[Note: although *Myrma* antedates *Polyrhachis*, the former has been treated as a subgenus of the latter since Forel, 1917: 251 (see Hung, 1967b: 396 for history). Dorow, Kohout & Taylor, 1997: 236 proposed the precedence of *Polyrhachis* over *Myrma* and that precedence was established by the ICZN (Opinion 1919) 1999: 92.]]

[*Polyraxis*: incorrect subsequent spelling by Arnold, 1924: 741.]

Subgenera of *Polyrhachis* (alphabetical order with synonyms indicated): nominal plus *Aulacomyrma* (= *Johnia*), *Campomyrma*, *Chariomyrma*, *Cyrtomyrma*, *Hagiomyrma*, *Hedomyrma* (= *Dolichorhachis*, = *Morleyidris*), *Hemioptica*, *Hirtomyrma*, *Myrma* (= *Anoplomyrma*, = *Hoplomyrmus*, = *Pseudocyrtomyrma*), *Myrmatopa* (= *Ireneae*), *Myrmhopla* (= *Cephalomyrma*, = *Florencea*), *Myrmothrinx* (= *Evelyna*).

[All subgenera were given as provisional junior synonyms of *Polyrhachis* by Brown, 1973b: 178-184. The list was repeated in Hölldobler & Wilson, 1990: 19 with all subgenera listed as junior synonyms. They reverted to subgeneric status in Bolton, 1994: 50; see under individual entries. The entry of *Chariomyrma*, *Hagiomyrma* and *Hedomyrma* under the synonymy of *Polyrhachis* by Taylor & Brown, D.R. 1985: 131, is not considered as confirmation as the three subgenera all range outside the Austral Region.]
