ACKNOWLEDGMENTS

This report analyzes the “Ending Agricultural Trade Suppression Act,” legislation currently under consideration by the U.S. Congress. It builds upon “Legislative Analysis of H.R. 4879: the Protect Interstate Commerce Act of 2018,” a report on similar antecedent legislation also published by the Brooks McCormick Jr. [Animal Law & Policy Program](#) at Harvard Law School. This update was researched and written by Kelley McGill, Regulatory Policy Fellow.

Ann Linder, Associate Director of Policy & Research, researched and authored the original 2018 report, portions of which appear below in an updated form. Kelsey Eberly, Clinical Lecturer at Yale Law School, provided analyses and draft text for other portions of this updated report. Chris Green, Executive Director, edited this report, and a team of independent experts reviewed it. Numerous individuals assisted in the research of potentially affected laws and regulations for this report and its predecessor. It is with gratitude that their contributions are recognized here.

EXECUTIVE SUMMARY

States long have had authority to regulate the health, safety, and moral aspects of goods sold within their borders, regardless of their state or country of origin. The Ending Agricultural Trade Suppression Act (“EATS Act”) fundamentally would transform the current balance of regulatory authority between the 50 States and the Federal Government by eliminating virtually all state and local legislative powers to impose standards or conditions on the “preharvest” production of agricultural products entering their own borders, including regulations related to food safety, disease and pest control, and government procurement.

The EATS Act defies basic notions of federalism and would circumvent decades of settled constitutional jurisprudence. As the Supreme Court recently reiterated in the National Pork Producers Council’s challenge to California’s Proposition 12, the Commerce Clause in the U.S. Constitution already restricts states from enacting protectionist laws that discriminate against interstate commerce. The Constitution’s Supremacy Clause also provides Congress plenary power to displace state law when it chooses to exercise its legislative authority over private actors pursuant to its enumerated powers. The EATS Act purports to do what courts interpreting state laws against these constitutional provisions have refused to do: declare by fiat that states cannot impose public health and welfare standards for agricultural products, even in the absence of conflicting local, state, or federal laws and regulations.

The EATS Act is unconstitutional in several different ways—chiefly, by running afoul of the Tenth Amendment principle that Congress may not “commandeer” states and prohibit them from legislating to protect public health and welfare, particularly in the absence of federal regulation. The legislation also includes a broad citizen-suit provision that authorizes any person affected by a regulation governing “any

aspect of 1 or more agricultural products that are sold in interstate commerce” to bring suit to block that regulation and to seek an award of monetary damages against the state or local government enforcing the regulation. The EATS Act’s citizen-suit provision raises significant concerns related to state sovereign immunity, protected under the Eleventh Amendment.

Despite its simple appearance, the wording of the EATS Act creates a myriad of interpretive questions that would need to be resolved in the courts. Because the scope of its prohibition against any “standard or condition on the preharvest production of any agricultural products sold or offered for sale in interstate commerce” is so broad, the legislation has the potential to void over a thousand state and local laws and regulations concerning public health and safety—including many laws and regulations that have not yet been identified and are unlikely to be intended targets of the legislation. While there is significant ambiguity in the text, the EATS Act could affect everything from commercial fishing regulations to the slaughter of horses, creating cascading effects far beyond the core farm commodities it seeks to protect.

Although some producers might initially financially benefit from enactment of the EATS Act, the potential for market disruption and uncertainty is extremely high. The EATS Act could sow confusion and disorder across state legislatures, city councils, and agricultural entities, disturbing the settled expectations upon which dozens of industries rely while harming the same animal agriculture industry players that the Act’s sponsors purport to help. These same market disruptions could have significant impacts on consumer choice, animal welfare, and food safety.

OVERVIEW

- On June 15, 2023, Senator Roger Marshall (R-KS) introduced the “Ending Agricultural Trade Suppression Act” (“EATS Act”) in the Senate as S.2019 with the support of 11 Republican cosponsoring senators.
- On June 30, 2023, Representative Ashley Hinson (R-IA) introduced the EATS Act in the House as H.R.4417 with the support of 15 Republican cosponsoring representatives.
- Former Representative Steve King (R-IA) drafted progenitor legislation to the EATS Act, including the King Amendment and the “Protect Interstate Commerce Act,” which later spawned the “Exp osing Agricultural Trade Suppression Act.”
- Congressional Republicans stated they introduced the EATS Act in part to invalidate Proposition 12, a California law setting certain standards for eggs, pork, and veal sold in the state, but the reach of the EATS Act would be much broader.
- The EATS Act would upset the long-standing, constitutional balance of power between the 50 States and the Federal Government by precluding state and local standards and conditions concerning the preharvest production of imported agricultural products, likely in violation of the Tenth Amendment’s anti-commandeering prohibition.
- The EATS Act would prevent state and local governments from regulating the “preharvest production” of imported “agricultural products” except to the extent that those products already are regulated in the place of production. The legislation further states that if there are no federal, state, or local regulations in the state of production for any given agricultural products, that lack of regulation becomes a new regulatory ceiling for any state or locality importing those products from that jurisdiction.
- The scope and precise meaning of the EATS Act are unclear, raise multiple constitutional concerns, and would require extensive litigation and judicial interpretation. Enactment of the EATS Act could impose tremendous costs on state and local governments faced with new lawsuits and on federal agencies charged with filling new regulatory voids. It also would create significant regulatory uncertainty for agricultural producers, industry participants, consumers, and governing bodies.

Examples of State Laws Potentially Affected by the EATS Act

Invasive Pest & Plant Disease Protections

(phony peach disease, emerald ash borer, glassy-winged sharpshooter)

Zoonotic & Infectious Disease Regulations

(avian flu, African swine fever, chronic wasting disease, honey bee diseases)

Food Quality & Safety Regulations

(fish and shellfish sourcing, milk quality standards, pesticides)

Fishing Regulations

(licensing and permitting, limitations on fish sourcing, species, or size)

Horse Slaughter Laws

(bans on importation or transport of horses for slaughter for human consumption)

Labeling Regulations

(kosher and halal protections, meat nomenclature, toxic seed treatments)

Narcotics Laws

(marijuana de-scheduling, opioid and hallucinogenic drug prohibitions)

Procurement Regulations

(government contracting policies for local, minority, and veteran producers)

Licensing, Permitting, and Recordkeeping Requirements

(professional licensing, date or location of production records)

QUESTIONS

- Key terms are not defined in the EATS Act, making it unclear which state and local regulations would be affected.
- The EATS Act would limit state and local authority to regulate the “preharvest production” of “agricultural products,” but the former term is not defined and the definition of the latter term is too broad to predict the full scope and impact of the EATS Act.
- The boundaries of what could be included within “preharvest production” are entirely unclear as the legislation does not define the term. These boundaries would be subject to definition by courts, shifting tremendous power from state and local legislative bodies to the judiciary.
- The definition of “agricultural product” includes “agricultural, horticultural, viticultural, and dairy products, livestock and poultry, bees, forest products, fish and shellfish, and any products thereof, including processed and manufactured products.” It also includes “any and all products raised or produced on farms,” raising questions as to its outer limits.

ENFORCEMENT

- The EATS Act would provide for citizen suits directly against states, which likely violates the Eleventh Amendment. It also could expose state and local officials to suit.
- The EATS Act would reverse long-standing presumptions favoring state authority while authorizing lawsuits seeking injunctions and damage awards against states and localities.
- The EATS Act would allow lawsuits to be brought up to ten years after a cause of action arose.

POTENTIAL EFFECTS

- The language of the EATS Act is broad enough to preclude more than a thousand state and local public health and safety regulations, many of which protect local producers from disease, pests, and other agricultural threats.
- The language of the EATS Act could have significant collateral impacts on other areas of state law, including commercial fishing, food safety, and livestock and crop health.
- The EATS Act could prevent states from imposing standards or conditions on the preharvest production of imported agricultural products, even when necessary to protect local health and safety.
- While some producers could benefit from the EATS Act, many other producers would suffer from its passage. Producers who have made significant infrastructure investments in response to regulations that the EATS Act could prohibit may see the economic value of those investments plummet.
- The EATS Act would cause significant regulatory uncertainty and spawn protracted litigation.
- The EATS Act would shift the balance of federalism away from the states with respect to the preharvest production of any product containing agricultural ingredients, likely in violation of the anti-commandeering prohibition found in the Tenth Amendment.

I. INTRODUCTION

In the wake of the recent U.S. Supreme Court decision in *National Pork Producers Council v. Ross*, upholding California’s Proposition 12, several U.S. lawmakers have introduced the “Ending Agricultural Trade Suppression Act” (“EATS Act”). The EATS Act proposes a race-to-the-bottom for state and local regulation of the “preharvest production” of “agricultural products,” raising serious constitutional concerns and threatening state rights, consumer safety, and farmers’ livelihoods. At minimum, the EATS Act could override more than a thousand state and local laws and regulations, the majority of which likely will not be identified or considered prior to its passage.

This report will detail the legislative history of the EATS Act and review relevant legal background information. Next, it will provide the text of the legislation in its current form and offer section-by-section analysis of the legislation. Finally, this report will discuss how the legislation could affect existing laws, regulations, and commerce and then provide an index with examples of potentially affected state laws and regulations.

II. LEGISLATIVE HISTORY

The origins of the EATS Act stretch back to 2008, when over 63 percent of the California electorate voted yes on Proposition 2 (“Prop 2”), the “Prevention of Farm Animal Cruelty Act.”¹ Prop 2 imposed minimum space and confinement requirements for egg-laying hens, veal calves, and mother pigs raised in the state, outlawing certain body-gripping crates, tethering methods, and battery cages. In 2010, the California legislature passed Assembly Bill No. 1437, the “California Egg Law,” requiring that all eggs sold in the state as of January 1, 2015 had to meet Proposition 2’s standards regardless of whether they were produced in California or outside of the state. The California Egg Law meant that any producers wishing to continue selling their eggs in California would have to provide hens enough space to stand up, lie down, turn around, and extend their wings without touching their cage or cage-mates—a standard the overwhelming majority of producers, who used battery cage housing, did not then meet.

At that time, the highest egg-producing district in the country was Iowa’s Fourth Congressional district, then represented by Steve King. Representative King responded to the California Egg Law with a series of legislative maneuvers aimed at nullifying it. These efforts to block the California Egg Law began with what became known as the “King Amendment.” As the blueprint for the current EATS Act legislation, the King Amendment would have prohibited states and localities from setting agricultural product standards or conditions in excess of those in effect in the state of production for goods sold in interstate commerce. The text of the King Amendment, formally entitled the “Prohibition Against Interference by State and Local Governments with Production or Manufacture of Items in Other States,” was included in two House-passed versions of the 2014 Farm Bill.² The King Amendment was not included in the Senate-passed version of the bill.³ After opposition by Senate Democrats and intense public criticism, the conference committee ultimately left the King Amendment out of the 2014 Farm Bill.⁴

In 2015, Representative King repackaged his amendment as standalone legislation entitled the “Protecting Interstate Commerce Act” (“PICA”).⁵ That legislative session, PICA was not passed out of the Agriculture Committee. Representative King reintroduced PICA in 2018,⁶ and PICA’s legislative text again was included in the House-passed version of the 2018 Farm Bill.⁷ It was not included in the

H.R.4879 was the subject of the 2018 report by the Brooks McCormick Jr. Animal Law & Policy Program at Harvard Law School, *Legislative Analysis of H.R. 4879: the Protect Interstate Commerce Act of 2018*.

7. H.R.2, 115th Cong. § 11701 (as passed by House, June 21, 2018), <https://www.congress.gov/bill/115th-congress/house-bill/2/text/eh>.

Senate-passed version.⁸ After condemnation by 32 Senators and a chorus of opposition—including from family farmers, public health and consumer groups, farmworker advocates, animal protection and environmental organizations, and state sovereignty champions, including the National Conference of States Legislatures—the King Amendment again was removed from the 2018 Farm Bill in conference.⁹

In November 2018, building upon Prop 2 and the California Egg Law, California voters passed Proposition 12 (“Prop 12”), the Farm Animal Confinement Initiative, again with nearly 63% voting in favor.¹⁰ Prop 12 established “new minimum requirements on farmers to provide more space for egg-laying hens, breeding pigs, and calves raised for veal” and it prohibited “California businesses... from selling eggs or uncooked pork or veal that came from animals housed in ways that did not meet these requirements.”¹¹ While celebrated by some animal producers, the passage of Prop 12 provoked multiple unsuccessful legal challenges from others.¹²

Like Prop 2 and the California Egg Law, the adoption of Prop 12 also fueled legislative attempts to prevent enforcement of its provisions. After Representative King lost his 2020 primary election after making racist comments,¹³ other lawmakers took up his cause of opposing such laws. In 2021, legislators in both chambers reintroduced the King Amendment/PICA as the rebranded and slightly revised “Exposing Agricultural Trade Suppression Act.”¹⁴ That legislation did not advance out of committee.

Now, in 2023, lawmakers in both chambers have reintroduced another revised version of that same legislation as the “Ending Agricultural Trade Suppression Act” or “EATS Act.”¹⁵ While the text has evolved throughout its progression from the King Amendment to its current form, the central aim remains the same: to federally block Prop 12 and similar state and local measures.¹⁶ The cost of enacting the EATS Act, however, would range far more widely than even its sponsors envision, raising serious constitutional concerns and undermining state and local rights at the expense of consumers, businesses, and agricultural producers across the 50 United States.

III. LEGAL BACKGROUND

Under long-standing principles of Federalism, state and local governments are free to regulate agricultural products and production except in ways that are preempted by federal law, unlawfully discriminate against out-of-state production, or unduly burden trade.¹⁷ In other words, “absent discrimination, ‘a State may exclude from its territory, or prohibit the sale therein of any articles which, in its judgment, fairly exercised, are prejudicial to’ the interests of its citizens.”¹⁸

While Congress has the power to regulate interstate commerce through the U.S. Constitution’s Commerce Clause of Article I and the Supremacy Clause of Article VI, the right of states to regulate their own markets has been inferred from their Tenth Amendment powers, and their authority to do so has been recognized even in cases where state laws have “substantial effects on interstate commerce.”¹⁹ As James Madison wrote in Federalist No. 45, “[t]he powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the State governments are numerous and indefinite... The powers reserved to the several States will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the State.”

Traditionally, states have enjoyed broad authority to legislate for the health, safety, and morals of their citizens. Where state legislation favors local interests at the expense of out-of-state parties or disproportionately interferes with interstate trade, however, that law may be challenged under what is

17. “Where the statute regulates even-handedly to effectuate a legitimate local public interest, and its effects on interstate commerce are only incidental, it will be upheld unless the burden imposed on such commerce is clearly excessive in relation to the putative local benefits.” *Pike v. Bruce Church, Inc.*, 397 U.S. 137, 142 (1970) (citing *Huron Portland Cement Co. v. City of Detroit*, 362 U.S. 440, 443 (1960)). That the “States must have a concurrent power to regulate commerce” is a principle that has long been recognized by the courts. *Gibbons v. Ogden*, 22 U.S. 1, 19 (1824). See also *United States v. Lopez*, 514 U.S. 549, 592 (1995) (Thomas, J., concurring) (citing Federalist No. 34 and stating that “[a]griculture and manufacture, since they were not surrendered to the Federal Government, were state concerns.”).

18. *Nat’l Pork Producers Council v. Ross*, 143 S. Ct. 1142, 1152–53 (2023) (quoting *Guy v. Baltimore*, 100 U.S. 434, 443 (1880)).

19. “That the internal commerce of the States and the numerous state inspection, quarantine, and health laws had substantial effects on interstate commerce cannot be doubted. Nevertheless, they were not ‘surrendered to the general government.’” *U.S. v. Lopez*, 514 U.S. at 594 (quoting *Gibbons v. Ogden*, 22 U.S. 1, 19 (1824)).

known as the “dormant” Commerce Clause.²⁰ Dormant Commerce Clause jurisprudence holds that states may not unduly restrict interstate commerce, even in areas where Congress has not acted.²¹ Courts have read the dormant Commerce Clause into the Commerce Clause as a way of protecting the flow of interstate commerce from state protectionism.²² When an alleged violation of the dormant Commerce Clause occurs, courts must consider the interests of the state and determine whether the state law places an unreasonable burden on interstate commerce.²³

In May, the U.S. Supreme Court affirmed existing dormant Commerce Clause jurisprudence by upholding California’s Prop 12.²⁴ The EATS Act would circumvent this long-standing constitutional doctrine by deregulating agriculture through the prohibition of preharvest state and local regulation of imported agricultural products and the creation of a private right of action to sue for enforcement injunctions and damages. Even state regulations that courts explicitly have determined to be in compliance with the dormant Commerce Clause, such as Prop 12, could be nullified under the EATS Act.

Further, the structure of the EATS Act likely violates the Tenth Amendment’s anti-commandeering doctrine. The Commerce Clause grants Congress the power to regulate commerce among the states. The Supremacy Clause makes federal law the supreme law of the law—trumping state law that conflicts or interferes with it, or that regulates in a sphere exclusively reserved for federal legislative control. The Tenth Amendment, however, protects states’ sovereignty and authority to legislate to protect their citizens’ health and welfare, and bars Congress from commandeering states by directly commanding that they permit or prohibit something.²⁵ The EATS Act could violate the Tenth Amendment by prohibiting states from regulating imported agricultural products, including those that may be harmful to their citizens’ health, safety, and welfare.

Finally, the EATS Act could run afoul of the Eleventh Amendment’s state sovereign immunity protections. The Eleventh Amendment grants states immunity from suit in certain circumstances.²⁶ While state and local officials with enforcement authority lawfully might become defendants to citizen suit challenges, the EATS Act could violate states’ rights under the Eleventh Amendment by exposing states to direct citizen suits without their consent.

20. See generally *Pike v. Bruce Church, Inc.*, 397 U.S. 137 (1970).

21. “Reading between the Constitution’s lines... [the Supreme] Court has held that the Commerce Clause not only vests Congress with the power to regulate interstate trade; the Clause also ‘contain[s] a further, negative command,’ one effectively forbidding the enforcement of ‘certain state [economic regulations] even when Congress has failed to legislate on the subject.’” *Nat’l Pork Producers Council v. Ross*, 143 S. Ct. at 1152 (2023) (quoting *Oklahoma Tax Comm’n v. Jefferson Lines, Inc.*, 514 U.S. 175, 179 (1995)).

22. “In its ‘modern’ cases, [the Supreme] Court has said that the Commerce Clause prohibits the enforcement of state laws ‘driven by... economic protectionism—that is, regulatory measures designed to benefit in-state economic interests by burdening out-of-state competitors.’” *Nat’l Pork Producers Council v. Ross*, 143 S. Ct. at 1153 (2023) (quoting *Dep’t of Revenue of Ky. v. Davis*, 553 U.S. 328, 337–338 (2008) (internal quotation omitted)).

23. “Where the statute regulates even-handedly to effectuate a legitimate local public interest, and its effects on interstate commerce are only incidental, it will be upheld unless the burden imposed on such commerce is clearly excessive in relation to the putative local benefits. If a legitimate local purpose is found, then the question becomes one of degree. And the extent of the burden that will be tolerated will of course depend on the nature of the local interest involved, and on whether it could be promoted as well with a lesser impact on interstate activities. Occasionally the [Supreme] Court has candidly undertaken a balancing approach in resolving these issues, but more frequently it has spoken in terms of ‘direct’ and ‘indirect’ effects and burdens.” *Pike v. Bruce Church, Inc.*, 397 U.S. 137, 142 (1970) (citations omitted).

24. *Nat’l Pork Producers Council v. Ross*, 143 S. Ct. 1142, 1165 (2023). In the service of in-state interests, the Supreme Court affirmed that states even may impose regulations that cause out-of-state commerce to shift from one type of business to another, finding that “the dormant Commerce Clause does not protect a ‘particular structure or metho[d] of operation.’” *Id.* at 1161 (citation omitted).

25. See *Murphy v. National Collegiate Athletic Association*, 138 S. Ct. 1461, 1478 (2018) (holding that a federal law preventing states from allowing sports gambling violated the anti-commandeering doctrine by “unequivocally dictat[ing] what a state legislature may and may not do”).

26. See *Virginia Off. for Prot. & Advoc. v. Stewart*, 563 U.S. 247, 253 (2011) (“Sovereign immunity is the privilege of the sovereign not to be sued without its consent.”).

IV. FULL TEXT OF S.2019 / H.R.4417

A BILL

To prevent States and local jurisdictions from interfering with the production and distribution of agricultural products in interstate commerce, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the “Ending Agricultural Trade Suppression Act”.

SEC. 2. PROHIBITION AGAINST INTERFERENCE BY STATE AND LOCAL GOVERNMENTS WITH PRODUCTION OF ITEMS IN OTHER STATES.

- (a) DEFINITION OF AGRICULTURAL PRODUCTS.—In this section, the term “agricultural products” has the meaning given the term in section 207 of the Agricultural Marketing Act of 1946 (7 U.S.C. 1626).
- (b) PROHIBITION.—The government of a State or a unit of local government within a State shall not impose a standard or condition on the preharvest production of any agricultural products sold or offered for sale in interstate commerce if—
- (1) the production occurs in another State; and
 - (2) subject to subsection (c),²⁷ the standard or condition is in addition to the standards and conditions applicable to the production pursuant to—
 - (A) Federal law; and
 - (B) the laws of the State and unit of local government in which the production occurs.
- (c) RULE OF CONSTRUCTION.—If no standards or conditions are applicable to the production of an agricultural product pursuant to Federal law, or the laws of a State or unit of local government in which the production occurs, that lack of standards and conditions shall be

27. S.2019 includes this clause; H.R.4417 omits it.

deemed to be the standards and conditions applicable to the production of the agricultural product for purposes of subsection (b)(2).

SEC. 3. FEDERAL CAUSE OF ACTION TO CHALLENGE STATE REGULATION OF INTERSTATE COMMERCE.

- (a) **DEFINITION OF AGRICULTURAL PRODUCTS.**—In this section, the term “agricultural products” has the meaning given to the term in section 207 of the Agricultural Marketing Act of 1946 (7 U.S.C. 1626).
- (b) **PRIVATE RIGHT OF ACTION.**—A person, including a producer, a transporter, a distributor, a consumer, a laborer, a trade association, the Federal Government, a State government, or a unit of local government, that is affected by a regulation of a State or unit of local government that regulates any aspect of 1 or more agricultural products that are sold in interstate commerce, including any aspect of the method of production, or any means or instrumentality through which 1 or more agricultural products are sold in interstate commerce may bring an action in the appropriate court to invalidate that regulation and seek damages for economic loss resulting from that regulation.
- (c) **PRELIMINARY INJUNCTION.**—On a motion of the plaintiff in an action brought under subsection (b), the court shall issue a preliminary injunction to preclude the applicable State or unit of local government from enforcing the regulation at issue until such time as the court enters a final judgment in the case, unless the State or unit of local government proves by clear and convincing evidence that—
- (1) the State or unit of local government is likely to prevail on the merits at trial; and
 - (2) the injunction would cause irreparable harm to the State or unit of local government.
- (d) **STATUTE OF LIMITATIONS.**—No action shall be maintained under this section unless the action is commenced not later than 10 years after the cause of action arose.
- (e) **JURISDICTION.**—A person described in subsection (b) may bring an action under that subsection in—
- (1) the district court of the United States for the judicial district in which the person—
 - (A) is affected by a regulation described in that subsection; or
 - (B) resides, operates, or does business; or
 - (2) any other appropriate court otherwise having jurisdiction.

V. SECTION-BY-SECTION ANALYSIS OF LEGISLATION

A. SECTION 1. SHORT TITLE.

This Section provides the short title for the legislation. It is to be known as the “Ending Agricultural Trade Suppression Act.”

B. SECTION 2. PROHIBITION AGAINST INTERFERENCE BY STATE AND LOCAL GOVERNMENTS WITH PRODUCTION OF ITEMS IN OTHER STATES.

Section 2 of the EATS Act would prohibit state and local governments from regulating imported agricultural products brought or sold within their borders, likely in violation of the Tenth Amendment. If enacted and upheld, it would prohibit any state or locality from imposing “standards or conditions,”²⁸ on the “preharvest production” of “agricultural products” not wholly produced within their own borders—if those regulations are “in addition to” those imposed at the federal level or in the producing state. The newly added rule of construction provided in subsection 2(c) further states that if no relevant standards or conditions exist at either the federal level or in the producing state or locality for an agricultural product, then no importing state or local government may add any standards in the future for that product. This new language could create significant deregulatory pressure on in-state production. In order to avoid creating disadvantages for in-state producers by subjecting their products to more extensive regulation than out-of-state products, states may lower or remove regulations on in-state production to match the lack of regulation on products originating from out of state.²⁹ As a result, the EATS Act likely would have

28. As discussed in [subsection 2\(b\)](#) below, the phrase “standards or condition” is not defined. In this analysis, it is presumed to mean state and local laws, regulations, and policies (collectively, “regulations”).

29. Oddly, the EATS Act would present a circumstance that is the opposite of one that the dormant Commerce Clause is intended to protect against: out-of-state producers could be favored over in-state producers because they would not be required to comply with the same standards set by the importing state or locality.

the effect of imposing a new, de facto, nationwide regulatory ceiling of zero regulation for agricultural products within the purview of subsection 2(c)—absent federal action.³⁰ In other words, states functionally could be prevented from regulating the preharvest production of goods that enter their borders within that scope of that new regulatory void and could be pressed to deregulate in-state production of those products.

The EATS Act would commandeer state and local governments, prohibiting them from imposing any “standard or condition” on the preharvest production of out-of-state “agricultural products” brought or sold within their borders if those standards or conditions are “in addition” to those in effect in the producing state and locality. In other words, if a state or local government imposes a preharvest standard or condition on imported agricultural goods that is not in effect in the state or locality of production, the EATS Act would prohibit the law, regulation, or policy imposing that standard or condition. Determining how to interpret the text of the EATS Act for any specific imported product, however, is not straightforward.

The basic framework of the EATS Act suggests at least a four-part inquiry to assess whether a state or local regulation is prohibited:

1. Is the imported product an “agricultural product” within the meaning of the legislation?
2. Does the state or local law or regulation in question impose a “standard or condition” on the “preharvest production” of that imported product?
3. In which states and localities is that product produced?
4. Is that “standard or condition” in addition to the law in effect in each state and locality of production, if any?

The text of Section 2 presents significant unanswered questions about the meaning and scope of the EATS Act in each part of this inquiry. What initially may look like simple language quickly dissolves into a quagmire of questions with regards to the legislation’s interpretation and application. Each issue adds vast amounts of uncertainty, and collectively they make the measure almost indescribably vague. In some instances, entire industries could survive or perish based on judicial interpretations of the EATS Act’s text if it were to pass in its current form.

The application of Section 2 would present mixed questions of fact and law for interpreting courts. At times, the EATS Act could require a rigorous fact-based inquiry as to exactly where regulated activities are taking place. It also would take tremendous time and resources for governing bodies and agricultural producers to sort through potentially affected regulations to determine whether and how they are impacted. Rulings could vary widely by jurisdiction and create a patchwork of interpretations across

30. See discussion of [subsection 2\(c\)](#) below for further details.

the federal judicial circuits, absent intervention by the Supreme Court—which already explicitly has found some of these regulations to be constitutional.

1. SUBSECTION 2(A)—DEFINITION OF AGRICULTURAL PRODUCTS.

Section 2(a) provides the clearest indication of the intended broad scope of the EATS Act. The term “agricultural products” is defined in the legislation to have the meaning given in section 207 of the Agricultural Marketing Act of 1946 (“AMA”):

The term “agricultural products” includes agricultural, horticultural, viticultural, and dairy products, livestock and poultry, bees, forest products, fish and shellfish, and any products thereof, including processed and manufactured products, and any and all products raised or produced on farms and any processed or manufactured product thereof. 7 U.S.C. § 1626.

This definition thus has four discrete parts:

1. Agricultural, horticultural, viticultural, and dairy products, livestock and poultry, bees, forest products, fish and shellfish;
2. Any products, including processed and manufactured products, of such agricultural, horticultural, viticultural, and dairy products, of livestock and poultry, of bees, of forest products, and of fish and shellfish;
3. Any and all products raised or produced on farms; and
4. Any processed or manufactured product of any product raised or produced on a farm.

The first clause of the definition lists categories of products that squarely fall within the purview of the term: crops, plants, wine, dairy, animals, bees, wood, fish, and shellfish. Yet several other terms within this list could be interpreted in different ways. For example, both “agricultural” (used here to define itself) and “livestock” could apply to a broad range of articles and species. Further, the use of the word “includes” (rather than “means”) is a textual indication that this list is not meant to be exhaustive.³¹

The second clause greatly expands the definition of “agricultural products” and injects significant ambiguity into the legislation. It provides that “agricultural products” also include “any products thereof, including processed and manufactured products.” The language suggests that any product with an agricultural element, no matter how small, could fall under the definition of “agricultural products.” Everything from breath mints to plastic bags, which may contain stearic acid from beef fat, might be considered “agricultural products.” There is no limiting condition or de minimis exception governing this term, and the word “any” suggests that it is to be construed broadly. While Section 2(b) confines

31. See U.S. HOUSE OF REPRESENTATIVES, *House Legislative Counsel's Manual on Drafting Style*, 48 (Dec. 2022), https://legcounsel.house.gov/sites/legcounsel.house.gov/files/documents/ManualDraftStyle_2022.pdf.

the scope of the section to barring certain standards or conditions on the “preharvest production” of agricultural products, regulations concerning manufactured goods also could be affected insofar they regulate the production of agricultural products used as inputs for those goods. As a result, the class of products affected by the EATS Act is unknowable given the broad and varying uses of agricultural products and by-products in the manufacturing of a wide range of goods.

The final two clauses of the definition go a step further.³² These clauses state that, “any and all products raised or produced on farms” as well as “any processed or manufactured product” made from these products qualify as “agricultural products” under the EATS Act. This language operates as a catch-all that captures virtually any items produced on farms. These may include pets raised commercially, exotic animals, ingredients of plant origin, and any other products “raised or produced” at such locations regardless of their connection to traditional agriculture. The bill does not define the term “farm.” Consequently, this language creates uncertainty because almost anything could be raised or produced on a “farm,” even items that bear no resemblance to what conventionally is thought of as agricultural products.

If the EATS Act passes, the question of what is and what is not an “agricultural product” within the meaning of the statute promises to be an ongoing source of litigation for years to come.

The definition of “agricultural products” incorporated into the EATS Act was drafted over seventy years ago and fails to contemplate the complexities of today’s modern agricultural landscape. It encompasses a vast number and array of products including all those manufactured with organic components such as wood, leather, cotton, and wool. Many vaccines today use eggs for their base, pharmaceuticals like heparin and insulin may be produced from livestock, and medicinal and dietary supplement pills frequently use cornstarch as a primary ingredient. The determination of the boundaries of “agricultural products” thus would have one of the greatest effects on shaping the EATS Act’s application. This issue is largely left open by the text, however, and would fall to the courts to decide.

If the EATS Act passes, the question of what is and what is not an “agricultural product” within the meaning of the statute promises to be an ongoing source of litigation for years to come. There has been virtually no case law interpreting the meaning and scope of the “agricultural products” definition to assist the judiciary with this task.³³ Canons of statutory construction could exclude some products as not falling reasonably within the intended scope of “agricultural products.”³⁴ In determining the scope Congress intended, the relevant question for a reviewing court would be the definition of “agricultural

32. Under the canon against surplusage, it reasonably may be assumed that these clauses are in addition to the preceding clauses.

33. *Audubon Soc. of Portland v. U.S. Nat. Res. Conservation Serv.*, a FOIA challenge concerning the meaning of “agricultural operation” for purposes of a statutory exemption, considered the question indirectly. 841 F. Supp. 2d 1182 (D. Or. 2012). There, the reviewing court weighed whether “agricultural operations” included private forested land (the subject of Audubon’s FOIA request). *Id.* at 1186. The relevant statute, the Food, Conservation, and Energy Act of 2008 (“FCEA”), defined “agricultural operations” as “the production and marketing of agricultural commodities and livestock,” but did not further define “agricultural” or “agricultural commodities.” *Id.* The key question was thus whether “wood or timber is considered an agricultural commodity.” *Id.* at 1187. Plaintiff Audubon claimed it was not, pointing to sections of FCEA that distinguished between “agricultural” and “forestry” and between “farmers” and “forest land owners.” *Id.* The defendant agencies, by contrast, pointed to the AMA definition at issue here, the Federal Crop Insurance Act’s (7 U.S.C. § 1518) definition of “agricultural commodity,” and the Agricultural Foreign Investment Disclosure Act’s (7 U.S.C. § 3508) definition of “agricultural,” which all include timber and forest products. *Id.* Because the plaintiff confined its argument to the statute at issue, the court found its definition more persuasive. *Id.* at 1187-88.

34. Relevant canons of construction could include the whole-text canon, which states that a text must be construed as a whole, and the presumption of consistent usage, which maintains that a word or phrase is presumed to bear the same meaning throughout a text and that a material variation in terms suggests a variation in meaning.

products” within the context of the EATS Act, rather than the AMA, the source statute for the language of the definition. While a reviewing court considering the definition of “agricultural products” under the AMA might cabin its interpretation to the boundaries authorized by that statute,³⁵ there would be fewer guideposts for a court to interpret the definition as it appears in the EATS Act, given that the intended boundaries of the latter statute are so undefined.

2. SUBSECTION 2(B)—PROHIBITION.

This subsection would attempt to expand the current reach of Congress, likely in violation of the Tenth Amendment’s anti-commandeering prohibition. Subsection 2(b) would forbid any state³⁶ or locality from placing a “standard or condition” on the “preharvest production” of “agricultural products” originating from out of state when certain conditions are met. This prohibition on state and local regulation of imported agricultural products is the heart of the EATS Act. This subsection is the source of greatest potential ambiguity as to the Act’s interpretation and the greatest uncertainty as to its constitutionality.

To fully sketch the boundaries and mechanisms of the EATS Act’s prohibitions, a reviewing court likely would need to apply the canons of statutory construction as well as consider congressional intent and legislative history. The Supreme Court’s principles of statutory interpretation counsel attempting first to divine the provision’s plain meaning—considering not the definition of individual words and phrases in isolation, but their meaning within the context of the provision and the statute as a whole. Attempting such a reading, one could interpret the EATS Act *as prohibiting state and local governments from regulating the preharvest production of any agricultural product unless (1) the product is produced wholly in the regulating state or (2) the regulation is consistent with, and does not exceed, that of any other state or locality of production or the Federal Government.* This interpretation still leaves open significant questions with respect to what would be considered as regulating preharvest production.

Implementation of the EATS Act depends on the threshold question of what constitutes a “standard or condition.” Neither word is defined in the legislation. Common usage suggests that these terms describe any sort of law, regulation, or best practices standard that has been codified by a legislature, administrative agency, or municipality. The drafters of the legislation chose not to use the common term “regulation,” however. This choice raises a question as to what, if anything, the phrase “standard or condition” encompasses that is not included within the term “regulation.” The EATS Act indicates that “a standard or condition” is something “impose[d]” by “the government of a State or a unit of local government within a State,” but beyond that provides no guidance as to the term’s intended scope.

35. The questions surrounding the definition of “agricultural products” and other key terms in the EATS Act could cause reviewing courts to invoke the “major questions” doctrine. As the Supreme Court recently reaffirmed in its decision invalidating the federal COVID-19 vaccine mandate, it “expect[s] Congress to speak clearly when authorizing an agency to exercise powers of vast economic and political significance.” *Nat’l Fed’n of Indep. Bus. v. Dep’t of Lab., Occupational Safety & Health Admin.*, 142 S. Ct. 661, 665 (2022) (quoting *Alabama Assn. of Realtors v. Department of Health and Human Servs.*, 141 S.Ct. 2485, 2489 (2021) (per curiam) (internal quotations omitted)).

36. The EATS Act does not define the term “State.” This analysis adopts a conservative approach in understanding this to apply only to the 50 U.S. States. Without a clear definition, however, this term also might include U.S. Territories such as Puerto Rico, Guam, and the U.S. Virgin Islands, as the word has been read in other contexts. *See, e.g.*, 7 U.S.C. § 1626 (“the term ‘State’ when used in this chapter shall include the Virgin Islands and Guam”). In the case of the EATS Act, the decision of how to apply the term no doubt would have significant impacts by removing barriers to introduction of certain crops or diseases not found in the 50 U.S. States and vice versa.

Similarly, the EATS Act also uses the phrase “preharvest production” without defining the term. The delineation between what would be considered “preharvest” and “harvest” or “postharvest” production is anything but clear. For instance, when a livestock animal is sent to slaughter, the question of where “preharvest” ends is impossible to answer from the legislative text alone. It could be that courts would interpret “preharvest production” to include everything up until the actual moment when that animal is killed during slaughter. It is also possible that courts would draw the demarcation somewhere earlier in the process, such as at the point at which the animal enters the slaughterhouse. The boundaries that future courts interpret around what is included within the scope of “preharvest production” likely would have significant consequences for the implementation of the EATS Act.³⁷

The boundaries that future courts interpret around what is included within the scope of “preharvest production” likely would have significant consequences for the implementation of the EATS Act.

Looking to congressional intent provides some clues to understanding the form that a “standard or condition” on “preharvest production” must take in order for the EATS Act to prohibit it. As discussed in the legislative history section above, the sponsors introduced the EATS Act in order to federally block California’s Prop 12 (and other regulations like it). Prop 12 is a partial ban on the in-state sale of pork, veal, and egg products. It is a partial ban in the sense that only the sales of certain products within each category are banned in California—those produced from animals kept in impermissibly restrictive confinement systems or, in the case of sows, from their progeny—rather than all pork, veal, and egg products. As a result, the EATS Act is intended to preclude at least partial prohibitions, and restrictions on the sale of goods seem to fall clearly within the purview of the legislation.

There also is a question as to whether total bans on particular products constitute “a standard or condition on the production or manufacture.” One might argue that in levying a total prohibition, a state legislature effectively renders the means of “preharvest production” irrelevant. Total bans, however, might constitute a standard or condition on preharvest production because a ban on a product could be defined by conditions of production related to the identity of that product. For example, a ban on the sale of kratom (a plant with leaves that are used as a recreational drug) in Vermont³⁸ means that producers of kratom in other states cannot plant kratom for future sale in Vermont. In essence, whatever makes an agricultural product discrete and identifiable by a regulator might equally function as a standard or condition that the EATS Act would prohibit. Putting this argument together with the legislation’s prohibition on partial bans, arguably the EATS Act also could prohibit a total ban, which would have a much greater effect on preharvest production than a partial ban.³⁹ To read the legislation otherwise would be to find that the text of

37. Different reviewing courts might not interpret this language in the same way, creating further confusion for producers, regulators, and consumers.

38. 13 Vt. Code R. 140 011:7.

39. In the case of Prop 12, any producer who chooses to sell their pork, veal, or egg products in California may need to change certain production practices to comply with its requirements, such as by enlarging cages. They also simply may choose not to sell their products in California, meaning that they will shift their products to other markets—and comply with applicable regulations in those new markets—or else reduce production. Either choice affects production, including preharvest production, within the scope of Section 3. A total sales ban would go further to affect preharvest production by removing these choices for the producer in the regulating jurisdiction. A total ban would shut out all (legal) access to state or local markets and require that a producer shift their products to other markets and, in all likelihood, reduce or cease production, such as by raising fewer pigs. As a result, a total ban plausibly is within the scope of regulations precluded by the EATS Act. At the least, a total ban likely would be vulnerable to suit, injunction, and potentially damages under Section 3. See discussion of [subsection 3\(b\)](#) below for analysis of the scope of the private right of action.

the EATS Act prohibits a partial sales ban, such as Prop 12, but condones a total sales ban that has a more significant effect on preharvest production (and interstate commerce).⁴⁰ Whether or not total bans constitute “a standard or condition” on “preharvest production” would have significant implications for a range of laws potentially affected by the EATS Act, including bans on the importation of horses for slaughter for human consumption, as well as prohibition on certain narcotics like kratom.

Because the prohibition in subsection 2(b) would apply to “any agricultural products sold or offered for sale in interstate commerce,” the EATS Act similarly may affect “standards or conditions” beyond sales restrictions. This language likely means that the EATS Act would affect more than end-point regulations on sale. The phrase “sold or offered for sale” functions as an adjective phrase modifying “products.” By including products “offered for sale,” the legislation also seems to encompass wholesale goods moving across state lines prior to the point when they are “sold.”⁴¹ Consequently, the EATS Act could affect regulations ranging from importation and transportation restrictions on live animals and plants to licensing and recordkeeping requirements, as discussed later in this report.

The EATS Act also is silent as to whether taxes might be included within the concept of a “standard or condition” under the legislation. Tax rates may vary based on means of preharvest production, or may be set so high as to constitute a virtual ban on particular items. If different forms of a product effectively are taxed differently as a result of differences in preharvest practices (such as a hypothetical sales tax break for goods produced specifically with organically grown cotton), a state might be seen as imposing its standards on imported products. It thus is unclear whether the EATS Act might implicate tax laws, creating another area of ambiguity that would have to be resolved by the courts.

The EATS Act further could implicate laws concerning waste or hazardous substances. If a product cannot be grown or raised without producing the type of waste or hazardous substance regulated (for example, the toxic substances sometimes used to treat seeds), such laws effectively might be interpreted as imposing a “standard or condition” and be precluded by the EATS Act. Many agricultural regulations would fall within these gray areas. The legislation provides no guidance as to whether these measures would be affected equally or not at all.

3. PARAGRAPH 2(B)(1)

Paragraph 2(b)(1) ostensibly would require that an agricultural product be produced outside of the regulating state in order for the EATS Act to block regulation of it.⁴² Laws that contain only a general condition or other requirement and that do not explicitly list regulated entities or geographic areas of effect would require a fact-specific inquiry into which parties are affected and the states and localities in which production occurs.

40. “Today, many States prohibit the sale of horsemeat for human consumption. But these prohibitions ‘har[m] the interstate market’ for horsemeat by denying outlets for its sale. Not only that, they distort the market for animal products more generally by pressuring horsemeat manufacturers to transition to different products, ones they can lawfully sell nationwide.” *Nat’l Pork Producers Council v. Ross*, 143 S. Ct. 1142, 1163 (2023) (internal citation omitted).

41. The phrase “offered for sale” also could also be read to apply the legislation’s prohibitions to all agricultural products so long as that *type* of product sometimes is sold in interstate commerce.

42. The wording here is ambiguous. At least theoretically, it could be read expansively to prevent states from regulating agricultural products produced within their own states as well, so long as those types of products also are produced in other states.

4. PARAGRAPH 2(B)(2)

Paragraph 2(b)(2) would set out a two-part test: the EATS Act only applies to standards or conditions in addition to those applicable under “[f]ederal law” and “the laws of the State and unit of local government in which the production occurs,” if any. This portion of the text would require examining courts to first identify relevant federal regulations as well as regulations in the place(s) of production affecting a certain good. Next, courts would need to overlay the standard or condition in question to see whether it goes beyond the contours of each of those other regulations. This analysis may be straightforward—for instance, in cases where states set allowable numerical regulatory thresholds (such as for pesticide application tolerances) that are more protective of public health than those levels permitted by the Federal Government or set by other states. Other times, it may be more difficult to discern whether the challenged standard or condition is “in addition to” the relevant state or federal regulation. While courts would be forced to engage in this type of post-hoc analysis under the EATS Act, states would be required to do the same prior to imposing any new regulations on “agricultural products,” or else risk facing lawsuits, injunctions, and the cost of potentially significant monetary damages. States also would need to conduct a review of all their own existing regulations in order to determine whether new causes of action could arise from those regulations in accordance with Section 3.⁴³

5. SUBPARAGRAPH 2(B)(2)(A)

Together with subparagraph 2(b)(2)(B), this subparagraph would prevent states and localities from regulating the preharvest production of agricultural products imported within their boundaries above the level of regulation effective in the place(s) of production. Subparagraph 2(b)(2)(A) references standards or conditions in excess of federal law, specifically. The EATS Act does not change existing federal regulations concerning agricultural products. Nor does it directly impose explicit federal standards that supersede state and local laws. Functionally, however, the EATS Act would set federal regulations as a new ceiling. Along with the laws of the state and locality of production, the federal standards would impose a high-water mark for regulation in importing states. Any state or local regulation that goes beyond the “applicable” regulations at the federal, state, and local level in the state of production would be considered “in addition to” those regulations and could be prohibited under the EATS Act. This prohibition could hold true even where, as often is the case in agricultural regulation, there is no federal law or standard at all.⁴⁴

Distinguishing between state and federal agricultural laws can be difficult in areas where the state works in conjunction with federal agencies. Even where states have codified non-binding federal guidelines or best practices, the EATS Act could have a prohibitive effect.

43. See discussion of [subsection 2\(c\)](#) below.

44. See discussion of [subsection 2\(c\)](#) below.

The point of origin for every agricultural product would have to be tracked carefully in order for the EATS Act to function

6. SUBPARAGRAPH 2(B)(2)(B)

Together with subparagraph 2(b)(2)(A), this subparagraph would prevent states and localities from regulating the preharvest production of agricultural products imported within their boundaries beyond the level of regulation effective in the place(s) of production. Determining whether a certain law runs afoul of subparagraph 2(b)(2)(B) requires knowledge of “the laws of the State and unit of local government” (emphasis added) that govern in the jurisdiction where production takes place. This analysis could vary from one producer to the next depending on where their particular farms or production facilities are located. For larger entities operating in multiple states and localities, the question of where “production occurs” may become complicated. Likewise, determining the place(s) “in which the production occurs” for any agricultural product that contains multiple ingredients, and then determining all applicable regulations, would become overwhelmingly complex.

In order for a regulation to be blocked by the EATS Act, an importing state or locality would need to impose a standard or condition on an agricultural product that is higher than those, if any, in effect in the state where “preharvest production” occurs. To determine whether a regulation meets these requirements would require a case-by-case analysis of particular industries, as well as knowledge of individual producers and their preharvest supply chains. The point of origin for every agricultural product would have to be tracked carefully in order for the EATS Act to function. This tracking would be necessary even for regulated products that contain only trace amounts of agricultural ingredients if a regulation imposes a preharvest standard or condition that applies to that product. So too would a state seeking to regulate a given product need to survey and track the regulations of all other potential states of production for that product, as well as determine any applicable federal regulations in that area. If a state fails to successfully thread this needle of regulating the preharvest production of an agricultural product no further than it already is regulated in at least one state and locality of production, or under federal law, then that state could be subject to lawsuits, enforcement injunctions, and potential damages by any person affected by the regulation. The administrative costs of setting up these tracking systems for thousands of products are incalculable in advance, but likely to be substantial.

7. SUBSECTION 2(C)—RULE OF CONSTRUCTION.

The newly added subsection 2(c) likely means that if there are no applicable federal standards or conditions governing the production of a particular agricultural product, that absence of regulation becomes the new functional regulatory ceiling for that product, nationwide.⁴⁵ In other words, under the EATS Act, states could not impose any preharvest regulation on agricultural products originating outside their borders that fall within the scope of a federal regulatory void.

In other words, under the EATS Act, states could not impose any preharvest regulation on agricultural products originating outside their borders that fall within the scope of a federal regulatory void.

45. See also discussion of [Section 2](#) *supra*.

The use of “or” in the phrase “or the laws of a State or unit of local government” in subsection 2(c) is ambiguous. It may be intended to imply that, in the absence of a regulation at the federal level, an importing state still could regulate the preharvest production of a product to the extent that it is regulated in the original state of production. If, however, a single state of production does not regulate a given product, that state’s lack of regulation too becomes the de facto ceiling unless states craft regulations applying only to certain other states or localities.⁴⁶ Trying to keep track of all the applicable, ever-changing regulations in all other potential states of production to determine a shifting regulatory ceiling would be a near logistical impossibility for already burdened state and local governments—to say nothing of trying to enforce regulations tailored specifically to the place(s) of origin for every product. As a result, a foreseeable outcome is that states would adopt only the lowest common denominator regulation for a given agricultural product. In many instances, this lowest common denominator likely would be an absence of federal regulation. In such cases, if enacted and upheld, the EATS Act effectively would create a federal bar against any state and local regulations concerning the preharvest production of that imported agricultural product.

C. TENTH AMENDMENT AND SUPREMACY CLAUSE ISSUES IN SECTION 2

The EATS Act seeks to strip away the authority of state and local governments to legislate with respect to agricultural products. Section 2 of the EATS Act thus raises serious Tenth Amendment and Supremacy Clause issues.

The Tenth Amendment to the U.S. Constitution provides: “The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.” This constitutional provision is the basis for what is known as the anti-commandeering doctrine, which holds that Congress cannot compel or forbid state action.⁴⁷ While Congress may displace state legislation by enacting preemptive federal legislation pursuant to its enumerated powers under the Constitution, it may not directly control state government or its officials.⁴⁸

The anti-commandeering doctrine is part of the Constitution’s guarantee of state sovereignty. In the 2018 case, *Murphy v. National Collegiate Athletic Association*, the U.S. Supreme Court made clear that federal laws similar to the proposed EATS Act violate the anti-commandeering doctrine.⁴⁹ In that case, the Court affirmed that all legislative power not granted Congress via the Constitution’s certain enumerated powers “is reserved for the States, as the Tenth Amendment confirms. And conspicuously absent from the list of powers given to Congress is the power to issue direct orders to the governments of the States. The anticommandeering doctrine simply represents the recognition of this limit on

46. Any such regulations would need to comply with the dormant Commerce Clause.

47. “The anti-commandeering doctrine may sound arcane, but it is simply the expression of a fundamental structural decision incorporated into the Constitution, i.e., the decision to withhold from Congress the power to issue orders directly to the States.” *Murphy v. National Collegiate Athletic Association*, 138 S. Ct. 1461, 1475 (2018).

48. “We have always understood that even where Congress has the authority under the Constitution to pass laws requiring or prohibiting certain acts, it lacks the power directly to compel the States to require or prohibit those acts.” *Murphy v. Nat’l Collegiate Athletic Ass’n*, 138 S. Ct. 1461, 1476–77 (2018) (quoting *New York v. United States*, 505 U.S. 144, 166 (1992)).

49. 138 S. Ct. 1461, 1478 (2018) (holding that a federal law preventing states from allowing sports gambling violated the anti-commandeering doctrine by “unequivocally dictat[ing] what a state legislature may and may not do”).

congressional authority.”⁵⁰ In *Murphy*, the Court further clarified that the anti-commandeering doctrine extends to Congressional prohibitions on state action.⁵¹ There, the Court found no distinction between ordering states to act and prohibiting them from acting because both offend “[t]he basic principle—that Congress cannot issue direct orders to state legislatures.”⁵²

The anti-commandeering doctrine does not prevent Congress from displacing state law with federal laws governing private actors or a mix of public and private entities. When Congress does exercise its legislative powers, the Supremacy Clause in Article VI, Clause 2 of the U.S. Constitution makes that federal law the “supreme Law of the Land,” preempting any conflicting state law. In order to distinguish unconstitutional “commandeering” from constitutional preemption, the Court explained in *Murphy* that:

*Preemption is based on the Supremacy Clause, and that Clause is not an independent grant of legislative power to Congress... It specifies that federal law is supreme in case of a conflict with state law. Therefore, in order for the [federal law] to preempt state law, it must satisfy two requirements. First, it must represent the exercise of a power conferred on Congress by the Constitution; pointing to the Supremacy Clause will not do. Second, since the Constitution confers upon Congress the power to regulate individuals, not States, the [federal law] at issue must be best read as one that regulates private actors.*⁵³

The commandeering nature of the EATS Act is even more apparent in light of the language in subsection 2(c), which could be read to hold that an absence of federal regulation of an imported agricultural product could preclude any state and local regulation of it. When Congress is legislating substantively to supplant state law through regulations on private actors, the Supremacy Clause applies.⁵⁴ When Congress is simply removing state legislative authority without any concomitant substantive federal policy, the Supremacy Clause does not apply. The EATS Act would attempt the latter, as the rule of construction in subsection 2(c) of the text makes explicit.⁵⁵ Even in the absence of any differing federal (or state or local) policy, a preharvest production standard or condition imposed by a state or locality on imported products would be invalid under the EATS Act. In this way, the EATS Act seeks to create a regulatory void for some products, where states impermissibly would be restricted from legislating.

Congress can displace state law when it regulates individuals pursuant to a valid exercise of its enumerated powers. But it cannot do what the EATS Act would do: bar states from legislating on a given subject.

50. *Id.* at 1476.

51. *Id.* at 1478.

52. *Id.*

53. *Id.* at 1479 (internal quotations omitted).

54. The Supreme Court recently issued another anti-commandeering decision in *Haaland v. Brackeen*, 143 S.Ct. 1609 (2023). In *Haaland*, the Court found that a federal law did not violate the anti-commandeering doctrine because it applies “evenhandedly” to both private and state actors. Unlike in *Haaland*, the EATS Act would not apply “evenhandedly” to state and private actors because its prohibition directs only state and local governments, not private actors. While Section 3 of the EATS Act gives private parties (as well as government bodies) a right to sue state and local governments for using their sovereign authority to enact prohibited legislation on pre-harvest production methods, this private right of action is voluntary. The mandatory portion of the legislation, the Section 2 prohibition, applies only to state and local governments, impermissibly “harness[ing]” the legislative and executive authority of states. *Id.* at 1632. Further, unlike in *Haaland*, under the EATS Act, Congress would prohibit states from adopting a state policy even in the absence of any substantive federal policy. As a result, the principles of *Murphy* are more applicable to the EATS Act.

55. The new language in subsection 2(c), which did not appear in previous iterations of the legislation, seems to evidence an intent by the drafters to preclude state and local regulation by commandeering state and locality regulatory authority, rather than to constitutionally preempt their authority through a positive exercise of federal authority directly over private actors, such as agricultural industry participants.

There remains a question of how the anti-commandeering doctrine affects the EATS Act’s restriction on local government regulation. Because the doctrine is an articulation of the limited, enumerated nature of Congress’s legislative authority, it is plausible that the doctrine extends to preclude Congress from directly controlling local governments, as well. For instance, the U.S. Court of Appeals for the Third Circuit recently invalidated two provisions of a federal law regulating states and localities, finding that the federal provisions were not preemptive because they did not act upon private actors.⁵⁶ Similarly, courts might find that the EATS Act violates the anti-commandeering doctrine and lacks preemptive effect because it attempts to directly regulate state and local governments, not private actors.

Just as clearly as articulated in *Murphy*, enactment of Section 2 of the EATS Act would be “as if federal officers were installed in state legislative chambers and were armed with the authority to stop legislators from voting on any offending proposals. A more direct affront to state sovereignty is not easy to imagine.”⁵⁷ Thus, the EATS Act’s prohibition on state regulation likely would be unconstitutional under the Tenth Amendment even if the legislation focused on only one industry.

D. SECTION 3. FEDERAL CAUSE OF ACTION TO CHALLENGE STATE REGULATION OF INTERSTATE COMMERCE.

Section 3 of the EATS Act would confer a private right of action to legally challenge any state or local law “that regulates any aspect of 1 or more agricultural products that are sold in interstate commerce... or any means or instrumentality through which 1 or more agricultural products are sold in interstate commerce.” This private right of action is potentially much broader than Section 2’s prohibition, lacking language confining its provisions only to regulations related to preharvest production. Section 3 provides for injunctive relief, shifts the burden to states and localities to defend their laws, and allows for monetary damages to be assessed against state and local governments. The language of Section 3, however, raises questions of interpretation and significant constitutional concerns, such as state sovereign immunity under the Eleventh Amendment, as discussed below. Given these concerns, its provisions might be found inoperable or interpreted narrowly by the courts.

Courts may interpret Section 3 in one of three ways. First, they may find its citizen suit provision inoperable because it does not specify particular triggering legal violations. Generally, citizen suit provisions attach to a specific violation of an underlying statute. The substantial ambiguity created by the language in Section 3, which does not specify the circumstances under which a cause of action would arise (beyond a person being affected by a regulation), could lead a court to disregard Section 3 of the EATS Act altogether.

A second possible outcome is that a court could read the broad language of Section 3 as itself establishing a new legal violation that may be enforced by private parties. To construe Section 3 in such a manner would lead to absurd results, however—providing anyone affected by the regulation of an agricultural product in interstate commerce with Article III standing the opportunity to sue, likely obtain

56. *Ocean Cty. Bd. of Commissioners v. Att’y Gen. of State of New Jersey*, 8 F.4th 176, 181–82 (3d Cir. 2021). “A federal statute that does not regulate private actors cannot serve as a basis for preemption.” *Id.* at 182.

57. *Murphy* at 1478.

at least a preliminary injunction of that regulation, and potentially secure damages and a permanent injunction. In practice, this reading could open the floodgates and force state and local governments to answer to a near endless onslaught of litigation over any regulation of any agricultural products. Given these concerns, a court might decline to read Section 3 this way, although such a reading is not outside the scope of the ambiguous language provided.

The third and most plausible interpretation of Section 3 would be to read its provision only in conjunction with Section 2.⁵⁸ In general, citizen suit provisions are written narrowly and give authorization for private parties to bring suit only in response to specific violations. Here, no such reference exists and the provision makes little sense in isolation. A court thus could find that the legislation’s drafters meant to refer back to and specify violations of Section 2 as the particular cause of action being enforced here. While it appears such a reading is in line with the drafters’ intent, it bears mention that the language of Section 3 departs from that of Section 2 in important ways.

Fundamentally, there is little congruence between “a standard or condition on the preharvest production of any agricultural products” and the much broader language of Section 3, “a regulation... that regulates any aspect of 1 or more agricultural products... including any aspect of the method of production, or any means or instrumentality through which 1 or more agricultural products are sold in interstate commerce.” Not only does the language encompass regulations touching “any aspect of 1 or more agricultural products,” it also expands to include regulations applicable to “any means or instrumentality through which” such a product is sold. It is unclear whether the EATS Act drafters intended that the terms “standard or condition” in Section 2 and “regulation” in Section 3 to mean different things,⁵⁹ but the mismatched language could cause considerable trouble for a court looking to interpret the text.

If the third interpretation of Section 3 prevails, under which Section 3 would enable private citizens to bring suit over violations of the prohibition in Section 2, the effects that this portion of the EATS Act would have could be extreme. State and local agricultural laws across the U.S. would be vulnerable to challenge by other states, the Federal Government, private entities, or even foreign governments seeking to exact monetary damages. If Section 3 were enforced as written, states could be flooded with lawsuits and damage claims. These suits could seek payments from states for taking common sense actions such as enforcing restrictions on the importation of disease-infected livestock or pest-infested plants. Innumerable sensible health, safety, and welfare regulations would be susceptible to challenge. On a macro-level, as currently written, the EATS Act might require state and local governments to expend significant taxpayer dollars in order to defend their regulations in court and to pay for potentially substantial damage awards.

... as currently written, the EATS Act might require state and local governments to expend significant taxpayer dollars in order to defend their regulations in court and to pay for potentially substantial damage awards.

58. Reading Section 3 in this way would be consistent with the whole-text canon, discussed *supra*.

59. The presumption of consistent usage, discussed *supra*, would counsel that the use of these different phrases demonstrates intent for different meanings. Under that reading, the interpretation of “standard or condition” becomes even more fraught.

1. SUBSECTION 3(A)—DEFINITION OF AGRICULTURAL PRODUCTS.

Subsection 3(a) repeats the same definition of “agricultural products” as used in Section 2(a). See the discussion of subsection 2(a) *supra* for analysis of the potential scope of this definition.

2. SUBSECTION 3(B)—PRIVATE RIGHT OF ACTION.

Subsection 3(b) would provide a right of action to challenge “a regulation of a State or unit of local government that regulates any aspect of 1 or more agricultural products that are sold in interstate commerce.” Next, subsection 3(b) lays out two available remedies: courts may both “invalidate that regulation” and award “damages for economic loss resulting from that regulation.” Though it is not stated explicitly, courts likely would award these damages against the “State or unit of local government” that imposed the regulation, which would have to be drawn from the State treasury or municipal funds. As discussed further below,⁶⁰ under the Eleventh Amendment’s state sovereign immunity protections, states themselves likely would be shielded from direct suit by private entities. States still could be directly subject to suit from other sovereigns, including other states and the Federal Government, though. Further, local governments themselves could be vulnerable to lawsuits from any affected party unless they are considered to be arms of a state. Perhaps more significantly, state and local officials with enforcement authority, may not be protected from liability under subsection 3(b) and potentially could be subject to extensive, expensive litigation and enforcement injunctions.

Under such an interpretation, an orange producer in Florida potentially might be able to sue officials in their own state government to challenge in-state regulations related to oranges under the EATS Act since oranges are a type of product sold in interstate commerce.

Subsection 3(b) additionally raises a number of more specific, interpretive questions. Most of these relate to scope. The language of subsection 3(b) does not make clear whether it applies only to agricultural products moved in interstate commerce or whether it applies to all agricultural products so long as that type of product is sold in interstate commerce. For example, the language could be found to apply to oranges generally because they move in interstate commerce rather than to a particular orange that may or may not cross state lines. Under such an interpretation, an orange producer in Florida potentially might be able to sue officials in their own state government to challenge in-state regulations related to oranges under the EATS Act since oranges are a type of product sold in interstate commerce.

Further, subsection 3(b) defines no terms. As discussed earlier, the subsection employs the word “regulation” rather than the phrase “standard or condition” used in Section 2. Though “regulation” can refer collectively to both statutory law and regulations established by agencies, one could narrowly interpret Section 3 to govern only the latter. The legislative history, however, suggests that the EATS Act was drafted to target California laws, so its intended scope likely includes both statutory laws and

60. See [Eleventh Amendment Concerns](#) below.

regulations. This reading, though, creates a new problem of how to interpret “standard or condition,” the plain meaning of which also would appear to cover both. This lack of congruence between the language of Sections 2 and 3 would present significant interpretative challenges for reviewing courts.

3. SUBSECTION 3(C)—PRELIMINARY INJUNCTION.

Subsection 3(c) would give plaintiffs the right to receive a preliminary injunction on the enforcement of a challenged regulation and lays out the standard to receive such relief. This preliminary injunction is intended to provide plaintiffs with immediate relief by “preclud[ing] the applicable State or unit of local government from enforcing the regulation at issue until such time as the court enters a final judgment in the case.” It may take years for a court to reach a final decision, especially given the backlog of cases that might be created by the EATS Act. Subsequent related lawsuits filed by other aggrieved parties could extend these injunctions almost indefinitely. Subsection 3(c) thus could tie the regulatory hands of state and local governments for years to come across a broad swath of legal areas related to agriculture.

Historically, the burden of proving entitlement to a preliminary injunction falls squarely on the party seeking injunctive relief. Over a hundred years ago, the Supreme Court in *Ex Parte Young* held that “to enjoin proceedings by state officials to enforce the legislative acts of the state... no injunction ought to be granted unless in a case reasonably free from doubt. We think such rule is, and will be, followed by all the judges of the Federal courts.”⁶¹ More recently, the Supreme Court has been explicit about the burden of proof, addressing the issue in *Winter v. Natural Resources Defense Council, Inc.*⁶² In *Winter*, Justice Roberts laid out the Court’s notoriously high standard: “A plaintiff seeking a preliminary injunction must establish that he is likely to succeed on the merits, that he is likely to suffer irreparable harm in the absence of preliminary relief, that the balance of equities tips in his favor, and that an injunction is in the public interest.”⁶³ This standard is in stark contrast to Section 3 of the EATS Act, which would take this conventional test and invert it in favor of the plaintiff.

Unlike the traditional standard prescribed by the Supreme Court in *Winter* and *Ex Parte Young*, the EATS Act provides for the issuance of a preliminary injunction unless the government defendant can prove by clear and convincing evidence: (1) a likelihood of success on the merits of its defense and (2) irreparable harm to the state or locality should an injunction be imposed.

4. PARAGRAPH 3(C)(1)

Paragraph 3(c)(1) would require a state or local government defendant to show that it is more likely than not to succeed on the merits of the case at trial in order to defeat a preliminary injunction. A government’s avenues to make such a showing are limited. One way would be to show that the regulated good is not an “agricultural product.” A good that is not an agricultural product falls outside the scope of the law. Yet, this sort of showing may be difficult given the expansive definition provided. Beyond contesting whether a product is an agricultural product within the meaning of the EATS Act,

61. 209 U.S. 123, 166–67 (1908).

62. 555 U.S. 7 (2008).

63. *Id.* at 20.

a state or local government might be able to argue in some instances that the product is not sold in interstate commerce, but that is unlikely to be the case for most goods.

For agricultural products in interstate commerce, the state or locality would have limited means to challenge the broad right of action created in subsection 3(b). If Section 3 were enacted and interpreted broadly, so long as a challenged regulation affects agricultural products in interstate commerce, it would be straightforward for a plaintiff with standing to secure a preliminary injunction preventing state or local government officials from enforcing that regulation. Plaintiffs would face a far more generous standard under Section 3 of the EATS Act than under the usual context in which a preliminary injunction may be sought in federal court, including in cases involving fundamental civil rights.

Plaintiffs would face a far more generous standard under Section 3 of the EATS Act than under the usual context in which a preliminary injunction may be sought in federal court, including in cases involving fundamental civil rights.

5. PARAGRAPH 3(C)(2)

Paragraph 3(c)(2) would require a state or local government to show that it would suffer “irreparable harm” if a court were to enjoin it from enforcing the regulation in question. States and localities may be able to make strong showings on this issue for certain products. Many agricultural regulations have a direct nexus to public health and safety, which state and local governments could use to demonstrate a risk of injury to citizens or property that rises to the level of irreparable harm. It should be noted, however, that this bar is high. Even if a state or locality succeeded in demonstrating irreparable harm under paragraph 3(c)(2), a plaintiff still would receive a preliminary injunction if the state or local government could not demonstrate a likelihood of success on the merits under paragraph 3(c)(1). Oddly, irreparable harm may be the easier hurdle to clear. States must prevail under both paragraph 3(c)(1) and paragraph 3(c)(2) in order to continue enforcing the law in question.

... the EATS Act text does not specify whether this statute of limitations refers to the date the regulation went into effect or the time at which the plaintiff suffered injury from it. In the latter case, legislation could be open to challenge even if it was implemented more than a decade before.

6. SUBSECTION 3(D)—STATUTE OF LIMITATIONS.

Subsection 3(d) would impose a ten-year statute of limitations for claims under this Section. The clock would begin when the “cause of action arose.” However, the EATS Act text does not specify whether this statute of limitations refers to the date the regulation went into effect or the time at which the plaintiff suffered injury from it. In the latter case, legislation could be open to challenge even if it was implemented more than a decade before. These timelines become important when considering the possibility of retrospective damages claims under subsection 3(b).

Because subsection 3(d) does not state that it is limited to new state laws, a question arises whether Section 3 may be intended to allow plaintiffs to challenge laws that were enacted years before the effective date of the EATS Act. Comments made by sponsors of the legislation indicating their intent to federally block Prop 12 would seem to support this reading. There is, however, a presumption against retroactivity.⁶⁴ Section 3 contains no explicit language concerning retroactivity, and retroactive intent is at least ambiguous. Consequently, rather than being read to be retroactive within the ten years preceding enactment, a court may be more likely to read Section 3 to permit suit within ten years of the time when a cause of action arose and to find that such a cause of action could arise from an existing regulation imposed more than ten years before but still in effect. Such a reading avoids reading retroactivity into the statute but still enables the EATS Act to accomplish its intended purpose of displacing Prop 12 and similar regulations, as well as many others not envisioned by the sponsors of the legislation. The EATS Act thus would provide a vehicle for challenging over a thousand long-standing state and local regulations and chill further lawmaking related to at least the preharvest production of imported agricultural products.⁶⁵

The EATS Act thus would provide a vehicle for challenging over a thousand long-standing state and local regulations and chill further lawmaking related to at least the preharvest production of imported agricultural products.

... EATS Act would throw open the courthouse doors for a potential flood of new litigation—which essentially could be brought by any party affected by any aspect of a regulation on any agricultural product in interstate commerce in any court with jurisdiction so long as that party meets Article III standing requirements.

7. SUBSECTION 3(E)—JURISDICTION

Subsection 3(e) clarifies jurisdiction over claims that could be brought pursuant to Section 3. It would paint jurisdiction with the broadest possible brush, enabling lawsuits to be brought in federal district courts located where a plaintiff “is affected by a regulation” or “resides, operates, or does business.” It also would permit challenges to be brought in “any other appropriate court otherwise having jurisdiction.” Through this language, the legislation does not narrow access to the courts. Rather, the EATS Act would throw open the courthouse doors for a potential flood of new litigation—which essentially could be brought by any party affected by any aspect of a regulation on any agricultural product in interstate commerce in any court with jurisdiction so long as that party meets Article III standing requirements. In doing so, the EATS Act would shift massive power from state and local legislative bodies to the federal judiciary and, together with Section 2, federal

64. See, e.g., Congressional Research Service, *Retroactive Legislation: A Primer for Congress*, 1 (Aug. 15, 2019), <https://sgp.fas.org/crs/misc/IF11293.pdf> (“Congress has much greater leeway to enact retroactive legislation in the civil sphere than in the criminal sphere. However, certain constitutional limits apply, and courts interpreting ambiguous statutes apply a general presumption against retroactivity.”)

65. Should other sections of the legislation be removed through the legislative process prior to passage or found unconstitutional by reviewing courts, there is some question as to whether Section 3 might be able to stand alone. If Section 3 were to pass without Section 2, a court may find it meaningless without direct reference to a specific violation. That said, a court theoretically could read the statute to grant a broad private right of action to those seeking to challenge existing agricultural regulations on other grounds. In this case, petitioners need not allege a violation of the prohibition in Section 2 of the EATS Act, but instead could use Section 3 to bring suit for other claims. If Section 3 were to be enacted on its own, and a judge were to find that the statute still has meaning, the necessary questions to determine whether it authorizes suit would be: (1) is the relevant product an “agricultural product”?; (2) is that product sold in interstate commerce?; and (3) does the regulation in question “affect[]” “any aspect” of that product’s production (including, plausibly, conditions even after preharvest)? None of these three requirements would pose a high hurdle. A plaintiff still would need to have Article III standing as well.

administrative agencies. Such a shift would upset the long-standing constitutional balance established by this nation's founders.

E. CONSTITUTIONAL ISSUES IN SECTION 3

Section 3 raises significant constitutional questions. As a threshold matter, it would appear to grant private parties an almost unlimited right to sue. However, plaintiffs still would need to satisfy requirements for standing under Article III. In addition, Section 3 of the Act raises serious Eleventh Amendment concerns.

1. ARTICLE III STANDING

A citizen suit provision such as Section 3 cannot grant standing in and of itself.⁶⁶ Plaintiffs still must meet standing requirements in order to bring suit in federal courts under Article III of the U.S. Constitution. Producers, trade associations, transporters, and distributors likely could make relatively straightforward claims of economic loss and establish standing. Consumers, though, might have a more difficult time demonstrating standing for purposes of Article III. Unlike producers, their injuries may be more speculative in nature. Some consumer injuries under the EATS Act might not warrant standing, such as a de minimis difference in the price of a product. Finally, alleged consumer injuries may tend to be more generalizable and therefore fail to meet the requirements of concrete and particular harm. Laborers bringing claims could have difficulty showing that a loss of employment is attributable to a particular law, especially if market conditions have changed, and their claims might fail with respect to redressability.

While Section 3 may provide private parties an open door into court, once there, they would face familiar hurdles with respect to meeting Article III standing requirements. These constitutional prerequisites cannot be overwritten by federal legislation.⁶⁷

2. ELEVENTH AMENDMENT CONCERNS

Section 3 of the EATS Act raises significant Eleventh Amendment concerns. The Eleventh Amendment to the U.S. Constitution prevents private citizens in one state from bringing suit directly against another state in federal court. The Supreme Court has interpreted the Eleventh Amendment to extend this same protection to states for claims brought directly without their consent by their own citizens.⁶⁸ Together, this doctrine is known as “state sovereign immunity.”⁶⁹ In Section 3, the EATS Act attempts to waive the rights of states not to be sued without consent and to allow private entities to exact equitable remedies and damages from them. Importantly, Section 3 also could create liability for state

66. *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560–61 (1992). In prior litigation, some opponents to the types of laws that the EATS Act aims to preclude have failed to meet the requisite conditions of Article III standing. *See, e.g., Missouri ex rel. Koster v. Harris*, 847 F.3d 646, 654 (9th Cir. 2017) (held that the facts alleged were inadequate to support Article III standing in challenge to a Prop 12-antecedent law, the California Egg Law).

67. *See Lujan*, 504 U.S. at 560–61.

68. “[T]he [Supreme] Court has upheld States’ assertions of sovereign immunity in various contexts falling outside the literal text of the Eleventh Amendment. In *Hans*, the Court held that sovereign immunity barred a citizen from suing his own State under the federal-question head of jurisdiction. The Court was unmoved by the petitioner’s argument that the Eleventh Amendment, by its terms, applied only to suits brought by citizens of other States.” *Alden v. Maine*, 527 U.S. 706, 727–28 (1999) (citing *Hans v. Louisiana*, 134 U.S. 1, 14–15 (1890)) (applying these rules to actions brought in state court as well).

69. “Sovereign immunity is the privilege of the sovereign not to be sued without its consent.” *Virginia Off. for Prot. & Advoc. v. Stewart*, 563 U.S. 247, 253 (2011).

and local officials charged with enforcement, potentially exposing them to extensive, expensive, and time-consuming litigation and subjecting them to injunction.

Whether Congress may abrogate state sovereign immunity depends on the constitutional basis on which it acts.⁷⁰ The EATS Act implicitly relies on Article I, Section 8, Clause 3 of the U.S. Constitution, colloquially known as the Commerce Clause, for its authority. As the Supreme Court has ruled, however, Congress may not use its authority under Article I to abrogate state sovereign immunity.⁷¹ This jurisprudence makes clear that Congress does not have the authority to subject states to suit from private citizens under the Commerce Clause.⁷² Accordingly, Section 3 of the EATS Act as applied to private parties bringing suit directly against states themselves likely is unconstitutional.

There are caveats to state sovereign immunity doctrine, though. Principally, state immunity does not extend to other sovereigns.⁷³ As a result, states are free to bring suit against one another for equitable relief and damage awards.⁷⁴ The Federal Government also is free to bring such claims.⁷⁵

Moreover, Section 3 could expand liability exposure for state and local officials. Although Section 3 does not specifically mention state or local officials, a reviewing court might interpret its language to include them within the private right of action in order to save the section from being found wholly unconstitutional under the Eleventh Amendment. Under such an interpretation, parties might be able to sue public officials in their official capacities to enjoin them from enforcing state law barred by the EATS Act.⁷⁶ Parties eligible to bring suit potentially even could include private entities who would be unable to sue the states themselves directly.⁷⁷ In lawsuits against state officials in their official capacities, however, only equitable remedies—not damages—would be

Under such an interpretation, parties might be able to sue public officials in their official capacities to enjoin them from enforcing state law barred by the EATS Act.

70. “A State may waive its sovereign immunity at its pleasure and in some circumstances Congress may abrogate it by appropriate legislation. But absent waiver or valid abrogation, federal courts may not entertain a private person’s suit against a State.” *Id.* at 253–54 (referencing *College Savings Bank v. Florida Prepaid Postsecondary Ed. Expense Bd.*, 527 U.S. 666, 675–676 (1999)).

71. “Even when the Constitution vests in Congress complete law-making authority over a particular area, the Eleventh Amendment prevents congressional authorization of suits by private parties against unconsenting States. The Eleventh Amendment restricts the judicial power under Article III, and Article I cannot be used to circumvent the constitutional limitations placed upon federal jurisdiction.” *Seminole Tribe v. Florida*, 517 U.S. 44, 72–73 (1996) (overruling the Court’s previous conclusion in *Pennsylvania v. Union Gas Co.*, 491 U.S. 1, 19 (1989), that “Congress has the authority to override States’ immunity when legislating pursuant to the Commerce Clause”).

72. “We have recognized that Congress may abrogate a State’s immunity when it acts under § 5 of the Fourteenth Amendment, but not when it acts under its original Article I authority to regulate commerce.” *Virginia Off. for Prot. & Advoc. v. Stewart*, 563 U.S. at 254 n.2 (citing *Seminole Tribe of Fla. v. Florida*, 517 U.S. at 59; 65–66).

73. “In ratifying the Constitution, the States consented to suits brought by other States or by the Federal Government.” *Alden*, 527 U.S. at 755 (citing *Principality of Monaco v. State of Mississippi*, 292 U.S. 313, 328–29 (1934)).

74. “[T]he Constitution contemplates suits among the members of the federal system as an alternative to extralegal measures.” *Alden*, 527 U.S. at 755–56 (recognizing that “the fear of private suits against nonconsenting States was the central reason given by the Founders who chose to preserve the States’ sovereign immunity”).

75. “A suit which is commenced and prosecuted against a State in the name of the United States by those who are entrusted with the constitutional duty to ‘take Care that the Laws be faithfully executed,’ U.S. Const., Art. II, § 3, differs in kind from the suit of an individual... Suits brought by the United States itself require the exercise of political responsibility for each suit prosecuted against a State, a control which is absent from a broad delegation to private persons to sue nonconsenting States.” *Alden*, 527 U.S. at 755–56.

76. *See Alden*, 527 U.S. at 756 (“[S]overeign immunity [does not] bar all suits against state officers,” but “[s]ome suits against state officers are barred by the rule that sovereign immunity is not limited to suits which name the State as a party if the suits are, in fact, against the State.”). Legislators likely are immune from suit, as the Supreme Court has “recognized that state legislators enjoy common-law immunity from liability for their legislative acts, an immunity that is similar in origin and rationale to that accorded Congressmen under the Speech or Debate Clause.” *Supreme Ct. of Virginia v. Consumers Union of U. S., Inc.*, 446 U.S. 719, 732 (1980) (citing *Tenney v. Brandhove*, 341 U.S. 367 (1951)).

77. “[W]hen a federal court commands a state official to do nothing more than refrain from violating federal law, [that official] is not the State for sovereign-immunity purposes. The doctrine is limited to that precise situation, and does not apply ‘when the state is the real, substantial party in interest.’” *Virginia Off. for Prot. & Advoc. v. Stewart*, 563 U.S. at 255 (quoting *Pennhurst State Sch. & Hosp. v. Halderman*, 465 U.S. 89, 101 (1984) (internal quotation omitted)) (discussing the state official exception to the sovereign immunity doctrine established in *Ex parte Young*, 209 U.S. 123 (1908)).

available.⁷⁸ As the Supreme Court has clarified, the “Eleventh Amendment’s protection of state sovereignty requires the state’s coffers to be shielded from suit.”⁷⁹ In their individual capacities, state and local officials might be subject to suit and payment of personal damages, but only in instances where a reviewing court found that they personally had acted unconstitutionally and unreasonably, outside the bounds of the qualified immunity that they enjoy when performing discretionary duties within their scope of employment.⁸⁰

Under the EATS Act, private parties would be able to proceed with claims against “a unit of local government” both for injunctive relief and damages unless the local governing body is an “arm of the State.”

Notably, the Eleventh Amendment’s sovereign immunity doctrine does not protect many forms of local government from lawsuits.⁸¹ Under the EATS Act, private parties would be able to proceed with claims against “a unit of local government” both for injunctive relief and damages unless the local governing body is an “arm of the State.”⁸² When determining whether an entity is a “arm of the state,” and therefore protected from suit, courts consider the status of the entity under state law, its degree of autonomy, and whether judgment resulting from the suit would come from the state treasury or affront

state dignity.⁸³ Municipal or county governments that are not arms of a state would not be protected by Eleventh Amendment immunity⁸⁴ and likely would be subjected to lawsuits under the EATS Act.

78. “The doctrine... does not apply...when the judgment sought would expend itself on the public treasury or domain, or interfere with public administration.” *Virginia Off. for Prot. & Advoc. v. Stewart*, 563 U.S. at 255 (quoting *Pennhurst State Sch. & Hosp. v. Halderman*, 465 U.S. 89, 101 n.11 (1984) (internal quotation omitted)).

79. *Edelman v. Jordan*, 415 U.S. 651, 666 (1974); *see also Virginia Off. for Prot. & Advoc. v. Stewart*, 563 U.S. at 256–57 (“Ex parte Young cannot be used to obtain an injunction requiring the payment of funds from the State’s treasury” (citing *Edelman*)).

80. *See Alden*, finding that “[e]ven a suit for money damages may be prosecuted against a state officer in his individual capacity for unconstitutional or wrongful conduct fairly attributable to the officer himself, so long as the relief is sought not from the state treasury but from the officer personally,” 527 U.S. at 757; *Anderson v. Creighton*, stating that “government officials performing discretionary functions [are generally provided] with a qualified immunity, shielding them from civil damages liability as long as their actions could reasonably have been thought consistent with the rights they are alleged to have violated... [W]hether an official protected by qualified immunity may be held personally liable for an allegedly unlawful official action generally turns on the ‘objective legal reasonableness’ of the action,” 483 U.S. 635, 638–39 (1987) (citations omitted).

81. *See Mt. Healthy City Sch. Dist. Bd. of Educ. v. Doyle*, 429 U.S. 274, 280 (1977) (“The bar of the Eleventh Amendment to suit in federal courts extends to States and state officials in appropriate circumstances, but does not extend to counties and similar municipal corporations” (citations omitted)); *see also Moor v. Alameda County*, 411 U.S. 693, 717 (1973) (footnote omitted) (finding that “a political subdivision of a State, unless it is simply ‘the arm or alter ego of the State,’ is a citizen of the State for diversity purposes”).

82. Local forms of government that can be said to be “arm[s] of the State” are eligible for Eleventh Amendment immunity. *See Mt. Healthy City Sch. Dist. Bd. of Educ. v. Doyle*, 429 U.S. at 280, stating that, “[t]he issue here thus turns on whether the [local governing body] is to be treated as an arm of the State partaking of the State’s Eleventh Amendment immunity, or is instead to be treated as a municipal corporation or other political subdivision to which the Eleventh Amendment does not extend. The answer depends, at least in part, upon the nature of the entity created by state law.” *See also Alden*, 527 U.S. at 756 (“[An] important limit to the principle of sovereign immunity is that it bars suits against States but not lesser entities. The immunity does not extend to suits prosecuted against a municipal corporation or other governmental entity which is not an arm of the State.”)

83. *See Hess v. Port Authority Trans-Hudson Corp.*, 513 U.S. 30, 52 (1994) (holding that a quasi-state, quasi-local port authority entity was not shielded by the Eleventh Amendment because it “is financially self-sufficient; it generates its own revenues, and it pays its own debts” and because an action “to recover damages [would] not touch the concerns—the States’ solvency and dignity—that underpin the Eleventh Amendment”).

84. “Political subdivisions exist solely at the whim and behest of their State, yet cities and counties do not enjoy Eleventh Amendment immunity.” *Hess*, 513 U.S. at 47 (1994) (internal quotation omitted).

VI. APPLICATION OF THE LEGISLATION

The EATS Act potentially could affect many types of laws and regulations across a broad spectrum of categories. Most of these relate to food and food production, while some govern other areas that fall within the legislation’s definition of agricultural products. As noted above, the EATS Act leaves open significant interpretation questions. Each of the areas of law below would face substantial uncertainty if the EATS Act were to pass, as would many others not listed here.

A. INVASIVE PEST & PLANT DISEASE PROTECTIONS

Almost every state imposes laws regulating the importation of agricultural products containing certain pests, diseases, or invasive species. Oftentimes, these regulations require treatment, inspection, certification, quarantine, or embargo of certain products entering the state. The EATS Act could prohibit these requirements, leaving producers more vulnerable to pests like the glassy-winged sharpshooter and the emerald ash borer and to diseases such as phony peach disease.

Historically, states and the Federal Government have shared the authority to impose quarantines to prevent the introduction and spread of harmful plant pests. Under the Plant Protection Act of 2000,⁸⁵ states are free to impose their own quarantines or regulations where no federal quarantine is in place.⁸⁶ Even where pests are under federal quarantine, states may further regulate or restrict their movement within the federal quarantine zone.

85. 7 U.S.C.A. § 7701 et seq.

86. 7 U.S.C.A. § 7756. For a complete list of federal domestic quarantines, see 7 C.F.R. §§ 301.1 to 301.99.

One pest that is regulated solely by state law is the glassy-winged sharpshooter. This insect causes Pierce’s Disease, which afflicts grape crops by interfering with the plant’s water collection system, ultimately causing the vine to die. The insects also can affect citrus trees, almonds, and other crops. Researchers have estimated that Pierce’s Disease costs California alone over \$100 million in annual damages to the grape and wine industry.⁸⁷ Accordingly, public spending to combat the disease is significant.⁸⁸ California and other states like Oregon, which also boast large wine industries, have implemented import restrictions on agricultural articles that may be carrying the pest—such as inspections, quarantines, and prohibitions on the interstate shipment of certain plants.⁸⁹ The EATS Act thus may interfere with those states’ ability to enforce such regulations. For example, under the EATS Act, a law requiring the preharvest treatment of agricultural products with pesticides to kill the sharpshooters prior to import would be an impermissible condition (although a postharvest treatment requirement might not be). Further, the EATS Act could prohibit an outright ban on the importation of infested agricultural products carrying the insect.

The EATS Act similarly could affect state and local regulation of products carrying *Xylella fastidiosa*, the bacteria that causes phony peach disease (“PPD”).⁹⁰ Trees infected with PPD show few symptoms but soon stop producing fruit altogether. Because treatment options for PPD are limited, efforts to prevent transmission are critical to reducing the spread of the disease.⁹¹ Alabama, Georgia, Louisiana, and other states have implemented regulations to protect fruit stocks from PPD.⁹² These PPD regulations might not survive challenges under the EATS Act.

State laws intended to prevent the transfer and spread of zoonotic and infectious disease could be one of the most significant casualties of the EATS Act. These regulations affect everything from avian influenza to African swine fever, salmonella, tuberculosis, Newcastle disease, anthrax, brucellosis, scabies, scrapie, rabies, pseudorabies, equine infectious anemia, and others.

B. ZONOTIC & INFECTIOUS DISEASE REGULATIONS

State laws intended to prevent the transfer and spread of zoonotic and infectious disease could be one of the most significant casualties of the EATS Act. These regulations affect everything from avian influenza to African swine fever, salmonella, tuberculosis, Newcastle disease, anthrax, brucellosis, scabies, scrapie, rabies, pseudorabies, equine infectious anemia, and others.⁹³

93. See [Appendix](#) below.

For instance, the EATS Act could affect poultry disease regulations, creating untimely regulatory disruptions during the severe and ongoing outbreak of highly pathogenic avian influenza. Avian influenza comes in various forms and affects domestic farmed poultry as well as over 100 species of wild birds.⁹⁴ In its more severe form, the virus causes between 90-100% mortality in domesticated poultry.⁹⁵ Currently, the United States is experiencing the most severe outbreak of highly pathogenic avian influenza,⁹⁶ with 47 states and over 58 million birds afflicted.⁹⁷ Outbreaks of avian influenza threaten farmers' livelihoods and public health, causing significant economic losses. For example, a major outbreak in 2015 cost an estimated \$3.3 billion in losses⁹⁸ and resulted in the destruction of more than 50 million birds.⁹⁹ The current outbreak already has cost the government over \$660 million and cost producers over \$1 billion.¹⁰⁰ Because highly pathogenic avian influenza is so destructive, transmission control measures are paramount to stopping its spread.

Most states have taken steps to protect their flocks from avian influenza by establishing disease control measures such as requiring pre-entry veterinary inspections, permits, quarantines, and testing regimes for live (preharvest) poultry imported from other states.¹⁰¹ Iowa, for example, has implemented a regulation mandating that “[n]o animal, including poultry or birds of any species, that is affected with, or that has been recently exposed to, any infectious, contagious or communicable disease or that originates from a quarantined area shall be shipped or in any manner transported or moved into Iowa, unless approved by the state veterinarian.”¹⁰² Such a restriction may run afoul of the EATS Act by placing a preharvest condition on imported products—namely, that birds not be exposed to avian influenza before transport. Iowa’s ban on birds originating from quarantined areas outside the state goes a step further. All poultry coming into Iowa must be inspected by a veterinarian prior to entry and accompanied by a certificate of veterinary inspection “on an official form of the state of origin”¹⁰³ or other approved substitute documentation.¹⁰⁴ For domestic fowl originating from an area affected by avian influenza, Iowa requires a pre-entry permit.¹⁰⁵ These requirements impose preharvest standards or conditions on imported poultry by requiring specific measures be taken before live birds may be brought into the state and thus could be prohibited under the EATS Act.

Similar to poultry importation restrictions, many states, including Iowa, regulate the importation of live swine by imposing pre-entry requirements.¹⁰⁶ These disease-control measures, which often include pre-entry veterinary inspections, certification, identification, and testing, could be prohibited if the EATS Act were enacted. Initially put in place to protect against the transmission of diseases like brucellosis and pseudorabies,¹⁰⁷ regulations governing the importation of swine in states like Iowa also could be an important tool in future efforts to contain and control the spread of African swine fever, if it reaches U.S. soil.¹⁰⁸ The EATS Act would jeopardize these state tools to protect local producers from devastating diseases such as avian influenza and African swine fever, ceding control to the Federal Government instead.

Iowa's sanitization requirements also may be called into question under the EATS Act. Iowa law provides that, "[a]ll stock cars and trucks used for hauling into the state of Iowa livestock (cattle, horses, sheep, goats, cervids, poultry, and swine) for feeding, breeding, or stock purposes must be cleaned and disinfected before such shipments of livestock are loaded."¹⁰⁹ The cleaning requirement is a "condition [imposed] on the preharvest production" that must "occur in another State" prior to importation of the "agricultural products" (here, "livestock and poultry") that are "sold or offered for sale in interstate commerce."¹¹⁰ As a result, the EATS Act additionally may block Iowa's livestock transportation sanitization requirements.

Bees are another example of livestock potentially threatened by the EATS Act. Honey bees contribute at least \$15 billion to the United States economy annually.¹¹¹ Dozens of crop varieties depend on bees for pollination, with the almond industry alone requiring the services of 1.4 million beehives annually.¹¹² Each year, bees are trucked across the country to pollinate various cash crops throughout the seasons.¹¹³ The same hive may be used to pollinate grapefruit in Florida, cherries in Washington, and avocados in California.¹¹⁴ Captive bee populations, however, are suffering significant losses due to disease.¹¹⁵

Nearly all states have imposed some form of regulation governing the interstate movement of bees.¹¹⁶ Most states require registration of apiaries, permits for moving bees and equipment interstate, certificates of inspection, movable-frame hives, quarantine of diseased apiaries, or outright prohibit the sale or transfer of diseased material.¹¹⁷ These requirements seek to limit and contain outbreaks of disease as

117. *Id.*

well as parasites such as American foulbrood that jeopardize the survival of beehives. Because bees are transported through interstate commerce many months out of the year, and because bees are necessary to the survival of many valuable crops, any restriction on a state's authority to regulate the importation of bees could have serious economic and food security consequences. Under the text of the EATS Act, the importation of bees could fall within its scope as either a preharvest condition on bees as an agricultural product or potentially indirectly as a preharvest condition on crops dependent upon bees.

Chronic wasting disease (“CWD”) is another area of concern. CWD is a degenerative neurologic disease, similar to mad cow disease, that affects farmed and wild deer and other cervids.¹¹⁸ The disease is fatal.¹¹⁹ Infected animals may experience symptoms that range from extreme weight loss to neurological problems such as stumbling and listlessness.¹²⁰ There is some evidence to suggest CWD may become transmissible to humans.¹²¹ CWD first was recognized in the U.S. in captive deer herds in the late 1960s and in wild deer in 1981.¹²² Since then, the disease has reached at least 29 states and 405 counties, as of March 2023.¹²³ CWD easily spreads among wild and captive populations, giving both farmers and hunters great cause for concern. States where CWD is present are feeling its impact.¹²⁴ Wisconsin lost over \$50 million from CWD throughout 2002-2003 in just the first year after the disease was discovered there.¹²⁵ More recent estimates calculate that from 2002-2015, Wisconsin lost at least \$96 million in hunter surplus value and \$17 million in lost hunting permit revenue.¹²⁶

Movement of infected cervids is the primary means through which CWD spreads. Currently, several states prohibit all importation of cervids, including Arkansas, Connecticut, and Massachusetts.¹²⁷ Dozens of other states impose import requirements and restrictions.¹²⁸ These state regulations include requirements such as import permits or written approval, certificates of veterinary inspection, or identification of each animal.¹²⁹ They also may include restrictions on importation based on conditions in the geographic area of origin, such as the status of CWD in that area, enrollment of the exporting state in an official CWD monitoring and certification program, or diagnosis of CWD in the originating herd or imported cervid.¹³⁰ All of these regulations could be interpreted as standards or conditions on preharvest production because they impose pre-entry requirements on imported live deer and other cervids, putting them squarely in jeopardy under the EATS Act.

118. Cervids are members of the family *Cervidae*, which includes hoofed, ruminant mammals such as deer, moose, and elk.

130. *Id.*

The EATS Act could have the perverse effect of prohibiting these state fish importation laws, undermining APHIS's federal deregulatory rationale and leaving local farmed fish populations vulnerable to disease.

Aquaculture and fish farming also could be impacted by the EATS Act. Over half of all states impose importation requirements on live fish moving in interstate commerce via measures such as permits or health inspection certifications.¹³¹ West Virginia, for example, requires pre-entry permitting and disease-free certification of fish and certain viable fish eggs.¹³² One aquatic disease of concern is viral hemorrhagic septicemia (“VHS”), which manifests itself through bleeding, bulging eyes, and open sores.¹³³ Because this disease can be transmitted by infected fish or through water,¹³⁴ states such as Illinois and Arkansas have implemented restrictions on live fish importation to prevent the transmission of VHS.¹³⁵ Following a VHS outbreak in 2006, the Animal and Plant Health

Inspection Service (APHIS) in the U.S. Department of Agriculture (USDA) published an interim federal rule restricting the interstate movement of live fish susceptible to VHS. In 2015, however, APHIS published a rule withdrawing that interim rule because it “had become duplicative with State regulations” and “could safely be removed as long as States maintain existing VHS regulations and other practices to reduce risk.”¹³⁶ The EATS Act could have the perverse effect of prohibiting these state fish importation laws, undermining APHIS's federal deregulatory rationale and leaving local farmed fish populations vulnerable to disease.

C. FOOD QUALITY & SAFETY REGULATIONS

If enacted, the EATS Act would jeopardize a variety of food safety and quality regulations currently in place—as well as ones policymakers might seek to implement in the future. Some of these regulations are designed to protect citizens from the sale of unfit goods, while others serve to protect key industries from scandal or sub-par sellers. Such state and local food regulations, however, could be prohibited under the EATS Act if they place preharvest standards or conditions on imported agricultural products. Examples of preharvest production standards plausibly within the scope of the EATS Act and affecting food quality and safety include state regulations governing fluid milk quality standards,¹³⁷ fish and shellfish sourcing,¹³⁸

135. See, e.g., ILL. ADMIN. CODE TIT. 17, PT. 875.50 (“a) It shall be unlawful to: 1) import VHS-susceptible species into the State of Illinois without a VHS-Susceptible Species Permit issued by the Department”); ARK. CODE R. § 002.01.1-35.11 (“It is unlawful to import, transport, or otherwise receive into Arkansas live fish or fertilized eggs from any Viral Hemorrhagic Septicemia Virus (VHSV)-positive state without a valid Fish Farm Health Inspection Permit issued by the Commission and in compliance with the provisions of the permit, the requirements in Addendum Chapter I1.00, and [other stated] requirements.”).

136. 80 Fed. Reg. 2285–6 (Jan. 16, 2015).

137. See, e.g., 25 TEX. ADMIN. CODE § 217.29 (“(a) All herds and additions thereto shall be tested and found free of tuberculosis and brucellosis before any milk therefrom is sold. All required tests in this section must be performed by a licensed veterinarian or a veterinarian in the employment of an appropriate state or federal agency.”).

138. See, e.g., GA. COMP. R. & REGS. 511-6-1-.04(2)(d)-(e) (restricting sources of fish and shellfish received for sale).

and wild mushroom safety.¹³⁹ The EATS Act also could affect certain state and local regulations on pesticides¹⁴⁰ and fertilizers.¹⁴¹ Further examples of food quality and safety regulations potentially affected by the EATS Act include restrictions on the use of antibiotics or growth hormones, soil or irrigation quality requirements, PFAS contamination thresholds, manure management practices, and limitations on genetic engineering and other technological processes.¹⁴²

D. FISHING REGULATIONS

Enactment of the EATS Act could negatively impact recreational and commercial ocean fishing. All fish and shellfish fall directly within the EATS Act's definition of "agricultural products," regardless of whether the animals are farm-raised or wild-caught.¹⁴³ States long have been afforded authority to regulate their coastal waters under the Submerged Lands Act. These areas, which generally extend 3 nautical miles from shore, are known as "state waters."¹⁴⁴ Under the United Nations Convention on the Law of the Sea, the U.S. Government has exclusive rights to regulate up to 200 nautical miles from its shoreline—known as the Exclusive Economic Zone ("EEZ").¹⁴⁵ Today, having given states control of waters from 0-3 nautical miles from shore, the Federal Government retains control of waters from 3-200 nautical miles off land. Fish harvested in the waters of one state and brought ashore in another state potentially could be considered "agricultural products" with "the production occur[ing] in another State."

A fishing vessel traveling seaward effectively could become an out-of-state producer if any of its catch was harvested in another state's waters or, possibly, in the federally controlled EEZ.¹⁴⁶ After securing its catch, when a fishing vessel crosses back over these territorial lines, it may become subject to laws of the state where it lands. The EATS Act would appear to prevent any state commercial or recreational fishing regulations that plausibly could affect preharvest production. For example, Texas fishing regulations explicitly state that their authority extends to "all aquatic life caught in the Exclusive Economic Zone (EEZ) and landed in this state for a recreational or commercial purpose."¹⁴⁷ If this law

139. See, e.g., MINN. R. 4626.0155 (mandating that "[a]ll wild mushroom species served in a retail food establishment must be obtained from sources where each mushroom is individually inspected and found to be safe by a certified mushroom harvester" and requiring written buyer specifications, certain records, and disclosure of risks to consumers); 010-3 WYO. CODE R. § 3-3 ("mushroom species picked in the wild shall be obtained from sources where each mushroom is individually inspected and found to be safe by an approved mushroom identification expert").

140. See, e.g., Beyond Pesticides, *Congress Asked to Help Stop Ecosystem Collapse in the Farm Bill by Preserving Local Authority to Restrict Pesticides* (June 26, 2023), <https://beyondpesticides.org/dailynewsblog/2023/06/congress-asked-to-help-stop-ecosystem-collapse-in-the-farm-bill-by-preserving-local-authority-to-restrict-pesticides/> (asserting that if the EATS Act were enacted, "it would overturn decades of precedent as well as prevent local governments from protecting their residents from hazardous chemicals in their environment... mak[ing] it virtually impossible to restore the basic local authority to protect public health and the environment, which has historically been vested in local governments").

141. See, e.g., ALA. ADMIN. CODE R. 80-1-6-.07 (special tags and labeling required for sale of fertilizer mixed with pesticides); 2 N.C. ADMIN. CODE 48A.1704–1705 (regulating certain articles including soil and soil amendments and requiring a certificate or permit in order to move those articles into the state from regulated areas).

142. Additional examples are included in the [Appendix](#) below.

143. "Agricultural products" includes... fish and shellfish." 7 U.S.C. § 1626.

144. Two states, Florida and Texas, were given authority to regulate out to 9 nautical miles from shore.

145. See Bureau of Ocean Management, *Federal Offshore Lands*, <https://www.boem.gov/Federal-Offshore-Lands/>.

146. While, the EATS Act applies to the regulation of preharvest production that "occurs in another State," there is no provision in its text to account for goods produced within areas of U.S. control that fall outside of the jurisdictional boundaries of the states. The EATS Act might apply in such circumstances. It more clearly would apply, however, to fish taken in one state and landed in another.

147. 31 TEX. ADMIN. CODE § 57.970.

were challenged under the EATS Act, a commercial fishing vessel potentially could return to Texas with its catch and not be bound by Texas law or even have anyone aboard with a Texas fishing license.¹⁴⁸ The EATS Act thus could disrupt a variety of commercial and recreational fishing regulations that relate to preharvest production—potentially ranging from equipment restrictions and licenses to fish or shellfish sourcing, species, and size restrictions.¹⁴⁹

E. HORSE SLAUGHTER LAWS

To date, federal attempts to entirely ban the slaughter of horses for meat have failed.¹⁵⁰ Although the interstate sale of horsemeat functionally is prohibited because federal funds may not be used to inspect the slaughter of horses,¹⁵¹ the *intrastate* slaughter of horses for meat still is permissible federally under the personal use and custom slaughter exemptions in the Federal Meat Inspection Act. Some states do ban such wholly intrastate slaughter of horses,¹⁵² and the EATS Act likely would leave these prohibitions undisturbed. The EATS Act, however, potentially would block state and local bans on the importation of horses intended for slaughter for human consumption. These precluded bans could include California's existing

horse importation prohibition, which makes it a felony “for any person to possess, to import into or export from the state, or to sell, buy, give away, hold, or accept any horse with the intent of killing, or having another kill, that horse, if that person knows or should have known that any part of that horse will be used for human consumption.”¹⁵³ By prohibiting the importation of certain horses (i.e. horses intended for slaughter), California's law places a preharvest condition on an out-of-state agricultural product that likely would be impermissible under the EATS Act. Further, if the EATS Act were enacted, states would be unable to adopt other types of regulations governing imported horses intended for in-state slaughter, such as laws requiring minimum

welfare or transport standards, as those likely would be preharvest production standards. The EATS Act thus plausibly could force California to allow the importation of horses for personal consumption slaughter and prevent other states from enacting similar measures in the future.¹⁵⁴

The EATS Act thus could disrupt a variety of commercial and recreational fishing regulations that relate to preharvest production—potentially ranging from equipment restrictions and licenses to fish or shellfish sourcing, species, and size restrictions.

By prohibiting the importation of certain horses (i.e. horses intended for slaughter), California's law places a preharvest condition on an out-of-state agricultural product that likely would be impermissible under the EATS Act.

148. Significant enforcement issues could follow if Texas were precluded from enforcing its fishing laws. Fishers seeking to skirt state restrictions could claim catches took place in federal waters or the waters of another state.

149. For example, 31 TEX. ADMIN. CODE § 57.990 et seq.

150. See, e.g., H.R.3355, 117th Cong. (died in committee, 2022), <https://www.congress.gov/bill/117th-congress/house-bill/3355/text>.

151. Consolidated Appropriations Act, 2023, Pub. L. No. 117-328, § 761 (2022).

152. See, e.g., 225 ILL. COMP. STAT. § 635/1.5.

153. CAL. PENAL CODE § 598C.

154. Legislation that would enact a prohibition on the transport of horses for slaughter for human consumption recently was passed by both chambers of the New York State Legislature. See N.Y. Senate Bill S2163B, “An act to amend the agriculture and markets law, in relation to prohibiting the slaughtering of horses for human or animal consumption,” <https://www.nysenate.gov/legislation/bills/2023/S2163/amendment/B>.

F. LABELING REGULATIONS

Although the sponsors of the EATS Act introduced the legislation with the stated intent of blocking sales restrictions linked with preharvest production practices such as Prop 12, the broad scope of the legislation's text potentially could sweep in other types of regulations such as labeling regulations. While the argument is less clear here than for sales restrictions, laws and regulations that mandate or ban the use of certain nomenclature on a product label based upon the method of production could be affected by the EATS Act if the regulation is conditioned upon a preharvest process. For instance, state and local regulation of kosher or halal certification on food labels could be within the scope of the EATS Act to the extent that the certified practices impose a standard on the welfare of the animal or, potentially, on the type of equipment used on the animal immediately prior to slaughter.

... state and local regulation of kosher or halal certification on food labels could be within the scope of the EATS Act to the extent that the certified practices impose a standard on the welfare of the animal or, potentially, on the type of equipment used on the animal immediately prior to slaughter.

Illinois is one such state that regulates the use of the terms “halal” and “kosher” on product labels.¹⁵⁵ Under those laws, it is a misdemeanor to “falsely represent any animal sold, *grown, or offered for sale to be grown in a halal way to become food for human consumption*”¹⁵⁶ or if a person “with intent to defraud, sells, or exposes for sale any meat or meat preparations and falsely represents the same to be kosher, whether such meat or meat preparations be raw or prepared for human consumption, or as having been prepared under and of a product or products sanctioned by the certifying organization or the supervising rabbi.”¹⁵⁷ Other states including Maryland,¹⁵⁸ New Jersey,¹⁵⁹ and New York¹⁶⁰ also have laws protecting kosher and halal food labels. The EATS Act could disrupt these religious food labeling laws, which help ensure that consumers following certain diets are protected from injury and fraud.

Other labeling regulations based on composition or preharvest treatment also could be prohibited as applied to imported products. For example, at least a dozen states have passed laws that restrict the use of meat nomenclature to certain products.¹⁶¹ In South Dakota, a food product labeled

155. See 410 ILL. COMP. STAT. § 637/5 et seq. (“the Halal Food Act”); 410 ILL. COMP. STAT. § 645/1 et seq. (“the Kosher Food Act”). In June, Illinois recently went further to protect access to appropriate religious food options, ensuring that individuals at schools and state-owned hospitals and penal institutions have access to kosher, halal, and other meals meeting their religious dietary restrictions. See HB3643, Illinois General Assembly (2023); 105 ILL. COMP. STAT. § 5/10-20.85; 105 ILL. COMP. STAT. § 5/34-18.82; 410 ILL. COMP. STAT. § 637/25; 410 ILL. COMP. STAT. § 645/1.5. Under these new laws, contracting vendors must certify compliance with the Kosher Food Act and the Halal Food Act. Although the argument is tenuous, these requirements might run afoul of the EATS Act, depending on where interpreting courts draw the boundary between “preharvest” and “harvest” as well as the precise conditions imposed by the religious certifying body and the reliance of the vendor on imported products.

156. 410 ILL. COMP. STAT. § 637/15 (emphasis added).

157. 410 ILL. COMP. STAT. § 645/1.

158. MD. CODE, COM. LAW § 14-3602 (“A person may not falsely represent, with intent to defraud, any food product or the contents of any package or container to be halal”); MD. CODE, COM. LAW § 14-904 (“A person may not sell or offer for sale, as kosher, kosher for Passover, or as being under rabbinical or other kosher supervision any packaged food product unless” certain conditions are met). Maryland also regulates the kosher labeling of mezuzah and tefillin. MD. CODE, COM. LAW § 14-905.

159. N.J. STAT. § 56:8-103 (“Any dealer who prepares, distributes, sells or exposes for sale any food represented to be halal shall comply with all requirements of the director, including, but not limited to, recordkeeping, labeling and filing”); N.J. STAT. § 56:8-66 (“Any dealer who prepares, distributes, sells or exposes for sale any food represented to be kosher or kosher for Passover shall comply with all requirements of the director, including, but not limited to, recordkeeping, labeling and filing”).

160. N.Y. AGRIC. & MKTS. LAW § 201-a (“All food and food products packaged in any container and sold or offered for sale as ‘kosher’ or ‘kosher for passover’ shall have a ‘kosher’ or ‘kosher for passover’ label affixed by the manufacturer or packer at its premises”); N.Y. AGRIC. & MKTS. LAW § 201-e (“All food and food products packaged in any container and sold or offered for sale as ‘halal’ shall have a ‘halal’ label affixed by the manufacturer or packer at its premises”). New York also imposes certification and recordkeeping requirements on purveyors of kosher and halal foods.

161. Nicole E. Negowetti, *Taking (Animal-Based) Meat and Ethics Off the Table: Food Labeling and the Role of Consumers As Agents of Food Systems Change*, 99 OR. L. REV. 91, 122 n.148 (2020).

as a poultry product is misbranded unless it falls within the state’s definition of poultry, which “includes anything containing meat intended for or capable of use for human consumption, that is derived, in whole or in part, from any domesticated bird intended for human consumption.”¹⁶² This law potentially imposes preharvest conditions within the scope EATS Act by imposing standards on an imported origin ingredient (e.g., requiring that a bird used in a poultry product be domesticated and intended for consumption by humans) in order for that product to be labeled and sold in a certain way. In this way, the EATS Act could preclude recently enacted state laws governing the labeling of meat analogue products.

Similarly, labeling laws that require disclosure of specific preharvest production processes or conditions might fall within the EATS Act’s prohibition if a court were to interpret its provisions broadly. Laws that could be precluded under such an interpretation might include requirements to disclose on agricultural product labels the application of certain pesticides or chemicals or future label regulations related to the use of novel processes.¹⁶³

G. NARCOTICS LAWS

Many medicinal and recreational drugs fall within the definition of agricultural products incorporated into the EATS Act.¹⁶⁴ Because drugs of plant-based origin would qualify as agricultural products in their raw forms, the EATS Act may prohibit states from regulating them.¹⁶⁵ While federally scheduled drugs may remain unaffected, the EATS Act unintentionally could force states to permit the importation of drugs that only are banned at the state or local level, including those currently under federal review.¹⁶⁶

Drug laws the EATS Act could affect may include those criminalizing possession of certain drugs. For example, several states that currently ban the plant *Mitragyna speciosa*, commonly known as “kratom,” could be forced to permit the drug under the EATS Act, at least when imported. Kratom is a tropical evergreen tree whose leaves contain opioid properties that make it a popular recreational drug.¹⁶⁷ Kratom, which the U.S. Food and Drug Administration (FDA) previously intended to schedule in 2016, since has been designated a “drug of concern.”¹⁶⁸ In 2018, the FDA found that “deaths associated with the use of kratom”

162. S.D. CODIFIED LAWS § 39-4-26.

163. See, e.g., 2 N.C. ADMIN. CODE 48C.0127 (“(b) Seed treated with a mercurial or similarly toxic substance, if any amount remains with the seed, shall be labeled to show a statement such as ‘Poison,’ ‘Poison Treated,’ or ‘Treated with Poison’” and “(c) Seed treated with other harmful substances (other than mercurials or similarly toxic substances), if the amount remaining with the seed is harmful to humans or other vertebrate animals, shall be labeled to show the appropriate toxicity category signal word (i.e. danger, warning, caution) in type no smaller than eight points, followed by the statement ‘Do not use for food, feed, or oil purposes.’”). Seeds are agricultural products themselves, but such laws also may be considered as preharvest standards or conditions on other products given that seeds are a necessary crop input. As discussed throughout this report, it is difficult to determine where reviewing courts might draw interpretive boundaries around the unwieldy text of the EATS Act in its current form.

164. The definition of agricultural products employed by the EATS Act is broad enough that it may include many other drugs, medicines, and vaccines as “processed and manufactured products [thereof].” Cornstarch and other agricultural products commonly are used as inactive ingredients in oral medications. While many of these items are federally regulated, some are not. To the extent that a regulation affects the preharvest production of such a product or its agricultural input ingredients, the EATS Act could preclude it.

165. 7 U.S.C. § 1626.

166. See discussion of subsection 2(b) *supra* for analysis of the EATS Act application to a total product ban.

167. Megan Rech, et al., *New Drugs of Abuse*, 35 PHARMACOTHERAPY 2 at 189 (Dec. 4, 2014), <http://onlinelibrary.wiley.com/doi/10.1002/phar.1522/full>.

168. Drug Enforcement Administration, 81 Fed. Reg. 70652, Withdrawal of Notice of Intent to Temporarily Place Mitragynin and 7 Hydroxymitragynin into Schedule 1 (Oct. 13, 2016), <https://www.federalregister.gov/documents/2016/10/13/2016-24659/withdrawal-of-notice-of-intent-to-temporarily-place-mitragynin-and-7-hydroxymitragynin-into>.

were increasing.¹⁶⁹ In the wake of this increase, states including Illinois, Wisconsin, and Vermont have implemented bans or partial bans on the substance, all of which the EATS Act potentially could prohibit.¹⁷⁰

Similarly, the EATS Act could force states to permit imported *salvia divinorum* (“salvia”), a controversial hallucinogenic drug derived from plant leaves. This drug has survived several attempts at federal regulation but is banned or partially banned in at least 29 states.¹⁷¹ These criminal laws, often passed in response to the deaths of persons found to have salvia in their system, could be prohibited by the EATS Act. Just as California would be unable to stop certain eggs from being sold in the state, Iowa likely would be unable to prohibit the sale of certain imported hallucinogenic drugs like salvia.¹⁷² Generally speaking, states are the first to act with respect to regulating risks posed by new drugs given the burden of federal procedural requirements. Frequently, drug legislation looks similar to an arms race, with manufacturers constantly making slight adjustments to drug formulas to avoid each new regulatory restriction. The EATS Act could restrain states from acting alone and as laboratories of democracy.¹⁷³ Under the EATS Act, states trying to address the impacts of narcotics in their communities may have their hands tied—becoming more reliant on less nimble federal agencies and ultimately be left to wait for federal action.

Further, if the Federal Government were to de-schedule currently regulated plant-based substances in the future, states might be prevented by the EATS Act from regulating the importation of those drugs from states that permit their production. For example, if the Federal Government de-scheduled marijuana, the EATS Act could force states that otherwise prohibit marijuana products to allow importation of the drug from states that permit production.

Additionally, states could lose their ability to regulate the preharvest production of agricultural inputs into vitamins, supplements, and medicines. Under the EATS Act, states may risk suit for their regulatory actions unless every state with producers of any affected products adopts identical regulations simultaneously. This result may hold true even when states adopt regulations recommended by federal agencies such as the U.S. Food and Drug Administration. Such a degree of simultaneous legislative coordination and unanimity among the states would be without precedent.

H. PROCUREMENT REGULATIONS

Another category of regulations the EATS Act could affect are those that place conditions or incentives on which products a purchaser may buy. Just as the EATS Act would limit restrictions on sales of imported agricultural products, the EATS Act also could preclude restrictions on purchasing that could be construed as involving the preharvest production of imported products. Specifically, state and local procurement laws, as well as any “standards or conditions,” that direct the purchasing choices of public

169. See FDA, *Statement from FDA Commissioner Scott Gottlieb, M.D., on the agency's scientific evidence on the presence of opioid compounds in kratom, underscoring its potential for abuse* (Feb. 6, 2018), <https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm595622.htm>.

170. See 720 ILL. COMP. STAT. § 642/5; WIS. STAT. § 961.14; 13 VT. CODE R. 140 011:7. Kratom has been proposed for pre-review for potential federal scheduling. See 86 Fed. Reg. 39038–9 (July 23, 2021).

171. See [Appendix](#) below.

172. Iowa currently bans salvia. See IOWA CODE § 124.204.

173. *New State Ice Co. v. Liebmann*, 285 U.S. 262, 311 (1932) (“It is one of the happy incidents of the federal system that a single courageous state may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country.”).

entities could be precluded.¹⁷⁴ For example, Louisiana requires its procurement officers to purchase Louisiana agricultural products unless there are imported products available that meet the same criteria, are better or higher quality, and are less expensive than the comparable Louisiana products.¹⁷⁵ In other words, out-of-state producers will lose out on government sales to in-state producers in Louisiana if their products are not of the same or higher quality. In this sense, Louisiana may be imposing standards or conditions on the preharvest production of imported goods. While the Louisiana statute governs only public purchasers, such purchasers may constitute a large share of the market for particular products given the food needs of public schools and state-run facilities such as prisons, government offices, and hospitals. If enacted and upheld, the EATS Act could remove procurement preferences for in-state agricultural producers like those in Louisiana.

Procurement regulations and policies potentially precluded by the EATS Act could extend much further than in-state producer preferences by voiding state and local preferences for products from women, minority, and veteran-owned businesses. For example, cities like Houston and counties like Dallas maintain policies that prioritize or set procurement goals for purchases from small businesses, including local businesses and qualifying women-owned and minority-owned businesses.¹⁷⁶ Iowa sets procurement goals for purchases from certain targeted small businesses, including businesses owned by service-disabled veterans.¹⁷⁷ Under the EATS Act, qualifying veterans could lose this procurement preference.

I. LICENSING, PERMITTING, AND RECORDKEEPING REQUIREMENTS

Many industries require sellers or producers to be licensed. States impose licensing requirements for a variety of reasons, such as to ensure safety standards are being met, to track the supply chain of goods sold within the state, or to protect the market from unfit producers. Oftentimes, these requirements work as part of a larger regulatory scheme. For instance, Kansas requires out-of-state pet distributors to obtain a license from the state to sell their imported products there.¹⁷⁸ On the licensing application, distributors are asked to disclose prior convictions for “any crime relating to theft or cruelty to animals.”¹⁷⁹ It is unclear how reviewing courts might interpret “preharvest production” and “agricultural products” (e.g. if raised on a “farm”) as applied to pets such as dogs and cats. Broadly, however, the EATS Act could force states to relinquish control over permitting, licensing, and regulating

174. As discussed in subsection 2(b) above, the EATS Act does not define “standard” or “condition.” As a result, either term could include state and local standards or policies for procurement contracts.

175. LA. STAT. § 39:1604(B). “[E]ach procurement officer, purchasing agent, or similar official who procures or purchases agricultural or forestry products, including meat, seafood, produce, eggs, paper or paper products under the provisions of this Chapter shall procure or purchase Louisiana products provided all of the following conditions are met: (1) The bidder certifies in the bid submitted that the product meets the criteria of a Louisiana product. (2) The product is equal to or better than equal to other products. (3) The cost of the Louisiana product shall not exceed the cost of other products by more than ten percent, except as otherwise provided in this Chapter as a specific exception.”

176. See City of Houston, Office of Business Opportunity, Policies and Procedures 7–8 (Feb. 2, 2022) <https://www.houstontx.gov/obo/docsandforms/OBO-Policies-and-Procedures-20220202.pdf>; Dallas County Purchasing Manual, 76–77 (Sept. 7, 2022) <https://www.dallascounty.org/Assets/uploads/docs/purchasing/Purchasing-Manual-Revised-2022.pdf>. Because the term “standard or condition” is undefined in the EATS Act, such municipal policies may fall within its scope.

177. “Every agency, department, commission, board, committee, officer, or other governing body of the state shall purchase goods and services supplied by small businesses and targeted small businesses in Iowa.” IOWA CODE § 73.16(1). “Of the total value of anticipated procurements of goods and services under this subsection, an additional goal shall be established to procure at least forty percent from minority-owned businesses and forty percent from female-owned businesses and forty percent from service-disabled veteran-owned businesses, as defined in section 73.14, that are targeted small businesses.” § 73.16(2)d.

178. KAN. STAT. § 47-1734.

179. See Kansas Department of Agriculture, 2022-2023 Out-Of-State Distributor License application form, <https://agriculture.ks.gov/docs/default-source/rc-ah-afi-documents/ah---out-of-state-distributor.pdf?sfvrsn=13>.

imported products, at least as those conditions relate to “preharvest production” and exceed the laws in effect in the place of production.¹⁸⁰

States also could be prevented from requiring recordkeeping related to preharvest production practices of imported agricultural products. The types of records required by some states that may be affected could include those related to safety standards, animal or plant health, sanitization, production conditions, or other aspects of agricultural production.¹⁸¹ Such recordkeeping requirements help states to ensure that agricultural products come from reputable and legal sources, but could face threat of preclusion under the EATS Act.

180. The EATS Act potentially could affect other types of regulations on pets, such as the retail sales bans passed by states like California, Maryland, and New York, as well as by hundreds of municipalities. *See, e.g.*, CAL. HEALTH & SAFETY CODE § 122354.5; MD. CODE REGS. BUS. REG. 19-703(A); N.Y. GEN. BUS. LAW § 753-F.

181. *See, e.g.*, 8 CODE COLO. REGS. § 1203-6:15; MINN. STAT. § 21.84; MISS. CODE § 75-40-109; 4 TEX. ADMIN. CODE § 54.9; VT. STAT. TIT. 6, § 4028.

VII. CONCLUSION

If enacted, the EATS Act would curtail the ability of state and local governments to regulate the production and sale of agricultural products—potentially nullifying over a thousand state laws and likely many more. The EATS Act would have widespread and unknown effects extending far beyond consumers and the agricultural industry. Significant questions are left open by the language of the EATS Act, and each of these unresolved questions has the potential to determine the fate of entire industries, billions of dollars of investment, and the flow of interstate commerce. Even for producers who initially might benefit from the EATS Act, this uncertainty and disruption could be extensive.

While some agricultural producers may face less oversight as a result of the EATS Act, those same producers could suffer unintended negative consequences from the federal legislation. Some of the regulations potentially precluded by the EATS Act exist to help producers by reducing the transmission of diseases and pests that threaten livestock and crops. Other forms of regulation, such as licensing, protect the industry as a whole by preventing sub-par producers from undermining its integrity. The same is true of quality control measures that safeguard the industry against lost business and public relations problems resulting from incidents such as outbreaks of foodborne illness. Consumer confidence could suffer insofar as it is linked to the perception of inadequate industry regulation. Further, in-state producers, veterans, and other small business owners who benefit from current government procurement regulations could see their investments and customer bases stripped away. If the EATS Act were adopted, producers who have made significant investments in updating infrastructure in response to state measures such as Prop 12 could see the economic value of those investments plummet, without receiving compensation for their losses.

Under the EATS Act, the benefit of potentially lower prices on some goods could be offset by increased public health and safety risks. In some areas, the EATS Act threatens to create regulatory voids or regulatory ceilings where none existed before, leaving entire sections of industries unregulated. A number of laws that the EATS Act could block were drafted for the benefit of consumers. Without these protections, product quality, transparency, and safety may suffer. The majority of laws and regulations potentially prohibited by the EATS Act, however, were enacted to safeguard agricultural production itself. Regulations related to the importation of livestock and plants exist to protect producers from costly diseases and pests. The prohibition of these regulations by the EATS Act could jeopardize entire sectors of the agricultural economy and threaten the livelihoods of local producers.

If the EATS Act were to become law, it could tip the balance of federalism, shifting agricultural oversight away from the states toward federal administrative agencies and the federal judiciary. USDA and FDA, among others, would be tasked with filling the regulatory holes left by the state and local laws

that the EATS Act would prohibit. This shift could trigger new federal regulation, and there could be significant federal budgetary costs associated with this transfer of regulatory authority from the states to federal agencies.

Congress and federal agencies historically have been slower to act than state and local governments regarding a large swath of regulatory categories, but especially those involving public health, safety, and welfare. The lag time created by removing agricultural oversight from state control could pose considerable risks with respect to issues of public safety, outbreaks of disease, and even harmful drugs. Under the EATS Act as written, state and local governments could be prevented from trying to act in times of crisis, such as during a prospective outbreak of African swine fever or the current severe and ongoing outbreak of highly pathogenic avian influenza. While laws might become more consistent across jurisdictions under the EATS Act, that lowest common denominator consistency would come at the expense of states and local governments being able to protect the health and safety of their citizens and the livelihoods of their farmers.

The federal judiciary would be responsible for answering the numerous, significant questions surrounding the constitutionality of the EATS Act and the interpretation of its provisions. Though much about EATS remains uncertain, the legislation is sure to spawn substantial litigation through its citizen suit provision, which could subject state and local governments to innumerable lawsuits. With over a thousand state and local agricultural laws and regulations potentially prohibited by the EATS Act—each susceptible to challenge by any number of parties—the federal court system could be overwhelmed.

The EATS Act itself also could face a number of legal challenges, particularly under the Tenth and Eleventh Amendments. These challenges could contest the Act's constitutionality, seek to limit its authority, and answer crucial questions that surround its scope, interpretation, and application. It may be years, however, before courts are able to provide a functional understanding of the EATS Act. Even then, federal courts in different circuits could reach contrary conclusions about the EATS Act's provisions—resulting in circuit splits and fractured jurisprudence that further would undermine the regulatory certainty vital both to governing bodies charged with implementation and to agricultural producers across the United States.

The agricultural industry has undergone rapid change in recent years with the advent of new technology, genetic modification of crops, and other innovations. The EATS Act comes at a critical moment when production methods are poised to enter an era of even more rapid change. The EATS Act has the potential to push state and local governments entirely out of the policy arena both in regulating and safeguarding new methods. The EATS Act thus may limit the ability of states to protect the health and safety of their citizens with respect to these emerging technologies.

The laws and regulations discussed in this report are only a preliminary assessment of the scope and impact of the EATS Act. See the index appended below for more examples of laws and regulations that the EATS Act potentially could affect.

APPENDIX

The following state laws and regulations are examples of standards and conditions that could be prohibited under the EATS Act. These examples are not exhaustive and reflect the substantial ambiguity around the scope of the EATS Act. They are listed below in two orders of arrangement: first by state and then by regulatory purpose.

State laws and regulations potentially affected by the EATS Act, listed by state

State	Law/Regulation Potentially Impacted	Industry	Agricultural Product	Regulation Type	Purpose	Description
AK	Alaska Admin. Code tit. 11, § 35.010	Livestock	Bees	Certification	Disease/Pest Prevention	Requirement that all bees entering the state must be free from bee disease
AK	Alaska Admin. Code tit. 11, § 35.020	Livestock	Bees	Importation	Disease/Pest Prevention	Importation requirements for bees - health certificate, notification, and other requirements
AK	Alaska Admin. Code tit. 18, § 36.010	Live Animals	Live Animals	Importation	Disease/Pest Prevention	Importation requirements for live animals - permit required for listed species
AK	Alaska Admin. Code tit. 18, § 36.015	Live Animals	Live Animals	Importation	Disease/Pest Prevention	Importation requirements for live animals - health certificate or certificate of veterinary inspection requirements
AK	Alaska Admin. Code tit. 18, § 36.105	Livestock	Equines	Importation	Disease/Pest Prevention	Importation requirements for equines - health certificate or certificate of veterinary inspection, equine infectious anemia
AK	Alaska Admin. Code tit. 18, § 36.115	Livestock	Cattle, Bison, Yak	Importation	Disease/Pest Prevention	Importation requirements for cattle, bison, yak - health certificate or certificate of veterinary inspection, brucellosis, tuberculosis, anaplasmosis, bluetongue, trichomoniasis
AK	Alaska Admin. Code tit. 18, § 36.125	Livestock	Goats	Importation	Disease/Pest Prevention	Importation requirements for goats - health certificate or certificate of veterinary inspection, identification, scrapie, brucellosis, tuberculosis, ectoparasites, Mycoplasma ovipneumoniae
AK	Alaska Admin. Code tit. 18, § 36.135	Livestock	Sheep	Importation	Disease/Pest Prevention	Importation requirements for sheep - health certificate or certificate of veterinary inspection, identification, scrapie, brucellosis, ectoparasites, Mycoplasma ovipneumoniae, bluetongue
AK	Alaska Admin. Code tit. 18, § 36.145	Livestock	Swine	Importation	Disease/Pest Prevention	Importation requirements for swine - health certificate or certificate of veterinary inspection, brucellosis, pseudorabies, garbage feed ban
AK	Alaska Admin. Code tit. 18, § 36.165	Livestock	Poultry, Hatching Eggs	Importation	Disease/Pest Prevention	Importation requirements for poultry and hatching eggs - health certificate or certificate of veterinary inspection
AK	Alaska Admin. Code tit. 18, § 36.175	Livestock	Cervids	Importation	Disease/Pest Prevention	Importation requirements for cervids - health certificate or certificate of veterinary inspection, brucellosis, tuberculosis, chronic wasting disease
AK	Alaska Admin. Code tit. 18, § 36.185	Livestock	Camelids	Importation	Disease/Pest Prevention	Importation requirements for camelids - health certificate or certificate of veterinary inspection, identification, brucellosis, tuberculosis, ectoparasites
AL	Ala. Admin. Code r. 80-1-6-.07	Fertilizer	Soil and Fertilizer	Labeling	Consumer Protection	Special labeling required for fertilizer containing economic poisoning
AL	Ala. Code § 13A-12-214.1	Drugs	Salvia	Prohibition	Consumer Safety	Recreational drug ban - salvia
AL	Ala. Admin. Code r. 220-2-.26	Live Animals	Live Animals	Importation	Disease/Pest Prevention	Restrictions on possession, sale, importation and/or release of certain animals and fish
AL	Ala. Admin. Code r. 80-10-11-.04	Livestock	Bees	Importation	Disease/Pest Prevention	Importation requirements for bees
AL	Ala. Admin. Code r. 80-10-11-.05	Livestock	Bees	Importation	Disease/Pest Prevention	Importation requirements for bees
AL	Ala. Admin. Code r. 80-10-14-.04	Plants	Plants	Importation	Disease/Pest Prevention	Noxious weed restrictions
AL	Ala. Admin. Code r. 80-10-15-.01	Forestry	White Pines	Importation	Disease/Pest Prevention	Pine shoot beetle restrictions
