

Energy Policy

databasics is committed to the systematic management of energy use and consumption leading to continuously improved efficiency.

As part of this commitment, we will:

- Meet our legislative and regulatory compliance requirements relating to energy use, consumption, and efficiency.
- Develop and implement an EnMS (energy management system) based on the international standard ISO 50001:2011.
- Monitor, measure and analyse various aspects of our energy management performance.
- Set objectives and targets for energy performance and assign responsibility to members of senior management. These objectives will be included in those managers' Key Performance Indicators.
- Ensure the availability of information and the necessary resources to achieve our objectives and targets.
- Consider energy efficiency in our procurement decisions on buildings, vehicles, and major items of equipment.
- Achieve continual improvement in our energy performance.
