1986

EXECUTIVE COMMITTEE:

Members: C. C Berg, C. E Bosworth, J. T. P. de Bruijn, Cl. Cahen, A. Dias Farinha, E. van Donzel, J. van Ess, F Gabrieli, E García Gómez, A. K. S Lambton, G. Lecomte, T. Lewicki, B. Lewis, Fr Meier, Ch Pellat, F. Rosenthal, F. Rundgren, A. L. Udovitch, F. C. Wiedner.

Associated members: Naji al-Asil, A. S Hazmee Ansari, Halil Inalcik, Ibrahim Madkour, S. H Nasr, M. Talbi, E Tyan

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government, and from Mr Gerald L. Parsky.

The articles in this volume were published in double fascicules of 128 pages, the dates of publication being:

1979: Fascs 79-80, p. 1-128
1980: Fascs 81-84, p. 129-384
1981: Fascs 85-86, p. 385-512
1982: Fascs 87-88, p. 513-640
1983: Fascs 89-92, p. 641-896
1984: Fascs 93-94, p. 897-1024
1985: Fascs 95-96, p. 1025-1263

ISBN 90 04 07819 3

PRINTED IN THE NETHERLANDS

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the list denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

Ihsan Abbas, American University, Beirut 553
Z. Abramowicz, University of Cracow 723, 767
Aziz Ahmad, University of Toronto 6
S. Maqbul Ahmad, University of Kashmir, Srinagar 938

ADDENDA AND CORRIGENDA

VOLUME I

P. 972b, **AL-BALĀDHURĪ**, *add to Bibliography*. Khalīl Athamina, *The sources of al-Balādhurī's* Ansāb al-ashrāf, in *JSAI* v (1984), 237-62

VOLUME II

P. 1a, **ČAGHĀNIYĀN**, *add to Bibliography* C. E. Bosworth, *The rulers of Chaghāniyān in early Islamic times*, in *Iran, Jnal. of the Brit. Inst. of Pers. Studies*, XIX (1981), 1-20

P. 75b, **DADALDGHLU**, *add to Bibliography* K.-D. Wannig, *Der Dichter Karaca Oğlan. Studien zur türkischen Liebeslyrik*. Freiburg i. Br. 1980 (Studien zur Sprache, Gesch. und Kultur d. Türkvolker, I).

P. 571bf., **DJUDDA**, *see now* G. R. Hawting, *The origin of Jadda and the problem of al-Shu'ayba*, in *Arabica* XXXI (1984), 318-26 who finds no sound evidence that Djudda existed in pre-Islamic times or that the exact location of its predecessor as the port of Makka, al-Shu'ayba, can be pinpointed with any certainty

P. 585a, **DJUGHRĀFIYĀ**, l. 5, *instead of* 56/1166 *read* 561/1166

P. 720a, **EXISTENCE**, *to reference add and* ADHIYYA.

P. 840b, **FATHPŪR-SĪKRĪ**, *add to Bibliography* S. A. A. Rizvi and V. J. A. Flynn, *Fathpur-Sikri*, Bombay 1975.

VOLUME III

P. 227b, **AL-ḤARRA**, *add to Bibliography* M. J. Kister, *The Battle of the Harra. Some socio-economic aspects*, in *Studies in memory of Gaston Wiet*, ed. M. Rosen-Ayalon, Jerusalem 1977, 33-49.

P. 679a, **IBN ʿABD AL-ẒĀHIR**, II, 19-24 from bottom, *instead of the sentence beginning* He composed the genealogy of al-Ḥākim . . . *read* He composed the genealogy of al-Ḥākim, which was confirmed by the *ḥāfiẓ*, and read it in the assembly of dignitaries, he also composed the *ʿahd* of al-Nāṣir Kalāwūn (*q.v.*), see Kalkashandī, *Ṣubḥ al aʿshā*, X, 116 ff.

VOLUME IV

P. vii, l. 24, *instead of* J. W. Allen . . . 1105 *read* [J. Allan, London], 1105

l. 19 from below, *instead of* Princeton University *read* Hebrew University, Jerusalem

P. xi, *instead of* Taeschner . . . Gothe 1926 *read* Taeschner, *Wegenetz* = Franz Taeschner, *Das anatolische Wegenetz nach osmanischen Quellen*, 2 vols., Leipzig 1924-6.

P. 118b, **ISHĀLIYA**, *add to Bibliography* *Crónica del Moro Rasis*, ed. D. Catalán and María Soledad de Andrés, Madrid 1974, 91-6, 305-6. Ibn Ḥazm, *Djamharat al-ansāb*, Cairo 1962, index. Ibn al-Khaṭīb *Aʿmāl* index

P. 237b, **AL-ISKANDARIYYA**, *add to Bibliography* Numerous pieces of information about the working of the port of Alexandria are given in the *Minhādj* of al-Makhzūmī, in the parts translated and commented upon by C. Cahen, *Douanes et commerce dans les ports méditerranéens de l'Égypte médiévale*, in *JESHO* (1965), reproduced in *Euro, Makhzūmiyyāt*, Leiden 1978. Furthermore, the author called al-Nuwayrī, Muḥammad b. Ḳāsim, author of the *Ilmām al-ʿilm*, should be clearly distinguished from his homonym, the celebrated author of the *Nihāya*. The *Ilmām*, written in regard to the attack on Alexandria by Peter of Cyprus in 1367 and from which come the extracts studied in the articles ed. Combes cited in the *Bibl.*, has now been edited by A. S. Atiya in 4 vols. in the Haydarābād Series, 1968-72.

P. 322b, **KAʿBA**, *add to Bibliography*: G. R. Hawting, "*It were not ordered with entering* vi *but only with circumambulating it.*" Hadīth *and* fiqh *on entering the Kaʿba*, in *BSOAS* xlvii (1984), 228-42.

P. 471b, **KALAM**, *add to Bibliography*: C. E. Bosworth, *A medieval Islamic prototype of the fountain-pen?*, in *JSS* xxvi (1981), 229-34.

P. 501b, **AL-KĀLĪ**, l. 2, *instead of* 189 *read* 289

ll. 10-12, *instead of* from memory . . . into account *read* from memory in his new home, or he made critical observations and commentaries, following the Tirāḳī tradition which he knew, upon

l. 23 from below, *after* 1392/1972 *add* (cf. *MMM*[4] xx/2 (1974), 49-130)

P. 545b, **KANNANŪR**, *add to Bibliography* G. Bouchon, *Mamale de Cananor, un adversaire de l'Inde portugaise (1507-1528)*, Hautes études islamiques et orientales d'histoire comparée 7, Paris 1975

P. 599a, **KARADJA OGHLAN**, *add to Bibliography* K.-D. Wannig, *Der Dichter Karaca Oğlan. Studien zur türkischen Liebeslyrik*, Freiburg i. Br. 1980 (Studien zur Sprache, Gesch. und Kultur d. Türkvölker, I).

P. 733b, **KASRAWĪ TABRĪZĪ**, *add to Bibliography* E. Jung, *Ahmad Kasravi. Ein Beitrag zur Ideengeschichte Persiens im 20. Jahrhundert*, Diss. phil. Freiburg i. Br. 1976.

P. 757a, **KATIB**, l. 24, *instead of* M. Kanter *read* M. Carter

P. 772b, **KATHAN**, l. 35 from below, instead of κεδρίν, read κεδρίν, instead of *huwya* read *hadriyā*

P. 814a-b, **KAY KĀʾŪS B. ISKANDAR**, last para. and *Bibl.* Five completely independent Old Ottoman versions of the *Kābūs nāma* have in fact survived, the best known of which is that of Mecdjumcı Ahmed (*q.v.*). The version at Kazan in 1882, 1889, etc. (and not in 1298/1880-1) is not by this last Ottoman author, but is a version in what is called by H. F. Hofman (*Turkish literature, a bio-bibliographical survey*, Section III, Part 2, v. 6, p. 65) "Old Tatar", possibly via an Ottoman intermediary.

P. 870[b], **KEMÂKH** *add to Bibliography* R H Ünal, *Monuments saljûqides de Kemah (Anatolie orientale)*, in *REI*, xxxv (1967), 149-72

P. 902[b], AL **KHADIR**, *add to Bibliography* H. Schwerbaum in *Fabula*, iii (1959), 51 ff.

P. 910[a], **KHᶜÂF**, *add to Bibliography* J. Aubin *Un tardon qâhsiant de l'époque timouride*, in *REI*, xxxv (1967), 183-216

P. 914[a], **KHAFP**, *add to signature* and Ö Melnardus.

P. 982[a], AL-**KHALÎL** B **AḤMAD**, l 30 from below, *instead of* AL-FARÂHIDÎ *read* AL-FARÂNIDÎ
l. 17 from below, instead of *Falkneriteratur* read *Falknerteliteratur*

VOLUME V

P 842b, **KIBLA**, l. 5: al-Djaghmīnī lived ca 628/1202-29, since, according to Ḥādjdjī Khalīfa (though not in the printed versions of the *Kashf al-ẓunūn*), this was the date of composition of his treatise on astronomy

P 852a, and formula from bottom: the quantity Cos φ_M is to be multiplied by the preceding quotient and the product is to be added to Sin φ_M Sin φ

P 853b, l. 8, *before* $\frac{\text{Cos } \varphi_M \text{ Cos } \Delta L}{R}$ *insert* =

l. 10, *before* $\frac{\text{Sin } \varphi_M \text{ Sin } \varphi}{R}$ *insert* =

l. 15, *before* $\frac{\text{Cos } \varphi_M \text{ Cos } \Delta L}{R}$ *insert* =

ll. 16 and 17, *instead of* OMf *read* OM_2

P 861b, l. 4, *after* sin ϑ_1 *insert* =

1st and 2nd equations beneath Fig. 5, *insert* =

P 871, Table 1, instead of η read φ

P 871b, ll. 2 and 9, instead of $f\varphi$ and $g\varphi$ read f_φ and g_φ.

P 881b, *add to Bibliography*. On the problems of mosque orientation see D. A. King, *Astronomical alignments in medieval Islamic religious architecture*, in *Annals of the New York Academy of Sciences*, 1982.

P 896a, **RILWA**, l. 10 from below, instead of KIVINVE *read* KIVINJE

l. 8 from below, *instead of* Dar es Salam *read* Dar es Salaam, the official spelling

P. 142-3, **RĪRĪM**, *add to Bibliography*: *Le khanat de Crimée dans les archives du Musée du Palais de Topkapı*, prés. par A. Bennigsen, P. Boratav et autres, Paris/Den Haag 1978, M. Berindei and G. Veinstein, *La présence ottomane au sud de la Crimée et en Mer d'Azov dans la première moitié du XVIe siècle* in *Cahiers du Monde russe et soviétique* xx (1979), 389-456; G. Veinstein, *La population au sud de la Crimée au début de la domination ottomane*, dans *Mémorial Ömer Lütfi Barkan*, Paris 1980, 227-49 (Bibl. de l'Inst. Français d'Archéol. d'Istanbul, xxvm), *Catalogue des microfilms des ouvrages intéressant les musulmans de l'URSS . . .*, in *Crimée*, Paris 1963 (stencilled)

P 243a, **KIZ**, 3rd paragraph: Ewliyā Čelebi and, following him, Mamboury are wrong when saying that the Kiz-taghi, i.e. the Byzantine "Maiden's stone" (of porphyry) was incorporated into the Süleymāniyye Mosque. The order books (1550-7) of the Süleymāniyye mention the transportation of a column from the Kiztaghi Mhallesi to the mosque, but that one was from granite. See C. Mango, *Antique statuary and the Byzantine beholder*, in *Dumbarton Oaks Papers* xvii, Washington 1963, 81; O. L. Barkan, *Süleymaniye Cami'si inşaatı*, Ankara 1972-9, i, 344-6, ii, 23-4, Nos. 44-5; J. M. Rogers, *The state and the arts in Ottoman Turkey*, i, *The stones of the Süleymaniye*, in *IJMES* xiv (1982), 79.

P. 268b, **KORDOS**, The correct name in Ottoman Turkish of the city of Corinth emerges rather as Kördes or Gördes in the pages of Ewliyā Čelebi, where it is consistently spelt with *kāf-i fārsī* and not with *kāf*, confirmed by such European renderings as Gourdese (Bernard Randolph, 1689) and Ghiurdos (W. M. Leake, ca. 1805). *Add to the Bibliography*: P. A. MacKay, *The fountain at Hadji Mustafa*, in *Hesperia, Jnal. of the American School of Classical Studies at Athens*, xxxvi (1967), 193-5; idem, *Acrocorinth in 1668, a Turkish account*, in *op. cit.*, xxxvii (1968), 386-97, with map, plan and photographs.

K

CONTINUATION

KHEMSHIL [see KHEMSHIN]

KHEMSHIN (other designation, Khemshili), a numerically small group of Muslim (Sunnī) Armenians who had been converted from Christianity in the beginning of the 18th century. In the U.S.S.R. (population 629, according to the 1926 Soviet census), they now inhabit the Black Sea coast near the Turkish border. In Turkey they live in compact settlements along the Firtina and Karadere rivers (Bash Khemshin) and in the mountains not far from Hope (Hope Khemshin). The traditional economy is based on sheep and goat herding, and related activities. The Khemshin dialect (like the Erzurum, Cilicia and Istanbul dialects) is part of the western dialect group of the Armenian language. The Khemshin have been, to a great extent, assimilated by the Turks, nor have they been listed in either the 1959 or 1970 Soviet censuses) (R. WIXMAN)

KHĒRLA, a fortress of mediaeval India, lying to the south of Mālwa and east of Khāndesh [*q.v.*], and in the extreme northern part of Berār [*q.v.*], just to the south of the headwaters of the Tāptī River. It is in fact some 50 miles west of modern Deogarh, in British India it fell within the Central Provinces, now Madhya Pradesh.

The foundation of the fortress is attributed to a Rājput *rāja*, the last of whose line is said to have been killed by a commander of the Dihlī Sultans, perhaps in the time of ʿAlāʾ al-Dīn Khaljī, but the fortress as it stands today is Islamic in construction. During the revolt of the Deccan in the latter years of Muḥammad b. Tughluk, it fell into the hands of a local Gond dynasty. In the early 9th/15th century, the Gond ruler Narsingh was made subject to the ruler of Mālwa, Hushang b. Dilāwar Khān Ghūrī (808-38/1405-35), appointed to Mālwa by the Tughlukids. It now became a subject of discord and covetousness between the rulers of Mālwa and the Bahmanī sultans of the northern Deccan [see BAHMANIS], thus in 832/1428 Hushang suffered a crushing defeat at Khērla at the hands of Aḥmad Shāh Bahmanī. Forty years later, in 872/1467, there was again fighting over possession of Khērla between Maḥmūd Shāh Khaljī of Mālwa (840-73/1436-69) and the Bahmanī Muḥammad Shāh III Lashkarī, but Maḥmūd managed to retain Khērla and possibly northern Berār as far as Ellichpur [*q.v.* in Suppl.]. In 994/1586 the Mughal governor of Mālwa, Aṣfam Khān, attempted to take over Berār; he failed to capture Khērla, but plundered the capital Ellichpur before being repelled by the combined forces of Khāndesh and the Niẓām-Shāhīs of Aḥmadnagar [*q.v.* and NIẒĀM-SHĀHIS]. Berār subsequently came under Mughal rule, and the *Āʾīn-i Akbarī*, tr. Blochmann and Jarrett[2], Calcutta 1939-48, ii, 237, lists Khērla as a *sarkār* of the *ṣūba* of Berār with a revenue of 17½ million *dams*.

Bibliography Sir Wolseley Haig, in *Camb. hist. of India*, iii, index. (C. E. BOSWORTH)

KHIḌĀB (A.), a term denoting the dyeing of certain parts of the body (and especially, in regard to men, the beard and hair) by means of henna [see HINNĀʾ] or some similar substance. It is still used in this sense today, but is used moreover for the items of make-up and cosmetics employed by modern women; the reader may find under MAKEUP information about those items of cosmetics used by women attached to the traditional usages. (ED.)

KHIDĀSH (or Khaddāsh, cf. Wellhausen, 509; his real name was probably ʿAmmār or ʿUmāra b. Yazīd) one of the leaders of the early Hāshimiyya movement in Khurāsān. Having played a part unacceptable to the ʿAbbāsids in the formative stages of their *daʿwa* in Khurāsān, the official ʿAbbāsid propaganda later obliterated as much as possible of his memory, minimised his part in the *daʿwa* and presented him as a heretic. This propaganda succeeded to such a degree that his life and achievements are hardly mentioned in the Arabic sources and doubt was even cast as to his real name. Consequently, orientalist scholarship, in those few cases when it mentions him, is highly influenced by this. Wellhausen, with his unusual historical instinct, was the first to understand his significance in the ʿAbbāsid *daʿwa*, and B. Lewis also mentions his role as one of the first emissaries of the Hāshimiyya in Khurāsān [see ʿABBĀSIDS]. Cl. Cahen and Lewis both tend to accept at least some of the accusations of the ʿAbbāsid propaganda, namely that he was a Khurramī, and they raise doubts as to whether Khidāsh was an ʿAbbāsid emissary at all (Cahen, *Points de vue sur la révolution ʿAbbāsside*, 324-5). However, with the discovery and publication of the anonymous source *Akhbār al-ʿAbbās* (ed. Dūrī and Muṭṭalibī under the title *Akhbār ad-dawla al-ʿabbāsiyya*), a fresh study is possible, based on new material which permits a reconsideration of the already-known traditions about him.

According to the ʿAbbāsid tradition, Khidāsh was a nickname derived from *kh d sh* "to tear apart", "to scratch" because "he has torn religion to pieces" (*khaddasha al-dīn*) (Ṭabarī, ii, 1303; Balādhurī, *Ansāb*, f. 192b). This is a clear indication of the efforts made on the part of the ʿAbbāsids to blacken his name, especially after his death. In another tradition, however, Ṭabarī says that it was Khidāsh who adopted this name whereas his real name was ʿAmmār or ʿUmāra b. Yazīd (ii, 1588 of *Annales*, f. 292a, *mf.*). Ibn al-Athīr, *Kāmil*, Beirut 1965, v, 144). As far as the

name is concerned, Khidāsh is not an uncommon name in Arabic, derived from the third form of the verb *M d s* (cf. Lane's *Lexicon* and *L.A*, s.v. and *Aghānī*, xix, 52 and index). It is quite possible that the ʿAbbāsids added their interpretation to the name later, when already there existed a tradition according to which the Prophet disliked the name Khaddāsh (Ibn Wahb, *Djāmiʿ*, Cairo 1939, 57, cf. Kister, *"Call yourselves by graceful names"*, in *Lectures in memory of Prof. Martin M. Plessner*, Jerusalem 1975, 19). However, whether Khidāsh was his name or not, it does not make much difference to the fact that his activities in Khurāsān for over eight years as head of the Hāshimiyya (*q.v.*), caused so much trouble to the ʿAbbāsids that his memory was almost completely obliterated from the records of the ʿAbbāsid *daʿwa*.

In order to understand the enigmatic personality of Khidāsh, one must remember that in the early phases of the *daʿwa* the contacts between the centre of its activity in Khurāsān and the parallel centre in Kūfa were, for security reasons, very weak. The same considerations necessitated extreme caution in the contacts between the Khurāsānis and the ʿAbbāsid *Imām* in Humayma. Although the sources say that the propagandists in Khurāsān acted in the name of the ʿAbbāsids, it is highly improbable that Umayyad intelligence failed to uncover this connection or to discover the identity of the *Imām* until the very end. The contents of the *daʿwa* teachings were extremely ambiguous throughout, and its propagandists spoke in general terms about the rights of *Ahl al-bayt* (cf. al-ʿImrānī, *al Inbāʾ*, ed. Samarrai, Leiden 1973, 57 l. 18) a term which was accepted to mean the family of the Prophet (cf. M. Sharon, *The ʿAbbāsid daʿwa re-examined*, 9, n. 23). Thus through most of its phases, the *daʿwa* in Khurāsān was, in fact, nothing but an extension of the Hāshimiyya of Kūfa. It is thus highly possible that even the leaders did not known what exactly were the essential ideas that differentiated their activities from those of the other Shīʿīs in Khurāsān, and especially those in Nīshāpūr and its environs.

The only information about Khidāsh supplied by Ṭabarī and Balādhurī is as follows. After Asad b ʿAbd Allāh al-Kasrī had killed several of the first propagandists of the *daʿwa* in Khurāsān, headed by Abū ʿIkrima, and had severely punished some of the others, another leader was sent from Kūfa to Khurāsān. The new leader was Abu ʾl-Husayn Kathīr b Saʿd. As he was an uneducated man (if the term *ummī* in Ṭabarī's account is to be understood thus), Khidāsh was able to overcome him and assume the leadership (Ṭabarī, ii, 1503, *Ansāb*, f. 292a)

In another tradition there is some more and rather different information about Khidāsh. According to this tradition, it was Bukayr b. Māhān, one of the veteran adherents of the Hāshimiyya who, in 118/736 sent ʿAmmār b. Yazīd to Khurāsān as a "leader of the Shīʿa of Banū ʾl-Abbās" (*Waliyyan ʿalā shīʿati banī ʾl-ʿabbās*). He resided in Marw and changed his name to Khidāsh (a custom common to the early adherents of the *daʿwa*, who for reasons of secrecy used to adopt new *kunyas* once initiated into the movement [see KAṬṬABA). He began making propaganda for Muḥammad b. ʿAlī, in which he was very successful. According to another tradition in the *Ansāb*, it was Muḥammad b ʿAlī who nominated him. Sometime later, however, Khidāsh changed his original propaganda and "turned away from the *Imām*'s instructions and began to teach improper and disgraceful ideas. Therefore, the adherents of Muḥammad b ʿAlī fell upon him and killed him. Some say that it was Asad b ʿAbd Allāh al-Kasrī that killed and crucified him" (Balādhurī, *Ansāb*, f. 292a). The "disgraceful ideas" according to Ṭabarī (*loc. cit.*) were those of the Khurramdīya (*q.v.*). His execution by Asad took place, according to Ṭabarī, in 118, during the governor's second term of office (ii, 1538-9, Wellhausen, 520). Although these traditions reflect clearly the later ʿAbbāsid distortion of the information about Khidāsh, it is possible, however, to build the following picture, from the combination of the above narrations with the information transmitted in the *Akhbār*. Khidāsh's predecessor as the leader of the Hāshimiyya in Khurāsān, Kathīr b. Saʿd, led the movement in Marw from ca. 108/726 for three years until *ca.* 111/729. It was probably in that year that Khidāsh arrived from Nīshāpūr, a centre of Hāshimī activity, and took over. For at least seven years, until his execution in 118/736, he was the leader (*nāʾib*) of the Hāshimiyya there (Ṭabarī, ii, 1589, l. 2) and the one responsible for creating its sound organisation, as Wellhausen rightly observes. He was the first to achieve a real and enduring success and to gain wide support among both Arabs and *mawālī*. The lists of the leaders of the *daʿwa* in his time show people from Tamīm, Rabīʿa, Azd and other Arab tribes, including Shaybān b Kathīr of Khuzāʿa, who was later to replace him (Wellhausen, 514, Ṭabarī, ii, 1586-7, *Akhbār*, 216-22). There is no neutral evidence whatsoever that he was Khurramī, though Wellhausen, Cahen and Lewis tend to accept ʿAbbāsid traditions which attributed in him Khurramī and Mazdakite theories (this tradition is presented in its complete form by al-Nāshiʾ al-Akbar, ed. J. van Ess, Beirut 1971, 32 l. 5, cf. Wellhausen, 525 n8; Cahen, *Points de vue ...*, 324 5). Cahen, however, points out that many people who fell out of favour were accused of *zandaka*, and this is clearly true of Khidāsh; a tradition which presents him as a Christian from Hīra should be understood also as representing the same trend (*Ansāb, loc cit.*) From a unique tradition in the *Akhbār*, we know exactly the nature and content of his propaganda, and this also explains why the ʿAbbāsids later hated him. This tradition speaks of a group of Khidāsh's adherents in Nīshāpūr, called the Khālidiyya after its leader, a certain Abū Khālid. The group united against the ʿAbbāsids from the very beginning of their reign, and in the time of Abū Djaʿfar al-Manṣūr changed its name and became the Fāṭimiyya. They argued that, since after the death of Ibrāhīm al-Imām (*q.v.*) a new *wasīya* was not nominated in the way of *waṣiyya*, the *imāma* must return to the ʿAlids, now already represented by the descendents of Fāṭima (*Akhbār*, 403-4).

From the statement that the Khālidiyya Fāṭimiyya continued the former Khidāshiyya, it is clear that Khidāsh as a Hāshimī leader furthered the cause of the ʿAlids.

Having worked for a while in Nīshāpūr, Khidāsh seized the opportunity of the growing activity of the Hāshimiyya in Marw in order to move there in 111/730, and being intellectually superior to Kathīr b. Saʿd, he was able to depose him and take over the leadership of the movement there. For the Hāshimiyya of Marw, both his leadership and ideology were congenial. After the death of Abū Hāshim, the original Hāshimiyya continued in general terms to support the cause of the House of the Prophet, which became more and more identified with the Fāṭimid ʿAlids. This development disturbed Muḥammad b. ʿAlī, and on one occasion he is said to have warned one of his early emissaries to Khurāsān, the Kūfan leader Abū ʿIkrima, about the ʿAlid leaders in Nīshā-

pūr, whose names include one Abū Khālid al Djawlāki (*Akhbār*, 204, cf. Ibn. Khaldūn, *'Ibar*, ed. Būlāk, iii, 102). His influence in Khurāsān, however, was too slight to act against Khidāsh, and he may have had to give his tacit approval to the latter's position. Khidāsh built a strong centre in Khurāsāh which was completely independent and detached from both Kūfa and Humayma.

During the seven years of his activity, the 'Alid cause gained wide support there, while the 'Abbāsid *Imām* was kept completely in the shade. Khidāsh spoke in favour of *al Ridā min Āl Muhammad* or *al-Kā'im min ahl al bayt*, slogans which were common to all the 'Alid adherents in Khurāsān and the early *da'wa*.

Khidāsh's independent ideas, which were inconsistent with the aims and aspirations of the 'Abbāsid *Imām*, are explicitly indicated in *Ta'rīkh al Khulafā'*, ed. Grigaryevitch, ff. 252b l. 18-253a l. 6, and especially in a unique note on the margin of the manuscript, f. 253a, which is the key for an understanding of the whole problem. It runs as follows *Khidāsh, radjulun intahala mahalahan bi Khurāsāna wa intasaba ilā l-ba'mi anna ahla bayti rasūli allāhi fa stubiha 'alā l ikhtiāri amrihim*

Muhammad b. 'Alī understood that the new independent centre in Khurāsān had to be connected *directly* with him and not through Kūfa, but as long as Khidāsh was alive this was impossible, and it was difficult even after Khidāsh's death in 118/736.

The new leader, Sulaymān b. Kathīr, went to see the *Imām* in Humayma in 120/739, but this meeting led to a crisis. Muhammad b. 'Alī tried to reproach the Khurāsānī for accepting Khidāsh's wrong ideas, but Sulaymān and the Khurāsānī could not see what was wrong in pure 'Alid-Hashimī ideology, and for over five years the relations between Khurāsān and the 'Abbāsid *imām* were almost non-existent (Tabarī, ii, 1640, 1727, 1769, Balādhurī, f. 292b)

Only in 126/744 were relations restored and the centre in Khurāsān acknowledged the leadership of the new *Imām*, Ibrāhīm b. Muhammad (Muhammad died in 125/743). Sulaymān welcomed Bukayr b. Māhān in Marw and sent money with him to the *Imām* (Tabarī, ii, 1869, Balādhurī *loc. cit.* This improvement in the atmosphere was due to the great crisis in the Shī'a that followed in the wake of the collapse of Zayd b. 'Alī's revolt in Kūfa in 122/740 and the execution of his son Yahyā in 125/743. The messianic expectations of the Shī'a which were connected with these two were replaced by the usual feelings of sorrow and repentance after their death. This feeling was especially acute in Khurāsān, where black garments were worn everywhere as a sign of mourning for the dead 'Alids and where newborn children were named Zayd and Yahyā after them (Mas'ūdī, *Murūdj*, Beirut 1905, iii, 212-13). This was also the moment when a new leader was needed to avenge their blood. The circumstances were, therefore, ripe for coming to terms with the 'Abbāsid *imām* and for turning the *da'wa* into an 'Abbāsid one. Even so, this change was not easily accepted. Not only did the pro-'Alid Khidāshiyya continue to exist under a new leader, but also (as Balādhurī reports, *Ansāb*, f. 305a), Muhammad the son of Sulaymān b. Kathīr was himself an adherent of the Khidāshiyya who was opposed to the transference of the movement in Khurāsān to Abū Muslim. Because of the activities of Khidāsh we can now understand that it was not until 126/744 that the *da'wa* in Khurāsān was changed from a purely 'Alid one to an 'Abbāsid one. But the 'Abbāsids, even after reaching power, knew, as al-Mansūr is reported once to have said, that "the love for the Ahl Abī Tālib in the hearts of the people of Khurāsān is mixed with the love for us" (*Fragmenta*, ed. De Goeje, 246).

KHIDĀSH s. **ZUHAYR** al. **AṢGHAR** b. **Rashīd** b. 'Amr b. 'Amir b. Ṣa'ṣa'a al-'Āmirī, *mukhadram* poet who is said to have attacked Kuraysh because his father had been killed in the War of Fidjār (*q.v.*); it is possible that he himself took part in this struggle, and it is precisely in the chapter devoted to this war that the *Aghānī* (ed. Beirut, xxii, 70 ff., cf. iii, 219) cites him at greatest length, since several pieces of his are given there, one of them considered as a *hadjā munsifa* (see Ch. Pellat, in *Mélanges Marcel Cohen*, 279-80), but he boasts there of a victory of the Hawāzin over Kuraysh which seems to be an invention. All the same, it is not impossible that these verses, and also a *hadjā* in praise of Kuraysh (*Aghānī*, xxii, 76), where allusion is made to Muhammad's presence amongst the combattants, were written at a later date and by another poet. Khidāsh was still a pagan at the Battle of Hunayn (*q.v.*). Ibn Sallām (*Tabakāt*, 119-22) classes him in the fifth *tabaka* and cites a certain number of his verses. An edition of his *dīwān* has been put together and is being prepared in Baghdād

Bibliography As well as the sources cited above, there are notices and verses quoted in Djāhiz, *Bayan*, iii, 18; idem, *Hayawan*, i, 20, 364, vi, 50; idem, *Bukhala'*, 388; Ibn Kutayba, *Ma'ārif*, 87, idem, *Shi'r*, 627-30; idem, *'Uyūn al-akhbār*, i, 235, 248, ii, 3, iii, 90; Mubarrad, *Kāmil*, 406; Kālī, *Amālī*, ii, 66; Ibn Durayd, *Ishtikāk*, 180; Āmidī, *Mu'talif*, 73, 107 8; Ibn al Kalbī Caskel, tab. 108 and ii, 347; 'Askarī, *Sina'atayn*, 240; *Nasab Kuraysh*, 300; Baghdādī, *Khizāna*, ed. KHIDHLĀN (A.), nomen actionis from the root *kh-dh-l*, 'to leave in the lurch', a technical term in Islamic theology, applied exclusively to Allāh when He withdraws His grace or help from man. The disputes regarding it first appear in connection with the quarrel over *kadar* (*q.v.*). A starting point is found in Sūra III 154/150 "but if He *al*-andon you to yourselves (*yakhdhul kum*), who will help you after Him? Let the faithful therefore trust in God". On this al-Rāzī observes: "The Comparisons deduce from this verse that belief is exclusively a result of Allāh's help (al. John, vi, 65), while unbelief is a result of His *khidhlān*. This is obvious, as the verse points out that the matter is entirely in God's hands".

A more detailed exposition is given by Ibn Hazm (ii, 50 f.): "Right guidance and assistance consist in God's preparing (*tayṣīr*) the believer for the good for

which He has created him; while *khidhlān* consists in His preparing the *fi'l* for the evil for which He has created him. Linguistic usage, the Kur'ān, the force of logic, and the attitude of the *salaf* and those in the past who handed down traditions and of the Companions and Successors as well as of those who came after these and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligence, namely such as belong to the followers of slanderers and outcasts, like of Najjār, Thumāma, al-'Allāf and al-Dhahabī, are all unanimous". Then follows this reasoning. Allāh has given man two forces, hostile and opposed to one another, *tamyīz* (power of discrimination) and *hawā* (passion, desire). When Allāh protects the soul *tamyīz* prevails by His help and power. But when He leaves the soul to itself (*khadhala*), He strengthens the *hawā* with a strength which amounts to leading astray (*idlāl*).

Khidhlān is therefore, according to Ibn Hazm, the opposite of *hudā* and *tawfīk* and the conception approaches that of *idlāl*. The Mu'tazilīs (as already indicated by Ibn Hazm's words) err in it a contradiction to Allāh's justness: according to them, Allāh does not urge a man to evil. In their terminology *khidhlān* therefore means the refusal of divine grace (*man' al-lutf*), while, according to the Ash'arīs, *khidhlān* is "the creation of the ability to disobey".

KHIDĪW, Khedive, title of the rulers of Egypt in the later 19th and early 20th centuries, deriving from Persian *khidīw*, *khadīw* "lord, prince, ruler". The one of the Arabic form of the title *khidīw* "khedival" is associated with Ismā'īl Pasha [*q.v.*], *wālī* or viceroy of Egypt 1863-79, even though his predecessors, 'Abbās I Pasha (1848-54) and Sa'īd Pasha (1854-63) used it unofficially on occasion. Certain government departments, in particular the Department of the Interior, even under Ismā'īl's grandfather, Muhammad 'Alī the Great (1805-49), founder of the dynasty, were known as *dīwān al-khidīwī*. In a way, it was a unique title among the vassals of the Ottoman Sultān, which the ambitious viceroy of Egypt sought precisely in order to set himself apart and above so many other governors and viceroys of Ottoman dominions. Closely related to his efforts to render his rule more secure within his family was Ismā'īl's ambition to acquire the more formal accoutrements of sovereignty in relation to his master in Istanbul and the European powers. After lavish gifts in Istanbul, the distribution of outright bribes to influential courtiers and vast expenditure in supplying troops to help his sovereign suppress a rebellion in Crete, the title of *khidīw* was formally conferred by the Sultān upon Ismā'īl in a *firmān* issued on 8 June 1867, two years before the formal opening of the Suez Canal. From a mere *wālī*, viceroy of the Sultān in Egypt, Ismā'īl assumed a rank which elevated his standing to a position closer to royalty. A more important concession which Ismā'īl received along with this title was the virtual independence of Egypt and her right to enter into special treaties and agreements governing posts, customs and trade transit. These provisions were to give Ismā'īl freedom in the financial, administrative and judicial arrangements of the country. The title remained in use until 1914, and was assumed by Ismā'īl's son Tawfīk Pasha (1879-92), and Tawfīk's son 'Abbās II Hilmī (1892-1914) [*qq.v.*]. When soon after the outbreak of the Great War Egypt was declared a British Protectorate and 'Abbās II was deposed, his successor, his uncle Husayn Kāmil, assumed the title of Sultān of Egypt.

KHIDR BEG, Ottoman scholar and poet of the 9th/15th century, and the first *kādī* of Istanbul. The unique source for his biography is the Arabic original of *al-Shakā'ik al-nu'māniyya* by Tashköprüzāde who, however, distorts the chronology of an otherwise convincing account of his career by an implausible anecdote which would place his first important appointment as late as the beginning of the reign of Mehemmed II (ca. 855/1451). Disregarding this, and an equally suspect interpolation made by Medjdī in his translation of the work in which his mother is identified as the daughter of the legendary Turkish jester, Nasr al-Dīn Khwādja (Nasreddin Hoca), the details of his life are as follows: He was born in Sivrihisār, where his father, Djalāl al-Dīn, was *kādī*—though the fact that the latter was, also, known as Amīr 'Ārif would suggest that he was a dervish rather than a member of the learned profession—and a source used by Brockelmann dates the birth to 1 Rabī' al-Awwal 810/6 August 1407. He completed his studies in Bursa under the famous scholar Molla Yegān, whose daughter he married, and is then said to have returned to Sivrihisār as a teacher. He acquired such a reputation for learning that he was appointed to the *madrasa* of Mehemmed I in Bursa with an increase in stipend, and certain of his pupils here were subsequently to become scholars of great eminence. Next he taught at the *madrasa* of Bāyezīd I in Bursa, again with an increased stipend, and in addition was appointed *kādī* of Inegöl. From here he moved to the newest of the ten *madrasas* in the Üč Sherefeli mosque in Edirne, and thence to Yanbolu (in present day Bulgaria) as *kādī*. After the conquest of Istanbul in 857/1453, he was appointed its first *kādī*, in which post he remained until his death in 863/1458-9. He is buried in the Zeyrek quarter of Istanbul (*'Othmānlī mü'ellifleri*, i, 230), where he also built the mosque later attributed to a certain Hādjdjī Kadīn (*Hadīkat al-djawāmi'*, i, 86). His three sons, Ya'kūb Pasha, Mūsā Ahmad Pasha and Sinān Pasha, were also notable scholars, the latter being the author of the famous *Tadjrīd*.

Although Khidr Beg is reputed to have introduced the versified chronogram into Ottoman literature, very few of his Turkish poems have survived (Sehī, 39) and his reputation rests on three poems in Arabic. The first, a didactic *kasīda* in the *basīt* metre on the creed, is known as the *Nūniyya* and has been the subject of several commentaries, most notably that by his pupil Khayālī (Hadjdjī Khalīfa, ii, 1348; Brockelmann, II, 229, S II, 321). Another *kasīda*, also a *nūniyya* dealing with the creed, but in the *mafīr* metre, is usually known as the *'Uqūla layla* or *layla-yam* (Brockelmann is incorrect in saying that he translated this into Persian). Finally, there is a *mustazād*, in a Persian variety of the *hazadj* metre, which was greatly admired and attracted imitations for over a century (Sāfī, *Rūmī*, v, 230-1; Ahmed Pasha, *Dīwān* ed. Ali Nihat Tarlan, Istanbul 1966, 357). Bursalī

Mehmed Tāhir mentions a translation into Persian of the *Maṭāliʿ* which he made at the request of Sulṭān Muḥammad II, the work in question probably being the *Maṭāliʿ al-anwār*, on logic, by Sirādj al-Dīn Maḥmūd al-Urmawī (Ḥādjidjī Khalīfa, ii, 1715).

Bibliography Tashköprüzāde, *al-Shaḳāʾiḳ al-nuʿmāniyya*, Arabic text in margins of Ibn Khallikān, *Wafayāt al-aʿyān*, Būlāḳ 1299, i, 251-5; Medjdī's Turkish translation (Istanbul 1269, iii 4) ranks many important details. Bursalī Mehmed Tāhir, *ʿOṯmānlı müʾellifleri*, Istanbul 1333, i, 290, Nuṣret Ayvānsarāyī, *Ḥadīḳat al-djawāmiʿ*, Istanbul 1282, i, 86; Edirnelī Sehī, *Heft iḳlīm*, Istanbul 1325, 307; Muṣṭafā ʿĀlī, *Künh al-aḵbār*, Istanbul 1285, v, 229-32; Süheyl Ünver, *Hızır Bey Çalebi, hayatı ve eseri*, Istanbul 1945. The biography given in the entry for Khiḍr Beg in von Hammer's *Geschichte der osmanischen Dichthunst*, Pest 1836, i, 242, is actually that of his son Sinān Pasha.

(J. R. Walsh)

al-KHIḌR ḤUSAYN [see al-Khaḍir b. al-Ḥusayn].

KHIḌR-ILYĀS (in Turkish, Hıdrellez), is the name, in Turkish tradition, of a popular festival in the spring and celebrated on the 5-6 May, this date being considered as marking the beginning of the season of summer, extending from then till y November (*Kasım*). The two dates correspond respectively with the feastdays of St. George (23 April) and St. Demetrius (26 October).

Khiḍr (Turkish, Hızır) also symbolises in Turkish tradition the renewal of vegetation in the spring. It is believed that, when this personage shows himself upon the face of the earth, the dry vegetation becomes green again as he passes, that he leaves a green impression on the hands which he touches, and that he brings abundance, fertility and happiness. Another feature of his legendary personality is that he comes to the aid of beings in distress, and in particular, of those in danger of drowning in the sea or lost in the desert. In regard to Ilyās, beliefs and traditions are somewhat rare. In the written literary texts and in oral tradition they are limited to allusions to his supernatural aid to beings in distress on land or sea, a power which he shares with Hızır; according to certain beliefs, Ilyas is the master of the seas, and Hızır that of the land, but others hold the reverse of these attributions (see *Halk bilgisi haberleri — HBH*, i (1936), 282, *Gedik*, No. 73 (1944); O. Bayatlı, *Bergama'da efsaneler, ādetler*, Istanbul 1941, 54; Evliyā Celebi, *Seyāḥat nāme*, iii, 90; Yazıdjioghlu, *Muḥammediyye*, lith. Istanbul 1322/1894-5, 77; Sadettin Nüzhet, *Türk şairleri*, i, 37, in one poem the popular poet of the 17th century Karadjaoghlan calls him "guardian of the seas, mounted upon a grey horse", in the Oghuz epic *Dede Korkud* he is likewise described as a horseman) Ilyās is further mentioned in beliefs which explain the name *Hıdrellez*. It is generally held that each year, on the night of 5 May, these two beings both of them immortal after having drunk from the 'Water of Life', come to meet together on the earth. Their meeting place is often pictured as a spot by the sea shore. According to a local belief of Balikesir (*HBH*, i, 181), they are two brothers. A legend recorded at Halkalı near Istanbul tells how they were two lovers. Hıdır a youth and Ellez a girl, for long they were unable to come together again, but at last met on the night of 5 May, and then both died of joy from their reunion (Ali Ímer, *Halkalı'da Hıdrellez*, in *Türk folklor araştırmaları*, No. 96 (1957)).

Hıdrellez is a festival the greater part of whose ceremonies are reserved for women and girls. They comprise three main sequences: (1) On the night of 5 May, various practices are performed and rites observed in order to ensure the fulfillment of divers vows, such as abundance, prosperity, happiness in general, or more specifically, the acquisition of a house, the birth of a child, etc. (2) Early the next morning, there takes place the "drawing from the divinatory pitcher". The previous evening, there are placed in the pitcher, to the accompaniment of appropriate rites, various small objects belonging to women and girls who wish to ask Fate about their future destiny, the pitcher is then placed under a rosebush during all the night. In the morning, a young girl draws out the objects in the pitcher one after the other, and woman recites the "divinatory quatrain", which is interpreted in regard to the future fate of the owner of the corresponding object. (3) On 6 May, there is an outing to go and eat, in groups of relatives, neighbours and friends, to the countryside, usually by some sanctuary. Games and amusements, including swings, the preferred pastime for this festival, are organised.

The festival and its attendant ceremonies are normally limited to two days only. Nevertheless, they form a sequence of seven weeks in the 'Alawī villages of a mountainous region in the province of Kırklareli. During the month which precedes the day of Hıdrellez, the ceremony of "drawing from the divinatory pitcher" takes place every Thursday evening. The seventh Thursday is called "the day of Nazarī", when a communal meal is eaten, prepared from the meat of sacrified animals. On this same day, the children, carrying flowers and willow branches, search out, and organise for themselves, communal meals by a sanctuary; they also carry out other rites which are, moreover, to be connected with those aimed at summoning rain [see ISTISḲĀ']. On returning to the village, they throw their crowns of flowers and leaves into the river (Etem Ütük, *Yıkarı Konara hayatında Nazarı günleri*, in *Türk folklor araştırmaları*, No. 267 (1972)).

(P. N. Boratav)

KHIḌR KHĀN, founder of the "Sayyid" dynasty which ruled at Dihlī from 817/1414 to 855/1451. His designation as a *sayyid* is traced in the near-contemporary *Taʾrīḵ-i Mubārak Shāhī* firstly to a remark hagiologically attributed to the Ṣūfī Djalāl al-Dīn Bukhārī, and secondly to his own excellent character, and has been accepted by later historians like Niẓām al-Dīn Aḥmad, Badāʾūnī and Firishta, but this has been regarded as dubious by modern British and South Asian historians. The other near-contemporary source, Bihāmad Khānī's *Taʾrīḵ-i Muḥammadī* (compiled or revised in 842/1438-9) is silent on the point. While false genealogies are quite common in Indo-Muslim history, Khiḍr Khān's selection by Timūr [*q.v.*] as his "deputy" in Dihlī suggests that he may have been regarded as *sayyid* in his lifetime, since Timūr's regard for *sayyids* is well documented.

Khiḍr Khān was the son of Malik Sulaymān, an adopted son of Mardān Dawlat, the *shiḥ-dār* of Multān under Sulṭān Fīrūz Tughluk [*q.v.*]. Sulaymān Malik succeeded to that *shiḥ* after the death of Malik Shaykh, Mardān's son, and Khiḍr Khān was assigned the *shiḥ* in succession to his father. In 798/1396 he lost the *shiḥ* during his strife with Sārang Khān,

When Timūr invaded India in 801/1398-99, he took refuge in Mēwāt, but later entered Timūr's service, and was appointed governor of Dihlī and *iḳṭā' dār* of Multān and Dēōpālpūr. However, it was not until 817/1414 that he finally took possession of Dihlī. He regarded himself a vassal of Timūr, and later of the latter's son Shāh Rukh [*q.v.*], whose names were recited in the *khuṭba* and inscribed on the coinage. He obtained Shāh Rukh's permission in 820/1417 to affix his own name also on the coinage; he chose for himself not the title of *sulṭān*, but that of *rāyat-i a'lā*, suggesting presumably that he was a standard-bearer of the Timūrids.

His reign of seven years, until his death in 824/1421, was full of campaigns undertaken by himself and by his able and loyal *wazīr* Tādj al-Mulk which extended the frontiers of his authority and re-united Pandjāb with Dihlī. Punitive expeditions were organised against rebellious nobles, especially the Türk bačas, there were also several expeditions against Hindu *rādjās* such as those of Katahr and Gwāliyār [*q.vv.*] in order to collect taxes and tribute. Near contemporary chronicles regard him as a kind and benevolent ruler who brought to Dihlī and the other areas which he governed relief from the economic sufferings and insecurity which had continued since the invasion of Timūr.

KHIL'A (pl. *khila'*), "robe of honour," also called *tashrīf* (pl. *tashrīfāt*) and *tashrīfāt*. Throughout much of the Middle Ages, the term *khil'a* did not designate a single item of clothing, but rather a variety of fine garments and ensembles (*kulla* or *kulāh*) which were presented by rulers to subjects whom they wished to reward or to single out for distinction (hence the alternate name *tashrīf* "honouring"). These robes, the most common of which was the *kabā'* (see LIBAS), were normally embellished with embroidered bands with inscriptions known as *ṭirāz* [*q.v.*] and were produced in the royal factories (*dār al-ṭirāz*).

(i) *Origin of the custom.*

The custom of bestowing garments of honour in the Near East is very ancient. The Patriarch Jacob singled out his favourite son Joseph from amongst his brothers by giving him a *kitnat passim* (Gen. xxxvii, 3) which was a ceremonial or royal robe (see commentary of E. A. Speiser, *Genesis*, Anchor Bible, Garden City 1964, 290). Joseph was later similarly honoured by Pharaoh, who had him dressed in garments of linen (Gen. xli, 42). Herodotus reports that the Egyptian king Amasis sent to Croesus of Lydia as a royal gift a corselet of linen embroidered with gold thread and cotton with the figures of animals woven into the fabric (*Hist.*, iii, 47).

This custom had a most important precedent in Islam with Muḥammad's gift of the *burda* [*q.v.*] which he was wearing to the poet Ka'b b. Zuhayr (Ibn al-Athīr, *Kāmil*, Cairo 1321, iv, 133 4). The very word *khal'a* denotes the action of removing one's garment (*A. khala'a*) in order to give it to someone (*TA*, v, 322). L. A. Mayer has suggested that this was "originally more a promise of personal security (*amān*) than a token of distinction" (*Mamluk costume*, 56), but this is an overstatement.

(ii) *Development of the custom in Islam.*

The term *khil'a* does not appear until 'Abbāsid times, when the practice became so institutionalised that the bestowal of garments of honour was an almost daily occurrence. Members of the caliphal entourage came to be known as *aṣḥāb al-khil'a* those who wear the *khil'a*". The presentation of a robe of honour was a standard mark of investiture. Such was the case for an heir-apparent (see e.g. Mas'ūdī, *Murūdj*, vii, 305), a vizier (e.g. Hilāl al-Ṣābi', *Ta'rīkh al-Wuzarā'*, ed. Amedroz, Beirut 1904, 176), or a provincial governor (e.g. Ṭabarī, iii, 2194). The bestowal of *khil'a* and other gifts to favourites was an occasion for poetical compositions and was noted by historians (e.g. Ibn al-Fuwaṭī, *al-Ḥawādith al-djāmi'a* ed. M. Djawād, Baghdād 1351).

In the heyday of Fāṭimid rule in Egypt, the new *haute bourgeoisie* found itself with the means to emulate—after a fashion—many of the luxurious practices of the aristocracy. Among these was the custom of bestowing *khil'a* upon friends and relations (Y. K. Stillman, *The importance of the Cairo Geniza manuscripts for the history of medieval female attire*, in *IJMES*, vii (1976), 582).

The Mamlūks with their strong military psychology and a marked penchant for heraldic symbolism standardised the *khil'a* in accordance with the class of the wearer and his rank within that class. The three major classes of *khil'a* wearers were the military (*arbāb al-suyūf*), the civil service (*aṣḥāb al-aḳlām*), and the religious scholars (*al-'ulamā'*). Maḳrīzī, drawing upon the *Masālik al-abṣār* of al-'Umarī, describes in detail the great variety of *khil'a* worn by these three important classes of Mamlūk society (*Khiṭaṭ*, ii, 227-8; tr. by Mayer, in *Mamluk costume*, 58-60). A special official, the *Nāẓir al Khāṣṣ* (Keeper of the Privy Purse) oversaw the *khil'a* in the Great Treasury (*al khizāna al kubrā*) which contained only robes of honour (*ibid.*). In addition to garments, the Mamlūk military *tashrīf* could consist of arms, such as gold ornamented swords, and a horse from the sultān's own stable (*min al iṣṭabl*), fully outfitted with saddle, bridle, and caparison (*kanbūsh*).

Money or other valuables were also given as part of the *khil'at-al-tashrīf* (e.g. Abu 'l-Fidā', *al-Mukhtaṣar min Ta'rīkh al-bashar* [*Annales Moslemici*] v, ed. J. J. Reiske, Copenhagen 1794, 254). In the Ottoman Empire, a sum of money was sometimes given in place of the robe of honour. This monetary gift was called *khil'et bahā* ("the price of a *khil'a*"). It specifically referred to money distributed to Janissary

officers upon the accession of a sultān (L. Barbier de Meynard, *Dictionnaire turc-français*, Paris 1881, i, 709), on that this term is to a large extent synonymous with that of *ʿaṭiyya ahliyya* "accession payment".

Robes of honour were given on all sorts of occasions and for a variety of reasons. Thus, there was the *khilʿat al mushāra* or *kh. al wizāra* (robe of appointment), the *kh. al wizara* (robe of viziership), the *kh. al-riḍā* or *kh. al-riḍā* (robe of pardon), and the *kh. al-ʿazl* (robe of dismissal—with honour of course). The *kh. al-ḥudūm* was given to a guest from afar, while the *kh. al-safar* was given upon his departure. A sultān might give a *kh. al-ʿāfiya* (robe of health) to a favourite who had recovered from an illness (Mayer, *Mamluk costume*, 61-2, and the sources cited there).

The custom of bestowing robes of honour remained widespread throughout the Muslim world until recent times. In 19th century India a *khillat* (also *khelat*, *khilat*, *killat*) might consist of anywhere from a minimum of five articles to as many as one hundred and one (Mrs Meer Hassan Ali, *Observations on the Mussulmauns of India*², London 1917, repr. Karachi 1974, 148-50; see also Yule and Burnell, *Hobson Jobson, a glossary of Anglo-Indian colloquial words and phrases*², London 1903, repr. London 1968, 483-4).

Buckler, *Two instances of Khilʿat in the Bible*, in *Journal of Theological Studies*, xxiii (1922), 197 ff.; M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, pp. lxxxvii-xcv; Y. K. Stillman, *Female attire of medieval Egypt*, unpublished diss., University of Pennsylvania, Philadelphia 1972, 16-8, 93-6. The most detailed survey of *khilʿa* is to be found in L. A. Mayer, *Mamluk costume*, Geneva 1952, 56-64 *et passim*.

(N. A. Stillman)

KHILĀFA [see KHALĪFA]

KHILĀFA, KHILĀFAT MOVEMENT, a politico-religious movement in British India, manifesting itself in the years after the First World War. On the one hand, it had its roots in Pan-Islamism, which came to the fore about 1900. On the other hand, it was stimulated by nationalism [see SAWMIYA. In Muslim India and Pakistan]. Turkey's defeat in the First World War spelt serious danger to the position of the Ottoman Sultān-Khalīfa. Would his power remain great enough to protect Islam? Would the Holy Places of Islam remain under his sovereignty (or at least suzerainty)? Arab nationalism poised a threat, and Greece, France and Italy wanted to rob him of extensive territories in Thrace and Asia Minor.

In September 1919, when rumours about the coming treaty of Sèvres were rife, the Khilāfa movement was organized. Khilāfa conferences met in several cities in Northern India, and a Central Khilāfa Committee constituted itself at Bombay. Seth Chotani, a wealthy merchant, became its president. Prominent leaders were Muhammad and Shawkat ʿAlī (the "ʿAlī brothers"), Abu 'l-Kalām Āzād, Dr. Ansārī and Hasrat Mohanī. An important part was played by the *ʿulamāʾ*, organising themselves in the Djamʿiyyat al-ʿUlamāʾ i Hind. Their most influential leaders were ʿAbd al-Bārī (of Farangi Mahall) and Mahmūd al-Hasan (of Deoband). In January 1920, a Khilāfa deputation presented an address to the Viceroy. It stated that "the preservation of the Khilāfa as a temporal no less than a spiritual institution" was "the very essence" of their faith, and that this meant full Muslim control over the Arabian peninsula, the Khalīfa's wardenship over the Holy Places and the integrity of the Ottoman Empire—claims which, by the way, constituted a check on Arab nationalism and the ambitions of the Sharīf Husayn of Mecca. Another deputation, headed by Muhammad ʿAlī, went to Europe and had two (unsuccessful) interviews with members of the British Government in March 1920.

The Khilāfa movement started as a communal movement and met with mass approval within the Indian Muslim community (only among upper-class Muslims was there a marked tendency to hold aloof from it). Large funds were collected, partly by petty contributions. But it also got the support of the Indian National Congress. Thereby the Khilāfatists became more and more involved in the nationalist movement, which entered upon its first non-cooperation campaign (1920-2). Gandhī became a member of the Central Khilāfa Committee and issued a Khilāfa Manifesto in March 1920. The Khilāfatists, however, accepted Gandhī's creed of non-violence only conditionally: if it did not bring success, they would have to resort to *djihād* and *hidjra*. The former seemed possible in connection with an Afghān invasion; the latter was actually performed in the summer of 1920 (some 30,000 *muhādjirīn*, most of them coming from Sind or the Pandjāb, crossed the Afghān border, but about 75% of them came back, disillusioned by their reception in Afghānistān). These aspects of the Khilāfa movement had an adverse effect upon Hindu-Muslim relations, which were vital to its nationalist character. Gandhī's suspension of non-cooperation in February 1922, constituted a severe blow in this respect; Indian Muslims felt betrayed by the Hindus after bearing the brunt of the nationalist battle.

No less deadly blows came from the Turks. The nationalist government at Ankara succeeded in restoring Turkey's position. The Khilāfatists supposed that Kemal Pasha was acting on behalf of the Sultān-Khalīfa, but this proved to be an error. In November 1922, the Sultanate in Turkey was abolished and the Khalīfa lost all temporal power, he was "Vaticanized" (a condition which the Khilāfatists had declared to be incompatible with his office). Khilāfa leaders tried to explain away the fact, but their followers left them. The movement wholly collapsed when in March 1924 the Ottoman Khilāfa was abolished. Some leaders, like Abu 'l-Kalām Āzād and Dr. Ansārī, remained in the Congress; others found their way back to the Muslim League, which up to 1919 had been the political organisation of Indian Muslims. Other leaders again, like the ʿAlī brothers, tried to save the Khilāfa organisation, but to direct it towards communalist goals. It grew into an instrument to further Muslim interests as opposed to Hindu ones, but even in this form, the organisation had lost all significance by 1928.

Bibliography: Among the contemporary accounts the most important is P. C. Bamford, *Histories of the non-co-operation and Khilafat movements*, Delhi 1925 (confidential publication of the Govt. of India). Materials concerning the movement can be found in Afzal Iqbal, ed., *Select writings and speeches of Maulana Mahomed Ali*, Lahore 1944 (containing among other things an unfinished autobiography of the author). In many books, the movement is treated as an episode in the nationalist struggle, *e.g.* A. Aziz, *Discovery of Pakistan*, Lahore 1964, and R. C. Majumdar, *History of the Freedom movement in India*, iii, Calcutta 1963. The most recent monograph is A. C. Niemeijer, *The Khilafat movement in India, 1919-1924*, The Hague 1972.

KHILĀT [see ANBILĀT].

KHILDJI [see KHALDJI].

KHINALUG (self designation: Kättätturdur; Russian, Khinalug[from the *aul* Khinalug]), a people of the eastern Caucasus. Khinalug is a numerically small ethnical group, which forms an independent branch of the Northeastern Ibero-Caucasian language group. According to the 1926 Soviet census, there were (ethnically) 705 Khinalugs, and linguistically 1,540. The Khinalugs are Sunnī Muslims of the Shāfi'ī rite.

The Khinalugs inhabit the *aul* Khinalug on the upper right arm of the Kudial-chay, in the Mount Shikhdagh area of Konakhkend rayon (Azerbaidjan S.S.R.). The Khinalug traditional economy was based on sheep-raising (transhumance system) and horticulture.

The Khinalug language is purely a vernacular, and Azeri is used as the literacy language, the Khinalug are in fact being culturally and linguistically assimilated by the Azeris.

KHINZĪR (A., fem. *khinzīra*, pl. *khanāzīr*) or *khinzīr barrī* designates, amongst the pachyderms, all suidae or porcines belonging to the palaearctic zone, without any distinction between the pig (*khinzīr ahlī*), domesticated since farthest antiquity, and the wild boar, *Sus scrofa* (*khinzīr waḥshī*), its feral relative, frequenter of wooded slopes and dense scrub in the valley bottoms.

The word *khinzīr* (Hebrew *ḤAZIR*) is to be attached to the root *Ḥ-Z-R* with the idea of "having small eyes", and has no link with the root *Ḥ-N-Z-R* which implies the idea of bulk, mass; this at least is the general opinion amongst philologists, but a coming together of both ideas is not to be excluded. Without being everywhere in current usage *khinzīr* is known to all arabophone populations, however, the term *ḥallūf* (pl. *ḥalāf*, *ḥilāf*, cf. Berber *ilf*, pl. *ifan*) is preferred to it in the Maghrib whilst the Touaregs keep for the animal its name *agubara* / *tagubarat* (pl. *igubaraten* / *tigubaratin*). Even within the porcine species, whilst the sow and the wild sow have no special name except for the feminine derived normally from the masculine (*khinzīra*, *ḥallūfa*), the bear is called *khanzuwān* and the wild boar, whether under three years old, a three-year old, a four-year old or an old boar, is called *rafl* (pl. *rufūl*) and *ʿufr* / *ʿifr* (pls. *ʿufūr*, *aʿfār*). In the Maghrib, where the wild boar is common in the mountain massifs, it is differentiated from the pig which is freely raised by some Berber groups by the expressions *khinzīr ǧabalī* "mountain pig" and *ḥallūf al-ghāba* "forest pig", an old boar is called, according to the places, *sbūl* / *sbūl*, *ǧnūkhri*, *bū darma* and *bū drīwa*. The young of suidae piglets or young wild boars, have retained almost everywhere in the Islamic world their classical name of *khanāwīs* (pl. *khanāwīs*) or the form of dialectical deformations *khannūs*, *khannūsh*, *khanūsh* and *khanūǧ*; in the Maghrib we have also the diminutive *ḥilīf*. From the anatomical point of view, the suidae are distinguished by a long muzzle, a snout in the case of the pig and a shaggy head in the case of the wild boar, and Arabic underlines these features by a series of evocative terms like *khurṭūm*, *ḥammūra*, *sanfara* / *sanfūra*, *khannūfa* / *khannūfa*, in the wild boar, its defensive tusks, the snout's powerful weapon, are called *nāb* / *nābūn* and *khanǧar* (pl. *khanāǧir*), a probable deformation of *khanǧar* "dagger", i.e. having a curved blade.

In Kurʾānic law, suidae are included in the same divine anathema as monkeys (V, 65/60) [see QIRD], and since their flesh involves the major impurity (*nadjas al-ʿayn*), no Muslim can eat it (Kurʾān, II, 168/173, V, 3/4, XVI, 115/116). This food prohibition inherited from the Old Testament (Lev. xi, 17, Deut., xiv, 8) was abolished by Christ for Christians (Matt. xv, 17-20; Mark, vii, 15-23). In Islam, the prohibition of eating pig meat implies *ipso facto* the illegality of buying it or of raising the animal, whose presence near a person praying renders void the prayer; only the *ǧam* of its bristles for making boot wear is tolerated. These bristles are provided by Christian pig breeders who obtain them by scalding the beasts in boiling water after they have been slaughtered, whence the saying *akrah min ḥirākat al-khinzīr* "more disgusting than the pig for boiling water".

Al-Djāḥiẓ, although admitting the excellence of the pig's flesh, which had pride of place on the tables of the Caesars and the Persian Emperors (*Ḥayawān*, i, 234, iv, 40), is careful to point out, in regard to the animal and its behaviour, its most unattractive habits, aiming perhaps at justifying the strict terms of the Kurʾānic prohibition. It is omnivorous, though not really coprophagous (*ǧallāla*), but it devours on occasion excrement. It consumes snakes, like the porcupine, certain raptors, the cat and the Purple Gallinule (*shamāwk*). Its zeal to prolong the act of copulation (*Ḥayawān*, ii, 52, iii, 186, 334, 400, 496, 525, iv, 50) suggested scornful sayings like *ayyash min ʿufr* "more flighty than a boar" and *akbaḥ min khinzīr* "more vile than a pig". The sight of a pig squelching in the mire or a wild boar wallowing in mud (*man baʿa*), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. This legend (*Ḥayawān*, v, 347-8, vii, 204) stated that Noah, distressed when in the Ark by the pestilence left by the evacuations of the pair of cats which Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him, out of an act of delecation of the elephant, a pair of pigs (or wild boars), who soon set to work gorging on the filth; from this hardly credible mode of generation arose the Arabic definition of the suidae, *al fīl abu 'l-khinzīr* "the elephant is parent to the pig". Like the monkey, in popular belief the hog was considered to be the metamorphosis of an impious person expiating the divine punishment; according to al-Damīrī (*Ḥayāt*, i, 304), there was a tradition current that Christ himself had changed a group of hostile Jews into swine. The comparison of the pig, as of the monkey, with a hated person or persons, has always been one of the sharpest insults, and one which the Spanish Muslims used for the Christians, who, as *e sewhere in Islam, raised pigs for food consumption.

At the side of this generally unfavourable view of the suidae, some Arabic writers were able to note and observe the qualities peculiar to the species, by way of rehabilitation: the mother's attachment for its young, its endurance of bad weather, the ease of keeping and raising it, the speed by which it grew fat and its sociable temperament; al-Kalkashandī (*Ṣubḥ*, ii, 48-9) goes so far as to say that, by way of emulation, horses put on flesh when one keeps them

in the neighbourhood of pigs. The fact was noted by E. Reclus (*Nouvelle géographie universelle*, Paris 1884, ix, 190) that in many stables in Fārs there was the custom of keeping horses in the company of piglets and that a most close affection grew up between the two very different creatures. On the Christians' farms, the pig rivalled the cock in the rôle of waking people in the morning, since its cries for its food allowance could be heard from the earliest hours of the day (*Ḥayawān*, ii, 294-5).

The ancient empirical forms of medicine attributed curative virtues to various organs of the pig. Thus its liver was an antidote against the venom of reptiles and soothed colics; its dried and powdered gall sprinkled on haemorrhoids made them go down, inserted in the nostrils, this last soothed coryza; a bone carried as a talisman secured against the quartan ague; and an ointment of its lard rubbed on the body gave protection against all evil and against maleficent spirits. Numerous other beneficial properties were attributed to its blood, urine and dung as well as to the wild boar's tusks (see al Damīrī, *op. cit.*, i, 306, and in the margins al-Ḳazwīnī, *ʿAdjāʾib*, ii, 224-6).

Arabic cynegetic literature is poor in material relating to hunting the wild boar in particular and to the dangers involved in this. It was considered to be a dangerous beast because of its bad temper and its depredations, so that battues for its destruction were held by local rulers and officers; it was hunted with the lance, hunting spear, bow and sabre as these occasions. In Syria, the farmers preferred to let the lion roam on the fringes of their lands rather than try to exterminate it, since it was a sure protection against the possible nocturnal ravages of herds of pachyderms through their crops (*Ḥayawān*, iv, 49). Kushādjim [q.v.] thoply recommends that a person on foot charged by a wild boar should feign death, *face* downwards on the ground (*Masāʾil*, 215). In the 6th/12th century, the valiant lord of Shaysar, Usāma b. Munḳidh, tells in a realistic fashion of his perilous encounters with the black beast which, in his time, abounded in the Orontes lowlands (*K. al-Iʿtibār*, Princeton 1930, 108, 223-4). ʿIsā al Asadī (7th/13th century), in his encyclopaedia of hunting *al-Djawāhira fī ʿilm al-baṣara* (Escurial mss., Ar. 903, f. 262a), advises farmers that, in order to ward off the depredations of wild boars, they should cause to boom out in the middle of the night a big cauldron, emptied and placed upside down, and with a drum skin stretched over its mouth, a bunch of hairs should then be flicked between the fingers with an alternating movement of the two hands. He also gives directions for making a trap (*ḥufra*), roofing over the mouth of a conical hole dug in the normally used pathway of the animals (*op. cit.*, ff 303b-304a). Finally, a century later, the Mamlūk Ibn Mangli, completing al Asadī, brings to bear the fruit of his experience for anyone wishing to measure his strength against the savage beast, whether on foot or mounted (*Umdat al-mahāʾ bi-wadjh al-faḥl*, B. N. Paris ms. Ar. 2832, ff. 17b-18b, and annotated tr. P. Viré, in the press). The arms which he recommends for fighting with it are the double-edged sabre (*saḥāfīrī*) and the arrow with a flat-edged head (*yāsīḳī*), which the attacker should plunge right into the animal's forehead or pierce with them its paws. If the hunter is thrown to the ground by the beast's charge (*ḥamla*), he should flatten himself on the ground and strike upwards with a slashing motion in order to cut the tendons of one of the beast's hinbs. He should also lie in wait for the moment when the beast turns round in order to spit it with a backwards action and rip it open. Another secret of success is perfect mastery of one's mount, which must not take the bit and bolt when it sees the attacking beast. With a lance or hunting spear, the best way is to gouge out one of the beast's eyes, which cannot then survive this wound. Finally, Ibn Mangli records that, according to the ancients, the best talisman against the wild boar's viciousness is to carry a crab's claw hung on the arm.

At the present time in the mountainous regions of the Maghrib, where the wild boar is sometimes abundant, hunting it is used as a tactical means of training for troops practising firing in the country side, and the dead victims are left on the ground for wild carnivores.

The term *khanzīr* plus other terms is also used to designate several other wild animals which have a long muzzle: the potamocherus (*Potamochoerus porcus*) of Africa is therefore called *khanzīr al-māʾ* ("wild boar of the river") or *khanzīr al mā'*, wrongly identified by Kazimirski with the hippopotamus [see FARAS AL MĀʾ in Suppl.]; the two other African suidae, the phacocherus (*Phacochoerus aethiopicus*) and the hylocherus (*Hylochoerus meinertzhagens*) are lumped together under the name *khanzīr abū ḥarnayn* because of their highly developed defensive tusks, with its long snout for grubbing up ant-hills, the aryctcrops (*Orycteropus afer*) is called *khanzīr al-arḍ*, whilst the delphin and the porpoise are called *khanzīr al-baḥr* "sea pig". Finally, in pathology, the plural *khanāzīr* denotes scrofulous growths on the neck.

Bibliography: Given in the article.

(F. VIRÉ)

al KHIRAḲĪ, ʿUmar b. al Ḥusayn al-Baghdādī (d. 334/946), better known under the name of Abu 'l-Ḳāsim al Khiraḳī, was one of the first and most celebrated of Ḥanbalī juris consults. He was first guided into the *madhhab* of the *Imām* Aḥmad by his father Abū ʿAlī al Khiraḳī (d. 299/912), who was himself a pupil of Abū Bakr al Marwadhī (d. 275/899). He also knew Aḥmad's two sons, Ṣāliḥ (d. 266/880) and the *shaykh* ʿAbd Allāh (d. 290/903).

On the eve of the arrival of the Shīʿī Būyids in Baghdād, al Khiraḳī left the ʿIrāḳī capital as a *muhādjir* seeking refuge in Damascus, where a Ḥanbalī school was already taking root. He died there soon after his arrival there, in 334/945, although the exact date of his death is not known. He was buried in the cemetery of the Bāb Saghīr, at the side of the martyr's tombs (*Kubūr al-shuhadāʾ*), and his tomb became a place of pilgrimage. Ibn Baṭṭa visited it when he passed through Damascus, and it still existed in Ibn Kathīr's time (*Bidāya* xi, 214).

Shams al-Dīn al-Nābulusī (d. 797/1394-5), in his résumé of the *Ṭabaḳāt* Abu 'l-Ḥusayn's *Ṭabaḳāt al-ḥanābila*, 332, tells us, on the basis of a report going back to Muwaffaḳ al-Dīn Ibn Ḳudāma, that al-Khiraḳī had denounced publicly in Damascus a "reprehensible practice" (*munkar*), whose nature is not otherwise specified, because of this, he was condemned to be flogged and died as a result of his wounds. However, this version of his death does not seem to be given by his other biographers.

Al-Khiraḳī's only work which has come down to us is his famous *Mukhtaṣar*, the first précis of Ḥanbalī *fiḳh*, which was to enjoy a considerable success and to contribute to the education and formation of numerous generations of legal scholars.

It is said that he wrote numerous other works whose titles are not specified and which have all

been lost. He had left his personal library to Baghdād in the care of a friend in the Darb Sulaymān, before leaving for Syria. A fire there destroyed it (*Bidāya*, xi, 224).

Ibn Kathīr remarks, *loc. cit.*, that the *Mukhtaṣar* was written when the Black Stone was in the hands of the Carmathians. In fact, al-Khiraḳī tells us in the *Mukhtaṣar*, iii, 383, when describing the Pilgrimage rites, that "The pilgrim must kiss the Black Stone if it is in its proper place". It is well-known that this hust was carried off in 317/930 and restored in 339/950; one may accordingly conclude that the *Mukhtaṣar* was put together between 317/930 and 334/945, after the death of Abū Bakr al-Khallāl (d. 311/923).

Abū Bakr ʿAbd al-ʿAzīz b. Djaʿfar (d. 363/974), called Ghulām al-Khallāl, gave out that he did not follow the views of the *Mukhtaṣar* on 60 questions (*masʾala*). The *ḥāfiẓ* Abū ʾl-Ḥusayn, in his *Ṭabaḳāt*, ii, 76-128, returns to this problem and enumerates 98 points of divergence between the two scholars, whilst defending that doctrine which he deems the best.

A large number of commentaries were written on the *Mukhtaṣar*, of which three became especially celebrated, *sc.* those of Ibn Ḥāmid (d. 403/1011) of the *ḥāfiẓ* Abū Yaʿlā (d. 458/1066) and of Muwaffak al-Dīn Ibn Ḳudāma (d. 620/1223). The first two have been lost, but the third, known under the title of *al-Mughnī*, has been published in Cairo by Rashīd Riḍā (12 vols., 1341-8/1922 30). But there were also many other commentaries, and an text of Ḥanbalism was an much commented upon. The *shaykh* Badrān, in his *Madkhal*, 214, states that 300 commentaries still existed in the time of Yūsuf b. ʿAbd al-Hādī (d. 909/1503), a Ḥanbalī known as a historian at Damascus.

Various disciples are known to us of al-Khiraḳī, including the following. (1) ʿAbd al-ʿAzīz b. al-Ḥārith Abū ʾl-Ḥasan al-Tamīmī (d. 371/981), prolific author and founder of a famous line of legal scholars (*Ibn al-Athīr*, 342), (2) Abū ʾl-Ḥusayn Sawāda (d. 387/998), one of the most famous preachers of his generation and a Ṣūfī master (*ibid.*, 350-3), (3) ʿAbd Allāh b. Baṭṭa (d. 387/998), even though he does not mention al-Khiraḳī amongst the authorities upon whom he based his creed (*Ibid.*, 346), and (4) Abū Ḥafṣ al-ʿUkbarī (d. 387/998), considered one of the best-informed scholars of Ḥanbalism.

KHIRBAT AL-BAYDĀʾ, an early Arab structure in the Syrian Desert. Khirbat al-Baydāʾ or Qaṣr al-Abyaḍ is situated about 100 km. southeast of Damascus, looking out to the east over the Ruḥba, a fertile depression in the middle of the southeastern Syrian *ḥamād*. It is a structure set out as a square, 60 m. × 60 m. At every angle and in the centre of each side, except for the eastern one, there are circular towers. The eastern side contains the gate, giving on to a courtyard of ca. 43 m. × 43 m. This courtyard is surrounded on the other sides by ranges of rooms, 7.6 m. deep and ca. 5.0 m. (type *a*), 6.5 m. (type *b*), 7.6 m (type *c*), and 5.2 m. (type *T*) wide, forming the schema *c-a-b-a-T-a-b-a-c*. All these rooms were living quarters. On the eastern side there were two small rooms flanking the entrance and four long rooms, which must have served as store-rooms. On the southern and northern sides the rooms were articulated into two groups with the schema *c-a-b-a* and *a-b-a-c* respectively. Entrance from the courtyard was given by doors in the *b*-rooms, whence doors led to the *a* rooms and further doors led from there to the *c* rooms. On the western side were two groups of rooms following the schema *a-b-a* which were also accessible through doors in the *b*-rooms. Thus we have on three sides of the courtyard two groups of rooms separated by isolated room of the *T* type. The residential character of the building is attested by the organisation of the rooms, together with the abundant natural decoration especially on the lintels. First impression suggest that Khirbat al-Baydāʾ was another example of the genre of Umayyad palaces. Closer investigation, however, reveals this identification to be impossible. It lacks many elements shared by Umayyad palaces, principally the bayt organisation of the rooms, the peristyle, brick and vaulted construction, and stucco decoration. Both the decoration and the technique of construction demonstrate an ambitious local Syrian craftsmanship. The decoration shows this craftsmanship to be working with oecumenical patterns of the 5th and 6th centuries A.D. The relations of this local craftsmanship can be more closely determined. Masonry comparable with that at Khirbat al-Baydāʾ is found in northeastern Syria, not in the neighbouring Ḥawrān. Equally, the decoration is not Ḥawrānian in type, but resembles closely the ornament found in the region northeast of Ḥims. This suggests that Khirbat al-Baydāʾ is not an Umayyad structure but was built in the 5th and 6th century by one of the Arab rulers, clients to the Byzantine state.

KHIRBAT AL-MAFDJAR, popularly known as Ḳaṣr Hishām, is the modern name for the ruins of an unfinished Umayyad mansion in the Wādī ʾl-Nuwaʿīma, north of Jericho. The ruins comprise three separate buildings: a palace proper, a mosque and a bath attached to a hall. On the east side of this complex stood a colonnaded forecourt with an ornamental pool at its centre. Additional architectural remains lie north of these buildings, but have not yet been excavated. Foundations of a wall, found north of the site suggest that the buildings were originally surrounded by a walled estate, comprising cultivated land, agricultural settlements and perhaps a game preserve. A complex irrigation system, developed already in Roman times and based on three neighbouring springs—ʿAyn al-Sulṭān, ʿAyn al-Nuwaʿīma and ʿAyn al-Duyūk, provided the water for the residential buildings as well as for the cultivation of the land. The modern name of the site, meaning "a place where water springs from the earth", attests to the abundance of water in this area.

The site, which has not yet been identified with any place mentioned in written sources, was first visited and described by Captain Ch. Warren and Mr. F. J. Bliss on behalf of the Palestine Exploration Fund (*Survey of Western Palestine*, iii, 1883, 211-23;

Fig. 1. Khirbat al Mafdjar Plan (after Hamilton)

PEFQS, 1894, 177-81). Our main knowledge, however, derives from the excavations conducted between 1935 and 1948 by the Department of Antiquities of Palestine, under the direction of R. W. Hamilton with D. C. Baramki as field director. Their finds which appeared first as preliminary reports in the *Quarterly of the Department of Antiquities of Palestine*, were later published by Hamilton (*Khirbat al Mafjar, an Arabian mansion in the Jordan valley. With a contribution by Dr. Oleg Grabar*, Oxford 1959).

1. *Architecture.*—A glance at the plan of Khirbat al Mafjar reveals some remarkable irregularities and a somewhat awkward relation between the main units of the building complex (Fig. A). The walls of the square, two storeyed palace, which was by far the largest part of the whole complex, are of uneven length (the south and west walls, 67.28 m. externally; the north wall, 67.21 m.; the east wall, 63.86 m.), its façade is asymmetrical, and there are further oddities in its inner division. However, the plan of the palace conforms to those of other Umayyad castles. A three-quarter round buttress-tower stood at each of the four corners and a semi-circular one in the middle of the west and north walls. In the middle of the southern wall only there was a square tower—presumably the base of a minaret—and another rectangular porch-tower faced the entrance in the east. The rooms of the palace were arranged around a central porticoed court. They were generally not connected, although along the west side of the palace they were arranged in communicating pairs, one behind the other, with a group of five intercommunicating rooms in the centre. The central room in the south was provided with a niche, probably a *mihrāb*, flanked by two colonnettes. The northern wall had a single elongated hall with a row of six piers down the centre. Six pairs of parallel wall piers suggest that this hall was divided by lateral arches into two times seven bays. In the centre of the western portico, but not aligned with the axis of the central room, three flights of stairs descended to a small forecourt preceding a *sirdāb*, a small room supplied with cold water and intended for refreshment. A balustrade around the top of the staircase clearly blocked the direct access to the central room.

At a distance of about seven metres from the north east corner of the palace and aligned with its eastern wall stood a mosque (23.6 m. × 17.1 m.). It could be reached in two ways: either by a staircase which descended from the first floor of the palace and led to a door in the *kibla* wall, or by three doors in its northern wall. The door in the *kibla* wall, next to the *mihrāb*, was probably used by the owner of the palace and his close attendants exclusively, while the openings in the northern wall were presumably used by the public.

The mosque was preceded by a small courtyard or vestibule, which had three additional openings in its northern wall. The *mihrāb* was flanked by two cylindrical columns and was covered with white plas-

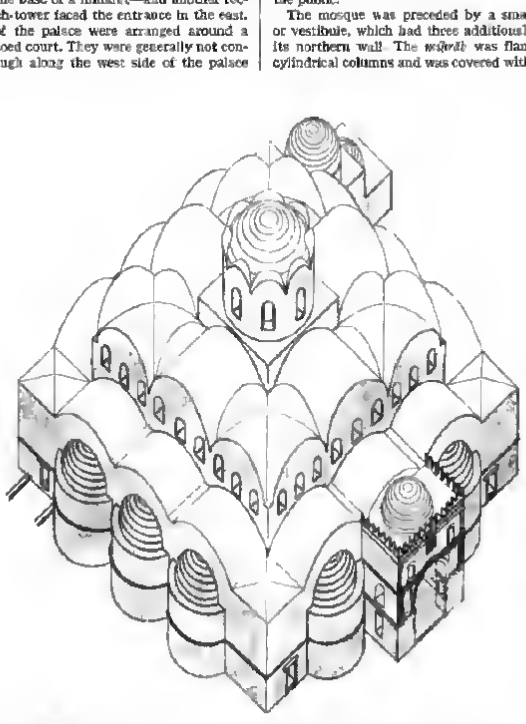

Fig. B "Bath Hall". Revised isometric reconstruction (after Hamilton).

nce which remained undecorated. In front of the *mihrāb* the excavators found the fallen remains of two arcades composed originally of three arches each. These arcades must have sheltered a strip of slightly more than 20 m. of the enclosure. The construction of the mosque was probably never finished, for the walls nowhere stood more than three courses high, and the excavators found no traces of a floor.

About 40 m. north of the palace are the ruins of a second large building complex which was separated from the palace by an open area. A wall and a buttress tower enclosed the area on the side aligned with the western palace wall, and the mosque bordered it on the east. A paved and originally covered passage crossed the open space, connecting the palace with the northern buildings. The dominant feature of this complex was a square hall (north wall, 30.28 m.; south wall, 30.33 m., west wall, 30.42 m.; east wall, 29.79 m.). The north, south and west sides each had three horse-shoe shaped exedrae, while a stately entrance porch, flanked by similar exedrae, occupied the eastern wall. Two additional entrances were found at either end of this wall. Each of the eleven exedrae was flanked by a pair of engaged columns, whose bases stood about a metre above the floor. Between and inside these exedrae were small rectangular niches which stood about 1·10 m. above floor-level and were covered by arched heads. Square pilasters with three-quarter round shafts at their corners supported the roof and divided the hall into nine central bays and an ambulatory. The piers were interconnected by stone built arches carrying intersecting walls which rose high enough to provide room for windows. According to Hamilton's reconstruction (Fig. B) (*Mafjar*, 67-92, Pl. CV and *Levant*, 63 and Fig. 1 for revised isometric restoration), the four corner bays were square and had cross-vaults, while the axial bays were rectangular and barrel-vaulted. The central bay was raised above the rest and carried a dome over a cylindrical drum which was also pierced with windows. Except for the four compartments at the corners, the bays of the ambulatory were barrel-vaulted. The spacing of the piers was such that the central nave, connecting the porch with the central apse in the west, like the main north-south axis, was wider than the other passages (5.50 m. to 5.60 m. as against 4.40 m. to 4.60 m. for the flanking aisles and 2.50 m. to 3.36 m. for the aisles closest to the walls).

Along the southern wall of the hall, and including its three exedrae, there was a pool. It was bordered by a barrier built between the four southern piers of the hall and continued at either end in a right angle towards the wall. This pool, the floor of which was at about the same level as the rest of the hall, was apparently not included in the original plan of the hall and only added subsequently.

The main entrance into the hall was by way of a monumental porch (8.45 m. wide) in its eastern *façade*. This porch was entered by an arched opening with stepped and undercut crenellations at the top edge. It was covered by a dome resting on pendentives carrying its high drum. Within the porch was a pair of arched recesses, and there was another pair of niches in the jambs of the entrance arch. A doorway connected the porch with the main hall.

Attached to the hall at the north-west corner was a small, originally domed, room with a semi-circular apsis, the *Diwān*, used apparently for private audiences. There were extensive latrines at the north-eastern corner (F), in the centre of the northern wall there was the bath proper, comprising two rectangular rooms (A, B) with benches along the walls (and two tanks in room B), and two additional rooms (C, D). Their floors, built over hypocausts, were heated by a furnace in the stoke-hole (E). The first room (C) was nearly square with a single niche in the east, while the other, a circular originally domed chamber, was surrounded with eight horse shoe shaped niches, one containing the door to room (C). These two were the more temperate and the hotter *caldaria* respectively, while the first two chambers may have served as waiting rooms or vestiary (A) and *frigidarium* (B).

The rooms of the *hammām* are remarkably small and could be reached from the large hall through chamber (A) only. There was no direct connection between the bath and the disproportionally large latrines.

2. *Decoration*.—Apart from the mosque, which was never finished, and the ground floor of the palace, the buildings at Khirbat al-Mafdjar were lavishly decorated. There were mosaic floors at the *sirdāb*, the hall adjoining the bath, and the *diwān*. The façade, the porches and the walls of the hall and the *diwān* were covered with stone and stucco panels respectively. The walls of the upper floor of the eastern wing of the palace, and of the bath hall, showed remains of paintings; figural sculptures, many of them nearly life size, were placed in niches or arcades at different parts of the buildings. The mosaics were of natural stone in a rich colour scale of red, brown or yellow, bluish, grey and white grades. While those in the *sirdāb* are technically of mediocre quality, the mosaics in the hall and *diwān* are extremely fine. There are forty-two carpets altogether (thirty-eight in the hall and four in the *diwān*). They are partly adapted in size and pattern to the architectural superstructure, and their placement appears to have been guided by the purpose and function of these buildings (Pl. Ib). The majority of these patterns show geometric or abstract designs and interlacings which are enriched by stylised floral devices. In the centre of the Hall a radiating rosette pattern accentuates the main axis and "reflects" the central dome above it (Panel 27 in Hamilton's chart, *Mafjar*, 328, Fig. 258). Roundels containing concentric interlacings decorate the floors of the four corner bays which were apparently cross vaulted. There is a continuous mosaic panel in each of the outer corridors (Nos. 2, 2, 3 in Hamilton's chart). The rectangular panel between the entrance porch and the central rosette, in its composition and ornament, leads towards the central axis of the Hall. Finally, the design in the central apse (No. V in Hamilton's chart) is distinguished from the other apses by a large rosette in its interior and a semi rosette at its base (Pl. IIa). The pavement includes only two figural designs: one at the base of the central apse, representing a citrus fruit, a branch and a knife; and the other in the dais of the *diwān* showing a fruit bearing tree flanked to the right by a pair of gazelles and to the left by a lion attacking a gazelle (Pl. IIb).

Together with Kaṣr *al-Ḥayr al-Gharbī* (q.v.), Khirbat el Mafdjar provides the richest accumulation of early Islamic architectural decoration so far known. Apart from stone—and occasionally marble—the artists made abundant use of plaster for elaborating the interior and exterior of the mansion. This technique, not used in Syrian architecture until later Umayyad times, had the advantage of being comparatively cheap, and its flexibility allowed it to be used for life-size sculpture. Moreover, it could be painted, and since it lent itself to modelling in a wide variety of forms, these stucco carvings must have contributed to the impression of richness and sumptuousness of the buildings.

Generally speaking, two groups of motifs predominate in the architectural surface decoration of Khirbat al-Mafdjar. The first, and largest one consists of vegetal elements such as acanthus leaves, full and half palmettes, vine garlands, flowers and fruit. The other comprises geometric elements and various abstract designs. Pure geometric compositions, however, are comparatively rare. In general they appear together and interwoven with vegetal designs: such as interlaced roundels, or roundels alternating with rectangles filled with rosettes, or diamond-shaped units filled with rosettes and palmette leaves respectively (Hamilton, *Mafjar*, Pl. XLIII, 2). In most of the plaster ornaments the geometric motifs are interrupted and combined in such a way that the resulting patterns completely conceal their original rigid construction (Balustrade panels from Palace, Hamilton, *Mafjar*, Pl. LIX, 13, 14 and pp. 245 ff., Figs 185-210. The same principle was used in the mosaic pattern).

Wall paintings were found in two areas only: in the rooms of the east wing on the first floor of the Palace, and in the "Bath Hall". Painted on plaster in both fresco and tempera, hardly any of these paintings were found *in situ*, and all that has remained are fragments. Since we know so little about Umayyad painting, this situation is all the more deplorable. *Professor Oleg Grabar has studied these fragments* and found that in subject matter, style and iconography the fragments in the Palace differed from those in the "Bath Hall". In the earth part of the eastern wing of the Palace Sasanian textile motifs predominated. In addition to floral ornaments, such as heart shaped leaves, rosettes, lotus and palmette designs, a pattern of interlacing circles with a simurg painted within each of the roundels could be reconstructed. In the rooms to the south the excavators found architectural and figural remains as well as painted imitations of marble. The style is less homogeneous than in the north part; yet the Roman Byzantine tradition is most conspicuous. The paintings in the "Bath Hall", which originally decorated the walls and piers above the level of the window-sills, were less spectacular and more limited in subject matter. Their main purpose was to emphasize the architectural setting of the construction, in particular, the groups of three niches in the clerestory were richly painted (Hamilton, *Mafjar*, Pl. XIII and p. 73, Fig. 33, for restored sketch). At the floor level all the apses were plastered white. The only exception was apse V in the centre of the western wall, whose archivolt was decorated with meandering bands which enclosed panels with various fruits (including pomegranates), vegetables in a bowl, etc. Another panel with painted fruit and roses covered an arch which had spanned a western aisle of the northern ambulatory, south of the *Diwān*. The importance of this fragment lies in the affinities of its rosettes to the type of rosette which is repeatedly depicted in the mosaic floor of the same Hall, particularly in front of the main apse, in the ambulatory and in the main panel between the entrance porch and the large central medallion (Pl. Ib).

Khirbat al-Mafdjar abounded in monumental sculpture of various human and animal forms. Although none of the statues were found *in situ*, they were evidently concentrated in three areas, the Palace porch and entrance, the porch leading to the "Bath Hall", and the *Diwān*. The human statues included an almost life-size princely figure, generally interpreted as a caliph, which came from a niche surmounting the entrance to the "Bath Hall" (Fig. C and Pl. Va), male and female entertainers (Pl. Vb) and miscellaneous figures connected with courtly pleasures. A quick glance at these statues reveals that they were sculptured in a remarkably homogeneous style: they are rendered frontally, in nearly identical conventionalised postures, and their rigidity and lack of movement gives them an impressive monumentality. The men and women are plump and heavily built, and the semi-nude female bodies show folds of abundant flesh on the thorax and above the girdle. The caliph is clad in a long coat trimmed with Iranian-type pearls, worn over wide trousers, and holds a short sword; the girls wear pleated skirts that close from right to left and are held on the hips by a twisted cord. With slight variations the hair of the figures is identically modelled parted in the centre and rendered in parallel grooves (caliph and some of the busts), or rows of small curls. The hair of the women is dressed in three heavy twists which are covered with a rosette in the centre, and on the forehead forms small ringlets which descend at either side and terminate in cork screw curls (Pl. IIIb). The rendering of the faces is generally identical. The brow forms one plane with the forehead and the flattened bridge of the nose, and abuts at a sharp angle on the plane of the eye sockets. The pupil of the eye is pierced or drilled, and the mouth curves downward slightly and has a drilled hole in each corner. There is little, if any, modelling in the faces.

The eyes of the figures from the Palace entrance, like those of the caliph, are modelled in a different style from those of the women from the bath porch of the *Diwān*. In the first group the eyes are encircled by a heavy unbroken band representing the eyelids, and the brows are marked by a grooved line; the eyelids of the other figures are more smoothly sculptured and the brows are painted (Pl. IIIb).

There were various animal figures at the Palace entrance. Rams or mountain sheep decorated the front of the "Bath" porch and the bottom of its drum, and about a hundred partridges (Pl. IIIa) were found in the *Diwān* and the "Bath" porch. On the whole the animals were more delicately modelled than the human figures.

3. *Interpretation of structures and decorations.*—Our knowledge of the purpose for which Khirbat al-Mafdjar was built, and of the actual function of its different units, is based primarily on interpretations of its architectural features and decorations. The irregular plan of the whole complex seems to imply that it was not conceived as a single unit and was built in consecutive stages. The function of most of the rooms of the Palace, except the little mosque, the *maqṣūra*, and the underground *wuḍūḥ*, is uncertain. The discovery of numerous wall paintings in the upper storey, in contrast to the lack of decoration observed in the ground floor rooms, is generally explained by the fact that the upper floor was reserved for the living quarters and private rooms of the owner of the mansion. This seems to be confirmed by the only painting which could be fully reconstructed, the textile pattern with the simurg and the interstitial heart-shaped four-petaled rosettes, which came from a room in the northern part of the east wing. This pattern would have been appropriate for a princely dwelling, as its Sasanian prototype figures on the garb of Khusrow II at the bas reliefs of Ṭāk-i Bustān and in similar royal Sasanian representations.

Scholarly opinions vary as to the purpose and function of the "Bath Hall". In relating it to the bath-rooms proper and the Roman tradition of public baths in Palestine and other provinces of the Roman empire, Creswell and Hamilton interpreted the Hall as

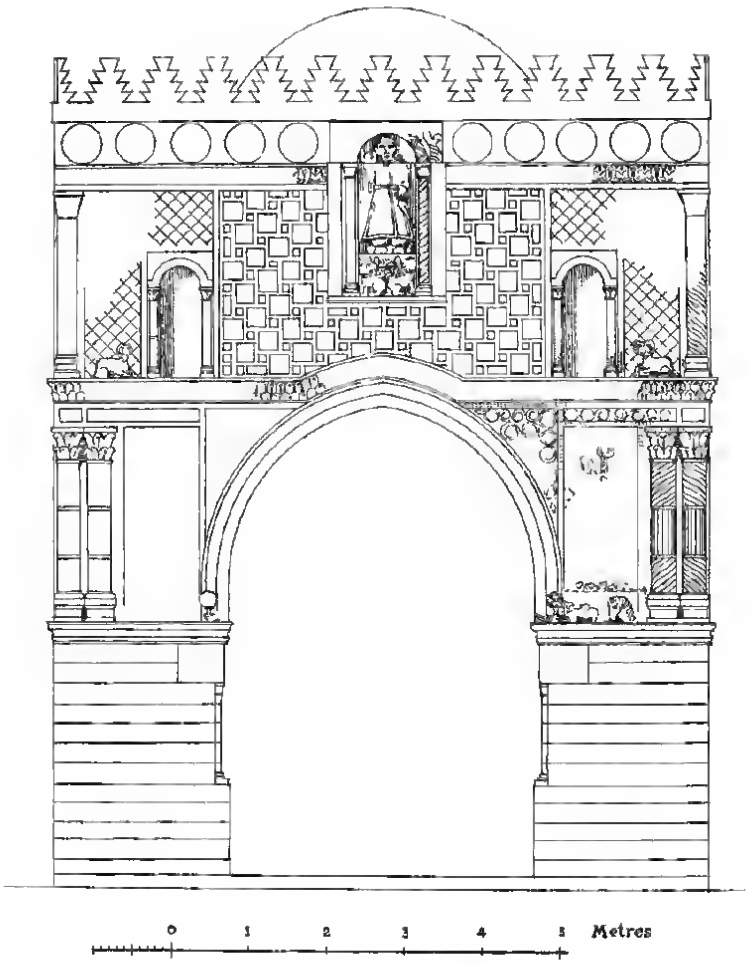

Fig. C "Bath Hall" Porch façade (after Hamilton).

a *frigidarium* which, according to Hamilton, served also as a vestiary or *apodyterium*. He saw an indication of these functions in the niches along the walls, which he interpreted as a repository for the bather's clothes. Hamilton was aware of the abnormal size of the Hall, which he believed to represent an 'architectural response to some specialized requirements' (*Mafdjar*, 47). A more specific function was suggested by Grabar, who suggested that the Hall should be related to the Roman *triclinia* and considered as a place for ceremonial entertainment and for other customary Arab and Sasanian activities, such as dancing in banqueting (*Islamic art and Byzantium*, in *Dumbarton Oaks Papers*, XVIII (1964), 76-7). A fresh study of the architectural peculiarities, decorative features and iconography of the Hall and a re-evaluation of these ideas has led Professor K. Ettinghausen to point out that in contrast to the more private character of the Palace, the "Bath" Hall was conceived as the representational part of the mansion. First, it could be entered from the outside by a distinctively ornamented monumental porch and two additional doors next to it. Aside from the caliphal statue, the front and inside of the porch carried figural sculptures of definite princely associations particularly appropriate for a princely abode, such as male and female entertainers, as well as animals alluding to the royal hunt. Secondly, the official character of this building becomes further evident if one follows Ettinghausen's discussion of the central axis of the Hall. This axis, which connects the porch with the western wall opposite, focuses on a central apse which in its artistic rendering differs from the remaining exedrae of the ambulatory. Originally attached to a cross shaped voussoir, there was a stone chain ending in a cylindrical device hanging from the apex of its semi dome. There were seven, and not five niches in the lower wall of the apse, and a pair, instead of a single niche, decorated the upper level of the exedrae. The arched heads of these niches had a horse shoe and not a semi circular profile, and were supported by colonnettes missing in the other recesses. Moreover, while all the exedrae in the ambulatory were plastered white, the archivolt of the central apse was painted with a meander pattern with perspective frein and different vegetal designs.

The exceptional rendering of the central apse, which must have been viewed by every visitor entering from the main porch, is explained by Ettinghausen in relation to its function. According to his interpretation it served as a throne recess in place of honour where the owner of the mansion sat at official occasions and in compliance with royal Sasanian practice, with his royal headgear suspended over his head.

Aside from the symbolic "hanging crown"—in Umayyad times transformed into a "hanging" *halanzuwa*—the royal character of the throne recess is further brought out by the huge half rosette in the pavement at the base of the apse, a motif which in Sasanian iconography had royal connotations. According to Ettinghausen it was not selected at random but rather in conformity with the Sasanian iconographic tradition, in order to emphasise the princely sections of the mansion.

By applying the principle that a "given imagery is related to the situation or activity that took place in or near the particular spot" (*From Byzantium*, 35-6), Ettinghausen further uses the mosaic panel with the knife, citrus fruit and leafy branch in front of the main apse (Hamilton, *Mafdjar*, 336-7) to explain one of the other functions of the "Bath" Hall. First, since Khirbat al-Mafdjar was an agricultural estate, this picture may be interpreted as an offering or present to the owner of the estate, or possibly as a symbol for a tax paid in the form of a highly-esteemed fruit grown in the plantations. Second, the fact that the only figural mosaic in this Hall depicts a fruit which had to be peeled with a knife in order to be eaten, appears to indicate that one of the purposes of this Hall was feasting and banqueting.

Assuming that the "Bath" Hall was built for public audiences, the *Diwān* or small apsidal room in its north-western corner (Fig. 1) was probably built as a private audience chamber. The interpretation of its function has again been based on the iconography of its decoration—the figural mosaic pavement on the raised dais (Fl. IIb), and the stucco ornaments of the dome in front of it (Fl. Ic). Accordingly, it has been pointed out that the lion preying upon a gazelle to the right of the fruit bearing tree was probably meant to demonstrate the caliphal power, while the two eating gazelles to the left alluded to a peaceful caliphal reign—the *Dār al Islām* versus the *Dār al Ḥarb*, the Abode (or Realm) of Islam versus the Abode of War (*From Byzantium*, 45-6).

The mosaics in the *Diwān* are based on ancient oriental concepts and symbolism. The winged horses and the pendentives of the cupola (Fl. IIIc), on the other hand, represent an Iranian, particularly Sasanian, motif. They are beasts which figure on seals, textiles and silver vessels as the royal mount of ascension and symbolise the semi divinity of the Sasanian king. Their representation on the cupola provides additional proof of the princely character of the chamber which, like in other parts of the mansion, is expressed in the iconographic language of Sasanian Iran.

4. *Who built Khirbat al Mafdjar?*—So far it has not been possible to connect the buildings at Khirbat al Mafdjar with one single prototype. The combination of a villa, a private bath and a multifunctional hall is Roman. The buildings reflect primarily Byzantine tradition, while the mosaics and most of the paintings in the palaces are rooted foremost in the local Syro Palestinian tradition. The remaining decoration—particularly the stucco sculpture and ornament—is inspired in style and technique by Eastern, Iranian and probably Central Asian prototypes. The imagery in particular is applied in accordance with Sasanian concepts of princely dwellings. It represents an apparently conscious adaptation of royal Sasanian art which was combined with architectural elements of Roman and Byzantine derivation in order to meet best the demands and aspirations of the Umayyad owner of the mansion.

The identity of the owner and builder of Khirbat al-Mafdjar has not yet been established conclusively. On the basis of certain graffiti with the name of Hishām which were found in the débris of the palace, it has been assumed that Khirbat al-Mafdjar was built during the caliphate of Hishām, between the years 105-25/724-43. More recently, however, Hamilton tried to prove that although the mansion was built at the time of Hishām, it was owned and occupied by his nephew, al-Walīd b. Yazīd. Hamilton's arguments are rather intricate. Yet it is true that in its architectural concept the palace, and particularly the Throne and Banqueting Hall, would have suited the taste of a personality like al-Walīd II.

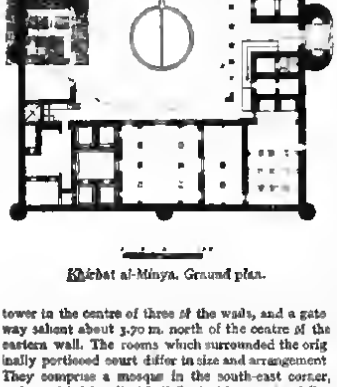
KHIRBAT AL MINYA, in mediaeval times known as Minya or ʿAyn Minyā: Ḥuṣḥām, is the name for the ruins of an apparently unfinished Umayyad mansion about 250 m. west of the northern end of Lake Tiberias. The ruins were excavated in 1932 by A. E. Mader and between 1936-9 by A. M. Schneider and O. Puttrich Reignard. During July August 1939 the western section of the palace was excavated by O. Graber in collaboration with the Israel Department of Antiquities.

The building consists of an irregular rectangular enclosure (66.40 m. × 73 m. × 72.30 m.) facing the four cardinal points. Like other Umayyad castles it has round towers at the corners, a semi-circular



Khirbat al-Minya. Ground plan.

tower in the centre of three of the walls, and a gate way salient about 3.70 m. north of the centre of the eastern wall. The rooms which surrounded the originally portioned court differ in size and arrangement. They comprise a mosque in the south-east corner, a three-aisled basilical hall flanked by a unit of five rooms in the south, and residential quarters in the north.

As against the simple unpretentious decoration of the mosque, the domed gate-way chamber and the southern rooms must have been richly decorated. Marble panels covered the dadoes of the walls. Coloured and gilt glass mosaics decorated the summit of the dome, and stone mosaics combined with glass cubes and set in geometric carpet like patterns on the floor of the five southern rooms indicate the official, representational character of this section. Another well-preserved floor mosaic was discovered in 1959 in the western part of the mansion.

A fragmentary inscription with the name of al-Walīd on a marble slab which had been used as a sill when the gateway was rebuilt centuries later, supports an attribution of Minya to al-Walīd I (86-96/705-15). However, the palace was apparently used throughout the Umayyad period. Moreover, the stratification established in the western part of the site, and the ceramics found in the excavation in 1959, have shown that the site was settled in the later Mamlūk period when it served as an important commercial post between Damascus and Cairo. It was abandoned at an uncertain date, but later temporarily resettled.

KHIRKA, "rough cloak, scapular, coarse gown". The assumption of such a cloak as symbol of embarking on the mystical path is mentioned as early as the 3rd/9th century (by Ibn Ḥarb and al-Muḥāsibī; see Massignon, *Lexique*). It is the equivalent of the handclasp (*muṣāfaḥa*) by means of which the spiritual director (*murshid*) transmits to the initiate (*murīd*) the blessing inherited from the Prophet. It can also be replaced, or accompanied, by other rites with the same significance; the handing-over of a rosary (*sibḥa*), of the text of a litany (*wird* [*q.v.*]) belonging to the mystical order (*ṭarīḳa* [*q.v.*]) which is receiving the novice. Its value as "the garment of piety", external and internal (according to Kurʾān, VII, 26), this latter implying humility and detachment from worldly standards, is further stressed when the *khirḳa* becomes, as with the Darḳāwa [*q.v.*], a cloak made up of pieces sewn together (*murakkaʿa*).

Starting from its original technical sense, the word *khirḳa* has been broadened to designate the initiation as such, becoming a synonym for "transmission" (*tawaḳḳul*), "embarkation on the way" (*akhḏ al-ṭarīḳ*) and "covenant" (*ʿahd, mīthāḳ*). Thus the Ṣūfīs came to speak of the *khirḳa khiḍriyya* "investiture by al-Khaḍir" [see AL KHAḌIR] to describe those cases, numerous in the history of Muslim mysticism, in which some contemplatives are said to have received spiritual direction directly from the powerful and mysterious person who, in the Kurʾān (XVIII, 64-82), shows a wisdom superior to the prophetic law.

In fact, the two methods of spiritual transmission, an attachment to the *shaykh* (*silsila*) of spiritual masters and spontaneous illumination coming from the bestowal of a special grace, existed side-by-side at all stages of the history of Ṣūfīism. Abu ʾl-ʿAbbās al-Mursī, the disciple of the *imām* al-Shādhilī (d. 656/1258), was to derive his arguments for demonstrating the superiority of the *ṭarīḳa* founded by his master, from the fact that the latter did not rest on the transmission of the *khirḳa*, but on "a spiritual direction (*hidāya*) to which God was able to attach certain of his disciples directly to Muḥammad His prophet" (cited by P. Nwiya, in *Ibn ʿAṭāʾ Allāh et la naissance de la confrérie shâdilite*, Beirut 1972, 32).

The word *khirḳa*, followed by a noun complement,

may serve to define various categories or degrees of initiation to the mystical path. Thus *khirḳat al-irāda* "the robe of free-will" means, according to al-Suhrawardī, "he whom one asks personally, of his own free-will, from the *shaykh*, having full knowledge . . . of counting on passive obedience to whatever thing he will be condemned to by accepting", whilst the *khirḳat al-tabarruk* "cloak of blessing", is that which is "given officially by the *shaykh* to those whom it seems to him useful to introduce to or guide along the mystical path, without their giving an exact account of the significance of the act of investiture" (*ʿAwārif*, quoted by E. Blochet, in *L'Ésotérisme musulman*, Louvain 1920, 153). Other authors speak, in more general terms, of the "cloak of Śūfism", *khirḳat al-taṣawwuf*, always insisting on the close connection created by this act of investiture between the disciple and his spiritual master, who penetrates the most intimate thoughts and needs of the initiate and becomes "his real father" (Aḥmad Diyāʾ al-Dīn al-Nakshabandī al-Mudjaddidī al-Khālidī, *Muʿīnnāṭ Dāʾirat al-ṣafā wa-ḥaramāt al-awliyāʾ*, Cairo 1328, 100). Finally, the act of investiture with the "cloak of nobility", *khirḳat al-futuwwa*, originally conferred by the ʿAbbāsid caliphs and then later by the Ayyūbid sultans of Syria and Egypt, was one of the features marking out the chivalric orders of the Islamic world before they spread into Christendom.

KHIRḲA-YI SHERĪF, one of the mantles attributed to the Prophet Muḥammad, called KHIRḲA-YI SAʿĀDET was preserved at the Topkapı Palace in Istanbul. It was brought to Istanbul by Muḥammad Abū Numayy, son of the *Sharīf* of Mecca, together with the key of Mecca and other Islamic relics, after the conquest of Egypt in 923/1517 by the Ottoman ruler Selīm I.

This black mantle, 1.24 cm. long with wide sleeves and a cream-coloured woollen lining, was kept in a throne made for Murād IV by the father of Ewliyā Çelebi, Derwīsh Zīlfī Meḥmed, the head jeweller of the palace. The throne, which resembled a canopied tent, lost its function in Maḥmūd II's time when lattice work doors were made. Today the *Khirḳa-yi Sherīf* is protected by being wrapped in seven silk velvet cloths, embroidered with gold thread, these in turn are protected by a gold box with a double lid, which is given further protection by being placed in a gold casket that was made in the era of ʿAbd al-ʿAzīz. This is then placed on a silver table in the silver throne.

The *Khirḳa-yi Sherīf* had a special function in Ottoman customs and ceremonies. In one of the late Ottoman chronicles ('Aṭāʾ, *Taʾrīkh*, i, 93 cf. *Khirḳa-i Śerīf*, in *IA*., by Ḥ. Kufralı) the author refers to the *Khirḳa-yi Sherīf* and says that a room was built named the Khāṣṣ Oda [q.v.] to protect the sacred relics when Selīm I brought them to the palace. It is not really possible to accept this statement as fact, because there is no other source of the same century or subsequent ones that mentions it until the 19th century. In fact, this room is most probably the Khāṣṣ Oda built by Meḥemmed II. No information about the mantle is known before Aḥmed I's time, his *nedīm*, Muṣṭafā Ṣafī Efendi, refers in his *Zübdet-ut tevārīkh* (Topkapı Sarayı, R. 1504, f. 128a) to the mantle, and says that Aḥmed I had a shelf made above his throne in the Khāṣṣ Oda and had the mantle put on it. We also learn that Aḥmed I started the ceremony of dipping a part of the mantle into water, thus making the latter holy; this custom was later changed into dipping the fastenings and then in Maḥmūd II's reign, to placing scarfs on it. We also learn from the *Zübdet ut tevārīkh* that the Khāṣṣ Oda did not contain all the relics in Aḥmed I's time. This room, with its 10th/16th century tiles, was repaired by Maḥmūd II, when a new fireplace was built, the decorations of the dome and upper parts of the walls were redone, and the whole apartment assigned to the keeping of the relics.

There were forty *Khāṣṣ Odalıs*—the men in charge of the Privy Chamber—who did the work of guarding the *Khirḳa yi Sherīf*. The duties of the *Khāṣṣ Odalıs* were to sweep the area, dust the Kurʾāns and other books, burn incense on special nights, sprinkle rose water, clean and polish the gold and silver objects, etc. (I. H. Uzunçarşılı, *Osmanlı sarayı teşkilatı*, Ankara 1945, 335). The "silver" water carriers, thus named because they carried the water in silver containers, washed the floors of the building (*idem*, 455). In the corner of the wall, where there was a gate that opened into the third courtyard, there was a pounding stone used to grind up incense; on the other side of the *mumr* well was a well where the sweepings were disposed of. Four of the *Khāṣṣ Odalıs* stayed on duty at night and read the Kurʾān (*ibid*., 32). The guarding of the *Khāṣṣ Oda* was the duty of *Aghas*, whose spell of duty lasted for a period of 24 hours before being relieved.

All the Ottoman Sultans believed firmly in the sanctity of the *Khirḳa-yi Sherīf* and tried to remain near it, Aḥmed I took it with him wherever he went (*ibid*., 256). Findiklilī Meḥmed Agha, a *Khāṣṣ Odalı* of the reigns of Muṣṭafā II and Aḥmed III, speaks at length about the *Khirḳa-yi Sherīf*. According to him, Muṣṭafā II took the mantle with him to a private wagon to Çatadja where he went for Ramaḍān, had it kept in a special room and visited it ceremonially on the 15th of Ramaḍān. He also took it with him when he went to Edirne (*Nuṣrat-nāma*, ed. İ. Parmaksızoğlu, Istanbul 1966, ii, 45), and when the revolt that ended his reign took place, he tried to escape to Edirne with the mantle (*ibid*., ii 183). Aḥmed III was also keen on burying the mantle with him. When he went to the Tersāne Bāghčesi to spend the summer of 1127/1715, or to the Wālide Sulṭān's seaside palace to spend the winter, and when he held a circumcision festivity for one of his sons, the mantle always figured prominently in what had to be taken with him (*idem*, 223, 338 9, 397).

Ewliyā Çelebi writes about Murād IV's sword-girding ceremony, after which he went to the *Khirḳa-yi Sherīf* of the *Khāṣṣ Oda*, paid humble respect to the mantle and then prayed (Ewliyā Çelebi, *Seyāḥat-nāme*, i, 227). We also learn from Findiklilī Meḥmed Agha that, when Muṣṭafā II learned that he was going to succeed to the throne, he went to the *Takht Odası* [*Khāṣṣ Oda*], prayed in front of the *Khirḳa-yi Sherīf*, and then put on suitable robes in order to take the oath of allegiance (*Nuṣrat-nāme*, i, 4). Subsequently, he visited the *Khirḳa yi Sherīf* every Friday (*ibid*., i, 32). Aḥmed III's eldest son, Süleymān, after he finished reciting the Kurʾān, held a ceremonial session in the *Tersāne Bāghčesi* in front of the *Khirḳa-yi Sherīf*, according to Findiklilī (*ibid*., ii, 388). It had an even greater importance in war time. A good example of this is the Egri campaign of Meḥemmed III, which was

going very badly, but was finally turned into victory when Sa'd al-Dīn addressed his people and Mehemmed III put on the mantle. The spirit of battle was kindled, and this turned the tide of the war (Orhan Şaik Ökyay, *Kutsi Çelebiden seçmeler*, Istanbul 1968, 59). Muṣṭafā II took the *Khirḳa-yi Sherīf* on all of his campaigns in order to reinforce the courage of the army (*Nuṣret nāma*, I, 143, 168, 267, 274, 283, 286, 290, 299; II, 280, 300). We know from this same source that Aḥmed III took the *Khirḳa-yi Sherīf* and the *Sanǧaḳ-i Sherīf*—the flag of the Prophet which was only unfurled for a holy war—with his army in order to raise the morale of the men (*Nuṣretnāme*, II, 190).

When the sultān took his oath of allegiance, the *Khirḳa-yi Sherīf* was not forgotten. When a sultan died, the *Dār al-Sa'āde Aghası* carried the news to the crown prince and took him to the deceased. He was then joined by the *Silāḥdār Aghası* who took him to the *Ḳıṣṣ Oda* (Diewdet Pasha *Ta'rīkh*, I, 236; Uzunçarşılı, *op. cit.*, 186). The oath of allegiance of the *Ṣadr-i A'ẓam* or Grand Vizier, the *Sheyḫ al-Islām*, the *Dar al-Sa'āde Aghası*, and the high officials of the Enderūn, was also taken there (Diewdet, iv, 237; Uzunçarşılı, 187; *Nuṣret ʿāmme*, II, 287 f).

During the third week of Ramaḍān, a visit to the *Khirḳa-yi Sherīf* was also customary. Even after the sultans ceased to reside in the Topkapı Palace, the *Khirḳa yi Sherīf* remained on the Palace premises, either in its own room or at the *Sofa Köshkü*. On such visits as these on the 15th of Ramaḍān, the sultān would open the silver throne, the seven wrappings and the gold casket with a golden key, take the mantle out, dip its fastening into a bowl of water and then put drops of this water into vessels filled again with water, which in turn would be given away as presents. This custom was abolished by Maḥmūd II, who chose to touch the mantle with some specially prepared scarves with poems inscribed on them, and these were then distributed as gifts for his guests. At the end of the visit, during which the Ḳur'ān was recited continuously, the mantle was put away by the sultan himself. This custom had however been abolished by the end of the sultanate.

One other mantle of the Prophet was brought in 1027/1617-18 by Shükr Allāh Efendi. It was believed that this mantle was sent to Uways al-Ḳaranī by the Prophet. Presumably it was preserved by Shükr Allāh Efendi and his son at his house in the Eski 'Ali Pasha quarter of Istanbul. Their mansion was rebuilt by Maḥmūd II, and a mosque was built opposite it in 1251 by 'Abd al-Medjīd. In this mosque, named that of the *Khirḳa-yi Sherīf*, the mantle was displayed to the public every year by the Queen Mother on the 15th of Ramaḍān. Today, it is possible to visit it there between the 15th of Ramaḍān and the *Laylat al-Ḳadr*.

(NUḤMAN AṬASOY)

AL-KHIRRĪT B. RĀSHID AL-ḤANAFĪ, partisan of 'Alī b. Abī Ṭālib who fought in his ranks at Ṣiffīn [*q.v.*], but who rebelled against him when the first results of the arbitration were known after having accepted, it appears, the principle of arbitration. He was chief of the Banū 'Abd al-Bayt b. al-Ḥārith b. Sama b. Lu'ayy (most usually called the B. Nāǧiya, after the name of 'Abd al-Bayt's mother), who had only recently been converted to Islam, where they had not kept their original Christianity. He informed 'Alī of his intention to disregard the results of the arbitration, which implied the caliph's deposition. 'Alī advised him to reflect a while before taking action, but al-Khirrīt, oblivious to the arguments raised, withdrew with his followers into the Sawād of Kūfa; al-Mas'ūdī even accuses him, together with 300 of his fellow-tribesmen, of abjuring Islam. It is difficult to establish the chronology of events, but these events probably took place after the battle of al-Nahrawān [*q.v.*], in which the rebel took no part contrary to what certain coincidences might lead one to expect, it is certainly tempting to compare and to assimilate al-Khirrīt's action to that of the Khāridjīs when one takes into account, in particular, the tradition according to which his group killed in the Sawād a Persian convert to Islam but spared the life of a Jew, circumstances which are analogous to those of the *sāḥ'āt* [*q.v.*] of the Azārika [*q.v.*].

'Alī sent after him Ziyād b. Khasafa, who finally caught up with him at al-Madā'in, where, after vainly trying to reason with him, he gave battle. The rebels fled in the course of the following night and headed for al-Ahwāz, where their ranks were swollen by a certain number of malcontents from Kūfa and of local people, who doubtless discerned here a way of avoiding taxation. At this point, in order to bring them to reason, 'Alī sent Ma'ḳil b. Ḳays al-Riyāḥī at the head of a more numerous force, and gave orders to 'Abd Allāh b. 'Abbās, the then governor of Baṣra, to send as reinforcements a substantial contingent under the leadership of Khālid b. Ma'dān al-Ṭā'ī. The rebels were soon put to flight by the government troops who pursued them to the Persian Gulf shores. In a decisive battle, al-Khirrīt was killed fighting, and his companions made prisoner. These events probably took place to the early months of 38/658.

According to the accounts given, Ma'ḳil b. Ḳays freed the captive Muslims and also the apostates, who for a second time abjured the Christianity to which they had returned; only one refused, it is recorded, and had his head chopped off. The Banū Nāǧiya who remained Christian, numbering 500, were on the other hand led into captivity. Maḳāla b. Hubayra, 'Alī's *ʿāmil* in the *kūra* of Ardashīr Khurra, whose centre was at Sīrāf, now intervened. Affected by the entreaties of the captive men, women and children, he purchased them for a sum of 300,000 *dirhams* (al-Mas'ūdī) or 200,000 only (al-Ṭabarī), of which he sent only part to 'Alī. He freed the prisoners without having asked them to contribute to the purchase money, and then, when pressed by the caliph to hand over all the money, he though it more expedient to take refuge with Mu'āwiya, who entrusted to him important official posts.

KHITA [see ṣāḥib khiṭāṭ]

KHITĀN (A.), circumcision. The term is used indifferently for males and females, but female excision is particularly called *khafḍ* or *khafḍ* (*q.v.*). In the dual, of *khitānān* are "the two circumcised parts" (viz. that of the male and that of the female), and according to tradition "If the two circumcised parts have been in touch with one another, *ghusl* is necessary" (Bukhārī, *Ghusl*, bāb 28; Muslim, *Ḥayḍ*, trad 88, Abū Dāwūd, *Ṭahāra*, bāb 81, 83).

Some words connected with the root *ḥ-t-n* denote the father-in-law, the son-in-law, the daughter-in-law (*ḥatan*, *ḥatana*), or marrying (*ḥitān*). Some of these words must have belonged to the primitive Semitic language, as they occur also in the same or cognate forms in North-Semitic languages

Circumcision must have been a common practice in early Arabia. It is mentioned, not in the Ḳur'ān, but in old poetry and *ḥadīth*, and the ancient language also has special words for "uncircumcised", *pl.* *akhlaf*, *aghlaf* and *aghlaf* (Hebrew 'arel).

In *ḥadīth* it is said that Ibrāhīm was circumcised in his 80th year (Bukhārī, *Anbiyā'*, bāb 8; Muslim, *Faḍā'il*, trad. 151). This tradition is based on the Biblical report. Ibn Sa'd has preserved a tradition according to which the patriarch was already circumcised at the age of 13 (*Ṭabaḳāt*, i/1 24). This tradition is apparently a reflex of the practice of circumcision in the first centuries of Islam. We may confront it with the statements concerning Ibn 'Abbās' circumcision in *ḥadīth*. According to some traditions (Aḥmad b. Ḥanbal, i, 273) he was 13 years old when Muḥammad died. In other traditions it is said that he was already circumcised at that time (Bukhārī, *Isti'dhān*, bāb 32; Aḥmad b. Ḥanbal, i, 264, 287, Ṭayālisī, Nos. 2839, 2640).

Circumcision is mentioned in *ḥadīth* in the story of the Emperor Heraclius' horoscope (Bukhārī, *Bad' al-waḥy*, bāb 6). Heraclius read in the stars the message of "the king of the circumcised". Thereupon an envoy of the king of Ghassān arrived who reported the news of Muḥammad's preaching of Islam. This envoy appeared to be circumcised himself and he informed the Emperor of the fact that circumcision was a custom prevalent among the Arabs.

It is further recognised in *ḥadīth* that circumcision belongs to pre-Islamic institutions. In the traditions which enumerate the features of natural religion (*al-fiṭra*), circumcision is mentioned together with the clipping of nails, the use of the toothpick, the cutting of moustaches, the more profuse length of the beard etc. (Bukhārī, *Libās*, bāb 63; Muslim, *Ṭahāra*, trad. 49, 50; Tirmidhī, *Adab*, bāb 24, etc.) In a tradition preserved by Aḥmad b. Ḥanbal (v, 75) circumcision is called *sunna* for males and honourable for females.

There are differences between the several *madhāhib*'s concerning rules for circumcision. Instead of giving a survey of the different views it may be sufficient to translate the passage of al-Nawawī in his commentary on Muslim, *Ṭahāra*, trad. 50 (ed. Cairo 1283, i, 328) that devoted to the subject, also because it contains a description of the operation:

"Circumcision is obligatory (*wādjib*) according to al-Shāfi'ī and many of the doctors, *sunna* according to Mālik and the majority of them. It is further, according to al-Shāfi'ī, equally obligatory for males and females. As regards males it is obligatory to cut off the whole skin which covers the *ghurla*, so that this latter is wholly denudated. As regards females, it is obligatory to cut off a small part of the skin is the highest part of the genitals. The sound (*ṣaḥīḥ*) view within the limits of our school, which is shared by the large majority of our friends, is that circumcision is effered, but not obligatory in a youthful age, and one of the special views is that the *wali* is obliged to have the child circumcised before it reaches the adult age. Another special view is, that it is prohibited to circumcise a child before its tenth year. The sound view according to us, is that circumcision on the seventh day after birth is *mustaḥabb* (recommendable). Further, there are two views regarding the question whether in the 'seventh day' the birthday is included or not".

The treatment of circumcision has not a prominent place in the books of law (see e.g. al-Ḳayrawānī, *Risāla*, 162, 305). More important, however, is the value attached to it in popular estimation. "To the uneducated mass of Muslims" says Snouck Hurgronje "as well as to the great mass of non-Muslims, both of whom pay the greatest attention to formalities, abstention from pork, together with circumcision, have even become to a certain extent the criteria of Islam. The exaggerated estimation of the two precepts finds no support in the law, for here they are on the same level with numerous other precepts, to which the same attaches less importance" (*De Islam*, Baarn 1912, 30, *Verspr. Geschriften*, i, 402; cf. iv/1, 577). In Java circumcision is generally considered as the ceremony of reception into Islam and therefore sometimes called *sjalamakelam* ("rendering Muslim"). Apart from this term many other words denoting circumcision are used in Java (*op. cit.*, iv/1, 505-6). In Acheh circumcision of infidels only is considered as the ceremony of reception into Islam (Snouck Hurgronje, *The Achehnese*, i, 398).

The importance attached to circumcision appears also from the tradition according to which Muḥammad was born circumcised (Ibn Sa'd, *Ṭabaḳāt*, I/1, 64). In North Africa a child born with a short foreskin is considered as a blessing (Doutté, *Merrâkech*, Paris 1905, 353).

At Mecca, where the rite is called *ṭahāra*, children are circumcised at an age of 3-7 years, girls without festivities, boys with great pomp. On the day preceding that on which the rite will be performed, the boy, who is clad in heavy, costly garments, is paraded through the streets on horseback, several footmen walking on both sides in order to prevent him from falling and to refresh him by means of a perfumed handkerchief. He is preceded by men with drums and *duffs* who accompany the *ghubra* sung by others. Nearest to the boy goes an elderly black handmaid of his father's, bearing on her head a brazier burning with charcoal, resin and salt. The second part of the procession is formed by the boy's poorer comrades, equally on horseback. The procession passes through the main streets during the time of *'aṣr* and comes back to its starting point a little before sunset. The female members of the family goes the evening with their friends, the party is enlivened by female singers.

Next morning, at sunrise, the barber performs the operation. The foreskin is pressed together by means of a thong, the boy lying on his back, while his mother tries to divert his attention by sweets. A plaster is applied to the wound which usually is healed in a week. The operation is followed by a breakfast for the nearest relatives. It is to be observed that

Hadramawt who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronje, *Mekka*, ii, 141 ff.).

In Egypt, boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kerchief is used to cover a part of his face in order to avert the evil eye. As in Mecca he is preceded by musicians. The foremost person of the procession is usually the servant of the barber (who performs the operation) who bears his *ḫaml*, a case of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking glass and brass, and its back with a curtain. It is to be noted that the Copts also circumcise their boys (Lane, *Manners and customs of the modern Egyptians* ch. on Infancy and Education).

D'Ohsson in his *Tableau de l'empire othoman*, Paris 1787, i, 231 ff., describes circumcision as practised in Turkey under the heading "Circoncision, *sunnath*", a designation which is also reflected in the word *sunnedjī* for the barber who performs the operation. It takes or took place in the presence of the *imām* of a mosque who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate 20 of d'Ohsson's work shows children dressed for the ceremony, and plate 21 adorned victims which are slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even in the other courts of Europe. D'Ohsson gives a translation of Murād's III letter of invitation to the dignitaries on the occasion of the circumcision of the crown prince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Doutté, *Merrâkech*, 352, at Algiers a stone knife was used for the operation. It reminds us of Joshua v. 2 ff. where it is said that the Israelites at their entering the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife for the operation (Wilken, 212). In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the ceremony. A. Jaussen (*Coutumes des Arabes au pays de Moab*, 363-4) has observed that the Bedouins organise collective circumcisions every two years, as an economy measure; hence the children's ages vary considerably (see also al-ʿUsayrī, *Kāmil al-ʿidād*, Amman 1973-4, ii, 236, s.v. *f-ḥ-r*). It should be noted here that in most Arabic dialects, the term for circumcision and its accompanying rites is taken from the root *f-ḥ-r*, implying the idea of purity, thus practice is therefore popularly felt as a purificatory rite.

On Java, circumcision of boys is often combined with the *khatm*- or *kedaman*-ceremony. On the different designations of circumcision used in this part of the Archipelago, cf. Snouck Hurgronje, *Verspreide Geschriften*, iv/1, 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is highest (14-15 years) than in circles which are in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (*larap*) is made before the house or *pendapo*, and a small room (*kobongan*) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are offered to several categories of awe-inspiring beings. Festivities such as *wayang*, *tayuban*, *djagongan* precede or follow the ceremony. The *djagongan* always takes place in the preceding night and follows upon *kataman*, the recitation of some chapters of the Kurʾān by the boy. On the day preceding circumcision, a procession is held in which the boys are either conducted by their relatives, or are placed in a kind of cars which have the forms of *nagas* or other animals. They wear the bridegroom's dress and are hung with gold and diamond ornaments, the visible parts of the body being besmeared with *wedak*. It occurs also that the boy wears the *kādjāgā*'s dress. Just as in North Africa, poor parents have their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a *sentra* who has many children, a circumstance which is expected to exercise a wholesome influence on the boy's marriage. For further details see Snouck Hurgronje, *Verspreide Geschriften*, iv/1, 205 ff.

In Atchen, boys are usually circumcised by the *modin* (probably = *muʾaḏḏin*) at the age of 9 or 10 years, immediately after finishing their Kurʾān study. The operation (for details see Snouck Hurgronje, *The Achehnese*, i, 399-400) consists in a complete circumcision, in some parts of Java it is rather an incision. The boy here also has to diet himself. In Atchen the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy vows, e.g., to arrange a *Rapa*'s performance or to visit a sacred tomb. In this case the boy, dressed as a bridegroom, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in ancient literatures, the Egyptians, the Arabs, the Israelites, the Edomites, Moabites and Ammonites (see Jeremiah, ix, 25).

In the Indonesian Archipelago it was already practised before the rise of Islām in that part of the world (cf. G. A. Wilken, *De besnijdenis bij de volken van den Indischen Archipel*, in *BTLV*, Sec. iv, vol. x, 166, 180-1 = *Verspreide Geschriften van G. A. Wilken*, iv, 206, 220). The facts mentioned above may be arranged in certain groups:

a. Among many peoples females as well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other.

b. The rite is sometimes repeated (Wilken, *op. cit.*, 207). In the Muslim world we have the in-

stance of Malayans who in their country were not circumcised in the way prescribed by religious law and who submit to the operation a second time when arriving at Djidda for the pilgrimage (Snouck Hurgronje, *Mekka*, ii, 312).

c. Children are circumcised at ages varying between the 7th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair (*ṣaḥīḥ*, cf. Doutté, *Merrâkech*, 351), the filing of teeth, the conclusion of the study of the Ḳurʾān. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable as matter of fact evidence, are supplemented by reports of travellers. In Central Arabia it is said (e.g. Batanūnī, *Riḥla*, 213), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation; if he utters a cry of pain the projected marriage is abandoned (Snouck Hurgronje, *Mekka*, ii, 141). In spite of doubts about the authenticity of such information, the relation between circumcision and marriage appears also from the Javanese custom of placing the boy who is operated, on the lap of a *sunāri* who has many children (see above and Wilken, *op. cit.*, 225).

d. Another group of characteristics is evidence of a relation between circumcision and the transition into a tribal or religious community, e.g., the boy's being conducted to the tomb of his father or of one of his ancestors (see above), the circumcision of several boys at one time (cf. also Wilken, *op. cit.*, 224); the value attached to circumcision as the ceremony of reception into the Muslim community, cf. the Old Testament designation of circumcision as the "token of the covenant" (Genesis xvii, see also Wilken, *op. cit.*, 227).

e. Many accessory rites express the intention to avert danger: the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt; the drums and *duffs*; the recitation of *ḏikrs* and prayers; possibly the displaying of charity and the slaughtering of victims may also be viewed in this light.

Ethnologists put forward various interpretations for the phenomenon of circumcision: as a surgical operation meant to prevent phimosy and to help fecundity; as a religious rite connected with fertility as reception into the community; and as a rite of passage. The viewpoint expressed by Van Gennep in his *Rites de passage*, Paris 1909, seems to account for many of the features of circumcision mentioned above. It accounts for the fact that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repeated; that it shows a deeply-rooted connection with marriage; that it is considered as the act of reception into a religious community; that it is sometimes preceded by a bath; that processions take place, which show a striking similarity with bridal processions; and so on.

(A. J. WENSINCK)

KHIṬAṬ (A.), pl. of *khiṭṭa*, the various quarters of the newly-founded early Islamic towns which the Arab-Islamic chiefs laid out (root *khaṭaṭa*) for the population groups which they attracted thither as for their respective leaders. Historical-administrative concerns led fairly quickly to the appearance of a literary genre which consisted of a description of the historical topography of these *khiṭaṭ*. This happened in regards to Baghdād and one finds chapters of this nature in the "geographical" works of Ibn al-Faḳīh al-Hamadhānī, and also in the introduction to the biographical history of the city by al-Khaṭīb al-Baghdādī. However, the genre developed most of all in Egypt, aided by its strong particularist feeling. It is already discernible for al-Fusṭāṭ in two chapters of the *Futūḥ Miṣr* of Ibn ʿAbd al-Ḥakam, and is expanded in the History of the *Ḳuḍāt* of Egypt and in a separate opusculum, now lost, of al-Kindī and also, a generation later, in another lost opusculum by Ibn Zūlāḳ. The foundation of Cairo caused an expansion of these studies, as is apparently already discernible with Ibn Zūlāḳ's work and with a treatise from the mid Fāṭimid period, now lost, by al-Ḳuḍāʿī. An apparently much more important work was written two centuries later by Ibn ʿAbd al-Ẓāhir, the biographer of Baybars, Ḳalāwūn, and al-Ashraf. All this literature culminated in the monumental work, the only one of its kind preserved for us (apart from the citations from the earlier works included within it), of al Makrīzī, *al Mawāʿiẓ wa ʾl-iʿtibār fī khiṭaṭ Miṣr wa ʾl-Ḳāhira*. In fact, the contents are arranged not according to quarters but by categories of buildings, at the same time comprising a description and history of everything connected with them. The title of Maḳrīzī's book was utilised later, because of its fame, in the survey conducted on the same spirit but adapted to modern Egypt, by ʿAlī Pasha Mubārak, and in a more flexible form, in the geographical-historical description of the whole of Syria by Kurd ʿAlī.

(Ch. CAHEN)

KHIṬĀY (see AL-ṢĪN).

KHIṬBA (A.), "demand in marriage", whence "betrothal", i.e. the mutual promise of marriage which in certain legal systems can form the first stage of marriage proper (cf. the *sponsalia* of ancient Roman law). But is this promise considered as entailing an obligation in Islamic law? In other words, does betrothal give rise to legal consequences?

According to Muslim authorities, the *khiṭba* does not involve a contract. It is true that it involves an offer and an acceptance, but before the acceptance is made, it is merely a demand in marriage and does not form a legal act.

The Mālikīs, apparently uniquely, give more importance to the betrothal than the Ḥanafīs or even the Ḥanbalīs, but the principle remains that the act of betrothal does not involve a legal obligation. However, betrothal can only take place when there are no nullifying factors present which would prevent a valid marriage, every impediment to marriage is an impediment to betrothal. The parties to a *khiṭba* are on the one hand, the man making the demand in marriage, and on the other, the woman, who may be represented by her *walī* [see WALĪ]. Yet if betrothal does not in principle involve any legal obli-

gation and is not a legal act, certain effects never theless follows from it:

1. The right of seeing the woman. Certain authorities state that the fiancé has this right, even if looking at her is accompanied by sexual desire. Ibn Rushd specifies that this right should be limited to seeing the face and hands only (*Bidāya*, ii, 3); others extend the right, but they never go so far as to admit the possibility of the couple being left alone (*khalwa*), which is the right to be alone with each other away from all indiscreet looks.

2. The right of priority. Betrothal gives the fiancé a right of priority, in that once a woman is betrothed to a man, that woman cannot be sought in marriage by another man; but this right is only sanctioned by the Mālikīs.

Dissolving of a betrothal. Either of the two parties can end the state of betrothal unilaterally. The only problem is that of disposal of presents which have been exchanged, and which are subject to the rules of donation. However, in various Islamic countries, part of the dowry is paid over at the time of betrothal, and this must in all cases be given back. Finally, there remains one problem, can one award damages to the victim of an unjustifiable breaking off of betrothal? Although certain modern Islamic authorities are endeavouring to introduce an obligation to pay an indemnity for damages in the case of an ill-founded breaking off, the action for damages is not an absolute right. Even so, many Islamic countries have been compelled to adopt the solutions of western law, since on the plane of practical law, betrothal is of no legal concern except in case of its being dissolved.

KHIṬṬA ("piece of land marked out for building upon"), a term used of the lands allotted to tribal groups and individuals in the garrison cities founded by the Arabs at the time of the conquests. The lay out of these cities everywhere followed the kinship organisation of the conquerors, who were distributed in tribal quarters around a centre housing the Friday mosque and the *dār al-imāra*. The smallest unit of the *khiṭaṭ* was the *dār*, in the case of prominent individuals often a sizable estate (usually known as *kaṣr*'a), otherwise a modest plot of land occupied by one or several families. Next came the quarter based on the smallest political unit of the tribe (what is often known as the *'ashīra* in Arabic sources, "clan" or "subtribe" in modern literature); these quarters usually had their own mosque, and how small the unit in question tended to be is indicated by the fact that the tribe Khuḍā, which was strongly represented in Fusṭāṭ, Damascus and Ḥimṣ in addition to Kūfa, had at least twelve such mosques in the latter city. Finally, there was a larger quarter reflecting the tribe proper, often endowed with its own *ḳubbāna*, a piece of unbuilt land serving, *inter alia*, as a meeting place and a cemetery. In Syria, where the Arabs settled in existing cities, the tribal quarters were less self contained and possessed neither mosques nor *ḳubbāna* of their own.

The *khiṭaṭ* served as military and administrative units from the start, but these small size was an practical and amalgamation of the tribal groups began already with the foundation of Kūfa, which was divided into seventhe, to be continued under Muʿāwiya when Baṣra was divided into fifths, and other settlements into quarters. Every such new division was placed under an officially appointed leader, the *raʾs al-rubʿ* or *raʾs al-khums*, who was selected from among the chiefs of the larger tribal groups represented in the division, and who was responsible for the command of the division in war and the maintenance of law and order within it in peacetime. The lesser groups continued to serve as military and administrative subdivisions under their own leaders. The entire range of tribal chiefs (the *ashrāf* of the Umayyad period) served as the link between government and subjects in the Sāsānid system of indirect rule, *ashrāf* and governor coming together in the latter's *madjlis* where information, orders and requests were exchanged, accompanied by a traditional display of generosity. The *raʾs al-rubʿ* / *raʾs al-khums* in turn passed on information, orders and gifts in his own *madjlis*, and the process was repeated in the *madjālis* of the lesser chiefs until we reach the smallest political unit reflected in the *khiṭaṭ*.

The erosion of the tribal ties in the Marwānid period rendered the system obsolete; the *ashrāf* disappeared from the political scene, while the *khiṭaṭ* survived only as place-names. The larger quarters and fifths, on the other hand, persisted until the end of the Umayyad period, physically as military divisions, now housing regiments rather than tribal groups, and morally as categories for the definition of factional loyalties. When the ʿAbbāsids came in power these too disappeared, and the allotments in Baghdād (known as *ḥalaḳ*'s rather than *khiṭaṭ*) were made on the basis of geographical provenance, not tribal affiliation.

KHIWA, on the western bank of the Amu Daryā, site of the last capital of the khanate of Khwārazm subsequently called the khānate of Khiwa. Its origins are bound up to the history of Khwārazm [*q.v.*].

Khiwa was the third capital, after Gurgānd (383-515/993-1221) and Kāth [*q.vv.*], the latter was the capital during the 8th/14th century, in which period, with Khiwa, it was governed by the Čaghatāy, and Gurgānd (subsequently called Urgenč) by the Golden Horde. After the restoration of unity (under the rule of the Shaybānids) in the 9th/15th century, the capital was again established at Urgenč, but neither this dynasty, nor the Djučī branch of the Özbeg dynasty that succeeded it, was in a position to restore stability in the region, brigandage increased, and the closure of the commercial routes which crossed the land hastened, at the same time, its economic decline and its relative isolation.

During the second half of the reign of ʿArab Muḥammad (1013-32/1603-23), which perhaps coincided with the drying up of the left branch of the Amū Daryā, the capital was transferred to Khīwa, and it was then that the khānate of Khwārazm began to be called the khānate of Khīwa. Little is known of the early history of this town, archaeological remains enable us to date its foundation between the 6th and 8th centuries of the Christian era, it is mentioned by the Arab geographer al Iṣṭakhrī in the 4th/10th century. The inhabitants of Khīwa were distinguished from the other Khwārazmians by the fact that they were Shāfiʿīs rather than Ḥanafīs.

The khānate was composed of various feudal districts (*ʿaṭāʾiks*) somewhat loosely linked together and their chiefs (*khāns*) recognised the sovereignty of the *khān* of Khīwa. The degree of unity of the khānate depended on the personal power of the *khān*, it is relevant, in this regard, to make special mention of ʿAbd al-Ghāzī Bahādur Khān (1054-73/1643-63) whose *History of Khīwa* has survived and is available to us. After the conquest of Mashhad by Anūsha, at the end of the 11th/17th century, the sovereigns of Khīwa took the title of *khān*.

The dynasty of the Özbegs was followed by that of the Čingizids, which occupied the throne of Khīwa until 1804, but real power was concentrated in the hands of the *Inaḳ* (tribal chief) of the tribe of the Kungrāt [*q.v.*]. The 18th century saw an acceleration in the process of disintegration, when to the effects of internal strife there were added the fruitless attempts at conquest made by Peter the Great in 1717, and by Nādir Shāh in 1153/1740, while invasions by nomads and attacks from the Turcoman Yomuts were particularly violent between 1135 and 1184/1740-70; however, in 1184/1770, the *Inaḳ* Muḥammad Amīn defeated the Turcomans, restored relative prosperity to the region and undertook the construction of a new city on the foundations of the old. In the course of this reconstruction, which lasted seventy years, a number of remarkable architectural monuments were erected, including the palace of Tashkawl (1832), the mausoleum of Pahlawan Shahtuda (1835) and the *madrasa* of Allāh Kulī Khān (1835), which are still standing today.

Under the *Inaḳ* Ilṭüzer, who became the first Kungrāt *khān* in 1804, the khānate attained its greatest territorial extent of the modern period, stretching from the mouth of the Sir Daryā on the Aral Sea as far as Kalʿa-i Mawr on the Kushk; this sovereign frustrated an attempt by Bukhārā at annexing the oasis of Merw, and he improved his relations with the Turcomans who became the first line of defence of the khānate. His successor, Muḥammad Raḥīm Khān, who was the most powerful *khān* of the 19th century, made a number of successful forays into the territory of the Kazaks, subdued the Ḳara Ḳalpaḳs and ravaged Khurāsān.

Although it had repelled an attack by the Russians in 1839-40, Khīwa was forced to accept their economic and diplomatic demands, which had the result of reinforcing the Russian presence which was already showing itself in Central Asia. The conflict which broke out with Bukhārā and the Turcomans further enfeebled the already divided State, and in 1873 the Russians were able to take possession of the entire territory without striking a single blow. The peace treaty gave them the right bank of the Amū Daryā and made the *khān* of Khīwa a vassal of the Tsar.

The Turcomans continued their struggle against the Khānate and in 1918, the *khān* Isfandiyār (1910-18) was assassinated at the instigation of Djunaydī Khān, the Turcoman chieftain, who reduced the new sovereign, Saʿīd ʿAbd Allāh (1918-20) to the status of a puppet. After an initial failure in 1918, the Soviets waited until 1920 before putting an end to the khānate of Khīwa and on the 26 April 1920, the People's Republic of Khwārazm was proclaimed, with a government of young Khīwans. On 5 September 1921, this was replaced by the Soviet Socialist Republic of Khwārazm, controlled by the Bolsheviks, and in November 1924, it became the *oblast'* of Khwārazm in the Soviet Socialist Republic of Uzbekistan, with Khīwa as provincial capital (*yayon*). between 1918 and 1924, there was a considerable movement of resistance to the Soviets, led by Djunaydī and supported by the deposed *khān*.

The Soviets did nothing to assist the development of the town. Although it is a centre for cotton-growing and has brickworks, dairies and a carpet-weaving industry, modern Khīwa no longer plays a vital role in the economic or political life of the Uzbek S.S.R.

(W. BARTHOLD - [M. L. BRILL])

KHIYĀBĀNĪ, SHAYKH MUḤAMMAD (1879-1920), Persian religious scholar and political leader. Born in Khāmana, Āḏharbāyd̲j̲ān, the son of a merchant, Khiyābānī received his early education there and then moved to Dāghistān in the Caucasus, where his father lived. After returning to Tabrīz, he studied *fiḳh*, *uṣūl*, and Ptolemaic astronomy, and soon became a *mud̲j̲tahid* leading public prayers in two central mosques. Responding to the Iranian constitutionalists, Khiyābānī joined the Social Democratic Party and also became a leading member of the Āḏharbāyd̲j̲ān Provincial Council which played a decisive role in the deposition of the anti-constitutionalist Shāh Muḥammad ʿAlī (1907-9). Khiyābānī was then elected to the second Parliament, where he rejected the 1911 Russian ultimatum and condemned the Persian government which, on the British recommendation, was willing to compromise. The Parliament rejected the ultimatum but the Regent, Nāṣir al-Mulk, dissolved Parliament and accepted the ultimatum, leading Khiyābānī to denounce this action in a long speech before the people of Tehran. He then fled to Russia, and later on returned to Tabrīz secretly. After the two Anglo-Russian treaties (1907 and 1915) there remained little room for the existence of Khiyābānī and his party. Suddenly, however, the 1917 Russian Revolution broke out and the Soviets withdrew the claims the Tsars had made against Iran. At this point, Khiyābānī and his friends re-established the Democratic Party and founded *Taǧaddud*, a newspaper which published Khiyābānī's speeches and articles. Among Khiyābānī's targets of attack were the British South Persia Rifles and the existing Persian régime as being submissive to foreigners. Before the end of the War, Ottoman troops invaded Tabrīz, arrested Khiyābānī, and imprisoned him in Riḍāʾiyya, but after the War he returned to Tabrīz. In 1919 the British signed an agreement with the Wuṯūḳ al-Dawla which gave them control of the Iranian army, finances, and customs. Under the influence of Khiyābānī and others, the treaty was not passed in Parliament. The Wuṯūḳ al-Dawla then suppressed Khiyābānī's party and resigned. Khiyābānī rose against the government (now in the hands of Mushīr al-Dawla) and in April 1920 he declared his province Āzādistān ("home of freedom"). Mushīr al-Dawla appointed Mukhbir al-Salṭana (Mahdī Ḳulī Hidāyat) governor of Āḏharbāyd̲j̲ān, and the latter put an end both to the six-month old movement and to Khiyābānī's life.

Khiyābānī has been described as a rebel, and his movement as a separatist one. Khiyābānī's attachment to the Soviets has also been a matter of controversy. However, he has been widely recognised as a national hero, whose murder was lamented by poets such as *Bahār*, *ʿĀrif*, *Salmat*, and *Aghā*.

(ABDUL-HADI HAIRI)

KHIYĀLA [see KEAVL]

KHIYĀR (A), a legal term meaning the option or right of withdrawal, i.e. the right for the parties involved to terminate the legal act unilaterally. This option is always included in the legal act, and in this case, the act does not irrevocably bind its authors. The word *khiyār* implies a choice on the part of the holder of the right of option, who may either confirm the act or render it void, the legal act containing an option is not void in origin, but its validity is nevertheless precarious and subject to confirmation. The act giving rise to an option corresponds in western law to an act liable to a suspensory or resolutory condition, according to the nature of the option.

Options (*khiyārāt*) may be either conventionary or legal in nature.

1. Conventionary options. Included amongst these, there is first of all the conditional option, *khiyār al-shart*, which is extremely important. This is the clause by means of which, in certain legal acts (in particular, contracts), one of the parties, or both of them, reserves the right to annul or to confirm, within a specified time, the legal act which they have just drawn up. This clause is undeniably equivalent to a purely potestative suspensory condition. The decision of the one confirming or rejecting the act does not have to be justified. The lawyers of the four schools adopted this institution without difficulty. The other conventionary option is the one called by the jurists that *al* designation (*khiyār al-taʿyīn*). *It can only be* inserted *into* alternative obligations, and allows the one making the stipulation to make his final choice between the different objects of one and the same obligation. Thus there are only two conventionary options, one common to all four schools and the other peculiar to the Ḥanafīs and Mālikīs.

2. Legal options. On the other hand, legal options, in which the law automatically grants the options without the parties having to stipulate them, are very numerous. Some Muslim authors number them at seventeen. Fraud, injury, hidden defects, eviction, and many other deeds, are only to be sanctioned in Islamic law by means of option in the *fiḳh* treatises, only a brief allusion is made to legal options, apart from the option in the case of a latent defect making the agreement void (*khiyār al-ʿayb* or *khiyār al nakṣa*). The option of sight (*khiyār al-raʾya*) presents a problem. It is rejected by the Shāfiʿīs, and there exists concerning it as many different doctrines as schools of legal opinion: see Ibn Rushd, *Bidāya*, Cairo 1952, ii, 154. Some countries have introduced the principle of the option of sight into their new civil codes: Egypt (art. 419), ʿIrāḳ (arts. 517-23), Syria (art. 389) and Libya (art. 408). *Khiyār* is also to be found in Imāmī law (Persian civil code arts. 396-457). *In the fiḳh* treatises, there is no systematic exposition of the idea of option, although certain modern jurisconsults have tried to remedy this.

It should finally be noted that the system of options is not peculiar to patrimonial law. There exist also options in family law, e.g. in the case of incompatible marriages, or when a minor still below the age of puberty has been married by a *wali* other than her own father or grandfather; when the minor reaches his majority, he can choose between maintaining the marriage in being or dissolving it.

(A. M. DELCAMBRE)

KHIYĀR (in theology) [see PREDESTINATION]

KHIZĀNA [see MAKTABA]

KHIZĀNE I ʿĀMIRE [see KHAZINA].

KHLOT [see KHULT].

KHŌDJA in the strict sense is the name of an Indian caste consisting mostly of Nizārī Ismāʿīlīs and some Sunnīs and Twelver Shīʿīs split off the Ismāʿīlī community. In a looser sense the name is commonly used to refer to the Indian Niẓārīs in general including some minor communities like the Shamsīs in the area of Multān and some *Mīmans* in northern Gudjarāt. The history of Niẓārī Ismāʿīlism on the Indian subcontinent, especially in the early centuries, is largely obscure because of a lack of reliable sources. The Khōdja religious literature [see SATPANTH] contains some highly legendary accounts of the activity of Niẓārī *dāʿīs*, mostly unreliable chronological data, and bare lists and genealogies of the *pīrs* and their descendants. On the basis of this material a few comprehensive historical accounts have been written since the 19th century by Khōdjas and members of the related Imāmī-Shīʿī community.

It is unknown if any of the Ismāʿīlī communities existing in India before the split into the Niẓārī and Mustaʿlawī branches in 487/1094 subsequently joined

the Nizārī Khōdja tradition makes one Satgur Nūr, also called Nūr al Dīn, the first *dā'ī* who, coming from Daylamān, was active in Pīr̄an, Gudjarāt. Dates ascribed to his activity vary widely. According to one version he was sent by the *imām* al Mustanṣir (427-87/1036-94) in order to preach for his son Nizār; according to another, by the *imām* al-Ḥasan ʿalā dhikrihi 'l-salām (557 or 2/1162 6). He is alleged to have converted the Hindu king Siddharādja Djayasimha (*d. ca.* 1145). Yet his place in the lists of *pīrs* would seem to put him in the first two centuries of Islam, and he is even identified with the *imām* Muḥammad b. Ismāʿīl. His shrine at Nawsarī appears to date from about the end of the 18th century. His historicity has been doubted. Evidence for the presence of Nizārīs in Gudjarāt in the first half of the 7th/13th century is too vague to be trusted. Most early Nizārī activity rather appears to have been centred on Sind.

The beginnings of the Nizārī *daʿwa* in Sind are connected by tradition with the *pīr* Shams al-Dīn, though the previous *pīr*, Ṣalāḥ al-Dīn, who is also called the father of Shams al-Dīn, is mentioned to have already been sent from Alamūt to India. Legend, on the other hand, identifies Shams al Dīn variously with Shams-i Tabrīz, the spiritual guide of Djalāl al-Dīn Rūmī, or with the first post-Alamūt *imām* Shams al-Dīn Muḥammad who, it is alleged, turned the imāmate over to his son Ḳāsim-Shāh in order to come to India. While most of the religious poetry ascribed to him names Ḳāsim-Shāh as the contemporary *imām* and thus would place him around the turn of the 7th/13th century, several dates mentioned in the poetry for his activity are in the first half of the 6th/12th century. A legendary account of his meeting with the Ṣūfī saint Bahāʾ al-Dīn Zakariyyāʾ of Multān (d. 665/1226) appears to be without historical foundation. His lifetime thus cannot be dated with any degree of certainty. He is described as having been active in Multān and Uṣ̄ch in Sind and his throne is located in Multān. The community of the Shamsīs claims to have been converted by him to Nizārī Ismāʿīlism. They live in Multān, Rāwalpindī and elsewhere in Pandjāb and are mostly goldsmiths.

The next two *pīrs* on the traditional lists, Nāṣir al Dīn and Shihāb (also Ṣāḥib) al-Dīn, are said to be the son and grandson of Shams al-Dīn. It is likely, however, that some minor figures were omitted. There is no information on their activity except that they worked clandestinely. Shihāb al-Dīn was succeeded by his son Ṣadr al-Dīn who is credited with the conversion of the Khōdjās from the Lohanas, a Hindu caste. He is also said to have given them the name Khōdja, derived from the Persian *khwādja*, master, which corresponds to the Hindu term *thakur* used in addressing Lohanas and Khōdjās, as the Lohanas are considered Kṣatriyas. Death dates given for him range from 770/1369 to 829/1426. The latter date seems more reasonable. Ṣadr al-Dīn, according to tradition, also laid the foundation for the communal organisation of the Khōdjas by building the first three *djamāʿat-khānas* (assembly and prayer halls) and appointing their *mukhis* (leaders). The centre of his activity was Uṣ̄ch and his shrine is not far from it near Djetur.

Ṣadr al Dīn was succeeded as *pīr* by his son Ḥasan Kabīr al-Dīn of whom a short vita was included by ʿAbd al-Ḥakk Dihlawī (d. 1052/1642) in his hagiographical work *Akhbār al-akhyār*. His appearance in a list of *shaykhs* of the Suhrawardī order reflects the close links of Nizārī Ismāʿīlism with organised Ṣūfism throughout this period. According to the *Akhbār al akhyār* he travelled widely before settling down in Uṣ̄ch and converted many Hindus. The death dates mentioned for him range from 653/1449 to 895/1490. Most accurate are probably those giving 875/1470 or 876/1472. His shrine is outside Uṣ̄ch. As Kabīr al-Dīn's successor, his brother Tādj al Dīn was appointed by the *imām*. He was opposed by some of the numerous sons of Kabīr al Dīn, who were also quarreling among themselves. After Tādj al-Dīn's return from a visit to the *imām*, they accused him of embezzling the tithes for the *imām* and he is said either to have died of the shock or to have committed suicide, probably not very long after his brother's death. His grave is in Djun in Sind. After his death Imām Shāh (q.v.), son of Kabīr al Dīn, vainly tried to gain the allegiance of the Khōdjas in Sind. After a visit to the *imām* in Persia he settled in Gudjarāt, where he succeeded in converting numerous Hindus, mostly of peasant communities. Legend maintains that he converted Maḥmūd Begṛā, sultan of Gudjarāt, who gave his daughter in marriage to Imām Shāh's son Nūr Muḥammad. Imām Shāh died in 925/1513 in Pīr̄ān, a town founded by him, where his shrine is located. Although he is not recognised as a *pīr* by Khōdja tradition and according to some accounts seceded from the Ismāʿīlī community, it appears more likely that the schism occured only under his son and successor Nūr (Nūr) Muḥammad Shāh. The latter at an unknown date demanded that the *imām*'s tithe should no longer be sent to Persia but be turned over to himself, claiming that his father Imām Shāh had been the *imām* and that he was his successor. The majority of his followers accepted his orders and came to form the separate Imām-Shāhī community while a minority remained faithful to the Ismāʿīlī *imāms*.

The Khōdja lists of *pīrs* name after the *pīr* Tādj al-Dīn the *Pandyāṭi-i yawāmardī*, a book of religious admonitions attributed to *imām* al-Mustanṣir II, in place of a person. According to tradition, the *imām* decided in view of the dissension in the *pīr*'s family after Tādj al-Dīn's death not to appoint any *pīr*, but instead to send the book as guidance for the faithful. There is, however, reason to assume that the book reached India only around the middle of the 10th/16th century, probably after the Imām Shāhī secession. It may have been sent at that time with a view to easing the leadership crisis resulting from the schism. Only one *pīr* mentioned in some of the lists after the book was active in India, *pīr* Dīdār. He is said to have been sent by the *imām* from Persia to Sind with the mission of stopping the conversion of Ismāʿīlīs to Sunnism. He was forced to leave and settled first with some followers from Sind in Navanagar (Djāmnagar) in Gudjarāt. In 1584 he moved to Bhudj where he died in 1593. An important role in reorganising the community and the prayer in ascribed to him.

After the end of the line of *pīrs* the *imāms* came to be represented at the local level in India by *mukhis* and *ḥākims*. This development evidently reflects an attempt of the *imāms* to gain more direct control over the Indian communities. However, some local families of *sayyids*, i.e. descendants of the *pīr* Kabīr al Dīn, retained much influence. Most important among these were the Kadiwals *sayyids* of Sind. Their ancestor, Sayyid Fāḍil Shāh, was active in Kadi around the middle of the 17th century. In Sind the family resided in Rali and after 1780 in Tando Muḥammad Khān. Shrines of early members of the family are located near these two places. Other members are known as authors of extant *ginans*. Two sons of Fāḍil Shāh, *pīr* Mashāykh and Ḥasan *pīr*, played a

major role among the Mōmnas in northern Gudjarāt. Mashāyikh (d. 1108/1697 in Ahmadābād) actively endeavoured to suppress Hindu practices in the community and cut his allegiance to the Ismā'īlī *imāms*. His extant works espouse strictly Islamic practices and reflect Sunnī and Ithnā 'Asharī tendencies. He is said to have cooperated with Awrangzīb in his wars against the Shī'ī rulers of Bīdjāpūr. His followers later quarrelled whether he was a Sunnī or a Shī'ī. His brother Hasan remained loyal to Ismā'īlism and became the saint of the Nizārī Mōmnas. In addition to his mausoleum in Thanapīpli near Dhōlkāgarh, Khōdjas and Nizārī Mōmnas in 1727 built a shrine in his honour in Ganod in Gudjarāt.

The Khōdjas were active in the commerce between India and East Africa at least since the 17th century, and in the 19th century, especially after the 'Umānī sultan Sayyid Sa'īd transferred his capital in Zanzibar in 1840, they came to settle in large numbers on the island and later in mainland East Africa. The coming of the Āgha Khān [*q.v.*] Hasan 'Alī Shāh to India in 1840 led to an aggravation of earlier conflicts in the Khōdja community about the rights of the *imām*. In 1866 the judgment of Sir Joseph Arnould in a law suit brought against the Āgha Khān by excommunicated members of the Bārāhnī party fully upheld his rights and authority, and the dissidents definitely separated from the community as Sunnī Khōdjas. Later dissidents seceding in 1877 and 1901, formed Ithnā 'Asharī Khōdja communities in Bombay and East Africa.

For Khōdja religious doctrine, see ISMĀ'ĪLIYYA and SATPANTH.

(W. MADELUNG)

KHŌDJA EFENDI, Sa'd al-Dīn b. Ḥasan Djān b. Ḥāfiz Muḥammad Isfahānī (1536-99), a famous Ottoman *shaykh al-Islām*, statesman, and historian.

Life. He was born in 943/1536-7 in Istanbul, and died there on 22 Rabī' I 1008/2 October 1599. His grandfather, one of the notables who had joined Sultan Selīm I after the battle of Čāldirān, had served Selīm I as *lala*, and his father Hasan Djān had been an intimate courtier to the same sultan. Sa'd al-Dīn studied under prominent scholars, entered the *'ulamā'* career and became *asistani* (*müderris*) in the *medrese* Ebu 'l-Su'ūd (see Abu 'l-Su'ūd) at the early age of twenty (963/1555-6). Soon after, he was appointed, with a salary of 30 aspers, to the Murād Pasha *sedrase* in Istanbul. In Shawwāl 972/May-June 1565 he was appointed, "with forty", to the *madrasa* of Yildirim Khān in Bursa, and one year later was promoted to the *khāridj* rank. After another promotion in Dhu'l-Hidjdja 977/May 1570 he rose, in Ramadān 979/January-February 1572, to the rank of professor at one of the eight courtyards (*pāya*) attached to the Fātih Mosque in Istanbul. When the preceptor (*khōdja*) of Prince Murād died, Sa'd al-Dīn was appointed in his place (Muharram 981/May 1573) and sent to Manisa. This was the beginning of a long period of prosperity and influence for Sa'd al-Dīn, who was henceforth known as Khōdja or Khōdja Efendi. When his pupil became sultan as Murād III, he followed him to Istanbul as *khōdja-i sultān* (3 Ramadān 982/22 December 1574). As the sultan's trusted advisor, he soon became influential in politics, even in foreign affairs such as the establishment of relations with England. When Mehemmed III succeeded to the throne in 1595, it was to Sa'd al-Dīn that he was expressly referred to for advice, the decree saying that "consultation (*meshveret*) should be held with Khōdja Sa'd al-Dīn in all matters of appointing viziers and religious officials". Although Sa'd al-Dīn, in Murād III's special *medjlis* (*meshveret*, had strongly advised against the 'Long War" with Austria begun in 1593, it was he who backed up the wavering sultan Mehemmed III, especially in the Eğri (Erlau) campaign. In the great *meshveret* on 22 October 1596 it was Sa'd al-Dīn who with his courage carried all with him, prevailing on the timid sultan in stand fast and eventually win the battle of Hač Ovasi (Mezō Keresztes). After this triumph, Sa'd al-Dīn fell into disgrace over the appointment of the next Grand Vizier; on 9 Djumādā II 1005/28 January 1597 his opponents at court brought about his dismissal from the office of preceptor. Expressly ordered to refrain from intervention in state affairs, Sa'd al-Dīn remained in disgrace for 14 months. As soon as he could, in March 1598 the sultan fully rehabilitated Sa'd al-Dīn and raised him, against some resistance, to the office of *shaykh al-Islām*, together with that of sultan's preceptor. This earned him the title *Djāmi' al-Riyāsatayn*. At this time Sa'd al-Dīn took the in efficacy al-Saturdjī Mehmed Pasha as *serdār* on the Hungarian front as an opportunity to state his views: he drew up a memorandum, outwardly directed to the Commander, but obviously meant for his opponents at court and later circulated as a piece of *inshā'* (it was published by Na'īmā in his official history). It voices the sense of impending misfortunes that threatened the Ottomans, and justifies, in the matter of *meshveret*, what Sa'd al-Dīn had done and was considering his duty, not to "meddle" with matters of state, but to render services to it. In 1599 this meant persuading both the sultan and his soldier to pay out of their treasuries the funds needed for the next campaign. After a successful term of office as *muftī*, he died during prayer in the Aya Sofya Mosque.

As an eminent *'ālim*, Sa'd al-Dīn distinguished himself, even more than on his learning, for his practical ability and political far-sightedness. Between 1579 and 1599 the preceptor of two sultans, the hero of Hač Ovasi "was the main voice directing the state's domestic and foreign policies" (H. Inalcik, *The Ottoman empire*, London 1973, 97). When the new Head Astronomer, Takī al-Dīn, had convinced him of the necessity of revising Ulugh Beg's *Tables*, Sa'd al-Dīn at once persuaded the sultan in issue the *fermāns* necessary to establish an observatory in Galata (1577). This project was short-lived; the *shaykh al-Islām* Kādīzāde Ahmed Shems al-Dīn, an enemy of Sa'd al-Dīn, managed to have it destroyed already in 1580 (A. Adnan-Adivar, *Osmanli türklerinde ilim*, Ankara 1943, 84-8; A. Suheyl Ünver, *Istanbul vasıflarım*, Ankara 1969, 35, 51-4, 82-2). But Takī al-Dīn's attachment to Sa'd al-Dīn is apparent in the grateful

dedications to him of several of his astronomical works. The Khōdja attracted writers and younger scholars of growing fame, some of whom worked as his assistants (Nishāndjīzāde, Nādirī) or were his protégés (Lokmānī); even Muṣṭafā ʿĀlī, his severest critic, dedicated a book to him. The charge of nepotism and favouritism which was brought against him, especially by ʿĀlī, does perhaps deserve closer inspection within the framework of the times. Of his five sons one died before him; two became *shaykh al-Islām* and two were *kāḍī ʿaskers*; three of his grandsons were *shaykh al-Islām* (Ş. Turan, art *Sa'd ad-Dīn* in *IA*; I. H. Danismend, *Osmanlı devlet erkânı*, 119).

Works. Although he did write poetry, he was essentially a prose writer. He translated Arabic and Persian works into Turkish (see Turan's article in *IA*). His fame as a writer rests on his *Tāḍj al-tawārīkh* begun under Selīm II and dedicated to Murād III in 982/1575. As a carefully written history, based on critical examination of a number of named sources, the work rightfully superseded the older chronicles. It deals with the history of the Ottomans from their beginnings to the death of Selīm I. In it Khōdja Saʿd al-Dīn displayed his celebrated powers of eloquence, but he was not showy or pompous, as has sometimes been alleged, indeed, the clarity of his exposition was not lost on contemporaries and later writers. While it is true that his *Tāḍj* abounds in Arabisms and Persianisms, he could often be simplicity itself. Indeed, the contrasts are great and have only been disregarded to some extent because Saʿd al-Dīn is habitually classed among the writers of "ornamented prose". On the many MSS. of the *Tāḍj*, see F. Babinger, *Die Geschichtschreiber der Osmanen und ihre Werke*, Leipzig 1927, 125-6, M. Aktepe, *Hum Sa'daddin Efendi'nin Tâcü't-tevârih'i ve bunun sayılı bakmuda* in *TM* xiii, 106-10; Turan, art. in *IA*; B. Flemming, *Türkische Handschriften*, i, Wiesbaden 1968, 105-8. The work was printed in two volumes at Istnobul in 1279/1862. Based on this edition, a modernised version in Latin script by İ. Parmaksızoğlu has begun to appear in 1974. The book found early recognition in the West, and parts of it have been translated, see Babinger, *GOW*, 126. A continuation of the *Tāḍj al-tawārīkh* is Muṣṭafā Ṣāfī's (d. 1025/1616) *Zubdat al-tawārīkh*. An abridgement is the first part of Hasan Beg-Zāde's (*q.v.*) *History*. Şolaḳzāde (d. 1067/1657) and Dhīyādīzāde (d. 1208/1794) made extensive use of the *Tāḍj*.

Saʿd al-Dīn's *Selīm-nāme*, a collection of anecdotes based on the recollections of his father Ḥasan Djān, was printed together with the *Tāḍj al-tawārīkh* (ii, 221-401).

Bibliography: ʿAṭāʾī, *Dhayl al-shaḳāʾiḳ*, Istanbul 1268/1851-2, 429-32, F. Babinger, *EI*², *s.v.*; of the works cited above, Turan's article has the fullest bibliography. (B. Flemming)

KHODJA ELI [see GEBZE 2(a)].

KHODJAEV (Faizullah Khodja) (1896-1938), Bukhāran revolutionary and nationalist, was born in Bukhārā the son of a wealthy merchant. In 1907 he went with his father to Moscow, where he received a Russian education. In 1913 he joined the so-called Djadīd Muslim reformist movement (see JADĪD), which was opposed to the feudal régime of the Amīr. In 1917 he became a member of the newly formed Young Bukhāran Party and in December left for Tashkent with the avowed object of working for the overthrow of the Amīr. By 1920 he had become leader of the Young Bukhārans. He declared himself in favour of the *Sharīʿa* remaining the basis of the new republic of Bukhārā, at the foundation of which he aimed, but this was, and still is, pronounced a mistake by the Communist Party of Russia. On the final overthrow of the Amīr's régime in September 1920, Khodjaev became a member of the Communist Party and was constituted head of the newly created Peoples' Soviet Republic of Bukhārā. He vigorously opposed the counter revolutionary Basmačī movement led by Enwer Pasha, the Turkish ex-Minister for War. For this and other services to the Bukhāran people, he was awarded in 1922 the Order of the Red Banner. Visiting Berlin in 1922, Khodjaev became active in trying to establish economic relations with European countries. This policy was seen as aiming at the economic independence of Bukhārā and in 1923 incurred the serious disapproval of the Central Asian Bureau of the Communist Party, in the setting up of which Khodjaev had always been opposed. In the same year, however, he took part in the 12th Party Congress in Moscow as delegate of the Bukhāran Communist Party. On the delimitation of the Central Asian Republics in 1924, the greater part of the former khānate of Bukhārā was embodied in the Uzbek SSR, of which Khodjaev was in 1925 appointed President of the Council of Peoples' Commissars, a post which he retained until his downfall in 1937, when he was dismissed from office and arrested. He was later indicted on a number of charges which included those of plotting against the Soviet state for the independence of Turkestan, of secretly aiding the Basmačīs, and of being a British agent. While much of the indictment was probably based on fabricated evidence, there is little doubt that, as he himself admitted during the trial, Khodjaev was aiming at the national independence of Turkestan. He insisted, however, that he was not actuated by anti-Russian or anti-Bolshevik feelings. He was executed in 1938. Excluded from the list of other Central Asian personalities posthumously rehabilitated between 1955 and 1957, Khodjaev was not rehabilitated until 1966 on the occasion of the 70th anniversary of his birth. Although he was then said to have made "errors of a nationalist character", he was described as "a prominent revolutionary". The long biographical introduction to the edition of his selected works published in 1970 is wholly laudatory, refers only briefly to his differences with the Party authorities and makes no mention of his downfall, trial and execution.

KHODJAND [see KHUDJAND].

KHŌĪ, Khūy, Iranian town (population in 1951: 49,000), situated *in long.* 45° 02′ *E.*, *lat.* 38° 32′ *N.*, in the *shahristān* of the same name in the *wilāya* of West Āḏharbaydjān; the Kurdish district of Ḳuṭūr is included in the *shahristān* of Khōī.

The town lies at an elevation of 1040 m./3,444 ft., in a plain known locally as *Khōī buhūrī* ("the Khōī depression"), because all the surrounding areas are of a higher elevation. The mountains surrounding the Khōī plain protect the city from the cold winter winds (the Harāwil range along the Turkish frontier in the north west averages over 11,000 feet), and consequently Khōī has a warmer climate than either Tabrīz or Riḍāʾīyya. Minimum winter temperature is —14° C/6.8 F, summers are very hot with hot southerly winds. The economy of the region is partly pastoral, partly agricultural; crops include grain, pulses, tobacco, apricots and cotton. The region has a mixed population of Sunnīs and Shīʿīs whose first language is either Turkish or Kurdish (the name Khōī is said

to mean "salt" in Kurdish, and certainly salt-mines are still worked in the area) In the *bakhš* of Shāhpūr there are several Christian villages.

In ancient times, Khōī acquired commercial importance by virtue of its location on the silk-route. In Ṣafawid times, the proximity of Khoī to the Ottoman frontier made it a town of great strategic importance; in 920/1514 Shāh Ismāʿīl I suffered a decisive defeat at the hands of the Ottoman sulṭān Selīm I on the plain of Čāldirān [*q.v.*], some 70 miles north-west of Khōī. In Kādjār times the strategic value of the town continued because of its proximity to the Russian frontier; the ruins of the walls built by General Gardane early in the 13th/19th century at the request of Fatḥ ʿAlī Shāh are still visible. More recently, Khōī saw fierce fighting between nationalist and royalist forces prior to World War I

Bibliography: ʿAlī Kasmārī (ed.), *Farhang-i djughrāfiyāʾī-yi Īrān* [*Inṭiḳhābāt-i dāʾira-yi djughrāfiyāʾī-yi setād-i artiš*], iv, Tihrān 1330sh /1951, 200-1; Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 86-7; Le Strange, *Lands*, 266, Mahdī Āḳāsī, *Taʾrīkh-i Khōī*, Tabrīz 1350sh./1971. (R. M. Savory)

KHOḴAND, Arabic orthography, Khwāḳand, later written Khūḳand (which is given a popular etymology, *khūk* + *kand* = town of the boar), a town in Farghāna [*q.v.*], where see also for the other spellings and the foundation of an independent Özbeg kingdom with Khoḳand as capital in the 12th/18th century. The accession of the first ruler of this Mān dynasty, Shāhrukh, was followed by the building of a citadel; another citadel later called Eski Ucda was built by his son, ʿAbd al-Karīm (d 1746). ʿAbd al-Karīm and his nephew and successor Irdāna Bī are several times mentioned in the history of the Atalīḳ Muḥammad Raḥīm, afterwards Khān of Bukhārā (d. 1759, see BUKHĀRĀ), Muḥammad Wafā Karminagī, *Tuḥfat al-Khānī*, Asiatic Museum Ms c 581b, especially fols. 93b, 145b). When the Kalmuck empire was destroyed and the frontiers of the Chinese empire advanced up to Farghāna (1758), Irdāna also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J Klaproth, *Magasin Asiatique*, i (1825), 81 ff. from the *Tse ts'ang yu T'ung K'ien*. Irdāna later was a member of a coalition of Muslim rulers of Central Asia, which applied to Aḥmad Shāh Durrānī [*q.v.*], the ruler of Afghanistān, for help against China. The alliance had no further results, although Aḥmad Shāh in 1763 appeared in Turkestan at the head of an army and occupied the territory between Khoḳand and Tāshkend (at the same time an invasion of the land of the Ḳarā-Kirgīs was made from Khoḳand, Klaproth, *op. cit.*, 63), but he had soon to retire again on account of the claims of his enterprises in other directions. ʿAbd al-Karīm's grandson, Nār Būta Beg (probably reigned 1188-1213/1774 98, cf. L. Zuwin in *Protokoli Turk kruzhka lyubitelyei arkheologii*, xviii, 1914, and Waldow, *ibid.*, xx, 1912 f.), was also nominally under Chinese suzerainty. To the early years of this reign belongs the journey of the Russian sergeant, Filipp Yefremov, who was taken prisoner by the Kirgīs in 1774 and sold to Bukhārā and 1782 returned to Russia via India and England According to his *Travels* (F Yefremov, *Stranstvovaniya v Bukharii, Khivye, Persii w Indii*, St Petersburg 1794, 99 f.), Nārbūta was already yet titled Khān "by the Chinese", was allied with China and at enmity with Bukhārā. No mention is made of prominent buildings in the capital (the Medrese Mīr was built in the reign of Nārbūta), on the other hand, a high pillar (apparently a minaret), said to be over 280 feet high in the market-place in Marghīlān, is described. According to Filipp Nazarov (see below), this "tower" was visible for a distance of 50 versts (over 30 miles).

Nārbūta's two sons, ʿĀlim and ʿUmar, are the real founders of the state and city of Khoḳand as we later know it The chronology of these reigns (1212-1237/1798-1822) is not sufficiently established, even the year in which ʿĀlim was assassinated and ʿUmar raised to the throne is variously given in the sources. According to the *Taʾrīkh-i Shāhrukhī* (ed. Pantusov, 106) ʿUmar died in the year 1237/1821-2 (in the cyclic reckoning the year of the horse = 1822 is given); according to Nalivkin (Russ. original, 201, French tr., 124), which here follows another source (the *Muntakhab al-Tawārīkh* of Ḥakīm Khān), ʿĀlim was not murdered till the spring of 1232 (i.e. 1817, not 1818, as in Nalivkin), on the other hand Nalivkin himself in another passage (Russ orig 185, French tr. 108) puts the building of the *chāhār* mosque of Khoḳand by ʿUmar Khān in 1231/1816. The Russian interpreter Filipp Nazarov, who was in Khoḳand in the winter of 1813 14, calls the ruler of Khoḳand Amīr Walīānā (*Zapiski o nyekotorïkh narodakh Sredneyey Azii*", St. Petersburg 1822, 50 ff. This is probably for *Walī al-Niʿmat*, not *Walī Miyānī*, as in Klaproth, *op. cit.*, 45. The ruler at this time was only 25 years of age; this statement can only refer in ʿUmar, not to the much older ʿĀlim, according to ʿAbd al Karīm al-Bukhārī alan (ed. Schefer, 102), this embassy and the cause of it (the murder of the Khoḳand envoy by a Russian soldier in Petropaviovsk) both took place in the reign of ʿUmar Khān. According to ʿAbd al-Karīm 99, ʿĀlim had already been killed in 1224/1809, which cannot be right, as we have a document of his dated Djumādā I, 1225/June 1810 (*Protokoli Turk kruzhka, iyub. arkh.*, iii, 105 f.). The change of ruler must therefore have taken place between 1810 and 1813.

In the oldest known document of his reign, dated 1213/1798-9, ʿĀlim still regards himself as the representative of an unnamed Khān, later he appears as an independent ruler with the title *Khān* or *Amīr*; after the conquest of Tāshkend, his power was as great as that of the Amīr of Bukhārā. In ʿUmar's reign in 1814 (so Nazarov; not so late as 1819, as in Nalivkin, Russ. orig. 170 f.; French tr. 134 f.), the town of Turkistān with the parts of the Kirgīs steppes belonging to it was incorporated to the kingdom of Khoḳand. ʿUmar thereupon took the title of *Amīr al Muslimīn*. There were several wars with Bukhārā regarding the possession of Ura Tübe in the reigns of both ʿĀlim and ʿUmar, and the town indeed remained a bone of contention between the two states right down to the Russian conquest.

ʿUmar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers, ʿĀlim had made up his mind to break the power of the Özbeg families and therefore surrounded himself with mercenary troops from the highlanders of Karātīgin, Darwāz and other lands (*Taʾrīkh-i Shāhrukhī*, 42 f.). The war against the nobles was, as frequently elsewhere, combined with a war on the religious classes, especially the dervish orders. The historians on this account describe ʿĀlim as a godless tyrant (*fāsiḳ*); on the other hand they praise the piety and justness of ʿUmar, who was put on the throne by ʿĀlim's murderers. ʿUmar built the present chief mosque of Khoḳand, which was also used as a *madrasa* and therefore is known as the Madrasa yi Djāmiʿ. ʿUmar was also fond of poetry and wrote poems himself under the pseudonym (*takhallus*) of *Amīr*, verses by the Khān himself, his officials

and favourites were collected in a special anthology (afterwards printed) satitled *Madjmūʿat al ghuʿarāʾ* by M. Hartmann in *MSOS*, vii, Westas. Stud., 87 ff. It was probably ʿUmar who founded the town of Shahr-i Khān (west of Andidjān), the great canal, led to it from the Karā Daryā, Shahr i Khān Sāy, completely altered the irrigation of Farghāna.

ʿUmar's son and successor, Madalī (properly Muhammad ʿAlī), was 12 at his accession (according to others 14). During the first half of his reign, the khānate of Khokand reached its greatest power and extent. In the south the districts of Karātegīn, Darwāz, and Kulāb, which now belonged to Bukhārā, were all conquered; to the north-east taxes were levied on the Karā Kirgiz, on the Great and on a part of the Central Horde of Kazak Kirgiz, the Khān's representatives even appeared among the tribes of the Great Horde which led a nomadic life on the other side of the Ili [*q.v.*]. The rebellion of Khodja Djahāngīr to Kāshgharia (1826), which received support from Khokand soet with no success; nevertheless, the officers of the Khan were allowed by the Chinese government to collect taxes in the "six towns" (*alti shahr*): Aksū, Uch Turfān, Kāshghar, Yangishahr, Yārkand and Khotan. Like Khokand, where one of the largest *madrasas* bears the name of Madalī Khān, Tāshkend attained considerable prosperity, from 1835 the *Beglerbegi* of Tāshkend was given the administration of all the northern provinces of the kingdom, and a memorial of this period is the great Beglerbegi Madrasa. The excavation of the great Khān Harīk canal in the region of Tāshkend also belongs to this period (*Protokoll Turk kruzka, Izvuk arkh*., iii, 275).

In spite of the great extent of his kingdom, the authority of the Khan was not firmly established; his vicious life and cruel rule had aroused general discontent. Nasr Allāh, *amīr* of Bukhārā, is said to have been asked by people in Khokand itself to put an end to his rule. The Khokand army was completely defeated; the capital itself was taken by the enemy (for the first time since the foundation of the kingdom), Madalī was killed while trying to escape (1258/1842). The conquerors were driven out again in the same year and Shīr ʿAlī, a cousin of ʿĀlim and ʿUmar, was placed on the throne; but down to the Russian conquest, domestic peace was never restored for any length of time. The reigns of Shīr ʿAlī (1842-45) and his sons Khudāyār (1845-58 and 1865-73) and Malla (1858-62) and several short-lived rulers were a period of continual confusion and bloody fighting, notably between the Özbegs of the Kipčak tribe and the "Sarts", i.e. the native population. Khudāyār, who was still a minor, was raised to the throne by Musulmān Kul, the chief of the Kipčak, the Kipčak drove the Sarts out of their houses in the capital and took possession of the canals in the country, the Sarts were only allowed the water necessary for their fields on payment of a fixed sum. In 1269/1852 Musulmān Kul was overthrown by Khudāyār and put to death; the land again passed to the Sarts. Mallā then relied on the support of the Kipčak and restored to them the lands taken by the Sarts. All this warfare, internal and external was waged with great ferocity, after Khudāyār's capture of Ura Tübe in 1264/1848, a tower of skulls (*Kelle manār*) was built from the heads of the slain enemy. Banished pretenders usually took refuge to Bukhārā, and taking advantage of these dissensions, the Mangit Khān of Bukhārā Nasr Allāh was able in advance as far as Khudjand [*q.v.*] in 1275/1858.

In spite of all this, the khānate retained its former extent down to the Russian conquest of the later 19th century. Russian forces had been in contact with troops from Khokand since 1850 on the upper Syr Daryā, and in the north-east of the khānate between the Čū and Ili rivers since 1860. All these regions were under the *Beglerbegi* or governor appointed by the Khān for Tāshkend (see above), who was also responsible for the maintenance of agriculture, the governor Mīrzā Ahmad (1853-8) is said to have organised irrigation works from the town of Turkestān or Azret to the Čū valley. In 1864 Tāshkend fought off a Russian attack, and immediately afterwards, a Khokandī force attacked the town of Turkestān, by then Russian-held. Subsequent Russian intervention was facilitated by the conflicting interests of the Iranian townspeople or Sarts and the nomadic Kipčak elements of the rural areas, mentioned above, and also by the discords between the Central Asian khānates. The ruler of Bukhārā Muzaffar al-Dīn b. Nasr Allāh was invited to secure Tāshkend for himself, when that town seemed likely to fall to the Russians, but in 1865 the Russians captured Tāshkend, whereupon the Khān of Bukhārā marched on Khokand, occupying Khudjand and Khokand and forcing Khudāyār of Khokand to acknowledge the suzerainty of Bukhārā. In 1866, as part of the operations against both Khokand and Bukhārā General Romanovski advanced up the Syr Daryā, thereby driving a wedge between the two khānates. After the fall of Khudjand, Khudāyār came to terms and agreed to become a Russian vassal and to pay an indemnity.

Thus began the last phase of the khānate's nominally independent existence. Despite all the internal dissensions and intrigues, the economic condition of the khānate seems to have been prosperous enough, with flourishing local textile, carpet weaving and other crafts, according to a Russian observer in 1867, the town had a population of 80,000, with 25 *madrasa* and several hundred mosques. Traditional Muslim learning was, indeed, far from moribund in all three of the Central Asian khānates in this the last phase of their existence. During this period, several buildings were erected in the town of Khokand, including the palace or *urda* of the Khān, and the *madrasas* of Hākim Āyīn and Sultān Murād Beg, built by the Khān's mother and brother.

Until 1875, it seems to have been the Imperial Russian government's intention to retain the khānate in a similar status to those of Bukhārā and Khīwa. But disturbances within the khānate, and attacks on Russian-held territory, continued, and in 1875 there was a popular rising against Khudāyār Khān led by his kinsman Pūlād Khān, and the former regions of the khānate then annexed by Russia, such as Khudjand and Kuramīnsk, joined the revolt. A Russian invasion inevitably led to the capture of Khokand by General Von Kaufman. The Treaty of Marghilān was made with the new Khān, Nasr al-Dīn b. Khudāyār, by which all the territory of Khokand on the right bank of the Syr Daryā was ceded to Russia. But fighting nevertheless continued in the western part of the khānate, until Russia finally occupied the whole of the khānate, deposed the line of the Mīn Khāns and annexed all their lands to Russia. The imposition of direct rule over the khānate was especially important to Russia at this time, because Khokand's eastern frontier marched with Kāshgharia or Chinese Turkestān, then controlled by the rebel Yaʿkūb Beg [*q.v.*], himself a Khokandī who had fought against the Russians at the capture of Aḳ-Masdjid (Kyzyl-Orda) on the middle Syr Daryā in 1853, and was not surprisingly hostile to Russia. As part of the Governor-Generalship of Russian Turkestān, Khokand now

became an *oblast* under the ancient name of Farghāna. In the 1898 administrative re-organisation, Khokand became a *uezd* of the *oblast* of Farghāna. The town of Khokand itself continued to be the chief town of the region, with 21,636 inhabitants in 1911, but with the newly founded town of New Margh̲ilān, later Skobolev, as the governor's seat.

The Muslim peoples of the former khānate played a major rôle in the anti-Russian rebellions of 1916, when the Imperial government attempted to call up non-Russians for labour service in the war. In the following year, it was the focus of the Muslim movement for the autonomy of Turkestan as the Tsarist régime broke up, and in December 1917, the Fourth Extraordinary Regional Muslim Congress met in the town of Khokand and declared the autonomy of Turkestan. Early in 1918, however, the Tashkend Soviet declared the government set up in Khokand under Muṣṭafā Čokayev to be counter-revolutionary, and in February 1918 Red Army forces attacked the town of Khokand, which was defended only by a hastily raised Muslim militia, captured it, and conducted a savage massacre in which several thousands of the inhabitants were killed. After this, Muslim desires for self determination in the region were expressed by the guerilla activities of the Basmačis (*q.v.*).

Under the Soviets, Khokand forms a *rayon* or district of the Fargana *oblast* of the Uzbek SSR. It is now an important centre for light industry, in which silk and linen manufactures are prominent. The palace of Khudāyar is now the town's museum. The population in 1970 was 133,000.

KHOKARS, a powerful hill-tribe inhabiting the Jahlum area in the north-west of the undivided Panjab. The Khokars *were a dominant race* of the province at the time of the first Muslim invasion of the Indian sub-continent, their origins are as shrouded in mystery as those of any other Panjabi tribe, but that they were originally Hindus seems hardly open to question.

The earliest mention of the Khokars occurs in Ḥasan Niẓāmī's *Tāj al-maʾāṯir* which refers to an insurrection of the *tribe* under their chiefs named Bakan and Sarki. The next contemporary chronicle to contain a reference to the Khokars is Minhādj al-Sirādj's *Ṭabaḳāt-i Nāṣirī*, which says that they were encouraged by Malik Khusraw, the last Ghaznawid ruler of Lāhawr, to rise against their Djammā overlords. History also records a military contact near Lāhawr between the Khokars and a force of the fugitive Djalāl al-Dīn Khʷārazmī in 620/1223.

Extending their sway beyond their traditional stronghold in the country between the Jehlum and the Chenab, the Khokars held a considerable area east of the Beas. In 647/1250 they were masters of most of the upper part of the Panjab, but they are no more heard of until the reign of Sulṭān Muḥammad Tughluk when they again created disturbance. Yaḥyā Sirhindī's *Taʾrīḫ-i Mubārakshāhī* describes the seizure of Lāhawr in 797/1394 by the Khokar chief Shaykhā and his long standing feud with Sārang Khān, governor of Dipalpur, resulting in the former's defeat.

The Khokars played a significant rôle in offering resistance to the invading hordes of Timūr in India. After Shaykhā's arrest by Timūr in 801/1398, the Khokars disappear from history, but his son Djasrat, who escaped from Samarkand, whither Timūr had taken him as a prisoner, emerges later in 823/1420 as a force to reckon with. For more than twenty years, this indefatigable Khokar warrior proved to be the cause of constant worry to the Sultans of Dihlī. In 845/1441, Sulṭān Maḥmūd Shāh conferred Dipālpur and Lāhawr on Bahlūl Lōdī and charged him to chastise Djasrat, but the wily Khokar came to terms with Bahlūl and urged him to oust the Sayyids and occupy Dihlī. However, Djasrat was murdered in 846/1442 by his queen, a daughter of Bhim Deo, Rādjā of Djammū, because her father had been put to death by him. After Djasrat, the Khokars were left leaderless, and coupled with the rise of the Lōdī power in the Panjab, the Khokar ambitions finally came to nought.

Scholars and historians have often confused the Khokars with the Gakhkars, a totally distinct tribe, settled in the same province. Firishta in all probability means Khokars when he describes the Gakkhars as a race of wild barbarians, devoid of religion or morality, practising polyandry and female infanticide. Similarly, in his article, *A history of the Gakkhars*, in *JASB*, xl/1 (1871), I. G. Delmerick has attributed the achievements of the Khokars to the Gakkhars. As a matter of fact, the Khokars were spread all over the central districts of the Panjab centuries before the Gakkhars acquired a foothold in the Salt Range, to which they remained traditionally confined (cf. H. A. Rose, *The Khokars and the Gakkhars in the Punjab history*, in *The Indian Antiquary*, xxxvi (1907), 1-9).

KHOMAYR (see KUMAYR).

KHOSRAW (see KHOSREW, KHUSRAW, KISRĀ).

KHOSREW BEG, sanḍjaḳ beg of Bosnia, was born in Serez (Macedonia) in 885/1480. His mother, the princess Selḍjūḳ, was a daughter of Sultan Bāyazīd II (*q.v.*), his father Ferhād being a South Slav

from Herzegovina (C. Truhelka has shown that "Redivoj, the brother of the Sultan's son-in-law", to whom the people of Ragusa [q.v.] sent gifts, was Ferhād's brother). Taking part in Sultan Süleymān's campaign against Belgrade (927/1521), Khosrew Beg was appointed *sanǧaḳ beg* of Bosnia on 13 Shawwāl/ 25 September of the same year, a fortnight after the conquest of the city. Having stayed four years in Sarajevo, he was removed from office because he failed at the siege of Yayče. Some six months later he returned to his post, which he kept until he died, over sixty years old, in 948/1541, except for an interruption of a few years (1533-6), during which he was at Belgrade *sanǧaḳ beg* of Semendria.

Distinguishing himself by his successful campaign, Khosrew Beg was nick-named *Ghāzī*; even today he is well known among the Bosnian Muslims by the name of *Gari Husrev-beg*. Due to his military activities, Turkish power spread widely in Bosnia, Dalmatia and Slavonia (Obrovač, Yayčal, Banjaluka, Požega, Kliš, Gorjan).

His campaign brought Khosrew Beg great riches which he spent on enlarging Sarajevo. During his governorship, the city grew into an important centre. Three charters of foundation (*waḳfiyya*) attest his activities: two (938/1531 and 944/1537) for the Khosrew Beg mosque (*Begova džamija*) next to which was erected the mausoleum (*türba*) in which he was buried, and one (943/1537) for the *Kuršumlija medrese*. The *Begova džamija* is one of the most outstanding specimens of Islamic architecture in Yugoslavia, and an imposing monument of the Turkish period in Sarajevo. The *waḳf* founded by Khosrew Beg has been of great importance for the city of Sarajevo and for the cultural life of the Muslims in Bosnia and Hezergovina in general. Up in the 20th century, many public buildings were erected with its revenues. It still exists, but much property was lost in the 17th/17th century, especially at the great fire in 1697 when Prince Eugene of Savoy made his breakthrough at Sarajevo. In course of time, many estates belonging to the *waḳf* were lost, including recently of the land-reform in Yugoslavia after 1918.

In the charter of foundation of the *medrese*, Khosrew Beg ordered a library to be attached to the school. During the governorship of Topal ʿOthmān Pasha in Bosnia (1861-9), the library was separated from the school, and the books were transferred in 1864. After 1867 books and documents from other libraries and institutions were brought in this library, known as *Gazi Husrev-begova biblioteka*. In 1963 it held 6,456 Arabic, Persian and Turkish manuscripts, and many have been added since. There are also *ca.* 3,500 documents of the Turkish period, 400 charters of foundation and 84 registers (*defter*) of the *ḳāḍī* of Sarajevo.

Other monuments in the town for which Khosrew Beg was responsible include a *ḫānḳāh*, a *ḥammām*, a *bedesten* of 90 stalls and the Tashlī Khān, a caravanserai provided with 60 lodgings.

Dobrača, *Gari Husrev-begova biblioteka u Sarajevu—Katalog arapskih, turskih i perzijskih rukopisa*, Svezak prvi, Sarajevo 1963. There are numerous references in Ghāzī Khosrew's military activities in the *Dsarn at* Marino Sanuto, where he appears under the name of "Usref Beg".

(B Djurdjev and J.-L. Bacqué Grammont)

KHOSREW, Mollā, a famous Ottoman jurist, whose real name was Mehmed b. Farāmurz b. ʿAlī. According to one statement he was of Turkoman (tribe of Warsak) descent and born in the village of Karǧhān (half way between Siwās and Tokat); according to others, however, he was of "Frankish" descent and the son of a "French" nobleman who had adopted Islām. According in Saʿd al-Dīn his father was of Romaic (*Rūm*) descent. Khosrew became a pupil of the famous disciple of Taftazānī, Burhān al-Dīn Haydar of Herāt (cf. *Ṭab.*, ai, 82 and Ḥoʿd of-Dīn, *Tāǧ al-tawārīḫ*, ii, 430), and received a teaching post in the Shāh Malik *madrasa* in Adrianople; in 848/1444 he became *ḳāḍī* of Adrianople and later *ḳāḍīʿasker* of Rumelia. On the death of Khiḍr Beg [q.v.], the first *ḳāḍī* of Constantinople, he succeeded him and was at the same time *müderris* at the Aya Sofya. Feeling hurt at Mollā Kurānī [q.v.] being promoted over him, he went to Bursa in 867/1462 and built a *medrese* there. In 874/1469 he returned to Istanbul by command of the Sultān, became *Shaykh al-Islām* and died there in 885/1480. His body was taken in Bursa and buried in the court of the mosque founded by him. He also founded a mosque in Istanbul, which bears his name (cf. Ḥāǧǧ Ḫalīfa, *Fedhleke*, i, 201; J. von Hammer, *GOR*, ix, 87, No. 426).

Mollā Khosrew was a celebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as an author. His two most important works are the often annotated *Durar al-ḥukkām fī šarḥ Ġurar al-aḥkām* on the principles of legal practice, written in 877 83/1473-7 (printed at Cairo 1294 and 1305), also a dogmatic work *Mirʾāt al-wuṣūl fī ʿIlm al-uṣūl* (printed at Cairo 1262 and Istanbul 1304). On other works by him, cf. von Hammer, *GOR*, ii, 589 ff. and Brockelmann, II, 226-7.

(F. Babinger)

KHOSREW PASHA, Bosniak (?-1041/1632), Ottoman Grand Vizier. Bosnian in origin, Khosrew was taken into the palace service and rose to the office of *silāḥdār*. When, in Muharram 1033/ October-November 1623, the dissident *sipāhī* of the bailiffs of the Janissaries demanded the replacement of their *aġha* by someone not of the corps, Khosrew passed out of the *enderūn-i hümāyūn* to become *Yeñiçeri aġhası*.

The state was at this time going through a critical period: the dominance of the Janissaries in internal affairs had reached new heights with the execution of ʿOṯmān II (Rabīʿ I 1031/May 1622); Aḥmed (Meh-

med) Pasha [*q.v.*] was in revolt in Erzurum, and the Safawid Shāh ʿAbbās I was soon to take Baghdād (Rabīʿ I 1033/January 1624). In Shaʿbān 1033/May 1624 Khosrew Agha, an *agha* of the Janissaries, left Istanbul with the *bashlıḳ*u soldiery in the train of the Grand Vizier Çerkes Mehmed Pasha [see MUḤAMMAD PASHA ČARKES], who had been given the command against Abāza Pasha. Khosrew is mentioned as having fought courageously in the victory over Abāza's forces near Keyseri in Dhu ʾl-Kaʿda 1033/ September 1624. When Çerkes Mehmed died in winter quarters in Tokat (Rabīʿ II 1034/January 1625), Khosrew and the *baṣḥdefterdār*, Ḥāfiẓ Pasha, wrote to the capital urging the appointment of the *beglerbegi* of Diyārbekir, Ḥāfiẓ Aḥmed Pasha [*q.v.*] as his successor, an action Khosrew came to regret on learning that he himself might have been considered for the office. Though he was soon after given the rank of vizier, he is said by Peçewi, then with the army, not in have been able to overcome his disappointment and to have hoped that Ḥāfiẓ Aḥmed might fail in the subsequent campaign against Baghdād (Peçewi, *Taʾrīḫ*, ii, 403, 405).

In Ramaḍān 1034/June 1625 Khosrew and the forces which had wintered in Tokat joined the army under Ḥāfiẓ Aḥmed to march against Baghdād. The ensuing siege of that city, which lasted for nearly eight months (Ṣafar Shawwāl 1033/November 1625 -July 1626), was unsuccessful, but Khosrew again distinguished himself by his bravery, especially when the Ottomans were near to rout in the third of the battles (Ramaḍān 1035/June 1626) with a relieving force of some 30,000 soldiers under Shāh ʿAbbās himself. (For an undated imperial decree sent to Khosrew during this siege, see Fetḥīān Beg, *Munshaʾāt al-salāṭīn*, Istanbul 1264-5, ii, 89-90).

Following the failure at Baghdād, both Ḥāfiẓ Aḥmed Pasha and Khosrew Agha were dismissed (Rabīʿ I 1036/December 1626), though neither was disgraced. Summoned to the capital by the sultan, Murād IV, Khosrew arrived in Raḏjab 1036/March-April 1627 and was made a *ḳubbe* vizier (and thus Pasha). The inability of the new Grand Vizier, Khalīl Pasha, to counter the renewed threat from Abāza Pasha in 1627 led to the former's dismissal. The sultan is said to have placed great trust in Khosrew Pasha's courage and in his ability to control the army (Peçewi, ii, 409), and in the consultation over the choice of a new Grand Vizier the arguments of the *Shaykh al-Islām* Yaḥyā Efendi that it was time to try a new face and that Khosrew's unparalleled reputation for valour made him the best man for the post silenced the other ministers. Because there were viziers senior to him, notably the *bāʾim maḳām* Raḏjab Pasha [*q.v.*], he was not made Grand Vizier immediately but was first appointed governor of Diyārbekir and sent to Izmit, where the imperial seal was delivered to him on 1 Shaʿbān 1037/6 April 1628. In his letter of appointment he was charged first with subduing Abāza Pasha, then with marching against the Ṣafawids, and he was also given wide discretion in the making of appointments and the administration of affairs generally (see Fetḥīān Beg, ii, 90-5, for the *berāt*).

Having made careful preparations for the campaign against Abāza, Khosrew moved towards Tokat. Through harsh measures against wrongdoers and those whom he regarded as having failed in their duty, he succeeded in establishing strict discipline in the army. He reached Tokat on 28 Ramaḍān 1037/ 1 June 1628, where he remained for some seven weeks before a report that Abāza, concerned by desertions from his forces, was seeking aid from Shāh ʿAbbās spurred him to move quickly against Erzurum. His considerable reputation for bravery persuaded increasing numbers of Abāza's followers to desert to him, a tendency which he further encouraged by treating the deserters well. Abāza had laid siege to Hasankale but returned to Erzurum on hearing of Khosrew's advance. At the suggestion of the governor of Hasankale, Khosrew advanced on Erzurum at great speed with a picked force, arriving before Abāza could complete his preparations (29 Dhu ʾl-Ḥijja 1037/30 August 1628). During the siege which followed, Khosrew again encouraged desertions by promises of pardon and employment in the army. Recognising the impossibility of resistance Abāza surrendered on terms on 23 Muḥarram 1038/22 September 1628, and Khosrew thus brought to an end a problem which had bedevilled the state for some six years. A Ṣafawid force coming to Abāza's aid was surprised and defeated by the governor of Kars, its commander, Shamsī Khān, being captured and sent to Khosrew. Having decided not to winter in the field, Khosrew returned to Istanbul with both Abāza and Shamsī Khān in his train and made a triumphal entry into the city on 22 Rabīʿ II/9 December. Abāza, pardoned in accordance with the terms of the surrender, was appointed governor of Bosnia.

Though Khosrew fell ill in the spring of 1629, he recovered and was appointed commander for the campaign to retake Baghdād. He left Üsküdār on 28 Dhu ʾl Kaʿda 1038/9 July 1629 and arrived in Mosul on 1 Djumādā I 1039/17 December 1629. An unusually hard winter, with continuous heavy rains and even snow, caused severe flooding over a large area and created great difficulties for the army. On 13 Djumādā II/28 January 1630 the army left Mosul for Baghdād. Having suffered considerable losses of men and matériel in the crossing of the flooded river Zāb, Khosrew convened a *divān* in which it was decided that to besiege Baghdād in the present conditions was impossible and that the time would be better spent in a pre emptive attack on the ruler of Ardalān [*q.v.*], Khān Aḥmad, who might otherwise threaten their rear. As the army advanced, many of the Kurdish *begs* submitted to Khosrew. Reaching the district of Shahrazūr, Khosrew was persuaded to rebuild the fortress of Gulʿanbar, built by Sulaymān I and subsequently destroyed by Shāh ʿAbbās. The work was begun on 1 Shaʿbān 1039/16 March 1630 and took some fifty days to complete. During the stay at Gulʿanbar, Khosrew sent a force to take the fortress of Mihribān, on the road to Hamadhān. The garrison surrendered, but the Ottoman force was then attacked by a Ṣafawid army under the *khān-i khānān*, Zaynal Khān. In the ensuing battle the Ottomans, with some difficulty, won the day (22 Ramaḍān/5 May). Moving further east, the Ottomans sacked the palace of Khān Aḥmed at Ḥasanābād and, on 27 Shawwāl/9 June, reached Hamadhān, which had been evacuated by the Ṣafawids. They had waste the city, and, with the intention of marching on Kazwīn, advanced to Dargazīn, which they also sacked. It was there decided that an attack on Kazwīn would prove both difficult and ultimately pointless and that it was past time to return to the main aim of the campaign, the recovery of Baghdād which was now some sixty stages distant. The army departed from Dargazīn on 10 Dhu ʾl-Kaʿda 1039/22 June 1630 and marched towards Baghdād, meeting serious resistance only from the ruler of Luristān, sent against them by Shāh Ṣafī, whom they overcame on the plain of Čamčhāl, near Niẖāwand, on 5 Dhu ʾl Ḥijja/24 July. Reaching the environs of Baghdād in early Sepṭam-

ber, Khosrew began on 28 Safar 1040/6 October 1630 what proved to be a fruitless siege of the city. Five days after an unsuccessful full scale assault on 3 Rabīʿ II/9 November it was decided to withdraw. During the course of the siege Khosrew had been persuaded by the local Arabs to garrison the fortress at Hilla, and leaving a sizeable force there, he departed with the army for Mosul, where he arrived on 7 Djumādā/ I/12 December. While the army dispersed for the winter, Khosrew, in ill health, prepared to winter in Mosul.

When the news that the Ottomans had abandoned the siege of Baghdād reached Kurdistan and the Shāh, an army under Khān Aḥmad attacked the Ottoman garrison at Derteneh. The defenders fled to the newly built fortress at Shahrizūr (Gulʿanbar) which was subsequently attacked by a large army under Khān Aḥmad and the Ṣafawid *khān-i khānān*, news of their advance caused the Kurdish begs to switch their allegiance to the Ṣafawids. The garrison at Shahrizūr evacuated the fortress, but subsequently engaged the Kurdish-Ṣafawid army in battle, only to be heavily defeated, three of the Ottoman commanders reached Mosul on 16 Djumādā I/23 December and were put to death by Khosrew. The victors meanwhile destroyed Gulʿanbar. A Ṣafawid army under Shāh Ṣafī then laid siege to Hilla, which they succeeded in taking despite stout resistance. The loss of Shahrizūr and the siege of Hilla persuaded Khosrew to retire to the relative safety of Mārdīn. Having made arrangements for the repair of the fortifications at Mosul, he left on 18 Djumādā II/22 January 1631 and arrived in Mārdīn on the 29th/2 February (For further details of the Hamadhān/Baghdād campaign from the Ṣafawid side, see Iskandar Beg Munshī, *Dhayl-i Taʾrīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, ed. Suhayl Khwānsārī, Tehran 1938, 39 ff.)

From Mārdīn a request was sent to the capital for men (in particular a large force of Tatars), money and supplies for another campaign against Baghdād in 1631. In Dhu ʾl-Kaʿda 1040/June 1631 Khosrew moved to Kochisār, a short distance to the south west of Mārdīn, where he spent the summer months awaiting the arrival of the Tatars, several thousand of whom had set out in the spring, and trying to decide on his course of action. When he finally determined to move towards Mosul (Ṣafar 1041/September 1631), heat, fatigue and disease had so affected the army that it was urged that the campaign be abandoned until the following year. Khosrew had little choice but to agree and retired toward Diyārbekr where he entered winter quarters on 3 Rabīʿ II/29 October.

By this time, however, he had already been replaced as Grand Vizier by Hāfiz Aḥmed Pasha, the decision to do so having been taken in Istanbul on 29 Rabīʿ I 1041/25 October 1631. Naʿīmā (*Taʾrīkh*, iii, 76 f.) lists a number of underlying reasons for his dismissal, chief among them his excessive dependence upon, and consequent currying of favour with, the troublesome elements in the army (*seyhs*), this in turn leading to instances of oppression and malfeasance (see also ii, 441-3 where Naʿīmā gives details of Khosrew's securing the dismissal of a *Yeñiçeri Aġāsı* who had been appointed with specific instructions from the sultan to end the abuses in the enrolment of Janissaries and to prevent improper entries in the registers of the corps). The decisive factor, however, appears to have been his failure to retake Baghdād despite a substantial investment of men and resources. When the news of his dismissal reached Diyārbekr (21 Rabīʿ II/16 November), the army immediately protested, threatening to kill the messenger who had brought the news and urging Khosrew to remain until they could make representations to the capital on his behalf. Khosrew calmed them, however, accepted his dismissal and left Diyārbekr (26 Rabīʿ II/21 November), surrendering the imperial seal in the vicinity of Malaṭya. A recurrence of gout forced him to halt in Tokat, where he was to remain until his death.

Khosrew Pasha's dismissal became the focus of a serious rebellion in the capital, incited, it is said, by the vizier Raḥīb Pasha, who coveted the Grand Vizierate. Those involved were the *sipāhīs* who had been recalled from Diyārbekr for the winter and a number of individual *sorbas* who, having built up their own followings and made themselves virtually independent in various parts of Anadolu and Rūmelī, had agreed to attempt to restore Khosrew to the Grand Vizierate and had converged on the capital. Demanding the deaths of seventeen leading men identified as those who had brought about Khosrew's dismissal, the rebels succeeded in assassinating Hāfiz Aḥmed Pasha, who was replaced by Raḥīb Pasha (19 Raḥīb 1041/10 February 1632; Peçewī, ii, 420, wrongly cites the execution, not the dismissal, of Khosrew as the cause of this rebellion). Deeply angered by these events, Murād IV held Khosrew to be the cause and determined on his execution. Appointing Murtaḍā Pasha to the governorship of Diyārbekr, he charged him secretly with putting Khosrew to death. Despite opposition from the people of Tokat as well as Khosrew's followers, this end was accomplished when Khosrew ordered an end to resistance and accepted his fate. The news of his death, which became public knowledge in the capital on 19 Shaʿbān 1041/11 March 1632, provoked yet another serious rebellion, forming part of the general disorder which obtained until Murād IV was able decisively to assert his authority in June of the same year.

Though Khosrew Pasha is credited in the sources with considerable personal bravery and with taking great pains in the preparation of his campaigns, these qualities are overshadowed by what is regarded as his excessive severity, even bloodthirstiness, to demonstrate which numerous examples are given. On this aspect of his character Naʿīmā remarks: "He had no hesitation in putting to death men whose execution neither the *shar*ʿ nor reason required, who perhaps did not deserve so much as a rebuke" (iii, 77). His success over Abāza Pasha, a considerable achievement, is seen as having made him arrogant and headstrong, qualities which fitted ill with his relative inexperience. In the accounts of the Hamadhān/Baghdād campaign he is faulted from the military point of view for having allowed himself to be persuaded by the Kurds to rebuild Gulʿanbar and by the Arabs to garrison Hilla, since neither was defensible unless Baghdād were taken, and both projects, though each in a different way, were distractions from that basic aim. In contrast to the generally unfavourable impression of him, and especially of his character, which emerges from the sources, however, one might note the apparently spontaneous protest by the army at his dismissal, the attempt by the people of Tokat to defend him; and, while allowing for the selfish ends of some of those involved, the strong reactions aroused in Istanbul first by his dismissal and then by his execution. These events suggest that he was perhaps, more widely admired, even at the end, than the sources, and particularly Naʿīmā, would lead one to believe.

KHOSREW PASHA, DEVĀNE OR DELI, Ottoman governor and vizier, and elder brother of Lala Muṣṭafā Pasha [*q.v.*] He was a Janissary of Bosnian origin, but became a deserter at the outset of his career, and for several years lived an adventurous life, as evoked by 'Ālī in his *Kunh al-akhbār* He returned to grace at an unknown date, and then became food taster (*ṭashnigīr*) at the Palace, intendant of the corps of guards (*bostandjī*) and then equerry to the sultan. His conduct during the Čaldıran campaign gained him the governorship (*beglerbegīlik*) of Karamān on 25 August 1514. He took part in the conquest of Diyārbakr in 1515, as the Egyptian campaign of 1516-17, and in the suppression of the Kızılbash revolt of Shāh Welī in 1520 and that of Djānbirdī Ghazālī [*q.v.*] in the following year

At the beginning of 1521 he became *beglerbeg* of Anatolia, and then of Diyārbakr at the death at the end of that same year of Dhu 'l-Ḳadr Meḥmed Pasha [*q.v.*], he was to remain for ten years in this post at Āmed, with responsibility for watching over the security of the frontiers with Ṣafawid Persia and for consolidating Ottoman authority in the Kurdish principalities which had recently rallied to the Porte. During the winter of 1531-2, his disputes with Ulama Pasha, a Ṣafawid refugee who had been made commander-in-chief of the troops in eastern Anatolia and was at that time in favour with the Grand Vizier Ibrāhīm Pasha, led to his dismissal. In 1532 he became governor of Anatolia for a second time, and took part in the "German" campaign of that same year. Traces is then lost of him until he turns up as *sandjak beg* of Aleppo and then *beglerbeg* of Damascus in 1534, and charged with various military duties during the "campaign of the two Irāḳs". Whilst the Ottomans army was wintering at Baghdād in 1534-5, the sultan nominated him as *beglerbeg* of Egypt in place of Khādim Süleymān Pasha [*q.v.*].

Khosrew Pasha's brief tenure of office in Cairo (February 1535-December 1536) was marked by such an enormous increase in the revenues from Egypt (*irsāliyya* [*q.v.*]) that the Porte had suspicions about the legality of the means used to collect it. A commission of enquiry was unable to prove his guilt, but he was nevertheless dismissed from his office. In fact, the evidence on his administration in Diyārbakr and in Egypt reveals a brutal, largely unscrupulous and highly mendacious official, but also a remarkably efficient one. The Ottoman chroniclers of Egypt (Yūsuf, Meḥmed b. Yūsuf al-Khallāk and 'Abd al-Karīm b. 'Abd al-Raḥmān) stress moreover the unusual prosperity and security which the land enjoyed under his rule.

He was replaced at Cairo by the powerful vizier Khādim Süleymān Pasha, whose previous ten years' tenure of the governorship he had endeavoured to denigrate in the eyes of the Porte, evoking in Khādim Süleymān Pasha a tenacious hatred against him. For the third time, Khosrew Pasha became *beglerbeg* of Anatolia at the beginning of 1537, and then of Rumelia in June 1538. His services during his tenure of these offices (the Moldavian campaign of 1538 and the capture of Castelnovum in 1539) led the sultan to appoint him as fourth vizier in 1541. Khādim Süleymān Pasha being Grand Vizier and Rustem Pasha [*q.v.*] second vizier. It seems very probable that the latter's ambitions were the cause of the ruin of the other two. As the sultan's son-in-law and enjoying the support of his influential mother-in law Khurrem Sultān, Rüstem was able to rouse against each other very skilfully the old enemies Khādim Süleymān and Khosrew to such a way that they came to blows in the sultan's presence in 1544 and were both deprived of office for this affair. Rüstem Pasha thus became Grand Vizier. In despair at having lost his offices and powers, Khosrew Pasha allowed himself to starve to death in this year, one of the very rare cases of suicide amongst Ottoman officials of this period

(J.-L. BACQUÉ-GRAMMONT)

KHOSREW PASHA, MEḤMED (?-1272/1855), Ottoman Grand Vizier, educated in the Palace and raised to the post of head *čuḳhadār* on the accession of Selīm III [*q.v.*] in 1203/1789. He entered the service of Küčük Hüseyn Pasha, a protagonist of military and naval reform, who became Admiral (*Kapudan-i deryā*) in 1206/1792. In 1215/1800 Khosrew sailed with the fleet to Egypt, where he commanded a force of 6,000 and co-operated with the British in the recapture of Rashīd and the defeat of French forces. In recognition of his services he was soon afterwards appointed *wālī* of Egypt.

In Egypt he attempted to establish the *niẓām i djedīd* [*q.v.*] army and disband the irregular *bashī bozuḳ* troops imported from Rumelia for the war against the French. When he attempted to stop their pay, the *bashī bozuḳ* forces rose in revolt and defeated Khosrew's own troops. Then Ṭāhir Pasha at tacked Khosrew, forcing him to withdraw to Damiet ta and declared himself *wālī* of Egypt Shortly after wards, Ṭāhir was murdered, leaving Muḥammad 'Alī [*q.v.*] and the Mamlūks real masters of Egypt. In Rabī' al Awwal 1218/July 1803, the Mamlūks defeated Khosrew near Damietta and threw him into prison. On his release by Muḥammad 'Alī 8 months later, he was removed from the governorship of Egypt.

His next appointment was as *wālī* of Diyārbekir (1218-19/1803 4), followed by various governorships in Rumelia. He was active in the Russo-Turkish war which broke out in 1221/1806 as *wālī* of Silistra and military commander on the Danube front. In recognition of his services, he was appointed *Kapudan-i deryā* in Dhu 'l-Ḥidjdja 1225/January 1811 and commanded the Ottomen fleet in the Black Sea until the conclusion of a peace in Ramaḍān 1227/September 1812. He was dismissed in 1233/1818, and afterwards served in a number of provincial governorships. As *wālī* of Erzurum he was appointed military commander (*ser'askar*) in the east, with instructions to pacify rebellious Kurdish tribes whose activities had led to a clash with Persia. However, his mishandling of the affair led to a rebellion by the former *mutasarrif* of Bāyezīd, while the Persians, taking advantage of the situation, captured Bāyezīd, Erdjīsh and Bitlis. The Porte transferred him to the governorship of Trabzon, and in Ṣafar 1237/September 1821 appointed in his place the former Grand Vizier Meḥmed Emīn Ra'ūf Pasha.

With the outbreak of rebellion in the Morea, Khosrew Pasha was again appointed *Kapudan-i deryā* (Rabī' al-Ākhir 1238/December 1822) and detailed to

pursue the rebels in the Aegean. For this purpose, he constructed a fleet of shallow draught vessels, suitable for pursuit in shallow waters, and attempted to cut off sea communications between Morea and the islands, at the same time victualling Ottoman troops on the Greek mainland. However, during the siege of Miseolonghi (1240 s/1825-6), rivalry often broke out between Khosrew and Muḥammad ʿAlī's son Ibrāhīm Pasha [q.v.], who was commanding an Egyptian force on the Sultan's behalf. Ibrāhīm and Muḥammad ʿAlī sought Khosrew's dismissal from the admiralty and were eventually successful. He was instead appointed *wālī* of Anadolu (Anatolia).

Khosrew, however, retained the confidence of Maḥmūd II, who recognised him as a protagonist of military reforms and as being instrumental in introducing European tactics to the fleet. In 1242/1827 the Sultan therefore appointed him *ser'asker* of the newly formed army, the *ʿasākir-i manṣūre-yi muḥammediyye*, where he also began to introduce European tactics and training techniques. His influence in the capital increased after the outbreak of war with Russia in 1243/1828, when he engineered the dismissal of the Grand Vizier Selīm Mehmed Pasha and the appointment of his own former slave and nominee, Reshīd Mehmed Pasha. He also secured a commandership on the front for his former slave Khalīl Rif'at Pasha, and the dismissal of the *ser'asker* on the Russian front, Agha Ḥüseyn Pasha. Meanwhile, the Russians crossed the Balkans and advanced on Edirne. Khosrew advised the Sultan to seek a peace, at the same time taking extraordinary measures to prevent panic in Istanbul, to the extent even of executing certain advocates of surrender. This, and the unpopularity of his westernising measures in the army, almost provoked a popular revolt. He was present at the peace negotiations in the presence of the French, English and Prussian ambassadors. His influence was now at a height, and he used it to remove his rivals from positions in the government replacing them with his own slaves, and to have the former Grand Vizier, Selīm Mehmed Pasha, dismissed from the governorship of Rumelia.

During the Russo-Turkish war, Muḥammad ʿAlī had made excessive demands to the Sultan and was now threatening ʿAkkā. At this point, Maḥmūd placed the matter in the hands of Khosrew who, in Dhu 'l-Ḳaʿda 1247/April 1832 appointed Agha Ḥüseyn commander of the army in Anatolia. After Muḥammad ʿAlī's victory and advance on Istanbul, Khosrew invited military instructors from Europe, among them the famous Von Moltke. During this period he had the complete confidence of the Sultan, and his responsibility for the security of the capital and the fact that he advanced many of his numerous personal slaves to positions in the government, further increased his influence. By marrying his own men to the Sultan's daughters, he insinuated his way into Palace circles.

However, in Shawwāl 1252/January 1837, two of his own protégés, Khalīl and Saʿīd Pashas, secured his dismissal as *ser'asker*, while in Rabīʿ al-Awwal 1253/June 1837, his great rival Muṣṭafā Reshīd Pasha became Foreign Minister. Khosrew was retired on a pension. His absence from public affairs did not last long. In Dhu 'l-Ḥijja 1254/March 1838, he received the chairmanship of the Reform Committee (*meǧlis-i wālā*) and presided over the councils which met in his villa to discuss the Egyptian question.

A further deterioration of affairs in Egypt and the death of Maḥmūd II in 1255/1839 caused a grave crisis in the empire. It was at this juncture that Khosrew literally seized power, by grabbing the Imperial Seal from the Grand Vizier, Raʾūf Pasha, during the funeral of Maḥmūd II, and declaring himself Grand Vizier. This led to the defection of his rival, the *Ḳapudan-i deryā*, Aḥmed Fevzī Pasha, who sailed with the fleet to Muḥammad ʿAlī in Egypt, with the intention of returning with Egyptian troops and deposing Khosrew. Muḥammad ʿAlī for his part, demanded Egypt and Syria for himself and the dismissal of Khosrew. Neither plan succeeded. Khosrew remained in his post, but the Foreign Minister, Muṣṭafā Reshīd Pasha, seized the initiative and, partly no doubt to win the sympathies of the European powers over the Egyptian question, had the famous *Ḫaṭṭ-i Sherīf* of Gülḫāne proclaimed, marking the beginning of the *Tanẓīmāt* [*q.v.*] era. Khosrew was still Grand Vizier, but Muṣṭafā Reshīd Pasha now had the sympathies of the Palace and was able to press for his dismissal and the reinstatement of Raʾūf Pasha. He then had Khosrew tried and convicted for bribery by the Supreme Council of Judicial Ordinances (*meǧlis-i wālā-yi aḥkām-i ʿadliyye*) and exiled in Djumādā 'l-Ūlā 1256/July 1840 to Tekirdaǧ.

In the following year, the Sultan ʿAbd al-Meǧīd permitted his return to Istanbul, where a change in government permitted his return to power. In Ṣafar 1262/January 1846, he was appointed *ser'asker*, in which position he removed his predecessor Riḍā' Pasha's nominees and replaced them with his own men. During this period of office, he opened the Military School at Ḳūčūḳ Taḳsīm. However, later in the same year, he was removed from office, and the new Grand Vizier, Muṣṭafā Reshīd Pasha, took care to prevent his further rise to power. He died, at the age of more than ninety, on 13 Djumādā 'l-Āḫira 1271/5 March 1855.

Bibliography see article *Husrev Paşa* by Halil Inalcik in *IA*, of which the foregoing is a summary. (Ed.)

KHŌST, Arabic spellings Ḫwast or Ḫwāst, the name of various places in Afghānistān. The most likely etymology for the name is that given by G. Morgenstierne in his *An etymological vocabulary of Pashto*, Oslo 1928, 98: that it is an Iranised form **Hwastu*, of Skr *sumastu-* "good site" (which became the place-name Swat [q.v.] in the North-West frontier region of Pakistan).

The mediæval Arabic and Persian geographers mention what appear to be two places of this name in northern Afghānistān. Those of the 4th/10th century mention Khasht as a town on the upper Herī Rūd on the borders of Ghūr and Gharčistān (cf. Ibn Ḥawḳal, 457, tr. 445, and Muḳaddasī, 349), and this is apparently the Khōst mentioned three centuries or so later by Ḳazwīnī, *Āṯār al-bilād* ed. Wustenfeld, 244, as a town of Ghūr; see Le Strange, *Lands of the eastern Caliphate*, 420, 427.

Distinct from this seems to be the Khōst further north near Andarāb and on the borders of Badaḫshān, the district which the *Ḥudūd al-ʿālam* [and of the 4th/10th century] refers to as (?) Yūn, cf. tr. Minorsky, 109, 340-1, perhaps the Khuwāsht of Yāḳūt, *Buldān*, ed. Beirut, ii, 358, and the Kʿuast of to of Huan Tsang, see Marquart, *Ērānšahr*, 245. It is frequently referred to in Timūrid and early Mughal times. In 884/1479 we hear of one Mīr ʿAbd al-Ḳuddūs being given the governorship of Khōst, "one of the most important districts in Badaḫshān and Ḳunduz" (*Taʾrīḫ-i Rašīdī*, ed. and tr. Elias and Ross, tr. 103). One of Bābur's wives, Māhum, apparently came from here, his daughter Gul-rang was born here, and he visited it on various occasions, see the *Bābur-nāma*, tr. Beveridge, index

In modern times, the most important region bearing the name Khōst is that comprised within the modern Afghan province of Paktia, lying to the south of the Safīd-Kōh range in the basin of the Kurram, an affluent of the Kurrem river which drains eastwards to the Indus; hence the ethnic and tribal connections of Khōst with the regions of Kurram, Kohat and northern Waziristan on the modern Pakistani side of the Durand Line form always been close. Khōst now forms an important forestry region of Afghānistān, and in the southern, sub-tropical zone, dates, citrus fruits, etc. are grown, recent Afghan governments have made considerable agricultural investment here (see J. Humlum *et alii*, *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 101, 105, *and* J. C. Griffiths, *Afghanistan*, London 1967, 119-20). In the 1920s, Khōst was the epicentre of a conservative, tradition-alist Pathan rebellion against the tentative reforms of King Amān Allāh, which seriously weakened the ruler's position and damaged the economic health of the country (March 1924-January 1925) (see W. K. Fraser-Tytler, *Afghanistan*², London 1967, 204 f.; V. Gregorian, *The emergence of modern Afghanistan, politics of reform and modernization, 1880-1946*, Stanford 1969, 282 f., L. Dupree, *Afghanistan*, Princeton 1973, 449, 453, 479).

Finally, the *Imperial gazetteer of India*, II, 138, VI, 306, mentions a Khōst in Balūčistān, the site of a small coalfield, 35 miles east of Quetta.

(C. E. Bosworth)

KHOTAN, a town of the People's Republic of China, in the autonomous region of the Uyghurs. The town, and the territory which depends on its resources as an oasis, lie between the desert of Taklamakhan and the massif of Kuen-lun on the one hand, and the Kara-Kāsh and Yōrūng-Kash rivers on the other. The kingdom of Khotan became known to the Chinese world in about 125 B.C., following the mission of Khang Khien, under the name Yu-t'ien. The name represented by this transcription seems to have had an connection with the town of Yotkan. Although numerous archaeological relics have been found at that site, Yotkan cannot correspond to Yu-t'ien. In fact, according to Pelliot (*Notes on Marco Polo*, 422, s.v. 'Cotan"), Yu-t'ien corresponds to *Ōdan, with the variant *Ōdon arising from the transcription Yu-tuan given by Hsuan-tsang (*ibid*., 409), the name encountered in the Khotanese texts is just a transcription of the Chinese Yin-t'ien under the form Yīttina, while documents of the 4th century in Kharoshthī script give the form Khotana (L. G. Gercenberg, *Xotanosakskij yazik*, 10). Yotkan is a ruined pre-Islamic cemetery, approximately 8 km. west of the town itself.

In fact, the kingdom of Khotan was not really known to the Chinese until after the conquest of the Tarim basin, carried out by Han Wu-ti (140-87 B.C.), in the years following 110 B.C. and through the re-conquest by the later Hans between 73 B.C. and an 170 A.D. Little is known of the history of the ruling dynasty and the name of the town is always transcribed Yu-t'ien in the Chinese sources. From the latter we learn that the population of the kingdom reached a total of 50,000. All that we can say is that this population spoke a language of Iranian type, which has become known as a result of discoveries made at the beginning of the 20th century and which has been deciphered principally by Lüders, Sten Konow and H. W. Bailey. It now seems that the Khotanese spoke a dialect of the Saka language.

It was in the course of the first centuries A.D. that the kingdom of Khotan received Buddhism. According to the Tibetan tradition, which agrees in some points with the account given by Hsuan-tsang, Buddhism was introduced to Khotan by a Kashmiri monk called Vairocana, during the reign, almost certainly legendary, of king Vijayasambhava (E. Zürcher, *The Buddhist conquest of China*, in *Sinica Leidensia*, XI, Leiden 1972, 340-1). This assessment is confirmed by the fact that one of the oldest dated Buddhist monuments is from 269 A.D. (A. Stein, *Sand-buried ruins of Khotan*, 1902, 405).

In the 7th century, Hsuan-tsang writes in his *Memoirs* (Watters, *On Yuan Chwang's Travels*, II, 299): "We arrive in the kingdom of K'iu-sa tan na. (*Note*) In Chinese, this signifies "Breast of the Earth"; it is the forest name used in the region. The local language uses the expression "Kingdom of Hsuan na". The Hiong-nou call it Yu-tsuen, the Hou (Iranians), Ho-tan; the Indians, K'ia tan. Formerly they (the Chinese) called it Yu t'ien, it is an incorrect form". (On this passage, cf. Pelliot, *Notes on Marco Polo*, 409 ff).

Thus, in the T'ang period, the polite and literary form is "Goutana" or "Gautana", difficult to interpret according to Pelliot, the local language used the expression Xuān nā (Hasana?), this name faithfully rendering the name which appears in the Khotanese texts under the form Hvatāna, Hvamna, and Hvena, the nomads of the north would have pronounced it *Ōdan or *Ōdon, a name which is found much later in Syriac, translated from Persian, in the story "*The History of the Patriarch Mar Yaballaha and the monk Rabban Shāmā*, published by Chabot (Paris 1895, 22), where the latter identifies the town of "Lōtōr" with Khotan. In fact "Lōtōn" is an erroneous form from the Persian original, where the *kāf* has appeared as a result of confusion with the initial *dāl*, whence we deduce the correct form "Odon" proposed by Pelliot fifty years ago, while Budge (*The monks of Kūbilāi Khān*, London 1928, 138) and Montgomery (*The history of Yaballaha III*, New York 1927) have retained the form "Lōtōn". This form appears in the works of Kāshghārī (Brockelmann, 252), with "Odon" and "Khotse". Finally, the Iranians would have pronounced it Ho-tan (Xuān-tsan) which assumes an original *Hwatan precursor of the Khotan of the Muslims, while the Indians would have pronounced it K'ia-tan (*K'iat-tan) which presupposes a form Khatan or Khotan. The land was known to the Tibetans under the name of Li-yul, "land of Li", although they knew the town under the name of Hu-tan, which is just a transcription.

In the T'ang period, the kingdom of Khotan was bounded to the south by the Kuen-luen, while in the east its territory touched that of Kroraina (Niya, Cerčen and the Lob-Nor region), and in the west that of Kāshghar (Khyesa) which stretched from the Pamirs and T'oou-shan to Maralbashi and beyond. The language used throughout the Khotan region was Saka-Khotanese, which was related to the Tadjik vernacular of the Pamirs, of which no ancient evidence has yet been recovered, to the language of Kāshghar in the west and north, of which some traces have been recovered at Tumshuk (the Turkish name of a site whose ancient name has disappeared), and to the east to the language spoken in Kroraina, of which apparently no relics remain.

The kingdom of Khotan at that time had a large population which had, an doubt under the influence of Buddhism, lost all interest in expansion and showed an extreme aversion to matters of war; Hsuan-tsang noted that the Khotanese were remarkable

craftsmen with a considerable taste for literary pursuits, also for music and dance. The region was the centre of a considerable commercial activity, being placed on the southern branch of the Silk Route, which was in use throughout antiquity and the Middle Ages; through the Khotanese texts we possess accounts of the travels of officials to Kashmir and Kansu, which permit us to gain an acquaintance with the geography of Central Asia, in particular the names of towns, thus we find that Käshghar is Kyesa, Niya is Niña, Čerčen is Yaṣbaḍä parrūṃ, Urumči is Yirrūmcina, Turfan is Ttuṛyaṇä, Leou-lan is Kaurata, Yumen kouan is Kviyikye, etc

The dynasty of the kings of Khotan in the T'ang period (7th-10th centuries), the family name of which was apparently Vija (preferable from Viśa) was in existence before that time for the history of the Sui (§ 3, 5b) mentions according to Pelliot (*op. laud.*, 429) a king called Vijayavikrama, under the T'ang, the dynasty is known to us from a list which can be reconstructed from the texts of the History of the T'ang and which can be partially cross-checked by reference to the names preserved in the Khotanese texts; a certain number contained in the latter cannot be placed with certainty in this list: these are. Viṣanakhan, Viṣakirti, Viṣavikrama and Viṣasagrama. On the other hand, there are some that can be dated, in particular the last kings of the dynasty, Viṣasambhkhava (912-966), Viṣasura (967-977) and Viṣadarma (978-982) (Gercenberg, *op. cit.*, 12). It was shortly afterwards that the kingdom of Khotan was conquered by recently-converted Muslim Turks; the kingdom of Khotan was henceforward to be one of the collection of Turkish states in the region which constituted Turkestan.

The town of Khotan, unlike Käshghar and the northern part of the Tarim basin, is not mentioned by the *Ḥudūd al-ʿĀlam* in the description of the Turkish tribes (§ 23, p. 96) in the section of the Yaghmā of western Turkestan, but in that of China (§ 9, p. 85). As the *Ḥudūd al-ʿĀlam* dates from the year 372/982-3, it may be supposed that in about the year 980, when king Viṣadarma was alive, Khotan and its territory formed a sort of enclave between the region of Käshghar which was occupied by the descendants of Satuk Boghrā Khān (died 344/955-6) and the territories belonging to China and Tibet; the king of Khotan, according to this source (p. 85), styled himself "Ruler of the Turks and the Tibetans" (*Ṣāḥib al-Turk wa 'l-Tubbat*)

A little later, Gardīzī, who was writing after 432/1040, reports (according to Barthold, *Otčet o poezdke v Srednyuyu Aziyu*, 94) that even the town of Kai (?), situated at fifteen days' march from Khotan in the direction of China, was under the domination of Toghuzghuz Turks (cf. *Ḥudūd al-ʿĀlam*, 255). According to Gardīzī, the inhabitants of Khotan were Buddhists, but he mentions a Muslim cemetery to the north of the town (*ibid.*, 255, n. 3), and in the town itself two Christian churches, although no documentary evidence of this has been found. As regards the Muslim world, Gardīzī shows us that in the first half of the 5th/11th century, Muslim proselytism was already actively exercised in Buddhist circles, and it is possible that the implanting of this group was a contributory cause of subsequent events.

At the beginning of the 5th/11th century, the *Turkish rulers of Kashghār* had become very powerful (Barthold, *Vorlesungen*, Berlin 1935, 79 *ff.*, particularly 88-90), and had founded the dynasty of the Ḳarakhānids (see ILAK-KHĀNS). The son of Boghrā Khān Hārūn, himself the grandson of Satuk Boghrā Khān, who called himself Kadir Khān Yūsuf and reigned in Käshghar from about 401/1010, decided, for reasons unknown to us, to conquer the territory of Khotan. Seeing that he died in 423/1032 (Ibn al-Athīr, s.a.), it is likely that the conquest of Khotan was accomplished sometime between the years 1013 and 1032, for we possess money struck in his name at Käshghar and at Yarkand from 404/1013-14 onwards (A. Markov, *Inventarnyy katalog*, etc., 192 *ff.*). On the conquests of Khotan, cf. Barthold, *Turkestan*², 281, n. 2.

Later Khotan, like Käshghar, passed under the authority of the Ilek-Khāns (*q.v.*), and subsequently under that of the Ḳarā-Khiṭāy (*q.v.*) After these events the crisis arising in Central Asia as a result of the expansion of the Mongol empire led the Khwārazm-Shāh to make an agreement with Küčlüg, who had deposed and expelled his father-in law, the Gür Khān of the Ḳarā-Khiṭāy, and a partition of the western sector of the Ḳarā-Khiṭāy empire took place, between the two rulers, giving to the Khwārazm Shāh the territory to the east of the Syr Daryā as far as the heights of Kashghar and of Khotan (Barthold, *Turkestan*², 556-7); after his succession to the throne, Küčlüg, who had married the daughter of the Gür-Khān, a Buddhist fanatic undertook a fierce persecution of Islam in the regions under his authority, particularly in Khotan after his agreement with the Khwārazm-Shāhs (*q.v.*) According to Djuwaynī (tr. Boyle, 65-6, 70-3), Küčlüg persecuted the Muslims cruelly and crucified the *Imām* ʿAlāʾ al-Dīn Khōtānī at the door of his *madrasa* in Khotan. In the time of Ḥaydar Mīrzā (*q.v.*), nothing more was known of this martyr; even his tomb was unknown (*Taʾrīkh-i Rashīdī*, tr. E. D. Ross, 218, and ch. xlii). Thus there was no indigenous historical tradition at Khotan, or if there was, the texts have been lost. Arabic and Persian geographical literature provides us with only the most meagre of information; the real situation is misrepresented by al-Samʿānī (f. 189b) and by Yāḳūt, who followed al-Samʿānī in his own writing (ii, 493).

Under the reign of Ögedey, Djuwaynī (tr. Boyle, 517) reports that "the lands between the banks of the Amū Daryā and the frontiers of Khiṭāy were placed under the orders of the Chief Minister Maḥmūd Yalawač and of his son Masʿūd Beg, those included Transoxania, Turkestan, Otrār, the land of the Uyghurs Khotan, Kāshghar, Djand, Khwārazm and Farghāna", Kashlū al-Dīn (*Djāmiʿ al-tawārīkh*, tr. J. A Boyle, *The successors of Genghis Khan*, New York-London 1977, 94), also writes as follows: "The Kaʾan (Ögedey) placed all the lands of Khiṭāy under (the orders of) Maḥmūd Yalawač, and (the region of) Besh-Balik and Ḳarā Khodjo, with the territory of Uyghuristān, Khotan, Käshghar, Almalik, Ḳayalik, Samarḳand and Bukhārā as far as the banks of the Oxus under (the orders of) Masʿūd Beg, the son of Yalawač". In the remainder of his work, he makes no further mention of Khotan, nevertheless, under the year 1253, Barthold (*za Vorlesungen*, 184) writes as follows: "After the re-establishment of order, the frontiers of his government (sc. of Masʿūd Beg) were extended further to him were subjected Transoxania, Turkestan, Otrār, the land of the Uyghurs, Khotan, Käshghar, Djand, Khwārazm and Farghāna". After the death of Mengü (Mongke) in 1259, a conflict arose between Kubilay (*q.v.*) and his younger brother Arik-böge in the course of which a cousin of Arik-böge, the Čaghatayid Alugu, took to himself the entire area entrusted to the authority of Masʿūd Beg; the latter appealed to Arik böge who gave him full authority to dispossess Alugu, but in the course of his mission he

went over to the side of Aliqu who died *ca.* 1266. As Arïq-böga had been eliminated during this period, Kubilay appointed in his place another Čaghatayid, Baraq, who took possession of part of the former possessions of his grandfather Čaghatay, but Baraq was compelled in his turn to submit to Kaydu, grandson of Ögedey, who sought to reconstitute the territory given to him by Čingiz Khan (Barthold, *12 Vorlesungen*, 184 f.). Finally, a more or less stable equilibrium was established between Kubilay and Kaydu, so much so that according to a passage of Marco Polo (ed. Yule-Cordier, i, 188; ed. Hambis, Paris 1955, 62-3), it is reported that in the 1270s Khotan was under the authority of the Emperor of China, while Yarkand depended on Kaydu.

While Central Asia was the object of partition between great powers, it is nevertheless certain (Barthold, *12 Vorlesungen*, 188 ff.) that a number of indigenous dynasties survived as vassals, especially at Khotan. In reference to these last, Barthold mentions some Persian verses of which the date is unknown, which were composed in honour of the sultan of Khotan, Muʾminsh-Tegin, the last words being quoted in Turkish (*zamān bizī ay ṭaḫt kiṣiläd Turk "wasalat ḫayl bilmäkä Muʾminsh Tägin"*. Barthold (*op. cit.*, 195) also mentions the fact that Dhamīl Karāhī, in the appendices (*Mulḥaḳāt*) to his translation of an Arabic dictionary of the 4th/10th century, devotes considerable space to the town of Khotan, giving a brief description and a list of some persons native to the place. Again according to Barthold (*op. cit.*, 195), Muḥammad Ḥaydar (*op. cit.*, tr. Ross, 302) writing in Kāshgharia, distinguished according to his own terms, four classes at Kāshghar and at Khotan, first—*ʿulmān*, the peasantry; second—*laškar*, the army; third—*oymak*, the nomads (who were entitled to a certain quantity of grain, textile goods, etc.); and fourth—the class of the officials and the *ʿulamāʾ*.

Much later, it seems that Khotan shared the fate of other towns in the Tarim basin, in particular of Kāshghar and other towns in the same region; in the 18th century it was a part of the state established by the Khōdjas, who defeated the descendants of Čagha tev, and were compelled to submit to the domination of the Djungar, and later, in *ca.* 1760, to that of the Manchus who eliminated the Djungar. Later still, in the seventh decade of the 19th century, Khotan was obliged to accept temporary domination by Yaʿḳūb Beg and after the death of the latter in 1877 to submit once again to the Manchus. With regard to a historical work completed on 12 Shaʿbān 1312/24 February 1894 in Khotan and dealing with events subsequent to 1280/1863, cf. *Bull. de l'Acad.* (1898), 209, cf. also the chapter on the Khōdjas of Khotan in *Taʾrīḫ i emeyve*, ed. Pantusov, 181 ff. The principal source for the history of this region is provided by reference in the Chinese dynastic histories and in other works concerning the autonomous region of the Uyghurs itself, which have appeared in Chinese from the 18th century to the present day. It is there that the documentation concerning the town of Khotan is found.

The town itself, like all those in the Tarim basin, has known a variety of activities, but the silk industry which has continued from the Han period to the present day is the principal activity. At the time of writing, the industrialisation of the region is being developed by the People's Republic of China, although it is not possible to assess what progress is being made, it seems that the Chinese government is concentrating them on the search for raw materials. There is no certainty about the population figures; according to Kornilov, *Kashgaria*, Tashkent 1909, 273, the population amounted to only 15,000; according to E. and P. Sykes, *Through Deserts and oases of Central Asia*, London 1920, 216, the population was 50,000.

Bibliography In addition to works cited in the article, see especially E. Bretschneider, *Mediaeval researches*, ii, 47 ff., 246 ff.; M. Hartmann, *Chinesisch Turkestan*, Halle 1908, 93 ff.; on the state of the Khōdjas and their connections with Khotan, cf. *idem*, *Der islamische Orient*, i, Berlin 1905, 195 ff. and the index. These sources may be completed by numerous works in Chinese.

KHOTIN (in Ottoman Turkish usage **Khōtīn**, in modern Turkish and in Romanian, **Hotin**; Polish **Chocim** and variants, German **Hwthyn** (15th/century), **Chotim**, **Chotin**, **Chotczyn**, etc., Italian (18th/century) **Cocino** and other forms): a fortress and town on the right (formerly Moldavian) bank of the Dnestr (Turla), 28 km. south of Kamenets Podolsk [Kamanīče (see KAMANIČA)]. Khotin is now (since the end of World War II) in the Ukrainian S.S.R., and forms the administrative centre of the *rayon* of the same name in the *oblast* of Černovits (Cernauti, Czernowitz).

Khotin, which occupied an easily-defensible site at the point where the important mediaeval trade route from the Baltic to Constantinople crossed the Dnestr, was from the mid-14th to the late 18th century a military stronghold and commercial entrepôt of some importance. The region of Khotin, which was, in the 16th and 17th centuries, disputed between Poland and Moldavia, had attracted Ottoman attention as early as the reign of Meḥemmed II, and in the 16th century Muslim merchants frequented the route via Khotin to Poland. Khotin was besieged unsuccessfully by ʿOṯmān II in 1030/1621; thereafter it was restored to Moldavian control, and is so described by Ewliyā Čelebi, who visited it in the retinue of Melek Aḥmed Paša in 1058 (*Seyāḥat-nāme*, v, 124-5). In 1064/1673 Khotin was occupied by the Poles, but it was regained by the Ottomans in the following campaign season (Silaḥdār, *Taʾrīḫ*, Istanbul 1928, i, 618 ff.). The Ottoman occupation of Podolia in 1083/1672 carried the frontiers of the Empire beyond the Dnestr, but with the retrocession to Poland of Podolia, and the evacuation of Kamanīča in 1120/1699, Khotin became the most important Ottoman fortress in the region of the upper Dnestr, thus importance was to increase in the course of the 18th century, as the conflict with Russia became ever more acute.

Khotin was occupied by the Russians in 1713; on its return to the Ottomans in 1125/1714, the old fortifications were rebuilt and increased in height by more than a half, as part of a general strengthening and rebuilding programme, which was supervised by a special commission sent from Istanbul. The contemporary Moldavian historian Cantemir described the Khotin of this period as the most elegant and well-fortified town of Moldavia, praise which is echoed in an Ottoman description of the town written at the same time. Also in 1125/1714, Khotin and its surrounding districts were removed from the jurisdiction of Moldavia and reorganised as an *eyālet* as part of the strengthened Ottoman frontier defences along the right bank of the Dnestr, becoming, in the words of a German observer, "die einzige Vormauer der Moldau".

The 18th century stronghold of Khotin consisted of the mediaeval *ič ḳal'e* and the more extensive new outer works encircling the old fortress on three sides.

In the outer walls were four gates: their names are variously given as the Istanbul (or Jassy) gate, the Temeshvar gate, the Water Gate and the Ukraine or Bender gate. Within the outer fortress were two baths, two principal mosques and, near the Istanbul gate, a *kenesse*. Inside the Istanbul gate, on the right, lay the barracks of the artillery and the supply-train, the residences of their aghas, and the headquarters of the *defterdār*. On the left was a large and well-constructed reserve granary. Further towards the *iç hal'e* were situated another bath, the office of the *yeniçeri aghasi*, and the barracks of the Janissaries of the fortress. Higher up, towards the old fortress, was situated the *serāy* of the *pasha* of Khotin, and the mosque of the *sultān sultan*. Khotin was, however, yet again occupied several times by Russian forces in the course of the 18th century: in 1152/1739 (by Münnich) and again in 1182/1769 (by Galitsin). In 1788 Khotin was occupied by an Austrian force, later, after the conclusion of the Peace of Jassy, Khotin was restored for the last time to Ottoman rule. After 1806 it remained in Russian hands, except for the period 1918-47 when the territories south of the Dnestr formed part of Romania.

al-KHUBAR, a town on Saudi Arabia's Persian Gulf coast (26° 17' N, 50° 12' 45" E). The name is most likely a collectival plural derived from the word *khubra*, meaning "a small pond formed by rain".

The first permanent settlers on the spot were members of the tribe of al-Dawāsir who landed in 1341/ 1923 after fleeing the island of al-Bahrayn in fear of British reprisal following clashes with Shī'ī elements. 'Īsā b. Aḥmad al-Dawasirī is generally regarded as the first settler of al-Khubar. Other tribesmen who landed at nearby al-Dammām a few weeks earlier subsequently moved to al-Khubar. Prominent among the early inhabitants were Muḥammad b. Rāshid and his brother 'Īsā, Ḥusayn Rū Sūnayb, Khālid b. Mībar and his brother Nāṣir, Sa'd b. Muḥammad and Ṣāliḥ b. Dhami'a (author's father). The settlers built huts of palm fronds along the sea shore. For two decades the village depended on small-scale pearling and fishing for its survival. No more than 60 boats left the village each pearling season, the crews came partly from the village, but mostly from nearby oases. In the early 1930s 'Īsā b. Aḥmad returned to al-Bahrayn with a group of the villagers, mostly crew members of his pearling fleet.

Al-Khubar remained a small fishing and pearling village covering an area of less than 0.5 km² until 1935. In that year the California Arabian Standard Oil Company (later the Arabian American Oil Company) built a pier at al-Khubar to support the early oil well-drilling at nearby al-Ẓahrān. In 1357/1938 a storage and shipping terminal was built at al-Khubar, and barges started carrying Saudi Arabian oil to the refinery of the Bahrain Petroleum Company (Bapco); this marked the beginning of the export of Saudi Arabian oil. The importance of al-Khubar port has diminished since 1369/1950, when a deep-water pier began operating in al-Dammām, the al-Khubar harbour facilities now accommodate only fishing fleets and coastal ships. The city itself, however, now covering an area of 8 km², thrives as one of the most active business centres on the Kingdom's Gulf coast, second only to al-Dammām. Commercial enterprises that were given their original impetus by the oil industry now flourish independently, supported by both the public and private sectors of the economy. With modern office buildings and living quarters, with stores displaying merchandise from all over the world, and with substantial job opportunity, al-Khubar attracts foreign communities of various nationalities.

(ʿABDALLAH S. JUM'AH)

KHUBAYB b. 'Adī al-Anṣārī, one of the first martyrs of Islām. The main features of his story common to all versions are as follows. After the battle of Uḥud (*q.v.*) (on the chronology of which, see below) a small body of ten of the Prophet's followers was discovered and surrounded between Mecca and 'Usfān by 100 (or 200) Lihyānīs who belonged to the Hudhayl. The leader of the hard-pressed little band, 'Āṣim b. Thābit al-Anṣārī (according to others, the leader was al-Marthad), proudly refused to yield. Six and six others were killed whereupon Khubayb, Zaid b. al-Dathina and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mecca and sold. Khubayb fell into the hands of the Banū 'l-Ḥārith b. 'Āmir b. Nawfal b. 'Abd Manāf, who on the expiry of the sacred period, took him out of the Ḥaram to al-Tan'īm, bound him to a stake and killed him with lances (*sahamān*) in revenge for al-Ḥārith whom Khubayb had killed in the battle of Badr. Before he was tied to the stake, Khubayb asked for then to perform two *rakaʿāt*, which became a *sunna* for martyrs, comparable to the last prayer of Christian martyrs. Khubayb is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body to Allāh was able to bestow for blessing even upon his severed members. Kunāsī formulae uttered by him besides these verses have also been handed down in which he appealed to Allāh for vengeance on his enemies. Those present are said to have shown great trepidation at this curse of the dying man; it is related that Abū Sufyān hurriedly pressed the little Mu'āwiya to the ground to protect him from the consequences of the ill-omened words; and Sa'īd b. 'Āmir used to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death 'Āṣim prayed to Allāh asking him to communicate news of the event to his Prophet in Medina, which actually happened.

His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wākidī, 155, however, Muḥammad received news of the event at the same time as that of Biʾr Maʿūna; and according to Ibn Hishām, 642, it was not ʿĀṣim, but Khubayb, who prayed to Allāh asking him to cause Muḥammad to be informed. According to al-Zuhrī and ʿUrwa (see the latter's brief account in al-Wākidī, 156) the ten men were sent out as a *sarīya* to spy upon the Meccans; according to Ibn Hishām, 638, al-Wākidī, 157 and Ibn Saʿd, iii/1, 39 40, iii/2, 33 4, ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like that which has been woven round the drama of Biʾr Maʿūna, which happened at the same time. Al-Wākidī, 227, tells us under the year 628 that Khubayb was not yet at that time a prisoner among the Meccans. The only certain chronological statement that can be made is that the event took place after the battle of Uḥud, as ʿĀṣim fought there. In the official *Sīra*, the incident is recorded under the name *Yawm al-Raḳīʿ* and put by Ibn Hishām in the year 3 and by al-Wākidī in the year 4.

The figure of the protomartyr Khubayb lent itself readily to embellishment. The daughter of al Ḥārith (according to others Māwiya, a client of Ḥudjayr b. Abī Ihāb), in whose house he was kept a prisoner, saw him one day eating grapes, although these could not possibly be obtained in Mecca. When the martyrdom approached, he asked for a knife with which to remove the hair on his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when Khubayb noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. The verses above mentioned, which he is said to have uttered at the stake, have grown in Ibn Hishām to a whole poem. The same author (644 ff.) gives the elegies uttered over him. For how his corpse was taken from the Ḳurayẓa and swallowed up by the earth, see Ṭabarī, i, 1436 7 = *Ibāḍa*, i, 862.

Bibliography: al-Zuhrī's or Abū Hurayra's tradition in Aḥmad b. Ḥanbal, *Musnad*, ii, 294 ff., 320-22, and in al-Bukhārī, *Dhikr*, bāb 270; Ibn Isḥāḳ's version, 638 ff., goes back in ʿĀṣim b. ʿUmar b. Ḳatāda al-Wākidī, tr. Wellhausen, 156 ff. (cf. 226-7) compiled the whole story from various sources; Ibn Saʿd, iii/2, 33-4, al-Diyārbekrī, *Taʾrīkh al-Khamīs*, Cairo 1283, i, 454 ff., Ibn Ḥadjar, *Iṣāba*, i, 860 ff.; Ibn al-Athīr, *Usd al ghāba*, ii, 122 ff.; Caetani, *Annali dell' Islām*, Anno 4, § 7, 8; Anno 6, § 2, Ṭabarī, i, 1431 ff., who gives the two main versions; Ibn al-Kalbī Caskel, tab. 77, on his genealogy. (A. J. Wensinck)

KHŪBMESIḤIS, the members of an obscure heretical movement in 17th/17th century Istanbul that preached the superiority of Jesus to the Prophet Muḥammad. The term derives from Persian *khūb* "good, virtuous", and *meriḥ* = Messiah". Some description of their tenets is to be found in Paul Rycaut's *The present state of the Ottoman Empire*, London 1668, 129. Rycaut attributes to the Khūbmesiḥis a belief in Jesus as "God and Redeemer of the World", and says that it is "principally maintained amongst the gallants of the Seraglio". Although adherence to the doctrine was liable to bring death, and his followers commonly practised secrecy, they might be recognised by the white turbans they wore. According to Rycaut, in addition to designating a member of the movement, the term Khūbmesiḥi entered general usage as a description for anyone of mild and affable disposition. The accuracy of this information in all its points is not to be assumed; many of the statements of Rycaut on religious matters are demonstrably erroneous. The Khūbmesiḥi movement presumably found its inspiration in the teaching of Kābiḍ, executed in Istanbul in 934/1527, after some delay, for alleging that the spiritual rank of Jesus was superior to that of the Prophet. Rycaut makes no mention of Kābiḍ, however, nor do any of the sources on Kābiḍ (e.g. Ibrāhīm Peçewī, *Taʾrīkh*, Istanbul 1283/1866, i, 124-6) attribute to him the foundation of the Khūbmesiḥi movement.

Bibliography: Given in the text. (Hamid Algar)

KHUBZ (A.) generic term (nomen unitatis: *khubza*) meaning bread, whatever the cereal employed, e.g. corn [see ḤAMṬ], barley [see SHAʿīR], rice [see RUZZ] etc., and whatever the quality, the shape and the method of preparation. There exists nevertheless, in literary Arabic and, to a greater degree in the various dialects, a certain number of metaphors and of specific terms which cannot all be mentioned in this brief article, and the ellipsis of the word *khubz*, in expressions denoting a particular type, causes the semantic range of the fundamental notion to be appreciably enlarged: thus *khamīr* for *khubz*un *khamīr*un "leavened bread", *faṭīr* for *khubz*un *faṭīr*un "unleavened bread" etc. The baker is called *khabbāz* (but in Morocco this is known only in its feminine form *khabbāza*, see below), or *farrān* "oven worker" (which however in Morocco means a communal oven), and a bakery is called *makhbaz* or simply *furn* "communal oven" (in technical usage corresponding to *ḥāḍa* "time-kiln" etc.). All these terms apply to precise cases which will be summarised later.

The economy of ancient Arabia was such that the Arabs could not make bread the basis of their diet [see GHIDhĀʾ], so that the expression *akal al khubz* "bread eater" was a laudatory epithet implying considerable affluence (al Djāḥiẓ, *Bukhalāʾ*, ed. Ḥādjirī, 421). Nevertheless, the nomads occasionally ate a *fuṭūr* ("flat bread", for *khubz*un *faṭīr*un), that is a kind of pancake cooked on a heated stone, or a *malla* ("hot ash", for *khubz*un *mallīy*un) also called *malīl*, a thicker loaf cooked under ash according to a process similar to that described by A. Jaussen (*Coutumes des Arabes au pays de Moab*, Paris 1948, 63) in talking of *ḥarr* on arrival at the halting place, the Bedouin kneads flour with water and salt (if he has got it), but without adding yeast, and makes a sort of pie which he cooks in ash, turning it frequently to prevent burning. E. Laoust (*Mots et choses berbères*, Paris 1920, 89-90) has collected in Berber (where bread is called *aghrum*) a text which refers to some very similar practices.

For their part, the sedentary people, who were familiar with the whitest flour (*ḥuwwārā*) and bread of the finest quality which they cooked in an oven (*tannūr*), did not eat it regularly. They used to crumble it, however, to make a broth (*tharīd*) which the Prophet placed above all other foods (al-Bukhārī, *kitāb al aṭʿima*, *bab* 27) and it is known that, according to the tradition, Hāshim [q.v.] owes his name to the fact that he crumbled (*hashama*) bread to make broth; this economical dish was highly thought of for a long period after Islam.

The conquest of several nations which produced corn in abundance increased in the various classes of society, and to varying degrees, the consumption of

bread, which was from that time considered, with nuances, "the subsistence of the land-dwellers, the basis of nourishment and the prince of foods" (al-Djāḥiẓ, *Bukhalāʾ*, 214) and city-dwellers who did not offer it to their guest unstintingly are taken to task (*ibid.*, 182). The *Kitāb al Bukhalāʾ* (see index, s.v. KHUBZ) provides interesting details regarding wheat-bread and its use, but in general it gives a picture of an affluent class, whose members were in a position to own a slave charged with the functions of a waiter as of a majordomo rather than a baker, but called *khabbāz* because of the importance attached to bread (*ibid.*, 48)

The same work (roll), while giving valuable information on the refined standard of cuisine then practised, shows that bread was never eaten alone and that it was incorrect to offer it dry, (*khubzun ḥāfirun*) In the more affluent circles, it did not constitute the most substantial part of the diet and was rather used for dipping or was eaten from side-plates, while in poorer families and from a very ancient period, it was always accompanied by some condiment (*udm*) designed to make it palatable; in the present day, a term taken from the root *ʾ-d-m* *ʾadd*, or *dj-w-ʿ* "to fan" (*djawwa*, *yudjiʿ*, *dawdjaʿ*, clearly expresses this idea; however, the interested parties probably do not take into account the imbalance which they create in thus adding lipids to the proteins and glucoses contained in bread. It should be stressed however that not everyone was to a position to eat it regularly, and even today, it still constitutes a rare luxury for certain particularly impoverished populations; for the more affluent, the basis of the diet is often, in many regions, boiled rice, ground corn (*burghul*) or kuskus (see KUSKUSU).

Since the classical period and, to a large extent, to the present day, there have existed various categories of bread which can be reduced to the following, while it may be noted that the dialectical vocabulary, extremely exiable and rich, deserves to be the object of a linguistic geographical study, whose ethno-sociological results could yield useful information:

— in Iraq, rice cultivated in the region of Basra was used probably by a limited number of bakers (among whom a popular poet, al-Khubzʾaruzzi [*q.v.*] was to become famous) to make a bread which was quite cheap and accessible to the poorer classes, as well as to those who lived an ascetic life-style (cf Ibn Baṭṭūṭa, ii, 5); in the other regions where it was cultivated, notably in Palestine and Egypt, rice was *more often consumed in other forms (see M. Canard, La vie dans la Proche Orient, in Arabica, viiᵉ* (1959), 22a ff);

— white bread, made with pure wheat-flour (*ḥuwwārā*) was in general continued to the most affluent families, but it seems to have been in widespread use in a number of countries such as Palestine and Egypt; physicians actively recommended it, although it was less nutritious than

— bread of coarse-ground flour (*khushāri* and vars.) which was consumed by people of less means;

— bread made from common wheat, perhaps mixed with a little barley flour;

— semolina bread (*samīdh*/*samīd*);

— barley bread, more coarse, mention of which appears frequently in the *ḥadīth*; ascetics judged it to be sufficient, but many poor families even today, must be content with it, in North Africa, *ḥarra*, and in the Near East, *baʿs*, are often nothing more than pancake of barley flour, pure or mixed with a little wheat-flour;

— to this list it is appropriate to add the bread manufactured, in times of hardship, with flour of maize, millet or sorghum (*dhura*) or even of some wild plant, such as *samaḥ* in Jordan.

Apart from various pastries based on wheat flour, bread was presented, with variations on which we cannot dwell here, in two principal forms,

— *ruḳāḳ*, very thin, was cooked on a slab of iron (or later, of stone) heated on a hearth or a brasier. This slab, called *ṭābaḳ*/*ṭābiḳ* in the Middle Ages, is still in use in the Near East where it is coovex and bears the name *ṣādj*, in the Maghrib, smaller baking is not unknown, but a type of earthenware casserole is more often used, and bread thus prepared is called *murḳāḳ* or *maʿāʾ* [cf. E. Laoust, *op. laud.*, 89 for the Berber world],

— *raghīf*, or (from Persian) *ḳurṣ*/*ḳurṣāḳ* is a round bread (*muḥawwar*) quite thick and cooked in an oven. But there is a distinction there between the domestic and the communal oven. The former (*tannūr*, currently *ṭābūn*/*ṭābūna*) has the form of an upturned jar without a base or of the frustum of a cone open in the upper part, it is heated by means of embers placed inside and the raw dough is spread on the sides, on the outside (see Beaussier and Dozy, *Suppl.*, s.v. *ṭābūn*). In certain regions there is also still to be found a *tannūr* dug into the earth, while in Jordan (Jaussen, *Moab*, 63) *ṭābūn* refers to a small construction in which is placed a sort of cooking pot, surrounded by embers to cook the dough in the interior. In encampments the oven is replaced by a pottery plate (*ṭābūnīya* or *ḥammāda* in Tunisia) which is heated on a brazier (*kānūn*) or even, on occasion, by heated stones.

As for the communal oven (*furn*, *khāna*) it is found in various parts of the towns as well as in the villages and it is there that individuals normally cook their bread for consumption of home. Until recently, in the Maghrib at least, it was considered dishonourable to buy one's bread outside, and the kneading of the dough, an essentially feminine occupation, was the duty of the mistress of the house or of a servant. On a large wooden tray (*ḳaṣʿa*/*ḳaṣʿa*), the housewife put, sometimes with a little bran, flour of corn or of barley or of both, or even of semolina, in quantities sufficient to provide food for several days, added yeast and salt, then poured in hot water and kneaded the dough which she then cut into pieces and left to rise on a tray in a warm place. A journeyman baker (*farrāḍ* in Morocco) went round the houses, took the trays, imprinted on each piece a distinctive mark and took it all to the bakehouse.

The baking done the baker came and handed over to each family the trav and the bread belonging to it. The wages of the baker consisted of a piece of bread which he baked and sold to his profit, in al-Andalus, this bread was called *foya* (and vars.) and this term has survived under the form *fiwaṭ*/*fūya*/*bāya*, in some regions of Morocco and of Algeria to designate the salary of the baker, even after it became the practice to pay him in cash (see W. Marçais, *Textes arabes de Tanger*, Paris 1911, 242-3 this work contains, pp 2 39, 227-52, an extremely vivid text relating to the journeymen and the bakers, notes and a bibliography.)

Thus there were no real bakeries, and there was no *sūḳ* reserved for the making and the sale of bread. However, foreigners, individuals and bachelors were able to obtain it, either from certain women who kneaded extra pastry in order to sell the surplus bread in the streets, at a price fixed by the *muḥtasib*, or from bakers or retailers, in fact the *farrān* sold not only the small amounts of bread that they had

received in wages (for they were in principle forbidden to mix the pieces of dough to make large loaves. cf. E. Lévi-Provençal, *Séville musulmane*, §§ 125, 148), but also the bread which they made on their own account. The authors of works of *ḥisba* [*q.v.*] especially al-Sakaṭī (G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de ḥisba*, Paris 1931, 26-32 and *passim*; Spanish tr. F. Chalmeta, in *al-And.* (1968 ff.), §§ 53 67 and *passim*), enumerated in detail the frauds committed by these bakers, in such matters as the mixing of flours of different qualities (and even the addition of white earth), as well as malpractices in the baking and in the weighing of the bread, and also the rules of hygiene which were to be observed by the bakers and the traders who, in particular, were not allowed to work at professions such as those of the butcher or the fishmonger. (cf. Ibn ʿĀṣim al-Raṣṣāṣ, ed E. Lévi-Provençal, *Trois traités hispaniques de ḥisba*, Cairo 1955, 83 90; French tr R. Arié, in *Hespéris-Tamuda*, i/2 (1960), 201 2) In spite of these precautions, the quality was not always high, and bread sometimes contained gravel and other impurities (cf. M. Talbi, in *Arabica*, ii/3 (1954), 299)

The price of bread, sold by weight and not by the loaf, was fixed by the *muḥtasib*, but it varied enormously, and it is the price of corn which provides the most convenient basis for estimating the cost of living, we confine ourselves to referring to E. Ashtor's fundamental work, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1969, and to the article ṬAʿĀM for all matters relating to the different types of flour

As in other civilisations, bread is treated with great respect. It is always broken and it should never be cut with a knife. A crumb which falls to the ground is picked up, raised to the lips and swallowed; a piece of bread found on the road is put, for the benefit of some destitute person, in a place where it will not be trodden on and soiled. And even though it does not constitute, strictly speaking, the basis of the diet, it is given in the Arabic dialects names which refer to life and to subsistence, *ʿayš/ʿīš*, *maʿīša*, *ḥāl*, etc. And it is not absolutely certain that the magical purposes that it served have totally disappeared.

However, the situation described above has now been perceptively modified in the sense that, in the towns at least, it is from the bakeries that the population buys the bread that it needs; but if the making of bread has borrowed from the West certain modern processes, anyone can still easily obtain *khubz ʿarabī* prepared and presented as in ancient times. Also, in the countryside the tradition is still alive.

(Ch. Pellat)

al-KHUBZAʾARUZZĪ (many possible vocalisations), Abū ʾl-Ḳāsim Naṣr b. Aḥmad b. al-Maʾmūn, popular poet of Baṣra, who probably died in 327/938. He made rice bread (*khubz aruzz*) in a shop at the Mirbad [*q.v.*], where his biographers show him as surrounded by a circle of admirers who were especially attracted by his *ghazal* verses on boys, these being his speciality. It does not seem that he should be included in the list of those poets whose belligerence involved them in contests and controversies, nor does he seem to have been inclined, like so many of his compatriots, to attack the honour of others because of this last fact, al-Masʿūdī's information that he had to flee into Arabia in order to avoid the vengeance of one of the Barāmika [*q.v.*] is dubious This same author states that his verses, set to music were sung everywhere, but except in error, the *Aghānī* cites none of them At all events, his *Dīwān*, put together by his friend Ibn Lankak [*q.v.*], must have spread considerably beyond the confines of his native town and even of Baghdad, where he lived for some time This is confirmed by the fact that this illiterate (*ummī*) poet was highly appreciated by a person who held fast to the classical tradition like Ibn Sharaf [*q.v.*], who attributes to him "ingenious shafts of wit and subtle inventions, in a closely-knit form and a chaste style, with no superfluities". The judgments of the biographers and anthologists confirm this appreciation, which the extant fragments of his work do not however seem entirely to justify. but the complete *Dīwān* must have been much richer and must have had enough originality to have stimulated the jealousy of a certain "great poet", then referred to briefly by Ibn Sharaf

KHUDĀ BAKHSH, a notable bibliophile of Muslim India, the founder of the celebrated Oriental Public Library at Patna, Bihar, India He was born in 1824 at Chapra, and received his education in the University of Calcutta. After obtaining his degree in law, he began to practise as a lawyer at Patna at the age of twenty-six. He soon achieved considerable success in his profession, and was appointed a public prosecutor, which post he held for many years. In 1894, he was invited to serve as the Chief Justice of the High Court at Hyderabad, Deccan. On his retirement in 1898, he lived a quiet life at Patna, where he died in 1908 and was buried in the precints of the library he had founded. In recognition of his public services, the order of C.I.E. was conferred on him in 1903 by the British Government of India.

Khudā Bakhsh had inherited his passion for collecting rare Arabic and Persian manuscripts from his father. When his father died in 1876, he left him a collection of 1,400 manuscripts, with the behest to make it into a *waḳf* on soon as circumstances should permit him to do so. He continued to make substantial additions to it, till the number of manuscripts had reached 4,000 in 1891, when the collection, along with the building which accommodated it, was made into a public trust. The *waḳf*-deed was duly executed on 29 October 1891, and the library was formally opened by the Lieutenant Governor of Bengal and Bihar. It was given the name of the "Oriental Public Library", though the people have

often persisted in calling it the "Khudā Bakhsh Library" after the name of the generous donor.

A new era in the history of the Library opened in 1903, when it was visited by Lord Curzon, then Governor-General and Viceroy of India. He was deeply impressed by its literary treasures, and ordered that a suitable new building be erected to accommodate them. He also discussed plans for the proper preservation and safe-keeping of the manuscripts and at the same time he directed Dr E Denison Ross, then Principal of the Calcutta Madrasa, to make suitable arrangements for the proper cataloguing of the manuscripts.

Twenty-eight volumes of the catalogue have so far (1970) been published, in addition to two Supplements and an Index. The work of cataloguing is still in progress. The library at present contains 4,232 Arabic and 4,838 Persian manuscripts, in addition to a number of printed books in Arabic, Persian, Urdu, Hindi, English, French, German, Latin and other languages.

Khudā Bakhsh was survived by his son Ṣalāḥ al-Dīn Khudā Bakhsh, Barrister at Law. Like his father, he too was a legal practitioner, but found time in write a number of essays and papers on Islamic history and civilisation, which have been collected in book form. He also translated into English some of the works of Alfred von Kremer and Joseph Heil, and was accordingly characterised by D. S. Margoliouth as an "interpreter of Indian Islam in Europe and of European Orientalism to India". He was a liberal and a modernist in his social and religious views.

Bibliography. V. C. Scott O'Connor, *An eastern library*, Glasgow 1910; Ṣalāḥ ud-Dīn Khuda Bakhsh, *My father, his life and reminiscences*, Calcutta 1909; information supplied by the present Librarian. (Sh. Inayatullah)

KHUDĀBENDE [see ul-jāytu]

KHUDĀWAND (P), God, lord, master. There is no established etymology for this word and no Middle or Old Persian antecedent. It is used in Ghaznawid times in the sense of lord or master (cf. Abu 'l-Faḍl Muḥammad b. Ḥusayn Bayhaḳī, *Tārīkh-i Bayhaḳī*, ed. ʿAlī Akbar Fayyāḍ, Mashhad 1971, 23, 435, and *passim*) in documents and letters belonging to the Saldjūḳs and Khwārazmshāhs it is used as a term of address to the sultan, usually with some qualifying word or phrase such as *khudāwand-i ʿālam* "lord of the world" (cf. Muntaḳīb al-Dīn al-Djuwaynī, *ʿAṭabat al-kataba*, ed. Muḥammad Ḳazwīnī and ʿAbbās Iḳbāl, Tehran 1950, 4; Bahāʾ al-Dīn Muḥammad b. Muʿayyad Baghdādī, *al-Tawassul ilā 'l-tarassul*, ed. Aḥmad Bahmanyār, Tehran 1937, 139, 542). *Khudāygān-i ʿālam* and other similar combinations are also found in the same sense. *Khudāwand*, with or without a qualifying phrase such as *walī niʿam*, is also used as a form of address to government officials (civil and military) and to patrons in general. Muḥammad b. ʿAbd al-Khāliḳ al-Maybudī in his manual on the art of the secretary, *Dastūr i Dabīrī*, written in 575/1180, mentions *khudāwand-i ʿālam*, *khudāwand-i ḏjahān*, *khudāygān-i ḏjahān* and *khudāwand-i walī-niʿam* among the forms of address accorded to the sultan (ed. Aduno Erzi, Ankara 1962, 13, 15). He also includes *khudāwand* among the titles of the *wazīr* (*ibid*. 18).

The terms *khudāwand-i aʿẓam*, *khudāygān-i ʿālam* and similar combinations are common in Djalā'irid, Aḳ Koyunlū and Ḳara Koyunlū documents. The derivative term *khudāwandagān* is common as an honorific for masters and commanders under the Saldjūḳs of Rūm (A. Z. V. Togan, *Umumî türk tarihine giriş*, Istanbul 1946, 329) and in Ottoman usage (I. Beldiceanu-Steinherr, *Recherches sur les actes des règnes des sultans Osman, Orkhan et Murād I*, Munich 1967; H. Inalcık, *IA*, art. *Pādişāh*). See also E. Quatremère, *Histoire des sultans Mamlouks de l'Égypte*, Paris 1837-45, i, 64 ff., and F. Taeschner, *Die Werke der Familie Ibn Qarāǧa Beg in Brussa*, in *Isl.* xx (1932), 275).

(A. K. S. Lambton)

KHUDĀWENDIGĀR (P) "lord, owner, master"; in Ottoman usage, it was used as (1) the title of Murād I, and (2) the name of the *sandjaḳ* and province of Bursa.

1. The title *Khudāwendgār* was used for commanders and viziers during the Saldjūḳ period (Ḥasan b. ʿAbd al-Muʾmin al-Khōyī, *Ghunyat al-kātib wa munyat al-ṭālib fī ruḳūm al-rasāʾil wa-madjmūʿ al-faḍāʾil*, ed. N. Lugal Adnan S. Erzi, Ankara 1963, 4, 5; M. C. Şahabettin Tekindağ, *Yeni Koyunluoğlu Kütüphanesinde bulunan Türkçe yazmalar*, in *TM*, xvi (1972, 234-5). As an attribute, the term was used for mystics like Djalāl al-Dīn Rūmī and Ḥādjdjī Bektāsh (Eflāḳī, *Manāḳib al-ʿārifīn*, ed. Tahsin Yazıcı, Ankara 1959, 2 ii, index). The word became widely used, especially after its usage as a title for the Ottoman sultan Murād I (761-91/1360-89) (Feridūn, *Münşeʾāt al-salāṭīn*, Istanbul 1274, i, 100, 103-4, 105-9, 122, 163, 166; M. Tayyib Gökbilgin, *XV-XVI asırlarda Edirne ve Paşalı livası*, Istanbul 1952, 272), but the early Ottoman historians (e.g. ʿĀshikpasha-zāde, Neshrī, Ordū, Bihishtī) do not mention this title. In 9th/15th century documents, when referring to the reign of Murād I, the phrase *Khudāwendgār sanamında* is used without mentioning the Sultan's name (H. Inalcık, *Hicrī 835 tarihli Sūret-i defter-i sancak-i Arvanid*, Ankara 1954, 134; *Kānūn-nāme-i Sulṭānī ber mūceb-i ʿOrf-i ʿOṯmānī*, ed. H. Inalcık and R. Anhegger, Ankara 1956, 77, 81; Çağatay Uluçay, *Saruhanoğulları ve sancakname-leri*, Istanbul 1946, ii, 44, 48). The 10th/16th century historians accord Murād I the title of *Khudāwendgār*. Also, Murād I was sometimes addressed as *Ghāzī Khānkār* (Gökbilgin, *op. cit.*, 175) and it has been argued that the word *khān-kār* is a variant form of *Khudāwendgār* (for the form *khundkār* used in a document of 848/1444, see Halil Inalcık, *Arvanid hüsmü*, 9). On the evidence of the documents, the term *khudāwendgār* was used for the successors of Murād I from Bāyezīd I to Selīm I (Feridūn, *op. cit.*, i, 228, 124, 149, 151-2, 134, 165, 187, 290, 304, 373, 377; A. Nimet Kurat, *Topkapı Sarayı Müzesinde bulunan Altınordu, Kırım ve Türkistan hanlarına ait yarlık ve bitikler*, Istanbul 1940, 49-50). As applied to these Sultans, it had the same meaning as the terms *pādishāh* and *khudāwend* (*Kānūn-nāma*, Veliyüddin Efendi Library, no. 1970, ff. 25b, 27a; Tekindağ, *op. cit.*, 235, n. 3); but in the 11th/17th century, it was applied to Murād I exclusively (Ewliyā Çelebi, *Seyāḥat-nāma*, Istanbul 1314, 24).

2. The use of Khudāwendgār as a name for the province of Bursa started after its conquest when Orkhān gave the town, together with its surrounding lands, to his son Murād as a *sandjaḳ* (Neshrī, *Djihān-numā*, ed. F. Taeschner, Leipzig 1932, 58; ʿĀshikpasha-zāde, *Taʾrīkh*, Istanbul 1915, 43). However, there is no record in the contemporary sources that this name was used during the reign of Murād I (cf. Kātib Çelebi, *Djihān-numā*, Istanbul 1145/1732, 556). At this early period, Bursa was the capital of the Ottoman leader, himself called the *emīr i kebīr*, and the province was therefore called after him *beg sandjaghī* (see H. Inalcık, *Bursa yeniçeri sicillerinde Fatih Sultan Mehmed'in fermanları*, in *Belleten*, liv,

698, 702; M. Akdağ, *Türkiye'nin iktisadi ve ictimai tarihi (1358-1579)*, Ankara 1974, ii, 284, 309). The oldest document relating to the region and calling it Khudāwendigār is the *Khudāwendigār livāsı tahrir defteri* dated 892/1487 (Başbakanlık Arşiv Genel Müdürlüğü Tapu Defteri no. 23). From this date onwards, the term *Khudāwendigār sancağı* was sometimes used instead of "the *sancak* of Bursa" (M. Akdağ, *op cit*, ii, 310; H. T. Dağlioğlu, *xvi asırda Bursa (1335-1579)*, Bursa 1940, 31, 41 and *passim*). The *Khudāwendigār sancağı* in the *eyālet* of Anatolia was organised as a separate province in the 19th century. This province consisted of the *sancaks* of Karahisar-i Sahib, Kütahya, Biledjik, Erdek, and Biga in 1846-7. It was reduced to a mere *mutaṣarrıflık* in 1860, but restored to the status of a province again in 1861-2. Khudāwendigār, according to the provincial organisation regulation of 1864, consisted of Kütahya, Kocaeli, Karesi, Karahisar-i Sahib and the central *sancak* of Khudāwendigār itself (Vecihi Tönük, *Türkiye'de idare teşkilâtı*, Ankara 1945, 110, 128, 130, 264)

KHUDJAND(A), a town and district in Central Asia, now the town and *oblast* of Leninabad in the Tadzhik SSR, the town lying in 40° 17' lat. N. and 69° 37' long. E. The mediaeval town was strung out along the left bank of the middle Sir Daryā at the southernmost bend of its course and of the entrance to the Farghāna valley. It lay in the ill defined borderlands between the Transoxanian districts of Ilāk [q.v. in Suppl.] and Ushrūsana [*q.v.*], and was generally reckoned as being connected administratively with one or other of these two in the early middle ages. Its destinies were, however, frequently linked with those of the region of Farghāna [*q.v.*] to the east, the frontier between the two districts being marked, according to the *Ḥudūd al-ʿālam* (372/982), ii. 125-16, by the town of Wāthkath or Wān Kath.

At the time of the Arab invasions of Transoxania, there was a local ruler or *malik* of Khudjand, apparently dependent on the ruler of Farghāna. The town was captured by the Arabs in 103-4/722, when anti-Arab elements of the Soghdians who had retreated thither were dislodged by Sa'īd b. 'Amr al-Harashī's troops, with a savage massacre of the besieged (Tabarī, ii, 1439 ff., Barthold, *Turkestan down to the Mongol invasion*², 189; H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 62-3). It must nevertheless have been speedily lost to the Arabs shortly afterwards when the local rulers of Soghdia were joined by the Kaghan of the Western Turks or Türgesh. Su lu, and the Arabs temporarily expelled from most of Transoxania. Not surprisingly, the people of Khudjand joined those of Farghāna, Ushrūsana, Čaghāniyān, etc. in supporting the rebellion of Rāfiʿ b. al-Layth during the years 190-3/806-9, according to Yaʿḳūbī.

The geographers of the 3rd 4th/9th 10th centuries now describe Khudjand and its district as a fertile and prosperous one, with many orchards and vineyards, although the town had to import grain from Farghāna and elsewhere. Ibn Ḥawḳal states that Khudjand had a *buhandas* or citadel with a prison, a *madīna* or inner city, and a *rabaḍ* or outer city, where the local ruler's palace, the *dār al-imāra*, lay. As befitted a frontier region, the inhabitants were warlike and generous. Furthermore, the town was an important centre for river navigation along the Sir Daryā. This same author describes the district of Khudjand as extending southwards towards Wash gird and Čaghāniyān, as to the Buttamān Rīs separating the basins of the upper Sir Daryā and the upper Oxus. The only other town of the Khudjand district was Kand or Kand-i Bādhām "Kand of the almonds", so-called for a local product, almonds; this was presumably on the site of the modern village of Kand-i Badam, some 40 miles from Khudjand. Leninabad, visited by the American traveller E. Schuyler in the mid-1870s en route for Khokand (see Ibn Ḥawḳal, tr. Kramers Wiet, ii, 457, 489; Le Strange, *The lands of the Eastern Caliphate*, 479; Barthold, *Turkestan*², 155-8, 264-5; Schuyler, *Turkestan. Notes of a journey in Russian Turkistan, Khokand, Bukhara, and Kuldja*, London 1876, ii, 3-4). A considerable number of *ribāṭs*² bearing the *nisba* of "al-Khudjandī" are mentioned by e.g. Samʿānī, *Ansāb*, ed. Hyderabad, v, 33-6, and Yāḳūt, *Buldān*, ed. Beirut, ii, 348; most notable of these is the madhasatician and astronomer Abū Maḥmūd Ḥāmid al Khudjandī, d. 390/1000 [*q.v.*].

Khudjand was a place of importance under the Ḳarā-Khānids or Ilek Khāns [*q.v.*], and in the early years of the 5th/11th century, from 406/1025 onwards, Arslan Khān Muḥammad b. ʿAlī, originally ruler in Talas, minted coins there (see R. Vasmer, *Zur Münzkunde der Qarāchāniden*, in *MSOS*, Westas. Studien, xxxiii (1939), 90-1, and E. von Zambaur, *Die Münzprägungen des Islams, zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 110). In the mid-5th/11th century it was the frontier town between the eastern khānate of Kāshghar and Balāsāghūn under the sons of Kadir Khān Yūsuf and the western one of Transoxania under Shams al Mulk Naṣr b. Tamghač Khān Ibrāhīm. It was also at Khudjand that in 551/1157 the Ḳarā Khiṭāy invaders won a victory over the Ḳarā-Khānid Maḥmūd b. Muḥammad.

During the period of the Mongol invasions, Khudjand was in 617/1220 stubbornly defended after the fall of Samarkand by the governor Temür Malik against a besieging force of 20,000 Mongol troops and 50,000 pressed levies, and after abandoning the citadel, he sailed away down the river and eventually reached Khwārazm (E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, i, 277-8, Dunwayni-Boyle, ii, 92-4). In the next century, under the Čaghatayids, the *ulus* of the important Djalāyir tribe in the Khāns' following was the district around Khudjand, until in 778/1376, after the revolt of the Djalāyirs, they were disbanded by Timūr and dispersed from the region (Barthold, *Four studies on the history of Central Asia*, ii *Ulugh Beg*, 9, 61). Bābur, in the period of his struggles in Farghāna against the kinsmen who were his rivals for power, used Khudjand as a centre for operations in 903/1497-8; he has given an enthusiastic description of the walled town or *burghan* of Khudjand and its many amenities (*Bābur nāma*, tr. Beveridge, 78, 89-90).

It was the connections of the Mongols and their epigoni in Central Asia with their kinsmen in northern China which stimulated mentions of Khudjand in the Chinese annals of the 14th century, e.g. as Hu-ch'an

in the *Yüan-shi*, and an early 14th century Chinese map shows it as Hu-jan; mediaeval Chinese travellers call the Sir Darya the Ho-ch'an or Hu K'ien "river al Khudjand", following Arabic usage of such terms as *Nahr Khudjand* or *Nahr al-Shāsh* for that river (cf. Bretschneider, *op cit*., ii, 34-5)

After being under Özbeg rule, Khudjand became part of the Khānate of Khokand at the beginning of the 19th century, but in 1842 was captured by the Mangit Khān of Bukhārā, Nasr Allāh b. Haydar (see F. H. Skrine and E. D. Ross, *The heart of Asia*, a *history of Russian Turkestan and the Central Asian khanates*, London 1899, 225-16) In May 1866 Khudjand fell to the Russian armies of General Romanovsky after a bloody siege of eight days, in which 2,500 of the defending Khokandī force were killed, and the town was then used as a base for the final reduction of the Khānate of Khokand (see TASHKENT, 251-2, Schuyler, *op cit*., i, 312 ff, 339, 354; R. A. Pierce, *Russian Central Asia 1867-1917*, a *study in colonial rule*, Berkeley and Los Angeles 1960, 23 5, 34-5) In 1873 the Russian garrison in Khudjand was for a while besieged there by a rebellious faction in the Khānate of Khokand, and it was this revolt in Khokand which led to the final annexation of the Khānate by Russia (see KHOKAND) Under Tsarist rule, Khudjand eventually became part of the Samarkand *oblast* of the Governor-Generalship of Turkestan

Under the Soviets, Khudjand was in 1936 re named Leninabad, and the name was also given to the northern *oblast* of the Tadzhik SSR. It is now the second most important industrial and cultural centre of the Republic after Dushambe (the Stalinabad of 1929-61), with manufactures of cotton, silk and fruit ware, food processing and with orchards and vineyards outside the town. The population in 1970 was 103,000 (see *BSE*³, xxiv, 513-5).

AL-KHUDJANDĪ, ABŪ MAHMŪD ḤĀMID B. AL-KHIDR, astronomer and mathematician, originally from Khudjand in Transoxania. He lived under the protection of the Buwayhid Fakhr al-Dawla (366-87/976-97) and died in 390/1000

From amongst his mathematical works, there has survived in Cairo the manuscript of a treatise on geometry We know that he was concerned with the resolution of equations of the third degree by geometrical methods and that he demonstrated, in an imperfect manner, that the sum of two cubed numbers cannot be another cube. Nasīr al Dīn al Ṭūsī (*R. Shakl al ḳaṭṭāʿ*, Istanbul 1891, 108 ff) affirms that Abu 'l Wafāʾ al Buzadjānī (*q.v.*), Abū Naṣr Manṣūr b. ʿAlī b. ʿIrāḳ (*q.v.*) and al Khudjandī are the three authors in whom are attributed the discovery of the sine law called by the latter the "astronomical law" (*ḳānūn al-hayʾa*), because of its frequent use in astronomy, and he gives the proof which he offered of this law (cf C Schoy, *Beiträge einiger geometrischen Fragepunkte durch muslimische Mathematiker*, in *Isis*, viii (1926), 260 3) However, P. Luckey, in his *Zur Entstehung der Kugeldreiecksberechnung*, in *Deutsche Mathematik*, v (1940-1), 426, 428 9, rejects al-Khudjandī's part in this in principle, because we are concerned here with a person whose outstanding work was in the field of practical astronomy.

Al-Birūnī, in his *Taḥdīd nihāyāt al-amākin*, in *BIMA*, viii (1962), 207, states that al-Khudjandī was "unique in his age" (*waḥad zamānihi*) for the construction of astrolabes and other astronomical instruments. Some manuscripts have been preserved of his treatise *Fī ʿamal al-ālāt al-ʿiḳmā*, in which is described a universal instrument (*al-ʾĀla al-ʿiḳmā* or *al-ʿiḳmā*) to be used in place of the astrolabe as quadrant. He constructed an armillary sphere and other instruments, and must have worked on theoretical questions concerning the laying out of the plan of an astrolabe, since Abū Naṣr Manṣūr gives two methods of al Khudjandī's for determining the position of the circles of the azimuth on the astrolabe by the intersection of the equator and the *muḥantaṭāt* (*Risāla fī mādjāʾāt dawāʾir al-samūt fī 'l-asṭurlāb*, in *Rasāʾil Abī 'l-Rīḥān*, Hyderabad 1948, 3-9). His most important work in the sphere of astronomical instruments was the sextant called *al suds al fakhrī* (sc. dedicated to Fakhr al-Dawla) which he made in order to determine the obliquity of the ecliptic. He described this instrument and the observations which he was able to make with it in his *Risāla fī 'l-mayl wa-ʿarḍ al-balad* (ed. L. Cheikho, in *Machriq* xi (1908), 60-8) Al Birūnī gave a detailed analysis of this in his *Taḥdīd*, 101-8, which is said to be based on the *Maḳāla fī taṣḥīḥ al-mayl* al al-Khudjandī (probably to be identified with the *R fī 'l-mayl* cited above). This sextant had a diameter of 40 *dhirāʿs* or cubits (al Birūnī: 80 cubits) constructed at Tabrūk near Rayy and set down on the plan of the meridian, it was surrounded by walls and covered over by a roof, part of which was vaulted (*ḳabw*) and with an aperture 3 spans (*shibr*) in diameter (al Birūnī: one span) coinciding with the centre of the sextant. With this instrument it was possible to take the height of the sun, the sun's light threw a circle on to the sextant and, in order to determine the centre, al-Khudjandī used a circle of the same radius which had two perpendicular diameters which he placed on the circle thereby lit up. Al-Khwārizmī asserted that the sextant was his own invention, and he boasted that, by using it, he could make calculations down to the very second. Similar instruments seem to have been employed in the observatories of Marāgha (founded before 660/1262) and at Samarkand (built in 823/1420).

With this *suds al-fakhrī*, al-Khudjandī observed the meridian height of the sun at the summer and winter solstices of the year 374/994; the procedure involved consisted in making observations on two consecutive days at the time of the solstice and in determining, by interpolation, the exact moment of the passing of the sun into the solstice. He was able to do this in the month of June, but clouds prevented him from repeating the procedure in December, so that the exactness of the whole operation was somewhat affected. His observations were made in the presence of a group of leading scholars who drew up a report. The result was $\varepsilon = 23° 32' 19''$ (21′ according to al Birūnī in *al Ḳānūn al Masʿūdī*, Hyderabad 1954, i, 364), a value which, compared to those worked out by the Indian astronomers (24°) and Ptolemy (23° 51′) justified al-Khudjandī's belief in a progressive reduction in the obliquity of the ecliptic. Al-Birūnī, who believed that ε was a constant (*Taḥdīd*, 107 8, 116; *Ḳānūn*, i, 364) emphasises that al-Khudjandī told him verbally that the aperture of the vault by which the sun's rays came in had been displaced downwards by a span before the observations regarding the winter solstice were made, so that it did not coincide exactly with the sextant's centre. This fact may explain the decrease in the value of ε in relation to other determinations made roughly around the same time.

Al Khudjandī made other observations, he fixed the latitude of Rayy at 35° 34′ 59″ (al Birūnī, *Taḥdīd*, 86-7, 99, 238, *Ḳānūn*, ii, 812), and he asserted that he had observed the planets for Fakhr al-Dawla by

means of armillary spheres and other instruments (*K fī l-ʿamal*, 62). The final result of this work was the compiling of *al-Zīdj al-ṣafāʾī*. An incomplete copy in Persian of a *zīdj*, preserved in the Madjlis Library in Tehran (ms. 181) may be based on al-Khudjandī's observations, the period of the tables of average movements is 600 of the Yazdadjirdī era, or about two centuries after al-Khudjandī's death (see L. S. Kennedy, *A survey of Islamic astronomical tables*, in *Trans. Amer Philos Soc.*, N.S., xlvi (1956), 133, No. 80).

KHUDJISTĀN, a small town or village of mediaeval Islamic Bādghīs (*q.v.*), lying to the northeast of Harāt in modern Afghānistān, and described by the mediaeval geographers as being mountainous, possessing agricultural lands and having warlike inhabitants (Iṣṭakhrī, 268 f., Ibn Ḥawḳal², 441, tr. Wilet, 426; *Ḥudūd al-ʿālam*, 104, 327; Yāḳūt ii, 404; Barbier de Meynard, *Dict. géogr., hist. et lit. de la Perse*, 197). Although within a Sunnī region, Khudjistān itself was one of the last centres for the Khawārid̲j in eastern Iran, and the population are described as Khārid̲jīs and extremists (*ghulāt wa-ghulāt*).

Its main claim to fame is that it gave birth in the 3rd/9th century to Aḥmad b. ʿAbd Allāh al-Khudjistānī. He was a commander in Muḥammad b. Ṭāhir's army, but after the fall of the Ṭāhirid capital Nīshāpūr to Yaʿḳūb b. Layth in 259/873, he made a bid for independent power in Khurāsān, with a base of power in Harāt and Tukhāristān, against the Ṣaffārids, until he was killed by one of his own *ghulāms* in 261/874. Worthy of note is the detail that Khudjistānī was allegedly launched on his career as a condottiere through hearing the martial poetry of a local author, Hanẓala of Bādghīs, who must have been one of the very earliest writers of verse in New Persian (Niẓāmī ʿArūḍī, *Čahār maḳāla*, ed. Browne, 26-7, revised tr. 27-9, cf. G. Lazard, *Les premiers poètes persans* (IX^e-X^e *siècles*), Tehran-Paris 1964, i, 57-8, 53).

Vasmer, in *Numismatische Zeitschr.*, N.F. xxiii (1930), 116-18, C. E. Bosworth, in *Cambridge history of Iran*, iv, ed. R. N. Frye, Cambridge 1975, 116-8. (C. E. Bosworth)

KHULDĀBĀD, a town in the northwestern part of the former Haydarābād state, now in Maharashtra state of the Indian Union, and situated in lat. 20° 1′ N. and long. 75° 12′ E, it is also known as Rauza (or Rawḍa). It is 14 miles from Awrangābād and 8 from Dawlatābād (*q.vv.*), and a particularly holy spot for Deccani Muslims, since it contains the tombs of several Muslim saints and great men, including the Niẓām Shāhī minister Malik ʿAnbar (*q.v.*); Niẓām al-Mulk Āṣaf Djāh, founder of Haydarābād state (*q.v.*) and above all, of the Mughal Emperor Awrangzīb (*q.v.*), who died at Ahmadnagar in Dhu ʾl-Kaʿda 1118/March 1707 and was buried at the *rawḍa* or shrine of Shaykh Zayn al-Ḥaḳḳ, and of his son Aʿẓam Shāh. After Awrangzīb's burial the place was called Khuldābād, the monarch's posthumous name being *Khuld maḳām* "He whose abode is eternity" (see *Cambridge hist. of India*, iv, 302).

(C. E. Bosworth)

KHUL^C [see ṬAḲḲ].

KHULḲ [see ABRIḲ].

KHULM, a town of northern Afghānistān lying in the lowland region to the south of the upper Oxus at an altitude of 1,440 ft./450 m. and in lat. 36° 42′ N. and long. 67° 41′ E., it is situated some 30 miles/50 km. to the east of modern Mazār-i Sharīf and, according to the mediaeval Islamic geographers, two *marḥalas* or 10 *farsaḵhs* to the east of Balkh (*q.v.*). It further lies on the Khulm River which flows down a narrow valley from the Hindu Kūsh past the town of Haybak and then Khulm itself until it peters out short of the Oxus. It is possible that this river is the Artamis of the Greek geographers.

The mediaeval geographers describe Khulm as the centre of a flourishing agricultural district, with luscious fruits, and as enjoying a healthy climate, the *kharādj* or land-tax was levied on the extent of irrigated land. The grapes and other fruits of Khulm were still the subject of much praise by the Scottish traveller Alexander Burnes in the early 19th century. The road from Balkh eastwards into Badakhshān and to Andarāba and the silver mines of Pandjhīr also passed through Khulm (see Le Strange, *The lands of the Eastern Caliphate*, 427, 432; *Ḥudūd al-ʿālam*, 108).

Regarding the pre-Islamic history of Khulm, it has been conjectured that Khulm is the Aornos mentioned by Arrian as conquered by Alexander the Great in the winter of 330/329 BC (cf. Pauly-Wissowa, I/2, 2859). The Buddhist Chinese traveller of the early 7th century, Hiuen Tsang, seems, however, to mention it as the kingdom of Hu-lu, whose chief town had over 10 Buddhist monasteries with more than 500 monks (see T. Watters, *On Yuan Chwang's travels in India*, London 1904-5, ii, 206, 209). In the period of the Islamic conquests in Central Asia, it is mentioned at various times in the course of warfare, e.g. in 90/708-9 when Kutayba b. Muslim (*q.v.*) made his final attack on the Hephthalite leader Ṭarkhāṭa Nīzak (Ṭabarī, ii, 1205-6, 1219, with mention of the *shiʿb Khulm* "defile or valley of Khulm"), and in 119/737 when Asad b. ʿAbd Allāh al-Ḳasrī was endeavouring to expel from Tukhāristān the united forces of the Turkish Khāḳān Su-lu of the Western Türgesh, the rebel al-Ḥārith b. Surayḡ and the local princes of the Oxus valley principalities and of Soghdia, and the Khāḳān endeavoured in vain to take the town (Ṭabarī, ii, 1803, 1815). Once pacified, the district was settled by Arabs of Tamīm, Kays, Azd and Bakr (Samʿānī, *Kitāb al-Ansāb*, ed. Hyderabad 1382-6/1962-6, v, 180), Khulm also figures in the tax-assessment for Tukhāristān in the time of ʿAbd Allāh b. Ṭāhir, a governor-

chup (years 811 12/826-8) under the sum of 12,300 dirhams per annum (Ibn Khurradādhbih, 38, cf. Marquart, *Ērānšahr*, 218); and in the fighting around Khulm in the later 3rd/9th century between the Ṣaffārids and other contenders for power in Khurāsān, the condottieri Aḥmad b. ʿAbd Allāh al-Khudjistānī [see KHUDJISTĀN] in 262/882 2 defeated ʿAmr b. Layth's ally Abū Ṭalḥa Manṣūr b. Sharkab near the town (Ibn al-Athīr, vii, 209). Culturally, Khulm was of sufficient note to produce, according to Sam. ʿānī, *Ansāb*, v, 180 3, a well-known poet, Kaʿb b Aḥmad, and several legal and theological scholars.

We hear little of Khulm under the rule of the successive Turkish and other dynasties of eastern Iran like the Saldjūks and Timūrids, but it was clearly within these centuries that the Turkicisation of these lands south of the Oxus took place, so that in modern Afghānistān, the population of the region is largely Uzbek.

In the period after Mādir Shāh, so. in the later 12th/18th century, the region came under the control of a local ruler of Uzbek stock, Kilich ʿAlī Beg of Khulm. He held, according to Elphinstone, the title of *Atalik* from the Durrānī kings of Kābul and paid deference to them, but was left virtually independent in return for protecting the northern borders of Afghānistān against Uzbek incursions from beyond the Oxus. It was because of these depredations that the seat of government for the Khulm region was in the early 19th century transferred from Khulm to Tash Kurghan 4 miles/6 km. to the south, and this has become the site of the modern town of Khulm. Various British travellers visited it at this time. W. Moorcroft (1824) mentions that the tyrannical Muḥammad Murād Beg, ruler of Kunduz and much of the region north of the Hindu Kush, had compelled the inhabitants of Khulm proper to transfer to his own capital of Kunduz. Old Khulm certainly now fell into decay, whilst New Khulm or Tash Kurghan flourished. Concerning population, Elphinstone (1809) estimated that Old Khulm contained about 8,000 houses, and Burnes (1832) that New Khulm had some 10,000 inhabitants. Subsequently, the sons of Kilich ʿAlī Beg reigned from Khulm over an area comprising Khulm, Haybak, Talakān, Andarāb and Mazār-i Sharīf as vassals of Muḥammad Murād Beg, but in the early 1850s Dōst Muḥammad of Kābul [q.v.] succeeded in bringing Badakhshān and the Uzbek principality of the Khulm district under his own control, and henceforth it formed part of the dominions of the *kings of Kābul*.

Present-day New Khulm Tash Kurghan forms part of the Afghān province of Samangān, within which it and Haybak are the main towns, Khulm, however, being the more populous of the two (population estimated by Humlum at 30,000 in ca 1950), both towns benefit by being on the main road from Kābul to Mazār i Sharīf and the Russian frontier.

KHULṬ, the classical form of the name of a tribe of northwestern Morocco pronounced Khlot (but ethnic, Khulṭī). The Khlot came into North Africa with the invasions of the Banū Hilāl in the 5th/11th century, and formed part of the "mixed" Arab people known as the Dhukhum, according to Ibn Khaldūn and other historians, the Khlot allegedly belonged to the Banū ʾl-Muntafiḳ. The Dhukhum spread throughout the central Maghrib, settled there and took part in all the wars which theatened Barbary. After the Almohad conquest, they vainly tried to rebel, and not long afterwards, the Banū Ghāniya [see BANŪ GHĀNIYA] had little trouble in engaging them as their auxiliaries after the capture of Bougie [see BIDJĀYA]. The Almohad caliph al-Manṣūr, once victorious over his enemies, punished their allies and accordingly transported to the oceanic shores of Morocco the Dhukhum and Riyāḥ Arabs. The latter were established in the Ḥibṭ; and the Gharb, and the first group in the Tāmasnā (Shāwiya), depopulated since the extermination of the Berghawāṭa [q.v.] by the Almoravids.

Under al-Manṣūr's successors, the intrigues of the Almohad *shaykhs* found excellent support in the two component groups of the Dhukhum, the Khlot and the Sufyān, whose jealousies yet further aggravated the internecine conflicts. In 621/1224 the Khlot espoused the cause of the pretender al-Maʾmūn against the caliph al-ʿĀdil, who was supported by the Sufyān. In 625/1228, al-Maʾmūn was proclaimed caliph; in 630/1233 his son al-Rashīd succeeded him, but because of their misdeeds and violence, he was obliged to take strong measures against the Khlot chiefs, who their rebelled and took the side of the pretender Yaḥyā b. al-Nāṣir. The Sufyān, now reconciled with al Rashīd, attacked the Khlot on the banks of the Umm al-Rabīʿ and a frightful carnage ensued. The Khlot sought vengeance by proclaiming as caliph the Andalusian pretender Ibn Hūd, but al-Rashīd pursued them, drove them back, and captured and then executed their chiefs (635/1237-8). Much weaken ed and browbeaten into obedience, they took part in the caliphs' expeditions, but their rivalry with the Sufyān was in no way extinguished and proved fatal to the Almohads. In 646/1248, at the siege of Tamesdekt against the Zayyānid pretender Yaghmorasen, this rivalry brought about the caliph al-Saʿīd's death and the Almohads' defeat.

The Marīnid sulṭān Abū Thābit treated the Khlot harshly for their violence (709/1308), but he took advantage of their assistance in order to destroy the power of the Riyāḥ. They were then settled on the former's lands, in the Azghār and the Ḥibṭ, and formed part of the *makhzan* [q.v.] of the Moroccan sultans, made marriage alliances with these rulers and provided for them provincial governors, ambassadors and advisers. They subsequently passed into the service of the Banū Waṭṭās and gave no support to the Saʿdids, who at first held them at arm's length despite the importance of the tribe which, according to Leo Africanus, could put 12,000 cavalry and 50,000 infantry into the field. However, the Khlot's important part in the Moroccan victory of Wādī ʾl Makhāzin against the Portuguese gave them entry in part at least to the *makhzan* of the Saʿdids. At the time of the latters' decadence, the marabout pretender al-ʿAyyāshī [q.v.], who sought to compel them to march against the Christians of Larache, was unable to bring them to obedience and was assassinated by them (1018/1638-9). Under the ʿAlawids, the Khlot took the side of the petty princelings of northern Morocco who had made themselves in-

dependent under the cover of waging holy war. Maw lay Ismā'īl and his successors, after first reducing them to submission, deprived the *Khlot* of their status as a *makhzen* tribe and favoured the establishment in their region of heterogeneous elements, the Tīlī and Badāwa groups, who inevitably afflicted and reduced the power of the former occupants of the land.

Bibliography: Michaux-Bellaire and Salmon have provided the most complete information about the habitat, ethnography, administrative organisation, political position and the splits among the Khlot in their article *Tribus arabes de la vallée du Lekkous*, in *AM*, IV-VI (1905-7). (A. Cour)

KHUMĀRAWAYH b. Aḥmad b. Ṭūlūn, second Ṭūlūnid ruler of Egypt and Syria. He was born in Sāmarrā in 259/864 and, after the abortive rebellion of his brother 'Abbās (*q.v.* in Suppl.) against Aḥmad b. Ṭūlūn (*q.v.*), was designated heir-apparent as early as 269/882. In an unprecedented act in the history of Muslim Egypt, the popular Khumārawayh came to power upon the death of his father on 10 Dhu 'l-Ka'da 270/10 May 884 without the caliph's sanction, but rather with the general approval of the military and civil authorities of the Ṭūlūnid régime. His brother 'Abbās was forced to pay homage in his rule, and was assassinated under obscure circumstances only a few days after Khumārawayh's accession. Khumārawayh reigned for twelve years, an 28 Dhu 'l-Ka'da 282/18 January 896 he was killed, a victim to a palace cabal, by one of his own slaves.

Khumārawayh inherited both a stable and wealthy polity from his father—the treasury is said to have contained ten million dīnārs, thanks to Ibn Ṭūlūn's far sighted internal and external economic policy—and also an unresolved struggle with the court of Baghdād. Since he had come to power only through his father or rather through his father's generals, the caliph regarded him as an usurper. Immediately upon receiving the news of Ibn Ṭūlūn's death, al-Muwaffaḳ, the ruler of the eastern half of the 'Abbāsid empire and strong man in the Baghdād court, broke off the negotiations which had led to the *de facto* recognition of Ibn Ṭūlūn as governor of Egypt and Syria. One of Ibn Ṭūlūn's foremost generals, Aḥmad b. Muḥammad of Wāsiḳ, then changed sides and urged al-Muwaffaḳ to attack Khumārawayh and reconquer Egypt, exploiting Khumārawayh's lack of political and military experience (al Kindī, 234, ii, 4-5). Two generals of the caliph with al-Muwaffaḳ's sanction now invaded Ṭūlūnid Syria. Isḥāḳ b. Kundādjīk, the governor of Mosul whom al-Muwaffaḳ had appointed "legal" governor of Egypt and Syria in 269/882-3, and Muḥammad b. Dīwdād Abū 'l-Sādj of Arbān. The defection of the Ṭūlūnid governor of Damascus and finally the appearance of Aḥmad b. al-Muwaffaḳ (the future caliph al-Mu'taḍid) leading an 'Irāḳī army challenged Khumārawayh's control over Syria even further. In Shawwāl 271/February-March 885 (Gra bar, 88) Aḥmad's troops met the Egyptians under Khumārawayh's command in the tragi-comic Battle of the Mills (*al-Ṭawāḥīn*) in southern Palestine. Both Aḥmad and Khumārawayh ignominiously fled from the battlefield, the military decision in Khumārawayh's favour was secured by the capable and courageous Ṭūlūnid general Sa'd al Aysar. After his victory he went to Damascus and rebelled, though unsuccessfully, against the humiliated Khumārawayh. Khumārawayh's long term strategy of achieving a rapprochement with the 'Abbāsid court is reflected in the exceptional clemency with which he treated his 'Irāḳī prisoners of war. In the following years his realm was considerably extended. He beat decisively, though with inferior forces, Ibn Kundādjīk, who submitted to him and brought areas as far east as Ḥarrān (Grabar, 75) under Khumārawayh's control. The Djazīra became part of the Ṭūlūnid lands when its governor Ibn Abī 'l-Sādj sought Khumārawayh's protection. On Khumārawayh's own initiative, Yamān of Tarsūs finally accepted Ṭūlūnid sovereignty over Cilicia.

In Radjab 273/December 886 al-Muwaffaḳ and Khumārawayh eventually came to terms. Khumāra wayh discontinued the public slandering of al-Muwaffaḳ in the sermons of Egypt and formally acknowledged 'Abbāsid sovereignty. In return he was granted the *de jure* governorship of both Egypt and the lands of Syria (*al Shām*) for thirty years for himself and his progeny (*walādihī*). Thus not only his own succession, but also the dignity of his family, were recognised by the caliph. The time limit imposed, however, clearly shows that the caliph regarded the Ṭūlūnid rule over Egypt and Syria to be temporary and revocable, unlike the privileges granted to the Aghlabids (*q.v.*) of Ifrīkiya. Unfortunately, the financial provisions of this first treaty between Khumārawayh and al-Muwaffaḳ are not recorded in the sources. Syria now became an integral part of the Ṭūlūnid domains, in the provincial capitals of the Sh*ā*m*ā*t, Ramla/Filasṭīn, Ḥimṣ, Ḥalab and Anṭākiya, new mints were set up.

In Radjab 279/October 892 al-Mu'taḍid, the son of al-Muwaffaḳ, succeeded al-Mu'tamid as caliph. In a new treaty he readily confirmed these arrangements with Khumārawayh. The annual tribute to be paid by Khumārawayh as vassal to al-Mu'taḍid was fixed at a rate of presumably 300,000 dīnārs, supplemented by 100 000 dīnārs to be paid for each preceding year of his rule. The sources are vague and inconsistent on these crucial figures. Khumārawayh lost the territories east of the Euphrates, Mawṣil, Diyār Rabī'a and Diyār Muḍar around al-Rāfiḳa, where coins had been struck on his behalf before 279/892. The important and prestigious *ṭirāz* manufactures of Fusṭāṭ and Alexandria remained under the control of the caliph. Ṭūlūnid coins bore his along with Khumārawayh's name.

Khumārawayh's limited autonomy made him susceptible to honours bestowed upon him by the caliph, the most exalted and highest sovereign of the Muslim community. In 279/892, through the mediation of his closest adviser, al Ḥusayn Ibn al Djaṣṣāṣ al Djawharī, he arranged for one of the great political marriages of mediaeval Islamic history. He offered his daughter Ḳaṭr al-Nadā to the caliph al-Mu'taḍid's son 'Alī, but the caliph took her as a bride for himself. It remains unclear whether or not this marriage, which entailed an exorbitant dowry of one million dīnārs, was a calculated device on the part of the caliph to wreck the finances of his dangerously wealthy and powerful vassal. The splendid nuptials of Ḳaṭr al-Nadā lived on in the memory of the Egyptians well into the Ottoman period, as is recorded in the chronicles and the folk-literature.

Khumārawayh's frivolity and generosity are well attested in the sources. He had sumptuous palaces and gardens built for himself and his favourites. To his contemporaries, his awesome bird-eyed palace lion epitomised his prodigality. He was said to ride no horse more than once. Becker (*Beiträge*, ii, 191) connects his addiction to luxury and debauchery with his status as heir to the capable and successful founder of a dynasty. "Rule was something self-evident to him, something given. He liked to exercise it, but shied from the burdens which were indispensable for

it". When Khumārawayh was murdered in 282/896, the treasury was empty. All the wealth Ibn Ṭūlūn had amassed had been squandered within a few years. In Khumārawayh's rule the *dīnār*'s worth sank to one third of its former value (Hassan, 245). Under Khumārawayh's sons Diayāh and Hārūn who succeeded him in rapid sequense, the political and financial demise of the Ṭūlūnid state was still further accelerated. In 292/905 'Abbāsid troops sacked Ibn Ṭūlūn's new city of al-Qaṭā'i' and brought back for thirty years direct 'Abbāsid rule to Egypt.

Khumārawayh's military prowess was notable. After the disaster of al-Ṭawāḥīn he showed strategic skills and astounding personal bravery, he is said to have killed the rebellious Sa'īd al-Aysar with his own hands. He could rely on the multi-racial army of his father, composed mainly of Turkish, Greek and Sudanese military slaves and some, mainly Greek, mercenaries; he strengthened his force with numerous fresh soldiers from Turkestan. Yet in contrast to his father, he lacked undisputed authority over the military. He tried to compensate for this with mostly-generous special distributions that further undermined the precarious finances of the state.

Possibly under 'Abbāsid influence (al-Muʿtaḍid had his own élite body of military slaves, *al-muḥāriam*), Khumārawayh established a corps d'élite, *al-muḥāra*, composed of purely Egyptian Bedouins of the Eastern delta, on whom he bestowed various privileges. By converting these tribesmen into a loyal and efficient bodyguard he reasserted control and brought back peace to this strategic region between the centres of Egypt and Syria. Significantly enough, there seem to have been no Turks among Khumārawayh's *muḥāra* soldiers, he seems rather to have used them to offset the predominant influence of his own Turkish entourage. One thousand Negroes formed a less highly privileged special contingent within the *muḥāra*.

Already under Khumārawayh, the civil administration of Egypt passed gradually into the hands of the Madhārā'ī family who later, during the 'Abbāsid interregnum and under the Ikhshīdids, directed the finances of the country. 'Alī b. Aḥmad al-Madhārā'ī began his illustrious career by bringing under his control the *barīd*, the intelligence and communications service. Khumārawayh's relations with the religious establishment of Egypt were strained, his libertinism and frivolity made him the target of harsh attacks both in contemporary and later historiography.

Khumārawayh's prodigal rule encouraged a rich life. Few traces of his splendid architectural and cultural monuments and the minor arts are preserved. His patronage of scholarship and poetry is well known; the grammarian Muḥammad b. 'Abd Allāh b. Muḥammad b. Muslim (d. 326/944) was his protégé and the teacher of his sons. Al-Kāsīn b. Yaḥyā al-Maryūnī (d. 317/929) wrote encomia to celebrate Khumārawayh's triumphs on the battlefield.

Bibliography: See *EI*[1] s.v. (Sobernheim). Among the Arabic sources the contemporary historian Ibn al-Dāya [q.v.] must be ranked first, fragments of his chronicle of the Ṭūlūnids are preserved in Ibn Saʿīd's *al-Mughrib fī ḥulā 'l-Maghrib*, as far as Khumārawayh is concerned, this important text unfortunately only contains a few remarks on his appointment as heir-apparent; see Ibn Saʿīd, *Fragmente aus dem Mughrib*, ed. K. Vollers, in *Semitistische Studien*, 1 (1894), 74 ff., al-Kindī, *K. al-Wulāt*, ed. R. Guest, Leiden/London 1912, 233-41, C. H. (U. HAARMANN)

KHUMAYR (pronounced locally Khmīr, in French Kroumir), an element of the population which has given its name to a mountainous massif extending along the north-west littoral of Tunisia, The Djebel Khmīr, or Kroumirie, forms part of the administrative district of Djendouba, which covers an area of 3,000 square km. and has a population of 355,000, of whom 195,000 are peasants (census of May 1966).

The massif of the Khumayr, a Tunisian extension of the Atlas range, consists of a series of contrasting sandstone flexures running along a south-west - north-east axis. The two extremities of the massif, separated by the cultivated limestone depression of Ghardīmaou, present palpable differences in spite of the overall unity. The western Kroumirie has its highest point at Djebel Ghorra in an altitude of 1,200 m., and the eastern Kroumirie, very difficult of access in spite of its modest altitudes, reaches a height of 1,014 m. at Djebel Ḥīr which dominates Aïn Draham. Everywhere the contrasting forms of rockstrata, deeply furrowed anticlinals and sheer synclinals, give a wild aspect to a landscape covered by a forest 47,000 hectares in area. Of the trees 70% are cork-oak, 20% are zeen oak, and 10% other species, including the wild olive. Often the undergrowth consists of fern. Other species have recently been introduced, notably the parasol pine (*umbrella*). The level of rainfall in Kroumirie is the highest in Tunisia, with an average of 1 m. per year and a maximum of 1,575 m. at Aïn Draham. In spite of the abundant rain and relatively pleasant falls of snow, the massif suffers from shortage of water. Springs are certainly numerous, but they are dispersed over a wide area and their output is feeble. Some springs even dry up in summer.

In ancient times, the massif of the Khumayr did not escape penetration by the Romans. Three routes crossed it, in the longitudinal axis, the road from Carthage to Hippo Regius (Bône, now called Annaba) via Hippo Diarrhytus (Bizerta), in the transverse axis the road from Simitthu (Chemtou) to Thabraca (Tabarka), of which numerous traces have been discovered, and the road from Vaga (Béja) leading to the same destination via Tricipa. Thabraca, originally a Carthaginian market-town, and from the 4th century one of the richest dioceses in Africa, was the centre for the export to Rome of the products of the massif, timber for building and wild animals, as well as oil, wheat and minerals. "A city of luxury, where art has its place alongside commerce" (P. Gaukler, *Monatsque*, 155), Thabraca has given us some very fine mosaics.

It is curious that throughout the mediaeval period, the massif of the Khumayr has gone unnoticed by the historian. The silence of our sources is complete. It is only in modern times, and in contemporary times in particular, that it has begun to play a historical role, appearing at the same time as a place of refuge and of resistance, escaping almost completely the power of the Tunisian authorities.

The Khumayr had cordial and profitable relations with the colony of Genoese fisherman established since 947/1540 on a rocky island of 40 hectares in area separated from Tabarka by a channel 300 metres wide. They were acutely affected when this islands was unexpectedly attacked and forcibly recovered by

ʿAlī Pasha in 1153/1740 (Ibn Abī ʾl-Diyāf, *Ithāf*, ii, 124). In 1183/1769-70, the Khumayr gave asylum to the pretender ʿUthmān al-Ḥaddād, who was ultimately captured and executed (*ibid.*, ii, 165). In 1260/1844 they gave their support to another pretender, who claimed to be a descendant of ʿUthmān Bey. The latter also was captured through a trick and beheaded (*ibid.*, iv, 78-9, ed. A. Abdesselem, 226-7). In 1282/1865, ʿAlī Bey, at the head of the military mission (*maḥalla*) responsible for the levying of taxes, bled the region of Béja white, but did not dare venture into the massif, which was subject to tax only within agreed limits (Ibn Abī al-Diyāf, *op. cit.*, vi, 55, 65). However, the mountain-people were not involved in the insurrection of 1864—they did not feel that it concerned them—nor in the troubles of 1867-8.

It was in 1881 that they came abruptly to the fore. The Khumayr were in the habit of pillaging their neighbours, including those in Algeria. Seeing that the Caïd of Tabarka, to whom they were theoretically answerable, had no control over them, the French authorities, in the context of a complex policy which had the effect of setting various powers in competition with one another, decided to act. They set in motion the process which culminated in the establishment of the protectorate over Tunisia. On 24 April 1881, the French Army of Algeria marched into Tunisia, two days later they occupied Kef without a battle, on 13 May it was the turn of Ain-Draham, and the following day the French routed the Khumayr at Ben Mtir after a number of fierce skirmishes.

Regarding the origins of the inhabitants of the massif, we have no precise and reliable information. The name Khumayr does not appear in any mediaeval text. In the period when Ibn Khaldūn was writing, that is to say, the 8th/14th century, the region between Béja and the sea was inhabited by Hawwāra Berbers by that time completely arabised with whom there had been blended various elements of Arab descent, notably the Hudhayl (*ʿIbar*, vi, 288-93; tr. de Slane, *Berbères*, i, 279).

The Khumayr pose an insoluble puzzle to the historian. They only make their appearance in the 13th century, and even for this period there are only scraps of information in the archives, when they pillage their neighbours, or when the *maḥallas* try in vain to force them to pay taxes. Who are they? They themselves say that they are Arabs, and it is true that there is an oasis in the Yemen called Khumayr (Yāḳūt, ii, 390, iii, 406) and there is a Kaḥṭānid tribe which bears the name Banū Khamr (Kalḳashandī, *Nihāya*, 247), of which Khumayr could be a diminutive. Legend would also have us believe that they are the descendants of a certain Khumayr b. ʿUmar, an eminent companion of the conqueror of the Maghrib, ʿUḳba b. Nāfiʿ. A descendant of Khumayr, Sīdī ʿAbd Allāh al-Ḥaddād, is supposed to have died, worn out by *ghibād*, in the heart of the massif, on a small plateau about 5 km. south west of Ain Draham. The mausoleum raised to him in this place perpetuates the legend and unites the Khumayr in an almost total veneration for their patron saint and presumed ancestor. According to another tradition, the Khumayr originally lived in the south of Tunisia and were ruled by the Shābbiyya of al-Kayrawān. In the 18th century they were forced to emigrate towards the north, occupying the massif to which they gave their name.

The Khumayr are divided into a number of segments. The most important in the eastern Kroumirie are the Awlād ʿUmar, the Ḥwāmdiyya, the Awlād Ibn Saʿīd, the Saʿīdiyya, the Urāḥiyya, and the Twāḥiniyya in the region of Tabarka, the Salūl, the Hudhayl, the Awlād Mūsallim, the Khrāyṣiyya, the Diḍāyḍiyya, the Diwābliyya, the Milykiyya, the Awlād Mḥal, the Awlād Hilāl, the Hamrān, the Dabābsa, and in particular the ʿAṭāṭfa in the region of Ain Draham, the Gwādiyya, the Thāniyya, and the Shibiyya in the region of Fernana. In the western Kroumirie, there are found the Banū Māzin, the Awlād ʿAlī, the Khuḍīr, the Mrāsin, and the Washtāta. It would be futile to attempt to distinguish between Berbers and Arabs among these tribes. The population of the massif is in fact the result of an immense and long-term ethnic fusion, dating back to the mediaeval period if not further, a fusion which was doubtless accelerated by the infiltration of the Banū Hilāl in the mid 5th/11th century, and of the Sulaym at the start of the 7th/13th century. Let it be stated explicitly that the local Arabic dialect contains no traces of Berber, and that sometimes the nomadic tent is found incongruously pitched on the mountain itself.

The geographers of the Middle Ages show little interest in the massif of Kroumirie in its own right. Their main concern is to describe the itineraries. The first, Ibn Ḥawḳal, who visited the Maghrib in the mid 4th/10th century, tells us that the main highway (*al-ṭarīḳ*) from Tunis to Tabarka passed through Béja (*Ṣūrat al-arḍ*, 76). Al-Bakrī, who was writing in the mid 5th/11th century, tells us that from Béja one would reach Tabarka in three stages, passing through Bādis and Darna (*Masālik*, 56 ʾ/120-2). Al-Idrīsī (mid-6th/12th century) mentions two routes from Tunis to Tabarka, the one passing through Bizerte, and the other branching off after Béja. (*Nuzha*, 84 ʾ). It is clear that this road system follows the routes inherited from ancient times.

We have no precise information regarding urban settlement in the massif during the Middle Ages. It is only just possible to follow the evolution of Tabarka. We have seen that it was a very prosperous place in ancient times. In the 4th/10th century, according to Ibn Ḥawḳal it was nothing more than "an unhealthy village" (*ḳarya wakhima*), infested by scorpions, its only claims to importance being the movement of ships between it and Muslim Spain and its status as a customs station (*op. cit.*, 76). In the 5th/11th century al-Bakrī noted that impressive ruins of ancient monuments were still to be seen at Tabarka, and that the place enjoyed a certain prosperity on account of the activity of its port. In the 6th/12th century, according to al-Idrīsī, it was nothing more than a fortress (*ḥiṣn*), thinly populated and surrounded by gangs of Arab bandits, men with respect for neither law nor religion. Finally, at the start of the 16th century (Leo Africanus, *Descriptum de l'Afrique*, 549) it was nothing more than "an abandoned port".

Today Tabarka (population 4,000), is a port of modest size whose primary function is the export of cork from the massif of Kroumirie, 3-4,000 tons per year. There is also fishing and the limited exploitation of coral, and the town has profited, albeit on a relatively minor scale by comparison with other regions, from the growth of tourism in Tunisia. The most important settlement on the massif is Ain Draham, at an altitude of 800 m., a summer resort and a centre for boar hunting; Fernana, at 475 m., is principally a market-centre, Babouche is little more than a frontier-station controlling the border-crossing into Algeria, at Oued El-Lil, near the hamlet of Ben Mtir, there was constructed in 1955 a dam with a capacity

of 73 million cubic m. to produce Hydro-electric power and to provide Tunis with water. Another dam, at Oued El-Kebir, is in the process of construction. In spite of efforts at re-organisation, settlements continue in the main to be scattered, according to the location of wells and agricultural small holdings. Huts and shacks built of branches have not yet disappeared.

In fact, the massif of the Kroumirie, dependant on a silvo-pastoral economy, is impoverished. The standard of living of the inhabitants is the lowest in Tunisia. The most important source of income is provided by the extraction of cork. The cultivation of tobacco is also moderately profitable. The breeding of cattle, sheep and goats, in which the methods used have not evolved at all in the course of time, provides only a mediocre income. Attempts at improving the cultivation of trees, by introducing apple, pear, and cherry trees to the area, have yielded only very limited results. Products of local craftsmanship—Kroumirie carpets in white, black and beige; wooden kitchen-utensils, embroidery—are not much in demand outside the region and provide employment for a very small number. Finally, let it be added that the hot and sulphurous springs of Bordj al-Hammām, much appreciated from the earliest times for their medicinal properties, have led to the establishment in 1966 of a modern spa resort, built presumably alongside the ruins of the ancient bathe and given the name Hammām Bourguiba. Enlarged in 1973, this resort is attracting an ever growing Tunisian clientele.

(M. Talbi)

KHUMBARADJĪ, bombardier, grenadier (Persian *ḵumbara* "explosive projectile, grenade, mortar bomb", etc.), a term used in the Ottoman military organisation. The bombardiers in the Janissary corps and the *Ḵumbaradjī* unit in the Diebedjī corps are thought to have been first introduced in the 9th/15th century. The *Ḵumbaradjīs* were of two types, the *ʿulūfeli* ones, who were paid, and the *timārli* holders, who formed the majority of them and who served in the fortresses. The *Ḵumbaradjīs* were neglected until the beginning of the 12th/18th century. Khumbaradjī Ahmed Pasha (see AḤMAD PAṢHA SORNEVALI) was appointed by Maḥmud I in 1144/1732 in reorganise the *Ḵumbaradjīs*, under his reorganisation, 301 soldiers from Bosnia were registered as paid *ʿulūfeli*, and thus a separate corps of bombardiers was formed. Each 100 soldiers became an *oda*, and each *oda* was to have 1 captain (*yuzbashī*), 2 *elibashīs*, and 10 corporals (*onbashīs*) (*Taʾrīkh-i Sāḥib Ṣaḥḥāf*, Istanbul 1298, 58 a.h.) In the Ayazma palace at Üsküdar, there were constructed 2 barracks and a factory for the Khumbaradjī corps, and later, their numbers increased to 601, half of whom were *ʿulūfeli* and the other half *timar* holders (for the activities of Khumbaradjī Ahmad Pasha, see also Başbakanlık Arşiv Genel Müdürlüğu, Cevdet tasnifi, Askeri kısım, no. 45137; for the number of *Ḵumbaradjīs* on the strength at 8 Ramaḍān 1152/December 1739, see Cevdet tasnifi Askeri kısım, no. 37483). The *Ḵumbaradjī* corps, which expanded until 1160/1747, was neglected thereafter, but in 1197/1783, during the reign of ʿAbd al-Ḥamīd I, there were attempts to improve it again (Djewdet, *Taʾrīkh*, Istanbul 1309, iii, 85, I. H. Uzunçarşılı, *Kapıkulu ocakları*, Istanbul 1944, ii, 235 f.) During the reign of Selīm III, when the army was organised on western lines, the *Ḵumbaradjī* corps was also included in the plan of reform. According to the decree of 1206/1792, the *Ḵumbaradjī* corps, whether paid or *timār* holders, were to be concentrated on Istanbul and the names of those absent were struck from the pay rolls. Also there were to be 10 *Ḵumbaradjī* soldiers and five assistants (*mülāzim*) for each *Ḵumbara*, so that the whole corps would comprise 500 *Ḵumbaradjī* soldiers and 250 assistants. Out of every 10 soldiers, one was to be considered as the *Ḵhalīfe*, and the other 9 as his aides (*yamaḳs*); out of every 5 *Ḵumbaradjīs* one was to be an officer with the title of *ser-Ḵhalīfe*, and the most notable among the officers was to be *oda-bashbuḍāsī*, another *ʿalemdār* or standard-bearer; beside the chief bombardier (*Ḵumbaradjī-bashī*) who was responsible for the soldiers' discipline there was to be appointed a superintendent (*nāẓır*) from among the state officials (Enver Ziya Karal, *Selim III'ün hatt-ı humayunları Nizâm-ı cedid* (1789-1807), Ankara 1946, 45-6; for the text of the regulation relating to the bombardiers' corps, see Djewdet, *Taʾrīkh*, vi, 356-8). The barracks for their training were built at Haskōy on the Golden Horn shores in Istanbul. A more detailed ordinance for the *Ḵumbaradjīs* was prepared and put into effect in 1211/1797 (Cevdet tasnifi, Askeri kısım, no. 40887). In the move-

*event to dethrone Selīm III, the Ḳapudjubashis sided with the rebels, but when the Janissary corps was abolished in 1241/1826 during the reign of Maḥmūd II, they supported the government action (Djewdet, *op. cit.*, xii, 137 Es'ad, *Ünsī-i ṣafer*, Istanbul 1293, passim). When a new army was established under the title of the *Asākir-i Manṣūra*, the *Khumbaradjī* corps was reorganised and retained within it (Luṭfī, *Taʾrīkh*, Istanbul 1290, i, 159), but was included in the artillery *divanlu* and was to be headed by the *Topdju bashī* (later by the *Topkhāne-i ʿĀmire müshīrliği*). There was one *Khumbara* regiment (*alay*), with two battalions (*taburs*) in existence in 1248/1832 (Başbakanlık Arşiv Genel Müdürlüğü, Rāmil Kepeci tasnifi, no. 6744), and four years later, 109 cavalrymen and 229 foot soldiers, a total of 338 soldiers (Rāmil Kepeci tasnifi, no. 6750).

KHUMM (see SHAHR-I KHUMM)

KHUNĀṢIRA, an ancient fortified settlement situated some 80 km. to the south-east of Aleppo and 100 km. to the north-east of Ḥamāt, on a route through the desert—on the fringes of which it lies—connecting Aleppo with Baghdād. The foundation of the place is attributed to Khunāṣir(a) b ʿAmr of the Banū Kināna (Ibn al-Kalbī-Caskel, Tab 250 and ii, 349), but it is probably older than this. Yāḳūt (s.v.), who cites also al-Khunāṣir b ʿAmr, the representative of Abraha al-Ashram, may be echoing a later legend. In the Umayyad period, this chef-lieu of the *ḥiṣn* of al-Abaṣṣ owed its fame to the fact that ʿUmar b ʿAbd al-ʿAzīz had a stronghold constructed there in which he frequently resided (al Masʿūdī, *Murūdj*, v, 343 — § 2188 Ibn Shaddād, *al Aʿlāḳ al khaṭīra*, ed D Sourdel, Damascus 1953, ii/1, 28, Ibn al ʿAdīm, *Zubdat al-ḥalab*, ed. S. Dahhān, Damascus 1951, i, 42, 46). Ibn Ḥawḳal (*K. Ṣūrat al-arḍ*, 175, tr Kramers Wiet, Beirut Paris 1964, 178), describes the role played by al-Khunāṣira at a time when the state's power had become relaxed and the routes in the interior of Syria were uncertain, so that travellers from Aleppo to Baghdād preferred to journey through the desert where they could enjoy, for a price, the protection of the Bedouins. In 513/1121 it was captured and destroyed by Baldwin II, who carried off to Antioch the gates of the citadel (Ibn al-ʿAdīm, ii, 611), after which the place was abandoned (N Elisséeff, *Nūr al-dīn*, Damascus 1967, i, 179) Nevertheless, there still exists a place there called today Khanāṣir.

KHUNĀTHA BINT BAKKĀR B. ʿALĪ B. ʿABD ALLĀH AL-MAGHĀFIRĪ, wife of Mawlāy Ismāʿīl, sultan of Morocco (1082-1139/1671 1727) She was highly versed in literature and the religious sciences and acted as an adviser to her royal spouse In 1143/1731, during the reign of her sons Mawlāy ʿAbd Allāh, she performed the Pilgrimage and at Mecca, she bought buildings and established them as *awḳāf*, in particular, a house in the Bāb al ʿUmra, one of the gates of the Holy House, which she placed at the disposal of students The masonry of her sumptuous pilgrimage was commemorated by the *shaykh* Abū ʿAbd Allāh Muḥammad b. ʿAlī al Ḥasanī al-Shāṭṭī al Ṭabarī, *muʾadhdhin* of the Maḳām Ibrāhīm, in a splendid poem. She died at Fās in Djumādā I 1159/May June 1746 and was buried in the mausoleum of the Shorfa in Fās al Djadīd.

Her writings include a letter addressed to the people to calm their fears over the neighbouring Turks, and a commentary on the *Fāsiya* of Ibn Hadjar al-ʿAsḳalānī

KHUNDJĪ, FAḌL ALLĀH B. RŪZBIHĀN (860-927/1455 1521), Persian religious scholar and political writer, who as a staunch Sunnī fiercely opposed Shāh Ismāʿīl, left Iran and fled to Uzbek Transoxania.

Khundjī's background, both on the side of his father (of the famous Rūzbihān family, cf. Rūzbihān al-Baḳlī) and of his mother (of the Saʿdī family), made him a member of the wealthy and influential *ʿulamāʾ* of Fārs who were important as *sayurghāldars* and who enjoyed the high esteem and the protection of the Aḳ Koyunlu rulers Khundjī received an exceptional scholarly training, in his native Shīrāz he studied under the great Shāfiʿī Djalāl al-Dīn Dawānī (q.v.), the author of the *Aḳlāḳ i Djalālī*. Dawānī's preoccupation with political thought is likely to have influenced Khundjī's own interest in a practical application of the norms of the *sharīʿa* in a post-Mongol, Sunnī state, as his sophisticated manual of government, *Sulūk al mulūk*—which he wrote shortly before his death on the suggestion of the Uzbek ruler ʿUbayd Allāh Khān in Bukhārā—attests. He was introduced to Ṣūfism by Djamāl al Dīn al-Ardistānī, a follower of the Suhrawardiyya *tarīḳa*. With him he travelled to Egypt and Palestine and he devoted a *manāḳib* biography to him which has not, however, come down to us Khundjī himself joined the Dhahabiyya order, an offshoot of the Naḳshbandiyya, possibly only after he had left Ādharbāydjān and Iran and had settled at the Uzbek court. Khundjī represents the typical intellectual Ṣūfī of his time, for whom *tasawwuf* is an indispensable litter in the academic curriculum. He wrote a commentary on the *Wasāyā* of the great Ḥanafī scholar and Ghudjduwānī (q.v.), one of the great precursors of the Central Asian Naḳshbandiyya. Khundjī eulogised Khwādja Bahāʾ al-Dīn Naḳshband and extensively quoted his doctrines; he sought and cherished the friendship of the disciples of the famous Naḳshbandī popular leader

Khᵛādja ʿUbayd Allāh Aḥrār [q.v.], who had dominated religious and political life in Transoxania in the second half of the 9th/15th century. At the same time, Khundjī fiercely opposed any excess and abuse in mysticism, particularly the doctrine that man can acquire divine attributes through *fanāʾ*. For him, such exaggerated mysticism was as much *irtidād*, apostasy, as the pernicious *ghuluww* of Shāh Ismāʿīl I. Khundjī's paramount concern in all his writings is the protection of the revealed *sharīʿa* from any infringements. In his sharp differentiation between types of mysticism, one is reminded of Ibn Khaldūn's *Shifāʾ al-sāʾil li-tahdhīb al-masāʾil*; an influence from Ibn Khaldūn on Khundjī cannot be ruled out. Khundjī also severely attacked the semi-pagan religious practices of the nomadic Uzbeks, such as the institutionalised pilgrimage to the tombs of local saints, however, he does not seem to have been very successful with these admonitions.

It was from the well-known Mamlūk historiographer and polyhistorian al-Sakhāwī [q.v.] that Khundjī owed his initiation into the sciences of *ḥadīth*, i.e. the discipline for which he acquired particular fame in his century. In Uzbek Central Asia, he became known as the "paragon of the traditionalists" (*zainat al-muḥaddithīn*). He studied law, theology, the Arabic sciences and *ḥadīth* with al-Sakhāwī in Medina; his proficiency is attested by the very complimentary *tarǧama* which al-Sakhāwī, who was normally very critical of his students and composers, included in his biographical dictionary of 9th/15th century celebrities. Among Khundjī's writings on tradition, one might mention an Arabic *risāla* on the big fire in Medina in 886/1481, *Hidāyat al-taḥdīth ilā ḥikāyat al-ḥarīq* (ed. Muḥammad Dānishpazhūh, in *Yādnāma-yi īrānī-yi Minorsky*, Tehran 1969, 77 ff.), which is a methodically exemplary study based on *ḥadīth*.

Khundjī began his public career at the court of the Āḳ Koyunlu Yaʿḳūb b. Uzun Ḥasan, whose attention he had attracted in 892/1487 with a copy of his lost—possibly panegyrical—work *Badīʿ al-zamān fī ḥaṣāʾil Ṣāyy b. Yaḳẓān*. He served as a *ḥāfiẓ* in Yaʿḳūb's *dīwān*, and dedicated to him and his unfortunate son Bāysonḳur his chronicle of the Āḳ Koyunlu house, the carefully-composed *Taʾrīkh-i ʿālam-ārā-yi amīnī* (partial translation by V. Minorsky, *Persia in A.D. 1478-1490—An abridged translation of Fadlullāh b. Rūzbihān Khunjī's Tārīkh-i ʿAlamārā-yi Amīnī*, London 1957; full edition under preparation by John Woods, Chicago). In this work, which is the most important single narrative source on the history of the later Āḳ Koyunlu rulers, Khundjī presents himself as an active courtier, who probably participated in the cabal to overthrow Yaʿḳūb's first minister ʿIsā of Sāva who had tried to re-islamise the fiscal system of the state, thus endangering the *soyurghāls* of Khundjī's affluent *ʿulamāʾ* relatives. The most significant passages of this chronicle are his diatribes against Ismāʿīl's grandfather and father, Shaykh Djunayd and Ḥaydar [qq.v.], whose self styled religious authority he reviled in vitriolic language.

After Ismāʿīl's accession to power in 907/1502, he fled in 909/1503 to Kāshān, where he wrote his refutation of Ibn al-Muṭahhar al-Ḥillī's treatise *Kashf al-ḥaḳḳ wa-nahdj al-ṣidḳ wa 'l-tawfīḳ*, entitled *Ilzām nahdj al-ḥilāf wa-ḥamdī kashf al-ʿiṭāf* (partial edn. and German tr. by I. Goldziher, *Beiträge zur Literaturgeschichte der Šīʿa und der sunnitischen Polemik*, in *SBWAW*, lxxvii (1874), 475-86). There he questions the originality and consistency of Imāmī *fiḳh* and *uṣūl al-fiḳh*, and disqualifies Shīʿī dogmatics as a bad reproduction of Muʿtazilī (that is, in itself reprehensible) *kalām*. A hundred years later, the Shīʿī Ḳāḍī Nūr Allāh Shushtarī (d. 1019/1610), a victim of Djahāngīr's anti-Shīʿī religious policy, again wrote a refutation of Khundjī's treatise. Khundjī's book has had a lasting influence on Shīʿī-Sunnī polemics in the Arab lands, even in the 20th century. Khundjī, who himself held the *ahl al-bayt* in high esteem and wrote poems in praise of the twelve *imāms* (see the text in Muḥammad Amīn Khundjī, *Faḍl Allāh b. Rūzbihān Khundjī*, in *Farhang-i Īrān-zamīn*, iv (1335/1956), 178 ff.) and, on the occasion of a pilgrimage to Mashhad in the company of Shaybānī Khān [q.v.], of the eighth *Imām* ʿAlī Riḍā (see Khundjī, *Mihmān nāma yi Bukhārā*, ed. Manūčihr Sutūda, Tehran 1341/1962, 336 f.), accused the Ṯiḥāḥ Ashʿarī theologians of placing more emphasis on the slander and cursing of the Prophet's Companions, and the *shaykhayn* Abū Bakr and ʿUmar in particular, than on the due veneration of the immaculate family.

On his flight to the east, which also took him to Timūrid and later Uzbek Herāt, Khundjī passed through Tūs, where he was inspired, as he describes in a touchingly impressionistic and intimate account, by the decaying ruins of al-Ghazālī's tomb in the solitude of the steppe (*Mihmān nāma* 332). Al-Ghazālī was Khundjī's revered model whom he quotes extensively. On this occasion Khundjī pledged that he would make an effort to emulate the great master and bring to the land of Khurāsān, in this age of great calamity, a revival of the orthodox religious sciences. He came to Bukhārā, to the court of Shaybānī Khān, the successful Uzbek ruler, who had ended Timūrid rule in Transoxania and Herāt and had conquered most of western Khurāsān. He gained access to and was to dominate the scholarly *madjālis* in which the Khān, himself a cultured man, had scholars discussing questions on religion, particularly on the compatibility of certain policies with the *sharīʿa*, e.g. the issue whether it was permissible for the Muslim Uzbeks to eat the meat of animals slaughtered by their semi-pagan Kazak enemies. Khundjī compiled at the court before 916/1510, perhaps at the suggestion of the ruler himself, the unique "guest book of Bukhārā" (*Mihmān nāma-yi Bukhārā*, see above, partial German tr. by Ursula Ott, *Transoxanien und Turkestan zu Beginn des 16. Jahrhunderts—Das Mihmān-nāma yi Bukhārā des Faḍlallāh b. Rūzbihān Ḥunǧī—Übersetzung und Kommentar*, Freiburg 1973) as a token of gratitude to his host and friend Shaybānī Khān. This work defies any formal classification. Its beautiful language and style evidences his literary talent. We find here, in a loose, more or less chronological sequel, passages on tradition, refreshingly natural descriptions of the scenery of Turkestan in spring and winter, surprisingly personal and autobiographical sketches (Khundjī tells us, unusually, much about himself, e.g. his fits of hypochondria), and straightforward narrative passages. In the latter he e.g. gives an account of the manners of the Kazaks, the cousins and at the same time the most dangerous enemies of the Uzbeks to their north. He devotes special attention to Shaybānī Khān and to his nephew ʿUbayd Allāh Khān, who much later was to lead the Uzbek federation back to political power.

The impelling idea of the *Mihmān-nāma* was the effort to drive Shaybānī Khān into attacking and exterminating the Shīʿī heresy from Iran and reviving the legal order of the *sunna* in Iranian homeland. He unsuccessfully opposed the scheme of defeating the Kazaks in the rear of the Uzbeks first, before marching against the Ṣafawids, whose deeds Khundjī denounced—in a familiar *topos*—as even more abomi-

nable than the unbelief of the Franks, who were *buffūn ab origine*. He expatiates on the apocryphal *ḥadīth* of Ḥārith, both in the *Mihmān-nāma* (95 107) and in a separate *risāla* Ḥārith, the prototype of Shaybānī Khān, saved the true doctrine of Islam from a heretic tribe which slandered and vilified the companions of the prophet and the 4om orthodox caliphs, an unconcealed allusion to Shāh Ismāʿīl, the foe, and his damnable creatures, the Kizilbāsh [*q.v.*]. Khundjī's concept of history is remarkable. He regards the Uzbeks as another manifestation of the nomadic migrations from Inner Asia to the Muslim East, destined to overwhelm Iran and ʿIrāḳ and to bring back justice to these lands, just as the Saldjūḳs had done. He praises the legendary past of the Uzbeks and predicts a glorious future for them. He elevates Shaybānī Khān, beyond the bounds of conventional encomium, to appear as a *mudjaddid* of his age.

The catastrophe of Marw in 926/1520, when Shaybānī Khān was slain in battle by the Ṣafawid army, shattered Khundjī's dreams. His advice had proved fatal for his protector and sovereign. Taking into account the vulnerable personality of the author, which shines through so often in the autobiographical passages of the *Mihmān-nāma*, this turn of events must have had drastic effects on Khundjī. He passed the following two years in hiding in Samarkand which had returned to the rule of the Timurid Bābur, Ismāʿīl's half-hearted ally. In 928/1522 Khundjī suddenly re-appears delivering an eloquent sermon in Samarkand (cf. Zayn al-Dīn Maḥmūd Wāṣifī, *Badāʾiʿ al-wakāʾiʿ*, ed. A. N. Boldyrev, Moscow 1961, i, 45 f.) which had been recaptured by the Uzbeks under ʿUbayd Allāh Khān.

Fulfilling a vow made at the tomb of Shaykh Aḥmad Yasawī in the hour of greatest affliction, ʿUbayd Allāh commissioned Khundjī to compile, as a guide for a righteous Sunnī ruler, the *Sulḳ al-mulūk* (ed. Muḥammad Niẓāmuddīn, Hyderabad/Dn. 1366/1946). In form this didactic work displays features of the Mirror for Princes books; in its topics and in the arrangement however, it belongs to the tradition of the manuals of government, such as al-Māwardī's *al-Aḥkām al-sulṭāniyya*. It represents a highly intelligent attempt to harmonise the norms of the *sharīʿa*, as developed in the first centuries of Islam, with the realities of a tribal confederation, the bodypolitic of which is nomadic *and* Turkish, and not Islamic. Khundjī gives the prescriptions and legal interpretations both according to the Ḥanafī *madhhab* of the Turkish Uzbeks and his own, Persian, Shāfiʿī *madhhab*. He carefully juxtaposes lengthy passages on the legal norms, with numerous quotations from the *ḥadīth* and the canonical textbooks, with highly realistic and sober opinions on the present state of affairs. This can be observed in his treatment of taxation; he appears to equate certain aspects of the canonical *zakāt* duties with the prevailing Mongol *tamghā*-imposts. Even more significant is his chapter on the *ghāzī*. He took his lesson from the catastrophe of Marw. No longer does he call for *ghihād* against the Ṣafawids at all costs, lest the blood of innocent subjects of Ismāʿīl be shed. He even concedes (and thereby joins the mainstream of traditional Sunnī polemics) that the Twelver Shīʿī doctrine does allow for the observance of the precepts of the *sharīʿa*, such as legal marriage contracts, the call to prayer etc. We do not know to what degree Khundjī's enlightened doctrines were taken up by ʿUbayd Allāh, an energetic and pious ruler, who despite the bitter polemics on both sides, kept religious issues largely out of his long controversy with the Ṣafawids over the possession of Khurāsān. His fame lived on at least in Central Asia; the increasing isolation of Transoxania from the Sunnī central lands probably accounts for the little influence which his writings—particularly the *Sulḳ al-mulūk*, which was explicitly directed to a broad audience of Sunnī rulers—exercised outside the Uzbek domains. An effort on political thought in Mughal India is more likely, yet remains to be investigated.

KHUNZAL (self designation, Khunzani, Russian designation, Khunzali Gun(d)zali, Gunzebi, Gunzibtsi, Enzebi, Nakhadi; other designations, Khunzeb, Gunzeb), a numerically small people of the eastern Caucasus. Khunzal forms with Bezheta, Dido, Ginukh and Khvarshi [*qq.v.*], the Dido division of the Avar-Andi-Dido group, of the north-eastern Ibero-Caucasian languages.

According to the Soviet census, in 1926 there were, ethnically, 106 Khunzals, and 129 claiming Khunzal as their mother tongue; in 1933 (estimation by Grande) there were 516 Khunzals. The Khunzals inhabit four *auls* on the upper course of the Avar Koysu in the Tlarata district of the Dāghistān A.S.S.R. They live in the highest and most inaccessible part of mountainous Daghestān. This isolated position has protected the Khunzals from exterior influences, and they have maintained to a great degree many of the patriarchal customs. The Khunzals are Sunnī Muslims of the Shāfiʿī rite. The economy has remained traditional: raising sheep with a transhumance system, agriculture on terraces, and handicrafts (especially leather work).

Khunzal is a purely vernacular language, and the Khunzals use Avar as their first literary and second spoken (sometimes first) language, having Avar as the language in primary education. Russian is the second literary language. They are in fact being culturally and linguistically assimilated by the Avars.

KHURĀSĀN, in day the north-easternmost realm or province of Persia, with its administrative capital at Mashhad [*q.v.*]. But in pre-Islamic and early Islamic times, the term "Khurāsān" frequently had a much wider denotation, covering also parts of what

ace now Soviet Central Asia and Afghānistān; early Islamic usage often regarded everywhere east of western Persia, ie. Dihēl or what was subsequently termed ʿIrāḳ ʿAdjamī, as being included in a vast and ill defined region of Khurāsān, which might even extend to the Indus Valley and Sind. Thus the Armenian geography traditionally attributed to Moses of Khoren depicts Khurāsān as stretching from Gurgān and Kūmis in the southeastern Caspian region to Badakhshān and Tukhāristān on the upper Oxus and Bāmiyān in the Hindū Kush (see J. Marquart, *Ērān šahr*, 47 ff.).

Topographically, Khurāsān in the modern, restricted sense is dominated by a zone of mountain ranges running roughly NW-SE, a continuation of the Alborz chain, and connecting that chain with the Paropanisus and Hindū Kush ranges of northern Afghānistān, in a district such as that of the Kūh-i Binālūd to the north of Nīshāpūr, these mountains rise to 11,200 feet. To the north, open steppes and deserts run down through the Soviet Turkmenistan SSR to the Caspian Sea and the Amū Daryā basin. To the south, there lies an extensive region of landlocked deserts and salt flats, such as the Dasht-i Kawīr, the Dasht-i Lūṭ and the Hāmund basin of Sīstān, but within this region is situated an important upland zone, that of Kāʾin and Birdjand, the early Islamic province of Kuhistān (*q.v.*), one massif of which, the Kūh-i Mūminābād, rises to 9,100 feet. There is thus considerable topographical diversity, but only in the more northerly mountain zone do adequate rainfall, perennial streams and accessible wells permit a relatively flourishing agricultural and pastoral economy; here, the population is quite dense for Persia. Elsewhere, and especially in the more southerly parts, there is usually an oasis pattern of life, with much dependence on wells and on *ḳanāts* or *kanāts*. Also, until the time of Riḍā Shāh Pahlawī at least, there was a substantial minority of nomads in Khurāsān, composed mainly of Gōkleh and Yomut Turkmens, and some Hazāras, Taymūrīs and Baloč. (See for the geographical topographical and demographic background, Admiralty handbook, *Persia*, London 1945, and *Cambridge history of Iran*, i, ed. W. B. Fisher, Cambridge 1968, chs. 1, 2, 5, 18, 19, and for the historical geography of the older period, Marquart, *op. cit.*, Le Strange, 382-432, and *Hudūd al-ʿālam*, tr. Minorsky, § 23).

The present population of Khurāsān is very mixed. There is of course the still important Iranian substratum, but there are extensive other groups, such as Turkmens, Kurds, Baloč, Arabs, and Taymūrīs and Hazāras from Afghanistan. The presence of these varied races is a concomitant of Khurāsān's strategic position as a bastion facing Inner Asia and as a corridor between the steppes and the civilised, settled lands of the Middle East. Pressure on Khurāsān by the Inner Asian nomads has been intermittent from the earliest known times till the later 19th century, when permanent political frontiers were established and the free movement of peoples thus impeded. Khurāsān was therefore the gateway through which Alexander the Great passed to Bactria and India, and conversely, that by which Turkish peoples from the Saldjūḳs onwards and then the Mongols entered Persia. The result has been an ethnic commingling in Khurāsān, especially as the rulers of Persia, whether Persian, Arab or Turkish, have, in pursuance of their historic task of defending their northeastern frontiers, at various times planted colonies of auxiliaries and guards, for political reasons, colonies of peoples like Lurs were settled there as late as the reign of Riḍā Shāh Pahlawī. Nevertheless, whilst the basically Iranian ethnic and linguistic nature of northern Khurāsān at least has been overlaid, this process has not gone so far as in a Turkicised province like Ādharbāydjān, the Kāʾin and Birdjand region, in particular, is still predominantly Persian.

In Sāsānid times, Khurāsān was one of the four great provincial satrapies, and was governed from Marw by an Ispahbadh (MP form *Spāhpat*, [see ISPAHBADH]). Yaʿḳūbī, *Taʾrīkh*, i, 202, enumerates as comprising Khurāsān under the Sāsānids the following districts: Nīshāpūr, Harāt, Marw, Marw al-Rūdh, Fāryāb, Ṭālaḳān, Balkh, Bulkhārā, Bādghīs, Abīward, Gharčistān, Ṭūs, Sarakhs and Gurgān. In times of military expansion, Sāsānid arms pushed beyond Marw, thus Ṭabarī, i, 819, says that Ardashīr Bābakān extended his power over Khwārazm and Tukhāristān. In fact, many local princes must have remained as Sāsānid feudatories, holding offices like those of *marzbāns* or frontier wardens; many of these achieved temporary independence when the Sāsānid monarchy collapsed under the Arab onslaught. To the immediate east of Sāsānid Khurāsān lay the lands of their enemies, the powerful northern branch of the Hephthalite confederation, with its centres in Bādghīs and Tukhāristān; Balādhurī, *Futūḥ*, 405, mentions that there was ruling over Harāt, Bādghīs and Pūshang a local potentate, called by him the *ʿaẓam* or 'mighty one', who must have been a Hephthalite chief. The ancient pattern of hostilities between the rulers of Persia and the Hephthalites was to be taken up by the Arab governors of Khurāsān in the Umayyad period (see further, HAYṬALA).

It was at Marw that the last Sāsānid Emperor, Yazdagird III, made his stand before his betrayal by the local *marzbān* Māhūya and his murder in 31/651. Meanwhile, the Arabs had already appeared in Khurāsān. During ʿUmar's caliphate, forces from Baṣra penetrated as far as Ṭabasayn in the Great Desert, and a determined attack on the province was made in the following reign of ʿUthmān when ʿAbd Allāh b. ʿĀmir b. Kurayz (*q.v.*) was governor of Baṣra (sc. from 29/649 till 35/655). An expedition eastwards was mounted by the men of Kūfa under Saʿīd b. al-ʿĀṣ, travelling along the northern route between the Alburz and the central deserts, and another one by the Baṣran army under ʿAbd Allāh b. ʿĀmir and his lieutenent al-Aḥnaf b. Ḳays, approaching via Kirmān and Ṭabasayn, a route which was for long preferred as an easier and safer route than that of the modern highway and railway connecting Tehrān and Mashhad. It was the Baṣran army which made most progress, and in 31/651 it reduced Nīshāpūr to obedience, receiving the submission of local rulers and former Sāsānid governors in most of the other towns of Khurāsān. In the following year, the last great stronghold of the Sāsānids, Marw al-Rūdh, fell to al-Aḥnaf after fierce fighting, but the local *marzbān*, Bādhām, was confirmed in his office and possessions there in exchange for a relatively light tribute. The permanent pacification of Khurāsān was, however, a protracted process. Local potentates frequently rebelled against Arab control and appealed to outside powers like the Hephthalites, the Western Turks or Tārgesh, the Soghdians, and even the Chinese Emperors (who claimed a vague sovereignty over Central Asia, and with whom certain Sāsānid pretenders took refuge). In particular, the civil war between ʿAlī and Muʿāwiya meant a relaxation in Khurāsān of Arab control, which had subsequently to be re-imposed by ʿAbd Allāh b. ʿĀmir (as appointed governor of Baṣra and the east by Muʿāwiya from 45/661 to 44/664)

and his generals. Thus an important expedition was sent against Sīstān and Zābulistān under ʿAbd al-Raḥmān b. Samura, in the course of which Kābul was reached, and according to Balāḏurī, *Futūḥ*, 409 Balkh was restored to obedience and the great Buddhist shrine of Nawbahār despoiled.

A period of stronger Arab rule came with the appointment in 45/665 of Ziyād b. Abīhi as governor of Baṣra and the east. During the Umayyad age, authority over the extensive provinces of Khurāsān and Sīstān (within which were included at times, as noted above, such distant regions as Transoxania, Farghāna, eastern Afghānistān, Makrān and Sind) was exercised in the first place by the governors of Baṣra, for Baṣran troops, and especially the men of the North Arab or Qays tribes of Tamīm and Bakr, were prominent in the overrunning of the eastern Persian lands, though in the governorship of al-Muhallab b. Abī Ṣufra (78-82/697-702), considerable numbers of that governor's fellow tribesmen of the Yamanī Azd were settled in Khurāsān. Since the turbulent province of ʿIrāḳ always demanded the personal presence and attention of the governors of Kūfa and Baṣra, the latter appointed deputies in Khurāsān and often in Sīstān also, and all these appointments tended to reflect policy trends and personal ascendancies at the heart of the caliphate in Syria. In Ziyād's time, attempts were made, against strong resistance from the local peoples and from the Hephthalites, to reduce Tukhāristān to obedience. This was achieved by al-Rabīʿ b. Ziyād and his son ʿAbd Allāh, in the case of Balkh and the lands up to the Amū-Daryā, in the years after 51/671, but the Hephthalite threat was not finally removed till the governor Kutayba b. Muslim captured and killed their leader Tarkhān Nīzak in 93/710 and took as a hostage the Turkish *Yabghu* (in the Arabic texts, *Dabghūya*) of Tukhāristān. But even after this, Arab rule was far from secure. The Arabs made Marw their military centre, and by the end of the 1st century A.H. were beginning to settle down permanently in the Marw oasis and probably to intermarry with the indigenous Persian population. But their solidarity in the face of external threats from enemies like the Türgesh and Soghdians was adversely affected by the tribal divisions and feuds between the Qays faction, numerically superior and generally dominant, and the Yamanīs, and also by the fact that control by the caliphs was difficult to exercise from distant Damascus. See for events in Khurāsān during the Umayyad period, Marquart, *Ērānšahr*, 47-70, Wellhausen, *Das arabische Reich und sein Sturz*, Eng. tr. *The Arab kingdom and its fall*, esp. ch. 8; Gibb, *The Arab conquests in Central Asia*, Spuler, *Iran*, 5 ff., M. A. Shaban, *Islamic history A.D. 600-750 (A.H. 132)*, Cambridge 1971, idem, *The ʿAbbāsid revolution*, Cambridge 1970 and idem, *Khurasan at the time of the Arab conquest* in *Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1971, 479-90.

The last decades of Umayyad rule were characterised by tribal warfare amongst the Arabs, which, amongst other things, delayed the consolidation of Arab control across the Amū-Daryā in Transoxania; noteworthy in this connection is the prolonged revolt in Tukhāristān from 116/734 onwards of al-Ḥārith b. Surayḡ [*q.v.*]. Large numbers of Arab troops continued to reach Khurāsān, so that according to the historian Ibn Aʿtham al-Kūfī, there were 40,000 Muslims in Khurāsān by 112/731. The last Umayyad governor there, Naṣr b. Sayyār of Kināna (120-30/738-48) [*q.v.*], was faced latterly by the spread of the ʿAbbāsid *daʿwa* or revolutionary movement from its centre at Marw under a political adventurer of consummate skill, Abū Muslim [*q.v.*]. This movement had been organised, from the caliphate of Hishām onwards, under local *nuḳabāʾ* or representatives of the ʿAbbāsid family in Marw, until Abū Muslim took over the leadership there in 128/746, apparently drawing his prime support from the older-established Arab settlers in the district, those whom Ṭabarī and the anonymous author of the *Taʾrīḵ al-Khulafāʾ* edited by Gryaznevich call the *ahl al-ḵhidma* (see Shaban, *The ʿAbbāsid revolution*, 155-8). By 130/748 Abū Muslim was undisputed master in Marw and Naṣr b. Sayyār had been forced to flee towards the west.

Since Khurāsānī support was so decisive in the rise of the ʿAbbāsids, the province enjoyed considerable favour from the early ʿAbbāsid Caliphs, of the aneconnum of the Khurāsānīs as "our party, our helpers and the people of our *daʿwa*" in a *ḵhuṭba* or oration pronounced at Hāshimiyya by al-Manṣūr and reported by Masʿūdī, *Murūḏj*, vi, 203 ff., and the similar sentiments quoted from Ibn Ḳutayba in Muḳaddasī, 293-4. Khurāsānian guards and officials, the *Abnāʾ al-Dawla*, continued to be the mainstay of the régime till towards the middle of the 3rd/9th century, when there began the wholesale adoption of slave troops as the nucleus of the Caliphal army and household (see GHULĀM). Many Khurāsānīs migrated westwards into ʿAbbāsid service, such as the Barmakī family from Balkh (see BARĀMIKA), this process was accentuated when al-Maʾmūn, the former governor in Marw, achieved the caliphate in 198/813 with the support of the Persian east against his brother al-Amīn.

The Ṭāhirids [*q.v.*] governed Khurāsān for the ʿAbbāsids, as faithful servants of the caliphs rather than as autonomous rulers, for some fifty years (205-59/821-73). They were of arabised, Persian *mawālī* stock, one member at whom had been secretary in an ʿAbbāsid *daʿwa* or propagandist in Khurāsān, Sulaymān b. Kathīr al-Khuzāʿī. Ṭāhir Dhu 'l-Yamīnayn was one of al-Maʾmūn's generals, and was in 205/821 appointed governor of Khurāsān and the east. The Ṭāhirids were strenuous supporters of Sunnī orthodoxy and the established Perso-Islamic social hierarchy against Shīʿī and older Iranian religious movements in the Caspian provinces and Transoxania, and also against heterodox currents of Persian socio-religious protest which were racking the Persian countryside at this time (see G. H. Sadighi, *Les mouvements religieux iraniens au IIe et au IIIe siècle de l'hégire*, Paris 1938). Under the Ṭāhirids, Khurāsān blossomed economically and culturally. We find ʿAbd Allāh b. Ṭāhir (213-30/828-45) showing his concern for his province's welfare by his commissioning a book on water rights and the regulation of *ḳanāts*, the characteristic means of irrigation throughout much of Khurāsān; this *Kitāb al-Ḳunūz* was, according to the Ghaznawid historian Gardīzī, still in use two centuries later. Whereas in the early Islamic period Khurāsān had been economically and culturally backward compared with western Persia (cf. E. Herzfeld, *Khorasan: Denkmalsgeographische Studien zur Kulturgeschichte des Islams in Iran*, in *Isl.*, xi (1921), 267 ff.), its agricultural prosperity now increased, according to Yāḳūbī, *Buldān*, 308, tr. 238, the *kharāj* or land tax of Khurāsān under the Ṭāhirids amounted to 40 million dirhams a year. It benefited from commercial traffic connecting ʿIrāḳ and Baghdād with Central Asia and the fringes of the Indian world, and a luxury product like the edible earth of Nīshāpūr was, according to Thaʿālibī, *Laṭāʾif al-maʿārif*, 192, tr. Bosworth, 132, exported all over the

Islamic world, including to Egypt and the Maghrib. Above all, Khurāsān derived much advantage from the transit trade in Turkish slaves, which were a regular component of the annual tribute forwarded to the caliphs by the early ʿAbbāsid governors, the Ṭāhirids, and later, the Sāmānids, and which often fetched high prices; Ibn Ḥawḳal, ii, 452, tr. ii, 437, says that he saw more than 4000 Khurāsān slaves sold for 3,000 dīnārs (Further on the Ṭāhirids, see Bosworth, ch. 3, *The Ṭāhirids and Ṣaffārids*, in *Cambridge history of Iran*, iv, Cambridge 1975, 90-106).

The Ṣaffārid adventurer from Sīstān, Yaʿḳūb b. Layth, overthrew Ṭāhirid rule in Khurāsān, entering their capital Nīshāpūr in 259/873, and in the ensuing years, Khurāsān was fought over by various contending generals, until the Sāmānid *amīr* Ismāʿīl b. Aḥmad [*q.v.*] defeated ʿAmr b. Layth in 287/900 and incorporated Khurāsān into the Sāmānid dominions. Under what is described in the sources as the beneficent rule of the Sāmānids, Khurāsān continued to be within the mainstream of Sunnī religious orthodoxy and culture. It had become already under the Ṭāhirids a vigorous centre of Arabic literature and of Sunnī legal and religious scholarship. There is a large representation of Khurāsānī scholars in such literary biographical works as Thaʿālibī's *Yatīmat al-dahr* and the continuations of Bākharzī and Iṣfahānī. Khurāsānī theologians and traditionists were prominent in Sunnī, especially Shāfiʿī and Ashʿarī, learning, and in such theological and philosophical movements as these of the Muʿtazila and Karrāmiyya [*q.v.*]. The extremist Shīʿī Ismāʿīlī sect had pockets of support in the east, and Khurāsānī ascetics and mystics played important rôles in the development of Ṣūfism. It is, of course, well known that Khurāsān and the eastern Iranian world in general had a crucial part in the renaissance of the New Persian language and its literature from the 3rd/9th century onwards, see Browne, *LHP*, i, 445 ff., and Ryp̈ka *et alii*, *History of Iranian literature*, 233 ff.

As the Sāmānid amirate disintegrated in the later 4th/10th century under external attack from the north and internal revolt by unruly Turkish generals, Khurāsān passed under the rule of the Turkish Ghaznawid dynasty [*q.v.*]. In 384/994 the founder of the line, Sebüktigīn, had been given the governorship of Balkh and the eastern parts of Khurāsān, and in 388/998 his son Maḥmūd consolidated his power in the whole of the province, which was to remain under Ghaznawid control for forty years. The riches of Khurāsān did much to finance the successful Ghaznawid war machine, but the financial exactions of Ghaznawid officials and a series of disastrous famines made the Sulṭāns' rule there unpopular. Hence Nīshāpūr and the other towns were not averse during the period 428-31/1037-50 from surrendering to the incoming Oghuz nomads led by the Saldjūḳ family; and the Saldjūḳ victory at Dandānḳān [*q.v.* in Suppl.] in 431/1040 sealed the fate of Ghaznawid rule over those parts of greater Khurāsān to the west of Bādghīs-Hirāt and the central Afghān mountain massif.

Under the Saldjūḳ Sulṭāns, Khurāsān was an important province of their empire, even though the founder Toghrïl Beg soon moved his capital westwards from Nīshāpūr to Rayy and Iṣfahān. Khurāsān and the east were initially ruled by Toghrïl's brother Čaghrï Beg Dāwūd, whose son and grandson Alp Arslan and Malik Shāh were to raise the Saldjūḳ empire to its apogee. In general, firm rule brought peace to the towns of Khurāsān. This was temporarily ended in the uncertain years after Malik Shāh's death in 485/1092—the local historian of Bayhaḳ or Sabzawār, Ibn Funduḳ, comments on the recrudescence of sectarian strife and the activities of the para-military *ʿayyār* groups in the town—but stability returned under the long reign of Sandjar, who was firstly governor in the east and then Sulṭān for a total of over sixty years. The intellectual and cultural vitality of Khurāsān remained unimpaired, and four of the original nine *madrasas* to colleges founded by the great Vizier Niẓām al-Mulk were, according to his biographer Subkī, in towns of that province, sc. in Nīshāpūr, Balkh, Harāt and Marw. One effect of the Oghuz migrations into Persia was the arrival of Turkman groups in northern Khurāsān, where suitable pasture was to be found for their flocks. These nomads remained an unassimilable element of Saldjūḳ Khurāsān, and ill neglect of their interests by the central government drove them into revolt towards the end of Sandjar's reign, leading to the Sulṭān's own capture by the Oghuz and effective deposition in 548/1153.

In the decades preceding the Mongol invasions, post-Saldjūḳ Khurāsān was held by various Oghuz tribal leaders and by former Saldjūḳ generals, and was then fought over by the Ghūrids and Khwārazm-Shāhs [*qq.v.*], until the Shāh ʿAlāʾ al-Dīn Muḥammad finally overthrew his Ghūrid rivals in the opening years of the 7th/13th century (See, for the history of Khurāsān in the Ghaznawid and Saldjūḳ periods, Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, part II and III, and idem, in *Cambridge history of Iran*, iv, ch. 5, v, ch. 2).

The Mongol hordes of Čingiz Khān, driving the Khwārazm Shāh Djalāl al-Dīn before them, appeared in Khurāsān in 617/1220, and seized control of its towns. Whilst not all of the notorious massacres of the Mongols may have been perpetrated at the original surrender of some towns, but at the time of subsequent revolts, Marw and Nīshāpūr, which resisted fiercely in 618/1221, suffered appallingly. Ibn al-Athīr, xii, 256, places the number of dead in Marw at 700,000, and Dīnawarī, tr. Boyle, i, 263 4, has the figure of 1,300,000 for the Marw oasis as a whole. Even allowing for statistical exaggeration, the Mongol invasions undoubtedly devastated Khurāsān to a far greater degree than the Oghuz incursions of the 5th/11th century had done, as is amply demonstrated in the accounts of European and Muslim travellers and geographers of the following period of the Il-Khānids, e.g. those of Marco Polo, Ibn Baṭṭūṭa, Ḥamd Allāh Mustawfī, etc. As well as the population losses and destruction of settlements, the increased proportion of Turkish and Mongol nomads in the province accentuated the existing trend from Saldjūḳ times towards pastoralisation and the decline of agriculture; moreover, the arbitrary Mongol system of taxation bore especially heavily on cultivators and landholders, according to I. P. Petrushevsky, in *Camb. hist. of Iran*, v, ch. 6. Certainly, Khurāsān never recovered its cultural and intellectual position within Persia as a whole, the Il-Khānids made their centre in western Persia, and Dihbāl, Āḏarbāydjān and ʿIrāḳ became the loci of political activity and artistic and literary life. The towns of Khurāsān continued to suffer from the warfare between the Il-Khānids and the Čaghatayids, and a place like Harāt only became a major centre with the florescence of the Timūrids in the 9th/15th century.

After the death of the Il-Khānid Abū Saʿīd in 736/1335, various local dynasties arose in Persia, including in Khurāsān the Karts or Kurts and the Sarbadārids [*qq.v.*] The Karts arose in Harāt during the 7th/13th century, and successive rulers with the

title of *malik* or king retained power there till the deposition by Timūr of the last ruler, Ghiyāth al-Dīn Pīr ʿAlī, in 791/1389. The Sarbadārs stemmed from Bayhak, and in the middle years of the 8th/14th century they held this region of western Khurāsān, extending to Dāmghān and even holding Nīshāpūr temporarily, till they too were extinguished by Timūr in 783/1381. Timūr made his own capital at Samarkand in Transoxania, but his son Shāh Rukh became governor of Khurāsān for his father in 799/1397 and ruled there for fifty years until his death in 850/1446-7. Towns like Harāt and Marw were rebuilt, and a considerable degree of prosperity restored, and under the Timūrid prince Husayn b. Manṣūr b. Bāysunghur (875-911/1470-1506) [*q.v.*], Harāt and Khurāsān enjoyed a period of political stability and of brilliant cultural and artistic life.

In the early 10th/16th century, Khurāsān was overrun by the Özbeg chief Muḥammad Shaybānī Khān and his hordes, but three years later, in 915/1510, the Ṣafawid Shāh Ismāʿīl I killed the Khān and incorporated Khurāsān into the Ṣafawid dominions. The Ṣafawids were, however, unable to hold Balkh, and lost it permanently in 922/1516. Warfare with the Özbegs remained endemic in northern Khurāsān, with the possession of frontier towns like Marw oscillating between the two powers. Noteworthy in the Ṣafawid period—one in which Persia became to a majority a Shīʿī land—was the rise in importance of the great shrine of the *Imām* ʿAlī al-Riḍā [*q.v.*] at Mashhad, originally the village of Sanābād, where both the eighth *Imām* of the Shīʿa and the Caliph Hārūn al-Rashīd were buried. The shrine was already splendidly ornamented in Il-Khānid times, as Ibn Baṭṭūṭa noted (*Riḥla*, iii, 77-9, tr. Gibb, iii, 582-3), and was increasingly enriched by the Timūrids and Ṣafawids. Shāh ʿAbbās I endeavoured to encourage the Shīʿī pilgrimage to Mashhad, since the holy places of ʿIrāḳ, such as Nadjaf and Karbalāʾ, were often in Sunnī, Ottoman hands. In the comparatively peaceful period of Ḳādjār rule, Mashhad gradually attained its modern position as the principal city of Khurāsān.

With this resurgence of tribalism and the political upheavals of the 12th/18th century, Mashhad became Nādir Shāh's capital, and he made his military redoubt in the massif of Kalʿat-i Nādirī in northern Khurāsān, but after Nādir's death in 1160/1747, the eastern parts of Khurāsān passed for a while into the control of the Durrānī Afghān chief Aḥmad Shāh [*q.v.*], and by 1163/1750, Balkh, Harāt, Mashhad and Nīshāpūr were all in his possession. But the blind, half Ṣafawid grandson of Nādir, Shāh Rukh, had meanwhile been raised to power in Khurāsān, and remained there as nominal ruler at least till his death in 1210/1796.

Once Āghā Muḥammad Ḳādjār had made firm his power over the whole land of Persia, control over Khurāsān was fully restored to the central government, now installed in Tehran. But the depredations of the Özbegs and other Turkmens continued to make life in northern Khurāsān chronically insecure, the progress of commerce and agriculture was inhibited, and many Persians were carried off and enslaved by raiders from the Central Asian emirates. These causes of friction were only ended by the Russians' virtual annexation of Khīwa in 1873 and the crushing of the Teke Turkmens at Gök Tepe in 1881. After this last victory, the Persian government was not strong enough to withstand Russian pressure, and the Russians annexed the Marw oasis in 1884. Relations with the amīrs of Afghānistān had meanwhile continued to be bad, with contention over possession of Harāt. The town was besieged to vain by the Persians in 1838, and Nāṣir al-Dīn Shāh fought a brief war with Britain in 1856-7 over a temporary Persian seizure of Herat. After this, overt Persian attempts on these districts of western Afghānistān ceased, though disputes over the demarcation of the boundary between Khurāsān and Afghānistān were not finally settled till the definitive demarcation of the whole boundary as far south as Sīstān in 1934-5.

Khurāsān and the provincial capital Mashhad are now fully connected with Tehran by a metalled road, a railway and air services. The present population of the province (1966 census) is 4½ millions, with Mashhad now the third largest city of Persia with 409,000 inhabitants.

Bibliography: This is largely given in the article, but note for the earlier period the flourishing genre of local histories, e.g. of Bayhak, Nīshāpūr, Balkh and Harāt (see Storey, i, 353 ff.). The political and social history of the province must be largely extracted from such general works as the books of Spuler, *Iran* and *Die Mongolen in Iran*, Sykes' *History of Persia*, the relevant chapters of the *Cambridge history of Islam*, i, and above all, the published and forthcoming volumes iv viii of the *Camb. hist. of Iran*. For the 19th and early 20th centuries, the works of European, mainly British, travellers, officials, consuls, etc. are a prime source, e.g. those of J. B. Fraser, C. Metcalfe MacGregor, the Hon. G. C. Napier, the Hon. G. N. Curzon, C. E. Yate, P. M. Sykes, W. Ivanow, etc.

(C. E. Bosworth)

Banū KHURĀSĀN, the dynasty which, taking advantage of the anarchy initiated in Zīrid Ifrīḳiya by the Hilālī invasion, governed Tunis 454-532/1062-1128 and 543-554/1148-59. When leaving Kayrawān and Tunis in the protection of a Ṣanhādjī chieftain Khalīfa b. Maymūn. The latter seems to have exercised no authority at Tunis, which was probably evacuated by the Ṣanhādja regrouping at al-Mahdiyya or in Hammādid territory, and independent Ibn Khaldūn states that it fell prey to a Hilālī *amīr*, a son-in-law of al-Muʿizz b. Bādīs, ʿĀbid b. Abī ʾl-Ghayth who reduced the inhabitants to slavery; this episode, undated, seems to have been no more than an isolated raid of which the effects were short lived. According to the same author, a mercenary leader, Kahrūn b. Ghannāsh, who became governor of Tunis, was banished from there because of his bad administration, subsequently he made a stronghold for himself in the arches of the aqueduct at Manzil Dahmūn, a refuge of brigands which the Tunisians succeeded in destroying with the aid of the Riyāḥid *amīr* Muḥriz b. Ziyād. One imagines the Tunisians paying ransoms and tribute to the nomads the rulers of the plains, but wishing to be protected against these marauders.

In the West, the Hammādid principality, still in tact, and indeed reinforced by the downfall of the Zīrid state, passed into the hands of an energetic, far-sighted sovereign, al-Nāṣir (454/1062). His power was quickly consolidated by the rallying to his side of Sfax and Kastīliya. It was only to be expected that Tunis should have considered doing the same thing, and accordingly a delegation of Tunisian *shaykhs* went to the Kalʿa to ask the Hammādid prince to choose them a governor. According to Ibn ʿIdhārī, al-Nāṣir prudently no doubt, contented himself with advising them to choose for themselves a *shaykh* who would govern them whilst he confined himself to observing them, taking his time to study

the situation (*yakūnu bi-amrihim khalalu mā yanzuru ʿalayhim*); they chose one of the leaders of their own community but he refused, and it was then that ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān took power in the name of al-Nāṣir. According to Ibn Khaldūn, ʿAbd al-Ḥaḳḳ was appointed by the Ḥammādid immediately following the reception of the embassy of the Tunisian *shaykhs*. This historian, who makes no mention of the election of a Tunisian *shaykh*, proposed initially by al-Nāṣir, seems to have condensed his account of events, possibly there was a second deputation which returned with the designation of the Khurāsānid, or even with the governor in person.

Abū Muḥammad ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān, a native of Tunis, was quite probably, says Ibn Khaldūn, of Sanhādjī origin, without this affirmation one would have to postulate for him a Khurāsānī descent, in Tunisian dialect, Khurāsān became Khrisān (the cupola of Sīdī Bū Khrisān)

He bore only the title of *shaykh* and ruled the city assisted by a council of *shaykhs*, a kind of senate partaking, no doubt, of the nature of the Berber *djamāʿa*. Nothing more is known of the institutions, certainly of a rudimentary nature, of this oligarchic republic. ʿAbd al-Ḥaḳḳ showed himself a good administrator, knowing how to assert himself and gain the sympathy of the population. To put an end to the brigandage of the Hilāl Arabs, he had the wisdom to agree to pay them an annual tribute (*sidra maʿlūma*); this *modus vivendi* probably made conditions favourable for the exploitation of neighbouring lands, for the provision of food supplies, for industry, and commerce.

The Ḥammādid suzerainty seems to have been no more than nominal, besides, al-Nāṣir was occupied warding off the Hilāl peril and in 457/1064-5, at Sabība, he suffered a defeat as great as that of the Zīrid at Haydarān in 443/1052. Tamīm b. al-Muʿizz b. Bādīs took advantage of his cousin's defeat to attack Tunis (458/1065 f), after a siege lasting fourteen months, ʿAbd al-Ḥaḳḳ submitted to him and consigned his suzerainty, but the authority of the Zīrid of al Mahdiyya seems to have been exercised in Tunis no more than had been that of the Ḥammādid of Kal'a. ʿAbd al Ḥaḳḳ governed for a further thirty years until his death (488/1095) His son ʿAbd al-ʿAzīz succeeded him. One may suppose, on the basis of an inscription on the foundation of a mosque dated Ramaḍān 485/5 Oct. - 3 Nov. 1092 where he is called *al-shaykh al-adjall* (the most venerable *shaykh*) that before his father's death he bore at least some of the authority. In addition, the frieze on the cupola of Sīdī Bū Khrisān says that this mausoleum was built in Djumādā II 486/29 June - 27 July 1093 by "the victorious power" (*al-sulṭān al-manṣūr*). Abū Muḥammad ʿAbd al ʿAzīz and Abū ʾl-Ṭāhir Ismāʿīl, both of them sons of *shaykh* ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān; from this we may suppose that at this date, ʿAbd al Ḥaḳḳ, doubtless aged and sick, had handed over the reins of government to his two sons. It seems that ʿAbd al ʿAzīz, whom Ibn Khaldūn accuses of "a feeble spirit", at least to a certain extent shared power with his brother Ismāʿīl.

Tunis must have broken with the Zīrid of al-Mahdiyya, since the sources state that Tamīm attacked and took it again in 491/1097-8.

The epitaph has survived of *shaykh* Abū Muḥammad ʿAbd al-ʿAzīz b. ʿAbd al Ḥaḳḳ b. Khurāsān who died on 5th Muḥarram 499/27th Sept. 1105, also that of the *amīr* Abū ʾl-Ṭāhir Ismāʿīl b. ʿAbd al-Ḥaḳḳ b. Khurāsān, who died on 12th Radjab 500/8th March 1107; so the latter must have reigned from 5th Muḥarram 499 to 12th Radjab 500 with the title of *amīr*. Had he seized power? Had he aimed a blow at the power of the council of elders? Whatever the explanation, his nephew Aḥmad b. ʿAbd al-ʿAzīz put him to death and his son Abū Bakr b. Ismāʿīl fled to Bizerta

Aḥmad b. ʿAbd al-ʿAzīz b. ʿAbd al-Ḥaḳḳ b. Khurāsān showed himself a dictator, abolishing the authority of the *shaykhs*, many of whom were exiled to al-Mahdiyya and elsewhere, and he sought the favour of the jurists with whom he liked to surround himself. He built the *Ḳaṣr* (palace) of the Banū Khurāsān, surrounded Tunis with ramparts and obtained from the Hilāl Arabs a guarantee to watch over the safety of travellers. Ibn Ḥamdīs wrote a panegyric of this prince, considered by Ibn Khaldūn the most remarkable of his family.

In 510/1116-17 he was obliged to submit to ʿAlī the Zīrid of al-Mahdiyya who sent an army to besiege Tunis, but in 514/1120-1 it was al-ʿAzīz the Ḥammādid of Bougie who laid siege to Tunis and imposed this suzerainty upon it. Finally, in 522/1128, a general of the Ḥammādid Yaḥyā b. al-ʿAzīz attacked Tunis Aḥmad b. ʿAbd al-ʿAzīz went out of the city, surrendered and was banished, with all his family, to Bougie where he died. Tunis was entrusted to Ḥammādid governors who continued to rule there until 543/1148-9.

There followed for the Tunisians a period of anarchy; they were threatened simultaneously by the Normans—already masters of Djerba (538/1235), of Tripoli (541/1146), of Gabès (whose chieftain, a usurper, recognized them in about 542/1146-7), of al-Mahdiyya, of Sousse and of Sfax (these three taken in the same year, 543/1148)—and by the Ḥammādids of Bougie who were making preparations to subjugate them unconditionally, in addition, they were harassed by Muḥriz b. Ziyād, the Riyāḥid *amīr* of La Malga (al-Muʾallaḳa, between Tunis and Carthage) They took as their chief the *ḳāḍī* Abū Muḥammad ʿAbd al-Muʾmin, one of the *sudan* Abū ʾl Ḥasan With his approval, they made an astonishing *coup-fourré*, deciding to appoint Muḥriz b. Ziyād as their king In reply to their invitation, the Riyāḥid approached Tunis, the *ḳāḍī* and the *shaykhs* came in procession to meet him; but a cry taken up by the crowd, "No obedience to an Arab or a Ghum (sc. a Tuscoman)", caused the enterprise to fail. It seems that the ruling class, having acted out of realism or for the defence of their own interests, were foiled by public opinion. Muḥriz b. Ziyād made his way back to La Malga where he was joined by the *ḳāḍī* who had been chased out of Tunis.

In order to put an end to the civil war, the Tunisians decided on a restoration of the Banū Khurāsān. A deputation went to Bizerta to fetch Abū Bakr b. Ismāʿīl b. ʿAbd al-Ḥaḳḳ who was hauled up at night over the city walls of Tunis in a wicker basket. This secret entry, which is not adequately explained by the closure at night of the city gates, suggests that the population was not unanimous in the decision to adopt him as *sadr*. Seven months later he was betrayed by his brother's son, ʿAbd Allāh b. ʿAbd al ʿAzīz who seems to have had him drowned. ʿAbd Allāh b. ʿAbd al-ʿAzīz b. Ismāʿīl b ʿAbd al-Ḥaḳḳ remained in power for about ten years. He killed the *ḳāḍī* Abū ʾl-Faḍl Djaʿfar b. Ḥalwān, his son and the son of his sister Ibn al-Bannāḥ, fearing lest they conspire against him with the Arabs, doubtless with Muḥriz b. Ziyād.

Nevertheless, it was thanks to a unit commanded by Muḥriz b Ziyad, which had penetrated into Tunis,

that the inhabitants, under siege by Abū Muḥammad ʿAbd Allāh, son of the Almohad caliph ʿAbd al-Muʾmin, made a successful sortie and forced the enemy to retire. On the last day of Djumādā I 558/10th July 1257, ʿAbd Allāh b. ʿAbd al-ʿAzīz reported to the archbishop of Pisa the victory which he had just won over the Muwaḥḥids, in a letter preserved in the archives of Pisa confirming the verbal terms of a commercial treaty between Pisa and Tunis.

He was succeeded by his nephew ʿAlī b. Aḥmad b. ʿAbd al-Azīz b. ʿAbd al-Ḥakk b. Khurāsān (in about mid-February 1159). But five months later (about mid-July 1159), Tunis was laid under siege by a formidable army and fleet under the caliph ʿAbd al-Muʾmin, and surrendered. A deputation of twelve (or seventeen) *shaykhs* went to ʿAbd al-Muʾmin to ask for peace. After an initial refusal, and long equivocation, he accepted. In the list of these *shaykhs*, unfortunately incomplete, we notice nine names — three brothers, the Banū ʿAbd al-Sayyid, Hāshimī *sharīfs* (the epitaph of another member of this line, dating from 598/1215, is qualified by *fakīh* and *imām*), and two sons of Manṣūr Ismāʿīl and their paternal cousin, so we are dealing here with an oligarchy, and, once more, it is making terms with the enemy, in fact, ʿAbd al-Muʾmin promised to respect the lives, families and goods of the *shaykhs* who had come to negotiate, in return for their readiness to surrender, but he made the same guarantees to the other inhabitants of the city and environs only after they had handed over to him half of their goods.

The last of the Khurāsānids, ʿAlī b. Aḥmad, had not only to surrender half of his goods, but also to accept exile in Bougie, once these conditions were accepted, he left Tunis that same day, but died on the road.

Tunis has kept some relics of the Banū Khurāsān, sc. the mosque of the Dār al-Kasr (ca. 499/1106), which probably adjoined their palace (no longer in existence), and not far from Sīdī Bū Khrīsān street, a *Kubba*, their funeral mausoleum in the centre of a necropolis excavated by S. M. Zbiss, to whom we owe the establishment of an epigraphic museum and the publication of a number of tomb-inscriptions of the men and women of this family.

Bibliography exhaustive references in H. R. Idris, *La Berbérie orientale sous les Zirides*, i-ii, Paris 1962, index, 542. (H. R. IDRIS)

KHURĀSĀNĪ, Āḳhūnd Mullā Muḥammad Kāẓim (1839-1912), a distinguished Shīʿī *mudjtahid* of Iran, born in Tūs he received his early education in Mashhad, pursued traditional studies including natural philosophy in Tehran in 1860, and moved to Nadjaf in 1861 for further studies. He studied under Mīrzā Ḥasan Shīrāzī, the then sole *mardjaʿ-i taḳlīd* of the Shīʿī world. After the latter's death (1894), Khurāsānī was recognised as the legitimate successor to Shīrāzī. He proved to be a resourceful teacher, lecturing daily before more than 1,000 students of *uṣūl al-fiḳh* and producing as graduates of his courses some 120 *mudjtahids* (Mahdī al-Mūsawī, *Akwān al-anḍār*, i, Nadjaf 1928, 147 ff). He established three religious (*ibid*, 148) and some modern schools in ʿIrāḳ (ʿAbd Allāh al-Fayyāḍ *al-Thawra al-ʿIrāḳiyya al-kubrā sanat 1920*, Baghdād 1967, 82 ff.). Since 1906 Khurāsānī's name has been associated with the Persian Constitutional Revolution as one of its most influential supporters. He and two other *mudjtahids*, Ṭihrānī and Māzandarānī, issued numerous *fatwās* and manifestos, sent many telegrams, wrote many letters to responsible authorities in Persia and Turkey, and organised two uprisings. Led by Khurāsānī, the Persian *ʿulamāʾ* of ʿIrāḳ intensified their campaign after Muḥammad ʿAlī Shāh's abrogation of the constitution in 1908, and in a *fatwā* they declared that obedience to the Shāh and the payment of taxes to his government were un Islamic (Aḥmad Kasrawī, *Tārīkh-i Mashrūṭa-yi Īrān*, Tehran 1952, 730) and strongly condemned their clerical opponent Shaykh Faḍl Allāh Nūrī (*ibid*., 528). Khurāsānī's activities were not favoured by ʿAbd al-Ḥamīd II of Turkey. Thanks to the Young Turks' Revolution of 1908, however, there appeared a degree of mutual co-operation between the *ʿulamāʾ* and the Turks, and Khurāsānī openly supported the Turkish Revolution. He even threatened to dethrone ʿAbd al-Ḥamīd upon the latter's counter revolution in 1909 (Sayyid Muḥammad Ḥasan Nadjafī Kūfānī, *Siyāḥat-i sharḳ*, Mashhad 1972, 474 f).

Living in an Ottoman province, ʿIrāḳ, Khurāsānī and other Persian constitutionalists seem to have been led to an agreement of expedience with the Young Turks. We see Khurāsānī, for instance, sanctioning the Pan-Islamic policy of the Young Turks (*RMM*, xiii (1911), 385 f) and at times, despite his being a Shīʿī *mudjtahid*, calling the Ottoman sultan "caliph" (al-*Irfān*, i (1909), 140-1, Nūrī al-Dīn-Zāda, *Ḥudjdjat-i Rāh-i Īrān*, Baghdād 1913, 45). In support of the sultan, he also declared a holy war against the Italian invasion of Libya in 1911 (al-*ʿIlm*, ii (1912), 246-7, 290-7, 338-42). In return, Khurāsānī appealed to the sultan to interfere in favour of the Persian constitutionalists, once in 1909 when he was successfully working towards the dethronement of the foreign-backed Shāh (*al-Irfān*, i (1909), 140-1), and another time when, upon the Anglo-Russian invasions of Iran in 1911, the deposed Shāh vainly attempted to regain his throne (*Ḥudjdjat-i Rāh*, 45-6). In both cases Khurāsānī, leading many of his supporters, set out for Persia to mobilise the masses. the first uprising was stopped because of the Shāh's downfall (*al-Irfān*, i (1909), and iv (1912), 36-40), and the second one was postponed because of Khurāsānī's sudden death (*Ḥudjdjat-i Rāh*, 58-67).

Despite the allegation concerning Khurāsānī's ties to the Oudh Bequest (Maḥmūd Maḥmūd, *Tārīkh-i rawābiṭ-i siyāsī-yi Īrān wa Inglīs*, Tehran 1953 vi, 1741-5), he does on the whole have favoured the British. Since the Russian troops were suppressing the Persian Revolution and the British were thought to have supported it, Khurāsānī sent delegates to the British Consulate in Baghdād seeking co-operation (Abdul Hadi Hairi, *Shīʿism and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977), though this proved useless because of the British commitment to the 1907 Convention. From then on, we see Khurāsānī in an equal opposition to the two powers. He expressed his deep mistrust in the Shāh, and paid no attention to the intercession of the two powers under whose pressures the Shāh had to promise the re-establishment of the Persian constitution; Khurāsānī only insisted upon the deposition of the Shāh and the declaration of a genuine constitutional régime (Hairi, *Why did the ʿUlamāʾ participate in the Persian Constitutional Revolution of 1905-1909?*, in *WI*, xvii (1976-7)

AL-KHURAYMĪ [see ABŪ YA'ḲŪB AL-KHURAYMĪ]

AL-KHŪRĪ, Fāris (1875? 1962), a Syrian politician, a Christian, who played a very important role over a period of almost half a century. Born in a Lebanese village on the slopes of Mount Hermon, he studied at Ṣaydā then at the school in Beirut which was later to become the American University, while also working as a teacher. When family affairs took him to Damascus in 1899, he took up residence in the Syrian capital, learned Turkish and French and was employed as an interpreter in the British consulate. His political career began in 1909 when he joined the Committee of Union and Progress. As legal adviser to the municipality of Damascus (1910-38) he was elected a member of the municipal council of the town in 1914, took part in 1928 in the Council of State which met in Istanbul, participated in the creation of the Arab Academy, and then occupied a number of important political offices: Minister of Finance in 1920, of National Education in 1936, President of the Chamber of Deputies in 1943 and then from 1946 to 1949, and President of the Council of Ministers in 1944-5 and in 1954-5. At the same time, he was President of the Bar of Damascus (1920-36), for a short time Professor of Law (1922), a founder member of the People's Party (1925), then of the Nationalist Bloc (*al-Kutla al-Waṭaniyya*, 1928), and was a member of the delegation which negotiated with France the Treaty of 1936. After the war he was appointed Syrian delegate to the United Nations, and presided over the Security Council in 1947 and 1948. He retired from active life in 1955 and died on 2 January 1962.

Fāris al-Khūrī was a calm, level-headed man whose essential aim was to achieve the supremacy of justice. He was a man of great culture and erudition, and his powers of oratory were widely recognised. After the beginning of this century he took an interest in events outside the Arab world and derived from them the inspiration for his literary, more precisely his poetic, production, for this man of politics was also a poet. His classical background gave him the idea in 1898 of preparing an anthology entitled *Shadhūr al-dhahab fī luġaṭ al-ʿArab* which has remained unedited, but he continued subsequently to compose verses, of which the total number is close to 2,000. His poetry is neo-classical in style and comprises a number of *ḳaṣīdas* on various events, notably on the Russo-Japanese War, panegyrics and obituary tributes dedicated to his friends or to distinguished personalities, a single *ḥiǧāʾ* (of sultān ʿAbd al-Ḥamīd II, which he later regretted), and some love poems, including three *muwashshaḥāt*, another product of his classical education is a *taḵhmīs* of the *nūniyya* of Ibn Zaydūn [*q.v.*]. He also found the time, in spite of his many commitments, to write two legal works: a *Muḏakkar fī ʿilm al-maḥkama al-shariʿiyya* (1924, 1937) and the *Uṣūl al-muḥākamāt al-shariʿiyya* (2nd ed. 1956).

Bibliography. In addition to the archival information held by the family, whose material is unedited, there have been two monographs on Fāris al-Khūrī: Ḥannā al-Khabbāṣ and Djurdj Ḥaddād, *Fāris al-Khūrī*, Beirut 1954, and Muḥammad al-Farḥānī, *Fāris al-Khūrī wa-ayyāmu la hawā*, Beirut 1964. See also *Cahiers de l'Orient Contemporain*, Paris, i-xxxii (1945-55), index; Nasīm Sh. al-Khūrī has presented at the Lebanese University in 1973 a *Dīwān Fāris al-Khūrī* containing all of his poetic work which is accessible, together with a detailed bibliography, this work should be published. (ED.)

AL-KHURMA, an oasis in western Saudi Arabia situated at lat. 21° 54′ N and long. 42° 2′ E, which became prominent in Arabian politics during the first quarter of this century. The oasis lies in the middle reaches of Wādī Taraba or Turaba (also shown on maps as Wādī Subay'). The companion oasis of Taraba [*q.v.*], capital of the tribe of the Bukūm, is farther up the valley about 75 km. to the south-west. Another 75 km. downstream from al-Khurma the valley passes by the wells of al-Kunsuliyya and then ends at 'Irḳ Subay', whose sands keep the floodwaters from joining the main drainage system emptying into Wādī l-Dawāsir [see DJAZĪRAT AL-ʿARAB]. The oasis is close to the northern tip of Ḥarrat Nawāṣif, the southern part of which is called Ḥarrat al-Bukūm. The road from al-Khurma to al-Ṭāʾif runs south of west over the range of Ḥadā, often taken as marking the eastern geographical limit of al-Ḥiḏjāz [*q.v.*]. About 80 km. north of al-Khurma is the ancient gold mine of Zalim, attempts to rework which in recent times proved a failure. Beyond Zalim to the north is the present main highway from Djudda and Mecca to al-Riyāḍ (Darb al-Ḥiḏjāz); earlier, many pilgrims and a considerable amount of trade went along the track through al-Kunsuliyya and al-Khurma.

The relatively small population of al-Khurma is made up of tribesmen from the western section of Subay' [*q.v.*], who regard the oasis as their capital, Sharīfs, and black freemen. The chief place in the oasis is Ḳaṣr Khālid, named after a former *Amīr* (see below), and the other principal settlements are al-Sūḳ and al-Sulaymiyya.

Unlike Taraba, al-Khurma is not mentioned by Hamdānī, though it may have been inhabited even before his time. Its first appearance in history seems to have been in 1212/1798, when the Sharīf Ghālib b. Musāʿid, a determined foe of the Wahhābiyya [*q.v.*], pitched his camp there with a host of "Bedouins, townsmen, Egyptians (*maṣriyya*), and Maghribīs" (Ibn Bishr, i, 122) while making a sweep through the south-western oases in an effort to halt the spread of the reform movement. Surprised by Wahhābī warriors under the leadership of Hādī b. Ḳarmula of Ḳaḥṭān and Rubayyiʿ b. Zayd of the Dawāsir, Ghālib and his host fled pell-mell, losing many hundreds of men and rich booty. This catastrophe compelled Ghālib to rescind in 1213/1799 the ban that for some years prevented the Wahhābīs of Nadjd from making the pilgrimage.

With the resurgence of the Wahhābiyya to this century under ʿAbd al-ʿAzīz Āl Suʿūd, possession of al-Khurma became a crucial issue. Many Khurmans had remained attached to the reform movement since the preceding century. As Wahhābī proselytising also won new adherents in the west, the Sharīf al-Ḥusayn b. ʿAlī of Mecca tried to assert sovereignty over al-Khurma, which would have carried his authority well towards the east. In the words of Philby, "Khurma itself was a locality of little importance, economically or politically, though it occupied a strategic position as the back door to Najd. Its real significance was as a symbol of the struggle for Arabian hegemony, which had now been transferred from the old cockpit of the Ḳaṣīm [see AL-ḲAṢĪM] to the frontiers of the Ḥiḏjaz" (*Arabian jubilee*, 60). The British government held that al-Khurma, which it thought was not very far away from al-Ṭāʾif (the actual distance is 190 km.), fell within al-Ḥusayn's sphere. ʿAbd al-ʿAzīz, on the other hand, avowed that he had inherited all

the territory that had belonged to his forefathers, including of Khurma.

The Sharīf Khālid b. Manṣūr Ibn Lu'ayy, said to have been named *amīr* of al-Khurma by al-Husayn, became a convert to the Wahhābiyya, as a result of which al-Husayn detained him to Mecca for a time. al-Husayn also rebuked the Ḥanbalī *kāḍī* of al-Khurma for preaching in the Wahhābī vein. The Khurmāo Wahhābīs were devout enough to be reckoned as be longing to the ranks of the Ikhwān (*q.v.*). Late in 1333/1915 al-Husayn's son ʿAbd Allāh delivered ultimatums to Khālid demanding that he return to his original loyalty. Khālid rejected the ultimata, and the Khurmans called on ʿAbd al-ʿAzīz for help. Sympathetic though he was to their cause, he was occupied elsewhere and could do little for them. During 1336/1918, expeditions sent by al-Husayn to subdue al-Khurma were repulsed one after another by Khālid and the Ikhwān.

Infuriated by the tenacious and successful resistance of the little oasis, al-Husayn in Shaʿbān 1337/May 1919 deputed his son ʿAbd Allāh with a martial array, well armed by Arabian standards, to settle accounts there once and for all. On the way, ʿAbd Allāh paused at Taraba where Khālid and the Ikhwān, striking suddenly at night, won a signal victory reminiscent of the one achieved by their Wahhābī predecessors over the Sharīf Ghālib. No serious military obstacle then barred the way to al-Ṭāʾif and Mecca, but ʿAbd al-ʿAzīz chose to bide his time. When the move in that direction leading to the capture of Mecca was finally made in 1343/1924, al-Khurma and Taraba provided the springboard for Khālid and the Ikhwān.

The *hajra* of the Ikhwān beside Khālid's castle in al Khurma is said to have been founded after the battle of Taraba. The British explorer Philby visited the oasis in 1336/1917 and again in 1351/1932, as well as a year or two before that while hunting with ʿAbd al-ʿAzīz.

Bibliography In addition to the works cited under AL SAUDIA, see ʿUthmān b. Bishr, *ʿUnwān al-majd*, Mecca 1349, M. Philby, *Arabian highlands*, Ithaca, N. Y. 1952, G. Troeller, *The birth of Saudi Arabia*, London 1976. (G. RENTZ)

KHURRAMĀBĀD, chief town of the *shahrastān* of the same name in the Iranian province of Luristān (*ostan 6*), situated in long. 48° 21′ E., lat. 33° 29′ N., population of the *shahrastān* (1966) 259,000, elevation above sea-level 4,760 feet.

The town in first mentioned under its present name in the 8th/14th century by Ḥamd Allāh Mustawfī, who states "this was tine town, but it is now in ruins" (*Nuzhat al-ḳulūb*, 74). To the south-east of the town, along the banks of the Khurramābād river, and also to the south west, are remains dating from the time when the site, then known as Dizʿ Siyāh, was the capital of the Saldjūḳ *atābegs* of Luristān Ḳučik (*q.v.*), who governed the area from 582/1186 and whose last representative was killed by Shāh ʿAbbās I in 1008/1597. At a still earlier date, the Sāsānid town of Shāpūrḵẖwāst seems to have occupied the site (thus Minorsky, in *EI*[1], Luristān, who supports Rawlinson *contra* Le Strange, *Lands*, 201-2).

This mountainous region, inhabited by Luri-speaking tribes, remained remote until almost the end of the 13th/19th century, when it was finally opened up by the construction of the Tehran-Abwāz highway, this reduced to 10 days the 40-50 days previously required for the journey from the Persian Gulf to Tehran via Shīrāz.

(R. M. SAVORY)

KHURRAMIYYA or KHURRAMĪNIYYA rulers in the Islamic sources to the religious movement founded by Mazdak (*q.v.*) to the late 5th century A.D. and to various Iranian, anti-Arab sects which developed out of it under the impact of certain extremist Shīʿī doctrines. Although the Khurramiyya are sometimes mentioned separately besides the Mazdakiyya, Ibn al-Nadīm, following Abū 'l-Ḳāsim al-Balkhī, is no doubt right in stating that the name Khurramiyya, as also Muḥammira (*q.v.*), originally meant the movement of Mazdak in general, and not merely a branch of it. Al-Mas'ūdī's assertion that the Khurramiyya are distinct from the Mazdakiyya evidently relates to the later development, since he at the same time identifies the former with the followers of Abū Muslim. The Persian name Khurram-dīn ("joyous or agreeable religion") may, as has been suggested, have been chosen by the sectarians in analogy to the name Yehdēn which the Zoroastrians applied to their own religion, though it seems also possible that it was coined by their Zoroastrian opponents. In the Islamic sources, it is usually explained as referring to their libertinist and hedonistic view that everything agreeable to the senses is permitted. Other explanations of the name, that it is derived either from Khurram, a district of Ardabīl, or from Khurrama, the wife of Mazdak, are probably unfounded.

Although the sources do not mention the Mazdakite movement in early Islamic times, it is evident that Mazdakite communities were dispersed in the countryside of many regions of Iran with the heaviest concentration in the province of al-Djibāl. The coalescence of the Khurramiyya with various extremist factions of the Khyāliniyya (*q.v.*) began during the upheavals of the late Umayyad age. Al-Ṭabarī, ii, 2588, reports that the ʿAbbāsid *dāʿī* Khidāsh (*q.v.*), who was active before 118/736 in the area of Nayshābūr and Marw, taught the religion of the Khurramiyya and permitted promiscuity. Al-Nāshiʾ identifies the Khurramiyya of Khurāsān with the Khidāshiyya, who held that the imāmate had passed from the ʿAbbāsid Muḥammad b. ʿAlī by forfeiture to Khidāsh, and who furthermore denied the death of the latter. According to Abū Ḥātim al-Rāzī, the Hārūnīyya the extremist supporters of ʿAbd Allāh b. Muʿāwiya (*q.v.*) who after his death in 131/748-9 chose various chiefs of their own, were called Khurramiyya. It is likely that these two sects were partially recruited from the local Mazdakites on Khurāsān and western Iran, which was controlled by ʿAbd Allāh b. Muʿāwiya for some time. The strongest impact on the Mazdakite Khurramiyya was made, however, by the figure of Abū Muslim (*q.v.*), who as the leader of the revolutionary movement which overthrew the Umayyad caliphate and as the victim of ʿAbbāsid perfidy came to symbolise Persian self assertion against Arab dominance. Many heresiographers fully identify the Khurramiyya with the Muslimiyya, who considered Abū Muslim as their *imām*, prophet or an incarnation of the divine spirit. Abū Ḥātim's statement that the Rizāmiyya belonged to the Khurramiyya is to be understood in the same sense, for he and some other sources explain this name as meaning the radical, anti-ʿAbbāsid followers of Abū Muslim.

The *daʿwa* of Abū Muslim evidently gained numer-

ous Mazdakite adherents during his lifetime. After his murder in 137/755, the Khurramiyya in Khurāsān, according to al-Mas'ūdī, rose in revolt. Some of them denied his death and expected his early return to establish justice in the world. Others affirmed his death and held that the imāmate had passed to his daughter Fāṭima. They were known as the Fāṭimiyya. The Zoroastrian Sunbādh [see SUMBĀD], a former associate of Abū Muslim, led an army of rebels from Nayshābūr to al-Rayy where his following swelled rapidly. According to the *Siyāsat-nāma*, it was composed of Mazdakites, Shī'īs and Zoroastrians. Sunbādh predicted the end of the Arab empire and promised to destroy the Ka'ba. Abū Muslim, he asserted, had not died and would shortly reappear, together with Mazdak and the Mahdī. By the latter, who is not identified, Muḥammad b. al-Ḥanafiyya may have been meant. The revolt was suppressed after 70 days and the leader was killed. Another former associate of Abū Muslim, known as Isḥāḳ al-Turk, after the former's murder fomented an insurrection in Transoxania, affirming that Abū Muslim was alive in the mountains of al-Rayy and would return. He is also reported to have previously taught that Abū Muslim was a prophet sent by Zoroaster, who himself was alive and would reappear to restore his religion. Nothing is known about the exact date of the activity of Isḥāḳ and the fate of his movement. It has been suggested, on the basis of the account of Gardīzī, that the governor of Khurāsān, Abū Dāwūd Khālid (d. 140/757) was killed by followers of Isḥāḳ and that the rebel leader Barāzbanda, whom Abū Dāwūd's successor 'Abd al-Djabbār joined when he revolted against the caliph al-Manṣūr, also belonged to Isḥāḳ's movement. The first suggestion is highly conjectural and the second quite unlikely; the white-clad (*safīd-djāmagān*) murderers of Abū Dāwūd were, according to Gardīzī, the followers of one Sa'īd the weaver (*ghazzāl*), and Barāzbanda claimed to be Ibrāhīm b. 'Abd (read Muḥammad?) al-Mashīnī (Gardīzī, *Zayn al-akhbār*, ed. 'Abd al-Ḥayy Ḥabībī, Tehran 1347, 1231). About two decades after the death of Abū Muslim, al-Mukannaʿ (*q.v.*), also a former member of his *da'wa* and of the Rizāmiyya, appeared in Transoxania to lead another revolutionary movement. His following was composed of white-clad (Ar. Muḥayyiḍa [*q.v.*], Pers. Sapīd-djāmagān) Soghdian peasants and by Turkish tribesmen. He claimed to be the final divine incarnation after Ādam, Nūḥ, Ibrāhīm, Mūsā, 'Īsā, Muḥammad and Abū Muslim (a different report adds Shaybī and substitutes 'Alī and Muḥammad b. al-Ḥanafiyya for Abū Muslim) and taught the transmigration of souls and sexual license. The sect of the Muḥayyiḍa is still mentioned as surviving in the 6th/12th century.

The latter two movements usually are not called Khurramiyya in the sources, though as branches of the Muslimiyya they were covered by the name in its wider sense. There is no specific information on their doctrine about Mazdak and the role of Mazdakites in them. Al-Bīrūnī, however, states in general terms that al-Mukannaʿ prescribed for his followers "everything Mazdak had brought" and al-Shahrastānī counts the Muḥayyiḍa as one of the neo-Mazdakite sects and as a variety of the Khurramiyya. They may have been crypto-Mazdakites before the coming of al-Mukannaʿ (see A. Yu. Yakubovskiy, *Vosstanie Mukanny Dvizhenie kyzylpalakh i bor'ba arabskogo halifata s nimi*, in *SO*, v. [1948], 35-54).

The use of the name Khurramiyya is most prevalent for the neo-Mazdakites in western Iran. In 162/779 the Muḥammira, i.e. the Mazdakites, of Djurdhān rose and made common cause with the Khurramdīniyya, i.e. the Muslimiyya, claiming that Abū Muslim was alive and promising to restore his reign. They put Abū 'l-Khaṣīb, the young grandson of Abū Muslim, at their head and reached al-Rayy before they were defeated by 'Umar b. al-'Alā'. At the same time, the Khurramiyya of Iṣfahān revolted. Again in 180-1/796-8 the Muḥammira of Djurdjān rose and for a brief time held sway over the province. In 192/808 the Khurramiyya revolted in Ādharbaydjān and the regions of al-Rayy, Hamadhān and Iṣfahān. The insurrection was quickly suppressed by 'Abd Allāh b. Mālik and Abū Dulaf al-'Idjlī.

The anti-Arab and anti-Muslim activity of the Khurramiyya reached its climax in the great rebellion of Bābak (*q.v.*) of Khurramī in Ādharbaydjān (201-23/816-38). Bābak had become the chief of the Khurramiyya in the region of al-Badhdh in Ādharbaydjān in succession to Djāwīdhān b. Shahrak, whose prophetic spirit, he claimed, had settled upon him. Djāwīdhān was alleged to have predicted the victory of Mazdakism under his successor. The sources offer little information on the religious doctrine of Bābak and his followers. Their connection with the Muslimiyya is indicated by the fact that some people, according to al-Dīnawarī, held Bābak to be a son of Muṭahhar, son of Fāṭima, daughter of Abū Muslim. The revolt later spread outside Ādharbaydjān. In 212/827 f. the Khurramiyya rose in the area of Iṣfahān and al-Karadj and some of them joined Bābak in Ādharbaydjān. In 218/833 they revolted around Iṣṭakhr under their chief 'Alī b. Mazdak and in Fārs. As 'Alī b. Mazdak took al-Karadj, the sectarians joined him in large numbers. After a bloody defeat by Isḥāḳ b. Ibrāhīm near Hamadhān, some of them retreated and pillaged in Iṣfahān, while others under their leader Barsā fled to Byzantine territory. They were enrolled in the Byzantine army and are mentioned in 223/838 fighting under the emperor Theophilus against the Muslims.

'Abd al-Kāhir al-Baghdādī treats a sect called Māzyārīyya, followers of the Kārinid ruler of Ṭabaristān, Māzyār [see KĀRINIDS] (d. 225/840), as the second major branch of the Khurramiyya besides the Bābakiyya. Māzyār whose revolt against the caliphate developed out of his quarrel with the big landowners of the lowlands of Ṭabaristān and his rivalry with 'Abd Allāh b. Ṭāhir, was certainly not a Mazdakite, although he was accused of having aided Bābak. In his political struggle he came to rely on the non-Muslim elements of the highlands, particularly Zoroastrians, but evidently also Mazdakites. The Khurramiyya of Ṭabaristān and Djurdjān may have continued to honour his memory as the account of al-Baghdādī suggests.

According to the *Siyāsat nāma*, the rebellions of the Khurramiyya in the area of Iṣfahān continued after the execution of Bābak until the year 300/912-3. First they rose during the reign of al-Wāthiḳ (227-32/842-7), and again sacked al-Karadj. Later, at an unspecified date, one Bāryazdjāh succeeded in fortifying himself in the mountains of Iṣfahān. The Khurramiyya joined him and raided caravans and villages. Only after some 30 years was he seized and executed. Still in 320-1/932-3, 'Alī b. Būya conquered several fortresses previously held by the Khurramiyya in the region of al-Karadj and captured great treasures.

Khurramī encampments are mentioned in the 4th/10th century in the regions of Fārs, al-Ahwāz, Iṣfahān, al-Burdj, al-Karadj, Māsabadhān, Mihrdjān-kadhak, al-Saymara, Dīnawar, Nihāwand, Hamadhān, Kāshān, Kūmis, al-Rayy in the mountains of

Tabaristān, al-Daylam, Āḏarbayǧān, Armenia, Shahrazūr, Ḏurḏān, Balḫ and Khurāsān. It has been accepted on the basis of a report of Miskawayh (ed. Amedroz, *Eclipses*, ii, 299, tr., v, 321) that Khurramiyya living along the coast of Makrān and Kirmān were subjugated in 360/972 by a general of ʿAḍud al-Dawla. The name al-Khurramiyya is, however, a corruption in the manuscript and should be read al-Ḏurūmiyya. This is evident from the text of Ibn al-Aṯīr (viii, 452) which is based on Miskawayh as well as from Miskawayh's mention of the same people called al-Ḏurūmiyya later under the year 364/974-5 (ii, 359 f., Ibn al-Aṯīr, viii, 482, Hilāl in *Eclipses*, iii, 377; al-Ḏurūm; this point is also made by C. E. Bosworth, *The Ṣaffārid Ḥyāṣs of Kirmān (320-57/932-68), in Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1971, 123 n. 34). The latest mention of surviving Khurramiyya communities is for the first half of the 6th/12th century in the region al-Ansābāḏh and Dackasīn, north west of Hamaḏān (al-Bundārī, *Muḫtaṣar baḥdat al-nuṣra*, ed. M. Th. Houtsma, Leiden 1889, 124), and in Āḏarbayǧān.

According to al-Masʿūdī (d. 343/956), the Khurramiyya in his time mostly belonged to two divisions, the Kūdakiyya and the Lūḥshāhiyya). (variants Kūḏshāhiyya, Kurḏshāhiyya). The former were probably named thus because of their veneration of Mahdī b. Fayrūz, the son (or grandson?) of Fāṭima, daughter of Abū Muslim, whom they called *kūdak-i dānā*, the omniscient boy. They are also mentioned in other sources and apparently constituted the great majority of the Khurramiyya in western Iran. Abū Ḥātim al-Rāzī (d. 322/934) states that the extremist factions which originally developed out of the ʿAbbāsid revolutionary movement were known under different names in different regions, in the country of Iṣfahān as Kūdakiyya and Khurramiyya, in al-Rayy and elsewhere in al-Ḍinhūl as Mazdakiyya and Sunbāḏiyya, in Dīnawar and Nihāwand as Muḥammira and in Āḏarbayǧān as Ḏhakūfiyya (or Daffūliyya). It is not clear if the latter name implies a distinction in religious doctrine between the Khurramiyya in Āḏarbayǧān and elsewhere in western Iran, though any such differences were most likely not substantial. Abū Dulaf b. Muhalhil, who visited al-Baḏhān about the middle of the 4th/10th century, mentions a place there were the Muḥammira known as the Khurramiyya consecrated their flags and where they expected the coming of the Mahdī. Probably the *kūdak-i dānā* or, in any case, a descendant of Abū Muslim's daughter Fāṭima, is meant.

The reports of the Muslim sources about the doctrine and practices of the Khurramiyya are mostly summary and biased. An exception is the account of Muṭahhar b. Ṭāhir al-Maḳdisī, which is based on his personal acquaintance with members of the sect and his reading of some of their books. The Khurramiyya were dualists holding that the principle of the world was the light, some of which had become effaced and turned into darkness. They all believed in the transmigration of souls in human, animal, and angel bodies. Prophetic revelation in their view never ceased and the same divine spirit inhered in all prophets. They had no religious law but, according to Muṭahhar, had recourse to their *imāms* in legal matters. Messengers whom they called angels (*firishtagān*) made the rounds among them. They were much concerned with cleanliness and purity, tried to win people's favour through acts of kindness and strictly avoided bloodshed except when they decided on rebellion. They expected the appearance of a descendant of Fāṭima, daughter of Abū Muslim, as the Mahdī who would make their cause prevail in the world. Wine was considered particularly blessed by them. According to Muṭahhar, some held promiscuity licit with the consent of the woman and, in general, any fulfillment of natural desires as long as no one was harmed. The more extravagant clichés of some sources concerning their sexual libertinism deserve no credence. There is no sound evidence for community of goods among them.

The Mazdakite and Manichaean basis of these beliefs is manifest. The attempts of some sources to establish a close link between the Khurramiyya and the Karmaṭīs and Ismāʿīliyya must be viewed with reserve. There is no evidence for any influence of Khurramī doctrine on Ismāʿīlī doctrine or of any large scale conversion of Khurramīs to early Ismāʿīlism.

KHURRAMSHAHR, chief town (population in 1960: 58,536) of the *shahristān* of the same name (population in 1966: 156,282) in the Iranian province of Khūzistān (*iklīm* 6), and situated in long. 48° 09′ E., lat. 30° 25′ N. Its elevation above sea-level is 3 m./26 ft., and the climate is hot and humid, with summer temperatures rising to 58° C/136° F., and a winter minimum of 8° C/46° F.

The present town is the successor of a number of settlements which, since ancient times, have been located in the general area where the Karūn (Dudjayl) river and the combined Tigris and Euphrates rivers flow into the Persian Gulf a few miles apart. Elamite and Achaemenid settlements were succeeded, in Islamic times, by Bayān and Muḥriz, which were included by the Islamic geographers in the province of ʿIrāḳ-i ʿAḏjam. The earlier settlements were situated on the Karūn river itself, the later ones on a channel cut to link the Karūn and the Tigris-Euphrates estuary (now called by the Arabs Shaṭṭ al-ʿArab, and by the Persians Arwand-rūd). The construction of this channel (known at different times as Ǧūy-i Bayān; Ǧūy-i ʿAḍudī (after it had been widened by the Buwayhid ruler ʿAḍud al-Dawla *[q.v.]*; and the Ḥaffār channel) created the island al-Ābādān [see ʿABBĀDĀN],

the site of the National Iranian Oil Company's refinery.

After being mentioned by al Mukaddasī (4th/10th century), the site is not heard of again until the beginning of the 13th/19th century, when a fort called Kut al-Muḥammara ("Red Fort") developed into the town of Muḥammara governed by Arab *shaykhs* of the Kaʿb tribe. The new town was situated on the Haffār channel, one mile from its confluence with the Kārūn. The rise of a rival port at the end of the Persian Gulf was regarded by the Ottomans as a threat to the prosperity of Baṣra, and in 1254/1838-9 they sacked the town, which was, however, subsequently ceded to Persia by the Treaty of Erzerum in 1847. This treaty was violated by the Ottomans in 1886 by the construction of a fort at Fao, at the mouth of the estuary, which enabled them to harass shipping bound for Muḥammara.

In 1925, Riḍā Shāh Pahlawī brought the virtually autonomous *shaykhdom* of Muḥammara firmly under Iranian control, and in 1937 the name of the town, by a decision of the Iranian cabinet, was changed to Khurramshahr. During World War II, the port facilities at Khurramshahr were greatly expanded, and a 75-mile branch line was constructed to link the city with the Trans-Iranian railway at Ahwāz. After further development under the Second Seven-Year Plan (1955 62), Khurramshahr is now one of Iran's principal ports of entry on the Persian Gulf, its exports include dates, milk products, skins and wool.

The 1922-14 Boundary Commission took as the international boundary with ʿIrāḳ the low-water line on the Iranian side of the Shaṭṭ al-ʿArab. This left the navigation channel to Khurramshahr under ʿIrāḳī jurisdiction, and resulted in constant friction between the two countries. This dispute appears finally to have been settled by the agreement signed on 6 March 1975, whereby Iran and ʿIrāḳ agree that the international boundary shall be the *thalweg*, or line of deepest water.

(R. M. Savory)

KHURREM (P. "cheerful, smiling") is a name of both men and women. The most famous bearer of it is the Khāṣṣeki [*q.v.*] and beloved wife of Sulaymān I [*q.v.*], who was born in the early years of the 10th century and died on 26 Djumādā II 965/15 April 1558. Because of the necessary seclusion of her life, few facts about her are known. It is, however, certain that Sulaymān remained passionately devoted to her from their meeting, probably in Istanbul after his accession on 27 Shawwāl 926/ 30 September 1520, until her death, hence her power, by which the altered the course of the Ottoman Empire. This power, for which she is hated, brought upon her charges of witchcraft (Bassano, *Costumi, Roma* 1545, 28v) *and sorcery* (Busbecq, *Omnia* . . . , Basel 1740, 72-3), but Navagero's remark (Albèri, *Relazioni* iii/1, 74), "she knows the Sultan's nature very well", seems nearer the truth. According to the tradition established by Hammer-Purgstall (*GOR*, ii, 673), she was Polish, from Rogatin (Polish: Rohatyn) on the Gnilaya Lipa river, now in the Ukrainian SSR, then in the Little Russia of Poland, the daughter of a Greek Catholic *papas*; possibly her name was Alek sandra Lisowska (see *Bulletin*, xxiii, 230). The area, an old Ruthenian settlement, was subjected to frequent Tatar raids, she may have been carried off on one of these and sold as a slave in Istanbul. It may not be a coincidence that she had a mosque built later in the ʿAvret Pazarī quarter, near the female slave-market. Other traditions, of little reliability, make her Slav, Circassian, Siennese, even French. She may have been presented to Sulaymān by his mother Hafṣa Sulṭān or by Ibrāhīm Pasha [*q.v.*] (Bassano, *loc. cit.*, 18v), with whom she was to share Sulaymān's affection. She was called Khurrem (variants: Churram, Curren, Hürrem) but is known in Turkish histories generally as Khāṣṣeki Sulṭān and in Western accounts as Roxelana (variants: Roxolana, Roxelone, Rossolana, Roxsane, la Rossa, la Rosa), probably all referring to her origin as a Russian or even a Ruthenian woman (*Bulletin*, xxiii, 229), but not meaning "Rose", "Redhead", nor Baudier's ingenious "Roxana" to Sulaymān's Alexander the Great (*Inventaire*², Paris 1620, 344). Bragadin in 1526 (Albèri, iii/3, 202) describes her as "young not beautiful, but graceful and small".

As heir-apparent in Manisa, Sulaymān seems to have favoured two ladies, Gülbahār and Gülfem, said to be variously of Circassian, Albanian, Montenegrin and Crimean origin. Gülfem bore him Murād in 919/ 1513 and Mahmūd in 921/1515, but both these sons died in 927/1521. Gülbahār bore Muṣṭafā [*q.v.*] in 922/ 1513, thus, by 1521, as mother of the Sultan's eldest surviving son, she was Khāṣṣeki Sulṭān and, after Sulaymān's mother, foremost in the Imperial Harem, then housed in the Old Palace. However, Khurrem had captivated Sulaymān, bore him a son Meḥemmed [*q.v.*] in 927/1521 and, after a squabble reported by Navagero (Albèri, iii/1, 75), during which Gülbahār had called her "bald meat", had ousted her. Gülbahār devoted herself to her son Muṣṭafā and, when she died in 988/1580, was buried beside him in Djem Sulṭān's mausoleum in Bursa (Refik, *xvi. asırda Istanbul hayatı*, Istanbul 1935, 8). Gülfem, no rival, was accepted by Khurrem and lived with her ladies; after her death, in 969/1562 3, a mosque was constructed in her memory in Üsküdar.

There is unanimous agreement that Sulaymān made Khurrem his legal wife by giving her the *ṣadāk* (dowry), said to be 5,000 ducats annually, but no hint as to when this took place. It may have been after the birth of Meḥemmed. An undated letter in the Archives of the Bank of St. George, Genoa, describes the wedding festivities in some detail (see Davey, *The Sultan and his subjects*, London 1907, 18 29). In 928/ 1522 their daughter Mihr i Māh Sulṭāna [*q.v.*] was born, the next year a son ʿAbd Allāh (died 930/1526) and, on 24 Rabīʿ 930/28 May 1524, the future Sulṭān Selīm II [*q.v.*]. Khurrem bore two more sons, Bāyezīd in 932/1526 and, in 937/1530 Djihāngīr, a hunchback much loved by his father. The circumcisions of Muṣṭafā, Meḥemmed and Selīm were celebrated together with great pomp on Dhu 'l-Kaʿda 936/July 1530, after which Muṣṭafā, as *sandjak-beg* of Sarukhān, departed with his mother to Manisa. On 4 Ramaḍān 940/19 March 1534 the wālide Hafṣa Sulṭān died. During the night of 21-2 Ramaḍān 942/24-5 March 1536, Ibrāhīm Pasha was assassinated in the Sultan's bedchamber in Topkapı Sarayı. Khurrem's influence is suspected in this murder, out of jealousy and fear for her children's lives after Ibrāhīm had declared in favour of Muṣṭafā as heir, but there is no proof of this. With Ibrāhīm's death, however, all her rivals had been removed.

In 945/1539 Khurrem began a long series of pious bequests with the construction of the Haseki mosque in Istanbul, the first communion of the new Chief Architect Sinān [*q.v.*]. It is in the former ʿAvret Pasarı, now Haseki district, and comprises two *medrese*, a *mekteb*, a *sebīl* and a hospital (finished 957/1550) which, as the Haseki Kadınlar Hastanesi, is still in use for women. Sinān also built another mosque on her behalf at Edirne, *imārets* near the Kaʿba at Mecca, at Medina and at Edirne, and baths in the Aya Sofya and Yehudiler districts of Istanbul. Her other charitable works include a caravanserai and fountains at Edirne and a richly endowed *imāret* at Jerusalem.

On the night of 27 Ramaḍān 947/25 January 1541 a fire swept through the Old Palace (Lutfī, *Tawārīḫ*, Istanbul 1341, 384). Khurrem seems to have moved at once with her ladies to Topkapı Sarayı where she remained. With a woman lodged for the first time at the political centre, there begins at this date the *Kadınlar saltanatı*, the rule of women, during which the policies of the Ottoman Empire were directed by a succession of foreign favourites, until the death of Murād IV's mother in 1061/1652. In the Genoese Archives there is a description of Khurrem's apartments, probably written in 1542 (see Davey, *Sultan*, 21-3), and also in Bassano (*loc cit*, 17v). On 21 Ṣafar 948/16 June 1541 Khurrem had Muṣṭafā dismissed to Amasya and on 3 Shaʿbān 949/12 November 1542 her own son Meḥemmed was appointed *sanǧaḳ-beg* of Sarukhān, the heir-apparent's post (*Kānūn-nāmeler*, 249). One year later, on 8 Shaʿbān 950/6 November 1543, Meḥemmed died in Manisa. Sulaymān was inconsolable; in a deed of gift to Khurrem made some eight years later (Feridūn, *Munšaʾāt*, i, 608-10), with all his other sons still alive, he calls her "the mother of my late son Meḥemmed". On 13 Ramaḍān 951/28 November 1544 Rustem Pasha [*q.v.*], husband of Mihr-i Māh since 945/1539, was appointed Grand Vizier. He was devoted to the policies of his mother-in-law and wife, foremost of which was the destruction of Muṣṭafā so that one of Khurrem's sons might succeed. The law decreeing that a Sultan at his accession must have all his brothers executed created such a desperate struggle for life within the Sultan's family, of which the pathetic aspect is well illustrated by Navagero (Albèri, iii/1, 77). Their scheming was crowned with success on 27 Shawwāl 960/6 October 1553, when Sulaymān witnessed the execution of his brilliant and popular eldest son in camp at Eregli near Konya. To pacify the infuriated army Rustem Pasha was dismissed at once and Karā Aḥmad Pasha [*q.v.*] appointed Grand Vizier. Disturbing proceeding with his father on the Persian campaign, died of pleurisy at Aleppo on 22 Dhu 'l-Ḥiǧǧa 960/29 November 1553. A few weeks later Muṣṭafā's son, Meḥemmed, born at Amasya in 933/1526, was executed at Bursa. His death also is attributed to Khurrem's plots, as is the execution in office of Karā Aḥmad Pasha on 13 Dhu 'l-Kaʿda 962/29 September 1555 and the immediate reinstatement of Rustem Pasha. He and Khurrem plotted for the succession to pass to Bāyezīd, the younger but abler of Sulaymān's surviving sons, but neither of them lived to see the end of the struggle between the two brothers which resulted in Bāyezīd's execution in Persia at Selīm's instigation on 25 Dhu 'l-Kaʿda 969/23 July 1562. Barbaro tells us (Albèri, iii/3, 248) that in her last years Khurrem would not allow Sulayman out of her sight, both infirm, they spent the winter of 965/1557-8 in Edirne together, and she returned to die in Istanbul in April. She is buried in her mausoleum, built by Sinān beside Sulaymān's near the Süleymāniyye mosque. Due largely to her intrigues Selīm, Sulaymān's least worthy son, remained alone to succeed his father.

A number of Khurrem's letters exist. Seven letters to Sulaymān, written between 1526-53, published in modern Turkish transcription in Uluçay, *Osmanlı sultanlarına aşk mektupları*, Istanbul 1950, are preserved in the Archives of the Topkapı Sarayı Museum as TKS Arşivi nos. E. 5038, 5662, 5859, 5926, 6036, 6056, 12480. In 1548 and 1549 the and Mihr-i Māh wrote to Sigismund Augustus of Poland; the originals are in Warsaw, AGAD, Arch. Kor., Dz. turecki, teczka 110, nos. 118, 213, 222, 222. French translations by Askenazy, *Listy Roxolany*, in *Kwartalnik Historyczny*, x (1896), 223 ff. A correspondence with Persia ensued over the building of the Süleymāniyye mosque, with Khurrem answering Shāh Tahmāsp's wife's letter of good wishes to her in 962/1555 (ref. erroneously to copies in Hammer Purgstall's *Ms.* in *GOR*, ix, 375: items 499, 500) and the Shāh's sister's letter of congratulations after the completion in 964/1557; published in Feridūn, *Munšaʾāt*, ii, 63-6. There are many deeds of gift made by Sulaymān to Khurrem, see, for example, Heyd, *Ottoman documents*, Oxford 1960, 143, and *Kānūnī Sultan Süleyman sergisi*, Istanbul 1958, nos. 71, 90, 102, 125. Some examples of embroidery said to be Khurrem's work are preserved in the Topkapı Sarayı Museum and the Türk İslâm Eserleri Müzesi in Istanbul.

Khurrem's fame spread through Europe in her lifetime. It is unlikely that she ever sat for a portrait, but several portraits of her exist. In Topkapı Sarayı there is an oil painting (see cover of Uluçay, *Aşk mektupları*), made from the engraving in Boissard, *Vitae et icones sultanorum*, Frankfurt 1596, and two other portraits (see Uluçay, 7, 20). Sokolnicki, *La Sultane Ruthène*, in *Bulletin*, xxiii, 1959, 229-39 lists further portraits in Florence, Venice and Vienna, the latter bearing the same inscription as Uluçay, 20, and probably identical to it. There is a fine engraving of her by Melchior Lorich in *Turckische Figuren* (see Rouillard, *The Turk*, Paris 1938, plate 23). Khurrem's story inspired drama and literature in Europe in the 16th and 17th centuries, including two French plays, *La Sultane*, Paris 1562, and *Roxelane*, Paris 1643; see Rouillard, *The Turk*, 422 ff., and Chaw, *The Crescent*, New York 1957, 497-503.

KHURSĀBĀD, a village situated 36° 40′ N. and 43° 10′ E. in the plain 27 km. to the north-east of Mosul, in the *muḥāfaẓa* of al Mawṣil. It is the site of the ancient Assyrian royal city Dur Shar-

rukin, "The Fortress of Sargon". The earliest excavations there were undertaken by Paul Emile Botta in 1843 when he was the French Consul at Mosul, and he has been described by Parrot as "the first systematic excavator of a Near Eastern site". He himself described his work in a series of letters which he wrote after each important find and he carefully copied all the inscriptions he discovered, although at that time Akkadian was still an undeciphered language. Victor Place continued the excavation of the site from 1852 5, but then it was abandoned until G. Loud worked there on behalf of the Oriental Institute of Chicago for eight seasons from 1927-35. Since then a number of stone reliefs from the palace, including two famous colossal bulls, have been removed to the Iraq National Museum in Baghdad (1938, 1943) and the Directorate-General of Antiquities of Iraq resumed excavations for a short period in 1957.

Sargon II (721-705 B.C.) built the city between 717 and 707 when he moved the centre of his administration from Kalkhu (modern Birs Nimrūd), and the city is a model of Assyrian town-planning. It has seven fortified gates and the early excavations revealed the rooms of the palace and the houses of the palace officials. There are a number of shrines to various deities (called by Botta the Harem) and a ziggurat (which Botta described as an observatory). The later American excavation discovered the temple of Nabu who, with his consort Tashmetum, was a god of vegetation and recently it has been suggested by Postgate that the fertility ritual of the sacred marriage was performed in this building. The entrance to the palace was flanked by a pair of massive, winged, human headed bulls (as in other Assyrian cities) and the walls were decorated with detailed reliefs of battle scenes and festival processions. A number of glazed brick panels have also been recovered from the site and chemical analysis of the blue glazes derived from copper suggests that lead was being used as a flux, a technique that was forgotten but later re-developed.

Cuneiform inscriptions show that the city was completed just before Sargon died. It was during his eighth military campaign, on which he plundered towns and villages in north-western Iran, that he was ambushed and killed (705 B.C.) and his corpse was left unburied as "food for the birds of prey". The priests seem to have interpreted this final humiliation as a sign of divine punishment, and his son Sennacherib abandoned the city and turned his attention to the rebuilding of Nineveh, which remained the capital of Assyria until the empire was overthrown in 612 B.C. The most important document for historical research which has been discovered at the site is a list of the names of the kings of Assyria together with the length of their reigns as far back as Iribum I (285a 2813). Although there are inconsistencies of detail between this list and the King list from Assur [see ASSUR] in Suppl. and the records of astronomical observations, it does provide the basic framework for the study of Assyrian history.

The palace is built on a raised platform and planned around an open courtyard which was accessible to the public. This gave access to an inner courtyard which seems to have been reserved for those in special positions of authority. The throne room was approached from the inner courtyard through a triple doorway flanked by monumental sculptures. A staircase led from the throne room to the private living rooms. Because of the absence of any relief carving in the throne room it has been suggested that this was originally decorated with mural paintings but no traces have survived.

Sargon had the construction of the city described in detail on the pavement stones in the palace gates with these words. "[the king] built the city at the foot of Mount Musri above Nineveh and named it Dur Sharrukin. He erected palaces of ivory, maple, boxwood, mulberry, cedar, cypress, juniper, pine and terebinth as his royal dwelling place. In front of the gates he built a portico, as in a Hittite palace, which in the Amorite language is called a *bīt hilāni*." It is particularly interesting to note that he received inspiration for at least one architectural detail from his western expedition.

When the site was first discovered, Botta thought he had found the much more famous city of Nineveh, for he was so astounded by the size and obvious splendour of the ancient city. Layard raised objections to this identification because he thought it was too far away from the Tigris. Neither of them appeared to know the traditional identification in Arabic historical sources, Yāḳūt describes the village as the site of an ancient city called Sar'ūn, which probably reflects an earlier corruption of Sarghūn.

When excavations began, E. Flandin was sent by the French government to copy the sculptures which had been found. It was identified with Dur Sharrukin after the inscriptions of its founding king had been translated. He had had it built as a strategic defence against the troublesome Cimmerian attacks from the north and had cobbled the main exit roads so that his troops could be transported efficiently with their supplies. The ancient walls surround an area of 320 hectares with the citadel occupying 20 hectares. Yāḳūt mentions that the village of his day (which he refers to as Khurustābād) had good irrigation. The modern village supports a small population (the average density of the area is 29.5 persons per km.²) situated on the eastern bank of the river Khawsar at the northern end of the Drabai Makhlūb.

(M. E. J. RICHARDSON)

KHURSHĪD, *tabarkhudh* [q.v.] of the Dābūyid line in Ṭabaristān. It was long believed that there were two Khurshīds, because of errors in interpreting coin legends, Mordtmann, in *SB Bayr. Ak.* (1874), 36, 36, dated three coins of this prince to the years 70, 60 and 64 of the Ṭabaristān era, and this led people to posit the existence of a Khurshīd I who reigned 50-60 T. and a Khurshīd II who reigned 88-116 T. (idem, in *ZDMG*, xxxiii, 110, cited by Unvala, p. 8, § 5, p. 30, § 11). He was followed by Marquart, *Ērānshahr*, 132, who also read 64 T. on a coin which

be attributed to Khurshīd I, who must in his opinion have reigned 60-4 T. Vasmer, in *EI*[1] art. Māzandarān was the first to perceive this false reading, which he explained by the resemblance between *shast* = 60 and *dahsat* = 110 in the Pahlavī script. Accordingly, Vasmer dated the coins to 110 and 114 T., instead of 60 and 64 T., and he therefore denied the existence of two Khurshīds, especially as the local sources make no mention of a Khurshīd I. Unvala, p. 7, § 4, p. 8, § 5, p. 30, § 21, confirmed Vasmer's conclusions, and remarked that the coins of the alleged Khurshīd I are absolutely identical with those which Mordtmann attributed to Khurshīd II. As for the bronze coin dated by Mordtmann (*ZDMG*, xix, 474, No. 170) to the year 70 T and attributed to Khurshīd I, Vasmer corrects this false reading to 107 T. (*EI*[1], loc. cit.). Unvala (p. 9, § 16, coin No 800 in his catalogue) confirms Vasmer's dating, and observes that to date the coins to 64 and 70 T. and attribute them to Khurshīd I would interrupt in an inexplicable fashion the series of coins issued by Farrukhān the Great (60-79 T.) One must thus cease speaking of two Khurshīds, as does Spuler in *EI*[2] art. Dābūya.

The *ispahbadh* Khurshīd is therefore the last Dābūyid prince who reigned to Tabaristān 89-110 T./ 113-44 A H./740-61 A.D. according to his coins, which corresponds closely with the information of local chroniclers. In fact, Ẓahīr al-Dīn, 40, gives him a reign of 23 years, to which should be added 8 years of the regency of his paternal uncle Sārūya (Ibn Isfandiyār, 213). But elsewhere (319), he gives him a reign of 31 years, which cannot even be given credence as an indication of his age At Ṭabarī, iii, 140, states that Khurshīd was still young when his father Dādhburzmihr died. According to Ibn Isfandiyār, *loc. cit.*, Dādhburzmihr's brother Sārūya acted as regent for 8 years, but his sons wanted to keep the throne in their own line, hence plotted against their cousin Khurshīd, who had reached his majority. The latter managed to defeat them and recovered his throne (*ibid.*, 213-14). He was a real petty king, with a personal guard, an army and representatives in the various districts of Ṭabaristān (*ibid.*, 214-16). He even sent an embassy to the Chinese court of the T'ang, in ca. 746 (Abel-Rémusat, i, 254, ii, 166-49): "In the fifth year Tien pao, the king Hu lu hou sent an embassy to the Imperial Court and received in exchange the title of King of Kuei-Sin" (submission to vassalage) These royal pretensions supless his rebellion under the last Umayyad caliph Marwān II (127 32/ 744-50; cf. Balādhurī, 338), but he had to submit to Abū Muslim al Khurāsānī in 131/749 (Ṭabarī, ii, 2016). After al-Manṣūr's execution of Abū Muslim in 137/755, Sunbādh revolted and entrusted to Khurshīd part of the treasures of Abū Muslim (Ṭabarī, iii, 86, 119; Nizām al-Mulk, tr. Schefer, 267-8, tr. Darke, 213) After his defeat, Sunbādh sought refuge in Ṭabaristān, but Khurshīd had him killed by his cousin, in order to get his hands on the rest of Abū Muslim's treasures (Ibn Isfandiyār, 217-18) The caliph al-Manṣūr had to send his son al-Mahdī to Rayy to recover Abū Muslim's property (Ibn al-Athīr, v, 369, Ibn al-Fakīh, 312, 314). Khurshīd refused to send his son as a hostage, but had to pay a heavier tribute, at the level paid to the Sāsānids (Ibn Isfandiyār, 218).

This submission did not last long, since he took advantage of the rebellion of ʿAbd al-Djabbār b ʿAbd al-Raḥmān, governor of Khurāsān, to cut off tribute in 141/758 (Ibn al-Fakīh, 309-80; Bal'amī, iv, 380). This time, the caliph decided to finish once and for all with his vassal's insubordination and to annex his principality His army invaded Ṭabaristān and they made contact with each other without fighting, forcing Khurshīd to take to the mountains, where he shut himself up in the fortress of al-Ṭāk (Ibn al-Fakīh, 320). A long siege followed, but the place was finally captured in 142/759-60. Khurshīd managed to flee for refuge in Daylam (Ibn al-Athīr, v, 387, Ibn Isfandiyār, 222), but his family fell into the hands of the Muslims and were sent to the ʿAbbāsid court (Balādhurī, 339, Ṭabarī, iii, 136-7, 239 49). There is great confusion over the names of these captive princesses, and certain chroniclers identify them with the daughters of the *mujmughān* of Dunbāwand and not with Khurshīd's family (Vasmer, 91, 100-1). However, various of this prince's daughters became concubines of al-Manṣūr, his brother el ʿAbbās, and al-Mahdī, who had a son of al-Bakhtariyya (or al Bubturiyya, according to Ibn Ḳutayba, *Maʿārif*, 193) called al-Manṣūr. It was al-Manṣūr b. al-Mahdī who refused the caliphate, or offered to him by the people of Baghdād in 201/817, after the choice of the ʿAbbāsid caliph of the Rāshidūn al-Ma'mūn's heir-presumptive. He merely agreed to become governor of ʿIrāḳ for al-Ma'mūn (Ṭabarī, iii, 1001, 1005-6) Another of Khurshīd's daughters, usually named as Shakla, also became the concubine of al-Mahdī (Ṭabarī, iii, 140; Ibn al Fakīh, 314) She gave him a son, Ibrāhīm b. al Mahdī (q.v.), sc. the anti-caliph of 201-*al* 817 19, who accepted his acclamation by the Baghdādī populace after his half-brother al-Manṣūr's refusal *All* this shows that one cannot set up against each other, in a simplistic fashion, the son of the "Persian concubine" (al-Ma'mūn) and the son of the "Arab princess" (al Amīn) since the ʿIrāḳīs did not hesitate in 201/817 to set up the son of a Persian concubine (al Manṣūr and then Ibrāhīm) against the son of another Persian concubine (al Ma'mūn), who was moreover the very nephew of Ibrāhīm b. al Mahdī

Khurshīd gathered an army in Daylam and Gīlān and in 143/760 tried to regain his principality (Ṭabarī, iii, 142 2), but meeting no success, killed himself the following year (Bal'amī, iv, 382, Ibn al Fakīh, 314). His son, who was on an embassy to China, learnt of the annexation of Ṭabaristān, as recorded in the Chinese annals "He was honoured by the title of supernumerary officer general, and awarded a purple cloak and a golden fish. Whilst he was staying in the capital, the black-robed Arabs conquered his lands" (Abel Rémusat, i, 254) The other local dynasties of Ṭabaristān (the Bāwandids (*q.v.*) of Mount Sharwīn, the Kārinids (*q.v.*) of Mount Kārin and the Zarmihrids of Mīyāndurūd) were kept as tributaries under the oversight of ʿAbbāsid governors resident at Āmul. These last continued to mint coins with Khurshīd's name till 214 T. (he having killed himself in 210 T.), which has led many historians to think that Khurshīd reigned till 115 T. The first extant coin minted in the name of an ʿAbbāsid governor is that of Rawḥ b. Ḥātim in 147/764 (cited by H Gaube, *Arabosasanidische Numismatik*, Brunswick 1973, 124, it will be published shortly by R. Curiel, of the Cabinet des Médailles of the Bibl. Nat. in Paris).

Bibliography In addition to the Arabic chroniclers (Balādhurī, *Futūḥ al-buldān*; Ibn al-Athīr, Ibn al-Fakīh Ibn Ḳutayba; Ṭabarī, etc.) and the Persian ones (Bal'amī, Ibn Isfandiyār, *An abridged translation of the History of Ṭabaristān*, by E G. Browne, Leiden 1905; Niẓām al-mulk, *Siyāsat-nāma*, ed and tr. tr Ch Schefer ed. and Eng. tr H. Darke; Ẓahīr al Dīn, *Taʾrīkh i Ṭabaristān* . . . , ed. B. Dorn, St. Petersburg 1850), the following should be consulted J. Marquart, *Ērānšahr* ;

AL-KHURṬŪM (KHARTUM, KHARTOUM), a city at the confluence of the Blue and White Niles, now the capital of the Democratic Republic of the Sudan. The name is said to be derived from the resemblance of the site to an elephant's trunk. At the time of the Turco-Egyptian invasion (1821), Khartum was a small village, the residence of a holy man. It was chosen as the military and administrative headquarters of the conquered territories by the governor, ʿUthmān Bey Djarkas, in 1824. With the extension of Turco-Egyptian rule, the pacification of the Sudan, and the opening up of the Equatorial Nile and Bahr al-Ghazāl [*q.v.*], Khartum developed into a flourishing town with a heterogeneous population, which included European traders, consular officials and Catholic missionaries. After the outbreak of the Mahdist revolt, the defence of Khartum was assumed by the governor general, C. G. Gordon Pasha (General Gordon), a British subject in the khedivial service. The town, which had been under close siege from October 1884, fell to the Mahdī on 26 January 1885, Gordon being among the slain. During the Mahdist period, the capital was transferred to Omdurman (Umm Durmān), on the left bank of the Nile below the confluence, and Khartum was abandoned, apart from the dockyard (*al-tarsāna*), where the steamers of the Mahdist state were maintained, and the gardens, which became a source of revenue. After the defeat of the Khalīfa ʿAbd Allāh b. Muḥammad [*q.v.*] at Karari in September 1898 by Anglo-Egyptian forces, the restoration of Khartum was begun by Kitchener, the *sardār* and governor-general. Although again the administrative centre and the principal place of residence for Europeans, Khartum did not equal Omdurman in extent or population during the Condominium (1899-1955). Together with Omdurman and Khartum North it forms a conurbation known as "the Three Towns" (*al-Mudun al-Thalāth*).

KHŪRYĀN-MŪRYĀN, a group of islands in the bay of the same name on the south coast of Arabia, lying along latitude 17° 30′ N between longitudes 55° 30′ and 56° 30′ E. The islands, principally of granite and limestone formation, are the peaks of a submarine ridge. From west to east they are Hāsikiyya, Sawdā, Hallāniyya, Karzawt and Djubayla Hallāciyya is both the largest (about 8 miles long and 23 in circumference) and the only inhabited island of the group. At its centre it rises to a peak some 1,500 feet above sea-level. Its vegetation is scanty: only a few marine shrubs, some scattered tamarisks and occasional mimosas relieve the monotony of the landscape. The water is brackish, the best being obtained from a couple of wells sunk by a RAF survey party in 1953. Sawdā, the second largest island (3 miles long), is equally barren, though it was once inhabited. So also, apparently, was Djabhaysa, to judge from a few tombs on the island. Djubayla and Hāsikiyya, the westernmost island, lying only 20 miles from the mainland, are the haunts of thousands of seabirds including pelicans and goosanders.

The Khūryān Mūryān Islands were early identified with the so-called seven successive islands of Zenobios, and as such they marked the frontier between the kingdom of the Parthians and the kingdom of Ḥaḍramawt. From this it would appear that the Parthian frontier should be located to the innermost corner of Khūryān Muryān Bay. Over the centuries the inhospitality of the islands has forced their inhabitants to seek their livelihood from the sea. In the 5th/12th century, al-Idrīsī [*q.v.*] records that the islanders, who were then politically under al-Shiḥr, were very poor to winter and only managed to make a moderate living in the sailing season. They used to sail to ʿUmān, Aden and the Yemen. Their main source of revenue was tortoise shell, which they traded to the Yemenis, and occasionally very beautiful amber, for which they sometimes got very high prices. Al-Idrīsī calls the bay containing the islands Djawa al-Ḥashīsh (Bay of Herbs). The Khūryān Mūryān Islands in their turn were frequented by Arabs from Shiḥr and Mukallā in the Ḥaḍramawt [*q.v.* in Suppl.], and from Ḥudaydā in the Yemen, to dig guano from Hāsikiyya and Djubayla Islands, where the seabirds down the centuries had left rich deposits. The guano was used as agricultural fertiliser, especially in the cultivation of tobacco.

The Portuguese were the first Europeans in modern times to record the existence of the Khūryān Mūryān Islands. Affonso d'Albuquerque discovered them in 1503, and they appear thereafter in Portuguese sources as as Asquié, Sawdā as Sodré and Karzawt as Rodondo. Kawkabān [*q.v.*] from Raʾs al-Khayma descended upon the islands in 1818, possibly with the intention of using them as a base for attacks upon shipping. The local inhabitants were driven or carried off and the islands remained unpopulated for several years afterwards. Sometime before 1821, more probably, after this incursion (the sources are unclear) the islands came into the possession of a sub-section of the Mahra tribe, the Ibn Khalīfa, residing to the vicinity of Mirbāṭ on the coast of Dhufār [*q.v.*]. It is from this clan that the islands have derived the name by which they are known to the Arabs of southern Arabia—Djazāʾir bin Khalīfān. By the middle of the 13th/19th century—and possibly a decade or so earlier—the islands had become a dependency of the sultanate of Maskat. French planters from Réunion Islands occasionally resorted in the islands to load guano for use as fertiliser, and it was the existence of these valuable deposits that led the British government in 1854 to ask the Sulṭān of Maskat, Sayyid Saʿīd b. Sulṭān, to cede the islands to Great Britain. The deed of cession was signed on 14 July 1854 and the guano deposits were worked from 1857 to 1859. A cable station was set up on Hallāniyya Island in 1861, only to be abandoned a year later when the Red Sea-Karachi cable proved unworkable.

from 1854 onwards, the Khuryān-Muryān islands were formally designated a dependency of the British colony of Aden, although administrative control over them was vested in the British political resident in the Persian Gulf, since it was more practicable for the British political agent at Maskat to visit them than it was for the political resident (later governor) at Aden. When British rule over Aden ceased on 30 November 1967, the islands were handed back to the Sultān of Maskat, despite the protests of the Aden successor government, the People's Republic of South Yemen, that it was entitled to succeed to sovereignty over all the dependencies of the former colony. Since that time the islands have been administered as part of the *wilāya* of Dhofār of the sultanate of ʿUmān. Hallāniyya Island is still populated, the number of inhabitants having remained fairly constant over the past century—36 in 1883, 30 in 1936, 70 in 1947 and 53 in 1976. They still derive their living from the sea, and especially from the great shoals of sardines which appear off the islands in late October each year, at the end of the south-west monsoon. Of late, foodstuffs and medical treatment provided by the ʿUmānī authorities in Salāla have gone some way to alleviate the rigours of the islanders' existence.

KHUSDĀR [see BALŪṬ]

al-KHUSHANI, Abū ʿAbd Allāh Muḥammad b. al-Ḥārith, Mālikī fakīh and biographer, originally from Khushān near Kayrawān. After studying *fikh* at the latter place and at Tunis, he left his homeland *ca* 321/933, passing through Ceuta, where he was held back some time by teaching (he is said also to have corrected the orientation of the mosque there), and travelling to Spain. He resided in the Marches, and completed his legal training, especially from Yaḥyā b. Aslab [*q.v.*], and ended up by enjoying the favour of the heir to the throne, prince al-Ḥakam, who procured for him the job of *kādī* of inheritances (*mawārīth*) at Pechina, then that of the *shurṭa* of Cordoba and after that, summoned him to his own side. He was something of a poet (though accused of committing faults *laḥn*), and was considered to have a certain manual dexterity and to practise alchemy; he seems also to have acquired some medical expertise which allowed him, after his disgrace following al-Ḥakam's death in 366/976, to live by making up electuaries (*adhāna*). He is said to have died in 371/981, but this date is not accepted by all his biographers, who however know very little information about the last years of his life.

Al-Khushanī is credited with a hundred or so works and treatises composed of al-Ḥakam's behest, who was, as is well known, a great lover of books. Amongst the titles cited here figure *al-Ittifāḳ wa 'l-ikhtilāf fī madhhab Mālik*, *al-Taḥṣīr wa 'l-maghālāt*, *al-Fuṣūl*, *al-Taʿrīf*, *al-Mawāʿiẓ wa 'l-waṣāʾil*, *al-Nasab* and *al-Ibtihāj*, which do not seem to have survived. His fame, however, rests on his biographical works. As well as a *Taʾrīkh ʿUlamāʾ al-Andalus* and a *K. Fukahāʾ al-Malikiyya*, which are no longer extant, al-Khushanī left two collections of especial interest. The first one which one thinks of is his *Ṭ. Ḳudāt al-Andalus*, ed. and tr. into Spanish by Ribera, Madrid 1914. Basing himself on written sources, archives and oral traditions, the author traces the biographies of the *ḥādis* of al-Andalus from the conquest till 357/966, in a lively and instructive manner, and if he lacks a critical spirit in relaying, for instance, the fictitious story of the first three judges to Cordoba, he nevertheless does not omit items of information which are sometimes unfavourable to the Umayyads.

The second work which has been preserved, the *Ṭabaḳāt ʿulamāʾ Ifrīḳiya*, has been published by M. Ben Cheneb in his *Classes des savants de l'Ifrīqiya*, Algiers 1915-20, as a continuation of the *Ṭabaḳāt* of Abū 'l-ʿArab [*q.v.*]. These *Ṭabaḳāt*, which the *ḥāfiẓ* ʿIyāḍ [*q.v.*] utilises freely in his *Madārik* under the title of *Taʾrīkh al-Ifrīḳiyyīn*, calling the author in familiar fashion Ibn Ḥārith, contain biographies of scholars who did not belong to the Mālikī school, and most remarkably, of converts to Shīʿism established in Ifrīḳiya by the Fāṭimids. It is the opinion of R. Brunschvig (*Un aspect de la littérature historico-géographique de l'Islam*, in *Mélanges Gaudefroy-Demombynes*, Cairo 1935-45, 250-8) that this exile, unable to come to terms with the doctrine imposed upon his native land, may have written this work at the demand of al-Ḥakam, who was eager to know about the situation there, in this respect, the *Ṭabaḳāt* are interesting for the information which they give on the Fāṭimids, but the author, far from being impartial, paints a gloomy picture of the *ʿulamāʾ* who remained behind in Ifrīḳiya and were compelled, according to his view, to rally to the new masters, either out of financial cupidity or from fear of persecution.

KHUSHHĀL KHĀN KHAṬAK, Pashtun poet and a warrior chieftain (1022-1100/1613-89), Khushhāl Khān is recognised as the national poet of the Pashtūns.

1. Life. Son of Shaik-bāz Khan and grandson of Yahyā Khān who, in turn, was the son of Malik Akōray, leader of a clan of the Khaṭak [*q.v.*], the boy Khushhāl accompanied his father in tribal wars. After his father's death in a tribal battle, Khushhāl succeeded him as *khān* or chieftain, and was recognised as such by Shāh Djahān, the Mughal Emperor. Khushhāl served Shah Djahān in his army's campaigns in Balkh and Badakhshān in 1055/1645, but later, in the time of the Emperor Awrangzīb, the governor of Kābul aligned himself, along with some of Khushhāl's uncles and cousins, against Khushhāl. In 1074/1664, Khushhāl, then 52 years old, was summoned by the governor to Peshāwar, where he was arrested and dispatched in chains to a fortress in Dhaypūr. He was released two years later, but was not allowed to return home until 1080/1669. For the rest of his life, his sympathies rested with the rebel Pashtūn tribes. In his poems he preached unity of the Afghān tribes to resist Mughal domination. Khushhāl greatly admired the Afrīdī chieftain Daryā Khān, who defeated the Mughal army at Landī Kōtal in the Khyber Pass [see KHAYBAR Pass] in 1083/1672, while leading a confederation of Afrīdī and Muhmand tribesmen. Accompanied by one of his loyal sons, 'Abd al-Kādir Khaṭak, Khushhāl fought and defeated the Bangash tribe, which supported Mughal rule. He also had to fight his third son, Bahrām, whom the Mughals sponsored in attempts to replace Khushhāl as chieftain. In 1085/1674, he voluntarily relinquished his chieftainship to his eldest son, Ashraf, also a poet who was later (1044/1683) jailed by the Mughals. Khushhāl declared himself a rebel and spent rest of his life with Afrīdī friends in the inaccessible eyries of Tīrāh, a zone "never effectively occupied by any government in all history". He travelled from tribal area to tribal area, seeking assistance and refuge. He was relentlessly pursued by his treacherous son, Bahrām, but evaded capture and died in the Afrīdī country in 1100/1689. The armed resistance which he encouraged by his pen and emphasised by his sword is "to be counted among the causes that brought about the dramatic collapse of the Mogul Empire in India" (Sir Olaf Caroe).

2. Literary Works. Khushhāl, a prolific poet, constantly chanted his love of beauty, honour, and justice. As part of his opposition to Awrangzīb and his forces, Khushhāl preached union of all Afghān tribes and encouraged revolt against Mughal rule:

> "My sword I gird upon my thigh
> To guard Afghān honour and fame;
> Its champion in this age am I,
> The Khaṭak Khān, Khushhāl my name".

Khushhāl also celebrates his successes and laments his subsequent misfortunes. He chastises those Pashtūns who accept gold rather than give battle to the Mughals.

As well as poetry, he wrote manuals on falconry, folk medicine, a dialogue between the pen and the sword, an account of his imprisonment and exile, and a geography of Swāt. "His lyrics and epics, alike present his religious devotion, occasionally in mystic terms, his patriotic feelings, his moral code, his many loves in object or joyful mood, and many other subjects" (D. N. MacKenzie). Khushhāl rightly claims to be the originator of Pashtō poetic form and metre, but it must be remembered that he had a predecessor, Mirzā Anṣārī. Both these early Pashtō poets used the Dari or Persian poetic mould, but instead of strictly applying the classical rules of prosody to Pashtō, they adopted the metres of popular Pashtō songs to *verse* forms known in Persian. "This metre is syllabic in nature, but the pattern is made by the stress usually recurring on every fourth syllable" (MacKenzie).

Khushhāl further left many *ghazals* in Persian under the pen name of Rūhī, and a Persian *kaṣīda* or ode on the futility of this world in same metre as the *Bahr al-abrār* of Amīr Khusraw Dihlawī, this Persian poetry is amongst the best of that written in the so-called *Sabk-i Hind* or "Indian style".

(Ravan Farhadi)

KHUSHḲADAM, al-Malik al-Ẓāhir Abū Saʿīd Sayf al-Dīn as-Nāṣirī al-Muʾayyadī, Mamlūk sultān of the Burjīs (regn. 19 Ramaḍān 865 - 10 Rabīʿ I 872/22 June 1461 - 9 October 1467). By origin a Rūmī (i.e. perhaps a Greek, but the term had a wide range of connotations), he was born ca. 815/1413. Brought as a boy to Egypt by the slave-merchant Khwādjā Nāṣir al-Dīn, he was purchased by the sultān al Muʾayyad Shaykh, whence his two *nisbas*. He rose through the grades of promotion of the Royal Mamlūks as *khāṣṣaki*, *ʿalāʾī* and *amīr*, finally succeeding al-Muʾayyad Aḥmad b. Ināl as *atābak al-ʿasākir* in Egypt when the latter became sultān in Djumādā I 865/Feb. 1461. The *atābakiyya* was at this time the highest in rank of the great offices of state, but had no specific functions, its holder was also styled *amīr kabīr*, i.e. the senior *amīr*. The reign of al Muʾayyad Aḥmad was soon disturbed by the intrigues of Djānim al-Ashrafī, the governor of Damascus, who sought to usurp the sultanate with the support of his *khushdāshiyya*, the Ashrafiyya, i.e. the Mamlūk household of al-Ashraf Barsbāy (*q.v.*). The Ashrafiyya were at first opposed by their rivals, the Ẓāhiriyya, i.e. the household of al-Ẓāhir Čakmak (*q.v.*), whose chief Djānibak al-Ẓāhirī (formerly governor of Dūdde) skilfully won the agreement of the two factions to the deposition of al-Muʾayyad Aḥmad and the installation of Khushḳadam as a compromise candidate until the arrival of Djānim from Syria. Since Khushḳadam was not of "the Nation" (*al djins*, i.e. not a Circassian), it would be easy to depose him at will. Thus Djānibak alleged, but he rightly calculated that once Khushḳadam was recognized as sultān, he would be difficult to oust. He was accordingly proclaimed, and his supporters captured the Citadel of Cairo with little resistance, al-Muʾayyad Aḥmad being arrested and sent to imprisonment in Alexandria.

The new sultān was thus faced at the outset with both an over-mighty kingmaker and a powerful rival. Djānibak, who was appointed *dawādār kabīr* (a great office of state of growing importance in the later Circassian period), was at first the effective ruler (*mudabbir al-mamlaka*). When Djānim al-Ashrafī advanced to Khānḳāh Sirysākū, north of Cairo, Djānibak succeeded in obtaining an oath of loyalty to the new sultān from him, and Djānim returned, loaded with gifts, to Damascus (Shawwāl 865/July 1461). Some months later, Djānim was removed from office, and died in Dhū ʾl-Ḥidjdja 867/August 1463, an event which was followed by the arrest of leading members of the Ẓāhiriyya faction. Khushḳadam's coup against the Ẓāhiriyya was, however, abruptly halted, probably because of a conspiracy against him in his own Mamlūk household. A reconciliation was effected through Ḳāyitbāy al-Ẓāhirī (the future sultān), and the offices and *iḳṭāʿ*s of the Ẓāhiriyya were restored.

There were no major foreign developments during the reign. Suzerainty was maintained over King James of Cyprus (who had been installed with the help of a Mamlūk contingent sent by al Ashraf Ināl (*q.v.*) in 864/1460), although in a clash between the king and the sultān's resident in Cyprus, the latter was killed, and Famagusta, which he had held, passed into the king's possession (868/1464). Another vassal state, the march-principality of Elbistan (*q.v.*) under the Turcoman dynasty al Dulḳādir (Dhu ʾl Kadr (*q.v.*)), was disturbed by a succession-struggle following the murder of its ruler, Malik Arslān, in 870/1465. Two pretenders, Shāh-Budak and Rustum, successively backed by Khushḳadam, failed to hold their position against a third Dulḳādirid, Shāh-Suwār, who had Ottoman support and at the end of the sultān's reign was threatening northern Syria. Khushḳadam sent orders to the governors of Tripoli and Ḥamāh to assist Aleppo and made provisional arrangements for an expeditionary force from Egypt (Muharram 872/August 1467). There are some indications of a resurgence of Arab tribal power during the reign. Five expeditions were launched between 866/1462 and 869/1465 against the Labīd tribe of al-Buḥayra, while a few months before the sultān's death, he sent a punitive force against Shaykh Mubārak of Banū ʿUkba, who had plundered the provisions for the pilgrims in the vicinity of Ayla. One of his last acts was to approve an expedition to Upper Egypt, where the *kāshif* had been defeated in a fight with Yūnus b. ʿUmar, the chief of the powerful tribe of Hawwāra (*q.v.*). The sultān died a few days later. Shortly before his death, on assembly of magnates had elected the *atābak* Yalbāy al Ināli al Muʾayyadī to succeed him.

KHUSRAW (see also Khosrew, Amīr Khusraw, Khosrew, Kisrā, Parwīz)

KHUSRAW FIRŪZ, name of the last Būyid ruler, better known by his *laḳab* of al-Malik al Raḥīm. He succeeded his father Abū Kālīdjār in ʿIrāḳ in 440/1048. Most of his reign was spent in disputing with his brother Fulādh Sūtūn the possession of Fārs and Khūzistān and in trying to maintain discipline amongst the Turkish troops of his general al-Basāsīrī (*q.v.*). There is no discernable doctrinal reason for his adoption, in defiance of the caliph, of an epithet reserved for God. In any case, the enfeeblement of the Būyid dynasty allowed the caliph in question, al-Ḳāʾim, to recover a certain amount of political authority, seen in the appointment once more of a vizier to the caliph, Ibn al-Muslima (*q.v.*). A group within the caliphate, in which Ibn al-Muslima was a driving force, hoped to throw off the Būyid tutelage as the Sunnī sultān, the Saldjūḳ Toghril Beg approached, at the invitation also of Fulādh Sūtūn. In 448/1055 Toghril entered Baghdād, after having promised to respect al Malik al-Raḥīm's position as his vassal, but a rebellion gave him a pretext to arrest the Būyid ruler, and the latter died two years later in prison at Rayy.

and in general, the bibliography to BUWAYHIDS, to which should be added, H. Busse, *Chalif und Grosskönig, die Buyiden im Irak (945 bis 1055)*, Beirut Wiesbaden 1969. (CL. CAHEN)

KHUSRAW MALIK [see GHAZNAWIDS]

KHUSRAW PASHA [see KHOSREW PASHA]

KHUSRAW SHĀH [see GHAZNAWIDS]

KHUSRAW SULṬĀN, eldest son of the Mughal emperor Djahāngīr [*q.v.*] by the daughter of Rādja Bhagwān Dās, was born at Lahore in 995/1587. He was a favourite with his grandfather, Akbar, who perhaps wanted to make him his successor. He rebelled against his father in the first year of the latter's reign (in 1015/1606), was defeated and imprisoned. He made a second conspiracy in Afghānistān, and this having been detected, he was, with one interval, kept in confinement for the rest of his life. He died at Aṣfargarh near Burhānpūr in the Deccan in 1031/1622, in suspicious circumstances, and was in all probability murdered by Shāh Djahān. His sister had his body buried in the Khusraw Bāgh at Allāhābād. His two sons, Dāwar Bakhsh, otherwise Buzurg, and Garshāsp, were put to death at Shāh Djahān's accession.

Bibliography The principal source is the *Tūzuk-i Djahāngīrī*; see also the bibliography to DJAHĀNGĪR. (H. BEVERIDGE)

KHUSŪF [see KUSŪF]

KHUṬBA (A.), sermon, address by the *khaṭīb* [*q.v.*]. The *khuṭba* has a fixed place in Islamic ritual, viz. in the Friday service, in the celebration of the two festivals, in services held at particular occasions such as an eclipse or excessive drought. On the Friday it precedes the *ṣalāt*, in all the other services the *ṣalāt* comes first. A short description of the rules for the *khuṭba* according to al-Shīrāzī (*Tanbīh*, ed. Juynboll, 40), one of the early Shāfi'ī doctors [*q.v.*], may be given here.

(a) One of the conditions for the validity of the Friday service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the *khaṭīb* must be in a state of ritual purity, his dress must be in accord with the prescriptions; he must pronounce the two *khuṭbas* standing and sit down between them; the number of auditors required for a valid *djum'a* must be present [see ṢALĀT].

Regarding the sermon itself, there are obligatory: the *hamdala*, the *ṣalāt* on the Prophet, admonitions to piety in both *khuṭbas*, prayer (*du'ā'*) on behalf of the faithful, and recitation of a part of the Kur'ān in the first *khuṭba* or, according to some doctors, in both. It is commendable (*masnūn*) for the *khaṭīb* to be on a pulpit or an elevated place, to salute the audience when directing himself towards them, to sit down till the *adhān* is pronounced by the *mu'adhdhin*, to lean on a bow, a sword or a staff; to direct himself straightway to his audience; to pray (*du'ā'*) on behalf of the Muslims; and to make his *khuṭba* short.

(b) Regarding the *khuṭbas* on the days of festival the same author says (42) that they are like those of the Friday service, except in the following points: the *khaṭīb* must open the first with nine *takbīrs*, the second with seven. On the *'Īd* he must instruct his audience in the rules for the *ṣadaḳat al-fiṭr*, on the *'Īd al-aḍḥā* in the rules for the sacrifice of this day. It is allowable for him to pronounce the sermon sitting.

Regarding the *khuṭbas* of the service during an eclipse, al-Shīrāzī (43) remarks that the preacher must admonish his audience to be afraid, and in the service in times of drought he must ask Allāh's pardon, in the opening of the first *khuṭba* nine times, in the second seven times; further, he must repeat several times the *ṣalāt* on Muḥammad as well as *istighfār*, recite verse 9 of Sūra LXVI, elevate his hands and say Muḥammad b. *Idrīs*' (which is communicated by al-Shīrāzī in full). Further, he must turn towards the *ḳibla* [*q.v.*] in the middle of the second *khuṭba* and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it as ill he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point to the relation between the Islamic pulpit and the judge's seat in early Arabia. This explains why the *khaṭīb* must sit down between the two *khuṭbas*. It explains why he must lean on a staff, sword or bow, for these were the attributes of the old Arabian judge. It is not easy to see why the *khuṭba* precedes the services on Friday, whereas on the days of festival and the other special occasions *ṣalāt* comes first. *Ḥadīth* tells us that Marwān b. al-Ḥakam was the first to change this order by pronouncing the *khuṭba* before the performance of the *ṣalāt* on the days of festival (e.g. al-Bukhārī, *'Idayn*, *bāb* 6 and especially the pathetic picture in Muslim, *'Idayn*, trad. 9).

It is also said that Marwān was the first to hold the *khuṭba* on these days on a pulpit, the old custom being a service without *minbar* or *aḳāma*. According to other authorities (cf. Muslim, *Īmān*, tr. 78, 79, and al-Nawawī's commentary) the *khuṭba* before the *ṣalāt* was an institution going back to 'Uthmān or even to 'Umar. The common opinion of traditionists is, however, that it was an innovation due to the general tendency of the Umayyads in favour their own dynastic interests rather than those of religion. If this opinion should be right, the innovation as well as the holding of the *khuṭba* in a sitting attitude may be looked upon as an endeavour to go back to the pre-Islamic judicial rites concerning *minbar* and *khuṭba*.

Regarding the prayer on behalf of the faithful (*du'ā' li 'l-mu'minīn*) it must be observed that in this prayer before the Friday *ṣalāt* it has become customary to mention the ruling sovereign. The history of Islam is full of examples of the importance which was attached to this custom, especially in times of political troubles, the name mentioned in this *du'ā'* betraying the *imām*'s political opinion or position. Though it is not prescribed by law to mention the ruler's name, the suppression of the name at this occasion exposed the *khalīfa* to suspicion. In countries where Muslims lived under non-Muslim rule, even a prayer for the worldly prosperity of the ruler could expose the *khalīfa* to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgronje, *Islam and Phonography*, 13 f. = *Verspr. Geschr.*, ii, 430 f. Idem, *Mr L. W. C. van den Berg's beoefening van het Mohammedaansche recht, to Ind. Gids*, vi/2, 809 f. = *Verspr. Geschriften*, ii, 214 f.) The custom of mentioning the ruler in prayer is found as early as the 5th century B.C. to the Aramaic papyri of Elephantina (Pap. J, line 26; cf. also Harnack, *Mission und Ausbreitung des Christentums*, i, 286).

Several of the characteristics of the *khuṭba* prescribed by the doctors of the law occur also in *ḥadīth*. The *khuṭbas* of Muḥammad usually begin with the formula *amma ba'du* (al-Bukhārī, *Djum'a*, *bāb* 29). Side by side with the *hamdala* (Muslim, *Djum'a*, tr. 44, 45) the *shahāda* occurs (Aḥmad b. Ḥanbal, ii, 302, 343: "A *khuṭba* without the *shahāda* is like a mutilated hand". In a large number of traditions it

is stated that Muḥammad used to recite passages from the Kur'ān (e.g. Muslim, Ṣalāt, tr. 49-52; Aḥmad b. Ḥanbal, v. 86, 88, 93 etc.). The *khuṭba* must be short in accord with Muḥammad's saying: "Make your *ṣalāt* long and your *khuṭba* short" (Muslim, Ṣalāt, tr. 47). Just like the *ṣalāt* the *khuṭba* must be right to the purpose (*fiḳh*, Muslim, Ṣalāt, tr. 42). The audience must be silent and quiet, "who says to his neighbour 'listen', has spoken a superfluous word"; al-Bukhārī, Ṣalāt, *bāb* 38). The two *khuṭbas* pronounced by the standing *khaṭīb*, who sits between them, are based on Muḥammad's example (al-Bukhārī, Ṣalāt, *bāb* 27; Muslim, Ṣalāt, tr. 35 f., Aḥmad b. Ḥanbal, i, 35, 92, 98). During the *adhān* Muḥammad used to sit on the *minbar*, the *iḳāma* was spoken when he had descended (in order to hold the *khuṭba* standing), this order was observed by Abū Bakr and ʿUmar (Aḥmad b. Ḥanbal, iii, 449 *bis*).

Neither the term *khuṭba* nor the verb *khaṭaba* in their technical meaning occur in the Kur'ān. Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the *ṣalāt* which is mentioned (Sūra LXII, 9-11). It would be wrong to conclude from this silence that the *khuṭba* did not yet form a constituent part of worship in Muḥammad's time. Still, it is not probable that the different kinds of service were accurately regulated from the beginning. *Ḥadīth* has preserved descriptions showing that Muḥammad's *khuṭba* often did not have much to do with the regular sermon of later times. Abū Dāwūd, *Kitāb al-Ṣalāt*, *bāb* 13, reports, for example, that the Prophet pronounced two *khuṭbas* at the end of a complaint raised against a collector of the *ṣadaḳa*. Still, it is not possible to distinguish between the kinds as may appear from the following traditions. According to one of them related on the authority of Abū Saʿīd al-Khudrī it is said that Muḥammad on the days of festival used to open the service with the *ṣalāt*; then he pronounced the *khuṭba* "and his *khuṭba* actually consisted in the command to participate in some mission or expedition" (Aḥmad b. Ḥanbal, iii, 56 f.). A similar statement is to be found in Muslim, ʿIdayn, tr. 9. "When Muḥammad had concluded the *ṣalāt* on the days of festival by the *taslīm*, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement, he gave his orders on it, he used also to say: give alms, give alms; . . , then he went away. This state of things lasted till Marwān, etc.". This is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muḥammad's time. Yet it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Marwān, who even had a *minbar* built on the *muṣallā*. According to another tradition, the Prophet once interrupted his *khuṭba* in order to reply to a stranger who had asked for instruction in the Muslim faith (Muslim, Ṣalāt, tr. 60), he is also portrayed as interrupting the *khuṭba* to call out directly to a man (*ibid*, tr. 54 f.).

However uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service on Friday and the days of festival arose only after Muḥammad's lifetime. This order reposes on three elements the early Arabian *khuṭba*, Muḥammad's *sunna* and the example of Jews and Christians.

In his study on the history of Muslim worship C. H. Becker endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the mass on the other. But this view was opposed by Mittwoch, who found in the Jewish liturgy features corresponding to *adhān* and *iḳāma*, to the *kawāsa*, the recitation of the Tora (first *khuṭba*) and the recitation from the Prophets (second *khuṭba*). It is perhaps impossible to decide the question, probably the example of the Jewish as well as that of the Christian liturgy exercised influence on the final constitution of the Muslim worship.

It is customary to pronounce the *khuṭba* in Arabic; nevertheless, this rule is not infrequently broken in non-Arabic speaking lands.

The history of the *khuṭba* in Islam remains to be written, and the study of oratory from the *minbar* or pulpit likewise remains to be undertaken. On the latter point, the enquirer might utilise with profit the texts (of varying degrees of authenticity) of those sermons of the Prophet given in the *Sīra*, in the *ḥadīth* collections and in historical texts, as well as in those *adab* works which have preserved specimens of famous *khuṭbas*. Collections like those of Ibn Nubāta al-Fāriḳī [*q.v.*] and the specially compiled anthologies of sermons used by the professional *khaṭībs*, just as the secretaries used collections of model letters, would also be found useful. Collections of this latter type are often arranged according to the calendar, i.e. there are four sermons for each month plus supplementary ones for festival days, the Prophet's birthday and his *miʿrāḏ* or night-journey (see Ahlwardt, *Verzeichnis der arab Hss.*, iii, 437).

(A. J. WENSINCK)

KHUTTALĀN, Khuttal, a region on the right bank of the upper Oxus river, in what is now Soviet Central Asia, lying between the Wakhsh river and the Pandj river (sc. the head waters of the Oxus), called the Wakhshāb and Dparyāb in mediaeval times. It was bounded on the west by the topographically similar regions of Čaghāniyān and Wakhsh [*qq.v.*], and was often administratively linked with Wakhsh (Yāḳūt, *Buldān*, ii 402). Khuttal was a land of rich pastures in both the river valleys and on the upper slopes of the hills, where the famed horses of Khuttal, known even to the Chinese, were reared; the geographers advert frequently to the Khuttalī and Tukhārī breeds, and the men of Khuttal were celebrated for their knowledge of horse-breeding, farriery and veterinary science, and for their skill in making saddles and other accoutrements (see Bosworth, *The Ghaznavids*, 113). The valleys ran northwards towards the Buttamān mountains, which separated Khuttal from the upper Zarafshān river valley, gold and silver were mined there, and there dwelt in these mountains two fierce and predatory groups, the Kumādhīs and the Kandjina Turks, both of them probably remnants of Hephthalite peoples [see KUMĀDHĪS].

The form Khuttalān, with the plural ending, is early attested, for this is found in the very early New Persian satirical verses composed by the local

people against the Arab commander Asad b. ʿAbd Allāh al-Kasrī when he unsuccessfully raided Khuttal in 108/726-7, see Ṭabarī, ii, 1492, 1494, 1602. Later Persian poetry requires forms like Khuttalān or Khetlān, whilst the *Ḥudūd al-ʿĀlam*, tr. Minorsky, 129, spells Khatulān. Yāḳūt, *loc. cit.*, gives both Khatlān and Khuttal, with his main entry under the latter form. In the Chinese annals we find forms like K'o-tu-lo, see Marquart, *Ērānšahr*, 299-300. An etymological connection with the name of the Hephthalites, within whose northern kingdom Khuttal certainly fell [see HAYĀṬILA] is certainly not impossible.

The principal town of Khuttal and the residence of its ruler was at Hulbuk to the south of the modern centre Kulāb/Kulyāb, whilst Nuḳāra or Andiḳāraḳh is described as the main trading centre. Other towns enumerated by the geographers include the important centres of Hallāwand and Munk, the latter probably corresponding roughly to the modern Baldjuwān; according to Yaḳūbī, Munk was on the borderland with Rāgh and the Turkish lands, &c. those of the Kumīdjīs etc. Clearly, Khuttal was a prosperous and well settled region at this time.

In the pre Islamic period, the local rulers bore the titles Khuttalān Shāh or Khuttalān-Khudāh and Shēr I Khuttalān (Ibn Khurradādhbih, 40). The Arab invaders did not gain full control of Khuttal till the end of the Umayyad period. The rebel al-Ḥārith b. Suraydj [*q.v.*] received support from the local ruler, and in retaliation, Asad b ʿAbd Allāh al-Kasrī led two expeditions into Khuttal in 119/737. These provoked an appeal for help to the Khāḳān of the Türgesh or Western Turks Su-lu, and the Arabs had to retreat hastily (Gibb, *The Arab conquests in Central Asia*, 81-3). The region was not fully secured till 133/750-1, when Abū Dāwūd Khālid b. Ibrāhīm, governor of Balkh, drove out the ruler (*malik*) of Khuttal, who fled first in the Turks and then to China, where he was granted the honorific title of *Yaḳġu* (Gibb, *op. cit.*, 95; E. Chavannes, *Documents sur les Tou-kiue occidentaux*, 168, 218).

In the ensuing century or so, Khuttal came under the rule of the Banū Ḳurāḳ or Abū Dāwūdids, who exercised power on both sides of the upper Oxus. In the Sāmānid period, the *amīrs* of Khuttal were in loose tributary status only in the Sāmānids, sending presents but not taxation to Bukhārā (Muḳaddasī, 337), and they exercised suzerainty south of the Oxus, for the *Ḥudūd al-ʿĀlam*, 109, says that the *dihḳān* of the small principality of Yūn in Badakhshān was tributary to the *amīr* of Khuttal. In the warfare of 336-7/947-9 between the Sāmānid Nūḥ b. Naṣr and Abū ʿAlī Čaghānī, all the vassal rulers (*muḳāṭaʿa-i afrād*) along the upper Oxus were stirred into revolt by Abū ʿAlī, including the *amīr* Aḥmad b. Djaʿfar of Khuttal, the *amīr* of Rāgh and the Kumīdjīs (Gardīzī, ed. Nāzim, 36-7, ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 157-8, cf. Barthold, *Turkestan*[1], 248).

Under the early Ghaznawids, Khuttal was strategically important as being in the buffer zone between the Ghaznawids and their Ḳarakhānid rivals. Khuttal is included with Čaghāniyān and Kubādhiyān amongst the territories enumerated to the ʿAbbāsid Caliph's investiture diploma of 422/1031 to Mas'ūd b. Maḥmūd (Bayhaḳī, in Bosworth, *The Ghaznavids*, 34), but it was also claimed by the Ḳarakhānid ʿAlī tigin [see ILEK KHĀNS], who stirred up the Kumīdjīs to harry the region. Unlike as in the neighbouring principality of Čaghāniyān, where the Muḥtādjī *amīrs* remained, no separate family of local rulers is mentioned for Khuttal at this time, Ghaznavid influence was exercised directly, seen in Mas'ūd's appointment of a *ḥāfiẓ li-ḥudūd* for Khuttal (Bosworth, *op. cit.*, 176).

In the Saldjūḳ period, however, various local *amīrs* are mentioned. An *amīr* of Khuttal rebelled against Alp Arslan in 456/1064, but was killed (Ibn al-Athīr, x, 13), and in 533/1138 there was a campaign by the lord of Khuttal, one Ibn Shudjāʿ Tarkishāh, formerly a vassal of Sandjar, against the important crossing place of Tirmidh, taking advantage of the chaos in Khurāsān consequent upon Sandjar's capture by the Ghuzz and then his death; this Ibn Shudjāʿ is said to have claimed descent from the Sāsānid emperor Bahrām Gūr (Ibn al-Athīr, xi, 255). In the period of the Ghūrids and Khwārazm Shāhs, no separate native dynasty is mentioned. Like Wakhsh, it may have been part of the Ghūrid empire and may have become one of the small principalities into which that empire broke up, see Djūzdjānī, *Ṭabaḳāt-i nāṣirī* ed. Habībī, Kabul 1342-3/1962-4, i, 387, 390, tr. Raverty, 426, 438, 490. A Djalāl al-Dīn ʿUmar of Wakhsh, apparently from the Bāmiyān branch of the Ghūrids [*q.v.*], was carried off into captivity to Khwārazm ca. 612/1215, according to Nesawī, see Barthold, *Turkestan*[1], 372.

In the 8th/14th century, Khuttal was likewise one of the small states into which Čaghatay's empire disintegrated, Sharaf al-Dīn Yazdī records that the ruler of Khuttal Kay Khusraw was killed by Timūr for treasonable contacts with Khwārazm (*Ẓafar nāma*, Calcutta 1885-8, i, 243). Later, Khuttal was one of the dependencies of the region of Ḥiṣār [*q.v.*] and was controlled by the later Timūrid *amīr* of Kunduz. Then in the 10th/16th century it passed under Özbeg control. The name Khuttal now disappears from use, being replaced by that of the modern town of Kulāb; one of the last recorded uses of the old name is in the dynastic history of the Özbegs, the *Baḥr al-asrār fī manāḳib al-akhyār* of Maḥmūd b. Amīr Walī (begun in 1044/1634). After being included in the Khānate of Bukhārā during the 18th and 19th centuries, the mediaeval region of Khuttal now forms part of the Tadzhikistan SSR.

Yāḳūt, *Buldān*, ii, 402, also mentions a village of al Khuttal in ʿIrāḳ on the Baghdād-Khurāsān high road near Daskara.

KHUZĀ'A, an ancient Arab tribe of obscure origin. Muslim genealogists assuming a Muḍarī origin of Khuzāʿa based their argument on an utterance attributed to the Prophet according to which the ancestor of the tribe, ʿAmr b. Luḥayy [*q.v.*] was a descendant of Kamaʿa (= ʿUmayr) b. Khindif, thus tracing their pedigree to Muḍar (Ibn Hishām, *al-Sīra al-nabawiyya*, ed. al-Sakkā, al Abyārī and Shalabī, Cairo 1355/1936, i, 78, al-Balādhurī, *Ansāb al-ashrāf*, ed. Muḥammad Ḥamīdullāh, Cairo 1959, i, 34; al-Fāsī, *Shifāʾ al-gharām bi-akhbār al-balad al-ḥarām*, Cairo 1956, ii, 44-5 bis; Muṣʿab b. ʿAbd Allāh al Zubayrī, *Nasab Ḳuraysh*, ed. E. Lévi-Provençal, Cairo 1953, 7-8, 11; Ibn ʿAbd al-Barr, *al-Inbāh ʿalā ḳabāʾil al-ruwāt*, al-Naḏjaf 1386/1966, 97 ff.; Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, ed. E. Lévi-Provençal, Cairo 1948, 222 ff.; al-Samʿānī, *al-Ansāb*, ed. ʿAbd al-Raḥmān al Muʿallimī, *Hyderabad* 1382/1962, V, 116). Some sections in Khuzāʿa asserted that

they were descendants of al-Ṣalt b. al-Nadr b Kinana b. Khuzayma b. Mudrika b Ilyas b. Muḍar. The claims for Muḍari descent made by some groups of Khuzā'a were firmly rejected by genealogists, who asserted that both Kināna and al-Ṣalt died childless. (Ibn al-Kalbī, *Djamharat al-nasab*, Ms. Hāl, Add 23297, fol. 4b, ll. 9-10; al-Wazīr al-Maghribī, *Adab al-khawāṣṣ*, Ms Bursa, Hüseyin Çelebi, 15, fols. 84b 86a, al-Balādhurī, *Ansāb*, i, 34 ult., 38-9; Muṣ'ab, *op. cit.*, 11-12). Muṣ'ab, recording the Muḍari genealogy of Khuzā'a, confirmed by an utterance of the Prophet, remarks cautiously that the pedigree uttered by the Prophet is certainly true, provided that it was actually said by him (Muṣ'ab, 8; Ibn 'Abd al-Barr, *al Inbāh*, 58). Harmonising traditions trying in the usual way to bridge the contradictory reports about the origin of Khuzā'a, claim that the mother of Luḥayy married after the death of Kama'a the Yamani Ḥāritha and the child traced his pedigree to the Yamani father who adopted him (al-Fāsī, *Shifā'*, ii, 46). Another tradition states that Kama'a married, beget children, but clashed with his relatives, left for al-Yaman and allied himself with the Azd (al Balādhurī, *Ansāb*, i, 35, ll. 1-2). The Yamani tradition, on the other hand, records a lengthy list of ancestors of Khuzā'a beginning with Luḥayy (= Rabī'a) b Ḥāritha b 'Amr b. 'Āmir b Ḥāritha b. Imru 'l Kays b. Tha'laba b. al-Azd. The pedigree is traced back, of course, to Kahtan (al Fāsī, *Shifā'*, ii, 45, ll. 5-10; Ibn 'Abd al Barr, *al Inbāh*, 97; Ibn Durayd, *al-Ishtiḳāḳ*, ed. 'Abd al Salām Hārūn, Cairo 1378/1958, 468; al-Ḥāzimī, *'Udjālat al mubtadī*, ed. 'Abd Allāh Kāmil, Cairo 1384/1965, 54)

The traditions about the beginnings of the rule of Khuzā'a in Mecca, ascribing Khuzā'a to Azd, record a lengthy story about the migration of the tribal groups of Azd from al Yaman to the North While some tribal divisions continued their migration to Syria (Ghassān) and 'Umān (Azd Shanū'a), the Khuzā'a separated (*inḳisām*) and managed to get control of Mecca. One of the traditions reports that the leader of the Azd asked Djurhum (*q.v.*), the tribe which ruled Mecca at the time, to permit them to stay in the territory of Mecca until them foragers would find for them suitable pasture-grounds, threatening war if they were denied this. In fact, when Djurhum refused to grant permission, Khuzā'a fought them, defeated them and got possession of the Sanctuary of Mecca. Another tradition, on the authority of Abū 'Amr al Shaybānī, reports that the custodianship of the Ka'ba was gained legally by Khuzā'a, as their leader Rabī'a b. Ḥāritha married Fuhayra, the daughter of al Ḥārith b. Muḍāḍ al Djurhumī, his son 'Amr b Rabī'a (i.e. 'Amr b. Luḥayy) had thus a legal basis for his claims to the custodianship. In the protracted battles which ensued between Khuzā'a and Djurhum, Khuzā'a defeated Djurhum, who had to leave the city. A third tradition ascribes the decline of the Djurhum in Mecca to their deterioration and moral decay. Afflicted by plagues, God's chastisement for their wickedness, they were extirpated, and only few survivors from amongst them left Mecca, the custodianship of the *ḥaram* was then taken over by Khuzā'a. A diverse tradition gives a quite different account of the events, sc. that Khuzā'a took over the control of Mecca from Iyād (*q.v.*) A peculiar version of this tradition transmitted by al-Zubayr b. Bakkār reports a battle which followed some clashes between the ruling Iyād and Muḍar in which Iyād was defeated. Iyād got permission to leave Mecca on the condition that Muḍari women married to Iyādīs would be returned to Muḍar if they wished. Among the returned women was a Khuzā'a woman named Kudhma Khuzā'a, the report states, traced at that time their pedigree to Muḍar As the Iyād failed to carry with them into exile the pillar with the Black Stone, they decided to bury it. The Khuzā'ī woman revealed to her people the place of the buried Stone and advised them to ask from Muḍar the custodianship of the Ka'ba as reward for finding the pillar with the Black Stone Muḍar complied and Khuzā'a got control of the Ka'ba, and retained this office until the arrival of Kuṣayy (*q.v.*) (al Fāsī, *Shifā'*, ii, 26 f., al-Ya'ḳūbī, *Ta'rīkh*, al-Nadjaf 1384/1964, i, 208; Muḥammad b Ḥabīb, al *Munammaḳ*, ed Ḳhūrshīd Aḥmad Fārik, Hyderabad 1384/1964 344 f.; al-'Iṣāmī, *Simṭ al nudjūm al 'awālī*, Cairo 1380, i, 283) Another tradition reports that Djurhum were driven out through a joint action of Bakr b 'Abd Manāt of Kināna and the Banū Ghubshān of Khuzā'a (al Fāsī, *Shifā'*, i, 370, "Bakr b 'Abd Manāt of Khuzā'a", as recorded in the article Djurhum above is an error).

These stories allotting exceptionally long lives to the rulers of Djurhum and Khuzā'a have the character of folk-tradition in which were embedded elements of *mu'ammarūn* tales, edifying stories about righteous and pious men (see e g the story of Wakī' b Salama of Iyād and his servant Harwara, in al Fāsī, *Shifā'*, ii, 26, and Muḥammad b Ḥabīb, al *Munammaḳ*, 346-7), accounts of battles and clashes in the popular style of the *ayyām al-'arab*, and recollections of legends about the migrations of tribes caused by a dam breaking in South Arabia. The tradition focuses around the person of 'Amr b. Luḥayy, almost unanimously putting on him the blame for the wicked innovations in the faith of Abraham and for the introduction of idol-worship, especially that of Hubal, into Mecca There is, however, a contradictory tradition asserting that it was Khuzayma b. Mudrika, one of the ancestors of Kuraysh, who introduced the worship of Hubal and stating that Hubal was consequently called "Hubal Khuzayma" (al Balādhurī, *Ansāb*, i, 37, no. 77; al Fāsī, *Shifā'*, ii, 32 init). As in the case of Iyād, some traditions mention among the Khuzā'a a *homo religiosus* Abū Kabsha, who in his search after the true religion worshipped Sirius. The unbelievers used to refer to the Prophet as Ibn Abī Kabsha in the early period of his prophethood, pointing out his deviation from the current beliefs of his people (Muḥammad b. Ḥabīb, *al-Muḥabbar*, ed. I. Lichtenstaedter, Hyderabad 1361/1942, 129; 'Alī b. Burhān al Dīn al Ḥalabī, *Insān al 'uyūn fī sīrat al-amīn al ma'mūn* (= *al-Sīra al-ḥalabiyya*), Cairo 1382/1964, i, 335, al-Balādhurī, *Ansāb*, i, 91, 327, al-Suyūṭī, *al Durr al manthūr*, Cairo 1314, vi, 131, al-Ḳurṭubī, *Tafsīr*, 1387/1967, xvii, 129, al-Makrīzī, *Imtā' al asmā'*, ed. Maḥmūd Shākir, Cairo 1941, i, 77, 158, al-Ḳāzarūnī, *Sīrat al-nabī*, Ms. B.M. Add. 1499, fol 232a b, 'Abd al-Salām Hārūn, ed., *Nawādir al-makhṭūṭāt*, Cairo 1370/1952, i, 100 (al-Fayyūmī Khidhlī, *Tuḥfat al-ṣāḥib fīman nasiba ilā ghayr abīh*).

These conflicting and contradictory stories seem to indicate that the formation of the tribe of Khuzā'a took place over a long period of time, ramifying into various tribal units. The main area of abode of the tribe was between Mecca and Medina.

When Kuṣayy arrived in Mecca aiming to gain control of the city, he had to subdue the ruling Bakr b. 'Abd Manāt of Kināna, the Khuzā'a and their abettors, the Ṣūfa. The different stories about the enigmatic Kuṣayy resemble in their outline the stories about the former rulers of Mecca; his marriage with Ḥubbā bint Ḥulayl b Ḥubghayya gave legitimacy to his custodianship of the Ka'ba. Another manner of

legitimisation, the sale of how this office was purchased by Kusayy for a goat's skin of wine from the drunken Abū Ghubshān, is recounted in the compilations of proverbs and stories of fools (al-ʿAskarī, *Dhamharat al-amthāl*, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm and ʿAbd al-Madjīd Katāmish, Cairo 1384/1964, i, 387, no. 585; Hamza al-Iṣfahānī, *al-Durra al-fākhira fī 'l-amthāl al-sā'ira*, ed. ʿAbd al-Madjīd Katāmish, Cairo 1972, i, 139, no. 126; al-Thaʿālibī, *Thimār al-ḳulūb*, ed Abu 'l-Faḍl Ibrāhīm, Cairo 1384/1963, 135, no. 196, al-Maydānī, *Madjmaʿ al-amthāl*, ed. Muḥyī 'l-Dīn ʿAbd al-Ḥamīd, Cairo 1379/1959, i, 216, no. 1167, Ibn al-Diwaytī, *Akhbār al-ḥamḳā*, Beirut, n.d., 42). The court of Abū Ghubshān (*dār Abī Ghubshān*) was extinct in Mecca in the second half of the 3rd century of the Hidjra (al-Fākihī, *Taʾrīkh Makka*, Ms. Leiden, or. 463, fol. 456b, l.15). Like the preceding rulers, he fought, according to another account, the two tribes Bakr b. ʿAbd Manāt and Khuzāʿa and crushed their power. His wife Hubbā revealed, as in the story of Iyād, the place where the pillar with the Black Stone was buried, and so the true worship of the Kaʿba could be resumed (al-Fāsī, *Shifāʾ* fī, 73; al-Nuwayrī, *Nihāyat al-arab*, Cairo 1374/1955, xvi, 32). The relations between Kusayy on the one side and the Bakr b. ʿAbd Manāt and Khuzāʿa on the other were settled on the basis of the judgment of the arbiter Yaʿmar b. ʿAwf of the Bakr b. ʿAbd Manāt, called al-Shaddākh. The verdict granted Kusayy the custodianship of the Kaʿba and provided that Khuzāʿa should be left in the area of the *ḥaram* (Ibn al-Kalbī *Djamhara*, fols. 52a, inf.—52b, sup.)

In the new régime set up by Kusayy, in which the scattered tribal units of Kuraysh were gathered and settled in Mecca, the groups of Khuzāʿa played an important role in strengthening the power of Mecca ruling Kuraysh to extend their influence among the tribes. Khuzāʿa was included in the organisation of the Hums. Two tribal groups of Khuzāʿa, the Muṣṭaliḳ and Hayā, were included in the organisation of the Aḥābīsh, the allies of Kuraysh (see e.g. Ibn Kutayba, *al-Maʿārif 'l-Kabīr*, Hyderabad 1368/1949, 398 l. 4; Muḥammad b. Ḥabīb, *al-Muḥabbar*, 178, al-Ḥāsimī, *al-Ittiḥād fī ansāb al-nisāʾ wa 'l-mamālīḥ min al-ʿarab*, Hyderabad 1359, 250. Ibn al-Kalbī *Djamhara*, fols. 48b-49a sup.; al-Fāsī, *Shifāʾ*, ii, 41, Yāḳūt, s.v. Makka; al-Bakrī, *Muʿdjam mā ʿistaʿdjam*, ed. al-Saḳḳā, Cairo 1364/1945, 845, Ibn al-Faḳīh, *al-Buldān*, ed. de Goeje, Leiden 1885, 28). Together with Mudjār tribes, Khuzāʿa worshipped al-ʿUzzā and Manāt, together with the Dawsī they worshipped Dhū 'l-Kaffayn (Yāḳūt, s.v. Manāt; Ibn ʿArabī, *Mukhtaṣar al-abrār*, Beirut 1388/1968, i, 415, Ps. Aṣmaʿī, *al-Aṣnām*, the section *Tasmiyāt al anbiyāʾ*, Ms. B M Or. 1403, fol. 27a, Muḥammad b. Ḥabīb, *al-Muḥabbar*, 328). The involvement of Khuzāʿa and Bakr b. ʿAbd Manāt in the affairs of Mecca and their influence can be gauged from the story about the agreement between Kuraysh and Thaḳīf concerning the mutual rights of these two tribes to enter Mecca and Wadjd. the Thaḳīf complied with the demands of Kuraysh, fearing the strength of Kuraysh, Khuzāʿa and the Bakr b. ʿAbd Manāt (Muḥammad b. Ḥabīb, *al Munammaḳ*, 280).

The considerable number of names of Khuzāʿīs married by Kurashīs recorded in the sources bears evidence of the close relations between Kuraysh and Khuzāʿa. Indeed, when Khuzāʿa decided to ally themselves with ʿAbd al-Muṭṭalib, they stressed that he was "borne" by Khuzāʿī women (*fa had waladnāhu*) In the same style the Khuzāʿī ʿAmr b. Sālim addressed the Prophet with the words *had kuntum waladan wahunnā wālidā* when he came asking his help against the Banū Bakr and Kuraysh (Ibn Sayyid al-Nās, *ʿUyūn al athar fī funūn al maghāzī wa'l-shamāʾil wa 'l-siyar*, Cairo 1356, ii, 264-5, 282).

When the Prophet was on his hidjra to Medina he met, according to one tradition, Burayda b. al-Ḥusayb of Aslam (q.v.) with a large group of his people, he and his people embraced Islam and prayed behind the Prophet. These Aslam, a branch of Khuzāʿa, allied themselves very early to the Prophet and warriors of Aslam took part on the side of the Prophet in his campaigns. The agreements of the Prophet with Aslam (see Hamīdallāh, *Madjmūʿat al-wathāʾik al-siyāsiyya li 'l-ʿahd al-nabawī wa 'l khilāfa al-rāshida*, Cairo 1376/1956, 191-4, nos. 185-70) bear evidence to the friendly relations between the Prophet and Aslam. After the murder of the people of the expedition of Biʾr Maʿūna (q.v.), the Prophet invoked God's blessing for Aslam (*wa-Aslam sālimahā Allāhu*; al-Wākidī, *al-Maghāzī*, ed. Marsden Jones, Oxford 1966, 550). When the Prophet mobilised the forces for the conquest of Mecca he summoned the Aslam, who dwelt in the neighbourhood of Medina, as present themselves in Medina. In fact, 400 warriors of Aslam, among them 30 riders, took part in the conquest of Mecca. The two standard bearers were Burayda b. al-Ḥusayb and Nādjiya b. al-Aʿdjam of Aslam (al-Fāsī, *Shifāʾ*, ii, 123; Ibn Hadjar, *al-Iṣāba*, ed. ʿAlī Muḥammad al Bidjāwī, Cairo 1392/1972, vi, 398, no 8647; al Wākidī, 799-800) Aslam, along with Ghifār, Muzayna and Djuhayna, were pointed out by the Prophet as surpassing in virtues the mighty tribes of Tamīm, Asad, ʿAmr b Saʿsaʿa and Ghaṭafān (al-Ḳasṭallānī, *Irshād al-sārī*, Cairo 1327, vi, 13; Ibn Hadjar, *Fatḥ al-bārī*, Cairo 1301, vi, 395 7) Commentators of *ḥadīth* are unanimous in saying that this high position was granted to them because they hurried to embrace Islam

The attitude of the Muṣṭaliḳ, another branch of Khuzāʿa allied with the Banū Mudlidj of Kināna and included in the Aḥābīsh organisation linked with Kuraysh, was however quite different towards the Muslim commonwealth of Medina Their leader, al-Ḥārith b. Abī Dirār, gathered the forces of his tribe for an attack against Medina. The forces of the Prophet attacked the Muṣṭaliḳ at Murayseʿ on 5/627, defeated them and took captives and booty. The Prophet married the captured daughter of the leader, Djuwayriyya (al Wākidī, 404 13).

Another branch of Khuzāʿa, the Kaʿb b. ʿAmr, played a decisive role in the struggle between Mecca and the Prophet. The dissensions and clashes between the Kaʿb and their neighbours, the Bakr b. ʿAbd Manāt, led the Kaʿb b. ʿAmr to opt for an alliance with the Prophet in the pact of al Hudaybiyya, whereas the Bakr b. ʿAbd Manāt allied themselves with Mecca. A group of the Bakr b. ʿAbd Manāt aided clandestinely by some leaders of Kuraysh attacked the Kaʿb b ʿAmr at al Watīr and killed some of them The orator of the Kaʿb, ʿAmr b. Sālim, appeared at the court of the Prophet in Medina and addressed him, reminding him of the alliance of the Kaʿb with ʿAbd al Muṭṭalib, pointing out the killing of the Kaʿb at al-Watīr, and urging him to revenge his allies. The Prophet responded and promised aid for victory (*naṣr*). The request of a man from the ʿAdī b. Amr, the brethren of Kaʿb b. ʿAmr, to be included in the promise was answered by the Prophet's remark that Kaʿb and ʿAdī are one corporate body (*wa-hal ʿAdiyyun illā Kaʿb wa Kaʿbun illā ʿAdī*: Nūr al-Dīn al Haythamī, *Madjmaʿ al zawāʾid*, Beirut 1967, vi, 184, Ibn al Bakkāl, *al Fawāʾid al munṭaḳā*, Ms. Ẓāhiriyya

mashāhid'a, 60, fol. 85b; *al-Tabarānī*, *al-Mu'jam al-saghīr*, ed. 'Abd al-Rahmān Muhammad 'Uthmān, Cairo 1388/1968, ii, 73 sq). It is evident that the tendency of this tradition is to establish the position of the 'Adī b. 'Amr in the Prophet's invocation and to stress their role in the expedition against Mecca. Whether the Ka'b b. 'Amr were already Muslims when they applied for help is disputed by scholars (Ibn Sayyid al-Nās, ii, 182, penult. says that they were unbelievers, al-Kalā'ī, *al-Iktifā'*, ed. Mustafā 'Abd al-Wāhid, Cairo 1389/1970, ii, 288, that they were Muslims; and see Ibn Hishām, *op. cit.*, iv, 36, n. 2). According to some commentators of the Kur'ān, vv. 13-13 *al Sūrat al Tawba* ordering fighting against the people who had broken their solemn pledges (*alā tuqātilūna kawman nakathū aymānahum*) were revealed in connection with the wicked attack of the Banū Bakr b 'Abd Manāt against the Ka'b b 'Amr (al-Tabarī, *Tafsīr*, ed. Shākir, Cairo 1958, xiv, 158-62 (nos. 16555-16547); al Suyūtī, *al-Durr al-manthūr*, iii, 214-15; idem, *Lubāb al-nuqūl*, Cairo 1373/1954, 124; al-Kurtubī, *Tafsīr*, viii, 86-7, al-Farrā', *Ma'ānī l-Kur'ān*, ed. Ahmad Yūsuf al-Nadjātī and Muhammad 'Alī al Nadjdjār, Cairo 1374/1955, i, 415).

When the Prophet went out against Mecca, he was joined by the tribesmen of Ka'b who stayed in Medina, the main troop of Ka'b joined the forces of the Prophet in Rudayd. The troop of the Ka'b, numbering 500 warriors, had three standards carried by Busr b. Sufyān, Abū Shurayh (Ibn 'Asākir, *Ta'rīkh*, Damascus 1349, vi, 400, Ibn Sa'd, *Tabakāt*, Beirut 1377/1957, iv, 294-5; al-Wākidī, but ["Ibn Shurayh" in *ibid.* l.2 is an error]) and 'Amr b Sālim. It is noteworthy that the Prophet permitted the Ka'b to fight the Bākr b. 'Abd Manāt in Mecca for some additional hours after he had ordered all other troops to stop fighting (*wa ibat* 839, *al-Maghāzī*, *op. cit.*, i, 388; al-Fāsī, *Shifā'*, ii, 144, al-Hārimī, *al-I'tibār*, 153. 'Alī b. Burhān al-Dīn, *op. cit.*, iii, 97 *ult.*) It may be remarked that a group of the Bakr b 'Abd Manāt hasted to join the forces of the Prophet. When Abū Sufyān looked at the marching troops of the Prophet and noticed the force of the Bakr he remarked sadly "By God they are an inauspicious people, because of those Muhammad raided us " (al Wākidī, 820, then 'Asākir, vi, 401).

The meritorious attitude of Khuzā'a towards the Prophet is fairly reflected in Muslim tradition. The Prophet is said to have stated that Khuzā'a was intimately linked with him. (*Khuzā'atu minnī wa-anā minhum*; *Khuzā'atu l-mihāmu wa-anā l-muhāmā* wa, e.g. al-Daylamī, *Firdaws al-akhbār*, Ms. Chester Beatty 3037, fol. 78b, 'Alī b. Burhān al-Dīn, iii, 83, al-Muttakī al Hindī, *Kanz al-'ummāl*, Hyderabad 1385/1965, xiii, 33, no. 316). The Kur'ān is said to have been revealed to the Prophet in the dialect (*lugha*) of the two Ka'bs, Ka'b b Lu'ayy and Ka'b b. 'Amr b. Lubayy, because they shared the same abode (al-Fāsī, *Shifā'*, ii, 53, Ibn 'Abd al-Barr, *al-Istī'āb*, 99) A special privilege granted by the Prophet to Khuzā'a was that he awarded them the rank of *mukhtaṣṣīn*, permitting them to stay in their abode (*ibid.*, 100). It was a Khuzā'ī, Tamīm b. Umayd, whom the Prophet entrusted with the restoration of the border marking stones (*ansāb*) of the *haram* of Mecca (Mughaltāy, *al Zahr al bāsim fī sīrat Abī 'l Kāsim*, Ms Leiden, Or. 370, fol. 319a, inf.-319b, al Fāsī, *al 'Iqd al thamīn*, ed. Fu'ād Sayyid, Cairo 1389/1964, iii, 387, no. 861)

The leader of the Ka'b, Busr b. Sufyān, according to one tradition, was appointed by the Prophet as the tax-collector of the Ka'b in 9/630 they were prevented from handing over their taxes by groups of the Banū 'l-'Anbar and Banū 'l-Hudjaym ("Ibn *al 'Utayr*" and "Banū Dhakwān" in al Wākidī, 974 are errors) al Tamīm, against these two Tamīmī groups the Prophet sent a troop commanded by 'Uyayna b. Hisn (al Wākidī, 974 f.). In the account it is emphasised that the Ka'b were believers, paying the *sadaka* willingly A special tax-collector was sent to the other branch of Khuzā'a, the Banū Mustalik (Ibn Sa'd, iii, 440 inf.)

'Umar b al-Khattāb used to carry the *diwān* of Khuzā'a to Rudayd and distributed there payments to the people of the tribe (al Baladhurī, *Futūh al-buldān*, ed. 'Abd Allāh and 'Umar al-Tabbā', Beirut 1377/1957, 634. Ibn Sa'd, iii 298).

Khuzā'ī warriors participated in the conquests of Islam and groups of Khuzā'a settled in the various provinces of the Arab empire. Some people of Khuzā'a took part in the revolt against 'Uthmān in Medina (Ibn 'Abd Rabbihi, *al 'Iqd al-farīd*, ed. Ahmad Amīn, Ahmad al Zayn, Ibrāhīm al Abyārī, Cairo 1381/1962, iv, 300, l.19). Some groups of Khuzā'a joined 'Alī and fought on his side in the battle of Siffīn, and some Khuzā'īs in Khurāsān were among the 'Abbāsid agents who paved the way for the new dynasty.

AL-KHUZĀMĀ (A.) "lavender" has for a long time been considered as the origin of the name of Alhucemas, on the coast of the Rīf of Morocco, and this etymology is still given in *EI*[1] (art. ALHUCEMAS) Since the problem raised by this toponym has not yet been satisfactorily resolved and since moreover Alhucemas has now, since Morocco's achievement of independence, been "arabised" to al-Ḥuesyma, it is under AL-ḤUSAYMA that an article on the place will be found in the Supplement.

KHŪZISTĀN, a province of south-western Persia, and the land of the Hūz/Hūz/Khūz (Ḥusā/Kusa), the Οὐξίοι/Uxii of Strabo and Pliny. The province of Khuzistān corresponds more or less to the ancient Elam and to the classical Susiana, and the names of its present capital, Ahwāz [*q.v.*], its ancient capital Susa [*q.v.*], and the town of Hawiza [*q.v.*], all reflect the name of its inhabitants in Elamite times.

Essentially, the province consists of alluvial fans formed by the Karkha and the Karūn [*q.v.*] rivers and situated between the Zagros mountains and the sea, near the Persian Gulf, partially saline mudflats merge into a zone of tidal marshes, and the coastline is pierced by deep tidal estuaries known as *khor*. The province is bounded on the east by the Irano-'Irāḳī border, on the north by Luristān [*q.v.*]; on the south by the Persian Gulf; and on the east by the river Tīndiyān or Hindiyān. The chief towns are: Abādān [see 'ABBĀDĀN], Ahwāz [*q.v.*]; Khurramshahr [*q.v.*], Dasht Mishān, Dizfūl; and Shūshtar [see SHUSHTAR] The population of the province (1,614,576 in 1956) is mainly hybrid Arab-Persian.

The climate of Khūzistān is hot and, in summer, so humid that water drips from the trees. Both the Greek and Muslim geographers speak eloquently of the heat. Strabo, quoting an unknown source (Nearchos?), says that in Susa at mid-day lizards and snakes could not cross the streets quickly enough to avoid being frizzled, and that barley spread out in the sun jumped as though it had been placed in an oven (*Geography*, xv 3.10) There was general agreement that snow rarely fell in Khūzistān, and water rarely froze. The great heat is accounted for by (1) the lack of elevation (average altitude in southern Khūzistān = 10 metres/32.80 feet, rising to 100 metres/328 feet in central Khūzistān), (2) the southerly inclination of the land, which exposes it to the maximum effect of the sun's rays; (3) the hot winds in summer from the Syrian desert and Arabia; (4) the clayey nature of the soil, which retains the heat, (5) the lack of open water, snow-covered mountains or forests to the west to moderate the heat of westerly winds. Because of its climate, Khūzistān did not have a good reputation as a place in which to live, the *Ḥudūd al-'Ālam*, tr. Minorsky, 130, describes the people of Ahwāz as "yellow-faced", and quotes a popular belief that "whoever establishes himself in Ahwāz becomes wanting in brains, and every aroma that is carried there loses its scent on account of the climate". Despite this, the province was noted for a perfume manufactured there from violets (B Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 389)

Despite the disadvantages of its climate, Khūzistān from earliest times was noted for its prosperity Unlike the regions of the Iranian plateau, Khūzistān has never lacked for water, which is provided in abundance by the Karkha, Diz and Karūn rivers and their tributaries. The province was the breadbasket of the Achaemenid empire. Strabo states that "Susis abounds so exceedingly in grain that barley and wheat regularly produce one hundredfold, and sometimes two hundredfold" (*Geography*, xv 3 11). In Sāsānid times, extensive urban settlements, and cultivated lands watered by large-scale irrigation works, were protected from the destructive raids of the bedouin by a defensive ditch known as *khandaḳ Sābūr*. In the 4th/10th century, Khūzistān had a monopoly of the sale of cane-sugar throughout Iran, 'Irāḳ-i 'Arab and Arabia Other important crops included citrus fruits, dates, melons, cotton and rice. The waters of the Persian Gulf provided abundant fish. The other basis of the province's prosperity was trade, from early times, Ahwāz had been the centre of an important road network and a recognised crossing place on the river Kārūn.

Under the two great pre-islamic Iranian empires, that of the Achaemenids and that of the Sāsānids, Khūzistān was firmly under the control of the central government. To the Achaemenids, it was the province of Uvaja, and Susa was the administrative capital of the empire; for the Sāsānids, it formed part of the "super province" (*pādhāshīh*) of Nēm-rōz (the South), and was divided into seven *kūras* In 17/638 the Muslim Arabs, after a reconnaissance raid across the Kārūn, launched a major attack on Khūzistān under 'Utba, captured Ahwāz, and completed the subjugation of the province by 19/640 In the 3rd/9th century Khūzistān, and particularly the city of Ahwāz, suffered as a result of the Zandj [*q.v.*] rebellion, and considerable damage was done to the irrigation systems. During the succeeding four centuries, Khūzistān was governed in turn by the Būyids [see BUWAYHIDS], the Saldjūḳs [*q.v.*] and the Ilkhānids [*q.v.*].

In the 9th/15th century, following the onslaughts of Timūr on the Iranian world, a local Arab Shī'ī dynasty, the Mushā'shā' [*q.v.*], established itself at Hawiza, on the old course of the Karkha river on the western edge of Khūzistān, and enjoyed about seventy years of independence In 914/1508, however, Shāh Ismā'īl Ṣafawī [see ISMĀ'ĪL I], after his capture of Baghdād, occupied Hawiza, Dizfūl and Shushtar, and received the submission of the Mushā'shā' *sultāns*. Like the rulers of other petty states along the Ottoman-Ṣafawī border during the 10th/16th to 12th/18th centuries, the Mushā'shā' *sultāns* played one side off against the other, often very much to their own advantage. As a consequence of Mushā'shā' rule, the western portion of Khūzistān became known, from early Ṣafawī times, as 'Arabistān In later Ṣafawī times, the title of "*wālī* of 'Arabistān" was conferred on the Mushā'shā' *sultāns* In the Ṣafawī administrative system, the *wālīs* were the highest in rank of the four categories of *umarā yi sarḥadd*, or "*umīrs* of the marches", and, of the four *wālīs*, the first in rank was the *wālī* of 'Arabistān, who was "higher and more honoured than his colleagues, on account of his belonging to a *sayyid* family, his valour and the number of his tribes" (*Tadhkirat al-mulūk*, tr. Minorsky, London 1943, 44). When the Afghāns invaded Iran in 1135/1722, the Mushā'shā' *sultāns* threw in their lot with the invaders. In 1140/1727 Khūzistān was temporarily occupied by the Ottomans, but in 1142/1729 Nādir Khān Afshār [see

BANŪ MUʿAMM reoccupied the province and made the Muḥammaʿira shaykhs sultāns his vassals.

In the course of the 18th and 19th centuries, the Muḥammaʿira dynasty steadily lost ground to Arab tribesmen of the Banū Kaʿb and Banū Lām (*q.v.*). The former had begun to migrate in large numbers from central and southern Arabia into southern Mesopotamia and south-western Iran during the 11th/17th century, at the height of their power, in the latter part of the 12th/18th century, their sway extended from Basra to Bihbihān (in the province of Fārs, just east of the Khūzistān border). The Banū Lām were nomads inhabiting regions along the lower course of the Tigris, and between 1788 and 1846 some 17,450 families from this tribe moved into Iranian territory. These immigrants lived a life that was neither completely settled nor truly nomadic, but gradually a sedentary way of life became the norm. The Banū Kaʿb not only intermarried with Iranians, but adopted Shīʿism, and wore a compromise style of dress consisting of Persian tunic and trousers under an Arab ʿabāʾ. Still later Arab arrivals, however, the Muntafiḳ (*q.v.*), who in 1811 migrated to Hawīza and ousted the Kaʿb from that area, have remained Sunnīs. As a result of this great influx of Arabs, the name of ʿArabistān was, by the 19th century, usually applied to the province as a whole. In the 19th century control of the province virtually passed from the hands of the central government into those of the shaykhs of Muḥammara (Khurramshahr), and it was not until 1925 that Riḍā Shāh Pahlawī (*q.v.*) overthrew the Shaykh of Muḥammara and restored the proper name of Khūzistān.

After the collapse of the Ṣafawid dynasty (1135/1722), the prosperity of Khūzistān sharply declined. A number of factors seem to have been involved. (1) hostility between Iranian and Arab elements; (2) the extensive damage to agriculture and to the settled communities caused by both the recent Arab immigrants and by the indigenous transhumant tribes like the Lurs and Bakhtiyārīs (A. K. S. Lambton, *Land lord and peasant in Persia*, Oxford 1953, 157 ff.); (3) the constant raiding of trade caravans by the Banū Lām; (4) the breakdown of the authority of the central government, which led to general neglect and maladministration, and the instability caused by frequent changes of governors; (5) oppression by tax collectors. In some areas the Arab shaykhs levied taxes five or six times a year (Lambton, *op. cit.*, 292). It was only after the discovery of oil at Masjid i Sulaymān in Khūzistān in 1908 that the economy of the province began slowly to recover, and this trend was accelerated by the completion of the Trans-Iranian Railway in 1938; the line ran through Ahwāz, and its southern terminal was Bandar i Shāhpūr.

In the last twenty years, Khūzistān's prosperity has increased exponentially. Many large oilfields are connected by road and pipeline with the refinery at Ābādān and with the terminal at Bandar i Māhshahr (formerly Bandar i Maʿshūr). Ābādān, a virtually uninhabited site fifty years ago, is now Iran's fifth city (estimated population, 1975, 320,000). In 1961, the deep-water tanker terminal on Khārg Island was opened. The construction of the massive Muḥammad Riḍā Pahlawī dam on the Dīz river (1962) has not only provided the province with hydro-electricity but with water for the large-scale development of market-gardening and other agricultural projects, including the resumption of the cultivation of sugar-cane, other dams are planned. Khurramshahr is now one of Iran's principal ports-of-entry on the Persian Gulf. More recently, the development of the natural gas industry has taken place on a large scale. In 1973, 8.7 billion cu. m. of natural gas were exported to the U.S.S.R. The petrochemical industry is expanding at a great rate. The rapidly developing Djundīshāpūr University at Ahwāz now has over 2,000 students. The words of the author of the *Ḥudūd al-ʿālam*, written one thousand years ago, now once again hold true: "This province is more prosperous than any province adjoining it. Great rivers and running waters are found in it. Its countryside is flourishing and its mountains are full of utility" (129-30).

KHVARSHĪ (self-designation, Kedaes bikwa, Khunzi, Khvarshal, in Russian, Khvarshints) an ethnic group in the Caucasus whose language forms, with Bezheta, Gmukh, Dido and Khunzal (*q.v.*) the Dido division of the Avar-Andi-Dido group of the north-eastern Ibero-Caucasian languages.

According to the 1926 Soviet census, there were 1,019 ethnic Khvarshīs, of whom 1,018 gave Khvarshī as their maternal tongue. They formerly lived in five *auls* (including Khvarshī and Inkheraki) on the upper course of the Ori-Tskalis, a southern affluent of the Andi-Koysu in the south-west of the Dagulal district of the Dāghistān ASSR, in 1944, they were resettled in the district of Vedeno in that same republic. They lived originally in an isolated region of high mountains, which long preserved them from any marked degree of outside influence and allowed them to retain their patriarchal customs. They are Sunnīs of the Shāfiʿī legal school.

Their traditional economy was based on sheep-rearing, with a system of transhumance, and also on terraced agriculture and various crafts, their present-day economy is essentially similar, with the added element of cattle-rearing.

Khvarshī is purely a vernacular language, Avar is used as the first literary language, and also as the second (sometimes first) spoken language, since it is used as the medium for primary education. Russian is the second literary language. Both linguistically and culturally, the Khvarshīs are now being assimilated to the Avars [*see further* AVAR, DAGHISTĀN. DIDO, AL-KABK].

QIBLA, the direction of Mecca (or, to be exact, of the Kaʿba or the point between the *miʾlāb* or water-spout and the western corner of it), towards which the worshipper must direct himself for prayer.

1—Ritual and Legal Aspects

From very early times the direction at prayer and divine service for the worshippers was not a matter of choice among the Semitic peoples. There is already an allusion to this in I Kings, viii, 44 and it is recorded of Daniel (Dan , vi, 11) that he offered prayer three times a day in the direction of Jerusalem (which has remained the Jewish *ḳibla* to this day). As is evident from the names of the quarters of the heavens, the whole life of the Semitic peoples was turned eastwards. The Essenes prayed in the direction of the rising sun and the Syriac Christians also turned east wards at prayer (*Ancient Syriac documents*, ed. Cureton, 24, 80, *Acta martyrum orient*, ed. Assemani, ii, 123). It may therefore very well be assumed in agreement with the tradition that Muḥammad appointed a *ḳibla* at the same time as he instituted the *ṣalāt*. It is certain that in the period immediately following the *hijra* the direction taken by the Jews was also used by the Muslims. Tradition places the alteration in the *ḳibla* to 16 or 17 months after the *hijra*, in Radjab or Shaʿbān of the year 2, probably rightly, for in this period we have the important change in Muḥammad's attitude to the Jews. Disappointed at the slight success of his preaching among the Jews of Yaṯrib, he began to turn more and more to the old Arabian tradition and make the religion of Ibrāhīm the basis of all monotheistic religions. The Kaʿba was brought into prominence as a religious centre and the *ḥadjdj* began to be talked of as a Muslim rite. At the same time a beginning was made with the eviction of the Jewish tribes of Yaṯrib. The alteration in the *ḳibla* is a not unimportant fact in this series of events and this train of thought. The Kurʾān verses, II, 136 ff., refer to this: ' What has induced them to abandon their former *ḳibla*? Say: to Allāh belongs the east and the west. He guides whomsoever he pleaseth unto the right path .... We only appointed your previous *ḳibla* to distinguish him who follows the Prophet from him who turns back on his heels .... Turn then thy face toward the holy *masdjid*; turn your face to it wherever you are '

The importance placed by Muḥammad himself upon the change is clear from these words. It is not necessary to assume with the tradition that it was brought about by scornful remarks of the Jews regarding Muḥammad's dependence on the prescriptions of their religion (ca Ṭabarī, i, 1280). In other traditions, the new *ḳibla* is represented as that of Ibrāhīm (Ṭabarī, *Tafsīr*, i, 378, ii, 13). Here we have a glimmering of the real truth of the matter, namely the connection with Muḥammad's new politico-religious attitude. According to one tradition (Bukhārī, *Ṣalāt*, *bāb* 32; *Tafsīr*, Sūra II, *bāb* 14) the revelation of the above quoted verses from the Kurʾān was communicated to the believers in the morning *ṣalāt* in Kubāʾ, according to another story Muḥammad had with a portion of the community performed two *rakʿas* of the *ṣalāt* prayer to a mosque at the Banū Salima, when he turned round to the direction of Mecca (Bayḍāwī, on Sūra II, 139). The mosque received the name of *masdjid al-ḳiblatayn*, "the mosque of the two ḳiblas".

If it may then be considered established that Muḥammad and his community turned towards Jerusalem at the *ṣalāt* during the early years of the *hijra*, the question still remains, what was his *ḳibla* before the *hijra*? In Tradition two answers are given to this question and a third deduced by harmonising the other two. According to one, Muḥammad in Mecca observed the *ḳibla* to the Kaʿba (Ṭabarī, *Tafsīr*, ii, 4; Bayḍāwī, on Sūra II, 138); according to the other story the *ḳibla* had always been Jerusalem (Ṭabarī, *Tafsīr*, ii, 3, 8, *Annales*, i, 1280, Balādhurī, *Futūḥ*, 2); according to the third (Ibn Hishām, 190, 228) Muḥammad in Mecca was careful to have the Kaʿba and Jerusalem on a straight line in front of him at the *ṣalāt*. The first view is influenced by the theory of the "religion of Ibrāhīm" for al-Ṭibrīzī also makes ʿAbd al-Muṭṭalib already know that Ibrāhīm appointed the Kaʿba as *ḳibla* (*Ḥamāsa*, i, 125). If the second opinion had not an historical basis, one does not quite understand how it could have arisen, for Tradition does not like to acknowledge Muḥammad's dependence on Jewish practice. This view seems therefore to be the most probable. It is further mentioned as a distinguishing peculiarity of Barāʾ b. Maʿrūr that even in the period before the *hidjra* he would not turn his back on the Kaʿba (Ibn Hishām 294); this tradition would lose its point if the old *ḳibla* had been on the direction of the Kaʿba. Besides these traditional views, others have been put forward in recent years. According to Tor Andrae, *Der Ursprung des Islams und das Christentum*, Uppsala and Stockholm 1926, 4 (cf. Buhl, *Muḥammed's Liv*, 212) the original *ḳibla* was to the east. Andrae bases his view not on the material of Tradition but on the general agreement between early Muslim and Christian religious usages. Schwally said that the Jerusalem *ḳibla* was introduced into Mecca, perhaps as a Jewish Christian institution (*Geschichte des Qorans*, i, 175, note k).

The direction of the *ḳibla* was, or is, not assumed at the *ṣalāt* only and with the points of the toes (Bukhārī, *Ṣalāt*, *bāb* 28; *Adhān*, *bāb* 131; Nasāʾī, *Sahw*, *bāb* 25; *Taṭbīḳ*, *bāb* 96), but also at the *duʿāʾ* (Bukhārī, *Daʿawāt*, *bāb* 24), at the *shāl* or *shōlam* (Bukhārī, *Ḥadjdj*, *bāb* 29) and after the stone-throwing at the central Djamra (Bukhārī, *Ḥadjdj*, *bāb* 140-2); the head of an animal to be slaughtered is turned to the *ḳibla* and the dead are buried with the face towards Mecca (Lane, *Manners and customs*, Paisley and London 1899, Snouck Hurgronje, *Verspr. Geschr.*, ivfr 243; v, 409).

In the *ḥadīth* it is forbidden to turn towards Mecca when relieving nature (Bukhārī, *Wuḍūʾ*, *bāb* 11; Muslim, *Ṭahāra*, trad. 61, Nasāʾī, *Ṭahāra*, *bāb* 18-20). On the question whether it is allowable to doing this to turn one's back to Mecca and thus in some parts of Arabia be facing Jerusalem no unanimity prevails (cf. Bukhārī, *Wuḍūʾ*, *bāb* 14; *Khums*, *bāb* 4, *Ṣalāt*, *bāb* 29, Muslim, *Ṭahāra*, *trad.* 59, 61-2, Abū Dāwūd, *Ṭahāra*, *bāb* 4); one should not expectorate in the direction of Mecca (Bukhārī, *Ṣalāt*, *bāb* 33).

The observance of a *ḳibla* is given in old traditions along with the performance of the *ṣalāt* and ritual slaughter as a criterion of the Muslim. The Prophet of God said: "The command has been given me to fight the people till they say: There is no god but Allāh, when they say these words, perform our *ṣalāt* and slaughter in our way, their blood and their property shall be inviolate for us", etc. (Bukhārī, *Ṣalāt*, *bāb* 28, cf. *Adhān*, *bāb* 17). One of the terms for the orthodox community is *ahl al-ḳibla* or *ʾl-ḳiblatān*. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus *ḳibla* (pronounced *ebla*) means in Egypt and Palestine, south, whereas in the Maghrib, east.

In the mosques the direction of the *ṣalāt* is indicated by the *miḥrāb* [*q.v.*], in classical *ḥadīth*, this word does not occur and *ḳibla* is used to mean the wall of the mosque towards which one turns. At a *ṣalāt* outside a mosque, a *sutra* [*q.v.*] marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the *ḳibla* (Lane, *op. cit.*, 228). It should be noted that many mosques are not accurately but only approximately orientated (according to the *ḳibla*, see below). It sometimes happens that this error has been later corrected by the drawing of lines on the stretching of threads. This is, for example, the case in many mosques of Indonesia where the faithful at the *ṣalāt* take their direction not from the *miḥrāb* but from such indicators.

The laws relating to the *ḳibla* are here given very briefly only and according to the Shāfi'ī school as laid down in al-Shīrāzī's *Kitāb al Tanbīh* (ed. Juynboll, 20). The adoption of a *ḳibla* is a necessary condition for the validity of a *ṣalāt*. Only in great danger and in a voluntary *ṣalāt* on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the *takbīr*, *ruḳū'* and *sudjūd*. One should turn exactly in the direction of the *ḳibla*, and one who is near it can do so with certainty. According to others, when one is distant only the general direction (*djiha*) is obligatory. Outside of Mecca one turns towards the *miḥrāb* within a mosque, when not in a mosque one follows the direction of reliable people only a man who is in a desert and region is allowed to ascertain the direction for himself by means of certain indications. For details of the laws see the *Bibliography*.

II.—Astronomical Aspects

The determination of the *ḳibla* was an important problem for the scientists of mediaeval Islam. Although essentially a problem of mathematical geography, the determination of the *ḳibla* can also be considered as a problem of spherical astronomy. Thus most Islamic astronomical handbooks or *zīdjs*, of which close on 200 were compiled during the millennium beginning in 750 A.D., contain a chapter on the determination of the *ḳibla*. In addition, several dozen mediaeval manuals for timekeeping deal with the topic. In contrast, the number of treatises dealing specifically with the *ḳibla* problem is quite few.

The *ḳibla* at a given locality is a trigonometric function of the local latitude, the latitude of Mecca, and the longitude difference from Mecca. The derivation of the *ḳibla* in terms of these three quantities was the most complicated of the standard problems of mediaeval Islamic spherical astronomy, and the solutions to the *ḳibla* problem proposed by the leading astronomers of mediaeval Islam bear witness to the development of mathematical methods from the 3rd/9th to the 8th/14th centuries and to the level of sophistication in trigonometry and computational techniques attained by these scholars. Already in the 3rd/9th century Muslim scholars had derived exact solutions using the construction of Greek mathematics known as the analemma (in which the various significant planes involved in a specific problem are either projected or folded into a single working plane, whereupon the geometrical solution can be derived graphically or the trigonometric solution can be derived by plane trigonometry) or using the classical Theorem of Menelaos for the complete spherical quadrilateral. Later *ḳibla* methods included trigonometric solutions based on projection methods or on the simpler corollaries of the Theorem of Menelaos. Certain Muslim astronomers contented themselves with approximate solutions, which were adequate for practical purposes. The final mathematical solution to the *ḳibla* problem was the table compiled by the 8th/14th century astronomer al-Khalīlī, displaying the *ḳibla* for all latitudes and longitudes.

The mathematical problem

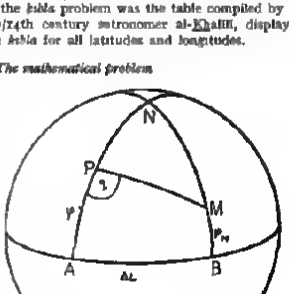

Fig. 1

Fig. 1 shows a locality P and Mecca M on the terrestrial surface. The point N represents the north pole, and the meridians at P and M are shown as NPA and NMB, where A and B lie on the equator. In mathematical terms the *ḳibla* at P is defined by the direction of the great circle through P and M. In mediaeval Arabic the angle φ between the arc PM and the local meridian NPS was called *inḥirāf al-ḳibla*, and the complementary angle between PM and the east-west line through P was called *samt al-ḳibla*. If φ and φ_M denote the latitudes of the locality and of Mecca (= PA and MB), and ΔL denotes their longitude difference (= AB), then φ is a function of φ, φ_M, and ΔL, and can be determined by spherical trigonometry. The modern formula, which can be derived from an application of the spherical cosine-rule to ΔNPM, is:

$$\varphi = \cot^{-1} \frac{\sin \varphi \cos \Delta L - \cos \varphi \tan \varphi_M}{\sin \Delta L}.$$

The exact solutions proposed by the mediaeval astronomers are less direct but ultimately equivalent to this.

Although the problem of determining the *ḳibla* is a problem of mathematical geography, it is mathematically equivalent to the astronomical problem of determining the azimuth or direction of a celestial body with given declination for a given hour angle, and as such it was usually treated by the mediaeval

astronomers. Indeed, the *ḳibla* problem may be transferred to the celestial sphere simply by considering the zenith of Mecca rather than Mecca.

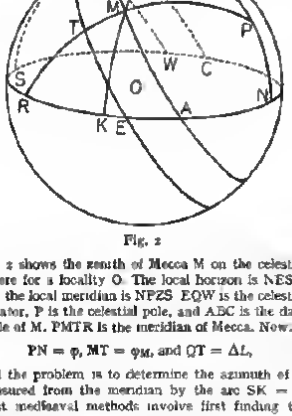

Fig. 2

Fig 2 shows the zenith of Mecca M on the celestial sphere for a locality O. The local horizon is NESW and the local meridian is NPZS. EQW is the celestial equator, P is the celestial pole, and ABC is the day circle of M. PMTR is the meridian of Mecca. Now,

$$\text{PN} = \varphi,\ \text{MT} = \varphi_M,\ \text{and QT} = \Delta L,$$

and the problem is to determine the azimuth of M measured from the meridian by the arc SK = q. Most mediaeval methods involve first finding the altitude of the zenith of Mecca above the local horizon, measured by the arc MR = h. This is equivalent to finding the complement of the distance between the two localities. Thus the problem of determining q (φ, φ_M, ΔL) is mathematically equivalent to determining the azimuth a (φ, δ, t) of a celestial body with declination δ (measured by MT) when the hour angle is t (measured by QT) and the local latitude is φ (measured by PN). Indeed, several Islamic *ḳibla* methods state simply that if one faces the sun on the day when the solar declination is φ_M at the time when the hour angle is ΔL (before or after midday, according as the locality is west or east of Mecca), then one is facing Mecca.

In the sequel a selection of methods is presented to illustrate the variety and sophistication of some of the few mediaeval *ḳibla* determinations that have been investigated in modern times. The notation has been modified in order to relate to that used in Fig 2. For the details of the original constructions the reader is referred to the secondary literature listed in the bibliography. Those methods that are trigonometric in character are represented by means of trigonometric equations, in the original texts the relations are written out in words. The capital notation for trigonometric functions denotes that they are to a base other than unity; thus, for example, Sin $\theta = R \sin \theta$ where R is generally 60 and occasionally, in the case of works following the Indian-Sasanid tradition, 150. Likewise Cos $\theta = R \cos \theta$, Vers $\theta = R$ vers $\theta = R(1 - \cos \theta)$, etc. The radius of the celestial sphere is taken to be R.

The trigonometric procedures outlined by the Muslim astronomers can also be performed geometrically using a grid of the kind which occurs on the circular instruments known in mediaeval Arabic as *al-dustūr* and *al shakkāziyya*, or the related quadrants known as *al rubʿ al muḳanṭarāt* and *rubʿ al-shakkāziyya*. Most Islamic treatises on these instruments contain a chapter on the determination of the *ḳibla*.

Approximate solutions

A popular approximate method for determining the *ḳibla* which occurs in the *Zīdj* of the Syrian astronomer al Battānī (*fl.* Rakka, *ca* 297/910) and in several unsophisticated Islamic astronomical works such as *al-Mulakhkhaṣ fī ʿl-hayʾa* by al Ḳaghmārī (*fl.* Khʷārazm, ? *ca* 725/1325) is the following.

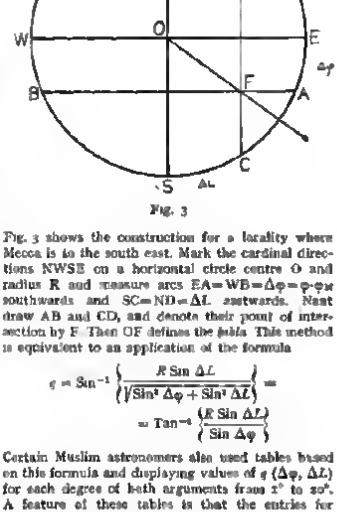

Fig. 3

Fig. 3 shows the construction for a locality where Mecca is to the south east. Mark the cardinal directions NWSE on a horizontal circle centre O and radius R and measure arcs EA = WB = $\Delta\varphi = \varphi \sim \varphi_M$ southwards and SC = ND = ΔL eastwards. Next draw AB and CD, and denote their point of intersection by F. Then OF defines the *ḳibla*. This method is equivalent to an application of the formula

$$q = \text{Sin}^{-1}\left\{\frac{R \text{ Sin } \Delta L}{\sqrt{\text{Sin}^2 \Delta\varphi + \text{Sin}^2 \Delta L}}\right\} = \text{Tan}^{-1}\left\{\frac{R \text{ Sin } \Delta L}{\text{Sin } \Delta\varphi}\right\}$$

Certain Muslim astronomers also used tables based on this formula and displaying values of q ($\Delta\varphi$, ΔL) for each degree of both arguments from 1° to 20°. A feature of these tables is that the entries for $\Delta\varphi = \Delta L$ are all 45°0′.

Another approximate solution to the *ḳibla* problem is outlined in a treatise related to al-Khʷārazmī (*fl.* Baghdād, *ca.* 215/830). Here the formula

$$q = \text{Sin}^{-1}\left\{\frac{\left[\frac{\text{Sin } \Delta L \text{ Cos } \varphi_M}{R}\right] R}{\sqrt{\text{Sin}^2 \Delta\varphi + \left[\frac{\text{Sin } \Delta L \text{ Cos } \varphi_M}{R}\right]^2}}\right\},$$

with the trigonometric functions to base R = 150 rather than R = 60 is outlined in words. The table displaying q ($\Delta\varphi$, ΔL) that accompanies this treatise was rather popular with later Muslim astronomers and exists in several manuscript copies, some of which are of Syrian, Yamani, and Turkish provenance. Yet other approximate *ḳibla* tables based on non trivial formulae are found in the *Ashrafī zīdj* of the Persian astronomer Sayfʿa Munadjdjim (*fl. ca.* 730/1330), the *Zīdj* of the Persian astronomer Shams al Munadjdjim al-Wābkanawī (*fl. ca.* 725/1325), and

in a treatise on the quadrant by Ibn Ṭaybughā (*fl.* Aleppo, ca. 752/1350)

Exact solutions

Four exact solutions to the *ḳibla* problem are outlined below. The first and second illustrate the application and mathematical elegance of the analemma construction, and the way in which it can be used to derive complicated formulae of spherical trigonometry from a plane figure. The third and fourth illustrate the application and mathematical elegance of the Theorem of Menelaos and its corollaries. Al-Khalīlī's *ḳibla* table, which is perhaps the most sophisticated trigonometric table compiled in the mediaeval period illustrates the competence of an 8th/14th century scholar in the algebra of functions and computational techniques

A geometric *ḳibla* construction proposed by Ḥabash al-Ḥāsib (*fl.* Baghdād and Damascus, ca. 235/850) involves an analemma to which the working plane is considered consecutively as the meridian, equatorial, meridian, and horizon planes. Ḥabash's method may be summarised as follows (see Fig. 4). On a circle centre O and radius *R* mark the cardinal directions NWSE, and then draw arc WQ = φ, arc QR = φ_M, and arc QT = ΔL. Draw the diameter QOR and the parallel chord BC with midpoint G. Mark the point M_2 on OT such that OM_2 = GC and draw the perpendicular M_2M_1 onto BC. Next draw M_1L parallel to WE and M_1IJ parallel to SN to cut WE in I and the circle in J. Finally, construct the point M_3 on M_1L such that OM_3 = IJ and produce OM_3 to cut the circle at K. Then OK defines the *ḳibla*.

This construction may be explained as follows. Firstly, QOR and BGC represent the projections of the celestial equator and the day circle of the zenith of Mecca on the meridian plane. Secondly, M_1 represents the projection of the zenith of Mecca in the equatorial plane. If we then imagine the equatorial plane to be folded into the meridian plane, M_1 moves to M_2, which is thus the projection of the zenith of Mecca in the meridian plane. Furthermore, M_1IJ is the projection in this plane of the almucantar through the zenith of Mecca, whose radius is thus IJ. Also M_1I and IJ measure the distances from the zenith of Mecca to the prime vertical and to the line joining the local zenith to O, respectively. Finally, we consider the horizon plane the working plane; by virtue of the construction, M_3 is the projection of the zenith of the Mecca in this plane. Thus OK defines the *ḳibla*.

From such a geometric construction a trigonometric solution for the *ḳibla* problem can be derived with facility. Indeed, from the analemma construction for the *ḳibla* proposed by Ibn al-Haytham [*q.v.*] (*fl.* Cairo, d. 430/1039) a single formula for q (φ, φ_M, L) equivalent to the modern one can be derived directly. Ibn Yūnus [*q.v.*] (*fl.* Cairo and Fusṭāṭ, d. 399/1005) proposed the following trigonometric solution to the *ḳibla* problem. Firstly from the quantity

$$k = \sin^{-1}\left(\frac{\left(\frac{\cos\varphi\,\cos\Delta L}{R}\right)}{\left(\frac{\cos\varphi_M\,+\,\sin\varphi_M\,\sin\varphi}{R}\right)}\right),$$

and then the *ḳibla* is defined by

$$q = \sin^{-1}\left(\frac{\sin\Delta L\,\cos\varphi_M}{\cos k}\right).$$

Ibn Yūnus offered no justification for this procedure, but his formulae can be derived from an analemma construction such as the one proposed by Ḥabash.

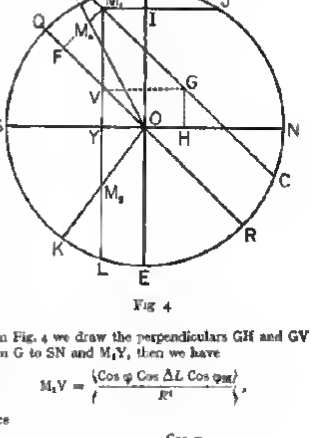

Fig. 4

If in Fig. 4 we draw the perpendiculars GH and GV from G to SN and M_1Y, then we have

$$M_1V = \left(\frac{\cos\varphi\,\cos\Delta L\,\cos\varphi_M}{R^2}\right),$$

since

$$M_1V = M_1G\,\frac{\cos\varphi}{R}$$

and

$$M_1G = OF = OM_1\,\frac{\cos\Delta L}{R} = GC\,\frac{\cos\Delta L}{R}$$

$$\frac{\cos\varphi_M\,\cos\Delta L}{R}.$$

Also

$$GH = OG\,\frac{\sin\varphi}{R}\,\frac{\sin\varphi_M\,\sin\varphi}{R}$$

Furthermore, since the arc JN measures k, we have $M_1V = \sin k$. But $M_1V = MV + VY = MV + GH$. Ibn Yūnus' first formula follows immediately.

Next we observe that M_1Y and M_1F both measure the distance of the zenith of Mecca to the meridian and are hence equal. Thus

$$M_1Y = M_1F = OM_1\,\frac{\cos\Delta L}{R}\,\frac{\cos\varphi_M\,\cos\Delta L}{R}.$$

Also, since the arc JN measures k, and OMI is $\frac{1}{4}$ by construction equal to IJ, we have $OMI = IJ = \cos k$. Ibn Yūnus' second formula follows immediately, since q measures the arc SK.

Ibn Yūnus also compiled a table displaying the solar altitude in Cairo when the sun is in the azimuth of Mecca. His table gives values for each degree of solar longitude, corresponding roughly to each day of the year. Tables of this kind were contained in the main corpora of tables for timekeeping that were used in such centres as Cairo, Damascus, Jerusalem, and Istanbul, and an isolated table of this kind was compiled for the observatory at Marāgha in north-western Persia. The solar altitude in the azimuth of Mecca is occasionally displayed graphically on the backs of astrolabes.

Al-Nayrīzī (*fl.* Baghdād, *ca.* 287/900) solved the *ḳibla* problem by four successive applications of the Theorem of Menelaos. His solution involves finding

successively the arcs TR, SE, MK and KS in Fig. 4, as follows. Firstly, find TR using

$$\frac{\sin PS}{\sin SQ} = \frac{\sin PR}{\sin RT}\frac{\sin TE}{\sin EQ},$$

that is,

$$\frac{\sin(180^\circ - \varphi)}{\sin\varphi} = \frac{\sin(90^\circ + TR)}{\sin TR}\frac{\sin(90^\circ - \Delta l)}{\sin 90^\circ}.$$

Secondly, find SR using

$$\frac{\sin PQ}{\sin QS} = \frac{\sin PT}{\sin TR}\frac{\sin ER}{\sin ES},$$

that is,

$$\frac{\sin 90^\circ}{\sin(90^\circ - \varphi)} = \frac{\sin 90^\circ}{\sin TR}\frac{\sin ER}{\sin 90^\circ},$$

whence ER and SE (= $\overline{ER} = 90^\circ - ER$). Thirdly, find MK (= h) using

$$\frac{\sin SP}{\sin SZ} = \frac{\sin PR}{\sin RM}\frac{\sin MK}{\sin KZ},$$

that is,

$$\frac{\sin(180^\circ - \varphi)}{\sin 90^\circ} = \frac{\sin(90^\circ + TR)}{\sin(TR + \varphi_M)}\frac{\sin MK}{\sin 90^\circ}.$$

Finally, find KS (= q) using

$$\frac{\sin KS}{\sin SR} = \frac{\sin KZ}{\sin ZM}\frac{\sin MP}{\sin PR},$$

that is

$$\frac{\sin q}{\sin SR} = \frac{\sin 90^\circ}{\sin(90^\circ - h)}\frac{\sin(90^\circ - \varphi_M)}{\sin(90^\circ + TR)}$$

Al-Bīrūnī [*q.v.*] (*fl.* Khʷārazm and Ghazna, d. after 442/1050) proposed several different methods for finding the *ḳibla*, based on a variety of different procedures. In his work on mathematical geography, the *Taḥdīd nihāyāt al-amākin*, al-Bīrūnī derived the longitude difference between Mecca and Ghazna mathematically using the distances between staging posts on the major caravan routes, and then derived the *ḳibla* at Ghazna using four different methods, including spherical trigonometry (using Menelaos' Theorem), solid geometry (using procedures equivalent to those standard in solving timekeeping problems), and the analemma. Al-Bīrūnī's solution to the *ḳibla* problem in his major astronomical work al-*Ḳānūn al-Masʿūdī*, compiled after the *Taḥdīd*, is more elegant than his solution by spherical trigonometry in the earlier work. It was also proposed about thirty years previously as an alternative solution by Ibn Yūnus. Al-Bīrūnī proved its correctness by spherical trigonometry. Ibn Yūnus presented it algebraically with no justification, but he appears to have derived most of his formulae for spherical astronomy by projection methods rather than by spherical trigonometry. Al-Bīrūnī's treatment of the problem illustrates the progress made by Muslim scholars in spherical trigonometry during the tenth century. Whereas his predecessor al-Nayrīzī had laboriously used Menelaos' Theorem, al-Bīrūnī used his simpler corollaries, the spherical Sine Rule and the "Rule of Four Quantities".

Al-Bīrūnī first outlined an algebraic procedure for finding q using four auxiliary arcs which we call θ_1, θ_2, θ_3, and θ_4. Since he used $R = 1$ rather than 60 his trigonometric functions are the same as the modern ones. First find θ_1, "the distance on the day circle", thus $\sin\theta_1 = \sin\Delta L \cos\theta_M$. Then find θ_2, "the local latitude adjusted for the horizon (of Mecca)", using $\sin\theta_2 \frac{\sin\theta_M}{\cos\theta_1}$, and θ_3, "the correction to the latitude", using $\theta_3 = \varphi - \theta_2$. Then find θ_4, "the distance between the two localities", using $\cos\theta_4 = \cos\theta_3 \cos\theta_1$. Finally, q is given by

$$\sin q = \frac{\sin\theta_4 \cos\theta_2}{\sin\theta_3}.$$

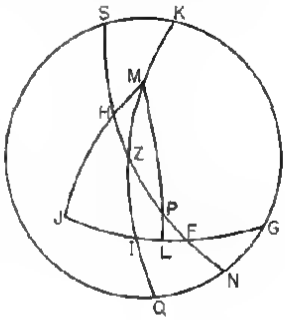

Fig. 5

Al-Bīrūnī's justification of this procedure is equivalent to the following. In Fig. 5, which is essentially the same as the diagrams in the manuscripts of the original text, the base circle represents the horizon, with N and S the north- and south points. The local meridian is SZPN where Z is the local zenith and P is the celestial pole. M is the zenith of Mecca and GLJ and MPL are respectively the horizon and meridian at Mecca. ZMK is the altitude circle of M and MHJ is a great circle with F as pole. Thus PN = φ, PL = φ_M, and MPZ = ΔZ, and it is required to find SK (= q). Al-Bīrūnī observed that (by the spherical Sine Rule),

$$\frac{\sin MP}{\sin MH} = \frac{\sin\angle MHP}{\sin\angle MPH}, \text{ i.e., } \frac{\cos\varphi_M \sin 90^\circ}{\cos\angle P \sin\Delta Z},$$

whence $\angle F$ (= $\angle PFL$) is known. Thus θ_1 is the complement of $\angle F$. Similarly

$$\frac{\sin\angle F}{\sin\angle PLF} = \frac{\sin PL}{\sin PF}, \text{ i.e., } \frac{\cos\theta_1 \sin\varphi_M}{\sin 90 \sin PF},$$

whence PF is known.

Thus θ_2 is FF. Thirdly, since FN = PN − PF = $\varphi - \theta_2$, θ_3 measures FN. Fourthly, al-Bīrūnī states that by the "Rule of Four Quantities"

$$\frac{\sin FZ}{\cos\angle G} = \frac{\sin FH}{\sin HJ}, \text{ i.e., } \frac{\cos\theta_4}{\cos\angle G} = \frac{\sin 90^\circ}{\cos\theta_1},$$

(note that $\sin\angle G = \cos\angle FGN = \cos IQ = \sin ZI$) so that θ_4 measures $\angle G$.

Finally, he points out that (by the spherical Sine Rule)

$$\frac{\sin\angle G}{\sin\angle F} = \frac{\sin FN}{\sin GN}, \text{ i.e., } \frac{\sin\theta_3}{\cos\theta_1} = \frac{\sin\theta_1}{\sin GN},$$

whence q = SK = 90° − GN.

Al-Khalili (*fl.* Damascus, *ca* 760/1360) compiled a *kibla* table based on an accurate formula and displaying q (φ, ΔL) for each degree of φ from 10° to 56° and each degree of ΔL from 1° to 60°. Al-Khalili's table thus contains a total of almost 3,000 entries, and the *kibla* is computed to degrees and minutes. The vast majority of the entries are either correct or in error by $\pm$ 1 or $\pm$ 2 minutes, a remarkable achievement. Table 1 shows a section of al Khalili's table.

$$f\varphi(\theta) = \frac{R \sin \theta}{\cos \varphi}, \quad g\varphi(\theta) = \frac{\sin \theta \tan \varphi}{R},$$

$$\text{and } G(x, y) = \text{arc Cos} \left\{ \frac{kx}{\cos y} \right\}$$

The procedure for finding q (φ, ΔL) would be to first find h (φ, ΔL) using the simple formula of al Marrākushī and then to use the auxiliary tables to apply the formula

Table 1

Sample Entries from al-Khalili's *Kibla* Table
(The errors in the minutes are shown after each entry)

ΔL \ φ	34°	35°	36°	37°
25°	66°55′ + 1	64°59′	63° 9′ + 1	61°20′ — 1
24	65 39 + 1	63 39 — 1	61 45 — 2	59 56 — 2

1	4 19 + 1	4 1 2	3 45 + 2	3 33 + 4

Al-Khalili does not describe the way in which he compiled his *kibla* table. However, in his introduction to the table he expresses his approval of the *kibla* method of al Marrākushī (*fl.* Cairo, *ca* 679/1280). This involved first finding h using

$$\text{Sin } h = \text{Sin } (\tfrac{\varphi}{\varphi} + \varphi_M) - \text{Vers } \Delta L \frac{\text{Cos } \varphi_M \text{ Cos } \varphi}{R^2},$$

and then applying the standard Islamic formula for finding the azimuth from the celestial altitude, namely

$$q = \text{arc Cos} \left\{ R \left[\frac{\frac{\text{Sin } h \text{ Tan } \varphi}{R} - \frac{R \text{ Sin } \delta}{\text{Cos } \varphi}}{\text{Cos } h} \right] \right\}$$

Both of these formulae can be derived from Fig. 4. If al-Khalili did use precisely this method to compile his *kibla* table, it may be that he also used his universal auxiliary tables (*al ǧadāwil al ʿāmma*) to facilitate the computation. These tables which were specifically designed for solving all of the standard problems of spherical astronomy for any latitude, display the three functions

$$q(\varphi, \Delta L) = G\{x(\varphi, \Delta L), h\}$$

where

$$x(\varphi, \Delta L) = g\varphi(h) - f\varphi(\varphi_M)$$

This latter procedure is easily shown to be equivalent to the standard azimuth formula.

Al Khalili also computed the *kibla* for 44 localities in Palestine, Syria, and Iraq. These are likewise very carefully computed. Sample entries from this list are shown in Table 2. Several other *kibla* lists were compiled by mediaeval Muslim astronomers, and the geographical tables in late Islamic *zīj*s often display the *kibla* alongside the latitudes and longitudes of important localities.

Alignment of Mosques

Now even though the mediaeval astronomer might have been aware of an exact formula for computing the *kibla*, the accuracy of his *kibla* determinations depended on the geographical data that he had at his disposal. Mediaeval longitude determinations, based either on simultaneous observations of lunar eclipses in different localities or on measuring distances between the localities, were generally not very accurate. Mediaeval latitude determinations,

Table 2

Sample Entries from al-Khalīlī's *Kitāb* List (The errors are derived using the mathematically correct formula and al-Khalīlī's coordinates)

Locality	Longitude	Latitude	*Kibla*	Error
Gaza	57°0′	32°0′	44°46′	+ 2′
Hebron	56 30	31 35	45 22	— 6
Jerusalem	56 30	32 0	45 14	— 2
Damascus	60 0	33 30	39 4	+ 1
Beirut	59 15	33 20	31 59	— 4
Ba'labakk	60 0	33 50	28 25	+ 1
Hamā	61 45	34 45	20 32	— 2
Aleppo	62 20	35 50	17 42	0
Mārdīn	64 0	37 55	9 48	0
Baghdād	70 0	33 25	13 19	0
Kūfa	69 30	31 30	13 22	+ 1
Mecca	67 0	21 30	-	-

on the other hand, based on observations of the solar meridian altitude, were generally more accurate. Even so, the most popular values used by Muslim astronomers for the latitude of Mecca were 22°, 21° 20′, 21° 30′, and 21° 40′, whereas the accurate value is 21° 26′. This explains why mediaeval mosques may be incorrectly oriented even though their *miḥrābs* [*q.v.*] were erected in a *kibla* direction computed by competent mathematicians.

Another reason why mosques may be incorrectly aligned is that their *kiblas* were not computed from geographical data at all but were inspired by tradition. Thus, for example, mosques in the Maghrib and the Indian subcontinent generally face due east or due west, respectively. Likewise, in early Muslim Egypt, the *kibla* adopted was the azimuth of the rising sun at the winter solstice. Several mosques in Cairo face this direction, which was favoured as the *kiblat al-shahha* but which is about 10° off the *kibla* computed mathematically using mediaeval geographical coordinates and about 20° off the true *kibla* for Cairo. No survey has yet been made of the orientation of mediaeval mosques. Such a survey would be of considerable interest for the history of Islamic architecture as well as the history of science.

Bibliography: Several of the following secondary sources contain descriptions and analyses of mediaeval *kibla* methods. There exist numerous Islamic astronomical works containing *kibla* methods that have not been investigated in modern times. On the *kibla* method of Ulugh Beg [*q.v.*] (*fl.* Samarkand, d. 853/1449), which is none other than the method of Ibn Yūnus and al-Bīrūnī, see L. A. Sédillot, *Prolégomènes des tables astronomiques d'Oloug-Beg. traduction et commentaire*, (Paris 1853), 116-21. On the approximate methods of al-Battānī and al-Djaghmīnī, see C. A. Nallino, *al-Battānī sive Albatenii Opus Astronomicum* (Milan and Rome 1899-1907), i, 318-9 and ii, p. xxvii; and G. Rudloff and A. Hochheim, *Die Astronomen der Mahmūd ibn Muhammad ibn 'Omar al-Gagmīnī*, in *ZDMG*, xlvii (1893), 213-75 (esp. 272 n.).

The first serious investigations of Islamic *kibla* methods were conducted by C. Schoy (see his article QIBLA in *EI*[1]). The methods of Ibn al-Haytham and al-Nayrīzī were discussed in his *Abhandlung des al Ḥasan ibn al-Ḥasan ibn al-Haitam (Alhazen) über der Bestimmung der Richtung der Qibla*, in *ZDMG*, lxxv (1921), 242-53, and in his *Abhandlung von al Faḍl b. Ḥātim al Nairizī über die Richtung der Qibla*, in *SB Bayr. Akad., Math.-phys. Kl.* (Munich 1922), 55-68 (also contains a list of *kibla* values for various cities, taken from an 8th/14th century Syrian source). Schoy's other studies on the *kibla* include *Die arabische Sonnenuhr im Dienste der islamischen Religionsübung*, in *Naturwissenschaftliche Wochenschrift*, N.F., xi (1912), 625-9; *Mittagslinie und Qibla*, in *Zeitschr. der Gesell. für Erdkunde zu Berlin* (1925), 252-76; *Die Mekka- oder Qiblakarte (Gegenstumthale mittabstandstreue Projektion mit Mekka als Kartenmitte)*, in *Kartographische und schulgeographische Zeitschr.* (Vienna 1916), 184-5; and *Gnomonik der Araber*, in E. von Bassermann-Jordan, ed., *Die Geschichte der Zeitmessung und der Uhren*, Band 1F (Berlin Leipzig 1923) (esp. 38-43 and 84 *ff.* on the methods of al-Battānī, Ibn Yūnus, and Abu 'l-Wafā').

On al-Bīrūnī's *kibla* methods, see his *al-Qānūn al-Mas'ūdī*, ed. M. Krause, Hyderabad 1955, ii, 522-8; Schoy, *Die trigonometrischen Lehren des . al-Biruni* , Hanover 1927, 70-1, and F. S. Kennedy, *A commentary upon Bīrūnī's Kitāb Taḥdīd al Amākin*, Beirut 1973, esp. 258-215. Habash's construction is discussed in E. S. Kennedy and Y. Ibl, *A letter of al Bīrūnī' Habash al-Ḥāsib's analemma for the Qibla*, in *Historia Mathematica*, 1 (1974), 3-11.

Al-Khalīlī's *kibla* table is analysed in D. A. King, *Al-Khalīlī's Qibla Table*, in *JNES* (1975), (which also contains references to other mediaeval *kibla* tables and a discussion of the determination of the *kibla* using a quadrant). Ibn Yūnus's table displaying the solar altitude in the azimuth of the *kibla* is discussed in idem, *Ibn Yūnus' Very useful tables for reckoning time by the sun*, in *Archive for History of Exact Sciences*, x (1973), 342-94 (esp. 368). Considerable additional information on *kibla* determinations is contained in the forthcoming publication by idem, *Studies in astronomical timekeeping in mediaeval Islam ii. A survey of mediaeval Islamic tables for regulating the times of prayer*.

Several lists of geographical coordinates of cities and the corresponding *kibla* values, taken from Islamic astronomers, are given in R. T. Gunther, *The astrolabes of the world*, i, Oxford 1932 esp. 24-6. On mediaeval Islamic longitude determinations, see Schoy, *Längenbestimmung und Zentral-meridian bei den älteren Völkern*, in *Mitt. der kaiserlich-königlichen Geographischen Gesell.*, xii (1915), 57-62; Kennedy's commentary on al-Bīrūnī's *Taḥdīd* (mentioned above), and F. Haddad and E. S. Kennedy, *Geographical tables of mediaeval Islam*, in *al-Abḥāth*, xxiv (1971), 87-101.

On the analemma in mediaeval Islamic astronomy, see the reference cited in the study by E. S. Kennedy and Y. Ibl (mentioned above). On the development of spherical trigonometry and computational techniques in mediaeval Islam, see P. Luckey, *Zur Entstehung der Kugeldreiecksrechnung*, in *Deutsche Mathematik*, v (1940), 405-46; Kennedy, *Al-Bīrūnī's Maqālid 'Ilm al Hay'a*, in *JNES*, xxx (1971), 308-14, and the references there cited, and King, *Al-Khalīlī's auxiliary tables for solving problems of spherical astronomy*, to *Jnal. for the Hist. of Astronomy*, iv (1973), 99-110.

(D. A. KING)

al-KIBRĪT, anhydrous. The Arabic term is derived from Akkadian *kuprītu* through Aramaic *kaḥbhrīthā*.

The Arabs knew both sedimentary and volcanic brimstone. Muḥammad b. Aḥmad al-Tamīmī, *K. al-Murshid*, Ms. Paris 2870, f. 100a, mentions a place where "white" brimstone was to be found on the

shore of the Dead Sea and in the neighbourhood of Jerusalem (see also Mukaddasī, 184), in fact the deposits of brimstone to be found in clay, mixed with gypsum and calcium carbide, on the right bank of the river Jordan at a mile from the Dead Sea (see C. Hintze, *Handbuch der Mineralogie*, i/1, Leipzig 1904, 68 ff.). Abū Dulaf al-Khazrajī (*al-Risāla al-thāniya*, ed. V. Minorsky, Cairo 1955, 99, tr. 54-5, ed. P. Bulgakov, Moscow 1960, 34) mentions already a sulphur spring on Mount Dateilwand [*q.v.*] around which brimstone had crystallised, and thus volcano showed immense deposits of brimstone. The same author (*ibid.*, 43 = Yāḳūt, ii, 619) knows also the sulphur springs of Dawraḳ [*q.v.*] in Khūzistān.

In general, four sorts of brimstone are distinguished: yellow, white, black and red (see *WKAS*, i, 536). Muḥammad b. Zakariyyāʾ al-Rāzī, *K. al-Asrār* (ed. M. T. Dānish Pazhūh, Tehran 1964, 3), however, differentiates these even further into 1. pure, massive, yellow brimstone, 2. pure, granular, yellow brimstone, 3. white, ivory coloured brimstone, 4. white brimstone mixed with soil, 5. black brimstone, adulterated with stones, and 6. red brimstone. Descriptions like *kibrīt ṣāfī* "bright red brimstone", *kibrīt dhahabī* "golden brimstone", *kibrīt dhakar* "male brimstone", *kibrīt baḥrī* "brimstone of the sea", *kibrīt nahrī* "brimstone of the river", etc. are also found. These descriptions indicate the various modifications and qualities brimstone deposited by springs is mostly fine-grained and yellow white, elementary brimstone is often contaminated with bitumen, selenium and arsenic. These various descriptions, however, were of course not used by the Arabs to indicate a strict classification.

A special case was the "red brimstone" (*al-kibrīt al-aḥmar*). According to Aristotles' *Stone-book* (ed J. Ruska, Heidelberg 1912, no. 26, p. 161 = Ibn al-Bayṭar, *K. al-Ḏjāmiʿ*, iv, 49) it shines by night over a distance of many parasangs, as long as it is left in its place of occurence. Others maintained that red brimstone was a mineral to be found in the valley of the ants, marched through by Solomon (Ibn Samadjūn, in Ibn al-Bayṭar *loc. cit.*). These are fairy-tales. Al-Rāzī (*K. al-Asrār*, *loc. cit.*) knew already that "red brimstone" does not exist as a mineral, and this scepticism was wide-spread. Al Djāḥiẓ (*Risāla fī ʾl-Ḥayawān* in *ʿIdda*, ed. P. Kraus, Cairo 1943, 93, ed. Hārūn, Cairo 1364, i, 271) remarks that "red brimstone" is easier to be found than a trustworthy friend, and the caliph al-Muʿtaḍid bi-llāh (279-89/892-902) said that two things exist only in name: the phoenix (*ʿanḳāʾ mughrib*) and *al-kibrīt al-aḥmar* (Bīrūnī, *Djamāhir*, 154). In this sense is also to be understood al-Maydānī's proverb "more rarely than red brimstone" (see Freytag, *Arabum proverbia*, i, 118, 920, ii, 149) and Bīlawhar's saying (ed. D. Gimaret, Beirut 1971, 33) that his merchandise is better than red brimstone. The solution to this enigma is that *al-kibrīt al-aḥmar* is a pseudonym for the elixir, by means of which silver can be changed into gold (Bīrūnī, *Djamāhir*, 103, *WKAS*, i, 536 no. 25 b).

The position of brimstone in the mineral system has been determined more than once in Aristotles' *Stone book*, compounds of brimstone and arsenic form one group together with salts and boraxes, without a fixed classification. The authors of the *Corpus Gabirianum* (3rd-4th/9th-10th centuries) counted red, yellow, black and white brimstone, together with orpiment, realgar, quicksilver, camphor and ammonia among the "spirits" (*al-arwāḥ*, τὰ πνεύματα), as opposed by the "metallic bodies" (*al-adjsām*) and the "mineral bodies" (*al-adjsād*). Ibn Sīnā (*K. al-Shifāʾ*, *al-Ṭabīʿiyyāt*, v, ed. Madkūr, Cairo 1965, 10-2) divides all minerals into four classes: the stones (*al ahdjār*), the salts (*al-amlāḥ*), the fusible bodies (*al-dhāʾibāt*) and the brimstone like ones (*al kabrīt*). Brimstone has become here a general notion indicating those substances in which wateriness has been combined with earthiness and smokes and which have then been consolidated by cold. According to al-Kazwīnī, *ʿAdjāʾib*, 203-45, brimstone, together with quicksilver, pitch, naphtha etc. belongs to the viscous substances (*al adjsām al-duhniyya*).

Already in the Middle Ages brimstone was an important mineral raw material. It was for instance used in bleaching. Thus the "brimstone of the river" (*al kibrīt al nahrī*) was also called *kibrīt al-ṣabbāghīn*, the "brimstone of the bleachers" (Galen, *K. al Andsya al mawdjūde bi hull makān*, in Ibn al-Bayṭar, iv, 49, below). Together with bitumen, fats, oil, etc., brimstone was a component part of Greek fire (see NAFṬ), and from the 7th/13th century onwards it was used with saltpetre and charcoal, to make gunpowder.

Brimstone was also widely used in medicine. According to Dioscurides (*Mat med.*, v, 107, Arabic tr. ed. C. E. Dubler, Tetuán Barcelona 1952-7, 423) brimstone avails against a cough, against pus that is stuck in the chest, and against asthma. If a woman is fumigated with brimstone, she will have a sure carriage. Leprosy, cutaneous eruptions and other skin diseases are treated with brimstone, which, if mixed with natron, dissipates itching. Finally, brimstone avails against the stings of poisonous animals, against jaundice, cold, sweat, podagra, ear ache and deafness. The same indications are found at Galen, *De simpl. med. temp. ac fac.*, ix, 3, 9 (Vol. xii, 217, Kühn, Arabic tr. in Ibn al-Bayṭar, iv, 50), ʿAlī b. Rabbān al-Ṭabarī, *K. Firdaws al-ḥikma*, 122, 224, 272, 322, 334, 407 (cf. W. Schmucker, *Die pflanzliche und mineralische Materia medica im Firdaus al-Hikma des Ṭabarī*, Bonn 1969, 380-2), Yaʿḳūb b. Isḥāḳ al-Kindī (cf. *The medical formulary of al-Kindī*, ed. M. Levey, Milwaukee 1966, ff. 93b, 102b, 133b), al-Rāzī, *K. al-Ḥāwī*, xvii, 55, and Ibn Sīnā, *Ḳānūn*, Rome 1593, i, 191. The *Ḥawī al-kibrīt* is one of the important electuaries. It equals theriac and avails against fever, cough, asthma, tetanus, dropsy, against stings of poisonous animals etc. (ʿAlī b. Rabbān 445; al-Maḳḳarī, *K. al-Malāhī*, ii, 536; Ibn Sīnā, *Ḳānūn*, ii, 191).

The curative property of sulphurous water is often praised. Abū Dulaf al-Khazrajī (*op. cit.*, ed. Minorsky, 12, tr. 43, ed. Bulgakov, 21, Yāḳūt, ii, 317) mentions the sulphurous springs in the neighbourhood of Hulwān [*q.v.*] in ʿIrāḳ, which avail against manifold diseases. According to Aristotles' *Stone book* (no. 26, pp. 113, 162) bathing in sulphurous springs is good for open wounds, tumours, itching, scabies and fever. Baths in sulphurous water avail also against trembling (*raʿsh*) (Philagrius, in Rāzī, *Ḥāwī*, i, 44, see Galen, *De tremore & palpitatione*, vii, 600, Kühn). Finally, sulphurous water is curative of articular pains (Rufus, in Rāzī, *Ḥāwī*, xi, 199), hemiplegia (*falaḳ*), ʿAlī b. Rabbān, *Firdaws*, 197) and elephantiasis (*djudhām*, *ibid.*).

To the many palliatives which were recommended for expelling vermin from houses there are always included fumigations with sulphur (Rāzī, *Ḥāwī*, xix, 310-33), which was also used in magic as an ingredient of talismans (Pseudo-Maḳrīzī, *Ghāyat al-ḥakīm*, 243-6, German tr. by Ritter and Plessner, London 1962, 254-8).

Sulphur played a prominent part in alchemy (see AL-KIMYĀʾ). Distillation of sulphur and the action

of sulphurous vapour on metals gave occasion to many observations and conjectures. Since sulphur is liberated in the distillation of most materials, it was believed to be a fundamental part of all minerals. In particular, it was assumed that the metals consisted of quicksilver and brimstone. If the parts of both materials are in an ideal ratio to each other, gold originates (see Dimashkī, *Nukhba*, 50 ff.). Sulphur is therefore also called "the mother of gold" (*umm al-dhahab*, see *K. al-Kanz*, ms. Berlin 4191, f. 51a).

The alchemists invented many pseudonyms for sulphur, like "the yellow, red or white bride") *al-ʿarūs al-ṣafrāʾ*, etc.), "the red soil" (*al-turba al-ḥamrāʾ*), "the colouring spirit" (*al-rūḥ al-mūnḍig*), "the saffron" (*al-zaʿfarān*), "the divine secret" (*al-sirr al-ilāhī*). The breath taking smell of burning brimstone gave it the name "the suffocator" (*al-khannāq*). Because brimstone combines quicksilver, it was also called "the letter of the volatile" (*bayḍ al-ʿIdhāʾ*). Conversely, the term *kibrīt* was also used in various combinations as pseudonym of other substances, e.g. *kibrīt lā yaḥtarik* "incombustible sulphur" (see *WZKM*, lxiii-lxiv (1972), 168) designates the elixir of gold. (For the problem of the pseudonyms, see J. Ruska and E. Wiedemann, *Alchemistische Decknamen*. Beiträge LXVII, in *SPMSE*, lvi lvii (1924 5), 20-33 = E. Wiedemann, *Aufsätze*, ii, 599-622; A. Siggel, *Decknamen in der arab. alchem. Literatur*, Berlin 1951).

KIBṬ, the Arabic term for the Copts or native Christians of Egypt. The term is a derivative of the Greek *Aigyptos*, a phonetic corruption of the Ancient Egyptian *Ḥa Ka-Ptaḥ*, i.e. the house or temple of the god Ptaḥ, signifying Memphis. The Greeks used the word for Egypt and the Nile, hence the word "Coptic" is originally the equivalent of Egyptian. Curtailment of both prefix and suffix from the Greek term gives us *Gypt* > Arabic rendering *Kibṭ*. According to Semitic sources, however, this term is derived from Kuftaim, son of Misraim, a grandchild of Noah who first settled in the Nile valley and imparted his name to the city of Kuft or Guft near Thebes or modern Luxor (see §1[7]). This latter theory is commoner among Arab writers who call Egypt *Dār al-Kibṭ*, sc. the home of the Copts who were the Christianised descendants of the ancient Egyptians at the time of the Arab Conquest of 20-1/640 A.

Apparently the Copts were not unknown to the pre-Islamic Arab traders whose caravans penetrated the fringes of the Fertile Crescent and to some extent touched Egypt. More directly, the Copts came into the life of the Prophet Muḥammad through Maryam *the Copt* who *was a gift from al-Muḳawḳas* [*q.v.*] *and* who bore him his short-lived and only son Ibrāhīm. The Prophet is said explicitly to have told ʿUmar b. al-Khaṭṭāb that ʾAllāh will open Egypt to you after my death. So take good care of the Copts in that country, for they are your kinsmen and under your protection". This is said to have appeared in the first *khuṭba* by ʿAmr b. al-ʿĀṣ after the conquest, and in it he subsequently admonishes his Muslim audience to "Cast down your eyes therefore and keep your hands off them!"

Though the caliph ʿUmar was hesitant to grant ʿAmr approval for the conquest of Egypt, certain factors in the Egyptian situation favoured the invaders. The Copts were restive under Byzantine rule. In pursuance to the policies established by Justinian (527-65), the Emperor Heraclius (610-41) in 631 appointed Cyrus (al-Muḳawḳas in Arabic sources) as prefect, army commander and patriarch of the whole of Egypt in order to facilitate the securing of both political and religious uniformity in that crucial part of the Empire. Byzantine taxation was also felt as oppressive. Cyrus forced the Copts to abjure their Monophysitism in favour of the Byzantine Chalcedonian profession and his legionaries pursued their native Patriarch-elect Benjamin I (623-62), who fled to the desert monasteries and remained in hiding until the removal of the Melkite Greeks from Egypt.

It was in these circumstances that ʿAmr crossed the eastern frontiers of Egypt (see §1[5]) and entered the country. Cyrus realised by then that he was fighting a lost battle, because the Copts wanted a change of masters at any cost. While the servitude of the latter was complete in civic, financial and religious matters, the Arabs cared more for the revenues from the province than for interference with the religion of the Copts. They did not distinguish between Melkites and Monophysites, and the Copts as Christians were regarded as a protected people (*Ahl al-Dhimma*), in return for payment of the *djizya* (*q.v.*).

When the Byzantine régime finally ended with the fall of Alexandria in 641, the Greek Melkite population was granted safe conduct to depart with Cyrus, and the native Patriarch Benjamin I was summoned to emerge from hiding. His appearance in Alexandria was honoured by ʿAmr, and the Copts at last regained their religious liberty and even appropriated most of the Melkite churches and foundations then rendered vacant. Thus the new era augured well, and perhaps Muslim monotheism might have been interpreted as bordering on Coptic monophysitism, thus creating a temporary bridge between the two religions in the eyes of those who were unaware of their philosophies to details of doctrine and future developments.

From this moment, the relationship between the Copts and the Arabs was based pre-eminently on revenue and taxation. The Arabs recognised the elaborate system of government in Egypt, and left the administration unchanged in the hands of the Copts. In the first year, ʿAmr was able to raise 12 million *dīnārs* in revenue, but the caliph ʿUmar was dissatisfied and removed ʿAmr, nominating ʿAbd Allāh b. Saʿd b. al-Sarḥ (*q.v.*) to succeed him. The new governor was then able to raise 14 million *dīnārs* in the second year.

From 21/642 to 254/868, Egypt was directly under Caliphal control through a viceroy, and ninety-eight governors were appointed by the Umayyad and the ʿAbbāsid caliphs. The average tenure of each governor was about two years, too brief a period for any constructive work. But caliphal policy aimed at removing governors before they had sufficient time for

trying to break away from the central government. In the circumstances, a governor's sole concern was simply to squeeze the maximum taxation from the subjects, not only to pay the necessary dues to the central government, but also for his personal enrichment. The depletion of the resources of the country was also often aggravated by low Nile floods and the spread of disease and plague.

The worsening of the economy meant heavier pressure and exactions for the Copts. The results of this situation were three-fold: many Copts fled to the desert monasteries to escape the poll-tax from which clerics were exempted, although this privilege proved to be ephemeral; some turned to Islam for the same reason, although wholesale conversions did not take place because the caliphs usually discouraged them in order to safeguard their revenue, and some rose in revolt, not infrequently reinforced in their insurrection by Muslim settlers.

Perhaps the Bashmuric Rebellion of 214-15/829-30 in the marshlands of the lower Delta was the most serious of those local insurrections. The caliph al-Ma'mūn had to come in person to Egypt to fight the Bashmuric rebels and to pacify the Copts. The outcome of a steadily deteriorating situation was a neglect of the irrigation system, the blocking of canals with sand and silt, and the ruination of the Nile dykes. In addition to a decline in the number of Coptic farmers, the steady shrinkage in the arable soil led to the fall of the revenue to 3 million *dīnārs* by the 3rd/9th century until the last of the ʿAbbāsid governors, Aḥmad b. al-Mudabbir [*q.v.*], assumed power in 254/868 and doubled the *kharādj* and the *ghiyār*; now even the clergy and the desert monks lost their customary exemption from payment. In the same year Ibn al-Mudabbir was imprisoned by Aḥmad b. Ṭūlūn. The latter soon introduced numerous financial reforms which earned for him the loyalty of the inhabitants. The leniency and understanding towards the Coptic subjects of the Ṭūlūnids (254-92/868-905) and the Ikhshīdids (323-58/935-69) [*q.v.*] stood in contrast to the rule of Ibn al-Mudabbir, from whose imposts the Coptic clergy were once again exempted.

It would be wrong to judge Ibn Ṭūlūn by his harsh treatment and incarceration of the Coptic Patriarchs Shenouda I (859-80) or his successor Khaʾīl III (880-90), caused by internal dissensions amidst the Coptic clergy themselves. An undeserving deacon and monk who wanted a bishopric hatched conspiracies against the Patriarchs, together with the bishop of Sakha, who had been excommunicated for misdemeanour. They went to the governor with false reports about the Patriarchs, including the worst of accusations in the eyes of a Muslim ruler, that is, trying to bring Muslims into apostasy and sending them to the desert monasteries to become monks. As usual, this was coupled with accusations that the Patriarchs were avaricious and possessed masses of gold. The truth was revealed in the end, and the Patriarchs regained their liberty after signing a warrant for debt, which they tried to repay through money raised from charity and from simoniacal practices.

The state revenue had declined to 3 million *dīnārs* at the advent of Ibn al-Mudabbir, and he aimed at doubling it without mending the cause of its decline. Realising that the cause of this deficit was the decline of agriculture, Ibn Ṭūlūn introduced land and irrigation reforms which ultimately improved the revenue. Even with exemptions, the revenue rose to 4 million *dīnārs* before Ibn Ṭūlūn's death, in addition to accumulated savings of 10 millions in the treasury and the execution of an extensive building program. With the help of the Kātib al-Firghānī, an accomplished Coptic architect, he constructed the Nilometer at the southern end of Rawḍa (Rōḍa) island (see MIQYĀS) and his famous mosque with its external spiral minaret. Muslims commonly destroyed churches in order to use their materials and pillars in building mosques. To save the churches, Ibn Kātib promised the governor to construct the mosque of Ibn Ṭūlūn without having to utilise pillars from churches. Thus the new pillars were built of massive masonry supporting pointed arches long before their use in Gothic art in Europe, and only two small marble pillars were placed on the flanks of the *kibla*. The mosque still stands as a testimony to the architectural genius of the builder and the return of the country to affluence.

During the years of stability in the rule of both these dynasties of governors, the Copts enjoyed a great degree of tolerance and prosperity. It is recorded that Ibn Ṭūlūn cultivated the habit of retiring to the al-Kusayr monastery south of Fusṭāṭ for rest and recuperation, and the first Ikhshīdid, Muḥammad b. Ṭughdj (323-34/935-46) used to participate in the celebrations of the Coptic Epiphany, according to the contemporary 4th/10th century historian al-Masʿūdī. Both dynasties entrusted the Copts with key positions in government.

The really favourable position of the Copts, however, was still to come, viz. under the Shīʿī Fāṭimid dynasty (358-567/969-1171), if we except the reign of al-Ḥākim bi-Amr Allāh (386-411/996 [*q.v.*]), who ended by persecuting Copts, Jews and even Muslims. Hence the Copts, whose religious freedom had been undisturbed and who had occupied the highest positions in the administration during the reigns of al-Muʿizz (358-65/969-75) and al-ʿAzīz (365-86/975-96) now faced forced apostasy or persecution by the unbalanced monarch, and many of their churches were levelled to the ground. However, towards the end of his reign, al-Ḥākim apparently fell under the spell of a priest named Anba Salomon during his visits to the monastery of al-Kusayr on the Bilwān road south of Cairo, and eventually began to wear a monks' garment, while his atrocities ceased.

During the caliphate of al-Ẓāhir (411-27/1020-36), the re-building of churches was again authorised, and Christians who had been forced to apostasise were permitted to return to their faith. Nāṣir-i Khusraw [*q.v.*], who visited Egypt in the reign of his successor, al-Mustanṣir, remarked that nowhere in the world of Islam had he seen Christians enjoy as much peace and prosperity as did the Copts. The strongest Fāṭimid vizier, Badr al-Djamālī [*q.v.*], and his son al-Afḍal, both Armenian converts to Islam, favoured the Copts and relied on their service. Ultimately, the sixty-sixth Patriarch Christodoulos (1046-77) decided to move his seat from Alexandria to Cairo in order to be within easier access to the central government.

Only towards the end of Fāṭimid rule, when internal disorder grew, did Copts and Muslims alike suffer in the ensuing broils and confusion, and the fate of the Copts was further aggravated by the outbreak of the Crusades. It would therefore seem that the Copts reached the height of power and prosperity, but also latterly some of their worst tribulations, during the Fāṭimid era.

The advent of the Sunnī Ayyūbid dynasty (564-648/1169-1250) re-established internal stability and

eliminated the confusion of the age of the last Fāṭimid caliphs, but these times proved rather a mixed blessing for the Copts. In the course of his fighting the Crusaders in the Holy Land and the Christian kings of Nubia in the south, Ṣalāḥ al-Dīn's suspicions led him to dismiss the Copts from government service. It was probably on this occasion that Zakariyyā' b. Abī 'l-Ṣalṭ b. Mammāṭī (a corruption of the Coptic *Makemaṭi*) of Asyūṭ, a Copt who held the joint secretaryship of the War Office and the Treasury, decided to apostasise with his family and become a Muslim, in order to retain his high office for himself and his descendants. His son al-Asʿad inherited his father's office, and compiled one of the few cadastres of mediaeval Egypt (*al-Rawḍ al-Ṣāfī*), leaving a record thereof in his *Asfār Kanāʾis al-Iskandariyya*. Ṣalāḥ al-Dīn's brother, Shams al-Dawla, who led the Nubian campaign, destroyed in the years 567-8/1172-3 the monastic settlement of Bawīṭ in Middle Egypt, the Coptic city of Kuft, which sank into insignificance thereafter [see QIFṬ], and the important Convent of St. Simeon (*Anba Hidra*) across the Nile from Aswān. Ṣalāḥ al-Dīn further decided to remove the imposing building of the Cathedral of St. Mark in Alexandria for fear that it might serve Crusader hordes with a fortified site, and the Copts tried in vain to ransom this church.

It would however be erroneous to accuse the Ayyūbid sultans of continuous intolerance and persecution of the Copts. One of their first deeds was to suppress Ibn al-Mudabbir's substitution of the lunar for the solar calendar in order to shorten the year and thus get more taxes. They left most of the Coptic churches unheeding, and generally refrained from interference with religious freedom. Ṣalāḥ al-Dīn himself granted the Copts an imposing monastery adjacent to the Holy Sepulchre, which they own to the present day as *Deyr al-Sulṭān*. The sultan's successes against the Crusaders and the recaptors of Jerusalem in 583/1187 seem to have terminated his early apprehensions about the Copts. The Copt Ṣafī al-Dīn b. Abī 'l-Maʿālī, surnamed Ibn Sharāfī, became his private secretary. Two Coptic architects, Abū Manṣūr and Abū Mashkūr, were employed to repair and extend the fortified walls of Cairo and to build the Cairo Citadel on the Muḳaṭṭam hills overlooking the capital, Ṣalāḥ al-Dīn's most enduring monument which became the fortified seat of successive governments and dynasties.

In the reign of Sultan al-ʿĀdil Sayf al-Dīn (596-615/1200-18 [q.v.]), the Sephadīh of western chronicles, a Copt by the name of Ibn al-Mikāt assumed the administration of the War Office in the Crusade of Damietta of 1218, the Coptic inhabitants participated in the defence of the city and with their clergy suffered greatly at the hands of the Latins. Again in the Crusade of St. Louis in 1249-50, notably Copts were to be found in the Sulṭān's camp. A number of Fāṭimid and Ayyūbid sources show that numerous Copts earned some of the highest titles of honour in the state such as *Raʾs*, *Ḥibat Allāh*, *al-Amjad*, *al-Aʿfaḍ*, *al-Shaykh*, *Nadīb* al *Dawla*, *Tāj al-Dawla*, and *Fakhr al-Dawla*. The Church historian Yaʿḳūb Nakhla Rūfayla collected as a sample some 30 Coptic names bearing these titles.

Two important processes were in progress since the Arab conquest, the Islamisation of Egypt and the Arabisation of Egypt, and these two processes should not be confused. That there should be a measure of conversion to Islam under early Arab rule was inevitable. The apparent kinship between Coptic monophysitism and Islamic monotheism might have played a role in a still amorphous body of doctrine, but the vexatious *ǧizya* or poll tax, increasing at a steady rate, left the impecunious Coptic taxpayer only one way to escape, sc. that of Islam. It is known that most caliphs discouraged wholesale conversion, in defence of a depleted inflow of revenue to the treasury. How can we explain, therefore, the eventual numerical superiority of Muslims as against the shrinkage of the Copts in Egypt? E. L. Butcher implausibly ascribed it to the popularity of the monastic life and called it "suicide of a nation". The Muslim social historian, Aly Mazahéri describes this phenomenon as "ethnic exhaustion", and discards the assumption of wholesale conversion. It does not seem that a single, facile answer can be given here.

The Arabisation of Egypt, on the other hand, is a more transparent process. A study of the papyri indicates that at first the Copts conducted the administrative records in Coptic, and that the Arabs, who did not know the native language, accepted their procedures thus. Then the year 86/705 witnessed the issuance of an edict by the governor ʿAbd Allāh b. ʿAbd al-Malik imposing on the first time the use of Arabic in state records. At this point, bilingual papyri began to appear in an intermediary stage. Meanwhile, the Copts hastened to master the language of the new rulers, but the clerks persisted in the use of bilingual protocols in the papyri. As to the use of Arabic in public life, this must have been a slower process, although we may note the compilation of Coptic grammars and Coptic dictionaries in the 13th century, which is probably to be regarded as an indication to national Coptic efforts to keep the torch of the Coptic language burning amongst those who were fast losing it. Nevertheless, it would be a mistake to assume that Coptic was becoming extinct at that early date. The same century produced eminent Coptic writers such as Ibn al-ʿAssāl [q.v.] and other members of his family, who were perfectly conversant with Coptic, Greek and Arabic. As late as 1673, the traveller Vansleb reported that he met the last Copt who really spoke Coptic, and Benoît de Maillet, an 18th century French consul in Egypt, stated that he found whole villages in Upper Egypt whose residents spoke Coptic. In the present century, Werner Vycichl is quoted by the Coptologist William Worrell to have discovered Coptic-speaking communities at Zēnīya and other isolated villages in Upper Egypt. Of course, the liturgy is still celebrated today in Bohairic Coptic, together with Arabic, in Coptic churches. The Arabisation of Egypt is an undisputed reality, but the total extinction of the Coptic language is still a debatable problem.

The later Middle Ages brought difficulties for the Coptic communities. The Mamlūks (648-922/1250-1517) who were originally slave soldiers bought by the Ayyūbid sultans, ended by seizing power from them, and they then continued to reinforce their army by more slave purchases. They were therefore men of varied ethnic and religious origins and had nothing in common with the Egyptians except the bond of Islam; and it is doubtful whether any of them was fully aware of the doctrines of their faith or the language of the Coptic people. Internal insecurity and increasing poverty and isolation now began to drive the Coptic populace into desperation. Skilled Copts continued to work in the Muslim administration, but as soon as they rose to wealth and power, the Muslim mob tended to clamour for their dismissal from office and to start a wave of

church destruction. As mob fury became overpowering, the Mamlūk sultans had often to yield to public pressure and unseat the Copts and condone the assaults on their religious foundations. Yet after a short period, confusion usually supervened in the government machinery, and the sultans were constrained to reinstate the Copts in office once more.

On one occasion, a group of exasperated Copts decided to retaliate against Muslim oppression. In 720/1320, a number of Coptic monks from Dayr al-Baghl ("The Monastery of the Mule") south of Cairo, formed a secret pact to use arson against mosques and Muslim quarters in the capital. Once while the city was ablaze, four of these monks were seized carrying naphthe and other incendiary substances. The Sultan ordered them to be burnt and the Copts were again dismissed from office. The infuriated mob continued their destruction of more churches. From 678/1279 to 851/1447, forty-four churches are reported to have been levelled to the ground in Cairo alone. The Patriarch Yoḥannes X (1363-9) was summoned by the Baḥrī Mamlūk Sultan al-Ashraf Shaʿbān (764-78/1363-76), and he and the archons or elders of the Coptic community were subjected to abject humiliation and confiscation of property, partly to appease the populace and partly to raise funds for waging war against the Cypriots in retaliation for their sack of Alexandria in 766/1365.

Occasional spells of relief for the oppressed Copts came only as a result of foreign intervention from three main sources. The first was from Constantinople, where the Byzantine emperor, himself harassed by the Ottoman Turks, pleaded at the Sultan's court on behalf of the remaining Melkite minority. The second was from Aragon, whose kings were for commercial reasons, usually on good terms with the Mamlūk monarchs, though their intercession was essentially on behalf of the churches in the Holy Land and only incidentally for the Copts. The third and perhaps the most important source of mediation came from Abyssinia, whose Negus had a strong bargaining power on behalf of the Copts in the counter threat of ill-treatment of the Muslims under his dominion, and in the imaginary menace of deflecting the course of the Nile to the detriment of Egypt.

The harassed Coptic patriarchs also hoped tentatively for an undefined form of assistance from the western world, without jeopardising their delicate position with the sultans. One such glimmer of hope appeared at the time of the Council of Ferrara-Florence (1438-9), which aimed at the union of the Churches of East and West, separated since the Chalcedonian schism in 451. We know that a certain Yuḥannes, Abbot of the Coptic Monastery of St. Anthony on the Red Sea, was a signatory to the *Decretum pro Jacobitis* declaring the formal union of the Churches. But the agreement long remained in abeyance until 1586, when Rome sent a delegation to Patriarch Yuḥannes XIV (1572-86) in order to discuss the practical application of the union. The Patriarch and a few bishops were agreeable, though the majority of the community remained apprehensive, the sudden death of the Patriarch ended this abortive mission.

By then the Ottoman Turks had been established in Egypt since its conquest by Selīm I in 923/1517. Egypt became a dependent province with a vast empire, and the sultans derived their revenue from a governor, an Ottoman Pasha whom they invested with the provincial government for brief periods. There was a Turkish garrison headed by a general independent of the governor, while the local administration was left in the hands of the surviving Mamlūk *umarā*. Tax farming (*iltizām* [q.v.]) became the practice and the tax farmers and village headmen were subjected to all sorts of pressures for the payment of excessive dues, not only for the sultan in distant Istanbul, but also for the enrichment of a whole hierarchy of the administration. Within this framework, the Copts worked as clerks and tax collectors mainly to local Mamlūk households. Though they suffered occasional, temporary dismissals from service, they were not goaded by the outbreaks of mob fury as in Mamlūk times; in fact, they suffered, together with the Muslim inhabitants, from the depredations of the Arab nomads who used to descend on villages in the countryside for looting. The land became isolated and its inhabitants sank into lethargy and ignorance until the French Expedition of 1798-1801 arrived under Napoleon and opened Egypt to western influences.

Perhaps the most significant Coptic document after the rout of the Mamlūks and the settlement of the French was a petition submitted to Napoleon by a notable Copt, Girgis al-Djawharī, imploring him to lift Copts disabilities, in keeping with the principles of liberty, equality and fraternity proclaimed by the French Revolution. However, the French, whose leaders feigned conversion to Islam in order to court favour with the Muslim majority, decided to overlook his plea and thus avoided the semblance of partisanship. Nevertheless, they did not hesitate to select the best candidates for the administration irrespective of religious considerations. Hence the same Girgis al-Djawharī became the head of the taxation department. They also nominated a commission of twelve to administer local justice. Six of these were Copts and the chairmanship fell to Muʿallim Malaṭī, a Copt about whom we possess no documentary evidence. But the real hero in Coptic annals emerged in the personality of Muʿallim Yaʿḳūb Ḥannā (1745-1801), whose meteoric career began in the predominantly Coptic city of Asyūṭ, in Upper Egypt.

Originally a humble civil servant under Sulaymān Bey, a Mamlūk *amīr* in charge of Asyūṭ province, he learned the equestrian art and the rudiments of Mamlūk warfare from his master and even participated in Mamlūk hostilities against the Turks. Later, when the French attempted to conquer Upper Egypt under Desaix, he played a prominent role in saving the French expedition from collapse. Then after the disastrous naval battle of Abūḳīr, which gave Nelson and the British command of the sea, Napoleon left and Kléber succeeded him with an empty treasury, while Turkish infiltrators played upon religious sentiment and incited the Muslim population of Cairo to rebellion. It was in these precarious circumstances that Yaʿḳūb, with the approval of the French authorities, recruited a Coptic legion of 2,000 Coptic youths to be trained by professional officers under his own command, first as Colonel, then in 1801 as General.

Still more spectacular on Yaʿḳūb's career was his dream of Egyptian independence from both the Turks and the Mamlūks. The documents pertaining to this chapter in his biography were discovered and brought to light by an eminent Muslim historian, the late Professor Shafīḳ Ghurbāl. The departing French made the stipulation that any native desirous to leave with them should be permitted to do so. Thus the General, together with a few companions, left Egypt with the French on the British ship *Fidèle*, in the hope of convincing the rulers of Europe

that the only solution of the Egyptian question was the independence of Egypt. Ya'kūb died on the high seas on 16 August 1801 leaving the fulfilment of his mission to his accompanying delegation. Apart from his secret deliberations with the captain of the *Pallas* Joseph Edmonds, preserved in the memoirs of his interpreter Lascaris, a Knight of the Order of Malta, his correspondence was communicated or signed by proxy and addressed to Bonaparte and his foreign secretary Talleyrand (23 September 1801) as well as to the British Lord of the Admiralty, Earl St. Vincent (4 October 1801).

Curiously, the man destined to realise Ya'kūb's vision was Muḥammad ʿAlī (1805-49), the Macedonian soldier who came to Egypt as the head of a Turkish force and succeeded in founding the dynasty in Egypt which did not end till 1953. Under the new régime, the enfranchisement of the Copts went a long way. With increasing security and acceptance, it became less necessary for them to congregate in fortified quarters for self-defence, and they began to scatter all over the big cities side-by-side with their Muslim compatriots. They even took courage to fight for the removal of a few remaining disabilities in the Coptic Congress at Asyūṭ in 1911, clashing with a countermovement in the Muslim Congress in Alexandria. Both, however, were confined to a war of words and were discouraged by the Khedive ʿAbbās Ḥilmī (1892-1914), eight years later both sides were engaged within the Wafd Party in the struggle against the British protectorate over their common homeland. The only cases of violence in contemporary history have consisted of localised incidents of arson against churches by the Muslim Brotherhood (see AL-IKHWĀN AL-MUSLIMŪN), whose organization was eventually suppressed by Djamal (Gamāl) ʿAbd al-Nāṣir [*q.v.* in Suppl.] in 1966.

In recapitulating the story of the status of the liberated Coptic community in modern times, we should not forget two 19th century movements. The first was an educational and cultural one sponsored by the Patriarch Cyril IV (1854-61), known as the Father of Coptic Reform. He founded public schools including the first girls' school in Egypt, and imported a printing press, the second in the country after the Būlāḳ press. On the international scene, he carried out with success a conciliatory embassy in 1856-8 with the Emperor of Ethiopia on behalf of the Khedive Saʿīd (1854-63). But he did not live to realise his grand dream of an ecumenical union with the Greek Church, the Russian Church and the Anglican Church, it is said that this enterprise disturbed the Muslim authorities and hastened the visionary Patriarch to his grave. The second movement was a natural corollary to the first, for western education created a Coptic élite who strove in the pursuit of establishing a more democratic system of government in community affairs and in the management of church property. This met with staunch resistance in the clerical conservatism of the age of Cyril V (1874-1927), and the project of a Community Council (*Maǧlis Milli*) has been in abeyance ever since.

Within the framework of the Islamic legal structure, the Copts made several gains of capital importance. The abolition of the *ǧizya* came in part in 1855 during Saʿīd's reign, and this was coupled with the acceptance of the Copts into military service. At his accession, the Khedive Tawfīḳ Pasha (1879-92) publicly proclaimed the principle of equality of all Egyptians in every way, irrespective of their ethnic origin or religion, this was later formalised in a decree of 21 July 1913 and again in the Constitution of 1922.

In a period of more than thirteen centuries of Islamic rule, it seems that the density of population of Egypt has varied from time to time. At the Arab conquest, judging from the papyrus tax returns, the Copts must have been at least 12 millions. Owing to many hardships, occasional failure of Nile floods and diminution of cultivable soil, recurrent plagues, conversions to Islam and flight in the desert monasteries, we must assume the existence of a downward trend in the number of Copts throughout the Middle Ages and Ottoman Turkish times. We note that their number sank to approximately one million souls. However, the latest three official itemised censuses of the population reveal the following figures:

Year	*Total population*	*Muslims*	*Copts*	*Jews*	*Other religions*
1947	18,966,767	17,397,946	1,502,635	65,839	1,347
1960	25,984,201	24,068,252	1,905,182	8,581	2,206
1966	29,943,820	27,919,528	2,018,305	2,484	3,493

It is difficult to accept the above figures unhesitatingly. This is largely due to the fact that Coptic villagers have always shown a reticence in divulging the real size of their families. The newly-founded Census Department in the Institute of Coptic Studies in Cairo has been working with the local country priests in assessing the Coptic population, suggestions of a Coptic population from four to six millions to the year 1974 have been put forward.

The basic causes of the survival of the Copts are both internal and external. Internally, the Copts clung to their Church as a cementing element in their private life. Coptic ethnicity and faith became a profound faith, a way of life, and an intangible doctrine of ethnic consciousness. Externally, it is fair to admit that Islam shares in the credit of this survival. Under the aegis of Islamic dynasties, there came dark times when the violence of the majority could well have exterminated minority groups with the concurrence of the rulers; yet this did not happen, despite such difficult periods as the reign of the Fāṭimid Caliph al-Ḥākim in the 5th/11th century.

Bibliography. All chronicles and source material on mediaeval Egypt contain many references to the Copts, see especially Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270; Suyūṭī, *Ḥusn al-muḥāḍara fī aḫbār Miṣr wa 'l-Ḳāhira*, Cairo 1327; and ʿAlī Bāshā Mubārak, *al-Khiṭaṭ al-Tawfīḳiyya*, Būlāḳ 1304 *ff.* Equally, bibliographies of Egypt under Islam cannot be overlooked. On the Copts proper, see W. Kammerer, *A Coptic bibliography*, compiled in collaboration with Elinor Husselman and Luise Shier, Ann Arbor 1950, and the monumental work of G. Graf, *Geschichte der christlichen arabischen Literatur*, 5 vols., Vatican City 1953. Some of the books cited below also contain additional detailed bibliographical material on special subjects.

1. *Primary sources*. Perhaps the most important primary source is Sawīris b. al-Muḳaffaʿ, *History of the Patriarchs of the Egyptian Church*, ed. C. F. Seybold (to 567 A.D.), and T. Evetts (to 849), to the *Patrologia Orientalis*. The remainder to 1211 was jointly edited with an English tr. by Yassa ʿAbd al-Masīḥ, O. H. E. Burmester and A. S. Atiya in 4 parts in the publications of the *Society of Coptic Archaeology*, Cairo 1943-59. An older chronicle,

written 50 years after the Arab Conquest, is indispensable, John of Nikiou's *Chronicle*, ed H. Zotenberg, Paris 1833. See also A. Grohmann, *Arabic papyri in the Egyptian Library*, 6 vols., Cairo 1934-62; H. T. Evetts, *The churches and monasteries of Egypt*, by Abū Ṣāliḥ al-Armanī, Oxford 1894-5 (a work probably written by Djirdjis b. al-Makīn, not Abū Ṣāliḥ, who must have only owned the manuscript); F. Wüstenfeld, *Macrizi's Geschichte der Kopten*, Göttingen 1848. J. M. Vansleb, *Histoire de l'église d'Alexandrie* Paris 1677; *ibid.*, *Voyage in Egypt in 1672-73* London 1678; Renaudot, *Historia Patriarcharum Alexandrinorum*, Paris 1713 (old but still useful); the Expédition d'Égypte contains records on Copts in the 18th century.

II. *Secondary sources in European languages*. E. Amélineau, *Géographie de l'Égypte à l'époque copte*, Paris 1893; A. S. Atiya, *History of eastern Christianity*, London 1967, and Notre Dame, Ind. 1968; E. L. Butcher, *Story of the Church of Egypt*, London 1897; A. J. Butler, *The Arab conquest of Egypt*, Oxford 1902; G. Douin, *L'Égypte undjeun-denis, projet de 1802 A.D.*, Cairo 1924; A. Fortescue, *The lesser Eastern churches*, London 1913; G. Hanny, *Le général Jacob et l'Expédition de Bonaparte en Égypte*, Marseille 1922; R. Janin, *Les églises orientales et les rites orientaux*, Paris 1926; R. K. Kidd, *The churches of Eastern Christendom*, London 1967; Kyriakos Mikhail, *Copts and Moslems under British control*, London 1911; S. H. Leeder, *Modern sons of the Pharaohs*, New York 1920; O. F. A. Meinardus, *Christian Egypt, ancient and modern*, Cairo 1965, M. Rescaglio, *Histoire de l'église copte*, Beirut 1966-; R. Rondot, *Les Chrétiens d'Orient*, Paris 1955; B. Spuler, *Die morgenländischen Kirchen*, Handb. der Orientalistik, Leiden Cologne 1961, R. Strothmann, *Die koptische Kirche in der Neuzeit*, Tübingen 1961, G. Vries, *Orientes cristiani vers s oggi*, Rome 1959, E. Wakin, *A lonely minority, the modern history of Egypt's Copts, the challenge of survival for four million Christians*, New York 1963; Sir Thomas Arnold, *The preaching of Islam*, London 1896, Aly Mazahéri, *La vie quotidienne des Musulmans au Moyen Âge*, Paris 1951, Shafik Ghurbāl, *Al-General Ya'kūb wa'l Fatū Lascaris*, Cairo 1932, Jacques Tagher, *Aḥbāl wa-Mushāwir*, Cairo 1951, Tewfik Isaareus, *Nawabigh al-Aḥbāl*, Cairo 1950-13, Ya'kūb Nakhla Rufayla, *Ta'rīkh al Umma al Kibṭiyya*, Cairo 1898, Yusuf Minkarious, *Ta'rīkh al-Umma al-Kibṭiyya*, Cairo 1913 (Coptic history from 1893 to 1912, including documents).

(A. S. ATIYA)

KIBṬĪ (see ḤINDĀN).

KIDAM (A.) in the technical vocabulary of philosophy and theology denotes eternity. It must be distinguished from *azal* and from *abad* (q.v.). Al-Tahānawī writes, "*Azal* is the constant duration of existence in the past, as *abad* is its constant duration in the future." As opposed to temporal origin (*ḥudūth*), it is the fact of having been preceded by nothing else (*al-lā mashūkiyya li-'l-ghayr*) *azal* implies the negation of a first beginning (*nafy al-awwaliyya*); it is therefore a case of eternity *a parte ante*, and *abad* is eternity *a parte post*. *Azal* and *abad* are essentially identical in God (*umma abadihi 'ayn azalihi*), for they mean that the two relative extremities which are the beginning and the end are both "cut off" from God (*inḳiṭā' al-ṭarafayn al-iḍāfiyyayn 'anhu*). For Him they are negative attributes (cf. Fakhr al-Dīn al-Rāzī, commentary on the Most Beautiful Names of God, sūra VII, 180; *azalī* and *ḥadīm* are classed among the real and negative attributes. First, *azalī* is regarded as real, accompanied by relationship and negation (*ṣifa ḥaḳīḳiyya wa'l iḍāfa wa 'l-salb*). He is eternal, in the sense of *azalī*, that which is not preceded by nothingness, that which is in existence before any rational conception of a first beginning (*bakiya ta'aḳḳul al-awwaliyya*), and in the sense of *abadī*, that which persists beyond any rational conception of an ultimate term (*ba'da ta'aḳḳul al-āḫiriyya*). Through these various definitions there come to light two conceptions of pre-eternity and post-eternity. The first is that of endless duration (*li nihāyata lahu*) which extends either towards the past, or towards the future (in which case it is also known as *al-le-yazal*, that which does not cease to be). This scheme (cf. below) raises many difficulties to the solution of the problem of the creation of the world since it introduces the concept of an infinite time before the moment of this creation. The second is more philosophical: the two eternities are nothing more than negative conceptions, to which contemplative thought has recourse in order to grasp the idea of eternity in relation to time, but which do not correspond to the reality of an infinite time in the two tenses: they are relative to the thought belonging to the human spirit, which as al-Rāzī points out (cf. below), cannot conceive of itself outside time. The reality which is hidden behind these imaginary concepts is that of God and of His subsistence through His essence (*bakā'uhu bi-dhātihi*), that is, of a being totally unaffected by time and temporality.

So what does *ḥadam* denote? Etymologically, the term should be associated with *azal* since it is a root expressing the idea of anteriority. The *LA* says of it exactly the same as al-Tahānawī says of *azal*: "It is the contrary of temporal origin (*ḍiddu al-ḥudūth*)". Ibn Manẓūr also explains it through the roots *'adiya* and *sabaḳa* ("to precede in a race"). It should in fact be noted that the idea of anteriorness in time or space is linked to that of superior worth, as would appear from the substantive *ḳadam* and from its Kur'ānic use: *ḳadam ṣidḳ* (X, 3) which al-Zamakhsharī interprets as *sābiḳa wa-faḍl wa-manzila rafī'a*, a priority, a higher abode that God is preparing for the Believers. Another explanation is that in advance a gift has been prepared for them on the part of God (*ḳad sabaḳa lahum 'inda Allāh khayr*) which unites the two ideas of anteriorness and of the excellence of the divine gifts. It may be noted further, with regard to *ḳadam* ("step", whence the fact of being a step ahead of the others, of precedence) that the *LA*, as well as al-Ḳurṭubī in his commentary, quotes verses of Dhu 'l-Rumma (q.v.) where the expression of Bedouin mentality may be seen. *ḥadam* is associated there with high nobility and acts of splendour (*mafākhir*). Since the qualities of Bedouin ethic were in general transferred by Islam to God, it may reasonably be supposed that the root *K-D-M* served not only to connote the anteriorness of God, but also His ontological pre-eminence over all things while it must be made clear that this is not an anteriority and a pre-eminence relative to others, as in the case of *mufākhara* which implies rivalry, but qualities that are transcendental and absolute. It is in this sense that the *LA* says that God is *al-Muḳaddim*, because he precedes all things (*yuḳaddim al ashyā'*) and He puts them in their place (*yaḍa'uhā fī mawāḍi'ihā*). But the terms *ḥidam* and *ḥadim* in the sense of eternity and the

eternal, are technical creations (*istilāḥāt*); they are not Kur'ānic. The *Ḥāfiẓ* 'Abd al Djabbār, in the *Sharḥ*, writes that according to the principles of the language *ḳadīm* is that which has existed for a longer time than something else (*mā taḳaddama wudjūduhu*) and he quotes the verse (XXXVI, 39) where God compares the moon to an old palm (*ka 'l-'urdjūn al ḳadīm*) As for the word *ḳidam*, it does not occur in the Kur'ān The revealed Book surveys the idea of divine eternity through that of transcendence. God is al Muta'ālī (XIII, 9), and this name, according to al-Rāzī, belongs to him on the grounds that he is utterly removed (*munazzah*) in His essence, in His attributes and His actions from all that may not be asserted of Him. In consequence, He is outside time, Eternal, and it is thus that the term *ḳadīm*, taken absolutely (*al Ḳadīm*) denotes God Himself.

Al-Tāhānawī also makes *ḳidam* the opposite of *ḥudūth* [*q.v.*]. These two terms denote attributes of existence and are studied together. Essence (*māhiyya*) is qualified only in regard to the qualification of the corresponding existence. They may be applied to nothingness, according to whether it is preceded by existence or not; thus one may speak of an eternal nothingness or nothingness resulting from obliteration. *Ḳidam* and *ḥudūth* may be taken according to reality (*ḥaḳīḳiyyan*) or according to relation (*iḍāfiyyan*).

1. Real eternity consists in the fact of not being preceded by another thing according to an anteriority which is essential and not temporal. This is what is known as essential eternity (*ḳidam dhātī*), which consists in the fact of needing absolutely nothing other than the self in order to exist. This implies the necessity of the being The Eternal in this sense is the necessary Being. On the contrary, origin (*ḥudūth*) is the fact of having been preceded by something in existence according to an essential anteriority, which in this case may or may not also be a temporal anteriority (for example, the world is essentially the result of an origin, it is *muḥdath*, but nothing precedes its time, man is also essentially engendered, but his parents existed in the time previous to his birth). In a certain sense, time is the result of an origin (*ḥādith*), because if it has been preceded by nothing which could have existed before it in a temporal way, an absurd hypothesis, it does not have the absolute existence of necessary Being and at every instant it renews itself. It is possible to understand in particular by eternity the fact of not being preceded by the non-existence of a temporal anteriority: this will then be called temporal eternity (*ḳidam zamānī*), and the eternal in terms of time is therefore "that of which the time of existence has no first beginning." Similarly, one may talk of a temporal origin (*ḥudūth zamānī*) where the existence of a being is preceded by non-existence in time. Thus we define that which is the fruit of a temporal origin (*al-ḥādith al-zamānī*) as that which is preceded in time by its non-existence, according to the well known formula *kam yakun, thumma kāna* ("it was not, then it happened"). In this sense, time is not *ḥādith* because nothing can pre-exist itself

2. As for relative *ḳidam*, it implies that the past time of the existence of a being is greater than that of the existence of another. But this sense cannot be conveyed by the word eternity. It concerns the antiquity of a being compared to the novelty of an other, and *ḳadīm* means ancient, old, like *'atīḳ*) Conversely, *ḥudūth* will be novelty, *ḥadath*, that which is new.

Al Tāhānawī adds that temporal eternity is more particular (*akhaṣṣ*) than temporal eternity, which in its turn is more particular than relative eternity or antiquity. Thus necessary Being, which is *ḳadīm dhātī*, is also eternal according to a temporal point of view, since it is preceded neither by nothingness ons by that which is other than itself But the converse is not true: thus the attributes of eternal Being, which are not preceded by nothingness since they are concomitants of its eternal essence, are not eternal in themselves and so do not have *ḳidam dhatī*. The same could be said of the world which is *ḳadīm zamānī* according to the *falāsifa*, but which is not however *ḳadīm dhātī*, because it depends on its cause, which is other than itself. As for *ḳidam iḍāfī*, it is not co-extensive with *ḳidam zamānī*. In fact, the past time of an existence may be greater compared with that which subsequently occurs for the first time This applies to the father who is *ḳadīm* in relation to his son, but who is not thereby *ḳadīm zamānī*, because he is born of parents. So if we compare the world to a man, both of these have a history made up of successive events. In relation to one of these events, the past of the world and of this man extend over a time greater than that of the new happening Each of them will therefore be called *ḳadīm* in relation to it They are both *ḳadīm iḍāfī*. But the world is not only *ḳadīm* in this context it is so in itself, because there has never been a time where it did not exist. Man is only *ḳadīm* in relation, for example, to the event of his paternity, doubtless he preceded it, but precisely according to an antecedence which is only relative to it. On the contrary, in the context of origins, it is *ḥudūth iḍāfī* which is the most particular, then comes *ḥudūth zamānī* and finally *ḥudūth dhātī*. This is because everything whose existence in the past covers a lesser time-span (*akall* that is to say *ḥādith iḍāfī*) is preceded by nothingness, and is therefore *ḥādith zamānī*. *A fortiori*, it is *ḥādith dhātī*. This analysis has clearly been influenced by the thought of philosophers who tend to associate eternity with the ontological necessity of the *wādjib al wudjūd* and *ḥudūth* with continuity. Theologians simply understand by *ḳadīm* that which is not preceded by nothingness, or in the vocabulary of al Tāhānawī, *ḳadīm zamānī*.

To what does the notion of eternity apply? *Ḳidam* relates first to the essence of God On this point all the philosophers and religious scholars are in agreement. On the question of the eternity of the attributes of God there are differences of opinion among the *mutakallimūn*. God is eternal because He is not subject to an origin, and being cannot be other than *muḥdath* or *ḳadīm*. So if God were subject to origin, in order to exist He would need another being to create him, a *muḥdith*. But the question would apply to the latter too and so on to infinity. So one must affirm the existence of God as eternal Creator, as it is expressed by 'Abd al-Djabbār (al-Ṣāḥib' *al-ḳadīm*) This argument, which bears a philosophical mark, is not the exclusive property of the Mu'tazilīs It is found in the same or similar terms in the *Kitāb al Tamhīd* of al-Bāḳillānī, in the chapter where he shows that the agent which produces beings subject to origin (*fā'il al muḥtathāt*) cannot itself be the fruit of an origin. It is found in the *Kitāb al Irshād* of al-Djuwaynī, where he proves that the existence of the Eternal "does not inaugurate itself" (*mufīd al ḳadīm ghayr mufṭaḥ*); in the same place he gives an interesting and precise observation on the concept of an existence that has no beginning does this not imply an infinite succession of moments? He replies

that the *zamaniyya* of a thing is defined by the fact that it is contemporary with other things. New God is not contemporary with any other thing. So the eternity of God is implied by his uniqueness.

The Ash'ari school admits the eternity of the divine attributes. On the contrary, the Mu'tazilis express the major principle that "God has no co-eternal", according to the formula of 'Abd al-Djabbar in the *Sharḥ* (*li-ḥadīth mā' Allāh*). Nevertheless, they recognise an eternal four attributes: existence, life, knowledge and power. In fact, according to al-Djubbā'ī and the majority of the learned men of the school, these four attributes necessarily belong to God through his essence, therefore they are also eternal. His knowledge is His being in acts of knowledge (*ma'lūmāt*) and the same applies to the other *ṣifāt*. Furthermore, He knows through a knowledge which is Himself (Abu 'l-Hudhayl), etc. They do not say that He possesses eternal knowledge, but that he has not ceased to be in acts of knowledge (*lam yazal 'ālim*), etc. 'Abbād b. Sulaymān refused to say that God possesses knowledge, any more than He possesses eternity (*ḳidam*); but it may be said that He is eternal (*ḳadīm*). Contrariwise, Ibn Kullāb taught that God is in acts of knowledge through a knowledge belonging to Him, and so on. To say that He is eternal, is to assert that He has not ceased to be in His Names and Attributes (*lam yazal bi-asmā'ihi wa-ṣifātihi, Mabāḥith*). The essence of God alone is eternal, not in the sense that it is stripped of all attributes, but on the contrary, clad in all that belong to God. Some of his disciples claimed that God is eternal through an eternity (*ḳadīm bi-ḳidam*), others that He is eternal, but not through an eternity (*ḳadīm lā bi-ḳidam*). We begin to deal here with pure subtleties of language, as in the distinction between the two expressions "God has not ceased to be" and "God has not ceased to be through the eternal attribute of eternity." A passage from the *Mabāḥith* deserves notice, however. "The supporters of the theory of attributes (*aṣḥāb al-ṣifāt*) differ in opinion concerning the attributes of the Creator: are they eternal or have they had an origin? Some say that they are eternal. Others declare: "If we say that the Creator is eternal in His attributes, we do not need to say that His attributes are eternal, so we say neither that they are eternal, nor that they have had an origin." According to al-Tahānawī, Abū Hāshim added a fifth eternal attribute to the four above mentioned, holiness (*al-ḳidhiyya*), which is distinct from essence. This is reminiscent of the *divinitas* of the 12th century theologian of Chartres, Gilbert de la Porrée. It is no doubt to this thesis that 'Abd al-Djabbar alludes when he writes that, according to Abū Hāshim, the attributes belong to God necessarily, and by virtue of that to which he confirms in his essence (*li-mā Huwa 'alayhi fī dhātihi*). So it is through divinity that these attributes are eternal. For Sulaymān b. Djarīr and other Ṣifātiyya, the attributes belong to God necessarily through "notions (*li-ma'ānī*) which can be qualified neither by existence nor non existence, nor by origin nor eternity" (*Sharḥ*). It is the concept of notional attribute (*ṣifa ma'nawiyya*), a term that has been translated variously as "essential", "qualitative", or even "antitative". It is nothing other than the qualification made necessary by the notion that one has of God. *Ma'nā* is always a notion signifying *cum fundamento in re*. The attribute *ma'nawī* therefore is not essence; neither is it a "thing" in God. It is that which the reality of God demands that one says of God. But, here too, that which is eternal is God and his essence, and the *ṣifa ma'nawiyya* escapes all ontological alternatives. Nevertheless, according to 'Abd al-Djabbār, certain disciples of Ibn Kullāb reified the *ma'ānī* and considered them to be eternal; for them the four aforementioned attributes are letting to God by means of the *ma'ānī nafsiyya*, which may be translated by "eternal entities". (We may note with 'Abd al-Djabbār that here *nafsī* has the sense of *ḳadīm*, as often happens.) The *Ḳāḍī* points out however that these Kullābiyya did not dare employ this formula in its absolute sense, so as not to run counter to the unanimity of the Muslims over the denial of co-eternal attributes.

From the same root as *ḳidam* is the 5th form *maṣdar*, *taḳaddum*, which occurs in a very interesting commentary by Rāzī on Ḳur'ān, LVII, 3: "He is First and Last". The word *taḳaddum* (antecedence) has several meanings: (1) *al-taḳaddum bi 'l-ta'thīr* where the antecedent exercises an influence over the consequent, for example, the movement of the finger entails that of the ring; (2) *al-taḳaddum bi 'l-ḥudūth*, based on the need which the consequent has of the antecedent, thus the number one is anterior to the number two without being its cause; (3) *al-taḳaddum bi 'l-sharaf*, according to worth; thus Abū Bakr has precedence over 'Umar; (4) *al-taḳaddum bi 'l-mariba*, according to a hierarchical order, either sensible, such as the place of the *imām* in prayers before the faithful who pray, or rational, such as the place of the genus in relation to the species. (5) *al-taḳaddum bi 'l-zamān*, temporal anteriority or *ḳabliyya*; to which al-Rāzī adds (6) "But I think that there is a sixth division which is like the anteriority of certain parts of time in relation to others: this anteriority is not temporal, otherwise it would be necessary for time to develop another time, to the point of infinity. Thus the present would be within another present which would be within a third present... and all these presents would be present at the present moment (*ḥāṣil ḥāḍira fī ḥaḍrat 'l-ān*). But the ensemble of these moments would be posterior to the ensemble of past moments, to the extent that there would be another time for the ensemble of times (*majmū' al-zamān*), which is absurd, for, being a time, it would have to enter into the ensemble of times. Consequently, it would be both within and outside this ensemble, which is impossible. "Furthermore, this anteriority of parts of time as relation to one another is not an anteriority according to causality, nor according to need, otherwise they would co-exist, evidently it is not according to worth, nor according to space. It is therefore a sixth kind of *taḳaddum*. Now the Ḳur'ān shows that God is First (Primus, not prior) for all that is not Him, and al-Rāzī draws here that this qualification only fits the necessary, first and unique Being, for all that is not Him is possible (*mumkin*) and the possible exists only through origin in a *muḥdath*. But what is the nature of this divine anteriority? It is not owed to an act of influence, for the agent and the patient are relative one to another and co-existent. It is not a priority founded on need, since the precedence here is absolute. It is not a precedence owed to worth, for it cannot be said that God is more worthy or more noble (*ashraf*) than possible, since He is incomparable (although in one sense, necessary existence implies a fulness of being besides which the existence of the possible is deficient). As for anteriorities according to time or space, they have no meaning for God, because time and space are possibles which depend on an origin.

God, being anterior to the totality of times, is not anterior according to time, otherwise the divine anteriority would have to enter into the ensemble of times, since it would be a time, but it would have to be exterior to it, because it would contain them all and that which contains is other than what is contained. This would be an absurdity. Apparently al-Rāzī is proposing, as far as concerns God, a sixth kind of anteriority which is not without analogies to the anteriorities of parts of time in relation to one another. However, these are not identical and that is why al-Rāzī, when introducing his sixth division, does not say it is, but only that it is *like* . . In conclusion, we know that God is First in a universal manner (*'alā sabīl al-ʿumūm*), not in a detailed manner (*'alā sabīl al-tafṣīl*). As for grasping the reality of this priority (*awwaliyya*), human intelligences have not the means, since they cannot escape temporal forms. We may note that a similar division of *taḳaddum* is to be found in the *Makāṣid al-falāsifa* of al Ghazālī, except that the *taḳaddum* in *'l-ḥaḳīḳa* is called *taḳaddum* in *'l-ṣifa'*, as a case where the antecedent is not suppressed by the suppression of the consequent, but the consequent is suppressed by the suppression of the antecedent (as with a series of numbers), and except that *taḳaddum* of *'l-in'ḍimām* bears the name *taḳaddum bi 'l-ʿilla* (in the relation of cause to effect).

The doctrine of the eternity of the world [see ABAD] was upheld in Islam only by the *falāsifa*, directly following the systems of thought of the Greek philosophers: Plato, Aristotle, Philo of Alexandria, Proclus, and John Philoponos the Grammarian. The two *Tahāfut* of al Ghazālī and of Ibn Rushd deal with it in a detailed fashion. The fundamental argument is that it is impossible to conceive a temporal beginning to the world, a moment of time in which it was created, in such a way that an empty that preceded the creation. In fact, if, as Aristotle maintains, time is the numerical measurement of movement (a theory taken up by the *falāsifa*, see HARAKA), movement demanding a mobile thing, moving bodies, the physical world and in particular the stars, then it is impossible for time to have existed before the existence of the world. Furthermore, if it existed, it would be eternal or created. But eternity does not conform with time that is changing and elapsing (*sayalān*) each of its parts is new in relation to the preceding part, and time renews itself (*yataḳaddad*) in every one of its instants. If time is *ḥādiṯ* in each of its parts, it has all the more reason for being so in its totality. So it is created; but then the problem arises is it created in time and did a time exist before time? That is absurd. This is the argument as taken on the part of the world. On the part of God, given a temporal creation, what did the Creator do before creating? Was He inactive? That is not his nature and it is written (II, 255) that "Neither weariness nor sleep take hold of Him". Besides, if He was first inactive, then active, a change would have taken place in Him, which is inadmissible. What would have induced Him to create at the moment when He undertook His creation? A *murāḳiḥ*, something which could have turned the scales in the sense of the act of creation? But this *murāḳiḥ* is eternal or created. If it is eternal, the world must also be eternal, unless some other thing could prevent this *murāḳiḥ* from acting, thus is known as *tark al murāḳiḥ*. This *tark* in its turn will be created or uncreated. If it is eternal, there must have been, for creation to have taken place, the intervention of a *tark tark al murāḳiḥ*, and so on. If now the *murāḳiḥ* is created, the question applies to it as to the world.

For their part, the theologians who believe in the creation of the world in time object on the grounds that if the world is eternal it has no beginning, it has never ceased to exist and consequently it has existed for an infinite period of time. Now, according to an Aristotelian principle, it is impossible to traverse an infinite time. If there is an infinity of instants to traverse in order to arrive at the present instant that exists, it is impossible to arrive there and it does not exist. This is a contradiction. The same reasoning is made in considering the infinite chain of causes: the effect that exists at present could not possibly exist. The difficulty arises from the assimilation of eternity to an infinite time. But to say that the world is eternal is to affirm that while remaining in the interior of the world and of the time which is linked to the world, one will never find a moment which could be its first beginning. One will need to go back indefinitely, but not to infinity: in other words, we are dealing here with an indefinite, or in the language of Aristotle, with an infinity in power, not an infinity in action. In short, the objection supposes that the expression "not having a beginning in time" means "having a beginning in infinite time." Besides, an infinity may be traversed if it is contained, between two points on a line, an infinite number of points is traversed. Ibn Sīnā seems to have held this view with regard to the problem of the first cause, analogous to the problem of the first beginning. If one considers the ensemble (*ḏjumla*) of causes within this world, it is clear that each one of them is at once cause and effect. Therefore, one cannot insert into this ensemble a first cause which would be without cause. "Every ensemble of which each unit is an effect caused demands a cause exterior to these units." In such a hypothesis of a causal chain "every series composed of causes and effects, whether finite or infinite, shows itself, if it contains within itself only caused effects, to need a cause that is exterior to it, but as definitely in continuity with it, as with a limit (*ittiṣāluhu bihā ittiṣāfan*)". If the components of this ensemble are infinite, we are then dealing with a limited infinite ensemble. That is to say, that in the search for the first cause, it will be seen to stand out as a limit to the infinite which thought can never reach and towards which it strives. But its action does not need to traverse the infinite discontinuity of causes and effects in order to act *hic et nunc*, *ke*, as Ibn Sīnā points out "every cause of an ensemble which is not one of the units of that ensemble is in the first place cause of these units and in consequence cause of the ensemble". Such is one of Ibn Sīnā's points of view on this question, according to the *Išārāt*. Another objection to the theory of the eternity of the world is based on astronomy. We have an example of it in the *Fiṣal* of Ibn Ḥazm. Having declared that to an infinite time one can add nothing, and having thus shown that the infinity of centuries to come adds nothing to the infinity of centuries passed, Ibn Ḥazm writes: "In its circular orbit, Saturn makes one revolution in thirty years, and it has never ceased to turn. The greatest sphere, in these thirty years, makes approximately 11,000 revolutions, and it has never ceased to turn. Now beyond any doubt, 11,000 revolutions is greater than one alone. Consequently, that which is infinite will be approximately 11,000 times greater than that which is infinite, which is absurd." This is a

crucial variation on the same theme: the assimilation of eternity to an infinite time. The reasoning of Ibn Ḥazm is ingenious, but it ignores the powers of the infinite.

And what of the end of the world? Plato apart, the philosophers held the view that that which has a beginning has an end, and correspondingly that which has no beginning has no end. From a creationist perspective, one could, however, admit that God will not destroy that which He has created, in such a way that the world could have been created, but eternal *a parte post*. For the philosophers, the universe cannot perish, but a part of it may disappear. For the theologians who believe in the end of the world, there remain Paradise and Hell which are eternal in the sense of *abadī*; in fact, it is written that the Chosen and the Damned shall dwell there eternally (*ḫumm fihā ḫālidūn*, as the Ḳurʾān says in a number of places). But on the basis of the verse where God describes Himself as the Last, Ḏjahm b. Ṣafwān supposed that Paradise and Hell shall also have an end, and he found a confirmation of his theory in verses 107 and 108 of Sūra XI, "To dwell there eternally as long as the heavens and the earth remain" Thus God will find Himself as absolutely alone in post-eternity as he was in pre-eternity.

(R. ARNALDEZ)

ḲIFT, Ḳuft, Ḳaft, ancient Coptos, a small town of Upper Egypt situated where the Nile approaches its closest to the Red Sea (some 40 km. north of the ruins of Thebes, and about 2 km. to the east of the river). In Pharaonic times it was connected with the exploitation of the minerals in the hills between the Nile and Red Sea and with trade through the eastern part of Egypt, and enjoyed its greatest florescence in the Greek and Roman periods. Strabo describes the organisation of traffic up the Nile to Coptos, then by caravan across the desert to the Red Sea, and calls it a "town inhabited by the Egyptians and the Arabs together". In fact, it was a centre of attraction for the peoples of the eastern desert coming to trade there, above all, for the Beḍja (*q.v.*), who doubtless received from there their Christianity; a bishop of the Beḍja resided at Coptos-Kift. It formed the centre at a pagarchy, then of a *kūra*, but then the position of Kift as a starting-point for trades to the Red Sea (in 132/750 some members of the Umayyad family fled there temporarily, probably with the intention of escaping) lost importance when the mainstream of oriental trade started using the Persian Gulf instead.

The tribes of the Nile Red Sea deserts started attacking the Nile valley; Kift was plundered with impunity in 204/819 by the Beḍja, who were still Christian, and not till 212/828 was a rampart constructed to protect the settlement. In the first half of the 4th/10th century, al-Masʿūdī wrote that Ḳūṣ was more important than Kift, whose lapse into disfavour he connects with the distance of the Nile channel from the town. In fact, the skilful traders of Ḳūṣ had been able to benefit by the river, the only commercial axis still flourishing, because of the commerce with Nubia, whilst the tracks were all deserted; when they were utilised once more, with the revival of oriental trade under the Fāṭimids in the 5th/11th century, Kift revived, but by then Ḳūṣ had assumed the first place by now a provincial capital Kift nevertheless acquired a numerous, mixed population, especially as relations with the Ḥiḏjāz had over a long period led to the settlement there of ʿAlīd families. It was no doubt their influence which explains the considerable expansion there of Shīʿism and its fidelity to the Fāṭimids after Ṣalāḥ al-Dīn's assumption of power, a conspiracy, leading to a revolt in 572/1177, was savagely repressed. Consequently, Kift left to Ḳūṣ the task of imposing the Sunnī counterrevolution on the Saʿīd. The departure of certain families from the town (e.g. that of Ibn al-Ḳifṭī) is probably to be connected with these events, Kift does not seem to have had a *madrasa* like the other small towns of Upper Egypt, and it soon lost its *ḥāḍī* (it passed under the jurisdiction of the representative of the *ḥāḍī* of Ḳūṣ). Its territory remained a *waḳf* whose revenue went to support the *sharīf*s of Mecca. In the Mamlūk period, Kift was nothing more than a small agricultural centre in a countryside where the cultivation of sugar cane provided the main means of livelihood, and it has remained thus to the present day

AL ḲIFṬĪ [see IBN AL ḲIFṬĪ].

KIHĀNA (A.) means divination in general. *Lā kihāna baʿd al nubuwwa* "there is no divination after the prophetic mission", if it were necessary to be ancient with this dictum, frequently repeated in the Tradition, such an article as this would be out of place in an *Encyclopaedia of Islām*. But once the precise sense of this term has been established and the range of concepts which it covers outlined, the reader will agree that it is, on the contrary, far from superfluous.

The word itself, both in terms of the conceptual aspect (*kahāna*) and the pragmatic aspect (*kahana*) is a legacy, through its root at least, from the earliest Semitic antiquity (*see* AZLAM) Because of this fact, it covers all the concepts and all the practices which are connected, closely or distantly, to the general concept of divination or the art of knowing that which cannot be spontaneously known. The current division of divinatory methods into inductive and intuitive is also to be found in the immense Arab-Islamic corpus of Arab-Islamic mantic literature, without always taking on the nature of a rigid classification, in that the two types of method may overlap or be used concurrently

It is fruitless to search for a theoretical definition of divination in the impressive mass of divinatory documents contained in the literatures of the Semitic languages, throughout the ancient period At the most, there are to be found descriptive definitions,

consisting of a list of the techniques which it comprised, according to places and periods. It is such a pragmatic definition which may be drawn from the Arabic documentation reckoned to preserve pre-Islamic traditions.

But in the mediaeval era, with the impact of Greek and Hellenistic philosophical thought, there was born, among the Arabs and the Islamised Iranians, a taste for theoretical definitions and methodical classifications. Already, in the works of a polygraph like al-Mas'ūdī (d. 346/956) there are recorded a number of attempts at theoretical definitions which have been summarised, by T. Fahd in *La divination arabe*, 43-5, cf. *Murūdj*, iii. 347 ff. = §§ 1233 ff. Some philosophers, such as Ibn Sīnā, al-Ghazālī, Ibn Rushd and Maimonides, have tackled this problem and attempted to elucidate it (cf. *La divination arabe*, 51-63). Then came Ibn Khaldūn who put together all these speculations (*ibid*; 45-51). He emphasises that as a branch of prophetic practice divination constitutes the lowest echelon. Like prophecy, it is a divine gift entrusted to a privileged group, men and women. In fact, according to al-*Karwīnī*, *there exist illuminated and celestial souls* which possess the faculty of knowing the names of the spirits. These are the souls of prophets and saints, they are also the souls of physiognomists, of soothsaying genealogists and of those who see the future by means of past and present events. "As for the souls of the soothsayers", he continues, "they receive spiritual knowledge and see through it the contingencies of beings which appear in dreams and in other manifestations" (i, 317 ff., *La divination arabe*, 50-51).

So, divination is seen to be theoretically legitimised by inclusion in the mainstream of prophecy (on divination and prophecy see *La divination arabe*, 63-90). But, for practical purposes, it was necessary to strip it of all that was obsolete and too closely linked to paganism. From that point was born, in Islamic literature, a detailed inventory of divinatory practices, with precise definitions of the techniques listed. In their taste for the classification of knowledge, encyclopaedists and bibliographers finished by conferring upon the concept of divination an epistemological quality. We shall begin with the most detailed classification, that of Ḥādjdjī Khalīfa (i, 34-5), who draws the data of his inventory from his predecessors, from Ibn al-Nadīm (*Fihrist*) to Tāshköprüzāde (*Miftāḥ al-saʿāda*).

Islamic divination, a legacy both of ancient Semitic divination and of Hellenistic divination, is divided into three categories:

I. *Firāsa* [q.v.], or physiognomancy, and its ramifications. Under this heading, eleven "sciences" are listed:

1 *ʿIlm al-shāmāt* see *ʿl-khāl*ān "beauty-spots and birthmarks" (see SHĀMAT and *La divination arabe*, 390-3).

2 *ʿIlm al-nāẓir*, "chiromancy" (see AL-KAFF and *La divination arabe*, 393-5).

3. *ʿIlm al-shikl*, "oneiropistoscopy" (see AL-KATIF and *La divination arabe*, 395-7).

4 *ʿIlm ʿiyāfat* (read *riyāfat*) *al-athar* "observation of footprints (on the ground)" (see KIYĀFA and *La divination arabe*, 370-3).

5 *ʿIlm ḥiyāfat al-baṭn*, "divination by morphoscopic and genealogical lines" (see FIRĀSA and KIYĀFA and also *La divination arabe*, 370-90).

6-7-8 *ʿIlm al-ihtidā' fi 'l-barārī* see *'l-ḳiyāfa*, "the sense of orientation in deserts"; *ʿIlm maʿrifat al maʿādin* "the detection of minerals"; *ʿIlm al-ruʾyāfa*, "the detection of wells". These three categories may be put together under the heading of "divinatory observation of the ground" (see AL-ARD and *La divination arabe*, 403 f.).

9. *ʿIlm anwāʾ al-ghayth* "the knowledge of (signs foretelling) rainfall". This consists in meteorological divinatsne with its various techniques: necromancy, capnomancy, anemoscopy, phyllomancy, brelomancy, etc. (see ANWĀʾ, MALḤAMA and *La divination arabe*, 407 ff.).

10. *ʿIlm al-ʿirāfa*, "knowledge of the future by means of past events". This definition suggest that it is a case *stricto sensu* of inductive divination, although initially *ʿirāfa* implied a certain intuitive, and consequently gnostic and esoteric, awareness (see KĀHIN and *La divination arabe* 113-19).

11. *ʿIlm al-ikhtiṭāṭ*, "palmomancy" (see IKHTILĀṬ and *La divination arabe*, 397-402).

II *Siḥr* [q.v.] or magic, and its ramifications.

12 *ʿIlm al-ʿazāʾim*, "divination" (astrological divination, involving incantations and invocations to the stars). Thus the influence of Hellenistic ideas led to the division of divination into two types, traditional *divination* or *ʿirāfa* and astrological *divination*, which underwent a great expansion in the Hellenistic period and which the Arabs came to know through the many translations of Greek, Syriac, Pahlavi and Hindu astrological writings (see NUDJŪM and *La divination arabe*, 478 sq.).

13. *ʿIlm al-nīranǧāt*, "white magic" (see NĪRANDJ and T. Fahd, *Le monde du sorcier en Islam*, in *Sources orientales*, vii (1966), 184 ff.).

14. *ʿIlm al khawāṣṣ* "knowledge of the properties of divine names (*al-asmāʾ al-ḥusnā*), of prayers (*duʿāʾ*), of numbers (see HARF and HURŪF) and various other special things" (see KHAWĀṢṢ AL-KUR'ĀN; *La divination arabe*, 214-45, *Le monde du sorcier*, 175-6).

15. *ʿIlm al-ruḳā*, "sympathetic actions or sorcery" (see RUḲYA and *Le monde du sorcier*, loc. *cit.*).

16. *ʿIlm al-ʿazāʾim*, "conjurations of demons or incantations" (see SIḤR and *Le monde du sorcier*, 264-5).

17. *ʿIlm al-istiḥḍār*, "the evocation of spirits in physical form" (see ISTIḤḍĀR and *Le monde du sorcier*, 170 ff.).

18 *ʿIlm daʿwat al-kawākib* "the invocation of (the spirits of) the planets" (see NUDJŪM and *Le monde du sorcier*, 269 ff.).

19. *ʿIlm al filaḥirāt* (φυλακτήρια), "the art of making phylacteries" (see RUḲYA and *Le monde du sorcier*, 172 ff.).

20. *ʿIlm al khafā'*, "the art of making oneself instantly invisible" (see NĪRANDJ and *Le monde du sorcier*, 184 ff.).

21. *ʿIlm al-ḥiyal al-shaʿbadhiyya*, "the art of trickery and *longerv*" (see *ibid.*)

22. *ʿIlm al-bahṭ ad-dakk*, "the art of disclosing frauds" (see *ibid*.)

23. *ʿIlm al shaʿbadha*, "conjury" (see *ibid.*).

24. *ʿIlm taʿalluḳ al'ḳalb*, "charms" (see RUḲYA and *Le monde du sorcier*, 172 ff.)

25 *ʿIlm al-istiʿānat bi-khawāṣṣ al-adwiya*, "the art of employing the properties of drugs" (see ADWIYA).

III Judicial astrology (see NUDJŪM) and its ramifications.

26. *ʿIlm al-ikhtiyārāt*, "hemerologies and menologies" (see IKHTIYĀRĀT and *La divination arabe*, 483-8).

27. *ʿIlm al-raml*, "geomancy" (see RAML and *La divination arabe*, 195-204)

28. *ʿIlm al-faʾl*, "omens" (see FAʾL, ṬIYAFA, *La divination arabe*, 432-519).

29. *ʿIlm al-ḳurʿa*, "rhapsodomancy" (see KURʿA; *La divination arabe*, 214-19).

30. *ʿIlm al-ṭīra*, "ornithomancy" (see FAʾAL, ʿIYĀFA; *La divination arabe*, 431 ff., 498-519).

As can be seen, to this inventory, Islamic divination avails itself of methods belonging to magic and astrology. A single term embraces all these arts: *ʿilm al-ghayb*, "the art of apprehending the invisible". Any method permitting the acquisition of supernatural knowledge or assumed to do so is considered as relevant to divination.

IV. The disciplines omitted in this inventory

31. Divination by dreams (see TAʿBĪR AL-RUʾYĀ; *La divination arabe*, 147-367; Fahd, *Les songes et leur interprétation selon d'Islam*, in *Sources orientales*, ii (1959), 127-58. The absence of oneiromancy among the divinatory techniques is justified by the fact that it occupies in Islam a higher place than that of divination in the sphere of religious inspiration. It is closer to prophecy, of which it constitutes one of the forty (or forty six) parts (cf. Wensinck, *Concordance*, i, 343), while divination is the lowest echelon.

32-4. Among cleromantic practices, only rhapsodomancy and geomancy are mentioned. (32) Belomancy (see ISTIKSĀM, *La divination arabe*, 181-8), (33) lithobolY (see RAMY AL-ḤIṢĀ; *La divination arabe*, 188-95), (34) *sooyeir* (see AL MAYSIR, *La divination arabe*, 204-14).

The absence of these practices in the above inventory is due to the fact that they were associated with pagan culture and they were for this reason prohibited in the Kurʾān.

35-42. The use of the oracle (in its various forms: *zadj*ʿ, *raḳṣa*, *khaṭṭ* [q.vv.], ventriloquism, and necromancy; see, *La divination arabe*, 148-9), which was still popular in pre-Islamic Arabia, (36) naturipiscine, (37) hepatoscopy, (38) teratomancy, (39) medical diagnoses, (40) lecanomancy, (41) ordeal, mantic disciplines much used in ancient Mesopotamia, are present only as vague survivals in Islamic divinatory literature (cf. the index of techniques and ideas in *La divination arabe*, 501-3, and J. Nougayrol, *La divination babylonienne*, in *La divination*, studies collected by A. Caquot and M. Leibovici, i, 28-81).

If the diviner ceased officially to exist in Islam, divination survived, but considerably changed, adapted progressively to the taste of the period and enriched by new Hellenistic, Iranian and Hindu practices, to which were added the local practices of the conquered territories. At the end of this period of adaptation and enrichment, Islamic divination progressively lost its primitive oracular nature to become a τέχνη, an art or a science (*ʿilm*). It is thus, for example, that to belomancy, condemned by the Kurʾān because of the its connexions with paganism, there succeeded *ʿilm al-kurʿa* or rhapsodomancy, *ʿilm al-ḳisṭ* and *ʿilm al-ḳurʿa* or onomatomancy, the *Aḥkām al Kurʿa*, a combination of rhapsodomancy and katromancy, *ʿilm al rami* or geomancy and *ʿilm al-zāʾirdja*, a sort of machine for producing omens. To oneiromancy, in the sense of dream-messages received directly from the divinity by a man or by his substitute and often expressed in explicit language, there succeeded *ʿilm al-taʿbīr* or oneirocriticism. To *firāsa* or physiognomancy, there succeeded *ʿilm al-firāsa* or physiognomony and the ramifications indicated above. The sphere of *faʾl* or omens was enriched by the translation of the Arabs from a nomadic to a sedentary cultuse, while preserving nevertheless, its original structure, especially where ornithomancy was concerned (cf. *La divination arabe*, 525-6).

Islamic divination resembles a crucible in which the divinatory practices of Semitic and Hellenistic antiquity were fused. The rich divinatory literature written to Arabic, Persian and Turkish conveys an imposing heritage the study of which will contribute to a better understanding of ancient and mediaeval *Weltanschauungen*.

Bibliography It is impossible to give here all the relative bibliographical items, but see for these T. Fahd, *La divination arabe. Études religieuses, sociologiques et folkloriques sur le milieu natif de l'Islam*, Leiden 1966, cf. esp 529-65. Amongst more general works, there see A. Guillaume, *Prophecy and divination among the Hebrews and other Semites*, London 1938, French tr. Paris 1941, E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1909, A. KĪKĀN / KĪKĀN [see KILĀT].

KILĀB b. RABĪʿA, an Arab tribe belonging to the group of tribes called ʿĀmir b. Ṣaʿṣaʿa [q.v.]. The territories and pre Islamic history of the tribe are described in that article. Kilāb was considered to have ten main divisions, of which the chief for a time was Djaʿfar b. Kilāb, from which came leaders of the whole of ʿĀmir. The most serious war of the Fidjār [q.v.] resulted from the killing of ʿUrwa al-Raḥḥāl of Kilāb by al-Barrāḍ b. Kays al-Kināni. Divisions within the tribe are reflected in hostility to the Muslims and friendship with them. Two men of Kilāb joined in attacking the Muslims at Biʾr Maʿūna (*q.v.*), but al-Ḍaḥḥāk b. Sufyān became a Muslim and both called on his tribe to accept Islam and raided a recalcitrant section (al Kurṭāʾ).

(W. M. WATT)

KILĀT, KALĀT, KELĀT, the name of a town and of an extensive region, formerly a Khānate, of Balūčistān, now a District of Pakistan.

(1) The town (often called Kalāt-i Balūč to distinguish it from the Afghān Kalāt-i Ghilzay) lies in lat. 28°53' N and long 66°28' E at an altitude of 6,800 feet, and has in recent centuries been the centre of the Khānate of Kalāt, until the rise of Quetta as a military base of British India [see KWATTA] it was the most important town of Balūčistān. The name Kalāt or Kilāt represents Arabic *ḳalʿa* and Persian *ḳulʿa/kalāt*, often pronounced *kilā/klā* in Indo Muslim usage; in Balūčī we have *klāt* "fortress, citadel", cf. Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, 480, s.v. *khelāt*, this last being the form of the name usually found in Anglo-Indian sources of the period. On locally-minted coins we find the name of the town both as *K.lāt* and as *K.lat* (W. H. Valentine, *The copper coins of India*, London 1914, ii, 223).

In earlier times, the town was known as Kalāt-i Shāwa, from a legendary Hindu king, as as Kalāt-i Niḳārī, after the local Brahūī tribe of Niḳārīs. The name is not found in any of the early Islamic histo-

rians and geographers, but it is very probable that Kalāt marks the site of mediæval Kizkānān or Kīkān, judging by the latter's position in the itineraries, it seems to be the Ki-kiangna of the early 7th century Buddhist pilgrim Hiuen-tsang (see Marquart, *Ērānšahr*, 275 f). Kīkān and Būkān were raided by the Arab commander Sinān b. Salama al-Hudhalī and then by al-Mundhir b. al-Djārūd al-ʿAbdī as early as 104ʾawliya's caliphate (Baladhurī, *Futūḥ*, 455 4). In the 4th/10th century, Kizkānān is named as the residence of the local ruler of the region of Ṭūrān (in which see Minorsky in *EI*[1] s.v.), whom Ibn Ḥawḳal[1], 324, tr. Kramers-Wiet 327-8, calls Muʿtazz b. Aḥmad, adding that he recognised the ʿAbbāsids in his *khuṭba* (a point probably made by Ibn Ḥawḳal because the adjacent province of Sind at this time acknowledged the Fāṭimids and the Ismāʿīlī imāmate). However, the capital of the region was located not long afterwards at Kusdār, modern Khuzdār, 80 miles to the south of Kizkānān/Kalāt [see KUSDĀR]. In the early Ghaznawid period, it is recorded that Masʿūd b. Maḥmūd went lion-hunting in the district of Kīkānān (Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, 126).

Since approximately the 9th/15th century, Kalāt has been in the hands of Brāhūīs of the Kamboʿrānī tribe, from whom the later Aḥmadzay Khāns of Kalāt were descended. In the 18th century, the Khāns recognised the suzerainty of Nādir Shāh Afshār and Aḥmad Shāh Durrānī [*qq.v.*] during their Indian campaigns, and their power in Balūčistān grew. The greatest of the chiefs of this period, Naṣīr Khān b. ʿAbd Allāh, tried to shake off Afghān control, and though Aḥmad Shāh defeated him in battle, the latter was unable to take Kalāt town from Naṣīr Khān, despite three attempts (1172/1758). It was Naṣīr Khān who built the citadel of Kalāt, known as the Mīrī, which became the Khān's palace. We possess descriptions of Kalāt during the first half of the 19th century by travellers such as H. Pottinger (1810), who mentions the mud-brick defensive walls pierced with gun-holes and the ample water supply from a spring, which also turned several mills (*Travels in Beloochistan and Sinde; accompanied by a geographical and historical account of those countries*, London 1816, 40-52), and C. Masson (1830s), who describes the colony in Kalāt of Bābī Afghāns, expelled thither by Aḥmad Shāh from Kandahār, and who numbers the houses there at *ca.* 800, giving a population of 3-4,000 (*Narrative of various journeys in Balochistan, Afghanistan and the Panjab*, London 1842, ii, 30-6, 96-8, 177-8).

In 1250/1834 the Afghān ruler Shāh Shudjāʿ al-Mulk took refuge in Kalāt with Mihrāb Khān b. Maḥmūd b. Nāṣir after his failure to recover Kandahār from Kōhandil Khān, governor there for his brother Dōst Muḥammad [*q.v.*]. During the First Afghān War (1839-42) Mihrāb Khān was drawn into conflict with the British force which advanced on Kandahār in 1254/1838 through the Bōlān Pass in order to reinstate Shāh Shudjāʿ. Kalāt was stormed in 1255/1839 and the Khān killed in the fighting; the districts of Kaččhī, Sibī and Mustang in the northern part of the Khānate were taken from Kalāt and ceded to Shāh Shudjāʿ, temporarily placed on the throne of Kābul, and British Agent installed in Kalāt. This last was killed by Brāhūī tribesmen soon afterwards, leading to a second British occupation in 1257/1842. The ceded territories were soon returned to the Khān, and with the annexation of Sind in 1843 and the Panjāb in 1849, British influence was brought right up to the frontiers of the Khānate. The Khāns themselves suffered several decades of disputed authority and tribal turmoil, till in 1876 the Government of India was compelled to intervene, and Capt. (later Sir Robert) Sandeman negotiated an agreement between the Khān and rival chiefs, making Kalāt a protected native state, with a British Political Agent to be henceforth stationed at Quetta. The northern *tahṣīls* of the Khānate, Quetta, Nushkī and Nasīrābād were leased to Britain in perpetuity, to form British Balūčistān, and the right to levy transit dues at the Bōlān Pass commuted for an annual subsidy (see T. H. Thornton, *Colonel Sir Robert Sandeman: his life and work on our Indian frontier*, London 1895, 39-67, 127-82, etc.). Even so, further intervention was necessary in 1893, when the tyrannical Mīr Khudādād b. Mihrāb was deposed from his Khānate by the Government of India.

The earthquake of 1935 affected Kalāt badly, as well as Quetta and Mustang, demolishing most of the old town and causing widespread economic damage through destruction of the irrigation *karīzes* [see KANĀT]. In 1940 strained relations and clashes between the Khān of Kalāt and the chief of Kharān [*q.v.*] to the north-west of Kalāt led to the recognition of Kharān as a separate native state under the control of the British Political Agent. Early in 1948 the Khān of Kalāt acceded to Pakistan and his Khānate became part of the Balūčistān States Union, with the Khān no longer an independent ruler but enjoying a privy purse from the central government.

(2) The province. This included by the 18th century the districts of Sarawān, Djahlawān, Kaččhī and Makrān, and the tributary states of Las Bēla and Kharān. In 1955 all the provinces of West Pakistan were merged into one unit, and Kalāt became a separate District under a Deputy Commissioner, whilst Kharān, Makrān and Las Bēla formed separate Districts. Kalāt District is today the biggest in area of all Pakistan, covering 30,931 sq. miles in area and with a population, made up of Brāhūīs, Balūčī, Djāts, etc., of 341,420 (1961 census).

(C. E. Bosworth)

KILĀT (KALĀT)-I NĀDIRĪ, "the most famous fort of Central Asia", located some 70 miles north of Mashhad near the Irano-Soviet border, on a spur of the Ḥarādjān Dāgh Mts. Kalāt-i Nādirī consists of a high valley (altitude 2,500-3,000 feet), some twenty miles long and running west-east, which is converted into a natural fortress by walls of virtually unscalable rock in the north and south. The height of the southern rampart is 700-800 ft., the northern rampart is even higher. These walls are breached at only five points: Darband i Arghūn on the south-west; Nofta on the north; Kushkhaul Darband on the south-east; Čūbast on the west, and Dihča on the north-west.

In 663/1264, the rebellious Mongol prince Arghūn took refuge there after his defeat at the hands of

the Ilkhān Tekūder in 783/1381-2, Timūr launched numerous assaults on Kalāt i Nādirī without success; the fortress eventually fell as a result of pestilence. In 1153/1741, Nādir Shāh, who had previously used Kalat-i Nādirī as the headquarters from which he set out to free Iran from the Afghāns, chose it as the site for the treasure-house in which he deposited the loot from his Indian campaign; the treasure-house was built by Indian craftsmen from massive blocks of Mariāgha marble. After Nādir's death, his son Rizā Kulī and fifteen members of his family were executed at Kalāt i Nādirī by the future ʿĀdil Shāh.

Today, Kalāt i Nādirī has reverted to its earlier name of Kalāt, and constitutes one of the five *bakhsh*s of the *shahrestān* of Darragaz.

(R. M. SAVORY)

KILBURUN (Kiburun), a sharp cape or headland at the mouth of Dnieper (Ōrī) river on the Black Sea coast of South Russia, this Turkish name was given to it by the Turks because it looked so slender as a single hair (*kil*). It lies at a sea miles's distance from the fortress of Özi or Ozzakof, and at the tip of the cape was a fortress built by the Ottomans. Within the Kilburun promontory as an inner estuary 40 km. long and 8-10 km. wide (P. Minas Bijikyan, *Karadeniz sathı ve coğrafyası*, fr. H. D. Andreasyan, Istanbul 1969, 100). The salt obtained from the lakes in the vicinity of Kilburun increased its importance economically.

Kilburun came into prominence at the beginning of the 11th/17th century as a result of the Cossack invasions towards the Black Sea coastlands (Kātib Çelebi, *Fedlleke*, Istanbul 1287, ii, 72, 103), hence fortresses were built in various places, including Kilburun, against Cossack raids (Peçewī, *Taʾrīkh*, Istanbul 1283, ii, 152). The one constructed at Kilburun had a staff of 193 persons (Başbakanlık arşiv genel müdürlüğü, Khāmi Kopeci tasnifi, no. 4891). It became of especial strategic importance to the Ottomans when the Russians started descending the rivers to the Black Sea, and major reconstructions were accordingly undertaken in 1709 and 1733-4 (Mustafa Erdoğan, *Lale devri Mimarı Kayserili Mehmed Ağa*, Istanbul 1962, 58-9, 81). In time of war, the Kilburun garrison worked in collaboration with the garrison of Özi (Ozzakof) opposite to it, in defence of the mouth of the Dnipr. The Russians succeeded in capturing Kilburun for a while during the 1736-8 Ottoman-Russian war, but were later obliged to return it after demolishing it. The fort was again captured in 1772 during the 1768-74 Ottoman-Russian war, and this fact was accepted by Turkey at the settlement of Küčük Kaynardja. Ottoman forces which tried to recapture it during the 1787-91 war failed decisively to do so (Djewdet, *Taʾrīkh*, Istanbul 1309, iii, 32). Kilburun fort was occupied by a French force on 17th January 1855 during the Crimean War, but finally demolished by Russia in 1860. Kilburun, on which there is a small fishing village, is now within the Ukrainian SSR.

KILID AL-BAHR [see ČANAK-KALE BOGHAZI].

KILIDJ ALAYI [see TAKLID-I SAYF].

KILIDJ ʿALĪ PASHA [see ʿULUDJ ʿALĪ].

KILIDJ ARSLAN I, also known to the Crusaders, like his father, under the name Soliymān/Soliman, son of Sulaymān b. Kutlumush [*q.v.*], second Saldjūk prince of Asia Minor. At an early age, he was in Antioch when his father was killed in battle fighting Tutush [*q.v.*], and he was handed over as a hostage to Malik Shāh [*q.v.*] who conquered Syria in 1086. On the death of the latter (1092) he managed to escape, and arrived in Nicaea, his father's former residence, where he seems without much difficulty to have had himself accepted as sovereign by the semi-autonomous Turcoman chieftains who were waging against Byzantium a policy of mistrate with the Basileus, who for his part, threatened on all his frontiers, sought to use against his other opponents those of the Turks whom he hoped gradually to assimilate or to neutralise. Kilīdj Arslan was especially anxious to maintain relations with the Turkish East, which other Turks, in particular the Dānishmendids [*q.v.*] were threatening to cut off. In summoning his father to Nicaea, Alexis Comnenus had in effect brought his Turks far in advance of what then was still the principal zone of Turcoman population.

It was in these circumstances that the Crusades intervened, enabling Alexis temporarily to abandon the task of dealing with the Turks. Kilīdj Arslan crushed the Peasant Crusade of Peter the Hermit, but was subsequently forced to give up Nicaea, along with his harem, to the Barons' Crusade, and was later beaten by the Christians again on the edge of the Anatolian plateau at Dorylaeum. These victories of the Christians enabled Alexis Comnenus to regain control of the entire Aegean coast of Asia Minor, but the Crusaders did not stay in Asia Minor, and the Turkish forces, who being still semi-nomadic in character had been repelled but not destroyed, returned behind the backs of the Crusaders. The danger had furthermore led to a temporary reconciliation between Kilīdj Arslan and Dānishmend, which led to the annihilation, in 1100-2, of the rearguard troops of the Crusaders, an operation in which Dānishmend, it is true, played the more significant role, the latter, at the head of his troops, deprived the Franco-Armenians of the strategic centre of Malatya, vital to Kilīdj Arslan's links with the East. Also, when Dānishmend died in 1104, Kilīdj Arslan, who had become reconciled with the Greeks to the point of sending them contingents to fight other enemies (1106), came and occupied the place.

From there he was able to control Upper Mesopotamia, where the lieutenants of his Eastern Saldjūk cousins were in conflict with one another. When the enemies of Sultan Muhammad b. Malik Shāh [*q.v.*]

appealed to him for help, he confronted the army of the latter on the Khābūr, and was killed (1192). This was for a long time the last intervention by the Saldjūks of Rūm in the East, and the roughly-constituted Turkish state was definitively enclosed within Asia Minor proper

Bibliography: The sources include Anna Comnena, Matthew of Edessa, Michael the Syrian and the Latin historians of the First Crusade; the *Kāmil* of Ibn al-Athīr and the chroniclers of Syria (Ibn al-Kalānisī, Ibn Abī Tayyi' in the unedited part of Ibn al-Furāt and Ibn al-'Adīm, ed. S. Dahan) and of al-Djazīra (Ibn al-Azrak, unedited)

The modern bibliography is given in Cl. Cahen, *Pre-Ottoman Turkey*, London 1968, and O. Turan, *Selçuklular zamanında Türkiye*, Ankara 1971). (Cl. CAHEN)

KILIDJ ARSLAN II, son and successor of Mas'ūd I, and one of the most important sultans of Rūm (1155-92).

Mas'ūd had, in dealing with the Greeks, succeeded in restoring the position of the Saldjūks in relation to the Dānishmendids who were divided by quarrels over the succession. Kilidj Arslan at first maintained this policy, and carried it to the extent of offering the Basileus Manuel Comnenus at Constantinople in 1162 a form of allegiance which, in concrete terms, cost him nothing. He was then able to make himself master of a portion of the Dānishmendid possessions, and he would have taken them all had he not been confronted by the powerful ruler of Muslim Syria, Nūr al-Dīn. The latter, champion of the Holy War against the Christians, pretended indignation at Kilidj Arslan's relations with the Greeks. The two princes in fact were alternately allied and at odds, Kilidj Arslan helping Nūr al-Dīn to deprive the Franks of their possessions on the Syro-Anatolian frontiers with the object of sharing them with his rival, and Nūr al-Dīn extending his power over this territory as soon as the Saldjūk sultan withdrew. The conquest of Egypt by Nūr al-Dīn's lieutenants Shirkūh and Salāh al-Dīn crowned his glory, and Kilidj Arslan's enemies persuaded Nūr al-Dīn to undertake an expedition into Asia Minor which forced Kilidj Arslan to recognise what remained of Dānishmendid territories. On the death of Nūr al-Dīn, he annexed them (Malatya in 1177) thus accomplishing, from the Byzantine territories in the West almost to the furthest limits of the East, the political unity of Asia Minor

He no longer needed to deal with the Greeks, and on his side, Manuel Comnenus, though strengthened by the general success of his foreign policy, was uneasy at the growing power of the sultan, and decided that he must put an end to it. In 1176, at the head of a powerful army, he advanced on to the Anatolian plateau, but was crushed at Myriokephalon. This was, after an interval of a century, a replica of Manzikert, which showed that henceforward there existed a Turkey which could never be further assimilated. If Kilidj Arslan showed moderation in his official policy, the pressure of Turcomans on the frontiers led him to reach out to the upper valleys of the Aegean coast and, in spite of opposition from Rhodes, to the sea itself

This expansion could not take place without risk. Trouble with the Turcomans, breaking out to the east of the Saldjūk State, grew more intense, with these Turcomans supplying troops ready to serve any ambitious chief. Whether for this reason or not, Kilidj Arslan divided the territories under his suzerainty between his nine sons, a brother and a nephew. Needless to say, the latter quarrelled among themselves and one of them, Kutb al-Dīn, with support from some Turcomans, forced his aged father to accept his protection at Konya. These events were interrupted by the Crusade of Frederick Barbarossa, the latter, an enemy of the Byzantines, had established diplomatic relations with Kilidj Arslan who, indifferent to Syro-Palestinian affairs, was inclined to promise him free passage. But Kutb al-Dīn's Turcomans attacked the Germans, who converged on Konya (1190). Shortly after, the old sultan succeeded in escaping from the semi-captivity in which his son was holding him, and took refuge with another of his sons, the son of a Greek mother, who was established on the western borders. It was there that he died, at the age of seventy-seven.

Bibliography: Sources include the Byzantine writers Cinnamus and Nicetas Choniatus, the Armenians Matthew of Edessa and Gregory the Priest, Michael the Syrian, and the Arab authors cited in the preceding Bibliography. References to modern works are given in the works of Cahen and Turan cited in *ibid.* and in R. Elisséeff, *Nūr ad-Dīn*, Damascus 1968. (Cl. CAHEN)

KILIDJ ARSLAN III, the young son of the sultan of Rūm Rukn al-Dīn, who reigned only a few months (1204-5), after which the majority of the *umarā*, worried of the general dangers inherent in the rule of a minor, deposed him in favour of Kay Khusraw I (q.v.).

KILIDJ ARSLAN IV, better known by his *laḳab* of Rukn al-Dīn, one of the sons and successors of Khusraw II (1246). It was at the beginning of the period of the Mongol protectorate that, the three sons of the late sovereign all being minors, the senior *umarā*, in order to safeguard the unity of the state, sought to *instal*, under their own executive power, a sultanate shared jointly between the three young princes; Kilidj Arslan was sent on a mission to the Mongol chief Batu to persuade him to accept this solution. This very mission alone established a special relationship between Kilidj Arslan and the Mongols, and for many years two opposing parties were in conflict, the one, taking him as its figure-head, believing that the only possible course of action was to submit to the Mongols, the other, rallying behind his brother 'Izz al-Dīn, seeking to organise resistance with the aid of the Turcomans of the West and in alliance with the Byzantines. Successive schisms resulted, leading on each occasion to a divorce, temporary at first, between the territories in the east, favouring the Mongols who were close by, awarded to Kilidj Arslan, and those of the west, left to 'Izz al-Dīn. United for the last time in 1260, the two brothers participated in a campaign against Syria under the orders of the Mongol chief Hülegü. Eventually, 'Izz al-Dīn fled to Constantinople, and Kilidj Arslan remained sole sultan. This did not mean that he exercised power, power to fact belonged to the *parwāna* Mu'īn al-Dīn Sulaymān, the favourite of the Mongols. When Kilidj Arslan came of age and showed resentment towards him, the *parwāna* had him strangled (1265)

Bibliography: Sources include the Muslim historians of Anatolia Ibn Bībī, Aksarāyī and the anonymous author from Konya of the *Saldjūk-nāma*; the Arabic historians Baybars al-Mansūrī (unedited) and Yūninī; and the Syriac one Bar Hebraeus. General references to modern works are given in the works of Cahen and Turan cited in the previous Bibliographies. (Cl. CAHEN)

KILIFI, headquarters of Kilifi District in the Coast Province of Kenya, in lat. 4° S, is a small port which was an independent sultanate until 1592, including the present Kicnl, Kitoke and Mnarani. The large Friday mosque, the wealthy *dīwān* of the adjacent tombs, and the walls and gatehouse, show that Mnarani was the chief amongst these settlements in medieval times. The cemetery is noteworthy for eleven inscriptions in 15th century *naskhī* script. Excavations by J. S. Kirkman in 1954 showed that the site was occupied from the end of the 14th century until some time in the 17th century when, as Capt. W. F. W. Owen recorded in 1833, it was destroyed by Galla tribesmen. The Sultan of Kilifi sent an ambassador to greet the Turkish commander Amīr ʿAlī Bey at Mombasa in 1586, and in 1589 joined him against the Portuguese in Mombasa. Following a long feud with Malindi, Kilifi was razed by the Portuguese with local allies in 1592, but recovered. It was to Kilifi that Sultan al-Ḥasan b. Aḥmad of Mombasa withdrew in protest against the Portuguese Captain of Mombasa's exactions in 1823.

(G. S. P. Freeman Grenville)

KILLAWRIYA, Calabria (in Yāḳūt is found Killawriya, and in Ibn Ḏiḥyar, *Kitāb*, Kalawriya, both of these close to the Byzantine Καλαβρία, Kalavria, in Italian Calabria).

It is very likely that the Arabs, coming probably from Spain, launched attacks across the sea against certain coastlands of Calabria even before Asad b. al-Furāt [*q.v.*] landed in Sicily in 212/827, thus providing the Muslims with a base for military operations against the Italian mainland.

According to Ibn al-Athīr (M. Amari, *BAS*, Leipzig 1857, text 228), followed by Ibn Khaldūn (*ibid*., 469), the first serious operation against Calabria took place in 225/839-40. With the capture of Messina in 228/842-3, it became easier for the Muslims of Sicily to undertake devastating raids and lengthy sieges, by means of which they were able to keep the Calabrian territory under continual threat from their incursions. This state of affairs lasted until the time when Constantinople decided to take the offensive and operations for the recovery of this region were entrusted to Nicephorus Phocas, who in 272/885-6 inflicted severe losses on the enemy. The Saracens, however, speedily counter attacked. Possibly encouraged by the traditional hostility in southern Italy between the Lombard princes and the Byzantine imperial governors, they managed in the course of the following three years to assemble in Sicily a fleet meant for attacking Calabria. Operations began in 275/888, and ended in the waters of Misazzo by the rout of the Byzantine army, the sack of the town of Reggio and the resumption of the raids, henceforth continuous, into the interior of Calabria.

However, it was at the beginning of the 4th/10th century that the Muslim offensive grew more violent, under the stimulus of the savage Aghlabid prince Abū Isḥāḳ Ibrāhīm, who had been compelled, as a result of his unbridled despotism, to abdicate in favour of his son ʿAbd Allāh (see AGHLABIDS); in order to expiate his misdeeds, he undertook a "holy war" in Sicily and Calabria, where he wrought, without any scruples, enormous devastations, attacking persistently Cosenza, before whose walls he died in 289/902.

The first Kalbid (*q.v.*) ruler to resume military operations in Calabria with both regular land and naval forces was al-Ḥasan b. ʿAlī, who captured Reggio in 339/950 and built there a mosque, which was however diverted from this usage after only four years, two years later, the same ruler gained a great victory over the Byzantine forces beneath Gerace.

The sequence of raids, sieges and movements of resistance on the part of the Christians continued until the point when, in 372/982, the Emperor Otto II decided to end this situation by simultaneously attacking both the Muslims and the Byzantines, whose troops, in this state of affairs, helped each other against the Frankish ruler. The latter's troops gained an initial success, but had to flee when his army was defeated before Stilo. In the period between this defeat and the occupation of Calabria by the Normans towards the middle of the 5th/11th century, the Calabrian region was once again the scene of clashes (in the course of the naval battle before Reggio in 395/1005, the Pisans inflicted a defeat on the Muslims), of unusual intensity between Christians and Muslims, and of exhausting trials for the local population, which suffered violent raidings and incursions and was never able to benefit from a stable Muslim régime which, in other places and in more favourable circumstances, was often the mediating force for the transmission of the genuine values intrinsic in its culture.

Bibliography. The texts of the greater part of the Arab geographers (above all, al-Idrīsī), chroniclers and historians, which involve Calabria, may be found in M. Amari, *Biblioteca arabo sicula* Leipzig 1857, 1st Appendix, Leipzig 1875, 2nd Appendix, Leipzig 1887, and *Storia dei Musulmani di Sicilia*², 3 C. A. Nallino, Catania 1933-9 (cf. the index *s.v.* Calabria, Reggio, Bruzzano, Gerace, Stilo, Tiriolo and Cosenza).

(U. Rizzitano)

KILLIZ, a town of northern Syria, situated to the north of Aleppo between the two rivers ʿAfrīn and Ḳuwayḳ, north of Aʿzāz and on the road from Aleppo to ʿAyntāb. It was apparently known to the Assyrians, since a letter in cuneiform script (Harper, no. 1037, Brit. Mus. K 13673, obv. 3) mentions a town Ki-li-zi. In Roman times, Killiz was called *Cohors sive Urmagigarii* (*Itin. Ant.*, ed. Pinder-Parthey, 84), in the mediaeval period it seems to have been of no importance. It is mentioned by Ps. Denys of Tell-Maḥré at the time of the revolt against the Patriarch Dionysius in 817. One should read Killiz instead of Kalaz or Shalaz in Bar Hebraeus, *Hist. eccl.*, ed. Abbeloos-Lamy, i, 339, 342, and Killiz instead of Halil in Michael the Syrian, *Chron. syr.*, ed. Chabot iii, 23.

The Arab geographers do not seem to mention Killiz. Yāḳūt is somewhat confused. His Killiz (iv, 138, cf. 168) refers to somewhere which he places near Sumaysāṭ or Samosata, but his Killiz (iv, 299) really does mean our Killiz, a town in the *nāḥiya* of ʿAzāz (Aʿzāz) between Aleppo and Antioch, and he believes that it should be written Killiz. The place in the region of Samosata is probably not Killiz but al-Kalīs or al-Kalls, which Ḳudāma lists among the frontier settlements of Diyār Bakr and which Ibn Ḥawḳal[1], 196 (1st edn., 232) places on the May-

yāfārikīn-Malaṭya route, and which is consequently not near to Samosata/Sumaysāṭ but to Shimshāṭ (on this al-Kalīs, see Mackward, *Südarmenien*, 249-50).

Killiz and Murāḏ Killiz are mentioned in verses of Abū Firās (in regard to Sayf al-Dawla's campaigns), which Yāḳūt also cites (*Diwān*, ed. S. Dahhān, 113, v. 128, 150, v. 137). Since his successor Abu 'l-Ma'ālī Sa'īd al-Dawla neglected to pay tribute owed to Byzantium according to the treaty of 359/969, the Domesticus Bardas Phokas led an expedition into Hamdānid territory, stormed Killiz and carried off its inhabitants into captivity. At the time of the Crusades, Killiz fell within the Frankish territories, no doubt after the capture of A'zāz by Roger of Antioch in 1118 or 19, for in 1124 the Turcoman *amīr* Balak, who had become master of Aleppo, attacked A'zāz and his troops laid waste the region of Killiz. Killiz presumably fell into the hands of Nūr al-Dīn at the same time as did A'zāz, *sc.* in 1150.

Although Killiz is some distance away from the important meeting-place of routes near A'zāz, it has nowadays eclipsed A'zāz in importance. The present town is in Turkey (see *Guide bleu* under *Killiz*), and *ca.* 1948 had 24,000 inhabitants; Cuinet had given 29,000 in 1831, 15 000 of which were Muslims. The town was in the 10th/16th century the residence of the Druze Jumblāṭ family (see DJANBULAT). According to Hartmann and Ahlwardt Killiz was the modern Tannūr Khān, where can still be found enormous pieces of stone, whilst the little garden Ḥarī Bāghčesi, "20 minutes' journey to the sort of Killiz, is traditionally pointed out as being the ancient site of the town or at least of part of it, since it is assumed that Ḥarī contains the name Killiz, and there are at that site traces of an ancient settlement.

KILWA, the name of various localities and islands of the east coast of Africa, amongst which should be mentioned KILWA KIVINJE, on the mainland (8° 45' S.) about 140 miles south of Dār al-Salām (Dar es Salam), and in particular, the QUILOA of the Portuguese (Kulwa in Ibn Baṭṭūṭa, ii, 391 ff., tr. Gibb, ii, 379 ff., and in the mss. B.M. Or. 2666, but Kilwa in Yāḳūt s.v.) This last is today called KILWA KISAWANI, and is situated on an island near to the Tanzanian coast, 150 miles south of Dār al-Salām (8° 58' S., 39° 34' E.). It is the site, covering about one km.², of the capital of a region which stretched from the Rufiji River as Sofala in mediaeval times and was the greatest of the Islamic trading states in East Africa.

Barros, *Da Ásia*, 1552, preserves an anonymous abbreviated *Chronica dos Reys de Quiloa*, composed perhaps before 1507; an independent 16th century *Kitāb al-Sulwa fī aḫbār Kulwa*, by an anonymous Shī'ī author, survives only in B.M. ms. Or. 2666, dated 1862. Neither is complete. A 19th century Swahili *History* is of little value. Coins of at least seven rulers are certain, and with them, Ibn Baṭṭūṭa and Muḥammad al-Fāsī sustain the historicity of the documents. After 1500, anonymous accounts occur in Portuguese and French sources. In 1960-3 H.N. Chittick excavated the chief buildings.

The chronology is controversial. Chittick's deletion from the text of Barros of some fifteen rulers must be regarded as unacceptable. He dates the earliest occupation to *ca.* 800. The finds agree well with the documentary sources as they stand. They describe a dynasty of "Shīrāzī" settlers from the Gulf established *ca.* 957. The founder, 'Alī b. al-Ḥusayn, bought the island from the preceding pagan ruler, marrying his daughter. For two centuries the expanding trading centre was often at war with neighbouring islands. In the 12th century it acquired the monopoly of Sofala's gold trade with its hinterland; its former governor, Dāwūd b. Sulaymān, was sultan of Kilwa *ca.* 1131-70, and "master of the trade" of Pemba, Zanzibar, Mafia and the mainland. Essentially, it was an entrepôt trade serving Arab Indian Ocean routes, in gold, ivory and some slaves, against imported textiles, beads, and Near and Far Eastern ceramics. Under Sulaymān b. al-Ḥasan, *ca.* 1170-89, many important buildings were erected in a new style. 'Alī b. al-Ḥusan, either wise unrecorded, issued the first coinage in the late 12th century. About 1294 Mahdalī *sayyids* succeeded the original dynasty, possibly by female descent. Ibn Baṭṭūṭa visited Kilwa in 1331: the people were black, *mālikī* Sh'āfi'īs, and devoted in *ghazā* against mainland unbelievers.

Vasco da Gama sailed past Kilwa in 1498. In 1500 Pedro Alvarez Cabral was the first Portuguese to levy tribute. Francisco d'Almeida took it by storm in 1505. Contemporary accounts attest its wealth. A Portuguese fort controlled it until 1512; its economy was ruined by the Portuguese seizure of the Sofala trade in 1505. A population of perhaps 10,000 in 1500 had already dwindled to about 4,000 by 1587, when marauding Zimba massacred 5,000 inhabitants. Kilwa never recovered. After the 'Umānī capture of Mombasa from the Portuguese in 1698, Kilwa also was made tributary to 'Umān. In the 18th century the slave trade developed greatly, but Zanzibar was the main entrepôt. Zanzibar finally absorbed Kilwa in 1843, deporting the last sulṭān. When Germany acquired the mainland in 1886, some surviving royalties threw their records in the sea, lest they fall into infidel hands.

AL-KILY, also **AL-KILĀ**, according to Abū 'l-Ḥasan al-Lihyānī also *al-ḥāla* (see al-Dīnawarī, *The book of plants*, ed. B Lewin, Wiesbaden 1974, 170, § 643), the word is derived from aramaic *ḥelyā*), potash, potassium carbonate [K_2CO_3], but also soda, sodium carbonate [Na_2CO_3] (both materials were not clearly distinguished, therefore the Arabic term is kept in what follows.) *Al-Kily* thus indicates the salt which is won from the ashes of alkaline plants, but is also confusingly used for the ashes themselves and the lye As synonyms are given *ghāḍī al-ʿuṭsa* and *ghāḍī al-aṣḥāṣ* (Ibn Maymūn, *Sharḥ asmāʾ al ʿuqqār*, ed M Meyerhof, Cairo 1940, no 343). The plants or families of plants *rimṯh* (Haloxylon articulatum Cav.) and *ḥamḍ* (Chenopodiaceae) serve as the standard plants employed. According to Abū Ḥanīfa al-Dīnawarī (*op cit* 104, § 411 = *LA*, s.v. *ḥ l y* — Ibn al-Bayṭār, *Mufrad*, IV, 32) the best potash is won from *al-ḥurmā* (Alhagi maurorum c.q. Scindixia), the so-called "potash of the dyers" (*kaly al-ṣabbāghīn*) The other sorts sufficed for the fabrication of glass. The extraction of *kily* is concisely but accurately described by al-Layṯ, the editor of the *K* of ʿAyn of al-Khalīl b Aḥmad al-Farāhīdī (d. ca. 170/786) the plants *al-ghaḍā* (Arthrocnemum c.q. Salicornia) and *al-rimṯh* are burnt while green, the ashes are slaked with water which then consolidates into *kily* (see *LA*, s.v.)

Kily is used for various purposes in the absence of soap (*ushnān*), clothes are washed with it (see *LA* Yāqūt, iii, 465). Chemists used it to manufacture pungent lyes (Muḥammad b Zakariyyāʾ al-Rāzī, *K al-Asrār*, ed. M T Dānish Pazhūh, Tehran 1964, 76, tod l ' J. Ruska and K Garbers, *Verschriften zur Herstellung von scharfen Wassern bei Gābir und Rāzī*, in *Isl.* xxv (1939), 1-34).

A prominent part is played by *al-kily* in the manufacture of glass. It is emlted together with sand and magnesia and thus produces the "substance of glass" (*jawhar al-zujāj*, Masʿūdī, *Murūj*, v, 407) Above all, it happens that the glass easily absorbs the various colorations (see Dimashkī, *Nukhbat al dahr*, ed. Mehren, 80, J Ruska, *Das Buch der Alaune und Salze. Ein Grundwerk der spätarabischen Alchemie*, Berlin 1935)

Because of its biting, burning and purifying effect *al-kily* is used in medecine to treat skin diseases like vitiligo (*bahaq*), leprosy (*barṣ*), scabies (*ḥarash*) and also wounds and sores (*ḥirāḥ, ḥurūḥ*) Morbid growths are also etched with it (Masīḥ al-Dimashkī, who lived in the time of Hārūn al-Rashīd in Ibn al-Bayṭār, iv 31; ʿAlī b. Rabbān al-Ṭabarī, *Firdaws al-ḥikma*, Berlin 1928, 322, Pseudo-Thābit b. Qurra, *K al-Dhakhīra*, ed G Sobhy, Cairo 1928, 114; Ibn Sīnā, *Kānūn*, Rome 1593, i, 248; *The medical formulary of al-Samarqandī*, ed. M. Levey and N al-Khaledy, Philadelphia 1967, 148; Kazwīnī, *ʿAjāʾib*, 233). Many people apply *al-kily* and vinegar on scorpion stings (Ibn Qutayba, *ʿUyūn*, ii, 101).

KIMĀK (in the texts usually Kīmāk), often wrongly vocalised Kaymāk), an early Turkish people living in western Siberia on the lower course of the Irtish River and on its tributaries the Ishim and Tobol possibly as far north as the confluence of the Irtish and Ob and as far west as the Ural Mts.; they are mentioned in Islamic sources from the 3rd/9th century onwards.

The most detailed accounts of the Kimāk and their territories are in the anonymous *Ḥudūd al-ʿālam* (begun 372/982-3), tr Minorsky, 99-100, 364-70, and in Gardīzī's *Zayn al-akhbār*, ed. ʿAbd al Ḥayy Ḥabībī, Tehran 1347/1968, 257-9 There is considerable confusion in these and other sources on the localisation of the Kimāk, possibly reflecting a major historical displacement of the tribe or else a confusion between their winter and summer pastures, but there must certainly have been confusion from the fact that the two major sources above believed that the Irtish flowed westwards through the Urals becoming the Kama and joining the Volga in Bulghār The *Ḥudūd* places the Kimāk to the west of the Kirghiz and to the east of the Kipcak (*q.v.*), but all the sources agree that to the north of them lay the forest lands inhabited by savage peoples who exchanged their goods by dumb barter The fur-trapping kirghiz tribe of the Ks.y.m (° Kishtim?) mentioned by the *Ḥudūd* as living near the Kimāk may have been Samoyedes or a Yenisei Palaeosiatic people (see Minorsky, *Sharaf al Dīn Ṭāhir Marwazī on China, the Turks and India*, 107 ff). The Kimāk also had connections with the Oghuz to the south of them, and are said to have visited the Oghuz pasture grounds in summer, possibly explaining why Muqaddasī, 274, says that Sawrān on the middle Sir Daryā is a frontier post against the Ghuzz and Kimāk

A legendary account of Kimāk origins given by Gardīzī mentions seven component groups, such as the Ināl, Ināk, Tatār, Bayandur, Khilcāk, etc , and in his section on the Yaghmā tribe (ed. Ḥabībī, 280), he gives to the chief of the Kimāk the titles *shād* and *tutughlushuk* The *Ḥudūd*, however, mentions that the ruler of the Kimāk is called the Khākān and has under him eleven subordinate chiefs. Two routes northwards to the Kimāk country from the northern fringes of Transoxania are mentioned one from Tarāz or Talas, taking 80 days by swift horse (Ibn Khurradādhbih, Kudāma, the *Ḥudūd*), and another more westerly route from Yangī-andī or Dih-i Naw near the Sir Daryā mouth (Gardīzī) The country of the Kimāk was excessively cold, so that the Kimāk lived in subterranean dwellings in winter and hunted on skis They were in part pastoralist nomads, but were also trappers of sable and marten furs, which were exported to the Islamic lands, also mentioned is the *khalanj* hardwood of the forest zone, brought from the Kimāk lands and used for making bowls and such-like table ware (see Dīnārī, *Bukhalāʾ*, ed. Ḥādiqī, 54, tr. Pellat, 77: *khalanj(iyya kimākiyya)*) The only town, or rather encampment, of any signifi-

cance, was the Khākān's summer residence, Namaklyya (°Yimaklyya?). The Kimāk worshipped fire and water and venerated the Irtish, according to Abū Dulaf al-Khazradjī in Yākūt, *Buldān*, iii, 448, the Turks' "magnetic rainstone" belonged to the Kimāk.

The main significance of this remote people, who can never at such have been Muslim and who impinge little on Islamic history is that the much more important people of the Kipčak (*q.v.*), the later Comans or Polovtsi, apparently sprang from them and eventually overshadowed them. By the late 5th/11th century, the Kimāk, whom Mahmūd Kāshgharī, iii, 23, tr. Atalay, iii, 29, names as the Yemak (°Yimāk), were reckoned as a group of Kipčak, but different in origin; it is clear that the remnants of the earlier Kimāk were now being absorbed into the rising tribal confederation of the Kipčak. In the ensuing period, the name "Kimāk" fades into oblivion, although we belatedly hear of the Yemāk in association with the Kipčak and Kanghlī (*q.v.*) at the time of the appearance of the Mongols, thus Nasawī, *Sīrat Sultān Djalāl al-Dīn*, tr. Houdas, 44, 72, says that the Khwārazm Shāh's mother Terken Khātūn was of the Beya'ut branch of the Yimāk.

(C. E. Bosworth)

KIMĀR, the name given in Islamic geographical and travel literature to Khmer or Cambodia. The geography and political organization of South-East Asia early became of interest to Islamic scholars because of trade links with Further India and China, and information was brought back by, *inter alios*, Arab and Persian merchants and navigators. Some of this information relates to the Khmer kingdom on the lower Mekong River, an outpost of Indian cultural and religious life, which lasted from the beginning of the 9th century to the middle of the 13th century (see R. Grousset, *Histoire de l'Extrême-Orient*, Paris 1929, 559-68, 587-8; G. Coedès, *Les états hindouisés d'Indochine et d'Indonésie*², Paris 1964, ch. vii, § 1, viii, § 2, ix, § 2, § 3, xi, § 1, Eng. tr. *The Indianized states of Southeast Asia*, Honolulu 1968).

Thus Ibn Khurradādhbih (mid-3rd/9th century), 66, 68, mentions Kimār as a place on the route to the Far East. Some decades later, Ibn Rusta, 132-3, tr. Wiet, 248-50, devotes considerable space to the customs of the kings of Kimār, their justice, their severity against fornication, adultery and wine-drinking, and he remarks on the flourishing state of the ascetic and eremitical life there; Muslim merchants were welcomed and not molested, and one Islamic funerary inscription has in fact been found in Cambodia [see KITĀBAT 8. South-East Asia]. Al-Mas'ūdī, *Murūdj*, i, 169 ff., = §§ 378 ff., has a lengthy anecdote on the relations of the king of Kimār and the ruler named as *al-Mahārādj*, the usual designation in the Islamic sources for the ruler of the kingdom of Śrīvijaya (Zābadj, Zābidj), centred on Palembang in Sumatra but also controlling the Malayan peninsula. Ibn Rusta names as his source one Abū °Abd Allāh Muhammad b. Ishāk who had resided for two years in Kimār, probably early in the 3rd/9th century under the great king Jayavarman II Parameśvara of Angkor (802-50); information from this authority came first in Ibn Khurradādhbih, who referred to Kimār only cursorily, and was eventually utilised even by al-Idrīsī, see S. Maqbul Ahmad, *India and the neighbouring territories in the* Kitāb Nuzhat al-mushtāk fī 'khtirāk al-°Āfāk *of al-Sharīf al-Idrīsī*, Leiden 1960, 29, 142.

The *Hudūd al-°Ālam* (372/982), ix. Minorsky, 86-7, mentions three great kingdoms of South-East Asia, sc. Kāmarūpa (Kāmarūpa, Assam [see ASSAM and KĀMARŪP]), Şanf (Champa, southern Annam or South Vietnam) and Kimār, and it states that two of the most precious products of Kimār were elephants' tusks and aloes wood. The aloes wood of Kimār (*°ūd kimārī*) is much mentioned in Islamic sources, as is that of Champa (*°ūd şanfī*), but there is considerable confusion in the sources about the origins of the different kinds of aloes wood stemming from eastern India and South East Asia, with a particular uncertainty over the wood of Kimār and that of Kāmarūpa. Moreover, Ibn Battūta, iv, 240-1, 242-2, when speaking of Djāwa (possibly Sumatra, since Sumatra and Java were frequently confused or even regarded as one island by the Muslims) mentions Kumāra as part of that land (*min bi'l-°ūd bi'l-dikkī*) and the Kumārī variety of aloes wood as being particularly fine. See, in regard to these problems, the discussions about the various varieties in Ya'kūbī, *Buldān*, 367-8, tr. Wiet, 238-9, and also Maqbul Ahmad, *op. cit.*, commentary 128-9, and J. D. Latham, *Arabic into mediaeval Latin: Letter C, M L D*, in *JSS*, xxi (1976), 135-7 (on the linguistic problems involved).

Ferrand, *Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l'Extrême-Orient du VIIIe au XVIIIe siècles*, Paris 1913-14, i, 229-30 (= Abū Dulaf al Khazradjī's information on Kimār), and index s.v. "Khmer".

(C. E. Bosworth)

KIMĀR is the most common Islamic term for gambling, which is strictly forbidden according to Muslim law. The prohibition goes back to the references to *maysir* (*q.v.*) in Kur'ān, II, 219/216, and V, 90 f./92 f. *Maysir* was expressly equated with *kimār* in general, supposedly already by °Abd Allāh b. °Umar (cf. al-Bukhārī, *al-Adab al-mufrad*, Cairo 1375, 325). Voices querying this assumption, and the assumption that the Kur'ān had the legal classification of "forbidden" in mind, were rarely raised, and then only for the sake of argument. For all we know, the Muslim ban on all gambling has existed since the time of the Prophet in the same form as later on, and has remained in force throughout. Gambling was conceived as a transaction in which property changed hands arbitrarily and unproductively, something falling also under the injunction of Kur'ān, IV, 29/33, against frivolous and worthless (*bātil*) business transactions. Economic theory, and economic realities, tended to favour a strict view of what constituted gambling.

According to Muslim sources, universal and reckless gambling was endemic in pre-Islamic Arabia. Although the Muslim attitude toward the *Djāhiliyya* no doubt contributed to this view, gambling was probably widely practised, and in a variety of ways, among which the drawing of arrows and the stake racing of horses and camels were the most prominent. The actual *maysir* game, as painstakingly reconstructed from stray verses of poetry by later scholars, principal among them Ibn Kutayba, *al-Maysir wa-'l-kidāh* (Cairo 1342), is presented to us as a kind of ceremonial lottery organised for charity.

Several gambling stories lead into the time of the Prophet. Thus, wagering with unbelievers by Abū Bakr "before gambling was forbidden" is mentioned in the Kur'ān commentaries in connection with Kur'ān, XXX, 1-4/1-3; it appears to be a rather old story, though hardly historical. Another, an less famous story, reported in connection with the battle of Badr, that of Abū Lahab gambling with al-ʿĀṣ b. Hishām, may also be old, but its connection with gambling can be shown to be mostly a later elaboration. The Kur'ān clearly indicates the social and religious undesirability of gambling. It is something causing quarrels, and it interferes with the performance of worship and prayer. However, the commentators were at a loss to cite any particular occasion for the prohibition. While there is much room for speculation, on convincing historical explanation can be offered, unless there is some significance in the fact that the *asbāb* literature credits a contemporary of the Prophet, al-Aḳraʿ b. Ḥābis [*q.v.*], with being the first to forbid gambling.

In spite of its being prohibited, gambling, or what was considered as such, seems to have always flourished everywhere in the Muslim world and at all levels of Muslim society. Lotteries proper appear to have been unknown in Islamic times, and wagering on castaged events is not much attested (cf. for instance, al Rāghib al Iṣfahānī, *Muḥāḍarāt al-udabāʾ*, Būlāḳ 1286-7/1869-70, i, 137, 241). Favourite outlets for the gambling instinct were, among board games, backgammon (*nard* [*q.v.*]), played with six sided dice, and, among sports, horse racing [see FURŪSIYYA]. Other board games, such as merels (*ṭurḳ*) and "fourteen" (*shiṭranj arbaʿata ʿashara*), could involve stakes, chess (*shaṭranj* [*q.v.*]) and draughts [see HIZĀNA], when played for stakes, fell into the category of gambling. Important sports suspected of being devices for gambling were archery (*rawy al-nushshāb* [*q.v.*]) and pigeon flying [see ḤAMĀM], as well as competitions such as footracing, swimming (*sibāḥa*), or, more significant as an organised activity, wrestling (*muṣāraʿa*). Fighting games of animals, looked upon with disapproval on the basis of the Prophetic warning against inciting animals against each other (*takrīsh*, *Concordance*, i, 446b, 64-66) and humanitarian principles, included cock (see NIK) and dog [see KALB] fights. Playing cards (*kanādjifa* [*q.v.* to Suppl.]) are attested since Mamlūk times (cf. L. A. Mayer, *Mamluk playing cards*, ed. R. Ettinghausen and O Kurz, Leiden 1971). All these activities, of course, could be, and were, undertaken and enjoyed for their own sake without any accompanying gambling, and the gambling habits connected with them differed considerably. According to Ibn Taymiyya, *Fatāwī* (Cairo n.d. [1384 ?]), iv, 308, *nard* was mostly played for stakes, while chess usually was not. The gambling that did take place was commonly in the form of stakes put up by the participating players themselves or, in the case of sports competitions involving animals, by the owners of the animals. However, although our information on this point is most deficient, it is clear that spectators, too, engaged in gambling on the outcome of the games and sports they watched.

While gambling by outsiders was clearly and undubitably illegal, the main problem for jurists was the determination of what constituted gambling by virtue of the manner in which the stakes were put up. The *ḥadīth* expressly permitted competitions with camels (*khuff*), horses (*ḥafir*), and arrows (*naṣl*) (*Concordance*, i, 480a, 16-18), and there are stories establishing precedents set by the Prophet. Later jurists were inclined to deny the legality of stakes in connection with any other kind of sports contests and, in particular, board-games (of which *nard* was often declared illegal, even when played without stakes, because of its dependence upon dice). However, the permissibility of the legal sports was rationalised on the ground of their usefulness for military preparedness, an argument which, in practice could be extended to other sports, even though jurists were usually hesitant to do so. The crucial question of how stakes, whose they were at all ad missible, could be legally established, was considered under three basic aspects: the establishment of stakes by a non participant such as, for instance, the government, by one of the participants, and by both (or all) participants. The first two cases were legal (with some doubts in the second case as to what is to be done with the stake if the donor himself is the winner). The third constituted illegal gambling. In order to make it legal, the presence of a "legaliser" (*muḥallil* [*q.v.*]) was required, i.e. the participation of someone who did not contribute to the stakes. There exists a *ḥadīth* to this effect (*Concordance*, ii, 402a, 15-17, etc.). However, the legality of this procedure was debated. Mālik personally did not admit the device of the *muḥallil*, with the consequence that later Mālikīs differed to their attitudes. The Hanbalī Ibn Taymiyya and his followers rejected it forcefully. Legal attitudes towards potential gambling games in general can be said to cut across school lines. Shāfiʿī-em, whose basic text on games was *Kitāb al-Umm* (Būlāḳ 1324), vi, 213, was sometimes attacked, with little justification, for its alleged somewhat easy lenient attitude. It should also be noted that by and large the legal literature paid comparatively scant attention to gambling, the reason being not so much the scarcity of gambling activities as the clearcut stand of the law as to its illegality. Occasionally we come across interesting statements, such as the one by the Ḥanafī Kādīkhān, *Fatāwī* (Calcutta 1835), iv, 587, suggesting that a Muslim could legally gamble with non-Muslims in non-Muslim territory.

The official handling of gambling offenders was determined by the peculiar nature of the circumstances under which gambling took place. Sporting events were mostly held in the open, but much other gambling went on in private. In the larger cities, there were gambling casinos (*dār al-ḳimār*, *bunduḳāna*, and other terms), where gambling was encouraged even to the extent of tempting losing gamblers with offers of loans (cf. Ibn Saʿīd, *Mughrib*, ed. and tr. K. L. Tallqvist, Leiden 1899, 30/63). Ordinary taverns, as later on the coffee houses [see ḲAHWA], also had the reputation of allowing gambling (in connection with board games) on their premises. These could be raided, if local authorities saw fit to do so. However, unless public annoyance resulted, or complaints were lodged, the legal authorities, presumably represented primarily by the office of the *muḥtasib*, had little power or incentive to intervene with voluntary activities undertaken by mutual consent in the privacy of the home. If brought before the authorities, gamblers were liable to discretional (*taʿzīr* [*q.v.*]) punishment. Jurists considered habitual gamblers as having forfeited their *ʿadāla* and their capacity to function as witnesses, thus decisively downgrading their social and legal standing. Social degradation was commonly associated with gambling, at least in literature and theory. In real life, this probably affected only those who were unable to afford the losses incident to their gambling.

Excessive gambling, though evidently not un-

common, is not frequently attested. We hear about the gambler in moderate circumstances who brought ruin upon himself and who neglected his family (cf Ibn ʿInaba, *ʿUmdat al-ṭālib*, al-Najaf 1381/1961, 210), or the poet al-Talla'farī [*q.v.*] whose compulsive gambling made him a liability in court circles and kept him from advancement, or the—fictitious—Sūfī who intentionally freed himself from all worldly possessions by gambling them away (cf. H. Ritter, *Das Meer der Seele*, Leiden 1955, 000). Most gambling probably involved the minor losses that the losers were sometimes able to absorb. It lies in the nature of gambling activities, especially where they are illegal, that reliable statistics with respect to them are not obtainable, and *we* have, of course, nothing to go on in the way of statistical information for the Muslim Middle Ages. We can only guess that gambling as such, common as it was, was nevertheless in no way a major economic factor or disruptive social force.

In addition to the legal injunction against it, the social stigma it carried, and its unsuitability for the economic environment created by Islam, gambling also presented a challenge to the metaphysical presuppositions of monotheism. Gambling was felt to be a manifestation of trust in blind fate and of an attempt at interference with, and thus disrespect for, the divine government of the world. A clever story, circulating since at least the 3rd/9th century (cf. in particular, Abū Zayd al-Balkhī, *Risālat ḥukmat waqf al-wasd wa'l-ghafrānī*), praised *wasd*, with its reliance upon chance, as representative of the orthodox view of predetermination and trust in God, and blamed chess for the freedom of choice it requires of the player as something akin to Muʿtazilī doctrine. The story appears to have been meant originally as the opposite of what it seems to suggest, namely, as an argument for the superiority of the *Muʿtazilī* view of free will, while taking a dim view of gambling as supporting the idea of blind chance in the realm of metaphysics.

Thus the factors that in Islam fought against the human propensity for gambling were numerous. They were, moreover, reinforced by the generally disdainful attitude toward "play and amusement" (*lahw —laʿib*) in all forms professed by religious scholars and intellectuals. This did not eliminate gambling in Islam but, to all appearances, succeeded in keeping its impact upon society largely under control.

Bibliography: T. Hyde, *De ludis orientalibus*, Oxford 1689-94, Mez, *Renaissance*, 382-4 (Eng tr. 403 f). References to gambling are so sporadic in the modern scholarly literature as they are in the primary sources. A first attempt to bring the available information together has been made by F. Rosenthal, *Gambling in Islam*, Leiden 1975, which contains the full documentation for the present article. (F. ROSENTHAL)

AL-KĪMIYĀʾ, alchemy. The word is derived from Syriac *Kīmiyā* which in its turn goes back to Greek χημεία χημεῖα "the art of casting or alloying metals" (see Liddell-Scott, *Greek-English lexicon*, 2019). The Arabs believed that *al-kīmiyā'* was a loanword from Persian (Ibn Durayd, al-Djawālīkī), from Hebrew (al-Akfānī) or from Greek and had the meaning of "artifice and acuteness" (*al-ḥīla wa'l-ḥidhq*, according to al-Khafādjī) or "solution and division" (*al-taḥlīl wa 'l-tafrīḳ*, according to Ibn Sallūm, 12th/18th century). As synonyms of *al-kīmiyā'* were used *al-ṣanʿa* (for ποίησις), *al-ṣanʿa al-ilāhiyya* (for ἡ Θεία τέχνη), *ʿilm al-ṣanʿa*, *al-ḥikma*, *al-ʿamal al-aʿẓam* (for τὸ μέγα ἔργον) etc. In abbreviation alchemy is also called *al-ḥāʾ*, which serves also as pseudonym (see *WKAS*, I, 459b, 29 ff.)

The Arabs have defined alchemy more than once. Its task is to make gold and silver without falling back upon the corresponding ores (*ṣanʿat al-dhahab wa 'l-fiḍḍa min ghayr maʿdanihimā*, Ibn al-Nadīm, *Fihrist*, 352), it should lend colourings to the metals which they did not have before (Djābir b. Ḥayyān, *Textes choisis*, ed. P. Kraus, Paris 1935, 141), and it should alter the specific qualities (*khawāṣṣ*) of the mineral substances so that gold and silver can be obtained through certain artifices (*ḥiyal*; Ghazālī, *Takāfut*, ed. M. Bouyges, Beirut 1927, 270), through alchemy harm and poverty are done away with (Ikhwān al-Ṣafāʾ, Beirut 1957, iv, 085, 303). The theme of alchemy is therefore the transmutation of base metals into precious ones. And thus certain *limitations* are given. Petrology and mineralogy do not belong to alchemy in the strict sense, although the alchemist must of course have an exact knowledge of minerals (as well as of animal and vegetable substances). In the same way, fabrication of glass and falsification of precious stones (see the *Papyrus Graecus Holmiensis*, ed. O. Lagercrantz, Uppsala 1913) belong no more to alchemy than metallurgical activities like extracting iron, gold and silver from their ores, so precisely and impressively described by al-Hamdānī (*K. al-Djawharatayn*, ed. C. Toll, Uppsala 1968). Nor does the technical chemistry of the craftsman, namely the manufacture of tints, colours and perfumes, come within the field of alchemy. The title *Kīmiyāʾ al-ʿiṭr* (ed. K. Garbers, Leipzig 1948) which al-Kindī gives to his book on the falsification of perfumes is as metaphorical as the *Kīmiyāʾ al-saʿāda* with which the mystics entitled their writings (see *WKAS*, i, 525b). Finally, it should be mentioned that the notion of "pharmaceutical chemistry" did not exist in the Islamic Middle Ages. The often very complicated "compound medicines" (*al-adwiya al-murakkaba*) are prepared by the physician or the apothecary according to Galen's work *De compositione medicamentorum* or to the many *Aḳrābādhīnāt* [*q.v.*] composed by the Arabs. There were of course points of contact between the various professions: the metallurgists and perfumers worked with the same instruments and appliances as the alchemists. Some of the latter also excelled in the related sciences, like Muḥammad b. Zakariyyāʾ al-Rāzī, who classified the minerals. Alchemy, however, the art of transmuting metals, has to be singled out from the other more technically orientated professions because of its theoretical foundations.

Alchemy originated among the Greeks. In order to prevent misunderstandings, it should be mentioned that the fourth book of Aristotle's *Meteorology* (the genuineness of which is disputed) is neither a writing about chemistry in the modern sense of the word nor was it a starting-point for alchemy. It discusses only the primary qualities as causes of all changes in nature (see J. During, *Aristotle's chemical treatise Meteorologica, Book IV*, Göteborg 1944, H. Happ, *Der chemische Traktat des Aristoteles, Meteorologie IV*, in *Synusia. Festgabe W. Schadewaldt*, Pfullingen 1965, 289-322). Ca. 200 B.C. Bolos of Mendes knew certain techniques of colouring, and such techniques, combined with neo-Platonic, gnostic and hermetic ideas (Stoic philosophy seems also to have had some influence) helped alchemy to assert itself in Egypt (H. Diels, *Antike Technik*, 2, Leipzig Berlin 1920, 111-34). From the period between the 2nd and 3rd centuries A.D. (see F. Sherwood Taylor, *The origins of Greek alchemy*, in *Ambix*, i (1937), 30-47, J. Lind-

say, *The origins of alchemy in Graeco-Roman Egypt*, London 1970) date a number of writings disseminated under the names of Hermes, Thoth, Agathodaimon, Cleopatra, Moses, Solomon, Mary, Jesus, Democritus (or Democrates), Zarathustra, Astanes etc. At the beginning of the 4th century these pseudographs are joined by the writings of Zosimus of Panopolis (→ Akhmīm [*q.v.*]), the genuineness of which is better vouched for. In the 5th century the neo-Platonic philosopher Asklepiodorus and emperor Heraclius wrote also on alchemy. A not inconsiderable amount of these Greek writings were translated into Arabic, but we have no exact information about times and places of these translations. It seems however that the first were made towards the end of the 2nd/8th century and that the greater part of these writings came to the Arabs in the 3rd/9th century (D. M. Dunlop, in *JRAS* (1974), 6 ff., makes it clear that the assertion according to which a work of Zosimus was translated into Arabic already in 58/659, is false). It is possible that in some cases there may have been intermediary translations in Syriac (for Syrian alchemy, see R. Duval in M. Berthelot, *La Chimie au moyen âge*, ii, Paris 1893), but it is not clear whether Ḥunayn b. Isḥāḳ [*q.v.*] and his pupils took part in the work of these translations. Most of the Greek writings have only been preserved in a very poor and fragmentary way. The oldest codex is Mertonensis 299 dating from the 11th century (see M. Berthelot *and* Ch. E. Ruelle, *Collection des anciens alchimistes grecs*, i ff., Paris 1887-8; J. Bidez, F. Cumont *et alii*, *Catalogue des manuscrits alchimiques grecs*, i ff., Brussels 1927 ff.). Since the Arabic translations are thus two hundred years older, and the Arabs at that period still knew an essentially greater amount of Greek writings than we do at present, the oriental tradition is of the greatest importance. It is certain that the study of Arabic alchemical literature will bring to light Greek works which have been lost in their original language.

Unfortunately, Arabic alchemistic literature has remained until now still a *mare indegnita*. Very many manuscripts have been preserved, but only an extremely small part of their contents has been disclosed through catalogues or published. Consequently, it is not yet possible to sketch out a history of Arabic alchemy. In particular, the beginnings of this science in the 2nd/8th and 3rd/9th centuries are still largely wrapped in darkness. It may however be stated that already in the period in which the *Corpus Gabrianum* (end of the 3rd/9th—beginning of the 4th/10th centuries) and the works of Muḥammad b. Zakariyyāʾ al-Rāzī [*q.v.*] were compiled, an important literature must have come into being, whose authors might have been Greek, Egyptian, Jewish, Christian, Persian or Indian wise men and philosophers. This pseudographic literature uses to a great extent the same names that served early Greek alchemy as designations. Some writings are in fact translations of Greek works, others were composed directly in Arabic but are imitations of Greek examples. It should however not be assumed that all sentences of Greek wise men, quoted by the Arabs, are taken from specific writings which are ascribed to these wise men. It seems rather that some of them originate only from doxographical collective works.

Nevertheless, a great number of Greek notions are found in these writings. The etyma of the terms *al-kīmiyāʾ*, *al-ṣanʿa al-ilāhiyya* etc. have already been mentioned above. The metals are called *al-aǧsād*, corresponding to τὰ σώματα, quicksilver and sulphur are *al-zwāḳ* τὰ πνεύματα. Elixir, *al-iksīr* is the loanword τὸ ξηρίον, the distilling apparatuses *al-uṯāl* and *al-anbīḳ* are derived from τὸ αἰθάλιον and ὁ ἄμβιξ, the processes *tabyīḍ*, *tasʿīd*, *tasʿīm*[1], *taḳṭīr* etc. are adaptations from λεύκωσις μέλανσις, ἐγκήρωσις, ἴωσις. In the same way a number of pseudonyms are imitations of Greek models, e.g. *ʾiṯbāt ṣāḥib* from ἀβράασσαρος ἀνατολικὸς *sahad al-ḥamar* from ἀρροσέληνον, *ḥabīṭa lā ṭāʾiṭa* from Θεῖον ἄκαυστον and *laban al ʿaḏārā* from γάλα παρθενικόν (for other pseudonyms formed with *laban*, see *WKAS*, ii, 25 ff.). To these are added whole theorems: *al-ṭabīʿa ṭāriḥa bi ʾl-ṭabīʿa* is the innumerably repeated ἡ φύσις τῇ φύσει τέρπεται and *lam taʿāl al-ṭabīʿa ghayʾan bi ʾl-ṭabīʿa* H *fīʾl-dafāʾ lahā* corresponds to ἡ φύσις φύσιν ποιεῖ μᾶλλον. All this shows without any doubt the origin of Arabic alchemy.

We thus possess a great number of Arabic writings, fragments and quotations in which our attestation is caught by the names of Pythagoras, Archelaus, Socrates, Plato, Aristotle, Porphyrius, Galen, Democritus, Zosimos and Theosebeia, Secundus "the silent philosopher" and many others. Often Hermes Trismegistus [see HERMES] is mentioned, who in the opinion of the alchemists was the first to speak about alchemy (*ʿilm al-ṣanʿa*, see *Fihrist*, 352). The writings attributed to him, *al-Risāla al-ṭabbāniyya al-kubrā*, *Risālat al-Sirr*, *Tadbīr Hirmus al-Hardamīs*, *al-Dhakhīra al-iskandariyya*, etc. have introductions in which on a legendary way is described how these texts were found as temples, caves and sepulchral vaults. The "Emerald table", a brief text full of symbols, was considered to be the key to the ultimate secrets of nature (see J. Ruska, *Tabula smaragdina. Ein Beitrag zur Geschichte der hermetischen Literatur*, Heidelberg 1926, M. Plessner, *Neue Materialien zur Geschichte der Tabula Smaragdina*, in *Isl.*, xvi (1927), 77-113). Sentences by Hermes are to be found in almost every Arabic alchemistic work (see e.g. H. E. Stapleton, G. L. Lewis, F. Sherwood Taylor, *The sayings of Hermes quoted in the Muʾ al-Waraḳī of Ibn Umail*, in *Ambix*, iii (1949), 69-90). Apollonius of Tyana [see APOLLONIUS] is considered to be the intermediary of the hermetic wisdom. Under his name a big commentary on the "Emerald table", the so-called *Kitāb Sirr al-Khalīḳa*, an allegorical book on the seven metals, the *Kitāb al-Aṣnām al-sabʿa*, and other writings were disseminated. Agathodaimon [see AGATHODAIMON] is also associated with Hermes. In the *Risālat al-Ḥaṭṭār* he communicates before his death to his pupils the secret of alchemy. Finally they are joined by Cleopatra (see M. Ullmann, *Kleopatra in einer arabischen alchemistischen Disputation*, in *WZKM* lxiii lxiv (1972), 258-75). Many the Jewess, the Persian wise men Dīmāsiānā and Ostanes, Manes, the Indian called Biyūn, Adam, Moses, Korah (Ḳārūn) and many others, whose writings and sentences became known to the Arabs at a relatively early period. This largely still uninvestigated complex of the pseudographs was enlarged by the Arabs since the 3rd/9th and 4th/10th centuries and rendered even more opaque by stamping on alchemists the Umayyad prince Khālid b. Yazīd, the son-in-law of the Prophet, ʿAlī b. Abī Ṭālib, the *Imām* Jaʿfar al-Ṣādiḳ [*qq.v.*] and the mystics al-Ḥasan al-Baṣrī, Sufyān al-Thawrī, Dhu ʾl-Nūn al-Miṣrī and Abū ʾl-Ḳāsim al-Djunayd [*qq.v.*]. The alleged writings and doctrines of all these Greek, Persian, Jewish and Arabic authorities form the groundwork for the two large alchemistic corpora which came into being at the turn of the 3rd/9th and the 4th/10th centuries, namely the *Corpus Gabrianum* and the writings of

Muḥammad b. Zakariyyāʾ al-Rāzī (the mutual relation of these two cycles has been discussed by J. Ruska and K. Garbers, *Vorschriften zur Herstellung von scharfen Wässern bei Gābir und Rāzī*, in *Isl.*, xxv (1939), 1-34). Djābir b. Ḥayyān (*q.v.*), who may have died ca. 196/812, is considered to be the author of the first work. Meanwhile, P. Kraus has proved that these writings cannot have originated before the second half of the 3rd/9th century and that a team of authors must be supposed (for this problem see also F. Rex, in *Isl.* xlix (1972), 305 ff.; idem, in *Deutsche Orientalistik am Beispiel Tübingens*, Tübingen 1974, 86 ff.). Accordingly, the writings of the so-called Ibn Waḥshiyya and the *Mushaf al-diyānāt*, whose Latin translation carries the title *Turba philosophorum*, may have originated at the turn of the century. In the *Turba* a congress of alchemists is pictured, to which Pythagoras takes the chair and Archelaus records the minutes, while nine pre-Socratic philosophers present their doctrines (J. Ruska, *Turba philosophorum. Ein Beitrag zur Geschichte der Alchemie*, Berlin 1931; M. Plessner, *The place of the Turba Philosophorum in the development of alchemy*, in *Isis*, xiv (1954), 331-8; idem, *Vorsokratische Philosophie und griechische Alchemie in arabisch-lateinischer Überlieferung. Studien über Text, Herkunft und Charakter der Turba Philosophorum*, forthcoming). In the 4th/10th century Muḥammad b. Umayl (*q.v.*) was outstanding with writings of a hermetic-allegorical character, followed in the 5th/11th century by Muḥammad b. ʿAbd al-Malik al-Kātib, pseudo-Mağrīṭī with the *K. Rutbat al-ḥakīm* and Muḥammad b. Bīghrūn. In the 6th/12th century the most important alchemists were the poet and statesman Ḥusayn ʿAlī al-Ṭughrāʾī and the preacher in Fās, ʿAlī b. Mūsā, called Ibn Arfaʿ Raʾs. Around the middle of the 7th/13th century, Abu ʾl-Ḳāsim al-Simāwī (*Book of knowledge acquired concerning the cultivation of gold by Abū ʾl-Qāsim Muḥammad Ibn Aḥmad al-ʿIrāḳī*, ed. E. J. Holmyard, Paris 1923) worked in ʿIrāḳ, and in the 8th/14th century the Egyptian Aydamir b. ʿAlī al-Dīdākī [*q.v.*] produced an unprecedented number of books in which he summarised and commented upon everything which had been written before him on alchemy and magic to the following period a number of authors still further appear who are of importance partly as compilers, partly as producers of new original writings, like al-Iznīḳī (= ʿAlī Celebi), al-Maqrīzī, Bel Mughūsh al-Maghribī and others. In the second half of the 11th/17th century Ṣāliḥ b. Naṣr Allāh b. Salīm, the court physician of sultan Meḥemmed IV (1058-99/1648-87), tried to introduce into Arabic medicine the chemical concepts of Paracelsus, which gave the alchemists the chance to set about new ways. They did not however avail themselves of these; on the contrary, they continued until recent times the ancient fruitless search for the "philosopher's stone" (G. Salman, *Archives Marocaines*, vii (1906), 451 ff.; C. Snouck Hurgronje, *Mekka*, ii, The Hague 1889, 215, Eng. tr. J. H. Monahan, Leiden-London 1931, 162 ff.; E. W. Lane, *The manners and customs of the modern Egyptians*, ch. xii; C. Barbier de Meynard, *L'Alchimiste, comédie en dialecte turc osm*, in *JA*, 8e série, vii (1886), 5-66; Osman Nevres, in O. Rescher, *Beiträge zur arabischen Poesie*, iv/2, Istanbul, n.d., 92 ff.).

In the Middle Ages Arabic works were translated into Latin. We have in Latin versions the *Tabula smaragdina*, the *Tabula chemica*, the *Practica Marie prophetissae*, the *Liber de compositione alchemiae* of Morienus (translated by Robert of Chester in 1144, partly translated by J. W. von Goethe, *Die Schriften zu den Naturwissenschaften*, Part 1, Vol. vi: *Zur Farbenlehre, Historischer Teil*, revised by D. Kuhn, Weimar 1957, 131 ff. Part 2, Vol. vi: *Ergänzungen und Erläuterungen*, Weimar 1959, 439-41), the *Liber secretarum alchemiae* of Calid, the *Liber de septuaginta* and the *Liber misericordiae* of Geber (E. Darmstaedter, *Eine lateinische Übersetzung der grösseren Kitāb al-kīmiā*, in *Sudhoffs Archiv*, xvii (1925), 161-97) and many other works (see M. Steinschneider, *Die europäischen Übersetzungen aus dem Arabischen bis Mitte des 17. Jahrhunderts*, repr. Graz 1956, *passim*). It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, *Das Buch der Alaune und Salze. Eine Grundwerk der spätlateinischen Alchemie*, Berlin 1935, 10). Thus they introduced a process which leads via Arnald of Villanova, the Latin "Geber" and Paracelsus to Robert Boyle (1627-91), Joseph Black (1728-99), Joseph Priestley (1733-1804), Antoine Laurent Lavoisier (1743-94) and finally to the miracle of modern chemistry. But they also gave important impulses to European cultural history; it may suffice to mention Jakob Böhme, the Rosicrucians, Novalis and Goethe (see K. R. Gray, *Goethe, the alchemist. A study of alchemical symbolism in Goethe's literary and scientific works*, Cambridge 1952).

This concise historical survey makes it clear that Arabic alchemy holds a key position in the development of chemical thinking as a whole. However, in glaring contrast to its importance, it has been regrettably neglected by research until now. Most of what historians of science have written on the Arabic alchemists is second-hand, based on obsolescent literature and disfigured by gross errors. A vast and fertile field lies here open to research; access to it, however, is not easy.

Alchemy is an extraordinary complex phenomenon which combines many divergent trends. Muḥammad b. Zakariyyāʾ al-Rāzī in his *K. al-Asrār* exerted himself in particular to build up a sober system. The Djābir-writings contain concepts of the Ismāʿīliyya (*q.v.*) which came into existence ca. 263/877. The authors introduce also into their thinking magical, arithmological, astrological and biological reflections. The hermetic writings and those of Ibn Umayl are marked by gnosis, others are coloured by strong mysticism. So it becomes understandable that Ibn al-ʿArabī (*Futūḥāt*, ii, 337) can indicate alchemy as a "natural, spiritual, divine science" (*ʿilm ṭabīʿī rūḥānī ilāhī*). As a whole, it was a natural philosophy which aimed not only at teaching the transmutation of the metals, but also at the whole connection of the world. For many scientists, however, the effort to refine matter was inseparable from purification of the soul. The alchemists expressed their insight in theoretical discourses, and also in allegorical *stoffen*, myths, visions and poems (Pseudo-Khālid b. Yazīd, Ibn Umayl, Ibn Arfaʿ Raʾs). In order to protect themselves against prosecution by orthodoxy or against competitors, they used pseudonyms and availed themselves of obscure, encoded expressions. All this renders the writings apparently abstruse. It was therefore bound to happen that the "Aufklärer" counted the history of alchemy among the *Geschichte der menschlichen Narrheit* (J. C. Adelung, Leipzig 1785-9), and even in the first edition of the *Encyclopaedia of Islām* E. Wiedemann still remarked: "Often it cannot be understood how reasonable beings could have written such things". Only the science of religion and depth-psychology have

smoothed the way for a more justified and significant explanation of alchemy. J. Evola, C. G. Jung and M. Eliade in particular have rightly shown how alchemy is dominated by mythical, mystical and gnostic ways of thinking. There remains, however, the task of decoding the Arabic texts through exact historical-philological studies, and thus laying foundations which will no longer permit rash conclusions and approximate assertions.

Until now it has not been possible to say much about the theoretical foundations of Arabic alchemy, and even this little only incidentally. The way theories are built up differs considerably from one author to the other, and even in the corpus of writings known under the name of Djābir b. Ḥayyān and thus claiming unity, they show quite varying concepts. Hence only a few basic notions can be given here, which cannot be generally applied.

Transmutation is possible because the various sorts (*anwāʿ*) of metals form only one single species (*djins*). They are differentiated only in accidents (*aʿrāḍ*) which can be proper (*dhātiyya*) or occasional (*ʿaraḍiyya*). The accidents, however, are not stable but changeable, as can be seen in nature. Indeed, the metals grow in the bowels of the earth over long periods. In a sort of maturation process they change from base into precious metals until finally they become gold. According to some scientists, this conversion comes about under the influence of the stars. The alchemist is able to hasten this process in his retorts and to achieve by his skill in one day that for which Nature needs a thousand years. The literature gives hundreds, even thousands of recipes for making gold. Basically three methods can be distinguished:

1. The first method is based on the quicksilver-sulphur theory. In quicksilver water and earth are present, sulphur contains fire and air and thus both substances together hold the four elements. When the particles of sulphur and quicksilver are mixed and enter into a close compound, the heat generates a process of maturation and cooking which result in the various kinds of metals. If the quicksilver is clean and the sulphur pure, if the quantities (*makādīr*) of both substances stand to ideal relation to one another and if the heat has the right degree (*iʿtidāl*), pure gold (*dhahab khāliṣ*, ἄβρυζον) comes into being. If before maturation coldness enters, then silver originates, if dryness, then red copper. The more disturbing factors enter, the more low grade the metals become: thus originate tin (*raṣāṣ abīḍ*), iron (*ḥadīd aswad*), plumbago (*usrub*) and antimony (*ithmid*) (see Ikhwān al-Ṣafāʾ, Beirut 1957, ii, 106 ff., Kawākibī, *ʿAdjāʾib*, 204 ff.). The alchemist, then, exerts himself to imitate nature. He tries to discover how much sulphur and how much quicksilver is contained in gold and how great the heat must be to bring about the maturation process. If he succeeds in establishing these conditions, he is able to synthesise gold. It should perhaps be added that "quicksilver" and "sulphur" did not necessarily mean for the alchemists the chemical elements Hg and S, but that by these terms they understood rather the basic principles of fluidity and inflammability (they speak of *zʾbaḳ rauḥānī* and *kibrīt muḥarrik*).

2. The second method is based on the doctrine of the relations of quantities (*ʿilm al-mawāzīn*) propagated by the authors of the *Corpus Gabirianum*. The alchemist tries to establish the mutual relation of the metals according to volume and weight (*ḥadjm wa-wazn*) and to construct on the ground of these data a body with corresponding volume and weight (for details of these strongly speculative doctrines, see P. Kraus, *Jābir b. Ḥayyān*, ii, Cairo 1942, 287-303, ch. "La théorie de la balance").

3. The most important and most recommended method, however, consists in projecting an elixir [see AL-IKSĪR]. An elixir can be made from mineral, but also from vegetable and animal matter. It is thrown upon a base metal which precedingly has been transposed into the passive (or black i.e. without any quality) condition; it permeates it like yeast pervades dough, and transmutes it into gold which is more valuable than mineral gold.

All these theories were based on premises which could neither be proved nor refuted. Therefore no real progress could be recorded in the dispute of the Muslim scientists about the possibilities of alchemy. It was significant that among the arguments advanced against the alchemists the reference to the *de facto* failure of all endeavours played only a small part. The alchemists admitted the difficulty of their undertaking, but emphasised that it must be possible to rediscover the secret of making gold, undoubtedly known to the wise men of old. The dispute was above all enacted in the theoretical field. Philosophical and theological arguments were put forward and conclusions based on analogy were often drawn.

ʿAmr b. Baḥr al-Djāḥiẓ's [*q.v.*] standpoint towards alchemy is not completely unequivocal. He is sceptical, but poses the question whether once in five thousand years it could be possible to make gold, when the various factors, like the quality of the elements, the right period, the correct position of the stars etc. would coincide accidentally (*K. al-Ḥayawān*, iii, 374 ff.). It seems paradoxical to him that it is possible to mend glass from sand, but that it is impossible to transmute brass and quicksilver into gold and silver, although quicksilver more resembles molten silver than sand does pharaonic glass.

Yaʿḳūb b. Isḥāḳ al-Kindī composed the *K. Iṯbāt daʿwā ʾl-mudaʿīn ṣanʿat al dhahab wa ʾl-fiḍḍa min ghayr muʿādinihā*, a refutation of those who pretended to be able to win gold and silver otherwise than from ore. According to him mankind is unable to achieve arts which are reserved to nature. This polemic writing was immediately contested by Muḥammad b. Zakariyyāʾ al-Rāzī.

Al-Fārābī (d. 339/950) was of the opinion that transmutation of metals is possible because, according to Aristotle's stonebook, the various sorts (*anwāʿ*) of the metals belong to only one single species (*djins*). But it was indeed extraordinarily hard to realise the transmutation, and a thorough study of logic, mathematics and natural sciences was a prerequisite. The alchemistic texts were rightly veiled by pseudonyms and symbols, because otherwise, anybody might be able to find out the secret of making gold, and gold would become useless as means of payment. This economic argument was repeated again and again by later authors (E. Wiedemann, *Journal für praktische Chemie*, clxxxiv (1907), 225 ff.; A. Sayılı, *Fārābī'nin simyanın ihtimal kabiliyetleri risalesi*, in Türk Tarih Kurumu, *Belleten*, xv (1951), 65-79).

The geographer al-Hamdānī (d. 334/945) worked with obvious analogies taken from metallurgy, of which he possessed a thorough knowledge. In the same way as iron and steel could reach various degrees of good quality and pureness through metallurgy, i.e. through the skill of man, in the same way man is able to make in an artificial way gold that otherwise matures in a natural way in the bowels of the earth

(*K. al-Dawharatayn*, ed. C. Toll, Uppsala 1968, ab. xxxvi).

But the very assertion that man is able to imitate nature was contested peremptorily by Abū Hayyān al-Tawḥīdī and Abū ʿAlī b. Sīnā: the alchemists were only able to make something that externally resembles the precious metals, but the senses do not perceive specific differences (*fuṣūl*) in the metals after the alchemistic operations, but only attributes and accidents (*lawāḥiq*, *ʿawāriḍ*), the substance (*djawhar*) of the base metals remains untouched (E. J. Holmyard and D. C. Mandeville, *Avicennae de congelatione et conglutinatione lapidum*, Paris 1927, 85 f; Ibn Sīnā, *K. al-Shifāʾ*, *al-Ṭabīʿiyyāt*, v, ed. A. Muntaṣir *et alii*, Cairo 1385/1965, 22 f; G. C. Anawati, *Avicenne et l'alchimie*, in *Convegno internazionale 9-15 April 1969* [*Accademia Nazionale dei Lincei, Atti 173*], Rome 1972, 285-341). Because of these utterances, Ibn Sīnā became the target for the polemics of all later alchemists, in particular of al-Ḥusayn b. ʿAlī al-Ṭughrāʾī and Aydamir b. ʿAlī al-Ḏuldakī.

With his *K. Ḥaḳāʾik al-istiṭḳāṣāt*, written in 505/1112, al-Ṭughrāʾī produced the most important writing in defence of alchemy. He meets Ibn Sīnā's objection by stating that the alchemistic processes do not absolutely create a new *differentia specifica* (*faṣl*), but that through them matter is only prepared in such a way that the *differentia specifica* which is granted to it by the Creator. Al-Ṭughrāʾī's argumentation thus takes account of the front of orthodox theologians, whose criticism found a mouth-piece in Ibn Ḥazm al-Andalusī, Ibn Taymiyya and the latter's pupil Ibn Kayyim al-Djawziyya (d. 750/1349).

The latter's *K. Miftāḥ dār al-saʿāda* contains a polemic of 200 pages against all secret sciences, especially astrology (see C. A. Nallino, *Raccolta*, v, 33 f). Like Ibn Sīnā, he is of the opinion that the alchemists only keep up appearances, but are in fact unable to make real gold and silver. The economic argument adduced by al-Fārābī to justify the disguise of the alchemistic writings is used by Ibn Kayyim al-Djawziyya to refute alchemy itself: if men were able to make gold and silver, the economic order of the world, created by God, would collapse. Gold would lose its value if it were available in abundance. The social order would also be destroyed because nobody would be willing any more to be the slave of a master (J. W. Livingston, *Ibn Qayyim al-Jawziyyah. A fourteenth century defence against astrological divination and alchemical transmutation*, in *JAOS*, xci (1971)).

Ibn Khaldūn also shows himself an adversary of alchemy, which in his opinion is in fact only a kind of *magic* (*siḥr*). With regard to Ibn Sīnā and al-Ṭughrāʾī his point of view is even somewhat more differentiated, without however alleging essentially new arguments (see G. C. Anawati, *La réfutation de Paracelse par Ibn Khaldūn*, in *Mélanges d'Islamologie, Vol. mém. A. Abel*, Leiden 1974, 6-27). For this kind of polemic literature see also Abū ʾl-Barakāt Hibat Allāh b. Malkā, *K. al-Muʿtabar*, ii, Hyderabad 1358, 231-6; Fakhr al-Dīn al-Rāzī, *K. al-Mabāḥith al-mashriḳiyya*, ii, Hyderabad 1343, 274-28; ʿAbd al-Laṭīf al-Baghdādī (A Dietrich, *NAWG*, I (1964), no. 2, p. 106); Muḥammad b. Ibrāhīm al-Dimashḳī, *K. Nukhbat al-dahr*, ed. Mehren, 58-61; Khalīl b. Aybak al-Ṣafadī, *K. al-Ghayth al-musadjdjam*, i, Cairo 1305/1887, 9-23.

The theoretical expositions and speculations of the alchemists were partly complete in themselves, and partly completed by experiments in the laboratory. The experiences gained in such experiments gave again rise to new writings and theories. It is probable that alchemy had a greater part in the development of experimental science than medicine, pharmacology, physics and astronomy (see L. Thorndike, *A history of magic and experimental science*, i-viii, London-New York 1923-58). An important experimental achievement was the oxidation of quicksilver which had been exposed continuously to a very slow fire over forty days. Pseudo-Madjrīṭī describes the process in his *K. Rutbat al-ḥakīm* and emphasises that the weight of the matter was the same before and after the experiment (E. J. Holmyard, *Makers of chemistry*, Oxford 1931, 78). The furnishing of a chemical laboratory is very impressively pictured by Ibn Shuhayd (982-1026/992-1035) (see J. Dickie, *to al-Andalus* xxix (1964), 143-320). There were many apparatuses: the *uṣṭuḳūs* (Latin *alembic*), used to distil and to sublimate, the *ḳarʿ* (*cucurbit*), a receiver over which was placed an alembic (*al-anbīḳ* [*q.v.*]), melting-pots (*būṭaḳ*, pl. *bawāṭiḳ*), kilns (*tannūr*, pl. *tanānīr*, Latin *athanor*) to generate high temperatures, phials (*binnīna*), casseroles (*ḳidr*, *ṭindjīr*), pans (*muḥarrada*) and mortars (*hāwān*). Many apparatus are named after their alleged inventors, like *aṯāl Fīthāghūras*, the "oven of Pythagoras", the *ḳarʿ Zūsīm*, the "pit of Zosimos" and the *ḥammām Māriyā*, the bain-marie (see A. Siggel, *Verzeichnis der Apparate und Geräte, die in arabischen alchemistischen Handschriften vorkommen*, in *Deutsche Ak. d. Wiss. zu Berlin*, Institut für Orientforschung, no. 1, Berlin 1950, 91-100, E. J. Holmyard, *Alchemical equipment*, in Ch. Singer *et alii*, *A history of technology*, ii, Oxford 1956, 731-52).

With such apparatus, vessels and ovens the procedures (*tadābīr*), i.e. certain chemical processes, were achieved. The methods of these procedures were essentially the same as those of Greek alchemy, and most of the Arabic *termini technici* see translations of Greek notions. The "solution" (*ḥalāl*, λύσις) of a matter is achieved by water, acids or lyes, the "putrefaction" (*taʿfīn*, σῆψις) is a process of decomposition furthered by water. Distillation and sublimation are indicated with *taṣʿīd* and *tadbīr*, calcination with *tahlīl*. A substance is consolidated and fixed by *tadjmīd* and *tathbīt*. "Blanching" (*tabyīḍ*, λεύκωσις) indicates the making of silver, "reddening" (*iḥmār*) the making of gold. Many alchemists, however, use these and many other expressions only symbolically or in a completely different meaning for fear that they might reveal their secret. Thus the understanding of alchemical texts is made extraordinarily difficult.

Since the alchemists were obliged from the earliest times to keep their esoteric knowledge secret (see *Papyrus Leidensis*, ed. C. Leemans, Leiden 1843, i, 10, ὃν ἀποκρύφῳ ἔχε ὡς μεγαλομυστήριον, μηδένα εἰδέναι), they used innumerable "pseudonyms", not only for the processes but also for the matters and elixirs. The same matter was often indicated with dozens of different names, and conversely, one and the same name was used to design different matters. Those pseudonyms also have a Greek tradition. Thus the names of the planets serve as designations of the metals: *al-shams* is gold, *al-ḳamar* is silver, *al-mirrīḵ* is iron, etc. Certain words contain the characteristics of a matter: *al-farrār* "the fugitive" is quicksilver, *al-aḥmar* "the reddish" is copper. Often names of animals are used: *al-ʿuḳāb* "the eagle" may designate sal ammoniac, *al-ʿaḳrab* "the scorpion" and *ʿunuḳ al-ḥayya* "the snake-neck" may stand for sulphur, *ḥimār al-ḥabāʾ* "the peacock of the Egyptian temple" for copper. The

meaning of such pseudonyms varied from one author to the other and from one workshop to the other, they had no general validity.

The first endeavours to solve this lexical problem were undertaken by the Arabs themselves: they composed glossaries or added to bigger theoretical works lists in which the meaning of the pseudonyms was explained. But the value of these lists is small. Only careful critical editions and competent lexicographical revisions of the sources may enable us to travel further in this thorny field, but in not a few cases it will probably be impossible to uncover now the original meaning of the alchemical recipes.

(M. ULLMANN)

KIHĀ [see KUHĀ].

KINALIZĀDE, 'ALĀ' AL-DĪN 'ALĪ ČELEBI (916-6 Ramaḍān 979/1510-22 January 1572), Ottoman scholar. His grandfather, 'Abd al-Kādir from Isparta, was one of the tutors of Meḥemmed the Conqueror, while his father was the *Kāḍī* Amr Allāh, known also as a poet. His grandfather used to dye his beard with henna, hence was by-named *Ḥinālī* ("the one with henna"). This nickname was applied to other members of the family as well. Kinalizāde 'Alī was born in Isparta in 916/1510 where he had his elementary education. His first tutor was one of his relatives, the *Kāḍī-'asker* Ḳadrī Efendi. Then, he went to different *madrasas* and completed his education under such scholars as Ma'lūl Emir, Sinān, Merḥabā, Kara Šāhi, and Čiwizāde Muḥyi al-Dīn. In 948/1541, he was assigned by the *Shaykh al-Islām* Abu 'l-Su'ūd (Ebüssu'ūd) to the *madrasa* of Ḥusām al-Dīn (the Ḥusāmiyye) in Edirne as *müderris*. He next taught in the *madrasas* of Ḥamza Bey and Well al-Dīn-oghlī Aḥmed Pasha—both in Bursa—and in the two *madrasas* of Rüstam Pasha, one in Küṭāhya and the other in Istanbul, and in *madrasas* of Khāṣṣeki and Semāniyye, also in Istanbul. In the year of 966/1559, when the construction of the *madrasas* of the Süleymāniyye Mosque was completed, he was assigned to one of them as *müderris*, thereby reaching the highest of the academic ranks. In Dhu 'l-Ḥiddja 970/July-August 1563, he was appointed as *kāḍī* of Damascus to succeed Ḳurd Čelebi. He remained in Damascus nearly four years, after which he was appointed to Cairo and then to Bursa. Two years later he was appointed *ḳaḍī* of Edirne, after which he became *kāḍī* of Istanbul. Shortly afterwards, in Muḥarram 979/June 1571 he became *Kāḍī 'asker* of Anatolia. This same year, while in Edirne with Selim II, he died (6 Ramaḍān/22 January 1572) from an attack of gout, a complaint he had contracted during his earlier residence in Edirne. His funeral, attended by many of the statesmen and scholars of his time, took place at the Eski Djāmi', and he was buried in the so-called Nāẓir cemetery on the road to Istanbul. In his youth, 'Alī Efendi was famous for his memory and knew by heart numerous *ḥadīths* and poems in Arabic, Persian and Turkish. He was versed in most of the branches of the knowledge of his time, including mathematics, astronomy and rhetoric, and while in Egypt his mastery of the Arabic language was admired by all. His son, Ḥasan Čelebi, informs us that he wrote marginal notes to the *Ḳashshāf* of al-Zamakhsharī and that he corrected other versions of these manuscripts. According to his son's *Tedhkiret al-shu'arā'*, 'Aṭā'ī's *Dhayl al-Shaḳā'ik* and *'Othmānlī mü'ellifleri*, his works may be summed up as follows: (1) the *Aḥlāḳ-i 'Alā'ī*, his most famous work and an important source for the study of Ottoman culture. He completed this work on 25 Ṣafar 973/21 September 1565 when he was the *kāḍī* of Damascus and dedicated it to 'Alī Pasha, the *Beglerbegi* of Syria, hence its title *Aḥlāḳ-i 'Alā'ī* (For an analysis of the work and its sources, and in particular for its dependence on the *Aḥlāḳ-i Naṣīrī* of Naṣīr al-Dīn Ṭūsī cf. the article by A. Adnan-Adivar in *IA*, iv, 710-11); (2) his *Dīwān*, which includes his poems in Turkish, Arabic and Persian; (3) the *Ḥāshiya-yi tadjrīd*. He taught *tadjrīd* when he was *müderris* at the Hamza Bey Madrasa at Bursa, and wrote these marginal notes at that time; (4) *Ḥāshiya-yi Durar u ghurar al-aḥkām*; (5) the *Kitāb al-Karāhat min al-Ḥudūd*; (6) *Risālatan fī ḳaḍā al-waṭar*, written as a reply to Shāh Meḥmed Čelebi who had criticised one of his *fatwas* when 'Alī Efendi was *ḳāḍī* of Edirne; (7) the *Es'ilat*, (8) the *Risāle al-sayfiyya wa 'l-ḳalemiyya*; (9) the *Ḥāshiya 'alā Ḥasan Čelebi li Sharḥ al-Mawāḳif*; (10) his *Münsha'āt*;

(11) the *Hâşiye-yi Kashshâf*; (12) the *Hâşiye-yi Beydâwî*, (13) the *Tahshît-i Hanafiyya*, (14) the *Sharh-i Kaşîde-yi Burde*.

Bibliography: Kinalizâde Hasan Çelebi, *Teşhîrat al-shu'arâ'*, New Yazıcı 'Atâyî, *Dhayl al-Shaķâ'ik* (originally called *Hadâ'ik al-ķaķâ'ik fî tekmîlat al-Shaķâ'ik*), 264-8; *Sicill-i 'Othmânî*, iii, 502; 'Othmanlı müellifleri, i, 406; *İA*, s.v. (Mehmed Çavuşoğlu)

KİNALİZÂDE, Hasan Çelebi (953 12 Shawwâl 1012/1546 24 March 1604), Ottoman scholar and biographer. He was born in Bursa where his father 'Alî Çelebi (see the preceding article) was *müderris* at the Hamza Bey Madrasa. He first followed the lectures of Nâşır-zâde Ramaḍân Efendi, who was *müderris* between 967/1560 and 973/1562 at the Yeñi 'Alî Pasha Madrasa founded by Semiz 'Alî Pasha in Istanbul. Afterwards he became a student of Abu 'l-Su'ûd (Edhsuw'ûd) Efendi. He began his career in 975/1567 as a *müderris* at Bursa. One year later, upon the assignment of his father as *ķâḍî* of Edirne, he was transferred to the Çukhâdâr Mâḥmûdî Madrasa as a *müderris*. Later he became *müderris* at the Sulṭânıyye Madrasa in Bursa, after which he taught at several *madrasas* in Istanbul, ultimately attaining an appointment to the Süleymâniyye. In Djumâdâ al-Âkhir 998/April 1590 he was appointed *ķâḍî* of Damascus, following which he received the *ķaḍa'*s of Cairo again, Bursa, Gallipoli, Eyyûb and Eski Zaghra respectively. While in the last post he became ill and returned to Istanbul. He then requested and received the *ķaḍâ'* of the small town of Reshîd in Egypt, where he died shortly after his arrival. Although credited with several minor works, his fame rests on his biographical dictionary of the Ottoman poets, *Teşhîrat al-shu'arâ'*, the autograph of which is in the Library of Istanbul University (TY 1737). This is the fifth work in this genre after those by Sehî, Latîfî, 'Ahdî and 'Âşhik Çelebi. Though completed at 994/1586, his own copy shows later revision and corrections. It is dedicated to Murâd III and includes three sections: the first devoted to the *sulṭâns*, the second to the *shehzâdes* and the third to poets proper, most of whom are also mentioned in previous *teşhîrs*. Hasan Çelebi made use of the *teşhîrs* of *Latîfî* (*q.v.*) and, in particular, that of 'Âşhik Çelebi. As may be seen from the alterations in his autograph, his method was to adopt the information given by these two predecessors, recasting it in his own individual, elegant style. However, he sometimes criticises their views on the merits of certain poets and advances his own opinions. The information he has to give about the poets and scholars with whom he was personally acquainted gives his work a particular value.

(Mehmed Çavuşoğlu)

KINĀNA 2. Khuzayma, an Arab tribe, genealogically related to Asad (b. Khuzayma) (*q.v.*). The territories of Kināna were around Mecca from the Tihâma on the south west, where they were next to Hudhayl, to the north-east where they bordered on Asad. There were six main subdivisions of the tribe, though more are sometimes mentioned: al-Naḍr (or Kays), the ancestor of Kuraysh (*q.v.*), which is reckoned a separate tribe; Mâlik; Milkân (or Malkân); 'Âmir; 'Amr; 'Abd Manât. The latter was further subdivided. Bakr b. 'Abd Manât was a strong group, and included as parts Mudlidj, al-Du'il and Layth, as well as the more independent Damra. Ghifâr (*q.v.*) is sometimes reckoned to Damra and sometimes said to be Ghifâr b. 'Abd Manât. Al Ḥârith b. 'Abd Manât was the main part of the Aḥâbîsh (see Ḥabash, end), who were probably a collection of small groups without common ancestry (named as 'Adal, al-Kâra and al Dich, all of B. al Ḥân b. Khuzayma, together with B. al Muṣṭalik of Khuzâ'a and sometimes B. Lubyân of Hudhayl).

History. At an early date Fihr, the common ancestor of all Kuraysh, was leader of Kināna when they defeated a Himyarite force. His descendant Kusayy (*q.v.*) had the help of men of Kināna in the fighting which gave him control of Mecca, and his position was consolidated by the arbitration in his favour of Ya'mar b. 'Awf of Layth, though most of Bakr b. 'Abd Manât opposed Kusayy. In the wars of the Fidjâr (*q.v.*) the "day of Nakhla" resulted from the killing of a Kilâbî by al-Barrâḍ b. Kays, a man of Damra rejected by his tribe but protected by al-Du'il, and a *ḥalîf* of Ḥarb b. Umayya (of Kuraysh). In general, Kināna, including Bakr, supported Kuraysh against Hawâzin, but some parts of Bakr continued to feel hostility towards Kuraysh, especially after the chief of Bakr was killed in revenge for a *youth* of Kuraysh. Because of this matter Kuraysh hesitated before setting out for Badr in 624, until a man of Mudlidj guaranteed that Bakr would not attack them from the rear. After this, however, Bakr supported Kuraysh against Muḥammad, and it was an attack by Bakr on Muḥammad's allies of Khuzâ'a which led to his conquest of Mecca in 630. In his force on this occasion Muḥammad had men from Ghifâr, Damra and Layth. Little is heard of the movements of Kināna after this. A prominent member of the tribe, Abu 'l-Aswad al-Du'alî (*q.v.*), is known as a supporter of 'Alî, and is incorrectly alleged to be the founder of Arabic grammar. In 230/844-5 al-Ṭabarî mentions some Kināna as still near Mecca but apparently weak. They are also recorded in the Ḥawrân, and, in the 6th/12th century, in Upper Egypt and the western delta.

Wüstenfeld, 61-4.

(W. M. Watt)

KINĀYA (A.), a technical term of rhetoric corresponding approximately to "metonymy" and meaning the replacement, under certain conditions, of a word by another word which has a logical connection with it (from cause to effect, from containing to contained, from physical to moral, by apposition etc.) Etymologically, this term implies a sense of dissimulation found also in the word *bunya* (*q.v.*), which is considered by such a grammarian as al-Mubarrad (*Kâmil*, 677) to be derived from *kināya*. *Kināya* constitutes a particular type of metaphor (*isti'âra* (*q.v.*)) and it is distinct from trope (*madjâz* (*q.v.*)) in that the latter is only to be understood if taken in its figurative sense (e.g. *ra'aynâ 'l-ghayth* "we have caused the rain to feed", where *ghayth* can only mean the grass appearing after a fall of rain). For some theorists, *kināya* covers allusion (of which the various forms are called *ta'rîḍ*, *talmîḥ*, *remz*, *ishâra*) and others, but this is not so because, if it may be

taken both in its proper and its figurative sense, it demands, if it is to be genuinely understood, an effort of imagination on the part of the listener, who may otherwise turn a deaf ear; after al Thaʿālibī, Ibn al Athīr saw fit to put together *kināya* and *taʿrīḍ* in *nawʿ* six of *al Mathal al sāʾir*, so as to condemn the errors made by his predecessors in this regard and to make plain the differences which exist between the two concepts. On the other hand, euphemism, antiphrase and other methods of dissimulation of a more popular nature are to be included under the heading of *kināya*.

In general, if we are to follow Ibn al Athīr, *kināya* describes a word or a group of words which may be interpreted either on their literal or figurative sense and are used to replace other words which are to be rejected, sometimes simply for considerations of style, sometimes out of respect for decency, avoiding the use of words likely to shock or judged to be of bad omen; a logical relation must however exist between the literal and the figurative, the *kināya* and the *mukinī ʿanhu*.

Thus is not the place to examine the other definitions proposed by the theorists and to take into account their disagreements regarding classification and nomenclature. We will simply observe that al Sakkākī distinguishes three types: (1) *tamthīl* or assimilation of one thing to another (e.g. *naḳī al-thawb* "clean of clothing" meaning "exempt from moral vice"). (2) *radf* "implication", a term which Ḳudāma (*Nakd*, 88) invariably uses to the exclusion of *kināya* (e.g. *ṭawīl al-nadjādī* "with long crossbelt", meaning "tall in stature', because the one cannot go without the other), in certain cases it is by a series of implications, more precisely of *ridf*s "pillion-riders" that the intended sense is reached (*kathīr al-ramād* "having a great quantity of ash" to express generosity, hospitality: in fact the abundance of ash implies successively abundance of fire, then of wood and of cooking for a large number of guests). (3) *mudjāwara* "proximity" or "association" (e.g. the container for the contained *ruḳāḳa* "bottle" = "wine").

Studies and chapters devoted to *kināya* contain first a number of quotations from the Ḳurʾān and from *ḥadīth*s which may be interpreted as metonomies; thus LXXIV, 4 *wa-thiyābaka fa-ṭahhir*" and your clothing, purify" where *thiyāb* may be understood as meaning the soul, behaviour etc. Another characteristic example is provided by XXXVIII, 22/23: *la-hū tisʿun wa-tisʿūna naʿdjatun wa-lī naʿdjatun wāḥida*, which is translated as "he has ninety-nine sheep and I have only one sheep", but where some, influenced no doubt by popular usage according to which the wife is called *naʿdja* (al-Dībādjī, *Bukhalā*ʾ, 23, tr. Pellat, 42, *Hayawān*, i, 222), see a *kināya*. There seems little purpose in providing extensive examples of the ways in which the followers of allegorical interpretation (*taʾwīl*) can take advantage of this concept of *kināya* in order to justify all kinds of daring interpretations.

It must be said that the *fuḳahāʾ* themselves are sometimes obliged to take it into account where they have to use verses directly concerning the *Sharīʿa*. This is the case for example with *IV*, 46/43, *V*, 6/6 where two *kināya*s appear: *aw djāʾa aḥadun min al-ghāʾiṭi aw lāmastumu 'l-nisāʾ* "if one (of you) has come from the place hidden from view or if you have touched women", then washing is obligatory; *ghāʾiṭ* comes to mean latrines, then excrement, and *lāmasa* may be taken in a literal sense of "touching" or in the figurative sense of "having sexual relations with a woman", as this verb is of a type which provokes discussions. Another notable example is the text which demands, for the application of the legal penalty to the forniciator, the presence of witnesses testifying that they have seen *al-mil fī 'l mukḥula* "the needle in the container for kohl"; but here the context leaves no doubt as to the true sense of the expression.

In these last examples it is a case of euphemisms whose purpose is to "palliate the ugly" (*takṭīn al ḳabīḥ*), as al Thaʿālibī says (*Kināyāt*, 55), and it is the examples of this genre that the authors most often quote, borrowing them from the Ḳurʾān, from *ḥadīth*s, from poetry, generally they concern woman, the sexual organs, defecation, various forms of uncleanness and everything which is of bad omen. Some *kināya*s testify to great finesse, notably that quoted by al-Masʿūdī (*Murūdj*, vi, 350-4 = § 2550), where in a letter addressed to al-Rashīd, the word *khayzurān* 'bamboo', but also the name of the caliph's mother, is replaced by *ḥadīda*. Others how ever are criticised, notably the use of Abū Aws to describe a stone (*ḥadjar*), because the father of Aws was called *Ḥadjar* (al ʿAskarī, *Ṣināʿatayn*, 370). There was thus ample scope for the making of puns, and the humorists did not hesitate to take advantage of this.

In the introduction to the *Kitāb Mufākharat al-djawārī wa 'l ghilmān*, al Djāḥiẓ makes fun of the hypocrites who cover their faces upon hearing a crude word, recalling that the most pious of the Muslims and the Prophet himself did not hesitate to use such words, and he adds that these words were created in order to be used and that it would be necessary to withdraw them from the Arabic language if one were not allowed to speak them. In the *Kitāb al-Ḥayawān* (i, 33), he notes the unwillingness of his contemporaries to use the specific term for excrement and their habit of utilising a number of euphemisms to describe latrines: *makhraḏ*, *madhhab*, *ḥalāʾ*, *bayt al-khalāʾ*, *mustawdaʿ*, and excrement *radjīʿ*, *ṣibl*, *ghāʾiṭ*, others could be added to this list. An anecdote probably invented for specific purposes figures in several sources (al-Masʿūdī, *Murūdj*, viii, 330-3 = §§ 3430 s; al-Thaʿālibī, *Kināyāt*, 32; al-Sharīshī, *Sharḥ*, ed. Cairo 2314, ii, 270-1, of Ibshīhī, *Mustaṭraf*, ii, 213-6, etc.) a man is the victim of a joke in bad taste, in that he is asking for the latrines and appealing to a group of singing girls who pretend not to understand him. He tries one by one about eight different terms supposed to belong to various regions of the Arabic speaking world (but the variants are too numerous to permit the drawing up of a linguistic map on the basis of this anecdote), to the words quoted by al-Djāḥiẓ we may add here at least *kanīf*, *mustarāḥ* and *murḥāḍ*.

In this regard, W. Marçais (*Euphémisme*, 395-6) comments that in classical Arabic "the plurality of nomenclature sometimes contrasts with the simplicity of the items described. If the latter are by nature liable to shock, one's tendency is to attribute this discrepancy between names and ends to the practice of euphemism." It is quite possible in fact that, independent of dialectical variants, the abundance of synonyms is sometimes due to the listing, by the lexicographers, of euphemistic terms whose origin is not indicated. It is thus for example that Ibn Mamdūḥ lists, according to Ibn Khālawayh, eight verbs meaning "to menstruate" (s.v. root *ḥ y ḍ*): *ḥāḍat* can in fact be replaced by: *nafisat*, *darasat*, *ṭamithat*, *ʿarikat*, *ʿakarat*, *ʿāḍat* and *ṭamat*.

It is not impossible that certain of the euphemisms which figure in the dictionaries belong to the language

of slang, but it is not always easy to determine the degree of decency of such and such a term of which the satirists make considerable use. In this connection, we quote only one epigram of *Di'bil* (ʿAbd al-Karīm al-Ashtar, *Shiʿr Diʿbil*, Damascus 1384/1964, 204) where the sixth verse contains the word *ṭiṭṭikha*, "cucumber" the sense of which is all the more readily understood because of the appearance in verse four of *tisʿīn* "ninety" which means the anus. This last *kināya* is borrowed from dactylonomy (*ḥisāb al-ʿuḳūd* [*q.v.*]), which supplies a large number of less obscene examples (e.g. "93" or "99" = miser"), see now Ch. Pellat, *Textes arabes relatifs à la dactylonomie*, Paris 1977, 22-2 and passim.

As a result of its undeniable expressiveness, to which the numerous examples cited by rhetoricians bear witness, the *kināya* preserves all its force in colloquial Arabic, for not only do slang expressions abound here, but also convention demands a strict caution in circles where superstitious sentiments to be strong. To antiphrase (*ḍidd*) "clear seeing" for "blind", already found in the *nasab* of Abū ʿĀʾit al-Baṣīr [see AL-BAṢĪR], who lost his sight; with this may be compared Ḳurʾān, XI, 89/87, *innaka la-anta ʾl-ḥalīmu ʾl-rashīd* "truly you are long suffering and just", which must be interpreted in the contrary sense), to designation by a verb without subject *ḥāṣat shayḥa Laylā* "the situation was lamentable"), by an adverb or a pronoun (*ʿand hā hādā* "the is having her menstrual period", cf. in a verse of Abū Nukhayla, *Aghānī*, xx, 382, *barrahtu-hā*, where the pronoun refers to an obscene word not expressed (likewise *aḍrabu-hu*, in Yākūt, *Irshād*, xvi, 209, l. 3 from bottom), and to euphemism pure and simple (in Morocco, *fākhir* "glorious" to describe coal (*faḥm*) because of its black colour), there are to be added voluntary alteration (*tasʿīd* [*taʿsīd*] "you shall be happy" for the number "nine" because *taʿsa* also means "you shall be a beggar"), borrowing from other languages (the Turko-Persian *shāhsen* for "Istrhsen"), the refusal to specify ("those who are not to be named" = the *ḏjinn*) and other procedures. On this subject, one can only refer to W. Marçais, *Nouvelles observations sur l'euphémisme dans les parlers arabes maghrébins*, in *Ann. de l'Inst. de Philol. et d'Hist. Or. et Slaves* of Brussels (*Mélanges Isidore Lévy*), xiii (1953), 333-38. For Berber, see E. Destaing *Interférences de vocabulaire en berbère*, in *Mél. René Basset*, Paris 1923, ii, 177-277.

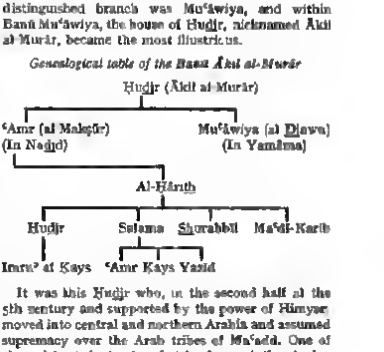
KINDA, a South Arabian tribal group, whose descent, real or imaginary, from Kahtān correctly identifies them as Arabs and distinguishes them, as it does the Aad, from Ḥimyar and other ante-Arab inhabitants of South Arabia. The tribe spread all over Arabia in the 5th and 6th centuries A.D., from the south to the centre to the north, and played a decisive role in the military, political, and cultural history of the peninsula before the rise of Islam.

1. The pre-Islamic period.

From Kinda (a *laḳab*, nickname for Thawr) are descended Muʿāwiya and Ashras, and from the latter are descended al-Sakūn and al-Sakāsik. The more distinguished branch was Muʿāwiya, and within Banū Muʿāwiya, the house of Ḥudjr, nicknamed Ākil al-Murār, became the most illustrious.

Genealogical table of the Banū Ākil al-Murār



It was this Ḥudjr who, in the second half of the 5th century and supported by the power of Ḥimyar, moved into central and northern Arabia and assumed supremacy over the Arab tribes of Maʿadd. One of the celebrated *Ayyām*, battle days of the Arabs, Yawm al Baradān, involves him with Ziyād b. al Ḥabūla, the Salīḥī client-king of Byzantium. It was his descendants, the Banū Ākil al-Murār, that dominated the political and military scene in Arabia for almost a century. He was succeeded by his son ʿAmr, nicknamed al Maksūr, while his younger son Muʿāwiya (nicknamed al Djawn) ruled over al Yamāma. Neither was distinguished, and it was his grandson, al-Ḥārith b. ʿAmr, who became the best-known member of the house, an international figure known not only to the Arabs of the peninsula but also to Persia and Byzantium and to their Arab clients, the Lakhmids and the Ghassānids. Around 500 A.D. his two sons, Ḥudjr and Maʿdī-Karib, mounted an offensive against the Byzantine border and in 502 A.D. the Empire had to conclude a peace treaty with al-Ḥārith. For a short time he ruled over Ḥīra, adopting Mazdakism during the reign of the Persian king Kawād. Then leaving al-Ḥīra, he went over to the Byzantines, who assigned to him a phylarchate in Palestine, but he quarrelled with Diomede, the *dux* of that province, and fled to the desert where he was killed in 528 A.D. either by the Lakhmid Mundhir or by a member of the tribe of Kalb.

Al-Ḥārith had divided the Arab tribes of Maʿadd among his four sons, Ḥudjr, Shurahbīl, Salama, and Maʿdī Karib. After his death, rivalries broke out among them and brought about a bloody engagement, the first day of al-Kulāb, in which Shurahbīl was killed. Then the tribe of Asad rose against Ḥudjr and killed him. It was at this juncture, after the violent death of al-Ḥārith when the power of Kinda was in disarray, that Byzantium sent its two diplomats, Jubān and Nonnosus, in. 530 A.D., to Ḥimyar, Ethiopia, and Kinda for an alliance against the Persians. The services of Kinda were indispensable, and Byzantine diplomacy was finally able to compose differences between the Ḥimyarīs and the Kindīs by withdrawing Ḳays (probably the son of Salama) from central Arabia and arranging for the division of his dominion between his two brothers, Yazīd and ʿAmr. Ḳays visited Constantinople and was given a command in Palestine.

In the second half of the 6th century, the power of Kinda in central and north Arabia was clearly disintegrating. In addition to the fratricidal wars among the sons of al Ḥārith in Nadjd, the Banū

'l Dīawn branch in al-Yamāma allowed themselves to be involved in the inter tribal feuds of Tamīm and 'Āmir; these resulted in the two battles of Shi'b Dibāla and Dhū Nadjab, which proved disastrous to the Banū 'l-Dīawn. So precarious had the position of Kinda become that the tribe, according to the sources, decided to go back to its original home in Hadramawt.

A century or so of rule over such a vast area in the Arabian peninsula calls for an assessment of the role of Kinda in Arab history. (1) The dominion of Kinda represents the first attempt, however forcible, to impose unity on the tribes of central and northern Arabia, but this unity could not have been achieved without the support of Himyar. (2) Kinda brought from the Himyarī South a tradition of sedentary life; it ruled the Arabs from such urban spots as Ghamr Dhī Kinda, Baṭn Ākil, and Hadjar. (3) The house of Ākil al-Murār adopted Christianity, and must have been an important factor in disseminating it to central and northern Arabia. The most important Arabic Christian inscription of pre-Islamic times, commemorating the erection of a church in al Hīra, is that of Hind, daughter of al-Ḥārith b 'Amr; and the Banū 'l-Dīawn must have done their share in spreading Christianity in al-Yamāma. (4) Kinda contributed towards the spread of literacy among the Arabs and one Bishr b 'Abd al Malik (from the Sakūn) is said to have learnt the art of Arabic writing in al-Ḥīra and to have taught it in Mecca, where he settled and married a sister of Abū Sufyān. (5) Kinda's greatest contribution, however, to the cultural life of the Arabs was Imru' al-Kays [*q.v.*], the foremost poet of pre Islamic Arabia. Through him and through the unification of the Arab tribes for a century, Kinda accelerated the development of a common and standard Arabic language, transcending dialectal differences, a circumstance that attained its fullest significance with the rise of Islam.

While the Banū Ākil al-Murār were making history in the Fertile Crescent as well as in central and north Arabia, other Kindī groups were not idle in the south, where they rebelled against, as well as fought for, the Ḥimyarīs, with whom their relations as auxiliaries and clients remained close. They fought for Ḥimyar against the Lakhmid Mundhir, against Nadjrān and the Ethiopians, and also for Abraha [*q.v.*] A measure of the military power of Kinda, in both the north and the south, is provided by the fact that of the twenty-one Dhurārīn [pl. of Dharrār, "leader of a thousand", chiliarch] of Yaman, eleven were Kindīs. Their military role in the south is evidenced by references to them in the Sabaean inscriptions (see below, Appendix).

The Arabic sources corroborate the Sabaean inscriptions on the importance of Kinda in the south and give prominence to Kays b. Ma'dī Karib, also a member of Mu'āwiya but from the family of Banū 'l Ḥārith. He was the lord of Kinda in Ḥadramawt, and is known to have adopted Judaism. Al-A'shā eulogised him and the famous al-Ash'ath [*q.v.*] was his son. Kinda is counted among the Arab tribes who adopted Judaism in pre-Islamic times, and it must have been this Kinda in the south that became Judaised. Their Judaism could possibly support the view that the Nasa'a (those in charge of intercalation in the pre-Islamic calendar) had been Kindīs before the tribe of Kināna took over the functions after one of them had married a Kindī princess.

2. The Islamic period.

Although it was in pre Islamic times that Kinda, sc. Kindat al Mulūk, "Royal Kinda", had its heyday, the tribe retained some of its power and influence in the time of the Prophet and in Islamic times. In addition to the Banū Mu'āwiya, the Aḥrāsis, especially the Sakūnīs, now come to the fore, and within the Sakūn the Tudjībīs become the most important group. The Kindīs crossed the paths of Muḥammad, the caliphs, and their governors, who enlisted their talents in the service of Islam, as is clear from the many personages listed in the pages of such works as Ibn Ḥazm's *Djamhara*. They appear at critical junctures in the history of Islam, displaying the same unruliness and spirit of independence that had characterised their tribal *ethos* in pre-Islamic times.

Al-Ash'ath b. Kays [*q.v.*] led the delegation of Kinda to Medina and accepted Islam, and so did four other Kindī chiefs, Mikhwas, Mishraḥ, Diarwad and Abḍa'a, leading another branch of Kinda (in some sources the four chiefs are associated with the Ḥadramawt delegation). Tudjīb also sent a delegation and accepted Islam. In 9/630 the Sakūnī Ukaydir b 'Abd al Malik, master of the strategic point Dūmat al-Djandal in northern Arabia, submitted to Khālid b Walīd. Perhaps the best measure of the continuing importance of Kinda in the newly emerging world of Islamic Arabia is the fact that Muḥammad contracted marriages with two, possibly three, Kindī princesses, but these do not seem to have been consummated.

After the death of Muḥammad, Kinda led a furious insurrection in Ḥadramawt, in which al Ash'ath and the four chiefs mentioned above were involved, and it was with great difficulty that the insurrection was finally put down, the four chiefs were killed, and Abū Bakr spared the life of al Ash'ath, who espoused the cause of Islam enthusiastically, fighting at both al-Yarmūk and al-Kādisiyya and later with 'Alī at Ṣiffīn. Other Kindīs distinguished themselves in the conquests: Shuraḥbīl b Ḥasana was one of the three or four main commanders appointed by Abū Bakr for the conquest of al-Shām or Syria and his brother was al Urdunn, which he conquered and later governed. Al-Simṭ b. al Aswad, a member of Mu'āwiya, and al Ash'ath b. Mi'nāṣ, a Sakūnī, took part in the conquest of Ḥīra, the first is credited with the division of the city into quarters in which the Muslims settled.

It was during the caliphate of 'Uthmān that Kinda took part in what proved to be the turning point in the history of Islam, namely, the murder of the fourth Orthodox caliph. Many of the Sakūnīs had settled in Egypt, and in the rising against 'Uthmān they formed part of the Egyptian party of rebels which advanced against Medina. The weapon that actually killed 'Uthmān was wielded by a Tudjībī, Kināna b Bishr by name, and two other Sakūnīs are also associated with the murder. A memorable event in the Second Civil War of Islam is also associated with a Kindī. It was al Ḥusayn b. Numayr, a Sakūnī, whose catapults raised stones upon the Ḥaram when in 64/683 he conducted for the Umayyad Caliph, Yazīd, the siege of Mecca, during which the Ka'ba caught fire and was burnt down. More revelatory of the atavistic rhythm in the history of Kinda in Islamic times is the career of 'Abd al Raḥmān, commonly known as Ibn al Ash'ath [*q.v.*], a member of Mu'āwiya, vividly aware of his Kindī and South Arabian origins and worthy of his grandfather al Ash'ath. After exteading the boundaries of the Dār al Islām by his invasion of Zābulistān in 80-1/699 700, he raised the standard of revolt and marched against al-Ḥadjdjādj in 'Irāk, where he was

finally beaten at the battle of Dayr al-Djamādjim.

It was, however, in the Islamic Occident, in far-away Spain and as late as the 5th/11th century, during the period of the *Mulūk al-ṭawāʾif*, that the Kindīs, unruly and rebellious as ever, achieved what figures such as Ibn al-Ashʿath in the Orient had been unable to achieve, namely, the carving out for themselves of an independent political existence, however shortlived this proved to be. The Tudjībids settled in Saraḳusṭa (Saragossa), Darawḳa (Daroca) and Kalʿat Ayyūb, in which cities they ruled as they did also in al-Maryyya (Almeria), if the Banū Ṣumādih were indeed Tudjībids, as is probable. Claims made by such historians as Ibn Khaldūn that the Dhu ʾl Nūnids [*q.v.*] of Toledo and the Aftasids [*q.v.*] of Badajoz were Tudjībids, do not seem to have been substantiated by recent research, which affiliates them rather to a Berber ancestry.

(J. SIRAWAN)

Appendix. The relations of Kindā with Saba and Himyar.

Pre-Islamic Sabaean inscriptions furnish us with some useful references to Kinda in its epigraphic South Arabian form *Kdt*. Unfortunately, one of the earliest of these references is not at present securely datable, since the precise chronology of the Sabaean texts is still in dispute, however, a date in the 3rd century A.D. seems possible. This text, Ja 576 (published in full by A. Jamme, *Sabaean inscriptions from Maḥram Bilqis*, Baltimore 1962), according to a recent re-interpretation offered by A. F. L. Beeston (*Notes on Old South Arabian lexicography VIII*, in *Le Muséon*, lxxxvi (1973), 446-51), depicts for us a situation to which Malīk king of Kinda was head of a confederation to which a certain Imruʾ al Ḳays b. ʿAwf, called "king of the *KHSŠT*", was a subordinate member; the latter committed an act of agression against Saba, as a result of which the king of Kinda and his *shaykh*s were forced under duress to surrender the person of the actual offender, to pay an indemnity, and to give hostages to the Sabaeans.

In two other texts of approximately similar date (Ja 660 and 665) we find Kinda and Madhḥidj, together with other bedouin groups, placed under the overall control of a Sabaean official with the title "*mkrb* of the Arabs of the king of Saba, and Kinda, and Madhḥidj etc.", and evidently acting as bedouin auxiliaries of the Sabaean army. In an inscription published by Sharafaddīn (*Yemen*, Taʿizz 1961, 44, bottom left), a mixed force of Sabaeans, Kindī Arabs and other elements, was commanded by two individuals bearing the title "*mkrb* of Saba'".

In the early 6th century A.D., the Himyarite king Yūsuf (= Dhū Nuwās [*q.v.*]) was similarly employing Kindīs together with members of the Murād and Madhḥidj tribes, under the control of a Sabaean commander belonging to the Yaʿfur (in Islamic sources Yaʿfur) family, as auxiliaries in his campaigns in central Arabia: see Ry 508.7. (G. Ryckmans, *Inscriptions sud arabes. X^e ser.*, in *Le Muséon*, lxxvi (1963), 296) from Kawkab, an isolated rock north east of the Kāra mountains and on the edge of the Empty Quarter.

In the mid 6th century, the Himyarite king Abraha [*q.v.*] claims to have installed a certain Yazīd b. Kabsha as "his *khalīfa* over Kinda", it appears that this Yazīd later revolted, but was defeated by the Himyarites and forced to renew his allegiance in the year 657 of the Himyarite era (*Corpus inscriptionum semiticarum*, iv, 542). Five years later, in 662 of the Himyarite era, Kinda was again campaigning in support of the Himyarites this time being given the particular mission of pinning down the ʿAmīr b. Ṣaʿṣaʿa tribe [*q.v.*] while the king was engaged on military operations elsewhere (Ry 506, *op. cit.*, 277).

(A. F. L. BEESTON)

AL-KINDĪ, ʿABD AL-MASĪḤ B. ISḤĀḳ, the name given to the author of a defence of Christianity presented in the forms of a letter written in response to that of a Muslim friend, named ʿAbd Allāh b. Ismāʿīl al-Hāshimī, who invited his correspondent to embrace Islam. The names of these two characters are supplied only by al Bīrūnī (d. after 442/1050 [*q.v.*]) in a reference that he makes in this defence in his *Chronology* (ed. Sachau, 209). In fact, the author of the two letters, who states to the prologue that he does not wish to mention the names of the correspondents "for a certain reason", speaks only of a Hāshimī and a Kindī. But it should also be noted that the headings of certain manuscripts supply the name of Yaʿḳūb b. Isḥāḳ *al*-Kindī, and to be confused with the name of the first Muslim philosopher (d. 256/870 [*q.v.*])

The authorship of this defence is the object, among orientalists, of serious disagreements concerning his period and his sect. Taking as evidence the historical data supplied by the text, mention of the caliph al Maʾmūn (198-218/813-33), of the sack of Mecca by Abu ʾl Sarāyā (199/815) and of the revolt of Bābak al Khurramī (201/817), W. Muir believes that the date of the composition of the letter can be fixed at 213/830. But L. Massignon believes the composition to be later than the year 300/912, seeing that the author has borrowed from al Ṭabarī (d. 310/923) his criticism of an opinion of the Ḥanbalī al Barbahārī (d. 329/940). Similarly, observing a parallelism between certain criticisms contained in the letter and in a work of the Muslim heretic Ibn al Rāwandī (d. 298/910), F. Kraus concludes that the Christian author borrowed these criticisms from the latter and therefore the letter can only have been composed at the beginning of the 4th/10th century.

As for the sect to which the author of the apology belonged, the majority of orientalists make him a Nestorian, as is moreover indicated explicitly by his Muslim friend in his letter. The fact that he himself mentions the convent (*ʿumr*) of al-Ḳarīḥ, a suburb of Baghdād, and Sābāt al-Madāʾin, near Seleucia-Ctesiphon, confirm this idea. But Massignon, considering that the distinction between the essence and

the attributes of the act is an "adaptation of Christian theology of the tenets of Islamic *kalām*", in led to identify the author with the celebrated Jacobite philosopher Yaḥyā b. ʿAdī (d. 364/974). Similarly, M. Th. de Alverny, on the basis of a passage in the Latin translation which treats the Nestorians as heretics, makes the author of the letter a Jacobite philosopher who, according to a concluding passage figuring only in the Latin version and a Karshūnī manuscript (Paris B. N. syr. 204) must have composed a work against Arius.

Now the publication of the work of a Jacobite theologian of the beginning of the 3rd/9th century, Abū Rāʾiṭa Ḥabīb b. Khidma, shows that, contrary to the opinion of Massignon, this distinction between the divine attributes dates from a period considerably before that of Yaḥyā b. ʿAdī since it is found in the work of Abū Rāʾiṭa, from whom the author of the letter borrowed it, as well as the whole of the philosophical-theological section dealing with the unity of God (ed. G. Graf, *CSCO*, cxxx, 5-10). As for the fact of a Nestorian author borrowing from a Jacobite a discussion of the unity of God, this is not surprising, since there was no difference of opinion between them on this point.

Similarly, the publication of the Latin version has shown that in this version, conforming to the original Arabic, the Muslim tells his correspondent that of all the Christians, the Jacobites profess the worst doctrine while the Nestorians, his friends, are closer to the Muslims (379); and it is clear that the passage in the Latin version which describes the Nestorians as heretics (423), and which is nowhere corroborated by the Arabic text, arises from the fact that the translator has "revised" the text in a "Catholic" manner (400); as for the concluding passage where there is mention of a work against Arius, it seems, judging from its context and style, that it does not belong to the original text, and that it is a later addition.

Finally, it should be noted that in a Karshūnī manuscript (Paris, B. N. syr. 205), the text of the letter of the Muslim has been revised in manner favourable to the Jacobites, the name of the Jacobite being replaced by that of the Nestorians and *vice-versa*, and the writing of the name of Cyrillos being distorted (fol. 3b).

Finally, it should be noted that in a Karshūnī manuscript (Paris, B. N. syr. 205), the text of the letter of the Muslim has been revised in manner favourable to the Jacobites, the name of the Jacobite being replaced by that of the Nestorians and *vice-versa*, and the writing of the name of Cyrillos being distorted (fol. 3b).

Presented as the work of a Nestorian Christian, a senior official at the court of al-Maʾmūn, this defence of Christianity is also a refutation of Islam, and is thoroughly documented, assessing the respective worth of the two religions from a historical and moral viewpoint. Translated into Latin in 1141, by Peter of Toledo and revised by Peter of Poitiers, the letter of al Kindī played a very important rôle, in the East as well as in the West, in the polemic between Christians and Muslims.

(G. TROUPEAU)

AL-KINDĪ, ABŪ ʿUMAR MUḤAMMAD B. YŪSUF AL-TUJĪBĪ, historian of Egypt, was born on *yawm al-sabt* [10 Dhu ʾl-Ḥijja 283/18 January 897 and died on Tuesday 3 Ramaḍān 350/Wednesday, 26 October 961. He heard al-Nasāʾī, the author of the *Sunan*, when the latter lectured in Egypt, and appears to have lectured on *ḥadīth* himself. Among his teachers and historical informants, Ibn Kudayd (d. 313/924-5) seems to have been the most important one. His principal transmitters (cf. his *Judges*) was Ibn al-Nabhān (325 416/935-1025). This is about all that is known of his life. The authentic information goes back mostly to his contemporary, the historian al-Farghānī, who mentioned him in his continuation of al-Ṭabarī's *Taʾrīkh*; this information has fortunately been preserved in biographical notices added in Ms. Brit. Mus. add. 23, 324. The name of the town where he was allegedly born is in fact to be read *yawm al-sabt*, this shows that no independent biographical information is preserved in the notice on al-Kindī in al-Makrīzī's *Mukaffā*, reproduced by N. A. Koenig, *The history of the governors of Egypt*, New York 1908, i, n. 5.

Al-Kindī's *Histories of the* (1) *Governors* (wulāt) *and* (2) *Judges* (kuḍāt) *of Egypt* are preserved in the above-mentioned Brit. Mus. manuscript. The definitive edition, provided with a careful introduction, is that of R. Guest, (GMS xix, Leyden-London 1912, reprinted to 1964, re-edition of the *Governors* by Ḥusayn Naṣṣār, Beirut 1379/1959). The *Governors* end with the year 334/946, they were briefly continued in the preserved ms. for a few decades to the coming of the Fāṭimids. The *Judges* end with the year 246/861 in the preserved text, they were perfunctorily supplemented by two hands through the first third of the 5th/11th century. Both works contain important information, and are early representatives of provincial historiography. As to political history, they afford a glimpse into events on seen from outside the centre of empire. As to judicial history, they reveal a good deal about legal institutions and practices. We may suspect, however, that they do not really compensate for the loss of the older, and sadly Fāṭimid, literature on Egyptian history. In Mamlūk times, al-Kindī's works together with what was then still known of the literature now apparently lost, were much used.

Al-Kindī is further credited with works on (3) the *Mamālīk* (known from a considerable number of quotations), (4) the *Khiṭaṭ* of Egypt, (5) the *Khandaq* (the trench made by Ibn Ḍabḍam around Fusṭāṭ in 65/684, cf. *Governors*, 46), (6) the *Great Mosque of the ʿAbd al-Ḥikam* (the mosque of ʿAmr), (7) the *Western Continents* (*al-ʿiyūn al gharbī ya al-aḥyāḍ al-gharbiyya*), and (8) *Marwān b. al-Ḥakam*, presumably the last Umayyad caliph (unless it dealt rather with al-Sarī b. al-Ḥakam). (3) and (6) may have been parts of (4). The assumption that he also wrote an independent history (see Brockelmann, in *EI*[1], s.v. *al-Kindī*) is quite uncertain.

A brief treatise on the *Faḍāʾil Miṣr* was compiled by al-Kindī's otherwise unknown son ʿUmar in the third quarter of the 4th/10th century. His authorship is indicated with some confusion at the beginning of the work and appears supported by the list of sources used, ending with Abū ʿUmar al-Kindī and Ibn Yūnus. Its transmitter was again Ibn al-Nabhān. Later authors took it for a work by Abū ʿUmar himself. It was first edited with a Danish

translation by J. Østrup, in *Oversigt over det Kongelige Danske Videnskabernes Selskab Forhandlinger*, Copenhagen 1896, 173-245. Another edition, by I. A. al-ʿAdawī and ʿAlī M. ʿUmar, appeared in Cairo in 1971 (including a reproduction of two pages of the ʿAkkā ms. supposedly dating from the 5th/11th century). Neither edition is complete with respect to the use of the available mss. material.

Bibliography: Given in the article, and Brockelmann, I, 255 f., S I, 229 f.; Sezgin, i, 358; Ḥasan A. Maḥmūd, *al-Kindī al muʾarrikh*, Cairo n.d. (F. ROSENTHAL)

AL-KINDĪ, Abū Yūsuf Yaʿḳūb b. Isḥāḳ, "The philosopher of the Arabs" whose distinguished genealogy is obligingly given by the bio-bibliographers, was born before the end of the 2nd/8th century and died in about the middle of the 3rd/9th (perhaps approximately 185-252/801-66).

An eminent universal scholar and philosopher, he lived in a period of intellectual ferment in the sphere of the sciences as well as in that of *kalām*, the period of the translations, and of the controversies concerning Muʿtazilism. He was a companion of the caliphs al-Maʾmūn and al-Muʿtaṣim. To the latter he dedicated notably his *On first philosophy*, and to his son Aḥmad, who was a pupil of his, he dedicated a number of other treatises. His association with these two sovereigns, plus the fact that he fell into disfavour during the reign of al-Mutawakkil (and was even deprived temporarily of his extensive library), lead one to suspect at least a tendency towards Muʿtazilism on his part. This hypothesis is supported by several passages from his known works (where there are references to the negation of the divine attributes or to the excellence of the works of God), as well as by the titles of works which are known only from the bibliographies. The latter show the extent and the variety of the work of al-Kindī: almost 250 titles (according to the *Fihrist*) concerning all the sciences cultivated in his day (these include astrology but not alchemy, which he regarded as a form of trickery), also technical subjects of particular interest to the ruling classes with whom he was associated: the manufacture of glass, jewellery, armour and perfume.

It is impossible to give a complete account of al-Kindī's thought because of the relatively small number of documents which has survived (less than 40 extant titles, as many of them philosophical as scientific, the task of editing and evaluating a number of unpublished ones is as yet incomplete). In the meantime, one can sketch the general outline, or at least note certain significant features, on the basis of the available texts.

His general philosophical position is best expressed in the introductory chapter of *On first philosophy*. Besides certain definitions and technical statements concerning philosophy, as the principles of philosophy, the four "causes", the four "scientific questions", there is to be found there what is in effect both an advertisement for, and a defence of, philosophy (it should be remembered that this treatise is dedicated to the caliph).

Taking as his inspiration, and sometimes borrowing literally from, the opening of a book of Aristotle's *Metaphysics*, of which he quotes a passage (without, however, acknowledging his source), al-Kindī describes the progressive accumulation of true knowledge which has come about in the course of time, thanks to the efforts of the philosophers; from this he infers that "the truth must be acquired, from whatever source it comes", and the statements of the philosophers must be re-examined and completed. He violently criticises the opponents of philosophy who attack it in the name of religion, while they themselves, he says, are without religion. The content of "the science of things and their true nature", that is to say philosophy, is identical to that of the message of the prophets: the science of divine sovereignty and divine unity, the science of morality and ethics. Finally, a brief quotation from Aristotle's *Protreptic* (again not acknowledged), according to which it is logically impossible not to be a philosopher, is followed by a prayer invoking the assistance of God in the pursuit of knowledge.

Thus al-Kindī sets forth an intellectual orientation doubly opposed to that of the traditionalists, according to him, knowledge can come from various sources and can still be expected to develop; but equally, he claims to respect the prophetic message. In precisely the same spirit his epistle *Concerning the number of Aristotle's works* compares human knowledge (*ʿilm insānī*) with divine knowledge (*ʿilm ilāhī*), whereas the first depends on prolonged effort and preparation regulated according to a precise scheme, God inspires the prophets, when He so desires, and without them having recourse to the methods of "human knowledge", with a type of revelation condensed into a few phrases whose sense the philosopher can only explain at the cost of a lengthy process of elucidation.

This position of al-Kindī's, with regard to the sciences and to philosophy, derived from various sources on the one hand, to revelation and religious speculation on the other, emerges also in some ways from the information supplied by the bio-bibliographers. These emphasise that al-Kindī had an unequalled acquaintance with the ancient sciences (Ibn al-Nadīm), that he of all the Islamic philosophers was closest to Aristotle (Ibn al-Ḳifṭī), that he studied in depth the various branches of Greek, Persian and Indian wisdom (Ḳifṭī); but also that he combined in his works the principles of the Law and those of the rational sciences (Bayhaḳī) and that he wrote an essay on *tawḥīd* according to the methods of the logicians (Ibn al-Ḥadjdjāj).

Also, in a systematic list of his works such as is first to be found in the *Fihrist*, one notes the section of "books of dialectic" or of "controversy" (*kutub djadaliyya*), many of which must have dealt with specific problems of *kalām*, such as prophecy, *ṣifāt*, divine unity, the creation of the body, of the atom, etc.

As regards the Greek philosophers, al-Kindī mentions by name Plato and Aristotle and hardly any others. We know on the one hand that he used the *Treatise on the heavens* of Aristotle, that he commissioned a translation of his *Metaphysics* and revised the translation of the *Theology* which was attributed to him. But careful scrutiny of his works shows that he must have been acquainted, directly or indirectly, with certain others, such as Epictetus, Proclus and probably John Philoponus; we find also echoes of the last phase of the teaching of the school of Alexandria as it is expressed notably in the writings of David. These various references to other authors and implied borrowings pose many problems, both historical and critical, which are far from being solved. Without doubt there are questions still to be asked.

The variety of these borrowings poses in addition a philosophical problem, which could only be solved by examining the entire corpus of works of our author and his precise chronology, and examining the con-

sistency and the development of his thought, and his vocabulary as well.

Without attempting to enter into the details of the philosophy of al Kindī as it is known to us, we can say that he adopted from the Aristotelian tradition a certain number of concepts (the four causes, the categories of change etc.) and of propositions (the finiteness of the world, the impossibility of a corporeal infinitude as an act, the mechanics of intellectual perception etc.), from the Platonist tradition, he takes speculation on the soul in its relationship with the body and with the divine light and on its ascent to and beyond the heavens. Parenetic and neo-mystical in this last case, his style and method are by times extremely precise, very abstract, strained, proceeding freely and methodically by means of askings and deductions of a geometrical regularity.

On the other hand, al Kindī, who ceases to follow the Greeks where they are in disagreement with the Kur'ānic revelation (i.e. with regard to the creation, and the life-span of the Universe), is interested in establishing or formulating agreements between certain philosophical ideas and certain articles of the Islamic faith, even Mu'tazilī ones

Thus the *On first philosophy*, after some reflections on the "one" and the "many", where we detect echoes of Proclus, concludes (that is to say, the first part of the book, which is all that has survived, concludes) with a kind of philosophical *tawḥīd* and with criticism of those who give attributes to God (the same theme is used in the essay *On the unity of God and finite nature of the world*). The epistle *Concerning the number of Aristotle's works* contains a philosophical commentary on verses 78-82 of Sura XXXVI and the epistle *On the lowest prostration of the body* another on verse 6 of Sūra LV.

There are other detailed references to other works which could be quoted. It would appear that al-Kindī uses the same method in his choice of language where certain words or verbal roots are common to the vocabulary of religion and to that of the Greek translations (thus he refers to God by the name of *wāḥid al ḥaḳḳ*, which is both Kur'ānic and Neo-Platonist; he uses the word *rubūbiyya*, which belongs to the language of religion, in the title of the *Theology* attributed to Aristotle). It is important to analyse these various agreements and differences at this early stage of the history of *falsafa*.

In so far as one is able to judge from the bibliographical lists and the few treatises, of various lengths, which have survived, the scientific work of al Kindī follows the same scheme as his philosophical work, viz. to revise and develop the findings of the ancient scholars in the light of new interests. He wrote essays on Euclid, Archimedes, Ptolemy on the astrolabe and on Hippocratic medicine; he also drew to a considerable extent on Asiatic sources, particularly for his knowledge of remedies

On the other hand he followed ideas which were specifically his own, notably in his studies of optics and pharmacology. His article on perspective (known only in Latin under the title *De causis diversitatum aspectus*) follows Euclid, though without following him blindly. Three points are set out here in succession: the rectilinear propagation of light which Euclid postulated and which al Kindī demonstrates; a theory of vision whereby the eye illuminates the object seen—this also is a Euclidean theory which al-Kindī modifies, giving three dimensions to the rays emitted by the eye (whereas for Euclid these were geometric lines), finally, a theory of mirrors. Here too, his study of burning mirrors is an adaptation, that is to say a revision, a criticism and a completion, of what Anthemios of Tralles had written on this subject.

The same method is used in the treatise *On compound medicines*. The ancients had studied the proportions of the four qualities (hot cold, dry, wet) in simple medicines. Now this method had to be extended to compound medicines, and al-Kindī takes pains to explain mathematically the relation between increasing the number of parts of each quality, and the corresponding increase in the effect of the medicine on the organism.

Al-Kindī left a few pupils (Aḥmad b. al-Ṭayyib al Sarakhsī, Abū Ma'shar), but not a school in the strict sense of the word. It is most of all as a universal scholar and as an astrologer that he has survived (to the point that those of his works which were available in Latin, were still being read in medieval times). Ibn Khaldūn quotes him at various points in his *Muḳaddima*, but does not include him in his list of Islamic philosophers

KINDĪL (see MISḤĀN)

KINKAWAR, Kankāwar, Kangāwar, a small town of western Persia (population in 1975, 13,144) situated in lat. 34°29' N., long 47°55' E., and in the *bakhsh* of the same time in the *shahristān* of Kirmānshāhān. The town is almost equidistant from the cities of Kirmānshāh and Hamadān (*qq.v.*), and lies at an altitude of 1,487 m.; it is first mentioned by Isidore of Charax under the name "Conobar". The *bakhsh* comprises (1975) four *dihistāns*, with a total of some sixty villages and a population of about 38,435. The economy of the region is based on agriculture and trade.

The Kangāwar valley has since ancient times been an important staging post and centre of communications on the great highway from Mesopotamia to the Iranian plateau, and recent excavations have established that nearby sites such as Gawrān Tappa and Sīh Gabī were occupied several thousands of years prior to the foundation of Kangāwar itself, which probably occurred in Parthian times. The important temple to the goddess Anahita, recently discovered at Kangāwar, is thought to date from the 2nd century B.C., its construction was erroneously attributed by early Muslim writers to the Sāsānid monarch Khosraw Parwīz.

In Islamic times, Kangāwar seems to have flour-

ished up in the Mongol invasions of the 7th/13th century. At about that time, most of the Saldjūk remains were destroyed by fire, and there seems to have been virtually no building on the site from Ilkhānid to Timūrid times, and little under the Safawids and Kādjārs.

In general, the Islamic geographers refer to Kangāwar as Kaṣr al-Luṣūs ("Robbers' Castle"). Al-Ṭabarī, i, 2849, says simply that it acquired this name because the Arab army on the way to meet the Persians at Nihāwand (21/642) had some of its baggage-animals stolen there. Centuries later, this reputation of the people of Kangāwar still prevailed; Ḥamd Allāh Mustawfī, *Nuzhat al-kulūb* (ed. M. Dabīrsiyāḳī, Tehran 1336/1957) states that they were "first-class thieves" (Le Strange's translation in Ḥamd Allāh Mustawfī, *Nuzha*, 107, is inaccurate). From the name Kaṣr al-Luṣūs derived the *nisba* "Kaṣrī" (see Barbier de Meynard, *Dictionnaire de la Perse*, Paris 1861, 450).

(R. M. Savory)

KINNASRĪN, an ancient town and military district in Syria, the name is of Aramaic origin and appears as Kennesḥrin in the Syriac texts. Composed of *knnā* 'nest' and *nasrin* "of eagles", it is mentioned in the Babylonian Talmūd in the form of Kannishrayyā and the European historians of the Middle Ages called the area Canestrine. A distinction must be drawn between the town and the *djund*.

i. The town. At the present day, Kinnasrīn is nothing more than a little village surrounded by ruins, a day's journey to the south of Aleppo, on the right bank of the Kuwaykh which flows into the nearby marshy depression of *al-Matḥ*. The Arab geographers place it in the fourth climate. Yāḳūt, who gives various explanations for the origin of the name, says that the place was already populated in the period when the Amalekites, coming from the south, sought refuge there, and that the town had once been prosperous and strongly fortified, but that in his time (beginning of the 7th/13th century) it was nothing more than a village, owing its survival to its position in the centre of a district where a number of highways converged. In ancient times the town, founded by Seleucus Nicator, was called *Chalcis ad Belum*, and gave its name to the Syrian-Arab *limes*. In the 4th century A.D. Kinnasrīn was a commercial centre and a prosperous agricultural market-town.

Set at a highway intersection and with a much-frequented *khān*, the town occupied an important position in the defensive system of the Syrian frontier from Antioch to the Euphrates and from the *ḥamad* toward Tadmur. It played a strategic role of some importance for the Byzantine empire and at the end of the 6th and the beginning of the 7th century A.D. it came under attack from the Persians.

After their victory on the Yarmūk [*q.v.*], the Muslim Arabs went on to conquer northern Syria. At Kinnasrīn, the garrison of local militia offered some resistance to the troops of Abū ʿUbayda, [*q.v.*] and in Shaʿbān 17/August-September 638, the town was taken. Under the reign of Yazīd b. Muʿāwiya, the town's defences were dismantled. Profiting by the experience of the Byzantines, the Umayyads, in their turn, installed a military headquarters at Kinnasrīn, which rapidly became the capital of the rich agricultural region of which it was the centre. Until the 4th/10th century, the history of the town was not marked by any event of importance.

In 331/943, it was one of the most solidly constructed localities of the region. Two years later, in the spring, the Ḥamdānid prince Sayf al-Dawla was defeated there by the troops of the Ikhshīd of Cairo. In the second half of the 4th/10th century, Kinnasrīn became the object of contention in the struggle between the Byzantines and the Ḥamdānids. At the approach of the Byzantines, in 352/963, the inhabitants fled from the city in panic. After the Ḥamdānid period, Kinnasrīn began to decline to the benefit of Aleppo. In 355/966, when Nicephorus Phocas advanced against Aleppo, Sayf al-Dawla fell back upon Kinnasrīn, but being unable to defend it, he evacuated the town and the Byzantines came and burned the mosques. Part of the population settled in the East of the Euphrates and the rest took refuge in Aleppo. Shortly after, the town was repopulated, but in 389/998 it was burnt down and reconstructed once again. In 422/1050, it was again sacked by the Byzantines. Rebuilt at the end of the 5th/11th century by Sulaymān b. Kutulmush [*q.v.*], it was destroyed by his enemy Tādj al-Dawla Tutush, [*q.v.*] brother of the sultan Malik Shāh [*q.v.*]. It remained virtually uninhabited. Nāṣir-i Khusraw, passing that way in Radjab 438/January 1047, saw nothing but a poor village.

In the period of the Crusades, Kinnasrīn was to play only a strategic role and was scarcely populated at all. In Muḥarram 513/April-May 1119, without occupying Aleppo, Il-Ghāzī installed himself in Kinnasrīn, made it a depot for military equipment and made raids against Ḥārim, the Rūdj and Djabal Summāḳ.

Some years later, Tughtakīn of Damascus joined forces with Aḳsunḳur and together they attacked Aleppo. Sawār, *amīr* of Aleppo in the name of Zankī, made Kinnasrīn an operational base. In 529/1134-5 Pons of Tripoli laid siege to the place, which was relieved by Zankī, arriving in haste from Ḥimṣ. The traveller Ibn Djubayr (end of the 6th/12th century) describes the town as being in a state of abandonment and ruin.

From the time of the Ayyūbid period (7th/13th century), Kinnasrīn is no longer mentioned as a town, but its *khān* is noted as a halting place for caravans journeying from Aleppo towards the south, and, beyond the crossroads of al-Aḥārib, towards the west. Pilgrims continued to make their way to Tell Nabī Mand, one of the hills of the town, to the tomb (*maḳām, ḥabr*) attributed to the prophet Yaḥyā [*q.v.*] which is in fact the burial-place of the *amīr* Yaḥyā b. ʿAbd Allāh b. al-ʿAbbās. In the Ottoman period, Kinnasrīn was nothing more than an impoverished village, bearing the name Eski Halep. At the present day, it has returned to its original name.

ii. The *djund*. Around Kinnasrīn there extends a

vast undulating plain (*ḥāra*), this is one of the most fertile regions of northern Syria where, with the aid of irrigation, cereals, fruit trees and vines are cultivated. In 375 Saint Jerome, visiting the province where at that time monasticism and asceticism were developing, testified to its agricultural prosperity.

On the horizon, there are visible to the south the Djabal Zāwiya, to the west the Djabal Barīsha, to the north the Djabal Sam'ān and the plain of Marǧ Dābik punctuated by tells, while to the east there are the shining salt marshes of Djabbūl. The Arabs penetrated at an early stage the territory of Kinnasrīn, which corresponded to one of the Byzantine administrative divisions of Syria, representing the Roman "Syria Prima" of which Antioch was the capital. In the 6th century, Arab tribes were encamped in the eastern part of the region between the Euphrates and Kinnasrīn. Among the battles which took place on this territory, one easy note the victory won in 554 A.D. near the source of the 'Uḏhayya by the Ghassānid al-Ḥārith over the Lakhmid al-Mundhir of al-Ḥīra.

After the Muslim conquest, Syria was divided into four *aǧnād*, the *ǧund* of Urdunn, that of Filasṭīn, that of Dimashk and that of Ḥimṣ. The creation of the *ǧund* of Kinnasrīn is attributed by some (al-Ṭabarī and al-Dimashḳī) to Mu'āwiya, who installed refugees from Ḥaǧra and Kūfa there in 21/643, by others (al-Balāḏurī, Yāḳūt) to Yazīd b. Mu'āwiya, who detached some districts from the *ǧund* of Ḥimṣ.

In the 'Abbāsid period, following the conquests of al-Manṣūr and his successors, the *ǧund* grew in size towards the north, at this time it covered its greatest expanse of territory. It absorbed to the north Ḳurṭs, Tīzīn, Duluḳ, to the north-west 'Aynṭāb at a distance of two days' march, and Ḳal'at al-Rūm [*q.v.*] at a distance of five days' march from Aleppo. To the south, it included the districts of the two Ma'arras (Al-Miṣrīn and Al-Nu'mān) and of Ḥamāt, and the territory of Sarmīn.

Under the reign of Hārūn al-Rashīd (170-93/786-809), the *ǧund* of Kinnasrīn was deprived, to the west, of the territory stretching from Antioch to the coast, to the east, of the region lying between Aleppo and Manbiǧ, and to the north, of the *thaghūr*, districts which were to constitute the region of the 'Awāṣim [*q.v.*]. The *ǧund* was then limited to the area lying to the south of Aleppo. This was the end of its period of military importance, but economic activity continued, as is shown by the increases in taxation and in the tribute payed to al-Ma'mūn. In the 3rd/9th century, the *ǧund* of Kinnasrīn paid 350,000 *dīnārs* while that of Damascus paid only 120,000. In the mid-4th/10th century, the *ǧund* paid 400,000 *dīnārs* of *Marāṭ*, the same as Dimashḳ, and 370,000 of *ḍarāʾiba* [*q.v.*]. The capital was then Aleppo, and the principal cities Antākiya, Kinnasrīn and Manbiǧ. Its limits were to the west, the coast from Lādhiḳiyya to Bayās, to the north, Mar'ash and the 'Awāṣim, to the east the Euphrates between Sumaysāṭ and Bālis, and to the south, the region of Ḥamāt with Shayzar and Afāmiyya, a region claimed by both Kinnasrīn and Ḥimṣ.

In 349/961, Nicephorus Phocas attacked the region of Aleppo; he returned two years later to sow the ruins, and the population went in search of refuge elsewhere. The intervention of the Basileus led to the disappearance of the 'Awāṣim, to the advantage of the Byzantines who occupied Antākiya. The reconstruction of northern Syria under the Saldjūḳs scarcely touched the *ǧund* of Kinnasrīn. In the 12th century, the latter came under pressure from the Franks of Antioch, especially in 493/1100 when Bohemond demanded tribute. In Ṣafar 517/Dec. 1123, Fulk of Jerusalem and the armies of Antioch attacked the territory of Kinnasrīn and imposed a truce with the addition of tribute upon Sawār, the Aleppo representative of the *Atabeg* Zankī.

At the end of the 7th/13th century, the *ǧund*, which retained its name in spite of the dominance of Aleppo, retrieved from the Franks the province of Antākiya and the lands of Sarmīn.

Under the Ottomans, in the mid-11th/18th century, Ḥādidjī Khalīfa still speaks of "the province of Kinnasrīn of which the capital is Aleppo". Later, the *ǧund* of Kinnasrīn disappeared and was integrated into the *livā'* of Aleppo

(N. ELISSÉEFF)

KINTĀR [see MAKĀYIL].

KIPČAK, a Turkish people and tribal confederation, usually also written Kipčāḳ or Kifčāḳ; the forms Kifčāḳh, Khifḍjāḳ, Kifḍjāḳh and Khifčāḳh are also found. The etymology of the name is uncertain: the origin of the Old Turkish word *ḳïpčaḳ* (*ḳïpčaḳ*), which is known only in the form *ḳïpčaḳ boot* "unlucky" (Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 581), is conjectural, as well the connection with the Sagai word *ḳïpčaḳ* "irate, ill-tempered". The proper name Kipčāḳ is recorded in the Uyghur texts. See Radloff, *Versuch eines Wörterbuches der Türk Dialecte*, St. Petersburg 1899, ii, 843-5. In later popular and learned etymologies (first in Rashīd al-Dīn, *Djāmi' al-tawārīkh*, ed. Berezin = *Trudy Vost. Otd. Arkh. Obshč.*, vii, 25, later in Abu 'l-Ghāzī, ed. Desmaisons, 19) *kipčaḳ* is connected with *kapuk* or *kobi* and explained as a "hollow tree trunk", of the same time a legend is told of the birth of a boy from a hollow trunk, the boy is said to have been adopted by Oghuz Khān [*cf.* KIMĀK] and to have been given a separate territory as a fief. The relation of the tribe Kipčāḳ, emerging in the Western Siberian steppes, to the other Turkish tribes is unclear. Gardīzī (text in W. Barthold, *Otčet v poezdke v Srednyuyu Aziyu*,

8a — ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 238) mentions the Kipčak along with the Imāk as a division of the Kimāk [see CUMAN] who lived on the Irtish, [q.v.] although the earlier anonymous author of the *Ḥudūd al-ʿālam* (f. 19a tr Minorsky, 101, § 32, comm. 315 n7) says that the Kipčak had separated from the Kimāk and dwelled to the north of the Pečenegs. Ibn Khurradādhbih, 51, l 9, and, following him, Ibn al-Faḳīh, 329, l. 3, tr. Massé 388, mention the Kipčak along with the Kimāk as a separate people. Maḥmūd al Kāshgharī, i, 273, describes the Yimāk (sic) on the Irtish as a subdivision of the Kipčak, not of the Kimāk. In another passage of the same work (iii, 22) we are told that the Yimāk are a Turkish tribe (*dhū nasab al-turk*), the same ' as we call Kipčak' (*wa hum al-ladhīna yuqālu*) the Kipčak themselves thought they were a separate branch (*thumma atraḥ baʿḍuhā ʿan-nafsihā wa-ntasaba ilayhā*). The Kimāk mentioned by Mukaddasī, 274 l. 3, at Ṣawrān must have been Kipčak. In connection with the advance of the Kipčak from north to south is the appearance (first in the 9th/12th century in the *Dīwān* of Nāṣir i Khusraw; cf. Browne, *Lit. hist. of Persia*, I, 227) of the name *Dasht i Kipčak* for *Maṣṭaḥ al-Ghuzz*, cf. *ibid*, ii, 168. The Kipčak (Khifčāḳ) are already mentioned by Bayhaḳī, ed. Morley, 91, as neighbours of Khwārazm. According to Marquart, *Osttürkische Dialektstudien*, 202, the Kipčak appear in history for the first time in 514/1120-1 in Ibn al-Athīr x, 390, as allies of the Georgians, according to Marquart (*ibid*, 136) the kingdom of the Kipčak was founded by people who emigrated from Manchuria in connection with the rise of the Čurčē (the Chinese Kin Dynasty), cf. thereon, P Pelliot, in *JA*, ser ii, xv 125 ff. That the term Dasht i Kipčak was also extended to South Russia is shown by the evidence of Ḥamd Allāh Mustawfī Kazwīnī, *Nuzhat al-ḳulūb* ed. Le Strange, 21, 238, that Dasht i Kipčak is the same as Dasht i Khazar. Altogether it seems to be sure, that in the 4th-5th/10th-11th centuries a loose political unit of Turkish tribes (including the Kimāk) existed under this name in the above mentioned territories. In the middle of the 5th/11th century, the Kipčak tribes moved to the Russian steppes, pushing the Oghuz toward the western areas of the Pontus region. [see CUMAN]. After 1064 they became the lords of these territories, which they kept until the Mongol invasion. Among the Kipčak tribes, the Kuman (called Polovtsi by the Russians and Comani by Western Europeans) were the dominant element which played an important rôle in the history of Byzantium, Bulgaria and Hungary. They are often identified with the whole of the Kipčak tribal confederation. The Kipčak in South Russia were exposed not only to the influence of Islam but also to that of Christianity; a prince of the Kipčak (Chinese Ku-ch'a) in the time of the Mongol invasion (the same prince is mentioned in Russian annals) was called George (Russ. Yuriy, hence Chinese Yü li ghi, in Bretschneider, *Mediaeval researches*, ii, 297 ff, and Pelliot, *op. cit.*, 250). Ibn Baṭṭūṭa mentions Christian Kipčak of Kerč [q.v.], the so-called "Codex Cumanicus" must be regarded as a memorial of the spread of Christianity among the Kipčak. The name Kipčak survived the Mongol invasion; it was later transferred to the empire of the Golden Horde. The Kipčak military slaves, coming to the Near East, especially to Egypt, played an important rôle in the history of this area as the Baḥrī Mamlūks [see AL BAḤRIYYA and MAMLŪK]. The first exact information concerning the language of the Kipčak is due to al Kashgharī. According to his *Dīwān lughāt al-turk*, ii, 253, iii, 23, the dialect of the Kipčak had the same phonetic peculiarities as the dialect of the Ghuzz, with *dh* for *y* at the beginning of a word. The first linguistic record relating to the Kipčak (Kuman) language is the Codex Cumanicus. From the Kipčak Mamlūks, several linguistic monuments are known. From the Armenians in Poland and in Ukraine, speaking a special Kipčak dialect, several literary and other documents have come down to us. One section of the Turkish languages, according to the ethnic and historical relation of these peoples to the Kipčak tribes and regions, is also called Kipčak. The Kipčak are no longer mentioned after the Mongol period like many other early names of peoples (Karluk, Uyghur, Naiman etc.) the name Kipčak is found as the name of a family or of a minor tribal unit among the Bashkir, Nogai, Kirghiz and Uzbek. The Kipčak are particularly associated with Farghāna in the modern history of Central Asia, cf KHAṬAKĀN.

KĪR SHEHIR [see KIRGHIR].

KIRĀʾ (A.), a legal term meaning the leasing or hiring out of things. This is a contract to every way like a contract of sale, but with this difference that a sale aims at transferring the possession of something in exchange for the sale price, whilst leasing or hiring out aims at the beneficial use or enjoyment of a thing for a fixed period to tane in return for a hiring use It is accordingly the sale of a beneficial use (*bayʿ al-manāfiʿ*) and is built around the procedure for a contract of sale The only differences are those which are inherent in the differing nature of the two contracts, but both of these come into the category of commutative contracts (*muʿāwadāt*), of which sale is the leading example. The term "commutative contract" is used in practice for all procedures (sale, exchange, loan, leasing or hiring out, settlement, etc.) in which we have the transfer of property (*milk*) or beneficial use (*manāfiʿ*) in return for the handing-over of an equivalent

The essential elements of a contract of leasing or hiring out are (a) the contracting parties, the lessor (*kārī*) and the lessee (*mukārī*); (b) the object in question (*al-maʿḳūd ʿalayh*), i.e. the thing hired out and the sum corresponding to its beneficial use (*ujūr*); and (c) the form or embodiment of the agreement (*ṣīgha*) The effects of a contract of this kind are those of a contract of sale, except for the differences arising out of the specific natures of the two contracts.

The contract is not dissolved by the deaths of either of the two contracting parties; the heirs have the power to re-negotiate the contract. Hiring or leasing can always be annulled when there is an excuse (*ʿudhr*).

The types of objects which may be leased or hired out. Whilst *ijāra* [see IJĀRA] is the hiring out of a service and of movable objects, with the exception of ships and beasts which are used for

transportation, the term *kirā'* is used for these last and for immovable property. Hence in practice, *kirā'* may be a contract for transporting something. According to Ibn 'Arafa, it is in this case the sale of the beneficial use of an animal or of something else like a ship for purposes of transport. But the transporting of objects must be distinguished from the transporting of persons. Mālik sees there a *locatio operis*. Other Mālikīs pronounce in favour of a hiring out of services. The Shāfi'īs consider this contract as a hiring out of objects. But in any case, the hiring out of beasts or burden and ships (*kirā' al-ramākil wa 'l-sufun*) is perfectly admissible, whether the beasts are individually determined or not.

Hiring out can cover land (*kirā' al-arḍ*), and the leasing of rural properties existed before Islam, under two forms: (a) *kirā'* involving payment of money, and (b) *kirā'* involving the making over of a proportion of the produce of the property (*muḥāḳara*). This last form must have been the commoner one, in view of the scarcity of coinage.

The last type of hiring out of an object is *kirā' mu'abbad* or *conductio perpetua*, the lease in return for a quit rent of ancient French law. It is the equivalent of our emphyteusis or emphyteutic lease. In Egypt, this institution is known under the name of *muḳāṭa'a awwila*, in Algeria as *'anā'*, and in Morocco as *kirā' 'alā 'l-ṭābi'a*; all these names indicate the idea of a perpetual lease.

(A. M. Delcambre)

KIRĀ'A, reading. Applied to the Ḳur'ān, *kirā'a* also means *recitation*. In the present article the term *kirā'a* is used as follows: 1. in the general sense of the recitation (*a*) of single parts of the Ḳur'ān, as prescribed for the ritual prayer (*ṣalāt*), or the recitation (*b*) of the entire Ḳur'ān, which has become, in the course of years, an accepted spiritual exercise (*kirā'a* = recitation), 2. to indicate a special reading of a word or of a single passage of the Ḳur'ān (*kirā'a*, pl. *kirā'āt* = variant), 3. to indicate a particular reading of the entire Ḳur'ān (*kirā'a* = reading). In the third case one speaks of the *kirā'a* of Ibn Mas'ūd or of the *kirā'a* of the people of Kūfa as opposed to the *kirā'a* of other authorities or to the redaction authorised by 'Uthmān.

The recitation of texts proclaimed by Muḥammad as revelation played from the very beginning a prominent part in the Muslim community. This is already evident from the fact that the collection of these revelations was designated as *ḳur'ān* "recitation". However, the Ḳur'ān had not yet been codified at the death of the Prophet and the form of Arabic letters used to note down single parts of it and later on the whole collection was very incomplete; in a group of consonants a choice between two or more readings was possible. Consequently, disagreements soon arose on exactly how to read the revealed text. The promulgation of a canonical redaction of the Ḳur'ān under the third caliph 'Uthmān (soon after 30/650) was intended to remedy this evil. Copies of this redaction were sent from Medina to Kūfa, Basra and Damascus, the most important cities of 'Irāḳ and Syria. After a relatively short period, this redaction seems to have been generally accepted as the official text, finally even at Kūfa where Ibn Mas'ūd (d. 33/653), the distinguished Companion of the Prophet, who maintained a "reading" of his own, had at first called upon his followers to resist.

On the whole, the text of 'Uthmān had a strong unifying influence, which was felt to an increasing extent. But a really uniform *kirā'a* was not thereby guaranteed. During recitation, which was essentially based on oral tradition, readings deviating from the official edition continued to be followed. In so far as these readings went back to recognised authorities of the early period and to trustworthy witnesses, they were also noted by commentators on the Ḳur'ān and philologists, and turned to exegetic or linguistic account. Thus variant readings of Ibn Mas'ūd, Ubayy b. Ka'b (d. 29/649 or 34/654) and other early "readers", which deviated from the official text, were transmitted in early scholarly literature and have therefore come down to us, at least in extracts. The *kirā'a* of al-Ḥasan al-Baṣrī (*d.* 110/728) was later even inserted among the "fourteen readings" (see below).

Further development was on characteristic lines. The untrammelled freedom with which the text had been treated in the earliest times was followed by a period of systematisation and limitation of the possibilities of the "readings" which the consonantal text and the oral tradition offered. However, complete unification was not achieved. People neither would nor could simply set aside the power of tradition. Thus the free choice on the *kirā'a* was limited, but not entirely forbidden. While reading the officially accepted consonantal text (already in itself constituting a limitation), the "reader" could still make a choice between a certain number of authorities. In its detail the history of Ḳur'ān reading is very complex. The scanty and sometimes unreliable sources leave much uncertain. In general, however, the course of development is clearly recognisable, thanks in particular to the penetrating studies of G. Bergsträsser (in collaboration with O. Pretzl) and E. Beck (see *Bibl.*). In this article only the essential aspects will be briefly mentioned.

Important progress in the standardisation of the "reading" was achieved by differentiating the letters *b, t, th, n, y* etc. by means of strokes (later dots) and by introducing vowel signs. The redaction of 'Uthmān, being officially recognised, gained in importance by this clarification. With the passage of time, other differences were gradually eliminated. Such a levelling seems at first to have been accomplished within single cities (*amṣār*), and later on through the influence of one city on another. Majority readings tended to prevail over minority readings, thus leading towards a general consensus. In the first half of the 4th/10th century, Ibn Mudjāhid (d. 324/936), the influential *imām* of the "readers" in Baghdād, publicly and with governmental support brought this process to its logical conclusion. He banned further use of the *kirā'āt* of Ibn Mas'ūd and other unconnected readings. Ibn Shanabūdh, a contemporary and fellow reader of Ibn Mudjāhid, complied with this ban only after he had been arraigned and flogged. In addition, Ibn Mudjāhid declared the reading of the 'Uthmānic consonantal text, standardised by tradition and consensus, to be obligatory, and compelled Ibn Miḳsam, an other fellow-reader, to renounce the claim which he had maintained until that moment that he could decide for himself on the punctuation and vocalisation of the text. As authorities on the traditional reading of the 'Uthmānic text, Ibn Mudjāhid recognised seven "readers" belonging to the 2nd/8th century, among whom were 'Āṣim of Kūfa (d. 128/745) and Nāfi' of Medina (d. 169/785), whose readings have both remained authoritative

to the present day, that of ʿĀṣim in the east and centre of the Islamic world, and that of Nāfiʿ—with some exceptions—in North Africa from Egypt westwards. To the seven "readers" recognised by Ibn Mudjāhid were added later on three others, and afterwards another four, but these never attained the same standing as the first seven. Furthermore, since Ibn Mudjāhid, in mentioning ʿĀṣim—one of the Seven—had often named two others, Abū Bakr Shuʿba (d. 193/809) and Ḥafṣ (d. 180/796), who transmitted ʿĀṣim's reading independently of one another, it became customary to add also the names of two other traditionists to each of the other six and of the "Three after the Seven". Thus originated the bewildering number of names in the list of readers recognised as canonical (*Gesch. des Qor.*, iii, 186-9, Blachère, 118 23, Bell-Watt 49 ff.).

After the readings had been limited to the "Seven" recognised as canonical, and to the other "Three after the Seven" and "Four after the Ten", all the others were eliminated in the practice of recitation. The "readers" henceforward had to keep exclusively to the canonical readings. This however did not completely rule out the uncanonical "deviant" (*shawādhdh*) readings. They were later adduced as useful evidence in the practical interpretation of the Kur'ān and in the elucidation of linguistic problems. Besides his "Book of the Seven" (*Kitāb al-Sabʿa*, ed. Sh. Dayf, see *Bibl.*) Ibn Mudjāhid also composed a "Book of deviant readings" (*Kitāb al-Shawādhdh*), which is not extant. The debate on the uncanonical *ḳirāʾāt* was carried on throughout the centuries in a scholarly literature of growing importance. Ibn Abī Dāwūd al-Sidjistānī's (d. 316/928) *Kitāb al-Maṣāḥif* and Ibn Mudjāhid's works already mentioned, were followed—to cite only a few of the most important names—by the monographs on uncanonical readings of Ibn Khālawayh (d. 370/980) and Ibn Diʾnār (d. 392/1002), by al-Dānī's (d. 444/1053) classical manual of the Seven Kur'ān readings (verse version by al-Shāṭibī, d. 590/1194) and his works on orthography, punctuation of the vowels and other punctuation marks, by Ibn al-Djazarī's (d. 833/1429) works on the Ten readings and on the classes (*ṭabaḳāt*) of readers, and finally by al-Bannāʾ's (1117/1705) book on the Fourteen readings. For the practice of recitation, the literary tradition constituted, in contrast with early times, an almost indispensable complement to oral instruction.

The knowledge of Kur'ān-reading (*ʿilm al-ḳirāʾa*) had become a distinct theological discipline and had many practitioners, few of whom, however, wrote books on it. In this connection, it becomes understandable that the official Egyptian Kur'ān of 1924 (following the reading of ʿĀṣim in the tradition of Ḥafṣ) is not founded on early Kur'ānic manuscripts, but is the result of reconstructions derived from the literature on the readings (see Bergsträsser, in *Isl.* xx (1932), 5 ff.)

In the recitation by professional "readers" (see above), a distinction is made between an incantatory, a rapid and a moderate tempo (*tartīl* or *taḥḳīḳ—ḥadr—taʾdwīr*). The manner of execution can be designated as recitation, but there are also intricate musical settings (see the studies by K. Huber and M. Talbi). The technique of reciting is laid down in detail in works on the *ḳirāʾāt*.

Special importance is attributed to the rules of pronunciation, including the theory of assimilation (*iḏghām* [*q.v.*], *idghām*), the modification of *a* into *e* (*imāla*), extension (*madd*), forms of the pause (*waḳf*) and the conservation or alleviation (*ibdāl*) of *hamza* (see O. Pretzl's analysis of a typical treatise on the *wuḳūf al-hamzaʾa*, in *Islamica*, vi (1934), 230, 291-332). The time required for private oral instruction is greatly increased by the fact that, since Ibn Mudjāhid, several different *Imams* and Schools of Readers have been officially recognised. According to a distinctive method known as "assembling" (*djamʿ*) "the Kur'ān verse is divided into small fragments, each one of which is recited as often as there are variants of it, each time with another variant" (see the instructive passage, "Koranlesungsunterricht", by Bergsträsser, in *Isl.*, xx (1932), 36-42). When the whole of the Kur'ān is recited, the separate readings must be considered as self-contained units, the "readers" are thus not free to combine the text of their recitation from different *ḳirāʾāt* (Bergsträsser, *Ibid.*, 29 ff.). These, however, are details which concern only an élite of "readers". The great mass of the *ḥuffāẓ*, consisting largely of blind men, would in any case limit themselves from the start to the study of a single reading (*Ḥafṣ ʿan ʿĀṣim*, in the west *Warsh ʿan Nafiʿ*). In general, the originally large number of readings has given way in the course of centuries to a far-reaching uniformity both in the practice of recitation and in the theoretical *ʿilm al-ḳirāʾa*.

The history of the text of the Kur'ān and of the *ḳirāʾāt* has also been studied by European and American orientalists, notably Nöldeke and Goldziher, followed by A. Jeffery, G. Bergsträsser, O. Pretzl and E. Beck (see *Bibl.*) Important sources have been published, and separate stages of development reconstructed. Jeffery, and likewise Bergsträsser in association with Pretzl, planned an apparatus criticus for the Kur'ān. Bergsträsser and Pretzl had begun a systematic collection of photostats of early manuscripts of the Kur'ān in the hope of discovering variants not registered in the literature. Because of their untimely death (1933 and 1941), this research came to a standstill. Jeffery also died (1959) without having realised his vast project. The task, however, remains to evaluate the known and still unknown variants for the study of old Arabian dialects and in general for a future historical grammar of Arabic. Whether much will emerge to the profit of the historical interpretation of the Kur'ān remains to be seen. The harvest so far obtained by Bergsträsser and Beck is rather meagre and promises no new results of any importance. During the last years of his life, Pretzl himself had apparently "retreated from the generally high appreciation of the manuscripts and readings of the Kur'ān". August Fischer, who noted this *en passant* in a posthumous article (*Isl.* xxvii (1948), 5 f. n. 4), also cited a passage from Spitaler's obituary of Pretzl (*ZDMG* xcvi (1942), 163 ff.). In Fischer's opinion the Kur'ānic textual variants "*for the most part* (emphasis by Fischer) consist of no more than attempts at emendation made by philologically trained Kur'ān specialists on difficult passages in the ʿUthmānic redaction".

KIRĀ'A (see TADRĪS)

KIRĀD (also *muḳārada* and *muḍāraba*, cf. below), a commercial arrangement in which an investor (*ṣāḥib al-māl*) or group of investors entrusts capital or merchandise to an agent manager (*'āmil*, *muḍārib*, *muḳārib*) who is to trade with it and then return it to the investor with the principal and previously agreed upon share of the profits As a reward for his labour the agent receives the remaining share of the profits. However, in case of a loss resulting from an unsuccessful business venture, the agent is in no way liable for the return of the lost investment. He loses his expended time, effort, and anticipated share of the profit, while it is the investor who exclusively bears the direct financial loss

The *kirāḍ* combined the advantages of a loan with those of a partnership (*sharika*), and while containing elements characteristic of both contracts, cannot be strictly classified in either category In all Islamic legal writings, it is treated as a distinct and independent contract with a separate section or book (*kitāb*) devoted to it. As in partnership, profits and risks in the *kirāḍ* are shared by both parties, the investor risking capital, the agent his time and effort. However, in the *kirāḍ*, unlike a partnership, an joint capital is formed and the investor does not become directly or jointly liable with the agent in transactions with third parties, indeed, third parties need not ever be aware of the investor's existence. As in a loan, the *kirāḍ* gainfully entailed no liability for the investor beyond the sum of money or quantity of commodities handed over to the agent; and in the event of its successful completion, the agent returned the capital plus a share of the profits (the latter, corresponding to the interest in an interest bearing loan).

The agent's complete freedom under normal trading circumstances from any liability for the capital in the event of partial or total loss and the disjunction between the owners of the capital and third parties are novel and distinctive features of the *kirāḍ* which made it a particularly suitable instrument for long-distance trade.

Although commercial arrangements resembling the *kirāḍ* were known in the Near Eastern and Mediterranean world from the earliest times, it appears very likely that its direct origins were indigenous to the Arabian peninsula, having developed in the context of the pre Islamic Arabian caravan trade With the Arab conquests, it spread to the Near East, North Africa and ultimately to Southern Europe. Its introduction in the form of the *commenda* in the Italian emporia of the late 10th and early 11th centuries A.D. was germinal to the expansion of mediaeval European trade The *kirāḍ* was the subject of lengthy and detailed discussion in the earliest Islamic legal compendia (late 2nd/8th century) its legal treatment in these early treatises bears the hallmark of long experience with the *kirāḍ* as an established commercial institution. Although not mentioned in the Kur'ān, numerous traditions attribute its practice to the Prophet and his leading companions (e.g. Shirbīnī *Mughnī al muḥtāj*, ii, 309, Sarakhsī, *Mabsūṭ*, xxii, 18-19, Shaybānī, *Aṣl muḍāraba*, fol. 42). From the sparse indications available, it appears that this form of commercial association continued through the early centuries of the Islamic era as a mainstay of caravan and long-distance trade. In one of the very few mediaeval Arabic treatises of commerce, Dimashkī's *The beauties of commerce* (probably 5th/11th century), the *kirāḍ* is cited as one of the three methods by which trade is carried out;

Ghazālī lists it among the six commercial contracts, "the knowledge of which is indispensable to anyone seeking gain in trade" (*Ihyāʾ*, ii, 66). The documents from the Cairo Geniza (5th/11th-12th centuries) are replete with numerous examples of *commenda* agreements which account for a considerable share of the commercial activity reflected in these documents. Thus we may conclude that not only in law, but in practice as well, the *ḳirāḍ* constituted one of the most widespread instruments of commercial activity.

Three Arabic terms are used to designate this contract: *ḳirāḍ*, *muḳāraḍa*, and *muḍāraba* and the terms are interchangeable with no essential difference in meaning or connotation among them. The divergence in terminology was probably originally due to geographical factors. The terms *ḳirāḍ* and *muḳāraḍa* apparently originated in the Arabian peninsula, and the term *muḍāraba* was of ʿIrāḳī provenance. Subsequently, the difference was perpetuated by the legal schools, the Mālikīs and Shāfiʿīs adopting the term *ḳirāḍ* and, to a lesser degree, *muḳāraḍa*, and the Ḥanafīs the term *muḍāraba*.

As in the case of several other commercial arrangements, Islamic law justifies the licitness of the *ḳirāḍ* contract on the religious grounds of traditional practice (*sunna*), the consensus of the community (*iǧmāʿ*) and, more interestingly, on the practical grounds of its economic function in society. After quoting a series of traditions describing the *ḳirāḍ*'s use in trade by the Prophet and his companions, Sarakhsī adds that it is also allowed: "Because people have a need for this contract. For the owner of capital may not find his way to profitable trading activity, and the person who can find his way to such activity may not have the capital. And profit cannot be attained except by means of both of these, that is, capital and trading activity. By permitting this contract, the goal of both parties is attained" (Sarakhsī, *Mabsūṭ*, xxii, 29).

Sarakhsī's summary of the *ḳirāḍ*'s economic function highlights one of the most important aspects of this contract's rôle in Near Eastern commerce, and helps explain its widespread use in mediaeval trade. For the investor, the *ḳirāḍ* served as a means of hiring trading skill, and for the agent-manager, as a means of hiring capital. Since, in the mediaeval commercial context, profit could be realised only by the combination of capital and trading activity, the *ḳirāḍ*, especially for the purposes of long-distance trade, became an ideal instrument to attain a profitable goal.

KIRĀN, in Islamic astrology "the conjunction". Without further qualification, this refers to the mean or true conjunction of Saturn and Jupiter. The conjunctions of these two planets were combined, apparently by Sāsānid astrologers, with the Hellenistic doctrine of the triplicities to form the basis of one of several methods of predicting the course of history available to mediaeval astrology.

The four triplicities were associated with the four sublunar elements as follows.

Fire	Earth	Air	Water
Aries	Taurus	Gemini	Cancer
Leo	Virgo	Libra	Scorpio
Sagittarius	Capricorn	Aquarius	Pisces

Mean conjunctions of Saturn and Jupiter occur once in about every 20 years with a longitudinal increment of about 242,30°; for twelve or thirteen conjunctions, then, or about 240 or 260 years, they stay within the same triplicity, and it takes about 960 years (i.e. approximately a millenarium) for the conjunctions to return to the triplicity in which the cycle started. The return of the conjunctions to the triplicity of Ore (or Aries) in about a millennium was thought to indicate the appearance of a new prophet, the transfer of the conjunctions from one triplicity to the next in about 240 or 260 years was taken to signify a possible change in the dominant dynasty; and the occurrence of each individual conjunction was believed to portend lesser shifts in political, military, or economic status. The details of these predictions depended upon the horoscopes of the beginnings of the solar years in which the conjunctions occurred.

This theory of conjunctions usually appears in consort with various other elements of political astrology, all of which seem to have originated in the Zoroastrian millenarianism of Sāsānid Iran. These other methods are: the revolutions of the world years, the cosmic cycles—i.e. the mighty, big, middle, and small varieties of the *ḥasm*, the *nuṣṣāb*, and the *fardārs* of the planets, the mighty years of the planets, and the planetary lords of the millennia, centuries, decades, and single years. These elaborate systems for predicting religious and political change, together with the related theory of the conjunctions of the maleficent planets, Saturn and Mars, in Cancer every 30 years, appealed strongly to dissident groups in the early ʿAbbāsid period and later, and especially to those with Iranian connections, in particular, one may mention the Ḳarmaṭians and the Ismāʿīlīs. Many leading astrologers wrote expositions of the significance of the conjunctions, including Mashāʾallāh and Abū Maʿshar, through their writings, this form of political astrology was transmitted to Western Europe, where it became extremely popular during the Renaissance.

KIRĀT [see MAKĀYIL].

KIRD (A., fem. *kirda*, pl. *kurūd*, *akrād*, *kirad*, *kirdān*, *kirdā*), a substantive having the general sense of "monkey", but representing in fact, among the simians of the Ancient World, only the members of two families, the colobids and the cercopithecids, the only primates known in ancient Arabia. Egypt, Abyssinia, Somalia, the Yemen and ʿUmān in fact constitute favorable habitats of baboons (genus *Papio*) and macaques or cynocephalous magots (genus *Macaca*). Both types live there in groups of which the total population can vary from a dozen to a hundred; each of these societies, which are based on polygamous family units, is subject to the authority of a male leader and this animal social organisation has not failed to attract the attention of those Arab writers who have spoken about monkeys. Since ancient times, the peoples of southern Arabia have looked with respect and circumspection tinged with an element of superstitious fear at the colonies of hamadryad baboons (*Papio hamadryas*) and of green baboons (*Papio anubis*) infesting the areas of high ground. In the times of the Pharaohs, the Egyptians deified these monkeys, and there was certainly a time when, in pre-Islamic Arabia, these animals were taboo. Were they demons incarnate, malevolent genii or metamorphoses of men? There was an shortage of questions for the credulous Bedouin to ask himself, and more especially, there was the ever-current legend according to which Solomon made a pact with the race of monkeys, setting them to guard the demons vanquished by the genii. Even in the 4th/10th century, Ibn al-Fakīh al-Hamadhānī [*q.v.*] and al-Masʿūdī report, with complete seriousness, that among these troupes of monkeys there is found one larger than the rest wearing at his neck the seal bestowed by Solomon. Apart from the involvement of the latter in the world of monkeys, there was alive in the minds of men the legend, al Talmudic origin (*Sanhedrin*, 109a), of the divine curse inflicted upon some of the builders of the tower of Babel, their expiatory punishment was to be changed into monkeys for all eternity. This curse was to be confirmed by the Kurʾān (II, 61/65, VII, 166; V, 65/60) where it is said: "those whom He has cursed, He has changed into monkeys and pigs". Popular belief in such metamorphoses (*masākh*, pl. *masākhā* [*q.v.*]), encouraged by successful fables such as the *Thousand and one nights* (for metamorphoses of men into monkeys, see nights 9, 22, 699, 624), was to persist for a long time in the bosom of Islam, in spite of categorical refutations on the part of the Prophet reported in certain *hadīths* (see al Damīrī, *Ḥayāt*, ii, 243 a), according to Ibn ʿAbbās. More sceptical, al-Djāhiz did not omit to set these alleged retrograde mutations in the realm of fiction (*Ḥayawān*, i, 309).

By nature less inclined towards superstition than the nomads, the settled people of the Yemen and of ʿUmān were familiar with the baboons of their region and also with other monkeys imported from East Africa, and were able at a very early stage to domesticate the young animals and to use them for such menial services as turning millstones, butchers and grocers used them to guard their goods (al-Damīrī, *op. cit.*). The cunning and agility of the monkey were also exploited by thieves for picking pockets and housebreaking. So the monkey became a part of the every-day life of man, to almost the same extent as the dog, and the term *kird* was no longer sufficient to differentiate between ages and sexes, a terminology based on exterior traits filled this gap. Thus the large male baboon was called *ribāh* or *rubbāh* (whence the form II verb *rabbaba* "to train monkeys"), he was known also as *kurdudh*, *kurdūdh*, *kawdal*, *bīm*, and has thick fur hood earned him the epithets *habbār*, *kawbar*. In the Ḥidjāz he was known as *hidjris*, a name for the fox in other countries. The female and the young monkey, smaller in stature than the male and with less hair, were known according to different places and people, as *dabya*, *hubāba*, *ilka*. In spite of these cases of domestication, which were in fact limited in number, relations between man and monkeys were not always so peaceable, and it happened quite often that as a result of the proliferation of the simian species, rural populations had to take issue with destructive and aggressive hordes, speaking of baboons, al-Idrīsī (*Nuzha...*, 2nd clime, section 6) remarks that, in ʿUmān, it is sometimes necessary to repel them with spears and arrows, and al-Makrīzī notes (*Khiṭaṭ*, end quoted in the *Masālik al-afṣār* of Ibn Taghribirdī) in referring to a *fatwā* of Mogadishu in Somalia, that in about the year 800/1398 this town was actually invaded by monkeys which installed themselves there firmly, and that in 839/1435-6, the date of his meeting with the *fatwā*, this permanent occupation was still going on, causing grave annoyance to the inhabitants.

In spite of a fundamental quality of mischief, encouraged by captivity and a sometimes extreme lewdness, stigmatised by the adage *azna min hidjris*, the Arabs recognised in the monkey qualities lacking to other animals, such as a concern for cleanliness expressed through a conformism and methodical process of delousing, its extreme agility, its astonishing ingenuity and above all its exceptional talent for imitation; these qualities were defined in proverbial expressions such as *aʿlam min hidjris* "more cunning than a monkey", *akyas min hubāba* "more sly than a she-monkey", *anlah min rubbāh* "more pleasing than a baboon", *akhf min ḳird* "more imitative than an ape", and they summed all of this up in the antithesis *al-ḳird ḳabīh lākinnahu malīh* "rascal though he is, the monkey is agreeable".

The maritime trade of slavers and of Arab and Persian merchants in the Indian Ocean made known to the Muslim world a number of new species of cercopithica and a considerable trade in monkeys developed in the ports of the Red Sea and the Persian Gulf. The hunters, sea farers from the coastal region of al Ḥaḍramawt, went by preference via the island of Socotra to the coast of East Africa (the country of the Zandj and the country al Sufāla) in search of the magnificent guereza colobus (*Colobus abyssinicus*) with its fine black pelt, an item of great luxury, exported at that time as far as Central Asia and Europe. Al Idrīsī (*Nuzha*, 1st clime, section 7) speaks of an "Island of Monkeys" (*djazīrat al-ḳurūd*), in the Indian Ocean (perhaps the island of Pemba or that of Malia?), where the hunters from Khāria Muria and of Socotra went to trap monkeys (that is to say, the green monkeys *Cercopithecus callitrichus*, the vervets *Cerc. pygerythrus*, the moustacs *Cerc. cephus*, the grivets *Cerc. Aethiops* and the nisnas *Cerc. pyrrhonotus*) with the aid of small boats propelled to the coast by the tide and the currents. These boats contained delicacies for bait and on the gunwales

there were towing ropes manoeuvred by cords attached to the ship. Attracted by the food, the quadrumans soon crowded together in the boats and it was necessary only to operate the recovery ropes and to bring on board the teeming cargo - depending on the species, some were killed and their pelts sent to the fur market, and others, with collars on their necks, were sold at a high price either to merchants or to aristocratic collectors of rare beasts or to itinerant animal showmen.

It is known, from the chroniclers, and al-Mas'ūdī (*Murūdj*, i, § 485) confirms it, that princes of India and of China kept trained monkeys, whose role was to detect poison in food and drink, the 'Abbāsid caliph al-Mahdī was advised by Chinese ambassadors to avail himself of the same precaution. But, a century earlier, the Umayyad caliph Yazīd b. Mu'āwiya already had his monkey which accompanied him in processions, mounted on an ass (al-Damīrī, *op. cit.*). The 'Abbāsid caliph al-Mutawakkil received, from a king of Nubia, two monkeys, of which one could sew and the other model in clay. On the other hand, the sea farers of Sīrāf and of 'Umān, maintaining commercial links with India, the islands of Indonesia and China, were the principal source of information on Asiatic fauna and flora, information exploited by Arab geographers and encyclopaedists from the 3rd/9th to the 7th/13th century; these hardy adventurers brought back, on their return, specimens of quadrumans native to these regions, such as rhesus macaques (*Macaca mulatta*) and crab macaques (*Macaca irus*) and semnopithes or langurs, including the hanuman entellus (*Presbytes entellus*), all of these being untouchable beasts in the Indians. Certain of these monkeys were offered, at the beginning of the 4th/10th century, by the *amīr* of 'Umān, to the 'Abbāsid caliph al-Muktadir bi-llāh to complete his menagerie (*Murūdj*, i, § 487), with hunting dogs and falcons, monkeys were regarded as princely gifts and they were to figure among the presents sent by Hārūn al-Rashīd to Charlemagne on the occasion of the two exchanges of ambassadors between the two sovereigns (181-5/797-801).

For its part the Maghrib was well acquainted with monkeys through the numerous colonies of apes, known as Barbary macaques (*Macaca sylvana*) in the Atlas. Very tame and friendly animals, they are a tourist attraction in the valleys of the Chlifa, in Algeria, and it is well known with what vigilant care the British keep their few specimens imprisoned on the Rock of Gibraltar.

The monkey has always and everywhere had, with its grimaces its mimicry, its mischief and its agility, the power of amuse crowds; among showmen and jugglers, the exhibitor of monkeys (*bayyād*, *bayyādūn*, *bayyādīn*) was assured, in the Islamic countries, of success in the company of strolling players, in public places, at fairs and in markets. Yemenis and Somalians were the experts in this profession, which, while relatively lucrative, was held in considerable contempt by the upper classes; so, according to Ibn al-Fakīh, Khālid b. Safwān, in the course of an oratorical contest between the people of North and South Arabia, threw this insult at Ibrāhīm b. Malikrame al-Kindī - "You other Yemenis, you are nothing but exhibitors of monkeys. . ." In spite of this disapproval of public entertainers who were, it must be said, in many cases rogues, the mass of the people, both rural and urban, were attracted to open air entertainments and to exhibitions of rare and "clever" animals, whether these were monkeys, dogs, bears, or goats. As trained quadrumans were a source of hilarity, the people readily abandoned the term *bayd* to designate them, substituting expressions of a happen psychological effect, thus, in Syria and in Lebanon, the monkey was called *sa'dān* "lucky charm" and his trainer became *the sa'dānī*, while in Iran, 'Irāk, Turkey and Egypt it was *maymūn/ maymūn* "fortune which prevailed and which by a coincidence perhaps ere fortuitous could quite well be linked to the Greek μιμώ "ape" from the verb μιμεῖσθαι "imitate, mimic" In the same spirit, the entire Maghrib instinctively adopted, in parallel to the classical substratum, *bordjoud* (pl. *brād*, *berādja*, *grād*, *grāda*) and the Berber *idis* (pl. *idisan*) and *tādā* (pl. *tādawin*), the arabised Persian adjective *shādī* (pl. *shwāda*, *shwāda*, *shwādī*) "gay, joyous" which must have been introduced by the Turks and which 'Irāk also made its own. Also in the Maghrib, the popular negro *Bū Sa'dayya*, parodying black magicians, to the terror of small children, is often accompanied in his acts by a trained monkey, which he makes dance to the sound of the tambourine to of the *ghayta* (*q. v.*).

Arab authors have said very little about the tricks which the exhibitors of monkeys trained their pupils to perform. Al-Mas'ūdī notes simply that the Nubian *grivet* exhibited in the fairs astonishes the audience by his surprising agility in climbing to the top of a spear fixed in the earth. As for al-Djāhiz who, as an objective naturalist, enquired into the behaviour of monkeys employed by the *ashāb al-hurūb* (*Hayawān*, *passim*), he makes no mention of the kinds of acrobatics that were displayed in public. It is nevertheless easy to imagine them for anyone who has witnessed the displays given in Morocco by the wandering troupes of the Ūlād Sīdī Ahmed ū Mūsā, the native showmen of the Sus, with their performing monkeys, and this on the occasion of local patronal festivals like that of *Lālla Kassāba* (see E. Laoust, *Noms et surnoms des feux de joie*, in *Hesperis* (1921), 44). In addition, the ambience of these travelling shows with their dense crowds of curious onlookers has been finely caught by Badī' al-Zamān al-Hamadhānī (*q. v.*) in his delightful *maklāma bayḍāwiyya* (*Mukhtārāt*, Cairo 1923, 104 *ff.*; Fr. tr. S. de Sacy, *Chrestomathie arabe*, Paris 1827, iii, 240-7) where the *bayrūd* is none other than the waggish Abū l-Fath al-Iskandarī constrained by vicissitudes to occupy this dismal condition. One of the most familiar street characters, the exhibitor of monkeys, is not absent from the stories of the *Thousand and one nights*, notably in the very salacious tale of the nymphomaniac princess who ravished one of his animals (Nights 355-7).

In Islam, as elsewhere, to liken a man to a monkey was one of the most degrading insults. Among the Muslims of Spain, in periods of friction between the communities, while the pig and the dog were used as epithets for the Christians, the name "monkey" was generally reserved for the Jews, as reminiscence of the Kur'ānic verses quoted above (see H. Pérès, *Poésie andalouse*, Paris 1953, 240-1). In Ifrīkiya, under the Aghlabid dynasty, the *fakīh*, in his zeal for *djihād* (*q. v.*), enjoined upon Jews and Christians the wearing on the shoulder of a square of cloth bearing the picture of a monkey in the case of Jews, and a pig in the case of Christians, these same symbols were to be shown on a board nailed to the door of their houses (according to al-Mālikī, *Riyād al-nufūs*, *apud* H. R. Idris, *Contribution à l'histoire de l'Ifrikiya*, in *RAf* (1935), ii, 240). The satirical poets did not hesitate to use derogatory comparisons with monkeys to brand those whom they were attacking; this was

done by the Andalusian Ibrāhīm al Ḥasanī in refuting to the famous *wazīr* al Manṣūr Ibn Abī ʿĀmir (Pérès, *op. cit.*), as was done before him by Abū Nuwās, proclaiming his hatred of the Barmakids (see BARĀMIKA) in this opening verse *kādhā nazanna bi ʾl-ḥurriyyi . . .*, "This is the age of the apes. . ." (*Dīwān*, Cairo 1953, 589, Beirut 1962, 425).

Under the scheme of Ḳurʾānic law, eating the flesh of the monkey is forbidden, since the animal is omnivorous and has canine teeth, an additional and fundamental reason for this prohibition is the instinctive revulsion, which is natural to the primates, the family to which the human race belongs, for the idea of devouring another member of the same family. For the evolved human being, eating the meat of the ape would be close to cannibalism. Nevertheless, ancient medical opinion held the flesh of the monkey to be an effective preventive agent against elephantiasis (*dāʾ al-fīl*). Certain other parts of the animal, such as the teeth, the hair and the skin, possessed "specific qualities" (*khawāṣṣ*) (see al-Damīrī, *loc. cit.*), which modern science has relegated to the rank of absurdity.

Finally, regarding the term *kird*, it should be noted that in astronomy the asterism ζ, λ *Canis majoris* and δ, κ, θ, γ, ζ, μ, ε *columbae* is wrongly called *al Ḳurūd* "the Apes" in some treatises, a mistake arising from a misspelling of *al Farīd* "the Hermits" (see A. Benhamouda, *Les noms arabes des étoiles*, in *AIEO*, Algiers (1951), IX, 102).

With *kird*, there has not so far been any reference to other than colobids and cercopithecids, it might also be asked what conception the Arabs had of the large anthropomorphic, or anthropoid, apes. These number no more than eleven species world-wide, seven gibbons, two chimpanzees, one gorilla and one orang outang, none of these species exists in Arabia, and to find them one must go either to Indonesia or to central Africa. It is impossible however, not to see in one or other of these primates the mysterious *nasnās/nisnās* (pl. *nasānis*) of the mediaeval Arab writers, and there can be no doubt that such a "demi-man" with human face, and vertical stance, without a tail and possessing the faculty of speech, but also covered with a thick fleece, usually russet-coloured, was originally nothing other than an anthropomorphic ape observed by sea-faring Arab merchants of the Indian Ocean, and only the gibbon (*Hylobates lar*), found in Malaysia, Indochina, Burma and the Himalayas, corresponds fairly accurately to this description. Ibn al-Fakīh, who is quoted by al-Kazwīnī (*ʿAdjāʾib*, in the margin of al Damīrī, *op. cit.*, I, 191) and Muḥammad b. Zakariyyāʾ al-Rāzī [*q.v.*] say, with reference to Sumatra (*djazīrat al-Ramī* = Lambrī), that "there are found there human beings of both sexes, who go bare-footed and without clothing. Their speech is incomprehensible and they live in the tree-tops. They are entirely covered with hair and they live on a diet of fruit; they constitute an innumerable people who flee at the approach of man. . . these beings are four spans in height, their language is a kind of whistling and their faces are covered with russet coloured down. . ." Al-Idrīsī (*Nuzha*, 1st clime, section 8) adds that their movement through the trees is accomplished by means of the arms alone and no use is made of the feet, which gives the impression that they are flying from one branch to another. In the 8th/14th century, Ibn Baṭṭūṭa (*Riḥla*, II, 136) writes of the colonies of siamang gibbons (*Symphalangus syndactylus*) with black fleece and white mask which he encountered on the southern coasts of the Indies. As for the recently-discovered Asiatic orang-outang, the gorilla and the chimpanzees of Africa, these remained on the peripheries of knowledge until the 12th/18th century. Besides, in so far as they were known, their height, greater than that of man, meant that they could not be identified with the half man which the *nasnās* is, by definition, the root *n. s. s.* evokes in fact the idea of smallness and weakness. The reports of those who saw gibbons were rapidly distorted by the imagination of those who transmitted them to the point where the *nasnās* became a monstrous semi-anthropomorphic creature, one-eyed and one-legged, moving with successive bounds at a tremendous speed, in times past hunted for its meat in the Yemen. With the *ghūl*, another half-human monster the *nasnās* is not without analogy with the *monoculus* and the *satyrus* of Pliny. Understandably, sceptical minds demanded visual proof of the existence of such phenomena and to this end the ʿAbbāsid caliph al-Mutawakkil, according to al-Masʿūdī (*Murūdj*, I, § 491), instructed the famous doctor and translator Ḥunayn b. Isḥāḳ [*q.v.*] to find for him some of these curiosities, it seems that the scholar brought back from his explorations two authentic *nasnas*, but nothing further is known of the episode.

Modern philologists, like P. Anastase-Marie, have gone so far as to see in the term *nasnās* the Greek νανος "dwarf" (see Amīn Muʿallūf, *Muʿdjam al hayawān*, Cairo 1932, s.v. *Ape*, 23-28), it cannot be denied that the two words have the same sense and one would thus be led to see in the origin of *nasnās*, besides the gibbon, a human pygmy. Al-Djāḥiẓ, while not believing in them, lists a number of these fabulous beings which really existed in the popular imagination, and, this being an interesting fact, he assimilates the *nasnas* to the *wāk-wak* and to the people of Gog and Magog (*Ḥayawān*, I, 159, VII, 278). Now the Arab geographers recognised three countries jointly said to be the land or the island of the *Wāḳ-Wāḳ* (or the *Wāḳ Wāḳs*), the first situated below the country of the Zandj [*q.v.*], beyond Sofāla "of gold" (Mozambique), the second in the most eastern islands of Malaysia (the Philippines, Celebes, the Moluccas), and the third in the extreme north of the Sino-Asiatic continent; it is found that these three countries correspond quite closely to those inhabited by particularly small peoples, the Negrillos and the Akhas in Africa, the Negritos in Malaysia, in Deccan and in the southern Himalayas, and the Lapps, the Samoyedes, the Tungus and other nomadic ethnic groups of the arctic and sub-arctic regions. It may thus be supposed that those who encountered these pygmy people by chance identified them in their accounts with the *nasnas* as had also been the case with the gibbon, and a detail which may corroborate this interpretation is the insistence of the authors on the faculty of speech attributed to the *nasnas*. Nevertheless, there remains the mystery of the alleged existence of the *nasnās* in the Yemen, and we can hardly be satisfied by the *ḥadīth* (see *LA*, under *n. s. s.*) according to which the *nasnās* were the metamorphoses of men from the two cursed tribes of ʿĀd and Thamūd [*q.vv.*]. Was there, in Arabia, a small anthropoid ape, or a race of human pygmies? The question and its solution belong to the realm of palaeontology and of prehistory.

In fact, in historical times, the Arab peoples, having never encountered the fabulous *nasnās* in their own countries, quite naturally applied the term to all the small long-tailed flat-faced African monkeys with which the sedentaries made them

familiar (see al Damīrī, *op. cit.*, ii, 353 q), and modern systematic practice has simply ratified the vox populi to retaining the name "mīnar" and applying it to the Somalian *Cercopithecus pyrrhonotus*. In conclusion, having been born out of confused images of the gibbon and a pygmy in travellers' tales, to become subsequently a monstrous human mutation blighted by divine punishment, the *ʿawānis* has finally been placed, by common logic, in one of the families defined by *bird*.

KIRESŪN [see GIRESŪN].

KĪRGĪZ, a Turkish people, mentioned as early as the oldest Chinese accounts of Central Asia (from the 2nd century A.D.) under the name Kien-Kuen, which according to P. Pelliot (*JA*, Ser. 2, vol. xv, 137) goes back to a Mongol word, singular *hirkun*. The lands of the Kirgīz are not exactly defined in these sources; according to a very reliable source, the land of the Kien Kuen lay north-west of the land of the K'ang K'iu, *i.e.* of Sogdiana. The name Kirgīz first appears in the Orkhon inscriptions of the 8th century; at that time the Kirgīz (as the contemporary Chinese annals also tell us) lived on the Upper Yenisei (Turkish Kem), north of the Kög-men or Sayan mountains. The same name (Kārkamān) is also mentioned in Gardīzī (W. Barthold, *Otčet o poezdke v Srednyuyu Aziyu*, 86 = ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 262); according to this source, the capital of the Khān of the Kirgīz was 7 days' journey north of these mountains. There is also said that the Kirgīz had red hair and a white colour of skin (*surkhī-i muyān-u safīdī-i pūst*) which is explained by their alleged relationship with the Slavs; the same anthropological features, of which there is no longer any trace among the modern Kirgīz, are mentioned in the Chinese *T'ang shu*. Linguistically, the Kirgīz were then already Turkicised. They did not come to the fore politically till about 840 A.D., when they succeeded in conquering the lands of the Uyghur in Mongolia. Nothing was known in Muslim lands of this event; Marquart's endeavour (*Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, 91 ff.) to connect with this the story in Djāhiz of the defeats of the Toghuzghuz, can be utterly rejected; like Kudāma (ed. de Goeje, 262, l. 13) Djāhiz only refers to the hostility between the Toghuzghuz and the Kharlukh [Karluk (*q.v.*)]. Iṣṭakhrī (ed. de Goeje, 9-10) and others mention the Kirgīz (Khirkhīz) as eastern neighbours of the Kimāk [see KIPČAK] and as northern neighbours of the Kharlukh and Toghuzghuz, in the east their lands are said to have stretched to the ocean. The most important article of export for trade with Muslim lands was musk. The ethnic and historical continuity between the Kirgīz and the people living today under the same name in the USSR is supposed but not proved. The Kirgīz were probably driven out of Mongolia in connection with the foundation of the empire of the Khitāy in the beginning of the 10th century [see KARA KHITĀY] and the advance of the Mongol peoples; on the other hand, a body of Kirgīz must have migrated as early as this century southwards in the present abode of the genuine Kirgīz (Kara Kirgīz); according to the *Ḥudūd al-ʿālam* (f. 18a, tr. Minorsky, 98, comm. 293 f), even the town of Panīkīt [the modern Ajna in Chinese Turkestan] was in possession of the Kirgīz. The Kirgīz are not mentioned again in this region till the 16th century; what the Chinese Ch'ang Te, who was there in 1259, records of the Kirgīz (especially on the use of dog sledges, cf. Bretschneider, *Mediaeval researches*, i, 129) he had only been told, and did not see himself, and these stories probably do not refer to the people of the land he passed through. The main body of the people had probably remained on the Upper Yenisei, the Kara Khitāy when driven out of North China had to fight with these Kirgīz during their trek westwards. In the fertile region of the modern administrative district of Minusinsk the Kirgīz gradually adopted agriculture and a settled mode of life. According to the *Ḥudūd al-ʿālam* (f. 17b, tr. Minorsky, 97, comm. 286) there was only one town among the Kirgīz, called Kemidjkat, where their Khākān lived, and no other towns or villages, but only tents, on the other hand, Rashīd al-Dīn says (ed. Berezin, *Trudi Vost. Otd. Arkh. Obshč.* vii, 268 f.) that the Kirgīz had "many towns and villages". From these and similar statements Radloff has drawn the conclusion (*JA*, Ser. 6, vol. ii, 328) that the present state of Kirgīz culture is much lower than it used to be.

In the 13th century the Kirgīz no the Yenisei had to submit to the Mongols under Čingiz Khān (*q.v.*) Negotiations for their submission were already begun in 1207, but it was only settled in 1218 when the last rebellion was put down. After the decline of the empire of the descendants of Čingiz Khān the Kirgīz had sometimes to be under the yoke of the Mongols, sometimes of the Kalmucks, and sometimes of the Russians. In 1607 they recognised the suzerainty of the Kazāk, but by 1609 we find them killing a tax collector sent by the Kazāk. In 1642 they were described by the Kalmuck Khān Batur as Kalmuck, in 1646 by the Russian plenipotentiary Daniyil Arkhinskiy as Russian subjects. In 1703 they were transferred by the Kalmucks, by arrangement with Russia, southwards to the region of the modern Semireč'ye they are then said to have numbered 3,000-4,000 tents. As mentioned above, a portion of the Kirgīz had migrated at a much earlier date shortly after 1514 a certain Muḥammad is mentioned as being invested as Khān of the Kirgīz by Saʿīd Khān the ruler of the Mongols (*Taʾrīkh-i Rashīdī*, tr. E. D. Ross, London 1895, 141); in the 16th century the Kirgīz were for the most part under the rule of the Khāns of the Kazāk. The Kirgīz were called *Burūt* by Kalmucks; they were nearly all driven out from Semireč'ye on Farghāna and Karātegin; it was only after the destruction of the Kalmuck empire by the Chinese (1758-9) that they returned to their old settlements in the southern part of Semireč'ye. At this date the name Kirgīz was transferred to the Kazāk by the Russians; to distinguish these from the latter, the true Kirgīz were called

Black Kirgiz (Karā Kirghiz). The term "Karā" was never adopted by the people themselves and is now definitely repudiated. In Semireč'ye, the Karā Kirghiz, outwardly at least, professed Islam in their epic, which takes its name from the principal hero Manas, the wars against the Kalmucks are described as wars of religion. Unlike the Kazāk, the Karā Kirghiz had neither princes or nobles, the elders, called *Manap*, were not chosen by any kind of election but owed their position entirely to their personal influence. Owing to the continual state of war, the tribes of the Karā Kirghiz did *not* break up into small subdivisions as was the case with the tribes of the Kazāk, an *aul* (camp) of the Karā Kirghiz comprised the members of a whole tribe and therefore occupied a much greater area than an *aul* of the Kazāk. In the 18th century authority over the Karā Kirghiz was claimed by the Chinese, to the 19th first by the Özbegs to Farghāna and later by the Russians, the final establishment of Russian rule dates from 1864. The prosperity of the Karā Kirghiz has been seriously affected by the Russian colonisation and particularly by the rising of 1916, when a considerable portion of the people migrated to China; the Russian government resolved—but nothing came of it owing to the revolution of 1917—to take from the Karā Kirghiz all their grazing grounds except the valley of the Tekes and to throw these lands open for Russian colonisation.

Until recently to both Russia and Western Europe the name "Kirgiz" meant particularly the Kazāk, they are sometimes called also "Kirgiz-Kaisak" (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cossacks). On the separation of the Kazāk, from the Özbeg, cf. ABU 'L-KHAYR and KAZĀK. The whole of the Kazāk people was for long under the rule of one Khān who therefore had a considerable military force at his disposal, Khān Kāsim (d. 924/1518) was particularly powerful. In spite of several defeats from the Mongols allied with the Özbegs in the 16th century, the Kazāk still had a strong nomadic kingdom at the end of the century under the rule of Khān Tawakkul, who, during the last years of the reign of Khān 'Abd Allāh b. Iskandar (*q.v.*) was able to make a successful incursion into Mā warā al-Nahr, and later still even held the town of Tāshkent. In the 17th century the power of the Khāns only rarely extended over the whole people, but about this time Tāshkent and Farghāna were usually in the possession of the Kazāk, sometimes under nominal recognition of the suzerainty of the Khāns of the Özbegs. At this time must have taken place the division of the Kazāk into three "Hordes" (called by the Kazāk themselves *žüz* "hundred"), the great horde (*uly žüz*) occupied the most easterly, the little (*kishi žüz*) the most westerly part of the so-called "Kirgiz steppes" and between the two the central horde (*orta žüz*). Towards the end of the 17th century this division was already an accomplished fact. Khān Tyawka, celebrated as the law giver of his people (in 1694 a Russian embassy was received by him in the town of Turkistān and in 1698 one from the Kalmucks), still ruled all three Hordes and had a representative to each of them. In 1727 un successful negotiations for the submission of all three Hordes to Peter the Great were conducted, in 1723 the towns of Sayrām, Tāshkent and Turkistān were conquered by the Kalmucks. For a short period after this, the suzerainty of the Khān of the Little Horde was recognised by all the Kazāk and the agreement embodying this was sealed by the sacrifice of a white horse, but the treaty had no practical results. In 1730, Abu 'l-Khayr negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the 18th century; but it was not till the 19th century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirgiz steppes on the Sir Darya, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg, regulations for the government of the Siberian Kazāk were published in 1822 and again in 1868. Even after the abolition of the Khāns authority, the descendants of Čingiz Khān or "Sultans" exercised a considerable influence over the people as a nobility (among the Kazāk called "white bones", *ak süyak*), their authority has been gradually destroyed by the measures of the Russian Governments. The last popular leader of the Kazāk was Kenesarī, who fought against the authorities in Siberia and Orenburg from 1842 in the mountains of Ala Tau, several risings were stirred up until 1873 by his son Sadik (so-called by the Russians, properly Ṣādik). Another son, Ahmad, later wrote the life of his father Kenesarī and of his brother Sadik, entitled *Sultanī Kansara i Sadik. Biografičeskiye ocherki sultan Akhmeta Kenisarina. Obrabotano dlya pečati i snabženo primečaniyami E. T. Smirnovoim*, Tashkent 1889 (review by V. Reen in *Zap.*, iv, 122-3).

The most southern part of the Kirgiz steppes was conquered in the 19th century by the Özbegs of Farghāna and Khīwa and partly coloured, the advance of the Russians in this part was therefore assisted by the Kazāk. After the foundation of the general-gouvernement of Turkestan (1867) and the general-gouvernement of the Steppes (1882) (Semireč'ye belonged at first to the latter, but was later again united to Turkestan), the gouvernment of Kirgiz steppes had less unity than before. On the other hand, after the Revolution an administrative unit was established called at first by the Russians the "Kirgiz Republic" and by the people themselves "Kazāk stān". Today the Kirgiz form one of the Union Republics in the USSR. The number of the population in the Kirgiz Socialist Soviet Republic was 3,245,000 in 1923 (43·8% Kirgiz, 24·2% Russians, 12·3% Uzbeks, etc.). The whole number of Kirgiz living in the USSR was 1,452,000 in 1920. The number of Kirgiz living in China and Afghanistan is over 100,000. The Kirgiz language belongs to the northeastern (Kipchak) group of Turkic languages.

Bibliography There exists the following guides to the bibliographies: E. E. Novičenko, *Bibliografiya bibliografiy o Kirgizii. 1852-1967 Annotirovannyy ukazatel' literatury*, Frunze 1969 — The most important of earlier bibliographies are A. N. Kharuzin *Bibliograficheskiy ukazatel' statey, kasayushchikhsya etnografii Kirgizov i Karagirgizov*, in *Etnograficheskoye Obozreniye* ix (1897), N. Veselovskiy, *Dopolnitel'nyy bibliograficheskiy ukazatel'nykh statey, kasayushchikhsya Kirgizov i Karagirgizov, ostavlennomu A. N. Kharuzinim*, in *Etnograficheskoye Obozreniye*, ix (1897), A. E. Alektorov, *Ukazatel' knig, zhurnal'nykh i gazetnykh statey o zemlyakh o kirgizakh*, in *Izvestiya Obshchestva Arkheologii, Istorii i Etnografii pri Imperatorskom Kazanskom Universitete*, xvi-xx (1900-4), Z. L. Amitin Shapiro, *Literatura o Kirgizii (1918-1924). Annotirovannyy ukazatel'*, Frunze 1963; idem, *Literatura o Kirgizii (1925-1936) Annotirovannyy ukazatel'*, Frunze 1965; idem, *Annotirovannyy*

obozrenie literatur po istorii, arkheologii i etnografii Kirgizov (1750 1917), Frunze 1958. The fullest history of the Kirgiz steppes is that by A. Levshin, *Opisanie Kirgiz kazach'ikh ord i stepey*, St. Petersburg 1832; this is supplemented by many quotations in Velyaminov Zernov, *Issledovanie o kasimovskikh tsaryakh i tsarevichakh*, iii. Of general works, see W. Barthold, *Histoire des turcs d'Asie Centrale*, Paris 1945. R. Grousset, *L'empire des steppes*, Paris 1952, D. Sinor, *Introduction à l'histoire de l'Eurasie Centrale*, Wiesbaden 1963, S. M. Abramzon, *Kirgizi i ikh etnogeneticheskie i istoriko-kul' turnye svyazi*, Leningrad 1971. Grodekov, *Kirgizi i Karakirgizi Syr-Dar'inskoy oblasti*, Tashkent 1889. On present conditions: *Obzor sovetskogo khozyaystva Kirgizskoy A.S.S.R. 1924 god*, Pod red. Y. P. Krutilina, S. A. Tokarev, *Etnografiya narodov SSSR Istoricheskie osnovi bita i kul'tari*, Moscow 1958 (with a lengthy bibliography). On language and literature: *Philologiae turcicae fundamenta*, i ii, Wiesbaden 1959-64 (W. Barthold - [G. Hazai])

KIRID (see QIRIRSK).

KIRIM, a peninsula jutting out into the Black Sea south of the Ukraine (Russian Krim, English Crimea, French Crimée, German Krim, with an area of 25,500 km²), connected with the mainland by the isthmus ca. 8 km. wide of Perekop (in Turkish Or Kapi), and ending to the east in the peninsula of Kerč (*q.v.*). The northern and central parts are flat; to the south lies a mountainous area consisting of three ranges, the most southern of which, Mt Yayla (1,545 m. high), falls down steeply to the coastal strip. The climate is relatively mild and on the south-eastern coast similar to that of the Mediterranean area. The water of the few rivers and brooks—especially that of the Salghir—is used for irrigation. The flat grounds are cultivated; in the mountains there are pastures besides woods, and wine growing is not without importance. Some minerals are found (iron ore near Kerč, fluorspar near Sevastopol) and at present there is also all kinds of industry.

In antiquity, the peninsula was inhabited by the Scythians. From the 6th century B.C. onwards, Greek colonies existed on the coasts. Around 480 B.C. these formed the Bosporean State, whereas in the 1st century B.C. they belonged for a short time to the Pontian kingdom. From 63 B.C. onwards, the Roman Empire wielded supreme rule (see *Pauly's Realenzyklopädie der klassischen Altertumswissenschaft*, new ed. by G. Wissowa, vi. Halbband, Stuttgart 1899, cols. 2254-69, H. G. Gundel, *Das Krim um Altertum*, in *Das Gymnasium*, lii (1941), 127-38). In the 4th century A.D. first the Goths came, then the Huns. Until 1239 the Byzantine empire held the Chersonese (Old Russian Korsun'), while the main part of the peninsula belonged to the territory of the Khazars (*q.v.*). During the 10th and 11th centuries there was the Russian colony Tmutarakan' (probably near modern Taman'), important in relations with Byzantium. From around 1030 the peninsula was dominated by the Kumans or Kipčak (*q.v.*), and from 1239 by the Tatars of the Golden Horde. They also wielded a sort of supreme rule over the Genoese colonies that came into existence here (since 1261), especially in Kaffa, mod. Feodosiya, see KEFE). These colonies took over the role of the Byzantine Chersonese and became of great significance for trade with Byzantium and the Mediterranean area until their downfall in 1475. They were to a certain extent tributary to the Tatars. Occasional plunderings of these towns by the Golden Horde (see BATU'IDS), e.g. in 1298-9, or sieges, e.g. 1343, remained incidental.

Kirim is only rarely mentioned by the Arab geographers (and even then partly following the Italian reports, as by Idrīsī). The first contact with Islam dates from a campaign of the Rūm Saldūkid sultan Kay Kubād ʿAlāʾ al-Dīn II (*q.v.*) (616-34/1219-36). After the Golden Horde occupied the peninsula, first in 1223 and then, definitively, in 1238-9, the religious situation did not change immediately. At the instigation of the Egyptian Mamlūks (who entertained trade relations with the peninsula) a mosque was erected at Old Kirim (also Solkhat/Solghad), another was built later by the Khan Özbeg (722-42/1323-41) (*q.v.*).

During the latter's reign, Sunnī Islam had gained a firm footing among the Tatars of Kirim, like among the rest of the Golden Horde. From Egypt shortlived influences of the *futuwwa* (*q.v.*) asserted themselves.

Next, there existed of old also Jewish settlements, but little is known about these in these centuries except from tombstones. Karaites or Karāʾītes (*q.v.*) were found at Čufut Kale, and the Orthodox Christians had a bishopric of Gothia at Old Kirim. Western or Latin Christianity, supported mainly by the Franciscans, was represented by the Genoese until the downfall of the latter in 1475. Already in 1261 a Latin bishop is mentioned, and in 1318 the bishopric of Kaffa was founded. Its jurisdiction stretched from Varna (in modern Bulgaria) to Saray (*q.v.*), the capital of the Golden Horde. The bishopric of Cherson, which came into being in 1303, was definitively established in 1333, with parishes in the individual towns. From here efforts were made to effect a union with the other Christians and to start missionary work among the Tatars, but at the end of the 14th century these attempts came to an end for lack of success. From 1351 until after 1370 there had even existed a Latin bishopric at Saray.

In the 14th century, during embittered fights with the Venetians in the Mediterranean and the Aegean Sea, the Genoese founded trading factories in Sughdak (Russian Surož), in Balaklava (then Cembalo), in modern Sevastopol, in Tana (Azov, Turkish Azak (*q.v.*)) and in Moncastro (Ak Kirmān [*q.v.*], Rumanian Cetatea Albă, since 1358) to the west of the mouth of the Dnestr. Until 1343 the Venetians had a colony at Tana (Azov). Besides Italians, who had their own rule and system of justice, there were living in these towns Arabs from various Near Eastern lands; Turks from Anatolia; Lurs (*q.v.*); Greeks, and above all, such a large number of Armenians that Kirim was sometimes called Armenia Magna or Armenia Maritima. About the Crimean Goths we are informed by reports of the 13th century, and latterly in the 16th century by Augier Ghislain de Busbecq, ambassador of the Austrian emperor in Süleymān II (see E. S. Forster, *The Turkish letters of Ogier Ghiselen de Busbecq*, Oxford 1927, repr. 1968; W. von den Steinen, *Vier Briefe Busbecqs aus der Türkei*, 1926). Since that time they have merged with the Kirim Tatars.

The Mongols of the Golden Horde had a governor on the peninsula (*bāsāk* or *wālī*), who kept up his own diplomatic relations with the Nile valley. We hear also of an "*amīr* of the right wing" and "of the left wing of the army". Until the middle of the 15th century Kirim, thinly populated except for the coasts, remained a centre, especially through Byzantine intermediaries on the Dardanelles, for trade with Egypt. For a long period not the Kirim slaves

(Mamlūks) were sent to that country, while all kind of goods (fine shawls, perfumes and the like) found their way from there to Kirim, and further to the Volga along the road of Sughdak, Old Kirim, and Perekop. Trade with Anatolia was also important. The traffic was later taken over by Trebizond, which had remained Byzantine until 1462. The Genoese brought European goods (linen and ceramics) to Kirim and to further on. In the 15th century especially, the commercial highway ran along the bank of the Bug via Lutsk and Lemberg to Breslau.

Both in Old Kirim, the peninsula's seat of government in these centuries, and in Eski Yurt, many goods were warehoused. The currents of trade manifested themselves also in the artistic construction of buildings and in ceramics. These showed influences from Sarāy, Saldjūkid Asia Minor, Egypt and the Genoese colonies, as we know since the excavations of 1924-8. Besides trade, a part was played by the manufacture of salt, the gathering of honey (which went as far as Khwārazm) and grapes, and by horse-breeding and tanning.

Notwithstanding, all these developments, Kirim remained until the 15th century only an annexe of the Golden Horde and occasionally a refuge for ambitious claimants in their struggle for power, like Nogḥay in 1291 and Mamay in 1359. Around 1345 6, 83,000 persons allegedly fell victim to the Black Death, and in 1395 the peninsula was ravaged by Timūr. Attempts of the double kingdom of Poland and Lithuania to push as far as the Black Sea and to endanger also Kirim were foiled in 1399 by the victory of the "mayor of the palace" Edigü (Russian Yedigey) on the Vorskla. The latter had his base here during his struggle with Witold of Lithuania until he died in 1419.

During the civil wars which ravaged the Golden Horde from 1359 onwards, princes of the Mongol ruling dynasty who were descendants of Čingiz Khān and his grandson Togha Temür (the son of Djoči), had settled on various occasions in the peninsula. At the beginning of the 15th century they had apparently adopted the family name of Girāy [q.v.] or Kerey. Relying upon the noble family of the Shīrīn, Devlet Berdi had established himself in Kirim after 1426, and in 1427 he tried to enter again into relations with Egypt. But he (and since 1427 also his brother Ḥādjdjī Girāy [q.v.]) encountered opposition from the ruler of the Great (until then, the Golden) Horde. In August 1449 Ḥādjdjī formally declared himself ruler of Kirim. With the help of the Turkish sultan and the Polish-Lithuanian king Casimir IV, he was able to hold out until his death in 1466, first in his residence Kirk Yer and later in the valley of Bāghče Sarāy [q.v.]. He and later his son again and again took in fugitives of the decaying Great Horde, and they thus became rulers of the strongest among the Tatar states that came into being. On the northern shore of the Black Sea a strip of land where the Moghāys [q.v.] lived, and since 1484 also the Budjāk [q.v.], came gradually under the rule of the Kirim Khāns.

After rather lengthy succession disputes, Mengli Girāy I [q.v.], one of Ḥādjdjī Girāy's eight sons, got the upper hand. He was to become the real founder of the independent Kirim state, in spite of the fact that he had to recognise Ottoman supremacy after the conquest of Kaffa in 1475 by the Sultan's troops. The Girāy family was then recognised as enjoying in Kirim the sole rights of succession and immunity. Since Islām Girāy II (992 6/1584-8) [q.v.], their name was mentioned in the *khuṭba* after the Sultan's; they had the right to strike their own coins; and they could grant asylum. They remained independent in internal policy and had at their disposal a richly ramified officialdom which followed more and more the Ottoman Turkish pattern. Under the continuous political preponderance of the Sultan, co-operation between the two states generally passed off without too much friction, in spite of many dangerous tensions at times. Joint military expeditions were regularly organised, in 1476 and 1538 into Moldavia, in 1543 for the first time into Hungary. From the time when the Turks had conquered Kilia and Ak Kirmān (1484) and the Poles had been defeated in Moldavia (1497), the khanate of Kirim was in direct contact with the Turkish dominions in the Balkan peninsula. To the north-east the Cerkes [q.v.] and Kabards [q.v.] were subjects of the Kirim Khāns, and thus the Black Sea became until 1739 a Turkish Tatar inland sea.

Relations with the Christian powers in the north changed when, from 1470-4 onwards, Casimir IV decided to co-operate more and more with the Great Horde. The Kirim Khāns turned to the Grand Dukes of Moscow, who between 1468 and 1571 were exempted from paying tribute. With certain fluctuations in details, both states remained loyal to this alliance until the fall of the Great Horde in 1502, and even extended it, while the kings of Poland-Lithuania in 1480 and later repeatedly neglected their commitments to the Horde. From that period onwards, this double kingdom was exposed to attacks from both the Muscovites and the Kirim-Tatars, who again and again invaded Podolia, Volhynia and Galicia and more than once laid Kiev, Černigov and other towns under contribution (for the Tatar incursions between 1474 and 1569, see J. Ochmański, *Organizacja obrony przed Tatarami w Wielkiem Księstwie Litewskim* ("The organisation of the defence against the Tatars in the Grand Duchy of Lithuania"), in *Studia i materyały do historii wojskowości* ["Studies for the history of the army"], v (1960), 349-98, esp. 361 4). Under these circumstances the Great Horde got into great difficulties, especially after the death of Khān Ahmad in January 1481. Until the very end of this state, officers, soldiers and even princes of the ruling house continued to desert to the Kirim-Khāns (see M. Malowist, *Kaffa kolonia genueńska na Krymie i problem wschodni w latach 1453 1475* ["Kaffa, the Genoese colony in the Crimea and the eastern problem in 1453 75"], Warsaw 1947 [*Prace Instytutu Historycznego Uniwersytetu Warszawskiego* ("Publications of the Historical Institute of the University of Warsaw")], ii). Even after a temporary treaty of peace between the Grand Duchy of Moscow and Lithuania in 1493, the latter's contact with Kirim remained as close that the Khāns were able to mediate in 1496 for the establishing of diplomatic Russian-Turkish relations, initially in the main for commercial reasons (see V. D. Syroečkovskiy, *Puti i znosheniya Moskvi s Krymom na rubeže XV-XVI vekov* ("Ways and relations of Moscow with the Crimea at the turn of the 16th century"), in *Izvestiya Akademii Nauk SSSR*, iii (1932).

When in June 1502 the Great Horde was finally defeated to the east of Kiev and close to where the Desna joins the Dnyepr, and their last Khān was forced to flee to Lithuania (where he was executed in 1505), the Kirim Khān, in accordance with his claim, assumed the rights of the former Golden Horde and demanded tribute "without subterfuge" from Moscow and Lithuania. To the Grand Duke of Lithuania he offered a treaty "after straightening

out relations". In addition, Mengli Girāy felt himself responsible for the security of the khānates of Kazān [q.v.] and Astrakhān [q.v.] and thus ran into increasing difficulties with Moscow (K. Fułaski, *Mendli Girāy* (sic), *chan Tatarów perekopskich* ("Mengli-Giray, Khan of the Perekop Tatars"), Warsaw 1882). Under these circumstances, a treaty with Sigismund I Augustus (1506-48) of Poland and Lithuania was of great importance to Mengli Girāy I. But the negotiations had not yet been concluded when the Kīrīm Khān died at a great age in 1515 (J. Pajewski, *Przyjaźń przymierza polsko-tureckiego za Zygmunta Augusta* ('A project of treaty between Poland and Turkey under Sigismund Augustus'), in *Księga ku Czci Oskara Haleckiego* Warsaw 1935).

Under Mengli Girāy I, Kīrīm reached its cultural zenith. The area was opened up to Ottoman Turkish culture. Artists from the Islamic cultural environment and also Italians, often Genoese, artisans who had remained to the country after 1475, such as Augustino da Garibaldi and Vincento da Zuguli, found work here, especially as architects and stone carvers. Intellectual and literary circles came also into being. Of special artistic importance was the Khān's palace at Bāghče Sarāy [q.v.], whither Mengli Girāy had transferred his residence from Old Kīrīm. It is actually in ruins today, but the Zenǧirli Madrasa has been preserved.

In view of the position of power which Mehmed Girāy I (1513-23) [q.v.] had inherited from his father (V. E. Syroečkovskiy, *Muchammed-Geraj i ego vassaly* "Mehmed Girāy and his vassals"), in *Učënye Zapiski Moskovskago Gosudarstvennogo Universiteta*, lxi (1940)), the new Khān also aspired to the position of the Golden Horde and wanted to unite all Tatars under his rule. His son Šāhīn Girāy [q.v.] in 1521 succeeded in driving away a Khān of Kāzān who was friendly to Moscow and, in spite of the resistance of Astrakhān, in incorporating his territory into that of his father. Having become Khān (1532-51) after his father had been murdered and Islām Girāy I [q.v.] had been put aside, he did not however succeed in holding out after a defeat inflicted on him by Moscow on the Oka in 1541 (Ö. Gökbilgin, *Tarih-i Sakib Giray han* (*1532-1551*), crit. ed., tr., notes and glossary, Erzurum 1973 (Atatürk Üniversitesi yayınları 222)). On the contrary, Ivan IV the Terrible (1533-84) who had born the title of Tsar since 1547, carefully collected his forces for a campaign which brought under his control Kāzān [q.v.] in October 1552, and Astrakhān [q.v.], firstly in 1554 and definitively in 1556. Thus the Volga valley was opened up to Russia right down to the Caspian Sea, the waterway to Caucasia and the north coast of Persia lay free and the Russians got an extensive new region for settlement. Dawlat (Dewlet) Girāy I (1551-77 [q.v.]) finally saw himself confined to the Kīrīm Khanate and its northern hinterland. After the manifold disturbances of the preceding decades he tried to collaborate again with Poland-Lithuania, which saw itself more and more threatened by Moscow and both of which merged into one single state in the Union of Lublin in 1569 (Ö. Gökbilgin, *1538-1577 yılları arasında Kırım Hanlığı'nın siyasi durumu*, Ankara 1973 (Atatürk Üniversitesi yayınları 269)).

However, the Khān was dissatisfied as was Sultan Süleymān II, by the fact that so many Muslims had become subject to Orthodox Christian sovereignty. The two sovereigns entered upon a close treaty of alliance and for the time being supported Tatar revolts against the supremacy of Moscow, these revolts are echoed in the legends around Cora Batır (Sa'ādat Šākir, *Cora Batyr Eine Legende in dobrudscha-tatarischer Mundart*, Cracow 1935). Dewlet Girāy attempted to relieve them by marching against Russia in 1555. But his fear that the Sultan might enlarge his influence in Kīrīm by stationing his own troops there made him abandon a plan of supporting the Ottomans effectively. Thus the Sultan received little help from the Kīrīm Khān for his attempt to connect with a canal the Volga and the Don, at the place where they draw the nearest to each other (near modern Volgograd). He could rely only on the Noghays [q.v.]. Consequently, when in the winter of 1569 the Turkish troops were defeated between Astrakhān and the Sea of Azov, the enterprise of Selīm II fell through. He had hoped to establish in Kīrīm a base for his campaign against Shī'ī Safawī Persia, and to activate from there economic relations with Central Asia (H. Inalcık, *Osmanlı-Rus rekabetinin menşei ve Don-Volga kanalı teşebbüsü* (1569), in *Belleten* xii 146 (1948), 349-402, Eng. text in *AUDTCFD* (1947), 47-106; A. N. Kurat, *Türkiye ve İdil boyu 1569 Astarhan seferi, Ten-İdil kanalı ve XVI-XVII yüzyıl Osmanlı-Rus münasebetleri*, Ankara 1966 (*AÜDTDF* Yayınları 152), P. A. Sadikov, *Pokhod Tatar i Turok na Astrakhan v 1569 godu* ("The campaign of the Tatars and Turks against Astrakhan in 1569"), in *Istoricheskiye Zapiski*, xxii, Moscow 1947, 232-66). When in 1571 the Turkish fleet became decisively weakened by the defeat at Lepanto [see INEBA BAḤRĪ], any plan of a Turkish advance against Russia had to be abandoned. On the other hand, Kīrīm was thus freed from the feared guardianship of the Sultan, although it also lost his direct protection.

The Khān availed himself immediately of this freedom at his rear to march against Moscow. In 1571 the city fell for the last time into Tatar hands and was burnt down. The Tsar was forced to declare himself prepared to resume paying tribute (*tgkliytsā*). It was only Peter the Great who was able to free himself decisively from this obligation. At this point, the Tsar was unable to counter attack, as a result of his military engagements in the west in regard to Livonia.

Kāzān and Astrakhān thus remained in Russian hands. In order to change this situation, Khān Mehmed II, the Fat (Semiz, reigned 1577-84) made new endeavours (Kitābī Abdulla oğlu Hasan, *Ikinci Mehmed Giray Han/Khān Mehmed Girāy II, in Azerbaycan Yurt Bilgisi*, iii (1934), 2). Since Turkish help failed to come because of the war with Persia (1578-90), the Khān sought an alliance against Moscow with Poland, Lithuania and even with Pope Gregory XIII. He held out a prospect of conversion to Roman Catholicism, which caused the Popes to send several ambassadors between 1571 and 1583. A Kīrīm embassy was honourably received at Vilna in 1579 (Stanisław Kryczyński, *Nieudana misya katolicka wśród mahometanów litewskich w XVI w.* ("A failed Catholic mission among the Lithuanian Muslims in the 16th century"), in *Przegląd Islamski* (1935), 3/4, 11-14).

But not even in this way could Mehmed Girāy II achieve a real success. He was forced to put on 5,000 soldiers at the disposal of the Sultan for the war against Persia. When the successor to the throne, the Kalgha [q.v.], was taken captive by the Persians, the Khān himself interfered in the war against the Shāh. This led to friction with the Sublime Porte and to the course of the ensuing unrest in Kīrīm, the Khān was murdered in 1584.

The new Khān, Ghāzī Girāy II (1588-1608) [q.v.],

got the upper hand after lengthy disturbances. He also came forward as a poet (H. Ertaylan, *Gazi Geray Han, hayatı ve eserleri*, Istanbul 1958; C. M. Kortepeter, *Gazi Giray II, Khan of Crimea, and Ottoman policy in eastern Europe and the Caucasus, 1588-1594*, in *The Slavonic and East European Review*, xliv/102 (1966), 139-66). His attack against Moscow in 1591 failed, and during the Turkish campaign against Hungary of 1592-1606 he had, in the same way as his predecessor, to provide troops for the Sultan, which on various occasions led to friction (B. Kocowski, *Wyprawa Tatarów na Węgry przez Polskę w 1594 r.*, Lublin 1948; M. Alekberli, *Bor'ba Ukrainskogo naroda protiv turetsko-tatarskoy agressii vo vtoroy polovine XVII-pervoy polovine XVII vekov* ("The struggle of the Ukranian people against the Turkish-Tatar attack in the 2nd half of the 16th and the 1st half of the 17th centuries"), Saratov 1961.

During these various wars, Kirim itself remained free of military incursions, and so the administration there could follow its even course. Public roads and inns were secure, and documents which survived the conflagration of the Khān's palace (in 1736) testify to well-organised archives and the regular proceedings of the Islamic law concerning justice, inheritance and marriage. Customary law (*ʿāda* [*q.v.*]) also played a rôle. The horse trade and rates of exchange of foreign currency were officially supervised. As in other Islamic countries, the *Divān* [*q.v.*] was the supreme court of judicature. There were 48 judicial regions in the lowlands and 19 in the mountains, where, except for the infliction of the death penalty, convictions could be pronounced without right of appeal "insofar as the conviction was in accordance with the laws." However, in the administration of justice corruption as always played a rôle that could not be disregarded.

The Tatars enjoyed personal freedom and, as in earlier centuries, passed for a friendly and hospitable people. Women were entitled to personal property, and took part now and then in public life, diplomatic negotiations or even in military expeditions; and occasionally they devoted themselves to poetry and literature.

Until the age of fifteen, the education of children of the ruling house was often left to Cirches (*q.v.*), who taught them riding and the use of weapons. (Up to the 19th century other Caucasian peoples, including the Ossets, also had their children brought up by Cirches.) The hardships thereby endured were supposed to influence many khāns up to their old age and to counterbalance Ottoman urban culture. In the course of time, however, rulers and high officials turned more and more to Istanbul for the education of their children, also, many a Girāy prince lived there as a hostage. Thus Turkish cultural influence became more and more important during the 17th and 18th centuries. Ottoman Turkish gradually began to supersede Kirim Tatar as the written language; Turkish melodies (played as drums, clarinets and later also violins) may well have merged into local musical tradition; but confinement of women in harems increased.

In this way, the ties with Turkey were strengthened, but they also reinforced dependency upon the Sultans, who more and more intervened, by deposing, and occasionally reinstating, many a khān. Thus the stability of the regional government was undermined both by the power of Istanbul and by the growing independence of the Begs, who possessed wide powers within their fiefs and fought out among themselves many a personal feud. The noble families, the prominent ones being the Shirin, the Kuluk, the Bārin, the Mangūt and the Sulesh, enjoyed tax freedom. The state revenues consisted largely of certain customs duties, payments by individual governors, indirect taxes (mainly on salt) and an annuity of the Sultan. Direct taxes, as for as they were levied, consisted (at least officially) of the *ʿušr* [*q.v.*] and *zakāt* [*q.v.*].

The interventions of the Sublime Porte bound Kirim the more closely to Turkey because no other policy of alliance was now possible with any power to the north (E. Baranowski, *Polska a Tatarszczyzna w latach 1624 1629* ("Poland and Tartary in 1624-9"), Lodz 1948). Bad harvests in the Crimea, whose agriculture normally secured the subsistence of its inhabitants, may have caused the Tatars to plunder again and again the south western regions of Poland and Lithuania (W. Czapliński, *Sprawa najazdów tatarskich na Polskę w pierwszej połowie XVII w.* ("The problem of the Tatar incursions into Poland in the first half of the 17th c."), in *Kwartalnik Historyczny* lxx/3 (1963), 713-20; M. Horn, *Skutki ekonomiczne najazdów tatarskich z lat 1605 1633 na Ruś Czerwoną* ("The economic consequences of the Tatar invasions in 1605-33 in Red Russia"), Breslau 1964; J. Goldberg, *Chronologia i zasięg najazdów tatarskich na ziemie Rzeczypospolitej Polskiej w latach 1600 1647* ["Chronology and reach of the Tatar invasions into the land of the Republic of Poland in 1600-47"], in *Studia i Materiały do Historii Wojskowości*, viii/1, 3-72). Properly speaking, these incursions had no political motivation, but they were to such an extent prejudicial to relations with the neighbours in the north-west that there could be no more question of combined action against the common enemy Moscow, which now became more and more threatening to both parties, also, the Kirim Khāns themselves suffered repeatedly from the unrest of the nomads. When at the treaty of Pereyaslavl' in 1654 the Cossack hetman Bohdan Khmel'nitskiy, who had been supported by the Tatars, changed sides and joined Moscow, the Tsar became a direct neighbour of the Crimean khān. Now at last the Polish Lithuanian king sought alliance with Islām Girāy III (1644-54 [*q.v.*]). They undertook a common military expedition against Moscow, which ended in 1655 with the victory of Ochmatów (J. Rypka, *Aus der Korrespondenz der Hohen Pforte mit Bohdan Chmelnyckyj*, in *Festschrift für Jar. Bidlo*, Prague 1928, idem, *Western Beziehungen . .*, in *Archiv Orientální*, ii (1930); idem, *Další příspěvek ke korespondenci Vysoké Porty s Bohdanem Chmelnickým* ("Further contribution to the correspondence. . "), in *Časopis Národního Muzea*, 1934, idem, *Briefwechsel der Hohen Pforte mit den Kosmchanen im II. Bande von Feridun Münşe'ât*, in *Festschrift für Georg Jacob*, Leipzig 1932, 249-69; O. Pritsak, *Das erste türkisch-ukrainische Bündnis (1648)*, in *Oriens*, vi (1953), 266-98). The Tatars now also took part in the campaigns of the Poles against the allied forces of the Russians, Swedes, Brandenburgers Transylvanians and Cossacks (in the period of the "Deluge") and fought in 1656 together with them before Warsaw, in Prussia and in Greater Poland. Many captives and rich booty were brought to the Crimea. Khān Mehmed Girāy IV (who reigned for the second time 1654-66) concluded a treaty with the Polish king over the partition of the conquered regions, the Islamic areas, like Kāsān and Astrakhān, were to fall to the Crimean khānate. Both peoples fought shoulder-to-shoulder against Transylvania in 1657 and against Moscow in 1660 (the Battle of Tudnov) (I. Rubala, *Wojna brandenburska z najazd*

Rakoczego i wojna maskiewska ("The Brandenburg War, the invasion of Rákóczy and the Moscow War"), Lomberg Warsaw 1923; A. Hajko, *Wyprawa wojenna w 1666 r.* ("The campaign of Tsudnov in 1666"), Warsaw 1932). The Tatar army numbered at this time 20,000-30,000 troops at the most, higher accounts (up to 150,000 and even 200,000) are probably false (O. Górka, *Liczebność Tatarów krymskich i ich wojsk* ["The number of the Crimean Tatars and their armies"], in *Przegląd Historyczno-Wojskowy*, viii/1, 1936). Single military units had their own standards, while the cavalrymen brought spare horses along with them. Victuals consisted mainly of millet, which was milled in leathern mortars. Prisoners of war were enabled to ransom themselves as far as possible, not infrequently they were humanely treated, in accordance with Islamic law, there may have been many freedmen.

The alliance between Poland-Lithuania and the Crimean khānate came to an end when Mehmed Girāy was deposed in 1666 and the armistice of Andrusovo, between Poland-Lithuania and Moscow, was concluded in 1667. The political situation changed further when Peter Doroshenko (1665-76), the hetman of the Cossacks "of the left bank", submitted to the Sultan out of dislike for the equalising policy of Moscow (D. Dorošenko and J. Kyrpa, *Hejtman Petr Doroševič a jeho turecka politika* ["Hetman P. D. and his Turkish policy"], in *Časopis Národního Musea*, Prague 1933; Ch. Hilbert *Osteuropa 1648-1681 bei den Ost genössischen osman Historikern*, typewr thesis, Göttingen 1948).

At the instigation of the Turks, Khān ʿĀdil Girāy (1666-71) had to collaborate with the Cossacks and therefore fell out with Poland-Lithuania. The ensuing war made Podolia in 1672 into a Turkish province, and thus the Sultan's empire reached its greatest expansion ever to the north of the Black Sea. Attempts by *Khān Selīm Girāy I* (1672-8) at mediation failed because of the Sultan's uncompromising attitude (J. Woliński, *Pośrednictwo tatarskie w wojnie polsko-tureckiej 1674-1675 r.* ["Tatar mediation in the Polish-Turkish War 1674-5"], in *Polityka narodów* iv (1954)/4). The new khān, Murād Girāy (1678-83), tried to free himself from subordination to Turkey and wanted to replace the *Sharīʿa* by "the Law of Čingiz Khān" (*Töre, Yasa*), a daring enterprise which naturally angered the *ʿulamāʾ*. In accordance with his political principles, he remained aloof during the Turkish march against Vienna in 1683, and his army corps did not take part in the battle of the Barren Mountain Kahlenberg. As a punishment, he was banished to Bulgaria (Kirimlı Abdullah oğlu Hasan, *Vaṣyana ömānde Kırım swanrileri*, in *Azerbay san Yurt Bilgisi* ii (1933), 22 ff., 348 ff.). Nevertheless, relations between the Tatars and Poland-Lithuania remained tense until the Peace of Carlowitz (1699 [see KARLOVČAI]).

The Tsars availed themselves of this dissension. After the Cossacks of the left bank of the Dnyepr had come again under their control, two Russian armies marched against the Crimea in 1687 and 1689. While Khān Selīm Girāy (who reigned for the second time in 1684-92) succeeded in defending the peninsula itself, Azov was lost to Peter the Great in 1699, and thus the khānate was divided for several years into two parts, ie. the peninsula and the region towards the Caucasus. In order to counterbalance Azov while it was in Russian hands, the fortress of Yeñi Kal'e was founded near Kerč (B. H. Sumner, *Peter the Great and the Ottoman empire*, London 1949).

During this turbulent period, the cultural significance of the khānate declined. Artistic creativity was small, although Islamic influences from the Crimea and from Turkey are clearly recognisable in contemporary Poland (T. Mańkowski, *Sztuka islamu w Polsce w XVII i XVIII wieku* ["Islamic art in Poland in the 17th and 18th centuries"], Cracow 1935, P.-K. Spuhler, *Studien Repräsentationsstepptiche der mittleren bis späten Safawidenzeit die sog. Polenteppiche*, doctoral thesis, Berlin 1968).

The victory of the European coalition over the Sultan in the great war of 1682-99 was of serious consequence for Kirīm. Pressure from the north made itself more and more felt. The planned co-operation with the Swedish king Charles XII (1697-1718) and with the hetman of the Cossacks Ivan Stepanović Mazepa, in which Ghāzī Girāy III (1704-7/[q.v.]) was very interested, failed owing to the Russian victory near Poltava in 1709. It is true that the allies succeeded in forcing Peter the Great, hemmed in by Turkish troops near the Pruth, to retrocede Azov, but this was all that could be achieved: a protest of Khān Dewlet Girāy II (who reigned for the second time 1708-13) remained unsuccessful (A. N. Kurat, *Prut seferi ve barışı* ["The Pruth campaign and peace"], Ankara 1951). More and more the Tatars began to fear and reject the adversary from the north (G. Veinstein, *Les Tatars de Crimée et la seconde élection de Stanislas Leszczyński*, in *Cahiers du monde russe et slave*, xi (1970), 24 pp.), especially when the Russians invaded Kirīm in 1737 and 1738, destroying many cultural monuments, among them Bağçe Sarāy (*q.v.*) in 1739 the Tatars and Turks had to abandon Azov definitively to the Russians (J. Vesaš, *Turetskyj traktat ob osmanskikh krepostyakh vnovnoge Prichernomor'ya v nachale XVIII veka* ["A Turkish treatise on the Ottoman fortresses on the north coast of the Black Sea at the beginning of the 18th century"], in *Vostočnye istočniki po istorii narodov yugo-vostočnoy i tsentral'noy Evropy*, ii, Moscow 1960, 98-139). As in Poland-Lithuania, the strength of Kirīm was diminished by the heavy toll of human life, the demoralising defeats, the increasing interference of the Porte in Crimean affairs, the manifold struggles among the princes of the ruling house, and a fairly protracted revolt of the Noghays (*q.v.*) around 1728 (see B. Kellner-Heinkele, *Aus den Aufzeichnungen des Sa'id Giray Han. Eine zeitgenössische Quelle zur Geschichte des Chanats der Krim um die Mitte des 18. Jahrhunderts*, Freiburg i. B., 1975). An attempt at a new alliance between Poland-Lithuania, Kirīm and Turkey remained without further result during the 18th century (W. Konopczyński, *Polska a Turcja* ["Poland and Turkey"] *1683-1792*, Warsaw 1935; D. Oljančyn, *Do istoriï torhovli Ukraïny z Krymom* ["Contributions to the history of the trade between the Ukraine and Kirīm 1734-9"], Lemberg 1933). An offer of alliance made to the Crimean khān by Frederick the Great in 1761, at the most difficult moment of the Seven Years' War, led to no result either (H. Scheel, *Ein Schreiben des Krim Giray Khan an den Prinzen Heinrich, den Bruder Friedrichs des Grossen*, in *Jorn Deny Armağanı*, Ankara 1958, 213-20).

On the other hand, the devastations of the war years stimulated the zest for living of the Crimean Tatars which, during the last decades of their freedom, flowered into a second cultural bloom, and which found its most important expression in the reconstruction of the khān's palace at Bağçe Sarāy in 1740-3. The Sultan made a present of a valuable library, and in 1763 a new staterooom (*Dīwān*) was erected, richly decorated with paintings and sculp-

tures. Former hydraulic works, like aqueducts and canals, were restored and preparations made for a new period of prosperity.

But already in 1771, Russian armies had again marched into the Crimea. Khān Selīm Girāy III (second reign 1770-3) tried to make a stand against them, in vain, because the Sultan himself pressed hard by a war (1768-74), against the Tsarina Catherine II, was unable to render effective help. Many people perished and many places were destroyed. The Russians marched as far as Kafa and the Khān had to flee to Istanbul (A. Mal'avov, *Bor'ba Tsarstvo Rossiĭ s Turtsiei za obladenie Krymskim Khanstvom* ("The struggle of Imperial Russia and Turkey for the domination of the Crimea", *Moscow 1929*)

Thereupon the nobility decided to appoint a khān who was friendly to the Russians and to accede to the Russian occupation of the fortresses of Kerč, Yeñi Kal'e and Kafa. Thus the independence which the Sublime Porte was forced to grant to the Kirim at the peace of Küčük Kaynardje [*q.v.*] in 1774 (E. I. Druzhinina, *Kyuchukkaynardzhiĭskiĭ mir 1774 goda: ego podgotovka i zaklyuchenie* ("The peace of K. K. in 1774 preparation and conclusion"), Moscow 1955), and the renunciation of its rights over these fortresses, on the Kuban and on the Tarsan peninsula, were only fictions, the more so because Kerč and Yeñi Kal'e were at that time already directly subject to Russia (V. D. Smirnov, *Sbornik vibrannïkh kasatel'stvuyushchikh dokladov i ofitsial'nïkh dokumentov otnosyashchikhsya k Tavricheskoĭ, Rossii i Krimu* ("Selection of the most important reports and official documents with reference to Turkey, Russia and the Crimea"), St. Petersburg 1881 (bearing mainly on the period 1786-74), F. A. Uasl, *Asrım tarihi veya Necati efendinin Ruzya sefaretnamesi 1769-75*, in *Tarih vesikaları* iii (1944), 599 (with continuations in later issues), *Mubadele Au Ottoman-Russian exchange of ambassadors [1775/76]*, annot. and tr. by N. Itzkowitz and M. Mote, Chicago-London 1970).

Even the Russian concession at the treaty of Aynalï Kavak in 1779 to declare the Sultan "in his capacity of caliph" to be the head of all Muslims could not prevent Crimean independence from coming to an end. Already two years earlier, the successor to the throne, Shāhīn Girāy, had succeeded as Khān with the help of the Russians and the Noghays (F. F. Lashkov, *Shagin-Girey, poslednyy krimskiy khan* ("Shāhīn G., the last Crimean Khān"), in *Kiyevskaya Starina*, Sept. 1886, 36 ff.). He was educated in Salonica and Venice, had become acquainted with Russia while living there as ambassador, and was open-minded to European and especially to Italian culture. Like the last Polish king, he thought about reforming the state, mainly after the Russian example. He thus transferred the capital to Kafa, on the sea coast, probably after the example of the Russian transfer of their capital to St. Petersburg. He invited foreign instructors to train his army of 6,000 troops, limited the *waḳf*s [*q.v.*] while indemnifying the *'ulamā'* with a pension, and introduced under foreign supervision a new silver coinage. A council of ministers consisting of 12 members was created, and finances were set up anew by introducing financial registers. These reforms burdened the country with considerable debts, and Russia availed itself of the ensuing discontent. Besides, the khanate became upset by a new revolt of the Noghays in 1782 and a rebellion of two brothers of the Khān, who saw himself forced to flee to Grigoriy Aleksandrovič Potëmkin, the governor of the regions newly conquered by the Russians in the south (the Ukraine). After the Khān had returned to his country with Russian help, Catharine II pressed him under deceitful promises to abdicate. Shāhīn Girāy saw no escape from giving in to this pressure and from abandoning his country to Russia, to which it has belonged ever since (A. W. Fisher, *The Russian annexation of Crimea 1772-1783*, Cambridge 1970, N. F. Dubrovin, *Prisoedinenie k Rossii Kryma. Reskripti, pis'ma, relatsii i donesheniya* ("The union of the Crimea with Russia. Rescripts, letters, accounts and notes") i-ii, St. Petersburg 1885, idem, *V'ezd poslednyago krimskago khana Shagin Gireya iz Rossii v Turtsiyu* ("The journey of the last Crimean Khan Shāhīn Girāy from Russia to Turkey"), in *Zapiski Imperatorskago Odesskago Obshchestva istorii i drevnostey*, xiii (1883), 132-56).

The annexation of the peninsula to the Russian empire (first as the Tauris region, and then from 1796 onwards as the New Russia Government) brought about shiftings of the population which must be mentioned here. Already in 1779 the Orthodox Christians of the Crimea, for centuries subordinated to "the Bishop of Gothia", had been removed to Southern Russia at the latter's instigation: 31,280 people from 6 towns and 80 villages settled around Mariupol' (A. L. Berthier Delagarde, *K istorii khristianstva v Krimu* ("Contribution to the history of Christianity on the Crimea"), in *Zapiski Imperatorskago Odesskago Obshchestva istorii i drevnostey*, xxviii (1910), 1-108; A. I. Markevič, *K voprosu o polozhenii khristian v Krimu vo vremya tatarskago vladicestva* ("Contribution to the situation of the Christians on the Crimea during the Tatar reign"), Simferopol 1910). Also the Armenians left the country (likewise with their own hierarchy) and settled in (New-) Nakhičevan now a suburb of Rostov-on-Don. In order to be able to remain in their home country, many Christians, among whom were probably the last remnants of the Crimean Goths, embraced Islam. (E. I. Druzhinina, *Severnoe Prichernomor'e* ("The northern edge of the Black Sea"), 1775-1800, Moscow 1959). But also, many Tatars left the country at that period and in the 19th century to settle in Turkey (G. I. Levitskiy, *Pereselenie tatar iz Kryma v Turtsiyu* ["The settlement of Crimean Tatars in Turkey"] in *Vestnik Evropï* v (1882), 596-639; A. Markevič, *Pereselentsïa krimskikh tatar v Turtsiyu v 1854 godu i dal'neĭshee nasel'enie v Krimu* ("The settlements of the Crimean Tatars in Turkey in connection with the movement of the population on the Crimea"), in *Izvestiya Akademii Nauk SSSR* (1926), 375-405). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, but furthermore some 7,000 Tatars from the Kuban area (M. Pinson, *Russian policy and the emigration of the Crimean Tatars to the Ottoman Empire, 1854-1860*, in *Gunay Doğu Avrupa Araştırmaları Dergisi*, i, (1972), 57-62). Most of the Crimean Tatars who had remained were moved to Central Asia in 1945 (and have not until now been permitted to return—*New York Times*, 13 July 1972—in spite of their official "rehabilitation" (*New York Times*, 5 May 1967; *Frankfurter Allg. Ztg.*, 25 Sept. 1967).

Until February 1954, Kirim belonged to the Russian Socialist Federative Soviet Republic (RSFSR), but has since been combined with the Ukraine.

Chronology of the Crimean Khāns

(1449)-1456	Hādjdjī Girāy I
1456	Baydar, son of the preceding
1456-1466	Hādjdjī Girāy I (2nd time)
1466-1467	Nūr Dewlet, son of the preceding

1467-1474 Mengli Girāy I, brother of the preceding
1474-1475 Nūr Dewlet (and time)
1475-1476 Mengli Girāy I (2nd time)
1476-1478 Nūr Dewlet (3rd time)
1478-1515 Mengli Girāy I (3rd time)
1515-1523 Mehmed Girāy I, son of the preceding
1523-1524 Ghāzī Girāy I, son of the preceding
1524-1532 Sa'ādet Girāy I, son of Mengli G. I
1532 Islām Girāy I, brother of the preceding
1532-1551 Shāhīn Girāy I, brother of the preceding
1551-1577 Dewlet Girāy I, nephew of the preceding
1577-1584 Mehmed Girāy II, the Fat, son of the preceding
1584-1588 Islām Girāy II, brother of the preceding
1588-1596 Ghāzī Girāy II, brother of the preceding
1596 Fetḥ Girāy I, brother of the preceding
1596-1608 Ghāzī Girāy II (2nd time)
1608 Tokhtamish Girāy, son of the preceding
1608-1610 Selāmet Girāy I, son of Dewlet G. I
1610 Mehmed Girāy III, grandson of Mehmed G. II
1610-1623 Djānibek Girāy, grandson of Dewlet G. I
1623-1624 Mehmed Girāy III (2nd time)
1624 Djānibek Girāy (2nd time)
1624-1627 Mehmed Girāy III (3rd time)
1627-1635 Djānibek Girāy (3rd time)
1635-1637 Inayet Girāy, brother of Tokhtamish G.
1637-1641 Bahādir Girāy I, son of Selāmet G. I
1641-1644 Mehmed Girāy IV, the Pious (*sofi*), brother of the preceding
1644-1654 Islām Girāy III, brother of the preceding
1654-1666 Mehmed Girāy IV (2nd time)
1666-1671 'Ādil Girāy, from the collateral line Čoban G.
1671-1678 Selīm Girāy I, son of Bahādir G. I
1678-1683 Murād Girāy, cousin of Selīm G. I
1683-1684 Ḥadjdjī Girāy II, cousin of the preceding
1684-1691 Selīm Girāy I (2nd time)
1691 Sa'ādet Girāy II, brother of Ḥadjdjī Girāy II
1691-1692 Ṣafā Girāy, cousin of the preceding
1692-1699 Selīm Girāy I (3rd time)
1699-1702 Dewlet Girāy II, son of the preceding
1702-1704 Selīm Girāy I (4th time)
1704-1707 Ghāzī Girāy III, son of the preceding
1707-1708 Kaplan Girāy I, brother of the preceding
1708-1713 Dewlet Girāy II (2nd time)
1713-1716 Kaplan Girāy I (2nd time)
1716-1717 Dewlet Girāy III
1717-1724 Sa'ādet Girāy III, son of Selīm G. I
1724-1730 Mengli Girāy II, brother of the preceding
1730-1736 Kaplan Girāy I (3rd time)
1736-1737 Fetḥ Girāy II, son of Dewlet G. II
1737-1740 Mengli Girāy II (2nd time)
1740-1743 Selāmet Girāy II, brother of the preceding
1743-1748 Selīm Girāy II, son of Kaplan G. I
1748-1756 Arslan Girāy, brother of Fetḥ G. II
1756-1758 Ḥalīm Girāy, son of Sa'ādet G. III
1758-1764 Ḳïrïm Girāy, son of Dewlet G. II
1764-1767 Selīm Girāy III, son of Fetḥ G. II
1767 Arslan Girāy (2nd time)
1767-1768 Makṣūd Girāy, son of Selāmet G. II
1768-1769 Kïrïm Girāy (2nd time)
1769-1770 Dewlet Girāy IV, son of Arslan G.
1770 Kaplan Girāy II, son of Selīm G. II
1770-1771 Selīm Girāy III (2nd time)
1771-1772 Makṣūd Girāy (2nd time)
1772-1775 Shāhīn Girāy II, son of Selīm G. III
1775-1777 Dewlet Girāy IV (2nd time)
1777-1782 Shāhīn Girāy, son of Selīm G. III
1782-1783 Bahādir Girāy II, brother of the preceding
1783 Shāhīn Girāy (2nd time)

A list of the Crimean *khāns* can be found in A. W. Fisher, *op. cit.*, 158 (defective) and in Zambaur, 247 f. For genealogical tables of the Girāys, see H. Inalcık, in *IA*, iv, after p. 788, Zambaur, table S, and E. Kellner, *op. cit.*, after p. 265 (18th c.).

KİRK KILISE, also Kirk Kilise and Kirkilisa (Ewliyâ Çelebi, *Seyâhat-nâme*, Istanbul 1928, viii, 69) a town in eastern Thrace, modern Kırklareli. This region to the east of Adrianople on Edirne [*q.v.*] had a centre in classical times, but its name is unknown (for the view that this place was called Heraclea, see J. von Hammer, *Histoire*, i, 234) The Byzantine name of Kirk Kilise was apparently Sarante Ekklesiai, and the name Kirk Kilise must mean the church of forty saints and not forty churches (F. W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929, ii, 392-2).

The later writers Kâtib Çelebi (*Dihân-nümâ*, Rumeli section Topkapı Sarayı Müzesi, Hazine kütüphanesi, no. 443, f. 17a) and Muneccimbâshi (iii, 295), record the date for the conquest of Kirk Kilise as 770/1368-9 (see Feridûn Bey, *Münşe'âtü 's-selâtîn*, Istanbul 1274, i, 71-2) The early historians do not mention its capture, but the implication is that it was conquered few years after the conquest of Edirne in 763/1362 (for this, see Halil Inalcık, *The conquest of Edirne* (1362), in *Archivum Ottomanicum*, ii (1972)) The first Islamic building constructed in the town after its conquest was the 'Atîk mosque (Başbakanlık arşiv genel müdürlüğü, Tapu defteri, no. 370, this building was in a ruined condition in 1228/1807) Nomads (*yürüks*) brought from western Anatolia were settled in the region of Kirk Kilise, and were during the 9th-10th/15th-16th centuries known as "the *yürüks* of Kirk Kilise" (M Tayyib Gökbilgin, *Rumeli'de yürükler, tatarlar ve evâil-i Fâtihan*, Istanbul 1957, 84, 180 and *passim*), Kirk Kilise was first attached to the *Vize sanjak* of the province of Rumelia, but was then established as *müsellem sanjak* (idem, *Kanuni Sultan Süleyman devri başlarında Rumeli eyâleti, livâları, şehir ve kasabaları*, in *Belleten*, Ixxvili (1956), 255, 269).

In the 10th/16th century, Kirk Kilise consisted of 6 quarters or *mahalles* Djâmi'-i 'Atîk, Djâmi'-i Kebîr, Hâdjdjî Zekeriyâ, Sultân Bâyezîd Khan Ketkhûdâsi, Yaprakli and Karadja Ibrâhîm, containing 283 households (Tapu defteri, no. 370) During the 11th/17th century, Kirk Kilise was a small town with a few shops and red tile-roofed houses set among the vineyards, and visitors noted the Old Mosque (Eski Djâmi'), the *bedestân* in covered market, the Köprühashi fountain, and the coffee house, meeting place of the learned man, situated by a fountain (Ewliyâ Çelebi, *Seyâhat nâme*, Istanbul 1315, v, 79-80) For the remaining monuments of the town today, see *Sâlnâme-i vilâyet-i*

Edirne, Edirne 1309, 143 ff., 247 ff., A. Rıza Durumkaya, *Kırklareli vilâyetin tarih, coğrafya, kültür ve eski eserler yönünden tetkik*, Kırklareli 1947, ii, Öncao Mert, *Kırklareli kitabları*, in *TD*, no. 29 (Istanbul 1972), 533-62. During the 12th/18th century, the Greeks in the town almost equalled the number of the Muslims (see *Racer Yusuf Beşkoç'un 1760 tarihli İstanbul-Lehistan seyahatnamesi ve hatıra defteri*, tr Ismail Eren, in *TD*, no. 26 (Istanbul 1962), 98-9). In the *sandjak* of Kirk Kilise of the province of Edirne there was in 1849 an important number of Greeks and Bulgarians, and the population of the region was 18,325 (*Salnâme-i vilayet-i Edirne*, Edirne, 1327, 398-9). For a time, the town was included in the boundaries of Bulgaria after the treaty of San Stefano (3rd March 1878), but was given back to the Ottomans after the Congress of Berlin (13 June - 13 July 1878). It again passed into Bulgarian hands for a short while during the Balkan War of 1912-3, but was recaptured on 8 July 1913. It was under Greek occupation for two years after the Madros truce (1918), but was recovered by the Nationalist forces on 20th November 1922. The population of the town fell when the Greek population was transferred to Greece after the Treaty of Lausanne settlement in 1923. The name Kirk Kilise was changed into Kırklareli by a law taking effect from 24th December 1924. Under the Republic, Kırklareli has become the centre of a province or *vilayet* of the same name. Its population was 13,000 in 1927, 19,097 in 1955, 27,431 in 1970 and 33,260 according to the latest census (1975).

KİRKLARELİ [see KIRK KILISE].

KİRK WEZİR [see SHAYKHZĀDE II].

KIRKÜK, the biggest town of the region of Mesopotamia (44° 25' E, 35° 25' N.) bounded by the Little Zab in the north-west, the Djabal Hamrin in the south-west, the Diyāla in the south-east and the mountain chains of the Zagros in the north-east. It is identified by some (e.g. C. J. Gadd in *Rev. d'Assyr. et d'Arch. Or.*, xxiii (1926), 64, and by Sidney Smith) as the site of the ancient city of Arrapha, and so Kirkūk participated in the revolt of the son of Shalmaneser II (859-824 B.C.) against his ageing father; again it rose up in the reign of Ashur Dan III (772-754 B.C.). It saw the victorious troops of Nabopolassar pass through in 626 B.C. before being taken by the Medes under Cyaxares at the end of 615 B.C. (G. Roux, *Ancient Iraq*, London 1964, 247, 255, 312, 314). From the time of the ancient Babylonian empire and during the Assyrian empire the town and its surrounding territories were very exposed to raids by the mountain peoples from the north-east.

Under the Sāsānids (226-651 A.D.) the province of Kirkūk was called Garmakān (Moses of Khoren) and in Syriac sources, Beth Garmai, here the town of Kirkūk itself is called Karkhā of Beth Sēlōkh (G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, in *Abh. für die Kunde des Morgenlandes*, viii/3 (1880), 267 ff.). This name could have come from the king Seleucus I Nicator (ca. 255-280 B.C.) who is said to have had constructed a tower in the citadel. During the Sāsānid period the town also became a famous centre for the Nestorians. The metropolitan of Beth Garmai had his residence there (J. M. Fiey, *Assyrie chrétienne*, iii, Beirut 1968). Christians suffered persecution under Shāpūr II (310-79) (Fiey, *Histoires de Karka d'Bēt Slōkh* in *Analecta Bollandiana* lxxxii (1966), 203-9) and especially in 445 under Yezdegerd II, who made victims of thousands of them. Their situation later improved when a Christian of the town of Wārdīn became chancellor under Chosroes II (591-628) and achieved such fame that his native town took the name Karkh Wārdīn. (Fiey, *Assyrie Chrétienne*, iii, 23-8) Beth Garmai of the Syriac sources is called Bādjarmā by the Arab historians. Yākūt speaks of a town Karkhīnā (iv, 276) which Hoffmann (*op. cit.*, 272) believes can be identified, correctly it seems, as Kirkūk. Even today the people of Shakkāwā and ʿAyn Kāwā, when setting out for Kirkuk, still say that they are going to Karkhīnā (Fiey, *op. cit.*, iii, 44).

In the 6th/12th century the region of Kirkūk belonged to the territory dominated by the Begtegīnī dynasty [q.v.], who had their residence at Irbil. After the death of Muzaffar al-Dīn Kökbūrī in 629/1232, the possessions of this dynasty reverted to the ʿAbbāsid caliphs, but not long afterwards were conquered by the Mongols. The name Kirkūk appears for the first time in the history of Timūr of Sharaf al-Dīn ʿAlī Yazdī (*Zafar nāma*, written in 823/1424-5, tr Pétis de la Croix, Delft 1723, ii, 259). Then came the reign of the Ak-koyunlu, followed by the conquest of Mesopotamia by Shāh Ismāʿīl I in the early years of the 10th/16th century. When finally Mesopotamia and ʿIrāk had fallen into the hands of the Ottoman sultans Selīm I and Sulaymān I (according to the first Turco-Persian truce at Amasya, 29 May 1555), Kirkūk again took on its rôle as an important bulwark against the enemy from the East.

The town fell again to the Persians after the fall of Baghdād in 1032/1623, but was reconquered by Khosrow Pasha [q.v.] in 1039/1630, in 1044/1638 Murād IV passed through the town on his march to reconquer Baghdād. But the true masters of these regions were the local Kurdish hordes, lords of the province of Ardalān (Hādidāt Khalīfa, *Dīshān-nāma*, 445). But shortly afterwards the Ottoman power became established there by the activity of the *pashas* of the *eyālet* of Shahrizūr [q.v.]. Thus *eyālet* was composed of 32 *sandjaks*, of which one was that of Kirkūk, and this town became the residence of the *pasha* of Shahrizūr after the castle in the town of this name had been razed by Shāh ʿAbbās (1571-1629) (*Dīshān-nāma*, *loc. cit.*). In 1732 the future Nādir Shāh besieged the town in vain. A great battle took place near Kirkūk in the following year, when the Turks were completely beaten under the grand vizier Topal ʿOthmān Pasha, who died there. In 1743 Kirkūk fell again into the hands of the Persians, but was returned to Turkey after the truce of 1746.

The town remained in the Ottoman empire until the end of the First World War. It was occupied by the British on 7 May 1918, but abandoned fifteen days later. It was re-occupied at the end of October and remained occupied until the time of the Mudros armistice. Having remained outside the sphere of activities of Shaykh Mahmūd (November 1918 until May 1919), Kirkūk and its district were administered peaceably. There was even a Turkish newspaper published there and sixteen schools were opened. At the time of the referendum of July 1921 Kirkūk

rejected the Amīr Fayṣal as king of ʿIrāḳ, and from that moment Turkish propaganda developed in the region, supported by a Turkish committee founded at Kirkūk by the family of the Naḳīzāda and other Turcophiles. On 17 March the Turks named a *Ḳāʾim-maḳām* at Ruwanduz, and at the end of July, Col. ʿAlī Shafīḳ, who was called Öz Demir, "Pure Iron one", appeared and made some advances towards the territory, but he was unable to retrieve all the *wilāyat* of Mosul. The Turks tried again to claim it at the Lausanne Conference (20 November 1922 until 4 February 1923) but without success. The Treaty of Lausanne (24 July 1923) still left the question of Mosul undecided, and so it was referred to the League of Nations. A committee of enquiry was sent by them, and in its 54th session in Geneva on 16 December 1924, the Council gave a definite ruling: ʿIrāḳ was given the territory south of the so-called "Brussels line". Thereafter Kirkūk was incorporated into the kingdom of ʿIrāḳ.

The present day town is built partly on top of an artificial mound or *ḥaḍr* about 40 m. high, and partly at its base, on the two banks of the Khāṣa Çay. These waters join with those of the Awā Spī to form the Aghaym which flows into the Tigris 30 km. south of Balad. On the right bank of the Khāṣa Çay, in the middle of a fertile plain, rises the residential district of Arrapkhe. In 1912 the population was estimated to be 15,000 (by E. B. Soane, *To Mesopotamia and Kurdistan...*, 220), in 1922 to be 25,000 (by C. J. Edmonds), and in 1965 official statistics, determined according to maternal language, gave 184,000 inhabitants, comprising 73,000 Kurds, 55,000 Turcomans and 46,000 Arabs, plus others. The present population is certainly over 200,000. It should be noted that, for many years, the authorities have made strenuous efforts to replace the Kurds by Arabs. Kirkūk is the centre of an administrative region, formerly a *livāʾ* and now since 1975 a *muḥāfaẓa*, and has had its name changed; it is now called al-Taʾmīm ("Nationalisation") in honour of the nationalisation of oil on 1 June 1972 and also in the intention of "de-Kurdicising" the town (though the latter has however kept its Kurds). The population of the *muḥāfaẓa* is rapidly increasing thanks to the development of the oil industry, its 338,900 inhabitants of 1957 increased to 525,000 in 1970, with a majority of Kurds. The Kurds, Arabs and Turcomans of the town are Sunnī Muslims, but the Turcomans of the villages belong to an unorthodox and secret sect, the Kākāʾīsh. The Christians are mainly Chaldaean (about 4,500) with an archbishop, and the Nestorians, who are less numerous, have a bishop at Ḥarīr. There was a small colony of Jewish merchants, one of whom was sent as a delegate to the Parliament in Baghdād and another was at the head of the Department of Finance of the *livāʾ* of *Kirkūk*, but it has disappeared since the Arab-Israeli War of 1948. It is thought they were the descendants of the Jews who were deported to Babylon by Nebuchadnezzar after the capture of Jerusalem (586 B.C.) and they continued to speak Aramaic. The little mosque of Nabī Dānīyāl on the slope of the hill of Kirkūk commemorates the Hebrew Prophet who was deported at the same time. This must be an ancient church which existed until *ca.* 1700, just like the Ulu Djāmiʿ mosque. The oldest church in the world was that of the martyr Mar Tahmasgerd, built by the metropolitan *ca.* 470 A.D., to the east of the citadel of Kirkūk; it was known as the Great Martyrion, but during the Turkish retreat of 1918 it was being used as a powder magazine and was blown up (C. J. Edmonds, *Kurds, Turks and Arabs*, 267, Eley, *Assyria*, iii, 54).

Urban planning in Kirkūk has made the centre a large circle of broad streets. Christians have been established there since earliest times, and seem always to have maintained positions of greater or lesser importance. The presence of a Turcoman minority in Kirkūk, within its Kurdish majority, must go back considerably before the conquest by the Ottoman sultans; their origin could be sought in a Turkish garrison which the caliphs may have installed there in the 3rd/9th century, or in an immigration at the time of the Saldjūḳs, and the Begteginids or Atabegs of Irbil (C. J. Edmonds, *op. cit.*, 267, has drawn attention to other opinions). Whatever may have been the circumstances of their coming to the region, the Turcomans of Kirkūk have always provided strong support for the Ottoman empire and its culture, and an abundant source for Ottoman officials (see *Türk Yurdu*, 1935).

Kirkūk's position as an administrative centre has varied through the ages: "In the 18th century Kirkūk was the chief town of the *eyālet* of Shahrizūr which included the modern *livāʾ*s of Kirkūk, Irbīl and nominally of Sulaymānī under a *mutaṣallim* appointed by Baghdād. With the reforms of Midhat Pasha, *wālī* of Baghdād from 1869 to 1872, the name of Shahrizūr was given to the *sandjaḳ* of Kirkūk, corresponding to the present-day *livāʾ* of Kirkūk and Irbīl, whereas the historic Shahrizūr remained outside, in the new *sandjaḳ* of Sulaymānī. The *wilāyat* of Mosul was formed in 1879 and Kirkūk remained an important garrison town" (Edmonds, *op. cit.*, 265-6). Under the Turkish régime, the *wilāyat* of Mosul was divided into three *sandjaḳ*s or *livāʾ*s: Mosul, Kirkūk and Sulaymānī, to which three *ḳaḍāʾ*s situated to the north of the Little Zab were detached from Kirkūk to form the *livāʾ* of Irbīl. In the constitution of 1923, the new Iraqi state was formed of three Ottoman *wilāyets*. Baghdād, which became the capital, Baṣra, and Mosul. The *livāʾ* of Kirkūk was composed of four *ḳaḍāʾ*s, Kirkūk, Kifrī, Čamčamāl and Gil. Today, the *muḥāfaẓa* of al-Taʾmīm, with a *muḥāfiẓ* at its head, includes five *ḳaḍāʾ*s, as follows Kirkūk, Tuz Khurmātū, Čamčamāl, Hawaydja and Kifrī. Each *ḳaḍāʾ* has at its head a *ḳāʾim-maḳām*. The *ḳaḍāʾ* of Kirkūk has five *nāḥiya*s, as follows. Tuz Khurmātū, Ṣarā Ḥasan, Altun Köpri, Dibs and Shuwān, and each *nāḥiya* is administered by a *mudīr*. Kirkūk is the seat of the regional court and of a court of appeal, and it possesses a garrison and an airport. There is also an association of Turcoman writers.

Kirkūk is an important commercial centre and an agricultural market for the cereal and animal products of the neighbourhood. It is well served by good roads to Baghdād through Taʾūḳ and Kifrī to Mosul through Altun Köpri and Irbīl, to Sulaymāniyya through Čamčamāl with branches to Sarāndadj and Ḥamadān to Iran. A narrow-gauge railway links Kirkūk with Baghdād to the south and with Irbīl to the north. The region around Kirkūk is undulating and it is populated mostly by Kurds. The Mesopotamian steppe begins to the west of the town and it is inhabited chiefly by Arabs. The immediately-surrounding district produces much fruit.

The region of Kirkūk abounds in sulphur and bitumen products and it is especially rich in petroleum deposits, extensively exploited even in ancient times. It should be noted that the petroleum had a

certain importance in Ottoman times, being used by the army (V. J. Parry, *Materials of war in the Ottoman empire*, in *Studies in the economic history of the middle East*, ed. M. A. Cook, London 1970, 220. A *firmān* of 1049/1639 recognised the monopoly of rights over this petroleum to a group of Turks in the region of Kirkūk, the Neftčizādeler. But their systematic working dates from March 1925. At that time a concession was granted to the Turkish Petroleum Company (T.P.C.) which was founded in 1914 to exploit the deposits of the *wilayets* of Mosul and Baghdād; royalties of 4 gold shillings per ton of extracted petroleum were payable. Before the end of 1925, geological work was begun and roads were constructed, water supplies, pipe lines and buildings were installed in the *wilayet* of Mosul, and there were 30 British and 2,500 Iraqis employed in the work. The drilling sites were chosen in the Djabal Hamrīn, near Tuz Khurmātu, in the neighbourhood of Kirkūk. The drilling programme was formally inaugurated in April 1927 by King Faysal I, and the first oil gushed forth on 27 October 1927 at Bābā Gurgur, near Kirkūk. The years 1927 to 1932 were given to preparing the whole region of Kirkūk for production by test drilling, scientific observation and arranging the necessary services; productive wells, reservoirs, workshops, housing etc. were established and at the same time negotiations were conducted with the Iraqi government to extend the period for selecting areas, according to the convention of 1925 in March 1931 the company, which had become the Iraq Petroleum Company (I.P.C.) in 1929, was able to operate in the whole territory in the north-east of Iraq, on condition that by 1935 they constructed a pipe-line to the Mediterranean with a capacity of 3,000,000 tonnes, with a branch at Hadīdja on the Euphrates to Haifā and Tripoli, and that they make an annual payment of £ 4,000 as an overall payment to the government.

It was also in 1931 that the operational headquarters of the I.P.C. was moved from Tuz Khurmātu to Kirkūk, and the headquarters for pipe-line operations was established at Haifa. The drilling for crude oil at Kirkūk began at the end of 1934 and, from 1935 onwards, the annual production of 4,000,000 tonnes put Iraq in the eighth position among the oil producing countries. In January 1935 the double 12" pipeline from Kirkūk in the Mediterranean was formally opened, but became of the Arab-Israeli war of 1948, the branch leading to Haifā was closed. This caused a loss of almost 7,000,000 tonnes and the corresponding royalties. The Tripoli pipe-line was, however, doubled by a second (16") pipe in 1949 and this trebled the export figure. In 1952 a third (30") pipeline was brought into service between Kirkūk and Banias (Syria). From then on the world market for Iraqi oil was in increase to 14,000,000 tonnes per year. On 3 February 1952 a new agreement was signed between the Iraqi government and the I.P.C. for the distribution of personnel, production and revenues. A maximum production of 12,000,000 tonnes was expected annually from 1953 and a revenue of £ 30,000,000, in 1952 to reach £ 60,000,000 in 1955. The profits gained from the oil workings would be shared equally.

The Iraqi revolution of 1958 did not change the agreements between the government and the petroleum companies. The objective was to obtain exports wuith 200 to 10 revenue from a capacity of 90 *m.* tonnes per year. This target was reached in four years, but a few problems of interpretation persisted. In April 1961 negotiations were begun and, after different interruptions, they finally reached deadlock. They were concluded by Law 80 of 11 December 1961 which dispossessed the company of 99.5% of the territories where they had prospecting rights and left I.P.C. with only 22 sites, 12 of there at Kirkūk in an area of about 478.75 sq. kms., 6 at Bay Hassan of about 182.5 sq kms., and 4 at Djambar, of about 86.5 sq kms. (Vernier, *L'Irak* .., 455). New installations were planned between May 1964 and June 1965 and were completed, with future plans taking into consideration the Iraqi National Oil Company (I.N.O.C.) which had recently been founded on 30 October 1964. More new laws were enacted as a consequence. Law 97 (6 August 1967) forbade any new concessions to foreign companies and Law 123 (October 1967) authorised the I.N.O.C. to exploit the remaining sectors, which seemed to put an end to the monopoly of oil production which the foreign I.P.C. enjoyed. On 14 June 1972, the I.P.C. itself was nationalised, and thus Iraq gained for itself all the profits from its rich petroleum deposits. The annual production of crude oil in Iraq has regularly increased from the 47.5 *m.* tonnes in 1960, by 1975 it had reached more than 110 *m.* tonnes, 60 *m.* of which were from the Kirkūk region. In 1973 the Iraqi reserves of crude oil were estimated to be 4-143 billion tonnes.

If the petroleum industry with all its subsidiary operations gave a favourable social status to its workers, for their standard of living is superior to that of other workers in the country, it did not suppress all the movements for social reform. Several important strikes were called in Kirkūk among the oil workers. The most notable were those of 1937 which coincided with the workers' strikes at the Kūt barrage, the drillers of the B.O.P., the railways, the stevedores at Basra and the weavers of Nadjaf. These showed a hardening of class-consciousness and the discovery of a new political weapon (Longrigg, *Iraq*, 252). In July 1947 a serious strike aggravated by politicians of communist leanings broke out at I.P.C., and it claimed several victims (*ibid.* 338).

Other demonstrations have had a more political tone. The mere announcement of the Treaty of Portsmouth (15 January 1948) produced a general strike for those days. At Kirkūk the British consulate was attacked, but the most tragic of these events was the so-called 'purge of Kirkūk". On the occasion of the first anniversary of the republic (14 July 1959) Communist elements helped by bands of Kurds, massacred the Turcomans of the town, for they were considered to be anti-Communist. There were probably 120 killed and about 100 wounded. The participation of the Kurds in the affair was interpreted not as a sign of an antagonistic nationalistic rivalry against the Turcomans, but one of social competition. The Turcomans, who are more socially and culturally advanced, occupied more high ranking positions in the I.P.C., while the Kurds had to constitut themselves with more subordinate work (cf. M. Khadduri, *Republican 'Iraq*, 125).

It must not be forgotten that one of the obstacles in a definitive solution to the Kurdish problem is precisely the claim of the Kurds to the territory and the revenue of the Kirkūk oil-fields, which they would like to see included in the territory of an autonomous Kurdistan. These claims are categorically refuted by the central Iraqi government. In October 1970 a plebiscite was to settle this point of contention, but it was adjourned indefinitely (E. O'Ballance, *The Kurdish revolt*, 161 f.). This at least in part provoked the outbreak of hostilities in

March 1974, just as the Kardo-Iraqi agreement of 11 March 1970 was being implemented. The law of 11 March 1974 awarding autonomy to the region of Kurdistan defined this region in terms of the 1957 census, carried out under the monarchy. At that time, the Kurds were afraid to declare themselves as such, and thus the census did not give a Kurdish majority to Kirkūk; hence the town and the *mukāfaṣa* were accordingly excluded from the autonomous area.

A well-known personality of Kirkūk was the Kurdish poet Shaykh Riḍā Ṭālabānī (m. 1840-1910). More-or-less an agnostic character, but at the same time fanatical also, he had gifts of satire and improvisation and a sometimes obscene verve, and composed poems in Kurdish, Turkish, Persian and Arabic. They were published in Baghdād in 1935 and 1946 and he is remembered as one of the most popular poets of Iraqi Kurdistan (cf. E. B. Soane, *op. cit.*, 134-5; Edmonds, *op. cit.*, 57 n, 290-5; Edmonds, *A Kurdish lampoonist: Shaikh Riza Talabani*, in *JRCAS*, xxiii (1935), 222-37).

(J. H. Kramers - [Ta Bois])

KIRMĀN, the name of a Persian province and of its present capital. The name goes back to the form Carmania, which is found in Strabo (xv, 2, 14), and which is said to be derived from the name of an ancient capital, Carmana (Ptolemy, *Geography*, vi, 8, Ammianus Marcellinus, xxiii, 6, 48. See further Marquart, *Ērānšahr*, 30, on the name Carmania, and Browne, *Lit. Hist. of Persia*, i, 143, for the later popular etymology of the name).

The Province.—The province of Kirmān is situated to the south west of the great central desert of Persia, the Dasht-i Lūt, which narrows to some 120 miles in width where it divides Kirmān from Sīstān. It is bounded on the north by Yazd and Khurāsān, on the east by Sīstān and Makrān (Balūčistān), which was regarded by most of the early geographers as separate from Kirmān, though Ḥamd Allāh Mustawfī states that it paid tribute (*kharādj*) to Kirmān (*Nuzhat*, 241), on the south by Makrān and Fārs and on the west by Fārs. Its boundaries have varied slightly from time to time. Ibn Rusta states that Fahradj was part of the tax district of Kirmān but that the ruler of Makrān claimed that it belonged to him (286). Khabīṣ, which is today included in Balūčistān, and Rīgān were both reckoned by Iṣṭakhrī to belong to Kirmān, though the former was, he states, part of the tax district of Sīstān (162). Idrīsī, on the other hand, includes Khabīṣ in Sīstān (427). Shahr-i Bābak was at various times included in Fārs, at others in Kirmān. In 1258/1842-3 it was placed, for revenue purposes, under Yazd (Aḥmad ʿAlī Wazīrī, *Tawdīḥāt-i-yī mamlakat-i Kirmān*, ed. Muḥammad Ibrāhīm Bāstānī Pārīzī, in *Farhang-i Īrān Zamīn*, xiv/1-4, 163). Bāft, which had earlier belonged to Kirmān, was also placed under Yazd about the year 1774 (Wazīrī, 175), though Khināmān, one of its districts, continued to belong to Kirmān. During the reign of the Saldjūk *malik* of Kirmān, Arslān Shāh (494-536/1100-41), Yazd and Tabas appear to have been under Kirmān (Afḍal al-Dīn Abū Ḥāmid Kirmānī, *ʿIḳd al-ʿulā*, ed. ʿAlī Muḥammad ʿĀmirī Nāʾīnī, Tehran 1311, 76). Furg and Tārum both placed in Fārs by the *Ḥudūd al-ʿālam* (129), were considered by Afḍal al-Dīn to belong to Kirmān (*ʿIḳd al-ʿulā*, 75). Ibn Balkhī states that Rūdān, which had belonged to Fārs, was put on the Kirmān side of the frontier in the reign of Alp Arslān (*Fārs nāma*, ed. Le Strange, 122), but according to Idrīsī, although it formed one of the dependencies of Kirmān, it was under Fārs for tax purposes (416). Hurmuz [*q.v.*] was sometimes counted as belonging to Fārs, sometimes to Kirmān, and has often been in different hands as its hinterland.

According to the Arab geographers, the western part of the province, which included Shahr-i Bābak, Sirdjān, Urzūya, Aḥṣāʾ, Kushk, Ṣawghān, Isfundaḳa, Djīrufṭ and Rūdbār, was in the third clime, and the eastern part, including Anār, Kūbanān (Kūhbanān) Zarand, Guwāshīr or Gwāshīr (also known as Bardsīr and later as Kirmān), Bāwar, Khabīṣ, Rāʾīn, Sardūya, Bam and Narmāshīr, in the fourth clime, while Hurmuz, according to Ḥamd Allāh Mustawfī was in the second clime (*Nuzhat*, 141).

In the variety of its topography the province is not dissimilar from Persia as a whole. A series of mountain ranges, with a general trend from north-west to south east, runs through the province. Much is tangled broken country, but there are many fertile upland districts, pastures and mountain valleys with orchards, cultivated places, and many streams. Some of these have a high elevation: Saʿīdābād, near the site of the old city of Sirdjān, lies at an elevation of 5,600 ft. and Pārīn at over 7,000 ft. There are also numerous arid waterless mountain districts and desert tracts. The main desert area is in the north and north-east on the borders of the Dasht i Lūt, and is encroaching on the neighbouring fertile districts. The Lūt is defined in the south by the Bam-Zāhidān road and thus excludes Narmāshīr and the desert regions of south-eastern Kirmān and Rīgān, though physically these belong to the Lūt proper. There are also some stretches of arid land between the south west highlands and the Djibāl Bārīz which run south-east from Sirdjān to east of Djīrufṭ. Salt swamps (*kaṣa*) are found in isolated depressions, notably the Kafad Kaṭrū near Sirdjān (for a description of this, see K. E. Abbott, *Geographical notes taken during a journey in Persia in 1849 and 1850*, in *JRGS*, xxv (1855), 66-7). In some parts of the province the towns and villages tend to be separated from each other by broad stretches of uncultivated land (cf. Iṣṭakhrī, 163, Ibn Ḥawḳal, ii, 309). Along the nor-

them littoral of the Persian Gulf and the Gulf of 'Umān these is a narrow coastal plain.

The most northerly of the mountain ranges stretches from the neighbourhood of Yazd to Khabīṣ (the modern Shahdād) and south-eastwards towards Sarvistān. The fertile upland district of Kūbanān to the north, and, further south, the arid district of Rāwar lie along its eastern base. A second range, further to the west, which contains Mt. Dūpār (13,000 ft.) south of Kirmān city, and Mt. Hazār (14,500 ft.) to the south-west of Kā'in, runs towards Bam, while a third, still further west, runs south-eastwards from north of Shahr-i Bābak though Sirdjān and Bāft, and contains Mt. Chiltan (12,000 ft.) Mt. Cahārgumbaz (13,000 ft.) and Mt. Lālazār (14,350 ft.). A lesser range, with Mt. Cāhkazār (9,480 ft.), lies to the south of Sa'īdābād, while the Mt. Dinā range of Fārs is prolonged on a south easterly direction to near Bandar 'Abbās. South of Sarvistān and to the east of Djīruft, lies the Djibāl Bāriz range [see DJABAL BĀRIZ in Suppl.], which also trends from the north-west to the south-east and rises in 13,000 ft. in the north and 12,450 ft. in the south. The Djibāl Kufs region of the Arab geographers (see Iṣṭakhrī, 164; *Ḥudūd al-ʿālam*, 124, al-Mukaddasī, 471; Ibn Ḥawḳal, ii, 309-10, C. E. Bosworth, *The Kūfichīs or Coffs* in *Persian history*, in *Iran*, xiv (1976), 9-18) probably lay in the south-east to *Bashākird*, *on the borders of Makrān and Rūdbār*

In the upland districts, notably in the Djibāl Bāriz, there exist remnants of a dry forest, consisting mainly of thin stands of pistachio trees, several species of almond, maple, celtis, juniper and other shrubs; stands of pistachio trees, almonds and other drought-resistant species are also found at lower levels. In the *garmsīr* the vegetation tends to be scattered trees and shrubs with a steppe like ground cover. The *kunār* tree (*zizyphus spina Christi*) has a wide distribution, as also do several species of acacia, myrtle, tamarisk and oleander. Deforestation from charcoal burning and annual grazing has taken place, and present day cover, though in places still considerable, would appear to be appreciably less than the 'forests' of both the early and mediaeval geographers and the 19th century writers.

There are no important rivers reaching the sea. The largest of them, the R. Mināb, rises in the hills of Bandar 'Abbās. It has a considerable drainage and flows into the Persian Gulf some 30 miles east of Bandar 'Abbās. The only considerable inland river is the R. Halīl, which is joined by its tributary, the R. Shōr, in the neighbourhood of Djīruft and disappears in the Dīz Hurūn. According to Iṣṭakhrī, it had enough water to turn 20 (306), or, according to Ibn Ḥawḳal, 30 mill wheels (ii, 311). The province relies, for the most part, on *kanāts* (*q.v.*) and mountain streams for water. In many districts the sub-soil water is brackish and the soil is often impregnated with salt. Rainfall is low and decreases towards the south-east, though the relief of the land gives rise to many local variations. The maximum precipitation is in winter. Kirmān town has an annual average rainfall of 7.9 in., Bandar 'Abbās 10 in., and Bam 3 in. Drought, sometimes accompanied by famine, has not been uncommon in the history of Kirmān. The *Tārīkh-i Sīstān* mentions one such in the *kharādjī* year 370 (97). In 1879 and 1880 Kirmān, like many other provinces, suffered severely from drought. Flash floods are also a hazard, such as the floods which occurred in Kirmān (and many other places) in 1001/1593 (Muḥammad b. Hidāyat Allāh Nṭanzī, *Nuzhat al-akhbār*, ed. Ihsān Ishrāḳī, Tehran 1972, 531).

According to the Arab geographers, some three-quarters of the province belongs to the warm regions (*ḥārr*, *garmsīr*) and one quarter to the cold regions (*sard*, *sardsīr*). In the *garmsīr* the districts bordering the central desert have a hot dry climate, but in the southern parts of the province, especially in the Persian Gulf littoral, the climate in summer is hot and unhealthy. Bam is thus reckoned to have a better climate than Djīruft (Iṣṭakhrī, 166) The latter is described by *Aʿḍāl al-Dīn* as a paradise for four months of the year but as hell for the rest of the year (*Tuḥfa al-ʿālā*, 69) The 5th/11th century Persian translation of Iṣṭakhrī adds to the latter's text the statement that the climate of Hurmuz was noxious (ed Iradj Afshār, Tehran 1340, 139). The upland country of Aḳṭāʿ and Sirdjān has a temperate climate, while Kirmān, Baftān, Zarand, Rāwar and Kūbanān have a hot summer and mild winter. Barley is harvested in Rūdbār at the Persian New Year (21 March) and wheat twenty days afterwards. In Aḳṭāʿ barley is not harvested until five months after the New Year and wheat a month later.

Outside the coastal area, where the annual range of temperature is lowest, the difference between the coldest month, January, and the warmest, July, is considerable. At Kirmān, with an elevation of 5,680 ft., the average maximum temperature in January is 55.4° F and the average minimum 33.8° F, with an *absolute maximum and minimum of 75.2° F and -7.6° F* respectively and a mean monthly average of 42.8° F in July the average maximum and minimum temperature is 95° F and 64.4° F respectively with an absolute maximum and minimum of 105.8° F and 48.2° F and a mean monthly average of 80.6° F. At Bandar 'Abbās the average maximum and minimum temperatures in January are 73.4° F and 57.2° F respectively with an absolute maximum and minimum of 86.2° F and 42.0° F and a mean monthly average of 66.2° F, while the comparable figures for July are 102.2° F and 87.8° F, 113.0° F and 82.4° F and 95.0° F. In some parts of the province, notably Kirmān, high surface winds are common at certain times of the year, especially in spring. In the Khabīṣ district a poisonous wind (known as *bād-i sumūm*) blows in the desert in the middle of the day for about forty days in summer.

Ibn Rusta states that Kirmān was divided into five *kūras*, Bardsīr, Sirdjān, Narmāshīr, Djīruft and Hurmuz, each *kūra* being called after its chief town (288) Mukaddasī also states that the province had five *kūras*, but lists them differently, omitting Hurmuz and including Bam (460). Hamd Allāh Mustawfī states that it consisted of fifteen districts (*ghalla*) (*Nuzhat*, 139) By the 8th/14th century the province was differently divided. In the 19th and 20th centuries there appears to have been a further proliferation of districts (*bulūkāt*), the names of which are variously given. Wazīrī in his *Djughrāfiyā-yi rūmlākhat-i Kirmān*, written between 1874 and 1876, mentions the following districts. Gwāshīr (the modern city of Kirmān and its surroundings), Kūhpāya, Khabīṣ and Gawk (which two, he states, in reality formed one *bulūk*), Bam, Narmāshīr, Rā'in, Sardūya, Djīruft, Djibāl Bāriz, Iskandarīya, Rūdbār, Kūhk and Ṣawghān, Bardsīr, Aḳṭāʿ (earlier known as the district of Baft), Urzūya, Sirdjān, Shahr-i Bābak, Rafsandjān, Bāfḳ, Zarand, Anār, Kūbanān (which, he states, had been administered with Yazd for revenue purposes for nearly a hundred years) and Rāwar. Later the districts appear to have been slightly redrawn. Aḳṭāʿ and Urzūya were united into one district, as also were Bam and

Narmāshīr, Bāfk was transferred to Yazd, the district of Khunārān only remaining with Kirmān, Pārīz and Rābur, which had formerly belonged to Sirdjān and Akṭā', respectively, both became separate districts while Rūdbār was now called Rūdbār and Bashākird (Hoefum-Schindler, art. *Kerman in Encyclopaedia Britannica*, 1911, xv, 756). Under Rīḍā Shāh the province was divided into six *shahrdārs*, Kirmān (which included the sub-districts of Zarand, Kūhpāya and Kūhanān), Bam (which included the sub-district of Rā'in), Djīruft (which included the sub-district of Sardūya, which in turn included Isfandaka, and Kahnādj, which in turn included Rūdbār), Bandar 'Abbās (which included the sub-district of Rūdān), Sirdjān (which included the sub-districts of Pārīz and Bāft, which in turn included Urzūya, Rābur, Rūshk and Sawghān) and Rafsindjān (Ḥusayn 'Alī Razmārā, *Farhang-i djughrāfiyā-yi Īrān*, viii).

Agriculture and Livestock.—The Arab geographers describe Kirmān as a rich and prosperous province. The Persian translation of Iṣṭakhrī mentions that it produced all kinds of fruit (139), while Yāḳūt states that it was rich in date palms, cereals, cattle and beasts of burden and that it produced fruits belonging to both the cold and the hot regions in great variety, including an abundance of walnuts and dates (Barbier de Meynard, *Dictionnaire de la Perse*, 483). The author of the *Ḥudūd al-'Ālam* notes that Djīruft, Bāft and the mountain country between Djīruft and Manūdjān, known as the Kūhistān-i Abū Ghānim, were prosperous and pleasant places (124). According to Mukaddasī, the last-named district had many date palms (467) Rūdbār is described by the *Ḥudūd al-'Ālam* as consisting of woods, trees, and meadows (124). The mountain region between Sirdjān and Bardsīr was also very prosperous and pleasant according to the same authority, and contained 200 populous places. Mukaddasī mentions a multitude of orchards and an abundance of fruit in Sirdjān (464), and many orchards and citrus trees in Mughān (467). Afḍal al-Dīn speaks of the excellence of the pastures of Rūdbār and states that animals thrived in them (70). He also praises the fertility of Narmāshīr and states that it produced the fruit of both the *garmsīr* and the *sardsīr* (72). Mukaddasī notes the great quantity of fruit belonging to the *sardsīr* and the *garmsīr*—dates, walnuts and citrus fruits—in Djīruft (466, cf. Iṣṭakhrī 168). Plenty prevailed in the Djibāl Bāriz, which, like the Kufs Mts., were difficult of access (Iṣṭakhrī, 164; Ibn al-Ḥawḳal, ii, 310) Bam and Khwāsh had many date palms (Iṣṭakhrī, 168; Ibn Ḥawḳal, ii, 313), which also grew in great profusion in Hurmuz (Iṣṭakhrī 168 Ibn Ḥawḳal ii, 311) and in the Kufs Mts. Honey was also produced there (cf. Idrīsī, 429). Indigo and cumin were cultivated in Djīruft and the district which extended from Mughān and Walāshgird to the neighbourhood of Hurmuz, and also sugar cane (Mukaddasī, 467 Iṣṭakhrī, 167; Ibn Ḥawḳal, ii, 312) Idrīsī mentions the excellence of the quality of the indigo and states that the inhabitants of Mughān and Walāshgird occupied themselves much in its cultivation and took a great deal of trouble over it because it was a source of considerable profit to them (424). Wheat and barley were grown in the *sardsīr*, but in Hurmuz millet was the staple crop and the food of the inhabitants (Iṣṭakhrī, 127, Ibn Ḥawḳal, ii, 311; *Ḥudūd al-'Ālam*, 124, Idrīsī, 424) Cotton, as well as grain and dates, were grown in Sirdjān and Shahr-i Bābak (*Nuzhat*, 141). Silk was produced in Bam (*'Ibd al-'Alī*, 71). Asafoetida and gum tragacanth were found in parts of the province.

In the Middle Ages, apart from a period of prosperity under the Saldjūḳs of Kirmān, agriculture suffered a decline. There were temporary fluctuations and local variations, but in general the agricultural recession continued until the second half of the 19th century At that time a wide variety of crops were cultivated Wheat and barley, though grown in most parts of the province, were not important in terms of the amount grown and some districts had a deficit. In the province as a whole, the yield was low. Some millet, and a small quantity of rice was also grown. Pulses, roots and edible gums were also produced. Cotton was grown in Rafsindjān (which was later, in the 1930s, to turn much cotton land over to the cultivation of pistachio trees), Kūhpāya, Dārzīn (Dardjīn), Bam, Narmāshīr, Djīruft, Zarand and Anār. Dates were still one of the most important products of the province and came from Bāfk, Khabīs, Bam, Dārzīn, Rūdbār and to a lesser extent from Kūshk and Sawghān. Rāwar was noted for its figs, Bāfk for its apricots and Khabīs for its citrus fruits. Cumin was grown mainly in Kūshk and Aḳṭā'. Pistachios, almonds (mainly from Sirdjān and Shahr-i Bābak) and walnuts (from Sardūya, Bardsīr and Aḳṭā') were important products Sugar and indigo were no longer grown except on a very small scale, though an attempt was made by Wakīl al-Mulk to re-introduce sugar cane together with indigo, pepper, ginger and various other Indian plants into Khabīs (Houtum Schindler, *Reisen im südlichen Persien 1879 . . .*, in *ZG Erd. Berlin*, xvi (1881), 357) Dye plants included henna in Narmāshīr, Khabīs, Djīruft, and Urzūya and madder in Sirdjān, Rafsindjān, Bāfk, Kūhanān, Anār and Zarand By 1880 the cultivation of henna in Bam had brought about in some measure a revival of prosperity in that district (Firūz Mīrzā Farmān Farmā, *Safarnāma-i Kermān* ms *Bahāristān*, ed. Manṣūra Nāẓim Māfī, Tehran 1963, 6). Silk, though a little was still produced in Bam, Rafsindjān, Bāfk, Dūpār, Bāghīn and Kūhanān, had also lost its importance, though some attention appears to have been given to the cultivation of mulberry trees during the reign of Muḥammad Shāh (1834-48) (R. G. Watson, *A history of Persia*, London 1866, 354) Tobacco was grown in Zarand and Bāfk, and potatoes in the district between Sirdjān and Pārīz. From the late 1870s opium cultivation became important in Māhān, Dūpār, Narmāshīr, Sirdjān, Bāfk, Kūhanān and elsewhere. Honey came from Aḳṭā', Bardsīr and Sardūya. (See further Watelī, who gives a list of the agricultural produce of each district (*bulūk*), and also references in E Stack, *Six months in Persia*, London 1882, i, 264-238)

Sheep and goats were important throughout the province. There was much movement of flocks from the mountain districts to the plains in winter. Those from Rābur, Isfandaka and the neighbouring districts went mainly to Rūdbār and Djīruft. Much wool was produced, including a fine soft wool (*kurk*) produced by a special breed of goat. In Rūdbār there were also many herds of cattle. Buffaloes were found only in Djīruft.

Minerals.—Various minerals existed in the province and many of these were exploited. Ibn al-Faḳīh states that there were mines of gold, silver, iron, copper, sulphur, and zinc oxide (206), but their location is not clear from his account. Mukaddasī describes how zinc oxide (*tūtiyā*) was mined and fired to produce tutty (459, 470). Ḥamd Allāh Mustawfī describes the process as carried out in "the village

of the tutty makers" as follows: the crude ore was brought out from the mine, moistened and made into bars (*mil*) one gaz long, dried and put into a furnace, the action of the fire then causing the tutty to form in a thin film (*Nuzhat*, 203). Marco Polo, who locates the mines in Kūbanān, gives a somewhat similar account. Mukaddasī also states that there were iron and silver mines in the province (470), the latter presumably located in the Silver Mine Mountains west of Djiruft (cf. also *Ḥudūd al-ʿālam*, 65). The *Ḥudūd al-ʿālam* mentions lead, copper and iodoasme in the mountains between Djiruft and Bam (63). Ḥamd Allāh Mustawfī states that there was a turquoise mine and a lapis lazuli mine in Kirmān but that the turquoises were immature and unformed and therefore not of much value (*Nuzhat*, 204, 206). Marco Polo also mentions turquoise in the mountains of Kirmān, while Wazīrī states that there was a turquoise mine near the mountains of Maymand in the Shahr i Bābak district (264). He also mentions lead mines in Sirdjān and Zarand, of which the former produced the best quality lead (256, 278). Abbott records the existence of a lead mine in the mountains of Zarand near the village of Tugrādja and states that the government took 10% of it produce (*op. cit.*, 27). Wazīrī mentions a sulphur mine in Kūbanān, which was in operation when he was writing (175), he also states that there were copper mines in Sardūya (123), a copper mine in operation in the mountains of Bazindjān in Aḳṭāʿ (139), and many disused copper mines in the mountains of Rābur (142–3). Salt was obtained from deposits near Khabīs, Sirdjān, Rāʾīn and elsewhere. Curzon mentions coal north of Kirmān city and in Kūbanān, manganese oil in Rāwar, borax in Shahr i Bābak and asbestos in Kūbanān (*Persia and the Persian question*, ii, 328). Extensive mining operations are being carried on in various parts of the province at the present day. Coal and other minerals are mined in the mountains between Rāwar and Zarand and copper in the Pāriz district.

The cities of Kirmān.—The main city of Kirmān under the Muslims until the middle of the 4th/10th century was Sirdjān (the form Shīrādjān is also found), which was situated some five miles to the east of the modern town of Saʿīdābād (Le Strange, *Lands*, 309). It was here that the governor (*wālī*) resided (Ibn Khurradādhbih, 49). Ibn Rusta describes Sirdjān as the greatest city of Kirmān (289), as also does Iṣṭakhrī (167). Ibn Ḥawḳal (ii, 312) and the *Ḥudūd al-ʿālam*. The last-named states that it was the capital of Kirmān and the seat of the king (122), though by the time the *Ḥudūd al-ʿālam* was written, Ibn Ilyās, the Būyid governor, had, in fact, moved the capital to Bardsīr. Mukaddasī states that it was the biggest town in the province (although an longer the capital) and more extensive than Shīrāz (464). Ḥāfiz Abrū refers to Sirdjān as the second city of Kirmān (*Djughrāfiyā*, f. 140a), although it had, in fact, been destroyed in 798/1396 (before he wrote) after a long resistance by the armies of Timūr. After the city was laid in ruins, the name Sirdjān was nevertheless still applied to the district of which it had been the centre. Towards the end of the 18th century Saʿīdābād was founded near the site of the old city. Abbott, who visited it in 1850, describes it as one of the most flourishing towns in Kirmān (*op. cit.*, 63). In 1881 it had some 8,000 inhabitants and appeared to be in a flourishing condition (Stack, i, 281; cf. also Wazīrī, 252). At the present day, the town of which Saʿīdābād is the centre is known as Sirdjān.

Bardsīr (Bardasīr), which became the capital of the province under the Būyids, is the mediaeval name of the city now called Kirmān (Le Strange, *Lands* 303). It was also known as Guwāshīr. The two names, Bardsīr and Guwāshīr, may represent the form Beh Ardashīr, the name of the town built by Ardashīr, the founder of the Sāsānid dynasty (Ḥamza Iṣfahānī, ed. Gottwald, 46; Ibn Balkhī, *Fārs-nāma*, 503). Muḥammad b. Ibrāhīm uses the names Bardsīr and Guwāshīr indifferently. The copyist of Ibn Ḥawḳal, writing in 550/1155, states that Bardsīr in his time was a small town. It was, however, very prosperous and its surroundings, which had been brought under cultivation, were more flourishing than the town itself (ii, 309). Aḥmad al-Dīn, writing some decades later, states that it was a large city with a wall (*rabaḍ*) and a suburb (*shahristān*). Adjoining the city outside the wall and surrounding it were orchards and villages. It had a temperate climate, good soil and good water (72). By the 10th/16th century the name Bardsīr appears no longer to have been applied to the capital of the province, which, although still called Guwāshīr, was by this time more usually known as Kirmān. It had the *laḳab* of *Dār al-Amān*. The name Bardsīr, although it had thus ceased to designate the capital of the province, was still applied to a district (Zayn al-ʿĀbidīn Shirwānī *Bustān al-siyāḥa*, lith. Tehran n.d., 764). This, however, did not include the town of Kirmān or its environs but was bounded on the north-west by Rafsindjān, on the west and south by Aḳṭāʿ and Sirdjān, on the south-east by Rāʾīn and on the north-east by Kirmān (Wazīrī, 133). The main centre of this district, Mashīz, is also known as Bardsīr.

Bam (*q.v.*) was the second major city of Kirmān in the early centuries. The third, Djiruft (*q.v.*), was a prosperous, commercial centre, having trade with Sīstān and Khurāsān (Iṣṭakhrī, 166, Ibn Ḥawḳal, ii, 312; Mukaddasī, 466; Idrīsī, 402). According to Ḥamd Allāh Mustawfī, when the Muslims conquered Kirmān, the region of Djiruft was wooded and occupied by wild animals. The Muslims cleared the country and made villages (140). Djiruft and its suburb Ramādān flourished until the end of the Saldjūḳ period. Its buildings decayed during the reign of Malik Dīnār (582–91/1186–95), although the surrounding district continued to be cultivated (*Tāʾrīkh-i Ghāzānī*, 40). Subsequently the district decayed also. Abbott, who visited it in 1850, states that it possessed only four or five collections of huts which could be termed villages, each of which had a mud fort, for the rest tribal groups from the mountain regions resided in scattered groups over the plain in winter (K. E. Abbott, *op. cit.*, 46). Today the *nāḥiya* which has grown up round Sabzawārān is also known as Djiruft.

The fifth of the great cities of Kirmān in early and mediaeval times was Hormuz (*q.v.*), situated on the Persian Gulf. It was the emporium of Kirmān. Its merchants, perhaps because of its bad climate, lived in the surrounding countryside (Iṣṭakhrī, 168). In 700/1300, because of repeated raids by marauding tribesmen, the ruler of Hormuz moved all the inhabitants to the island of Djarūn where he founded the town of New Hormuz (see further, J. Aubin, *Le royaume d'Ormuz au début du XVI^e siècle*, in *Mare Luso-indicum*, ii, *Hautes études islamiques et orientales d'histoire comparée*, iv/5, Geneva 1973). Other important towns were Manūdjān, Zarand and Narmāshīr. Many of the towns and villages mentioned by the early and mediaeval geographers have disappeared or have not yet been identified.

Communications.—In the early centuries Sīrāf was the main centre upon which the principal roads converged. This, no doubt, in part accounted for its importance until it was destroyed in the 8th/14th century. Three roads led from it to Fārs, one via Shahr-i Bābak, another through Ṣāhik and a third to Nayrīz. Other roads went south to Furg, Ṭārom and Sūrū on the Persian Gulf, south-east to Bāft, Djīruft, Manūdjān and Hurmuz, north to Unās in Rūdbār, north-east to Māshīz, Bāghīn and Kirmān, north north-east in Māhān, Khabīs and Khurāsān, and east to Shāmāt and Rāʾīn. From Kirmān (Guwāshīr) two roads went north-west to Yazd, one via Zarand, Rāwar, Kūbanān and Bāft and the other via Rafsindjān and Anār. From Rāwar and Kūbanān roads went north-north-east across the Great Desert to Ṭabas and Khūr respectively. South-east from Kirmān a road went to Māhān, Rāʾīn, Dārzīn or Dārdjīn, Bam and Narmāshīr, where it bifurcated, one branch going to Farādī and Zarandī in Sīstān and the other to Rīgān, where it again divided, one road going east to Khwāsh and the other south-west to Manūdjān. From Dārzīn another road went south to Djīruft (see further Le Strange, *Lands*).

In the 19th and early 20th centuries communications were still very backward. Generally speaking, the roads were fit for pack transport only. Moreover, many were often shut for months at a time owing to the activity of bandits. In 1902 a convention was signed between Britain and the Persian government for a three-wire telegraph line on iron posts from Kāshān to Balūčistān via Yazd, Kirmān and Bam. It was begun in December 1902 and finished in March 1907.

Manufactures and Trade.—In the early centuries, the province had manufactures of silk, cotton and woollen goods, which were important articles of local and long-distance trade. A cotton cloth (*bafta*ʾ*ī*), which appears to have been used as lining for clothes, was produced in Zarand and exported to Fārs and ʿIrāḳ (Iṣṭakhrī, 167-8). Ibn Ḥawḳal states that it was called *al-Zarandiyya* and taken to Egypt and the most distant parts of the Maghrib (ii, 323). There was also trade in cloth made in Sirdjān (Mukaddasī, 470). The people of Bam were noted for their crafts-manship, and the cloths which were made in Bam were of great elegance and lasting quality. They fetched a high price and were exported to Khurāsān, Egypt and ʿIrāḳ (Ibn Ḥawḳal, ii, 312, Mukaddasī, 465, cf. also Iṣṭakhrī, 167-8). Idrīsī states that the cloaks of goat hair made in Bam equalled the best to be found anywhere in the world (423). Turbans of fine material were also made in Bam and were in demand in Khurāsān, Egypt and ʿIrāḳ (Ibn Ḥawḳal, ii, 312). There had at one time been a royal workshop for *ṭirāz* in Bam (*ibid*.). Cotton cloths (*ahmīsha*) were still produced in Bam at the turn of the 8th/14th century (cf. Rashīd al-Dīn, *Mukātabāt*, ed. Muḥammad Shafīʿ, Lahore 1945, 190). In the middle of the century it was apparently still an important trading centre with India, Sīstān, Khurāsān and Kābul (cf. Ḥamd Allāh Mustawfī, *Tārīkh-i guzīda*, ed. E. G. Browne, G.M.S., London 1910, 729). By the 9th/15th century, however, the textile industry appears to have no longer existed in Bam (J. Aubin, *Deux sayyids de Bam au XV*ᵉ *siècle*, Wiesbaden 1958, 91-2).

Idrīsī states that there were leather workshops in Zarand and that girths were exported to ʿIrāḳ and Egypt (427). Marco Polo mentions the manufacture of saddles, bridles, spurs, swords, quivers and other arms in Kirmān. Al-ʿUmarī also states that swords were made in Kirmān (*Masālik al-abṣār*, ed. K. Lech, Wiesbaden 1968, 110). In the 17th century pottery (blue and white) was made in Kirmān. According to Du Mans, the best examples of this were difficult to distinguish from Chinese porcelain (*Estat de la Perse*, Paris 1890, 197).

There was considerable trade, local and long distance, in agricultural produce. Indigo and cumin were exported to distant regions (Iṣṭakhrī, 167, Mukaddasī, 470, Idrīsī, 424). Narmāshīr had trade with Khurāsān and ʿUmān, and was a collecting centre for dates, which were exported to different parts (Mukaddasī, 463). Djīruft also had a large export of dates to Khurāsān. Mukaddasī states that nearly 200,000 camels used to set out every year. The trade appears to have been carried out on a *mundjafa* basis, i.e. the profit was divided equally between the producer and the camel driver (469). Khabīs also exported dates to distant parts (*ʿIḳd al-ʿulā*, 74).

Afḍal al-Dīn states that much trade from India, Sind, Ethiopia, Zanzibar, Egypt, the Arab countries, ʿUmān and Baḥrayn entered the port of Tīz (which he places on the frontier of Kirmān, though usually it is reckoned as belonging to Makrān). Imports included musk, asebergris, indigo, velvets, cloths, and other luxury articles. Hurmuz was also an important trading centre, to which merchants came from the most distant parts (71). Later, in the reign of Shāh ʿAbbās (996-1038/1587-1629), Bandar-ʿAbbās (Gombroon) (*q.v.*) became an important port, but this did not bring at first much additional trade to Kirmān, since goods appear to have gone into the interior mainly through Fārs rather than Kirmān. How early the long distance wool trade became important in Kirmān is not entirely clear, so when carpets became an article of export and carpet weaving became important in the 17th century wool was being taken from Kirmān and Yazd to Europe. By the end of the century it was an important export of the East India Company from Persia and was used in fellings, sailings, and coverings for buttons, while in the 18th century Kirmān wool for hats and shawls was a commodity consistently sought after. This wool came from goats and in different colours, black, white and red. The last named was highly prized (see *Gombroon diary* for a discussion of the arrangements for obtaining Carmanian wool. See also A. A. Amin, *Britain's interests in the Persian Gulf*, Leiden 1967, 126-7). During the reign of Nādir Shāh (1148-60/1736-47) wool for export was in short supply because it was used for the clothing of his army, and some of the Zand rulers appear to have prohibited the export of wool because they wanted it for the internal manufactures of shawls. The situation was not improved by the desolation which Āḳā Muḥammad Khān Ḳādjār carried out in Kirmān in 1794.

In the early 19th century, the main manufactures of Kirmān were shawls, carpets, felts, silk and cotton cloths, loaf sugar, matchlocks and earthenware (Malcolm, *History of Persia*, London 1829, ii, 366). Macdonald Kinneir in his *Geographical memoir of the Persian empire* states that 'the trade of Kerman is still very considerable, and it is celebrated for its manufactures of shawls, matchlocks, and carpets, which they chiefly export to *Khorassan* and the northern provinces, receiving in return drugs, skins (from *Bockhara*), furs, silk, steel, and copper. These articles as well as pistachio-nuts, carpets, rose-buds for preserves, and balloon, they send to *India*, and import from hence tin, lead, iron, chints, straught silk, spices, indigo, muslin, kheemkhob, gold brocade,

china and glass-ware, broad-cloth, hardware, etc." (London, 1823, 198-9). Abbott, on the other hand, states in a report made in 1849-50 that the commerce of Kirmān was much restricted, though its woollen manufactures thrived. Such little importance as it had was due to the manufacture and trade in shawls and other woollen fabrics. He estimated the number of looms for shawls in Kirmān city at probably 2,000 (though some put the figure at nearly double that number), for other coarser woollen fabrics some 400, and in addition some 325 looms in nine of the surrounding villages (Great Britain, Public Record Office, F.O. 881, 165, *K. Abbott's report on commerce of the south of Persia. Trade report. Notes on the Trade, Manufactures, and production of various Cities and of Persia, visited by Mr Consul Abbott in 1849-50*). Wazīrī, writing rather later, states that shawls were exported to Transoxania, Anatolia, Arabia and Turkestan and that there were nearly 12,000 workshops in Kirmān (*Diyā'ī-yi 'asāmīkat-i Kirmān*, 33). His editor states that there was a great expansion at the end of the 19th century in carpet weaving, which displaced the manufacture of shawls, but that carpet-weaving declined again very shortly afterwards (33-4). *Kurbās* (a kind of coarse cotton weave) was woven in many parts of the province, and there was some export from Zarand for the local market. The *kurbās* of Rafsanjān was reported to be of excellent quality (171, 178).

In the mid-19th century some of the transit trade between Central Asia and India passed through Kirmān, and there was also some direct trade between Kirmān and India. Gums, asafoetida, madder, roots, carraway seeds, silk, saffron (from Khurāsān) wool, cotton and dried fruits were exported to India and Arabia via Bandar 'Abbās. There were also some imports of English goods via India. Tabrīz and Yazd (Abbott, *Notes on the Trade, etc.*). Abbott states that caravans from Birdsan reached Khabīs several times a year. They brought wool, grain, dried fruits, silk, saffron (from Kāshān), and clarified butter, etc., a great part of which went on to Bandar 'Abbās for India. Returning caravans brought groceries, spices, indigo and English cotton manufactures for Khurāsān (*Geographical notes, op. cit.*, 34-5). Curzon states that Bandar 'Abbās in 1889-90 was the start of the important caravan route running north to Kirmān and Yazd and ultimately to Khurāsān. Kirmān and Yazd were mainly supplied from India with piece goods, prints and yarn, copper sheets, iron bars, lead, tin, sugar, tea, dyes, spices, glass and china; and exported in return opium, wool, cotton, madder, almonds, pistachio nuts, etc (*Persia and the Persian question*, ii, 371-2). According to Wazīrī, various districts of Kirmān took part in the long distance trade. Among the articles which went to Bandar 'Abbās and thence to India from Kirmān were cumin and wool from Akṭā' and Bardsīr (*op. cit.*, 136, 138), and a variety of dried and fresh fruit and nuts, namely pears and apples from Akṭā' and Rāhur, quinces from Akṭā', and raisins from Gawk; almonds from Shahr-i Bābak, Gawk and Akṭā', walnuts from Sardūya and Akṭā', and pistachios from Shahr-i Bābak, cotton from Sirdjān (to Bombay) and Anār, peas from Akṭā', and Bardsīr and sometimes wheat from Akṭā' and Urzūya, and barley from the latter district also.

Abbott mentions exports from Kirmān to Yazd and other neighbouring towns and villages, which included shawls, woollens, wool, spices, lead, soap, henna, indigo leaves, figs, gums and wild asses' skins (*Notes on the Trade, etc.*). There was also, according to Wazīrī, some internal movement of wheat from Zarand to Yazd and Rāwar and sometimes from Urzūya to Kirmān; Sirdjān also exported wheat to Yazd and Kirmān. Peaches were exported from Gawk to Kirmān and other districts, dried apricots and dried mulberries from Bāfk to Kirmān, and dried figs from Rāwar to Yazd, whence they were exported to other parts of the country as *anǧīr-i yazdī*, dates from Khabīs to Yazd and Khurāsān; peas and lentils from Shahr-i Bābak to Yazd and Kirmān; henna and *rang* from Narmāshīr to Kirmān, whence they were distributed to neighbouring regions; sometimes henna was exchanged in Sistān for clarified butter and swansdown.

Milk products were an important article of local commerce. Rūdbār exported clarified butter (*rawghan*) to Kirmān. Bardsīr also supplied Kirmān with clarified butter and *kashk* (a kind of whey). Shahr-i Bābak supplied Yazd, Rafsanǧān, and Sirdjān with clarified butter, *kashk* and cheese, while Kūbanān exported *kashk* to various districts beyond the bounds of Kirmān. Lastly, wood was exported from Akṭā' to the surrounding districts and to Fārs (see further Wazīrī).

In 1904 a British commercial mission visited south-east Persia in order to encourage British trade in the area. Russian efforts were also made to increase their trade, and Russian trade agencies were established in Kirmān, Bam and Rafsanǧān.

Population.—The settled population appears to have been mainly of Iranian stock. Strabo states that the customs and language of the population of Kirmān were similar to those of the Medes and Persians (xv.2, 14). Idrīsī describes the inhabitants of Kirmān (apart from the tribal population) in favourable terms. He states that they were remarkable for the purity of their customs and the grace of their character and that the merchants especially were marked by an amiability, sincerity and docility greater than elsewhere (421). Stack, writing several centuries later, remarks on the quiet and orderly habits of the people (ii, 182). Bārthōld, on the other hand, gives an unfavourable account of the people of Kirmān and accuses them of being given to sedition (*Mufarrih al-kulūb*, B.M., Or. 3499, f. 198a).

The geographers of the 3rd/9th and 4th/10th centuries mention a number of tribes as inhabiting Kirmān, namely the Kufs, (Kūdidjīs, Kāf [see KUFS], Balūs (Balūz, Balūč [see BALŪČISTĀN]), the Dihbal Bārisīs, and the Akhwāsh, all of whom were harried and, to some extent, displaced first by the Muslim armies, and then by the Saffārids, Būyids, Sāmānids and Saldjūks. When Mas'ūdī refers to Kurds (*Akrād*) in the province it is probable that he meant semi-nomadic or nomadic Iranī dwellers rather than ethnic Kurds. The Kufs were a mountain people, as their name suggests. They possessed herds of cattle (*bara'*) and also practised agriculture. Their main occupation was alleged by Muslim sources to be highway robbery. The Kufs mountains in which they lived consisted, according to Iṣṭakhrī, of impregnable fastnesses. They were bounded on the south by the Gulf of 'Umān on the north by Djīruft, Rūdbār and the Mountains of Abū Ghānim, on the east by Khwāsh and the desert of Makrān and on the west by Manūdjān and Hurmuz. There were seven different mountains each of which had a chief. The early Muslim governments, unable to bring the region under their direct control, gave the Kufs leaders allowances to keep them quiet, but they nevertheless raided the surrounding districts up to Sistān and Fārs. Iṣṭakhrī mentions that they were reported to

have accumulated much wealth. He states that they were lead and swarthy; and that some said that they were, by origin, Arabs (263-4, cf. Ibn Ḥawḳal, ii, 310; Muḳaddasī, 472). The *Ḥudūd al-ʿālam* adds that the government tax-collector (*ʿāmil-i sulṭān*) did not go into the Kufs mountains and that their chiefs were responsible for the collection and payment of the government tax, which would appear to have been assessed by a *muḥāṭa'a* contract. It also states that they spoke a special language (65).

The Balūṣ were, according to Iṣṭaḵhrī, herdsmen and tent-dwellers living along the western base of the Kufs Mountains and were rich in flocks (164; Ibn Ḥawḳal, ii, 310; Muḳaddasī, 472). Iṣṭaḵhrī, writing in the mid-6th/12th century, however, states that they lived at the base of the mountains to the north of the Kufs (429). They were the only people whom the Kufs feared. Iṣṭaḵhrī's claim that they were peaceable and did not commit highway robbery like the Kufs (164) is not born out by the *Ḥudūd al-ʿālam* (124) or Muḳaddasī, who couples them with the Kufs in the matter of brutality and bloodthirstiness and in their propensity to raiding the caravan routes (488-90). Muḳaddasī states that the Balūṣ had been very numerous until the Būyid ʿAḍud al-Dawla [*q.v.*] destroyed them. The language of the Kufs and Balūṣ, according to Muḳaddasī, was incomprehensible and resembled Sindhī (472).

It would seem that, in general, Muslim writers made no clear distinction between the two groups, and frequently mention them together. Miskawayh states that the Kufs and Balūṣ, together with the people of Mand̲ishān, joined Sulaymān b. Muḥammad b. Ilyās when he attempted, with help from the ruler of Khūrāsān, to seize Kirmān from the Būyids. They were defeated by a Būyid force in 360/970, with heavy losses, and suffered further casualties when the Būyid forces pushed down to Hurmuz. The Balūṣ, however, did not remain quiet for long. Spreading into the districts of Sirdjān they made ʿAlī b. Muḥammad al-Būrīd their leader, and began to commit disorders. ʿAḍud al-Dawla then marched against them in person. They retreated into the Djibāl Bāriz, but were defeated in 362/972 (ii, 298 ff.). Miskawayh states that those who were not killed were removed from the mountains by ʿAḍud al-Dawla, who replaced them with peasants who received the land on a crop-sharing agreement and with persons who were not well-off (*al-ʿabara al-muzāriʿīn wa 'l-masākīn min aghnāʾ al-raʿiyya*) belonging to various races among his subjects (ii, 300). There is mention of a detachment (*djaysh*) of Kufs in ʿAḍud al-Dawla's army in 366/977 (Miskawayh, ii, 366, and see further C. E. Bosworth, *The Kāfichīs or Kufs in Persian history*, 9 ff.).

The decline in the power of the Kufs and Balūṣ as a result of ʿAḍud al-Dawla's operations was only temporary. By the beginning of the Saldjūḳ period they were again in control of the *garmsīr* from Dīrkuft to the Gulf of ʿUmān, though, according to Muḥammad b. Ibrāhīm, their main location was in the Djibāl Bāriz (*Tārīkh-i Afḍal*, 66, Muḥammad b. Ibrāhīm, 6 ff.). They were reduced by Ḳāwurd b. Čaghrī Beg [*q.v.*] (Afḍal al-Dīn, *Badāyiʿ al-azmān wa makāyiʿ Kirmān*, ed. Dr. Mihdī Bayānī, Tehran A.H.S. 1336, 6 ff.). By the end of the 6th/12th century they were again operating in Dīrkuft and the *garmsīr* of Kirmān (Muḥammad b. Ibrāhīm, 3 ff., 182, *Tārīkh-i Afḍal*, 5 ff.). There are no references to the Kufs in the later Middle Ages, though there are, of course, many references to the Balūṣ, who were established to Makrān from the 5th/12th century and who may or may not have been the descendants of the Balūṣ [see BALŪČISTĀN].

Wazīrī claims that the Mihnī tribe were the descendants of the Kufs, but produces no evidence in support of this claim. When he was writing the Mihnī numbered some 700 families. They had a separate assessment, i.e. they were not included in the assessment of Dīrkuft and Isfandaḳa, where they had their winter quarters—and this, perhaps, suggests that they had at one time been more important. Wazīrī states that up to fifty or sixty years before he was writing the Mihnī leaders had enjoyed a considerable degree of independence. In 1259/1843-4, the government seized Fatḥ ʿAlī Khān, their leader, and confiscated the many estates which he held in Isfandaḳa and Dīrkuft (Dh̲ikr-i ʿimārāt, 56, 113-14, 121). According to a tradition current among the tribe, however, the Mihnī came originally from Khurāsān to Isfandaḳa in Ṣafawid times, when a number of tribes formed a federation under their leadership. This would seem more probable, and would suggest that at most only some of those reckoned as Mihnī today are the direct descendants of the Kufs. Their leaders claim to be descendants of Abū Saʿīd b. Abī 'l-Khayr [*q.v.*]. In 1969 the Mihnī consisted of the following eleven sub-tribes: the Sulaymānī, Larī (who are alleged to have come to Kirmān from the Mecca-sanad in the reign of Nādir Shāh on, according to another account, in the reign of Shāh ʿAbbās), the Bahr Āsmānī, the Markī, Mukhallī, Sālār Beglighwurī, Lurī, Rūḥī Bārdī, Lakandarī, Kahhūrī, Pushtkūhī, and Muṣaffarī. Wazīrī gives a list of twenty-three sub-tribes (199), which differs slightly from the above list.

The Djibāl Bāriz, according to Iṣṭaḵhrī, were even worse robbers than the Kufs. They did not adopt Islam until ʿAbbāsid times and he alleges that they persisted, in spite of their conversion, in their evil ways. They were eventually pacified by Yaʿḳūb b. Layth and ʿAmr b. Layth and their leaders destroyed. They too had a special dialect (Iṣṭaḵhrī, 164, 167; Ibn Ḥawḳal, ii, 310; Muḳaddasī, 472). Whether as a result of the operations of the Saffārids or because of the movements of the Kufs and Balūṣ, they appear to have been pushed out of the Djibāl Bāriz region. About the beginning of the 19th century the Manṣūr Tawakkulī *ilrs* of the Djibāl Bāriz apparently moved to Bazindjān, where they numbered some 4,500 persons in 1960. Wazīrī mentions Djabal Bāriz in Pārs (199), but whether they were the direct descendants of the earlier Djibāl Bāriz is not clear. Wazīrī states that their prosperity and the numbers of their sheep, cattle and horses had decreased, especially from about 1880. They were engaged to some extent in trade, taking *kurk*, wool and cumin mainly to Bandar ʿAbbās for export to India and clarified butter and *kashk* to Kirmān (220). The *Gazetteer of Persia* records the existence of 50 families of Djabal Bāriz in Akṭāʿ in 1903 (iv [Calcutta 1910], 358). In 1960 there were a few families of Djibāl Bāriz who had summer quarters between Bāft and Rābur and winter quarters near Gulāshgird (Walāshgird).

The Akṭāʿish, the fourth of the tribes mentioned by the early geographers, centred on Kiṭāʿish, were said to be semi-nomads. They had camels and date palms and lived in houses made of reeds (Iṣṭaḵhrī 168, Ibn Ḥawḳal, ii, 313). They are not separately mentioned in later times.

Although there appears to have been some immigration of Arabs into Kirmān before the Islamic conquest (Nöldeke, *Gesch. der Perser u. Araber*, 57)

there does not seem to have been widespread settlement by Arabs in the province during the early Islamic conquests. For the most part, the Arab armies pushed on through Kirmān into Sīstān and Khorāsān. So far as settlement took place, those who settled became, as in other provinces, largely assimilated to the local population. Small groups may also have been settled in the province after the period of the conquests. Yāḳūt records the existence of descendants of the Banū Asad [see ASD] and Banū Muhallab in Djīruft (Barbier de Meynard, 1853). Wazīrī mentions the survival in Djīruft of a few families who still spoke Arabic (*Djughrāfiyā*, 119). The village known as Karyat al-ʿArab, near the city of Kirmān, is believed to have been originally settled by the ʿAmīrī tribe, who came there from Sīmīān. In some of the coastal districts, such as Bandar ʿAbbās however, much of the population was of Arab origin, though not necessarily Arab speaking (cf. Houtum Schindler, *Reisen im südlichen Persien* 1879, 344).

Turkish tribes, Ghuzz and others, came into Kirmān from the 5th/11th century onwards. It is, however, difficult, if not impossible, to trace the changes in their locations and numbers. Whether the Salādjiḳa, who today are to be found in Rābur, are descendants of the Saldjūḳs is extremely doubtful. They do not appear to have any tradition among themselves of such an origin and are now Persian-speaking. They are mainly engaged in trade and for the past forty or fifty years have ceased to move from summer to winter quarters. The Khalīl, reckoned on Rābur with winter quarters in Shāmīl, whom Wazīrī reckoned to be fifty families (*Djughrāfiyā*, 199), are related to the Salādjiḳa. They are so-called because Fatḥ ʿAlī (during the lifetime of his uncle Āḳā Muḥammad Khān) took one of their women, Fāṭima Khānum, to wife after he had defeated the tribes of Rābur. She in due course became his chief wife and was known as Sunbul Bādjī.

On the break up of the Great Saldjūḳ empire there was a new influx of Ghuzz into Kirmān under Malik Dīnār. The Raʾīsī tribe claim to be their descendants. In the middle of the 19th century they numbered 800 families and lived in black tents in Narmāshīr, Rigān and Rūdbār. Their *khāns* lived in the fortress of Kahnū in Rūdbār, which had been built by Malik Dīnār (Wazīrī, 108, 125). In 1903 they are recorded as comprising 700 families (*Gazetteer of Persia*, iv (1910), 337). In 1906 their winter quarters were in Mīnāb and Rūdān and their summer quarters in Uatur, Balward, Sirdjān and Čahārgunbad.

There was further movement of Turkish tribes into Kirmān during the Mongol, Timūrid and Ṣafawid periods. When exactly the Afshār [q.v.], who appear to have migrated westwards with other Ghuzz tribes in the 5th/11th century, settled in Kirmān is not known. There was already an Afshār presence in the province at the beginning of the 10th/16th century (cf. *ʿAlamārā-yi Shāh Ismāʿīl*, ed. Ashʿar Muntaẓir Ṣāḥib, Tehran A.H.S. 1349, 326). Their *khāns* held governments there in the Ṣafawid period. On the death of Nādir Shāh, Shāhrukh Khān Afshār, who was settled in Zarand, temporarily extended his power over the whole province. In the 19th century the Afshār were the most important of the tribes of Kirmān. They consisted in Wazīrī's day of 32 sub-tribes (*ṭīra*) and *ca.* 1,000 families (*ibid.*, 145, 198-9). Sheil, writing rather earlier, put their numbers at 1,500 houses (*Note on the tribes by Sir J. Sheil*, in Lady Sheil, *Life and manners in Persia*, London 1856, 398), which would suggest that Wazīrī's figures may be an underestimation. Today their summer quarters are between Bāft and Sirdjān and their winter quarters in Urzūya and Daghṭ-i Bar. Their numbers in 1960 were estimated at *ca.* 20,000 and they were divided into 18-20 *ṭīras*. Among other Turkish tribes in Kirmān in Ṣafawid times there were the Karā Oghlānlū, a branch of the Karamānlū, whose *khāns* held governships in Aḳṭāʿ and Urzūya towards the end of the period. By the time Wazīrī was writing, the tribe had become much weakened (*ibid.*, 143). A few Tekkelū are said to have fled to Aḳṭāʿ in the reign of Ṭahmāsp and to have been absorbed in due course by the Karā Oghlānlū (*ibid.*, 144). Of the various other Turkish tribes, the most important were probably the Karāʾī and the Bučāḳčī. The former, according to Sheil, numbered 700 families (*op. cit.*, 398). Wazīrī put them at 800 (*ibid.*, 199), but by 1903 they appear to have declined to some 600 (*Gazetteer of Persia*, iv [1910], 337). The Bučāḳčī, according to a tradition current among themselves were brought from Karā Dāgh to Fārs in Ṣafawid times to act as wardens of the marches and later moved in Kirmān. According to Wazīrī they numbered 600 families, and many of them were settled in their summer quarters around Balward (*ibid.*, 154, 199). Some of them had winter quarters in the neighbourhood of Bandar ʿAbbās. By 1903 their numbers had changed little (*Gazetteer of Persia*, iv [1910], 337), but by 1906 they numbered some 2,000 families. Some of their *ṭīras* were Turkī speaking, others Persian speaking, and some of them were settled. The Shūl, who formerly belonged to the Afshār federation, had by 1903 joined the Bučāḳčī and numbered some 90 families (*ibid.*). In 1960 there were some fifty families of Shūl Turks settled near Sirdjān, who claimed that their forefathers had come from Fārs at the beginning of the 19th century. The *Gazetteer of Persia* mentions 150 families of Karā Koyunlu in Aḳṭāʿ in 1903 (iv, [1910], 338). It is possible that they were descendants of families left behind in Kirmān by the Karā Koyunlu in the 9th/15th century. They appear to have been subsequently absorbed into the Afshār and in 1960 were reckoned among the Afshār *ṭīras*.

In the early 18th century a number of Lak tribes moved from Fārs to Kirmān and established their winter and summer quarters in Urzūya and Aḳṭāʿ respectively (Wazīrī, *Djughrāfiyā*, 144). They numbered some 2,000 families in 1903 (*Gazetteer of Persia*, iv [1910], 338-9). Sheil put the ʿAṭā Ilāhī, whom he describes as Laks, at 3,000 tents and houses (*Note on tribes by Sir Justin Sheil*, in *op. cit.*, 398). According to Wazīrī, the Aṭā Ilāhī had cultivated land and cattle in Sirdjān and Shahr-i Bābak. They were Ismāʿīlīs and numbered some 150 families (*Djughrāfiyā*, 137, 199). In 1960 there were some 2,500 Laks in the neighbourhood of Razandjān. There are, or were, various other tribes and sub tribes in the province whose origins are difficult to establish. Most of them are semi-nomadic and their numbers very small.

The internal organisation of these various tribal groups appears to have been broadly similar. Most of the tribes had a *raʾīs* or leader, whose office appears usually to have been hereditary within a family. Larger tribes or federations, such as the Afshār, had an *ilkhānī*. Each tribe was composed of a number of *ṭīras*, under a *kadkhudā*, whose office was sometimes hereditary but more often subject to election by the elders (*rīsh safīd*) of the *ṭīra*. The latter were composed of *ṭāyfas*, i.e. groups of, perhaps, 5-12 families, each under a *rīsh safīd*. The

number and size of the *ḥiras* varied widely with the prosperity of the tribe. Success brought new followers, while failure or weakness caused the dispersal of its existing followers. The collection of taxes from the tribe and the decision of disputes were usually carried out by the *ra'īs-i īl*, though not infrequently an outsider became responsible for the payment of the taxes to the government. Thus Muḥammad Ibrāhīm Khān, the grandson of Ẓahīr al-Dawla, became responsible for the taxes of the Mīnāī tribe and for those of Isfandaḳa and Rāhūr (*ibid.*, 56), while Muḥammad ʿAlī Khān Wazīrī was charged with the collection of the taxes in the Afshār of about 1870 and had the title *īlbegī* (*ibid.*, 61). In recent years the tribal structure has largely broken down.

In the present state of our knowledge it is not possible to give a breakdown of the population at different periods. From time to time, conquest brought about a transfer of power from one group to another, a redistribution of land and the emergence of new factions but we are ignorant of the details of these events. It would seem likely, in view of the flourishing trade of Kirmān in the early centuries that the merchants formed a prosperous community, but that their importance declined with the decrease in trade. Aubin in his monograph entitled *Dans sayyids de Bam au XV^e siècle* has studied the functions and influence of local religious leaders in the Timūrid period. Some information on the leading families in the 19th century is to be obtained from Wazīrī (*op. cit.*). In Kirmān, as elsewhere, in Persia, the *aʿyān* were composed of landowners, tribal leaders, religious dignitaries and merchants. The dividing lines were not always clearly drawn. Marriage alliances between them were common. Governors and local officials were also included in the *aʿyān*, and often used their official position to acquire wealth and land. In the 5th/12th and 6th/12th centuries the leading officials of the bureaucracy were rich and influential. It is not always easy to decide what was the basis of a family's influence, whether it was government office, trade, landownership or religious leadership, for all might be combined in one family. But governors changed frequently and though they sometimes settled in the province, the government of which they had held, the system did not make for the emergence of families who retained their pre-eminence over a long period. Some of the local *sayyids* were among those who could perhaps trace their influence back furthest. Wazīrī states that there were families of *sayyids* in Bam and Narmāshīr who had held property there for over 400 years (*ibid.*, 202). One, the Kāẓī family of Bam, had held the office of *kāḍī* there from generation to generation (*ibid.*, 97). There appears also to have been some movement among *sayyids*. Thus, the Mīrzā'ī *sayyids*, who came to Bam about 1770, were by origin from Tehrān. One of their number, Ḥadījī Sayyid ʿAlī Khān b. Ḥādījī ʿAbd al-Wahhāb, was made *raʾīs* of Bam and Narmāshīr by Muḥammad Ismāʿīl Khān Wakīl al-Mulk (who became governor of Kirmān in 1860) and put in charge of *dīwān* taxation and the *Madīsadāt* of Bam. This however, proved disastrous for the family, he was a spendthrift and was dismissed, and all his estates and those of his nephews were taken in lieu of arrears. But their fall was only temporary, and when Wazīrī was writing they were again a rich and respected family (*ibid.*, 200-2).

As elsewhere it was not uncommon for the religious classes and the merchants to be closely allied, either through marriage or by actual participation in trade. Thus, Ḥadījī Sayyid Muṣṭafā b. Ḥadījī Sayyid ʿAbd al-Muʿṭīm, a Riḍawī *sayyid*, who owned numerous villages and hamlets and many herds of camels and flocks of sheep and goats, had agents and partners in Bandar ʿAbbās, Yazd and elsewhere who traded on his behalf (*ibid.*, 158-9). There was also movement from merchant families and craftsmen into the religious classes. Ḥādījī Āḳā Aḥmad b. Ḥādījī ʿAlī Kirmānī, who belonged to a merchant family, studied *fiḳh* and became a *mudjtahid*. He owned much property in Rafsindjān and elsewhere (*ibid.*, 44-5).

Two families were especially prominent in Kirmān in the 19th and 20th centuries, those of Ẓahīr al-Dawla Ibrāhīm Khān b. Mādī Kull Khān b. Muḥammad Ḥasan Khān Ḳādjār Kuwaytu and Muḥammad Ismāʿīl Khān Wakīl al-Mulk Nūrī, both of whom had been governor of the province. Their fortunes illustrate the ease with which government officials were able to acquire wealth and property and become part of the local *aʿyān*. The first, Ẓahīr of Dawla Ibrāhīm Khān (d. 1240/1824-5), who became governor of Kirmān in 1216/1801-2, settled in the province where he and his descendants acquired property (*ibid.*, 54 *ff.*). He himself bought some of the estates of the heirs of Āḳā ʿAlī Wazīrī (see below) in lieu of arrears due from Mīrzā Ḥusayn b. Āḳā ʿAlī (*ibid.*, 170). His grandson, Muḥammad Ibrāhīm Khān, acquired villages in Isfandaḳa and Djīruft through marriage to a daughter of Fatḥ ʿAlī Khān Mīnāī. He also founded new estates in those regions (*ibid.*, 56). Ḥādījī Mūsā Khān b. Ẓahīr al-Dawla's daughter married Mīrzā Abu 'l-Ḥasan b. Āḳā Ibrāhīm of the Mīrzā Ḥusayn Khān family. Wazīrī alleges that whoever in Kirmān married into the Ẓahīr al-Dawla family tended to become puffed up with pride because of the wealth of his wife (*ibid.*, 69-70). The second, Muḥammad Ismāʿīl Khān Wakīl al-Mulk, whose family came from Nūr in Māzandarān, was sent as *pishkār* to Kirmān and Balūčistān in 1275/1858-9. In 1277/1860 he became governor of the province, holding office until his death in 1284/1867-8. He exerted great efforts in the development of Kirmān and Balūčistān. He made a number of *bandas* and gardens, and revived much *khālṣa* land which had fallen out of cultivation or into a bad state of repair. He rented these for a lump sum which transaction proved extremely profitable. He was also a great builder and made many caravan-sarais, *ḥammāms*, *masdjids* and other buildings. His son Murtaḍā Kull Khān Wakīl al-Mulk was governor from 1286/1869-70 to 1295/1878 (see further Asad Allāh Nūrī Isfandiyārī, *Tārīkh-i Khāndān-i Iṣfandiyārī*, Tehran A.H.S. 1329). Both Muḥammad Ismāʿīl Khān and Murtaḍā Kull Khān acquired extensive estates in the province and established links with the local *aʿyān* through marriage alliances. Muḥammad Ismāʿīl Khān gave one of his daughters to Mīrzā Ghulām Ḥusayn b. Āḳā Ibrāhīm, who owned estates round the town of Kirmān. This Ghulām Ḥusayn belonged to a family of *sayyids* originally from Djīruft (Wazīrī, *op. cit.*, 69), and his maternal grandmother was a sister of Mīrzā Ḥusayn Wazīr (see below).

In the local government offices there was often a hereditary tendency. For example the office of *kalāntar* (q.v.) of Kirmān had been in the Kalāntarī family since the time of Shāh ʿAbbās. From towards the beginning of the 19th century they also held the office of *ṣābiṭ* of Khabīṣ and Gowk and from about the middle of the century the collection of taxes of the environs (*ḥawmas*) of the town of Kirmān was also entrusted to them. Muḥammad Zamān Kalāntar

and his father Mīrzā Kāẓim Kalāntar were blinded by Āḳā Khān Maḥallātī in 1252/1836-6. Ḥādjdjī Mīrzā Abu 'l Ḥasan b Mīrzā Ḥasan Khān, a nephew of Mīrzā Kāẓim Kalāntar, was the *kalāntar* and *ʿāmil* of Sirdjān, and also the head of the Niʿmat Allāhī order. Another member of the family, Mīrzā Ḥusayn Khān b Mīrzā Yūsuf, acquired many *mazāriʿ* and gardens in Khabīṣ and Gawk, where he was for years in charge of the collection of *divān* taxes. Mīrzā Mihdī Khān b Mīrzā Muḥammad Khān was also an overseer (*mubāshir*) in the tax administration in Khabīṣ, where he acquired desirable estates. He was a capable man, but tyrannical in the matter of tax-collection (*ʿāmilī*) (*ibid.*, 63-5).

Another family which seems to have risen to prominence through the holding of government office was the family of Mīrzā Khalīl, who was made *mustawfī* of Kirmān in the reign of Muḥammad Shāh. His son, ʿAlī Akbar, became *ḥadjdjūdā* and *dārūgha* of Kirmān city and *ṣāḥib al-dīwān* in Sirdjān in 1258/1842-4. While holding the latter post he acquired riches and bought property in the environs of Sirdjān and in Bardsīr, but dissipated much of his wealth towards the end of his life. His son, Yaḥyā, became *kalāntar* of Kirmān. Another branch of the family held the office of *ḥadjdjūdā* of Kirmān. When Wazīrī was writing, Mīrzā Zayn al-ʿĀbidīn was *ḥadjdjūdā* and known as the *ḥadjdjūdā bāshī* although he did not have any authority over the *ḥadjdjūdās* of the other quarters (*ibid.*, 65 f).

Among the oldest families of Khabīṣ was the Wazīrī family, who traced their origins back to the Kuttuwī Khān, Barāk Ḥādjib [see BURĀK ḤĀDJIB], the founder of the Karā Khiṭāy or Kuttuwghkhānī dynasty (q.v.), who died in 632/1234 (see below). At the turn of the 18th century the family was mainly engaged in trade but also owned land, Āḳā ʿAlī, the head of the family at the time, having many estates in Aḳṭāʿ, Kushk and Khināmān. He was taken as a hostage by Karīm Khān Zand to Shīrāz, where he became acquainted with Āḳā Muḥammad Khān. On the death of Karīm Khān, Dja'far Khān gave money to Āḳā ʿAlī and sent him back to Kirmān on the understanding that he would bring Kirmān over to Dja'far Khān's side. After the death of Dja'far Khān, Āḳā ʿAlī threw in his lot with Āḳā Muḥammad Khān and refused Luṭf ʿAlī entry to Kirmān. The latter, when he subsequently took Kirmān seized Āḳā ʿAlī's possessions, put two of his nephews, Ḥādjī Khān and Ṣādik Beg, in prison, and fined his son, Mīrzā Ḥusayn, heavily. He also took one of his daughters to wife and gave another to his uncle, Naṣr Allāh Khān. The former was later married to ʿAbd al-Raḥīm Khān, the brother of Ḥādjdjī Ibrāhīm Shīrāzī (*q.v.* in Suppl.). Āḳā ʿAlī, who had been sent to Tehran by Bābā Khān (later Fatḥ ʿAlī Shāh), reported these happenings to Āḳā Muḥammad Khān and encouraged him to set out for Kirmān, which he did in 1208/1793-4, accompanied by Āḳā ʿAlī. When Āḳā Muḥammad Khān, after defeating Luṭf ʿAlī gave the town of Kirmān over to pillage, he exempted from this the residence of Āḳā ʿAlī, and several thousand persons are alleged to have taken refuge there and escaped slaughter. Āḳā Muḥammad Khān made Āḳā ʿAlī's son, Āḳā Muḥammad Taḳī, governor of Kirmān, which office he held until the death of Āḳā Muḥammad Khān, and another son, Mīrzā Ḥusayn (d 1270/1853-4), his treasurer (*yundūkdār*). The mother of the latter, of Iṣfahānī, was a Mīr Muḥammad Rafīʿ *sayyida* on her father's side and a Ṣafawī *sayyida* on her mother's side. When Āḳā Muḥammad Khān returned to Shīrāz he took Āḳā ʿAlī and Mīrzā Ḥusayn with him. The former apparently died in Shīrāz shortly afterwards. Towards the middle of the reign of Fatḥ ʿAlī Shāh, Mīrzā Ḥusayn was appointed *wazīr* of Kirmān, which office he held until about the middle of the reign of Muḥammad Shāh. He had many estates in Aḳṭāʿ, Urzūya and Kūshk. The office of *waʾlī* and *ʿāmil* (tax-collector) of the districts of Aḳṭāʿ, Urzūya, Kūshk and Ṣawghān remained in his family for many years, and his descendants owned villages, gardens, flocks and herds in these districts. Muḥammad ʿAlī Khān, Āḳā ʿAlī's grandson, was *ʿāmil* of the districts of Aḳṭāʿ, Urzūya, Kūshk and Ṣawghān and of the Afshār tribe for over twenty five years. From about 1870 he had the title of *ilkhānī* in addition to the properties he inherited, Muḥammad ʿAlī founded many villages in Urzūya and Aḳṭāʿ. His position as tax-collector enabled him to usurp the estates of his uncle Mīrzā Ḥusayn Wazīr and his cousin ʿAlī Muḥammad Khān after their deaths (*ibid.*, 6f). His brother, Abu 'l Ḳāsim Khān also usurped some of the properties of ʿAlī Muḥammad in Aḳṭāʿ and Urzūya. He founded other properties as well and gradually became a wealthy man. A third brother, Murtaḍā Kull, had numerous estates in Urzūya, Aḳṭāʿ, Kūshk and Bardsīr, some usurped, some bought and some founded by himself. He put money out with merchants and others. He owned herds of horses and flocks of sheep (*ibid.*, 5 ff., 58 ff., 62). A grandson of Āḳā ʿAlī, ʿAlī Muḥammad Khān, married his cousin, Bībī Kūčik, a daughter of Mīrzā Ḥusayn b. Āḳā ʿAlī their son was Aḥmad ʿAlī Khān Wazīr, the author of the *Dīnghrāfiyā-yi wilāyat-i Kirmān* and the *Tārīkh-i Kirmān*. ʿAlī Muḥammad Khān is said to have brought back six *kanāts* in Ṣawghān into a flourishing condition (*ibid.*, 12) Aḥmad ʿAlī Khān Wazīrī, unlike his forebears, did not enter government service, but occupied himself running his estates. He appears, however, to have received a government pension (*muḳarrarī*) (Wazīrī, *Tārīkh-i Kirmān*, ed. Bāstānī Pārīzī, Tehran 1961, introduction)

Wazīrī mentions another old family, the Āḳāyān of Anār, who traced their origins back to Bahādur Idgū Barlās, who had been governor of Kirmān in the time of Tīmūr. For years this family had held the office of *raʾīs* of Anār, but by Wazīrī's time they had fallen on evil days and become poverty-stricken (*Dīnghrāfiyā*, 183). For the rest, most of the families mentioned by Wazīrī had risen to prominence in recent times.

In the middle of the 19th century, partly as a result of the increase in the price of agricultural products and the revival of long-distance and local trade, there appears to have been a revival in the prosperity of the merchant class and also a strengthening of their links with the landowning class. This was notably the case in Rafsindjān. Wazīrī relates that a certain Ḥādjdjī Āḳā ʿAlī of Rafsindjān had landed estates worth over 100,000 *tūmāns* and partners and agents in Bombay, Yazd, Iṣfahān, Tehran, Mashhad, Tabrīz and Istanbul, whereas thirty years before he had not owned property worth 1,000 *tūmāns* (*ibid.*, 168-9, 172) Among merchant families in Kirmān city, Wazīrī mentions that of Ḥādjdjī Muḥammad ʿAlī Amīn al-Raʿāyā b Ḥādjdjī Muḥammad Ibrāhīm b. Ḥādjdjī Allāhwardī Kirmānī, who was the *waʾīs al-tudjdjār* of Kirmān. His father and grandfather had built many caravanserais, baths and mosques in the city of Kirmān and elsewhere. He himself had acquired many estates in the district of Khabīṣ and in Māhān. According to Wazīrī, he

showed little care for the poor and the deserving (*ibid*, 78).

Wazīrī asserts that between about 1844 and 1874 there was a great increase in the wealth of those holding land, due, he states, to the high prices for cotton and madder which had prevailed for several years in India and for grain in Persia. Persons whose property thirty years before he was writing had been worth 1,000 *tūmāns* were then receiving an income of 2,000 *tūmāns* from their estates, and those who had formerly been prepared to sell a hamlet or piece of cultivated land for a song to pay their tax demands would not then sell for 3,000 or 4,000 *tūmāns*. This was especially the case in Sirdjān, Rafsandjān and Urzūya. He alleges that the condition of agricultural labourers had also improved, so much so that they were better off than had been the owners of hamlets formerly. Many of the agricultural labourers of Rafsandjān had become *kādkudā*s. Flockmasters, because of the rise in the price of *hurk*, had also become rich men (*ibid*., 168-9, 238).

Religion.—In Sāsānid times, there were in addition to Zoroastrians a number of Nestorian Christians in Kirmān. The bishop of Kirmān was under the metropolitan of Fārs. Conversion to Islam after the Arab conquest was slow. The province was exposed to Khāridjī influence in the 1st century and to some Ismā'īlī activity in the late 5th/11th and early 6th/12th centuries (see below). Mukaddasī states that the Khawāridj had a Friday mosque in Bam. According to his account, the dominant rite was the Shāfi'ī one except in Djīruft. The *fukahā'* were not numerous; among them the *ahl al hadīth* formed the majority except in Hurmuz (468-9). Afdal al-Dīn praises the good religion and orthodoxy of the people of Bardsīr. He alleges that Kirmān was free from every kind of heresy and that the people were either Hanafīs or Shāfi'īs. Yākūt states that the inhabitants of Kirmān were virtuous, honest, and very attached to Sunnism and orthodoxy (483). Under the Salawids, Kirmān, like the rest of the empire, accepted *Ithnā 'asharī* Shī'ism. In the 19th century the Shaykhīs [*q.v.*] gained many adherents in Kirmān, as also did the Bābīs [*q.v.*]. The office of *Shaykh al-Islām* in Kirmān was held in the middle of the 19th century by Ridjāl *nazyads*, who were Shaykhīs (Wazīrī, *Dughrāfiyā*, 52-3). Factional strife between the Shaykhīs and Bālāsarīs was common. Under the Timūrids the Ni'mat-Allāhī dervish order, founded by Shaykh Ni'mat Allāh Walī (d. 843/1431), gained many followers in Kirmān and elsewhere. Shaykh Ni'mat Allāh's shrine at Māhān, near Kirmān, has remained one of the main centres of the order.

Zoroastrians appear to have maintained themselves as a community in Kirmān city, though in greatly reduced numbers, until modern times. Nevertheless their numbers at 10,000 in the middle of the 17th century. In the reign of Shāh Sulaymān (1077-1105/1667-94) they were removed from the city at the demand of the *'ulamā'*. They built a suburb to the south of the town. They were plundered by the Afghāns in 1133/1720-1 (Wazīrī, *Dughrāfiyā*, 28; *Tārīkh-i Kermān*, 194). Khanikoff states that there were 12,000 Parsī families in Kirmān before its destruction by Āghā Muhammad Khān in 1794. Thereafter, their numbers declined. According to Abbott, there were only 250 families in Kirmān in the middle of the 19th century. Of these some 40 families lived in the villages around Kirmān, and the remainder in the town (*Notes on the trade*, etc.) Wazīrī put the number at 200 families (*Dughrāfiyā*, 40). In 1903 the total number of Zoroastrians was said to be 1,700 persons (*Gazetteer of Persia*, iv (1910), 349). A small community of Hindus from Shikārpūr appear to have settled in Kirmān some time after 1810. They were engaged in banking and trade with Karachi, Bombay, Sind and the Punjāb (Stack, i, 215; Curzon, ii, 244). The export trade of Kirmān was largely in their hands in the 19th century (W. M. Floor, *The merchants* (*tudjdjār*) *in Qādjār Iran*, in *ZDMG*, cxxvi/1 (1976), 124).

History.—Kirmān in many ways developed along different lines from the rest of Persia. It was distant from the early capitals of the caliphate. Its mountain fastnesses could not be easily controlled and local leaders were often able to assert their independence. Thus each of seven mountains which constituted the Djabal Kufs region had a separate leader in early Islamic times. The Lār prevented easy access from Khūrāsān and Sīstān, while the inhospitable country to the north west discouraged expansion from and into the Dāhil. It was ideal country for dissident groups and was one of the regions where the Azārika [*q.v.*] carried on their resistance to the caliphate. Its abundant pastures attracted tribal groups, but the broken nature of the country militated against the formation of large tribal kingdoms. Lack of communications tended to isolate the province but trade with Central Asia, India and the Far East and with other parts of Persia was, nevertheless, important though subject to interruption by local outbreaks of disorder.

The Arab conquest of Kirmān as recorded by al-Balādhurī (*Futūh*, 325, 391 ff.) was begun about 17/638 by al-Rabī' b. Ziyād, who was sent by Abū Mūsā al-Ash'arī [*q.v.*], then governor of Basra on behalf of the caliph 'Umar. Al-Rabī' conquered Sirdjān and made terms with the inhabitants of Bam. Another Arab expedition was sent about the same time by the governor of Bahrayn, 'Uthmān b Abī 'l-'Ās al-Thakafī, who killed the *marzubān* of Kirmān in the island of Abarkawān. The conquest of Kirmān was not, however, completed. In 29/649-50 Yazdagird, the last of the Sāsānid kings, fled from Iṣfahān to Kirmān and thence to Khurāsān. Most of the Arab army under Mudjāshi' b. Mas'ūd al-Sulamī sent by 'Abd Allāh b. 'Āmir in pursuit of him perished in the snow at Baynand (in the district of Sirdjān). Mudjāshi' appointed governor of Kirmān by Ibn 'Āmir, subsequently took possession of the chief towns up to the Kufs mountains. A counter attack by the Persians from Hurmuz was defeated. Further details concerning the early conquests are uncertain and variously recorded (see al-Ya'kūbī, *Buldān*, 286).

Under the Umayyads, Kirmān became a theatre for the activities of the Khāridjīs. In 63/682-3 the Azārika fled to Kirmān. About 73/693 they reassembled and under Katarī b. al-Fudjā'a [*q.v.*] seized Fars and Kirmān, being joined by a number of the local inhabitants. They extended their activities to 'Irāk. Harried by al-Muhallab, they withdrew again to Kirmān. By about 79/698-9 they had been exterminated by him. Kirmān nevertheless continued to be a hotbed of rebellions and a favourite asylum for rebels. the al-Ash'ath [*q.v.*] took refuge there briefly ca. 82/701-2 or 83/702-3. In 101/719-20, the rebel Yazīd b. Muhallab, who, during his father's lifetime had for a period been governor of Kirmān, appointed a governor over Kirmān. After the failure of his rebellion, from about 102/720 the Umayyads (in whose name several coins struck at Kirmān survive) seem to have exercised control over the province, often through the governor of Khurāsān,

who would administer the province through a deputy. In 120/738 Muḥārib b. Mūsā, a supporter of ʿAbd Allāh b. Muʿāwiya b. Djaʿfar, who had turned out Marwān's governors from Fārs, made inroads into Kirmān but was later routed by the supporters of Marwān. In 131/748-9 an Umayyad army set out from Kirmān to oppose the ʿAbbāsid army under Khāzim, which had advanced on Rayy, and was defeated near Iṣbahān.

Under the early ʿAbbāsids, governors were appointed over the province, which continued for the most part to fall under the general control of Khurāsān. ʿAbbāsid coins struck in the province in the years 165/781-2 and 167/783-4 survive. During the reign of Hārūn al-Rashīd rebellion spread to Kirmān when Hamza b. ʿAbd Allāh al-Sharī occupied Hurmuz in 179/795 and extended his authority to Fārs and Kirmān, where there were still a considerable number of Khāridjīs, who appear to have recovered from the defeats inflicted on them in late Umayyad times (see further Gh. H. Sadighi, *Les mouvements religieux iraniens au IIe et au IIIe siècle de l'hégire*, Paris 1938, 54 ff.).

Ibn Balkhī gives figures for the revenue of Kirmān at this period. In 200/815-16 Fārs, Kirmān and ʿUmān were assessed at 2,600,000 *dīnārs*, a new assessment having been necessary because the registers had been destroyed in the civil war. Another assessment made by ʿAlī b. ʿĪsā in the reign of al-Muḥtadir was rather lower, namely 2,531,880 *dīnārs*, of which Kirmān and ʿUmān accounted for 444,380 *dīnārs*. After various deductions the net sum going to the *dīwān* was 364,380 *dīnārs* (Ibn Balkhī, *Fārs-nāma*, 171).

A succession of governors, some of whom from the time of al-Muʿtaṣim onwards were Turks, ruled the province until the caliphate of al-Muḥtadir when Muḥammad b. Wāṣil al-Tamīmī rebelled in 256/869-70 and seized Fārs and Kirmān. Al-Muʿtamid on his accession to the caliphate sent an army against him. The two armies met near Ahwāz and the caliph's forces was defeated. About the same time Yaʿḳūb b. Layth moved into Kirmān and took possession of it. Some of the supporters of Muḥammad b. Wāṣil joined him, while the remainder set out for Fārs. Yaʿḳūb after spending some two months in Kirmān, marched into Fārs in 253/867. Both he and his brother ʿAmr after him appointed governors over Kirmān. The latter after he was defeated by al-Muwaffaḳ in Fārs, retired to Sīstān in 274/887-8, but in 280/893-4 al-Muʿtaḍid made peace with him and re-appointed him over Fārs, Kirmān and Sīstān. After the death of ʿAmr, his grandson Ṭāhir governed Fārs and Kirmān until 295/907-8, when it passed into the hands of Subkarī (?Sabīl-kī), who was defeated by a caliphal army in 298/911 or 299/912. In 317/929, however, the Saffārid Abū Duʾlaf Aḥmad b. Muḥammad b. Khalaf b. Layth was able to send a military force to Kirmān to collect revenue.

Meanwhile, the Sāmānid kingdom was in the throes of revolt. One of Naṣr b. Aḥmad's *amīrs*, Abū ʿAlī Muḥammad b. Ilyās, had seized Nīshāpūr. When Naṣr recovered the town in 320/932, Muḥammad b. Ilyās went to Kirmān and established himself there. In 322/934 Mākān b. Kākī drove Muḥammad out and took possession of the province on behalf of the Sāmānids. In either 323/935 or 324/935-6 Mākān left the province to undertake operations against Wushmgīr in Gurgān. Muḥammad b. Ilyās returned and attempted to restore his authority. Meanwhile Aḥmad b. Būya (later Muʿizz al-Dawla) had advanced on Kirmān and when he reached Sīrdjān in 324/935-6 the Sāmānid *amīr*, Ibrāhīm b. Sīmdjūr, who was besieging Muḥammad b. Ilyās, withdrew to Sīstān while Muḥammad b. Ilyās retired to Khurāsān. Muʿizz al-Dawla then undertook operations against the Kufs and Balās, the details of which are variously recorded (see above). In 326/937-8 he was recalled to Baghdād. After the withdrawal of the Būyids, it appears that Muḥammad b. Ilyās returned to Kirmān. He acknowledged the Sāmānids in the *Khuṭba* and received in 348/959-60 a banner and robe of honour from the caliph al-Muṭīʿ. Somewhat later, quarrels broke out between Muḥammad b. Ilyās and his sons, and he was finally persuaded to abdicate in favour of Ilyās[1]. In 356/967 ʿAḍud al-Dawla took ʿUmān and invaded Kirmān. Bardsīr fell in Ramaḍān 357/August 968 and Ilyās[1] fled to Khurāsān. ʿAḍud al-Dawla having received a diploma for Kirmān from the caliph, then appointed his son Abū l-Fawāris Shīrzīl (later Sharaf al-Dawla) governor and returned to Shīrāz. In 359/969-70 an abortive attempt was made by the Sāmānids to regain possession of Kirmān with the help of Sulaymān b. ʿAlī b. Ilyās. In 364/974-5 al-Ḥusayn b. (?) Muḥammad b. Ilyās placed himself at the head of a group of malcontents in the *garnīsūn* but was defeated and captured (see further C. E. Bosworth, *The Banū Ilyās of Kirmān (320-57/932-68)*, in *Iran and Islam*, ed. idem, Edinburgh 1971, 107-24). The period of the Banū Ilyās was a time of disorder during which the revenues of the province were dissipated (Ibn Ḥawḳal, ii, 315). Under ʿAḍud al-Dawla the province appears to have been highly taxed compared to the reign of al-Muḥtadir. According to Ibn Balkhī, the total revenue of Fārs, Kirmān and ʿUmān, together with ʿushr levied at Sīrāf and Mihrūbān on goods imported by sea (*ʿushr-i mughrāḥ-i yi dar?ya?*), in the time of ʿAḍud al-Dawla was 3,346,000 *dīnārs*, of which Kirmān, Tīz and the coastal districts of Fārs (? *hadūd*) accounted for 750,000 *dīnārs* (*Fārs-nāma*, 172). After the death of ʿAḍud al-Dawla in 372/982-3, his descendants began to fight among themselves for the province and a period of some confusion followed. Muḥammad of Ghazna in 407/1016-17 attempted to install his nominee in the province but without lasting success and in 424/1033 Masʿūd b. Muḥammad temporarily occupied it (C. E. Bosworth, *The political and dynastic history of the Iranian world*, in *Cambridge History of Iran*, v, 137; see also AND KĀLĪ-JĀR).

In 431/1040 the Saldjūḳs defeated Masʿūd at the battle of Dandānḳān (q.v. in Suppl.), and some two years later in 433/1042 Kāwurd Ḳarā Arslān Beg b. Ḳaghrī Beg b. Mīkāʾīl b. Saldjūḳ [q.v.] was sent by Toghrïl Beg to conquer Kirmān. This attack was repulsed by Abū Kālīdjār in 434/1042-3. A second expedition in 440/1048 was more successful, the governor, Bahrām b. Lashkar, surrendering the province without war. The Kufs, however, resisted but were defeated (see above). Kāwurd, who established his rule in Kirmān, made two attempts to usurp the sultanate. On the first occasion in 458/1066-7, Alp Arslān marched against him and defeated him, but reinstated him in Kirmān on his former position (Ibn al-Athīr, x, 36-7). After Alp Arslān left the province, Kāwurd went to Baḥḥāstān, repaired the port of Tīz and appointed governors over Makrān. He also conquered ʿUmān, which remained in Saldjūḳ hands until the death of Arslān Shāh in 536/1141. When Alp Arslān died in 465/1072, Kāwurd made an second attempt to claim the sultanate. According to one account, he wrote to Malik Shāh stating that he was more fitted to succeed on the

grounds that he was Alp Arslān's eldest brother (Sayyid Ṣadr al-Dīn al-Ḥusaynī, *Akhbār al-dawla al-Saljūqiyya*, ed. Muḥammad Iḳbāl, Lahore 1933, 56). According to another account, some of Malik Shāh's *amīrs* invited him to come (Muḥammad b. Ibrāhīm, 12-13). He was defeated near Hamadān, and taken prisoner and killed. The Saljūḳs of Kirmān did not, however, come to an end with Kāwurd: the dynasty founded by him was to last some 150 years, during which the province enjoyed, on the whole, prosperity and peace.

The Saljūḳs of Kirmān had a reputation for justice and caring for their subjects. Kāwurd took measures to establish security on the roads, and erected pillars at intervals along the Bam-Fahraj road so that travellers would not lose the way; he also built caravanserais and water tanks (Muḥammad b. Ibrāhīm, 10-11). Kāwurd, Tūrān Shāh b. Kāwurd, Arslān Shāh b. Kirmān Shāh and his wife Zayṭūn Khātūn, and Muḥammad b. Arslān Shāh were all great builders. The latter built a library for the Tūrān Shāh *dhimmī*, which contained 5,000 books on different branches of learning. Some of them were also patrons of the religious classes. In the reign of Arslān Shāh b. Kirmān Shāh, the *'ulamā'* are alleged to have come to Kirmān from far and wide. His son, Muḥammad, gave pensions to the *fuḳahā'* and during his reign there was, according to Muḥammad b. Ibrāhīm, a spread of learning and a tendency for craftsmen to send their sons to study *fiḳh* (29). Some of the officials and *amīrs* of the Saljūḳs were also builders and patrons of the religious classes. The atabeg, Mu'ayyid al-Dīn Rayḥān, made many charitable foundations and constituted *awḳāf* for their upkeep (*Tārīkh-i Afḍal*, 36).

Although the Saljūḳs of Kirmān were familiar with city life, their existence was closely bound up with the well-being of their flocks. They habitually spent seven months of the year in Bardsīr and five (from Āḏar (Nov.-Dec.) to Urdī Bihisht (April-May)) in Dīrūft, their flocks moving with them. Their financial position seems to have been favourable until towards the end of the dynasty, and Bahrām Shāh b. Muḥammad, under whom the decline of the dynasty set in, succeeded to a well filled treasury. Throughout Kāwurd's reign of 34 years the value of the coinage remained stable (Muḥammad b. Ibrāhīm, 4). Trade probably contributed to this favourable situation. Kamādīn, even towards the end of the period, was still an important centre of long-distance trade and was "a place where strangers from Anatolia and India and travellers by land and sea lodged, and was full of wealth" (*Tārīkh-i Afḍal*, 42, 69). Some of the ministers and *amīrs* owned considerable estates. Mu'ayyid al-Dīn Rayḥān appears to have let his money out to merchants and others, who presumably worked it for him (cf. *Tārīkh-i Afḍal*, 40). The pay and allowances of the military following of the ruler (*dasham*) were controlled from the centre (cf. *Tārīkh-i Afḍal*, 34). The troops were mainly Turks, but there were also some Daylamīs. They received allowances and *iḳṭā'*s, mainly, according to Afḍal al-Dīn, in the district of Sīrdjān, where "a great *amīr* with a large force was always stationed because it was on the frontiers of Fārs" (*'Iḳd al-'ulā*, 74). The total number of the military following of the rulers and their *amīrs* was not large. Kāwurd, when he came to Kirmān in 433/1041-2 had, according to Muḥammad b. Ibrāhīm a force of 5,000 or 6,000 (s). The rival groups who disputed supremacy in the province at the end of the period and during the period of Ghuzz ascendancy were on the whole not large. Malik Dīnār is said to have ruled over 10,000 men (*'Iḳd al-'ulā*, 99). Muḥammad b. Ibrāhīm credits Ḳuṭb al-Dīn Mahārīs and Niẓām al-Dīn Maḥmūd, the Shahānkāra *amīrs*, with having a force of 10,000 men, horse and foot, when they came to Kirmān in 596/1199-1200 (279).

Kāwurd was succeeded by his son Kirmān Shāh, whom he had appointed to act in his stead during his absence on the campaign against Malik Shāh. Sulṭān Shāh, who had been taken captive with his father Kāwurd, escaped from captivity and was brought to Kirmān. His brother had meanwhile died, and in 467/1074 he ascended the throne in Kirmān. In 472/1079 so (or according to some sources rather earlier) Malik Shāh went to Kirmān and besieged Sulṭān Shāh in Bardsīr. After some seventeen days the siege was raised, Sulṭān Shāh was confirmed in his government and Malik Shāh returned to Iṣfahān. Sulṭān Shāh was succeeded by his brother Tūrān Shāh in 477/1085. His reign was on the whole uneventful. In 487/1094 he made an abortive expedition into Fārs. He was followed by his son, Īrān Shāh in 490/1097. The latter appears to have been won over to the Ismā'īlīs. A number of *amīrs* had recourse to the *Shaykh al-Islām*, the *Ḥāfiẓ* Djamāl al-Dīn Abu 'l-Ma'ālī, who issued a *fatwā* for his death. Īrān Shāh fled, but was overtaken and killed, and Arslān Shāh b. Kirmān Shāh placed on the throne in Muḥarram 495/October 1101 with the joint support of the *amīrs* and the *ḥāfiẓs*. He reigned for 42 years and under him the dynasty reached its greatest heights. He married a daughter of Muḥammad b. Malik Shāh. He appointed, as had his predecessors, *shiḥnas* over 'Umān and attempted also to extend his dominion over Fārs. He defeated Čawlī Sāḳā in 508/1114-15, and on the death of the latter in 510/1116-17, Muḥammad b. Malik Shāh appears to have considered the threat posed by the Saljūḳs of Kirmān to Fārs to be a real one (Ibn al-Athīr, x, 365). Towards the end of Arslān Shāh's reign, disputes arose between him and 'Alā' al-Dawla, the ruler of Yazd. Bahrām Shāh b. Mas'ūd, the Ghaznavid, when he was defeated by his brother Arslān Shāh, sought the help of Arslān Shāh b. Kirmān Shāh. The latter treated him with favour, but refused to help him on the grounds that he did not wish to interfere in affairs which properly concerned Sandjar. In 537/1142, Muḥammad b. Arslān Shāh set his father aside because of his advanced age and seized the throne, in spite of the fact that another son, Kirmān Shāh had been appointed *walī 'ahd*. A third son, Saljūḳ Shāh, after making an abortive attempt to seize the kingdom, fled to 'Umān, where he continued to constitute a potential threat to Muḥammad. The fact that the latter is said to have appointed *shiḥna*s in the towns within his kingdom and to have had an excellent information service perhaps suggests that there was unrest or hidden opposition to him. However that may be, Kirmān continued to prosper under Muḥammad. He extended his rule over Ṭabas and his successors continued to appoint *shiḥna*s over that city for some years. There was also a proposal by Rashīd Dīmadār, the governor of Iṣfahān, to hand that city over to Muḥammad, but the death of both parties in 551/1156 brought the plan to nought.

Muḥammad was succeeded by his son Toghrul Shāh, a somewhat frivolous character, and there was during his reign a decline in public morals. However, Kirmān still enjoyed security and prosperity under his rule (*'Iḳd al-'ulā*, 7; *Tārīkh-i Afḍal*, 30; Muḥammad b. Ibrāhīm, 35). There was a total eclipse in the month of Urdī Bihisht 557 *Ḥaraḳāt*/April-May

1169 (*Ṭabaḳāt al-Ṣūfiyya*, 8; *Tārīkh-i Afḍal* 30). In the last years of Toghril Shāh's reign, power was in the hands of the Atabeg Mu'ayyid al-Dīn Rayḥān who, on the death of Toghril Shāh in 565/1170, placed the latter's son, Bahrām Shāh, on the throne, though not before Turkish troops had plundered Djīruft and carried off the cattle (*mawāshī wa sutūrān*) of the non-Turks and the bureaucracy (*Tārīkh-i Afḍal*, 33, 36). His succession was disputed by his brother Arslān, who was joined by the Atabeg Ḳuṭb al-Dīn Muḥammad b. Buchush, and a period of internecine strife ensued. A third brother, Tūrān Shāh, sought help from the Atabeg Zangī of Fārs and advanced on Sirdjān, but was put to flight by Arslān, while Bahrām Shāh retired to Khurāsān to seek help from the Ghuzz leader, Malik Mu'ayyid. A second attempt by Tūrān Shāh to seize the province was also defeated. Bahrām Shāh, having obtained reinforcements from Malik Mu'ayyid, advanced in 566/1171 via Sīstān and Makrān on Djīruft and put Arslān's forces, which had been weakened by disease, to flight at Ḳamādīn, which the Khurāsān army then plundered. Subsequently, heavy impositions were laid upon the people of Bardsīr, who were reduced to misery. Arslān, meanwhile, with support from the Saldjūḳ ruler of 'Irāḳ, Arslān b. Toghril, returned and besieged Bahrām Shāh in Bardsīr. After six months, Bahrām Shāh and his supporters, who were short of supplies, made peace. Bardsīr, Sirdjān, Djīruft and Khabīs went to Arslān and Bam and Makrān to Bahrām Shāh. Peace, however, did not last; Bahrām Shāh again appealed to Khurāsān for help while Arslān had recourse to 'Izz al-Dīn Langar, the ruler of Yazd. Bahrām Shāh was put to flight and Arslān entered Bardsīr in 569/1174. Some years later, Bahrām Shāh retook Bardsīr. In 570/1174 he died. A further period of strife and disorder ensued, the main roles being played by the atabegs and *umarā* acting in the name of one or other of the Saldjūḳ princes; inroads into the province were also made by the forces of the atabegs of Fārs, Yazd and 'Irāḳ. Under Tūrān Shāh, who eventually defeated Arslān, the Mu'ayyidī *ghulāms* (i.e. the followers of the Atabeg Mu'ayyid al-Dīn Rayḥān) played a dominant role (cf. *Tārīkh-i Afḍal*, 79). The Atabeg Rayḥān was persuaded to return to Kirmān from Yazd, to which he had withdrawn some seven years earlier, but retired again almost immediately because of his advanced age. By this time, the province had become impoverished. Afḍal al-Dīn describes its condition in the following words: "every year the unfortunate peasants used to take loans or sell their substance (*bihā u māya*) to buy seed grain from Ṭabas or elsewhere. They would sow it only for another to harvest it and eat it" (81; Muḥammad b. Ibrāhīm, 99; cf. also *Ṣilat al-Sīra*, 13 ff., 77 ff.). All kinds of impositions and fines were meanwhile laid upon the population by the contending *umarā* in order to support their forces. Little money remained in the treasury, and in 575/1179 the Turks plotted and killed a number of leading officials of the bureaucracy (*Tārīkh-i Afḍal*, 86).

New disasters were meanwhile in store for Kirmān. About 574 or 575/1179, Sulṭān Shāh turned the Ghuzz out of Sarakhs and some 5,000, with their families and flocks, came to Kūhbānān, plundered the countryside and went on to Zarand and Bāghīn. The Atabeg Takelle of Fārs, who at the time held Sirdjān and Furg, sent a force against them. Together with the Kirmān army, it was defeated in 575/1179-80 and the Ghuzz spread into the *garmsīr*, where they committed pillage and waste. In the years 575-6/1179-80 or 576-7/1180-1 there was a severe famine in Bardsīr (*Tārīkh-i Afḍal* 91; *Ṣilat al-Sīra*, 97). In the winter of 577/1181-2, the Ghuzz again set out for the *garmsīr*. Afḍal al-Dīn states that since they had now come to stay, they began to develop and cultivate the districts of Djīruft and Narmāshīr and paid some consideration (*murā'āt*) to the peasants (*bīzdīr*), and brought from Iṣfahān, Sīstān and Fārs goods, beasts and booty which they took from caravans and accumulated in the *garmsīr* and the *sardsīr*. (*Tārīkh-i Afḍal*, 93). They also took several fortresses into which the remnants of the Turkish forces had retired. The *sardsīr*, however, to which the nominal rulers of the province were confined, remained in a state of distress. In 579/1183-4 Tūrān Shāh was killed by a group of *umarā*, who released Muḥammad Shāh b. Bahrām Shāh from the fortress where he had been imprisoned and placed him on the throne. In 580/1184-5 famine again broke out in Bardsīr. In the following year 581/1185-6, Malik Dīnār came with some 60 men to Rāwar and Khabīs from Kūhbānān, intending to join the Ghuzz in Narmāshīr. Some 300 men from Bardsīr set out to prevent his advance, but did not dare to join battle with him (*Tārīkh-i Afḍal*, 103). In 582/1186 Muḥammad Shāh set out for 'Irāḳ to seek help against the Ghuzz. The following spring, Bardsīr surrendered to Malik Dīnār. Muḥammad Shāh, who had failed to obtain help from either 'Irāḳ or Takkele in Fārs, returned briefly to Bam. He then went to Sīstān and from there to the court of the Khwārazm Shāh Takash. He finally took refuge with Shihāb al-Dīn, the ruler of Ghūr and Ghaznīn. In 583/1187-8 an abortive attempt was made to read the *khuṭba* in Bardsīr in the name of a Saldjūḳ princess, Khātūn Kirmānī, a daughter of Toghril (Muḥammad b. Ibrāhīm, 148).

Malik Dīnār, having established himself in the district of Djīruft, struck coins and read the *khuṭba* in his own name in Djumādā I 582/July-August 1186 he set out for Bardsīr, but lack of pasture and the role of the countryside appear to have prevented him from establishing himself there, and the town remained for some time in the hands of the Saldjūḳ forces until it surrendered on 5 Radjab 583/11 September 1187. During the next two years, Malik Dīnār was occupied in extending his power and putting down local pockets of opposition. He then made an expedition to the south, took Manūdjān and extracted 1000 *dīnārs* tribute from the ruler of Hurmuz (Muḥammad b. Ibrāhīm, 154). Revenue was also collected from the Makrānāt (*al-Mudjmal*, 5) Bam, which had been in the hands of an *amīr*, Shihāb 'Alī, did not however submit until ca. 588/1192. In 589/1193 Malik Dīnār was again in the south and met the ruler of Kays, who promised him tribute. The death of Malik Dīnār in 591/1195 was followed by new outbreaks of disorder. He was succeeded by his son Farukh Shāh, who rapidly dissipated the contents of the treasury which Malik Dīnār had laboriously accumulated (*ibid.*, 164). Unable to establish himself, he had recourse to the Khwārazm-Shāh for help, but died in 592/1196 before this could arrive. Meanwhile, on the one hand the Ghuzz began to commit disorders and pillage on an unprecedented scale while on the other the *umarā* were rent by faction and disunity.

The period of Ghuzz ascendancy, was a time of misery and distress for the people of Kirmān. The province was subjected not only to the ravages of the Ghuzz, but also to incursions by the rulers of Fārs and Khurāsān, or their *umarā*, who from time to time established a temporary ascendancy in different

parts of the province. Trade was brought to a standstill and agriculture to ruin, even though the members of the warring factions were small—to be numbered in hundreds rather than thousands. The Ghuzz flocks commonly grazed the crops of the settled people, and in addition they levied a quarter of the share of the crop remaining to the landlord, after the payment of government dues to provide for their followers, although certain persons, mainly belonging to the religious classes, were exempted from this levy (*al-Muḳtaṣaf*, 19-20).

For a time the situation was extremely confused, until the Shabānkāra *amīrs*, Ḳuṭb al-Dīn Mubārik and Niẓām al-Dīn Maḥmūd, defeated the Ghuzz in 597/1200, appointed a deputy over Kirmān and retired to Fārs. Shabānkāra rule proved no less harsh than that of the Ghuzz (Muḥammad b. Ibrāhīm, *183 ff., al Muḳtaṣaf*, 10 ff.). Finally, the population rose against them. Further disorders ensued until a group of the *amīrs*, townspeople and *tāzīks* of Bardsīr, fearing renewed attacks by the Ghuzz, decided to hand the town over to ʿAḍud Shāh b. Malik Dīnār, who, after a period spent at the court of the Khʷārazm-Shāhī ruler, had returned to Rum and placed himself at the head of the Ghuzz in that district. New forces arrived from Fārs under ʿImād al-Dīn Muḥammad b. Zaydān, Saʿd b. Zangī's nephew, and they recaptured Bardsīr. About 601/1205 an expedition into Kirmān was made by Khʷāja Rashīd Zawzanī, a Khʷārazm-Shāhī *amīr*, who had been in Kirmān on several occasions and acquired many estates there. In 603/1207 another expedition came from Fārs. Later Saʿd b. Zangī came himself to Kirmān and undertook operations against the Ghuzz. They submitted in 605/1209 and Saʿd b. Zangī returned to Fārs. When he appointed officials over Bardsīr to that year, he is reported by Aḥmad al-Dīn to have levied a quarter of the net income of the landowners by way of tax, but in 606/1210 this appears to have been increased to one-third and the exemptions formerly allowed by the Ghuzz to certain members of the religious classes and others withdrawn (*al-Muḳtaṣaf*, 20, 42). Waṣṣāf states that the taxes of Kirmān were not sufficient for the needs of the kingdom and the wages of the army, and so Saʿd b. Zangī issued a decree for an additional levy of one tenth (*ʿushr*) on landed estates, which was called *fidāyat al-mulūk*. The people complained of this levy and it was abolished (*Tārīkh-i Waṣṣāf*, 151). According to Aḥmad al-Dīn, Saʿd b. Zangī bought up much dead land and spent on its development whatever he received from the *dīwān* of Kirmān (*al Muḳtaṣaf*, 42). Meanwhile, Khʷāja Rashīd Zawzanī's forces, who are alleged to have committed great oppression, came into conflict with ʿIzz al-Dīn Faḍlūn, Saʿd b. Zangī's representative, and returned to Khūrāsān in 606/1210.

Zangid supremacy in Kirmān was fleeting. In 607/1213, a Khʷārazm-Shāhī *amīr*, Kiwān al-Dīn Muʾayyid al-Mulk, also from Zawzan, asked the Khʷārazm-Shāh Muḥammad b. Tekesh to give him Kirmān and in Ramaḍān of that year, having received the title of *malik*, he set out from Zawzan for Kirmān (Faḍlī Khʷāfī, possibly mistaking the *Sharāfī* year for the *hilālī*, appears to put these events in the year 603, *Mujmal-i Faṣīḥī*, ed. Maḥmūd Farukh, Mashhad A.H.S. 1939-41, ii, 281). Djiruft and Ḥurm surrendered and also Bāfḳ and, finally Bardsīr in Ṣafar 610/June 1213. Muʾayyid al Mulk then made an abortive expedition against Fārs, which he abandoned when part of his army deserted. In or about this year there was an outbreak of plague (*? wabā'*) which spread from the south to Bardsīr and was accompanied by heavy loss of life (*al Muḳtaṣaf*, 46 ff.).

Among the *amīrs* of the Khʷārazm Shāhs was a certain Abu 'l Fawāris Ḳuṭlugh Sulṭān Barāḳ Ḥādjib (see AUZAK QUAGHRI), who had been in the services of the Gūr Khān of the Kara Khiṭāy [*q.v.*]. He rose to the position of *ḥādjib* in the Khʷārazm Shāh ʿAlāʾ al-Dīn Muḥammad and became atabeg to his son Ghiyāth al Dīn Pīr Shāh. The latter, after the fall of ʿAlāʾ al-Dīn, appointed him governor of Iṣfahān, but he, seeing the disorder into which the affairs of the Khʷārazm Shāh had fallen, set off with his followers for Kirmān intending to proceed to India. Having reached Kirmān, he joined battle with the governor of the province, Shudjāʿ al-Dīn Abu 'l Ḳāsim, defeated him and besieged his son in Bardsīr. When Djalāl al-Dīn Mangubirnī returned from India some months later, Barāḳ Ḥādjib requested from him the government of Kirmān. Djalāl al Dīn, having little choice in the matter, agreed and gave Barāḳ Ḥādjib the *laḳab* of Ḳuṭlugh Khān (for which reason, the dynasty which he founded is sometimes known as the Ḳuṭlugh Khānid dynasty), and went himself to ʿIrāḳ and Āḏharbāydjān. Barāḳ Ḥādjib later apparently demanded and received from the caliph the title of "sulṭān," and the sources refer to the rulers of the dynasty as *sulṭāns* and their rule as *salṭanat*. When Ghiyāth al-Dīn subsequently came to Kirmān and sought to establish himself there, Barāḳ Ḥādjib, after first temporising, finally seized and killed him. He then sent an envoy to Ögedey offering submission and was in return confirmed in his possession of the province of Kirmān, which he held for fifteen years. He had four daughters, the eldest of whom, Sevinč Khātūn, was married to Čaghatay, while the other three were married into the family of the Atabegs of Yazd. His son, Rukn al-Dīn Khʷādjā-Ḳuṭb was sent to serve at the Mongol court and was with Ögedey at the time of his father's death, which took place on 22 Dhu 'l Ḥidjdja 632/6 September 1235 (the accounts of these events given by Nāṣir al-Dīn Munshī Kirmānī, *Sumṭ al-ʿulā*, ed. ʿAbbās Iḳbāl, Tehran A.H.S. 1327, 22 ff., Djuwaynī, *Djahān-gushā*, and Nasawī, *Histoire du Sultan Djelal ed-Din Mankobirti*, *ed.* and tr. O. Houdas, Paris 1891-5, vary somewhat).

After the death of Barāḳ Ḥādjib, the Ḳuṭlugh sultans, although their status was that of local rulers rather than governors, had no real independence. Mongol *amīrs* who had come as *basḳaḳs* to Kirmān are mentioned at the court of Ḳubilay al-Dhū in 655/1257 (*Sumṭ al-ʿulā*, 38). All the contenders for power among them appear to have found it necessary to obtain the support of the Great Khān or the Il-Khān for their cause. Many of them made marriage alliances with the Mongols. Barāḳ Ḥādjib was succeeded by his nephew, Ḳuṭb al-Dīn, who shortly after his accession, married Barāḳ Ḥādjib's daughter, Ḳuṭlugh Terken. However, when Rukn al-Dīn, who had obtained a *yarlīgh* for the province of Kirmān from Ögedey, approached the province, Ḳuṭb al Dīn felt it necessary to set out himself for the Mongol court to seek support. Rukn al Dīn, having reached Bardsīr in 633/1236, took possession of the province and ruled for some fifteen years. Ḳuṭb al Dīn, unable to oust his cousin, who was supported both by Ögedey and Čaghatay's wife, Sevinč Khātūn, remained for a while at the Mongol *urdū* and was then sent to Maḥmūd Yalawāč, the Mongol governor al Khiṭāy. In 646/1248, when Mangū Ḳa'ān succeeded Güyük, Ḳuṭb al Dīn obtained a *yarlīgh* for Kirmān

and set out for the province. On his approach, Rukn al-Dīn abandoned the province. After appealing in vain for help from the caliph al-Mustaʿṣim, he went to the *urdū* of Mengū Kāʾān, where the case between him and Ḳuṭb al-Dīn was referred to the Mongol court (*yarghu*). After examination, Mengū handed Rukn al-Dīn over to his cousin, who killed him and then returned to Kirmān. Djuwaynī mentions that he saw Rukn al-Dīn in Almālīgh in Ramaḍān 655/December 1255-January 1256 (*Tārīkh-gushā* ii, 227). When Hülegü crossed the Oxus in 654/1256, Ḳuṭb al-Dīn came to his camp at Ṭūs and was given permission to return to Kirmān provided he came back with an army to join the Mongol forces in their march on Baghdād. He fell ill, however, in 655/1257 and died the following year.

Terken Khātūn, Ḳuṭb al-Dīn's wife, was put on the throne in Kirmān amid general acclaim, and subsequently received, after she had had recourse to Hülegü in person, a *yarlīgh* authorising her to act for Ḳuṭb al-Dīn's sons, who were still children. She ruled some 25 years, during which time Kirmān prospered. Many learned men among the *ʿulamāʾ* and merchants resorted to Kirmān during her reign. It was then also that Marco Polo visited the province. When the Čaghatay hordes crossed the Oxus in 668/1270 to attack Abaḳā's domains, Terken Khātūn sent Ḥadjdjādj Sulṭān b. Ḳuṭb al-Dīn to Khurāsān with an army to support Abaḳā. She also tried to strengthen her position by marrying her daughter, Pādishāh Khātūn, to Abaḳā. However, when Ḥadjdjādj Sulṭān came back to Kirmān he sought to curtail the influence of Terken Khātūn. She repaired to Abaḳā's court to complain of this and was well received. On her return to Kirmān, Ḥadjdjādj Sulṭān retired to India, where he spent the next ten years. Finally, the sultan of Dihlī provided him with an army to retake Kirmān. He set out, but died en route and the army returned to India. (The *Siyāḳ al-ʿulūm* gives 690/1291 as the date of his death. This is presumably an error.)

Djalāl al-Dīn Sūrghatmish b. Ḳuṭb al-Dīn, Terken Khātūn's step-son, who governed the western part of Kirmān on her behalf, also apparently went, with her approval, to Abaḳā's *urdū* while he was in Khurāsān. On his return to Kirmān, Sūrghatmish had his own name inserted in the *ḵhuṭba* alongside that of Terken Khātūn. She complained to Pādishāh Khātūn, and received a *yarlīgh* forbidding the interferences of Sūrghatmish in the affairs of Kirmān. The latter then had recourse himself to the Mongol court. When Abaḳā died in 680/1281, Terken Khātūn immediately set out for Tabrīz to ensure her position. The new Il-khān, Aḥmad Tegüder, however, dismissed her and appointed Sūrghatmish in her stead. She was unable to secure her reinstatement, and spent the winter in Barda'a. The following summer, she went to Tabrīz where she died. Sūrghatmish, who reached Kirmān in 681/1282, took possession of the province unopposed. After the accession of Arghūn (683/1284), Bībī Terken, Ḳuṭb al-Dīn and Terken Khātūn's eldest daughter, whose son, Nuṣrat al-Dīn Yūlūḳshāh, was powerful at the Mongol court, accused him of peculation in the collection of taxes. He was dismissed, his accounts demanded, and officials sent to Kirmān to collect the taxes. By the expenditure of considerable sums of money, Sūrghatmish appears to have obtained permission to go to the Mongol court and there, by further expenditure, to have reached a compromise with the Mongol authorities. By this his half-sister, Pādishāh Khātūn (who had been married to Abaḳā) was given in marriage to Gaykhātū, while Sūrghatmish was married to Kürdüdjin, the daughter of Mengū Temür b. Hülegü and Abish Khātūn, the daughter of Saʿd b. Zangī, and Sūrghatmish undertook to pay an annual sum for Kirmān of 600,000 *dīnārs*, against which, however, he was allowed the expenses (*ikhrādāt*) for his administration and military forces, etc. 390,000 *dīnārs* (*Siyāḳ al-ʿulūm*, 57). During Sūrghatmish's absence, there was apparently an outbreak of famine in Kirmān. The price of wheat rose and the Turkomans rioted and plundered the city. He restored order on his return. He then proceeded to expend considerable sums of money on charitable works: he built a *madrasa*, a *khānḳāh* and a hospital, and constituted *waḳfs* out of *khāliṣa* property for their upkeep. He also extended his patronage to the religious classes (*Siyāḳ al-ʿulūm*, 58). During his reign, Makrān was reduced and tribute exacted. There were, however, renewed encroachments into the province by the Karākwan (Nīkūdārīs), who had already to 677/1278-9 invaded Kirmān from Sīstān. In 680/1281-2 they penetrated to the Persian Gulf and in 683/1284-5 plundered the neighbourhood of Bardsīr (see further P. Pelliot, *Notes on Marco Polo*, i, 283-96 (art. *Caracaras*) and J. Aubin, *L'ethogenèse des Qaraunas*, in *Turcica*, i (1969), 85-94).

On the death of Arghūn in 690/1291, Sūrghatmish, taking advantage of the disorders which had ensued, asserted his independence. In the winter of the following year he went to the *garmsīr* and took Hurmuz. Returning to Bardsīr, he reassessed the *tamghas* and had down that the taxes should be collected in three instalments (*Siyāḳ al-ʿulūm*, 65). Meanwhile, Gaykhātū had sent Pādishāh Khātūn to Kirmān as governor. She immediately seized Sūrghatmish and imprisoned him (693/1292). His wife Kürdüdjin contrived his escape, but he was recaptured and killed in 693/1294 (the sources differ in their relation of these events). In 694/1294-5 Kürdüdjin, encouraged by the rise of Baydū, laid siege to Bardsīr and captured and put to death Pādishāh Khātūn. Kürdüdjin then ruled the province, though there was beside her a Mongol *baḍḥāḳ* (*Siyāḳ al-ʿulūm*, 77).

Baydū was overthrown almost immediately by Ghāzān Khān, who while still in Khurāsān appears to have sent *ilkīs* to Kirmān to collect money for the Khurāsān army (*māl-i ṭarīḳ-i Khurāsān*) (*Siyāḳ al-ʿulūm*, 78). Once Ghāzān had established himself as Il-khān, he appointed Muḥammad Shāh b. Ḥadjdjādj Sulṭān, who had been at his court, over Kirmān. During the early years of Ghāzān's reign, Kirmān was the scene of internecine and factional strife between Muḥammad Shāh b. Ḥadjdjādj and Shāh-shāh, son of the sons of Bībī Terken and brother of Nuṣrat al-Dīn Yūlūḳshāh, and between rival *amīrs* and officials (*Siyāḳ al-ʿulūm*, 79 ff.). Demands for ever more revenue, including taxes for the Khurāsān army, were made, on one occasion a *yarlīgh* was issued for the payment of two years' taxes from Kirmān (*Siyāḳ al-ʿulūm*, 83). There were also renewed attacks by the Karākwan in 695/1295-6. In the following year, Fakhr al-Dīn, who had been appointed *muṣrif* of Kirmān by Ghāzān, proceeded to the province accompanied by a number of *amīrs*. His behaviour provoked an uprising and he and his followers were seized and killed. The revolt spread. The rebels took refuge in the town of Bardsīr and were besieged by the Mongol forces, which, although they received reinforcements from Fārs, Luristān and Yazd, were unable to take the town. Ghāzān, who at the time was in Diyār Bakr or the neighbourhood, summoned Muḥammad Shāh and sent

him back to Kirmān as governor with a number of other officials. The siege continued for ten months. The defenders were reduced by famine and finally, according to Waṣṣāf's account, the city's defences were destroyed by siege engines brought from Fārs, where they had been made by experts summoned from Mawṣil, and the city fell. The ringleaders were put to death and Shāykhshāh was sent to Tabrīz, where he was executed (*Sharḥ al-ʿulāʾ*, 85 ff., Waṣṣāf, 446 ff.). The province was in a miserable condition and the treasury empty. The Karāwun meanwhile renewed their attacks. A substantial remission of taxation was given (*Sharḥ al-ʿulāʾ*, 94), but the ensuing improvement was cut short by the death of Muḥammad Shāh in 703/1303-4 (Waṣṣāf gives the date of his death as 6 Djumādā I 704, 434) Shāh Dhāhirb Suyūrghatmish, who was at the time at Ghāzān's court, was appointed to succeed him. At some time during the reign of Ghāzān or Öldjeytü, Rashīd al-Dīn's son Muḥammad appears to have been governor of Kirmān and to have committed extortion against the people of Bam (*cf. Mukātabāt-i Rashīdī*, ed. Muḥammad Shafīʿ, 20 ff., and also 261). On the death of Öldjeytü, Shāh Dhāhān attempted unsuccessfully to establish his independence. He was dismissed after a reign of some two and a half years, and with him the dynasty came to an end. He was replaced by Nāṣir al-Dīn b. Muḥammad b. Burhān, a descendant of Shihāb al-Dīn Ghūrī, in 704/1305 (Kāshānī, *Tārīkh-i Öldjeytü*, ed. M. Hambly, Tehran 1969, 43).

Kirmān was ruled for the next few years by Mongol governors until it was taken in 740/1340 by Mubāriz al-Dīn Muḥammad Muẓaffar, who was married to Kutlugh Khān, the daughter of Shāh Dhāhān b. Suyūrghatmish. An attempt made by Kuṭb al-Dīn b. Dhāhī al-Dīn b. Kuṭb al-Dīn to regain the city with the help of reinforcements from Harāt was repulsed and Mubāriz al-Dīn, who had temporarily withdrawn, retook the city in 741/1340. Bam, which was ruled by a governor appointed by Abū Saʿīd, held out and was not captured until three or four years later. Meanwhile, the Ilkhān empire was rent by war and faction. In 748/1347 Abū Ishāk b. Muḥammad Shāh, the Ingū Timūrid ruler of Iṣfahān, attacked Sīrdjān and destroyed the town, but left the citadel unreduced. After continuing his march on Kirmān, he then retired to Shīrāz without joining battle with Mubāriz al-Dīn. During a second expedition, he was defeated by Mubāriz al-Dīn and again retired to Fārs. Meanwhile the Djurmāʾīs and Ughānān, some of whom may possibly have been the descendants of the Mongol detachment which had been sent to Kirmān in or about 683/1284 under the leadership of Ughān (*Sharḥ al-ʿulāʾ*, 58), were committing renewed disorders in the south of the province. Mubāriz al-Dīn marched against them. The campaign was inconclusive and the Ughānān and Djurmāʾīs continued for many years to disturb the provinces, in spite of the fact that they frequently served in the ruler's army (in which they proved to be an extremely unreliable element). In 753/1352 renewed encroachments into Kirmān by the Ingū Timūrids were repulsed near Rafsandjān. Mubāriz al-Dīn then extended his power over Fārs and appointed his son Shudjāʿ al-Dīn governor of Kirmān in 754/1353 (though he did not reside permanently in the province, taking part in military expeditions in Fārs and ʿIrāḳ-i ʿAdjam). In 757/1356 Mubāriz al-Dīn was again briefly in Kirmān and undertook a campaign against the Ughānān and Djurmāʾīs, who had been committing disturbances. Mubāriz al-Dīn's death in 765/1364 was followed by a period of internecine strife and faction. In Kirmān, the governor Pahlawān Asad rebelled. After an inconclusive battle with Shāh Shudjāʿ near Kirmān, Pahlawān Asad retired into the city, but submitted after a siege of several months (Ramaḍān 775-Raḏjab 776/March-December 1374). On the death of Shāh Shudjāʿ (786/1384), his son, Sulṭān Aḥmad, went to Kirmān as governor. In 787/1385-6 he read the *Khuṭba* in the name of Timūr. When the latter set out for Fārs in 789/1387, Sulṭān Aḥmad repaired to Timūr's camp, was favourably received and given the government of Fārs, ʿIrāḳ and Kirmān. Internecine strife, however, continued among the Muẓaffarids in Kirmān and elsewhere, until finally they were overthrown by Timūr in 795/1393 and Idgu Bahādur Barlās appointed governor of Kirmān (see further, the supplementary chapter on the Muẓaffarids in the *Tārīkh-i gazīda*). The province was in a state of disorder, and Idgū had to establish his authority by a series of military operations. On Timūr's death in 807/1405, he recognised Shāhrukh. The province was nevertheless subject to pillage and disorder in the struggles which ensued between the various Timūrid princes. Idgū died in 812/1409 and was succeeded by his son Saʿīd Sulṭān, who was assassinated almost immediately on the instigation of his brother, Sulṭān Uways. Disorders continued (see further, J. Aubin, *Deux tayyids de Bam au XV^e siècle*, 20 ff.). Agriculture declined. Ḥāfiẓ Abrū states in the *Zubdat al-tawārīkh-i Bāysunghurī* that wherever the army of Mīrzā Iskender (*d.* 818/1415-6) passed through, no building or cultivation was left, and in the *Diughatāyī* he says that wherever Mīrzā Iskandar went he sacked everything, destroying buildings, cutting down trees and sending troops into all districts so that there was not a single corner of Kirmān which was not devastated (quoted by Aubin, *op. cit.*, 35-6). In 819/1416 Sulṭān Uways was besieged in Kirmān by a Timūrid army, and in the following year there was a severe famine in Kirmān accompanied by a heavy loss of life. Shāhrukh then sent Sayyid Zayn al-ʿĀbidīn to the province to restore agricultural prosperity. He devoted his efforts to the revival of *nuḳṭa* which had fallen out of cultivation. In the first year 250,000 *manns* of wheat were sown. Various tax reductions and remissions were also given to the peasants (Ḥāfiẓ Abrū, *Diughatāyī*, f. 173b, quoted by Aubin, 50). On the death of Shāhrukh in 850/1447, there was renewed anarchy until Dīnārshāh b. Karā Yūsuf, the Karā Koyunlu, sent his son Abu 'l-Ḥasan Kāsim Mīrzā to take possession of the province. Conditions showed little improvement (see Abū Bakr Tihrānī, *Kitāb-i Diyār Bakriyya*, ed. F. Sümer, Ankara 1964, ii, 334 ff., and Aubin, 58 ff.). Heavy taxes and dues were imposed on summer and winter crops and irregular levies made on the peasants; many properties were usurped by the government and *waḳf* revenues seized for the payment of the military (Aubin, 69-70). Abu 'l-Ḳāsim Mīrzā adopted the practice of billeting his followers on the province with all the attendant evils of such a practice (*Kitāb-i Diyār Bakriyya* 302). On the death of Dīnārshāh, confusion and disorder prevailed in Kirmān until the Ak Koyunlu succeeded in establishing their rule. For a time Kirmān was governed by Zaynal, the third son of Uzun Ḥasan.

In 909/1503 the province came into the possession of Shāh Ismāʿīl. Some six years later, Kirmān was invaded by the Uzbegs and suffered much damage (*Ḥabīb al-siyar fī Shāh Ismāʿīl*, 326 ff., 333). According to Wāzirī, the first Ṣafawid governor of Kirmān was Muḥammad Khān Ustādjlū (*Tārīkh-i Kirmān*, 283;

see also K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 11). From 930/1524 to 1000/1590 the province was under governors belonging to the Afshār tribe (*ibid.*, 32, 37). According to the late Safawid manuals, the *Tadhkirat al-mulūk* and the *Dastūr al-mulūk*, Kirmān was one of the thirteen *beglerbegis* of the Safawid empire (*Tadhkirat al-mulūk*, ed. V. Minorsky, G.M.S. London 1943, 163, Muḥ. Taḳī Dānishpażhūh, *Dastūr al-mulūk-i Mīrzā-Rafīʿā wa tadhkirat al-mulūk-i Mīrzā Salmān*, in *Rev. de la Faculté des Lettres et des Sciences Humaines*, Tehran, xvi/1-2 (1968), 75). For one or two years from 998/1590, however, part of the province, and from 1068-9/1658 to possibly 1206/1694 the whole of the province, was *khāṣṣa* (i.e. under the direct administration of the central government) (Röhrborn, 120, 122). From 1015/1596 to 1031/1621-2 it was under the governorship of Gandj ʿAlī Khān, though during that period he was frequently absent from the province with the Kirmān army on military campaigns with the shāh. During his government he built a number of caravanserais and bazaars in Kirmān city and elsewhere in the province.

During the reign of Shāh Sulṭān Ḥusayn, Kirmān was subject to renewed inroads by the Balūč. In or about 1133/1721 the Kirmānīs appear to have appealed to the Afghān Maḥmūd for help. He came to Kirmān and stayed for nine months, when he returned to Kandahār because of disturbances there. In the following year he came back, but it seems that the people were not prepared to receive him on this occasion and resisted his entry. He laid siege to the citadel, which fell. After plundering the countryside he continued his march to Iṣfahān (Mīrzā Mahdī Astarābādī, *Durrah-yi Nādirī*, ed. Sayyid ʿAbd Allāh Anwār, Tehran A.H.S. 1342, 22). In 1139/1726 Mīrzā Sayyid Aḥmad, who was descended from Shāh Sulaymān's eldest daughter, who had married Mīrzā Dāwūd Marʿashī, seized Kirmān and assumed the title of *shāh*. From there he went to Fārs, where he was defeated. He came back to Kirmān, but whatever support he may have had there had disappeared, and so he went via Bam and Narmāshīr to Bandar ʿAbbās, which he temporarily occupied. Eventually, after further adventures, he was captured by the Afghāns and executed in 1140/1728 (J. R. Perry, *The last Safavids, 1722-1773*, in *Iran*, ix (1971), 59 70). After Nādir Shāh defeated Ashraf at Iṣfahān in 1141/1729, the Afghāns abandoned Kirmān.

Under Nādir Shāh, the province suffered further disasters. In the winter of 1145/1732-3 he marched through the province on his way to Kandahār and exacted from the people of Kirmān supplies that there was famine for seven or eight years afterwards (L. Lockhart, *Nadir Shah*, London 1938, 119). Disturbances in southern Persia in 1156/1744 and in Sīstān in the spring of 1159/1746 brought the province into a state of confusion, and in the summer of that year a revolt broke out. It was on a small scale, and was speedily suppressed. In 1160/1747 Nādir Shāh again passed through Kirmān and treated the province with great severity (*ibid.*, 259). His death in that year was followed by anarchy and renewed encroachments by the Afghāns and Balūč.

It was not until 1172/1758 that Khudā Murād Khān Zand took possession of Kirmān on behalf of Karīm Khān Zand. During the period of his rule, Kirmān was less troubled by disorders and impositions by the government than had been the case under the Afghāns, and on the death of Karīm Khān in 1193/1779 remained little affected by the struggle between the Zands and the Ḳādjārs until 1205/1790, when Luṭf ʿAlī [*q.v.*], the last of the Zands, marched against Kirmān. Its governor, who had been appointed by Āḳā Muḥammad Khān, agreed to submit but refused to come to Luṭf ʿAlī's camp. The latter thereupon besieged the town. Lack of supplies forced him to raise the siege and leave the district. Subsequently, having been defeated by Āḳā Muḥammad Khān near Shīrāz on 1206/1790-1, he fled to Ṭabas. Offers of support from some of the *khāns* of Narmāshīr induced him to return to Kirmān. He attacked the city and took possession of it in 1208/1793-4. Āḳā Muḥammad meanwhile advanced and laid siege to the town. After some four months, the population were reduced by hunger and a group of the defenders opened the gates on 29 Rabīʿ I 1209/24 October 1794. The surrender of the city was followed by a general massacre—the culminating disaster in the long series of calamities which the province had suffered during some four centuries. Luṭf ʿAlī escaped, but was captured in Bam and handed over to Āḳā Muḥammad Khān. Meanwhile Āḳā Muḥammad Taḳī b. Āḳā ʿAlī (see above) became governor of Kirmān and held office until the death of Āḳā Muḥammad Khān.

There appears to have been some fear that the disaffection caused by Āḳā Muḥammad Khān's brutality towards the people of Kirmān, coupled with the failure of the government to control raiding and disorder by the Balūč might give rise to a desire for secession from Persia. Because of this, and partly, perhaps, as an result of the influence of Sunbul Bādjī, Fatḥ ʿAlī's Kirmānī wife (see above), Fatḥ ʿAlī Shāh appointed Ibrāhīm Khān Ẓahīr al-Dawla (see above) governor in 1228/1813. He held office until his death in 1240/1824-5 and was the first of a number of Ḳādjār princes to be appointed governor of Kirmān. Under him the province enjoyed for the first time for many years a period of security. He repaired *ḳanāts*, fostered trade and agriculture (acquiring many estates himself in the process), and encouraged a revival of learning, inviting to the province *ʿulamāʾ* from Bahrayn, Khūrāsān, Fārs and elsewhere (Shaykh Yaḥyā Aḥmadī Kirmānī, *Farmānfarmā-i Kirmān*, ed. Bāstānī Pārīzī, Tehran A.H.S. 1344, introd., 3). He also made a successful expedition into Balūčistān. This favourable situation did not, however, last. His son, ʿAbbās Ḳulī Khān, who succeeded him as governor, attempted to throw off control, and as the succeeding years there were a number of disturbances and perennial outbreaks of disorder by the Balūč. In December 1831 ʿAbbās Mīrzā was sent to the province to restore order. His efforts were only partially successful. After he left the province there were renewed disturbances by governors and others, and in 1835 further inroads by the Balūč. Meanwhile, Muḥammad Shāh had succeeded Fatḥ ʿAlī Shāh and in 1835 or 1836 appointed Āḳā Khān Maḥallātī, the leader of the Ismāʿīlīs, as governor of Kirmān. On his withholding revenue from the central government, a force was sent to collect arrears. Unable to resist, Āḳā Khān fled in 1837 to Bam, where he was besieged by Firūz Mīrzā Nuṣrat al-Dawla. He surrendered and was sent to Tehran. Later he was allowed to return to Kirmān in 1840 and renewed his rebellion. After a number of skirmishes he was defeated, and took refuge in Afghanistān and later India, whence, it was alleged, he carried on a secret correspondence with his supporters in eastern Persia. His brother, Muḥammad Bākir, made a movement into Balūčistān in 1844 or 1845 but was repulsed. Balūčistān was

meanwhile gradually reduced by the governors of Kirmān, and by the middle of the 19th century Persian control had been extended southwards from Hampūr over the Makrān east of Djask.

From about 1858 Kirmān once more had a period of security and good government, this time under Muḥammad Ismāʿīl Khān Nūrī Wakīl al-Mulk (see above), first as *pishkār* during the nominal government of Gayūmarth Mīrzā, and then as governor from 1860 until his death in 1284/1867-8. His period of office was marked by an increase in prosperity which continued during the subsequent decade. During the government of his son, Murtaḍā Kulī Khān Wakīl al-Mulk, who was governor from 1869-1878. Čāh Bahār was brought under the control of the Persian government. In 1877 there was an outbreak of factional strife between the Shaykhīs and the Bālāsarīs, which led to the resignation of Murtaḍā Kulī Khān and the despatch of a force from Tehran to restore order. Towards the end of the reign of Nāṣir al-Dīn Shāh there appears to have been considerable intellectual activity in Kirmān, and when the movement for reform became overt towards the end of the 19th century and in the early 20th century, a number of Kirmānīs, notably Mīrzā Āḳā Khān Bardsīrī Kirmānī (who became the editor of *Akhtar*, the Persian newspaper published in Constantinople) and Nāṣim al-Islām, played an important part (see DUSTŪR, and also, Nāṣim al-Islām, *Tārīkh-i bīdārī-i Īrāniyān*, ed. ʿAlī Akbar Saʿīdī Sirdjānī, Tehran A.H.S. 1349).

Bibliography The works of the principal geographers have been mentioned in the text. They have been utilised by G. Le Strange, *The lands of the Eastern Caliphate*, 179 ff.; idem, *The cities of Kirman*, in *JRAS* (1901), 281-90, P. Schwarz, *Iran im Mittelalter*, III, 211 ff.; Aḥmad Mustawfī, *Lūṭ-i Zanūbī Aḥmad, Gwdhārishhā-yi Djughrāfiyā'ī*, Univ. of Tehran, Institute of Geography, X (1970), idem, *Shahdād wa djughrāfiyā-yi Dashti-i Lūṭ*, Univ. of Tehran, Institute of Geography, VII (1971), Aḥmad ʿAlī Wazīrī, *Djughrāfiyā-yi mamlakat-i Kirmān*, in *Farhang-i Īrān zamīn*, XIV/I-4 (1966-7) (tr. by H. Busse, *Kerman im 19. Jahrhundert nach der Geographie des Wazirs*, in *Isl.*, XL/2, 1973), Firūz Mīrzā Farmānfarmā, *Safarnāma-i Kirmān wa Balūčistān*, ed. Manṣūra Niẓām Māfī, Tehran 1363. KIRMĀNĪ, AWḤAD AL-DĪN ḤĀMID B. ABĪ 'L-FAḌĀʾIL (not to be confused with Rukn al-Dīn Awḥadī of Maragha in Āḏarbāyǧān who was also called Awḥad al-Dīn al-Iṣfahānī and who died in 738/1337-8) was an eminent Iranian mystic (cf. Ḥamd Allāh Mustawfī, *Taʾrīḫ-i guzīda*, ed. ʿAbd al-Ḥusayn-i Nawāʾī, Tehran 1339/1960, 667 f., Ḏīl, *Nafaḥāt al-uns*, ed. Mahdī b. Tawḥīdī Pūr, Tehran 1336/1962, 588-92). He was a pupil of Rukn al-Dīn al-Sīǧāsī (Sinǧāsī), of the affiliation of Kuǧd al-Dīn al-Abharī and Abū Naǧīb al-Suhrawardī. On his numerous travels, he came to Damascus where he became acquainted with Muḥyī 'l-Dīn b. al-ʿArabī, who mentions him to his *Fuṣūṣ al-makārim* (ch. viii), and was deeply influenced by his ideas. Awḥad al-Dīn knew Shams al-Dīn Tabrīzī (cf. B. Furūzānfar, *Risāla dar taḥqīq-i aḥwāl-u sarguẕašt-i Mawlānā Ḏiyāʾ al-Dīn Muḥammad maʿrūf ba-Mawlawī*, Tehran 1333/1954, 33 f.), and probably met also Ḏiyāʾ al-Dīn Rūmī, ʿUṯmān Rūmī, Ṣadr al-Dīn al-Qūnawī and Fakhr al-Dīn al-ʿIrāqī. He spent the last period of his life as a well known mystical teacher in the neighbourhood of Baghdād and was honoured by the ʿAbbāsid caliph al-Mustanṣir in 632/1234-5. He died probably on 3 Shaʿbān 635/21 March 1238.

Awḥad al-Dīn belongs with Aḥmad Ġazālī and Fakhr al-Dīn al-ʿIrāqī to the representatives of *shāhidbāzī*, the contemplation of the divine beauty in earthly forms, preferably in beautiful boys. The basic concepts of his mystical philosophy are *ṣūrat* (outer form, image) and *maʿnā* (inner meaning, essence), in conformity with Ibn ʿArabī's key terms *ẓāhir* and *bāṭin*. The famous *maṯnawī* poem *Miṣbāḥ al-arwāḥ*, often attributed to him, was actually written by Shams al-Dīn Muḥammad Bardasīrī Kirmānī. The poetical heritage of Awḥad al-Dīn is marked by short forms (i.e. only some *tarǧīʿ-bands* and a few *ġazals*, but a large number of *rubāʿiyyāt* which are grouped into 22 chapters), and is of a gnostic-mystical character. The *rubāʿiyyāt*, which are sometimes influenced by ʿUmar Ḫayyām, are not always of the best literary quality, but they show a deep mystical thought and experience, (as is found in verses of Ḏiyāʾ al-Dīn Rūmī, Aḥmad Ġazālī, ʿAyn al-Quḍāt al-Hamaḏānī and Fakhr al-Dīn al-ʿIrāqī.

Bibliography: B. Furūzānfar (ed.), *Mandūma-i Awḥad al-Dīn Ḥāmid ibn-i Abī al-Faḍāʾil-i Kirmānī*, Tehran 1347/1969, with an extensive introduction on the life and writings of Awḥad al-Dīn; B. M. Weischer, *Awḥaduddīn Kirmānī and some Voorgangers*, in *Isl.*, lix (1973); B. M. Weischer and P. L. Wilson, *Heart's witness. The rubāʿī quatrains of Awḥaduddīn Kirmānī* Tehran 1978; (cf. also H. Ritter, *Das Meer der Seele*, Leiden 1955, 474-6). (B. M. WEISCHER)

AL-KIRMĀNĪ, ḤĀMID AD-DĪN AḤMAD B. ʿABD ALLĀH, was a prominent *dāʿī* of the Fāṭimids during the reign of al-Ḥākim bi-amr Allāh (386-411/996-1021) as well as the author of many works on the theory of the Imāmate and on Ismāʿīlī philosophy.

The life of al-Kirmānī is known only in its main outlines, which can be traced on the basis of statements contained in his own works. Some other details can be derived from unpublished Ismāʿīlī sources, as has been done notably by Muṣṭafā Ġālib (*op. cit.*, 42 f.), who, however, does not specify these sources. His *nisba* points to his origin from the Iranian province of Kirmān. It is evident from his works that he continued to be in touch with the Ismāʿīlī community in this area. It is not very likely that he was a pupil of the well-known *dāʿī* Abū Yaʿqūb al-Siǧzī [q.v.], as Ġālib states, for Abū Yaʿqūb was not only al-Kirmānī's senior by half a century but there appears to have been a difference of opinion between the two on many doctrinal points as well. A great part of his life seems to have been spent in the service of the Fāṭimid *daʿwa* in the missionary district (*ḥaḍīra*) of ʿIrāq. The title *ḥuǧǧat al-ʿIrāqayn*, which is often added to his name by way of an honorific rather than as a designation of his rank (cf. W. Ivanow, *Nāṣir-i Khusraw and Ismailism*, Bombay 1948, 44; W. Madelung, *op. cit.*, 63 f., n. 117), implies that this district also included the parts of Iran where al-Kirmānī's *Aḏlām*. At least one of his larger works (*Kitāb al-Maṣābīḥ*) was composed in Iran, while two shorter *risāla*s (*al-Ḥāwiya fī 'l-layl wa 'l-nahar*, dated 399/1009, and *al-Kāfiya fī 'l-radd ʿala 'l-Ḥarūrī wa 'l-Ġasānī* were addressed to a subordinate in Dīnawar (Kirmān). The title of his *Kitāb al-Maǧālis wa 'l-Musāyarāt* which has not been preserved, refers to his personal activities in these cities of ʿIrāq. Ġālib ascribes to him a part in winning over the ʿUqaylids of Mosul to the cause of the Fāṭimids. In the early years of the 5th/11th century, al-Kirmānī came to Cairo, where a serious crisis had developed among the Fāṭimid *duʿāt* concerning the nature of the imāmate as it was represented at that time by al-Ḥākim. Quite a few of them, among whom are the founders of the religion of the Durūz [q.v.], propounded the doctrine of the divinity of al-Ḥākim. Either at the request of the chief of the religious organisation, the *dāʿī al-duʿāt* Ḫaṭṭigīn al-Ḍayf, or of the caliph himself, al-Kirmānī interfered in the controversy. In 405-6/1014-15 he wrote the *risāla* called *Mubāḥaṯa al-Baġdādī* upholding the tenet that the imāmate of al-Ḥākim was, in spite of its exceptionally blessed condition, of an ordinary kind and that the theory of his divine nature was incompatible with the Ismāʿīlī dogma of the absolute transcendence of God. The *risāla* called *al-Wāḥiḍa fī nafy daʿwa al-ḥulūl* or *al-Ḥākim bi-amr Allāh* (ed. M. Kāmil Ḥusayn, in *Maǧallat Kulliyyat al-Ādāb* (Cairo), xiv/1 (1952), 1-20), composed in 408/1017, was a reply to a pamphlet by al-Ḥasan al-Akḥram al-Farġānī, one of the supporters of the extreme point of view. Apparently, al-Kirmānī returned afterwards to ʿIrāq where he completed his major work, *Rāḥat al-ʿaql*, in 411/1020-1. The latter date provides also a dating *post quem* for his death.

Works. The fate of al-Kirmānī's work after his death has been determined by the further dogmatic history of the Ismāʿīliyya. While the later writers of the Fāṭimid period appear to be hardly influenced by him, he left a lasting imprint on the religious literature of the Ṭayyibiyya [q.v.] which continued a part of the Fāṭimid tradition in the Yaman and in India. This influence can be traced from the time of the second *dāʿī muṭlaq* of the sect, al-Ḥāmidī [q.v.], up to the present day (cf. e.g. R. Strothmann, *Gnosis Texte der Ismailiten*, Göttingen 1943). Thanks to this continuous tradition of Kirmānī studies, the main part of his works has been preserved, although all the copies that have been brought to light as far are very recent.

The defence of the theoretic basis of the Fāṭimid Imāmate, which al-Kirmānī regarded as one of his most important concerns, was not only directed against deviations within the movement itself. He also attacked the claims of the ʿAbbāsids (in *Maʿāṣim al-ḥudā*, a refutation of al-Ḏahabī's *Kitāb al-ʿUlā*

mānāyya) and those of other Shī'ī pretenders (*as al-Kāfiya*, being a warning against the propaganda of the contemporary Zaydī Imām Abū 'l Ḥusayn al-Mu'ayyad bi 'llāh al-Hārūnī). In his *Kitāb Tanbīh al-kātib wa 'l-muṭāliʿ*, the polemics against these opponents are combined with a plea in favour of the validity of the religious law for anyone without exception, addressed towards the antinomian strain current in the Ismā'īlī movement. His fullest treatment of the theory of the *imāmate*, constructed as a support of the claim of al-Ḥākim, is contained in *al-Maṣābīḥ fī ithbāt al-imāma*. In the course of his argument, al-Kirmānī frequently resorts to Jewish and Christian scriptures, which he quotes in Hebrew as well as in Syrian (cf. Paul Kraus, *Hebräisches und syrisches Zitate in ismailitischen Schriften*, in *Isl* xix (1930) 243-63, and A. Baumstark, *Zu den Schriftzitaten al-Kirmānīs*, in *Isl*. xx (1932), 308-13).

Of equal importance in the work of al-Kirmānī is his preoccupation with metaphysical speculation, to which his most important works are devoted. In the *Kitāb al-riyāḍ fī 'l-ḥikam ilayn al-yāḍayn yāḥkuḥ al-Iṣlāḥ ma 'l-Nuṣra* (ed. by 'Ārif Tāmir, Beirut 1960), he attempts to settle the debate over a great number of philosophical questions which had been going on among the Ismā'īlīs in Iran during the preceding generations. The starting-point of this discussion was the *Kitāb al-Maḥṣūl*, a work by al-Nasafī (d. 332/943), to whom the introduction of neo-Platonism in the speculations of the Ismā'īlīs has been attributed. Al-Nasafī had been criticised on several points, which according to al-Kirmānī are of fundamental importance, by Abū Ḥātim al-Warṭānī (*fl*. about 320-34/934-46) in his *Kitāb al-Iṣlāḥ*, but the tenets of the former had been defended by Abū Ya'kūb al-Sijistānī (d. after 360/971) in a work entitled *Kitāb al-Nuṣra*. Kirmānī, who on most issues takes the side of Abū Ḥātim, approaches these problems from a point of view to which he attributes an authoritative weight and which he denotes as "the canon of the guiding mission" (*ḥudūd al-daʿwa al-hādiya*); see further W. Ivanow, *An early controversy in Ismailism*, Leiden 1948, 123 sq., and ed. Bombay 1935, 87 sqq.

The *Rāḥat al-ʿaql* (ed. by M. Kāmil Ḥusayn and M. Muṣṭafā Ḥilmī, Cairo 1371/1952, ed. by Muṣṭafā Ghālib, Beirut 1967) contains a summa of Ismā'īlī philosophy written for adepts who have prepared themselves for the study of the fundamental truths both morally, through the fulfilment of the commands of religious law, and intellectually, by the study of less abstract works of earlier Ismā'īlī authors and of al-Kirmānī himself. The subject-matter has been arranged in chapters and paragraphs which have been styled "walls" (*aswār*) and "crossroads" (*maḥājir*) according to the allegory of a city of gnostic knowledge. By travelling along the fifty-six crossroads enclosed within the seven walls of this city, the searching soul acquires an awareness of the real structure of the universe, which consist of four separate but fully congruent worlds: the world of Divine creation (*ʿālam al-ibdāʿ*), transcending the purely spiritual beings, the world of bodily existence or the realm of nature (*ʿālam al-ajsām, dār al-jasadiyya*), the world of religion (*ʿālam al-dīn*), which is the hierarchy of the Ismā'īlī da'wa, from the *nāṭiq* up to the lowest delegate (*mukāsir al-ḥudūd*), and, finally, the world of the *Maʿād* where this universe returns to its primordial one-ness in its second perfection (*al-kamāl al-thānī*). In complete analogy to this macrocosmic process, the individual human soul, which by origin is only a virtually-existing first perfection, through acquisition of true metaphysical knowledge, can realise itself completely as an intelligent being.

The *Rāḥat al-ʿaql* is the earliest attempt at a complete and systematic exposition of Ismā'īlī philosophy. In comparison to older works, and even to al-Kirmānī's own *Kitāb al-Riyāḍ*, it shows a profound influence of the metaphysical theories of the *falāsifa*. This is particularly evident in his concept of the world of creation as a decade of intelligent beings which has come into existence by way of "being sent out" (*inbiʿāṯ*) from the universal intellect, the first created being (see further ISMĀ'ĪLIYYA. Doctrine).

Like many other Ismā'īlī *dāʿīs*, al-Kirmānī attacked the writing of the arch-heretic Abū Bakr Muḥammad b. Zakariyyā' al-Rāzī. In the *Kitāb al-Aḥwāl al-ghāṣṣāṭiyya fī 'l-ṭibb al-rūḥānī*, he supported the criticism of his predecessor Abū Ḥātim on al-Rāzī's ideas about the therapy of the mind expounded in the latter's *al-Ṭibb al-rūḥānī* (cf. P. Kraus, in *Orientalia*, v (1936), 361; idem, *Razis fil. philosophus*, in *Opera philosophica*, i, Cairo 1939, *passim*; and the excerpts from the first part of al-Kirmānī's treatise in the notes to the edition of *al-Ṭibb al-rūḥānī*).

Bibliography: The editions of al-Kirmānī's works mentioned in the article all contain more or less extensive introductions to his life and work. Surveys of his works and of the manuscripts known to exist are given in W. Ivanow, *A guide to Ismaili literature*, London 1933, 43-6, 2nd ed. *Ismaili literature*, Tehran 1963, 40-5, Brockelmann, S I, 325-6, Mu'izz Goriwala, *A descriptive catalogue of the Fyzee collection of Ismaili manuscripts*, University of Bombay 1965, 37-57, nos. 52-65, Sezgin, *GAS*, i, Leiden 1967, 580-2. Fragments of some of the works of al-Kirmānī are contained in the great Ismā'īlī compilations of 'Imād al-Dīn Idrīs (d. 872/1468), *Kitāb 'Uyūn al-akhbār*, and Ḥasan b. Nūḥ al-Bharūchī, *Kitāb al-Azhār* (written 931/1525), which are still unpublished. Excerpts from his *al-Risāla al-lāzima fī yawm ghadīr Ramaḍān* have been edited and translated into Urdu by M. H. Aʿẓamī, *Nuṣm al-yawm 'inda 'l-Fāṭimiyyīn*, Karachi 1961, 18 to. A work of doubtful authenticity has been edited by 'Ārif Tāmir, *Arbaʿ rasāʾil ismāʿīliyya*, Beirut 1958, 59-66. On the *Khaṣāʾiṣ al-nāṭiq*, which is really the work of a pupil of al-Kirmānī, see W. Ivanow, *A creed of the Fatimids*, Bombay 1936, 10-2. See further E. Griffini, in *ZDMG*, lxix (1915), 87, M. F. Hamdānī, in *JRAS* (1933), 372-5, idem and H. S. Mahmūd, *al-Sulaṭāniyyūn wa 'l-ḥarakāt al-Fāṭimiyya fī 'l-Yaman*, Cairo 1955, 258-61, and passim; W. Madelung, in *Isl*., xxxvii (1962), 229-67; Henry Corbin, *Trilogie ismaélienne*, Tehran-Paris 1961, passim; idem, *Histoire de la philosophie islamique*, Paris 1964, 130-2; S. H. Nasr, in *Cambridge history of Iran*, iv, Cambridge 1975, 436, 440.

(J. T. P. de Bruijn)

KIRMĀNĪ, Kamāl al-Dīn (see Supplement).

KIRMĀNSHĀH, a town and province in western Persia. The province is situated between lat. 34° N. and 35° N. long. 44° 5′ to 48° 0′ E. It lies to the east and north of 'Irāk and Luristān i Kūčik (or Pusht i Kūh) and to the south and west of Kurdistān and Asadābād. In the early 20th century the province was divided into nineteen *bulūks*. These were Bālādih, Wastām, Miyān Darband or Bilawar, Pusht i Darband or Bālā Darband, Dinawar, Kuli 'yā, Sahna, Kangawār, Asadābād, Harsīn, Čamčamāl, Durū Faramān, Māhidasht, Ḥārūnābād, Gūrān,

Kirind, Zuhāb, Aywān and Hulaylān (Government of India, General Staff, Army Headquarters, Intelligence Branch, *Gazetteer of Persia*, ii, Simla, 1914, 358). At the present day it is bordered by Sanandadj on the north, Asadābād on the north-east, Shāhābād on the south, Nihāwand and Tūyserkān on the east, Khurramābād on the south-east, and Kasr-i Shīrīn and Rawānsār i Djawānrūd on the west, and contains the following districts: Sunkur and Kuliyā'ī, Kanguwār, Sahna, Harsīn, Sandjābī, Gūrān and Thalāth (Razmārā, *Farhang-i djughrāfiyā-yi Irān*, A.H.S 1329 32, v). The town of Kirmānshāh (also known as Kirmānshāhān, a name which appears to be used first in the 4th/10th century) is situated approximately at lat. 34° 19 N and long. 47° 3′ E. at a height of 1322 m. on the Kara Sū River, which runs to the north-east of the town in a south-easterly direction until it joins the River Gāmāsiyāb (Gawmīsa) (also known as the River Saymara) which flows into the River Karkha. A series of mountain ranges, trending from north-west to south-east, run through the province. Between them there are extensive plains and valleys, containing pastures and cultivated lands. From Asadābād, with an elevation of 2,340 m., there is a gradual descent through a succession of peaks and valleys to Kasr-i Shīrīn, which is at 575 m.

The climate is mild in summer but cold in winter, except in the Zuhāb district and the plains near the ʿIrāḳī frontier and in the lower parts of the Kalhur country (in the region of Mandalī) where it tends to be hot in summer. Snow on the mountains is heavy in winter and spring rains are normally plentiful. The maximum July temperature of the town of Kirmānshāh is 37.2° C and the minimum January temperature −3.5° C. Annual rainfall is 372.7 mm (H. M Ganji, *Climate*, in W B. Fisher, ed., *Cambridge history of Iran*, Cambridge 1968, 1, 247).

Parts of the province in the south, notably districts in Hulaylān, Bilawas and Gūrān, are wooded. Oak, elm, sycamore and some coniferous trees and walnut trees are found in the mountains; willows, poplars and oriental planes are common throughout the province, palm trees are found in Sar-i Pul-i Zuhāb and Kasr-i Shīrīn. Fruit is abundant in some districts, especially in Kandūla, Harsīn and Sahna; Kirmānshāh produces excellent seedless grapes, Rīdjāb is famous for its figs and Gahwāra for its apples. Gum tragacanth was formerly plentiful in the province, but indiscriminate tapping has caused supplies to diminish. Gum mastic (*sakīz*) is obtained from Hulaylān and was formerly exported to Russia (Government of India, H. L Rabino, *Gazetteer of Kermanshah*, Simla 1907, 163, 163).

Dry farming is practised in most parts of the province. In the valleys river water is used for irrigation. *Kanāts* are not numerous. The province is rich in grain land. Formerly, in a normal year the province had a large grain surplus, though from time to time this would be cut by insufficient rainfall, ravages by locusts and other pests, and by disorders. Surplus grain was exported to other parts of Persia, Ottoman Turkey and, later, to ʿIrāḳ. The proportion of wheat to barley was usually two-thirds wheat to one-third barley. Both are grown as unirrigated crops. Grain land is left fallow in alternate years or in many districts for longer periods. Rice is grown in some of the river valleys, including Razyān, Bilawas, Dīnawar, Čančamāl, Zuhāb and Kalhur. It is of inferior quality and mainly consumed locally. Peas (*nukūd*) are produced in quantity and exported to other parts of Persia. Sugar beet has been an important crop since the 1930s and is grown especially in Māhīdasht. Cotton, castor oil, tobacco, saffron, opium, the cultivation of which on a significant scale probably did not begin until the late 19th century (United Kingdom, Foreign Office, Diplomatic and Consular Reports, Annual series, 3189, *Report on the Trade of Kermanshah and district for the year 1903 04*, 22, and see further G. G. Silbermann, *The Persian Constitutional Revolution. the economic background 1890-1905*, unpublished Ph. D. thesis, University of London, 1974, 132 ff.) indigo, maize, clover, alfalfa, and vegetable crops, such as melons, water melons, cucumbers, egg plants and tomatoes, are, or were, grown for local consumption (see further Rabino, 153 ff.).

The province has rich pasture lands. Transhumance is widely practised. Formerly, nomadic tribes commonly migrated annually across the Ottoman-Persian frontier and later across the ʿIrāḳī-Persian frontier. Animal husbandry is of great importance, not only among the nomadic tribes but also among the settled peasants. After grain the most important product of the province is wool. Part of the spring wool crop was formerly exported. The autumn wool was less in quantity and inferior in quality and mainly used for the manufacture of felts (*namads*). Formerly, the manufacture of carpets was a thriving industry in the villages and among the tribes, but declined towards the end of the 19th century. By the 20th century it had virtually disappeared. Goat's hair was made into tents, saddle bags, ropes and yarn. Goat skins were dried and exported and were used for coverings for clarified butter and water skins. The markets of Tehran, Hamadān, Kumm and Baghdād were largely supplied with sheep from Kirmānshāh (see further Rabino, 158-9).

Mules and horses were bred in considerable quantities in the 19th century. The horses, which had much Arab blood in them and were well adapted for both draught and saddle, were highly esteemed (cf. J. P. Ferrier, *Caravan journeys*, London 1856, 26; *Gazetteer of Persia*, 342).

The extensive oil belt extending from Kirkūk in ʿIrāḳ to Khānaḳīn passes through the south western part of the province of Kirmānshāh, and the extraction of oil has been carried on at various centres since antiquity (*Gazetteer of Persia*, 343). Other mineral resources include marble, porphyry and lime.

The province is mainly inhabited by Kurds, nomadic and sedentary, and Lurs. Most of the tribes have their own winter and summer quarters (see further ILAT). A rough estimate of their numbers in the early 20th century put them at some 80,000 families or some 300,000 persons. Among them were the Kalhur, partly settled and partly nomadic, who were estimated at 12,000 families. They owned large stretches of irrigated land in the fertile plains of Māhīdasht, Gūān and Kalleh Shahīn, the two last-named purchased by the Kalhur chiefs from their Turkish proprietors at the beginning of the 19th century (United Kingdom Foreign Office, Diplomatic and Consular reports, Miscellaneous Series, 590 (1903) *Report on the trade and general condition of the City and Province of Kermanshah by Mr. H. L. Rabino*, 46). The Gūrān, also partly settled and partly nomadic, were estimated at 4 5,000, the Sandjābī at 4,000, the Kuliyā'ī, mostly sedentary in Sunkur, at 4,000 and the Zangana, who were mainly settled in Māhīdasht, at 2,500 (*Gazetteer of Persia*, 339, Rabino 171 ff.). Apart from some tribes near the ʿIrāḳī frontier, who are Sunnī, most of the Kurdish tribes of Kirmānshāh are Shīʿī. ʿAlī Ilāhīs are also

found in considerable numbers (*cf.* Zayn al-ʿĀbidīn Shīrwānī, *Bustān al-siyāḥa*, Tehran lith. 1315, 490; *Gazetteer of Persia*, 356).

The town of Kirmānshāh or Kirmāsīn (var. forms Kirmāsān, Karmāsān, Karmāsīn, Karmanshīn) as it was known by the early Arab geographers was founded in the Sāsānid period. Ḥamd Allāh Mustawfī attributes its foundation to Bahrām IV (388-99 A.D.) (*Nuzhat*, 108), who had acquired the title Kirmānshāh as governor of the province of Kirmān (*q.v.*). The town founded by him was, however, more probably the small town of Kirmānshāh situated between Yazd and Kirmān (*cf.* Tabarī, in Nöldeke, *Gesch. der Perser u. Araber*, 72) Another tradition attributes the foundation of Kirmānshāh to Kawādh b. Fīrūz (488-532 A.D., cf. esp. Mukaddasī, 257 ff.) The Sāsānid kings often resided there, and their example was from time to time followed by later rulers, notably the caliph Hārūn al-Rashīd and the Buyid ʿAḍud al-Dawla, who built a palace there (Mukaddasī, 393) The province is rich in monuments of the Achaemenians and Sāsānids, such as the sculptures at Ṭāḳ-i Bustān, three miles east of Kirmānshāh, the rock inscriptions at Bīsutūn (*q.v.*) and various remains at Kanguwār [see KANGAWAR].

Kirmānshāh was peacefully occupied by the Arabs after the capture of Ḥulwān in 21/640 (Balādhurī, Futūḥ, 301). It became part of the province of the Djibāl and was known, together with Dīnawar (*q.v.*) as Māh al-Kūfa. Although situated on the great Khurāsān road almost midway between Baghdād and Hamadān, it was less important in the early centuries than Dīnawar or Hamadān Ibn Ḥawḳal does not mention it among the best known towns of the Djibāl, though he describes it as a pleasant place with running water, trees and fruit, in which living was cheap, and as having abundant pastures, where numerous flocks grazed, and much water. Many articles of commerce were also to be found there (i, 259) Later, Kirmānshāh with Hamadān, Rayy and Iṣfahān became one of the four great cities of the Djibāl, though it did not rival them in importance it was ruled successively by the ʿAbbāsids, the Būyids, the Hasanūya [see HASANWAYH] and the Saldjūḳs.

In 394/1197 Kirmānshāh was laid waste by the Khwārazmshāhī *amīr* Mīrāduḳ (Rāwandī, *Rāḥat al-ṣudūr*, 398). After the Mongol conquest, the Djibāl appears to have been divided into two unequal parts, the larger in the east being known as Persian ʿIrāḳ and the smaller in the west, which included Kirmānshāh, as Kurdistān. Ḥamd Allāh Mustawfī states that Kirmānshāhān (which, he writes, was known in books as Kirmīsīn) had been a medium-sized town (*shahri wasaṭ*) but that in his time it was a mere village (*Nuzhat*, 108). Čančarāsī near Bīsutūn, because of its excellent pastures, was a regular camping ground of the Mongol establishments, and, according to Ḥamd Allāh, Öldjeytü b Arghūn built a town (*barzahī*) there (*ibid.*, 107). It would seem from Ḥamd Allāh Mustawfī's account that there was a decline in production in Kurdistān as in the neighbouring provinces after the Mongol invasions (*Tārīkh-i guzīda*, 572).

During the 9th/15th century Kirmānshāh lay outside the main course of events in Persia, but with the rise of the Safawids Kirmānshāh became a frontier province facing the Ottomans. Many of the Kurdish tribes enjoyed a degree of local independence, and it does not appear that central control was established throughout the region in the early Safawid period. The sources make little mention of Kirmānshāh, though there is mention of Safawid governors in Dīnawar—Seljuḳ Husayn Takkalū in the reign of Shāh Ismāʿīl and Čiraḳ Sulṭān in the reign of Ṭahmāsp (Bidlīsī, *Sharaf-nāma*, Tehran A.H.S. 1343, 410, 476) Intermittent warfare with the Ottomans kept the frontier regions of Kirmānshāh in a state of instability and often disorder, though the main theatre of operations was Ādharbāydjān. By the peace treaty made by Shāh ʿAbbās in 999/1590 the western provinces of Persia, including Kirmānshāh, were ceded to Turkey, and it was not until the campaign begun in 1011/1602 that Persian rights were reasserted and the lost provinces recovered in the following year After the death of Shāh ʿAbbās an Ottoman expedition led by Khusraw Pasha penetrated up to Hamadān (1039/1630) When peace was again signed in 1048/1639, Sulṭān Murād IV recognised the frontier more or less along the line which it occupies at the present day.

About the middle of the 11th/17th century, the Zangana family began to emerge as the most powerful of the local leaders, and from then on frequently held the government of Kirmānshāh, which usually included Sunkur and, from the reign of Shāh Ṣafī (1038-52/1629-42), Kalhur (K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 9) Shaykh ʿAlī Khān Zangana became governor under Shāh ʿAbbās II in or about 1056/1646 (Riḍā Ḳulī Khān Hidāyat, *Rawḍat al-ṣafā-yi Nāṣirī*, Tehran, A.H.S 1339, viii, 474). Members of the family also held important offices at court, which further strengthened their position Shaykh ʿAlī Beg became *amīr ākhūr* to Shāh Sulaymān (1077-1105/1667-94) His son Shaykh ʿAlī Khān, who also held this office, became governor of Kirmānshāhān and finally Iʿtimād al Dawla, which office he held for fifteen years. He died in 1101/1689-90 (*ibid.*, viii, 490).

After the fall of the Safawids, Kirmānshāh was again occupied by the Ottomans in 1136/1723, the deputy governor Ḥusayn ʿAlī Beg submitting without resistance. By the terms of the peace made by Ashraf with the Ottomans in 1140/1727 Kirmānshāh, Hamadān, Sanandadj, Ardalān and Nihāwand and various other places were allocated in perpetuity to Turkey (L. Lockhart, *The fall of the Safavi dynasty*, Cambridge 1958, 292). Kirmānshāh was retaken by Nādir Ḳulī (later Nādir Shāh) in 1142/1729-30 (Mīrza Mihdī Astarābādī, *Tārīkh-i Djahāngushā-yi Nādirī*, ed Sayyid ʿAbd Allāh Anwarī, Tehran 1962, 119 ff.), and when peace was again made in 1145/1732 Kirmānshāh remained with Persia. It was reoccupied by the Ottomans later in the year, but evacuated after a brief siege by Nādir The Zangana *khāns* were still powerful, and in 1156/1743-4 Ibrāhīm Khān b Ẓahīr al-Dawla Zangana was appointed *sipahsālār* of Kurdistān and Luristān (*ibid.*, 490) On the death of Nādir in 1160/1747, Mīrzā Muḥammad Taḳī, who had been made governor of Kirmānshāh by Nādir, took the part of ʿĀdil Shāh against his brother Ibrāhīm. The latter, sent an army to Kirmānshāh, which plundered the town and took temporary possession of the district (*ibid.*, 429), but when Ibrāhīm defeated and dethroned ʿĀdil Shāh, Muḥammad Taḳī made himself virtually independent In 1179/1766 Karīm Khān took the town of Kirmānshāh after besieging the fortress for two years The defenders were finally reduced by famine ʿAlī Murād Khān was then made governor of Kirmānshāh. (See further Abu 'l Ḥasan b Muḥammad Amīn Gulistāna, *Muḳīmī al-tawārīkh*, ed. Mudarris Riḍawī, Tehran A.H.S. 1344.)

In the 19th century the commercial and strategic importance of Kirmānshāh increased. It became the capital of Persian Kurdistān. The latter formed a separate province from Ardalān [*q.v.*]. The capital of Ardalān, which was also known as Kurdistān, was Sinna. Already in 1800, Sir John Malcolm noted the importance of Kirmānshāh as a mart for trade between Turkey and Persia (Melville papers, quoted by C. Issawi, *The economic history of Iran 1800-1914*, Chicago 1971, 288). Sir John Macdonald Kinneir states that it was a flourishing town in 1801, containing about 12,000 houses (*Geographical memoir of the Persian empire*, London 1813, 132), which would have given a population of some 60,000 persons.

Fath ʿAlī Shāh appointed his eldest son, Muḥammad ʿAlī Mīrzā, as governor-general of Kurdistān and Luristān in or about 1806, and it became one of the most thriving provinces of Persia. Muḥammad ʿAlī disposed of a considerable army, mainly cavalry, composed largely of Kurds and trained by French officers, and under his rule Kirmānshāh formed a bulwark against the advance of the Ottomans. Because of the rivalry which existed between him and his brother ʿAbbās Mīrzā, the *walī ʿahd* and governor-general of Āḏarbāyd̲j̲ān, and the likelihood of a struggle between them in the event of Fath ʿAlī Shāh's death, he felt the need to attach the population to his interests. Ferrier states that he "administered the affairs of his government in a truly paternal manner. His charities enriched the town and the people lived in the enjoyment of plenty" (*Caravan journeys*, 24). Zayn al-ʿĀbidīn also comments on the expansion of the town under Muḥammad ʿAlī Mīrzā's government. He states that the number of its buildings surpassed those of most other towns in Persia (*Bustān al-siyāḥa*, 492). In addition to buildings in the town, Muḥammad ʿAlī Mīrzā surrounded the town by walls, flanked with loop-holed towers, and by a moat three miles in circumference.

Prior to the Turco-Persian war of 1821, the south-western boundary of Kirmānshāh had been some seven miles west of Kirind at Sar i Pul. Muḥammad ʿAlī, having embarked on successful operations against the Ottomans, annexed Zuhāb and advanced on Baghdād, but was forced to abandon his advance by an outbreak of cholera, to which he himself succumbed. The war continued until 1823. By the terms of the treaty then concluded, the districts acquired by either party during the war were to be respectively surrendered and the frontier line was to be restored to where it had been in Ṣafawid times. Zuhāb, although claimed by the Porte, nevertheless remained part of the province of Kirmānshāh. Having been acquired in war, it became *khāliṣa* [*q.v.*] and was farmed by the chief of the Gūrān tribe (H. Rawlinson, *March from Zoheb to Khuzistan*, in *JRGS* IX (1839), 36).

After the death of Muḥammad ʿAlī Mīrzā, the town of Kirmānshāh decayed as a result of the extortion and tyranny of the governors who succeeded him. Zayn al-ʿĀbidīn, writing about 1832, states that there were then no more than 10,000 houses in Kirmānshāh (*loc. cit.*), while Ferrier, writing in 1845, states that its splendid bazaars were deserted, nine-tenths of the shops were shut and three-fourths of the population had emigrated, the townspeople to Āḏarbāyd̲j̲ān and the nomads to Turkey (*op. cit.*, 25). All sign of Muḥammad ʿAlī's fortifications had disappeared by the 20th century. Cholera, plague and famine added to the misfortunes of the town, notably the plague of 1830, which is said to have reduced the population to 12,000 (*Gazetteer of Persia*, 355; *cf.* also Zayn al-ʿĀbidīn, *loc. cit.*), and in 1832 floods washed away about one fifth of the populated area with heavy loss of life (*ibid*). These disasters, coupled with the rapacity of the governors, reduced the province to a low ebb. Consul Abbott, writing in 1849-50 states that there were some 5,000 inhabited houses (United Kingdom, Public Record Office, F. O. 60 165, *K. Abbott's report on the commerce of South Persia . . .*), which would have given a population of about 25,000. Another report written in 1851 estimated the population at 30,000 (*Report on Persia, accounts and papers 1867-68*, 19, quoted by Issawi, 28). By the end of the century there had been some degree of recovery, and in 1924 the population was put at 60,000 (*Gazetteer of Persia*, 353). This figure, which was probably a conservative estimate, was the same as that given by Sir J. Macdonald Kinneir rather over a century earlier.

Various Ḳād̲j̲ār princes held the government of Kirmānshāh after Muḥammad ʿAlī Mīrzā. The first was his son Muḥammad Ḥusayn Mīrzā Ḥishmat al-Dawla, who held office for some ten years. Another of his sons, Imām Ḳulī Mīrzā ʿImād al-Dawla, also held the governorship for some twenty-one years under Muḥammad Shāh and Nāṣir al-Dīn Shāh. In 1842 relations with Turkey again became critical, and a mixed commission was appointed to delimit the frontier, an operation which was not finally completed until 1914 (see further C. J. Edmonds, *Kurds Turks and Arabs*, London 1957, 125 ff.) When Nāṣir al-Dīn Shāh passed through the province on his way to Karbalāʾ and Nad̲j̲af in 1871, a huge petition was presented to him complaining of the oppression of the governor. It was not answered. From 1821 to 1838 the province was included in the immense region coming under Ẓill al-Sulṭān, the governor of Iṣfahān [*q.v.*]. When he was deprived of all his governments except Iṣfahān, his nominees in Kirmānshāh and Kurdistān were dismissed. For some years after that the government of Kirmānshāh was given to the highest bidder with the result that the people were greatly oppressed.

In the last quarter of the 19th century the volume of trade coming through Kirmānshāh markedly increased (*Gazetteer of Persia*, 343-4). With the opening of the Suez Canal in 1869 and the establishment of a steamer service on the Tigris, it became the port of entry for all goods entering Persia from Baghdād and coming from England and India via the Persian Gulf and the Tigris. By the end of the century the province equalled, if it did not excel, any other province in its general state (*Gazetteer of Persia*, 336-7). Consul Preece wrote in 1899 that "There are but few towns in Persia which show to-day so flourishing a condition, from a trade point of view, as Kermanshah, and this in spite of oppression by the local Governor, and badness and unsafety of the roads radiating from it" (quoted by Rabino, 206). There was a customs post at Kirmānshāh, which was normally farmed. In 1881 the sum paid was 20,000 *krāns*. For the year ending 20 March 1897 the figure had risen to 480,000 *krāns* and for the year ending 20 March 1899 to 670,000 *krāns*. On 21 March 1899 the customs were taken over by the Belgians (see further *Gazetteer of Persia*, 350 ff.).

Kirmānshāh also benefited greatly from the pilgrim trade, lying as it did on the direct route from Persia to Nad̲j̲af and Karbalāʾ. In the late 19th and early 20th centuries it was estimated that 150,000 to 200,000 pilgrims passed annually through the town. They brought money to exchange or tried to pay their way by selling things, and so gradually

added to the well being of the town (*Gazetteer of Persia*, 344).

In 1914 there were about 200 merchants in Kirmānshāh dealing mostly in Manchester goods obtained direct from Manchester or through Baghdād, in sugar from Marseilles, and in opium, gums, goat skins, carpets and wool, which they exported to Baghdād and England. One of the most prominent of these was Ḥādjdjī ʿAbd al-Raḥīm Wakīl al-Dawla, who combined trade with banking and landownership (for the career of his father and the rise of the family to wealth and influence, see Silbermann, 207). There were about twenty Ottoman Jews, who had in their hands the greatest part of the foreign and export trade. Kāshī merchants imported from Kāshān tobacco, native silk goods, copper ware, to a total amount of some 100,000 *tūmāns*, which they covered by exports to Kāshān of prints and foreign goods received from Baghdād. Yazdī merchants imported henna and Yazdī silk from Yazd to the amount of 40,000 *tūmāns*, and exported an equal amount of foreign goods to Yazd. Iṣfahānī merchants imported native prints and cotton goods, such as *ḳalamkārs*, prints, *lahāfs*, *ʿabās*, etc., and *ǧadjs* and glass from Iṣfahān, and exported to Iṣfahān Manchester prints, iron, tea, cowhides, wool and *ǧalīms*. Their imports came to 100,000 *tūmāns*, but were exceeded by their exports. Hamadān merchants imported naphtha, rice, Russian prints, glassware and hardware (coming from Rasht) and exported to Hamadān dates from Mandalī, gall-nuts, grease, ghee, raw hides, tea, spices, iron, lead, Manchester goods and window glass. The exports exceeded the imports. Some Hamadān merchants worked exclusively as commission agents for releasing goods from the customhouse and forwarding them to Hamadān (*Gazetteer of Persia*, 355-6). There were also a few Persian Jews, who lived by small trade and hawking, and a very small number of Chaldean Christians, some engaged in trade and some living by the manufacture of *arak*.

Kirmānshāh played little part in the constitutional revolution, but in 1911 Sālār al-Dawla entered Kirmānshāh in the name of the ex shah Muḥammad ʿAlī. In the following year he advanced on Tehran with a force of Kalhurs, Sandjābīs and other Kurdish tribes. He was defeated near Hamadān and government troops retook Kirmānshāh. Operations continued until the autumn, during which time Kirmānshāh repeatedly changed hands. In the first world war Kirmānshāh was one of the centres of the *muhādjarat* movement. A local committee for national defence was set up (*Anǧumān-i difāʿ-i milli*) and in December 1915 the central committee, which had retired from Tehran to Kum and Iṣfahān in November of that year, withdrew to Kirmānshāh. A provisional government had barely been established when the *muhādjirīn* evacuated Kirmānshāh in March 1916 in the face of a Russian advance. Turkish forces later occupied the town but evacuated it in 1917 (see further Yaḥyā Dawlatābādī, *Ḥayāt-i Yaḥyā*, Tehran n.d., iii, 323 ff., Husayn Samīʿī Adīb al-Sulṭana and Amīn Allāh Ardalān ʿIzz al-Mamālik, *Awwalīn dawra-i mashrūṭiyyat-i milli*, Tehran A.H.S. 1332, 30 ff., 75 ff., P. M. Sykes, *History of Persia*[3], London 1963, ii, 446 ff.).

(A. K. S. LAMBTON)

KIRMĀSTĪ, chief-lian of a *ḥadd*[a] in Anatolia, 13 miles south east of Mikhalitch (cf. J. H. Mordtmann, in *ZDMG*, lxv [1911], 211) and 40 miles S.W. of Bursa with about 26,900 inhabitants (1960). The town lies on both banks of the Edrenos Çay (Rhyndacus), now called the Mustafa Kemal Paşa Çay. The origin of the name, often wrongly written Kirmāsī, which points to a Greek *Κερμαστή or *Κρεμαστή, is uncertain, nor is it known what ancient town was here. Perhaps the Kremastis in the Troas (cf. Pauly-Wissowa, ii, 743) mentioned in Xenophon, *Hist. iv*, 8, 15 to be connected with it. In the Byzantine period Anrata is said to have been here, where the troops of Alexios Comnenus under Kamytzes were defeated in 1068/1113 by the Saldjūḳs (cf. Anna Comnena, ii, 279 ff.). In any case there is close to Kirmāstī a Byzantine castle in ruins which resembles that 6 miles farther up the Edrenos Çay at Kesterlek and presumably was intended with similar defences at Ulubad (Lopadium) and Bursa to keep back the advance of the Ottomans. In the town, which has 6 mosques, including one large very old one with a *türbe*, and 14 *masdjids*, there are ancient remains (sarcophagi, inscriptions on the walls ornaments) which do not seem yet to have been studied. The history of Kirmāstī under the Ottomans is quite obscure, as there are no records. Ewliyā Čelebi (v. 290) and European travellers (cf. W. Hamilton, *Researches in Asia Minor*, London 1842, i, 77, 85, ii, 93) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmāstī, which did not suffer from the Greek occupation, was in 1923 renamed Muṣṭafā Kamāl Paşa in honour of the Turkish President. Kirmāstī is the birth-place of Seyyid ʿAlī Wilāyet (d. 929/1520-3 in Istanbul), son-in-law of the historian ʿAṣḥḳī Paşa zāde (cf. Ṭaşköprüzāde-Meǧdī, *Shaḳāʾiḳ al-nuʿmāniyya*, 352, 13), known from the *Menāḳıb-i Ṭāǧī wa ʿArīfān* (i.e. Sheykh Ebū ʾl-Wefā); cf. Pertsch, *Lat. Türk. Handschr. Gotha*, 137, No. 166 and Tornberg, *Cat. Upsal.*, 222, No. ccccvii.

Two hours' journey from Kirmāstī are two hot mineral springs, called Dümbüldidah and Akardja.

KIRMISIN (see KIRMANSHAH)

KIRSH (see SIKKA)

KIRSHEHIR, modern Turkish Kırşehir (formerly *Kirşehri* "town in the steppes", incidentally also called euphemistically *Gülşehri* "town of the roses"), a town in central Anatolia, ca. 490 m. above sea level, situated at 37° 9' N. lat., and 34° 10' E. long., on a small river called the Kılıç Ozu which flows into the Kızıl Irmak [q.v.], the ancient Halys. The town, with a total population of 24,268 in 1950, lies on the road from Ankara (295 km. distance) to Kayseri (240 km. distance). Another road leads after some 25 km. to the Kesik Köprü, a long bridge over the Kızıl Irmak of 13 pointed arches, built in 640/1248 by a Saldjūk vizier called 'Izz al-Dīn Muḥammad (see Taeschner in *Festschrift Ernst Kühnel. Aus der islamische Kunst*, Berlin 1959, 290-2, and A. Dietrich in *ZDMG*, cx (1961), 320-23). Close to the bridge, on the eastern bank of the river, is a khān or caravanserai, erected in 667/1268 by Nūr al-Dīn Djahrā'īl b. Bahā' al-Dīn Djadja, *amīr* of Kirshehir (see K. Erdmann, *Das anatolische Karawanserai des 13. Jahrhunderts*, Istanbuler Forschungen, xxii/1, Berlin 1962, no. 21, 74-7). In the neighbourhood of the town are medicinal springs.

Kirshehir is certainly an old settlement, as may be deduced from the *höyük* (a hill indicating ancient cultivation) in the centre of the town, which however, has not as yet revealed its secrets. The ancient name of the town is not known, the denominations proposed for antiquity are disputed. So far as is recorded by inscriptions and architectural monuments, its history starts only in the early Turkish (Rum Saldjūkid) period. Then and shortly afterwards, from the middle of the 7th/13th until the middle of the 8th/14th centuries, the town must have been an important cultural centre.

After the battle of Malāzgird (1071), the Turks took possession of great parts of Anatolia, and Kirshehir became also Turkish, but the control of the city changed more than once sometimes it fell to an *amīr* of the Danishmandids of north-eastern Anatolia (Sivas and Malatya), sometimes to a sultan of the Anatolian collateral line of the Saldjūkids, the so-called Rūm-Saldjūkids who resided in Konya. Under sultan Kilič-Arslan II, the amirate of the Danishmandids was incorporated (ca. 1173) in the territory of the Rūm-Saldjūkids, who remained the overlords of the town until the end of their power in 1307. Then governors of the Mongol Il-Khāns of Iran started to rule the whole region, including Kirshehir, which served as a place of coinage for these until 728/1328. In his *Nuzhat al-kulūb* (ed. G. Le Strange, i. Text, London 1925, 99, *ll.* 23 ff., ii. Tr. London 1919, 99, *ll.* 22 ff.), Ḥamd Allāh Mustawfī designates Kirshehir as "a big town with high sacred constructions ("*imārāt*), which enjoys a fine climate, the revenue of its *Diwān* amounts to 57 000 *dīnārs*".

After the disintegration of the Il-Khānid state, Kirshehir again became a controversial issue between independently behaving governors, like those of the Eretnids [see ERETNA] and other dynasties, until it was taken by the Ottoman sultan Bāyazīd I. After the latter's defeat near Ankara in 1402, the town was at first added by the conqueror Timūr to the territory of the Karamānoghlu (Konya and Laranda), but afterwards changed masters several times until it became definitely Ottoman when Selīm I incorporated the principality of the Dulkadir, to which Kirshehir had belonged ultimately. As capital of a *liwā* (*sandjak*), the town was attached to the *eyālet* (*wilāyet*) of Karaman.

When the *wilāyet* system was reorganised in the middle of the 19th century, the *sandjak* of Kirshehir was assigned to the *wilāyet* of Ankara. The town became a *wilāyet* in 1924 when the former *wilāyets* were abolished and the *sandjaks* raised to *wilāyets*. But in 1954 the *wilāyet* of Kirshehir was suppressed, parts of its territory were added to the *wilāyets* of Ankara and Yozgad, but the greater part was assigned to the newly formed *wilāyet* of Nevshehir.

The heyday of Kirshehir was the late Saldjūkid and Il-Khānid period between ca. 1240-1340. The town must then have been really important, there was in any case an active intellectual life and a mystical religious character, as may be seen from imposing architectural monuments which have survived until today (see Ali Saim Ülgen, *Kırşehir'de Türk eserleri*, in *Vakıflar Dergisi*, ii (Ankara 1942), 255-62, figs. 1-25, Halûn Baki Kunter, *Kırşehir hatibleri*, in *ibid*, 432-36, figs. 4-23, W. Ruben, *Kırşehir'in dikkatımızı çeken abu'ol ahadeleri. A*, in *Belleten*, xi [Ankara 1947], no. 44, 603-40, pls. CX-XCVI, idem, *B*, in *Belleten*, xii [Ankara 1948], no. 45, 173-93, pls. XXXVII-XLVI; idem, *Ergenarıge Denkmäler aus Kırşehir*, in *ibid*, 294-303; Cevat Hakkı Tarım, *Kırşehir tarihi üzerinde araştırmalar*, Kırşehir 1938, idem, *Tarihte Kırşehir - Gülşehri ve Bahailer - Ahiler - Ekhiazâtlar*, Istanbul 1948).

The oldest cultural institution in Kirshehir is possibly the *madrasa* of Malik Muzaffar b. Bahrāmshāh, called Malik Ghāzī, of the Mangūtekdynasty, whom sultan 'Alā' al-Dīn Kaykubād I had invested with Kirshehir as compensation for the principality he had taken away from Ghāzī a family. Of the *madrasa* allegedly built in 644/1246, only the relatively simple portal has been preserved. When the ruins of the *madrasa* were carried away, the portal was used in 1312/1893 for the reconstruction of the 'Alā' al-Dīn Mosque on the hillock of the town. The still-standing graceful mausoleum of Malik Muzaffar, the Malik Ghāzī Kümbedi, constructed by his consort in the style typical for the high-Saldjūkid period, indicates the original site of the *madrasa*.

For the next period, the *madrasa* of the *amīr* Nūr al-Dīn Djahrā'īl b. Bahā' al-Dīn Djadja served as a centre of intellectual life. It belonged to an extension foundation on which a deed of foundation (*waḳfiyya*) in Arabic and Mongol, dated 670/1272, provides information (see Ahmed Tevfik, *Kırşehir emiri Cacaoğlu Nur el Din'in 1270 tarihli Arapça Moğolca vakfiyesi*, Ankara 1959). Of the constructions belonging to this foundation, only a group of buildings in the centre of the town has survived. It consists of the *madrasa*, built in 671/1272 and presently used as the Friday mosque, its minaret and the tomb of the founder. The tomb is included in the north-eastern angle of the *madrasa* and can only be reached from the inside; on the outside, it is only marked by a window in the northern wall, of the same style as the portal of the *madrasa*.

To the north-west of the Malik Ghāzī Kümbedi, at a distance of ca. 200 m. from the Djadja Beg Madrasa, lies the Lāla Camı ("Tulip mosque"). A tale has it that its name is derived from a tulip of particular beauty, which the builders received from a pupil of the Djadja Beg Madrasa; proceeds of its sale then allegedly enabled him to build the Lāla Camı. The building, which lies in ruins and does not bear any inscription so that nothing is known about its construction and original use, apparently was not a mosque at the outset, during the Il-Khānid period it served as the mint, but was used as a mosque later,

probably still in the 14th century, as is shown by its *miḥrāb* built to Saldjūkid style.

In the north-eastern part of the town, on a hillock in the Imaret ward, lies the tomb of Shaykh Süleyman-i Turkomānī, who is said to have introduced to Kirshehir the Mewlewī order, and to have built a Mewlewī khān, nothing of which has survived. The tomb has no inscription and so nothing is known about its construction or about the death of the man who is buried there. A wooden panel on the tomb gives 693/1294 as the year of his death, but this can not be correct since there exists a foundation deed (*waḳf-iyye*) of Shaykh Turkomānī, dated Muharram 697/October-November 1297 (see C. H. Tarım, *Kırşehir tarihi*, 82-5). The biographical work *Nafaḥāt al-uns* of the Persian poet Djāmī (Turkish tr. Lāmiʿī, Istanbūl 1289/1872, 652, M. F. Köprülüzāde, *Türk edebiyyātında ilk mütaṣavvıflar*, Istanbul 1918, 236, n. 1) mentions 714/1314 as the year of his death; this seems more probable. Until recent times, descendants of Shaykh Süleymān I Turkomānī have been known in Kirshehir, as may be seen from *later sites* their tombs, all of which carry Mewlewī characteristics. It seems probable that the dignity of Shaykh of the Mewlewī community to Kirshehir was hereditary in their family.

The poet Gülshehrī to all probability also originated from Kirshehir. He was one of the first to write poetry in Rūm Turkish, and by doing so was largely instrumental in this language's, the later Ottoman-Turkish, finding its place among the literary languages of Islam. Nothing is known about his life, nor is there any trace of his tomb in Kirshehir or elsewhere. But on the basis of his pen-name (*maḵhlaṣ*) Gülshehrī (q.v.) there can be no doubt that he originated from Kirshehir. Because his *Mantiḳ al-ṭayr* contains many references to the prophet Süleymān (Solomon), it has been supposed that Gülshehrī can be identified with Shaykh Süleymān-i Turkomānī. The identification, however, is in no way proved and remains controversial.

From an artistic point of view, the most important building to Kirshehir is the *türbe* of the poet ʿĀshik Pasha (*q.v.*; see also M. Fuad Köprülü, *in IA*, s.v.), born of Kirshehir to *569/1272*. His grandfather Bābā Ilyās had been the founder of the Bābā'ī sect, and one of his followers, Bābā Ilyās, had been the leader of the great dervish revolt which had been crushed with great difficulty in 1242 on the Mālkiyye plain near Kirshehir. ʿĀshik Pasha, himself a dervish also, died in the odour of sanctity on 23 Ṣafar 733/3 November 1333, his tomb at Kirshehir became a highly visited place of pilgrimage. The magnificent *türbe*, which guards the mortal remains of the poet, was built after his death and has a style of architecture all of its own. It has nothing in common any more with the Saldjūkid tombs, generally called *kümbet* ("cupola"), but it departs also from the customary style of the Ottoman *turbes*. A characteristic feature of ʿĀshik Pasha's *türbe* is that before it extends a closed entrance hall which is accessible at the side through a grand portal.

From an historical point of view the most remarkable monument of Kirshehir is perhaps the modest sanctuary of Akhī Ewrān which consists of the saint's *türbe*, a *tekiyye* and a mosque. On the role of this sanctuary in the economic life of Kirshehir, see AKHĪ BABA AND AKHĪ EWRĀN. When in 1925 the dervish monasteries were closed, the role of the *tekiyye* of Akhī Ewrān came also to an end, and so Kirshehir was reduced to the status of a provincial town.

Taeschner, *Kırşehir, ein altes Kulturzentrum aus spät- und nachseldschukischer Zeit*, in *Necati Lugal armağanı*, Ankara 1968, 577-92. (F. TAESCHNER)

KIRṬĀS stands for 1. papyrus, papyrus roll, 2. parchment, and 3. later also rag paper, from the Arabic texts, it is not always clear which material is meant. The word *ḳirṭās*, *ḳarṭās*, *ḳurṭās*, or *ḳarṭas*, *ḳaṭṭas*, has been adopted from the Greek word χάρτη through the Aramaic, from the Arabic, it has been adopted by the Spanish as *alcartas* meaning "bag", and by the Portugese as *cartas* meaning "paper, permit; placard". In the *Ḳurʾān*, it is mentioned in the singular, *ḳirṭās* (Sūra VI, 7), and in the plural, *ḳarāṭīs*, meaning "[written] papyri" (Sūra VI, 91). Sometimes a genuine Arabic word is used *waraḳ al-bardī*, "reedy sheet", and *waraḳ al-bardī* or *al-ṣaʿīdī*, "sheet made of the papyrus plant" (see KASAR, PAPYRUS). The Arabs attribute the invention of the *ḳirṭās*, "papyrus", to the biblical Joseph (Ibn Kutayba, *Maʿārif*, Göttingen 1850, 274, etc.). Nothing is said about its production. Only in the *Fihrist* of Ibn al-Nadīm (d. 380/990), 21, and in al-Bīrūnī's *Indica*, 81, completed in 421/1030, are there two statements that *ḳirṭās* is obtained from the reed of the papyrus (*ḳaṣab al-bardī*), or else from its pulp (*lubb al-bardī*). Only to the 7th/13th century after the termination of the production of papyrus in the 5th/11th century, Ibn al-Baytār (d. 646/1248) related in his *Djamʿ al-mufradāt al-adwiya wa 'l-aghdhiya*, Cairo 1291/1874-5, i, 87 from his teacher Abu 'l-ʿAbbās al-Nabātī (d. 637/1239), that the Egyptians, in former times, used to split the stalk of the papyrus in two parts, cut [the pulp obtained thereby] into strips, put them [crosswise, in two layers] on an even pad made of wood, spread size on them which they had obtained from the seeds of the bhīs lotus (*Nymphaea coerulea* Sav.), dry [the strips combined thereby], and beat them carefully with a beetle until they got an even [piece].

Ḳirṭās was not usually sold as pieces, but rather as rolls of pieces stuck together. From these rolls, pieces could be cut, irrespective of the glued joints which were usually not visible. The smallest piece used in trade was a sixth of a roll, which was called a *fāmūd* (Greek τομάριον) or *fāmūr ḳirṭās* (Greek τομάριον χάρτου). On the front surface (*recto*), the strips of the papyrus ran horizontally, hence parallel to the writing, while on the reverse-surface (*verso*), the strips ran vertically. In the early ʿAbbāsid period several sheets were, sometimes, bound into a booklet (*ḥarīsa*). Because of the high price of the material, it was usual to write on the reverse surfaces as well as to wash the written papyri and write on them again (thus forming an opistograph or palimpsest). The sizes of the sheets were probably generally the same as those of the Ancient World. The usual size was 30-40 cm. high and 20-30 cm. wide, but the width later was increased. The manufactories producing the different kinds of papyrus were run by the government or were under governmental supervision; it seems that this governmental control was certified by an official note on the back side of the first sheet of a roll.

The word *ḳirṭās* did not remain confined to

"papyrus", "roll of papyrus", but was used for "bag" and, in medical science, for "dressing", "a kind of absorbent gauze", and things like that (cf. Ibn al-Bayṭār, *op. cit.*, i, 87, and his sources, ss. Dioscorides, Galen, Ibn Sīnā, etc.), or else was applied to writing paper obtained from other materials, e.g. "parchment" [see QIRṬĀS, RAḲḲ] and "rag paper" [see KAGHAD].

Bibliography A. Grohmann, *Arabische Papyruskunde* (Handbuch der Orientalistik, erste Abt., Ergänzungsband ii, erster Halbband, Leiden-Cologne 1966), 49-128 (with bibliography), idem, *Arabische Paläographie*, i (Österr. Akad. d. Wissenschaften, phil.-histor. Kl., Denkschriften, 94. Bd., 2. Abhdlg., Vienna 1967), 66-93 (with bibliography) (R. SELLHEIM)

AL-KISĀʾĪ, Abū ʾl-Ḥasan ʿAlī b. Ḥamza b. ʿAbd Allāh b. Bahman b. Fayrūz, *mawlā* of the Banū Asad, well-known Arab philologist and Kurʾān-reader (*ca.* 119-89/737-805). Descendant of an Iranian family from the Sawād, he was born in Bāb-amshā, Dujayl, north of Baghdād (Yāḳūt, *Muʿdjam*, i, 458 s.v., M. Streck, *Die alte Landschaft Babylonien*, Leiden 1901, ii, 226) and when still a boy, came to al-Kūfa (Zubaydī, *Ṭabaḳāt*, 138; Ibn al-Djazarī, *Ghāya*, i, 535). It is related that he had difficulties with the *ʿarabiyya* and therefore sought to attach himself to the grammarian Muʿādh al-Harrāʾ (*Taʾrīkh Baghdād*, xi, 404). Al-Khalīl's [*q.v.*] authority in the field of Arabic philology allegedly caused him afterwards to go to al-Baṣra, at his advice, al-Kisāʾī is said to have stayed for some time among the Bedouins in order to become fully conversant with the secrets of the *ʿarabiyya* by direct association with them. As is shown by the explanations and interpretations of details which are to be found in grammars and lexicographical works of the native philological literature and which are to be traced back to al-Kisāʾī, it is in any case certain that he attributed more importance to linguistic usage than to learned systematisation, as was aspired to by Sībawayh (*q.v.*), another pupil of al-Khalīl, who laid this down in his voluminous *al-Kitāb*. Even if al-Kisāʾī, in his discussions and investigations, made use of the generally accepted method of analogy (*ḳiyās* [*q.v.*]), he nevertheless, in his learned observations, left, as was fitting, wide space to the anomalous ways of speech as presented especially by colloquial speech or dialect, be took care not to squeeze into a system such anomalies, exceptions and discrepancies from the general rule (against Yāḳūt, *Udabāʾ*, v, 190; Suyūṭī, *Bughya*, 336). In this way, he and those who followed him in this method preserved for us vestiges of the everyday language, which was not acknowledged by other scholars and therefore concealed and suppressed. Three or four generations later, in connexion with the controversies between al-Mubarrad and Thaʿlab [*q.vv.*] in Baghdād, the more independent treatment of the Arabic language by al-Kisāʾī, and not least that of his pupil al-Farrāʾ [*q.v.*], became straightaway the method of the grammatical school of Kūfa, *ex eventu*, be and his teacher al-Ruʾāsī [*q.v.*] have entered the history of Arab philology as the real founders of that school. In his introduction to Ibn al-Anbārī's *Kitāb al-Inṣāf* (Leiden 1913), G. Weil pertinently characterised this method as the "anomalous" one, in opposition to the strictly "analogous" one of the school of Baṣra, which has generally prevailed among the Arab grammarians. Apart from the material preserved in the *Kitāb al Inṣāf* with respect to the school of Kūfa and in particular to al-Kisāʾī's teachings, see also Thaʿlab, *Madjālis Thaʿlab*, Cairo 1960, index; al-Zadjdjādjī, *Madjālis al ʿulamāʾ*, Kuwait 1962, index; al-Suyūṭī, *al-Muzhir*, Cairo 1958, iii, index; idem, *al-Aghānī wa ʾl-radjāʾir*, Haydarābād 1360/1941, iii, 15, 18, 42; al-Sayyid Ṣadr al-Dīn al-Kanghrāwī (?) al Istadrābādī (1278-1349/1862-1931), Kaṣhāla, *Muʿdjam*, v, 27, 292), *al-Mūdjiz fī ʿilm-i nāḥw al-kāfī*, ed. M. Bahdjat al-Bayṭār, in *MMIA*, xxiv (1949), 417-32, 560-82, xxv (1950), 223-46, 399-414, 521-34, xxvi (1951), 83-100, 299-321, 407-22, 577-89 (cf. too A. al-Himsī, Ẓahiriyya, Nahw, 519. al-Kanghrī).

Al-Kisāʾī's learned studies more concerned with a description of reality than with scholastic systematisation, apparently sprang from a basic attitude, which must also have enabled him to maintain for many years those manifold good and close relations with the ʿAbbāsid court in Baghdād, where he had moved. There the scholar, as original in knowledge as he was in ideas, was all the more welcome as teacher of the princes since he was also able to act as a Kurʾān-reader (Azhari, *Taḥdhīb*, 15). The caliph al-Mahdī had entrusted to him the education of the young al Rashīd, who in his turn later caused his sons al-Amīn and al-Maʾmūn to be taught by al-Kisāʾī (Yāḳūt, *Udabāʾ*, v, 286, 294 ff.) Al-Rashīd promoted his teacher al-Kisāʾī among his personal companions and confidants (*al djulasāʾ wa ʾl-muʾānisīn*) and requested him to accompany him on the *ḥadjdj* and other journeys (Yāḳūt, *Udabāʾ*, v, 283, 286) thus manifesting the intimate relation between pupil and teacher. During one of these journeys probably the road to Khurāsān in 189/805 (Ṭabarī, iii, 702 ff.), al-Kisāʾī died at the age of seventy (Kifṭī, *Inbāh* ii, 269), probably in Rambāya in the neighbourhood of Rayy. Fragments of an elegy on him and on the jurist Muḥammad b. al-Ḥasan al-Shaybānī [*q.v.*] by his antagonistic colleague Yaḥyā al Yazīdī [*q.v.*] have survived (Marzubānī, *Muḳtabas*, 240; Zubaydī, *Ṭabaḳāt*, 140; *Taʾrīkh Baghdād*, xi, 423 ff., and ii, 180, Yāḳūt, *Muʿdjam*, ii, 824 f., idem, *Udabāʾ*, v, 283, 299. Ibn al-Djazarī, *Ghāya*, i, 540); for the *laḳab* "Kisāʾī", see *Taʾrīkh Baghdād*, xi, 404 f., Suyūṭī, *Muzhir*, ii, 445 etc., O. Rescher, *Beiträge zur arabischen Poesie*, 1963-4, viii/i, 108.

It is evident that the opinion of al-Kisāʾī's colleagues on a man who seemed to be favoured personally by fate because of his good relations with the court of the caliph, was not always positive (Abu ʾl Tayyib, *Marātib*, 74), all the more so because—as indicated above—in controversial questions he preferred to rely on the reality of the spoken language rather than on speculative assertions of the learned (Yāḳūt, *Udabāʾ*, v, 280). It was the Bedouins, as disputed authorities on the current language, who assisted him at the famous discussion with Sībawayh on the so called *al masāʾala al zunbūriyya* (Zadjdjādjī, *op. cit.*, 8 ff., Marzubānī, *Muḳtabas*, 288, Kifṭī, *Inbāh*, ii, 358 f., etc.; A. Fischer, in *A volume of oriental studies presented to E. G. Browne*, Cambridge 1922, 150-6). He is also reproached with being a pederast and fond of date-wine (*nabīdh*) (Marzubānī, *Muḳtabas*, 284, 289, Yāḳūt, *Udabāʾ*, vi, 185, 194, 198).

Al-Kisāʾī's authority as a Kurʾān-reader was generally recognised, both at the court and among the public of Baghdād, al-Rakka and elsewhere (*Taʾrīkh Baghdād*, xi, 403). At first, he represented the reading of his teacher Ḥamza al-Zayyāt [*q.v.*], but in the course of time he developed his own (*Fihrist*, 30). How highly al Kisāʾī's reading was appreciated is shown by the fact that it became the seventh of the seven canonical readings [see QIRāʾĀT]

Probably his reading was as little established by its reader, al-Kisā'ī, as were the others by their readers. This was first done by al Kisā'ī's pupil Abū 'Ubayd [*q.v.*], when he compiled 32 *ḥurūf*. As in parallel cases, the *Mufradāt al Kisā'ī*, which exists in Ms. Tehran University 4867,1 (M. T. Dānish-Pazhūh, xiv, 3897), could be a later extract from the *Shāhbiyya*, the *Taysīr* or a similar work (see R. Sellheim, *Materialien zur arabischen Literaturgeschichte*, Wiesbaden 1976, i, 38 f.).

Of al-Kisā'ī's 14 or 15 works enumerated in the *Fihrist*, 65 ff., 165—for some of them, see Asharī, *Tabāʾīn*, 23 ff. and Zubaydī, *Ṭabaqāt*, 178 (or should we read Sībawayh here instead of al Kisā'ī?)—nothing apparently has come down to us. According to the titles, they were devoted to questions of grammar, lexicography and the Kur'ān, and also of poetry, of which he allegedly did not have much knowledge (Yāḳūt, *Udabāʾ*, v, 193; Ibn Khallikān, ii, 457). According to Brockelmann, I, 128, S I, 178, three other treatises which are connected with his name and are lacking in the enumeration of the *Fihrist*, have been preserved: *Risāla fī laḥn al ʿāmma* (ed. Brockelmann, in *ZA*, xiii (1898), 29 46; cf. Th. Nöldeke, *ibid*., xxi 25, 'Abd al-'Azīz al Maymanī, Cairo 1935, and R. 'Abd al-Tawwāb, *Laḥn al-ʿāmma*, Cairo 1967, 121 f.); *Kitāb al Mutashābih fī l-Kurʾān* (other mss. e.g. in Ẓāhiriyya [ʿIzzat Ḥasan, Kur'ān, 592], Chester Beatty [A J Arberry, 3165,1] or Baghdād, Awḳāf ['A. al-Djubūrī, i, 144, no. 433], a remark on the *istiʿādha* formula in a verse (British Museum [Ch. Rieu, Supplement 1203, 12]), preserved in detail in Ṭaḳīdādī, *op. cit.*, 338-42 (for similar traditions, see e.g. Marwazūnī, *Mukhtaṣar*, 285, *Taʾrīkh Baghdād*, xi, 406).

(R. Sellheim)

KISĀʾ [see LIBĀS].

KISĀʾĪ, Majd al Dīn Abū 'l-Ḥasan, a Persian poet of the second half of the 4th/10th century. In some later sources his *kunya* is given as Abū Isḥāḳ, but the form given above can be found already in an early source like the *Ṭahīr mahālī*. The *Dumyat al ḳaṣr* by al Bākharzī contains a reference to the "solitary ascetic" (*al-mudjtahid al muḥtin be nafsihi*) Abu 'l-Ḥasan 'Alī b. Muḥammad al Kisā'ī of Marw who might very well be identical with this poet (cf A. Ateş, *gerig* to his edition of *Kitāb Tarcumān al balāgha*, 97 f.). The pen name Kisā'ī would, according to 'Awfī refer to the ascetic way of life adopted by the poet, but it can also be explained otherwise e.g. as a *nisba* derived from the trade of tailoring. From the very beginning the title *al-Ḥakīm* has been attached to his name.

His origin from Marw is confirmed by the early sources. It is also certain that he made at least a part of his career as a poet in that city. In one of his poems, a lament of old age, he has inserted a precise dating of his birth Cahārshamba, 26 Shawwāl 341 (Wednesday, 16 March 953) as well as the statement that he had reached the age of fifty. From this poem, the conclusion has been drawn that he must have died in or shortly after the year 391/1000-1. The actual date of his death is, however, unknown.

The *dīwān* of Kisā'ī was still extant in the 6th/12th century. After that time, its transmission appears to have been discontinued. Hardly any complete poem has survived. The fragments that have been collected so far from a great variety of sources are generally not longer than a few lines. It is, therefore, difficult to assess the statements concerning the nature of his work that have been made both by ancient and modern writers. It can be regarded as certain, anyhow, that Kisā'ī did enjoy a great reputation as a religious poet during the two centuries following upon his death as well as on his own lifetime. 'Awfī describes him as the first place as a poet who practised the genres of devotional poetry (*zuhd*) and religious admonition (*waʿẓ*), and quotes a few specimens of his eulogies (*manāḳib*) on the members of the House of the Prophet. The *Kitāb al Naḍḍ*, an apology of the Imāmī Shī'a written about the middle of the 6th/12th century, establishes Kisā'ī with some emphasis as a Shī'ī poet.

The Ismā'īlī poet Nāṣir-i Khusraw (died ca. 465/1072), who cultivated the same genres as Kisā'ī, acknowledged his indebtedness to this predecessor, indirectly, by using a claim to the superiority of his own poems over those by Kisā'ī as a *topos* of the epilogue in a number of *ḳaṣīdas*. As E. G. Browne has pointed out, these instances of poetical *faḵr* need not be taken as evidence of a sectarian controversy between these two poets (as it had been suggested by H. Ethé). The opposite conclusion reached by Sa'īd Nafīsī—namely, that they both belonged to the same branch of the Shī'a—is equally untenable. The exchange of poems between Kisā'ī and Nāṣir-i Khusraw quoted by Riḍā-Ḳulī Khān Hidāyat from the *Khulāṣat al-ashʿār* by Taḳī Kāshī, is an anachronistic forgery made up from poems that actually belong to the *dīwān* of the latter only.

The paucity of the primary sources available now does not permit us to estimate how far Kisā'ī specialised in the writing of religious poetry. It is also impossible to define the social groups to which he addressed himself in these poems. It is evident, on

the other hand, that he did not stay aloof entirely from the profane practice of poetry. He was patronised by a minister of the Sāmānid *amīr* Nūḥ b. Manṣūr, and in his later days he wrote at least one panegyric ode to Sultan Maḥmūd of Ghazna. ʿAwfī praises his descriptions and quotes several specimens which show that Kisāʾī used all the poetical themes current in his age.

Bibliography The fragments of Kisāʾī's poetry were collected for the first time by Ethé, *Die Lieder des Kisâ'î*, in *SB Bayr. Akad.* (1874), ii, 233-53. This collection, based on manuscripts of a number of *taḏkiras*, is now outdated. More material has come to light from various other sources, such as dictionaries and *maǧmūʿa*-manuscripts. New collections have been published, in particular by M. Dabīr-Siyāqī, *Ganǧ-i ḥaz-yāfta*, ii, and *Pīškišangān-i sabk-i pārsī*, Tehran 1352/1972; see also *Lughat-nāma*, no. 262 (1352/1972), s.v. *Kisāʾī*. The most important primary sources on his life and work are of Nāṣir al-Dīn, al-Kazwīnī al-Rāzī, *Kitāb al Naḳḍ*, ed. Ḏjalāl al-Dīn Muḥaddiṯ i Urmawī, Tehran 1332/1952, 252, 628; Muḥammad b. ʿUmar al-Rādūyānī, *Tarǧumān al-balāġha*, ed. A. Ateş, Istanbul 1946, printed text 23, 11, 46, 47, 108, Asadī, *Luġhat-i Furs*, ed. M. Dabīr Siyāḳī, Tehran 1336/1957, passim, Naṣīr i Khusraw, *Dīwān-i aš'ār*, ed. Naṣrat Allāh Takawī, Tehran 1348/1969, passim, Niẓāmī ʿArūḍī, *Čahār maḳāla*, Tehran 1955-6, *main* 44, *taʿlīḳāt* 89-97; ʿAwfī, *Lubāb*, ed. E. G. Browne, ii, 33-9, ed. S. Nafīsī, Tehran 1335/1956, 270-4, *taʿlīḳāt* 660-8, Amīn Aḥmad Rāzī, *Haft iḳlīm*, Tehran 1340/1961, ii, 7-9; Luṭf-ʿAlī Beg Āḏhar, *Ātaškada*, lith. Bombay 1299 A.H., 236; Riḍā Ḳulī Khān Hidāyat, *Maǧmaʿ al-fuṣaḥā'*, lith. Tehran 1295 A.H., i, 488-5. See further Ethé, in *Gr. I Ph.*, ii, 281 f.; Browne, *LHP*, ii, 160-4, B. Furūzānfar, *Kisā'ī-yi Marwazī, in Armaġān*, i (1309/1930) 27-34 (= *Maǧmūʿa-yi maḳālāt wa aš'ār*, Tehran 1352/1972, i 7), idem, *Sukhan wa sukhanwarān*², Tehran 1350/1971, 38-42, ʿAbbās Iḳbāl, *Irānšahr*, i (1340 A.H.), 337-42, ʿAlī Kawīm, *Armaġhān*, xxiv (1328/1949) 241-51, Dh. Ṣafā, *Taʾrīḫ-i adabiyyāt dar Irān*⁴, i, Tehran 1342/1963, 442-9.

(J. H. Kramers-[J. T. P. de Bruijn])

al-KISĀʾĪ, Ṣāḥib Kiṣaṣ al-Anbiyāʾ, unknown author of a famous Arabic work on the lives of the prophets and pious men prior to Muḥammad. Some small passages of this book were first edited in 1898 by I. Eisenberg in his thesis on Muḥammad b. ʿAbd Allāh al-Kisāʾī. A complete edition was published in 1922.

In his thesis, Eisenberg tried to prove that the author of the *Kiṣaṣ al-anbiyāʾ* was the well-known philologist al-Kisāʾī, to whom Hārūn al-Rashīd had entrusted the education of his sons al-Amīn and al-Maʾmūn. But what renders this identification impossible is that Ibn an-Nadīm in his *Fihrist* does not make any allusion to any book of the philologist, the contents of which could have been the legends of the old prophets; furthermore, the name of al-Kisāʾī the philologist is Abu 'l-Ḥasan ʿAlī b. Ḥamza, and not Muḥammad b. ʿAbd Allāh, as indicated in the text edited by I. Eisenberg. Thus the identity of the author of the *Kiṣaṣ al-anbiyāʾ* remains an enigma.

Moreover, recent enquiries into the subject have proved that the legends of the prophets as written down in the numerous manuscripts of al-Kisāʾī's *Kiṣaṣ al-anbiyāʾ* belong to the popular narrative tradition of mediaeval Islam and can be compared with works such as the romance of ʿAntar, so far as the narrative style is concerned. So it would be of little use to search for an individual author al-Kisāʾī who could have compiled the *Kiṣaṣ al anbiyāʾ* at a certain date, he is as vague a figure as the narrator al-Aṣmaʿī in the romance of ʿAntar. The mediaeval story-tellers (*quṣṣāṣ* [see ḳiṣṣa]) apparently held al-Kisāʾī's *Kiṣaṣ al anbiyāʾ* in high esteem, but they were not anxious to preserve one standardised text of the legends. It is for this reason that the manuscripts, the oldest of which date from the early 7th/13th century, differ considerably in size, contents, and even arrangement of the stories.

The legends of the pre-Islamic prophets as related in these compilations under al-Kisāʾī's name, or handed down unto us in many other anonymous manuscripts, must be considered as the vivid expression of the religious feeling of the average mediaeval Muslim. It is to this respect that al-Kisāʾī's *Kiṣaṣ al-anbiyāʾ* are sources of great value for scholars who want to carry out further investigations of the popular religious life of the Islamic world, a task which has been somewhat neglected up till now.

(T. Nagel)

KISANGANI, the former Stanleyville, is a city now of well over 250,000 inhabitants, the third city in Zaire, and the capital of the province of Upper Zaire, formerly Province Orientale. The most important urban centre in north-eastern Zaire, it is situated on the bend of the river Zaire, formerly called Lualaba (upstream) and Congo (downstream from the city), just where it turns west and a few miles north of the equator.

In 1877, Henry Morton Stanley set up camp here to rest from the exhausting weeks during which he negotiated the seven cataracts still called Stanley Falls. In 1882, Hamed Muḥammad al-Murjebi, better known as Tippu Tibb [q.v.], founded a town on the northern shore of the island in the Zaire river that was formed by a creek called the Abibu. The new settlers, about 1500 in number and all nominal Muslims, called their town Kisangani, Swahili for "On the sandbank". In 1883, Stanley returned with instructions from King Leopold II to found a government station at the upper end of the navigable part of the Congo river. This became Stanleyville, with its centre on the right bank just north of the original Kisangani. By that time the Muslims (called "Les Arabisés" by the administration) had settled on the left bank, calling their new town Kisingitini, Swahili for "On the threshold". Their language of culture and literature is Swahili, their tribal background is mainly Kusu, Tetela and Genia, the Genia (Wagenia) being the original inhabitants of Wane Rusari or Wanye Lesali, the island of which Kisangani formed part. Stanleyville became an important trading centre, exporting coffee, cocoa, palm oil, timber and ivory. Modern Kisangani has a university; it was part of the policy of authenticity of President Mobutu to replace the name Stanleyville by Kisangani as the name for the whole city

The Muslims flourished with the city. More adaptable to urban culture and more conscious of their cultural dignity than the tribal peoples, they were more self-confident in their attitude vis-à-vis the Europeans, since their religion claimed equality with Christianity. The Belgian Congo government tried to restrict the activities of the Muslim missionaries, but could not prevent Islam from spreading to the country districts south of the city. The Muslims called themselves Waungwana "free man", the name by which all the Swahili peoples once called themselves. Their language is called Kiungwana, a dialect of Swahili (*q.v.*). This Swahili became the lingua franca of the entire country east of the Lomami river.

Always rebellious against the colonial administration, the Muslims were among the first groups to form a nationalist party about the time of independence, sc. the Mouvement National Congolais, from which the late Patrice Lumumba drew an important part of his support (he was a Tetela himself). No longer isolated, the Muslims in Kisangani, although they number only some 10,000, are in contact with and receive support from, those in Egypt, Arabia and Pakistan. Two neighbouring states, Uganda and the Central African Empire, have been ruled by Islamic governments until 1979.

Bibliography J.-P. Rossie, *Bibliographie commentée de la communauté musulmane au Zaïre des origines à 1975*, in *Les Cahiers du CEDAF*, no 6 (1976), 38 pp.; *L'évolution de la communauté musulmane de 1964 à 1975 dans la presse Zaïroise*, in *ibid.*, pp. 29-37. On Tippu Tibh and Stanley, see F. Bontinck, *L'autobiographie de Hamed bin Mohammed el Murjebi Tippo Tip (ca. 1840-1905)*, in *Academie Royale de Sciences d'Outre Mer*, Classe des Sciences Morales et Politiques, Nouvelle Série, XLII/4, Brussels 1974, with bibl. on pp. 25-39. A specimen of the liturgical literature can be found in J. Knappert, *A Swahili Islamic prayer from Zaire*, in *Orientalia Lovaniensia Periodica* (1973), 197-206. Crawford Young, *Islam in Congo*, in *Etudes Congolaises*, 2/3 (Kinshasa, 1967), 14-31, updates the following: A. Abel, *Les musulmans noirs du Maniema*, in *Correspondance d'Orient*, Centre pour l'Etude des Problèmes du Monde Musulman Contemporain, Brussels 1960, 160 pp., perhaps the most important work on the Muslims in Zaire. F. M. de Thier, *Singhiniwe, in Stanleyville musulmane*, Publications du Centre pour l'Etude des Problèmes du Monde Musulman Contemporain, Brussels 1963, is the only work that deals specifically with the history of Stanleyville-Kisangani. The Wagenia (who call themselves Waenya) have been described by A. I. Droogers, *De Gewaarwijhe Rete Jongensinitiatie bij de Wagenia van Kisangani*, Amsterdam 1974. (J. KNAPPERT)

KIṢĀṢ (A.), synonymous with *kawad*, retaliation ("settlement", not "cutting off" or "prosecution"), according to Muslim law is applied in cases of killing, and of wounding which do not prove fatal, called in the former case *kiṣāṣ fi 'l-nafs* (blood vengeance) and in the latter *kiṣāṣ fi-mā dūn al-nafs*.

1. For *kiṣāṣ* among the pagan Arabs see Wellhausen, *Reste arabischen Heidentums*[2], 186 ff.; Procksch, *Über die Blutrache bei den vorislamischen Arabern und Mohammeds Stellung zu ihr*, the collection of essays *Zum ältesten Strafrecht der Kulturvölker. Fragen zur Rechtsvergleichung, gestellt von Th. Mommsen*, Sections v VII; and Juynboll, *Handbuch des islämischen Gesetzes*, 284 ff.

2. Muḥammad takes it for granted that the bloodvengeance of Arab paganism—in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the doer himself, forms the essential feature of the vengeance (cf. Procksch, *op. cit.*, 6 and n. 5)—is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain. Kur'ān XVII, 35, XXV, 68, VI, 152 (cf. KATL, i, 1, in these passages only the *jus talionis* can be understood by the right to kill another, already in XVII, 35 the avenger of blood is forbidden to kill any one other than the guilty one), II, 173 ff. (before Ramaḍān of the year 2): "To you who are believers the *kiṣāṣ* is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother, he shall be dealt with equitably ... and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In *kiṣāṣ* you have life, you of understanding ..." (the first verse says that a free man can only be slain for a free man, a slave for a slave and for a woman only a woman [but probably a slave or a woman for a free man, but this is not expressly stated and must be deduced], naturally, of course, only the guilty one, and that in all other cases the payment of compensation (*diya*) takes place. This is an extension of what is presumed in the earlier passages: the treatment of the free man in relation to the slave is a matter of course, according to old Arab views, and that of the woman, which cannot be completely explained from them, represents an independent decision of Muḥammad's based on them (there is quite a different interpretation of the verse in Procksch, *op. cit.*, 75 n. 5). The commentators had difficulty in reconciling the passage with later developments (cf. below, 4). Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 (see below): By "prescribed" is meant not a duty but a rule not to be transgressed, pardon is the abandonment of *kiṣāṣ* with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood-feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved); v. 49 (after the first encounter with the Medinan Jews, but before the outbreak of open hostilities): "and we have prescribed for them (the Jews) in it (the Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and *kiṣāṣ* for wounds, but if anyone remits it, it is an atonement for him (i.e. for his sins) ..." (this verse of course does not cancel II, 173). In the years 3-5, with IV, 89 ff. there came the distinction between deliberate and accidental killing (cf. KATL, i, 1); in this the application of *kiṣāṣ* is excluded. In II, 190 (before the campaign of the year 6), *kiṣāṣ* is used metaphorically in the sense of retaliation of like with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the *Sīra*, the records of the life of Muḥammad are in agreement with this. In the so-called constitution of the community at Medina, which belongs to the early Medinan period, it is laid down that if any one slays a believer and is convicted (proof of guilt as a trial before the authority—Muḥammad—is therefore required as a condition for the carrying out of *kiṣāṣ*), talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the

murderer and must take an active part against him. Here the *ḳiṣāṣ* is brought from the sphere of tribal life into that of the religious-political community (*umma*), which finds an echo in the law, not however to be taken literally, that believers are one another's blood avengers for their blood spilt for the sake of Allāh; but it is also throughout recognised as a personal vengeance, as is also laid down in the case of the Medina Jews, and no-one is to be prevented from avenging a wound. A limitation of *ḳiṣāṣ*, logical from the standpoint of the *umma*, lies in the fact that the believer is forbidden in the ordinance of the community to kill a Muslim on account of an unbeliever. On two occasions, when Muslims had killed heathens who had however treated with Muḥammad, he did not allow *ḳiṣāṣ* to be made "because they were heathen" (this does not in any way follow from the ordinance of the community), and even paid the compensation himself, his utterance regarding the possibility of *ḳiṣāṣ* a propos of the second of these cases is, however, illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undoubtedly had the claim to *ḳiṣāṣ*, but in one case he cursed the murderer—again an illogical attitude. Muḥammad in his turn after the capture of Mecca, in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation on the slaying of a nephew of his, which had taken place during the heathen period. In this connection, he is said to have laid down the principle that any blood guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. GATL, i, 5). But Muḥammad also intensified the operation of *ḳiṣāṣ*, and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between *ḳiṣāṣ* and compensation, the proscription and execution of murderers who were also *muḥāribūn* (*q.v.*, cf. GATL, ii, 5), is however to be interpreted differently, from everything, it is clear that Muḥammad also supervised the carrying out of *ḳiṣāṣ*.

Taking the evidence of the Ḳur'ān and the *Sīra* together, it is evident that Muḥammad did not recognise the blood-feud, but allowed *ḳiṣāṣ* to survive as personal vengeance. Moreover, he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all important advances by which it was brought nearer in character to a punishment. That Muḥammad at the same time, according to the demands of the individual case, sometimes gave decisions deviating from his own rules, is intelligible.

4. Among the traditions (*ḥadīths*) is one that must be genuine, according to which Muḥammad had a Jew, who had smashed the head of a Muslim *ǧāriya* (slave girl or young woman) with a stone, killed in the same way, because in this case there was no question of an avenger of blood. At a later period when Ḳur'ān, II, 179 (cf. 2. above) was interpreted in a new way, the attempt was made to see in it evidence that a man might be killed as *ḳiṣāṣ* for a woman, without observing that the tradition referred to an unbeliever while the Ḳur'ān passage one only concerned with Muslims. But this Ḳur'ānic prescription regarding the woman was very early neglected and interpreted differently; it is true that 'Umar b. 'Abd al-'Azīz, al-Ḥasan of Baṣra, 'Aṭā' and *Ṭāwūs* are quoted as representatives of the Ḳur'ānic view that a man cannot be put to death for a woman (al-Zamaḵẖsharī on Ḳur'ān, II, 173) but Sa'īd b. al-Musayyab, al Sha'bī, Ibrāhīm of Naḵẖa'ī and Mālik had held the opposite view (*ijmā'*), and the latter opinion prevails in the law-schools without any opposition (al Zamaḵẖsharī's statements on the point are not quite accurate), at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-schools, the following is important. For the view that *ḳiṣāṣ* could be inflicted on several, on account of one individual, if they had committed the crime jointly, an unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the *ḳiṣāṣ* is to be executed is also disputed, the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muḥammad's. There are also varying opinions as to whether a case can be put to death on proof by *ḳasāma* (cf. 5. below), and ancient authorities are quoted for both, the historical truth is perhaps that Muḥammad wished to apply *ḳasāma* in a case of bloodshed and when it could not be managed, paid compensation himself, besides it is said (certainly wrongly) that he confirmed *ḳasāma* as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there one only *ḳiṣāṣ* and no possibility of paying compensation (this is wrongly cited in explanation of Ḳur'ān, II, 174) and that Muḥammad granted the blood-avenger a request to abandon claim to *ḳiṣāṣ*, laid great stress on forgiveness, and even asked him to do so (cf. above 3.)—in these historically certain cases, however, his attitude was influenced by purely political considerations); finally, we are told that he who raises a claim for blood without cause is one of the ones most hateful to God. Other traditions agree with the regulations mentioned and still to be mentioned, and need not therefore be quoted, especially as the *ḥadīths* on this subject are collected in Guillaume, *The traditions of Islam*, 107 ff.

Summing up the results of the traditions as the expression of opinion of authoritative circles of Islam to the early period, as must notice in contrast to Muḥammad a period the important change in the treatment of women, which marks an undeniable advance, just as the request for forgiveness is evidence of a loftier point of view.

5. The *ḳiṣāṣ fī 'l-nafs* according to the Sharī'a. In the cases of illegal slaying noted in the article GATL, i, 5 7, *ḳiṣāṣ* comes into operation, i.e. the next-of-kin of the slain man, who in this capacity is called *walī 'l-dam* ("avenger of blood") has the right to kill the guilty man under certain conditions From what has been said above, it is obvious that this punishment still partakes for the most part of the character of personal vengeance; this is also clearly seen in the regulations—disputed in points of detail—prescribed for the case when the avenger in any way qualifies the murderer and only occasionally the idea of punishment by an authority for the sake of justice crops up (Thus in all cases of culpable, illegal slaying in which *ḳiṣāṣ* cannot take place, *ta'zīr* intervenes, the competent authority is therefore regarded as the *walī* of one who has no *walī*, therefore anyone who kills a *ḏhimmī*, *mu'āhad* (an unbeliever connected with the Muslim state by a treaty) or a *musta'min*

(an unbeliever who enters a Muslim country after being given a safe conduct) must, according to Mālik, be put to death and the *walī* has no right to abandon claim to *ḳiṣāṣ*. On the other hand, however, it is laid down that anyone who kills a *mukātab* slave goes scot-free. But that this point of view is found at all is a step forward, for Muḥammad's decisions in this connection (cf. above, 3) were only dictated by the demands *at* the individual case, in other matters also, he certain points one see a loftier attitude adopted, at least in some of the schools.

For the application of *ḳiṣāṣ*, the fulfillment of the following conditions is necessary: (1) The life of the person slain must be absolutely secured by the Sharī'a, this is the case with a Muslim, *dhimmī* and *mu'āhad*, at least so long as they are in the *Dār al-Islām* [q.v.], and *Dār al Ṣulḥ* [q.v.] (in the case of the slaying of a Muslim prisoner in the *Dār al Ḥarb* [q.v.], it is unanimously agreed that there is no *ḳiṣāṣ*, and for the slaying of another Muslim there is no *ḳiṣāṣ*; according to the Ḥanafī school; there are corresponding regulations for the *dhimmī* and *mu'āhad*) in contrast to the *musta'man*, *murtadd* and *ḥarbī* (but *ḳiṣāṣ* may be inflicted on a *murtadd* if he kills another *mustadd*, and Mālik makes *ḳiṣāṣ* the general rule if anyone kills a *murtadd*, without the authority of the Imām). This point of view is to be distinguished from the conception of the illegality of the slaying (cf. KAFL, i, 5) although the two ideas have a certain amount in common, the killing of a *musta'man* is illegal, but there is no *ḳiṣāṣ* (apart from the special case just mentioned). (2) The slain man must not be a descendant of the slayer, nor the slave of the slave of one of his descendants, nor must there be a descendant of the slayer among the heirs of the slain man. (3) It is further taken for granted that the man when he committed the deed was of years of discretion and was in full possession of his faculties. (4) The further conditions are disputed (cf. below).

Any alteration in these relations of the doer after the deed makes no difference to the old blood guilt (it is, however, to be noted that the adoption of Islam by a *ḥarbī* wipes out all previous blood-guilt) with the exception of lunacy (in which case *ḳiṣāṣ* cannot be inflicted), nor does, for example, no alteration in the relations of the slain man after the doer has decided on the deed but before it is actually committed (but there are various views on this point). If one of several men who have slain someone jointly cannot be put to death for one or other of these reasons, the others also escape *ḳiṣāṣ*; this is also the case if a further reason for killing leads to the action of the slayer. If the slayer dies before *ḳiṣāṣ* is carried out, all claims by the avenger of blood ceases according to Abū Ḥanīfa and Mālik; according to al Shāfi'ī and Aḥmad b. Ḥanbal, compensation can still be claimed.

Mālik, al Shāfi'ī and Aḥmad b. Ḥanbal further demand, before *ḳiṣāṣ* can be allowed, in addition to the conditions mentioned, that the slain man is at least the equal of the slayer as regards Islam and liberty, so that they certainly uphold Muḥammad's intentions, while the Ḥanafīs—of course interpreting differently the evidence cited—take no account of this, and therefore occupy an undoubtedly higher position. A particular view of Mālik's has already been mentioned. According to Mālik, the slayer can further be put to death, if he has deliberately slaughtered his descendant, and this view is also admitted in the Shāfi'ī school. Several may be put to death for the killing of one, according to Abū Ḥanīfa, Mālik and al Shāfi'ī, if they have done the deed together, provided the part taken by each was such that if he had acted alone, the result would have been the same (Mālik alone excluded *taghāwu* (cf. below) on the basis of which, according to him, only a single individual can be put to death). There is unanimity on the point that anyone who has killed several people is liable to *ḳiṣāṣ*, on the question whether compensation has also to be paid there are different views.

Ḳiṣāṣ can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as to another case; in *Ḳiṣāṣ fi 'l-nafs* there is however also the old Arab institution of the *ḳasāma* (cf. GASAM and Goldziher, *Zeitschr. für vergl. Rechtswissenschaft* viii, 412 ff; Wellhausen, *Reste arabischen Heidentums*[2], 187 ff) which Islam allowed to survive (cf. above); according to Mālik, Aḥmad b. Ḥanbal and al-Shāfi'ī's earlier opinion, *ḳiṣāṣ* can be inflicted on the accused (but according to Mālik on one only) if the *ḳasāma* is performed and the other conditions are fulfilled, according to Abū Ḥanīfa and the later view of al-Shāfi'ī, which became predominant in his school, he has only to pay compensation, among the Shāfi'ī's, with the limitation that he may be put to death if in the course of the trial the accuser swears to his guilt twice with fifty oaths each time. If the person entitled to inflict *ḳiṣāṣ* does so without previous judicial proof he is punished with *ta'zīr*.

The execution of *ḳiṣāṣ* is open to the avenger of blood, and according to Abū Ḥanīfa consists in beheading with the sword or a similar weapon, if the avenger slays in another fashion he is punished with *ta'zīr*, but not imprisoned. According to Mālik and al Shāfi'ī, the guilty person, with certain limitations, is killed in the same way as he killed his victim; both views are given by Aḥmad b. Ḥanbal.

Ḳiṣāṣ takes place—among other conditions—only when the next of kin (*walī*) of the slain man or the owner of the slain man, if he was a slave, demands it. If there are several (equally nearly related) avengers of blood, all must express this desire, if one of them remits *ḳiṣāṣ*, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The *walī*, or the wounded man before he dies if the case occurs, is permitted to remit the *ḳiṣāṣ* and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations an detailed points and many differences of opinion between the schools of law.

6. *Ḳiṣāṣ fī-mā dūn al-nafs* according to the Sharī'a. If any one deliberately (with *'amd*, opposite of *khaṭ'*; cf. KATL, i, 5) and illegally (this excludes the wounding of one who tries to murder or injure or rob a fellow man, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who forces his way into another's house without permission) has inflicted no injury, not fatal, which could be inflicted on the doer's person in no exactly similar way (what is meant by this is very fully discussed in the *Fiḳh* books), he is liable to *ḳiṣāṣ* on the part of the wounded man, [except that Mālik makes it be inflicted by an expert], if the conditions necessary for carrying out the *ḳiṣāṣ fi 'l-nafs* are present with the following modifications: according to Abū Ḥanīfa, *ḳiṣāṣ fī mā dūn al-nafs* is not carried out between man and woman or slaves among themselves, but it is accord

ing to Mālik, al-Shāfi'ī and Aḥmad b. Ḥanbal, Abū Ḥanīfa and Mālik further allow no *ḳiṣāṣ fī-mā dūn al-nafs* between free men and slaves. According to Mālik, al-Shāfi'ī and Aḥmad b. Ḥanbal, this *ḥadd* is inflicted for one on several, but not according to Abū Ḥanīfa. A sound limb may not be amputated for an unsound one; if the guilty person has but the limb, there can *at* course be no *ḳiṣāṣ*. In the case where he loses it after committing the deed, there is a corresponding difference of opinion, as to the case of his death before the execution of *ḳiṣāṣ fī 'l-nafs*.

The further regulations correspond to those quoted in section 5.

7. If retribution is not permitted as if the person entitled to *ḳiṣāṣ* voluntarily remits his claim, compensation may nevertheless be demanded, for an unlawful slaying, the blood money (*diyat* [*q.v.*]) is to be paid to the avenger(s) of blood, in an unlawful but not mortal wounding, according to the particular case either the full *diya* or a definite part of it or a contribution defined by the law (*arsh*) or a percentage of the *diya* laid down by the judge (the so-called *ḥukūma*) to the injured person, all this, of course, on the supposition that *in maxam datore*; cf. e.g. Girard, *Nouvelle Revue Historique* (1887), 440 ff.).

8. Of the regulations of the Shī'a *fiḳh* books, which need not be gone into fully here as they are essentially the same as the Sunnī, we need only mention that among the Twelver Imāmīs, for example, it is taught that if a man has killed a woman, *ḳiṣāṣ* can be carried out if the *walī* of the woman pays the relatives of the man the difference between the bloodmoney on each side, an isolated interpretation explains Ḳur'ān, II, 173, in this way. Here we can scarcely have a late effect of the Ḳur'ānic rule regarding woman, as similar calculations are also made in other cases.

9. On the practical carrying out of *ḳiṣāṣ*, cf. ḲAṢṢ, ii, 10, to which we may note that breaches of his regulations are recorded *at* even the Prophet's companions.

ḲIṢAṢ AL-ANBIYĀ', the "legends of the pre-Islamic prophets", is the title of several works relating the lives of the prophets of the Old Testament, the story of Jesus, and some other events into which pious heroes or enemies of God are involved (on the etymology *cf. ḳiṣṣa* = "story", see ḲIṢṢA). Very famous and widely spread books on this subject were the *'Arā'is al-madjālis* by Abū Isḥāḳ Aḥmad of Tha'labī (d. 427/1035) and the different versions of the *Ḳiṣaṣ* written down in the name of a certain Muḥammad b. 'Abd Allāh al-Kisā'ī [*see* AL-KISĀ'Ī].

The origins of this type *of* literature must be traced back to pre-Islamic Arabia. Knowledge *of* the tales of the Old and New Testaments and the apocrypha must have been transmitted to the Arabs through the Jewish influence in Yaṯrib and through Christian missionary work, the effect of which can be ascertained not only in the regions close to the Byzantine and Sāsānid empires, but also *on* the shores *of* the Red Sea and in South Arabia (*see* Baumstark, in *Islamica*, iv (1931), 562 ff.; Altheim and Stahl, *Die Araber in der Alten Welt*, iv, 306 ff., v/1, 316 ff.). Umayya b. Abī 'l-Ṣalt [*q.v.*], a poet *of* al-Ṭā'if and contemporary *of* Muḥammad, seems to have made use *of* some of these oral traditions, there are pieces of poetry ascribed to him dealing with Abraham, Isaac, the Deluge, etc., though their authenticity remains doubtful.

It was the Prophet of Islam who gave to these legends an entirely new meaning, finding the events of his own life reflected in them, his vocation for prophecy, his being rejected by his own people, the impending punishment, which might have meant the destruction of his own people. All these psychological implications of the Ḳur'ānic legends, and their didactic aspects, were studied at length by Khalafallāh in his book on the Ḳur'ānic art *of* story-telling. From the Muslim point of view, the lives *of* the pre-Islamic prophets are awful examples (*ʿibar*) warning against the evil fate *of* those who are disobedient to God and His messengers. Thus the *Ḳiṣaṣ al-anbiyā'* became part *of* universal history, an history as general was often considered as a series of *ʿibar* (cf., Ṭabarī, *Taʾrīkh*, *prefatio* and pre Islamic period).

The edifying character of the legends became even more stressed when they were separated from historiography, this was, so far as we know, first done by Tha'labī. Moreover, Tha'labī's narrative is mainly based on the *tafsīr*-literature. It must be mentioned that even to modern times the legends retained their importance for studying sermons, as is proved by 'Abd al-Wahhāb an-Nadjdjār's compilation, which was published in Egypt in the thirties of this century. The wide-spread and various versions *of* the *Ḳiṣaṣ al-anbiyā'* which were written down to the name of al-Kisā'ī show another form of this type *of* literature, they are the result of the imaginative art *of* story-telling cultivated by the popular narrators (*ḳuṣṣāṣ* [*see* ḲAṢṢ]), and they are an abundant source for the study of the religious feeling and thinking of the average mediaeval Muslim.

The historical sources allude to the activities of *ḳuṣṣāṣ* since the first Islamic century, but the oldest manuscripts of the popular legends date from the 7th/13th century. In certain circumstances, the activities of *ḳuṣṣāṣ* and the legends of the prophets could acquire a political significance; thus the story about Moses and Pharaoh was used in the anti-Umayyad propaganda, and the early Shī'a held that the history of the Muslim community was similar to that of the Israelites during Moses' lifetime, the Shī'a being the equivalents of those few who did not apostatise from the true faith when Moses was up on Mount Sinai.

KISH, Hisman, the later Shahr-i Sabz, a town of mediaeval Transoxania, now in the Uzbekistan SSR and known simply as Shahr, but in early times in the region of Soghdia (Ar. Sughd [*q.v.*]). It lay on the upper reaches of the landlocked Khashka Daryā in an area where several streams came down from the Sayām and Buttamān Mountains to the east, forming a highly fertile valley, intersected with irrigation canals. The town lay on the Samarkand-Tirmidh high road, two days' journey from Samarkand, after passing through Kish, this road continued for four more days' journey to the famous Iron Gate, the Bozgala defile (see DARBAND-I AHANIN) which guarded the approaches to the Oxus. Further down the Khashka Daryā lay Nakhshab or Nasaf or Karshi (see KARSHI), a town with which the fortunes of Kish were often linked.

Kish was clearly an important town in pre-Islamic Soghdia, and had its own prince. According to Ya'ḳūbī, *Buldān*, 299, tr. Wiet, 222, at the time of the Arab conquests in the early and/8th century, Kish was the chief town of Soghdia and was accordingly, by the common process of applying the name of a district to its main urban centre, actually known as Sughd also. It appears in several Chinese sources, e.g. in the travel account of the early 7th century Buddhist pilgrim Hiuen Tsang as Kie shang-na; cf. E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1888, i, 82, and Marquart, *Ērānšahr*, 55, 303-4, giving various Chinese renderings of the town's name.

When the Western Turks were defeated in Central Asia by the Chinese invasion of 645-8, the Chinese forces are said to have penetrated as far as Kish and the Iron Gate, after which the whole of Transoxania was nominally annexed to the empire and placed under the viceroyalty of Fīrūz, son of the last Sāsānid Yazdgird III. The raid across the Oxus of the Arab general Sa'd b. 'Uthmān in 56/676, when according to Ṭabarī, ii, 179, the Arabs defeated the Soghdians and captured their city, may well have reached to Kish rather than to Samarkand (see H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 19-20, 22). When Ḳutayba b. Muslim [*q.v.*] became governor of the East, al-Ḥadjdjādj ordered him to "crush Kish, destroy Nasaf and drive back [the local Soghdian ruler] Wardān" (Ṭabarī, ii, 1199). But he was unable to in 88/707 to make headway against the Soghdian defending forces and had to fall back on Marw. It was not until 91/710 that he returned to subdue a revolt by the local ruler of Shumān in upper Caghāniyān [*q.v.*], and then marched through the Iron Gate and seduced Kish and Nasaf. The Arabs seem thereafter to have held on to Kish during the period of the Turkish revanche in Central Asia, but the town did rebel in 133/750-1, at the time of the final appearance of a Turkish army west of the Altai, in the expectation of Chinese aid. However, Abū Muslim's general Abū Dāwūd Khālid b. Ibrāhīm killed the local prince or Ikhshīd (*al-Ikhshīd* in the text of Ṭabarī, iii, 79-80) of Kish at Kandak just north of the Iron Gate, looted his treasures (which included many luxury goods from China) and appointed his brother Tārūn in his place (Barthold, *Turkestan*, 196; Gibb, *op. cit.*, 38, 96).

Two or three decades later, in the caliphate of al-Mahdī (158-69/775-85), the Kish district figured prominently in the anti-Muslim religious movement of Mukanna', known as al-Muḳanna', "the Veiled Prophet of Khurāsān". The revolt began in the Sayām Mountains just to the east of Kish, and it was in the Kish and Nasaf district that al-Muḳanna' drew strong support. Narshakhī states that the first village to join the rebel leader was Sūbakh in the Kish district (cf. Sam'ānī, *Ansāb*, facs. ed. Margoliouth, f. 316b) under a local leader 'Umar Sūbakhī, who hailed the Arab *amīr* there. Kish welcomed al-Muḳanna' and supplied him with much wealth, and it was in a nearby fortress that al-Muḳanna' finally shut himself up against the Arab general Sa'īd b. 'Amr al-Ḥarashī, dying there in 163/779-80. Even two centuries later, the common people of the Kish and Nasaf districts were still accounted Mubayyida "wearers of white" and awaiters of the messianic return of al-Muḳanna' (Narshakhī, *Ta'rīkh-i Bukhārā*, ed. Mudarris Riḍawī, Tehran n.d. 1939, 77-89, tr. R. N. Frye, *The history of Bukhara*, Cambridge Mass. 1954, 65-75; Ya'ḳūbī, *Buldān*, 304, tr. 238; Barthold, *Turkestan*, 299-300; E. G. Browne, *Lit. hist. of Persia*, i, 318-23; Gh. H. Sadighi, *Les mouvements religieux iraniens au II^e et au III^e siècles de l'hégire*, Paris 1938, 163-86).

The geographers of the later 3rd/9th and the 4th/10th centuries give good descriptions of Kish. The town, whose buildings were of clay and wood, had the typically eastern Islamic tripartite division of a citadel (*kuhandiz*), an inner city (*madīna dākhila*), in which lay the prison and Friday mosque; and an outer city or suburb (*rabaḍ*) called al-Muṣalla, where was situated the *Dār al-Imāra* or government headquarters. In Ibn Ḥawḳal's time (mid-4th/10th century) the citadel and inner city were both ruinous. The *madīna* had four gates, and the *rabaḍ* two. The whole administrative region or *'amal* of Kish contained 16 rural districts or *rustāḳs*, stretching up river to the mountains. It was watered by two constituent streams of the Khashka Daryā, sc. the River of the Fullers or the Butchers (Ḳaṣṣārīn or Ḳaṣṣābīn, on this ambiguity, present in both the Arabic and the Persian sources, see *Turkestan* 534, n. 2) and the Asrūshb, and was highly productive, its early fruits and vegetables being exported to Khurāsān. Also stemming from the region were manna, therapeutic substances found in the mountains, red salt (the red rock salt of the Oxus lands was known since the time of Pliny, see Marquart, *Wehrot und Arang*, Leiden 1938, 76-7), and mules and other livestock. Mukaddasī nevertheless comments on the unhealthiness of the place, a judgement endorsed by later travellers. The salaries (*ṣilāt-i'iyya*) of the *Ṣāḥib-Barīd*, the Ḳāḍī and other officials of the Sāmānid administration there amounted to 300 *dirhems* each per annum. The ruinous state of the inner parts of the town show that under the Sāmānids, Kish had declined in status and given place to Bukhārā and Samarkand, so that only the *rabaḍ* was occupied and a new town was being built on to it (see ISTAKHRĪ, 324; Ibn Ḥawḳal, ii, 470, tr. ii, 452-3; Mukaddasī, 282; *Ḥudūd al-'Ālam*, tr. 113, § 25.25; *Turkestan*,

134-6; Le Strange, *The lands of the Eastern Caliphate*, 469-70)

In the period of the Karakhānids and Saldjūḳs, little specific is heard about Kish, which seems to have continued its decline into secondary status. In spring 1222 the Taoist holy man and traveller Ch'ang-ch'un passed through what he calls Kie-shi on his way from Samarkand to Čingiz Khān's encampment south of the Oxus; and in autumn 1235 Hülegü sent Arghun, governor of Khurāsān, and certain Persian magnates, and spent a pleasant month at Kish (Djuwaynī Boyle, ii, 521; Bretschneider, *op. cit.*, ii, 125, 147; Barthold, *Turkestan*, 452, 483).

Kish revived, however, under the Čaghatayids and Timūrids, and Tīmūr himself was born in the Kish district in 736/1336 (according to Ibn 'Arabshāh, at a village called Khōdja-Ilghār). Since the mid-7th/13th century, the region had apparently been occupied by the Barlās tribe of subsequently Turkicised Mongols, from whom Tīmūr sprang and from whom he derived much support in his struggles to achieve power in Transoxania (cf. Barthold, *Ulugh Beg*, to *Four studies on the history of Central Asia*, ii, Leiden 1958, 14-16). He seized control of Kish from the chief Ḥādjdjī Barlās in 761/1360, and used it and the Barlās tribesman for further expansion. Tīmūr's fondness for the Kish district perhaps depended less on a sentimental feeling for his birthplace than on his need to draw on the support of the Barlās there, after Tīmūr's death, towns were a numerous element in Ulugh Beg's army during his campaign into Moghulistān of 844/1425. In 781/1380 Tīmūr made Kish his summer residence and the second capital of his empire after Samarkand. He rebuilt the town, constructing a *madrasa* and a mausoleum for his dead first-born son Djahāngīr, and above all, a splendid white-walled palace, the Aḳ Sarāy. This new importance of Kish doubtless accounts for the detailed description of K'o-shi in the Chinese Ming annals, which expatiate on its fine palaces and mosques, and the Spanish traveller Clavijo, who passed through Kish in 1404, mentions the still-unfinished mosque of Tīmūr there (Sharaf al-Dīn Yazdī, *Ẓafar-nāma*, Calcutta 1887-8, i, 4, ii, 28. 28; Bretschneider, *op. cit.*, ii, 273 4, *Bābur-nāma*, tr. Beveridge, 83-4)

It is in the post-Mongol period that the old name Kish was gradually supplanted by that of Shahr-i Sabz "the green city". The 8th/14th century was the transition period, the Čaghatayid usurper Būyān Ḳulī Khān struck *dīnārs* at Shahr-i Sabz in 752/1351, whereas other coins of his bear Kish as the mint named on them. But the old name still persisted to literary usage for some time, since Bābur uses Kish as the primary name for the town (*Bābur-nāma*, loc. *cit* and *passim*). The new name must derive from the greenness of the whole oasis, as Yazdī states, and was applied by the local people to the whole area, as well as to the town; local legend also gives other, fanciful explanations for the name. The identification of the recent Shahr i Sabz with the older Kish seems fairly conclusive.

In the time of the florescence of the Özbeg Khāns, the towns of Shahr-i Sabz and Kitāb just to its north were often semi-independent under a beg of their own. It was therefore the constant ambition of the Khāns of Bukhārā in the 18th and 19th centuries to bring Shahr i Sabz under their own control, although the desert to the west and the mountains to the north acted as effective barriers against attacks from the directions of Bukhārā and Samarkand respectively. In the 19th century, the Mangit Khāns Haydar Tūra, his son Naṣr Allāh and the latter's son Muẓaffar al-Dīn all repeatedly tried to reduce Shahr i Sabz, and in 1856 temporarily captured it. It only lost its virtual independence in 1870, when the Imperial Russian General Abramov was sent by Kaufmann against it. He besieged Shahr i Sabz, and captured it after fierce resistance. The Beg fled to Khokand, and the Russians handed over Shahr-i Sabz to the Khān of Bukhārā. See E. Schuyler, *Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara and Kuldja*, London 1876, i, 243 ff., ii, 60-76 (who estimated the population of Shahr-i Sabz at approximately 20,000 and that of Kitāb at 15 000), and F. H Skrine and E. D. Ross, *The heart of Asia, a history of Russian Turkestan and the Central Asian khanates from the earliest times*, London 1899, 214-15, 219-20, 256

In the 20th century, Imperial Russian and then Soviet scholars have shown considerable interest in the place and its antiquities, and a full-scale archaeological and architectural survey was commissioned in 1942, special attention has been directed to the imposing ruins of Tīmūr's Aḳ Sarāy, to a mosque built by Ulugh Beg and to the two buildings known as the Dār al-Siyāda and the Dār al-Tilāwa. For a detailed account of these and the other surviving monuments, see M. E. Masson and G. A. Pugachenkova, *Shakhri Syabz pri Timure i Ulug Bege*, in *Trudi Sredneaziatskogo Gosudarstvennogo Universiteta*, xlix (Tashkent 1953), 17-96, Eng tr J. R. Rogers, in *Iran, Jnal of the British Inst. of Persian Studies*, xvi (1978), xvii (1980), and also *BSE*[3], xlvii, 557-8.

KĪSHLAḲ (T, < *kīsh* "*winter*"), winter quarters, originally applied to the winter quarters, often in warmer, low lying areas, of pastoral nomads in Inner Asia, and thence to those in regions like Persia and Anatolia into which Türkmens and others from Central Asia infiltrated, bringing with them their nomadic ways of life; Kāshgharī, *Dīwān lughāt al-turk*, tr. Atalay, i, 464 5, defines *kīshlāk* as *al mushattā* Its antonym is *yaylaḳ* 'summer quarters" (< *yay* "spring', later "summer") denoting the upland pastures favoured by nomads for fattening their herds after the harsh steppe or plateau winters (cf. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, ii, 857-8, Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 670, 672-3, 980-1).

The basic terms *kīsh* and *kīshla-* "to spend the winter" are ancient Turkish ones, appearing in the Orkhon inscriptions In the Čaghatay Turkish of Central Asia, the sense of *kīshlāk* evolved from that of "the Khān's residence, winter quarters of the tribe" into the additional one of "village". Within the Iranian world, the word spread into such tongues as Kurdish, Pashto and the Pamirs languages; through Ottoman Turkish, it spread into Balkan languages, but here with the derived Ottoman sense of 'barracks" and the form *kışla* (G. Doerfer, *Türkische und Mongolische Elemente im Neupersische*, iii *Türkische Elemente bei Neupersische*, Wiesbaden, 1967, 479-82, No. 1496). This meaning has in fact passed into the Arabic colloquials of Syria and Egypt, as has also that of "hospital, infirmary", so that in Egyptian Arabic we have both *kushlāk* "barracks" and *kashla* "hospital" (S. Spiro, *An Arabic-English vocabulary of the colloquial Arabic of Egypt*, 488, cf. Dozy, *Supplément*, ii, 552).

In Arabic, we find such terms for "winter and summer quarters" as *mashtā* and *maṣīf*, e.g. in the 4th/10th century geographers (the original sense of

the name for the Umayyad palace to Jordan, Mshatta (q.v.), is presumably that of "winter residence", *mughattā*).

In Persian, approximate synonyms to *sīrsīr* and *yayla* are *sardsīr* (lit. "cold region") and *garmsīr* ("hot region"). But as well as denoting the seasonal pasture grounds of nomads, these Persian words were early used as geographical terms to denote, on the one hand, cooler, temperate highland regions, and on the other hand, hot, desert type or sub-tropical lowland climates. Already by the time of the classical Arabic geographers, these topographical terms had been borrowed into Arabic, e.g. by Ibn Hawkal and Mukaddasī. Thus the geographers use *garmsīr* or its erubised form *ǧarm*, pl. *ǧurūm*, for the hot, coastal region of the Persian Gulf shores and the regions bordering on the great central desert, and *sardsīr*, arabised form *sard*, pls. *surūd* and *masārid*, for the mountainous Zagros hinterland of Fārs and Kirmān (cf. Le Strange, *The lands of the Eastern Caliphate*, 249). This distinction is carried further into the realm of their characteristic products, called by e.g. Muḳaddasī *al-aṣḥ'a' al-mutaḍādda* "products of the two opposing regions" (cf. A. Miquel, *Ahsan at taqasim ... traduction partielle*, Damascus 1963, Glossary 390, 404 s.), and of local populations (cf. the Ǧurūmiyya, inhabitants of the part of Kirmān bordering on the Straits of Hormuz, attacked by ʿAḍud al-Dawla's forces in 360/970, Miskawayh, in *Eclipse of the ʿAbbasid caliphate*, ii, 299, 359, tr. v, 321, 398).

Kishlāḳ (Dialect-yi Kishm, or in Arabic, Ǧazīra al-Ṭawīla, "the long island") is the largest island in the Persian Gulf. It lies off the southern (Lāristān) coast of Persia between Linga and Bandar ʿAbbās (q.v.), and is separated from the mainland by Clarence Strait, the width of which varies from three to twelve miles. The island measures nearly 70 miles in length, from north-east to south-west, and an average of seven miles in breadth (20 miles at its widest point). Its general formation is that of an eroded, sloping plateau, inclining northwards from a sharp, rocky scarp on the seaward side. The highest point, almost in the centre of the island, is 1,300 feet.

Kishm now is virtually a desert, though it once produced grain, vines, fruit and vegetables in quantity. Salt is still mined from the great salt caverns, and there are workable deposits of sulphur and ferrous oxide, along with some naphtha springs on the south coast, near Salīḫ. The population, some few thousand souls, mostly Arab and Sunnī, lives by fishing, limited cultivation and salt mining. Kishm town, at the north-western tip, is the only populated centre of any size.

The fleet of Alexander the Great, under the command of Nearchus, anchored at Kishm on its voyage from the Indus to the Euphrates in 326 B.C. The sporadic references to Kishm that appear in the next dozen centuries or so tell us nothing of its history. By the middle ages it was a dependency of the kingdom of Hurmuz (q.v.), and it remained so until Hurmuz fell to Portuguese in 922/1515. When the Portuguese were driven from Hurmuz by Shāh ʿAbbās I, with the assistance of ships of the English East India Company, in 1032/1622, Kishm was incorporated in the Ṣafawid empire. It was occupied in 1133/1719-20 by Masḳaṭ Arabs who were to turn expelled by Nādir Shāh in 1150/1737-8. Sometime after his death in 1160/1747, Kishm fell under the control of the Banī Maʿīn (or Muʿayn) Arabs, who held it, along with Bandar ʿAbbās, in farm from Karīm Khān Zand (regn. 1163-93/1750-79). They retained possession of the island, despite attempts by the Kawāsim (q.v.) of Raʾs al-Khayma and Linga to dislodge them, until 1208/1793-4 when Kishm, together with Bandar ʿAbbās and Hurmuz, was conquered by the Āl Bū Saʿīd ruler of Masḳaṭ, Sulṭān b. Aḥmad. He was afterwards confirmed in possession of Bandar ʿAbbās by a *firmān* from the Ḳāǧār court, granting him the lease of the town and its dependencies in return for an annual rental.

In 1219/1804-5 the Masḳaṭ garrison was evicted from Kishm by the Banī Maʿīn and the Kawāsim in combination. Subsequently, the Banī Maʿīn joined the Kawāsim in piratical attacks upon British Indian shipping, and in reprisal their stronghold at Lāft, on the southern coast of Kishm, was attacked and destroyed in Shawwāl 1224/November 1809 by the British expeditionary force sent from India to subdue Raʾs al-Khaymā and the other Kāsimī ports. After the reduction of Lāft, Kishm island was returned to the authority of the ruler of Masḳaṭ, now Saʿīd b. Sulṭān (1220-73/1806-56).

Two years later, after the second expedition to the Pirate Coast, a British military detachment was stationed on Kishm, from Shawwāl 1225/July 1810 to Rabīʿ II 1238/January 1823, to keep watch on the Kawāsim. The Persian government objected to its presence on the grounds that Kishm was Persian territory. Saʿīd b. Sulṭān, however, maintained that his father, Sulṭān b. Aḥmad, had acquired title to Kishm by right of conquest, and that the island had passed to him in full sovereignty. It was not listed among the dependencies of Bandar ʿAbbās in the original *firmān* granting the lease of the town to Masḳaṭ, nor was it mentioned to any of the annual receipts for the rental of Bandar ʿAbbās. When the British detachment was withdrawn from Kishm—because of the island's unhealthiness and the danger of the detachment's becoming involved to military operations on the Arabian mainland—the sovereignty issue was left unresolved. In Rabīʿ II 1239/December 1823 a stores depot for the Gulf squadron of the Bombay Marine was established at Basīdū, at the western end of Kishm, without protest from the Persian government.

The Masḳaṭ lease of Bandar ʿAbbās and its dependencies was renewed in Shaʿbān 1272/April 1856, shortly before Saʿīd b. Sulṭān's death. Kishm and Hurmuz were declared to be Persian islands, and were classed as "dependencies" of Bandar ʿAbbās. The lease, which was restricted to Saʿīd and his sons, was terminated in 1283/1866-7 after Saʿīd's successor, Thuwaynī b. Saʿīd, had been murdered by his son, Sālim. A new lease of eight years' duration was awarded to Sālim in Ǧumādā I, 1285/August 1868, only to be rescinded two months later when Sālim was overthrown. Despite attempts by Turkī b. Saʿīd after his accession in 1288/1871-2 to renew the lease, it was never granted again.

The British stores and coaling depot at Basīdū fell into gradual disuse, and it was finally abandoned in Muḥarram 1334/April 1935 to humour the wishes of Riḍā Shāh.

KISHN, a small town on the south coast of Arabia, some 40 miles west of Ras Fartak. Formerly it was the mainland capital of the Mahri sultanate of Kishn and Sukūtra (Socotra), which up to 1387/1967-8 formed part of the Eastern Aden Protectorate. After that date it was designated the sixth governorate of the People's Democratic Republic of Yemen.

The inhabitants of Kishn live mainly by fishing, pastoralism and trading, the principal exports being frankincense, dried fish and salt. The ruling family, now dispossessed, was the Bin ʿAfrār clan of the Mahra. The reigning sultan, from the senior branch of the family, traditionally resided on Sukūtra, while the head of the cadet branch acted as his deputy at Kishn.

Kishn was several times raided by the Portuguese during their operations off the Hadramī and Mahri coasts between *ca.* 929/1522-3 and *ca.* 956/1550-1. The period of Portuguese activity coincided with a successful war of conquest by the Kathīri sultans of Shihr against the Mahra, which culminated in the capture of Kishn in 952/1545-6. The Bin ʿAfrār appealed for help to the Portuguese, who responded by expelling the Kathīr from Kishn, reputedly in Safar 955/April 1548.

A revival of Ottoman interest in South Arabia after 1287/1870 led the British authorities at Aden to secure an undertaking from the sultan of Sukūtra and Kishn in Dhu 'l-Ḥijjā 1292/January 1876 not to alienate Sukūtra or its island dependencies to any foreign power. A treaty of protection followed in Rajab 1303/April 1886, which was extended in Shaʿbān 1305/May 1888 to include Kishn and the mainland dependencies. The treaties lapsed when British rule over Aden colony and protectorates ended in 1387/1967.

(J. R. KELLY)

KISMA (A.), KISMET (T.), a term used for "fate, destiny". In Arabic, *ḳisma* means literally "sharing out, distribution, allotment", and one of its usages is as the arithmetical term for "division of a number". It later came to mean 'portion, lot', and was then particularised to denote "the portion of fate, good or bad, specifically allotted to and destined for each man". It is in this final sense, and especially via Turkish, that *kismet* has become familiar in the West as a term for the fatalism popularly attributed to the oriental (the first attestation in English being, according to the Oxford English Dictionary, in 1849, see also K. Lokotsch, *Etymologisches Wörterbuch der Europäischen . . . Wörter orientalischen Ursprungs*, Heidelberg 1927, 95, No. 1187).

As noted by H. Ringgren, the noun *ḳisma* does not occur in the Kurʾān in this sense (*Studies in Arabian fatalism*, Uppsala-Wiesbaden 1955, 106), but only in its basic sense of "division, apportionment" (IV, 9/8, LIII, 22, LIV, 28). In a verse like XVII, 14/13, the word *ṭāʾir*, originally 'bird of ill omen', seems to convey the idea of a man's personal destiny as decreed by God (elsewhere in the Kurʾān, this word means rather "evil augury"), cf. Ringgren, *op. cit.*, 87 f., and T. Fahd, *La divination arabe*, Leiden 1966, 218, 436-6, 518). Concerning the more usual terms of early Islamic theology and philosophy for "determinism, predestination" see QAḌāʾ and AL-QAḌāʾ WA 'L-QADAR; however, it should be noted that *ḳisma* makes an appearance in Arabic poetry of the 1st century A.H (ʿUmar b. Abī Rabīʿa, Djamīl) in the sense of "the share of human life allotted to a man by God" (Ringgren, *op. cit.*, 151, 156).

By Ottoman Turkish times, *ḳismet* was less a theological and philosophical term than one denoting a general attitude of fatalism: the resigned acceptance of the blows and buffetings of destiny (the same concept being often expressed in Persian and Turkish poetry by words like *falak*, *gardūn* and *ḫarḫ* in reference to the blind, irrational influences of the heavenly bodies of mankind). The climate of popular belief in fate and chance is well seen in many stories of the *Thousand and one nights* (see ALF LAYLA WA-LAYLA) and in much of the Perso-Turkish moralistic literature; thus these attitudes loom large in the stories in chs. v and vi of Saʿdī's *Bustān*, on *riḍā* "acceptance" and *ḳanāʿat* "contentment" respectively.

Also in Ottoman usage, *ḳismet* was a technical term of the *ḫarāmilik*, the official department of state responsible for the division of estates between the various heirs, the military branch of this being the *ḳismet-i ʿaskeriyye maḥkamesi*. For this service, a fee called the *resm-i ḳismet* was exacted, for further details see KASĀM.

KISRĀ, Arabic form of the Persian name Khusraw, derived from Syriac *Kasrō* or *Kasrē* by the 6th century A.D. The consonant and vowel changes occurred because ◌ was used for both *ḳ* and *ḫ* in Syriac, and used here for the Persian *ḫ*, became *k* in Arabic. The first *u* became *i* by vowel dissimilation in Syriac, and the final vowel became an *alif maḳṣūra* by approximation to the *fiʿl* form. Arabic lexicographers said there was no Arabic word ending in *-aw* with *ḍamma* after the first consonant, so Khosraw was put in the *fiʿl* form and the *kh* became *k* to show that it was Arabicised.

Although Khusraw occurs in Arabic, Kisrā was usually employed for proper names, especially for the Sāsānid rulers Kisrā Anūshirwān (531-79 A.D.) and Kisrā Aparwīz (591-628 A.D.). Because these two Kisrās dominated the late Sāsānid period and Arab memories of it, their name was identified with the dynasty. Arabs came to regard Kisrā as the name (*ism*), surname or title (*laḳab*) of Persian kings, the Sāsānid dynasty as the house of Kisrā (*āl Kisrā*), and crown lands in ʿIrāḳ as *arḍ Kisrā*. Women of the royal family were called "daughters of Kisrā". By the 2nd/8th century, the tendency to call all Sāsānid rulers Kisrā produced the broken plurals *akāsira* (the one most commonly used), *kasāsira*, *akāsir*, and *kusār*, all contrary to analogy

Kisrā personified Sāsānid royalty for the Arabs, who viewed him with an ambivalent combination of envy, awe and fear. They called Ctesiphon *Madā'in Kisrā*, the great audience hall there the *Īwān Kisrā*, the defensive ditch the *Khandak Kisrā*, spoke of the crown, treasure, dazzling carpet, sword and armour of Kisrā, and associated polished manners, lavish hospitality, *haute cuisine*, golden tablewares and the arbitrary exercise of power, with his court. Kisrā provided a symbol for Arab assimilation to Persian high culture, for feelings of common nobility, and represented the Persian monarch in lists of kings of the world and in the murals at Kuṣayr ʿAmra. He was a poetic symbol of past glory and of fate that overtakes even mighty kings.

Kisrā's worldliness contrasted with Muslim spiritual values. *Ḥadīth* emphasised Muḥammad's lack of pretence, his avoidance of royal trappings, and his followers' greater respect for him compared to Kisrā and other rulers. Kisrā tore up Muḥammad's letter inviting him to Islam, and *ḥadīth* promised the destruction of Kisrā and Kayṣar and that Muslims would spend their treasures. In the simile ascribed to Hurmuzān, Kisrā is the main enemy of Islam (the head of the hostile bird).

A fictionalised Kisrā emerged by the 3rd/9th century as a vehicle for edifying tales, a person who conversed with a Bedouin on the virtues of manners or exchanged the lethal gift of a leopard for an eagle with Kayṣar. He was quoted as a source of proverbs and someone who knew these stories might be nicknamed "Kisrā".

Relative nouns *kisrawī*, *kisrī*, and *kisrawānī* were formed from Kisrā. The form *khusraw(ān)ī*, directly from Persian, referred to the greatest of the *ashāra* and meant a kind of drink or a very fine, royal silk used for clothing and used to cover the Kaʿba in the late 12th/7th century.

al-Kisrawī, Abu ʾl-Ḥasan ʿAlī b. Mahdī al-Iṣfahānī al-Ṭabarī, *rāwī* of the 3rd/9th century who was also a poet and man of letters. He was the teacher of Hārūn, the son of ʿAlī b. ʿAlī b. Yaḥyā al-Munadjdjim, and transmitted historical and literary traditions, and especially on the authority of al-Djāḥiẓ. He was in contact with Badr al-Muʿtaḍidī (*q.v.* in Suppl.) and exchanged verses with Ibn al-Muʿtazz. His knowledge of *adab* led him to compose several works, amongst which are cited a *Kitāb al-Khayl*, a collection of literary traditions, maxims, proverbs and poetry, a *K. al-Aʿyād wa ʾl-nawāʾir* and a *K. Murūnāt al-ikhwān wa-mukhāwarāt al-khillān*. His poetry consists mainly of occasional verses which were improvised. He died at some point between 283/896 and 289/902, although Ḥādjdjī Khalīfa, ed. Istanbul, i, 703, places his death in ca. 330/941-2.

Kiṣṣa (a.), pl. *aḳṣāṣ*, the term which, after a long evolution, is now generally employed in Arabic for the novel, whilst its diminutive *uḳayṣa*, pl. *uḳayṣāt*, has sometimes been adopted, notably by Maḥmūd Taymūr (*q.v.*) as the equivalent of "novella, short story", before being ineptly replaced by a calque from the English "short story". *Kiṣṣa khaṣīra*. The sections of the following article are largely devoted to these literary genres as they are cultivated in the various Islamic literatures, even if the word *kiṣṣa* is not itself used by them. Although some Berber tongues use the Arabic term (*iḳṣṣi*), it has not seemed necessary to add a section on the story in that language (see amazigh), but a brief section is devoted to the *kiṣṣa* in Judaeo-Arabic and Judaeo-Berber.

The ensuing article is accordingly divided as follows:

1. The semantic range of *kiṣṣa* in Arabic.
2. The novel and short story in modern Arabic literature.
3. (a) The *kiṣṣa* in older Turkish literature.
   (b) The novel and short story in modern Turkish literature.
4. The genre in Persian literature.
5. The genre in Urdu.
6. The genre in Malaysia and Indonesia.
7. The *kiṣṣa* and its modern developments in Swahili.
8. The *kiṣṣa* in Judaeo-Arabic and Judaeo-Berber.

1. The semantic range of *kiṣṣa* in Arabic.

Judging by the contents of the articles in the Arabic dictionaries devoted to the root *k-ṣ-ṣ*, one may consider this as the result of a convergence of several different "roots". Among the various meanings shown here, two of them seem to be totally distinct from each other: "to chip the hair, wings, etc." (cf. Hebr. קצץ and words made up of "קצ") and "to follow the tracks of a man or animal"

Taking into account the realities of Bedouin life, this last sense, to which *kiṣṣa* can easily be connected, is certainly old, if not the primitive signification. It is from the verb *kaṣṣa* taken in this sense that the name of the *kiṣṣ*, pl. *kuṣṣāṣ* "a kind of detective responsible for examining and interpreting tracks and marks on the ground" (al-Masʿūdī, *Murūdj*, iii, 343 = § 1227, cf. al-ʿUmarī, *Kamūs al-ʿādāt* . ., ʿAmmān 1973-4, iii, 85, who points out the use in Jordan of *kaṣaṣ* with the generally-developed sense of *kaʾnf al-athar* [see ATHAR]) has evolved. Moreover, the Kurʾān provides two attestations of this old meaning of the root *k ṣ ṣ*. Moses' mother says to his sister *kuṣṣīhi* "follow his tracks" (XXVIII, 10/11), and in XVIII, 63/64, it is said that Moses and his page boy "followed their tracks back again, retracing them" (*fa-rtaddā ʿalā āthārihimā kaṣaṣā*). Nevertheless, the verb *kaṣṣa* is most frequently found in the Kurʾān with the derived sense of "to tell a story, narrate", or more exactly, "to give a circumstantial account of some happening, to recount an event by giving all the details successively"; this nuance is usually lost in translation, though it may sometimes be conveyed through an adverb like "exactly". One may note, with repetitions within the same verse, 29 occurrences of this verb: the account is given by God to the Prophet (IV, 162/164, VI, 57, VII, 6/7, 99/101, XI, 102/100, 121/120, XII, 3, XVI, 119/116, XVIII, 12/13, XX, 99, XL, 78), by the Kurʾān (XXVII, 78/76) and by Moses to Shuʿayb (XXVIII, 25). Jacob tells Joseph not to recount his dream to his brothers (XII, 5), divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35), and God instructs the Prophet to recount "the affair" (VII, 175/176).

In this last verse, the word *kaṣaṣ*, which but the general sense of "narrative, explanation, report, story" to its five other attestations (III, 55/62, XII, 3, 111, XXVIII title and v 25), has been translated by "affair". Doubtless one should not neglect the nuance of precision and exactness contained in *kaṣaṣ*, but it is perfectly certain that the term's sense tends to become attenuated in order to assimilate it to that of *ḥadīth*. It could be perfectly easily substituted for the latter word in at least five occurrences out of 23 (XX, 8/9, LI, 24, LXXIX, 23, LXXXV, 17, LXXXVIII, 1), and furthermore, the verb *ḥaddatha* is clearly equivalent to *kaṣṣa* in three verses (II, 71/76, XCIII, 11, XCIX, 4). Also close to *kaṣaṣ* are *khabar* (XXVII, 7, XXVIII, 29) and especially the pl. *akhbār* (IX, 65/94, XLVII, 33/31, XCIX, 4), and also *naba'*, with 12 attestations out of the 27 in the singular (V, 30/27, VI, 34, VII, 174/175, IX, 71/70, X, 72/71, XIV, 9, XVIII, 11/12, XXVI, 69, XXVIII, 6/3, XXXVIII, 21/20 and LXIV, 5) and 7 out of the 11 in the plural (III, 39/44, 52, 122/120, VII, 99, XII, 103/102, XXVIII, 66 and LIV, 4) corresponding fairly exactly in *kaṣaṣ* in the sense of "narrative, story, tale". Thus four terms of very different origins converge here in the Kurʾān and tend to assume a common signification, whilst losing at the same time the nuances implied in their original etymologies [see HEAVA].

Kiṣṣa itself does not appear in the Holy Book, but one can point to some examples in the *ḥadīth* with a general meaning of "thing, affair" (= *amr, shaʾn*), close to one of the meanings of *kaṣaṣ*, but this term seems however to have kept well its original nuance of meaning in the traditionists' vocabulary, to judge by the expression *ʿālim al-ḥadīth bi-kiṣṣatihi* "he cited the *ḥadīth* in all its details, giving it word-for-word" (Muslim, Ṣaḥīḥ, *Salām*, *bāb al-siḥr*, trad. No. 44). The word also very rapidly became a technical term of Arabic grammar. Sībawayh certainly uses the verb *kaṣṣa* in the sense of "to narrate" (i, 60) and the noun *kiṣṣa* in those of "narrative" (= *ḥadīth*, i, 60) and "affair" (i, 415, 426, 432), but above all he applies it (5a instances) to the idea of "state" (= *ḥāl*, see G. Troupeau, *Lexique-index du Kitāb de Sībawayhi*, Paris 1976, 172), consequently the expressions *ḏamīr al shaʾn* and *ḏamīr al kiṣṣa* are absolutely synonymous (W. Wright, *A grammar of the Arabic language*, index).

At the moment when Sībawayh wrote his work, the verb *kaṣṣa* meant, from the time of the Prophet onwards, "to practise as a popular preacher of sermons and edifying tales" (see 6.555), this profession being called *kaṣṣ* or *kaṣaṣ* (see Wensinck, *Concordance*, v, 391-2, 394, 565). The more serious among the *kuṣṣāṣ* made a speciality of giving a commentary to their audience on the miraculous events referred to in the Kurʾān and of recounting, in particular, in reference to the lives of the prophets, edifying stories. The *kaṣaṣ* of the Kurʾānic text was then specialised in meaning, as we have just seen, and replaced, in order to designate the material in the répertoire of the popular religious story-tellers, by *kiṣṣa*, pl. *kiṣaṣ*, without the term having, at least at the outset, the least element of the pejorative in its sense. However, in the 3rd/9th century, al-Djāḥiẓ, following other authors, reserves for *kiṣaṣ* the sense of "religious tale", but sometimes adds, with his usual irony, some fairly precise nuances of "story full of marvels and somewhat unbelievable", of "myth" and of "traditional explanation of a supernatural happening" (see *Tarbīʿ*, index).

At this period, the *kuṣṣāṣ* were already mingling with their discourses stories totally lacking in edification, but it seems that *kiṣṣa* did not yet mean a secular tale, and even in the next century, Ibn al-Nadīm does not use the word in the chapter devoted to stories in the *Fihrist*. Moreover, a few decades later, *kiṣṣa* appears with the religious sense which it had when used by the first *kuṣṣāṣ*, in the title of al-Thaʿālibī's [q.v.] popular work, the *ʿArāʾis al-madjālis fī kiṣaṣ al-anbiyāʾ*; the expression *kiṣaṣ al-anbiyāʾ* [q.v.] was to become the title of quite a considerable number of works. Despite the precise meaning implied by this latter expression, the lexicographers, who devote quite a lot of space to the root *k - ṣ -*, hardly give the precise sense of *kiṣṣa* at all. The *LA* limits itself to asserting that the term is well-known, and then glosses it by *khabar, ḥadīth* and *amr*, though it does however give a pejorative nuance for *kaṣṣ*, in fact equivalent to "words, chatter", opposed to *ʿamal* "action". In the *Miṣbāḥ*, *kiṣṣa* is defined only by *shaʾn* and *amr*; and in the *Ṣaḥāḥ*, *amr* and *ḥadīth* are further used to gloss this term, whose plural *kiṣaṣ* would therefore only be used for the *kiṣṣa* when it was written (likewise, also, in the *LA* and *Kāmūs*). Assuming that we are probably not concerned here with the *kiṣaṣ al-anbiyāʾ*, this rather enigmatic explanation is probably to be used with a technical sense different from that signalled in grammatical terminology, starting from the meaning of "affair", easily attested and found from Kurʾānic times onwards, *kiṣṣa* very soon came in fact to mean "a written exposition of an affair or matter, a mémoire presented to a judge, a request placed before a ruler, a petition". Quatremère, in his *Sultans mamlouks*, i, 236 n. 111, gives a certain number of examples of this meaning and mentions the existence of an official, the *kiṣṣa-dār*, who was

concerned with such requests (see also Gaudefroy-Demombynes, *La Syrie*, p. XLIV; Douy does not appear to have interpreted the material in the dictionaries relative to the written *ḳiṣṣa* in the same way as we have done, since he includes this term in his *Supplément*). Al Ḳalḳashandī, in *Ṣubḥ*, iii. 487-8, does not cite the *ḳiṣṣa-sīra* but provides some details about the manner in which *ḳiṣaṣ al-mashāʾikh* were treated.

Since some *ḳuṣṣāṣ* began regularly to narrate stories which had no religious character at all, *ḳiṣṣa*, without ceasing at the same time to characterise a serious, even a historical narrative (e.g. the 27 mss. called *ḳiṣṣat ghazawāt*... "narrative of the expedition of ..." classified by Ahlwardt in his Berlin catalogue) tended to be applied to any story, sacred or profane, and to become a synonym of *ḥikāya*, and secondarily, of *ḥadīth* and *ḵẖabar*. As an indication, the above-mentioned catalogue has a total of 216 works beginning with *ḳiṣṣa*, that of the mss. in the B.N. of Paris drawn up by G. Vajda has 115 (of which 75 have been restored according to their contents), *ḥikāya* appears there 47 times, *ḥadīth* 12 times and *ḵẖabar* 4 times. In the group as a whole, there are certainly some edifying stories (e.g. the *Ḳiṣṣat Abī al-Ḵẖayr*), but titles like *Ḳiṣṣat Sulaymān maʿa Bilḳīs* or *Ḳiṣṣat Tawaddud* reveal true romances. In this way, the modern use of the term is to be justified, and this, conversely, has brought about a revival of *ḳaṣaṣ*, now specialised in the sense of "narration", the narrative genre and the narrative art", leading to the creation of the word *ḳaṣaṣī* "narrative" (adj.). (Ch. Pellat)

2. In modern Arabic literature.

The modern and technical meaning of this word "fictional narrative", "novel" has come to be accepted without eliminating the more general, older sense of "story", "account". Furthermore, it should be noted that, in this case as in many others, the neologism has not been immediately accepted and does not cover the same semantic field for all those who use it, even today. From the start, it is seen to alternate with other words.

In an article appearing in *al Ahrām*, on 11 May 1881, where the *shaykh* Muḥammad ʿAbduh drew attention, without otherwise deploring it, to the taste of his contemporaries for the novel, we find the word *rumūziyyāt*. The definition of the genre remains somewhat hazy since the eminent reformer included under this heading *Kalīla wa-Dimna* and the stories of traditional *adab* along with the recent translation of the *Aventures de Télémaque* by al-Ṭahṭāwī and the serial stories then published in *al-Ahrām*. Besides this borrowed term—which was not long to remain in use—there are words drawn from the Arabic vocabulary which come to mean the same as *ḳiṣṣa*. Understandably in the case of works on the borderline of the novel genre, the terminology appears uncertain. the *ʿAlam al-dīn* (1884) of ʿAlī Mubārak is presented by its author as a *ḥikāya* (story) while Ibrāhīm al-Muwaylihī gives the title *ḥadīth* (talk) to his very interesting *maḳāmāt*. *Ḥadīth ʿĪsā b. Hishām* (1907). It is all the same curious to note that in 1927 a certain Dhubrān Khalīl Dhubrān, suggesting to the editor of the review *al-Hilāl* the holding of a competition for the best story—to promote a genre that has proved its worth in Europe—uses the term *ḥikāya* to describe the genre. Little by little, however, *ḳiṣṣa* came to prevail, and Ṭāhā Ḥusayn was seen claiming back his liberty as a creator and refusing to apply rules whose validity he did not recognise by saying in substance, the *ḳiṣṣa* is taught nowhere, and besides, what I write is not a *ḳiṣṣa* but a *ḥadīth* (cf. Ṣāliḥ, in *al Muʿallimūn fī ʿl-ʿarab*).

In fact, the lack of precision remains, mainly as a result of the differences in length among the various kinds of story. It is possible to account for these without departing from the root *ḳ ṣ ṣ*. For the abstract "narration", "narrative literature" we have *ḳaṣaṣ*, while the "story" of indeterminate length is called *ḳiṣṣa*, the novel being distinguished from the "tale" or from the "novelette" by an adjective (*ḳiṣṣa ṭawīla* in the one case, *ḳiṣṣa ḳaṣīra* in the other). The range of meanings may be conveyed in a still more precise fashion: a suitable adjective expresses the midway term, the long short story as popular with the British (*ḳiṣṣa muṭawwala*), while *uḥṣūṣa* (pl. *aḥāṣīṣ*) denotes the very short story, the short novelette.

But in practice, things are not so simple. The first Arabic story-teller to be universally known, Maḥmūd Taymūr, published successively two collections of stories, calling the first *aḥāṣīṣ* (*al-Shaykh Dyaṭ wa-aḥāṣīṣ uḵẖrā*, 1925) and the second *ḳiṣaṣ* (*Ammu Metwalli wa-ḳiṣaṣ uḵẖrā*, 1928). At the other end of the scale, there are some who prefer *rumūza* to *ḳiṣṣa ṭawīla* to denote the novel, this neologism was more specifically reserved at the end of the 19th century to denote a "theatrical piece." Without it being an absolute rule, it may be stated that at the present day *uḥṣūṣa* is more frequently used in Syria and Lebanon in the sense of short story, while *rumūza* is preferred in Egypt with the meaning of novel.

Considerations of length are not the only ones to be of relevance. It should also be noted that some have tried to solve the ambiguity inherent to the word "tale" which exists also in English. If one wishes to differentiate the brief, realistic, truthful or plausible narrative (the short story) from a narrative of the same dimensions but imaginative, extraordinary or extravagant (the tale), one must call the latter by the name *ḳiṣṣa* (or *uḥṣūṣa*) followed by an adjective (*khayāliyya* or *ḵẖurāfiyya*), while being careful not to use the word *ḵẖurāfa* in isolation lest it be understood in a non-technical sense and with a pejorative flavour "a cock-and-bull story".

The birth and evolution of Arabic fictional literature. The modern *ḳiṣṣa* owes nothing to Arab tradition. It is linked neither with the folklore of the *Thousand and one nights* nor with tales of chivalry nor with narratives of *adab*. The tradition of classical *maḳāma*, although taken up by two men of imagination and dual culture (Fāris al Shidyāḳ for *al-Sāḳ ʿalā ʾl-sāḳ*, 1855, and Muḥammad al-Muwaylihī, cf. above, 1907) has left no legacy. It is from Europe that the Arabs have borrowed this literary genre totally unfamiliar to them, sc. the novel.

The press, which has been remarkably prolific in Cairo and Beirut ever since its first appearance there in the middle of the 19th century, has in a short space of time put into circulation stories of various lengths translated from French and English. Some periodicals, like *Ḥadīḳa al-aḵẖbār* (founded in Beirut in 1858) publish examples from time to time, others, like *al-Diyānāt* (Beirut 1870) regularly devote a part of each issue to such translations, and the same applies to the reviews that the Lebanese resident in Egypt have subsequently launched in Cairo (*al-Hilāl*, *al-Muḳtaṭaf*, *al-Diyāʾ*). Even the daily *al Ahrām* founded in Alexandria in 1875 has its serial story. Furthermore, some weekly or monthly

entertainment publications are entirely devoted to them (*Silsilat al fukāhāt*, Beirut 1884; *Munṭalaḳabāt al riwāyāt*, Cairo 1894). A certain degree of decentralisation has even been achieved with the appearance of *Silsilat al-riwāyāt al ʿuṯmāniyya* at Ṭanṭā in 1908 and *al-Samīr* at Alexandria in 1911. The second stage is the editing of the translated novels in volumes.

The essential object of this type of literature is to entertain. Publishers and translators search out stories of extraordinary adventures, of unhappy love-affairs, of poignant grief, rather than works of established quality whose authors are universally known. Fidelity to the original text was not regarded as an obligation in the period where the translator most in demand, Ṭanyūs ʿAbduh, a Lebanese who had settled in Egypt, was renowned for the imagination which he put into his work. The tendency was to adapt rather than to translate.

Quite naturally "original" composition has followed translation adaptation and obeyed the same rules. It has even in some cases been exactly contemporary with it, and there are times when the translator is at the same time an author. This was the case with Salīm al Bustānī, who published no less than five original works in serial form between 1870 and 1884 in *al-Ḏimām*, at the same time as he was translating French novels. His sister Alice and his cousin Saʿīd were also involved in the same sort of work. In serial stories of this kind as well as in the copied models there abound *coups de théâtre*, unexpected meetings, unsuspected relationships, etc. In order to avoid offending a very sensitive public moral sense, the scene of the plot still tends to be exotic, or if the action takes place in Egypt, the whole or the majority of the cast of characters must be foreign (*Fatāt al aḥrām* by Muḥammad Maḥmūd, *Fatāt Miṣr* by Yaʿḳūb Sarrūf). Saʿīd al Bustānī discovered to his cost the powerful force of this unwritten rule: a resident of Egypt for ten years, a friend of Shaykh ʿAbduh, this Lebanese was nevertheless savagely criticised in conventionally-minded circles for having published *Dīdā al-Ḥāyik* (1894) which claims to show the disastrous results of an ill-matched marriage ... in a wealthy family supposedly living in Alexandria!

Obliged to show some degree of discretion, limited in its intellectual ambitions, this newly arrived genre would doubtless never have interested an enlightened Arab public had it not found sponsors and promoters. Shaykh ʿAbduh took an interest in it, as has been seen, because he reckoned it capable of having a reformatory effect, if carrying a well formulated message. For Djurdjī Zaydān (1862-1914), it was the ideal didactic means to put into the service of history, and this Christian author of a *History of Islamic civilisation* therefore brought to the novel the caution of the scholar. Whereas Djamīl Mudawwar had published in Beirut in 1881 a single historical novel about ʿAbbāsid Baghdād, he was to publish twenty-four such novels between 1889 and 1914, of which the majority appeared in serial form in Cairo in the review *al-Hilāl* which he edited. Serious information being in his view the essential part, the amorous element of the plot would serve only to lure the reader, this element seems therefore to be somewhat stereotyped from one volume to another, but at least, the construction is solid and the language clear and precise.

After reason, sensibility. It would be impossible to overestimate the role al Manfalūṭī (1876-1924) for, in his two collections (*al Naẓarāt* (1910-1921) and *al-ʿAbarāt* (1915)), he superbly arabises French romanticism to the point where, under his pen, translations, adaptations and original creations seem to flow from the same source. Having found a style and a tone, he knows how to stir emotions while dealing, in a context of traditional morality, with the problems posed by the irruption of European civilisation into the modern Orient. At the opposite extreme as regards content but with a similar degree of emotional intensity, is the message of "The American" Dhubrān (1883-1931). Tears flow in abundance here too, but the romanticism is noble, protesting at the injustice practised by the powerful of this world as observed in the microcosm of the Lebanese village where the mayor and the priest seem to be constantly united in the effort to prevent the children from loving each other; *al-Ajniḥa al-mutakassira* (1912) hardly deserves to be called a novel, it is rather a long poem in prose devoted to an unhappy love affair of the author. "Broken wings" and "Tears", these are the two works, of Egypt and the *mahdjar*, which have moved as irritated several generations of Arabs all over the world.

But the first Arabic novel owes nothing to Manfalūṭī or to Dhubrān. It was written in Paris—and perhaps partly in Geneva—by a young Egyptian student. Haykal (1888-1956) was feeling homesick when he wrote *Zaynab* (1914), and it is the Egyptian countryside that he attempts to re-create with its poetry, its variety, and also its characters, simple and poverty stricken. But this evocation is centred around two victims of injustice in Egypt, so the peasant and the woman. Even though the first edition is signed under the pseudonym *Miṣrī Fallāḥ*, the poverty of the farm worker hardly holds our attention, while the fate of two women, equally unfortunate, illustrates the sorry condition of an entire sex and recalls the courageous protest of Ḳāsim Amīn at the beginning of the century. The hero ultimately makes his indictment: life has no appeal in a land where youth passes too quickly, where love is not allowed, and where the individual has no time to look at what is beautiful.

Even if the problems of writing and construction are not always perfectly solved, even if the influence of *La nouvelle Héloïse* of Rousseau is too obvious, this rich composition does not only have a historical interest, for it conveys an authentic tone, that of a desperate confession.

In spite of these promising beginnings, other novels were not to appear for a further fifteen years. In the interval, it is only short story writers who make a name for themselves, putting forward within the dimensions of shorter narratives technical solutions borrowed this time from the best European specialists. The stories that they tell, on the other hand, always deal with the reality that surrounds them. In "wringing the neck of rhetoric", these young pioneers feel that they are laying the foundations of a new literature. The first of them,—and paradoxically the only survivor—Mikhāʾīl Nuʿayma (born in 1889) began publishing his stories at the beginning of the First World War in *al-Sāʾiḥ*, then in *al Funūn*, the two reviews edited by Syrian Lebanese settlers in New York. The best, later collected in an anthology (*Kāna wa akhwātuhā*, Beirut 1937), are striking for their simple language, the transparency of the characters, the significant choice of situations—where ancestral customs like the journey to America play a central role—and perhaps even more for the firmness with which the story is

told, a story where, however, emotion and humour make themselves discreetly felt. On Egyptian soil, slightly later, Muḥammad Taymūr (d. 1921) published in *al-Sufūr* some stories of which the best known dates from 1919—an important year for Egyptian nationalism of which this writer was a passionate advocate. Add to this element the interest taken in social injustice and in poverty, and we have the principal source-material of the stories of Muḥammad Taymūr and of his comrades-in-arms. This expression is not an exaggeration when applied to his brother Maḥmūd, who describes himself as taking the torch from the hands of his brother, dead at the age of thirty. It is without doubt Maḥmūd Taymūr (d. 1974), the greatest story writer of the time, who has exerted the strongest influence in Egypt and in the other Arab lands, one of the most prolific of modern Arab writers and one of the most widely translated too. Following the school of Maupassant—to whom his brother introduced him—he learnt to construct a plot firmly centred on a character who is bizarre to say the least, or on an exceptional incident. But he does not ignore the dominant themes of Egyptian social life, to which the brothers ʿUbayd and Maḥmūd Ṭāhir Lāshīn (d. 1955) also come to apply themselves, each according to his temperament and his special talent, Lāshīn being of the three the one whose palette would appear to be the best equipped both for varieties of subject and of resources of expression. Let it also be noted that this writer has written one of the few Arabic novels to appear before the Second World War: *Hawwāʾ bilā Ādam* ("Eve without Adam"), 1934.

Furthermore, it may be appropriate to note that this novel is distinct from the others in that its subject (the pitiable failure of a feminist school-teacher who believed in love and social advancement) owes nothing to the life of the author, while Ṭāhā Ḥusayn (d. 1973) Ibrāhīm ʿAbd al-Qādir al-Māzinī (d. 1949), al-ʿAqqād (d. 1964) and Tawfīq al-Ḥakīm (b. 1902) had written nothing before 1939 but works largely autobiographical in character. What these men have in common is that they are not true imaginative writers, but rather they are part of the Egyptian intellectual élite. It should therefore surprise no-one that they look for material for their stories in their own experience. Besides, for these great thinkers of their generation also, this is the means of assessing the exact condition of their country, *"or carrying on,* in short, the worried analysis conducted by Haykal in *Zaynab*. As chance would have it, the year 1929 saw both the second edition of this novel and the publication of the first part of Ṭāhā Ḥusayn's *al-Ayyām*. The accuracy in tone of this book, written with finesse and modesty, explains its immediate success in Egypt and the rest of the world, one feels that the blind boy struggling in a world that is hostile or indifferent to stupid symbolises more than an individual destiny. Even before the appearance of the second part of *al-Ayyām*, *Adīb* (1935) represents a split in the personality of the author, whose Egyptian half looks on helplessly at the folly and wreck of the Europeanised part.

The debate between the two civilisations—with their customs and culture—also interests Tawfīq al-Ḥakīm in two of his autobiographical novels, while in the two others (*ʿAwdat al-rūḥ*, 1933, *Yawmiyyāt nāʾib fī l-aryāf*, 1937) we find a number of the elements of the dossiers opened on Egyptian society by the short story writers. Superficially, the enquiry is less emphatic, there are times when the reader roars with laughter, but do not the laughter and the careless airs conceal a deep disquiet into which the faint-hearted lover and the Deputy Prosecutor are both plunged?

In drawing his self-portrait in *Ibrāhīm al-kātib* (1931), Māzinī speaks of disappointments in love which may be fictitious, but he is most certainly honest when he shows himself irresolute and easily discouraged. As if in spite of himself, he gives us suggestive insights into the three milieux that he sets himself to evoke and, when he does not overstep the bounds, his gibness does not lack charm.

Outside Egypt, a single novelist deserves mention for this period, the Lebanese Tawfīk Yūsuf ʿAwwād, who published *al-Raqīm* in 1939. It is the Lebanon of the period of the First World War, the Lebanon "in the hour of the Turk", ravaged by famine, that we find here, the repression of nationalist movements coming to an end on the gallows of Beirut's Place des Canons. With a great deal of sobriety, a very sure sense of crowd-scenes, a propetly romantic conception of history and politics, here is a writer who knows how to give to his narrative a depth which nobody else, Ḥakīm included, has yet succeeded in obtaining.

ʿIrāk of that time was still at a hesitant stage, with Maḥmūd Aḥmad al-Sayyid (d. 1937) publishing from 1921 onwards, in Cairo stories which are admittedly rudimentary but where the effects of Turkish rule on ʿIrāqī society are succinctly shown, with Anwar Shāʾūl (first collection of stories 1930), the influence of Taymūr is clear. In his stories and those of ʿAbd al-Majīd Luṭfī (b. 1908), influenced by Tolstoy and Gorky, one feels that the seeds of a promising harvest have been sown in ʿIrāq.

Among the pioneers mentioned above, a certain number have lived on after the war. Their prestige has increased and they have attained immortality. Young Arabic literature has found in them its ancestors, its sponsors, its classics, it could be said. Each of them otherwise remains imperturbably faithful to his style. It is still the same self-centred man dissatisfied with home and love that Māzinī indulgently analyses (*Ibrāhīm II*). From an incident of everyday life, the Lebanese Mikhāʾīl Nuʿayma draws the material of an intimate diary (*Mudhakkarāt al-arbaʿīn*, 1949), where meditations on good and evil, the solitude of the soul and its mystical vocation, count more than the narrative plot. In the same way that Tawfīk al-Ḥakīm hardly descends from his ivory tower to stigmatise feminine duplicity and to comment ironically on the sacred bonds of marriage (*al-Ribāṭ al-muqaddas*, 1944), Ṭāhā Ḥusayn pursues his dialogue with destiny, but through interposed characters, in a tragic family chronicle with slow tempo (*Shajarat al-buʾs*, 1954). The famous Maḥmūd Taymūr still composes short stories—his last collection appeared in January 1967—but he also writes novels where he expresses in the same pure language the qualities for which he is well known, very close to his times in *Hāʾulāʾ l-bādiʿ ayyuhā l-bahw* (1959), he is halfway to fantasy in *al-Maṣābīḥ al-rusūd* (1960). In this group, it is without doubt Haykal who has produced the least expected work for *Hākadhā ḥaqīqat* (1956) presents, on the eve of his death, a portrait of a woman that contrasts totally with the *Zaynab* of his youth, this cold, dominating female really existed, as well-informed contemporaries assert.

But the new-comers are henceforward very numerous, some of them belonging to Arab countries not

mentioned above. Reviews have been founded in Egypt of course, but also in Bahrayn, where a literary periodical of this name appeared when the first printing-press was installed in the Gulf (1939), most of all in Beirut where *al-Adab*, founded in 1953, and *al-Adib* give young writers the opportunity to become known, in Tunis where, since 1944, the review *al-Mabahith* awards a prize (*Bahlawan*) to a writer every year. Henceforward, Arabic fictional literature is sufficiently vigorous and varied to convey trends which are to be noted elsewhere in the world.

The romantics. It is clear that romanticism has solid roots at its disposal—it is enough to recall the genre of the first European novels translated, the importance of Manfalūṭī, the tone of *Zaynab*. A younger generation dissatisfied with its condition finds at last the means of expressing its revolt and its dreams. Evidently it is love that polarises all attention. This lyricism is a phenomenon of youth in three senses: the youth of the writer, the youth of literature and the youth of the public. The theme of the impossibility of amorous relationships is treated at length by the Tunisian Rashīd Ghālī in the short stories that he has published in the review *al-Fikr* since 1960, an encounter without future constitutes the subject of *al-Bahr li-mā? fīh*, a story which gives its title and dominant tone to a collection published by the Libyan A. Ibrāhīm al-Fakīh in 1966; the Sudanese Sabbār (b. 1927) published ten years ago a novel on a small scale, *Sirr al-dumū'*.

It should not, however, be assumed that this type of novel is always attributable to an "indiscretion of youth." Writers of considerable renown who are no longer adolescents have built their success upon this specialised genre, and their prolific output shows that they know how to pluck the string of emotion. In this context, one could hope for no better example than the Egyptian trio of Yūsuf Sibā'ī (d. 1978), 'A. H. 'Abd Allāh (d. 1973) and Ihsān 'Abd al-Kuddūs. The systematic exploitation of sentimental problems is their common denominator, as well as their ability to impose their personal style. The first emphasises the dramatic, or melodramatic quality of the situations that he imagines; the second does not flinch from a certain moralistic purring owed for the most part to the very literary nature of his language; finally, the third darts with scandal, and his gallery of pretty girls at once innocent and greedy for liberty has aroused many adolescent dreams.

Readers unmoved by the magic of these masters perhaps would allow themselves to be seduced by more subtle forms of romanticism. In Egypt, 'Abd Allāh Tūkhī finds in his native countryside (*Fī dam' al-hamar*, short stories, 1960) or in a cruise on the Nile (*al-Nahr*, a novel 1962) the appropriate setting that his dreams require, while Muṣṭafā Mahmūd (b. 1931) studies the relationship of married people (*al-Mustahīl*, 1960) with much tact and sensitivity. In Syria, the short story writer Shāhīd Rūmī (*al-Kuft?ī*, 1960) even seasons his outpourings with a fair dose of fierce satire. Finally, we draw attention to a short story by the Algerian Tāhir Waṭṭār (*Mamarr al ayyām*, in *al-Fikr*, 1959) for this disillusioned statement by one of his heroes: "There is no youth in the Arab world. The Arab knows only two ages: childhood and adulthood." We shall have occasion to speak again of this sense of realism.

The realists. These writers have inherited a populist or poverty-oriented tradition that is not very old. On the eve of the war, the Syrians T. 'Awwād, K. M. Karam, and the 'Irāqī Dhū'far Khalīl were concerning themselves with fraternity, tearful commiseration or indignant horror at the sufferings of the lower classes.

We find this same interest in poor people with a great number of writers of the following period and in countries that have come to the novel more recently. From Morocco, we may mention two collections of stories, *al Sajf* by Muḥammad Ibrāhīm Abū 'Allū and *Raqṣat wa-mar'a* (1969) by Zaynab Fahmī. Teymūr has really created a school, for we witness an impressive parade of pitiable or laughable "cases". Y. Hakkī's petty tradesmen, the charlatans of the Tunisian Muṣṭafā Fārisī, the baggage carriers of the Syrian Samīm Sharīf, the water-carriers of the Egyptian Sibā'ī. These specimens of an idle or poverty stricken humanity, true to type even when they live on the fringe of society, clearly lend themselves to living in novels. Who could deny the vividness of the portrait of Tarnannūh, idler and football fanatic, product of the imagination of Rashīd Ḥamdāwī (Tunis, *al Fikr*, 1959) or that of the "maker of grotesque cripples", the negro Zīta who introduces a kind of Court of Miracles in the lane (*Zuqāq al-midaqq*, 1947) described by the Egyptian Najīb Maḥfūẓ.

Apart from the hero, the writers strive to recreate a whole ambience to which they are deeply attached. Thus, thanks to the pen of a Tayyib Tarīkī or of a Ḥamdāwī, there appear before us the coloured quarters of Rabat and of Turbat al-Bey in Tunis, while the shrines of Old Cairo, Sayyidnā Ḥusayn and Sayyidatnā Zaynab, inspire the best works of Hakkī and Mahlūf, and the seascape of the Shaṭṭ al-'Arab is recreated in a story such as *Dhikrayāt al-madīna* (1975) by the 'Irāqī 'Abd al-Raḥmān Maqlīd al-Rubay'ī.

It would be surprising if the countryside were to remain outside the fictional repertoire, when we recall that, with *Zaynab*, the Arabic novel was born there. It is in fact the same love of nature that shines through in a simple account of olive-picking in Tunisia, told by Muḥammad F. Ghālī (b. 1927) in a short story (*al-Fikr*, 1962). But it is most of all in the novels of the Egyptian Sharqāwī (*al-Ard*, 1954, *Kulāb Abāliya*, *al-Fallāh*) that the rural life is conveyed in all its richness, at a time when new ideas are shaking the system of traditions that used to be thought immovable. On the contrary, Ḥusayn Nasr (Tunisia) evokes the full force of the past in a few pages, this "On that my father left us" (*al-Fikr*, 1961) is slow to die and imposes his presence when the young men, rejecting the experience of the old, wish that the page had been decisively turned.

It will come as no surprise to find political involvement accompanying this meticulous survey of an entire people. At the same time that *al-Arḍ* appeared in Cairo, Hannā Mīnā published in Damascus *al-Maṣābīḥ al-ruṭub*. We may thus see side-by-side two exemplary narratives: a peasant revolt in the Delta, and the resistance of the Latakians to the French Mandate at the end of the Second World War. The heroic times of such and such a country have inspired a considerable mass of stories. The Moroccan Khanātha Bannūna celebrates inter-Arab solidarity sealed in combat in a recent collection of short stories (*al-Nār wa 'l-ikhwān*) and his compatriot Mubārak Rabī' makes the participation of Moroccan troops in the battle of the Golan Heights, in 1974, the central subject of his novel: *Rifāt*

al silāḥ, *ana 'l-ḥamar* (1976). Sometimes one finds them to be too verbose and not sufficiently alive. This is especially the case with the entire output of Muṭīʿ Safadī (Syria), a real propagandist of the Arab Revolution (*Thaʾir mukhtaraf*, *Dīl al-ḥadar*, *Aṣḥāb ahlī*, 1959). On the other hand, an ʿA. H. ben Haddūḳa (Algeria) succeeds in interesting us in the conscience of a man who has just committed a political crime (in *Zilāl ghaniʾriyya*, 1960). It is the analysis of the social and psychological consequences of the war of liberation which interests him in his first novel appearing ten years later (*Rīḥ al-ghaḍab*), of which the form catches the attention. His compatriot Ṭāhir al Waṭṭār also distinguishes himself in his two recent novels by the originality of his vision of guerilla warfare (*al Ard*) or the traumatic after effects of independence (*al Zilzāl*). Similarly, the Palestinian tragedy is presented, free of forced sentimentality, in fascinating novels by the Lebanese Ḥalīm Barakāt and the Palestinian Ghassān Kanafānī (*Rijāl fī 'l-shams*).

Oriental society is evolving to a varied rhythm in its different aspects. Industrialisation, for example, has scarcely been reflected by the appearance of workers in romantic literature. To our knowledge, only two writers have taken an interest in this: H. Mīna (Syria) mentioned above, who has made a study *à la* Gorky of type-setters in a printing press, *The invisible thread*, 1960, and Muḥammad Ṣidḳī (Egypt), who through the experience of a self taught man trained in a number of occupations, gives us an insight into the daily life of the working classes (in the collections *al Anfār* and *al Aydī l-khashina*, 1956 and 1958).

On the other hand, the number of Arab women writers is already remarkable. Quite naturally, they are interested in problems that are specifically feminine. Since professional involvement of women is still somewhat limited in their countries, it is most of all "psychological realism" that they aim at. The older ones—Bint al-Shāṭiʾ and S. Kalamāwī in Egypt, Widād Sakākīnī in Syria—have born witness to the deep transformation affecting the female mentality. The younger women writers—Samīra ʿAzzām in Irak, Colette Sulṭayl in the Lebanon, Ṣafīʾ ʿAbd Allāh in Egypt—seek to re-establish, with regard to their sex, the truth misunderstood or distorted by men. The Egyptian Laṭīfa al Zayyāt does not claim to make any extraordinary revelations in her novel *al-Bāb al mafṭūḥ*, 1960, but points out succinctly that the noble protests of the sterner sex are not yet fully convincing.

So as not to distort the perspectives, it is important to draw special attention to the work of three Egyptian novelists whose renown extends over the entire Arab world. Yaḥyā Ḥaḳḳī, Yūsuf Idrīs and Nadjīb Maḥfūẓ. The name of the first, who was born in 1905, is linked with the difficult emergence of the Arabic short story in the years around 1925, but he has only become well known since the war. His first collection *Kindīl Umm Hāshim* dates from 1945. His collections of stories, his short novel (*Sāḥa 'l-nawm*, 1954) and his memoirs (*Khalīkhī 'alā 'l-lāh*, 1959) have made him known to the public at large as a writer of prose that is firm but not prudish, and one who treats his characters with sensitivity and humour.

As for Yūsuf Idrīs, he has been writing "committed" stories since 1949. With the appearance of his first collection (*Arkhaṣ layālī*, 1954), there is the feeling of a talented writer making himself known. His subsequent works (*al-Ḥarām*, novel, 1959; *al-ʿAskarī al-aswad*, a short story, 1961, among many others) testify to his dramatic sense, and his condensed style, on the borderline of grammatical correctness, counts as one of the most original of all.

Nadjīb Maḥfūẓ enjoys an even wider readership. He owes this perhaps to his uncompromising adherence to the classical language but most of all to the seriousness and depth of his analysis and to a remarkably prolific output—some twenty novels and a dozen collections of short stories published to date. His *Trilogy* (1957, 1958) is considered to be the perfect masterpiece of Arabic realism. It gives us the key to an understanding of the generation of contemporary Egypt through a wealth of passions reminiscent of the Russian novelists, but with a concern for detail that is exclusively his own, and most important of all, frees a perspective such that every Arab reader feels himself involved.

The existentialists. In a society in a state of flux, there are some who feel resentful, disillusioned, alienated and who find in existentialism a philosophy in tune with their mood. The Lebanese Suhayl Idrīs has done much to install this philosophico-literary doctrine in the Orient. He has been the prime mover in a major series of translations that have introduced the Arabs to Sartre and Simone de Beauvoir in particular. But his role has not been limited to that of translator nor to that of editor-in-chief of the major review *al Ādāb*. He is also the author of a number of novels. In the first (*al Ḥayy al-lātīnī*, 1953) he too examines the reactions of the oriental to the European way of life, but the analysis is different from one given by Tawfīḳ al Ḥakīm in *ʿUṣfūr min al sharḳ* nearly twenty years earlier in spite of his love for a European sweetheart—shared this time—the Arab student returns to the Lebanon to place himself beneath the yoke, and perhaps the protection of the customs of his homeland. His resigned acceptance of the absurdity of life shows that his stay in the Latin Quarter has left deep marks on him.

The Lebanon is thus the favoured land for existentialism. There are some who take pleasure in a type of fiction that is closer to the debate of ideas than to the novel as strictly defined, like Emile B. Abī Mādir in *al Fāriḳ* (1961). But the more interesting writers are able to bring to light in their plots the unplaceable character of life. A story by George Shāmī shows to what extent a personal sentiment, however sincere and profound, is helpless in the face of the tyranny of the family spirit, and another by Djamīl Djabr (*Ḳalaḳ*, 1961) finds the correct tone for describing, in the first person, an impossible love. The Lebanese novel does not however attain the level of despair except in the work of the woman-writer Layla Baʿlabakkī, in *Anā ahyā* (1958) and in *al Ḥubb al-mansiyya* (1960) there is a vivid account of the revolt of a feminine sensibility stifling in a male society, made—taboos included—for men.

Although she has become known more recently, the Syrian Ghāda Sammān is closely akin in ton. One of her collections of short stories (*Layāt al-ghurabāʾ*, 1960) presents us with a study fundamentally of a single character in a variety of settings: the woman who feels herself involved neither with the family nor with the revolutionary ideal, a "stranger" always and everywhere, her too-clear intelligence and her too-vivid sensibility making of her a person who suffers and sees no other future than this suffering, which she broods over with a kind of masochistic delight.

'Irāk throws up another kind of existentialism, less intellectual, more visceral. Among story-writers of talent, the first place belongs to 'Abd al-Malik Nūrī (born in 1922). Between 1946 and 1954 (*Nahḍat al arḍ*) he has created a genre from the first to the last line, his fiction expresses malaise, an infinite despair or a fatal torpor. With Mahdī 'Isā Ṣaḳr and Fu'ād Takarlī (*al-Wadjh al-ākhar*, 1961) we are steeped in the same unrelieved black that seems to be the dominant colour of young 'Irāḳī literature.

The basic problems. During its sixty or so years of existence, Arabic fictional literature has been obliged essentially to cope with two basic problems.

The one, purely internal, concerns language. For obvious reasons, the novelist must choose the type of language that he is to lend to his characters, dialect or *fuṣḥā*. A writer so eminent as Maḥmūd Taymūr has, to his credit, carefully tried each of the two alternatives and subsequently remained absolutely faithful to the academic language, of which he is besides a perfect master. The no less eminent Yaḥyā Ḥaḳḳī has shown a quite original attitude, proclaiming everywhere his loyalty to Arabic and wielding in a delicious manner in his short stories the Cairene of his childhood as the Ṣa'īdian patois dear to his heart. These examples should not be misinterpreted; the question does not only apply to Egypt. Throughout the whole Arab world, from 'Irāḳ to Morocco, there are novelists who believe that they would be betraying their mission as creators and artists if they were to avoid using a type of language that is natural, living and immediately evocative of the correct sentiment, the spontaneous idea. Conversely, in every Arab country there are today writers who would consider themselves unworthy of their art and traitors to Arabism if they were to adopt—even in dialogues—a language other than "pure" Arabic obeying the rules of declension, more or less modernised in its vocabulary, but effectively unchanged in its syntax. The question of the two languages has been debated so often since the beginnings of the *nahḍa* that there is nothing to be gained by dwelling on it here. The adherents of one or other mode of expression may be confident of finding themselves in excellent company and having no shortage of arguments. In particular, the equation frequently proclaimed in the last fifty years (dialogue in dialect = literature in the service of the people) is no longer put forward today, when the purists too are "committed". At the most, we may attempt a risky generalisation, the tendency to use the spoken "popular" language is more widespread in countries where the literary public is greatest and which, believe, rightly or wrongly, that they have a better-established "Arab" character—thus in Egypt, rather than in Algeria. Whatever the answer may be to these formal—and important—questions, there is no likelihood of provincialism gaining precedence over a common Arab heritage that is easily recognisable through the entire spectrum of fictional literary production from "the Ocean to the Gulf" and through all the trends that we have attempted to unravel.

The other problem concerns the relationship of the Arabic novel to Europe, the masters, in both senses of the word, pedagogic and colonialist. This relationship first applies on the level of content. The dialogue of a floundering East with a West that is too sure of itself constitutes one of the themes and sometimes the central theme of novels that have become famous. It is natural, with regard to novels, that this ill-fated or violent confrontation should take the form of an amorous encounter between a practical or fickle or dominating European woman and an Arab emigrant, usually a student, convinced that he owns a share of the truth but naive and maladroit. Furthermore, the character of the latter and the general physiognomy of the work change in the course of the years. In *'Uṣfūr min al-shark* by Tawfīḳ al Ḥakīm (Egypt, 1938) Muḥsin is an incorrigible idealist, an incompetent pursuer of working girls whom the author mocks and admires at once, while the hero of *al Ḥayy al lātīnī* discovers nausea in Paris, but returns to the fold of ancestral custom in Beirut. The English girl married by *al-Dukkān Ṭāḥ̲ūn* by Dhū 'l-Nūn Ayyūb ('Irāḳ, 1959) is only the first stage of an ambition which comes to light on his return to his country. If Ismā'īl repudiates his God on leaving Mary's embrace, he finds Him again on the banks of the Nile (Yaḥyā Ḥaḳḳī, *Kandīl Umm Hāshim*, Egypt, 1949). The experience of Adīb (Ṭāha Ḥusayn, *Adīb*, Egypt, 1935) is at the same time more profane and more desperate, less that described by the Sudanese al-Ṭayyib Ṣāliḥ in *Mawsim al-hidjra ilā 'l-shamāl* (1966) is violent, and it disconcerts because hatred here is innocent.

Nobody is deceived, whether sex and suffering intervene or not, it is always the impact of a culture that is in question, an invading, besieging, disruptive culture. Two Moroccan novels examine in detail its traumatic aspects: *Dafanāt 'l-māḍī* by Ghallāb (1956) and *al-Gharība* by La'rwī (1971). Quite naturally, another level of connections with Europe appears. Has this literary technique been learnt, assimilated or, on the contrary, has there been constant re-adaptation to a model which, so time passes, remains indispensible? It is in reality impossible to answer this question. It may simply be stated that this common Arab heritage mentioned above adapts itself well to the most recent trends in universal fiction, that the surrealism of Zakariyyā Tāmir (*Dimashḳ al ḥarā'ik*, Damascus, 1973) with its nightmare universe, takes up and carries to an obsessional and hardly bearable degree, the taboos and desires of a sick society. It is madness—superficially, for what the mastery resides in the cascade of images and the narrative twists!—that succeeds the meticulous and classic analysis of 'Abd al Salām al-'Ujaylī and the cruel realism of Fāris Zarzūr, two Syrian novelists who have achieved renown in the sixties. Echoes of such trends arise from elsewhere, from Egypt, of course, where established novelists like Yūsuf Idrīs and Nadjīb Maḥfūẓ have begun in the sixties and at the present day in turn towards the short story in preference to the novel, a wild and implacable type of short story, to which the stirring compositions of a writer such as Ṭāhir al-Waṭṭār; this is taken even further in Bahrayn, where 'Abd al-Ḳādir 'Alīl sets in motion with *al Nasf* a series of dream like sequences that express his continuing anticipation of revolutionary liberation.

Finally, if such and-such a name made famous by the European "new novel" suggests itself to the readership of one of these narratives, it should be recognised that the Arab intelligentsia is henceforth in sympathy with the evolution of ideas and tastes throughout the world, that purely internal lines of influence are clearly visible in Arabic fiction and that the contemporary proliferation of works, the

multiplicity of devoted talents in all provinces of Arabism, are signs of the flourishing state of the *kiṣṣa*.

Bibliography Arabic journals. The literary journals are very numerous and some have only a short existence. Among the most important are *al-Adāb*, *al-Aʾdāb* (Beirut), *al-Madjalla*, *al-Taʾrīfa* (Cairo), *al Maʿrifa* (Damascus) and *al-Fikr* (Tunis). Those in European languages include *MIDEO*, *Orient*, *OM*, *Jnal. of Arabic Literature*, and *Bulletin d'études arabes of the IPEA* of Rome.

For the beginnings of the novel, the general histories of Arabic literature may be consulted [see ʿARABIYYA, V].

Anthologies give a very representative picture of contemporary novel writing, general introductions and valuable biographical details about the authors covered: *Anthologie de la littérature arabe contemporaine*, Paris 1964 I R. and M. Makarius, *Le roman et la nouvelle*; Mahmoud Manzalaoui, ed., *Arabic writing today, the short story*, Cairo 1968.

Studies—most of these on the Arab short story and novel centre upon Egypt. In particular, note ʿAbd al-Muḥsin Ṭāhā Badr, *Taṭawwur al-riwāya al-ʿarabiyya al-ḥadītha fī Miṣr (1870-1938)*, Cairo 1963; R. Francis, *Aspects de la littérature arabe contemporaine*, Beirut 1963, Yaḥyā Ḥakkī, *Fadjr al-kiṣṣa al-miṣriyya*, Cairo 1962?, ʿAbbās Khiḍr, *al-Kiṣṣa al ḥaṣīra fī Miṣr mundhu nashʾatihā ḥattā sanat 1939*, Cairo 1385/1966; H. 3(a) In older Turkish literature

As a generic term, *kiṣṣa* in Turkish texts is often synonymous with story, tale (*ḥadīth*) and legend (*menḳabe*, *efsāne*). Fakīrī in 772/1367 calls his version of the romance of Farhād and Shīrīn [*q.v.*] a *kiṣṣa*; Meḥmed, writing in 800/1397, says that a copy which he found was old but the *kiṣṣa* (story) was new, and Sheykhī [*q.v.*], in the first half of the 9th/15th century, found the mere telling of a *kiṣṣa* (story) no longer sufficiently enjoyable (B. Flemming, ed., *Fakrīs Hosrev u Širīn*, Wiesbaden 1974, vv. 2915-26 and p. 240 f., S. Yüksel, ed., *Mehmed Işk-nāme*, Ankara 1965, v. 404, F. K. Timurtaş, *Şeyhī'nin Hosrev ü Şirin'i*, Istanbul 1963, v. 1563).

Narrative works in verse and prose dealing with epico-religious and heroic themes (see HIKĀYA, iii) were often called *kiṣṣa*, the term alternating with *destān*. This is true for the ʿAntar, Abū Muslim, Saiyid and Ghāzī Dānishmand stories (see NAMĀSA, iii) or the tales around *Kirāz i Ḥubbī* and Bahmān Shāh b. Firūz Shāh (see A. S. Levend, *Türk edebiyatı tarihi I Giriş*, Ankara 1972, 113, and KAHRAMĀNNĀMA) and Delhī Shāh and Dhemālī Perī (see H. Schwiedе, *Türkische Handschriften* Teil 3, Wiesbaden 1974, 276, no. 316); not a few tales still await examination.

The lives of holy men and great Ṣūfīs of Islam such as Ibrāhīm b. Adham [*q.v.*] were treated collectively in the genre called *tadhkira*, the most famous being the extensive Persian prose work *Tadhkirat al-awliyāʾ* by ʿAṭṭār [*q.v.*]. An early Turkish example is the *Tedhkire-yi evliyāʾ* adapted from the Arabic and presented to the prince of Aydın [*q.v.*], Muḥammad Beg, by an unknown author (MS Istanbul, Veliyüddin 2643).

In a more restrictive sense, *kiṣṣa* designated stories of the Prophets before Muḥammad, whose own life history gave rise to the *siyar* genre [*q.v.*], whereas events of the lives of members of his family inspired other books such as the *ghazawāt* of the caliph ʿAlī, the *mathālī* works commemorated miracles and happenings around the martyrs of the house of the Prophet, particularly his grandson Ḥusayn [see HAMĀSA, iii and HIKĀYA, iii], especially famous being the *Ḥadīkat al-suʿadāʾ* by Fuḍūlī [*q.v.*].

In the *kiṣṣa* some prophets were dealt with separately, such as Moses (*Kiṣṣa-yi Mūsā we Khiḍr*, see Levend, *op. cit.*, 126), and Solomon; such works being also known as *nāme* [see HIKĀYA, iii] the most voluminous of the *Süleymān-nāme* being the compilation made by "Uṣūlī" Firdewsī [*q.v.*]; Iskandar [*q.v.*] was also treated separately (see M. Götz, *Türkische Handschriften*. Teil 2, 161, no. 254 and ISKANDAR-NĀMA, iii).

Joseph or Yūsuf [*q.v.*] was a favourite hero of the histories of Prophets, his ascetico-mystical romance with Zulaykhā, based on the *Sūrat Yūsuf*, has been treated in many Turkish *mathnawīs* and prose works. The oldest appears to be the *Kiṣṣa-yi Yūsuf* by a certain ʿAlī, a work of uncertain provenance supposedly composed in the Crimea in 630/1232 (see N. Pekolcay, *Islami türk edebiyatı* I Istanbul 1967, 77 ff., Levend, *op. cit.*, 92, 125).

In Anatolia, Sheyyād Ḥamza wrote a *mathnawī* version (ed. D. Düçar, Istanbul 1946); ten Caghatay, Mamlūk, Āḏharbāydjānī, and many Ottoman versions see the list compiled by Levend, *op. cit.*, 128 sq., for 19th century Kazakh versions, see *Fundamentia*, ii, 744.

Collectively, the prophets have been dealt with in the *Kiṣaṣ al-anbiyāʾ* [*q.v.*], which made their appearance in Turkish literature in the 8th/14th century. In 710/1310 Nāṣir al-Dīn al Rabghūzī, working for a Mongol *amīr*, composed his Eastern Turkish *Kiṣaṣ al-anbiyāʾ* on the basis of a Persian version (facsimile ed. K. Grønbech Copenhagen 1948). Other Turkish authors consulted the Arabic *Kiṣaṣ al-anbiyāʾ* by al-Kisāʾī, the *ʿArāʾis al-madjālis* by al-Thaʿlabī and others (see K. Fraʾnkan, *Kisā'i'nin Beda'i u Dünyā ve Kıṣaṣı l-Enbiyā adlı eserinin İstanbul'daki tercümeleri*, in *TDED*, xviii (1970), 125-32, N. Hacıemiroğlu, in *TDED*, xi (1961) and xiii (1964), on an anonymous translation in the MS Bursa, Ulu Camı 2474, and A. Ateş, in *TDED* viii (1958), 93 f., on the Yozgat MS. of the translation made by Izniḳī (d. 833/1429-30).

In 987/1579 an Ottoman writer, Ḥindī Maḥmūd, composed a *Kiṣas-ı enbiyā*[3] [G. M. Meredith-Owens, *Traces of a lost autobiographical work by a reuriter of Selim II*, in *BSOAS*, xxxii/3 (1960)]. Later, more complex titles were used for the genre, such as *Muʾnis el safā fī aḥwal el-anbiyāʾ* written by Kara Çelebizāde (d. 1068/1656).

A highly esteemed educational *Kiṣaṣ-ı enbiyāʾ* written by the Ottoman statesman and historian Aḥmed Dāwūd Pasha [*q.v.*] as late as the end of the 19th century, in no less than twelve volumes, is evidence for the tenacity of the genre.

Bibliography In addition to the works cited in the article see the relevant articles in *Philologiae turcicae fundamenta*, ii, Wiesbaden 1965, F.

Babinger, *Die Geschichtschreiber der Osmanen und ihre Werke*, Leipzig 1927, *Istanbul kütüphaneleri tarih yazmaları kataloglarına. Türkçe tarih yazmaları*, Istanbul 1943 ff., J. R. Walsh, *The Turkish manuscripts in New College, Edinburgh*, in *Oriens* xii (1959), 175-89, esp. no. 2, F. E. Karatay, *Topkapı Sarayı Müzesi Kütüphanesi türkçe yazmalar kataloğu*, Istanbul 1961, F. 3(b). More recent Turkish literature.

After the *Muḥāyyelāt* of ʿĀṣīm ʿĀṣīm [*q.v.*] (1796), which form a transition between the old and the new, a series of translations, mainly from the French, followed some sixty years later, e.g. Fénélon's *Télémaque* as *Terǧeme-yi Telemaḳ* (1862), Victor Hugo's *Les Misérables* as *Maġdūrīn ḥikāyeti* (1862), Daniel Defoe's *Robinson Crusoe*, as *Ḥikāye-yi Robinson* (from the Arabic, 1864), followed by Bernardin de Saint Pierre's *Paul et Virginie* (1870), Voltaire's *Micromégas* (1872), Alexandre Dumas père's *Le Comte de Monte Cristo* (1873), Lamartine's *Graziella* (1878), Abbé Prévost's *Manon Lescaut*, Octave Feuillet's *Le roman d'un jeune homme pauvre* (1880) and many others. Except for the *Télémaque*, which was translated in a most flowery and ornate style, in the best Ottoman *inšāʾ* tradition, most of the rest were rendered in a comparatively simple language, not far removed from spoken Turkish. This translation movement as activity coincided with the emergence of the literary *Tanẓīmāt* school, and the first generation of modernist writers provided the early examples of Turkish short stories and novels in the modern sense.

1. The short story

The pioneer of the short story is the popular author Ahmed Midhat [*q.v.*]. Although he did not belong to the literary school initiated by Šināsī [*q.v.*] and his associates, and was looked down upon by them as a conservative in outlook, as informal in style and as lacking in technique, and was consequently unfairly judged, he was avidly read by the general public and youth intellectuals alike and greatly influenced the succeeding generation of writers as witnessed by many of them (see NUMAYN MAḤMŪD and MAḤMŪD DIYĀʾ). Ahmed Midhat published two collections of short stories *Ḥikāyeler* (1870) and *Letāʾif-i rivāyāt* (in 25 parts, 1870-93). His mostly romantic stories with an occasional touch of realism, some adapted from the French, became immensely popular and soon made the genre fashionable.

To this formative period belongs a collection of short stories in three volumes, the *Müšāʿereh-nāme* ("The Book of mirrors", 1872-3), inspired in structure, by Boccaccio's *Decameron*, and written by one Emin Bülend, a civil servant about whom we know almost nothing. These are entertaining stories of uneven value, a mixture of traditional narrative and the new approach. Different from Ahmed Midhat's works, the *Müšāʿereh-nāme*'s language and style vary in places from the ornate to the straightforward colloquial. A younger member of the *Tanẓīmāt* literary period, Sāmī Pasha-Zāde Sezāʾī [*q.v.*], is also reckoned among the pioneers of the modern Turkish short story. His modest output (two volumes, of which *Küčük šeyler* "Little things", 1308 Rūmī/1892), began the realist trend in the short story. He used a good technique and developed a tidier style and avoided ornate language. The great master of the Turkish short story is, however, Ḫālid Ḍiyāʾ of the *Ṭaṣvīr-i Fünūn* [*q.v.*] literary school, who perfected the genre, of which he made a study in his work *Ḥikāye* (1307/1891). Ḫālid Ḍiyāʾ, who tends in his novels to concentrate on the life of Istanbul upper and upper middle classes and to use a precious language, by contrast in his numerous short stories (collected in 20 volumes) describes mostly ordinary people of the middle and working classes, and uses a comparatively less ornate style. Among minor writers of the same school, the novelist Meḥmed Raʾūf and the critic and journalist Ḥüseyn Ḍjāhid [*q.v.*] also wrote short stories of uneven value. Two prominent writers who remained outside the *Ṭaṣvīr-i Fünūn* school, the novelist Ḥüseyn Raḥmī and the essayist Aḥmed Rāsim [*q.v.*] contributed realistic short stories which are vivid sketches of everyday life in Istanbul of the 1890-1920 period.

The restoration of the Constitution (July 1908) followed by the movements of Turkism (see TÜRKÇÜLÜK), Populism (*Ḫalḳcı degāʿa*) and the New Language (*Yeñi lisān*), sponsored by Ḍiyāʾ Gökalp [*q.v.*] and ʿÖmer Seyf ed-Dīn [*q.v.*], revolutionised the whole approach to narrative in Turkish literature. Most short story writers (and novelists) switched from the capital (Istanbul) to the provinces and made an attempt to introduce colloquial Turkish into literary language and secured, on the whole, elaborate psychological analysis for straightforward realism.

The prominent woman novelist, Ḫālide Edīb [*q.v.*], wrote realistic short stories mostly based on her own experiences or observations. ʿÖmer Seyf el-Dīn (1884-1920), who left ten volumes of short stories (posthumously collected in book form), led the reaction against the precious language of the *Ṭaṣvīr-i Fünūn* school and wrote in spoken Turkish stories on the reminiscences of his childhood or on episodes of Turkish history. A hasty writer, his easy, even facile language is not always polished. But his deliberately direct style, avoiding the "literary", established a new tradition in Turkish narrative. The outstanding essayist and political satirist Refīk Ḫālid Karay [*q.v.*], wrote his famous *Memleket ḥikâyeleri* ("Stories from the provinces", 1919), during his five years' exile in Anatolia. These stories on the types and customs of the villagers and provincial townspeople are told with a rare virtuosity of natural style and powerful realism unprecedented in modern Turkish literature.

Most novelists of the period (e.g. Y. K. Kara-ʿOṯmānoġlu, R. N. Güntekin, Peyāmī Ṣafā, etc.) also wrote short stories. But others excelled in the *genre*; Memdūḥ Šewket Esendal [*q.v.* in Suppl.], a politician and diplomat, wrote, at irregular intervals, stories which are different in subject matter, plot and style from the "classical" Maupassant-type stories of his contemporaries. F. Ḏiyāʾ el-Dīn, a psychiatrist by profession, left remarkable sketches and short stories, written in a very personal style, about eccentric types and harmless maniacs of Istanbul, against an authentic "local" setting of the Hüseyn Raḥmī tradition. They are character studies or sketches of the moods of ordinary people, with emphasis on women, written in spoken Turkish, without any elaboration or embellishment and imbued with human warmth and optimism. The

novelist Halikarnas Balıkçılı [q.v. in Suppl.] who belongs to the 1920s generation, but who published his work in the Republican period, after the age of fifty, wrote fascinating stories on the life and struggles of the sea folk of the Aegean.

The 1930s inaugurated a new era in contemporary Turkish literature, and witnessed the emergence of two prominent but very different story writers: Sabāh al-Dīn ʿAlī (also a novelist [q.v.]), who pioneered social realism, writing powerful stories on the true life experience and hardship of the village and small town communities of Anatolia. Saʿīd Fāʾik (1906-54), perhaps the greatest name in the Turkish short story, described, in his compelling stories and sketches, written in a forceful and romantic style, the life and milieu of the simple people: workers, fisherman, vagabonds, etc of Istanbul, based mostly on his personal experiences, with a deeply human touch. Ahmed Hamdi Tanpınar (*q.v.*), poet, critic and novelist, and adept of the neo-classicist Yahyā Kemāl (*q.v.*), wrote nostalgic evocative short stories where unresolvable psychological issues are the *leitmotiv*. The playwright and essayist Khaldūn Taner (b 1915) writes stories flavoured with humour and social criticism. Ilkhān Tarus (1907-67), a civil servant, described in his stories the intricacies of bureaucracy in the provinces.

In the 1940s, 1950s and 1960s, most novelists (e.g. Kemal Tahir, Kemal Bilbaşar, Orhan Kemal, Samim Kocagöz, Yaşar Kemal, etc.) also wrote short stories in which concentration is on the plight of the peasantry, provincial townfolk and suburban dwellers (see below). This is particularly true of writers of peasant origin (e.g. Fakir Baykurt, Talih Apaydın, etc.). Aziz Nesin (b 1915) the great humorous writer of unsurpassed popularity, has been writing innumerable stories and sketches where he uses his art to fight social evils and bigotry by ridicule. Oktay Akbal (born 1913) writes individualistic and romantic stories, mostly based on personal reminiscences, full of nostalgia for things past. Necati Cumalı (b 1921), poet, playwright and novelist, differs from most of his contemporaries in not concentrating on any one given theme, but writing stories on a variety of subjects in a warm and flowing style.

Contemporary short story writers dwell as a rule on the social, political, economic and cultural problems of Turkey, a society in rapid transformation, linking these to the personal problems of the individual. From several dozen names (some of them also novelists), the following stand out: Mehmed Seyda (b 1919), the poet S. K. Aksal (b. 1920), Yusuf Atılgan (b. 1921), Vahʾat O. Bener (b. 1920), Muzaffer Buyrukcu (b. 1928), Bilge Karasu (b 1930), Tahsin Yücel (b 1933) and Bekir Yıldız (b. 1933). Among women writers one notes Nezihe Meriç (b. 1925), Adalet Ağaoğlu (b 1929), Leyla Erbil (b. 1931), Pürüsan (b 1933) and Sevgi Soysal (1936-76) who dwell on the problems of women of all classes in present day Turkey.

2. The novel.

The outstanding lexicographer and scholar Shems al-Dīn Sāmī (*q.v.*) wrote the first Turkish novel in the modern sense: *Taʿashshuk-i Talʿat we Fitnat* (1872). This is a love story used as a background to criticise the traditional marriage custom, marriage of partners unknown to each other. Nāmik Kemāl (*q.v.*), the great poet and patriot of the *Tanzīmāt* school, experimented with a romantic (*Intibāh*, 1876) and a historic (*Djezmī*, 1880) naval. One of his younger colleagues, Sāmī Pasha Zāde Sezāʾī (1860-1936), wrote an anti slavery novel (*Sergüzasht*, 1889), while another, Redjāʾī Zāde Ekrem (*q.v.*) produced a social satirical novel (*Araba sewdāsī*, "Devotees of the *hansom cab*", 1889, published 1896), which is a forerunner of later novels where the "westernising snob", the blind imitator of European manners and customs, is ridiculed (see below); and Nābī Zāde Nāzim (1862-93) wrote examples of realist novels (*Kara Bebik*, a long short story, 1890, and *Zehrā*, 1895).

Outside this literary school of the "élite", the most important representative of the genre was the prolific popular writer, publicist and journalist Ahmed Midhat who flooded the post-1870s period with several dozen novels on subjects of all types: adventure, history, social satire, science fiction, realist and naturalist narrative, etc. He owes a great deal of his narrative technique, his dialogue and his handling of episodes to the traditions of Turkish popular art and literature (i.e. *Karagöz*, the *meddāh*, the *pulʿat* technique in the *Orta oyunu* and folk tales of various kinds), and also to the French novels of adventure. Many of his novels, particularly *Hasan Mellāh* (1873), *Hüseyn Fellāh* (1873), *Süleymān Mujīl* (1876), *Hırsız ve yahūd yanşlında* (1882), *Dündāne Ḥākim* (1882), were enormously popular and read avidly by generations of readers of all classes until the 1920s. His novel *Efelīlōn Bey ile Rākīm Efendi* (1896), pioneered a series of novels which satirise the *alla franca* way of life of Istanbul snobs.

In the following period of the *Tarwīt-i Fünun* school, the great representative of the novel is Khālid Diyāʾ. Although as a boy writer, like most of his contemporaries, he greatly admired Ahmed Midhat, there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment even in his early novels of the formative period, which were romantic love stories with some elements of realism. He completely broke with traditional methods of story-telling and developed a well-disciplined narrative technique where there is no room for irrelevant digression or asides to the reader. Khālid Diyāʾ perfected this technique in his later novels (e.g. *Māʾī ve siyāh*, "Blue and black", 1897, and *ʿAshk-i memnūʿ* "Forbidden love", 1900), inspired mainly by the method and style of the French realists. His works remained the best examples of realism in Turkish literature until the mid 1930s. The setting and characters are often chosen from the upper and upper middle classes of Istanbul, the type of people with whom he came into direct contact during the strict Hamidian régime. He chose, in his novels, to write, like most of his colleagues of the movement, in an extremely precious and artificial language, thus deviating from the trend of the first generation of modernists (the *Tanzīmāt* writers) who had made an attempt to create a style which could be understood by a larger audience.

As Khālid Diyāʾ dominated the scene in prose, minor writers were hardly noticed. One of them, Mehmed Raʾūf (1875-1935), a naval officer, wrote a (probably autobiographical) novel, a poignant story of desperate love: *Eylül* ("September", 1901), which is the only work still remembered of his dozen novels.

Hasan Rahmi, who did not join any particular literary group, began his career during the time of the *Tarwīt-i Fünūn* movement, and remained one of the most popular novelists from 1890s until the late 1920s. At the beginning, he followed in the steps of his master Ahmed Midhat, but he gradually pol-

ished the elements taken from Turkish popular arts and adopted them to his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly of Maupassant and Zola. With his accurate observations of the life and types of Istanbul lower and lower-middle class families in the period approximately 1850-1920, his penetrating analysis of the burning social problems of his time and his acute sense of humour and satire, Hüseyn Rahmi is perhaps the most original of all Turkish novelists. Like his prominent contemporary the essayist Ahmed Rāsim (q.v.), his work is of great documentary value. He studied meticulously the everyday life of families and individuals and their development within disintegrating Ottoman society and all the social problems arising from the impact of Western ideas and customs. His best novel, *Shāpsevdī*, "Always in love" (written and partly serialised in 1901, published in book form 1911) is a further development of the theme already treated by his predecessor and himself: a character study of the "Westernising snob".

During this period, two works were the pioneers of the so-called "village novel" (*köy romanı*) which was to develop during the Republican period: Nabī-Zāde Nāzim's long short story *Kara Ibishi*, already mentioned, and Ebūbekir Hāzim Tepeyran's (1864-1947) *Kulāk Pasha* (1910), which describes life in a central Anatolian village during the last decade of the 19th century.

During the post-1908 era, with the freedom of the press restored and in the midst of warring ideologies (Ottomanism, Pan Islamism and Turkism), we see that most writers of the young generation gather around a new trend called "National literature" (*Millī edebiyyāt*), led by the sociologist and guiding spirit of the intellectuals of the epoch, Diyā' Gökalp and his associates (particularly 'Ömer Seyf el-Dīn, see above). In this period, the prominent woman writer Khālide Edīb's early novels have considerable autobiographical elements, and with their passionate, independent, strong-willed heroines, outline the author's ideal of the emancipated Turkish woman. Under the impact of the Pan-Turkish-movement, she wrote *Yeni Türān*, 1912, and her contemporary colleague, a minor woman writer Müfide Ferīd (Tek, 1892-1971) followed her example with a similar novel *Aydemir*, 1918). However, Khālide Edīb later rejected this ideology and espoused the new nationalism of the resistance movement in Anatolia which she joined in April 1920. She wrote novels on the national struggle and life in Anatolia, based on personal experiences as observations (e.g. *Ateshten gömlek*, 'Shirt of fire", 1922; *Vurun kahpeye* "Strike the whore", 1923). During her long exile abroad (1925-39) and after her return to Turkey, she continued to write, mainly period novels. Already by 1930 the approach to the novel was beginning to change (see below). Khālide Edīb's prominent contemporary, Ya'kūb Kadrī Kara 'Othmanoghlu (1889-1974 [q.v.]) the most powerful novelist of his generation, excelled in studies of periods and institutions. In a series of novels he described the disintegration of a family caught between the old and the new: towards the end of the Empire (*Kiralik konak*, "Mansion to let", 1922); life in a convent of the decaying Bektāshī order of dervishes (*Nür Baba*), party strife in the post-1908 period (*Hüküm gedjesi*, "The night of the judgment", 1927), life is occupied Istanbul in the early 1920s (*Sodom ve Gomôre*, 1928), a poignant description of the gap between an educated man and the peasants (*Yaban*, "The stranger", 1932), a pioneer "village novel", the life of a young Turk exile in Paris (*Bir sürgün*, "An exile", 1932), etc. He also experimented with a *roman-fleuve*, covering the second and the third decade of the Republican era (*Panorama*, 2 vols 1953-4).

The humorist and essayist Refīk Khālid Karay is the author of some twenty novels, mostly of mediocre literary value, except for the first, *Istanbulun iç yüzü* (1920, Roman script edition as *Istanbul'un bir yüzü*, 1939). This is written in the form of a diary and is a series of masterly sketches of Istanbul 'society' between 1900 and 1920, in which the tart vestiges of the *ancien régime*, the influential magnates of the all-powerful Committee of the Union and Progress and the degenerate *nouveaux-riches* of the war years are depicted with brilliant, merciless sarcasm. Feyāmī Safā (1899-1961), a self-taught writer, produced in the early 1920s novels which described various characters of the changing Turkish society, emphasising the clash between the traditional and the new (e.g. *Sürde bitlar*, 1922, *Makber*, 1924, *Fatih-Harbiye*, 1931), later he studied cases of psychological stress and crisis and also supernatural phenomena. His partly autobiographical *çamur hamziye tokatı* ("External ward No. 9", 1936) is one of the best examples of the psychological novel in Turkish literature.

The best seller of the early 1920s was *Calikushu* (1928, Eng. tr. *The autobiographs of a Turkish girl*, by Sir Windham Deeds, 1950) by Reshād Nurī Güntekin (q.v.), who published several similar novels (e.g. *Akşam güneşi*, 1926, Eng. tr. *Afternoon sun*, by Deeds, 1951). These were sentimental romances mixed with realistic observations of Anatolian life. With the publication of *Yeshil sedje* ("Green night", 1928), where the influence of religious fanaticism in Anatolia is studied, Reshād Nūrī changed his manner and wrote a series of novels dealing with social change brought about by the reforms of the 1920s, (e.g. *Yaprak dökümü*, 1930) Güntekin perfected the literary language based on spoken Turkish initiated by 'Ömer Seyf el-Dīn and was recognised as one of the masters of modern Turkish prose until the middle of the 1930s, when a profound transformation of the language, style and literary taste began to take place.

The early generations of novelists of the Republican era inaugurated a new approach to the novel which began in the 1930s, and gathering momentum in the 1940s, matured in the 1950s and 1960s. For the majority of contemporary writers, the novel is only a vehicle to convey ideas, to prove a point and to discuss the burning problems of modern Turkey. Except for sporadic cases, for nearly forty years novelists have been concentrating mainly on the following themes:

(1) The background and various episodes of the War of Liberation; (2) The plight of the villages and provincial townspeople, (3) The struggle of the peasants against exploiting land owners and corrupt bureaucracy, (4) Unemployment in the villages, and peasant migration to labour areas (cotton fields, etc.); (5) The peasant migrations to the cities in search of work and its consequences; (6) Peasants turned brigands as a result of gross injustice; (7) The problems of the peasant populations of the shanty-town (*gecekondu*) in city suburbs, (8) The problems of illiteracy and educating children (particularly girls) in villages, (9) The influence of religious exploitation on the masses in villages and towns, (10) The plight of peasant migrant workers in Europe,

particularly Germany; (11) Problems arising from long-sojourn of Turkish worker-families in Europe; (12) The exploitation of the defenceless citizens by the *nouveaux-riches* business classes in the cities; (13) The ravages of partisan politics in villages and provincial towns; (14) The problems of women in general and working women in particular, etc.

In short, all the problems of a rapidly developing and industrialising, once mainly rural, society where a population explosion and a universal yearning for better living defy the dexterity of all government. The days of the "art for art's sake" principle of the *Thervet-i Fünun* days are left far behind: the contemporary Turkish novelist has no time or leisure for telling stories of personal woes.

Leading names of the modern period are: the pioneer Şâhâb al-Dîn ʿAlî (1907-48), already mentioned) whose novel *Kuyucaklı Yusuf* ("Yusuf from Kuyucak", 1937) is a masterly description of life in a small western Anatolian provincial town at the beginning of the century; Orhan Kemal (1914-70), who wrote with a warm and deeply human style the epic of the Turkish "little man"; and Kemal Tahir (1910-73 [*q.v.*]), who spent long years in Anatolian prisons where he collected his material on a series of novels on the life and problems of the central Anatolian peasantry and small town communities. He also wrote several period novels on episodes of early and modern Turkish history. Further, Sabahattin Kocagöz (b. 1916) wrote on the peasant landowner relationship in the Aegean area and also related episodes of the Anatolian resistance movement; Yaşar Kemal (b 1922) excels in describing, with an epic style inspired by Turkish folk tales, the life and struggles of the peasantry in the Adana area, and Fakir Baykurt (b 1929), of peasant origin himself, describes the life and problems of southern Anatolian villages, etc. [The majority of short story writers cited above are also known as novelists, and most of them should be counted in this category.]

Outside this category, there are novelists who belong to previous generations but who published their work in the 1930s or later. The short story writer Memdûh Şevket Esendal (1883-1952), published a remarkable novel *Ayaşlı ve Ankaralar* ("The man from Ayaş and his tenants", 1934), a powerful study of a group of disparate types during the early years of the new capital, Ankara. Midhat Cemâl Kuntay (1885-1956), a minor epic poet and biographer, wrote a single novel, *Üç İstanbul* ("Three Istanbuls", 1938). Planned as a period novel, it is rather a series of loosely-connected sketches on the life and character of Ottoman society and government in Istanbul during the period of decay and disintegration of the Empire (1850-1926). It is a fascinating panorama of events and of personalities, Ottoman, Levantine and foreign, told with a personal, elaborate and, in places, precious style. ʿAbd al-Hakk Shinâsî Hişâr (1883-1963 [*q.v.*]), who published some poems and critical essays in the 1920s, produced his first novel in 1941 at the age of fifty eight, *Fahim Bey ve biz* ("Fahim Bey and our family"), a powerful character study of an Istanbul type at the turn of the century, an inefficient civil servant turned businessman. After the great success of this novel, Hişâr wrote several others, all in an anachronistic style which nostalgically evoke the Istanbul of 1900. Lastly, the unusual writer Halikarnas Balıkçısı the famous exile of Bodrum (Halicarnassus), must be mentioned, who produced his first novel at the age of sixty (*Aganta, Burnu, Sarnıaz*, 1946) and devoted his entire work to the epic of the sea and seamen of the Aegean.

4. In Persian literature.

In Persian the term *ḳiṣṣa* (together with its approximate synonyms *ḥikâyat afsâna*, *dâstân*) covers a number of different literary forms, and while this article must be concerned primarily with the modern application, it is also true that the more traditional manifestations have had some influence on recent developments. One of the earliest uses of the term seems to have been in the sense of "biography". Examples of this range from the *ḳiṣaṣ al-anbiyâ'*, the title given to a number of works, of which one of the earliest and most popular is that by Mawlânâ Muḥammad Nîshâpûrî, said to have been written in 352/963, containing biographies of the prophets from Âdam to Muḥammad, to, at the other extreme, the *ḳiṣaṣ al-ʿulamâ'* written by Muḥammad b. Sulaymân Tunukâbunî in 1239/1823 and consisting of accounts of leading Shî'î divines, in which frequent reference is made in E. G. Browne, *Literary history of Persia*, iv, 354-449 *passim*. A condemnation of this work was published in 1941 by Muḥammad ʿAlî Djamâl-zâda under the title *Ḳiṣṣa-yi ḳiṣṣa-hâ*.

A second group includes pseudo-biographical works of a largely fictional nature. A classic example of this *genre* is the *ḳiṣṣa-yi Ḥamza* or *Ḥamza-nâma*, the hero of which was a contemporary of the Prophet Muḥammad and the story of whose exploits is said to have been commissioned by a namesake who led a rebellion in Sîstân at the end of the 2nd/8th century. The story is extant in a number of versions, some parts of which, judging from their style, may well go back to the 3rd/9th century. Another example in a slightly different class is the *Bakhtyâr-nâma*, the account of the deeds of a putative descendant of the legendary hero Rustam, said to have been a contemporary of the Sâsânid monarch Khusraw Parwîz, the earliest surviving version of this is the *Râḥat al-arwâḥ*, composed (in prose) by Shams al-Dîn Muḥammad Dabâyîdjî Marwazî in the 9th/12th century.

From this phase we move by a natural progression to the traditional romance with few or no historical or religious overtones. Some of these are by known authors—ranging from the famous *mathnawîs* of classical poets like Nizâmî, Amîr Khusraw Dihlawî and Djâmî, retelling the stories of Layla and Madjnûn, Khusraw and Shîrîn, Yûsuf and Zulaykhâ, and so on—to the works of lesser or otherwise unknown writers, like Fakhr al-Dîn Gurgânî's *Wîs u Râmîn*, ʿAyyûḳî's *Works on Gulâhâ*, or the prose version of *Samak-i ʿAyyâr* by Barkamar b. Khudâdâd, all these dating from the 5th/11th century. Many such romances have been handed down orally in more or less corrupted versions, until they finally achieved permanence in manuscript or, most recently, in "chapbook" form. Characteristic examples are the stories of Husayn-i Kurd, Bahrâm and Gulandâm, Hâtim-i Tâ'î, Shîrîn-u Farhâd and Khusraw-u-Mariyam,

Malik Djamshid, Nashat-yi Shirazi and Nush-afarin. Many of these must be of considerable antiquity, while others (for instance, the story of Amir Arslan, known to have been composed, though doubtless on a foundation of traditional material, by Nasr al-Din Shah's storyteller, Mirza Muhammad 'Ali Naqib al Mamalik, during the second half of the 13th/19th century) are comparatively recent. Such stories, often qualified by such epithets as *shirin, shirin-i-dastan*, are part of the stock-in trade of the *nakkal* or *kissa-gu*, both professional and amateur, who provide entertainment alike for the chiefs of coffee-houses, the children of private households, and the peasants of rural villages. In a similar tradition are the humorous anecdotes of Mulla Nasr al-Din and Molla Buhlul-i 'Akil, whose Iranian versions have not yet been given the attention they have received, for instance, in the Turkish folk-literature area. This vast reservoir of oral narrative, which in addition to the long romances provides innumerable examples of every category of folk-tale —animal tales, fairy stories, tales of magic, moral and satirical anecdotes—has been sadly neglected in the past (in spite of early collections like *Kalila wa Dimna*, *Marzban-nama*, *Sindbad-nama*, *Djawami' al-hikayat* and *Riyad al-hikayat*), and it is only within the present century that serious attempts have been made by scholars and anthropologists, both privately and officially-sponsored, to collect and preserve this treasury of popular literature.

This neglect may account for the fact that when the art of story-telling and novel-writing was revived on the literary level during the early years of the present century, models were sought not in Iran's own literary tradition but rather from the flourishing ateliers of Western Europe. Indeed, it is significant that the Persian language does not yet have a word for "novel", but still uses the French *roman* (*ruman*). In making this judgment, we are consciously leaving out of account such works as *Ru'ya yi sadika* (1900), *Maralik al-mukasirin* (1903), and *Siyahat-nama yi Ibrahim Bayg* (1903-9), since the story element in these is subordinate, the primary purpose of the semi-anonymous authors being to expose social and political abuses in pre-Revolution Iran through the medium of a fictionalised travelogue. The authors of the first novels proper may indeed have had similar motives in setting their tales in remote historical periods, but the European influence is unmistakeable, not only in the clear debt owed to the historical novels of such writers as Alexandre Dumas (several of which had been translated into Persian), but even in the use of European forms of Persian names from the Achaemenid and Sasanid periods. Among the more noteworthy of these novels are the trilogy by Muhammad Bakir Khusrawi, *Shams u Tughra*, *Mah-i-Wirtis* and *Tughrul u Humay*, published in 1909-10, three independent novels whose common link is their single hero and their setting in the period of the Mongol invasions of the 7th/13th century; another trilogy by Shaykh Musa Nathri, *Yahya u sallasani*, *Sitara yi Iskit* and *Sargudhasht-i Shahzada Khanum-i Babuli*, published in 1919, 1924-5 and 1932-3 respectively, and set in the reign of Cyrus the Great, *Dastan-i Bastan*, by Hasan Badi', the Achaemenid background of which is a mixture of elements drawn indiscriminately from the *Shah-nama* of Firdawsi and the works of Herodotus, and a long series of works by 'Abd al-Husayn Sani'at-zada Kirmani, beginning with *Damgustaran*, a two-volume novel published in 1921 and 1926 and set in the period of the rebellion of Mazdak and the fall of the Sasanid dynasty, and continuing with stories from such widely separated historical periods as the reign of Shapur the Great (*Dastan-i Mani-yi nakkash*, 1927), the rise of the Sasanid dynasty (*Salshakur*, 1933), the overthrow of the Umayyad dynasty by the 'Abbasids (*Sayih falakan*, 1944), the reign of Nadir Shah (*Nadir, fatih i Dihli*, 1936), and even the science-fiction future (*Rustam dar sarn-i bist u duwwum*, 1935). Most of these works are noteworthy as pioneering efforts rather than through intrinsic literary value. Their language is literary, and even in the dialogues shows little attempt to adjust style to speaker, let alone to use colloquialisms, they are discursive and rambling, and historically full of inaccuracies and anachronisms. Their inspiration comes from the romantic historical novel of 19th century Europe rather from any native source. If they do reflect any particular society, it is rather that of the writers themselves, and in this respect at least the novels throw interesting light on contemporary Iran.

However, the popular success of these early works encouraged many other writers to follow their example, and a long list of such books, of varying merit, have appeared and continue to appear up to the present day. A fairly comprehensive list will be found in Kamshad's *Modern Persian prose literature*, 52-3, and it is sufficient here to mention a few of the outstanding names. The list includes a number of recognised scholars—Sa'id Nafisi, Yahya Karib, Rida-zada Shafak, Dhabih Bihruz—whose writing is marked by a greater attention to accurate detail than some of their rivals, like 'Ali Djalali, Rahimzada Safawi, Husayn Masrur, Haydar 'Ali Kamali Djawad Fadil, Shirazpur Partaw, and others whose novels show almost a tendency to revert to the style of the popular romances. Few writers have ventured into the field of contemporary history. A notable exception is Husayn Rukn-zada Adamiyyat's *Daliran i Tangistan*, first published in serial form in 1931 and recounting as episode in the southern tribal disturbances during the first World War, though it appeared a year or two later in book form, it was subsequently suppressed and only reappeared after the abdication of Rida Shah.

However, although contemporary history was too dangerous a subject for most writers, this did not apply to general social criticism, which indeed was quite consonant with the reforming mood of the years of Rida Shah's reign. The theme that attracted most attention, partly perhaps because of the opportunities it offered to less talented and scrupulous writers to exploit sensationalism, was that of the position of women in traditional Iranian society. One of the first novels to take up this subject was Mushfik Kazimi's *Tehran-i makkar* (1922), a somewhat rambling work woven round the subject of true love thwarted by family greed and social custom. Like a number of his successors, Kazimi devotes a good deal of space to the discussion and description of prostitution. 'Abbas Khalili, Rabi' Ansari and Djahangir Djalili are other writers of this period who base their criticism of social conditions and the frustrations of youth on the oppression and in particular prostitution of women. The chief merit of these works is the light they throw on Iranian society, particularly of the middle class, under the impact of modernisation and western influences. Otherwise their style is rambling and discursive, with frequent digressions into moralising, while the language is still literary and ponderous.

A few writers of this category deserve fuller

mention. Muḥammad Mas'ūd (Dihātī), who was assassinated in 1947 in consequence of his editorship of an outspoken and often slanderous newspaper, *Mard-i sharīf*, wrote a trilogy in 1932 4—*Tafrīḥāt-i shab*, *Dar talāsh-i ma'āsh* and *Asrār-i makhlūqāt*—in which he draws on his own experience of lower middle class life in the provinces and Tehran. These novels were variously praised for their frankness and condemned for their pessimism and ribaldry. A later unfinished trilogy—*Guftār-i ān dar ghahanmān mīrāyad* (1942) and *Bahār-i 'umr* (1946)—is in the same vein, but shows a greater degree of maturity and objectivity. 'Alī Daghīī is also well known as a journalist and politician, and in addition has achieved distinction as an essayist and literary historian and critic. He earns mention here, however, for his three novels *Fitna* (1943), *Dzādī* (1952) and *Hindū* (1955). Like the others, these take the position of women in society as their central theme, but here it is the women of the upper classes that are under the microscope, and Daghīī's work has been criticised for its concentration on a rather narrow and repetitive stratum of Iranian life. His language, while no better suited to his subject than the others, is enjoyable for his skill in the handling of words and for his admittedly sometimes rather forced employment of Arabic and European terms. Muḥammad Ḥijāzī is noted for a series of novels—*Hume* (1947), *Parīlāh* (1950), *Zībā* (1956-58), *Parwāna* (1952) and *Sirāḥ* (1953)—which also, as the names of the first four imply, have a woman as the central character. Ḥijāzī's view of middle-class society, however, is less satirical and caustic than those portrayed by Daghīī and Dihātī, and sentimental philosophising expressed in high-flown language plays a greater part. Ḥijāzī may also be regarded as one of the pioneers of the art of the short story, which during and since his time has tended in Iran to overshadow the full-length novel, perhaps because of its conciseness and discouragement of diffuseness and prolixity. Ḥijāzī's many short stories are buried in some half dozen collections of essays and sketches, notably *Āyina*, *Andīsha*, *Nusīm*, published at intervals over the period 1932-80. Other novelists who deserve mention include Mahdī Ḥaerīdī, for his three-part novel *Yāh-i dar-ḥ-dar* (completed in 1940), though he is better known as a poet, Fakhr al-Dīn Shādmān for his *Tārīkī ou rawshnā'ī* (1950), and 'Alī Muḥammad Afghānī for his two encyclopaedic novels *Shawhar-i Āhu Khānum* (1961) and *Shādhmān-i ḥarra yi Kara-ká* (1966), the first of these being hailed at the time as a major breakthrough for the Iranian novel, though apart from its length it cannot be regarded as more than a worthy continuation of the tradition set by its predecessors mentioned above.

The true innovators are rather to be found in the field of the short story, and here the first name to be mentioned is that of Muḥammad 'Alī Djamālzāda, whose first collection appeared in 1921 under the title *Yakī būd o yakī nabūd*. The title itself is indicative of a new approach to the art of story-writing, for it is the conventional phrase used to open the traditional folk-tale ("Once upon a time"). In fact Djamālzāda's stories do not owe as much to folk-literature as this might suggest, though at least one of the six in this collection takes its basic plot from a well known folk tale (*Dāstān yi Khāla Khīrza*). His contribution to the development of Persian prose lay rather in his insistence on the importance of using language that the ordinary people can understand, and although he does not go quite so far as to employ colloquial and dialect forms, except occasionally, his writings are nevertheless a rich mine of idiomatic and proverbial expressions. Indeed he has been criticised for using this stock rather in the manner of a card-index, instead of attempting to reproduce the tones and rhythms of common speech. Djamālzāda, like most writers of his time, indulges in social criticism; but the effectiveness of this is largely discounted by the author's long residence abroad and his consequent ignorance of present-day conditions. After his first volume of stories, Djamālzāda published nothing more for twenty years, but then there followed four more volumes of short stories, *'Amū Hasan 'Alī* (1942, extensively revised as *Shāhkār*, 2967), *Talkh u Shīrīn* (1955), *Ghayr az Khudā hīchas nabūd* (1961), and *Āsmān u Rīsmān* (1964), and six novels, *Dār al-majānīn* (1942), *Sahrā-yi mahshar* (1944), *Kulthūm-i 'amū* (1945), *Rāh i-ib-nāma* (1947), *Ma'shama-yi Shīrāz* (1953), and *Sar u tah-i yak karbās* (1955). Djamālzāda's literary life of more than forty years has assured him a high place in Iranian literary history, even though the momentum of his original incursion into the field was not maintained in his subsequent writings.

The credit for changing the direction of Persian prose writing must go rather to a somewhat younger man whose literary career lasted only half as long, as well as to others who associated with him or followed his example. Ṣādiḳ Hidāyat's [*q.v.*] first published work dates from 1923, when he was only twenty, but his contribution to story telling began in 1930 when, shortly after his return from studying in Paris, he published *Zinda bi-gūr*, a collection of eight short stories. The next four years marked the first fruitful period of creative writing, during this time he was the leader of a group of friends known to themselves and others as the *Rab'a*, the "Group of Four", who included in addition to Hidāyat himself Mas'ūd Farzād, with whom in 1934 he collaborated on a volume of satirical sketches (*Wagh wagh sāhāb*), Mudjtabā Minwī, with whom he wrote an historical drama in three acts (*Māzyār*, 1933), and Buzurg 'Alawī the only other member of the Four to achieve distinction as a writer of fiction (the other two had noteworthy careers as scholars). From Hidāyat's pen came two volumes of short stories, *Sih katra khūn* (1932), *Sāya yi rawshan* (1933), and a short novel *'Alawiyya Khānum* (1933), as well as a satirical play, *Afsāna-yi Āfarīnash* (written in 1930 but not published until 1948), books and articles on literary topics, folklore and magic, and translations from French. The range of this output shows the lines along which Hidāyat was developing. Like Djamālzāda, he wanted to write in the language of the people; but he achieved this not by having at his elbow a stock of idiomatic expressions, but through an ear well-attuned to the speech of his contemporaries, particularly those of the lower social classes. Moreover, he did not confine himself to any one milieu or class, but wrote with equal insight of all, though his sympathies were always with the underdog. This period in his writing culminated in an astonishing work, *Būf-i kūr* (not published until 1937, and then only in a privately duplicated edition in India—full publication had to wait until 1941). So much has been written about this essay in surrealism that it would be futile to attempt to add anything here, and it is sufficient to say that this one work has established Hidāyat as a writer of international calibre.

After the change of régime in 1941, Hidāyat began

to write fiction again (the intervening six years had seen only a handful of literary articles and some translations from Pahlavī), and by 1947 he had published two more collections of short stories (*Sag-i wilgard*, 1945, and *Wilangārī*, 1944), a novel (*Hādjādji Ākā*, 1945), and two long stories (*Ab-i zindagī*, 1944, and *Fardā*, 1946), as well as a quantity of articles and translations. The work of this period shows a greater awareness of political questions and even for a time a degree of optimism quite out of character with the prevailing trend of his writing. However, this mood was not to last. In 1947 he wound up his fiction writing with a searing and in places scurrilous satire on Iranian society, cast in the form of a mock history of the Pearl Cannon that used to stand in the centre of Tehran and served as a point of pilgrimage and petition for the uneducated women of the city (characteristically, the manuscripts of this work, which has never been published, carry the "spoonerised" "bylins" Hādī Sidīkat). Also possibly from this period, though probably earlier, is another unpublished and undated work, *al-Bi'that al-sidmiyya ilā 'l-bilād al-afrandjiyya*, a satirical account of a fictional Muslim mission to Europe, in which he takes the opportunity to lampoon typical figures in the religious and political establishment. Four years later Hidāyat died in Paris by his own hand.

His close friend and colleague, Buzurg ʿAlawī, though sharing many of his aims and ideals, differed from him in a number of respects. He took less interest in literature and folklore, and was more deeply influenced by Freudian psycho-analysis and Marxist political theory. This latter enthusiasm led to his imprisonment in 1937 and to prominence in the newly formed Tūda Party after his release in 1941. Prior to that experience he had written only one volume of short stories (*Čamadān*, 1934), apart from a single story contributed to the volume *Aširān* (1931), one of the other two contributors to which was Hidāyat. In 1941 he published a second volume of short stories (*Warsā-pāra hā-yi zamān*), and in 1952 a third collection (*Nāma hā*) and a novel (*Čašm hā-yash*). In 1953 he left Iran for East Berlin, whence his output of fiction has been negligible. The fact that his reputation stands as high as such a small foundation is a tribute to the quality of his writing, which shows a strong sense of realism and a profound understanding of character.

The "school" of writing started by the *Rab'a* attracted a number of imitators and followers, some of whom achieved status as independent writers. Among these must certainly be mentioned Sādik Čūbak and Djalāl Āl-i Ahmad [*q.v.* in Suppl.]. Čūbak's reputation was established with his first book of short stories, *Khayma-i shabbāsī*, published in 1945, and this was followed by a second collection, *Antarī ki lāyiyash murda bād* (1949). Like his colleagues, he is interested primarily in the lives and characters of members of the lower classes, and he depicts these with a strong sense of realism, which often leads him to use expressions and idioms that shock his elders. He is also one of the first writers to use colloquial language freely throughout. His second volume of short stories was followed by more than ten years of silence, but in 1963 he published a novel, *Tangsīr*, set in the Tangistān area of his home province of Fārs, which gives a vivid picture of the provincial and tribal life of the south of Iran. Two more volumes of short stories followed, *Rūz-i awwal-i bahr* (1965) and *Čerāgh-i Āḫīr* (1966), and finally (for so far nothing else has appeared) in 1967 a long kaleidoscopic novel, *Sang-i ṣabūr*, written mainly in dialect, and with passages in dramatic dialogue form introducing characters from history, poetry, and so on.

Djalāl Āl-i Ahmad, who died in 1969, has a wider range of writing than Čūbak, being interested in sociology, folklore, and political questions, on all of which subjects he wrote articles and books. In the field of story-writing he has four volumes of short stories, *Dīd u bāzdīd* (1945), *Az rangī ke nībarīm* (1947) *Sitār* (1948), and *Zan-i zīyādī* (1952). A further five stories were published posthumously under the title *Panǧ dāstān*. He also published four novels or long stories, *Sargudhasht-i Kandū hā* (1954), *Mudīr-i madrasa* (1958), *Nūn wa 'l-kalam* (1961), and *Nafrin-i zamīn* (1968). Āl-i Ahmad's sociological interests show clearly in much of his work, but this is not a criticism of his writing, which is concise and economical, allowing his characters to develop in their own words (which are usually in their colloquial form) rather than through the author's description. Other writers who may be considered as having been influenced by the same school of writing include Muḥammad Ḥidjāzī (Bīt-Āghtn), Ibrahīm Tūlistān, Ihsān Tabarī, Raḥmat Muṣṭafawī, Sharīf-zamādārī (Darwīsh), and Djalīl Āl-i Ahmad's widow Simīn Dānishwar.

The interest in folklore shown by Sādik Hidāyat was shared by other writers, some of whom could indeed claim to have preceded him, for instance, Amīr Kull Amīnī, Kāhī Kirmānī, and Ṣubḥī Muḥtadī. Only the last-named, however, ventured briefly into the field of original fiction, with a short novel in folk-tale form, *Hadjdjī Mullā Ẓulf ʿAlī* (1947). The two threads rejoined in the writings of Ṣamad Bihrangī [*q.v.* in Suppl.] and Ghulām Ḥusayn Sāʿīdī. Both these writers, born in Tabrīz, use the folk-tale form as a medium for allegorical works commenting on contemporary social questions. Bihrangī, who was drowned in 1968, is the author of a series of ostensibly children's stories, all published between 1966 and 1969, of which mention may be made of *Ūldūz wa huldjī hā*, *Kalak-i khūr-hās*, *Afsāna-yi mahabbat*, *Māhī ya ziyāh-i hātūlī*, and *Kūrughlū wa Kalak-i Ḥasan*. A posthumous collection of short stories, *Talkhūn*, was published in 1970. Sāʿīdī, who writes his fictional work under the pseudonym Gawhar-i Murād, is best known for his plays, mimes and film scripts; his short story collections include *Ādjna-hā-yi ghayr-i Kayy* (1953), *Shab-nishīnī-yi Mashhad* (1960), *Dandil* (1966), *Wāḥima hā-yi Ḥasīm-ūmghān* (1967), *Tors u dz* and *Tāp* (1968). Like Āl-i Ahmad, he is interested in sociology, and is the author of a number of monographs. Other writers in this category include Sādik Humāyūnī, Djamāl Mīr-Ṣādikī and Shāpūr Karīm.

The latest phase in fiction-writing shows a trend towards a more introspective approach, perhaps encouraged by current political and social conditions, which are felt to preclude open discussion of current questions. The writers of this category choose a somewhat obscure and allusive mode of expression, which leaves the reader free to make his own interpretation; they are also more concerned with inner feelings and psychological states. One of the first writers in this vein was Taki Mudarrisī, whose novel *Yaklīlyā ou tawhīd-i ṣ* appeared in 1956. This was followed in 1966 by *Sharīf Dīdn*, a novel of the 1930s. Bahman Farsī is known chiefly as a playwright, but his collection of short stories, *Zir-i dandān-i sag* (1964), attracted favourable notice. Two poets, Mahmūd Kiyā-Nūgh and Mahmūd

Tayyāri, are also known as story writers. Two other writers deserve special mention. Hūshang Gulshīri for his three novels *Shāda Ibtidāʾī* (1968), *Kristāl wa Kāh* (1971), and *Maṣṣām-i dawrawn* (1972), and Nādir Ibrāhīmī, who since the late sixties has published a steady flow of novels and short stories. Other names include Kāẓim Sādāt i Ishkawarī and Bahrām Ṣādiḳī.

Bibliography Apart from the works of the authors mentioned in the text, the following surveys may be listed. For the traditional literature Jiří Cejpek, ch. *Iranian folk-literature*, in J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 607-709, William L. Hanaway, Jr., *Formal elements in the Persian popular romances*, in *Review of National Literatures* (New York 1971), iii/1, 130-60, idem, Introd. to *Love and war. adventures from the Farsi Shāh Nāma of Shaikh Righami*, Delmar, New York 1974, x-24. (L. P. Elwell-Sutton)

5. In Urdu.

Until the beginning of the 19th century, prose literature was almost unknown in Urdu. A few prose works had been written in the Deccan as far back as the early 17th century, but they were mostly on religious subjects. A notable exception, however, was Wajhī's story *Sab Ras* (1635). This is based on the Persian allegorical *mathnawī*, *Dastūr al-ʿushshāḳ*, by Yaḥyā b. Sībak, who is generally known as Fattāḥī Nīshāpūrī (d. 854/1448). *Sab Ras* is written in ornate rhymed prose, and like its Persian source, it tells the story of the romance of Princess Ḥusn (Beauty) and Prince Dil (Heart). All the characters bear similarly allegorical names. The work appears to have been an isolated piece, and it cannot be considered a progenitor of modern Urdu fiction.

There did exist a kind of versified Urdu fiction in the 18th century, namely, the narrative *mathnawī*, of which the outstanding example is *Sihr al-bayān*, by Mīr Ḥasan [*q.v.*]. At its best, the *mathnawī* included some of the essential elements of the novel—a story with a logical sequence of connected incidents, characterization, however rudimentary, and vivid description of scenes and social customs. But the plots relied too heavily on the incredible and supernatural.

Another precursor of modern Urdu fiction is to be found in certain collections of short stories within a "frame", which were recited to general audiences, as well as to royal courts and rich households. They are the Urdu equivalents of Arabic collections like *Alf layla wa-layla* and *Sīrat ʿAntar*, and are termed *dāstān* (pl. *dāstānāt*). Ralph Russell (*op. cit.* in *Bibl.*, 107) refers his readers to E W Lane's *Manners and customs of the modern Egyptians* for a "generally accurate account of how the dastans were recited in India" These cycles of legends were subsequently printed in Lucknow in the press established there in 1858 by Nawal Kishōr (d. 1895) *Amīr Ḥamza Ṣāḥib Ḳirān ki ḥikāyat* recounts the wonderful exploits of a famous uncle of the Prophet Muḥammad in 17 volumes totalling about 17,000 pages The most popular sections were *Ṭilism-i Hōshrubā* (7 vols.) and *Nawādir-i ʿAmma* (2 vols.) Vying in popularity with this vast collection was the seven-volume *Bustān-i Khayāl*. These works are generally considered to be of Persian origin, but it is not clear whether the reciters employed by Kishōr to produce his Urdu versions were actually translating Persian texts themselves, or using existing Urdu sections which had been passed from mouth to mouth The language is highly coloured and uses rhyme, but the stories recounted were apparently well known and appreciated in India. The *dāstānī* were tales of chivalry, and, like the *mathnawī*, contained a strong element of the supernatural. But whereas a *mathnawī* might have a well-formed story, the *dāstān* consisted of a series of short stories or incidents, with little attempt at characterisation.

In the evolution of the Urdu novel, we find the *dāstān* gradually giving way to the European-style novel. Indeed, in some measure the one gradually merged into the other But the prelude to this transformation takes us to Calcutta, where, in 1800, the British East India Company established Fort William College to train British officials in the languages, laws and customs of India. The first Principal, John Borthwick Gilchrist, assembled a number of Indian writers, whom he commissioned to produce prose works which could be used as text books for Urdu and other languages. While not discouraging a sense of style and a medium of linguistic embellishment, he required fairly simple language A number of Urdu books were written, some of them fiction, which became popular classics They were all adaptions from other languages, chiefly Persian but occasionally Sanskrit The emergence of the Urdu novel later in the century diminished the importance of these works, though they served until the Second World War as text-books for British officials and army officers

The best-known was Mīr Ammān's *Bāgh o bahār* (1801) based on a Persian tale by Amīr Khusraw [*q.v.*] It tells the story of four dervishes who are supernaturally guided to a city. There, aided by the king, they discover their long lost loves. The name is supposedly Istanbul, but it is described like Dihlī in the last years of the Mughals. Since the original Calcutta edition, this book has been frequently reprinted, and so English translations by Duncan Forbes appeared in London in 1862, S. A. B.

Suhrawardy (*op. cit.*, in *Bibl.*, 18) describes it as "the first prose classic in Urdu. ... still read for enjoyment". Like other Fort William products, it is written in reasonably straightforward language, and includes good dialogue and characterisation. Amongst other Fort William fiction were *Ārāʾish-i maḥfil* by ʿAlī Afsōs, and Mirzā ʿAlī Kāẓim Djawhe's *Shakuntalā* based on the drama by Kālī Dās. Not all the fiction written for John Gilchrist was published at the time. Two previously unpublished ones have recently been added by Ṣābdat Bareilwī. They are by Mazhar ʿAlī Khān Wilā. *Haft gulshan* (Karachi 1964) is a collection of fables; while *Mādhōnal aur Kām Kandalā* (Karachi 1965) is a short *dāstān*, in 20 chapters. Finally, mention must be made of another Fort William publication which provides a link with the *mathnawī*—Mīr Bahādur ʿAlī Ḥusaynī's *Naẓr-i Ḥusayn* (Calcutta 1803). It is a prose version of Mīr Ḥasan's *Siḥr al-bayān*, including verses quoted from the poem from time to time. Strange to relate, it was published two years earlier than the *mathnawī* itself.

Whether the fiction produced at Fort William forms a definite stage in the evolution of the Urdu novel and short-story, or was merely an interlude, is a matter subject to dispute. Muḥammad Ṣādiq (*op. cit.* in *Bibl.*, 212) denies that it was a "formative factor in the development of modern Urdu prose". He adds that, had it never existed, Urdu prose would not have developed any differently. On the other hand, Suhrawardy (*op. cit.*, 22) maintains that it not only furthered the simplification of Urdu prose, but also popularised prose romances. It is certainly arguable that the simpler prose fostered by the ʿAlīgarh Movement, and exemplified by the writings of Sir Sayyid Aḥmad Khān and Altāf Ḥusayn Ḥālī, and even ʿAbd al-Ḥalīm Sharar, is at times reminiscent of "Fort William prose". But of those three, only Sharar wrote fiction.

Whatever the merits and demerits of the Fort William products, they were important enough to stimulate controversy as to what features constituted good Urdu literary prose. Many considered the Fort William prose style too thaqīl to be literary. In fact, the first original prose romance in Urdu, *Fasāna ya ʿadjāʾib* by Mirzā Radjab ʿAlī Bēg Surūr (d. 1867), was regarded, and perhaps intended, as a reply to the Fort William style. He wrote it in about 1824, but it was not published until between 1839 and 1842. It may fairly be described as a *dāstān*, for it is a series of stories of chivalry, with a certain amount of the supernatural, set in a "frame", but it is in one volume only. The frame is the love-story of Prince Djān i ʿĀlam and Princess Andjuman-Ārā. The stories or incidents describe the dangers, and fights with men and magicians, that the hero has to face in order to win her. The frame is a familiar one, and recurs in Sarshār's *Fasāna-yi Āzād*. The language contains much rhetoric and rhyme, and it is interesting to note that Surūr wrote it in Urdu only because he feared that his command of Arabic and Persian was inadequate.

However, it was not until the 1860s and 1870s that the Urdu novel, in the European sense, emerged. There were good reasons for this. English became not only the language of government and higher education, but also a common medium of communication between the various peoples of India. English novels became familiar in the original language. Later, a number were "translated", or, more accurately, adapted into Urdu, as were selections of short stories. But as far as can be ascertained, these "translations" did not become common until after the First World War, by which time the Urdu novel was already flourishing. Another factor favouring Urdu fiction was the appearance of numerous newspapers and magazines, which published novels either in instalments, or as supplementary special issues. Fiction therefore became cheap enough to attract a wide readership. Thirdly, the ʿAligarh Movement made prose a respected literary medium, and also demonstrated that prose need not be artificial, full of rare words, balanced sentences and rhymes, to be artistic. During the last thirty years of the life of Sir Sayyid Aḥmad Khān (1813-98), the novel became an established form.

Of the three great novelists writing in this period, the first, chronologically, was Nadhīr Aḥmad (1836-1912). But it is more logical to discuss Pandit Ratna Nāth Sarshār (1845-1903) first, as his stories retain some features of the *dāstān*. Born in Lucknow, after a sketchy education he worked for the newspaper *Awadh pandj*, then for its rival, the *Awadh akhbār*, of which the proprietor Nawal Kishōr appointed him editor. His gigantic picaresque novel *Fasāna-yi Āzād*, on which his fame rests, appeared in this newspaper in instalments in 1878 and 1879, and was then published in book form in Lucknow in 1880, in four volumes totalling about 1700 double-columned pages. It is more like a collection of short stories and anecdotes than a novel, reflecting both Sarshār's untidy and disorganised way of life and the demands of serialisation, which required him to produce regular instalments with or without inspiration. According to Khūrshīd (*op. cit.* in *Bibl.*, 183), the idea of the work arose from a discussion about *Don Quixote* among members of the staff of the paper Sarshār's book was a tremendous success, and it was imitated by many subsequent novelists.

The "frame" of *Fasāna-yi Āzād* is that the noble and chivalrous Āzād, of the city of Lucknow, falls in love with the beautiful Ḥusn-Ārā. In order to win her hand, he has to go and fight for the Turks against the Russians, and his adventures are recounted in the book. He has a companion, Khōdjī, who is a figure of fun. In fact, in many ways, the roles of Don Quixote and Sancho Panza are reversed in Āzād and Khōdjī. The work is as rich in characters, incidents and scenes that it defies description in a brief account. There are major sub-plots as well as the main "frame", and the incidents described are both numerous and varied, ranging from fighting and flirtation in discussions of poetry. It is notable for its pictures of Lucknow life. But above all, it is full of dialogue, often racy, and suiting the language to the speaker. A Western reader picking it up for the first time might think, from many pages, that it is a drama, with each speaker's name in bold letters at the beginning of the line, followed by "stage directions" and then what he or she says. This method of setting out dialogue was followed by a number of Urdu novelists—for example, ʿAbd al-Ḥalīm Sharar.

The hero, Āzād, resembles the *dāstān* hero—handsome, brave, a great lover and a champion of what is right. The realistic pictures, however, are modern, sometimes reminding us of Dickens, and there is very little of the supernatural. Thus it is a transitional work, between the *dāstān* and the novel, though by the time it was published, three of Nadhīr Aḥmad's novels had already appeared, with their realistic contemporary social themes. However, Sarshār wrote to entertain his readers. The abundant variety of characters, including many from the underworld

and the demi monde; the wit and humour; the basic realism, despite a veneer of exaggeration—all these appealed so strongly to the readers, that it is said that when it first appeared in serial form, each new instalment was avidly awaited and people rushed to buy the *Avadh akhbār* because of it.

Such a tour-de-force is hard to repeat; and Sarshār's Bohemian life-style, especially his addiction to alcohol seems to have affected his work. Of his later novels, *Khudā'i faujdār* is an abridged and adapted version of Cervantes' novel. His *Āzmā* is his only novel with a Hindu background—which is rather surprising, since he was himself a Hindu.

Nadhīr Ahmad (1836–1912) is considered by many to be the first modern novelist in Urdu, especially by those who prefer a novel to be a study of contemporary social life, and who like it to have a message. Strange to relate, he became a novelist by accident. Educated at Delhi College, he worked first as a schoolmaster, then an inspector of education, and subsequently in various posts in the Revenue Department. His first "novel", *Mirā'at al-'arūs* ("The bride's mirror") (1869) was written for his own daughters to read privately; it was a moral tale to teach them the qualities required of a good and successful *wife*. A British Director of Public Instruction saw the manuscript, and urged Nadhīr Ahmad to have it published. Because of its educational value and high moral tone, the Indian Government bought a thousand copies. Nadhīr Ahmad achieves his didactic aim by describing two sisters and comparing their married life. Akbarī is a spoilt girl who proves incapable of running a house, while Asghari is efficient and practical, almost a model of all the virtues. In 1873 he followed it with a sequel, *Binat al-na'sh*. Its subject is girls' education, but it is more like a series of lessons than a story. *Tawbat al Nasūh* (1877) is a more ambitious family tale. It tells how Nasūh, while ill, repents, and, having previously allowed his children to do as they like, he now tries to reform them as well as himself. *Fasāna yi-Mubtalā* (1885) treats of the evils of polygamy. *Ibn al-waqt* (1888) describes the troubles of an Anglicised Indian who thinks his fellows Indians. But when his only British friend leaves the country, he finds himself isolated. All these novels then, are stories with a moral, and the very names of many of the characters are descriptive of them: thus Nasūh (repentant) and Hubtalā (afflicted).

These novels struck a new note and have many attractive qualities. They are straightforward stories of manageable (one-volume) size in uncomplicated yet elegant style, dealing with the contemporary social scene and its problems. Their high moral tone, somewhat reminiscent of Victorian England, made them suitable reading for people of all ages and both sexes; and they were widely read, and frequently re-printed up to the Second World War. Nadhīr Ahmad improved with experience, and his later novels are superior to his earlier ones in both character development and plot construction. But his earlier ones remained the most popular—especially *Mirā'at al-'arūs* and *Tawbat al Nasūh*. More recently, *Ibn al-waqt* has attracted attention, because of its relevance to the last years of the British Rāj.

The main objection to these novels has been on grounds of the domination of the didactic aim: so much so, that it has been suggested that they are not real novels at all, but pleas for social reforms in the guise of novels. There is also a lack of humour in them. Nevertheless, they mark the advent of the social novel in Urdu.

Two distinct genres of novel, then, had emerged by the last quarter of the 19th century—the picaresque type of Sarshār, and the social type of Nadhīr Ahmad. Both writers were imitated, and there was a burst of activity in both genres. The picaresque type gradually lost its appeal, and though many later examples could be mentioned, none achieved anything approaching Sarshār's success. The social novel, however, was continued unabated until the present time, and in 1899 an outstanding example appeared—*Umrā'o Jān Adā*, by Mirzā Muhammad Hādī Ruswā (1858–1931). Ralph Russell describes it as "the first true novel in Urdu" (*op. cit.*, 132). It is the story of a retired high-class Lucknow prostitute, whose name forms the title, and who tells her life-story to the author. Like Sarshār, Ruswā tells much of the story in dialogue form, and the book is very readable and entertaining. As Muhammad Sadiq says (*op. cit.*, 355), the didactic element emerges before the end. But what is remarkable in Ruswā's approach is his sympathetic and perceptive attitude to his heroine. He does not blame her, neither does he condone her sinful life, which has made her virtually a social outcast. He shows understanding without being sentimental. Ruswā wrote several other novels, but was unable to repeat the success of *Umrā'o Jān Adā*.

As the 19th century drew to its close, a third genre of Urdu fiction appeared, the historical novel. Its pioneer was 'Abd al-Halīm Sharar (1860–1926), a journalist and historian and a leading figure in the 'Aligarh Movement. Born in Lucknow, he worked there for 5 years as Assistant Editor of the *Avadh panch*. In 1887, he started the magazine *Dil gudāz*, which he continued, with interruptions, until his death. His earlier novels were first published in serial form, but later ones were published whole, and sold cheaply as supplements to the magazine. The idea of writing historical novels came to him while reading Sir Walter Scott's *Talismān* during a train journey. Struck by the unfavourable light in which Scott depicted Muslims, he decided to try to redress the balance, and produced *Malik-i-'Azīz aur Warjāna*. He had previously published a social novel, *Dilkusā*. But though he did not completely abandon this genre the majority of his novels, numbering about 35, are historical. They contrast unashamed propaganda for Islam, and paint Christianity in a poor light; but they are vivid and exciting stories of heroism and romance, with brave heroes, cruel villains, and beautiful heroines—the latter often Christians girls who fall in love with Muslims. They achieved enormous popularity, because Sharar knew how to write a good story and sustain interest. His descriptive passages are convincing without being over long, and there is considerable dialogue. But the drama often deteriorates into melodrama. His denouements are frequently bloodthirsty, and he lingers too long over cruelty and killing for modern tastes. Historical veracity is often lacking, and there are anachronisms. Still, there is no doubt that he could draw characters credibly if not subtly. His language is eclectic and attractive, without being forced, and it still reads well. And though overladen with Arabic expressions for some tastes, this suits his themes.

His novels span the Islamic world from Spain to Africa, Turkey, the Middle East and India; whilst in time they range from the 7th to the 19th centuries. *Flōrā Flōrinda* (1897), a tale of Christians and Muslims in mediaeval Spain, is regarded as one of his best novels. The heroine, Flōrā, is the daughter

of a Muslim father who is brought up as a Christian. She is later raped by a "patriarch", whose child she bears, and whom she kills in the end. The story is highly involved, and the swift denouement which occupies only 15 pages out of a total of 350, leaves almost all the main characters killed. Equally popular was *Firdaus-i baṭīn* (1899), which to the present writer, is more convincing. The background to the story is the conquest of the valley of the Assassins (*Ḥashīshiyya*) and their fortress of Alamūt by Hūlāgū Khān in 1257. The hero and heroine, Husayn and Zamurrad, have been in the power of the Assassin leader, Khūrshāh, but in the end they side with Hūlāgū against him. There is a vivid description of the final battle and the destruction of the "sublime paradise" of the Assassins, with the hero Husayn playing a major rôle. Finally, Hūlāgū arranges for Husayn and Zamurrad to marry, and they leave together for Mecca and the Pilgrimage. This accords somewhat ill with Husayn's obvious enjoyment of prolonging the agony of those whom he kills in the final battle. But it is the sort of melodrama which doubtless appealed to the readers of 1899.

It is difficult to single out names of 20th century Urdu novelists who continued social and historical novels. Some of these, like Prēm Čand and M. Aslam, are better known as short story writers. Rāshid al-Khayrī (1868-1938) was one of the most successful, and though best known for his social novels, he also wrote a number of historical ones. His social novels, though not without humour, earned him the nickname of *Muṣawwir-i ghamm* ("depictor of sorrow"). The main theme is the position of woman in Islamic society. His trilogy *Sukh-i zindagī*, *Shām-i zindagī* and *Ṣubḥ-i zindagī*, is worthy of note. Among his historical novels, *ʿArūs-i Karbalā* deserves mention. The "bride" of the title is a Christian widow who feels drawn to Islam, and finally marries ʿUbayd, a partisan of al-Ḥusayn at the battle. Suhrawardy (*op. cit.*, 128) regards Rāshid al-Khayrī's historical novels as "poor stuff", lacking social colour and realism.

The Urdu short story is held by most Indian and Pākistani critics to be an importation from the West, although some of its elements may be seen in stories and anecdotes of the *dāstān*, especially *Fasāna-yi ʿAjāʾib* and *Fasāna-yi Āzād*.

M. Aslam in his introduction to one of his short-story collections, *Hamārī kahānī kaun sunāyegā* (Lahore 1972, 3) maintains that the reverse is true, and that the Europeans really took the short-story from the Muslims! He goes on to say that the short-story originated in religious literature such as the Old Testament and the Kurʾān, and attempts to substantiate this from stories in the Kurʾān. However, there is no doubt that the creator of the genre in its modern sense, in Urdu, was Prēm Čand (real name Dhanpat Rāʾē) (1880-1937). Born near Benares, he was a Hindu, and wrote in both Hindi and Urdu; indeed some of his fiction appeared in both languages —or in both scripts, Arabic and Devanagri. He started his writing career as a novelist, then turned to the short-story, which was at that time in its infancy in India. He was a prolific writer, and his short stories were collected in a number of volumes, including *Prēm pachīsī*, *Prēm batīsī*, *Prēm čālīsī*, *Wārdāt* and *Zād-rāh*. Prēm Čand is noted for his pictures of village life. He depicts the poor and humble as inherently good, but compelled to do wrong by the pressures of poverty and temptation. They are exploited by landowners and rich employers, and are a prey to fear, superstitions and religious bigotry. For such people little acts or accidents may have dire effects. Prēm Čand, then, was no less a pleader for social reform than Nadhīr Aḥmad. But whereas the latter concentrated on the middle class, Prēm described the lower classes, especially in villages. A master of characterisation, style and form, he made the short story his métier, and whilst his novels are now neglected, many of his short stories are acknowledged masterpieces.

Among later short story writers, mention should be made of M. Aslam (*Em Aslam*) the author of over a hundred books. Many of his short stories are romantic, and he depicts the instability of middle-class society in a period of change. Finally, there have been several brilliant writers of humorous short stories, and essays in story form. They include Shawkat Thānawī, Mirzā ʿAẓīm Bēg Čughtāʾī and Patras Bukhārī (1898-1958).

A word must be said about the nomenclature of Urdu fiction, which includes Hindi, Persian, Arabic and English terms. *Dastān* has already been mentioned. *Kahānī* was used chiefly for fables, anecdotes and short stories. Throughout most of the 19th century, the term *fasāna*, with its variant, *afsāna*, was current. Nadhīr Aḥmad's novels were called *ḥikāyat*, but as we have seen, he also used the term *fasāna*. *Ḥikāyat* has been used considerably, particularly for the short story. It seems likely that Sharar was the first to employ the English word "novel" (Urdu, *nāwal*) and this is now the commonest name for a novel. A short story is now usually called *afsāna*—more properly, *mukhtaṣar afsāna*.

Bibliography: Shāista Akhtar Bānu Suhrawardy, *A critical survey of the Urdu novel and short story*, London 1945, provides a full history to 1939, with critical accounts and plots of many individual novels and short stories. Ralph Russell, *The development of the modern novel in Urdu*, in T. W. Clark, ed., *The novel in India, its birth and development*, London 1970, 102-41, is valuable for its detailed accounts of *Umrāʾ Ḍāʾn Adā* and *Fiorā Fīrūndā*, with shorter accounts of previous novelists. Muhammad Sadiq, *A history of Urdu literature*, London 1964, contains several sections on Urdu fiction; Wadīhī, 50-1; a highly unsympathetic account of Fort William's contribution, 110-21; Surūr, 143-4; Nadhīr Aḥmad, 216-24; Sarshār, 326-38; Sharar, 339-24; and Prēm Čand, 344-55 together with a lukewarm account of *Umrāʾ Ḍāʾn Adā*, 355-6. Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, contains information on Urdu fiction, 139-50, 257-97, and 318-45. In Urdu there is a remarkably full account of the short story from its beginnings to 1943 by ʿIbādat Barēlwī in *Tanḳīdī ṣāyagī*, Karachi 1957, 309-82. Sayyid ʿAbdu 'l-Laṭīf, *The influence of English literature on Urdu literature*, London 1924, contains some interesting background information, but no details of novels. Lists of Urdu novels and short stories which are "translations" (usually more properly "adaptations") of English and other Western literature, are given by Mawlwī Mir Ḥasan in his *Maghribī taʾthīr kī Urdū tarāʾīm*, Khayrabād, 1939. Finally, in view of the important rôle of the Urdu press in the development of the novel and short-story, reference may be made to ʿAbd al-Salām Khūrshīd, *Ṣaḥāfat Pākistān-o-Hind mēʾn*, more especially 183-4 (Sarshār) and 186 (Sharar).

(J. A. MAYWOOD)

6. In Malaysia and Indonesia

In dictionaries of older Malay, *kissa* is defined as "story, narrative episode". It occurs regularly in this sense in literary works from the 17th century onwards, and, in addition, is used in Malay historiographical works and romances as a kind of percope marker to introduce a new stage or episode in a longer narrative.

It appears in the title of a Malay adaptation of the Stories of the Prophets, *Kişaş al anbiyā'* (largely the version of al-Kisā'ī) which became popular from the 17th century onwards, and in more recent times was the title of an Indonesian magazine, *Kisah* (Jakarta 1933 8) devoted to the short story. It appears in the title of a collection of short stories, purely western and totally secular in theme and content by Armijn Pané, *Kisah Antara Manusia*. Nevertheless, it did not establish itself as the title of a genre. For shorter length narratives, the Sanskrit-derived *cerita* (story) was preferred, with, in imitation of European usage, the qualifying adjective *pendek* ("short"), the two words now being abbreviated to *cerpen*.

The short story is currently the most popular literary form in Indonesia and Malaysia. Its roots are to be found in local fables and animal stories, in short narratives of Perso-Arabic origin, especially those set within frame-collections, and in the flowering of the genre in late 19th century Europe. Although none of the great Arabic collections of stories such as al-Bukhalā', of *Aghānī* or the *Alf layla wa layla* has accompanied the islamisation of the Malay world, one of the very oldest Malay MSS (a. 1615) is a fragment of the Persian *Tūṭī nāma* a rendering in Malay of a Persian version of the *Sukasaptati* or "Tales of a parrot". Other frame-stories such as *Kalila wa-Dimna* and the *Sindibād nama* established themselves to Malay renderings relatively early. The large number of MSS of such works is an adequate index of their popularity.

All of these stories belong to the popular domain. The composition by individuals of realistic short stories did not begin until the 20th century with the development of a popular press, and the possibilities that newspapers and periodicals offered for the development of such a form of narrative fiction. It established its present popularity in both regions during the 1950s.

In Malaysia, during the 1930s, the authors of short stories were graduates of Malay stream education and religious schools. The majority of their stories were moralistic, concerning such issues as the backwardness of the Malays, the problems of forced marriage, and the need for a reformist understanding of Islam. In Indonesia during the same period the secular stream was dominant. But just as since Malaysian independence in 1957, the short story in Malaysia has become secularised, in Indonesia some short stories by Muslims have brought a consciousness and sensitivity to the perception of religious experience which is characteristically modern. In many cases, the concern is purely with man as man, and while a religious dimension is suggested, it is not worked out within the dogmatic frame work of a single identifiable religious tradition. In a few, however, and A. A. Navis (*see Bibl* below) presents the best example, a religious problem lies at the very heart of the story, and is the reason for its existence. Nevertheless, apart from contributing the word *kissa* to the Malay vocabulary, the Muslim religious and literary tradition has played only a limited role in the shaping of the short story in Malay. The Western secular tradition has been, far and away, the most important single influence.

7. In Swahili.

In Swahili literature, the word *kissa* was first used in the context of the *Kişaş al-anbiyā'* [q.v.]. The numerous Swahili authors (i.e. writers as well as composers of oral traditions) had at their disposal rather more elaborate versions than those of al-Kisā'ī or al-Tha'labī from which to borrow their themes for the prophets' legends, extremely popular in East Africa. Also, several of the Swahili versions of the legends have their parallels in Indonesia, see J. Knappert, *The Qiṣaṣu 'l-Anbiyā' as moralistic tales*, in *Procs. of the Seminar for Arabian Studies*, VI (1976), 103-26.

In written Swahili literature, the legends of the pre-Islamic prophets are always treated in verse. Full-length epic poems are extant about Adam and Eve, Job (Ayyūb) and Joseph (Yūsuf), but fragments have also come to light dealing with Mūsā, Ya'kūb, Yūnas, Sulaymān and Dāwūd, Ibrahīm (Ibrāhīm), and Zakariyyā' and 'Īsā, see Knappert, *Four Swahili epics*, London 1964; idem, *Traditional Swahili poetry*, Leiden 1967, ch. 2, idem, *Swahili Islamic poetry*, Leiden 1971, I, ch. 3. Many of these legends, and especially those with miraculous elements, circulate in oral tradition, see Knappert, *Myths and legends of the Swahili*, London 1970. It is

probable that these tales have come to the Swahili Coast with sailors from Arabia, Persia and India, the latter country in particular seems clearly to have influenced Swahili literature.

From this semi-religious usage, the word *kissa* (now spelt *hisa* with purely Swahili plural *visa*) acquired an extended range of meaning to that of "miraculous tale in general", "fairly tale of the type found in the *Alf layla wa-layla* collection" [q.v.] The connection here is obvious, since many of the latter tales are variations on *Kisas al-anbiyā'* themes or employ their characters, e.g. the tale of the fisherman who found a bottle that had been sealed by King Salomon, a tale well known amongst the Swahili. These prose stories were not written down by the Swahili themselves, but missionaries with folkloric interests collected them in the 19th century; see e.g. E. Steere, *Swahili tales*, London 1869, and C. Velthe, *Märchen und Erzählungen der Suaheli*, Berlin 1898. These *visa* were never composed in verse, until very recently, whereas the *hadithi*, traditions about the Prophet Muhammad or other holy men, were often composed in verse and written down, in Arabic script of course. As well as the above two genres, traditional Swahili storytellers distinguish also the *ngano*, an invented tale or fable, of which last there are several in Swahili oral literature, some apparently derived from the Indian treasure house of fables, of the type represented in Islamic literature by *Kalila wa-Dimna* [q.v.] and the *Anwār-i Suhaylī* [see KAGHATI].

It is only in the last thirty years or so that the word *hisa* has come to be used in the meaning of the modern novel, though Swahili novels have another the extended treatment nor sophistication of European-language novels. Indeed, secular Swahili prose literature as a medium for artistic expression is still very much in its infancy. In the earlier, traditional society, prose was the vehicle for the conveyance of factual information, such as topics of history, law and theology. Artistic expression was channelled exclusively into poetry, even for subjects that in the West have not been represented in poetry for a century or so, such as theology and the rules of personal behaviour. Fable and fairy tale belonged to the realm of the (often illiterate) story-teller. The short story and novel have only come to the scene a generation after the influence of English literature, bringing with it an entirely new appreciation of the possibilities of prose writing, has affected the minds and creative faculties of Africans educated in mission secondary schools. Hence a major problem is now the adaptation of the Swahili language—previously largely a trade language, apart from its function in didactic and epic literature, where it has been bound by rigid conventions—into a flexible, modern medium for literature and belles lettres.

The names of some recent Swahili novelists, with details of their works, are given below. No claim to completeness nor to any attempt at ranking in importance can be given, in view of the uncertain future course of development of Swahili prose. Muhammad Said Abdullah has written the first Swahili detective novel, *Mvua ya mali ya kale* "The ghost of the old people" (1960), with a sequel *Kisima cha Gisingi* "Mrs Gisingi's well" (1968), in both, the chief character is Bwana Msa, a taciturn, pipe-smoking detective, obviously inspired by Sherlock Holmes. A. J. Amir's *Nahodā fikirani* "A captain in thoughts" (1971) is a semi-historical novel describing life on the Swahili Coast and to sea. Haji Chuma's first novel is *Kisa cha ndugu saba* "The tale of the seven brothers" (1969), after his two epics *Vita vya Uhud* "The battle of Uhud" and the unpublished *Utenzi wa Nushuru* "The Day of Judgment", born in Zanzibar, he writes within the Islamic tradition. David Dra is a writer of short stories (*hadīth*) in the Islamic tradition, and one of the first modern writers in this genre. Abdullah Saleh Farsy, from a prominent family of Islamic scholars in Zanzibar, has written *Kurwa na Ndoto* "K and N," about two young people getting married, with a concentration on the rites and ceremony of the Swahili wedding. Salim A. Kibao's *Malafu ya thamani* "Three priceless proverbs" (1975) describes how these proverbs save the life of a young man who buys them and make him into a king, the story has echoes of the Kur'ānic Yūsuf story so popular in Swahili. G Ngugi wa Thiongo's novels are set in central Kenya and have the life of the Kikuyu as their background. *Mlawa mweusi* "The black hermit" and *Usilie mpenzi wangu* "Don't cry, my darling". F. V. Nkwera's *Mtasha wa habu saa nadhi* "The one who buries his father will receive his blessing" (1967) is partly autobiographical. Abdulla Shariff Omar's *Kosa cha Hasan al Basri* "The story of Hasan al-Basir" is an adventure story in the Arabian Nights' mould, still very popular in Swahili. Shaaban Robert is the only Swahili author of more than local fame, a poet, essayist and storyteller, and a writer of fine prose with a strong religious philosophy behind it; his *Kusadikika* "The credible country" (1951, 1960) and *Utubora* "Human excellence" both have moral implications behind their stories. John Ndeti Semba's *Alipanda pepo na kuvuna tufani* "He planted the wind and reaped the storm" (1969) and *Kuishi kwingi na kuona mengi* "To live long is to see much" (1968) both deal with the author's own experiences in up-country Kenya.

Bibliography. Given in the article.

(J. KNAPPERT)

8. In Judaeo-Arabic and Judaeo-Berber

The written and oral Judaeo-Arabic and Judaeo-Berber literature is a genre of intellectual activity which has a place in the cultural field of the Muslim West which is by no means negligible. In this sphere of the expression of Jewish thought, the *kissa* enjoys a certain favour both among the educated and among the wider public and the masses. The themes and genres are very varied: rhymed versions of Biblical stories or liturgical poems, songs of joy or of lament (*hinot*), eulogies, and panegyrical and hagiographical pieces glorifying the saints of Palestine in Jewish antiquity (Rabbi Shim'on Bar Yohay, buried at Meron in Galilee, and Rabbi Me'ir Ba'al Hanes, buried at Tiberias) or local saints (Mūlāy Ishāq, Rabbi Ḥayā Lakhḍar, etc.), venerated by means of *hillulas* and by local pilgrimages. Also connected with the *kissa* are the songs of folklore celebrating family ceremonies (e.g. *rites de passage* such as circumcisions, burials and periods of mourning), except that these form a genre devoid of any literary or intellectual pretentions, made up in a language closer to the local spoken tongues, whilst the *kissa* proper has a more studied form and a more precise expression. It is written in a special language, comparable to the *malḥūn*, a kind of poetic found in Arabic dialect given literary touches, largely stripped of Hebraisms or outside linguistic influences, and generally to be understood by the Jewish communities of the Maghrib as a group, even though differing from the current spoken language.

As well as the folkloric setting which it describes

and the precious linguistic materials which it represents, the *kiṣṣa* reveals on examination deep structures and a content attaching it, on the one hand, to the general cultural ambience of the Maghrib, but on the other, to universal Jewish thought. A rigorous and minute analysis of the written text or the oral discourse, and of their direct or allusive references, throws light on their literary formula and on a cultural substratum of great richness.

The present author has given a sketch of all this in various publications (*REI*, *REJ*, *JA*, *ROMM*, etc.). Thus *L'histoire de Job en judéo-arabe du Maroc*, in *REI* (1968), 279-315, surveys a considerable number of Jewish, Arab Muslim, Morisco and Coptic chronicles and legends, the (Greek) apocryphal text of the Testament of Job, as well as the conflicts and speculations of the Biblical text.

The pieces involving parodies, published in *REJ*, cxxviii (1969), 377-93, as *La parodie dans la littérature hébraïque et judéo-arabe, folklore de Purim au Maroc*, borrow from local ceremonies, the Jewish homiletic literature of the *Midrash* and *Aggadah*, and Arab-Muslim legends. *L'hymne à Bar Yohay*, in *REJ*, cxxvii (1968), 366-82, is a *kiṣṣa* from Tinghir of the Todgha which derives its sources from local mystical folklore combined with the texts of the Zohar, the Kabbalah, the Talmud and the *Midrash*.

(H. ZAFRANI)

KIST [see MAḤĀYIL].

KI-SWAHILI [see SWAHILI].

KIṬ'A [see MUKATTA'A].

KITĀB (A., pl. *kutub*) "book". The beginnings of the Arabic book go back to the early Islamic period. According to traditions, sheets (*ṣuḥuf*) with verses of the Kur'ān were collected and put between wooden covers (*lawḥayn*, *daffatayn*,) kept thus and called by the Ethiopian word for "book", *muṣḥaf*/*maṣḥaf* [q.v.]. Following Christian and Jewish patterns, this form of a codex was generally maintained for the Holy Book since the authoritative redaction done under 'Uthmān by that means, the Kur'ān was distinguished, by its material form, from profane writings in rolls made of papyrus [see QIRṬĀS] and from the *ḥisāb* pure and simple which meant, in that early period, "something written", "notes", "list" or "letter". As writing material, sheets of parchment [see JILD, RAḲḲ, ṬIRṢ] were used, which, folded into four pages and placed within one another, became quires (*karārīs*); it is uncertain whether these quires were sometimes stitched. Presumably covers made of wood or papyrus were covered over and kept together with leather and, like contemporary Coptic or later Islamic covers, decorated with coloured wood, bone or ivory.

With the rise of the 'Abbāsid caliphate, books and book knowledge, additional to knowledge of the Kur'ān, became a general aim of Islamic society. The interest of the government was evoked by questions concerning the legitimation of its power and by problems of administration connected with these questions, as a background to the theocratic claim to power [see MIḤ'ŪNIYYA]. During this period Arabic learning concerning problems of theology [see MU'TAZILA], *ḥadīth*, *fiḳh*, history, philology, etc. and medicine, alchemy, etc., had its heyday, and this florescence was connected with the emergence and spread of rag paper [see KĀGHAD] from the end of the 2nd/8th century onwards. These scholars wrote books at the suggestion of or on order from the caliphs and the ruling classes, in the expectation of being honoured by presents and payments, in opposition to the organs of state and their policies, or just for the sake of belief (cf. Sūra LXVIII, 1; XCVI, 4). Apart from treatises on different subjects, general works were written by authors who were employed as secretaries or *ḥādis* in state chanceries and offices, where the rather expensive writing materials were at their disposal. Others copied books not only for personal purposes, but for their living; moreover, they dealt in paper, ran a bookshop or a book bindery, or combined one with one the other. It is surprising to note how quickly books were widely disseminated and did not remain confined to schools and learned institutions [see MADRASA], where also notes taken in lectures, enlarged by additional material, were made into books. Certain kinds of transmission of books and their authentication, including lists of students in a lecture audience, were formed [see IJĀZA], adoptations or quotations from other works were often marked by special terms, texts and copies were compared with each other, collated, complemented and glossed. In writing rooms which were sometimes associated to public libraries [see MAKTABA] books were multiplied commercially. An author could safeguard himself against dubious activities of scribes in these writing rooms through issuing his books by authorisation, only, e.g. al-Ḥarīrī (d. 516/1122 [q.v.]) himself wrote a *nuskha* in 700 copies of his *Maḳāmāt*, during a period of ten years. The production of such books and their trade was immense in quantity and was widespread. Titles of books which had in the past been simple and short became ornate and flowery in the course of time, consisting of two phrases rhyming with one another (*sadʿ*). First the titles were given in the prefaces, which usually contained the author's name and which started on a b-page, later the previous page (a-page) became the title page with the author's name. Already in this period, autographs or copies made by learned men or calligraphers [see e.g. IBN AL-NAWWĀJA] were sold for high prices. There was a big demand for the libraries of learned men; some of them went to pious bequests [see WAḲF], others were put into the stocks of an academy when an attachment to heretical ideas of their deceased owner was known. Bibliophiles, from the caliph to the craftsman, competed in searching for valuable or rare books. As early as the *Fihrist* of Ibn al Nadīm (d. 380/990 [q.v.]), compiled in 377/987, we find that this work gives, before its information on books and biographical notes on their authors or compilators, informative details about these matters. There is also the voluminous biographical literature, with its innumerable names of learned and literary men, secretaries, calligraphers, etc., and the multiplicity of manuscripts with their countless, often very personal, notes of the owners and readers, to be found in libraries situated even in remote places and containing thousands or tens of thousands of volumes. These considerable survivals, give us an ample idea about books and their quality in the Islamic Middle Ages; these books have in common one thing only, sc. the *basmala* [q.v.] at the beginning.

The upright quarto size was widespread, sizes in folio to oblong sizes being usually reserved for special occasions, e.g. presentation copies for high-ranking persons. The cover, writing materials, format and type of script [see KHAṬṬ] were determined by these purposes. The kinds of leather used for the covers, their colouring, workmanship and decoration sometimes refer to patterns of the Pre-Islamic period, e.g. in Egypt to Coptic, and in Persia to Sāsānid ones; they were developed in forms charac-

teristic for the respective countries, e.g. regarding the different kinds of workmanship in leather. Moreover, in regard to the arrangement of the areas on the covers, there are, apart from general principles like lines parallel to the edges of the book, features characteristic of certain places or periods, e.g. the treatment of the centre, and the application of innumerable geometrical patterns and ornaments in certain variations by using brasses. The triangular flap to protect the edge and the clasp and eyes, appear at an early period. Asphodelos paste was used in the Syrian Palestinian area, and paste made of wheat in South Arabia. While rag paper was used for books in general, parchment was sometimes used for copies of the Kur'ān and other de luxe editions. Fine paper imported from China was reserved for books valuable to their owners, like books of texts. These books were not written with the usual ink [see KITĀBA] only, but also with ink made of silver and gold, and their pages and lines were decorated with coloured ornaments (arabesques [q.v.]). There were always illuminations [see ṢŪRA, TAṢWĪR], in spite of the prohibition of depicting living beings with a *rūḥ* or soul, but these were exceptional. A quire (*kurrāsa*) usually consisted of five double sheets, and several quires combined together, sometimes by chain stitches, made a sewn book. The quires were marked by consecutive numbers which were written out in words, and the right order of the sheets was controlled by catch-words, which appear early. The pagination of sheets or, sometimes, of pages, is only found later or in modern times; the pagination of sheets was more widespread. Many books ended with a colophon containing the name of the scribe, and often the date as well as, though not as often, the place, but in certain cases, the dates given there are not correct; e.g. when taken from texts which had been copied. For the post-Mongol period, the following features of the books should be noted. The sizes and the writing became smaller, and the kinds of paper became thinner, stronger and smoother. Coloured paper was used and, from the Ottoman period, imported paper from Europe also, firstly from Italy, and with watermarks. The ink became darker and more shiny; the writing surfaces were framed with lines in different colours or in gold, and an *'unwān* [q.v.] was drawn on the first page of a book. Owner's stamps appear in considerable number for the late period, and bookbinders' brasses with their names shaped like a medallion, can be found on the covers, even on lacquered ones. Splendid, calligraphic specimens of large size, with covers superbly wrought (these being mostly works of Persian poetry), often illuminated by unique miniatures), were produced mainly at the courts of the Timūrids, Ṣafawids, Mughals and Ottomans, splendid copies of the Kur'ān were produced also at the court of the Mamlūks. The painter is often identical with the decorator, the "gilder" (*zarkashī*), he came next in prestige to the highranking calligrapher. The bookbinders formed their own guild from the time of Bayazīd II (886-918/1481-1512 [q.v.]) onwards. Even after the introduction of printing [see MAṬBAʿA], books were written by hand, increasingly by European ink and nibs, and bound in the traditional way until the beginning of this century.

(R. SELLHEIM)

KITĀB al-DJILWA, one of the two sacred books of the Yazīdīs [q.v.], which with the *Maṣḥafrēš* contains the fundamentals of their religion. As the religious language of the Yazīdīs is Kurdish and all the prayers of the Yazīdīs known to us are in Kurdish (for example, the chief prayer, the morning prayer, the formulae used at baptism and circumcision, the proclamation at the assembly of the *sanǧāḳ*, and God Himself in the apocryphal continuation of the *Maṣḥaf-rēš* speaks Kurdish), it is rather remarkable that these two sacred books, the existence of which has long been known and of which copies of the originals have come into the possession of Europeans, should be in Arabic, namely the *Kitāb al-Djilwa* (*Kitēb-i Jilwa*), the "Book of Revelation" (the form *Djalwa* which Sharaf al-Dīn gives from the manuscripts available to him, seems to be a slip on the part of the copyist), and the *Maṣḥaf-rēš*, the "black book", "black" obviously means something sacred, for example God descends upon the "Black Mountain" (*Maṣḥaf*, xvi). The explanation of the name from the forbidden words, said to be covered over with black wax, is wrong, as in this case the Kur'ān is substituted as the sacred book of the Yazīdīs.

Father Anastase Marie of Baghdād was the first to succeed in getting exact tracings of the alleged

original parchment copies of the two sacred books by bribing the keeper of the books of the Sindjār in 1904 6; they were written in Kurdish in a simple transposition cipher. The text written in this cipher shows clearly that it was copied from an original written in Arabic script. The possibility of a fraud was, however, not excluded especially as, stimulated by the interest of European scholars in Yazidī beliefs, sharp guarantors in Mawsil were always endeavouring to discover new texts. Mingana endeavoured to show that a former Nestorian monk of the Alkoš monastery, named Shamm̄ās Ēraḫā Shāmir of the diocese of Kirkūk, who died in 1906, forged all the texts published by Chabot, Gianoli, Isya Joseph and Browne, but the authenticity of the Kurdish text was accepted in Bittner's monograph, *Die heiligen Bücher der Jesiden oder Teufelsanbeter*, with *Nachtrag*, in the *Denkschriften d. Wiener Ak. d. Wiss.*, lv, Vienna 1913. The syntax of the text is, according to Edmonds, basically that of the present day dialect of *Sulaymānī Kurdish*. Both Bittner and Edmonds agree that the Kurdish version is not the original, but must be a translation from the Arabic, as some linguistic peculiarities suggest (plays on words which are unintelligible in Kurdish).

The *Kitāb-i Djilwā* might nevertheless conceivably have been originally written in Kurdish, as the Kurdish text is in many passages more lucid and coherent than the Arabic, while in the *Mashaf rēš*, the Arabic text is better than the Kurdish. According to Sharaf al-Dīn, the *Kitāb al Djilwa* in its present form could not have been written by an Arab, as the language is modern; there are a number of expressions which are either not used in classical Arabic or only came into use very late. In places also the construction is un-Arabic. These considerations could, of course, be arguments in favour of a recent forgery. The Arabic of the *Mashaf rēš* is even more modern, as it shows undeniably the influence of the spirit of Otto-man Turkish.

So far, we know of at least four versions of the two sacred books: one in the possession of O. Parry in 1895; one in the hands of Isya Joseph, who possessed two versions in addition to the one published in *AJSL*, xxv; two procured by Father Anastase Marie, one of which, the so called Sindjār version, was copied in 1869 by a Sindjār Yazīdī for a Yazīdī apostate, while the other was copied in 1904 by Anastase himself from the original in the possession of a Mawsilī.

The *Kitāb-i Djilwā* (also *Kitb-i Djalwā*, *Diclwa*), the original of which according to Joseph was in 1892 still in the house of Molla Haydar in Bā'adhrayya and was taken twice a year to the tomb of Shaykh 'Adī, is quite short. In book form it covers 8 pages and has 209 lines. It is ascribed to the reputed founder of the religion, Shaykh 'Adī (d. 555/1160 or 557/1162, see 'Adī b. Musāfir) who is said to have dictated it to Shaykh Fakhr al-Dīn.

The fact that the *Kitāb al-Djilwa* is not mentioned in the *Rasā'il ahl 'l-Rāfida wa-Yazīdiyya et mukhālifīn fī 'l-milla al-islāmiyya al muhammadiyya* written in 725/1325 by the well informed Ibn Djamīl (Abū Firās 'Ubayd Allāh) who belonged to the Euphrates district, nor in al-Makrīzī in connection with his description of the destruction and burning of the tomb and bones of Shaykh 'Adī in 817/1414, makes Sharaf al-Dīn think its date of composition cannot be put earlier than 725/1325 or 827/1424. As Ewliyā Čelebī does not mention the work, this would bring the date even further down, to 1655.

The above facts seem rather to indicate, however, that the Yazīdīs have been able to maintain the secret of the book with success. In spite of the advantages which might have accrued to them as *ahl al-kitāb*, they have preferred to deny their possession of sacred books. Only in the Catechism of the Shaykh Hasan Ismā'īl Bek 'Abdī Bek Oghlu Nazlī Rāhānī Yazīdī for the Russian Yazīdīs is there a reference to "the glorious *Djilwa*", *Gylawan*, as a source of the tradition.

The contents of the *Kitāb i Djilwā*, the form and text of which are in keeping with its high purpose, are as follows. Melek Tāwūs who existed before all creatures sent 'Abṭāwūs (= 'Abd Tawūs = Shaykh 'Adī) into the world in order to guide rightly his chosen people, the Yazīdīs, by oral instruction and later by means of the *Kitāb-i Djilwā* which no outsider may read (preface). He then speaks in the first person of his pre existence and eternality, his omnipotence over all other creators and gods (not "creatures" as in the Arabic), of his omnipresence and *providence*, the erroneousness of other sacred books and the clear perceptibility of good and evil, his rule over the world and his inscrutable decree, to which in every age we owe the sending of a great man upon earth (ch. 2). Further, he deals with his power of rewarding and punishing, which also allows those who do not deserve it to receive benefits, with the dying of a true Yazīdī and the migration of souls (ch. 2); he says that he alone has power to dispose of the creatures and things of the world (ch 3). He warns against strange doctrines, so far as they contradict his own ones, and against three unnamed things, and promises his followers his powerful protection if they keep together (ch 4). He asks that his cult and the orders of himself and his servants should be followed (ch. 5).

The *Mashaf-rēš* is more comprehensive. The Yazīdī Kurdish original is in the form of rolls and contains 152 lines in cipher. It is much more mundane and banal and less coherent than the *Kitāb Djilwā*. It is full of contradictions and breaks off abruptly. According to tradition, it was composed about 200 years after Shaykh 'Adī (ca 743/1342) by the great Hasan al Baṣrī [q.v.]. The original was said to have been at one time in the house of the Kahāye 'Alī to Kasr 'Azz al-Dīn near Semail on the Tigris, but it seems now to be in Sindjār like the *Kitāb-i Djilwā*.

Cosmogony. In a very confused fashion, without divisions into chapters, the *Mashaf rēš* deals with the creation of the world in three contradictory versions. According to what seems to be the more original story of the creation, God completed the creation alone. He made a white pearl which he put on the back of a bird Anfar (in many manuscripts, Anghar) created by him and was enthroned on it for 40,000 years. He then created the seven angels of God who are identified with the mystic *Shaykhs*.

On the Sonday, God created 'Azrā'īl (Azāzīl, Zazā'īl) = Melek Tāwūs, who is supreme over everything, on the Monday Melek Dardā'īl = Shaykh Hasan (al Baṣrī). The Yazīdī pronunciation is Shēkhsin, as the invocation in the chief Yazīdī prayer shows (Sydjadin Shēkhyain = Sadjdjād al-Dīn Shaykh Hasan) (the conclusions which have been drawn from an alleged *Shaykh* Sīn who is compared with the moon god *Sin*, e.g. by Massignon, *Essai sur les origines du lexique technique*', Paris 1922, 200 n. 2, are quite wrong); on Tuesday he created Melek Isrāfā'īl (Isrāfīl) = Shaykh Shams (al-Dīn), on Wednesday Melek Mikā'īl = Shaykh Abū Bakr,

on Thursday Melek Djibrā'īl = Sadīkādīn (Sidkādīn, Sadīdi'l al-Dīn); on Friday Melek Shamnā'īl (Shamnā'īl, Semanā'īl) = Nāṣir al-Dīn; on Saturday Melāk Tūrā'īl (Nūrā'īl) = Fakhr al-Dīn.

Then he created the seven heavens, the earth, sun, and moon, whereupon the last named angel of God Fakhr al-Dīn took over the rest of the work of creation and created man and the animals.

God now came out of the pearl with the angels and caused it to burst into four pieces with a loud cry. On the ore which was formed by the water rushing out of the pearl, God sailed for 30,000 years in a ship created by him. Djibrā'īl, created in the form of a bird, created from the pieces of the pearl sun, moon and stars, the mountains, plants, fruit trees and the heavens (cf on the rôle of the pearl, M. Mokri, *Le symbole de la perle dans le folklore persan et chez les Kurdes fidèles de vérité (Ahl-e Ḥaqq)*, in *JA* [1960], 463-81).

Parallel with this is the rather different conception of the seven deities, who arising through emanation, are light of the light of God just as light is lit from light, and among them the supreme god, Khudā, only appears as *premus inter pares*.

The statements regarding the creation of the religious community of 'Asrā'īl (= Melek Ṭāwūs) i.e. the Yazīdīs, to whom God sent Shaykh 'Adī from Shām (Syria) to Lālish (*q.v.*), are fragmentary, as are the statements regarding the descendants of Shahr b. Safar the son of Adam and Eve, the ancestors of mankind. After God had been worshipped for 40,000 years by the 30,000 newly-created angels, he created Adam out of the four elements with the active assistance of Djibrā'īl and put him in Paradise, ordering him to eat of all the fruits of the earth, except wheat (according to one Yazīdī legend, the prohibition concerned grapes).

When, after 100 years, Melek Ṭāwūs reminded God that there could be no increase in Adam's race, God gave him permission to do what he thought fit. Melek Ṭāwūs induced Adam to eat of the forbidden wheat, whereupon Adam who had as yet no opening in his bowels was driven out of Paradise by Melek Ṭāwūs and suffered great discomfort until God sent a bird to pick an orifice in him. After another 100 years, God sent Djibrā'īl to create Eve from the lower part of Adam's left armpit.

Another story of the creation in the *Maṣḥaf reš* says that God, who was sailing about on the ocean on a ship created by Him, created a pearl but crushed it after 40 years; from its cry of pain arose the mountains, from the noise the hills and from its vapour the heavens. God then created six other deities by emanation from His light. Each of these deities in their turn then created something: the first the heavens, the second became the sun, the third the moon, the fourth created the heroines, the fifth the morning-star and the sixth the atmosphere.

There are further a few confused statements regarding the very early history of the Yazīdīs in the *Maṣḥaf*, which include a few features worth noting after Melek Ṭāwūs had given Eve to Adam as a companion, he descended to earth to the Yazīdīs who, as descendants of Adam alone, had nothing in common with the rest of mankind. He appointed for them as far the Assyrians, who had been in existence from the earliest times, rulers namely: Nashrūḥ (Nasrūkh, Asavr, Nasrech) = Nāṣir al-Dīn, Djambūsh (Kāmūsh = Kamos) = Melek Fakhr al-Dīn and Artēmesh (Artimīs = Artemis) = Melek Shams al-Dīn. After them Shābūr (Shāpūr) I and II reigned for 150 years. From him, all their notables are descended, especially the family of the Yazīdī princes. The Yazīdīs had four rulers not definitely named. One of their kings, Ābāb, ordered names of their own to be given to them (which names is not stated). Ilah Ābāb (i.e. Ba'labakk) is now called Pirbāb. Among other Yazīdī rulers were Bukhtnaṣar (Nebuchadnezzar) in Babel, Akhashwerosh (Akhashverosh) in Persia and Aghrinkalūs (Aghrikalūs) in Constaetmople.

The *Maṣḥaf* further contains prohibitions. The forbidden foods include lettuce (Yaz. *kāsū*, Arab. *ḥass*, which is prohibited on account of the resemblance of the name to that of the prophetess Khāsla); beans (*lobiā*); fish (*māsi* = *mākī*, on account of the prophet Yūnān = Yūnus), gazelles (*āsek*); for the *shaykh* and his disciples, the flesh of poultry (*kāzhir*) and gourds (*kāzhā*) are forbidden.

As among the Sabians, the colour dark blue is prohibited. The following are also expressly forbidden: to micturate standing, to dress while sitting down, to use a closet and to wash in a bathroom (bath and closet are regarded as the abode of evil spirits). It is forbidden to pronounce the following words: *shaytān* ("the name of their god"); *bayṭān* (noose), *shaṭṭ* (stream), *sharr* (evil); *mal'ūn* (accursed), *la'na* (curse) and *nafṭ* (horseshoe).

Not mentioned in the *Maṣḥaf*, but traditionally regarded as forbidden, are words beginning with *shīn* also *saraṭān* ("crab"); *bayḍa* ("hedges"); *bustān* ("vegetable garden"); *baṭṭ* ("duck"), *naṭṭ* ("jump") and others; reading and writing, shaving and complete removal of the moustache are also forbidden, as are the use of combs and razors belonging to others, taking wood from sacred forests, the rearing of bastards and drinking from gurgling vessels.

KITĀBA [see Supplement]

KITĀBĀT (A.), inscriptions.

1. Islamic epigraphy in general.

The study of Arabic inscriptions today constitutes a science full of promise, an auxiliary science to be sure, but a science indispensable to the scholarly exploitation of a whole category of authentic texts capable of throwing light on the civilisation in the context of which they were written. From a very early period, seeing that the first dated Arabic inscription available to us goes back to the year 31/652 and that we are aware of previous inscriptions and graffiti known as "proto-Arabic", there appeared in Islamic circles the practice of engraving, on stone or other hard material, in a more or less skilful fashion, the symbols then used in so-called archaic Arabic writing [see KHAṬṬ]. This practice subsequently spread, benefiting from the prestige soon to be enjoyed by a writing capable of giving material embodiment to and preserving the very letter of the Kur'ānic revelation while responding to the needs of the new society born simultaneously with the Arab-Islamic empire and state. This corpus

of inscriptions drawn up in the Arabic language, disseminated and preserved up to the present day throughout a particularly vast geographical region, that of the Muslim countries where Arabic writing was practised, may today be suitably considered in its entirety, in spite of the difficulties inherent in the massive scale of the regions in question and in the inadequacies of the researches hitherto undertaken.

In its capacity as an original discipline, Arabic epigraphy, in common with the subsidiary sciences which it more or less borders on, like numismatics, glyptic or diplomatic for example, or even those which it partially overlaps, like palaeography *stricto sensu*, was among the disciplines subjected to specific study, at the end of the 19th century, by enthusiastic Western scholars curious about Oriental civilisations. Its methods, inspired principally by those of classical epigraphy, and the first attempts at their application, were owed to their zeal. It enabled various Western Arabist and Islamic scholars to obtain historical and archaeological results which guaranteed its vigour. It was not however until several decades later that it came to be recognised as a science by Arabic speakers themselves, in regions where the traditional taste for calligraphy had hitherto reigned unchallenged but had never taken the form of the searching out or the study of texts of this type decorating the walls of buildings or the surfaces of pieces of furniture, it is in fact no accident that the early Arab sources, anxious to describe the stages in the development of writing and to give the names of its eminent exponents, mention only the names of copyists or scribes distinguished in their use of the pen, while remaining silent on the bene of so-called lapidary writing and refer only exceptionally to the existence of the monumental graphic compositions that are so remarkable.

A modern science therefore by its very definition, Arabic epigraphy saw some of its rules codified as a result of the personal efforts of the Swiss orientalist Max van Berchem. The attention which this passionate enquirer tirelessly brought to bear on the remains of Arabic inscriptions preserved in Egypt and in Syria was in fact accompanied by a detailed consideration on his part of the fundamental principles according to which their study should best be conducted, some spectacular initial progress was marked in his lifetime and under his inspiration by the establishment of the first corpora of Arabic inscriptions

This progress went far beyond anything that had been previously attempted They should not, however, condemn to oblivion those earlier efforts which can be set back as far as the 18th century with reference to Tychsen, but which owed most of all, at the beginning of the 19th century, to the personality of J J Marcel, the French palaeographer, a member of Bonaparte's expedition to Egypt, who devoted his energies to deciphering reproducing and annotating in tentative fashion some Kūfic inscriptions of Cairo with the aim of gaining insights into the evolution of ancient Arabic writing. His studies, like the works of other pioneers upon whom there is no space to expatiate here (see J. Sourdel-Thomine, *Quelques étapes et perspectives de l'épigraphie arabe*, in *SI*, xvii [1962], 5-22, also the references in epigraphy in the detailed historical chapter entitled *Die Entwicklung der arabischen Paläographie* in *Abendlande*, in A. Grohmann, *Arabische Paläographie*, i, Graz-Vienna Cologne 1967, 32-85), gave clear indications of what was to follow. They even gave birth, alongside the ambitious and fruitless efforts of Lanci for example, to works that remain, even today, as indispensable for reference purposes as is the catalogue of inscriptions on objets d'art drawn up by Reinaud in connection with an important collection of his time (Reinaud, *Monuments arabes, persans et turcs du cabinet de M. le Duc de Blacas*, 2 vols., Paris 1828) The uneven quality of the results obtained emphasised even at this early stage the difficulties of a sphere where the best-conceived programmes—and this was the case with J. J. Marcel's programme at the dawn of the 19th century—most often came into confrontation with insurmountable obstacles of a material order and where the enthusiastic work of numerous specialists failed on every occasion to satisfy requirements, the importance of which they themselves had understood and asserted.

In fact, it was not at that time solely a case of showing that Arabic inscriptions deserved to be collected in the same way as Greek and Latin inscriptions. There was also a need to work rapidly in the field of new research, where the volume of exploitable documentation was remarkably copious. The initiative was taken by Max van Berchem when, having produced a large number of manifestos in commendation of Arabic epigraphy, he published, in the early years of the 20th century, the first volume of his *Matériaux pour un Corpus Inscriptionum Arabicarum*. But his ambitious and authoritative project of publishing systematically, region by region and monument by monument, a corpus of hitherto neglected epigraphic material soon had to be abandoned. The exemplary collections of inscriptions which he himself accomplished or supervised with regard to Cairo (M. van Berchem, *CIA Egypte* i, Cairo 1894-1903, *Mém. mission arch. fr.*, xix), Tripoli (M. Sobernheim, *CIA Syrie du Nord* i, Cairo 1909, MIFAO, xxv), Siwās and Diyārbakr (M. van Berchem and H. Edhem, *CIA Asie mineure*, i, Cairo 1910-17, *MIFAO*, xxix) and finally Jerusalem (M. van Berchem, *CIA Syrie du Sud*, Cairo 1920-3, *MIFAO*, xlii xliv), were followed, after his death in 1921, only by a later supplement on Cairo (G. Wiet, *CIA Egypte*, ii, Cairo 1929-30, *MIFAO*, lii) and the publication still later, in the form of posthumous work taken over by other hands, of the results of a survey of Aleppo begun by Morita Sobernheim, in the lifetime of Max van Berchem, and subsequently resumed by Ernst Herzfeld and Etienne Combe (*Syrie du Nord*, ii, Cairo 1954-6, *MIFAO*, lxxvi-lxxvii)

The terrain prospected on this basis remains, at present, minimal in comparison with that approached by less complete studies. Certainly there are other works of broad scope, undertaken in a different spirit, which also deserve mention. These have striven for example to deal with the question in their own way with regard to countries where Arabic inscriptions attracted attention at a very early stage the inventories of Michele Amari for Sicily (*Le epigrafi arabiche di Sicilia, Iscrizioni edite*, Palermo 1875, *Iscrizione sepolcrali*, 1879 81, *Iscrizione mobili e domestiche*, 1885, re-edited by F. Gabrieli, Palermo 1971) or of E. Lévi-Provençal for Spain (*Inscriptions arabes d'Espagne*, Leiden 1931), not to mention the various fascicules published in Calcutta under the title *Epigraphia Indo-Moslemica*. But beside these, of far greater number are studies that are currently out of date, such as the *Corpus des inscriptions arabes et turques de l'Algérie* (G. Colin, *Département d'Alger*, Paris 1902, and G. Mercier,

Département de Constantine, Paris 1902), works that have quite recently been supplemented by the various published fascicules of the *Corpus des inscriptions arabes de Tunisie* (1st part: S M Zbiss, *Inscriptions de Tunis et de sa banlieue*, Tunis 1955, *Inscriptions de Gorjani*, Tunis 1962, *Inscriptions de Monastir* Tunis 1962), or the volumes devoted to various epigraphic collections of the Iberian region (M Ocaña Jimenez, *Repertorio de inscripciones árabes de Almería*, Madrid-Granada, 1964; G. Rosselo-Bordoy, *Corpus basar de epigrafia árabe*, Mallorca 1975; F. Valderrama Martinez, *Inscripciones árabes de Toledo*, Madrid 1975). Moreover, there are numerous tentative works which are still at the project stage, although more than ever there is an awareness of the fundamental need for studies conducted on a regional basis, taking advantage of opportunities for verification on the spot (see in this context, the remarks of Sourdel-Thomine *Perspectives nouvelles dans le domaine de l'épigraphie* in *Bulletin de la association espagnole de Orientalistas*, v [1969], 183-90, and M Sharon, *Un nouveau corpus des inscriptions arabes de Palestine*, in *REI*, xlii [1974], 185-92).

As a consequence, the uneven quality of results obtained and their partial insufficiency remain the principal defects of collections made up to the present day. This assertion, banal though it may be, cannot be passed over in silence, even if the reasons for it are easily explained in a world stretching from India to the Pyrenees and from Anatolia to Black Africa, covering an immense territory that is little-known from an archaeological point of view and of which certain parts are particularly difficult of access, and which in any case considerably overstepps the limits assigned today to the Arab world as strictly defined. It is not only that Arabic inscriptions are dotted throughout areas that have since reverted to a desert state and that some provinces laboured at a late stage, like Anatolia, are not the least rich in hitherto unsuspected treasures; but there is also the fact that these inscriptions that have remained so long outside the canon of research are also distinguished by their diversity of appearance according to the regions, as witnesses to a society where writing, spread broadly throughout all areas, was subject to numerous stylistic variations [see KHAṬṬ]. The difficulties of decipherment are thus magnified by the effect of these local practices, and the traits and qualities peculiar to Arabic writing itself from the time of its appearance, which have subsequently conditioned its development, continue to be partially responsible for the shortcomings of a discipline where scientific progress is confronted by uncertain readings and by problematic interpretation of scripts, since there are numerous instances where letters are easily confused and uncertainties are further multiplied and complicated by a concern for ornamentation, which in most cases takes priority over legibility (cf. R Ettinghausen, *Arabic epigraphy: communication or symbolic affirmation*, in *Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles*, ed. D. K. Kouymjian, Beirut 1974, 297 317).

Such conditions were hardly favourable to the intensive and systematic publication of documents in the series of *Matériaux pour un Corpus* inaugurated by van Berchem. They were no more favourable to the establishment of the other fundamental study apparatus envisaged a little later by Etienne Combe, Jean Sauvaget and Gaston Wiet in the form of a *Répertoire chronologique d'épigraphie arabe* which had the object of assembling, year-by-year and in an approximately geographical order, the texts of Arabic inscriptions already published, accompanied by their French translation and indispensable bibliographical information. To be sure, sixteen successive volumes of this *Répertoire* (Cairo, FIFAO, 1931 ff.) have so far appeared and more than six thousand inscriptions have been edited covering the first eight centuries of the Muslim era. But since 1931, the date at which the enterprise was begun, the rhythm of discoveries has been more rapid than the rhythm at which the inventory has been assembled; the latter remains incomplete and today it swarms with inaccuracies in its most ancient sections, making it a vehicle for defective copies and sometimes of duplications. Even to consult it, in its present state of incompleteness, is to encounter difficulties which are barely alleviated by the publication of the *Index géographique* to its first six volumes, quite recently brought about through the good offices of the Centre d'Épigraphie Arabe of the École Pratique des Hautes Études IVe section of Paris. Even if it may be hoped that forthcoming volumes (vol. xvii prepared by L. Kalus, in press), profiting from experience acquired and designed to respond to more precise critical objectives in an age where our knowledge of Arabic inscriptions has considerably developed, will avoid some of these defects, they will continue to be no less restricted by the inadequacies of the previous publications on which they cannot help being based.

The *Répertoire chronologique d'épigraphie arabe* is, in any case, the only existing attempt at systematic grouping of inscriptions, in a sphere where the means employed are, to this day, seldom sufficient for the extent of the tasks to be accomplished. Also to be asserted is the almost total absence of studies of Arabic epigraphy constructed on the principle of the series, the non existence of functional corpora, organised according to material and category for example, the only means permitting a thorough investigation of the limited types of documents which inscriptions are, by definition. It is appropriate to mention in this connection, insofar as concerns the signatures of craftsmen, the inventories, designed to form a *Corpus of Muslim artists*, with which L. A. Mayer hoped to bring about a re-evaluation of our knowledge concerning the artistic schools as well as the functioning of their influences, and the publication of which was, also, interrupted soon after the death of the inaugurator of the collection (see Mayer, *Islamic architects and their works*, Geneva 1956, *Islamic astrolabists and their works*, Geneva 1958, *Islamic metalworkers and their works*, Geneva 1959, *Islamic armourers and their works*, Geneva 1962).

The bibliographical guides and the synthesised surveys are also inadequate to enable a confident orientation in a mass of studies that are too often indebted to fortuitous discoveries and consequently scattered through the most diverse of volumes, ranging from "epigraphic appendices" accompanying reports of explorations, accounts of journeys or archaeological publications to museum catalogues or monographs dealing with themes such as Islamology, history, palaeography or even aesthetics. Such in fact is the variety of subjects covered by Arabic inscriptions of an equally varied interest. Such also is the slow progress of research, which has been principally concerned with a copious proliferation of notes, correspondences and brief articles of unfortunately uneven quality.

Nor do we have at our disposal, it should finally

he made clear, manuals providing an introduction to Arabic epigraphy and guiding the efforts of those who wish to become conversant with it, familiarity with the works of their predecessors, especially with the articles of Max van Berchem, loaded with methodology (*Notes d'archéologie arabe*, I and II, in *JA* [1892], i, 421-495, and [1894], i, 377-407 *Recherches archéologiques en Syrie* in *JA* [1895], ii, 485-515, in particular *Inscriptions arabes de Syrie*, in *Mém. de l'Inst. égyptien*, iii, 417-520), with the volumes already mentioned of the *Matériaux pour un Corpus* and the specimen publications of subtly-deciphered and annotated inscriptions offered by some articles of J. Sauvaget (such as his publication of the *Diarra mamelouks de Syrie*, in *BEO*, ii [1932], 1-52, iii [1933], 1-29, and xii [1947-8], 5-80, as well as his *Quatre diverses seljoukides*) remains for the aspiring student the only possible path to follow, apart from various items of specific information provided here or there. More regrettable, however, is the fact that numerous aspects are to be distinguished in a body of inscriptions influenced simultaneously by regional practices and by the disparities between schools marked by the proliferation of dynastic centres. We know in fact that diverse currents presided, according to places and periods, over the drafting of inscriptions, the best of which evolved in parallel with the development and stylistic ramifications of so-called lapidary writing (which has in fact applied to various materials), a writing the history of which is an important chapter of the history of Arabic writing [*see* KHAṬṬ]. Influences of every kind were manifested here equally in the form of politico-social transformations and historical events which it would be impossible to evoke in this article in the context appropriate to each, geographically distinct, group of inscriptions.

But this continually renewed variety should not cause one to forget certain traits characteristic of Arabic inscriptions which may be underlined here, in regard to their nature and customary content, and which will enable us to stress the value of the conclusions to which their study leads.

One important feature to be emphasized is the frequency and significance of religious inscriptions, which have sometimes tended to be overlooked in cases where they are not accompanied by documents judged to be of historical interest and which for this reason, do not figure in their own right in the *Répertoire* and are only briefly mentioned in the *Matériaux pour un Corpus*. These are sometimes isolated inscriptions also capable of supplying an ornamental function on buildings, tombstones or even household objects, sometimes elements belonging to texts where in spite of the profane purpose there is an inevitable collection of pious expressions and customary doctrinal preoccupations. Here we shall assemble in particular examples of Kur'ānic quotations, professions of faith, isolated or linked to the texts of epitaphs, prayers, invocations and blessings.

These religious inscriptions appeared at the very beginning of the Islamic era among the primitive graffiti which covered a large number of the rocks of the desert (see the bibliographic references of Sourdel-Thomine, *Inscriptions et graffiti arabes d'époque umayyade, à propos de quelques publications récentes*, in *REI* [1964], 225 2e). But they were also early situated in ornamental bands forming an integral part of the architectural decor, as admirably illustrated by the interior of the Kubbat al-Ṣakhra [*q.v.*]. From this period, their essential theme has been the glorification of the Muslim faith, which could be associated with the personal nature of the testimony left behind by each traveller in the course of his wanderings, as much as with the majestic impassiveness of epigraphic compositions on a grand scale. It would not be enough, however, to say with Max van Berchem, that the dominating feature here is principally the notion of divine power which is one of the two main concepts of the Muslim spirit. Some of these texts, regarded in the most ancient cases as useful means of access to the deity, continue to act as representatives of the dominant religious feeling of the period and their formulae of praise and trust, varied to a greater or lesser extent with requests for pardons, blessings and favours, for a long time remained free of the constrictions of a stereotyped vocabulary. But even when they obeyed more rigid rules, they still maintained an authenticity enabling them to share in the expression of genuine religious options, and traits of commonplace appearance thus continued to reflect diverse doctrinal tendencies to the bosom of the Islamic community, allusions to sectarian beliefs, in the form of eulogies of a Shī'ī flavour for example, echoes of theological arguments like references to the created Kur'ān in professions of faith accompanying Egyptian epitaphs of the 3rd/9th century; maxims bearing the marks of philosophical wisdom and of mystical self-denial observed for example in the inscriptions of Shumaraïkh at Kazwīn at the beginning of the 6th/12th century. Even the poetic quotations so frequent for instance in later Sicilian texts could concur to the same design, and variations in formula came to be accentuated with the fragmentation, of a religious as well as a political nature, which the Islamic world suffered towards the end of the Middle Ages (note the originality of the theological texts which adorned at that time the sanctuaries of the Twelver Shī'ī conducting the prayers on the basis of a cult of *imāms* unknown in other Muslim circles).

A common denominator in all these inscriptions may assuredly be found in the constant use of Kur'ānic quotations, multiplied to the extent that they sometimes take the place of any other form of devout reflection. But even here the choice of verses copied in whole or in part obeys specific intentions, which are discernible, if not clearly asserted, and their arrangement is sufficient to indicate the theological or judicial implications of texts which have a doctrinal value for anyone who is able to interpret them. References to *ḥadīth*, the use of extracts from the Kur'ān of a recognised propitiatory nature (the "Throne" verse, for example), the insertion of certain types of prayer, also constitute revealing elements (see in this connection, D. Sourdel, *A propos des "Dix Élus"*, in *REI*, xxxi [1963], 111-14).

It is to be regretted, however, that few Islamic scholars take an interest in material that too often continues to be strange to them, while on the other hand there is a vigorous and widespread school of thought seeking, in the light of illuminist doctrines popular in certain circles of initiates, to decipher every ancient inscription as if it were an esoteric riddle, tainted with "traditional" gnostic philosophy both Shī'ī and Iranian. In fact, besides the traditional use of certain formulae that are legible and loaded with meaning beneath the flamboyant style of the writing—such as for example the remarkable stucco compositions in "square Kūfic" on the names of the Twelve *Imāms* preserved in the sanctuary of Pīr-i Bakrān at Linjān near Iṣfahān—one might hesitate to see a hidden sense in the quasi-mechanical

repetition on certain monuments, of formulae such as *al-mulk li-llāh* "the power is God's", or, on certain pieces of pottery, of expressions of the *al-ʿāfiya* type sometimes evolving towards pseudo-inscriptions. These formulae, reproduced in the manner of respected graphic combinations, doubtless preserved no theological significance more precise than the successions of appeals, such as "fortune, prosperity blessing ... to him who possesses it" *al-yumn wa ʾl-ʿiqbāl wa ʾl-baraka*, etc. .... *li ṣāḥibihi*, which at that time were invariably inscribed on manufactured objects. The connections between sign and signified which may still be legitimately read here, are thus shown to be especially typical of a psychological climate peculiar to Muslim society in the sense of a society marked by religiosity, and correspond to the tight liaison that we have already emphasised between the character, Muslim in tenor and ornamental in appearance, of the majority of the inscriptions in this category: these are works of art endowed in this sense with a fundamental ambiguity as means of expression, both aesthetic and symbolic, of the sensibilities of their period.

A second category of inscriptions that is no less copious is subsequently represented, that of historical texts which have the object of commemorating the individual and his acts, whether the case in question is of a senior government official or of the obscure occupant of a village tomb. To this category we may add construction texts fixing the date of a certain building, title deeds and other documentation of private transactions, foundation texts indicating (according to terminology originating with van Berchem and adopted by the *RCEA*) attestations of pious donations given in perpetuity through the custom of *waḳf* [*q.v.*], funeral texts of all kinds and even the straightforward signatures of *masters* craftsmen and artists which will also be considered here. If these texts partially reflect the notion of "absolute political power" whereon van Berchem saw, according to an insufficiently qualified assertion, the second major concept of the Islamic spirit, and if their principal gravitation is such that the same epigraphist expressed it, evolving around the names of the sovereign, his titles, his major deeds and his contesting praise, they also contain much more, through the evolution that they have undergone in the course of the centuries, they give information on popular beliefs, opinions current among the wealthy or academic classes of society and the functions served or the degree of respect attained, after their death, by certain of their members, as well as on the nature of the buildings, utilitarian or decorative, that the latter took pleasure in constructing. Some of this information of obvious value in the reconstruction of the social, economic and intellectual history of the Islamic world, is accompanied also by precise revelations touching on such-and-such a point of circumstantial history or such-and-such an archaeological detail: these amply compensate for the tedium that sometimes emanates from the stereotyped phraseology and the excessive enumeration of titles that are characteristic of documents tending towards a standard official formality rather than towards any personal touch, which is rarely encountered.

Of all these texts, the most copious category is undoubtedly that of epitaphs, collections of which, either remaining *in situ* in the ancient cemeteries or transferred to museums, are on such a massive scale as to discourage the most enthusiastic researcher and in consequence have seldom been catalogued in a systematic way. The specimens published since the unique example of 31/652 and the Egyptian steles of the end of the 2nd/8th century are nevertheless sufficient to give an idea of the progressive transformation, according to places and periods, of fairly simple types of texts, where the significant features have always been religious maxims and the professions of faith already mentioned (for supplementary details and bibliography, see ḲABR). Their references to certain currents of thought deserve in fact to be given more attention than the study of the dates of inscriptions or the genealogies of the deceased where statistics directed towards onomastic and prosopography, according to local perspectives, would alone be capable, in the longer term, of maintaining interest. But neither should one ignore the titulary inscriptions which are to be noted from the 6th/12th century onward, to a period where the devaluation of titles formerly reserved for sovereigns led to the attribution, to "men of religion" and other representatives of the upper urban classes, of honorific phrases, the history of which has not yet been written and which ought to be studied in the same way as the titles of individuals serving in the higher echelons of the administration (see LAḲAB).

Besides these epitaphs, marked by a discretion of vocabulary which is maintained up to the time of the royal epitaphs of the Ghaznavid Sebüktigin (cf. 387/997) or of the Artukid Balak (d. 518/1124), there are other funerary texts which belong more emphatically to the canon of inscriptions intended to celebrate the glory of the sovereign. These are those which, from the 4th/10th century onward, accompany monumental mausolea varying considerably in architectural structure. A greater freedom of composition, already perceptible in the dated and dedicatory epigraphic friezes of the Iranian tower tombs, is shown when the opportunity offers, notably in the original version of inscriptions specially designed before his death in 607/1210-11 by ʿAlī al-Herawī [*q.v.*] for the decoration of his tomb. These texts are as valuable for the history of monuments as they are for that of the sovereigns, officials or military chiefs who chose them for the commemoration of their graves. Moreover, they become especially significant when the tombs in question are those identified by popular piety as objects of pilgrimage and supplication, whether in SHīʿī circles where the buildings of *imāms* and *imāmzādas* [*q.v.*] were widespread at a very early stage, or to a certain extent throughout the Muslim world from the 5th/11th century, when the practice of *ziyāra* [*q.v.*] developed to the proportions of a veritable "cult of saints" in honour of pious individuals renowned for their posthumous miracles, or of celebrities from the early periods of Islam commemorated now for the first time by newly-built sanctuaries: only inscriptions of sufficient antiquity may in fact give information about the original period of these devotions, inaccurately described in the literary sources, while at the same time supplying the names of rulers or wealthy patrons who promoted them. These data are also useful for the reconstruction of the complicated history of the multi-purpose architectural complexes which became numerous around the tombs of saints from the end of the 7th/13th century and which grew up a little later around royal graves, as is proved by well-known Timūrid and Mamlūk examples (see ḲUBBA, TURBA).

The formulae employed in this particular category of funerary texts also belong partially to that attested by the innumerable construction texts en-

graved on Muslim monuments since the Umayyad period. These latter texts in fact obeyed from the start strict obligations, which imposed the following elements: definition of the work undertaken, name of the initiator responsible, sometimes located between the name of the reigning sovereign and those of the authorities who supervised the progress of the work, and date of the construction or restoration, the whole incorporated within a series of variable additions variously distributed pious formulae which included Kur'ānic quotations appropriate to the nature of the work, but which most of all were requests to God for reward in respect of the work accomplished in his honour more or less detailed appeals on behalf of the founder and optional complementary notes, including the names of the author-scribe and the architect mason. This was the constant framework, and the additions made in ensuing centuries were only such as to incorporate subsidiary details affecting in particular the titles of the builder or those of the various authorities on whom he depended: thus one may find, in the 5th/11th and 6th/12th centuries for example, successive mentions of the caliph of Baghdād, of the Saldjūk sultan, of the local sovereign and the humble figure of the builder is introduced simply as *al-ʿabd al fakīr ilā raḥmati rabbihi* "the poor slave imploring the good will of his Lord". Furthermore, such rigidity of formulae provides the exact scheme that may be expected of inscriptions of this genre, texts that are easily reconstructed where there are lacunae in the details of ritual etiquette or in the order of succession of the various elements, but of scope limited by the constraints of their subject. Only on two points are we likely sometimes to be agreeably surprised: their archaeological interpretation, on the one hand, when care is taken to note their precise location in the building, to the dating of which they contribute, on the other hand, their richness in titles, from which one sometimes perceives the reality of Islamic government institutions which continue to pose numerous questions to the historian.

Comparable information is furthermore to be obtained, in the majority of cases, from foundation texts where the list of the titles of the legators obeys the same rules of precedence and is often clarified when account is taken of the more theoretical notions supplied by some Arabic texts dealing with chancellery practices. But the more original data contained in the disposal of these *waḳfiyyas* are of a topographical or toponymical order, on account of the large number of localities and regions listed as sources of revenue, as of an economic and social order, relating to daily life, sometimes also to urban life in general when the generous benefactor has decided for example to underwrite the excavation of *ḳanāts* [*q.v.*] or the improvement of some municipal work. The profoundly Islamic character of these arrangements, as well as the attitudes that engendered them, is linked, through the solemn proclamation of the devotional work, to the psychological process according to which the construction of a building took on its true dimension when an inscription text preserved its memory and placed the builder or benefactor in his just position within the Muslim community.

This tendency was superimposed on a concern for the glorification of the individual concerned, which appears to a still greater extent in the inscriptions on material objects, which constitute the final category of Arabic commemorative inscriptions. The texts of these most often consist in fact of nothing more than greetings added to the name and titles which enable the owner to be identified, whether it was a case of a caliph ordering the manufacture of a *ṭirāz* [*q.v.*] in a royal factory or of a Mamlūk *amīr* acquiring a bronze or a ceramic plate bearing his monogram. The mention that such an object has been manufactured on the orders of a certain powerful dignitary is sometimes the only information to be conveyed, in the form of a motif that is both epigraphic and decorative. But the sense of pride of ownership also sometimes finds an echo in the professional pride of the craftsmen who at an early stage adopted the practice of signing their works, even if in the briefest manner possible (see in this connection the writings of L. A. Mayer mentioned above).

It remains to consider, in the third and final place, the group which, while being definitely the least important is nevertheless extremely rich in information of all kinds the group constituted by administrative texts. Linked to the functioning of the machinery of power, they are not designed to glorify, except indirectly, the holders of this power, but rather to make certain government decisions known. Represented in early times by inscriptions stamped on coinage, or on weights and measures of glass paste which appeared from the Umayyad period onward, they made way somewhat later for decrees of abolition of taxes. Mamlūk specimens are among the best known: these are, once again, valuable documents of economic and social history, comparable with title deeds and records of donation, to the extent that they provide precise and detailed information regarding fiscal policy or give accurate descriptions of bureaucratic procedures. But the quaint symbolic notations that they preserve are shown in their turn to be extremely rich when one attempts, as Sauvaget has done, to glean from them certain data on the spot and to deduce from them, especially in the sphere of topographical studies, elements of assistance in the reconstruction of certain aspects of urban evolution.

So here we find once more this golden rule for the utilisation of Arabic inscriptions, which seems to be always to consider them as concrete documents, which are not to be separated, beyond the official formulae and the pious expressions that characterise them, from the local and monumental context within which their most original significance is expressed. Some such epigraphic commentaries even when they deal closely with the purport of the various texts the principal tendencies of which we have reviewed above, thus remain subordinate to that which constitutes the prime quality of the documents with which they are concerned that of having been composed to occupy a particular location in lasting fashion and to be integrated into the exterior appearance of the objects or the monuments that they accompany. Nor should one neglect those inscriptions which were capable of being enclosed in the interior of the most varied types of framework (panels, scrolls, friezes of all dimensions, the entire surface of an object or a tightly-limited section), entrusted to the most varied materials according to equally diverse processes (stone engraved or sculpted in depth, stucco elaborately worked on several surfaces, experiments with bricks in relief, mosaic, painting, moulded or incised metal, wood, ivory, ceramic, etc.), sometimes reduced to the subsidiary role of motifs underlining with their shapes the principal lines of the architecture or joining with covering linear décors composed of arabesques and

lattice-work. These details are to be considered with as much attention as the formulae of the inscriptions or as the style as revealed by the idiosyncrasies of the writing. For the reasoned study of this body of facts, with which, in order to be complete, any survey of Islamic epigraphy ought to begin, is the only means that will enable the scholar to put into their just place, for an introduction to the realities of mediaeval Islamic civilisation, the inscriptions which up to the present day scholars have been content to examine in a fashion that is still too incomplete and inevitably superficial.

Bibliography Given in the article.

(J. SOURDEL-THOMINE)

2. In the Near East.

It is in the Near East, the cradle of Arabic writing, and more precisely in Syria (Namāra, Zebed, Harrān, Umm Djimāl) that the oldest known inscriptions written in the Arabic language have been discovered. These so-called proto-Arabic inscriptions, sometimes bilingual (Greek-Arabic), have contributed to our understanding of the ancestry of the Arabic characters, which in the final analysis derive from Syriac characters and not from Nabataean, as was previously believed.

The privileged place accorded by Islam to writing allowed the latter to undergo a rapid evolution and a rapid diffusion. From the time of the Umayyad era, inscriptions proliferated in all the provinces of the young Islamic empire. Construction texts, religious texts, milestones, epitaphs, and simple graffiti dating from this period have been and still are being discovered in the archaeological sites of Syria, Lebanon, Palestine, Egypt, and ʿIrāḳ.

The formula of these inscriptions was probably influenced by that of the Greco-Roman inscriptions, very numerous in these regions. It is simple, sober and varies in tenor according to the function of the text. It serves as a prototype for later periods which enrich it, while remaining faithful to its broad outlines. Official texts are generally composed as follows: almost always the *basmala*, one or more Kurʾānic verses, religious invocations, the dispositions of the work, the name of the caliph followed by his title *amīr al-muʾminīn*, sometimes the name of the overseer responsible for the work, and generally, the date.

The study of these inscriptions reveals the rapidity with which the crude and maladroit writing of the proto-Arabic inscriptions was transformed to the point of attaining to the monumental inscriptions, a high level of aesthetic perfection. Engraved on rock in finely drawn lines of equal breadth, usually incised, very seldom in relief, sometimes executed in mosaic or in painting, Umayyad writing obeys the same norms: characters composed of simple geometric elements—verticals, horizontals, obliques, circles or segments of circles—set out on a base line which is strictly horizontal. This horizontal base line plays an essential role in Arabic writing. The latter was in fact conceived, after the pattern of Syriac characters, as resting on a foundation, as opposed to Nabataean characters, which appear to be suspended from an upper line. This role is such, that in certain types of archaic and crude writing, the base line is itself an integral part of the characters. These latter are in such cases formed of small simple lines, vertical or oblique, and of rings, resting on the horizontal of the base line, of which the continuity is unbroken (cf. Pl. VIII, 1).

In Umayyad epigraphy, the combinations of these geometric elements give two types of characters: tall letters with vertical strokes and short letters with notches or rings, connected by horizontal segments. This double typology constitutes one of the essential elements of the aesthetic quality of Arabic writing to last, it provides the artist with two areas where he can exercise his genius differently: the lower register, the more dense, where the artistic effect obtained results in a simple inter-play of characters, and the upper register where the spaces between the vertical strokes provide an ideal place for the artist to indulge his taste for audtiple creations.

In the Umayyad period, this upper register was not used, but the stone-masons succeeded, by using the lower register alone, in creating "a harmony at once rhythmic and linear" which makes this form of writing a genuine work of art. The rhythm is obtained by the opposition and alternation of high and low characters, while the linear harmony results from the arithmetical reckoning of the proportions. This reckoning answers a need for equilibrium as much in height (the proportion of short characters to long varies generally between 1/3 and 1/2) as in width. It is to satisfy this latter need that the mason does not hesitate to extend his characters in width and to lengthen the joining segments. The standard of calligraphy definitely varies according to the type of inscription and it is especially in official texts that fine specimens are to be found. We shall mention simply as examples the inscriptions of the caliph ʿAbd al-Malik in the Kubbat al Ṣakhra in Jerusalem and his milestones (cf. Pl. VIII, 2 and IX, 3).

During the first two centuries of the ʿAbbāsid régime, the Arabic inscriptions of the Near East underwent an evolution corresponding to that of the socio-cultural development of the entire ancient Baghdād and that of the palaces of Samarrāʾ. The fact that these were constructed of brick, a perishable material, has deprived us of the monumental inscriptions which probably adorned the official buildings and which disappeared as a result of these destructions. On the other hand, we have dating from this period a large number of epitaphs and inscriptions on movable objects, especially on fabrics which benefited from the expansion of state factories (*ṭirāz*) supplying the needs of the caliphs and their court. The formula of these inscriptions, often found on the edges of the fabric, is stereotyped. It begins with the *basmala*, generally followed by the phrase *baraka min Allāh li-ʿAbd Allāh* followed by the name of the caliph and his title, and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name of the workshop where it was made and the date of manufacture. These inscriptions are executed in archaic, angular characters whose typology corresponds, as broad outlines, to that of the characters of the stone inscriptions.

In this area, undoubtedly the most interesting evidence is provided by the epitaphs, most of them of Egyptian origin, engraved on marble or on sandstone, of which a considerable number of specimens have survived to the present day. The formula of these epitaphs is constituted of different elements of which the combinations vary according to a variety of patterns: the *basmala*, a verse of the Kurʾān, one or more religious invocations, the profession of faith, more or less developed, the dedication of the tomb, the verb introducing the name of the deceased followed by his titles and

profession, the date of his death and an appeal for God's mercy upon him.

These epitaphs provide valuable materials for following the evolution of inscriptions on stone during the first ʿAbbāsid centuries. The change of dynasty did not immediately change the practices of the stonemasons and the characters of early ʿAbbāsid epitaphs are similar in outline to those of Umayyad inscriptions. Nevertheless, differences soon appear in the reckoning of the proportions. The characters diminish in length and correspondingly the joining segments between the letters become shorter. As a result, ʿAbbāsid Kūfic presents a more cramped and less harmonious aspect appearance than Umayyad Kūfic. On the other hand, this evolution is inclined toward a concern for the ornamentation of characters. This is expressed first in the lengthening of the terminal segments in the form of a bevel which tends to grow larger and larger. In the crude types it is sometimes replaced by a small hook or even a ring. To the development of the bevel there correspond a thickening of the outlines of the letters and a more frequent adoption of the techniques of engraving in champlevé (cf. Pl. IX, 4), which allows two parallel expressions of the evolution of characters, corresponding to the duality of engraving techniques. Thus, in incised inscriptions, the vertical strokes of the letters are decorated with hooks, simple, double or triple, pre-figuring the palm-leaf (cf Pl. X, 5), while in inscriptions in relief, the bevels evolve into foils, double foils or triple foils which later open out into leaves, fleurons and palm-leaves, a style of décor much in vogue in the mid-3rd/9th century (cf. Pl. X, 6)

Various other processes of ornamentation are encountered in this period: symmetrical indantations in the parallel vertical strokes of the *alif* and the *lām*, soltening of the lines and the appearance of curves (in the *lām-alif*, the *kaf*), transformation of the lower appendices into rising tails fleurons arising from mouth-shaped letters (*mīm*), the intertwining of contiguous lines, (cf the knot formed by the *alif* and the *lām* of the word Allāh, Pl. X, 6, l. 2). The indentations and arcs which sometimes adorn the joining segments, especially in the word Allāh, roses and fleurons at the end of a word, framing to linear décor (braids, zigzags, mouldings, spirals) or in a décor of plant forms (plant palm leaves alternated on one side and the other by a sinuous line, leaves and symmetrical fleurons), sometimes an even more subtle composition (an arc delineated by a flat moulding with spandrels adorned by an outline in arabesque), combine towards the embellishment of the script.

With the Fāṭimid conquest of Egypt in 358/969 and its sporadic expansion in Syria-Palestine, new practices are introduced into the inscriptions of the Near East. The formula varies little in its basic elements, but the name of the caliph is almost always followed by mention of his links with the "Family" in a phrase such as *salawāt Allāh ʿalayhi wa ʿalā abīhi-l-imām al-muṭahhir*, and the name of ʿAlī is often mentioned with that of the Prophet (*Muḥammad rasūl Allāh ʿAlī walī Allāh ṣalawāt Allāh ʿalay-himā*).

The effort at the embellishment of calligraphy continues and a real proliferation of types of decorative inscriptions is seen. As characteristic examples, we mention the inscriptions of the 4th/10th century mosque of al Ḥākim in Cairo (cf. Pl. X, 7) and those of the cenotaph of Fāṭima in Damascus (dated 439/1047, Pl. XI, 8) In the former, the linear element maintains a predominant place. The characters show a vigour of design which accentuates their relief on the excised base, completely bare in the lower part, decorated in the upper register by an independent, foliated scroll which glides alternatively above and below the vertical strokes and which gives a free run in the empty spaces to the development of spiral designs which open out as fleurons (cf. Pl. X, 7).

In the cenotaph of Fāṭima, the foliated scroll is sometimes linked to floral elements issuing from the characters and develops in such a fashion as to form a more dense composition (cf. Pl. XI, 8).

In the Fāṭimid period, the typology of the characters is considerably enriched. Curvatures, counter-curvatures, knots and indentations are numerous in the interiors of the characters, offering the stonemason infinite opportunities for improvisation. Purely for the sake of example, let us note the ten different types of *lām-alif* in the single inscription of the cenotaph of Fāṭima.

It would of course be wrong to attribute to Fāṭimid artists alone all the epigraphic innovations in the inscriptions of the 5th-6th/11th-12th century in the Near East. The conquest of Syria by the Saldjūḳs, who imported with them the techniques and the graphical forms used in the eastern provinces of the Islamic empire, was accompanied by the intrusion of a number of the features mentioned in the Fāṭimid inscriptions, such as knots and right angled bends in the vertical strokes of certain characters. There was probably a phenomenon of osmosis between these various regions where exchanges were frequent.

The inscription on the cenotaph of Sukayna in Damascus (end of the 6th/12th century, cf Pl. X, 9) is an interesting specimen of the evolution of monumental Kūfic in the Saldjūḳ period The inscriptions engraved in the wood of the cenotaph are distributed on three levels, in two bands superimposed and separated by a fine braid. The main inscription occupies the full height of the broadest band, while at half way up, the second is intertwined among the vertical strokes of the first. The third, quite independent, occupies the small upper band. These three bands stand out against a background decorated by a fine network of arabesques which cover all of the part crudely excised.

Among the specifically Saldjūḳ types of monumental inscription, mention should be made of epigraphic bands with geometric décor where the vertical lines of the characters are extended in the upper area giving rise to the interweaving of stars and polygons. The inscription of Ṣafwat al-Mulk at Damascus is a living illustration of this.

The Saldjūḳ influence is also shown in the evolution of the formulary of inscriptions of small Syrian dynasties of Saldjūḳ allegiance where the titles become swollen with pomposity (cf. for example the titles of the *atābak* sovereigns in the construction texts of the great mosque of Damascus).

It was in the first half of the 6th/12th century that there was effected the most important transformation regarding the evolution of Arabic script in stone, when Nūr al-Dīn ordered the adoption of the cursive script in official inscriptions, to the detriment of the angular script, which, without disappearing completely, was reduced to repetitions of ancient types. Some fragments of cursive script are mixed, as an intrusion, in the Kūfic inscriptions of the bands of the minaret of the great mosque of Aleppo to 483/1090. There is found also at Buṣrā in Syria an inscription dating from 485/1188, where the characters, while still crude are neatly rounded, but it is not until the first half of the 6th/12th century

that there appears the full flowering of cursive writing expressed in stone, with its full and its slender lines, its supple ligatures and the introduction of points and diacritical lines, not used in the inscriptions of angular type. A parallel transformation is effected regarding the base line which loses its rigidity and its horizontal continuity. The lintels which delimit the bands of writing are cut however eliminated, and they continue to compress the lower appendices, the latter being forced to develop below the base line. To remedy this inconvenience, the stone-masons divide the words and engrave the segments thus obtained on different levels, based on an oblique line descending from the centre of the band towards the chief of the base. This procedure permits a freer development of the lower appendices. The base line appears as a discontinuous line reduced to a series of obliques overlapping segments (cf. Pl. XII, 10). This procedure is accentuated in the Ayyūbid period, and already there appear inscriptions where the words are divided and staggered on two or three levels, almost parallel and superimposed. The word generally begins on the lower line and continues above (cf. Pl. XIII, 11).

In the Mamlūk period, this technique of engraving reaches its apogee. The characters are so interwoven that their deciphering becomes difficult all the more so as the characters used in the majority of the inscriptions of this period are of small dimensions, thick and squat. It is to this type of inscription that belong the Mamlūk decrees, engraved in profusion on the walls of official buildings and constituting precious documents regarding the socio-economic life of the Near East in this period (cf. Pl. XIII, 12).

There exists, moreover, a type of Mamlūk *naskhī* where this dense writing gives way to an elongated graphic style prefiguring the Ottoman script. This last gives the appearance of a transposition on to stone of manuscript writings, in particular the style known as *thuluth*, in which the Ottoman calligraphers excelled (cf. Pl. XIII, 13).

3. In Muslim Spain.

At the time of the Muslim invasion of the Iberian peninsula (92/711), the *khaṭṭ* or Kūfic script had already existed in the Islamic world, as an official and sacred script, for 80 years. It was this script that the conquerors used from the start in their inscriptions. The most ancient evidence that we have of it is constituted by the bilingual coinage struck by the governor al Hurr b. 'Abd al-Raḥmān al-Thakafī (98/716-17); the uninterrupted continuity of its use is confirmed by all the coinages struck by subsequent governors and *emirs*. From the time of the amīrate of 'Abd al Raḥmān II, this writing figures in pious foundation texts, in funeral and other inscriptions which corroborate this numismatic evidence, as well as testifying clearly to the development of the usage of the Kūfic characters in al-Andalus before the Almohad invasion (541/1147). Following this event, a struggle developed between *khaṭṭ* and *naskhī*, ending in victory for the latter which subsequently took the status of the official scripts of epigraphy, while the former lost ground and its use became limited to religious or profane inscriptions of little importance and intended for purposes of general ornamentation.

The Kūfic features which appear in the oldest Arabic inscriptions of al-Andalus are virtually the same as those which were used during the last decade of the first century A.H. in all the lands conquered by Islam, that is to say, the symbols originating from the city of Kūfa, with scarcely any evolution in design. This Kūfic, on account of its clearly primitive nature, is generally called archaic. It was reproduced, with more or less finesse over the years, by the traditional craftsmen of Spain who never succeeded in mastering it fully and in consequence introduced no novelty of design by virtue of which it might be considered characteristic of, or exclusive to, al-Andalus. In the last years of the amīrate of Muḥammad I, a new generation of rather more erudited craftsmen began to turn the more extreme features of Kūfic script into stylised plinth-forms. At first this innovation was used very timidly because it applied only to a very small number of letters, nevertheless, little by little it found acceptance to the point where it was applied to all the symbols which permitted it. The craftsmen thus succeeded in creating the Hispano-Muslim version of floral Kūfic while it must be admitted that the development of this variant of Kūfic never attained, in al-Andalus, the level reached by contemporary Kūfic writing in other Muslim territories.

In the reign of the second caliph of Cordova, al-Ḥakam al-Mustanṣir bi 'llāh, the religious puritanism and stern austerity which characterised the conduct of this powerful sovereign at the head of the government of al-Andalus made itself strongly felt, needless to say, in the epigraphy of the period. Decorative floral additions were suppressed and attempts made to restore the Kūfic letters to their primitive and classical design. But this was not entirely possible, because the letter-forms possessed henceforward a certain elegance which was lacking in them before; this elegance, far from disappearing as a result of this suppression, manifestly increased. Thus there was born a new Kūfic with streamlined, elegant shapes, stripped of all ornamental addition, commonly called simple Kūfic, which flourished until the downfall of the Caliphate of the West. Previous to this important historical event, there certainly existed a consistency in the style of writing Kūfic

in the whole of al Andalus—as a consequence of the political unity of the region, feebly introduced by the governors and subsequently definitively enforced by the monarchs of the dynasty of the Banū Umayya—and a single cultural centre regulating its art, the metropolis of Cordova. After the downfall of the caliphate, a number of schools of design sprang up, for, with the end of the hegemony of Cordova, each province of al-Andalus followed its own political direction and developed its own artistic practices under influences of very diverse origin. Among the schools the most important were those of Seville, Toledo, Saragossa and Almería, without counting that of Cordova. At Seville, simple Kūfic continued to be used in inscriptions, but the characters developed in height, which made them extremely elegant and distinctive. At Toledo, the craftsmen returned to floral Kūfic, with forms excessively overladen with plant-forms alternated with the use of simple Kūfic forms. Of these two variants, two distinct versions appeared: one traditional, firmly Cordovan in origin; the other authentically Toledan, which consisted in adding to characters carved in relief a central groove, giving them considerable force of expression. The Kūfic of Saragossa had a particular importance. It is known today through the inscriptions preserved at the Palace of Aljafería (al-Dja'fariyya), built by the princeling Abū Dja'far Aḥmad al-Muktadir bi 'llāh (438-74/1046-81); it is known that in the building of this monument, originally called Dār al-Surūr or House of Rejoicing, the craftsmen experimented with numerous innovations, architectural as well as decorative, and inscriptions—an ornamental element of first importance in Islamic art—were no exception. They stylized Kūfic characters to an incredible extent, and by sometimes making them slide on a floral base or at other times cleverly interlacing them with geometric motifs, they succeeded in composing epigraphic bands of great beauty and an originality unusual for the period. As for Almería, principal base of the Umayyad fleet in the Mediterranean, it had been intimately linked with the metropolis of Cordova during the caliphate. Its craftsmen had always represented Kūfic according to the model of Cordova, and they did not change their style when the latter lost its political status. They continued to use the simple Kūfic which was in use at the time of this event; later, this Kūfic evolved very slowly and its most brilliant period, corresponding to the importance and splendour of this naval base, was reached under the aegis of the Almoravids. From the study of the Arabic inscriptions of Almería, of which a fine selection survives, it may be deduced that the Almoravid invasion brought no change in the shape of the Kūfic of al Andalus. By contrast, as mentioned above, the Almohad invasion had very significant effects on epigraphy. At first, the latter respected the Kūfic script and used it, as is well-known, in the first building that they constructed at Marrākush, but, when they were obliged to put into practice a policy of reconciliation of the peoples whom they had subdued by force, they very soon realized that the Kūfic script with its difficulty of interpretation, was not suitable for the development of their policies, and they replaced it with *naskhī* or cursive in all texts relating to new foundations of a public character. For the craftsmen of al Andalus in particular, this change had the effect of enabling them to acquire a thorough knowledge of the Arabic characters and to distinguish, in each one of them, that which was essential and invariable from that which was secondary and could legitimately be altered according to the taste of the designer. Thus they came to appreciate the true significance of Kūfic forms hitherto reproduced more or less mechanically. They were no longer content with drawing their designs according to the good taste of the Almohads, but little by little they transformed the shapes. First of all, with the idea of making them attractive and graceful, then by building up their upper portions with complicated interloops, while increasingly filling up with stylized plant-forms all the interstices not covered by the letters in the lines of inscription. In the end, they created ornamental motifs of a type which, on account of its incontestable decorative worth, was subsequently copied by the Mudéjar craftsmen, including those who worked in the Alhambra of Granada, thus undoubtedly conferring upon it a long lasting prosperity. For it is certain that it is by virtue of these copies, made with extreme care and fidelity, that we are acquainted today with the Arabic epigraphy of al Andalus current in the period of the Almohads, since the original inscriptions of this historical period surviving to the present day are very few in number, and discoveries have not been made on the scale which could have been desired. The motif types mentioned above were incorporated into Mudéjar decoration without further consequence, and through incessant use over the course of the years they patently degenerated and became a parody of what they had originally been. On the other hand, their inclusion in the ornamentation of the palace of the Banū Naṣr had the effect of inspiring the craftsmen of Granada to the creation and the development to hitherto inconceivable limits of the geometric Kūfic which is admired today in the Alhambra and which is, beyond doubt, one of the finest ornamental creations contributed by Andalusian craftsmanship to the art of Islam. It was also in the Alhambra that the *naskhī* script achieved the highest point of its development within Muslim Spain. In fact, it is known that among the most important elements contributing to the ornamentation of the Nasrid palace there are epigraphic friezes composed in this script and containing the best works of the most prominent poets of the period, Ibn Zamrak and Ibn Diayyāb, which are thereby available to us in "the most sumptuous edition in the world", to borrow the apt expression of E. García Gómez.

4 In North Africa.

The oldest inscriptions known to us in North Africa show an originality compared with those of the Near East in the Umayyad and, in particular, the ʿAbbāsid periods. The evolution of styles in Ifrīkiya was to follow a course generally parallel to that of the styles known to Egypt which seems to have constituted the natural link to the chain connecting the Muslim East and West. The Maghrib al-Aḳṣā, by contrast, and especially from the time of the Almoravid period, was influenced by al-Andalus, which for a long time remained faithful to archaic forms of Kūfic but which, under the influence of the ʿAbbāsid East, submitted to the prevailing taste Nevertheless, Muslim Spain was to interpret in its own fashion toe styles of writing and their evolution such as were familiar in the Orient in the Fāṭimid period. This piece of the Orient set in Andalusian soil was to influence Morocco, and then with the victory of the Almohads, the whole of North Africa.

The style of monumental inscriptions in the Aghlabid period differs according to whether it is a case of carvings in relief, or incised engravings, on stone or wood, or of painting The Kūfic carved in relief on stone may well be compared to that of the Nilometer of Rawḍa (199/814-15), notably on the marble at al-Kayrawān (the capitals and the interior of the *miḥrāb*) It may equally be compared to Tūlūnid Kūfic, but some of the details characteristic of the West appear to be quite original, for example the *alif* with 3 horizontal appendage towards toe right in the lower part of the letter The writing, whose essential value lies in the message to be transmitted, tends gradually to become a part of the ornamentation (for example, the inscription painted on wood at the base of the cupola of the Great Mosque of al-Kayrawān where the mis shaping of the *ʿayn* gives a fleuron with three foils while the background is decorated with isolated floral motifs) The first inscription on the façade of the Mosque of the Three Gates at al-Kayrawān also provides an example of this tendency which is emphasised in the marble plaques of the *miḥrāb* of the Zeytūna at Tunis, where the inscription in very fine Kūfic characters forms a decorative framework.

The Kūfic of the foundation-plaque of the *ribāṭ* of Sousse (206/821) appears very archaic in comparison with these inscriptions

Funerary inscriptions are mostly engraved; the formula varies little, the main element being a few Kurʾānic verses, usually taken from Sūra CXII. These inscriptions perpetuate, in the 3rd/9th century, forms which are more emphatically archaic than those of the monumental inscriptions; this is especially notable in epitaphs on pillars, occasionally crudely executed in spite of some fine creations, and in the fine funerary inscriptions engraved on marble plaques or on tall columns. The similarity between the Aghlabid incised inscriptions and contemporary examples from Egypt and the Sudan is quite striking.

There can be no doubt that the arrival of the Fāṭimids in Ifrīkiya and their installation at Mahdiyya, then at Ṣabra al-Manṣūriyya, accentuated the orientalisation of the country. The evolution of Kūfic in the Near East in the 5th/11th century, then in the 6th/12th century, was to be reflected almost immediately in the Maghrib. In the latter as in the former, the problem faced by the artist was how to alleviate the difficulties inherent in Arabic writing, very dense in the lower part of the line of inscription, but leaving important gaps in the upper areas. The solutions adopted consisted in the development of the vertical strokes and in their evolution, sometimes their distortion, in the intertwining of letters, and most of all, use was made of stylised floral patterns to decorating the background. These inscriptions are often divided in two parts by a rigid horizontal band, the lower part being occupied by the body of the letter while the upper register is decorated with a complicated floral design against which the vertical lines stand out. At Sfax, from the end of the 4th/10th century, the letter is seen to develop, the terminal

chamfer of the vertical strokes opening into floral shapes or curling so as to occupy the empty spaces. The influence of Fāṭimid Egypt is undeniable. The characters in general affect a refined elegance. The bordering strips contribute to the décor of the façades (Sfax, Great Mosque) or to that of the *miḥrābs* (Sfax, Zīnā *miḥrāb*), mosque of Sayyida at Monastir (beginning of the 5th/11th century). At Constantine (*miḥrāb* of the Great Mosque, dating from the 6th/12th century), the epigraphic décor reaches a high degree of ornamental quality, recalling that of the finest Fāṭimid *miḥrābs* of Cairo.

Funereal epigraphy also abandoned the archaisms of the Aghlabid period, but after a perceptible delay. Incised inscriptions practically disappeared. The form of the tombs evolved towards prismatic marble stèles, notably at Monastir and at Tunis (cemetery of the Khūrūsānids). The writing, of refined elegance, recalls, by the development of the letters and by the appearance and proliferation of stylised floral designs, the style of the monumental inscriptions.

As for epigraphy on furniture, we have, in the magnificent *maḳṣūra* of al-Muʿizz b. Bādīs, one of the finest examples of floral Kūfic, with complex interlwining of letters and a background of plaitforms comparable to the Kūfic of Aleppo or to that of Diyār Bakr.

In the Maghrib al-Aḳṣā and in the western region of the central Maghrib, very few inscriptions are to be noted before the Almoravid period. That of the Karawiyyīn, dating from 363/877, is in Kūfic of the al-Ḳayrawān type, but, with the reign of ʿAlī b. Yūsuf, there appears the Andalusian Kūfic, characterised by well-proportioned letters with long and curved vertical strokes. However, the writing itself is very sober and stands out against a background flowered with arabesques and fleurons and palm-leaves with deep and multiple radiating divisions (Karawiyyīn, Great Mosque of Tlemcen) or against a background of palms, of pineapples and of half-fleurons divided in two parts horizontally by a straight listel.

The epigraphy on furniture shows, on the contrary, an attachment to the old tradition, whence a surprising conservatism in the Kūfic inscriptions of the *minbars* of Nedroma and of Algiers, and in those of the *maḳṣūra* of Tlemcen.

But the most important event of this period is the appearance of the cursive script (*maghribī*). This style appears in Ifrīḳiya from 490/1096, in funereal inscriptions where it is presented in a very elaborate form (the characters are fine, large and supple and well-proportioned, framed with a border and standing out against a rich floral background of oriental type). It is to be supposed that it was by this oriental route that the new alphabet penetrated to the Maghrib al-Aḳṣā in the Almoravid period (the inscriptions of Tlemcen and of Karawiyyīn) in about 531/1136 ?. It is in fact impossible, in the absence of precise documentary evidence, to propose an Andalusian influence, as it seems that cursive writing did not appear in Andalusia until much later.

Whatever the case may be, the victory of the Almohads had as a consequence a certain unification of styles in the whole of North Africa with an inclination towards sober, angular Kūfic in the monumental inscriptions and, on the contrary, a preference for cursive in the funereal inscriptions. It is worth noting that no foundation inscription appears in this period in the religious buildings, pious works through which the great caliphs of the dynasty were able to bring honour to themselves.

One consequence of the Ottoman domination of Tunisia and Algeria was a new "orientalisation". The inscriptions lose their decorative quality and adhere to the requirements of the message to be transmitted. They are inscribed in frames or in scrolls in cursive characters, often with diacritical points, sometimes with vowels, on several lines which may overlap. The execution is rather casual, and the use of the Turkish language is limited.

On the other hand, Morocco remained faithful to the Andalusian models and followed their evolution in the period of the Naṣrids of Granada. The type of Kūfic script which distorts the letters, twisting and stretching them into wreaths and fleurons, is hardly distinguishable from the background, where geometric and floral elements are mixed. The cursive begins to take the place of the Kūfic script in the fine framing strips of the *miḥrābs* of the Marīnid period. After the disappearance of the kingdom of Granada, Morocco tended to withdraw within itself, apparently shut off from outside influences.

At no time did the artists of the early Middle Ages make so much use of Arabic writing as an element of decoration. It appears everywhere, in religious buildings, in funereal pavilions, in the houses of citizens as in the palaces of kings, on furniture, on table ware and on the most minor objects of daily life, where the ornamental role is often more important than the meaning of the language. The result is a pseudo-writing without precise meaning, or a constant repetition of a word or part of a phrase, in ornamental friezes, where ease and routine take the place of refinement and, above all, of faith.

5. In West Africa.

Proof is still awaited that any system of writing was in use among the Negro civilisations of West Africa before the introduction of written Arabic. An animal drawing on a sherd found by F. Willet at Old Oyo in Western Nigeria was considered representational rather than pictographic, whilst K. Han's search for linguistic interpretations of recurrent *motifs* in the art of Benin proved inconclusive. Gold-weights from Ashanti and neighbouring districts seem to represent a proliferate stage, some of the designs symbolising proverbs and injunctions and others perhaps conveying metrological data. Inscriptions in Punic, Greek, Latin or similar Classical languages have not yet been reported from tropical West Africa.

The Saharan Berbers (Tuareg, "People of the Veil") derived their *tifinagh* alphabet from the Libyan script used in North Africa during the second century B.C and subsequently (see BERBERS. vi). *Graffiti* in *tifinagh* are known to extend from Tibesti and Djado westwards to the Niger bend, and even into Mauretania, Mauny (1954) providing the most convenient survey of the literature. A complication in the reading of these inscriptions is the problem of determining their direction. They may run from left

as right, top or bottom, but within each inscription the direction remains uniform, and clues to the orientation are provided by the alinement of certain asymmetrical characters, and the stereotyped opening phrases. In academic usage texts are conventionally arranged to read from the right.

Two main varieties of *tifinagh* script are generally recognised. The older (called variously "*tifinagh* archaïque", "Saharan ancien" and "Libyco-berbère") renders by bars certain characters (ⵟ *ṭ*, ⵜ *t*) which in the modern script are represented by dots (ⵟ *ṭ*, ⵜ *t*). The older script also lacks several characters. A number of the older *graffiti* were interpreted by Marcy (1937). They contain recurrent formulae, commencing with each words *ar* ⵔ ⵄ ⵔ *asaragh asareg*, "I require...", ⵔ | *aneg* "I need...", and often accompanied by a drawing to illustrate *fulfilment of the wish*, *all designed to have* a magical influence. A group of modern inscriptions commences with the word : | *sakh nekh* "I...", followed by the writer's name, and a statement of his purpose or wish. Another group, still known only from modern examples, consists of formulae inscribed on the typical Tuareg stone *amulets* (*akabeg*), and shields. These were presented to a departing lover to preserve his fidelity. Manifestly Islamic personal names in later inscriptions show that they are relatively modern, but much work has still to be done in the chronology, linguistics, and collection of the older *graffiti*.

Of Arabic inscriptions from West Africa, at once the oldest and the most important is the tombstone from Gao reported by Sauvaget. It records the decease on 1 Muharram 494/6 November 1100 of a *gā*ʾ*id* personage designated *al-malik al-nāṣir li-dīn Allāh al mutawakkil ʿalā Allāh*, Abū ʿAbd Allāh Muḥammad b ʿAbd Allāh b Zāgī. The Kūfic calligraphy of this monument closely resembles tombstones from Almeria (reported by E. Lévy Provençal, *Inscriptions arabes d'Espagne*, Pl. XXVII XXX), and it is carved from similar marble. There is a strong implication that the monument may have been made at Almeria (a part of Spain then subject to rule by the Almoravid Murābiṭ dynasty) for transport across the Sahara to Gao. This situation would present a new aspect of Almoravid connexions in the Southern Sahara. The inscription seems also to confirm the remark attributed to the *Qāḍī* Maḥmūd b. al-Ḥāǧǧī al-Mutawakkil Kuʾt (Kati), that the Islamisation of Gao took place between 472 and 475/1078-9 and 1082-3 (Kati, *Taʾrīkh al-Sūdān*, tr. O. Houdas, 332), also the reference of Ibn Khurradādbih, 89 (cf. *Ḥudūd al-ʿālam*, tr. Minorsky, 165, 476) to a ruler in West Africa named Zāgī b Zāgī. The exalted *titʾle* appearing in the inscription may imply that the deceased person was himself Sultan of Songhay, but if so, his names are absent from the list given in the literary sources. Other inscriptions from Gao are of a Queen Sārā (502/1108-9), of *al-malik al-nāṣir li-dīn Allāh al-mutawakkil ʿalā Allāh* Abū Bakr b Abī Kulḥāfa (503/1109-10), of ʿĀʾisha daughter of *al-malik* Kūrī (511/1117-8), and of another possible Sultān Māmā b Knā b. (2)Sāgī (514/1120-1). Further inscribed tombstones from the area of the Niger bend have subsequently been published by Mrs. Vycé, including a specimen of the year 496/1102-3 from Gao, and other from al-Sūk (504/1110-11), Bentia (Kukiya, a former Songhay capital on the Niger above Niyamey) bearing the date 800/1397-8, and El-Kreib in Mauretania, a place thought to represent the ancient site of Aretenna.

Later Arabic rock-graffiti are known from the Saharan zone, but other inscriptions on stone have not yet been reported outside the area of the Niger bend. The well known inscribed swords carried by *sarkis* in Hausaland, being apparently imported, bear conventional Arabic inscriptions not characteristically local. Many West African vernacular languages have, however, been written in Arabic script. A Bornu dialect, apparently Kanembu, occurs in Kur'anic glosses at least as early as 1080/1669 Kanuri, Hausa, Fulani, Nupe and Yoruba all occur as slightly later dates.—Hausa for example being found in glosses ascribed to ʿAbd Allāh b. Fūdī (*ca.* 1761-1828) in a manuscript of *al-Muḥtaṣar* owned by Abū Bakr Ghumai at Kano, the inscription on an iron panel at *Kofar Wa*ʾ*ika*, a gate of Kano city, though of uncertain date, contains several sentences in Hausa. The situation for the languages of the Upper Niger, Songhay, Malinke etc. is however less clear.

Arabic inscriptions in two cryptographic alphabets, called *Suryāniyya* and *ʿIbrāniyya*, were described by Menod and Mauny. Talismanic inscriptions and magic squares are known all over the area, often written in carbon ink on wooden writing-boards (Ar. *lawḥ*), or iron replicas of these boards, also on earthenware bowls, sherds, bones, human skulls and polished stone axeheads, besides everyday examples on paper sheets or scrolls.

For an understanding of the magic squares (*wafḳ*, pl. *awfāḳ*), the most informative study is probably that of Canman, who traces them back to the Chinese origins. In Nigeria and other West African countries, the work on this subject of Muḥyī al-Dīn Abū ʾl-ʿAbbās Aḥmad b. ʿAbd Allāh *al-Būnī* (d 1031/1225 (q.v. in Suppl.)), *Shams al-maʿārif wa laṭāʾif al-ʿawārif*, is widely utilised. A Nigerian scholar of some renown, Muḥammad b. Muḥammad al-Fullānī al-Kashnāwī (al Katsina, in Hausaland), found in the Egyptian historian Ḥasan al Djabartī, compiled a treatise on the subject entitled *Bahǧat al-ʿĀbid wa-lidāḥ al labīb wa ʾl-ʿagīlāḥ fī ʿilm al burūf wa ʾl-awfāḳ*. Anawati's description of charms on paper from Mālī gives a full bibliography of Arabic talismans and magical symbols. Cryptographic alphabets had a long history in the Near East, and became especially prevalent in North and West Africa. A standard treatment in Arabic is that of Aḥmad b. Abū Bakr b. Waḥshiyya, *Shawk al-mustaḥām fī maʿrifat rumūz al aḳlām* (ed and tr. J Hammer, *Ancient alphabets and hieroglyphic characters*, London 1806), though commentators have found these explanations obscure. One of these alphabets known as *al-Yāsīnī* (and conceivably therefore associated with the spiritual leader of the Almoravids, ʿAbd Allāh b. Yāsīn) was shown by Dalby to have influenced two of the modern indigenous scripts of West Africa, so that knowledge of it may have lingered from earlier centuries along the Senegal. The oldest of the scripts in question is the Vai syllabary of Liberia (212 characters invented 1833); the other is the Mende syllabary of Sierra Leone (195 characters invented 1921). Five other syllabaries and two alphabets, of differing structure and inspiration, designed for the expression of various African languages, are included in his account, but the currency of each is very restricted. Another item from the Islamic mystical repertoire, the *sabʿat khawātim* or "seven seals (of Solomon)" ۶ ⵠ ||||| ⵔ ⵛⵛⵛ ⵜⵜ ✡ have been recorded amongst the Hausa, amongst the Yoruba inscribed above the doorway of a building at Oyo, and in the Ivory Coast.

6. In eastern Africa

So far some 250 inscriptions have been reported from the eastern coast of Africa lying between Mogadishu, in Somalia, and the mouth of the R. Zambezi in Mozambique, as well as from the offshore islands, including also the Comoros [see QUMR] and Madagascar. The principal sites of most of the coast have been surveyed and some partly excavated, but very much remains to be done, and quite likely more inscriptions will come to light. Especially is this the case in Mozambique and the Kerimba Islands close to its coast, whose Islamic historical archaeology is still virtually unknown, albeit that the existence of mosques and widespread adherence to Islam is attested by 16th century Portuguese writers. Other than those of the present century, an inscriptions have been reported inland. Only one inscription is known completely in Swahili, even though some Swahili words occur in Arabic inscriptions of the 17th to the 19th centuries of the epitaphs of the petty Sultans of Kunduchi, 17 miles north of Dar es Salaam. With these exceptions and a group of 16th and 17th century Portuguese inscriptions in Fort Jesus, Mombasa, with a solitary one in Zanzibar, all the inscriptions are in Arabic.

The two earliest known inscriptions are an epitaph in the Friday Mosque at Barawa reported by Cerulli dated 438/1204-5, and a Kufic dedicatory inscription in the Friday Mosque at Kizimkazi, Zanzibar, dated 500/1106-7, which, if not carved in Sīrāf itself, would appear to have been the work of a Sīrāfī craftsman in Zanzibar [see KIZIMKAZI]. Apart from these a small number of inscriptions in Kufic or floriate scripts have been found in small nuwebers in or near Mogadishu, and at Malindi, Mnarani and Mombasa in Kenya. The remaining inscriptions are all in *nashkī* or cursive scripts. No comprehensive attempt has so far been made to identify or classify their style or provenance so far as it was not local, but at Kilwa certain decorative inscriptions have been thought to have Fāṭimid affinities. On these subjects it would probably be wisest to reserve judgment until more is known of the inscriptions of the Yemen and of the Hadramawt. The greatest number of inscriptions found in eastern Africa are epitaphs, very many of them of persons otherwise unknown. Quite exceptional are sixteen dedicatory inscriptions commemorating the foundation of mosques in Lamu between the 14th and the 19th century, which demonstrate the stages of growth of the town [see LAMU]. At Mombasa a number of inscriptions, mostly funerary, illustrate and provide a solid dating for the varying fortunes of the Macarī family, of whom a number of members served as *wālī* under the suzerainty of 'Umān from ca. 1734 until 1837. At Kilwa there are a number of inscriptions in the Great Palace known as *Husūma* (Swa. from Ar. *ḥiṣn*) but all undated and on whose date agreement has not yet been reached. A curiosity is a carved ivory state horn (*mbau*) with an inscription in Swahili, which has been ascribed to the 19th century; but a reference in the traditional Swahili *History of Fate*, from which town it came, would suggest, however, that its approximate date of manufacture was ca. 1060/1650.

7. In Turkey

The Muslim epigraphy of Turkey has not yet been the object of methodical research. It is true that there exist a large number of editions, but most of these are isolated undertakings.

The history of Muslim monumental epigraphy in Turkey does not in fact begin until the middle of the 6th/12th century. There had been building activity in Anatolia before, in the Turcoman states of the Dānishmandids, the Artuḳids, the Saltuḳids and the Mengüdjekids, but most of the constructions of that time were destroyed as a result of the continuous fighting in the area.

Muslim epigraphy in Turkey can be divided essentially into three categories: commemorative inscriptions, pious inscriptions, and epitaphs. The most important of these, both from the historical and the

artistic point of view, is the former, which includes inscriptions commemorating the constructions or restorations chiefly of foundations for the public good—mosques, fountains, *sabīls*, etc.—and, in later times, also of government buildings (offices, hospitals, schools, barracks, etc.) The pious inscriptions either confine only the names of God, Muḥammad or the four *rāshidūn* caliphs, or consist of *ḥadīths* or citations from the Kur'ān that suit the purpose served by the object which they decorate. Thus in mosques one may find such Kur'ānic verses as IV, 104 or XV, 46, on fountains LXXVI, 18 and 21 or the words *man al-mā' ḥulw shay'an bayy*, from XXI, 31, and on libraries the words *fihā kutub bayyina* (XCVIII, 2). Pious texts may also serve as mottoes over commemorative inscriptions. Hence in foundation inscriptions of mosques one may find such sayings of the Prophet as "Whoever builds for God a mosque, even if only like the nest of a sand grouse, for him God builds a house in paradise". The number of inscriptions surviving on tombstones is very large. Especially in Istanbul very fine ones can still be seen. Unfortunately, the amount of research done in epitaphs is still less than that done in the other Muslim epigraphy of Turkey (see also TAʾRĪḪ).

The typical Muslim inscription, including that in Turkey, is a rectangular slab with one or more lines of text, which are separated by narrow lines, the whole being enclosed in a narrow frame. In the Saldjūk and early Ottoman periods the inscriptions were often also in the form of bands along the borders of porches, or, inside mosques, of *miḥrābs*. Some inscriptions from this time consist of one line in *ghubār thuluth* with elongated shafts through which runs a second line in Kūfī, these together against a background of spiral arabesques. In the Ottoman period the lines (in verse texts, the hemistichs) of most inscriptions are enclosed in cartouches with the left and right extremities elaborated in different manners, these inscriptions are sometimes decorated with such motifs as flowers (either separate or in vases), fruits, arabesques, rosettes and, especially in later times, *tughras* and crescent-and-stars. In the relief inscriptions the (raised) letters and decorations may be gilded, and the (sunken) backgrounds painted—mostly green or blue, it is uncertain whether these colours were used in the older inscriptions too, because the original paint of these has mostly worn off.

On the tile inscriptions, it is not the relief but the colours that present the necessary contrast between the text and the background. Inscriptions of this kind are mostly of pious content and undated. They are found in buildings from very early times; after the 12th/17th century their number gradually diminishes. Very fine examples of this kind of inscription are found inside the Selīmiye Mosque (completed 982/1574-5) in Edirne and in the Bāghdat Köshkü (12th/17th century) in the Topkapı Palace in Istanbul.

Since, under the Great Saldjūks, Kūfic was very much used for inscriptions in Iran, it was also in the early Muslim epigraphy of Anatolia. This script, which was employed, roughly, in the period and areas of the above-mentioned Turcoman states, was, under the Rūm Saldjūks, largely replaced in inscriptions by *ghubār thuluth*, although it continued to be used for mere decorative purposes by them and by the Ottomans up to the reign of Meḥemmed II (855-86/1451-81). *Nasta'līḳ*, which was brought to Turkey by Persian calligraphers in the period of Meḥemmed II, became common especially in the commemorative inscriptions and epitaphs made after the middle of the 11th/17th century. (The earliest inscription written in this script in perhaps that of the Mosque of Selīmshāh Khātūn (dated 860/1455-6) in Edirne (Dijkema, No. 16)). This script became so popular because (a) by this time most of these inscriptions were in Turkish verse, which (as is demonstrated in the manuscript *divāns*) it was traditional to write in *nasta'līḳ*, and (b), since this script uses far less different auxiliary signs than does *ghubār thuluth*, it is much simpler to handle for the stone carver. Such scripts as *muḥaḳḳaḳ*, *ghubār muḥaḳḳaḳ* and ordinary *thuluth* are very rare in inscriptions. *Ruḳ'a* was used occasionally in the last period of the Ottoman empire, mostly on buildings of secondary importance.

Little is known about the calligraphers who designed the inscriptions in the Saldjūk and early Ottoman periods. Later, the more reputed calligraphers used to sign their works, with such stereotyped formulas as *kataba 'l-'abd al-ḍa'īf* ... or *kataba 'l-'abd al-ḥaḳīr* .... They might omit their signatures, however, if on the same building there was another inscription written by one of the sultans (as is the case, for instance, in the inscriptions on the front of the two fountains of Sultān Aḥmad III in Istanbul).

Under the Rūm Saldjūks and the early Ottomans, the general Muslim tradition was followed of writing inscriptions in Arabic. The earliest inscription in Turkish is perhaps that of the *madrasa* of Ya'ḳūb Čelebi (dated 814/1411) in Kütahya (İ. H. Uzunçarşılı, *Kütahya şehri*, Istanbul 1932, 79), later, especially from the end of the 10th/16th century, this came to be the language of most of the commemorative inscriptions and epitaphs, the cause of this rather radical change being probably an increase of the prestige of Turkish vis à-vis Arabic following the Ottoman occupation of the Arab lands in the 16th and early 17th centuries. The Arabic inscriptions are mostly prose, the Turkish ones usually verse. The wording of the Arabic prose inscriptions closely follows the models of the Mamlūk and earlier Arabic epigraphy of Egypt and Syria. In most commemorative verse inscriptions, both those in Arabic and those in Turkish, the dates of the events commemorated are not expressed in figures or words but hidden in chronograms (see ABDJAD AL-DJUMMAL). There do exist also Persian inscriptions, but they are very rare.

The redactors and calligraphers of the Muslim inscriptions in Turkey seem to have had a special liking for mystifying the reader—mostly in such a manner, however, that with adequate knowledge one can discover the true meanings of the texts. Not only is there the chronogram and, in verse texts, the often intricate language, but, for instance, in the inscription commemorating the 1288/1865-6 restoration of the Eski Camī (Dijkema, No. 128) in Edirne, some words are written phonetically. Calligraphers might add to the intricacy of inscriptions, these already sufficiently difficult to read through the interlacing of the letters, by several means: the inscription of the Muradiye Mosque (dated 839/1435-6) (*ibidem*, No. 7) in Edirne, for instance, contains unusual ligatures of letters; in the inscription of the Mosque of Sitt Khātūn (dated 869/1484) (*ibidem*, No. 23), in the same town, some letters are written mirror wise; and in the inscription of the Kadīn Most (dated 876/1471) (ed. by P. Wittek in *Byzantion*, xviii [1946-8], 327, n. 2) near Küstendil (q.v.) in Bulgaria, letters and words are arranged in an unnatural manner.

Damaged or lost inscriptions were often replaced by copies. The student of Ottoman epigraphy can mostly recognise these easily, for they are generally in a better state than originals dated in the same period. Also, the wording may give a hint. Knowledge of the history of calligraphy and decorative art may provide a means to ascertain the period when a copy was made. (The foundation inscription of the Darülhadis Mosque in Edirne, dated 838/1435 (Dijkema, No. 6), for instance, is written in a *nasta'līḳ* of a kind not used as Turkish epigraphy until the middle of the 11th/17th century.)

Bibliography For a general appreciation of the significance of Turkish epigraphy, see R. Mantran, *Intérêt et perspectives de l'épig aphie turque pour les périodes pré-ottomane et ottomane*, in *Revue d'histoire maghrébine iv* (1975) 217-20 For editions of Ottoman inscriptions, see the works of G Colin, M van Berchem, Khalil Edhem, J H Mordtmann, F Taeschner, P Wittek, Ismail Hakki Uzunçarşılı, Mühürcü Ghâlib, H B Kunter, M Mujesanović, A P Vekilov, A Zajączkowski, P. Miyatev, R. Mantran and F. Th. Dijkema (bibliographical details to F. Th Dijkema, *The Ottoman historical monumental inscriptions in Edirne*, Leiden 1977, Introd., § 1), some of their editions include also pre Ottoman inscriptions Among the editions containing more specifically pre Ottoman inscriptions, there should be mentioned Cl. Huart, *Épigraphie arabe de l'Asie Mineure*, in *Revue sémitique*, ii (1894) and iii (1895), J. H Löytved, *Konia. Inschriften der seldschukischen Bauten*, Berlin 1907 the numerous articles of Ahmed Tewhîd in *TOEM*, esp those in Nos 29 (1330), 63 (1340), 86 and 87 (both 1341), P Wittek, *Inscriptions*, in K M Rietstahl, *Turkish architecture in southwestern Anatolia*, Cambridge (Mass) 1932, 77-116; J Sauvaget, *Inscriptions arabes*, in A Gabriel *Voyages archéologiques dans la Turquie orientale*, i, Paris 1940, 287-356; W Hinz, *Steuerinschriften aus dem mittelalterlichen Orient*, in *Belleten*, xiii (1949), 745-69 The voluminous studies which I. H. Konyalı has devoted to the monuments and inscriptions of a number of towns in (mainly western) Anatolia are unmethodical and possess little or no value for epigraphical research. See further the *RCEA*, the sections VIIIc in the different parts of J. D Pearson's *Index Islamicus*, Cambridge (later London) 1958 , H J. Kornrumpf, *Osmanische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa*, Leiden 1973, 1185-6. the bibliographies of the articles devoted in this encyclopaedia to towns of the Ottoman empire and to dynasties and important families in the area. Finally, many local histories of towns formerly under Ottoman domination contain records of inscription texts, even though this may not always be indicated in the titles.

(F. Th. Dijkema and A. Alparslan)

8. In South-East Asia

Islamic epigraphy is distributed very unequally in South-East Asia, it being understood that islamisation, although it did take place, was not accomplished everywhere at the same time or with the same intensity. The survey which follows can give only an idea of the importance of documents from Indonesia (*Republik Indonesia*) and from the Federation of Malaysia (*Persekutuan Tanah Malaya*) We shall have only a few words to say about the other regions

A. *Indonesia and the Federation of Malaysia*

The majority of epigraphic documents consist of tombstone inscriptions. Next in number are charters and related texts, and finally there are some brief legendary pieces on various subjects.

These three groups will be subdivided into four geographical regions, although the exigencies of history will not always allow a rigid separation: (a) Java (b) Sumatra (c) Malaysian Peninsula (d) Eastern Indonesia.

Regarding the Javanese year, since the introduction of the purely lunar calendar in 1633 A.D., it should be noted that the latter does not always correspond to the so-called "Arabic" system, because of a different distribution of 'full' years of 355 days, and also as a result of local variations which are not all known to us On this typically Javanese chronology (abbreviated Śākā Jav or S J) and the theoretical conversion of its dates to the Gregorian system, reference should be made to the article *Tāḳwīmhenang*, in *ENI*², v (= Suppl I), 73-9, which is accompanied by tables. For the pre-Islamic chronology (still in use in Bali) which consists of lunar-solar years, we shall use the term Śākā (abbr. Ś.).

1. Tomb inscriptions.

(a) *Java*. It is on this island that the oldest known Muslim tomb in Indonesia has been found. It is the burial place of a girl whose personal name is uncertain or is not indicated, but who is called Bint Maymūn. Without recalling here the arguments concerning the year of her death (there is an error in the writing of the word denoting tens), let us say that it may be read as 475 A.H. or 2 December 1082. This tomb stone is at Leran in eastern Java.

Eastern Java possesses a large number of tombs, among which we shall mention those of the cemetery at Trāḥāyā (usual orth Trolojo). Here there are found, besides a number of undated or uninscribed tombs, ten dated inscriptions ranging from 1298 to 1533 Śākā ,that is 1376 to 1611 A.D It is seen that here the Śākā chronology is still used for Muslim tombs, except in one case where we have a *hijra* date expressed in Arabic numerals Moreover, some of these tombs have a purely Javanese type of ornamentation and symbols which seem to link the interred persons to the court of Majapahit

It is also in the east of Java that there is found the tomb of an individual reckoned by tradition to be one of the nine *Wālis* responsible for the spreading of Islam to Java. His name is Malik Ibrāhīm, but his title cannot be established with certainty. The date is 822/10 April 1419.

In the cemetery of Trāwulan (usual orth. Trowulan) a few kilometres from Trāḥāyā, is the famous tomb said to be that of the Putri Campā (a title interpreted as meaning Princess of Campa), a figure well-known in legend, but the date, inscribed on the tomb in old Javanese numerals is 1370 Śākā = 1448-9 A.D. which does not correspond to the year of her death given by the literary texts The same cemetery contains a very simple tomb dated 1290 Śākā = 1368-9 A.D., which is therefore more ancient and dates back to the glorious period of Majapahit.

There is furthermore in the Soŋdaŋ Duwur complex, still in the east of Java, an inscribed wooden pole bearing the date 1407 Ś. (not 1507 as read by Stutterheim), again in old Javanese numerals. In another cemetery at Goŋdaŋ Lor (in the region of Tulung Agung) there is a tomb bearing the date

1479 Ś = 1548-9 A.D. In these two latter cases, the numerals are to be read from right to left, a mode of writing members unknown to epigraphy in the Aṣak lands but found in a number of cases in Indonesia (though rare in Sumatra), which doubtless arises from the system current in the Hindu period of expressing dates through chronograms.

Finally, in concluding this brief survey of the principal Muslim monuments of Java, let us note that in the burial complex of the famous Queen of Jāpārā (usual orth. Djaparra), Ratu Kali Nyamat, is a chronogram giving the date 1481 Ś = 1559-60 A.D.

(b) *Sumatra*. As a result of a systematic survey carried out between 1912 and 1917 in the region of the ancient kingdom of Samudra-Pasai and in the extreme north of the island, in Atchek to be precise, the *Archeological Service of Indonesia* possesses a rich collection of photographs and casts of epitaphs, most of which however offer us nothing more than pious texts without historical value. Of the sixty dated inscriptions, wholly or partly legible, which we have been able to examine from Samudra-Pasai, the majority (more than thirty) are from the 9th/15th century; ten are from the 10th/16th century; four date from the 8th/14th century, and only one from the closing years of the 7th/13th century. Among these tombs, of which about half belong to women, a dozen or less are of persons of royal or princely rank. Only a few of these epitaphs have been published, and a systematic study has yet to be made.

We may mention among the historically more important, that of the first sultan of Samudra, Sulṭān Malik al-Ṣāliḥ who died in 696/1297, and that of his son al-Sulṭān b. al-Sulṭān al-Malik al-Ẓāhir Shams al-Dunyā wa 'l-Dīn Muḥammad b. al-Malik al-Ṣāliḥ, which is of a completely different style and dates from 726/1326. Among the other tombs, we may mention those of a descendant of the penultimate caliph of Baghdad, named 'Abd Allāh b. Muḥammad b. 'Abd al-Kādir, who died at Samudra in 809/1406, that of a queen of Samudra, great-granddaughter of the first sultan of the kingdom, dating from 831/1428, the epitaph of a princess with a Persian name, Mihr Shāh, daughter of Khōdja Aḥmad al-Sulṭān al-'Ādil, and finally, the tombs of two individuals, one named Rādja Khān dating from 834/1430 and the other, his son, Khōdja Rādja Khān b. Rādja Khān, buried in 863/1460-1.

One tomb, of unique type, is that of a person named Nā'ina Ḥusām al-Dīn b. Nā'ina Amīn. As well as conventional texts, the tomb bears a poem by Sa'dī and dates from 823/1420.

Of two particularly interesting inscriptions apparently belonging to the same tomb, the one gives us a text in Old Malay written in palaeo-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 781/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the same month, but the years later, 791/3 December 1388. It is probable that there is an error in the dating of one of the two inscriptions. In any case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the use of this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/14th century, a hundred years after the islamisation of the region.

(c) *Federation of Malaysia*. Among the tombs discovered here are that of the sixth sovereign of Malaka, Sulṭān Manṣūr Shāh b. Muẓaffar Shāh, who died in 882/1477 and that of the first sultan of Pahang, Sulṭān Muḥammad Shāh, son of Sulṭān Manṣūr Shāh the conqueror of Pahang, who was the son of Muẓaffar Shāh, son of Muḥammad Shāh. The latter tomb is dated 880/1475, and it is noticeable that the genealogy here goes back further than in the previous example. The vast majority of tomb inscriptions are in Arabic, but one case is known where the epitaph proper is in Malay. It is that of a step-daughter of Sulṭān Aḥmad, the second sovereign of Pahang; she was in fact the daughter of the seventh sovereign of Malaka and sister of the seventh and last, who was forced to flee before the Portuguese invasion. There are various other royal tombs of the different sultanates, as well as those of eminent individuals dating from the 9th and 10th/15th and 16th centuries.

At Brunei, two tombs from the 15th century A.D. have been discovered. They are totally different from those of the Peninsular as regards the form and the style of the inscription.

(d) *Eastern Indonesia*. The island of Bali, where there is a small minority of Muslims in the north, has not hitherto yielded a single ancient inscription. There is one, however, on the island of Lombok, of which roughly half the population is Muslim. This inscription is bilingual: the *shahāda* in Arabic and a chronogram in Balinese script. The latter has been interpreted by Stutterheim as representing 1142/1727.

II. Charters and related documents.

(a) and (b) *Java and Sumatra*. On a *mimbar* from the east of Java, of which we have only a facsimile, there is the date 1487 Śāka/1565-6 A.D. inscribed in palaeo-Javanese numerals, but a chronogram which accompanies it causes difficulty. A small stele on at the centre of the island, in Javanese, is dated 1644 S.J./1700 A.D. There are a number of texts in existence which are related to charters. They are written in Javanese and in Javanese characters, sometimes in Arabic characters (*pegon*).

In western Java (the Sundanese country), we have eleven charters dating from the 17th and 18th centuries A.D., (they are dated according to the Javanese Śāka chronology).

From Bantan there are similar texts using both types of script, but dated according to the *hidjra* system. They date from the same centuries and are twelve in number.

Finally, from Palembang (southern Sumatra) there are various documents of which most are dated by the Javanese Śāka chronology. They are written in Javanese language and characters and date from the 17th to the 19th century.

The appointment of a chief of the Badouy (the as yet Hindu population of the Sundanese country) dates from 1124/1712-13. This document is furthermore endorsed by the seal of a sultan of Bantan (the "Bantam" of the maps) which gives the date of the accession of this sovereign as 1108/1690. There are a number of other documents existing from the Lampung country, some written on bark, one on cattleskin.

At Atcheh, documents of various kinds but generally authenticated by a seal, are called *surat-ata*. None of these which have been preserved is very old.

(c) *Federation of Malaysia*. The most important document from this region is an inscription, unfortunately incomplete, of a type totally different and unique in this part of the world. The text includes a proclamation of Islam, followed by a list of ten in-

fractions, with the penalties laid down for each. The date is unfortunately incomplete but we can at least be sure that it belongs to the 8th/14th century. In this text there are very few Arabic words, and even the name of Allāh is rendered by an expression Hindu in origin, *Dewata Mulya Raya*.

(d) *Eastern Indonesia*. Especially interesting in this region are texts written in Arabic script but in the language of Ternate, emanating from the sultanate of the same name. They are all recent (19th century), but give valuable evidence concerning this language, which is not part of the Indonesian linguistic family (which henceforward may usefully be called Nousantaran), but which alongside Malay played the rôle of a lingua franca in the eastern parts of the Indonesian archipelago.

III. Inscriptions on various objects.

1. *Cannons*.

(a), (b), (c). *Indonesia and the Federation of Malaysia* Cannons of diverse origin have been found (of French, Dutch or Indonesian manufacture) bearing inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. On one of these is inscribed the name *Yahetira* (variant of Djakarta) written in Javanese letters. It also bears a date, which is, however, problematical.

(d) *Eastern Indonesia*. A cannon of Indonesian manufacture, dating from the start of the 18th century, has been found at Soulawesi. It bears the name La Patau, the nephew of the famous Sultan of Boné Aru Palakka.

2. *Other objects*.

(a) *Java*. There are various brief inscriptions on mortars and on carved wooden panels, all of them from the 19th century.

(c) *Federation of Malaysia*. From this region there are a number of *gantang* (measures for rice) bearing the name of the sultan of the period. They are mainly from the 19th century, and one of them even dates from the beginning of the 20th

B. *Thailand*

From this country we have only one inscription, which is now in the museum at Sukhothai. It consists of five lines in Arabic (the name of the four archangels and the *shahāda*) as well as two lines in Urdu. It is dated 1338/1919 and has therefore no historical value, but it bears interesting witness to the behaviour of an Indian Muslim in a Buddhist country.

C. *Cambodia*

One inscription only has been found in the area of Pnom Penh. The first three lines consist only of pious texts and the fourth, which perhaps contains more interesting details, unfortunately cannot be deciphered.

D. *Campa*

Two tombstone inscriptions have been found at Campa, in Arabic with Kūfic characters. One is from 431/1039. The other is undated, but judging by the palæography, is of roughly the same age as the first.

Bibliography. For convenience, the sources have been divided in the same way as in the text of the article, sc. in three groups: I. Tomb inscriptions, II. Charters and related documents; and III. Inscriptions on various objects. Each of these groups is subdivided also according to the article proper into (a) Java, (b) Sumatra, (c) Federation of Malaysia (including British Borneo) and (d) Eastern Indonesia. In general, only books and articles discussing the epigraphic data are cited here.

I. Tomb inscriptions.

a. *Java*. For the inscription of Malik Ibrāhīm's tomb at Gresik, see *TBG*, index 1910-13, under the name of Ph. S. van Ronkel, Th. Juynboll, J. P. Moquette and H. Djajadiningrat, anon., *Grisse, Grissee*, in *EI*[1], i (1917), 819; G. P. R[ouffaer], *Lāran*, in *EI*[1], ii (1918), 570; Moquette, *De oudste Mohammedaansche inscripties op Java*, in *Verhandelingen van het Eerste Congres voor de Taal, Land- en Volkenkunde van Java, gehouden te Solo, 1919*, Weltevreden, 1921, 381-9; P. Ravaisse, *L'inscription coufique de Léran à Java*, in *TBG*, lxv (1925), 668-703; D. A. Rinkes, *De Heiligen van Java I. De magiër van Sjeich 'Abdoelmoḥji*, in *TBG*, lii (1910), 536-89; idem, *De Heiligen van Java* iv. *Ki Pandan arang te Tembajat*, in *TBG*, liii (1911), 435-582; Sur la tombe de Seïk Sirah: J. L. A. Brandes, *Enkele oude steenen . . te Leiden, en TBG*, xlvii (1904), 457 f., on the complex of Ratu Kali Nyionat: F. D. K. Bosch, *OV* (1930), 52-7 with pls. 12-25, on Sañdan Duwur and Gondjan Lor: W. F. Stutterheim, *OV* (1934), 10, n. 1 and fig. 34; L. C. Damais, *Etudes javanaises* I. *Les tombes musulmanes datées de Trālayā*, in *BEFEO*, xlvii (1957), 353-415 with 22 plates.

a/b *Java and Sumatra*: Moquette, *De grafstenen te Pasai en Grissee vergeleken met dergelijke monumenten uit Hindostan*, in *TBG*, liv (1912), 536-48; M[oquette] and H. g. Iran and Transoxiana.

Before the advent of Islam, the regions of Iran and Transoxiana had long-established traditions of

literacy. On the one hand, use was made of various scripts derived from the Imperial Aramaic of the Achaemenid chancelleries during the 5th and 4th centuries B.C. These employed a largely historical spelling for Iranian words, and combined with this, ideographic writing-elements formed from Semitic roots, but with added Iranian terminations (known as phonetic complements) to indicate the inflexions. On the other hand, in the regions of Balkh, Tukhāristān and Bukhkhadh, there had been current the cursive Bactrian script, a slightly modified form of the Greek alphabet, which like its parent employed for this Iranian dialect straightforward phonetic spellings. This survived on the so-called Arab Hephthalite coins until the coming of Islam. Here and there, among the Buddhist communities, Indian Kharoṣṭhī and even Brahmī scripts had formerly been known, but with these, as with the Runic Turkish of Eastern Turkistan, and the undeciphered Kushan linear script of Dasht-I Navor, we are not here concerned.

To the first group, the descendents of Aramaic, belonged Parthian, Sogdian and Khᵛārazmian, besides a little-known variant of the same type used in Māzandarān. Sogdian and Khᵛārazmian lingered on, again on coins, well down into Islamic times. More prominent however, was (Sasanian) Pahlavī, which, in its cursive form known as Book-Pahlavī, co-existed with Islam for centuries as a vehicle of Zoroastrian scriptures. It is found beside Arabic in bilingual Islamic inscriptions of the Caspian region at Rādkān (Neka), Lājīm and Rasgīt (Resget), and perhaps was the only method of writing the Persian language in the earlier Islamic period. Until the time of al-Ḥadjdjādj in 76/695-6, Pahlavī had been the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kalkashandī, *Ṣubḥ al-aʿshā*, i, 423) converted the chancery of al-ʿIrāḳ, and ultimately of the Iranian east, to Arabic script and language. In 84/703-4, Book-Pahlavī and Cursive Bactrian occur together with Arabic on a coin of the Gūrgān district in Afghānistān issued by Yazīd b. al-Muhallab. Sogdian and Khᵛārazmian script continue to occur as coins of Bukhārā and Khᵛārazm, and Book-Pahlavī on the issues of Tabaristān, well into ʿAbbāsid times. Otherwise, the language of the Umayyad "Reformed coinage", and succeeding Muslim issues, is uniformly Arabic, apart from the Marw issue of 79/698-9, which has the city-name in Pahlavī.

The four earliest varieties of the Arabic script, according to Ibn al-Nadīm, *al-Fihrist* (ed. Flügel, 8) were *makkī*, *madanī*, *baṣrī* and *kūfī*. The implied differences between these forms still elude modern commentators, who today use the term Kūfic (as opposed to *kūfī* in Ibn al-Nadīm's sense) with general application to all varieties of monumental, angular, and (usually) unpointed Arabic script, employed for the writing of Kurʾāns, in lapidary inscriptions, and in coin legends. It can be observed that the Umayyad "Reformed coinage" actually shows five distinct styles of script that of Damascus with its related mints, that of the earliest issues from Iranian cities; that of Wāsiṭ, with the developed Iranian issues; that of Sidjistān, a curiously awkward script with "thorny" letter terminals; and the thin and delicate script of the closing Umayyad, and revolutionary ʿAbbāsid coinages.

Apart from inscriptions on the coins, the dated Arabic inscriptions of Iran, as at present known, begin surprisingly late. The earliest are a still unpublished series at Bahmandiz, near the border of Fārs and Iṣfahān Provinces. The clearest text reads *ʿamarahā Khāzim b. Muḥammad b. Dja[ʿ]far (?) sanat khams sitta wa-mi[ʾ]atayn*. Another records the birth of Muḥammad b. Yūsuf b. Khāzim on Monday, 27 Shaʿbān 309. The same site has one poorly preserved Book-Pahlavī inscription and many other short texts in Arabic. A substantial list of the known Arabic inscriptions of Iran to 600/1203-4 was compiled by Mīrzā. The earliest of consequence are the famous texts of the Būyid ʿAḍud al-Dawla Fanā Khusraw [*q.v.*] in the Tachara at Persepolis, recording the defeat of Muḥammad b. Mākān in Ṣafar 344/May-June 955 and the ʿAmīr's interest in the decipherment of inscriptions. One of the texts has been shown to contain several Persian words (R. N. Frye, *The heritage of Persia*, London 1962, 231, 290, with fig. 63). Nearby is the inscription of Bahāʾ al-Dawla [*q.v.* in Suppl.] dated 392/1002-3. Earlier in fact than any known Arabic inscription of Iran or Afghānistān is the enigmatic text from the Tochi Valley in Waziristān, now in the Peshāwar Museum, which is dated Djumādā I 243/August 857. This seems to contain a mention of "the land of 'Umān", which, with the early date, would imply a connexion with the Khāridjite amīrate at Sarakhs [*q.v.*], since judging by the *Taʾrīkh-i Sistān*, caliphal control could not then have extended so far east.

Decorative varieties of Arabic script were equally slow to appear in the Islamic East. The texts of ʿAḍud al-Dawla show no more than occasional barbed terminations, and characters linked by small loops beneath the base-line. Foliation of letter-terminals seems to have developed first in Egypt, and to have been quickly followed there by Floriation (by which is here understood the use of attached, but extended, leaf-decoration, as well as that of circular flowers, either attached or separate). Such features, as Grohmann showed, were known in Egypt as early as 218/833-4, and must have travelled thence to the East, not, as Van Berchem maintained, on the evidence of a restored inscription of Tashkent, from Central Asia westwards. In Iran, strongly Foliated Kūfic often tending to floriation is found in undated (probably 4th/10th century) inscriptions of the Masdjid-i Djāmiʿ at Nīyīn. The earliest dated examples of floriation appear to be the inscriptions of Badr b. Ḥasanawayh, a Kurdish ruler in Luristān, one at each end of the Pul-i Māmūlān near Khurramābād, alike dated 374/984-5, and another from the Pul-i Kashkān completed in 399/1008-9, which all record the building of the bridges. Very fine specimens of Floriated Kūfic are those of the minaret of the Fā'yi Minār mosque at Zawāra (461/1068-9), and the tomb-tower of Hormizdyār at Rasgīt (Resget). From a reading of its date that was uncertain, Godard sought to ascribe the latter to the 5th/11th century, but its thick, heavy script and floral decorations are more comparable with the legends of the Khᵛārazm-Shāhī coins of the 6th/12th century; and in any event, the closing words can hardly be taken for a date. In fact, the principality of Khᵛārazm had been slow to develop an ornate calligraphy. That region during the 5th/11th century had adopted an austere and elegant style, unusual only for the sweeping curves of the *dāl*, *kāf* and *lām*, which is exemplified by the foundation-text of Muʾmin b. Muʾmin (dated 402/1010-11), in lead, from a minaret of Urgandj, or Gurgāndj [*q.v.*], now at Tashkent. With this may be compared the silver tray of the unidentified prince Tādj al-Umma wa Sirādj al-Milla Khᵛārazm-Shāh b. Ibrāhīm, reproduced by Smirnov. Further to the west in the Zyārid kingdom,

the inscription of the Gunbad-i Kāhān (395/1004-5) is in a magisterially simple, yet wholly undecorated script. Such austere forms were well adapted to rendering in the brickwork of the many minarets and domes erected under the Saldjūks in Iran such, for example, as the plain and elongated lettering of the founder's inscription of the minaret Nūrān al-Mulk in the sanctuary of the Djāmi' at Isfahān (*AMI*, vii, 2-3, 83) or that in the name of the Sultān Muhammad b. Malik Shāh at Gulpāyagān.

More adventurous calligraphic developments had meanwhile been taking place in the Sāmānid territories of Transoxania and Khurāsān, no doubt stimulated by the introduction of paper manufactore from China, and the stimulus consequently given to penmen. On the slip-painted "Nīshāpūr" pottery, magnificent lettering is found in black or chocolate over a pale ground, and plaited or interlaced letter-forms soon become widespread. In the absence of dated specimens, chronology of the pottery depends on examples in other media. Interlaced letters appear on a *dīnār* of Nasr b. Ahmad dated 324/935-6 from al-Muhammadiyya (Rayy), and similar forms are found frequently on subsequent Būyid coins of North Iranian mints. Thus Plaited Kūfic seems to have been diffused from east to west across the Islamic world, in the opposite direction to floriation. In Iran, the classic example of the plaited style is the epigraphic frieze of Abū Dja'far Muhammad b. Wandarīn on his tomb-tower at Rādkān in Māzandarān, commenced in 407/1016-17 and completed in 411/1020-1. The outstanding specimen to combine floriation with plaited decoration is the script at the tomb of Yahyā b. Zayd (known as Imāmzāde Khurd), at Sar-i Pul in Afghānistān. Undated it mentions one Abū 'Abd Allāh Muhammad b. Shādān, evidently a relative of Abū 'Alī Ahmad, *wazīr* of the Saldjūk Caghrī Beg, and so should be several decades later than the Saldjūk occupation of Balkh around 435/1042 A. Plaited script appears also on the celebrated arch of Bust in southern Afghānistān, which though ascribed by commentators to the 5th/11th century, has greater affinities, both architectural and epigraphic, with the Ghaznavid period. In view of this last fact, its fragmentary date could suitably be restored merely as *arba'mi'a* (400/1009-10), which would thus be the earliest specimen of Plaited Kūfic in the Ghaznavid area, and belonging consequently to the reign of Mahmūd I.

More typical of the lettering of the Ghūrid period, in contrast to the previous examples, is a Bordered Kūfic which descends from that of the later Ghaznavid minarets, those of Mas'ūd III (492-508/1099-1115) and Bahrām Shāh (512-52/1117-57) at Ghazna. Here the decorative border is independent of the actual lettering, though both stand on a floral background. A forerunner of this convention may be the so-called shrine of Bībā Hātūn or Sīār Ghalī, near Andkhoy, which may even predate the Saldjūk occupation there, and has bordered decoration of a simple kind. This monument of the mature Ghūrid period (late 6th/12th century) show a great variety of scripts, which include a stiff, archaising Kūfic, and a flowing Naskhī (Thuluth, see below). The most characteristic, however, both at Čisht, and in particular at Shāh-i Mashhad, is a form with broad decorative borders developed into complex geometrical forms. Further to the west, under successors of the Saldjūks in Iran, Bordered Kūfic is seen resembling that of the minarets at Ghazna on that at Nigār in Kirmān province. Enhanced with sparse turquoise tiling, it is presumed to date from 615/1218-19.

The Kūfic inscriptions so far discussed are all couched in Arabic. The small number of Persian epigraphs known which were written in this character were discussed by Bombaci in his examination of the long and fragmentary Persian verse-inscription on marble slabs, found in the palace of Mas'ūd III at Ghazna (built in 505/1111-12). He notes Persian verses also on the tomb of an unknown person at Ghazna. However, the earliest example of such a text is on the portal arch of Rībāt-i Malik near Bulkhārā (Pope, *Survey of Persian art*, Pl. 273B), ascribed to the Karakhānid Shams al-Mulk Nasr b. Tamghač Khān Ibrāhīm (471/1078-9). Other monumental Persian inscriptions are at the tomb of Mu'mina Khātūn at Nakhčīvān (N. Khanikoff, *Mémoire sur les inscriptions musulmanes du Caucase*, in *JA* (1862), 213-15), and especially that at the mausoleum of the later Karakhānid Djalāl al-Dīn al-Husayn b. al-Hasan b. 'Alī at Uzgend (547/1152), where the Persian foundation text is in sinuous Naskhī, and the largely Turkish protocol of the ruler, below, in a rigorously geometrical Bordered Kūfic. In unpointed script Persian has always been found extremely difficult to read, and it was only with the advent of fully pointed Naskhī that the monumental use of Persian became extensive.

In any event, by the close of the 5th/11th century, decorated kūfic was passing out of favour, both by reason of its difficult legibility, and perhaps on account of associations with the Fātimid dynasty, considered hostile by the Saldjūks. Cursive handwritings, the rounded Naskhī, and the flowing and ligatured chancery hands, had always co-existed with the angular script, and now emerged with full monumental status. A Naskhī text on the tombstone of Mahmūd I at Ghazna contains the date 421/1030, but is often considered a later addition, as are the Kūfic inscriptions on the wooden doors from that tomb. Nevertheless, Ghazna played a leading part in the innovation, for the specimen there on a marble panel naming the Sultān Ibrāhīm b. Mas'ūd is unlikely to be later than his death in 492/1099, in view of its wording. At Dandānkān (*q.v.* in Suppl.), a Naskhī text is placed before 494/1100. A small panel in Naskhī appears on the Čilil Dukhtarān mausoleet at Isfahān (dated 502/1107-9), as also on that of Muhammad b. Malik Shāh at Sāwa (504/1110-11), where the main text is Kūfic. The minaret at Dawlatābād near Balkh is ascribed to the year 502/1108-9. Besides a band of Kūfic it has a fine epigraphic frieze of Naskhī type (of a style which some designate Thuluth). At the Imām-i Kādān shrine at Sar-i Pul nearby, the entrance inscription is in sprawling Naskhī, but unhappily only the units figure of the date is legible (- 9). Thereafter, the historical inscriptions of Muslim monuments were regularly in the rounded script, as at the Imām-zāda Karrār at Buzūn (528/1133-4), which provided Herzfeld with the occasion to prepare a list of Kūfic and Naskhī inscriptions noted in his time. Recent discoveries enable us to add to his list the *mashrabiyya* of Shāh-i Mashhad already mentioned, and the mausoleum of Qorveh (Kurwa) near Kazwīn, ascribed to 575/1179-80. Arabic manuals of calligraphy, followed by several recent commentators, apply special terms (*thuluth*, *muhakkak*, *nasKhī*, *rik'a* and so on) to varieties of Naskhī script. Yet since the application of these in succeeding periods is inconsistent, and the categories appearing on monuments do not always correspond, it is safer to use only the general term. From the second half of the 6th/12th century, Naskhī inscriptions exist in substantial

numbers in Iran. The best general study, no longer, of course, up-to-date, is that of Kratchkovskaya (in Pope, *Survey of Persian art*, iv, 1770-84). Often the Naskhī characters stand, without attachment, on an overall background of vegetable scrolls, a convention found also in the latest phase of Kūfic. In the period of the Ilkhāns and later, wide variations are found in the forms of script under the Naskhī "label". As outstanding specimens, mention must be made of the *sabras* to Öljeytü in the Dīānī[c] of Isfahān, and the *sanduq* of the Mugaffarid Ahmad at Sirdjān, with its massed verticals typical of the *tughrā* style. Yet the fashion for Naskhī, in numerous forms and variations, with increasing use of diacritical points and signs persists down to the time of the Safawids and still more recently. In later centuries, monumental inscriptions stand closer to the traditions of the manuscript copyists. Besides foundation-texts, they often include the detailed provisions of *waḳf*-endowments. However, from the point of view of script, they hardly make the same call as the examples of the Kūfic period for separate treatment.

10. India.

The Indian sub-continent is very rich in Muslim inscriptions, the study of which affords valuable information not only to the archaeologist and historian but also to the geographer, the economist, the student of religions, the linguist, and of course the calligrapher. Most of these are found on religious buildings (tombs, mosques, *ʿīdgāhs*, *imāmbāṛās*, *madrasas*) and military works (forts, gates, bastions, cavaliers, towers), or as works of public utility (bridges, tanks, *bāʾolīs*, dams, sluices, *sarāʾis*), some are also found on palaces, gardens, pavilions, etc.; and another class is found on movable objects such as guns and swords, ornamental metalwork including Bidrī ware (see BIDAM), and on crystal and jade (see BILLAWR and YAŠM). The greatest part of the public inscriptions is carved on stone; often of a stone identical to that of the main building material, but not infrequently a specially selected fine-grained stone is used for the inscription and cemented into the structure.

Here the question of authenticity must be considered. An inscription may indeed be exactly contemporary with the building on which it appears. But it may also be earlier, preserved through the reverence accorded to the written word or through the ascription to it of some special sanctity, and set into a later unrelated building; or else later, marking say the completion of a building project essentially constructed perhaps half-a-century earlier, as at the Dīānī masdjid of Bidjāpur (*q.v.*), a late ʿĀdil Shāhī building whose inscription records its completion by Awrangzīb, or recording a restoration (as in many works in Dihlī of Firūz b. Radjab, whose inscriptions have to be studied in connexion with the problems of interpretation in his own accounts of his restorations in the *Futūḥāt-i Firūz-Shāhī*: see ORMLI. Monuments); or it may be fictitious—not necessarily mischievously for example, the Persian inscription to the Masdjid Kuwwat al-Islām at Dihlī is probably a *post facto* of sixty or seventy years after the conquest.

The technique of carving stone inscriptions in Arabic, Persian or Urdū is conspicuously different

from that of inscriptions in other Indian languages, where the characters are engraved into the surface of the stone, in the Muslim inscriptions the outline of the letters is first written on the stone, and the ground between the letters then chiselled away leaving the inscription level with the original surface. A similar technique may be applied to inscriptions on crystal and jade, and also to the larger metal pieces, although on any of these fields the letters may be incised and the grooves filled with another material to leave an inscription flush with the surface, in the case of Bīdrī ware this is regularly of silver bar laid into the base metal. Inscriptions in ceramics may be either of letters in a contrasting colour fired integrally in a regularly-shaped tile (*kāshī-rangī* see GHAZAR), or consist of the individual letter-shapes let into a contrasting ground by a mosaic technique. The former ceramic technique is more commonly employed for simple repetitive motifs (*e.g.* the names Allāh or Muḥammad), sometimes combined with a moulded base on which the letter-shapes are raised, as on the merlons of Rukn-i ʿĀlam's tomb in Multān, mosaic tile inscriptions, which do not appear until the 11th/17th century, are best exemplified in the Mughal buildings of Lahore ([see LAHAWR])

The language of the earliest inscriptions is invariably Arabic There are no inscriptional records of the ʿAbbāsid presence in Sindh, although a few were engendered by the Muslim communities which lingered on in Sindh and the Panjāb, with their occasional offshoots in Kačč̌h and the north coast of Kāṯhiāwāṛ [see GUJARAT], to which were added the small communities which grew up around the *khānkāhs* of individual Ṣūfī saints who drifted in to India before the Ghūrid conquest, especially in the Panjāb and the Ganges valley After the Ghūrid conquest of Dihlī, dating inscriptions remain in Arabic regularly until towards the end of the 7th/13th century, when they are replaced by Persian; non historical epigraphs tend to remain in Arabic somewhat longer, and of course Arabic persists up to the present day for Ḳurʾānic quotations on mosque and tomb inscriptions This does not, however, apply to the sultanates of Bengal, where the preferred language of dating inscriptions remains in Arabic until Mughal times. In late Mughal times, in north India Urdū inscriptions appear beside Persian. Away from Dihlī, there are many bilingual and trilingual inscriptions, especially in the Deccan (Persian/Sanskrit, Persian/Marāṯhī, Persian/Kannada, etc), there are a few inscriptions in the Deccan regions in Dakhnī [q.v.]. Not infrequently the date is written in Arabic words in a Persian inscription; and often the Arabic, and to a less extent the Persian, is grammatically incorrect. The date on north Indian inscriptions is regularly expressed in Hijrī years, except for a few inscriptions of the time of Akbar and Djahāngīr which use the Dīn i Ilāhī [q.v.] system, or are dated by regnal years. In the Deccan, various solar calendars are occasionally used, especially the *Shāhūr* san (well studied by Marie Martin, in an unpublished M.A. thesis of the University of Colorado) in the ʿĀdil Shāhī sultanate of Bīdjāpur, and a *Faṣlī* san in Golkonda and under the Niẓāms of Ḥaydarābād In Mysore under Ḥaydar ʿAlī and Tīpū Sulṭān, the Mawlūdī era is used. For these eras, see TA'RĪKH

The scripts in use are the common Kūfic, *naskh*, *thuluth*, and *nasta'līḳ* Kūfic is used only in the earliest dating inscriptions, and retained long after its period of active use in Ḳurʾānic quotations. *Naskh* and *thuluth* are in common use for both Arabic and Persian inscriptions all over India, with some regional modifications. *Nasta'līḳ* is regularly used for Persian inscriptions in and after the Mughal period, and for inscriptions in Urdū. Of the regional styles, the most striking is that of Bengal, where the vertical strokes of *alif*, *kāf* and *lām* are much elongated and spaced evenly across the length of the inscription, leaving the significant parts of the remainder of the letters to occupy the lowest quarter or third of the band, sometimes the tails of final or detached *nūn* or *yāʾ* are so disposed in the top part of the inscription to produce the "bow and arrow" effect. A similar style is seen also on some of the coins of Djawnpur Elaborate *tughrās* fall more in the domain of *farmāns* and other such documents rather than in public epigraphs, although they are certainly known in ceramic tile tintay and in *pietra dura* in Mughal buildings, but simpler *tughrās*, in the square seal-script, are not uncommon, consisting usually of repetitions of the names Muḥammad or ʿAlī, or both, or the *ḥalima* None of these seal-script inscriptions approaches the complexity of the Iranian examples. Simple dating inscriptions are usually unadorned but many mosque inscriptions, starting with the *makṣūra* arches of the first stage of the Masdjid Ḳuwwat al Islām in Dihlī, are engraved against an arabesque [*q.v.*] pattern also carved in relief on the ground. The finest example of this, however, is a dating inscription of the governor Tughril from a lost building at Bihār sharīf. Similar arabesque patterns may also set off inscriptions in tilework or painted plaster, and occur also on coins of the Mughal period [see SIKKA] Many inscriptions are of a high order of calligraphic excellence, and the names of many calligraphers in many regions of India are recorded

The information which the inscriptions provide for the historian is sometimes very valuable, at times, they furnish the only sources for doubtful points of dynastic chronology, they supply missing details from the literary histories, or enable confusing points to be resolved where the other documents are in conflict; they enable more complete lists to be made of rulers' families, of the local nobility or court and town officials; and they are a valuable source of information on the history of the buildings on which they are found (subject to the reservation on their authenticity inferred to above). Indirectly, too, their location enables the political status of border regions at certain confused times to be determined, such as the regions in dispute between the Mālwā and Djawnpur sultanates [*q.vv.*], or the Rayčūr *dōʾāb* [see HYDERABAD History]; in many cases, an inscription is the only evidence for a fort or stronghold having been occupied by a particular power at any time. Even when rulers and governors are known from chronicles, the inscriptions often provide essential information on details of their careers, their promotions and postings, their achievements, even on their families. Tomb-inscriptions frequently mention their subject's birthplace, and thereby provide evidence for the extent of immigration and for the settlement pattern of foreign groups.

Administrative and economic details contained in or implied by the inscriptions can also be invaluable information on details of departments, names of offices, and designations of office-holders; on the imposition or remission of taxes, and their varied application to certain classes or trades, on the nature and conditions of grants of land, both to

builders of an *shāh* [*q.v.*] and to charitable institutions such as mosques or *madrasa* as *waḳf* [*q.v.*], on land cultivation or irrigation (well inscriptions, or records of repairs to tanks and dams, often refer to the amount of land intended to be irrigated), on regional boundaries, on markets. Records on works of public utility may include a schedule of expenses on the wages to be paid to employees. Geographical details, including distances, occur in inscriptions relating to roads and bridges, which also provide information on their builders—besides recording the correct forms of place names, which seem singularly liable to corruption by copyists of the chronicles. Building inscriptions often indicate the cost of construction as well as details of the architects; an unusual inscription in the tomb of Hūshang Shāh at Māndū [*q.v.*] records a tribute by visiting Mughal architects of the family of master-builders who were later responsible for the Tādj Maḥall. Gun inscriptions, as well as prescribing essential instructions on the quantity of charge and shot required, frequently provide information on gun founding and the gun-founders—often Turks or Europeans—involved in the industry.

The literary contribution of the inscriptions must not be overlooked. Many inscriptions are in verses composed *ad hoc*, some of considerable beauty and skill, but it must be admitted that the verse of a lot of inscriptions is no better than doggerel. This is especially the case with verses containing a chronogram, where taste is often sacrified in favour of ingenuity. There are occasional quotations from well-known Persian poets, but frequently the authors are local poets not otherwise recorded. Specimens of Dakhnī poetry are preserved in some Deccan inscriptions. Some prose inscriptions also evince literary merit, and may contain traditions not found in the usual collections of *aḥādīth*, such as the saying ascribed to Jesus in the Djāmiʿ masdjid of Fathpur Sikrī (Persian), or the variations on a tradition (Arabic) in the mosque inscriptions of Bengal, basically "The Prophet, God's peace is upon him, said 'He who builds a mosque to God, for him God builds a *bayt* in Paradise'". Sentiments expressed range from strict and self-conscious rectitude through quietist mysticism to wistful nostalgia.

There is also the linguistic contribution of inscriptions. The occurrence of local words (Hindī, Bengalī, Marāṭhī, Gudjarātī, Urdū and Dakhnī in particular) is useful in reconstructing the history (and social conditions of use) of Indian languages. Bilingual inscriptions provide evidence on the extent of use of local languages and their place in communication of official instructions to the public, and the status of a particular local language in a border area, this is especially the case in the Deccan, where Muslim inscriptions in Kannada, Marāṭhī and Telugu are not uncommon besides the usual Persian and Dakhnī.

The Indian sub-continent has been fortunate in the attention which has been paid to Muslim inscriptions for well over a century. Hundreds are recorded in orientalist publications, besides those in specialist journals devoted to epigraphy alone, and India has been well served by highly competent Government Epigraphists appointed specially to oversee Arabic and Persian inscriptions, of whom Ghulam Yazdanī and Zinuddin Desai are pre-eminent. The work of exploration, interpretation and publication is still active.

Bibliography: A complete bibliography would be enormous in view of the great corpus of Indian Muslim epigraphs published as far inscriptions which relate to particular regions of India are listed under regional articles on History. In the 19th century epigraphs were mostly published, usually with translations and notes, in *JASB*. From 1907 the invaluable *Epigraphia Indo-Moslemica* appeared, which continued until the independence of India and Pakistan. Pre-*EI*1st inscriptions are listed in J. Horovitz, *A list of the published Muhamedan inscriptions of India*, in *EIM* (1909-10). Since the cessation of *EIM*, Muslim inscriptions of India have appeared in *Epigraphia Indica Arabic and Persian Supplement*, and valuable comments appear also in *Annual Report on Indian Epigraphy*. Articles and studies are recorded in Creswell, *Bibliography*, and its Supplement, and in Pearson and Supplements. Many of the earlier *EIM* articles collect the epigraphs of individual sultans, but recent discoveries have rendered many of these out-of-date. V. S. Bendrey, *Studies in Muslim inscriptions*, Bombay 1944, extracts some historical information from epigraphs published in *EIM* to that date, but since the author knew no Arabic or Persian many significant details were not appreciated, and the work suffers from the limitation of its corpus. There is a valuable chapter on Arabic and Persian epigraphy in the Deccan by Z. A. Desai in H. K. Sherwani and P. M. Joshi (eds.), *History of medieval Deccan*, ii, Hyderabad 1974.

(J. Burton-Page)

KITĀBKHĀNA [see MAKTABA]

KITĀMIYYA [see SHADHILIYYA]

KIṬFĪR, one of the most common names for the biblical Potiphar in Islamic tradition. It is probably a corruption of Fiṭfir, based upon an early scribal error. Other forms of the name based on confusions of similar letters in Arabic script are Kiṭfīn, Kiṭ'in, and Kiṭfin. The form Kiṭfīr is frequently corrupted further to Iṭfīr (so generally in Ṭabarī, Tha'labī, Zamakhsharī, Baydawī, and others), and in some manuscripts Iṭfin. He is given the patronymic Ibn Ruḥayb (also Ibn Ruḥayb and Ibn Rūḥīt in mss.). There is considerable confusion regarding his name, and Ṭabarī, for example, uses several forms. Kisā'ī alone calls him Kuṭfīr, which is closest to the original Hebrew in the Ḳur'ān, he is merely referred to by his title al-'Azīz (XII, 30, 51).

Kiṭfīr was the treasurer of Egypt. Because he immediately discerned Yūsuf's [*q.v.*] fine qualities, he is considered one of the three most insightful individuals (*afraṣ al nās*) in the judging of men, along with Shu'ayb's daughter, who asked her father to hire Mūsā, and Abū Bakr, who chose 'Umar as his successor (Ṭabarī, Tha'labī, Zamakhsharī, Baydawī).

Several reflections of the Haggadic Potiphar are found in Muslim legends. Kiṭfīr dies after Yūsuf's release from prison. Yūsuf in most Muslim sources marries Kiṭfīr's wife and finds her a virgin. This is never explained by the fact that Kiṭfīr was a eunuch, as is common in the Judaeo-Christian tradition (based on a later interpretation of Bible. Heb. *sārīs*), but rather that he was a homosexual as in some Jewish midrashim (comp. Ṭabarī, i, 396, with *Sota*, 13b, and *Genesis Rabba*, lxxxiii, 3). According to Kisā'ī, Kiṭfīr had been unable to have sexual relations with his wife because he was an alcoholic (*'unnīn*). Yūsuf's marrying Kiṭfīr's wife probably reflects the association of Potiphar with Potiphera (Gen. xli, 45) in the midrash.

Kiṭfīr is a minor character about whom little is related in Islamic tradition.

(B. HELLER - N. A. STILLMAN)

KITHĀRA, ḲITHĀRĀ, a musical instrument of the lyre family. It first appears in Arabic literature on music in the 3rd/9th century to denote a Byzantine or Greek instrument of this type. It was made up of a richly-decorated rectangular sound box, two vertical struts fastened together by a yoke and strings which were left free at their greatest width. Ibn Ḵẖurradāḏẖbih in his *K. al-Lahw* (ed. I. A. Khalīfé, Beirut 1969, 19) and in his account appearing in the *Murūj al-ḏahab* of al-Masʿūdī (viii, 92 = § 3216) says concerning the *isṭūḵẖa*: "They (sc. the Byzantines) have the *līrā* which is a *rubāb* (sc. viol), which is made from wood and has five strings; they also have the *ḳiṯāra* with twelve strings". Al-Shīrāzī in his *Maṣāṣiṯ al-ʿulūm* writes that "the *līr* (lyra) is the *ṣanǧ* (harp) in Greek the *ḳiṯāra* is one of their instruments, and resembles the *ṭunbūr* (lute with a long neck)". The approximation of the two instruments in the sources corresponds indeed to reality, because the *lirā* and *ḳiṯāra* were two variations of the same instrument type in vogue since classical times and up to the first centuries of Islam. The *lirā* was a smaller instrument played by beginners and by amateurs, whereas the *ḳiṯāra* was the instrument for professionals who towards the Islamic period used it to show off a virtuosity frequently displayed freely. It is possibly to this that a musical aphorism alludes, this figuring *inter alia* in the *Adab al-falāsifa* of Ḥunayn b. Isḥāḳ, the *Rasāla fī aḵẖbār ṣināʿiyyāt al-mūsīḳī* of al-Kindī, the *K. al Lahw* of Ibn Ḵẖurradāḏẖbih and the *Risāla fī ʾl-mūsīḳī* of the Ḵẖwān al-Ṣafāʾ: "A philosopher (Orpheus, according to Ibn Ḵẖurradāḏẖbih), having heard the sounds of a *ḳiṯāra*, said to his disciple, 'Take me along to this musician, and possibly he will give us the benefit of a noble image'. But when they came upon him, they heard an unmetrical rhythm and a defective tune. So the philosopher then said to his disciple, 'The sooth sayers assert that the raven's voice portends a man's death, if this is true, then the sound from this musician portends the raven's death'".

It seems that, at a later period, the term is used to denote a different instrument, the guitar, since this is the state of affairs in the *K. al-Imtāʿ* on *ʾl-Muʾānasa*, where the *ḳiṯār* is one of the 32 instruments described in the second chapter (ms. Madrid, Res. 246). In the same realm of ideas, we believe that the name of the North African lute, the *ḳuṯṯra*, derives from the interpretation of the *ḳiṯāra* evolved by the authors of the 3rd/9th century who compared it to the *ṭunbūr* (lute with a long neck) or to the *murabbaʿ* (lute with a quadrangular sound box).

KITMĀN [see KERMĒSTES, TAKIYYA]

KITMĪR [see AṢḤĀB AL-ḲAHF]

AL-KIYĀ AL HARRĀSĪ, SHAMS AL-ISLĀM ʿIMĀD AD-DĪN ABŪ ʾL-ḤASAN ʿALĪ B. MUḤAMMAD B. ʿALĪ AṬ-ṬABARĪ, known especially as al-Kiyā, jurisconsult of the Shāfiʿī school and Ashʿarī theologian, a dialectician known in his days as one of the best practitioners of the art of disputation. (The *nisba* al-Harrāsī = "a preparer of the food called *harīsa*", wheat and meat pounded together and cooked.) A class-mate of *al*-Ghazālī and of the same age (they were born in 450/1058), al-Harrāsī died in 504/1010-11, one year before *al*-Ghazālī.

He first studied in Ṭabaristān, which he left at the age of twenty to study under the direction of the Imām al-Ḥaramayn al-Ǧuwaynī (*q.v.*) in Nīshābūr; he was one of his most successful disciples and became one of the most able repetitors (*muʿīd*). He excelled in the field of law, both positive law (*fiḳh*) as well as its theory and methodology (*uṣūl al-fiḳh*). From Nīshābūr, al-Kiyā went to Bayhaḳ where he taught Shāfiʿī *fiḳh*; this was very likely after the death of his teacher Ǧuwaynī in 478/1085. His class mate al-Ghazālī had gone to Ṭūs to the court of the Saldjūḳ vizier Niẓām al-Mulk. From Bayhaḳ, al-Kiyā went to Baghdād to assume the chair of law in the Shāfiʿī *Madrasa Niẓāmiyya*, a position which he kept until his death in 504/1110-11. He also taught *ḥadīṯ*, and one of his pupils in this field was the famous tradition expert al-Silafī (*d.* 576/1180-1).

Al-Kiyā was accused of Ismāʿīlī sympathies and was in danger of losing his life, but was saved by a petition signed by notable scholars of Baghdād, among whom his older colleague and sparring-mate in disputations, the Ḥanbalī jurisconsult and theologian Ibn ʿAḳīl (*q.v.*).

Among his works, biographers cite the *Shifāʾ al-murtāḍā*, considered by Tāǧ al-Dīn al-Subkī as one of the most excellent works in the field of *ḫilāf*, and the *Nahḍ muʿtaḍā li Imām Aḥmad*, points of law on which he differs from Aḥmad b. Ḥanbal. Al-Kiyā was in turn criticised by the Ḥanbalī Shams al-Dīn Muḥammad b. Ḳudāma al-Maḳdisī (704 44/1304 43), in his *al-Radd ʿalā ʾl-Kiyā al-Harrāsī*, as well as by the *Kāfī ʾl-Ḥudūd* al-Ḥasan b. ʿAbd Allāh, a student of Ibn Taymiyya (see Ibn Raǧab, *Ḏayl*, ii 438 (l. 24) and 454 (ll. 3 4), respectively). Biographers also attribute to him a work on *uṣūl al-fiḳh*, and this is borne out by a discovery made by G. Makdisi of a manuscript in the library of the University of Ankara, several years ago, during a search for works on *uṣūl al-fiḳh*. Indications on the title page show that this work of al-Kiyā had three recensions: great, medium and small, the extant copy being the medium recension. The title is given as *Taʿlīḳ fī uṣūl al-fiḳh*, and appears to be the work by the same title cited by Suyūṭī in his *Muzhir*, i, 23. It is not to be confused with his work on *uṣūl al-dīn* as suggested in Brockelmann, *GAL*, S I, 674 (l. 12), a manuscript of which is in the National Library in Cairo, for the work is definitely on *uṣūl al-fiḳh*.

Makdisi, *Ibn ʿAḳīl et la résurgence de l'Islam traditionaliste au XIe siècle (Ve siècle de l'Hégire)*, Damascus 1963, 218 and n. 1 (bibliography cited), and index idem, *Muslim institutions of learning in eleventh-century Baghdad*, in *BSOAS*, xxiv (1961), 42 and *passim*.

(G. MAKDISI)

KIYĀFA (A), the science of physiognomancy and the examination of traces on the ground.

In their concern for the purity of race and the

correctness of genealogical lines, the ancient Arabs perfected a technique which permitted them to verify, and, where necessary, to research into, lines of parentage. This technique consisted partly in experience and partly in divinatory intuition. In primitive times, a specialised personnel maintained the practice but the progressive decline, in pre-Islamic Arabia, of personnel skilled in cultic and divinatory matters led to the accumulation of numerous mantic disciplines in the répertoire of the *kāhin* [*q.v.*]. But there were numerous individuals skilled in this sphere of activity who were not necessarily *kāhins* (cf., for example, Ibn Ḥabīb, *Muḥabbar*, 225); certain tribes were noted for their practice of this art (the Banū Mudlidj, Khath'am and Khuzā'a).

Ḳiyāfa, ancestor of the Islamic *firāsa* [*q.v.*], comprised two branches

(i) *Ḳiyāfat al-bashar*, "physiognomancy", which has the object of disclosing the lines of parentage between the child of an unknown father and his presumed father, with a view to his legitimisation. Thus by virtue of traditional *ḥiyāfa*, Mu'āwiya was obliged to recognise, as his consanguineous brother, Ziyād b. Abīhi [*q.v.*]. The principle on which *ḥiyāfa* is based in the necessary resemblance between the infant and his father. Certain parts of the body serve as points of reference, notably the sole of the foot, because, in most cases, the child has the same foot as his father (al-Mas'ūdī, *Murūdj*, iii, 338 = § 2222). But those points of resemblance are not always evident; discovery of them requires a faculty of perception and a perfect memory (al-Rāzī, *Firāsa*, 23). The acute eye for detail possessed by the Bedouin contributed greatly to the perfection attained by the Arabs in this art.

(ii) *Ḳiyāfat al-athar*, the faculty of minute observation which the Arab displays, most notably in the course of everyday life. The examination of footprints permits him to find a stray animal, a fugitive chief, a lost path, etc. he distinguishes the footprints of a man from those of a woman, those of a young man from those of an old man, those of a white man from those of a negro and those of a stranger from those of a local resident. He can even tell if the woman is a virgin or not.

This astonishing faculty of observation and deduction extended to the behaviour of animals. The legend of the sons of Nizār, interpreting, in each case according to a particular point, the traces of a camel, on their road, and the origin of the honey, the roast meat and the wine offered to them by their host (Mas'ūdī, *op. cit.*, iii, 228 ff. = § 2094 ff.), is a perfect illustration of the minuteness with which the *kā'if* dissected the most insignificant facts.

As a spiritual faculty surpassing human intelligence, *ḥiyāfa* possessed, as early as the pre-Islamic period, a sacred character which ensured its survival, as a judicial proof in legal cases concerned with establishing the paternity of a child born of a slave (Ibn Ḳayyim al-Djawziyya, *al-Ṭuruḳ al-ḥukmiyya*, 208, 295-223). Shurayh, the famous *ḳādī*, was a *ḳā'if*; al-Shāfi'ī wrote a *Risāla fī 'ilm al-ḥiyāfa* (Ḥādjdjī Khalīfa, i, 452, ms. Süleymaniyye, Mihrimah Sultan, 285, 4, in Turkish).

A product of nomadism and the milieu of the desert where it was applied under many different circumstances, *ḥiyāfat al athar* rather lost some of its *raison d'être* in the Islamic city, where it was to be eclipsed by *firāsa* which evolved on totally different principles.

Bibliography: T. Fahd, *La divination arabe*, Leiden 1966, 370-8; Y. Mourad, *La physiognomonie arabe et le* K. al-firāsa *de Fakhr ad-Dīn ar-Rāzī*, Paris 1939. Mas'ūdī, *Murūdj*, iii 333-8 = §§ 1217-21. (T. FAHD)

ḲIYĀMA (A.), the action of raising oneself, of rising, and of resurrection. The root *k-w-m* is employed very frequently in the language of the Ḳur'ān. *Ḳiyama* occurs there seventy times, always in the expression *yawm al-ḳiyāma* "the day of resurrection". The resurrection of bodies follows the annihilation of all creatures (*al-fanā' al-muṭlaḳ*) and precedes the "judgment" (*ḥisāb*), the "day of judgement" (*yawm al-dīn*). This will be the Last Hour (*al-sā'a*). *Al-sā'a*, *yawm al-ḳiyama* and *yawm al-dīn*, taken as a whole constitute one of the "necessary beliefs" which determine the content of the Muslim faith. It may be noted that the word *mushūr* is no equivalent (in the Ḳur'ān) of *ḳiyāma*.

The works of *'ilm al-kalām* and of *falsafa* deal with the whole subject of eschatology under the general title of *al ma'ād* "the return", a word which appears only once in the Ḳur'ān (XXVIII, 85) in the localised sense of "the place to which one returns". Hence very often, in learned discussions, the idea of resurrection will be expressed by "return". We may add that it would be inappropriate to deal with judgement as such and its modalities, or with retribution, under the term *ḥisāb* in this respect, the present article needs to be supplemented by the articles reserved for *al-ḥisāb*, "the reckoning", *al ma'ād*, *al-sā'a* and *yawm al-dīn* [*q.v.*]. We shall confine ourselves here to considering (1) the succession of eschatological events which precede and accompany resurrection, (2) the Ḳur'ānic arguments which demonstrate its possibility, and (3) the setting in perspective of the philosophico-theological problems which arise as a result.

1. The succession of eschatological events.

(a) Prophetic signs. Resurrection will be preceded by the end of the world, by 'annihilation'. The Meccan sūras are insistent on this. 'Signs' will foretell the end, 'the earth will be shaken with its earthquake' and will "yield up its burdens" (Ḳur'ān, XLIX, 1-2) the sky will crack, the planets will be dispersed, the seas "poured forth", the graves overturned (C, 9; LXXXII, 2-4; cf. LXXXI, 1-14, especially LVI, 2-6, etc.); the mountains (will fly) like "tufts of carded wool" (CI, 5), etc. The Ṣaḥīḥ of Muslim (viii, 179) gives a systematic list of these "signs". Al-Nasafī, in his *'Aḳā'id*, lists five of them, and the *Tafsīr* of al-Taftazānī enumerates ten "major signs" (see the list in L. Gardet, *Les grands problèmes de la théologie musulmane—Dieu et la destinée de l'homme*, Paris 1967, 262, n. 6).

(b) The annihilation. On that day "the Sound shall ring out, and a second shall follow it" (Ḳur'ān LXXIX, 6-7). This "sound" will be the "trumpet" (LXXIV, 8), which according to tradition will be blown by the angel Isrāfīl. Then there will not be, it is sometimes said a single living being that does not die—"every soul shall taste death" (XXIX, 57). This is the final annihilation, where God alone remains in His absolute power, for "all shall perish save His countenance" (XXVIII, 88) in the course of time, this vision of an absolute *fanā'* came to be modified. From commentary to commentary, the number grows of the beings who shall escape annihilation: not because they are endowed with natural immortality, but on account of a "principle of permanence" (*ḥukm al-baḳā'*) which the will of God shall concede to them (list in L. Gardet, *op. cit.*, 264-5)

(c) The resurrection. When the "second blast of the Trumpet" has sounded, the whole of mankind, long dead or annihilated in the "great *fazā'*", will be revived in body, soul and spirit. The day when the crier shall cry out from a nearby place, the day when they shall in all truth hear the cry, that will be the day of resurrection" (L, 41-2). Stress is always laid on the suddenness of this "return" to life. Resurrection is a rising up, the immediate passage, without reference to time, from non-life to life.

(d) The gathering (*ḥashr*). God "shall gather" (L, 44; LIX, 2). He shall gather men together "as if they had stayed (in their tombs) only one hour of the day" (X, 45). He will gather the believers (XIX, 85). He will gather the impious (XX, 102; XXV, 17; etc.). He will gather men and *djinn* (VI, 130), men and demons (XIX, 68). He will gather the angels (XXXIV, 40). This is the universal gathering. Also taking part in this, it is decided at a later stage, will be those protected from *fazā'* by divine mercy, and even, according to al-Nawawī, pack-animals and wild animals. This will be the "standing" (*al-mawḳif*) in waiting for judgement. Some traditions maintain that the first who will "rise" and arrive at the place of assembly (*al-maḥshar*) will be the Prophet of Islam. According to the most widespread beliefs, the prophets, the angels and the virtuous will be spared the terrors of waiting. But humanity in general "will sweat with agony"; they will be drenched in their sweat (*al-ʿaraḳ*), which will "muddle" them, as the bit bridles the horse (cf. al-Ghazālī, *Iḥyāʾ ʿulūm al-dīn*, Cairo 1352/1933, IV, 436-7).

The Kur'ānic texts are abundantly glossed by *ḥadīths* (al-Bukhārī, IX, 46 61, Muslim, VIII, 165-250, etc.). A whole didactic literature is grafted on to this stem. For example, in al-Ghazālī, *ibid.*, the last book of the fourth volume, entitled *Dhikr al-mawt wa-mā baʿdahu*, 381 ff., in particular on the *yawm al-ḥisāb*, 437-9, and the text attributed to the same author (wrongly, it appears), *al-Durra al-fākhira* (ed. Cairo 1347/1928). See on this subject, as indicated in *EI*[2], Hughes, *Dictionary of Islam*, 559 ff., taking up the "Preliminary discourse" of Sale, section 4, 73-103 of the 1734 edition (the latter itself being based on Edward Pococke, *Porta Mosis*, II, 255-313 of the Oxford 1634-3 edition, which deals at length with Arabic passages and expressions).

Popular imagery abounds with descriptive details and continually builds on the foundations of tradition. But such imagery is irrelevant to faith. On the other hand, the very fact of the resurrection of the body is a cardinal element of the Muslim faith. A meta-historical and unique fact, linked, as if to an "opposite correlative" (*muḳābal*), to the fact, also meta-historical, of creation.

We may further note that the Shīʿī beliefs refer to a first "return" which will precede the universal resurrection and gathering; only the virtuous will take part in it under the guidance of the *Mahdī* of the last times. This is the *rajʿa* ("return to life"), a kind of millenarianism. The Rāfiḍīs, in the early centuries of Islam, insisted on this. It continues to be one of the perspectives of Imāmism, linked to the "return" of the 12th *Imām*, Muḥammad al-Mahdī, the "vanished one" (*al-ghāʾib*), who, with this "first return", will be *al-Kāʾim*, "the riser". The Ismāʿīlī "hidden sense" has more than once transposed the foretold *parousia* on a gnostic and extra-temporal basis.

The Muʿtazilīs opposed the Rāfiḍīs and declared this first resurrection to be "vain". Al-Khayyāṭ returns to it in his refutation of Ibn al-Rāwandī (cf. al-Khayyāṭ, *Intiṣār*, ed. Nyberg, French tr. A. Nader, Beirut 1957, *passim*, in particular 93-97/118-20). The Aṣḥʿarī reaction no longer held the idea of *rajʿa*. Sunnī thought as a whole denies or ignores the expectation of a preliminary "return" of the virtuous, a golden age on earth preceding the day of judgement. For Sunnism, the only "return" is that of the last hour which will follow the "great *fazā'*", so that of the resurrection (*bayāmu*) and of the gathering (*ḥashr*).

II. *Kur'ānic arguments.* As suggested by D. Masson (Kur'ān tr., Paris 1967, index, under "Resurrection"), these arguments may be grouped around three themes:

(a) A constant comparison of the creation (*khalḳ*) with the resurrection, which then appears to be a "new creation" (Kur'ān, XVII, 49; cf. XVIII, 48; XXI, 104; XXVII, 64) or "the second creation" (LIII, 47). It is the creative power of God which is invoked in reply to the man who would doubt the resurrection (XXII, 5); and to produce a second creation is "easy" for God (XXIX, 19; XXX, 27). He has created man and "formed him harmoniously" (LXXV, 38). "Is He who has done these things not able to bring the dead to life?" (LXXV, 40; cf. LXXXVI, 5-8).

(b) A second "sign" of the resurrection is the analogy of the production of vegetables and of fruits, and the revivification of the soil by water (XLI, 39; LXIII, 11). "Thus we restore life to the earth after its death. Observe how resurrection (*nushūr*) comes about" (XXXV, 9; cf. L, 11) "God ... brings forth the living from the dead and the dead from the living" (VI, 95; X, 32; XXX, 19)' "thus we shall cause the dead to arise" (VII, 57). And resurrection after death is compared to the day that follows the night (XXV, 47).

(c) Finally, the example of miracles with reference to a dead man revived by God (II, 72-3 and 259). R. Blachère compares this last account with the Ethiopic version of the *Book of Baruch*. It should be noted that the Kur'ān does not speak here, like the *Book of Baruch*, of a waking after a miraculous sleep (cf. "the Seven Sleepers"), but of a new life after death.

III. *Problems posed.* The most diverse "professions of faith" (*ashhād*) steadfastly proclaim the resurrection of the body. But very soon problems of a philosophico-theological nature arise. The influence of the *falāsifa* is predominant. Not only the *Tahāfut* of al-Ghazālī, but every *Kitāb al-Maʿād* of the major treatises of *ʿIlm al-kalām* has the intention of refuting them, and, for this very reason, to a large extent adopts their methods of examining problems, and sometimes their vocabulary.

(a) The "punishment of the tomb" (*ʿadhāb al-ḳabr*, *q.v.*). First question: is there a survival of the soul or of the spirit? Will the predicted resurrection be of the body alone, or of the whole man, body, soul and spirit? The Kur'ān does not talk explicitly of a survival of the soul or of the spirit after death. Man dies, then is recalled to life on the day of resurrection. Three texts, however (XL, 45-6; XL, 11; III, 169-70), are advanced by the *mutakallimūn* as evidence for the "punishment of the tomb", at a later stage, "the pleasures of the tomb" are reserved for the virtuous. In conjunction with these texts, there are many *ḥadīths*, recognised as authentic (*ṣaḥīḥ*), which are quoted, then as "I take refuge with You against the punishment of the tomb" (cf. further, al-Bukhārī, XXIII, 87; LXXX, 37-9). The

punishment of the tomb and the interrogation that precedes it, the formulation thereby of a "first judgment" are mentioned in the majority of professions of faith. The Ash'arīs accuse the Mu'tazilīs of denying them. 'Abd al-Djabbār, on the contrary, affirms them; he locates them, however, not immediately after the "first death", but between the two blasts of the Trumpet" (of annihilation, and of resurrection) that will sound at the last Hour. And his arguments in support of the punishment of the tomb are very close to the arguments habitually propounded by the Ash'arīs (cf. 'Abd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, ed. 'Abd al-Karīm 'Uthmān, Cairo 1384/1965, 732 3).

But what is at issue here is not the survival of a separate soul, by nature immortal. What is being discussed is a first and transitory resuscitation, at once corporeal and spiritual, which is not a true resurrection. It is not necessary, say some authors, that the entire body should revive; it is enough that some fundamental part or other, heart, kidney, etc., be animated afresh. Moreover, if the body has been completely devoured or reduced to ashes, it will not be difficult for God to reassemble it and restore to life a sufficient quantity of matter (cf. al-Ghazālī, *Iḳtiṣād*, Cairo n.d., 88-9). Besides, this survival of the tomb is brief. After being thus examined and punished (or rewarded), the man experiences "the second death". For a resumé of the question, see al-Djurdjānī, *Sharḥ al-Mawāḳif*, ed. Cairo 1325/1907, viii, 328. It is also declared that the prophets and the *shuhadā'* who have died fighting for God are exempted from the interrogation and from the punishment of the tomb.

Under various influences (Mazdaean? Christian? The *falāsifa*?), or through a simple endogenous development, the belief in a survival of the soul or the spirit is developed whether in the tomb, with, according to the circumstances, appropriate punishments or rewards; or in other places; or even in Paradise for the spirits of the prophets or the *shuhadā'* and, according to some of the Muslim children who have died before the age of reason. These spirits, in Paradise are provided with a temporary body symbolised by "the gizzards of green birds". Furthermore, an exegesis that has come to be accepted of Kur'ān, XVII, 84 "the spirit proceeds from the commandment of your Lord", points to the directly divine origin of the spirit, hence to its immortality (cf. al-Ghazālī, *al-Risāla al-ladunniyya*, the second of the short treatises linked together under the title *al-Djawāhir al-ghawālī*, ed. Cairo 1353/[illegible]934).

We have here a brief revival (body and soul), prolonged or not by a survival of soul or spirit, and what is at issue is, in any case, only a transitory state. The eschatological hour of the *yawm al-ḥisāb* and that hour alone, retains its absolute quality.

(b) The *falāsifa*. The "punishment of the tomb" could hardly be accepted on anything other than a metaphorical sense in the view of the *falāsifa* in general. In their habitual concern to integrate all the articles of faith, they refrain from rejecting it, but interpret it according to the major frameworks of their anthropology. For them, in accordance with their Hellenistic sources, the reasoning soul a spiritual substance, is by nature incorruptible, it belongs by nature to the sphere of separate substances. It is thus that Ibn Sīnā, describing the lot of souls after death, speaks of pleasures, or of purifications, or of intellectual punishments; with this explicit statement that the souls which, on earth, have taken pleasure only in physical enjoyments are now found to be irremediably deprived of them; they will be eternally at grips with tormenting and insatiable desires of lust and anger, and will draw from the celestial bodies the view within their imaginations of their torments (cf. *Nadjāt*[2], Cairo 1357/1938, 297). Their "hell" is to be barred from joining the higher angelic world—which we may take to be the world of separate substances—"where are found supreme happiness and accomplished splendour" (*Sharḥ K. Uthūlūdjiyā*, published by A. Badawī, in *Arisṭū 'ind al-'Arab*, Cairo 1947, 43). It is true, the "humble of spirit" (*bukī*), who have sought after good to the limit of their ability, will enjoy a happiness that is subjectively absolute, objectively relative to imaginative, not purely intellectual happiness, and the celestial bodies here too, will supply them us if with an additional body. Thus, according to Ibn Sīnā, for the mass of humanity, what should hold is that which is said in the prophetic revelation about the judgment of the tomb, about punishments and potential rewards (cf. *Nadjāt*, 298; parallel texts in the *Shifā'*).

Are these spiritual torments and joys of the life to come connected with the *yawm al-ḥisāb*, the day of resurrection of the body foretold by the Book? Resurrection is an article of faith too central to Islam to be explicitly and overtly dismissed by the *falāsifa*. Their position is nonetheless highly ambiguous.

It is appropriate to set aside Abū Yūsuf Ya'ḳūb al-Kindī "the philosopher of the Arabs". He is the only *falsafī* who explicitly maintained that philosophical research could be and should be strengthened and guided by prophetic revelation. Consequently, he professes, from a specifically philosophical point of view, the fact of the creation in time, and the possibility of the resurrection of the body, the latter is possible, he says, since that is what the creation was—thus he adopts too major Kur'ānic argument (cf. *Rasā'il al-Kindī*, ed. Abū Rīda, Cairo 1369/1950, i, 372 ff.). In works aimed at the "simple philosophers" (see *Manṭiḳ al-mashriḳiyyīn*, ed Cairo 1328/1910, 3), Ibn Sīnā confines himself to affirming belief in the resurrection on the basis of Kur'ānic testimony. "The revealed law (*shar'*) maintains, and reason does not deny, that the body also will enjoy pleasures" (or will be plunged into misery and suffering), cf. *Taʿlīḳāt*, Cairo 1326, 124 6; analogous texts in the *Shifā'* and *Nadjāt*. Such is, moreover, approximately the position of Ibn Rushd. It is for the sake of his respect for prophecy and the revealed law that he opposes with such vehemence the accusations of the *Tahāfut al-falāsifa* (*Tahāfut al-tahāfut*, ed. Bouyges, Beirut 1930, 580-6, see translation by S. Van den Bergh, London 1954, notes on vol ii, 203 5).

But in fact, Ibn Rushd confines himself to a statement of principle, without replying to the arguments and objections of al-Ghazālī. Now it seems probable that the latter was familiar with the esoteric treatise of Ibn Sīnā, *al-Risāla al-adḥawiyya fī amr al-maʿād*, which was translated into Latin (*Liber Mahad*) by Andre Alpago (Venice 1546) and has been edited recently in Arabic by Sulaymān Dunyā (Cairo 1368/1949). In this work, the Sīnā attempts to demonstrate explicitly that the resurrection of the body, which he does not mean to deny, should be understood as a symbol or an allegory which has the object of inducing the mass of humanity to persist in virtuous behaviour. In reality "it is known that the true well-being of man is

opposed by the very existence of the soul in his body, and that physical pleasures are other than true pleasures, and that the fact of the soul returning to the body would be punishment for the soul" (*Risāla aqliyya*, 53). We can understand how al-Ghazālī was able to accuse the *falāsifa* of not admitting in its exphert sense, and according to all its demands, the teaching of the Ḳur'ān concerning resurrection, this is the 20th question of the *Tahāfut al-falāsifa*, Beirut 1927, 334 ff.).

(c) Responses and attempts at explanation of the Mu'tazilites. Later *kalām* was to judge the *falāsifa* much more by the esoteric treatise of Ibn Sīnā than by their statements of respect towards the religious law. When al-Djurdjānī lists the various attitudes which were or could be adopted (*op. cit.*, viii, 297, cf. Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, Cairo n.d., 269), he seems to assimilate the *falāsifa* to those 'deistic philosophers' who only accept "spiritual return", the *radjʿ*, in the sense found in the pseudographic *Theology of Aristotle*, while the man "with certainty of truth" (*muḥaḳḳiḳūn*), like al-Ḥalīmī or al-Ghazālī for example, profess a *maʿād* that is both spiritual and corporal. It is in this sense that developments of *kalām* will tend to prove the rational possibility of the "return", then of the "gathering", and to study its conditions. We cannot follow in detail the whole series of discussions, arguments, objections and responses in all their intricacy and multiplicity (cf. L. Gardet *op. cit.*, 266-9, and refs.). Nevertheless, we make some comments.

(1) Curiously enough, Fakhr al-Dīn al-Rāzī (*Muḥaṣṣal*, 270) declares that all the earlier prophets preached only the 'spiritual return" and that it is the Ḳur'ān that proclaims the return of the body. His opponent, the Imāmī Shī'ī Naṣīr al-Dīn Ṭūsī (in the margin of the *Muḥaṣṣal* text) states furthermore that the Gospel does not preach the resurrection of the body, and quotes Matthew, xxii, 30 "they are like the angels in heaven". Ibn Rushd (*Tahāfut*, 580) seems to have had a better knowledge of Judaism and of Christianity.

(2) In his *Tahāfut al-falāsifa* (*loc. cit.*), al-Ghazālī, under the heading of a third hypothesis, and in the form of an argument *ad hominem*, concedes to his opponents that the soul may be of a wholly spiritual nature and that in it alone the human personality may reside (in the *Iḳtiṣād*, 88, he declared that this opinion "does not accord with what we believe"). Even in this case, he says, the resurrection of the body is still possible, and so it will take place, since the religious law foretells it. Also, he replies meticulously to three objections of a philosophical order (for the details of this debate, see L. Gardet, *La pensée religieuse d'Avicenne*, Paris 1951, 87 n. 3).

(3) Numerous explanations of the "return of the body" are proposed by the *ʿUlamāʾ al-kalām*. The Muʿtazilīs seem to have professed the "annihilation", then the "return" of substances and of "durable" accidents (real accidents) which are necessarily linked to them (see summary in al-Djuwaynī, *Iḳtiṣād*, ed. and tr. Luciani, Paris 1938, 211/315). Al-Djuwaynī himself (*ibid.*, 213/318) and al-Ghazālī (*Iḳtiṣād*, 87) envisage either the "annihilation" of substances (and therefore of accidents which could not alone remain in the being), and their "return"; or the "annihilation" of accidents, then their "return", the substances remaining. For al-Ghazālī, either hypothesis is possible (*muʿambar*). According to the followers of Ashʿarism as finally evolved, such as al-Rāzī (*Muḥaṣṣal*, 171) and of Djurdjānī (*op. cit.*, viii, 297), either God brings back to life (*iʿāda*) an "annihilated" (*maʿdūm*) and the "return" is thus preceded by a reduction to non-existence (*ʿadam*), or else the return follows a total dispersion (*tafarruḳ*).

Discussion of these last two hypotheses led to developments concerning the relationship between substances and accidents, concerning an atomistic or non-atomistic view of the world, and concerning notions of being and of non-being. Three terms are constantly being repeated by the pen of the scholars: the being according to its first existence (*mubtadaʾ*), to the "annihilated" (*maʿdūm*) and to the "similar" (*mithl*). For it is not a "similar" being that returns on the day of resurrection, it is the being itself, the same one that was "annihilated". No difference between the first creation (*ibdāʿ*) and the "return" (*iʿāda*) is spoken of by al-Ghazālī (*Iḳtiṣād*, 87 f.), al-Rāzī (*Muḥaṣṣal*, 169 ff.) and al-Djurdjānī (*Sharḥ al-Mawāḳif*, viii, 290, 294). Henceforward, declares al-Djurdjānī (*ibid.*, 293 f.), the subject of the first creation and the subject of the return are not at all to be distinguished in terms of their ensemble of determining characteristics (*muʿayyina*), but only in terms of the essence (*huwiyya*) which places them within the being. There is between these two "subjects", that is between the thing and itself having 'returned', an 'interference" (*takhallul*) of non-existence, which al-Ghazālī and no doubt al-Rāzī on the one hand, and al-Djurdjānī on the other would explain rather differently. But the consensus continues to rest on the return to existence of the same being that was annihilated.

This dialectic, subtly conducted, and originally devised as a reply to the *falāsifa*, is characteristic of the procedure of the "modern" *mutakallimūn* (in the sense used by Ibn Khaldūn, *Muḳaddima*, Cairo n.d., 346-7, tr. de Slane, iii, 60, 62), and of the type of problems that they study. Also to be noted is their extreme sobriety in regard to traditional and descriptive data. We have, thus, in Sunnī Islam, as at were two lines of development: an expression of popular faith, employed to a large extent in the sermons of preachers and of a type to strike the imagination, and an explanatory effort at rational justification. Elementary manuals of a later period take inspiration from both one and the other. To this could be added various "hidden meanings" of Shīʿī traditions. But in opposition to the *Risāla aqliyya* of Ibn Sīnā and his allegorising theses, the existential reality of the basic fact of the resurrection of the body has not ceased to be vigorously maintained.

(L. Gardet)

KIYĀS (ar.), reasoning by analogy, the fourth source of Muslim law.

1. In law

This word is derived from the Hebraic term *hikkēsh*, infinitive *hikkēsh* and from the Aramaic root *n-k-s* which signifies "to beat together". It is employed with reference to (a) the juxtaposition of two subjects in the Bible and the demonstration that they should be treated in the same manner; (b) the action of the exegete who applies the comparison suggested by the text, and (c) the conclusion of the reasoning by analogy which relies on the existence of a common characteristic in the "basic case" and the "analogous case" (J. Schacht, *Origins*, 99).

In a broad sense, *kiyās* can indicate inductive reasoning (*istidlāl*), and even deduction (*istinbāṭ, istikhrāḍ al-ḥukm*). It is thus that in *kalām*, *kiyās*

al shaʾn bi-ʾl-shāhid (*Mafātīḥ*, I, 333) indicates the syllogistic procedure which consists in induction from the known to the unknown; it is the *qiyās* *fāsid* that is inspired by Greek syllogism. While the Muʿtazilī Abū Hāshim al-Djubbāʾī retains this meaning for the *qiyās sharʿī*, his disciple Abū ʾl-Ḥusayn al-Baṣrī rejects it (*Muʿtamad*, II, 697). In the terminology of *fiḳh*, *qiyās* is "judicial reasoning by analogy". It is the method adopted by the Muslim jurisconsults to define a rule which has not been the object of an explicit formulation in a verse of the Kurʾān, a *ḥadīth* of the Prophet or *iǧmāʿ*. It is *qiyās fiḳhī* or *sharʿī*, different from the former in the sense that it "has its own structure and its own complexity" (R. Brunschvig, *Valeur et fondement du raisonnement juridique*, 61). This specific structure results from the particular nature of the mode of reasoning by analogy; the absence of a middle term in the primitive form of *qiyās*, then definition of an explanatory principle (*ʿilla*) which is not a logical norm, but the prescription of a rule (*ḥukm*) established by God or His Prophet, this is the judicio-religious norm. The complexity of *qiyās sharʿī* results from the diversity of cases to be taken into consideration and from the detailed reflections of the *uṣūlīs* on the different procedures that may be adopted in the execution of *qiyās sharʿī*. The elaboration of the major treatises concerning *uṣūl al fiḳh* [*q.v.*] develops the notion of *qiyās* in a systematic manner, conferring upon it a very strict and elaborate form. The work leads in the work of an author like al-Ghazālī (d. 505/1111) to a much expanded concept of the fourth source of law, embracing the perspective of "Greek logic and traditional exegetical method" among the Muslims (R. Brunschvig, *op. cit.*, 37).

The problem. The establishment of *qiyās* as a new judicial source responds to the need to find solutions not foreseen in the texts and to define rules applicable to new situations. The problem of *qiyās* comes therefore to consist in determining "grounds of procedure" (*usūlīyāt*) which respect the spirit of rules dictated by the text. The putting into effect of *qiyās sharʿī* must, in consequence, appeal to principles of analogical deduction which enable the discovery in the rule of the derived case (*farʿ*) of the grounds which determine the rule of the basis (*aṣl*).

Like *iǧmāʿ* [*q.v.*], *qiyās* was instituted after the demise of the Prophet. With the death of Muḥammad, the community of the faithful was deprived of the "organ of revelation" and of its political and religious chief. *Iǧmāʿ* was born of the need to ensure the coherence of the nascent doctrine of Islam, in the face of the dispersion of the believers and the proliferation of sayings attributed to the Prophet. The institution of *iǧmāʿ* had the purpose of preserving the social and doctrinal unity of the parent community (*umma*). In origin and in its "summary and primitive" form, *qiyās* in ʿIrāḳ was employed as a means of giving the force of law to certain *ḥadīths* attributed to ʿAlī which had not met with success (Schacht, *Origins*, 106-7), the extension of this practice may be considered not so much a factor of unity as of divergence. The putting into effect of *qiyās* would appear more and more to respond to a need for diversification and clarification of the divine law. Also, the risk of divergence (*ikhtilāf*) was the essential motivation of the Shīʿī opposition to the use of *qiyās*. The partisans of the Shīʿa do not accept the rule which considers that every *mudjtahid* speaks the truth (*muṣīb*), a rule implied by the practical application of *qiyās*. Nevertheless, the continuing crop of new cases (*ḥawādiṯ*) that the believer is obliged to cope with justifies in the view of the *mudjtahid* recourse to personal reflection, the practice of which is encouraged by the Kurʾān and the Sunna (Kurʾān, XIII, 3; XVI, 12, 67; XXX, 21, XXXIX, 41; XLV, 12, cf. Aḥmad b. Ḥasan Pazdawī, *Uṣūl*, III, 995). The Prophet said: "The study of knowledge (*ʿilm al-ʿilm*) is a duty (*farīḍa*) incumbent upon every Muslim and the knowledge that must be studied is that of the rules which shed light upon the divine law" (*Sharʿiyyat Mughnī*, xvii, 278). *Qiyās* is one of the means whereby reflection leading to this awareness may be exercised.

Development. The practice of *qiyās* thus comes to be established as a means of establishing a judicial ruling not provided for in the texts. However, reasoning by analogy is, in the view of the faithful, to be treated with caution, for the simple reason that it is exercised by a fallible being who is liable to error. *Iǧmāʿ* must therefore intervene to ensure the credibility and the cohesiveness of the opinions of the *mudjtahids*. Only the information provided by the Kurʾān and the prophetic tradition is a source of integral truth (*ṣaḥīḥ*). Such is the view of al-Shāfiʿī (d. 204/820), who may be regarded as the first of the *uṣūlīs*. The ruling that consists in believing that every *mudjtahid* speaks the truth (*muṣīb*, *Risāla*, ed. Shākir, § 1330, *Mughnī*, xvii, 277) will authorise the specialist to make a decision according to that which conforms most closely to the divine intention. By means of *qiyās*, a search must be made, not for certainty (*yaḳīn*) but the proof which will permit the deduction of a peremptory ruling (*ḥukm ḳaṭʿī*). *Qiyās* must be a determinant in a practical sense (*mūdjib li ʾl-ʿamal*, al-Sarakhsī, *Uṣūl*, Beirut 1973, II, 139, *Mughnī*, xvii, 291-2). There is thus a need to elaborate a theory of *qiyās* sufficiently precise for its use to confer upon the specialist a decision the greatest possible integrity. In the practice of the Ḥanafī, Mālikī and Shāfiʿī schools, *qiyās sharʿī* cannot provide certain knowledge, it amounts only to a "strong putative probability" (*ghalabat al-ẓann* al-Āmidī, *Iḥkām*, III, 256, al-Sarakhsī, *Uṣūl*, II, 140, *Mughnī*, xvii, 277).

It was at a very early stage that *qiyās sharʿī* began to be practised. As early as the 2nd century A.H., Ḥammād b. Sulaymān b. Rabīʿa, master of Abū Ḥanīfa and Ibn Abī Laylā, and judge at Baṣra, inaugurated its use. But the first to employ it systematically was Abū Ḥanīfa (d. 150/767), for which reason the practitioners of his school are known as those who use reason (*aṣḥāb al-raʾy*) to distinguish them from pure traditionists (*aṣḥāb al-ḥadīth*). The latter do not accept *qiyās* except as a last resort, according to them, analogy is like carrion, to be eaten only when no other food is available" (L. Milliot, 135). Dāwūd al-Ẓāhirī (d. 270/884) avoided wherever possible reasoning by analogy, preferring the literal content of the Kurʾān and of *ḥadīth*. In the same way that he restricts the notion of *iǧmāʿ*, he imposes limits on recourse to analogy, without however rejecting it absolutely. According to him, one must bow the head before the inexorable law that the finite cannot contain the infinite and admit analogy in some cases (L. Milliot, *op. cit.*, 135, al-Sarakhsī, *Uṣūl*, II, 118; al-Ṣayrafī, *Masʾala al-ḳiyās*, I, 482 b). With Ibn Ḥazm (d. 456/1064), the Ẓāhirī school replaces *qiyās* with the implicit sense of the text (*mafhūm*), according to this last, the notion of analogy is vague and arbitrary. *Qiyās* is

rejected by the Ḥanbalīs and the Shī'īs, but adopted by the other schools of law. In practice, it is the Ḥanafī doctrine which prevails.

In his *Risāla* on the foundations of law, al-Shāfi'ī provides the first stage in systematisation of the theory of *ijtihād*. Having established precisely the role of the Kur'ān, of the Sunna and of *ijmā'*, he neatly defines that of reasoning by analogy. It is to him that is owed the fundamental distinction between *ḳiyās ʿilla* or *maʿnā* and *ḳiyās shabah*. The first bases analogy on an explanatory principle (*ʿilla*). This form of *ijtihād* considers a thing according to its original meaning (*aṣl*). In this case, there is no need for disagreement. *Ḳiyās shabah* considers the thing in its similarity (*shabah*) to others, those who employ it may disagree (al-Shāfi'ī, *Risāla*, § 2334). Al-Āmidī (d. 632/1235), a Ḥanbalī *uṣūlī* who went over to Shāfi'ism, is at pains not to confuse the ruling of the basic case (*aṣl*), with that of the derived case (*farʿ*). The ruling of the former is given by the text of the Kur'ān or of *ḥadīth* or by *ijmāʿ*, it is certain. The ruling of the latter is deduced (*thamara nātiǧa*), it is putative (*al-ḥukm li ʾl-farʿ ġayr al-ṣaww*, *Iḥkām*, iii, 264). For this reason, the conclusions of *ḳiyās* cannot in their turn provide deductive principles (*ruknu*, *op. cit.*, 277). Analogy on the basis of analogy is not acceptable. Such is not the opinion of the Muʿtazilī ʿAbd al-Djabbār, who adopts the Shāfi'ī teaching and enlarges it. According to him, "there is no difference between the ruling of the basic case which is known through explicit evidence (*bi-ḍ-ḍarūra fī-hi bi ʾl-muḳtaḍā*). The explanatory principle (*ʿilla*) is fruitful, although dissociated from the basic case which has inspired it, it may be taken as operative, for it finds its own guarantee within itself. Thus, God (IV, 25) lays down that the punishment inflicted upon a slave woman should be half that applied to the free woman: as soon as we are aware that the reason for the existence of this *ḥukm* is the fact of slavery (*riḳḳ*), we may apply this ruling to the male slave. Similarly when we know that the reason for the prohibition (Kur'ān, II, 219; V, 90) of all fermented drink (*ḵhamr*) is the existence of wine (*mutaḳaḍḍi*) we shall forbid the consumption of wine. For the Muʿtazilī ʿAbd al-Djabbār, *ḳiyās*, when applied to scriptural or rational material, is dependent on a similar process, that of intellectual effort (*iǧtihād*). Here the role attributed to the action of the subject in interpretation of the *Sharīʿa* is predominant.

Foundation. The various objections raised to the practice of *ḳiyās* which are known to us through the different treatises of *uṣūl al-fiḳh* divide into two types of argument: an argument of fact and an argument of law.

(a) The verses of the Kur'ān and of prophetic tradition which forbid recourse to reasoning by analogy are numerous. "We have presented to you the Book to make all things clear" (XVI, 89), "We have neglected anything in the Book" (VI, 38), "Your Master is not forgetful" (XIX, 64). Recourse to personal opinion (*raʾy*) to extract a ruling from it amounts to imputing inadequacy to the Holy Book. The Prophet, in his turn, accuses of aberration and error those who deduce a non-existent rule from an existing rule (Pazdawī, *Uṣūl*, iii, 992; al-Sarakhsī, *Uṣūl*, ii, 120).

(b) The argument of law consists in denying that legal status (*ḥukm*) may be founded on reason. The "*reason d'être of law*" (*ʿilla*) is attained through its erroneously convincing nature (*shubha fī ʾl-aṣl*). The text (*naṣṣ*) has never determined explicitly the "properties" (*awṣāf*) which might provide a foundation for legal precepts. The latter are obligatory on the grounds that they result from divine decision (al-Sarakhsī, *Uṣūl*, ii, 122, Abū ʾl-Ḥasan Pazdawī, *Uṣūl*, iii, 992). Reason has no competence to exact that which only the All-Powerful is entitled to impose. The object of law is beyond reason. The content of a number of divine precepts cannot be subject to personal opinion; these *aḥkām* have no foundation other than divine decision, such is the case with regard to ritual ordinances (*ʿibādāt*). The practice of *ḳiyās*, in substance, far from providing a guarantee of rectitude, can lead only to a misunderstanding of rules (*ġhalaṭ*, al-Sarakhsī, *Uṣūl*, ii, 122). In the argument of authority there is no place for personal assessment.

According to the Muʿtazilī al-Naẓẓām, the process of *ḳiyās* is far from always respecting the rational model. It is not compatible with reason to impose fasting on the menstruating woman and to excuse her from prayer, when she is better able to pray than to fast. The same applies to the prohibition laid upon the man against gazing at an aged free woman, with repulsive features, while he is permitted to look at no attractive young slave. It is contrary to good sense to cut off the hand of a petty criminal (*sāriḳ al-ḥalīl*) while the judicial rule spares the man who robs on a large scale (*ghāṣib al-kathīr*, al-Āmidī, *Iḥkām*, iv, 9, *Muʿtamad*, ii, 746). In other words, in ethical questions analogy is inoperative. It has the effect of linking together dissimilar cases and dissociating similar cases, which precludes passing from the basic case (*aṣl*) to the derived case (*farʿ*); cf. al-Ṣaymarī, *R. Masāʾil al-ḵhilāf*, f. 48a. It is interesting to observe that the Ḥazmian objection to the principle of similitude in religious questions (Ibn Ḥazm *Iḥkām*, vii, 82) is the same as that of al-Naẓẓām. Such is the criticism of *ḳiyās* raised by these two authors. Classical Muʿtazilism, as represented by the *ḳāḍī* ʿAbd al-Djabbār, replies to the objection of ancient Muʿtazilism in declaring that 'neither *naṣṣ* nor *ijmāʿ* should, in the last resort to reason or to *raʾy*, figure in the arsenal of judicial-religious thought ... as regards *ḳiyās*, there is the need to detect, among the elements of basic prescription, the invariants on the basis of which *ḳiyās* will be legitimate, if account is taken of the indication (*amāra*) which specifies them" (R. Brunschvig, *Al-ḥanāfiyya et tradition chez ʿAbd al-Ǧabbār*, 214). The convincing validity (*ḥuǧǧiyya*) of *ḳiyās* is, like that of *ijmāʿ*, based on a text; reason only intervenes in order to put the analogical deduction into effect.

The Shī'ī criticism of *ḳiyās* is directed against the diversity of opinion which is liable to result from it. The Kur'ān condemns divergence of opinion in many places (IV, 82; XLII, 13, VIII, 46, XXX, 32, III, 105). A number of *ḥadīths* attack those who profess divergent doctrines (al-Āmidī, *Iḥkām*, iv, 10).

To these objections, the scholars of *ḳiyās* reply in their turn with scriptural and rational arguments in favour of judicial analogy.

(a) God said: "Learn from this, O you who are clear-sighted" (LIX, 2). To learn a lesson is to associate a thing with its "homologue" (*naẓīr*), such is the process of *kiyās*. "If you are capable of interpreting dreams ..." (XII, 3), *kiyās* does nothing other than interpret the rule "These verses are addressed to thinking people" (XII, 3, X, 24, cf. Abu 'l-Ḥasan Pazdawī *op. cit.*, 995), what is more, the Kur'ān (IV, 146) employs analogy in authorising ablution with sand (*tayammum*) when water is lacking.

It is well-known that the Companions of the Prophet employed *kiyās* and dialectical discussions (*munāẓarāt*) and that they practised judicial consultations (*mushāwarāt*). In a general fashion, the partisans of *kiyās* appeal to the *ḥadīth* where it is related that when the Prophet sent Mu'ādh b. Djabal to the Yemen as *ḳāḍī*, the former asked: "How will you reach a judgement when a question arises?", Mu'ādh replied "According to the Word of God".—"And if you find no solution in the Word of God?"—"Then, according to the *sunna* of the Messenger of God".—"And if you find no solution in the *sunna* of the Messenger of God, nor in the Word?"—"Then I shall take a decision according to my own opinion (*adjtahidu raʾyī*)". Then the Prophet of God struck Mu'ādh on the chest with his hand and said: "Praise be to God who has led the Messenger of God to a solution that pleases him" (Abū Dāwūd, *Aḳḍiya*, b. 11 al-Tirmiḏī, *Aḥkām*, b. 3, al-Dārimī, *Sunan*, Introduction; A. J. Wensinck, KIYĀS, in *EI*[1]).

(b) The person endowed with reason, the *ʿāḳil*, *ḥāḏḏ*, is naturally inclined to assess the invisible (*ghāʾib*) on the basis of the perceptible tokens of experience (*ḥāḍir*). Cracks in a wall foretell its collapse, a cloudy sky and fresh wind are signs of rain, etc. (al-Āmidī, *Iḥkām*, IV, 3). Similarly, in matters of religious law, *kiyās* puts into effect "the cause-norm association" (*ʿilla-ḥukm*) to assist the exercise of reflection on two similar cases, the second not being defined by this association.

The nature of *kiyās*. According to al-Shāfiʿī, *kiyās* and *ijtihād* (*q.v.*) are two terms expressing a single notion; when the rule concerning a specific case is not dictated by a particular indication (*dalāla*), this indication must be sought by a means conforming to truth with the aid of *ijtihād*. Now *ijtihād* is *kiyās* (Risāla, § 1323). The specific nature of *kiyās* is not yet detached, it is subjective opinion (*raʾy*). With the elaboration of the science of the *uṣūl al-fiḳh*, the concepts are defined and fixed. *Kiyās* can then be defined as the method which consists in assimilating the derived case (*farʿ*) to the basic case (*aṣl*) in virtue of their similarity with regard to the *ratio d'être* (*ʿilla*) of the norm (*ḥukm*). *Kiyās* is thus a form of reasoning which proceeds from particular to particular, linking a new case to an old case: "It cannot be considered as inductive reasoning, since it does not aim at applying to all cases of the same kind the observations made concerning one of them" (C. Chehata, *Logique juridique et droit musulman*, 20). Such is the character of the reasoning which concludes that in a case of formation, a confession repeated four times on the part of the guilty party may be considered a sufficient proof of the offence. The basic case is defined by a Kur'ānic text which prescribes the execution by stoning of the guilty party in the presence of the four witnesses. This assimilation (*taṣḥīḥ*) of ancient origin belongs to a still simplistic concept of *ʿilla*. With the development of the theory of *kiyās*, *ʿilla* takes on a more logical quality. Whence the penalty that reduces by half the punishment applied to female slaves as compared with free women (IV, 25), the *ʿilla* of the reduction in penalty is slavery. By analogy, the reduction will be applied to male slaves as compared with free men. Of the same type is the *kiyās* that prohibits the lending of dry dates or raisins at interest (*ribā*), on the basis of the prohibition of lending grain (wheat, barley), with the demand of eleven measures against ten. The reason for the prohibition is that usury is forbidden.

For *kiyās* to be effective, four elements are necessary: (1) the appearance of a new case which causes a problem, (2) a basic case (*aṣl*) governed by a *ḥukm* defined by a text, (3) a reason *d'être* of the law (*ʿilla*) which can provide the line (*maʿnā ifādī*) justifying the assimilation of the derived case with the basic case. This reason *d'être* is the "sign" (*ʿalāma*) which permits the knowledge that the ruling from a text may be applied to a case not envisaged in these terms. Once this reason is known, the jurist, proceeding by analogy, applies the law thus motivated to the case in which he sees a similar reason to pronounce judgment. This is the *taʿlīl* (L. Milliot, *op. cit.*, 138), (4) finally, a result which is the *ḥukm* applied to the derived case. Such is the prohibition against striking one's parents drawn from the prohibition against saying to them "fie!" (XVII, 24). As regards the third condition, "the Ḥanafīs only recognise *ʿilla* as endowed with a "transitivity" (*taʿdiya*), that is, susceptible in being put into effect in a derived case on the basis of a basic case (al-Sarakhsī, *Uṣūl*, II, 167). The Shāfiʿīs, on the contrary, accept that no *ʿilla* may be intransitive (*ḳāṣira*), untransmissible to a derived case". In reality, the opposition between these two doctrines depends on the different manner in which the *ʿilla* is conceived in relation to *ḥukm*. According to the Shāfiʿīs, on the contrary the *ʿilla* is that which confers upon the *ḥukm* its "validity of origin". According to the Ḥanafīs, the *ʿilla* of the basic case justifies itself by the derived case (R. Brunschvig, *Valeur et fondement du raisonnement juridique*, 79-80).

From the point of view of modality, several types of *kiyās* are distinguished: (a) *kiyās ʿilla* or *kiyās al-dalāla* (al-Āmidī separates these two) which consists in associating (*ilḥāḳ*[c]) the basic case with the derived case with the aid of the indication of the *ʿilla* and the qualifications which the latter entails (cf. Ibn Kayyim *Iʿlām*, I, 138-9). An example is the association of wine (*nabīḏ*) with alcoholic drink (*khamr*), giving as "middle term" the faculty of upsetting good behaviour.

(b) *Kiyās shabah* is an analogy by "simple similarity" which requires no intervention of motive or of common indication (*man ghayru ḥalli ijtimāʿ*, *Iʿlām*, I, 148). An example is the similarity established between the slave and the free man for the assessment of the *diya* (*q.v.*) when the slave is the responsible for the offence, and that which assimilates his compensation when he is the victim (*Muʿtamad*, II, 692).

(c) *Kiyās al-ṭard* is a re-extensive *kiyās al-ʿilla* and its contrary is *kiyās al-ʿaks* or "reversibility", "reverting to non-*wasf* → non-*ḥukm*" (R. Brunschvig, *op. cit.*, 81, al-Āmidī, *Iḥkām*, III, 261). *Kiyās shar*[c] would thus appear with *ijmāʿ* to be a decisive criterion for the interpretation of Islamic law. It permits the establishment of new rules. But in the extent to which it is a process of reasoning which excludes the possibility of having recourse to a purely logical

norm, *ḳiyās ghayr* belonging definitively to personal opinion (*raʾy*), it is for this reason limited in range. From this results the need to resort in certain cases to other methods of reasoning: *istiḥsān* (q.v.) or *benignitas* and *istiṣlāḥ* (q.v.) or *utilitas publica*.

In the modern period, the theory of *ḳiyās* is generally applied in the different schools which adopt it in the spirit of the Ḥanafī doctrine. Because of the major role accorded to personal effort by the Ḥanafī *maḏhab*, the modern *muḏtahid* is generally eager to draw from this the norms enabling him to deduce new rulings; historically, the importance accorded to Ḥanafism results from the fact that the Ottoman empire followed the Saldjūḳ sovereigns in imposing it as an official doctrine. This ascendancy, which prevailed over a large proportion of the Muslim world, had the effect of conferring upon the Ḥanafī *maḏhab* an official status to a number of countries "where the majority of the native Muslim population follows another school, e.g. in Egypt, Sudan, Jordan, Israel, Lebanon and Syria" (J. Schacht, ḤANAFIYYA, in *EI*², iii, 163).

(M. BERNAND)

2. In Grammar.

In grammar, the word *ḳiyās* indicates the "norm", meaning the instrument which enables the grammarian to "regulate" (*ḍabaṭa*) the morphological or syntactical behaviour of a word, where this is not known through transmission (*naḳl*) or audition (*samāʿ*), on the basis of the known behaviour of another word, by means of a certain kind of analogy. It is synonymous with *maḥyās* (pl. *maḥāyīs*). The term is well attested in the *Kitāb* of Sībawayhi (cf. G. Troupeau, *Lexique index*, 179); Sībawayhi does not define it but he says that it may be bad (*radīʾ*, *ḵabīth*), constant (*muṭṭaṣib*, *mustamirr*), flowing (*ḏjārī*), stable (*mutamakkin*) and that it is indispensable (*lāzim*), he insists that one does not "regulate" a thing on the basis of that which is rare (*ḳalīl*) or exceptional (*shāḏḏ*, *shāḏḏ*), but that one "regulates" it on the basis of that which is in frequent use (*kaṯīr*). The expression *ʿala ʾl-ḳiyās*, which is often used, indicates "according to the norm, normally".

It is the Muʿtazilī grammarian al-Rummānī (d. 384/994) who supplies the first definition of the term, in the *K. al-Ḥudūd* (ed. M. Ḏjawād, 59), "*ḳiyās* is the combination (*ḍamm*) of two things, whence results necessarily their combination in principle (*ḥukm*)".

Ibn Ḏjinnī (d. 392/1002) devotes to *ḳiyās* five chapters in the *K. al-Khaṣāʾiṣ* (ed. M. A. al-Nadidjār, i, 109-33, 357-69, 391 ff.). He asserts that the Arabs love affinity (*taḏāwur*) and resemblance (*taḏābuh*) and that this leads them to assimilate things that are close to one another, and to trace (*ḥaml*) a secondary thing (*farʿ*) to a primary thing (*aṣl*), he comments that this penchant of the Arabs for assimilation (*taḏbīh*) sometimes leads them to trace a primary thing from a secondary thing, and that a rare thing can be the "norm", while a more common thing is not. As regards the links between the "norm" and audition and usage (*sulṭān*), he distinguishes four cases: (1) that which is generalised (*muṭṭarid*) according to the norm and according to usage, this is the optimum; (2) that which is generalised according to the norm, but exceptional according to usage, one adopts the word of most frequent usages; (3) that which is generalised according to usage, but exceptional according to the norm: one adopts that which is commonly heard (*masmūʿ*), but does not "regulate" anything else according to it, and (4) that which is exceptional according to the norm and to usage; this is faulty (*marḏūl*) and should be rejected (*mufṭaraḥ*). Finally, he observes that the grammarians considered that that which is "regulated" according to the language of the Arabs, constitutes a part of their language, even if the Arabs have not used it in speech.

In the *K. Lumaʿ al-adilla fī uṣūl al-naḥw*, Ibn al-Anbārī (d. 577/1182) subjects *ḳiyās* to a lengthy examination (ed. A. Amer, 44 ff.). He considers that it is impossible to do without it to grammar, since the latter may be defined as being the science of "norms" (*maḥāyīr*) drawn (*mustanbaṭa*) from exhaustive study (*istiḳrāʾ*) of the Arabic language. He defines it as the tracing of a secondary thing from a primary thing, by virtue of a cause (*ʿilla*) which demands the application of the principle of the primary thing to the secondary thing. He distinguishes three kinds of *ḳiyās*, according to its basis upon (1) a cause to which the principle is attached; (2) a resemblance (*shabah*) other than the cause to which the principle is attached; and (3) a generalisation (*ṭard*) of principle. Where the assumptions (*ḥikāya*) of the cause is lacking in this case, only the two former kinds are utilised by the grammarians.

Al-Suyūṭī (d. 911/1505), in the third chapter of the *K. al-Iḳtirāḥ fī uṣūl al-naḥw*, classifies all the data concerning *ḳiyās* supplied by previous grammarians (ed. Ḥaydarābād, 38 ff.). He divides his study into three parts. (1) the primary thing, on the basis of which one "regulates" (*maḥīṭ ʿalayhi*), (2) the secondary thing, which one "regulates" (*maḥīṭ*), (3) the principle; and (4) the cause that unites them (*ḏjāmiʿa*).

Finally, it should be noted that, in the *K. al-Radd ʿala ʾl-nuḥāt*, the Ẓāhirī grammarian Ibn Madāʾ al-Ḳurṭubī (d. 592/1196) objects to the use of *ḳiyās* in grammar and calls for its abrogation (ed. Sh. Ḍayf, 156).

Bibliography given in the text of the article.

(G. TROUPEAU)

KĪZ (n.), basically "girl, unmarried female", but often used with the more restricted meanings of "daughter, slave girl, concubine". It is already found in the Orkhon inscriptions in the phrase *bir oghli* "daughter" as opposed to *eri oghli* "son".

and subsequently appears in most Turkish languages. Through Türkmen forms it passed into Iranian languages like Kurdish and Ossetian, and through Ottoman usage into Balkan languages like Serbian and Bulgarian, often via the Ottoman technical expression (for which see below) *khiṣṣ aghasi* (see Radloff, *Versuch eines Wörterbuches der Turk Dialecte*, ii, 818-9, G. Doerfer, *Türkische und Mongolische Elemente im Neupersische* iii. *Türkische Elemente im Neupersische*, Wiesbaden 1967, 569-70, Ne<u>sh</u>ri, Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 679-80).

In mediaeval Islamic usage, one of its denotations was "Christian woman", doubtless influenced by the meanings "slave girl, concubine", <u>D</u>huwaynī, tr. Boyle, i, 357, calls the Georgian King David IV "the son of Kiz Malik", i.e. son of the Queen Ruandam. Under the Ottomans, the term *Kiṣlar Aghasi* "*Agha* of the maidens" was generally used to denote the chief of the black eunuchs in the Imperial Palace, more correctly entitled *Dār al-Sa'ādat Aghasi* "*Agha* of the House of Felicity". This offices was in charge of the sultan's harem, and was in practice the principal officer of the whole palace. From the last years of the 10th/16th century onwards, he enjoyed the prestige of vizierial rank, as a *pasha* of three *tughs*, with the title of *Mutafarrik*, coming in order of precedence only after the Grand Vizier and the *Shaykh al-Islām*. After 993/1585 he also displaced the Chief of the White Eunuchs from his control of the *awkāf* or pious endowments of the *Haremeyn*, Mecca and Medina (see N M Penzer, *The Harim*,[2] London 1965, 198 ff.; I H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 272 ff. and index, Gibb and Bowen, *Islamic society and the west*, *i/1*, Oxford 1950, 76-7, 329-35).

The element *kiz* also occurs in two well-known topographical features in the city of Istanbul and vicinity. First, there is the *Kiz taşi* "Maiden's stone", the column of the Emperor Marcian (450-7), in the Fātih quarter, so-called from its alleged power to distinguish virgins (in fact, the genuine "virgin's column" from near the Church of the Holy Apostles was incorporated in the Süleymāniyye Mosque, which rose on that church's site after 1456); see E Mamboury, *The tourists's Istanbul* Istanbul 1953, 339-40, 41, and Baedeker, *Konstantinopel, Balkanstaaten, Kleinasien, Archipel, Cypern*[2], Leipzig 1914, 180. Second, there is the *Kiz kûlesi* "Maiden's tower", the signal station and lighthouse built on a rock in the Bosphorus just south of Üsküdar in the entrance to the Bosphorus, popularly called "Leander's tower", referring to Leander's death by drowning when trying to reach his beloved Hero (though this occurrence is usually located in the Dardanelles between Cestus and Abydos). The classical name for this rock was Damalis (from the wife of the Athenian general Charas), but the Turkish name is connected with the story of Mehemmed II's daughter, allegedly shut up there in a fruitless attempt to preserve her from death by snakebite (see Mamboury, *op cit*, 496 7, and *Murray's handbook for travellers in Constantinople, Brussa and the Troad*, London 1893, 107).

For the social status of women in Turkey, see MAR'A.

(C. E. Bosworth)

KIZIL AHMADLI [see ISFENDIYĀR OGHLU]

KIZIL ARSLAN [see ILDEGHIZIDS].

KIZIL BASH (T. "Red head"). The word is used as both a general and a specific sense. In general, it is used loosely to denote a wide variety of extremist Shī'ī sects [see GHULĀT], which flourished in Anatolia and Kurdistān from the late 7th/13th century onwards, including such groups as the *Alawis* ('*Alawīs*, see A S Tritton, *Islam: belief and practices*, London 1951, 83).

The 'Alawis were closely connected with the Nuṣayris [*q.v.*] of northern Syria and Cilicia, and the *takiyas* (*takkiyas* [*q.v.*]), in order to protect themselves from persecution by the Ottoman government as schismatics, later "gained the right of asylum under the all-embracing and tolerant umbrella of the Bektāshī organization" (J. Spencer Trimingham, *The Sufi orders in Islam*, Oxford 1971, 83; see also BEKTĀSHIYYA). The *Kizil-bash* did not constitute a Sūfī order as such, but rather a religious sect (Abdülbāki Gölpınarlı, *IA* art. *Kızıl baş*). The common characteristics of all those designated as *Kizil bash* was the wearing of red headgear. Gölpınarlı, *op cit*, sees the *kizil bash* in this respect as the spiritual descendants of early Shī'ī *ghulāt* groups such as the <u>Kh</u>urramīs [*q.v.*], who were also known as the Muḥammira from their practice of wearing red hats and robes, and even of pre-Islamic heretical sects of the Sāsānid period, especially that of Mazdak (see also Browne, *LHP*, i, 320-23). In its specific sense, the word *kizil-bash* was a term of opprobrium (often *kizil bash-i suwash*, "scoundrelly *kizil-bash*", etc.) applied by the Ottoman Turks to the supporters of the Safawid house [see ṢAFAWIDS], and adopted by the latter as a mark of pride.

In Ṣafawid usage, the term derived from the distinctive scarlet or crimson hat (*tādj*) with twelve gores (*tark*) commemorating the twelve Imāms of the Ithnā 'Ashari Shī'īs, worn by the disciples (*murīds*) of the Safawid *shaykhs*. According to Ṣafawid tradition, in 893/1487 Shaykh Haydar [*q.v.*], instructed in a dream by the Imām 'Alī, devised this headgear (British Museum MS. Or. 3246, ff. 21a-b). When Haydar first showed this "Sūfī *tādj*", as it became known, in the Aḳ Koyunlu ruler Uzun Ḥasan, the latter kissed it and put it on his head (if the date 893/1487-8 is correct, this story is clearly apocryphal, because Uzun Ḥasan died in 882/1478). His son Ya'ḳūb, however, refused to wear it, and this was the origin of the enmity between Haydar and Ya'ḳūb which resulted in the breakdown of the Ṣafawid Aḳ Koyunlu alliance. After the death of Haydar, Ya'ḳūb not only forbade his subjects to wear the *kizil bāsh tādj*, but also tried to prevent the Sūfīs of the Ṣafawid *jarība* from wearing it (R M Savory, *The struggle for supremacy in Persia after the death of Timur*, in *Iṣl*, xl (1964), 34 ff.).

Strictly speaking (as noted by Chardin; see V. Minorsky, *Tadhkirat al-mulūk*, London 1943, 188 and n 5), the term *kizil-bāsh* should be applied only to those Turcoman tribes inhabiting eastern Anatolia, northern Syria and the Armenian highlands which were converted by the Ṣafawid *da'wa* and became the disciples of the Ṣafawid *shaykhs* at Ardabīl. However the term was also loosely applied to certain non-Turkish-speaking Iranian tribes which supported the Ṣafawids, for instance the tribes of Tālish and Karādja-dāgh (Siyāh-kūh), and Kurds and Lurs. The great *kizil bāsh* tribes (*oymāḳ*) were subdivided into as many as eight or nine clans (the list in Minorsky, *op cit.*, 16 17, is by no means complete). The most important *oymāḳs* included the Ustādjlus, Rūmlūs, Shāmlūs, Dulghadirs (erroneously Dhu 'l-Ḳadrs), Takkalūs, Afshārs and Ḳādjārs, other tribes, such as the Turkmāns, Warsāḳ and Bahārlūs, are occasionally listed among the great *oymāḳs*. During the reign of Shāh Ismā'īl I [*q.v.*], the Shāmlūs were the most powerful of the *kizil-bāsh*

oymāḳs. The provenance of some of the great *oymāḳs* is clearly indicated by the name of the tribe: for instance, the names Shāmlū, Rūmlū and Bahārlū consist of a place name with the addition of the possessive particle *-lū*, others, such as Afshār, Warsāḳ, and Dulḳadir, are the names of old Oghuz tribes. The origin of some names, such as Ustādjlū, is still obscure.

From the middle of the 9th/15th century, Ardabīl was the nerve centre of an extensive organisation designed to keep the Ṣafawid leadership in close touch with its *khiṭṭ-bāḳ murīds* in eastern Anatolia, Syria and elsewhere. This organisation was controlled through the office of *khalīfat al khulafā'i*, fulsomely called by Minorsky (*op. cit.*, 128) "the special secretariat for Ṣūfī affairs". The *khalīfat al khulafā'*, who was *successarily* a *khiṭṭ-bāḳ* and usually a Turcoman, appointed representatives termed *khalīfa* in the region in which the Ṣafawid *da'wa* was active, and the *khalīfas* in their turn had subordinates termed *pīrs*. The presence of large numbers of *khiṭṭ-bāḳ* Ṣafawid supporters in eastern Anatolia constituted a serious threat to the Ottomans. In 907/1501, Sultān Bāyazīd II transferred large numbers of Shī'īs from Asia Minor to the Morea, yet in 927/1521 there was another serious *khiṭṭ-bāḳ* revolt at Tekke [see BĀYAZĪD II], and Sultān Selīm I, before invading Irān in 920/1514, massacred 40,000 of them in order to secure his rear (see Savory, *The consolidation of Safawid power in Persia*, in *Isl.*, xli (1965), 86 f.).

The *khiṭṭ-bāḳ*, as the *murīds* of the Ṣafawid *shaykhs*, owed implicit obedience to their leader in his capacity as their *murshid i kāmil* ("supreme spiritual director"). After the establishment of the Ṣafawid state, the Ṣafawid *shāhs* transferred this *pīr-murīdī* relationship from the religious to the political plane, since they were now not only their followers' *murshid-i kāmil* but their king (*pādishāh*) as well. As a consequence, what had formerly been an act of disobedience on the part of a Ṣūfī against the orders of his spiritual director now became an act of treason against the king or a crime against the state, and as such, punishable by death. The term *ṣūfīgarī*, 'proper conduct for a Ṣūfī", was extended to mean, "conduct becoming to a *khiṭṭ-bāḳ* officer', the converse, *nā-ṣūfīgarī*, came to mean "failure to obey orders, rebellious or treasonable conduct". As late as 1023/1614-15, for instance, when Shāh 'Abbās put to death some *khiṭṭ-bāḳ* who had defected to the Ottomans, the charge was *nā-ṣūfīgarī* (Savory, *The office of khalīfat al-khulafā under the Safawids*, in *JAOS*, lxxiv (1965), 502). A passage in the *Ta'rīkh-i 'Ālam-ārā-yi 'Abbāsī*, Tehrān 1334/1955, i, 68, where an officer is described as *mard-i ṣūfī wa pādishāh-dūstkhwāh*, makes it clear that being a Ṣūfī and a *khiṭṭ-bāḳ* was considered to be tantamount to being loyal to the shāh and the régime.

When the Ṣafawid state was established in 907/1501, the *khiṭṭ-bāḳ* constituted the military aristocracy. Since they had been largely responsible for bringing the Ṣafawids to power, they considered it only right and proper that they should both fill the principal offices of state in the central administration and also hold the most important provincial governorships. The use of such terms to describe the Ṣafawid empire as *kishwar-i khiṭṭ-bāḳ* ("the *khiṭṭ-bāḳ* realm") (*Ta'rīkh-i 'Ālam-ārā-yi 'Abbāsī*, i, 206); *dawlat-i khiṭṭ-bāḳ* ("the *khiṭṭ-bāḳ* state") (*ibid.*, i, 152), and *mamlikat-i khiṭṭ-bāḳ* ("the *khiṭṭ-bāḳ* kingdom") (*ibid.*, i, 563), makes it clear that, in the view of the *khiṭṭ-bāḳ*, the Tādjīks or Persian elements did not count for much in the new order of things. Similarly, the shāh is commonly referred to as *pādishāh-i khiṭṭ-bāḳ*, again a term which appears to ignore the existence of the Tādjīks altogether.

Initially, the two principal offices of the central administration, that of the *wakīl* and that of the *amīr al umarā'i*, were both held by the same *khiṭṭ-bāḳ* officer. Under Tahmāsp I (*q.v.*), the office of *amīr al umarā'* declined in importance, and was superseded by the office of *ḳurčī-bāshī* [see QURČĪ], which was also a *khiṭṭ-bāḳ* prerogative. The government of the provinces of the Ṣafawid empire during the early period was allotted almost exclusively to *khiṭṭ-bāḳ amīrs*, who ruled as petty princes in their provinces. The provincial governors had courts which were replicas of the royal court, and the system of provincial administration in many respects resembled that of the central administration. These provincial governorships were assigned to the *khiṭṭ-bāḳ amīrs* as fiefs known as *tuyūl* (*q.v.*). The governors, in return for the obligation to provide the king with a stated number of fully-equipped troops when required, were allowed to consume locally the greater part of the revenues collected in the provinces under their jurisdiction, such provinces were known as *mamālik* or "state" provinces.

After the conquest of Khurāsān in 916/1510, Shāh Ismā'īl made Harāt the second city of the Ṣafawid empire, and it became the seat of one of the Ṣafawid princes and frequently of the heir-apparent. The royal prince was placed in charge of the *khiṭṭ-bāḳ* governor-general of Khurāsān who, in his capacity as *lala* or *atābeg* ("guardian") of the prince, was responsible for the moral and physical welfare of his ward. It was his duty to see that the prince was trained in archery, horsemanship and the like, and also to see that he received his apprenticeship in statecraft.

Since the *khiṭṭ-bāḳ* were "an party to the national Persian tradition" (Minorsky, *op. cit.*, 188), their assumption that the principal offices of state would automatically fall to their lot led to immediate friction with the Persian elements in the administration. The Persians, or 'Tādjīks" as the *khiṭṭ-bāḳ* contemptuously called them, were the "men of the pen' who had traditionally filled the ranks of the bureaucracy in Irān and had provided administrative continuity under a succession of foreign rulers, Arabs, Turks, Mongols, Tatars and Turcomans. In the Persian view, the *khiṭṭ-bāḳ* were "men of the sword", and were not expected to have any knowledge of statecraft. On the other hand, in the *khiṭṭ-bāḳ* view, 'Tādjīks" were fit only "to look after the accounts and *diwāns* business. They had no right ... either to maintain private bodyguards or to command troops in the field. If *khiṭṭ-bāḳ* were asked to serve under a Persian officer, they consider it a dishonour" (Savory, *The qizilbāsh, education and the arts*, in *Turcica*, vi (1975), 169). Ismā'īl I attempted to maintain a balance between these two forces by appointing Persians to the all important office of *wakīl*, but this merely aggravated the tension between them, and the *khiṭṭ-bāḳ* brought about the death of three of the five Persians appointed to that office under Ismā'īl I (see Savory, *The significance of the political murder of Mīrzā Salmān*, in *Islamic Studies, Journ. of the Central Institute of Islamic Research, Karachi*, iii (1964), 281-91).

When Shāh Tahmāsp succeeded his father in 930/1524, at the age of ten and a half, the *khiṭṭ-bāḳ* took advantage of his youth to assume control of the

state. Their mystical belief in the quasi-divine nature of Ismāʿīl I as their *murshid-i kāmil* had been shattered by the latter's disastrous defeat at Čāldirān [*q.v.*], and they now reverted to their primary loyalty to their tribe. This led to almost a decade of civil war as the great *khāl-khāl oymaḳlar* fought for political supremacy, and between 932/1526 and 940/1533 effective individual *khāl-khāl* tribes *or* coalitions of tribes ruled the state. In 937/1530-1 the Takkalūs attempted to seize the person of the shāh, but the other great *oymaḳlar* rallied to his defence and, in the ensuing fighting, large numbers of Takkalūs were killed. The survivors fled to ʿIrāḳ-i ʿArab, some of them subsequently entered Ottoman service, and one of their chiefs, the renegade Ulama (Ulāma), was involved in the rebellion of Aḳ-Aṣ Mīrzā (*q.v.*) These events virtually ended the political influence of the Takkalū *oymaḳ*.

In 940/1533 Shāh Ṭahmāsp managed to reassert the authority of the crown, and for some forty years remained in control of affairs, but in 982/1574 when he fell ill, there was immediately a recrudescence of dissension among the *khāl-khāl*. The political situation, however, was very different from the situation obtaining in 932/1526, at the outbreak of the civil war between the *khālkhāl* tribes. The new factor was the introduction of a "third force" to the political scene in the form of Armenians, Georgians and Circassians who became *ghulāmān-i khāṣṣa-yi sharīfa*, "slaves of the royal household". These men, many of whom had been taken prisoner in Ṭahmāsp's campaigns in Georgia between 947/1540-1 and 961/1553-4, or were the offspring of woman brought to Iran at that time, adopted Islām, and were given special training to fit them for service either in some branch of the administration of the royal household, or in one of the newly-constituted *ghulām* regiments. The *ghulāms*, instead of being paid on a quasi-feudal basis like the *khāl-khāl*, were paid direct from the royal treasury, and their primary loyalty was therefore to the shāh and not to any tribal unit. When therefore there was a fresh outbreak of factionalism in 982/1574, "it was no longer a struggle to determine which tribe could outstrip its rivals in a state in which the *Ḳizilbāsh* tribes as a whole enjoyed a dominant and privileged position, but whether the *Ḳizilbāsh* tribes as a whole could maintain their privileged position against the threat from the new elements to Persian society, the Georgians and Circassians" (Savory, *Safavid Persia*, in *Cambridge History of Islam*, i, 407 f). This struggle was not resolved during the remainder of Ṭahmāsp's lifetime, or under his successors Ismāʿīl II and Sulṭān Muḥammad Shāh [*qq.v.*].

When ʿAbbās I [*q.v.*] was placed on the throne in 996/1588 by the powerful *khāl-khāl amīr* Murshid Ḳulī Khān Ustādjlū, he realised that not only his personal future but the continued survival of the Ṣafawid state depended on his being able to establish his authority over the *khāl-khāl* as rapidly as possible. The Ottomans, taking advantage of *khāl-khāl* factionalism, had made large inroads into Persian territory in the west, as had also the Özbegs in the east. ʿAbbās's solution of curbing the power of the *khāl-khāl* and increasing that of the *ghulāms*, though successful in the short term, ultimately seriously weakened the military and political effectiveness of the Ṣafawid state. The *khāl-khāl* regarded the *ghulāms* with contempt, and dubbed them *ḳara-oghlu*, "sons of black slaves". The *ghulāms*, though some great commanders emerged from their ranks, did not have a fighting élan comparable to that of the *khāl-khāl*, the only troops in the Islamic world who had earned the grudging respect of the Ottoman Janissaries. Essentially heavy cavalry, the *khāl-khāl* carried a formidable arsenal of weapons—bow, lance, sword, dagger and battle-axe, in action, the *ṭāḳī* was replaced by a helmet with mail cheek-pieces (Minorsky, *op. cit.*, 32); as they charged, they set up a rhythmic chant of "Allāh! Allāh!" (*Taʾrīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, ii, 699). The basis of their fighting spirit, however, was their fierce tribal loyalty (*taʿaṣṣub-i oymāḳiyyat*, *taʿaṣṣub-i khāl-khāliyyat*). Shāh ʿAbbās I was well aware of this and, in pursuance of his policy of curtailing the power of the *khāl-khāl*, not only reduced the strength of the *khāl-khāl* regiments but also deliberately weakened the all-important attachment of the *khāl-khāl* soldier to his tribe. He did this in a variety of ways. he placed an officer in charge of a tribe who was not himself a member of that tribe, in certain cases, alleging that a particular tribe did not possess an officer worthy of holding the rank of *amīr*, he appointed a *ghulām* as *amīr* of the tribe, he transferred groups of men from one tribe to a district belonging to another tribe. The continuance of these policies by his successors ultimately undermined the military strength of the Ṣafawid empire.

In Afghānistān, there exists a substantial Shīʿī minority group of *khāl-khāl*, living mainly at Kābul and in the high valleys of Folādī in the eastern edge of the Hazāradjāt (*q.v.*). These people are the descendants of garrison troops left behind by Nādir Shāh [*q.v.*] in 1150/1738 during his Indian campaign. The *khāl-khāl* hold clerical posts in government offices, engage in trade or are craftsmen, in short, they constitute an important and politically-influential element in the population. Estimates of their total number vary from 60,000 to 200,000 (see H. W. Bellew, *The races of Afghanistan*, Calcutta 1880, 207, D. N. Wilber, *Afghanistan*, New Haven, Conn., 1962, 49-50, and V. Gregorian, *The emergence of modern Afghanistan*, Stanford 1969, index *s.v. Qizil Bash*).

As recently as 1945, the fact that the name *khāl-khāl* still had an emotive power in Āḏharbāydjān, the nerve-centre of the Ṣafawid organisation in earlier times, was demonstrated by the choice of this name for the regular troops recruited by the short lived autonomous republic of Āḏharbāydjān.

Bibliography : Given in the text. For a detailed description of the rites and ceremonies of the Anatolian *khāl-khāl*, see article *Kızılbaş*, in *IA*. For additional textual references, see G. Doerfer, *Turkische und Mongolische Elemente im Neupersischen*, iii, *Türkische Elemente im Neupersischen*, Wiesbaden 1967, 470-2.

(R. M. Savory)

KIZIL-ELMA (or **KIZIL-ALMA**), "Red Apple" is an expression which occurs in written sources from the 16th century onwards. It also occurs in Turkish oral traditions from Anatolia and Āḏharbāydjān as well as in modern Greek, Bulgarian and Rumanian folklore, current to this day. It refers to a legendary city which was to be the ultimate goal of Turko-Muslim conquests, and some versions explain the term from the resemblance between a red apple and the golden dome of a building—in this latter case it refers to a large church situated in the area in the Ottoman period Kızıl-Elma tended to be identified with the large cities associated with Christianity—Constantinople, Budapest, Vienna and Rome—which the armies of the *Pādishāh* were hoping

to conquer (see J. Deny, *Les pseudo-prophéties annonçant les Turcs au XVI^e siècle*, in *REI*, x/2 (1936), 201-20, E. Rossi, *La leggenda turco-bizantina del Pomo Rosso*, in *Actes du V^e Congrès international des études byzantines*, Rome 1936, 542-53).

Another tradition, which must have developed before the Ottoman one, identifies Kizil Alma with Dāghistān, beyond Demir-Kapu. It has been supposed that this legend originated from the ceremony for enthroning the Shamkhal of Dāghistān, in which the claimant to the throne is involved in throwing a "golden ball"; because of this ball, Dāghistān was called "The land of Kizil-Alma" (see Fahreddin Çelik, *Kızıl-Almanın yerleri*, in *Cumhuriyet*, Jan. and March 1942, Bamsçek Ermeğin, *Kızıl elma efsanesinden hareketle Kızıl-Alma*, in *Türk folklor araştırmaları*, No. 181, Aug. 1964) The idea of Kizil Alma being situated in Dāghistān in the furthest point of Muslim expansion has persisted in the oral tradition of Eastern Anatolia among the residents of Kars, Ardahan, Kağızman and both parts of Ādharbāydjān. The legendary place is mentioned in the 18th century by two poets from the fringes of the Caucasus. The one, 'Āshik Şafi, speaks of it in a song composed to celebrate an expedition of Nādir Shāh (1736-47) against the Russians in Dāghistān (see F Çelik, *op. cit.*) But drawing on information given by a certain Bahrām of Damascus in his geographical work which was translated from Latin (Nūr i 'Othmāniyya Library, ms. 2936), Çelik suggests that the country of the Khazars was called Kizil-Alma since the 4th/10th century

A popular legend, which probably rose in the oral tradition of the Janissaries, has survived in written recensions. One version is dated 13 Sha'bān 1084/23 November 1673 and is found in the National Library at Ankara ("cönk" collection, No. 72). A second, dated 15 Djumādā II 1179/29 November 1765 is in a collection of folk narratives from manuscripts brought together by P N Borotav. The narrative is written in the form of a letter and it combines the motif of ' Kizil-Alma, the ultimate goal of the Ottoman conquests" with that of a Christian king who, having been vanquished and wounded by 'Alī b. Abī Tālib, was plunged into a deep sleep, and is waiting for a favourable day to revive and to take his revenge on the Muslims. In the version of the legend, an attempt can be seen at an identification and a localisation, which has ended in contradiction and anachronism. The Christian king is called Kum Papa "The Pope of Rome", so Kizil Alma is thus being identified with Rome But the narrative also locates the same legendary place at Bec (Vienna), and links this legend with the account of the Ottoman raid carried out during the reign of Süleymān II in 1532 by the historical person Kāsim Voyvoda (see P. N. Borotav, in *Annuaire de l'École Pratique des Hautes Études*, IV^e section, 1966-7, 163 4) The motif of the resurrection of a king is certainly Christian and probably Byzantine It is linked with the cycle of pseudo-prophecies at the end of the period of Turkish domination (Deny, *op. cit.*), but later on it must have been integrated into Turkish tradition.

Oral versions of this narrative are still being told today. The present writer has recorded five versions in Turkish folklore (1) Isparitah Hakkı, *Köyümden geliyorum*, Ankara 1971, 34-5 (the material in this book dates from 1916), (2) H I. Erginci, in *Gedik*, No 33 (1944)—cf. P N Borotav, in *Journal de la Société des Africanistes*, xxviii (1956), 16; (3) Kurt Bittel, *Legenden vom Keshenes-Dağ* (*Kapadokien*), in *Oriens*, xiii-xiv (1960), 33, (4) a version noted by Borotav in the villages of Han Köy and Ak-Dere (Afyon province) in 1950, and (5) a version noted by Oğuz Tansel in the village of Meyre (near Bozkır, Konya province). The two last versions are part of Borotav's own manuscript collection and are unpublished. A Greek version from Asia Minor has also been recorded, it comes from a village in the region of Ephesus (see Dido Sotiriou, *D'un jardin d'Anatolie*, a novel translated from Modern Greek Paris 1963, 22) For an Arabic version, see Yakoub Artin Pacha, *Sous haddenta, contes populaires recueillis au Caire*, Cairo 1903, 11-12

Bibliography: A full bibliography is provided by J. Deny and E. Rossi in their articles. Apart from works cited in the article, see for the motif of the Kizil Elma Elmas Yılmaz, *Kızıl-Elma efsanesi* in *Türk folklor araştırmaları*, No 146, Sept 1962 (P. N. Borotav)

KİZİL-IRMĀK (T. "Red River"), the ancient Halys ("Ἅλυς or Alys ("Αλυς), the largest river in Asia Minor. It rises in the mountains which separate the *wilāyet* of Sīwās from that of Erzerūm, waters the towns of Zarra (4,930 feet high) and Sīwās (4,1 in feet high), then enters the province of Ankara where it meets the mountain of Ardīsh and the Kodja Dāgh range which force it to make an immense detour of over 160 miles. Its course is at first southeast, then it turns northwards, and finally it reaches the Black Sea below Bāfra in the middle of marshes. It is nearly 600 miles long Its waters, of a dark yellow colour when they are in flood, diminish enormously in the summer, its bed is wide and its banks high Its principal right bank tributaries are the Kīlīč-şūyu and the Delidje Çay; those on the left are the Şārīmşāk-Çay which flows by Kaysarīyye, the Dewrek-Çay from Tosya, the Gök-Irmāk which comes from the Ilgāz-Dāgh (the ancient Olgassys) and waters the town of Kastamūnu (*q.v.*). According to Strabo (xii, 561), the river Halys ('Αλυς) took its name from the mines of rocksalt, the product of which was exported in the form of large blocks; these mines thirty miles to the north of Yōzgħād (Yozgat) near the village of Şārī-Kāmīsh, are worked among the red sandstone, covered with clay and marl of a reddish colour; this soil washed down by the heavy rains gives the river a reddish colour, whence its name

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotus (i, 72) makes it a frontier between Lydia and Media It seems to have been known to the Arabs by its ancient name, if it is this river that is referred to by the name *Alus* in a verse of Abu 'l-'Alā' al-Ma'arrī (S de Sacy, *Chrestomathie arabe*[2], iii, text, 45, tr. 109, gives by mistake "Aloue", an error reproduced by Defrémery, *Mémoires d'histoire orientale*, ii, 221).

(Cl. Huart*)

KİZİL-KUM (T. "Red sand"), a desert between the Sīr-Daryā and Āmū-Daryā rivers (*qq.v.*, and also KARA-KUM), falling within the modern Uzbekistan and Kazakhstan SSRs The country is less uniform, especially in the central part, than or the Kara-Kum; the sand desert is crossed by several ranges of hills, and in some places is rocky. The Kizil-

Kum becomes more and more inhospitable as one goes southwards. The region called Adam-Kirlighan ("where man perishes") between the Āmū Daryā and the cultivated region of Bukhārā, consisting of sandhills (*barkhān*), is considered especially uninviting and dangerous. In summer, there is absolutely no life in the desert, in the winter, there is vegetation, such as the *saksaul* shrub, and a few springs and wells are visited by Kazakh nomads. Schuyler noted that "Kirghiz" (sc. Kazakh) nomads crossed into the Kizil Kum from north of the Sir Daryā on the river ice and returned in the spring when there were still ice floes in the river. Moreover, the mediaeval Islamic sources show that the winter, when the desert was carpeted with snow, was normally the time for military and other movements across the Kizil-Kum. Thus the Ghaznawid historian Bayhaḳī noted that it was the absence of snow which prevented the Oghuz ruler of Djand, Shāh Malik, from restraining the rebel in Khwārazm Hārūn and his Saldjūḳ allies from invading Khurāsān in spring 426/1035 (*Ta'rīkh-i Mas'ūdī*, ed. Ghanī and Fayyāḍ, 683-4), and in the 6th/12th century the raids of the Khwārazm Shāhs to Djand and against the Ḳipčaḳ were always made in winter [see KHĀNS in Suppl.]. At the south-eastern extremity of the Kizil-Kum lay the Kaṭwān Steppe, to the north of the Samarkand Khudjand road, where in 356/1142 Sultan Sandjar was defeated by the Kara Khiṭāy [*q.v.*]. In recent times, the desert sands have encroached on the cultivated fringes, and in the later 19th century several villages on the lower course of the Zarafshān river became buried in the sands.

(W. Barthold - C. E. Bosworth)

KIZIL-ÜZEN (in Āzarī Turkish "Red River"), the ancient Amardus, a river which flows through Ādharbāydjān and enters the Caspian Sea forty miles east of Sefīd Rūd, "White River", at its junction with the river Shāh Rūd at Mendjil. Its source lies in the province of Ardabīl, and it begins by crossing 'Irāḳ 'Adjamī to the north, its right bank tributary is the Zandjān, on the left it receives the Kurz gōl at Miyāne, then it runs along the southern slopes of Elburz, describing a great arc 125 miles long and crosses this range through the defile of Rūdbār and the narrow valley of Rustamābād, a kind of coulour through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs as Nahr al-Abyaḍ "White River" (tr. of the Persian *Sefīd Rūd*) (cf. Dimashḳī, *Cosmographia*, tr. Mehren, 145), at one time the Turks called it the Hūlān (Hādidjī Khalīfa, *Djihān numā*, 304).

KIZIMKAZI, in full, KIZIMKAZI-DIMBANI, a small hamlet in south-west Zanzibar situated in lat. 6° 26' S, which possesses the earliest datable mosque in East Africa. Its *miḥrāb* has a dedicatory Kūfic inscription recording its foundation by Shaykh Abū 'Imrān Mūsā al-Ḥasan Muḥammad in 500/1106-7. This is flanked by Kur'ānic verses and two inscriptions in roundels, all of great elegance. The nearest analogy is with a grave cover found at Sīrāf; the *ensemble* was either imported from there or executed in Zanzibar by a Sīrāfī mason. This Persian connection accords with traditions of trading relations attested by inscriptions in Somalia and by the Kilwa histories. Otherwise, the mosque is an undistinguished rectangular structure. H. N. Chittick excavated it and the adjacent site in 1960. The latter settlement dates from the 11th century or earlier: a ruined stone house and defensive enclosures are probably 18th century, when, as is commemorated by another inscription dated 1184/1772-3, the mosque and *miḥrāb* were largely rebuilt, the earlier inscriptions being incorporated into the fresh structure. An oral tradition claims that it was the capital of Bakari, a 17th century Swahili ruler of southern Zanzibar, but this seemingly contradicts the archaeological evidence, the fortified residence and the rebuilding of the mosque are more congruent with the 18th century development of the western African slave trade.

KIZKĀHĀN [see KILĀT]

KIZLAR AGHASĪ [see AGHA].

KOČ HIṢĀR, a name of several towns and villages in Asia Minor, derived from Koča-Hiṣār, compare such names as Koč Hiṣārī, Koyun Hiṣārī, Koyu Hiṣārī, Keči Hiṣārī and Toḳlu Hiṣārī. Confusion is often prevented by the addition of the name of the nearby provincial capital or of another word, e.g. Čankīrī Koč-Hiṣārī, Sherḥī Koč Hiṣār. For the same reason, the toponyms of places with this name have been changed in recent times.

1. SHEREFLI KOČ HIṢĀRĪ (in modern usage *Şerefli Koçhisar*, centre of an *sīgh* (previously *ḳaḍā'*) formerly called Ereğlī, in central Anatolia nowadays within the *wilāyet* of Ankara (formerly of Konya), 8 km east of the northeastern shores of the Tuz Gölü [*q.v.*]. The town is situated on the road connecting Ankara with Adana via Aksaray, nowadays a major line of communication. The countryside around it is watered by a mountain stream and yields a varied agricultural produce, there is also sheep-raising. Since ancient times salt has been produced at Kaldırım on the lake. In 1930 Şerefli-Koçhisar town had a population of 4,458 and the

ilçe (then called a *kaza*) one of 46,300, the latter including within its boundaries 97 villages.

Bibliography: B Darkot art. s.v. in *IA*, F. Taeschner, *Das anatolische Wegennetz*, Leipzig 1924-6, i, Table 8ª; *Ankara il yıllığı*, Ankara 1967; İ. M. Konyalı, *Şereflikoçhisar tarihi*, 1972.

II Çankırı Koç Hişârî, in modern usage Çankırı Koç Hisar, since ca. 1923 centre of an *ilçe* (*kaḍâ*ª) in the *il* (*wilâyat*) of Çankırı (Çankırî [*q.v.*], Kiǰnghri before 1925) in central Anatolia, nowadays called Ilgaz. In the 13th century it was a *nâḥiya* in the *sanǰaḳ* of Kiǰnghri, in the *wilâyet* of Anadolu, and since 1864 in that of Kastamonu. Situated in the valley of the River Devres (= Devrek) on the southern slopes of the Ilgaz Mountains at an altitude of 903m. the town is an agricultural market centre, lying near the crossroads of the routes from Ankara to Kastamonu via Çankırı and of that from Istanbul via Bolu and Tosya to Erzurum and the east. Islamisation came after the conquest by the Dânişmend *amîrs* in ca. 468/1075. Afterwards the region became part of the dominions of the Isfendiyâroghlu [*q.v.*] as Djandârid dynasty of Kastamonu (Kaştamûnî [*q.v.*]). The Ottoman Sultan Bâyezîd I took it in 793/1393. After the invasion and restoration of the amirates in Anatolia by Timûr (after 804/1402), Koç Hişâr definitively became Ottoman territory in 855/1451. It then became an important halting-stage in the Ottoman network of routes of the so-called "left wing" (*sol kol*) of Anatolia. In 1950 the town of Ilgaz itself had a population of 1,783, and the *ilçe* (then called a *kaza*) one of 24,800, the latter including in its boundaries 76 villages.

Bibliography: [R. Bertram†] *Osmanlı imparatorluğunda kellar ulak ve jane memurları*, Ankara 1966, ix. 25, 32 and map; *Çankırı il yıllığı 1967*, Ankara 1967; R. Taeschner, *Wegennetz*, i, 26, 138, table 26, O Yalçın, *Çankırı*, Istanbul 1963; V Yücel, *Kastamonu'nun ilk fethine kadar Osmanlı Candar mücadeleleri*, in *Tarih Araştırmaları Dergisi* (1963), i.

III Koçhişâr (Sivas) nowadays Hafik, centre of an *ilçe* in the province of Sivas situated on the old main road and caravan route from Sivas to Erzindjan [*q.vv.*] and the East 37 km. NE of Sivas on the right bank of the Kızıl Irmak at an altitude of 1340 m. The population of the town in 1970 numbered 3,256 Nearby is Lake Todurgha (Tödürge, new Kaz Gölü or Demiryurt Gölü) Koçhişâr is identical with Hâfik Kal'esi (Hâwik), a stronghold of some importance during the amirate of Sivas of Kâḍî Burhân al-Dîn [*q.v.*]. In the 13th century the town had a mixed Armenian and Turkish population.

Bibliography. V. Cumet, *La Turquie d'Asie*, Paris 1892, i, 695, B. Darkot, art *Sivas* in *IA*, with list of older sources, H. W. Duda, ed. and tr., *Des Seltschukhongeschichte des Ibn Bibî*, Copenhagen 1959, 248 and n.b ; F. Taeschner, *Wegennetz*, ii, 2 f., 11 n. 2, 3, table 32, Y. Yücel, *Kadı Burhaneddin Ahmed ve devleti (1344-1398)*, Ankara 1970, 32 f., 45 f , 52, 73.

IV Koçhişâr (Mardin) nowadays called Kızıltepe, the centre of an *ilçe* of the province of Mardin in southeastern Turkey (*Diyâr-bakr*) on the Zerkan Sayı, a tributary of the Khâbûr, to the south-east of the city of Mardin [*q.v.*] Its population numbered 16,376 in 1970 In early Islamic times this, Koçhişâr was called Dunaysir (Dunayṣar) [*q.v.*]. During the rule of the Artukids [*q.v.*], the town was an important caravan centre, and a medical school existed here. The present ruins of the Ulu Djâmi' are a monument of that period (ca. 621/1204 f.). At the time of Sultan Selîm I's campaigns against the Şafawids, an Ottoman army commanded by Bîyîklî Mehmed Pasha, *beglerbegi* of Diyâr Bakr, defeated a Persian force under Karakhân Ustâdjalû near the town in 922/1516. Afterwards the whole region came under Ottoman rule, with Mârdîn as a *sanǰaḳ* (*livâ*) of the new *eyâlet* (*beglerbeglik*) of Diyâr Bakr [*q.v.*]. Koçhişâr was a part of the *kaḍâ*ª of Mârdîn in 924/1518 and remained a subdivision of that district, being a *nâḥiye* of the *sanǰaḳ* of Mârdîn during the 19th and 20th centuries and a *kaḍâ*ª of the *wilâyet* of Mârdîn since the Republic was founded.

In 1766 the well known traveller Carsten Niebuhr visited Koçhişâr (" Kodsje hissar" in Arabic "Ḳunâṣar" or "Ḍunâṣar"), finding five minarets still standing (cf. *Reise naar Arabie*, Amsterdam-Utrecht 1776-80, ii, 366-7).

KOČI BEG, also called Gömbüzlü Konia Muṣṭafâ Beg, Ottoman writer of treatises on statecraft.

Koči Beg was a native of Górdiçe (Gorča, Korytza) in Macedonia. He entered the Palace service as a *dewshirme* [*q.v.*] during the reign of Ahmed I and served under successive sultans until his retirement to his native place in the early years of Mehemmed IV's reign. He seems never to have served in any capacity outside the Palace He gained the especial confidence of Murâd IV and Ibrâhîm, and it is for his memoranda to these sultans that he is famous He was also taken by the historian Na'îmâ [*q.v.*] (for a full biographical account see M Çağatay Uluçay, *IA* art *Koçi Beg*).

Koči Beg's best known work is his *Risâle*, presented to Murâd IV in 1040/1630, where he analyses the causes of Ottoman decline and suggests remedies. There are several printed editions of the work Ahmed Vefîk Pasha (ed.), *Koçi beg risâlesi*, London 1279/1862-3, Istanbul 1303/1885-6, A. K. Aksüt, *Koçi bey risalesi* (in Latin script), Istanbul 1939, German translation by W F. A Behrnbauer, in *ZDMG*, xv (1861), 272 ff., with comments by Fleischer in *ZDMG*, xvi (1862), 271. The work is summarised in J. von Hammer, *GOR*, v, 291. A second *risâle* attributed to Koči Beg was apparently compiled from memoranda submitted to Sultan Ibrâhîm on that Sultan's order. There is no critical edition of the work. The first published version is an incomplete but fairly full

German translation by Behrnhauer, entitled *Das Nasihatnâme*, in *ZDMG*, xviii (1864), 699 ff., based on manuscripts now in the Nationalbibliothek, Vienna (Mix. 477 *A. F.* 188, Hist. Osman 150). The translator states that the author is anonymous. The second published edition is in A. K. Aksüt, *op. cit.*, 78 ff. (in Latin script), based on a manuscript in Millet Library, Istanbul, no. 474. In a third published edition, based on a manuscript in Nuruosmaniye Library, no. 4950, the editor attributes the *risâle* to the Grand Vizier Kemânkeş-h Kara Muṣṭafà Paşha (F. R. Ünat, *Sadrazam Kemankeş Mustafa Paşa lâihası*, in *TV*, ii, no. 6, 443 ff.). There are divergences between the published versions and between these and other existing mss. (for details and discussion, see M. Çağatay Uluçay, *Koçi Bey'in Sultan İbrahim'e takdim ettiği risale ve arzları*, in *Z. V. Togan'a armağan*, Istanbul 1950-5, 177 ff.).

The contents of Koči Beg's *risâle* presented to Murâd IV resemble those of an earlier analysis of Ottoman decline, the anonymous *Kitâb-i müstetâb*, (ed. Yaşar Yüce!, Ankara 1974) and are entirely conservative in outlook. The spread of corruption, he argued, had brought about a decline in the old institutions and bred disrespect for the *sharî'a* and old laws (*ḳânûn* [*q.v.*]). Remove corruption, restore respect for the *sharî'a* and *ḳânûn*, and the Empire would return to its former glory. In the old days before the reign of Süleymân I, the sultan had attended the *Dîwân* personally. Süleymân had abandoned this practice. Before the year 982/1574-5 the Grand Vizier had been independent, with no intermediary between him and the sultan. The sultan's favourites (*müḥemmâ*) had never interfered in affairs of state. Bribery was unknown and *beys* were never unjustly dismissed. There was strict control over the emoluments of Palace officials and they never received lands whose rightful use was as *timars* or *zi'âmets* (*q.v.*).

After 982/1574-5 Palace officials and Sultan's favourites were able to engineer the dismissal of Grand Viziers, *beglerbegs* and *sanḏjaḳ beys* and acquire lands rightfully allocated as timariots, as freeholdings (*temlîk*) or *tîmâr*-holdings (*paşhmaḳlîḳ*, *arpalîḳ*). As a result, the state lost its warriorist officers and no longer had the timariots available for war. A similar decline occurred in the *'ilmiyye* hierarchy. After 1003/1594-5 *sheyḫülislâms*, *ḳâḍî 'askers* and *ḳâḍîs* [*qq.v.*] frequently suffered wrongful dismissal. *Müderrisats* and *ḳâḍî*-ships were offered for sale, allowing ignorant men to enter the profession. Promotion, too, had come to depend on age, rather than ability. In the old days, the *'ulemâ'* had been upright men. Because they had feared God, the people had feared them, and the integrity of the *sharî'a* had been preserved.

The *timar* system had undertaken the Empire's former military strength. In 992/1584-5, however, Özdemir oghli 'Oṯmân Paşha had allocated *timars* to deserving *re'âyâ*. After him, the principle was extended, and unworthy *re'âyâ* and Palace nominees had received *timars*. These made bad and rebellious troops. Few bothered to present themselves for campaigns. Many had contradictory *berâts* (*q.v.*), giving rise to disputes and a decline in the respect due to the sultan's decrees. Finally, the abolition of the *yürüks* and *müsellems*, who had acted as a pioneer corps on campaigns, meant that the timariots, the picked troops of Islam, now had to perform menial tasks. The Janissaries and other *ḳapîḳulu* corps (see ODAU) had also become corrupt. It was again Özdemir-oghli 'Oṯmân Paşha who, in 992/1584, had admitted suitable non-*kuls* into these corps, and after 1003/1594-5 this had become a flood. The *devshirme* system broke down; tradesmen and others secured posts lawfully due only to *kuls*, and admitted their relatives to the corps. The number of so-called *kuls* increased enormously, many of them returning early without performing their military or other duties, and consequently they became a heavy burden on the treasury. Previously, they had resided only at Istanbul, Edirne and intermediate villages. They now resided throughout the empire, often exercising dictatorial powers in a region.

The swollen number of *kuls*, together with a decline in *ḫâṣṣ-i hümâyûn* lands [see KHĀṢṢA], which had either passed to enemies or else been allocated as *paşhmaḳlîḳ*, *waḳf* to vizier's *ḫâṣṣ*, meant a vastly increased burden of taxation on the *re'âyâ*. The sale of tax-collecting rights exacerbated the situation. Excessive taxation had impoverished the *re'âyâ* and this, in turn, led to insufficient treasury revenue. This led to military weakness which undermined the authority of the sultan. The result was internal dissension and military defeat.

Koči Beg's remedy for the decline was as conservative as his analysis of its causes: a return to the imagined perfections of the era before Süleymân I. Bribery should be removed by restoring the independence of the Grand Vizier and centralising the influence of Palace favourites in affairs of state; by keeping *beys* in their posts without fear of unjust dismissal; by dismissing ignorant *'ulemâ'* and replacing them with learned men; by distributing *timars* only to men worthy to receive them, and ceasing the practice of distributing *timar*-lands as *paşhmaḳlîḳ*, *waḳf* or other form of tenure. Only *beglerbegs* should appoint timariots. They should make a roll-call (*yoḳlama*) of present incumbents in their provinces (*eyâlet*), renewing the *berâts* of qualified timariots and removing the unqualified. Çavuş with high pay should receive *ze'âmets*, thus creating a warrior's *timâr* (*ḫâṣṣ*) and removing a burden from the treasury. Able-bodied timariots should serve on campaigns with the number of retainers (*ḏjebelü*) which the old *ḳânûns* specify. This would produce 400,000 to 500,000 troops and provide a counterbalance to the influence of the *ḳapîḳulus*. Similarly, all innovations (*bid'at*) in the Janissary and other *ḳapîḳulu* corps which contravene the old *kânûns* should be abolished. There should be a graduation (*ṭîrâz*) from the Palace once in every seven years, and at these times the *ḳapîḳulu* corps should reserve only enough recruits to replace dead members. Officers (*ḏâbit*) of these corps should never be unjustly deposed.

Koči Beg's second *risâle* is a straightforward description of various state institutions and governmental practices, interspersed with political maxims. Its purpose was to guide the new and totally inexperienced sultan, Ibrâhîm, and its language, in accordance with that ruler's mental capacities, is extremely simple (see M. Tayyib Gökbilgin, *İA*, art. *İbrahim*, and IBRAHIM).

KODJA ELI, modern Turkish Kocaeli, a region between the Black Sea and the Sea of Marmara, covering a part of ancient Bithynia with its centre Izmid (*q.v.*) (ancient Nicomedia), and the name of a *sandjak* of the Ottoman empire. Nowadays it is the name of a province (*il*) of Turkey (population 585,406 in 1970), with Izmit as its capital. In 1954 the eastern part of the province Kocaeli was separated to form the Sakarya (Sakārya) province with its capital Adapazarı. Since this administrative reform, Kocaeli has comprised the *ilces* (formerly *kadā'ī*s) of (Izmit-) Merkez, Gebze, Kandıra, Gölcük (before 1936, Değirmendere) and Karamürsel. The province is traversed by the main route of communication between Istanbul and Ankara and the East, nowadays by the Anatolian railway (since 1873) and the motorway No 1/E5. Modern industries have been founded along the Gulf of Izmit (Izmit Körfezi) in the Republican period, complementing the already existing ones (*e.g.* the imperial Ottoman textile and carpet factory at Hereke). Thanks to the large forests prevailing in the region (in 1970 42.1 % of the area was still considered as forest land), the province became a centre for ship-building already in ancient times [cf. the mediaeval type of (rowing- and sailing) transport vessel, *Coromandi*, Turkish *Karamürsel*, called after the port of Karamürsel].

The Gulf of Izmit was a base area of the Ottoman navy from the 10th/16th century onwards. A dockyard and naval establishment existed at Izmit till World War I. Since 1926 Gölcük has been one of the main bases of the modern Turkish navy.

Kodja Eli was one of the earliest Ottoman *sandjak*s, formed during the reign of Orkhān in the years 1327-38. Its name is derived from that of one of the *ghāzī* leaders of the first two Ottoman rulers Akčakodja, who with Kara Mürsel and Konur Alp first raided this then Byzantine region, and was buried on Baba Tepe near Kandıra in 728/1327. During the Ottoman interregnum 1402-13 the Byzantines were able to regain their territory, but in 1419 Timūrtāshoghlu Umur Beg reconquered Kodja Eli definitively for the Ottoman Sultan. Before the end of the 10th/16th century, the *sandjak* became part of the *eyālet* of the *kapudān pasha* and its *sandjak beg*s a commander of a naval squadron. In 1867, within the framework of the new system of provincial administration, Kodja Eli was incorporated in the *wilāyet* of Khudāwendigār (*q.v.*). From 1888 till the end of the Ottoman period it became the independent *sandjak* (*mutasarrīflik*) of Izmid, with the 3 *kadā'ī*s of Adapazarı, Kandıra, Geyve, Karamursel and Izmid-Merkez. In ca. 1890, *V.* Cuinet (*La Turquie d'Asie*, Paris 1894, iv, 303 ff., 371) estimated the population of the *sandjak* at 223,000, of which 129,000 were Muslims, 49,000 Armenians, 41,000 Greeks and 2,500 Jews.

(A. H. de Groot)

KŌHĀT (P., "mountains"), a directly-administered District of what was the North West Frontier Province of British India and of Pakistan till 1955, covering some 2,694 sq. miles and with its administrative centre at the town of Kōhāt. The District is bounded by the Khyber Agency [see KHAYBAR Pass] on the north, by the Kurram and North Wāzīristān Agencies in the west, by the Bannū District [*q.v.*] on the south, and by the Indus River and the Īsā Khēl *tahsīl* of the Panjāb on the east.

The terrain of the District is that of a rugged tableland lying at an average of 2,000 ft., with low ranges of arid hills which rise to 3,000-4,000 ft., and with more fertile valley bottoms in which agriculture, sometimes by irrigation, is possible. The climate shows considerable variations in temperature and rainfall averages only 15 inches per annum. The region is connected with the Kābul River valley and the Khyber region by the Kōhāt Pass, called locally the *Darra* (2,856 ft.), whose control was in British times much disputed by the local Afrīdī tribesmen, the area round the Pass, a strip of an administered territory, has for long been the site of a flourishing Afrīdī gun-making factory. An important commodity of the Teri village neighbourhood of Kōhāt has always been rock salt, of which there are extensive deposits at Bahādur Khēl, until recent years, these were owned by the *Nawāb* or titular head of the Khaṭak tribes. The Government of India's increase of the tax on Kōhāt salt in 1896 to a level with that on cis-Indus salt was one of the pretexts for the tribal rising along the Frontier in 1897.

The population of the District is essentially Pathan, mainly of the Bangash in the eastern parts, the Khaṭak [*q.v.*] in the eastern tracts down to the Indus shores, the Orakzay and Ādizm Khēl Afrīdīs in the northern parts, and the Nīāzīs along the Indus in the south of the district, of these, the Bangash speak the northeastern or "hard" variety of Pashto, and the Khaṭak and Nīāzī the south-eastern or "soft" one [see AFGHĀN, iii. The Pashto language]

The Khaṭak seem to have moved into Kōhāt from the west in the 8th/14th century, whilst the Bangash entered the district in the following century as allies of the Khaṭak against the Orakzay. The Mughal adventurer Bābur [*q.v.*] made his first foray into India in 910/1505 down the Kābul River valley to Peshāwar, then into Kōhāt and Bannū and through the Deradjāt to the Indus, he scattered the local Pathans, and built towers of skulls of the slain in Kōhāt (*Bābur nāma* tr. A. S. Beveridge, 330-2). In 1039/1630 the Mughal Emperor Djahāngīr's general Mahābat Khān [*q.v.*] campaigned in Kōhāt against the Rāshaniyya sectaries [*q.v.*] amongst the local Pathans.

In the early 19th century, Peshāwar, Kōhāt, Bannū and the Deradjāt came under the control of the Sikh ruler of the Panjāb, Randjīt Singh, although Sikh authority was contested by the local tribes. The British envoy Mountstuart Elphinstone passed through Kōhāt in early 1809 on his way to the Durrānī court in Kābul, and waxed lyrical about the green valleys and the fruits of "Cohaut" (*An account of the kingdom of Caubul*", London 1842, i, 49 ff., ii, 50-1). After the downfall of the Sikh empire

and the annexation of the Panjāb in 1849, the British penetrated through the low Khaṭak hills and Kōhāt to the Kurram River valley at Thāl. The regions of Peshāwar, Kōhāt and Hazara were then briefly placed directly under the Board of Administration for the Panjāb in 1876 these three northern regions of the Frontier were formed into the Commissionership of Peshāwar. Then after the frontier tribal wars of the late 1890s and in the Viceroyalty of Lord Curzon, the North West Frontier Province was formed in 1901 as an administrative unit separate from the Panjāb, with Kōhāt as one of its four trans-Indus districts; Kōhāt District itself comprised the three *tahṣīls* of Kōhāt, Teri and Hangū. A road was made in 1901 connecting Peshāwar and Kōhāt via the Pass, and a narrow gauge railway was also begun to connect Khush hāligarh on the Indus with Kōhāt itself, Hangū and Thāl, thereby stimulating local trade with Tīrāh and Kābul. Kōhāt town had already become an important garrison centre from which control was exercised over the turbulent Pathan tribes, and Sir Louis Cavagnari, who for more than a decade had been Deputy Commissioner in Kōhāt, had built himself a fine official residence there.

During the inter war period, Kōhāt was, with Peshāwar, Bannū and other parts of the Frontier, the scene of disturbances caused by the political movement of the *Khāksārān* or "Redshirts" of ʿAbd al-Ghaffār Khān. The postpartition position has not been greatly altered since British days. The District continues to be divided into three *tahṣīls*, with the names Kōhāt, Hangū and Karak, Kōhāt town is an important military base for the Pakistan Army and there is also a military airfield. A plan for a barrage across the Toi River, the "Banda Tanda Dam", in order to harness flood waters, has long been mooted. The 1961 census enumerated a total population for the District, including the attached tribal areas in the north, of 627,795, a 45 % increase since 1951, with a population for Kōhāt town and cantonment of 75,000.

AL-KŌHĒN AL-ʿAṬṬĀR, Abū ʾl-Muḳā (Dāwūd) b. Abī Naṣr b. Hawāz al-Isrāʾīlī al-Harōnī, Jewish pharmacist who in 658/1260 wrote in Cairo "for himself and his son" a pharmacopoeia under the title (changing slightly in the manuscripts) *Minhāj al-dukkān wa-dustūr al-aʿyān fī tarkīb al-adwiya al-nāfiʿa li'l-abdān*, which became very widely spread. About his life almost nothing is known, and his relation to Abū Manṣūr Sulaymān b. Ḥassān al-Kōhēn, the author of a *munḳidhat* from which al-Kōhēn al-ʿAṭṭār quotes, is uncertain (see Steinschneider, *Die arabische Literatur der Juden*, 133 f.; H. Piessner, in *Orient*, xxiii-xxiv [1970-1], 454. The *Minhāj* has the following 25 chapters: 1. The duties of the pharmacist. 2. Drinks (*ca.* 1/6 of the whole work). 3. Concentrated fruit-syrups. 4. Preserved fruits. 5. Pastes. 6. Electuaries. 7. Powder. 8. Lozenges. 9. Remedies to be sucked. 10. Pills. 11. "Hallowed substances" (*syūrāǧāt*). 12. Eye-powder. 13. Eye salves. 14. Pomades. 15. Oils, etc. 16. Plaster. 17. Tooth-powder. 18. Suppositories. 19. Compresses, wettings sternutatories. 20. Substitutive drugs. 21. List of simple drugs. 22. Apothecaries' measures and weights. 23. Admonitions for a sensible way of living. 24. Professional instructions. 25. Test of the usefulness of the simple and the composite drugs. At the end, the author promises a monograph on generally-known simple drugs, which was probably not written.

Thus the work is a typical dispensatorium (*akrādhīn*, from Greek γραφιδιον via Syriac *graphidhīn*), in which, after the Galenic example, the composite drugs (*al-adwiya al-murakkaba*) are grouped according to classes (κατὰ γένη). In the present work, the simple drugs (*al-adwiya al-adwiya al-mufrada*), usually dealt with in separate works, have equally been treated from certain view points in chapters 21, 24 and 25. The recipes are partly of the author himself, but the majority come from sources mentioned by name. Most conspicuous among the latter are the *Durrat al-bīmāristāni* of Ibn Abī ʾl-Bayān [q.v.], teacher and somewhat older contemporary of al-Kōhēn al-ʿAṭṭār, and the *Irshād* of Ibn Ḳumayḥ al-Isrāʾīlī, another pupil of Ibn Abī ʾl-Bayān. In the introduction, al Kōhēn claims to be the first to compose an extended pharmacopoeia especially for chemists; the earlier ones, Ibn Abī ʾl-Bayān's book included, are said to have been written for physicians in the traditional manner. This specialisation has possibly been one of the reasons for the wide dissemination of the work, a second one apparently being the very conveniently arranged survey of the current measures and weights (ch. 22), which must have met a generally felt need. For no officially-regulated standard did not exist, and the units of measures, so countlessly varying, were overseen with more or less care by the *muḥtasib* only. A third reason for the popularity of the work may have been its useful indications for the chemist's profession (purchase, efficient storage, cleaning, protection of the drugs against blight etc., chapter 24). Finally, the abundant use of popular Arabo-Egyptian names of drugs made the work easily accessible to every user.

KONAKRY (usual orthography, Conakry), capital of the Republic of Guinea.

With its site fixed in the tables of latitudes of Ptolemy, Konakry has only been regularly inhabited since the second half of the 18th century. It is situated on the west coast of Africa in lat. 9° 31′ N and long 13° 49′ W., and occupies three distinct natural sites: part of the Kaloum peninsula, the island of Tumbo and the archipelago of Loos. Manga Dambo, chief of the Soso people, founded Kaporo there in 1780, after having subjugated the Baga and the Mandenyi. The Loos islands, originally occupied by the Portuguese (Los Idolhos), were occupied by Britain in 1848. After the "Mulatto War" of 1865-70, there were four villages, sc. Kaporo, Bulbinet, Tumbo and Camayenne, which were placed together at the time of the first French post's foundation, when the corvette "Goéland" passed there on 26 January 1887. On 1 August 1889, Conakry became the capital of the colony of the Rivières du Sud and Dependencies, and then in 1890 of French Guinea, of which Ballay was the first governor.

It became the departure-point for roads into the interior after 1895, and then for the Conakry Niger railway completed in 1914, and the town and its port enjoyed a rapid development facilitated by the filling-in of the Tumbo channel. Its vitality was shown by the increases of population: 13,000 in 1899, 78,000 in 1938 and 250,000 in 1975. The Loos islands were attached to it in 1904, and also the convict settlement of Fotoba, where the Wali of Gumbu, Tierno Aliou, leader of the revolt of the Houbbous, died in 1912.

It became a Communa Mixta in 1923, with full powers in 1933, and then on 2 October 1958 Conakry became the capital of the Republic of Guinea. It has 1,853 m. of docks, 12 hectares of platforms, a volume of traffic amounting to 2 1/2 million tonnes and an airport with a 3,500 m. runway. It is thus a lively industrial centre. Despite the ending to the mining of Kaleum's iron deposits in 1966 and the slackening of the exploitation of the bauxite of Kassa, it remains the main outlet of the Fria Company, and also possesses many factories, including for tobacco and matches, furniture, tanning, shoes, plastics, brewing, fruit juice, etc. Since 1963 Conakry has had the Gamal Abdel Nasser Polytechnic Institute, with seven faculties, including one for medicine, and it also has several Écoles Nationales (Arts and Crafts, Meteorology, etc.).

The majority of the population is Muslim (72 % in 1955). The conversion of the Baga and Susu was achieved at the beginning of the 19th century by the Yattara family, the Diulas. Christianity came with the Anglican mission at Fotoba in 1864, and the Catholic mission, which built the cathedral of St. Mary, in 1890. On 18 October 1897 Conakry became an Apostolic prefecture, on 18 April 1920 an Apostolic vicariate, and on 15 September 1955 an Archdiocese. The diocese contained 13,400 Roman Catholics in 1965, two-thirds of these in the capital. The strength of Islam is easily discernible from these figures. The main *fatiha* there remains that of the Kādiriyya, which resisted the penetration of the Tijāniyya in the 19th century under the double influence of the *almāmy* of Toube and of the Senegalese auxiliary troops of the French who adopted Muridism. These last built a mosque on the island of Tumbo, still called the Senegalese mosque.

Despite the efforts of Malinka scholars, Wahhābism has remained only embryonic. One should further note a certain persistent strain of animism among the Baga population, characterised till 1963 by the cult of the tree of Bassidole, on the isthmus of Tumbo, cut down then to allow the building of the People's Palace at the expense of the People's Republic of China.

KONO, corruption of *Kpon*, name of a place in the northern part of the Ivory Coast near to the watershed between the basins of the Comoé and that of the Nzi which flows into the Bandama. Kpon was founded in a very ancient period by the Senoufo of the Fataïala tribe who to this day have retained their predominant rights over the land, while playing now only an unobtrusive role.

Kong is an illustration of the advance of the Malinka towards the south and towards the regions producing gold and kola. This immigration took place in the period following the 18th century and these Dioula who supposedly came from Macina founded Bobo Dioulasso on their way. Having established themselves in Kong they were reinforced at the beginning of the 19th century by contingents of Sohoudji Malinka pagans, with whose help they were able to police the trade routes. There can be no doubt that it was at the end of the 18th century that a Malinka chief, Sekou Ouattara, whose family was linked with the inhabitants of Boron on the Bandama, united a group of Malinka families coming from the north. From Macina he passed through Dé near Bandiagara, Téwélé near Bobo Dioulasso, then Teninguera near Kong where he ousted a red-haired chieftain named Lassiré Gombélé, taking his place and establishing Islam. Lassiré Gombélé would no doubt have been a Mandé, ruling over the autochthonous Fataïala and the Paraïba (Koulango).

Sekou Ouattara established his twelve sons so firmly in the villages that when his brother Famaraha attempted to gain power the resistance offered by the sons forced him to leave and to settle in Bobo Dioulasso, opening a long series of quarrels between the two cities.

From the city of Kong the power of this Dioula aristocracy spread throughout the neighbouring country, largely as a result of the superiority of their cavalry. To assure themselves of a supply of remounts, they founded on the Banï the village of *So fara* (stallions).

While the children of Sekou Ouattara received various appanages, the sixth son, Sambakari, al-

tempted to conquer Lobi and spent several years fighting interminable campaigns against the Léla, the Tegueséé and the Dian. The authority of the Dioula over the land of Lobi seems to have been purely nominal

Among campaigns involving external powers, one was repulsed by the *Tondion* of Biton Koulouballi in 1725. Also, the Ashanti army which, according to Bowdich, had reached as far as Kong, was defeated there and its leader injured by a lance-blow at a place which is still pointed out in the vicinity of the town.

Abo (1720-46), the ruler of the Abron, was pursued by the Ashanti king Opokou Ouaré and took refuge in Kong, where the sovereign's mother handed him over to the Ashanti who put him to death

With its control over the gold and kola routes, the city of Kong took on greater and greater importance, and the authority of the sovereigns extended over the whole of the land from the Comoé to the Marahoué and, towards the Djimini in the south, where the Dioula had constructed terraced dwellings in the Sudanese style. Five mosques with twin pyramid shaped minarets dominated the quarters of the city

The military power of Kong depended on contingents of pagan soldiers. But commercial prosperity induced the more gifted elements to turn away from military pursuits, to such an extent that when the Pallaka pagans rebelled and closed their territory to caravan traffic, the punitive expeditions mounted by Kong came to nothing

Although Mungo Park had heard tell of Kong it was Binger who, on 20 February 1888, arrived in the town and stayed there until the 11th March In December of the same year, French-Laplène made the sovereign of that time, Karamoko Oulé Wattara, sign a treaty placing Kong under French protection This treaty was signed on 12 January 1889 in the presence of Binger, who had occasion to return to Kong in 1892.

Two years later, Kong was visited by Captain Marchand, *Kpaki Bo* (= "feller of the forest"), who had heard of the threats made by Samori against Kong It was then that Lt.-Colonel Monteil was recalled to the area, he had been preparing to attempt a regrouping of forces on the Upper Nile. Mustering at Grand Bassam in August 1894, the column encountered the utmost difficulties in making progress. Joining battle with the armies of Samori in March 1895, it was forced to retreat and on 15 May 1897, Samori razed the city to the ground and massacred those of the inhabitants who had not succeeded in escaping towards Bobo-Dioulasso Only the houses of the Falafala were spared.

In January 1898, a French detachment established a post there, which was soon laid under siege but was relieved by Commandant Caudrelier. With Samori captured, and peace re-established, the French administration invited the refugees to return. Some accepted, but the majority remained in Bobo Dioulasso. Kong was never to regain its former eminence. It was to remain a mere regional capital with some 3,000 inhabitants, and an important centre of Muslim proselytism.

KONYA (Arabic and Turkish orthography, Konya), known in antiquity as Iconium, an important town lying on the edge of the Anatolian plateau, on a diagonal line connecting the Dardanelles with the Taurus passes leading into Syria.

1. History.

Konya was, during the centuries of Arab invasion, a Byzantine military base which the attackers seem for this reason to have more or less deliberately avoided and circumvented, in preference either for Tarsus [see TARSUS] to the south or especially for Cappadocia by the northern routes; this would seem to explain the fact that the town is seldom mentioned in military histories It is probable, however, that Konya, like other towns had suffered previously in the Persian invasion, and that it occupied only a section of its former territory *It is difficult* to describe with certainty its history in a period for which no archaeological investigation has been performed, but the common and widespread use of older materials in the Saldjūk monuments would seem to indicate that many buildings were in ruins and the town only partially reconstructed. It reappears, however, in a better light at the time of the Turkish invasions of the 5th/11th century and at the time of the Crusaders who passed that away in 1097. The latter found no serviceable fortifications there, but were able to derive benefit from the gardens in the vicinity of the town

It was the Saldjūk régime which marked the zenith of the history of Konya The site, well irrigated in contrast to the neighbouring desert, commanded the southern route at a time when the Dānishmendids [*q.v.*] denied the Saldjūks access to the northern route to the Dardanelles, and it must have found favour with the new masters when they became aware of the need for a secure political and military base as a focus for their still semi-nomadic peoples. The real development of the town dates from the reign of Mas'ūd (512 30/1118-55), who resolving to make Konya a capital, built a mosque there and other monuments which his successors must have completed. It was already a city of note when in 1190 the German army raised in Cologne by Frederick Barbarossa passed through it. The progressive unification of Turkish Asia Minor under the rule of the Saldjūks evidently contributed to the prosperity of the capital Besides the principal mosque, from about 1190 onwards the city possessed a number of smaller ones, as well as *madrasas*, *khānkāhs* [*q.vv.*], flourishing markets and reconstructed ramparts The development of the power of the sultans in the first half of the 7th/13th century was also reflected in the town, where apparently social hierarchy was judged by the importance and height of houses rather than by the allocation of separate quarters to the various ethnic groups. In Konya there were evidently Greeks (with their monastery, reputedly dedicated to Plato), Armenians and some Jews, the records make few references to Turks, a term reserved in this context for the Turcomans of the plains, but rather speak of Muslims, a designation normally embracing both indigenous Turks, who in a town of this kind were largely Iranised, and Iranian immigrants, arriving especially in the period following the Khwārazmian and Mongol invasions, who, besides their involvement in craftsmanship, were sometimes promoted to the most important civil posts of the régime. Three social groups deserve special attention, the *akrāsh*, the *akhīs* and the

Sufis or dervishes. The *ʿayyār* were a kind of militia recruited among the half-breed sons of indigenous fathers converted to Islam and married to Turkish women; the *aḫīs* (*q.v.*) were a Turkish form of the Moslim *futuwwa* (*q.v.*), and were to play an important rôle especially in the period of the Mongols and their immediate successors, as for the Sufis, there were a number of different orders, but, from the middle of the 7th/13th century the prestige of Djalāl al-Dīn Rūmī must have drawn numerous disciples to him, although this was not an organised order (that of the Mevlevīs or Mawlawiyya, from Mevlānā/Mawlānā) until the 8th/14th century. Naturally, Konya also had a military garrison, composed to a large extent of slaves of Byzantine stock captured on the north-western marches of the kingdom. The sultans lived in the palaces which they had built in Konya and the surrounding area. The ramparts of the town had been extended and strengthened in the time of the great sultan ʿAlāʾ al-Dīn Kay Kubad (*q.v.*) with the compulsory co-operation of the senior *umarāʾ* of the region. The buildings erected in this period are studied below, but the abundance and importance of the mosques, *madrasas*, *khānkāhs*, hospitals, *khāns*/caravanserais, etc. testify to the considerable development of the Saldjūk capital, which the present day remains continue to evoke, in an original and compelling style.

The progressive establishment of the Mongol protectorate over Saldjūk Anatolia in the second half of the 7th/13th century was naturally pre-judicial to the importance of Konya, although in a slow and partial fashion. The rivalry between the brother sultans ʿIzz al-Dīn Kaykāʾūs and Rukn al-Dīn Kilidj Arslan represented in fact the struggle between the partisans of collaboration with the Mongols, the naturally dominant force in eastern Asia Minor beyond Kayseri, and the partisans of resistance, whose headquarters was at Konya and who relied to a large extent on the Turcomans of the southern and western frontiers. The decline of central authority was accompanied by a boost to the prestige of peripheral Turcoman principalities, in such a way that centres of political activity, etc. were transferred to new regions, to the detriment of Konya in particular. The episode which marked this evolution for the first time was the temporary occupation of Konya in 675-7/1277-8 by the Karamānids (*see* KARAMĀN-OGHULLARĪ) of the western Taurus, who installed there a bogus Saldjūk known by the name of Djimri. Their independent government survived however until 713/1313, but in that year it was definitively annexed, although the Karamānids did not lose their capital, henceforward to be situated at Laranda/Karaman (*see* LARANDA). The cultural and religious importance of the town and the relative importance of its population ensured, however, that it retained a certain vitality, as is attested by a number of buildings and pious foundations erected by Karamānid princes and dignitaries. Once occupied by Bāyezīd Yildirim, the town was definitively annexed to the Ottoman state, together with the remainder of the Karamānid state, in 880/1475, and Ottoman documentary archives give evidence that *awḳāf* and Saldjūk and Karamānid institutions were in general maintained there. Naturally in this vast empire, far removed from all the important areas, Konya could no longer be more than a provincial centre. The fact that it was under its walls that the Ottoman army of Reshīd Pasha was crushed by the Egyptian army of Ibrāhīm Pasha, the son of Muḥammad ʿAlī, at the end of 1832, proves that the town could still occasionally play a strategic rôle.

A number of travellers have visited and briefly described Konya. One of the most valuable accounts is that of Henri de Laborde, who has left us plans of the town as it was in 1828, a period in which many buildings today in ruins were still standing. The population of the town, which in the time of Cuinet (end of the 19th century), was about 50,000, passed the 100,000 mark in the middle of this century (129,842 in 1960) and has continued to increase slowly since then.

Bibliography. An exhaustive bibliography of the geographers, travellers and historians was given in 1954 by Besim Darkot in his *IA* art. s.v. The most recent works include especially those of Ismail Hakki Konyalı, *Konya tarihi*, Konya 1963, and Mehmet Önder, *Meviana şehri Konya*, Konya 1971. See also Cl. Cahen, *Pre-Ottoman Turkey*, London 1968; Osman Turan, *Selçuklular zamanında Türkiye*, 1971; S. Vryonis Jr., *The decline of medieval Hellenism in Asia Minor*, Berkeley and Los Angeles 1971; E. Eickhoff, *Friedrich Barbarossa im Orient*, 1977; Faruk Sümer, art. KARAMĀN-OGHULLARĪ. (Cl. CAHEN)

2. Monuments

There are some eighty monuments surviving in Konya, but many are so heavily restored that only fragments of decoration survive of the first foundation. An example is the Hoca Hasan Mescid, *ca* 1200. Major buildings lost but recorded include the *bedesten*. The number of houses and *konaks* dating from the 18th to the 20th centuries is declining rapidly, but the private Koyunoğlu Museum survives. A study of relative documents was made by I. H. Konyalı, *Konya tarihi*, Konya 1963, and of ceramics by M. Meinecke, *Fayencedekorationen seldschukischer Sakralbauten in Kleinasien*, Tübingen 1976. His datings are here accepted unless otherwise stated, while an asterisk indicates buildings dated by inscriptions.

Walls and palaces. The walls were destroyed within living memory. C. Texier, *Asie Mineure*, Paris 1882, and others recorded the wealth of antique and Saldjūk decoration incorporated in them, especially in the vicinity of the 128 towers, including fabulous beasts, a decapitated Hercules and extensive verses, all of which were gilded. The grandeur of the city is confirmed by the ruined kiosk of Kilidj Arslān II (1155-92), which was once a square chamber clad in ceramics with balconies carried on large consoles above a vaulted hall. Illustrated in F. Sarre, *Der Kiosk von Konya*, Berlin 1936, it is situated in the citadel area which has yet to be excavated in depth and where such remains of the *hale* as exist are attributed by Konyalı to 618/1221, although it was founded in 569/1173.

Mosques and complexes. Adjacent is the Alaeddin Camı begun by Kaykāʾūs I (*q.v.*). The consequences of frequent repairs are as important on the damage they mask. The area immediately round the *miḥrāb* is the oldest dated by the inscription to Sultān Masʿūd on the outstanding *ambrab*, *ca.* 1155. The west half of the prayer hall was completed in 617/1220* and the east pillared hall was added in 1235 when the *miḥrāb* (its heart mutilated irreparably) in the typical Anatolia ceramic manner was added. Among inscribed names are those of Ustād Hādjdjī Mengubirti (reading provisional) al-Khalīfī (on the *ambrab*), Muḥammad b. Khawlān of Damascus, on overseer, and of Atabeg Ayāz, the official in charge of work 1219-20.

Contiguous with the enlarged mosque and now entered from it is the duodecagonal *türbe* named after Kılıç Arslān and dated 676-17/1219-25. The cenotaphs are covered in white inscriptions on deep cobalt blue grounds. Except for Kaykāʾūs I, buried at Sivas, from 1192 onwards this was the mausoleum of the dynasty.

Externally, the courtyard wall is monumental, with two marble portals in a style developed from that of 12th century Zangid Damascus. The Ipliḳçi Cami, 1220-30, was first rebuilt in 733/1332-3, but the *miḥrāb* survived. The central aisle has three domes, and the three on each side are vaulted. The mosque is now the museum. The Larende or Sahip Ata Cami, 656/1258-9, has lost its second brick minaret in the Iranian or Central Asian style. The stalactite perch, incorporating detritus from Christian monuments, is 13th century workmanship at its apogee which was increasingly heavy and flamboyant. The fine faience *miḥrāb* and semi-domed *īwān* survived rebuilding. It is united with the *khānegāh* (of the four-*īwān* type retaining some original decoration) by the family tomb in a manner suggestive of ancestor worship. This mausoleum is of the domed *īwān* type with a crypt, where the cenotaphs retain some of their faienceswork. The inscription on the mosque to the master Ḳalīḳ b. ʿAbd Allāh (reading provisional) makes this his only dated building. The Sadreddin Konevi Cami, 673/1274-5, has lost two deeply-carved shutters to the Türk ve İslâm Eserleri Museum, Istanbul.

Kayḳubād I [*q.v.*], as patron of Djalāl al-Dīn Rūmī [*q.v.*], created Konya's greatest spiritual memorial, which is expressed materially at the Mevlevi complex and museum, to which the mosque of Selīm II is related. The *takke* originated in 628/1231 (Meinecke, 342; Konyalı, 630), but the earliest *sıkan* which contains the cenotaph of the poet is dated 672/1273-4. Its scalloped dome was recovered in Kütahya tiles externally in 1818, 1909 and 1949 (Konyalı, 634) and the wooden cenotaph, 674/1277, completely covered in inscriptions, is hidden under the gold embroidered velvet cloth donated by ʿAbd Ḥamīd II. A second dome was built over the tombs of the successors of the Mewlānā, but the complex is largely 16th century in date. Bāyazīd II restored the mausoleums and added three domed units together with a typical Ottoman minaret in 910/1504, while Selīm I installed the garden fountain, 918/1512. Süleymān I rebuilt the *mesdjid* and *semāʿ khāna*, 973/1565, and Selīm II the *ʿimāret*, now destroyed. The cells of Murād III were transformed in the 19th century. Important repairs were effected by Murād IV, 1044/1634 and 1048/1650, and by Muḥammad IV, 1066/1650. Four typical Ottoman *türbes* of the garden court are dated 1934/1527, Khurrem Pasha, 981-2/1573-4, Sinān Pasha, 994/1585, daughter of Küçük Murād Pasha; 1006/1597, Shaykh Khalīl. The museum houses textiles and other treasures of the order which is active again. The Selīmiye Cami, begun by Süleymān I and completed by Selīm II, has a seven domed portico carried on six Byzantine limestone columns. Its plan is based on that of the Fatih mosque in Istanbul, but without a *miḥrāb* apse. Erroneously attributed to Sinān, it is typical of the stark style that preceded his appointment as *maʿmār bashī*. Beside the mosque is the library of Yūsuf Agha, 1209/1794. Pir Paşa Cami, ca. 926/1519, is a typical Ottoman mosque, but with a *türbe* incorporated into a corner of the portico. Şerefeddin Cami was founded 1220-30, rebuilt by the Karamānoghlu Ibrāhīm II, 848/1445, and transformed in 1046/1636 into an imitation of Kılıç ʿAlī Pasha mosque, Tophane, Istanbul. Fragments of 13th century ceramic can be seen in the mortar, and there are patches of brickwork amid the ashlar. Heavily restored, 1299/1882, the interior painting is in the 19th century fairground manner and includes a typical folk art representation of the Süleymaniye Cami, Istanbul, over the *miḥrāb*. Kuşa Cami, 1060/1650 (Konyalı, 429), owes its light, open style to the repairs in 1926/1812. Abdullazīz Cami, *ca.* 1293/1876, also replaces an older building, and its florid Ecole des Beaux Arts appearance is likely to be the work of Sarkis Balyan of the 19th century dynasty of court architects.

Colleges or madrasas. The Sırçalı Medrese, 640/1242-3, is a partially ruined two-*īwān* type. The outstanding faience *miḥrāb* is set in an *īwān* which retains a quantity of its décor. The carving of the portal is also notable. Inscriptions include those to the founder Badr al-Dīn Mudjāhid and the master Muḥammad b. Muḥammad b. ʿUthmān al-Tūsī.

The Karatay Medrese, 649/1251-2*, ruined, but retaining its famous marble portal, which was an Anatolian variant of the Damascus style (see Aḥmadīm Cami), and also the stancape dome with an oculus over the pool of the court-hall supported by deep fan-shaped tiled pendentives. This monument now houses a collection of Saldjūḳ ceramics. Only the *īwān* remains of the Küçük Karatay Medrese nearby 648/1248-9.

The İnce Minareli Medrese, ca. 663/1264-5, built by Ḳalūḳ (Kölüg) b. ʿAbd Allāh, heavily restored, lost two-thirds of its brick minaret in 1317/1899. It was a foil to the portal's giant inscriptive bands developed out of simple established decorative forms more appropriate to wood. Overweights: decoration which marks structure was the Achilles heel of later Saldjūḳ architecture.

Mosques. These include Beşarebey Mescid, 610/1213 (inscription disputed), and Abdülaziz Mescid, 611/1214-5, both rebuilt with fragments of original ceramics remaining, as with Şekerfurun Mescid, 617/1220*. The Taş (Stone) or Hacı Ferruh Mescid, 622/1225 (Konyalı, 564), has an inscription to the master Ramaḍān and idiosyncratic carved stone porch and *miḥrāb*. The Hatunuye Mescid, 627/1229-30*, retains most of its thick Güdük Minaret, built of glazed brick. The Bulgur Takke Mescid 1240-50, still has its plain, hexagonal dado tiles, as does the Karatay Mescid, 646/1248-9, but the Sırçalı Mescid of the same date retains its brick minaret and its renowned *miḥrāb*. The *miḥrāb* of the Beyhekim Mescid, 1270-80, is now in the Staatliche Museum (Islamische Museum, Cat. No. 82), Berlin. Both the Karaaslan and the Tahir ile Zühre Mescids, ca. 1280, have restored *miḥrābs*.

Of many later examples, the Kadı Mürsel Mescid, 812/1409, has lost its dependencies which once were distinctively Karamanlı in style, including the *miḥrāb*.

Lesser monuments. The Hasbey Darülhuffaz, 824/1422* built by Karamānoghlu Mehmed Bey, has a traditional ceramic *miḥrāb*. The marble panels have fallen from the façade below the sixteen-ribbed dome. A rare, extant *namazgāh* is the Musalla, 948/1541.

Among several, a typical *īwān* type *türbe* is the Gömeç Hatun, 674-84/1275-85, built of brick above ashlar with an ornamental tile façade and crenellations. It has two triangular buttresses and double stairs raised over the sepulchral vault. Fakidede Türbe, 624-60/1472-56, built of stone is transitional in style.

Of the fountains, Kapu Çeşme rebuilt in Ottoman times has claim to Saljūk origins. A standard Ottoman example is the Akçeşme, 936/1555°. The Bahkh Çeşme incorporates a Byzantine plaque depicting two lions.

Monuments in the vicinity. The large, pillared mosque at Mecam of Karamānoghlu Mehmed Bey, 805/1402°, stands beside the *hammām* of Ibrāhīm Bey, 837/1424°, which is fed by the lime springs.

Local mid-13th century caravanserais each with portal, court and hall and all partially ruined, are Kandemir (Yazōnū) Han, 603/1206°, Kızıl Örən Han, ca. 604/1207; Dokuncu Han, 607/1210°, Altunlıa (Altunapa) Han, early 13th century. The Zazadin (Sadeddin) Han, 633/1235-6°, is in better repair and noteworthy for the extensive re-use of classical material and early Christian tombstones.

(G. Goodwin)

KOPAK [see SIKKA].

KÖPRÜ [see VIZIR KÖPRÜ].

RÖPRÜ HIṢĀRĪ "fortress of the bridge", a village in the Ottoman province of Khudāwendgār [*q.v.*] in northwestern Anatolia, and situated on the Çörük Şū river near Yeñishehir. It owes its historical fame to its being the site of a Byzantine fortress taken in 686/1289 by ʿOthmān b. Ertoghrul, chief of the ʿOthmānlī group of Türkmens based on Eskishehir, after the previous capture of Bilejik and during the course of the extension of Ottoman influence within the provinces towards Bursa [*q.v.*], cf H A. Gibbons, *The foundation of the Ottoman empire*, Oxford 1916, 32-3.

Bibliography. Sāmī Bey, *Kāmūs al-aʿlām*, v, 3906, Von Hammer, *Histoire*, i, 87-9; Huart, *Konia, la ville des derviches tourneurs*, Paris 1897, 18 (illustr or bridge). (Cl. HUART)

KÖPRÜLÜ, a family of Ottoman viziers who rose to prominence in the latter half of the 11th/17th century and dominated Ottoman life for much of that period, bringing a halt to some time to the decline of the empire, instituting internal reform and gaining new conquests. The name derives from the close association of the founder of the family, Köprülü Mehmed Pasha, with the town of Köprü [*q.v.*] (then in the *sandjak* of Amasya), which, in turn, was later called Vezir-Köprü through its association with the family (and to distinguish it from the near-by Tash Köprü). That Mehmed Pasha was born in Albania, however, is clearly shown by the *waḳfiyya*, drawn up in Edirne in Radjab 1070/March 1660, in his own lifetime, in which it is stated that his homeland was the village called Rudnik, attached to the *ḥaṣṣ*[1] of Arnawut Belgrade (Ilbasi) His first visit to Köprü appears to have occurred only when he departed the palace service to go there as a *sipāhī*, but he thereafter settled there, marrying and establishing a home to which he repaired when out of office.

The leading members of the Köprülü family are the following:

1. Köprülü Mehmed Pasha (?986-1072/?1578-1661), the Ottoman Grand Vizier who gave his name to the family. If, as his contemporary, Findiklili Mehmed Agha asserts (Silāḥdār, *Taʾrīkh*, Istanbul 1928, i, 226), he died at the age of 86, he must have been born in ca. 986/1578 (for other estimates of Mehmed Pasha's age, see Defterdār Sarī Mehmed Pasha, *Zubdat al-waḳāʾiʿ al-ʿOthmāniyya*, Süleymaniye-Esad Efendi 3362; Rāshid, *Taʾrīkh*, Istanbul 1282/1865, i, 6, ʿAṭāʾ, *Taʾrīkh*, Istanbul 1292-3/1874-6, ii, 69, Ahmed Refīḳ, *Köprülüler*, Istanbul 1332/1914; 1931, Uzunçarşılı, *Osmanlı tarihi*, iii/1, Ankara 1954, 410) in Albania (as above). Brought to Istanbul in his youth, he was taken into the palace and by 1623 was a cook in the palace kitchens. He secured the backing of Khosrew Agha [see KHOSREW PASHA, MIMAR], then to the *khāṣṣ-oda* [*q.v.*], and entered first the *bayāṭ oda*, then the *khazīne-odasi*. His quarrelsomeness and disobedience led to the termination of his career within the palace, and he went out to the provinces as a *sipāhī*; it was thus that he first went to the town of Köprü in Anatolia where he settled and married ʿĀʾisha Khānūm, the daughter of the valvode of Köprü, Yūsuf Agha, from the Kayadilli *fitlik* in Havza. During Khosrew Agha's tenure as *agha* of the Janissaries, Köprülü again entered his service, and when Khosrew became Grand Vizier (1037/1628) Köprülü became tax treasurer (*khazīnedār*). Following Khosrew's execution (1041/1632), Köprülü served in certain provincial posts, as valvode or *agha*, probably to or near Köprü according to Ḥüseyn Husām al-Dīn, for example, he was *sandjak beg* of Amasya for some eight months in 1044/1634-5 (*Amasya taʾrīkhi*, iv, Istanbul 1928, 62). He subsequently came again to Istanbul where he held a variety of posts such as those of inspector of the Guilds (*Iṣṭnāf aghasi*), inspector of the Arsenal (*Topkhāne nāẓiri*), Commander of the Sipāhīs (of the *altī bölük Sipāhīler aghasi*) and Commander of the Armourers (*Dyebedjī bashi*). Taking part in *sandjak beg* of Corum in the siege of Baghdād (1048/1638), in which he was wounded, he became attached to the Grand Vizier Kemānkesh Kara Muṣṭafā Pasha and was appointed *Kapūdān-bashāwwalāsi* and, later, *Mīr-i-khāṣṣ*. In 1053/1643-4 he held the post of *sandjak-beg* of Amasya a second time, for some five months Kara Muṣṭafā Pasha's successor, Sultān-zāde Mehmed Pasha, gave Köprülü the governorship of Trabzon with two *tughs*. How long he remained in that post is unknown, but he later resided for a time in Köprü and then, in 1057/1647, became *mütesellim* for the *eyālet* of Damascus when that province was given to the seventh *Mīrāsekhī* as a *bash-mākhlūḳ* by Sultān Ibrāhīm (Naʿīmā, *Taʾrīkh*, Istanbul 1281-3/1864-7, iv, 243; Silāḥdār, i, 225). While in this post, he was ordered to campaign, acting as *beglerbegi* of Karaman, against the rebellious

valī of Sīvas, Warwar ʿAlī Pasha, who was advancing on Istanbul. Having fallen prisoner to ʿAlī Pasha in the battle which ensued near Çankırı, he was rescued by Ipshīr Muṣṭafā Pasha [*q.v.*], who had also been deputed to deal with ʿAlī Pasha (1058/1648, cf. Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1314-8/1896-1900, ii, 452). The following year Köprülü was sent against Boynu-Yaralī Mehmed Pasha, for whose execution an imperial rescript had been issued because of his oppression of the peasants. Köprülü avoided bloodshed by sending him a letter recommending that he immediately seek pardon from the Wālide Sulṭān, which advice Boynu-Yaralī Mehmed Pasha took and thus was forgiven and spared (Naʿīmā, iv, 459-60).

During the Grand Vizierate of Gurǧiu Mehmed Pasha (1061 s/1651 s), the architect Kāsim Agha [*q.v.*], *ḥekīmbashī* to the Wālide Sulṭān, knowing of her dissatisfaction with the Grand Vizier, recommended Köprülü to her, but the initiative led only to Köprülü's holding the office of *kahve emīni* for a week or so before the jealous Grand Vizier brought about his virtual banishment as *sanǧaḳ beg* of Köstendil (Kara Čelebi-zāde ʿAbd al-ʿAzīz, *Risāle-i ʿibret-nümā-yi ḥavādiṯ*, Istanbul University TY3272, fol. 63, Naʿīmā, v, 278). He was later dismissed and, according to Silāḥdār (i, 225-6), scraped a living during this period in certain minor posts, suffering imprisonment for debt. While spending some time in Köprü, he met in Kütahya (February 1655) with Ipshīr Pasha, who was on his way to take up his appointment as Grand Vizier and who appointed him governor of Tarabulus al-Shām. Before Köprülü could take up his post, however, Ipshīr had fallen, and Köprülü, dismissed, returned to Köprü (Naʿīmā, vi, 22, 123). Although Kāsim Agha advised the Grand Vizier Süleymān Pasha to seek Köprulü's help (February 1656), Süleymān Pasha did not heed the recommendation (Naʿīmā, vi, 142), Köprülü met with the newly-appointed Grand Vizier Boynu-Yaralī Mehmed Pasha in Eskishehir a few months later and came with him to Istanbul, some time afterward he was once more appointed governor of Tarabulus al-Shām. But as the result of efforts made on his behalf with the Wālide Sulṭān by such as Kāsim Agha and the *reʾīs ul-kuttāb* Shāmī-zāde Mehmed Efendi, Köprülü was himself proposed for the Grand Vizierate, which post he agreed to accept on four conditions, which were such as to guarantee him absolute independence and freedom from interference. The Wālide Sulṭān accepted these conditions on oath, and the sultan appointed him the next day (26 Dhu ʾl-Kaʿda 1066/15 September 1656).

Köprülü's appointment to the Grand Vizierate aroused great astonishment at first, since his career thus far had not been characterised by any great success (Mehmed Khalīfa, *Taʾrīḫ-i Ġilmānī*, ed. A. Refīḳ in *TOEM*, supp. [1340], 44), but before long his considerable abilities came to be widely recognised. Among his first acts was to deal with the ḳāḍīʿaskers, who, since the time of Murād IV, had been engaging in troublesome sectarian quarrels in Istanbul and who attempted to provoke such a quarrel after Köprülü had been in office only eight days. Having tried persuasion, Köprülü caused their ringleaders to be banished to Cyprus (see Kātib Čelebi, *The balance of truth*, tr. G. L. Lewis, London 1957, 132-4; Naʿīmā, vi, 227 ff., Silāḥdār, i, 37-9). Köprülü continued his efforts to bring peace and order to Istanbul. Along with causing the executions of certain individuals, among them Abāza Ahmed Pasha, accused of laxity in the defence of Bozǧa-ada which he had surrendered to the Venetians, and the Orthodox Patriarch Parthenius III, who was accused of seditious activities, he succeeded in quelling a rebellion of the *sipāhī* dissidents (*sekbān*) and purging their number (28 Rabīʿ I 1067/4 January 1657; for details, see *Taʾrīḫ-i Ġilmānī*, 44, Naʿīmā, vi, 246 ff.; Silāḥdār, i, 62 ff.).

Köprülü then set about preparations for a campaign to end the Venetian threat to the Straits and in particular to recover Bozǧa-ada and Limnos. Having sent the fleet out first, under the Kapudan Pasha Ṭopal Mehmed Pasha, he himself set out, as commander-in-chief, on 1 Ramaḍān 1067/13 June 1657. The Ottomans fared badly at first in the clashes at sea, but their fortunes changed when, on 19 July, a ball fired from the Anatolian shore struck the powder magazine of the flagship of the Venetian admiral Mocenigo, destroying it and throwing the Venetian fleet into confusion (*Taʾrīḫ-i Ġilmānī*, 44 ff., Naʿīmā, vi, 279 ff.; P. Rycaut, *The history of the Turkish empire from the year 1677*, London 1680, 54 [Mehammed IV]). Köprülü rewarded the successful gunner and others who had fought bravely but executed a number of high ranking commanders held responsible for the earlier failures. This action disquieted even his supporters in Istanbul and led to agitation for Köprülü's removal by Ḳara Ḥasan zāde Ḥüseyn Agha, an influential member of the Janissary corps; his efforts were in vain, however (Naʿīmā, vi, 295 ff.). The Grand Vizier meanwhile continued his efforts to take Bozǧa-ada, which goal his forces achieved on 21 Dhu ʾl-Kaʿda 1067/ 31 August 1657 (for a letter sent by Köprülü to the Kızlar aghası Mehmed Agha, see *Taʾrīḫ-i Ġilmānī*, 47; for other details, see Naʿīmā, vi, 289 ff., Silāḥdār, i, 65 ff.), an event which caused great joy in Istanbul. In an imperial rescript sent to Köprülü, the sultan ordered him to remain until Limnos was taken, and Köprülü's existing forces were strengthened by tumariots from Bursa and other *sanǧaḳs*. Having repaired, supplied and garrisoned Bozǧa-ada, Köprülü dispatched Ṭopal Mehmed Pasha to Limnos. After a 60-day siege from both sea and land, the defenders surrendered the fortress on 8 Ṣafar 1068/15 November 1657 on condition that those in the fortress be allowed to leave with their goods.

Having countered one danger to the state by opening the Straits and recovering the two islands lost to the Venetians in his predecessor's time, Köprülü went to Edirne (25 November 1657) where he had been summoned by the sultan on account of pressing problems in Transylvania (*see* ABDÜL.) The ambitious George Rákoczy II, prince of Transylvania since 1648, had, as a result of an agreement made with the King of Sweden in December 1656, marched against Poland with Transylvanian forces; and when he incited the *beg*s of Wallachia and Moldavia to act with him, in defiance of the Ottomans, the imperial *divān* felt it necessary to take measures against him, deciding that a campaign should be undertaken, first by the Khān of the Crimea, and later under the command of the Grand Vizier (for details, see Szilágyi Sándor, *Erdély és az oszmánlok háború*, Budapest 1892, ii, 244 ff.). The *beg*s of Wallachia and Moldavia were also replaced (N. Iorga, *Histoire des Roumains et de la romanité orientale*, Bucharest 1940, vi, 226 f.; Naʿīmā, vi, 321 ff.). Köprülü left Edirne on 22 Ramaḍān 1068/ 23 June 1658 and went to Belgrade. His army was strengthened by Crimean and Cossack forces, by the provincial forces from Buda and Silistria, and

by a force of 12,000 men sent by the King of Poland. Entering Transylvania, he moved first against Yanova (Kiś Jenő), a key point taken to Kānūnī Süleymān's time but subsequently lost, and received the surrender of the fortress on 31 August. Rákoczy, who, under Ottoman pressure, had been replaced at the end of 1657, had returned and driven out the Ottoman-backed prince and re-established himself (see Szilády Áron and Szilágyi Sándor, *Török-Magyarkori állam-okmányok*, Pest 1870, iii, 442 ff.; Hóman Bálint and Szekfű Gyula, *Magyar történet*, Budapest 1935-6, iv, 80; Decel-Gökbilgin, *IA* art. *Erdel*) After the taking of Yanova, Köprülü caused the Crimean and Cossack forces to plunder Erdel Belgrad (Fehérvár), the centre of government, in order to seize Rákoczy, but the latter was understood to have escaped to a fortress on the Austrian frontier. Köprülü's desire to pursue him was thwarted by a summons from the sultan because of a revolt in Anatolia. He therefore appointed Akça Barcsay to prince as condition that he pay *khazāʾin* and that he hand over the arms (*malzamāt*) of the fortresses of Sebeş and Lugoj, together with the cannon and munitions within them; and at the same time he charged the *beglerbegs* of Buda, Kenʿān Pasha, with the oversight of that area (for the appointment of Akça Barcsay, see Uzunçarşılı, *Eleş Barçsay'ın Erdel hükümdarı tayını hakkında bir kaç vesika*, in *Belleten*, vii [1943]; idem, *Barçsay Akoş'un Erdel hükümdarı tayini dair bazı orijinal vesikalar*, in *Tarih Dergisi*, iv [1952-3]; Naʿīmā, vi, 334 ff.; Silāhdār, i, 126 ff.).

For some time a revolt of serious proportions had been building up in Anatolia. To the long-standing causes of unrest there were added the uncertainty and fear inspired in many *sipāhīs* and commanders by Köprülü's harsh behaviour. The leader of the dissidents was the *beglerbegi* of Aleppo, Abāza Ḥasan Pasha (*q.v.*), who realized that his past actions constituted a cause for the sort of punishment which Köprülü had meted out to the *sofras* in the capital. With him, in Kayseri, gathered a number of commanders, among them the *wālī* of Damascus, the vizier Tayyār Pasha-zāde Aḥmed Pasha; the *beglerbegs* of Anatolia, and some fifteen other active or retired *beglerbegs* who, fearing for their fates, sought to replace Köprülü with Tayyār Pasha-zāde Aḥmed Pasha. At first replying to the summonses from the capital to join the Transylvanian campaign with excuses, they subsequently openly declared their rebellion, saying that they could not join a campaign with Köprülü, who had caused the deaths of so many Janissaries and *sipāhīs* (Naʿīmā, vi, 344 ff.). Ignoring an imperial command that they should either disperse to their several places or engage in the defence of Baghdād, the rebels came as far as the vicinity of Bursa. Summoned by the sultan, Köprülü arrived in Edirne on 24 Muḥarram 1069/22 October 1658 and was present at an *ayāk dīwānī* three days later in the sultan's presence at which the *fatwā* given by the *Shaykh al-Islām* for the punishment of Abāza Ḥasan was read out. Though a positive force under the *beglerbegs* of Diyār Bakr, Murtaḍā Pasha, was already in the field, it was decided that Köprülü himself should campaign, and, accompanied by the sultan, he crossed in Üsküdar on 23 November 1658. Abāza Ḥasan, meanwhile, using the pretext of the distribution of pay to the army in Istanbul, dispatched some 3000 *sipāhīs* to Üsküdar, ostensibly to collect their pay but as fact to assassinate Köprülü. The latter, however, apprised of the plot, removed the names of 3000 *sipāhīs* from the rolls and executed about 1200 who were caught. The unrest caused in the army by this fresh thow of force led him to abandon the campaign and leave the matter to Murtaḍā Pasha. Although Abāza Ḥasan defeated the latter near Ilgīn (25 Rabīʿ I 1069/12 December 1658), he was compelled to winter in ʿAyntāb. Murtaḍā Pasha, having received reinforcements, pressed the rebels closely from Aleppo, depriving them of provisions and other necessaries. When Abāza Ḥasan's forces began gradually to desert to Murtaḍā Pasha, the rebel leaders went to Aleppo to submit to the government, only to be deceived and executed (25 Djumādā I 1069/26 February 1659 *Taʾrīkh-i Gilānī*, 54 ff., Naʿīmā, vi, 378 ff.; Silāhdār, i, 230 ff.)

Following this outcome, Köprülü busied himself with the solution of internal problems like the local *kul* soldiery in Damascus who had been acting disruptively for some time, whom he struck from the rolls and replaced with five *odas* of garrison Janissaries from Istanbul; and the revolts of Çerkes Mehmed Beg in Egypt and of Muṣṭafā Pasha, known as Kör Beg, in Antalya. Coming to Bursa with the sultan (19 July 1659), Köprülü instituted a sweeping attempt to bring order to Anatolia by summoning Ismāʿīl Pasha, who had been left as *kāʾim-makām* to Istanbul, and charging him with carrying out investigations (*taftīsh*) throughout Anatolia, "from Üsküdar to ʿArabistān", specifically to seize and punish any whom he found to have been involved in the Dialālī revolts (see DJALĀLĪ in Suppl.), whatever their rank or station, to restore to *re'āyā* status those falsely claiming to be *ʿasherī*, to deprive those unable to prove their claim in be *sayyids* of their distinctive turbans, and to seize and send to the imperial arsenal any arms or weapons found in the possession of the *reʿāyā* (Naʿīmā, vi, 415 f). But during these years he was also guilty of certain injustices such as bringing about the execution of the famous Deli Hüseyn Pasha (see HUSAYN PASHA DELI), in spite of the opposition of the *Shaykh al-Islām*, by concocting false complaints (Rabīʿ II 1069/December 1658); and of Seydī Aḥmed Pasha (1072/1662-3), long in state service and most recently active in the continuing struggle to Transylvania (for the defeat and death of Rákoczy in this period and for the conquest of Oradea by Kose ʿAlī Pasha (Dhu 'l-Ḥiddja 1070/August 1660), see *IA*, art. *Erdel*)

Köprülü divided the remaining months of his life between Edirne, to which he returned with the sultan in November 1659, and Istanbul. Age and illness greatly weakened him, and while journeying with Meḥemmed IV to Edirne in July 1661, Köprülü recommended, and the sultan agreed, that his son, Fāḍıl Aḥmed Pasha, should succeed him on his death. Aḥmed (Köprülü-zāde) was immediately brought from Damascus and made *kāʾim-makām* in Istanbul. When his father's condition worsened, he was summoned to Edirne and acted as *kāʾim makām* for his father for 48 days until Köprülü's death on 7 Rabīʿ I 1072/31 October 1661. His body was brought to Istanbul and buried in the mausoleum near the *dār al-ḥadīth* which he had built near Çemberli Taş (Silāhdār, i, 297 ff.).

During his five years to power, in a period when confusion reigned in all the institutions of state, Köprülü succeeded in crushing the prevailing spirit of rebellion and disorder through harsh and merciless acts. On this latter count, certain historians have characterized him as cruel and bloodthirsty (Silāhdār, i, 208; ʿOthmān-zāde Taʾīb, *Ḥadīkat al-wuzarāʾ*, Istanbul 1271/1854, 166), but while he was not

guiltless of unjust acts, such judgements must be tempered by the recognition of the disabling turmoil which had afflicted the state since the death of Murād IV and of the great services which he performed in office (ʿĀlī², ii, 69 ff.). In fact, historians like Mehmed Khalīfe, ʿAbdī Pasha, Naʿīmā and Rāshid are united in praising Köprülü. When Köprülü came to the Grand Vizierate, he said to those around him that the state expected service, not show from him, and he remained true to this principle to the end of his life (cf. the recitation of Durmush Efendi, the *kātib* of the *Lāle al-ravżāt aghasi*, in Rāshid, i, 28).

Köprülü tackled the *sirkāt* at Çanak-ḳale to be strongly fortified (see ÇANAK-ḲALʿE BOGHAZI). His benefactions, estates, and endowments are to be found in a great many places: for example, a mosque, a school and shops in Yanova, a mosque and school in Rudnik; and a mosque and a school in the town of Tarakli in the *sandjak* of Bolu (see further the listing in *IA*, art. *Köprülüler* (Gökbilgin), vi, 897b). His sons-in-law, Kīlīdj Muṣṭafā Pasha, Kaplan Muṣṭafā Pasha, Kara Muṣṭafā Pasha (Merzifonlu) [*q.v.*] and Siyāwush Pasha, all held high positions during his own and his son's Grand Vizierate.

II. Fāḍil Aḥmed Pasha (Abū ʾl-ʿAbbās) (1045-87/1635-76), the elder son and successor of Köprülü Mehmed Pasha, was born in Köprü in 1633. Brought to Istanbul at the age of 7 by his father, he studied under the leading learned men of the period, first under ʿOthmān Efendi, later under Kara Čelebi-zāde ʿAbd al-ʿAzīz Efendi (see KARA-ČELEBI ZADE (4)). Through the influence of his father he was, while only 16, appointed a *müderris*, first at *Ikhrīdjī*, then at *dākhil* level. Now known as Pashazāde, his lessons proved popular, and in 1657 he was raised to the *Ṣaḥn-i thamān*. Shortly after, however, upset by gossip amongst the *ʿulamāʾ*, he abandoned the learned profession and took up an administrative post. In 1066/1659 he was, at the request of his father, appointed to the governorship of the *eyālet* of Erzurum with a vizierate. One year later he was transferred to Damascus. There he won great popularity by causing an imperial rescript to be issued removing two taxes, called *dakhīkha* and *barība*, which his predecessors had levied on the people of Damascus and which and sometimes risen as high as 5-4 million *akčes*. Under orders from the central government he moved against the Durūz [*q.v.*] and defeated the Maʿnids and Shihābids, thereby securing the payment of a tribute of 500 purses and the abandonment of the brigandage in which they had been engaging for some time. He also caused to be made into a *beglerbegilik* the region where the Maʿnids and Shihābids lived together with the areas of Ṣayda, Bayrūt and Ṣafad which till then had been governed by a vaivode (1660 for details see *Dhaylī* of *tawārīkh der aḥwāl-i Fāḍil Aḥmed Pasha*, Süleymaniye-Esad Efendi 2243, fol. 4, Silāḥdār, i, 214-16). Although he was later appointed *beglerbegi* of Aleppo, he was summoned to Istanbul as *ḳā'im-makām* before he could take up the post and subsequently succeeded his father as Grand Vizier (see above).

Amongst the new Grand Vizier's first concerns was the continuing unsettled situation in Transylvania. Some measure of order was established there, however, without Köprülü-zāde's direct intervention, by the victory in January 1662, near Sighisoara, of the *beglerbegi* of Yanova over Rákóczy's successor, János Kemény, which secured the control of the Ottoman supported Mihály Apafi. Though a campaign against Venice was mooted for 1663, this was abandoned in favour of a campaign against Austria, which had constantly been attacking Ottoman frontier forts and outposts and which was seen as the most dangerous enemy. The army moved out from Edirne on 5 Ramaḍān 1073/13 April 1663. During discussions in Belgrade and Osijek with Austrian ambassadors, Köprülü-zāde demanded the destruction of a newly built Austrian fortress (Zerinvár) facing Nagykanizsa to western Hungary; the withdrawal of Austrian troops from Transylvania, and the restoration of the annual 30,000 florin *cizye* to which the Austrians had paid from the time of Süleymān I until 1606 (later, in Buda, modified to a demand for a single 200,000 *ghurūsh* payment like that agreed at Zsitva-Torok in 2606). The Austrians were unable to accept the last of these conditions, and Köprülü-zāde set off from Buda against the fortress of Nové Zámky (24 Dhu ʾl-Ḥidjdja 1073/30 July 1663; see Kātib Muṣṭafā Zuhdī, *Taʾrīkh-i Uyvar*, Istanbul University TY2468; Rāshid, i, 23 ff., *Dhaylī* of *tawārīkh*), to which he laid siege on 27 August and which finally surrendered on terms on 21 Ṣafar 1074/24 September 1663 (to September in Montecuculi, *Mémoires de Montecuculi*, Paris 1712, 332 ff.) Having deputed subordinates to take several near by fortresses, among them Neugrad and Nitra, Köprülü-zāde returned with the army to winter quarters in Belgrade, intending to move out from there against the Austrians in the spring. The campaign by the Hungarian commander Zrinyi and General Hohenlohe in January 1664, during which Berzence, Babocsa and Pecs were occupied (*Magyar történet*, iv, 166), led the Grand Vizier to move toward Osijek, but on hearing that the local commanders had gained control of the situation, he returned to Belgrade (21 February 1664).

The fall of Nové Zámky, regarded as the last major block to the Turkish advance into Europe, had aroused great anxiety in Europe and led to contributions of men and money to the Habsburg cause from the Papacy, Spain, some of the German princes and even France and to the formation of a sizeable force under the command of Montecuculi. A Christian force laid siege to Nagykanizsa, in response to which Köprülü-zāde advanced on that fortress. The siege having been lifted at his advance, he took and destroyed Zerinvár (6 Dhu ʾl-Ḥidjdja 1074/30 June 1664), the building of which had been one of the ostensible causes of the present campaigns, and then moved northward, his forces taking Kiskemárom (14 July), Egerseg Egervár and Kemendvár (*Dhaylī* of *tawārīkh*, fols. 82 ff.) and advancing to the river Rába (Raab). Here, near the village of St. Gotthard, they came face to face with the Imperial forces under Montecuculi. Though Köprülü-zāde was actively engaged in peace negotiations with the Austrian ambassador, he decided to cross the river and engage the enemy. The bridge proved inadequate, however, and only a part of the Ottoman forces got across. In the battle which ensued (8 Muḥarram 1075/1 August 1664), these at first had some success but were ultimately driven back, both sides suffering heavy losses (for details, see Montecuculi, 416; Hammer Purgstall, *Histoire*, xi, 281 ff., Aḥmed Muḫtār, *Sen Gelar'dın ʿOthmānlī ordusu*, Istanbul 1326/1908).

This defeat, though by no means decisive, forced a more defensive policy on the Ottoman army, which had previously moved as it willed (*Dhaylī* of *tawārīkh*, fols. 90 ff.) But within ten days the two sides had signed the Treaty of Vasvár (17 Muḥarram 1075/10 August 1664) which largely satisfied Ottoman

aims and, in particular, left them in possession of Nové Zámky and assured their influence in Transylvania (for a Hungarian view of the treaty, see *Magyar történet*, iv, 169; for the treaty, see Baron de Testa, *Recueil des traités de la Porte Ottoman*, ix, Paris 1898, 50 ff.; *Ta'rīkh-i Ghilmāni*, 90 ff., Silāhdār, i, 367, Rāshid, i, 78 ff.) After advancing to the area of Nové Zámky, which he had heard was to be besieged, Köprülü-zāde received there the confirmed copy of the peace treaty from Vienna and therefore returned to Belgrade where he wintered in order to oversee the implementation of the treaty. He returned to Edirne only in July 1665, and from there to Istanbul, inspecting the fortifications of the Dardanelles in company with the sultan on the way.

At a consultative assembly in December 1665, Köprülü-zāde proposed a major effort to take Kandiya [*q.v.*] in Crete, the siege of which had for years been the cause of heavy losses, and it was agreed that preparations for such a campaign should be put in hand. Departing from Edirne in Dhu 'l-Ka'da 1076/ May 1666, Köprülü-zāde crossed from Monemvasia, chosen as the mainland base for the campaign, to Canea in early November. The fleet was strengthened during the course of the winter and spring, and on 1 Dhu 'l-Hidjdja 1077/25 May 1667 Koprulu zāde convened an assembly of the leading commanders in which the plans for the conduct of the siege were laid (*Dīwānčhe al-tawārīkh*, fol. 112; Defterdār Sarī Mehmed Pasha, *Zubdat al-tawārīkh*, Süleymaniye-Esad Efendi 2382, fols. 4 ff., Rāshid, i, 164 ff.). The siege was pressed vigorously, with varying fortunes, until mid-November when Köprülü-zāde, who had lived in the trenches from the beginning of the siege in order to encourage the troops, suspended operations for the winter During this period Köprülü-zāde received Venetian commissioners and was in correspondence with both the Doge of Venice and the Venetian captain general Morosini with regard to negotiations about the fate of the fortress (*Dīwānčhe al-tawārīkh*, Köprülü Fazıl Ahmet Paşa, 231; Rāshid, i, 185 ff.). Both sides gathered reinforcements in the spring and, with Köprülü zāde entering the trenches once more on 12 Muharram 1079/22 June 1668, the issue was again hotly contested through the summer (for details, see *Dīwānčhe al-tawārīkh*, Rāshid, i, 208 ff., Hammer-Purgstall, *Histoire*, xi, 311 ff.) Knowing that Köprülü-zāde would accept only the surrender of Kandiya, the Venetians approached the sultan, then in Yeñishehir (Larissa), in Thessaly, for more favourable terms, as a result of which Mehemmed IV demanded to know of the Grand Vizier the situation, warning that it would be impossible to raise men and supplies were the siege to last another year. At an assembly convened by Köprülü-zāde on 8 Radjab 1079/ 12 December 1668, it was agreed that the fall of Kandiya seemed close at hand, and arrangements were made to winter in the trenches (Rāshid, i, 218 ff.). Friction amongst the Venetians and their allies led to the withdrawal of the allied fleet at the end of August 1669, which act left the Venetians little choice but to surrender. After six days of discussion, terms were agreed on 8 Rabī' II 1080/ 5 September 1669 (see Rāshid, i, 240 ff.; *Mu'āhadāt Madjmū'asi*, ii, 141 ff., Noradounghian, *Recueil d'actes internationaux de l'empire Ottoman*, i, Paris 1897, 132 ff.). Köprülü zāde received the 80 keys of the evacuated city and fortress of Kandiya on 27 September. He remained through the winter to repair the fortress and to have a new land survey (*tahrīr*) made in the Mediterranean islands. He also pacified the Mainotes with a letter which he sent, and he forgave their outstanding taxes (for details, see *Dīwānčhe al-tawārīkh*, fols. 122 ff.; Köprülü-Mahmud Asim Bey 724, fols. 231-6; Başvekâlet arşivi, tahrir defterleri; Ewliyā Čelebi, *Seyāhat nāme*, viii 498 ff.; Silāhdār i, 538). Returning by way of Tekirdagh, he arrived in Edirne in mid Şafar 1081/early July 1670 and surrendered the sacred standard to the sultan.

(For diplomatic relations with France in the early 1670s, leading to a renewal of the capitulations on 5 June 1673 (19 Şafar 1084), see J. Chardin, *Voyages en Perse et autres lieux de l'Orient*, Paris 1811, i; A. Vandal, *L'odyssée d'un ambassadeur. Les voyages du Marquis de Nointel (1670-80)*, Paris 1900; Saint-Priest (ed. Schefer), *Mémoires sur l'ambassade de France en Turquie*, Paris 1877; A. Galland, *Journal d'A Galland pendant son séjour à Constantinople (1672-1673)*, Paris 1881; L. d'Arvieux, *Mémoires du chevalier d'Arvieux*, Paris 1735, iv; Hammer-Purgstall, *Histoire*, xi, 341 ff See also TÜRKİYE ii This Ottoman empire, esp. at p 1185a).

In 1672 a campaign was undertaken against Poland on behalf of Peter Doroshenko, hetman of a group of Ukrainian Cossacks, who had accepted Ottoman suzerainty in 1669, and on 7 Şafar 1083/4 June 1672, Köprülü-zāde left Edirne with the army, accompanied by Mehemmed IV, who was to take an active interest in the campaign (for correspondence between Köprülü-zāde and the King of Poland in May 1672, see Rāshid, i 261 ff.). The principal object of the campaign, the fortress of Kamenets Podolskiy (see KAMĀNIČA), was taken on 3 Djumāda I 1083/27 August 1672 after a nine-day siege (Nābī Yūsuf, *Ta'rīkh-i Kamānīča*, Istanbul University TY2428; al-Hādjdjī (Hādidī) 'Alī, *Ta'rīkh-i Kamānīča*, Süleymaniye-Lala Ismail Efendi 308; 'Abdī Pasha, *Wakā'i'-nāme*, Süleymaniye-Hasef Efendi 675, Topkapı Sarayı-Bağdat köşkü 217). The rapid Ottoman advance in Poland, and particularly the siege of Lwow, compelled the Polish King, Michael Wiśniowiecki, to sue for peace; and terms were agreed at the recently taken fort (*palanka*) of Buchach (28 October 1672: 'Abdī Pasha, Rāshid, i, 284 ff., Noradounghian, i, 52). The harsh terms of the treaty, which included the loss of Podolia and the Ukraine and the payment of tribute, made it unacceptable to the Polish Diet. Their refusal to ratify it and implement its terms led to further Ottoman campaigns in the following years, of which Köprülü-zāde, once again accompanied by Mehemmed IV, directed those in 1673 and 1674. In the main action of the former year, Köprülü-zāde was appointed commander to axes Khotin (*q.v.*) from the attack of John Sobieski, but the fortress was lost before he could arrive. The latter year saw a successful campaign into the Ukraine (Khotin having been retaken by the Khān of the Crimea) in response to Russian incursions Köprülü-zāde, now in poor health, returned to Edirne with the sultan on 22 Sha'bān 1085/21 November 1674 (see Rāshid, i, 317 ff.), and the campaigns of 1675 and 1676 against the Poles were left to others.

In his last years, Köprülü-zāde's illness worsened through his addiction to drink. Although he followed the sultan when the latter left Istanbul for Edirne with the army in early Sha'bān 1087/mid-October 1676, he was too ill to get even as far as Ergene köprüsü (between Čorlu and Karishtiran), on 26 Sha'bān 1087/3 November 1676 at the age of 42 ('Abdī Pasha), his death resulting from acute

dropsy brought on by drink (Silāḥdār, i, 659). His body was brought to Istanbul and buried in his father's mausoleum near Çenberli Taṣh.

Köprülü-zāde's tenure in the Grand Vizierate was one of the two or three longest in Ottoman history. Tall and stout, with a round face and large eyes, he is described as dignified and inspiring respect. Especially significant is the high praise accorded his virtues by Silāḥdār (i, 659) in view of that historian's harsh judgements on Köprülü Meḥmed Pasha. Köprülü-zāde saw to the completion of pious foundations begun by his father, such as a half-finished *khān* and mosque in Rumeli, and also of his foundations in Çeṣbeli Taṣh in Istanbul (*Dīwān̲ī̲ al-tawārīkh*, fol. 14), and, as evidence of the great value which he himself placed on learning, one may cite the library which he established near his residence (formerly that of ʿĀʾisha Sulṭān, daughter of Sulṭān Ibrāhīm and wife of Ibshīr Pasha) in the vicinity of Ava Ṣofya (Uzunçarsılı, *Osmanlı tarihi līfṭ*, 438) and which he enriched with many very valuable books acquired both while as *müderris* and in later times. The *waḳfiyya* for the library, which was drawn up two years after his death, in 1089/1678 and which makes provision for students and the teaching of certain subjects there, is now in the Köprülü library (no 4 of the *waḳfiyyas* of the Köprülü family; M Gökmen, *Köprülülerin-mūzesi nefāʾis*, Istanbul 1950, 30, Shaykhī, *Waḥīd al-fuḍalāʾ*, Istanbul University TY81, fol 691). His other foundations include a mosque in Kandiya (for a copy of the imperial grant of the land (*muḳāṭaʿa nāmeʾsi*) given him in Kandiya, dated Rabīʿ II 1081/ August-September 1670, as well as other documents demarcating boundaries, see the above collection of *waḳfiyyas* in the Köprülü library), mosques in Nové Zámky and Kamenetz, and an uncompleted *khān* (later completed) in Izmir (Silāḥdār, i, 659).

Fāḍil Aḥmed Pasha was also the patron of a number of men of learning and the arts, among them his private secretary (*muḥarrirī*), Ḥasan Āgha, author of the *Dīwān̲ī̲ al-tawārīkh*, which is based on the documents committed to his charge (there exists in the Nationalbibliothek, Vienna, a Latin translation of this work, made in 1680 and entitled *Annalium gemma, authore Hasanage .... Cf. A. Caliand, Journal*, tr. N. Ş. Örik, *Hatıralar*, Ankara 1949, 297, n; Babinger, 216-17); Mazīdī, who was with him throughout the siege of Kandiya; Nāʿīm; Zuhdī, the author of the *Taʾrīkh-i Uyvar*, the *reʾīs al-kuttāb* Ṭālib Aḥmed Efendi, the poet Fenni, and Ḥuseyn Ḥezārfenn (*q.v.*) (*cf. Ṣafāʾī, Tadhkira*, Istanbul University TY3225, fols. 189 ff., 142 ff.; Shaykhī, fols. 680-786).

III Fāḍil Muṣṭafā Pasha (1047-1102/1637-91), Ottoman Grand Vizier, the younger brother of Fāḍil Aḥmed Pasha. Born in Köprü in 1047/1637, he began *medrese* education together with his elder brother. Whether he received a *medrese* appointment is not known but in 1070/1655 he is said to have received a *reʾīsīyet* and to have entered the ranks of the sultan's guards as a *müteferriḳa* (Uzunçarsılı, *Osmanlı tarihi*, iii/2, Ankara 1954, 452). In view of the facts that he was in Crete, together with his mother, for the whole of the final siege of Kandiya (1667-9), that he was at Fāḍil Aḥmed's side when the latter died and that he bore the Grand Vizier's signet ring to the sultan (for the *berāt* granting him a *reʾīsīyet* at this time, see Başvekalet arşivi, Ali Emiri tasnīfi, period of Meḥemmed IV, 229), one may suppose that he spent most of his time with his elder brother, on campaign. On 1 Dhu ʾl-Ḥijja 1090/ 29 June 1680 he became seventh vizier at the instigation of his brother-in-law, the Grand Vizier Merzifonlu Kara Muṣṭafā Pasha (see KARA MUṢṬAFĀ PASHA, MERZIFONLU). In November of the same year he served as guard (*muḥāfiẓ*) to the Wālide Sulṭān and the princes Süleymān and Aḥmed when they went to Edirne; and he performed the same function the following year, now as sixth vizier, when they remained in Edirne after the departure of the army for Istanbul (Rabīʿ I 1091/March 1681) following the conclusion of peace with Russia. At the time of the army's departure on the Austrian campaign of 1683 (Rabīʿ II 1094/April 1683) he remained in Edirne as guard to the Wālide Sulṭān, with the posts of fifth vizier and *ḥāʾiz-maḥall* of Edirne. He was later appointed to the governorship of the *eyālet* of Silistria with the addition of Nicopolis (i.e. the Özi *muḥāfiẓlīḳ*) and became commander at Babadaghī (*q.v.*). With Kara Muṣṭafā Pasha's dismissal and execution (December 1683) following the failure of the second siege of Vienna, and on the report that John Sobieski, King of Poland was making preparations against Kamenets and Moldavia, it was decided to replace Fāḍil Muṣṭafā with a more experienced commander: he was summoned to the capital as *ḥaḍṛe alīī* vizier, but kept the estates (*khāṣṣ*) he then possessed (Rabīʿ II 1095/March April 1684, Silāḥdār, ii, 227). Reaching Edirne in mid May, Fāḍil Muṣṭafā occupied the position of third vizier in the *dīwān*; but before long he chose retirement, no doubt grieved by the enmity of the new Grand Vizier toward the Köprülü family. One year later, as the war with the Venetians in the Morea intensified, he was appointed commander (*muḥāfiẓ*) of Chios (according to Silāḥdār, ii, 232, transferred there from the command of Boghaz [Ḥiṣārī] = Sedd al-baḥr), subsequently being transferred to the command of Boghaz Ḥiṣārī on 4 Rabīʿ II 1097/ 22 February 1686 (Silāḥdār, ii, 230).

On 30 Dhu ʾl-Ḳaʿda 1098/7 October 1687, shortly after a rebellious army had made his brother-in-law, Siyāwush Pasha, Grand Vizier and begun a march on the capital, Fāḍil Muṣṭafā was summoned to Istanbul as second vizier and *ḥāʾiz-maḥall*. Though Meḥemmed IV had some hope that Fāḍil Muṣṭafā might help him save his throne, past slights by the sultan made Fāḍil Muṣṭafā unsympathetic, and the latter was in fact closely involved in the deposition of Meḥemmed IV (2 Muḥarram 1099/8 November 1687). He soon fell out of favour with the army, the instruments of the deposition, however, through resisting their demands for donatives and attempting to establish discipline; and though his position was once saved by the new sultan, Süleymān II, he was subsequently effectively exiled by being appointed again to the command of Boghaz Ḥiṣārī (7 Rabīʿ II 1099/10 February 1688 Silāḥdār, ii, 318 ff.; *Zubdat al-taʾrīkh*, fols 87 ff.; Rāshid, ii, 95). He was spared a worse fate by the refusal of the *Shaykh al-Islām* in sanction his execution. A little later he was moved to the command of Canea, then to that of Kandiya, then, in Ṣafar 1100/December 1688, to that of Chios.

With the war against the Holy League going badly for the Ottomans in 1688-9, particularly on the Austrian front, it was agreed by the *ʿulamāʾ* to recommend to the sultan the appointment of Fāḍil Muṣṭafā Pasha to the Grand Vizierate, and he was accordingly summoned to Edirne (21 Muḥarram 1101/ 25 October 1689). His first act was to issue a declaration (*beyān-nāme*) designed to restore morale and to encourage the willing performance of military service. He also took steps to ease the lot of the tax paying

subjects (*re'āyā*) by removing a number of onerous extraordinary taxes such as the *resm-i khamr* or *'arak*, a recently-imposed tax on drink which had led many Christian subjects in Rumeli to make common cause with the enemy (cf *Zubdat al-tawārīkh*, fol. 122). During the winter he was engaged in preparations for a campaign which he himself was to lead, and on 6 Shawwāl 1102/13 July 1690 he left Edirne. He succeeded in recovering Pirot (12 August), the fort (*palanka*) of Müsā Pasha, and, after a 25 day siege, the important stronghold of Nish (9 September). Despite the lateness of the season and the opposition of his commanders, Fāḍil Muṣṭafā determined to march to Belgrade. Semendria fell after a three-day siege, on 23 Dhu 'l-Ḥijja 1102/17 September 1690, and Belgrade after an eight-day siege, on 4 Muharram 1103/8 October 1690 (Silāḥdār, ii, 501 ff; *Zubdat al-tawārīkh*, fols. 169, 172, 173, Rāshid, ii, 123 ff; cf. İ. H. Danişmend, *İzahlı Osmanlı tarihi kronolojisi*, Istanbul 1947-55, iii, 470). Detachments sent out from Belgrade succeeded in taking Boğur-delen (Sabac) and re-establishing control over the Danube at Orşova but failed to recover Ösilek. Having seen to the repairing and supplying of Belgrade, Fāḍil Muṣṭafā set out for Istanbul (4 November 1690). During his return he was mindful of the *re'āyā*, sending prisoners to their homes at the treasury's expense and also restoring lands and goods and providing the means of agriculture to those who had lived between Nish and Belgrade but had been moved across the Danube by the Austrians and now wished to return. He spent the winter of 1690-1 dealing with matters such as uprisings in Egypt (by Ibn Wānī) and Cyprus (*Zubdat al-tawārīkh*, fol. 182) and instituting reforms in the Janissary Corps, the imperial stables and the imperial larder whereby expenditure was cut (Silāḥdār, ii, 559-60).

Though Fāḍil Muṣṭafā proposed that he remain in Istanbul in 1691 in order to oversee all fronts during the year and that another commander be sent to Hungary, it was thought best that he lead the campaign. By the time the army was ready to move (Sha'bān 1102/May 1691), Süleymān II was near death, and a faction opposed to Fāḍil Muṣṭafā was making efforts to restore Mehemmed IV to the throne. Having taken measures to forestall these, Fāḍil Muṣṭafā left strict instructions, on departing from Edirne (18 Ramaḍān/15 June), that, in the event of the sultan's death, his brother, Aḥmed, should be placed on the throne. When, on 25 Ramaḍān 1102/22 June 1691, Süleymān II died, Aḥmed II ascended the throne without incident and confirmed Fāḍil Muṣṭafā Pasha in the Grand Vizierate.

Having reached Belgrade on 23 Shawwāl/20 July, Fāḍil Muṣṭafā bridged the river Sava; and when the Austrians, encamped at Varadin (Petrovaradin), advanced and then retreated, the Grand Vizier set off in pursuit, overriding the advice of his commanders that he should await the arrival of the Crimean Tatars and the provincial forces. When the Ottomans took up a position before the fort of Slankamen, the Austrian commander, his road to Varadin threatened and fearing being caught between the Ottomans and the Tatars, engaged the Ottomans in battle (24 Dhu 'l-Ka'da 1102/19 August 1691). The Ottoman right wing having been broken, Fāḍil Muṣṭafā himself led the attack to restore the position, but just as this was about to be achieved, he was struck in the forehead by a bullet and killed: the confusion consequent on his death led to the defeat and withdrawal of the Ottoman forces. The battle of Slankamen thus saw not only a serious military reverse but also the death of an able Grand Vizier from whom much might have been expected. Despite a thorough search, Fāḍil Muṣṭafā's body was not found. (For details, see Silāḥdār, ii, 583 ff; *Zubdat al-tawārīkh*, fols. 184 ff; Rāshid, ii, 161 ff; Hammar-Purgstall, *Histoire*, xii, 319 ff.)

Fāḍil Muṣṭafā Pasha, though Grand Vizier for less than two years, grasped the true needs of the state and demonstrated the ability to implement necessary reforms. He appreciated the political necessity of countering European hopes of defections from amongst the Christian subjects by taking account of their interests and by making reforms in connection with the *ğizya* and other obligations laid upon them (for the effects of the *ğizya* reforms, however, cf. BIRYA II—Ottoman, especially 565b). To ensure the independence of the Grand Vizierate, he took steps to limit the number and influence of the *bābā'ī* viziers. The practice of giving gifts (*ṣalāriyya*) to the sultans at *ğulūs* by state officials was ended in every provincial city he created councils of notables (*meğlis-i a'yān*), modelled on the imperial *dīwān*, to prevent the growth of local despotisms and to check abuses by keeping an eye on the judgements and procedures of *meğlis* and *maḥkama*. In Istanbul however, his failure to enforce the *narkh*, or fixed prices, on the grounds that the practice was not justified in the *sharī'a* and that trade should rest on the consent of the two parties, resulted in an increase in profiteering in his time of office. His learning particularly in the fields of *ḥadīth* and lexicography, his devotion to the *sharī'a*, his dignity and his sense of justice are widely attested. He had three sons: Nu'mān, 'Abd Allāh and Es'ad (Silāḥdār, ii, 586-587 ff; *Zubdat al-tawārīkh*, fols. 187 ff; Rāshid, i, 530, ii, 125, 148 ff.; Hammer-Purgstall, *Histoire*, xii, 307; Saint-Priest, *Mémoires*, 242 ff; Shayḫī, ii, 321 ff; *Amasya ta'rīkhi*, iv, 212 ff; U. Heyd (ed. Ménage), *Studies in old Ottoman criminal law*, Oxford 1973, 155).

IV. 'Amūdja-zāde Ḥusayn Pasha (nephew of Köprülü Meḥmed Pasha)—see 'AMŪDJA ZĀDE ḤUSAYN PASHA.

V. Nu'mān Pasha (?1083-1131/?1670-1719), Ottoman Grand Vizier, the eldest son of Fāḍil Muṣṭafā Pasha. Born in Istanbul, he studied under Demir-Kapili Fāḍil Süleymān and Kayserili Ḥāfiz al-Seyyid Aḥmed Efendi, among others, and became *mulāzim* of the Köprülü *sarīdj* after his father's death. While Muṣṭafā II was preparing for his second campaign against the Austrians, in 1696, he decreed that Nu'mān, like the administrators of other rich foundations, should take part in the campaign, providing 150 infantry. In Muharram 1112/July 1700, Nu'mān Beg became sixth vizier and was betrothed to 'Ā'isha Sultān, a daughter of Muṣṭafā II (*Silāḥdār ghayrī*). He became *beglerbegi* of Erzurum in Ramaḍān 1118/March 1707 and then, in Djumādā I 1114/October 1702, of Anatolia. His marriage to 'Ā'isha Sultān, set for the spring of 1703, was delayed in the confusion surrounding the uprising known as the *Edirne wak'asi* which led to the deposition of Muṣṭafā II (9 Rabī' II 1115/29 August 1703), who was replaced by Aḥmed III. Following this event, Nu'mān Pasha was appointed commander (*muḥāfiz*) of Eğriboz (Euboea), and by June 1704 he had become *muḥāfiz* of Crete, being charged with making a land survey (*taḥrīr*) of the fiefs on the island (Rāshid, iii, 137). Transferred to the command of Boghas Ḥiṣārī on 06 Shawwāl 1117/10 February 1706, he was shortly after returned again to Crete. Though

the marriage ceremony with ʿĀʾisha Sulṭān was celebrated in Muḥarram 1120/April 1708, it was still to be several years before the marriage was consummated.

Appointed again to Eğriboz in Ḏjumādā II 1121/August 1709, he was summoned to Istanbul four months later (Ramaḍān 1121/December 1709) to consummate his marriage (Rāshid, iii, 311-2, cf. *ibid*., iii, 317 *b*, however, where the consummation is said to have occurred in Muḥarram 1122/March 1710). He was made *beglerbeg* of Bosnia on 8 Shawwāl 1121/11 December 1709 but was then appointed to the command of Belgrade on 3 Ḏhu ʾl-Kaʿda 1121/4 January 1710 (Rāshid, iii, 313; cf. Uzunçarşılı, *Osmanlı tarihi*, iv/2, Ankara 1959, 291, who dates this appointment on 17 Rabīʿ I 1122/26 May 1710). On 18 Rabīʿ II 1122/26 June 1710, Nuʿmān Pasha was elevated to the Grand Vizierate in the hope that he would be more resolute against the Russians and better able to handle the problem of the supliant Swedish king, Charles XII, than his predecessor, Çorlulu ʿAlī Pasha had been (see ʿAlī Pasha Çorlulu; Akdes Nimet Kurat, *Isveç Kralı Karl XII.'nin Türkiye'de kalışı* . . , Istanbul 1943, 227, 229). His appointment was met with general satisfaction. Despite a strong movement in the government to concentrate attention on the Black Sea and the Polish question, Nuʿmān Pasha, trying to maintain peace with Russia, contented himself with announcing simply that a large army would see the Swedish king to his own country in the spring (see Rāshid, iii, 327; Ahmed Refik, *Memâlik-i ʿOsmâniyye'de Dimirbach Şhari*, Istanbul 1332/1913-14, 30 ff.; A. N. Kurat, *op cit*., 232 ff., idem, *XVIII yüz yılbaşı Avrupa umumi harbinde Türkiye'nin tarafsızlığı*, in *Belleten*, vii, 1943, 268 ff., Saint Priest, *Mémoires*, 120-1).

Disappointed in his handling of both external and internal affairs, Ahmed III removed Nuʿmān Pasha from the Grand Vizierate on 21 Ḏjumādā II 1122/17 August 1710; he was subsequently appointed *muḥāfiẓ* of Eğriboz (*Silāḥdār ghayri*; Rāshid, iii, 330-1. For a relation concerning his wish to resign from the Grand Vizierate, see Behdjetī, *Taʾrīkh-i sitāt-ı-Köprülü*) In the nine years before his death he held administrative and military positions continuously in various parts of the empire. He became *muḥāfiẓ* of Canea in Shawwāl 1122/December 1710, and of Kandīya in Ḏhu ʾl Kaʿda 1123/December 1711, while on 19 Shawwāl 1125/8 November 1713 he was given the *sanḏjak* of Yanya (Ioánnina) as an *ocaklık* (*Silāḥdār ghayri*). The next year he was given the *eyālet* of Bosnia together with the military command of the Karadaġh (*q.v.*) area. While in this post he moved against the rebels of Karadaġh who were receiving aid from the Venetians, hunted them down and drove those who escaped to take refuge with the Venetians (Shawwāl 1126/October 1714· Rāshid, iv, 22-3. For the decree sent to him about this problem, see Başvekalet arşivi, İbnülemin, dâhiliye, 2421).

Following this success, he was moved to the command of Belgrade (January 1715. *Silāḥdār ghayri*), where affairs were at a delicate stage, but under him, as in his predecessor's time, disorder in this frontier fortress increased, as did desertions from the local levies and the *kapıkulu* soldiery Dismissed because of this in Rabīʿ II 1127/April 1715, he was transferred to the governorship (*mutaṣarrıflık*) of the *sanḏjaḳs* of Īšī and Menteşhe and given the task of following the activities of the bandits who were profiting from the absence on campaign of the viziers and *beglerbegs* of Anatolia (Rāshid, iv, 237, 240 ff). In Shawwāl 1128/September 1716 he was made *beglerbegi* and *muḥāfiẓ* of Cyprus (*Silāḥdār ghayri*), and three months later he became commander (*serdār*) in Bosnia while retaining the governorship of Cyprus (for part of the firman of appointment, see Uzunçarşılı, *Osmanlı tarihi*, iv/2, 294, n. 1). During the period when the Austrians gained Belgrade (Ramaḍān 1129/August 1717), Nuʿmān Pasha beat back the enemy attack on Bosnia and forced the raising of the siege of Izvornik (October 1717) He remained active in the defense of Bosnia until after the signing of the Treaty of Passarowitz (on Shaʿbān 1130/21 July 1718) (see Rāshid, iv, 383; and for a copy of a decree sent to him in mid Ramaḍān 1130/August 1718, see Başvekalet arşivi, İbnülemin, dâhiliye, 2436) and was then transferred at his own request to the governorship of Crete in Ramaḍān 1130/August 1718. Falling ill as soon as he reached the island, however, he died in Kandīya on 16 Rabīʿ I 1131/6 February 1719 and was buried beside the mosque of Fāḍil Ahmed Pasha

Nuʿmān Pasha was accounted an honest and pious man of whom one author remarks that he would have been better suited to the office of *Shaykh al-Islām* than to that of Grand Vizier (Charles de Fernol, *Correspondance du Marquis de Ferriol*, Antwerp 1870, 220). He is said to have taking nothing from the estates attached to the various offices he held, but rather to have met his expenses exclusively from the income of the estates which he had inherited from his father (Behdjetī)

Both his younger brothers and, of his sons, particularly Ḥāfiẓ Ahmed Pasha (d. 1183/1769) made a mark in public life, as have other descendents of the family down to the present day (see Köprülü Mehmed Fuad).

Bibliography For further details and a more complete bibliography, especially of archival materials, see *IA* art *Köprülüler*, by M Tayyib Gökbilgin, on which this article is largely based.

(M. Tayvib Gökbilgin - R. C. Repp)

Köprülü, Mehmed Fuad, until 1934 Köprülüzade Mehmed Fuʾād (1890-1966), prominent Turkish scholar and the pioneer of Turkish studies to the modern sense in Turkey. Born in Istanbul, he was the son of Ismāʿīl Faʿiz Bey, a civil servant, a descendant of the sister of the famous Ottoman grand vizier Köprülü Mehmed Pasha (*q.v.*) who married Ḥibleli Muṣṭafā Pasha, one time vizier of Mehemmed IV His mother Khadidja Khānim was the daughter of ʿĀrif Hikmet Efendi, a member of the *ʿulamāʾ* of Islimye in Kumeli (Silven in present day Bulgatia) He was educated at Ayāspasha junior high school (*rüşdiyye*) and at Merdjān high school (*ʿādī*) in Istanbul Later, for two years he attended the School of Law (*Mekteb-i Ḥuḳūḳ*), which he left in 1909, but he was mainly self taught. After teaching in various schools, he was appointed in 1913, with Ḍiyāʾ [Ziya] Gökalp's support, to the chair of Turkish literature in the University of Istanbul, vacant upon the resignation of Khālid Ḍiyāʾ [*q.v.*], a position which he kept until 1939. He also taught at the School (later Faculty) of Political Science (*Seyasî Bilgiler*) and in the Ankara Faculty of Arts (*Dil ve Tarih-Coğrafya Fakülteleri*) (where he covered Ottoman history and institutions). He served for eight months as under secretary at the Ministery of Education in 1924 and was elected deputy from Kars in 1936 After 1939 he settled in Ankara and joined political life. In January 1946 he became one of the four

founders of the Democratic Party [see DEMOKRAT PARTİ]. Following the 1950 elections he became Foreign Minister (1950-5) and Minister of State in 1956, but resigned from the party on account of a rift with the other leaders. Following the revolution of 27 May 1960, he was arrested and briefly detained on Yassıada (in the Sea of Marmara) where all Democratic Party leaders were being tried, but he was acquitted on all charges in 1961 he founded the short-lived Yeni Demokrat Parti ("The New Democratic Party") and soon afterwards retired from political life. He died in Istanbul on 28 June 1966 as a consequence of an earlier traffic accident in Ankara.

Fu'ād Köprülü started his career as a poet and literary critic. His name began to appear towards the end of 1908 in various papers and periodicals particularly in the *Therwet-i Fünün* (*q.v.*). As a poet he belonged to the *Fecr-i Âti* group (*q.v.*), an extension of the *Therwet-i Fünün* school. In 1912 he mainly contributed to the daily *Ḥakk* and its literary supplement. He gradually switched to research and in 1913 he published in *Bilgi Mecmū'ası* (i, 3-52) his "Method in the history of Turkish literature" (*Türk edebiyyāti ta'rīkhinde usūl*). Like many young talents of his generation he came under the impact of Diyā' (Ziya) Gökalp [*q.v.*] and of the Turkist movement which he led (see TÜRKÇÜLÜK, and contributed many articles to *Türk yurdu* (1923), the organ of the movement and to the daily *Ikdām* where he serialised a study on folk poetry (February-June 1924). In 1915 he founded the journal *Millī tetebbu'lar mecmū'ası* ("Journal of National Research"), where he published some of his early important study on *'āshik* poetry (i, 5-46). In July 1917 Diyā' Gökalp founded the famous *Yeni Mecmū'a* ("the New Review") which gathered together all the leading young writers of the period and where Fu'ād Köprülü published his new style poems (in spoken Turkish, syllabic metre and on "national" topics as required by the new *Millī edebiyyāt* trend) and his articles of literary criticism and research. After the publication in 1918 of his epoch making monograph on "Early mystics in Turkish literature" i.e. Aḥmad Yesewī and Yūnus Emre (*Türk edebiyyātında ilk mutesawwifler*) and of the first two parts of his history of Turkish literature (*Türk edebiyyātında ta'rīkh*, i, 1926 and ii, 1927), Köprülü concentrated his research on the origins and development of classical Turkish literature and culture in Anatolia; the evolution of Turkish Islam and Ottoman institutions, the Turkish legal system, and the development of Turkish literature in other literary dialects e.g. Azerī and Chaghatay. His work shed new light on the formative period of Turkish literature in Anatolia very little research had been carried out in this field before him But his greatest contribution is to have treated the evolution of the many branches of Turkish literature and culture as one unit and to have studied its development as a whole. In 1924 he founded in Istanbul University the Institute of Turcology (*Türkiyyāt Enstitüsü*) and his organ the *Türkiyyāt Mecmū'ası*. Apart from his many articles (some of which are independent monographs) published in various scholarly journals, particularly *Ḥayāt*, *Türkiyyat Mecmū'ası*, *Edebiyyāt Fakültesi Mecmū'ası*, *Belleten*, *Türk hukuk ve idāri tarihi mecmuası*, and the Turkish edition of the *Encyclopaedia of Islām* (*İslâm Ansiklopedisi*), Köprülü is the author of the following major works. *Türkiyye Ta'rīkhi*, i ("History of Turkey"), Istanbul 1923 (covers the period up to the settlement of the Turks in Anatolia); *Ḥadīthlī edebiyyāt* ("Literature of today"), Istanbul 1924 (collection of early articles on literary criticism and book reviews), *Türk edebiyyāti ta'rīkhi*, i, Istanbul 1926 (revised and enlarged edition of the two parts published in 1920-8); *Millī edebiyyat devrenlerinin ilk mubeshshirleri* ("Forerunners of the national literature movement"), Istanbul 1928 (contains selections from the 10th/16th century poet Edirnelī Nazmī who experimented with "pure Turkish"); *Türk dili ve edebiyatı devrende araştırmalar*, Istanbul 1934 (a collection of research articles and book reviews); *Les origines de l'empire ottoman*, Paris 1935; and *Türk sazlerī*, in 3 volumes, the first of which is published for the first time (Istanbul 1962).

KÖPÜZ [see °ün]

KÖRÄ or **KÖRÄ DJAHĀNĀBĀD**, an ancient town of northern India in the Khadjuhā *tahsīl* of Fathpūr District in the former British United Provinces, now Uttar Pradesh It lies in lat. 26° 7′ N. and long. 80° 22′ E on the Rind River some 12 miles/20 km. from the Djamnā (Jumna) River between Kānpūr (Cawapore) and Fathpūr.

In early times it was apparently held by the Rādjput line of the Rādjās of Argal, and the fortress there may have been their ancestral centre Under the Mughals, Kōrā (sometimes spelt in Marāthī and Persian sources as Kurrah, and to be distinguished from Kārā Manikpūr, an adjacent but separate *sarkār*) formed a *sarkār* or district of Allāhābād *ṣūba* or province, with a revenue of 27,400,000 *dams* (Abu 'l-Faḍl, *Ā'īn-i Akbarī*, ii, tr. Jarrett and Sarkar, Calcutta 1949, 178). The great Mughal highway connecting Allāhābād with Āgra ran through Kōrā, and a bridge was built in ca. 1770 to carry the road over the Rind. During the fighting of the middle decades of the 18th century between the Marāṭhā invaders and the troops of the titular Mughal emperors and the Nawwāb-Wazīrs of Awadh or Oudh, Kōrā played a considerable rôle. A copper coin of Akbar's is known from the Kōrā mint, and it was a mint town of the later Mughals from Shams al-Dīn Rafī' al-Daraḏjāt (1131/1719) onwards.

During the 19th century, the population of both Kōrā proper and of Djahānābād, the township adjoining it to the north-west declined (populations of 9,806 and 4,379 respectively on 1901, the proportion of Muslim to Hindus being then 44% and 27%

KORČA, modern Turkish Korçe, Greek Koritsa, Ottoman Görice, all from the Slavic toponym "Gorica."), the only urban centre of importance in southeastern Albania, situated at the edge of the homonymous plain at the foot of the Moravë Mountains, which constitute the natural barrier

between the Korča plain and Macedonia. Korča was one of the most important towns founded by the Ottomans in Albania. Throughout the Ottoman period (late 14th century till 1912), Korča was a local administrative centre (*nāḥiye*, *każā'*), and latterly the capital of a *sanǧaḳ* in the *wilāyet* of Manastır (Bitola) and a small Islamic centre.

The Ottomans annexed the eastern part of the present-day Albania in the last decade of the 8th/14th century and established their regular administration there, with the castles of "Göriçe" and Premedi (Përmet) as bases. A *terminus ad quem* for the conquest, not recorded it seems by the Ottoman chroniclers (ʿĀṣıḳpaşazāde, Oruç, Anonymus-Giese, Neşrī, Saʿd al-Dīn), is the church of the village of Mborje 3 km. east of Korča on the flat spur of the Moravë, which church was, according to its well preserved inscription, built by Bishop Niphon in the year 1390. Throughout the entire 15th century the name "Göriçe" seems to have been used for a castle on the spur of the Moravë between the village of Mborje and the place where the town of Korča lies today. The Ottoman documents from the early period use "Enbornye" (from Emporion) and "Göriçe" indiscriminately. A fragment of a *tīmār* register from Ṣafar 886/April 1482 mentions a *ḥiṣār* of an "Iskāk the Albanian" situated in the ' *nāḥiye* of Göriçe". This *ḥiṣār* included eight small villages (mostly with Slavic names), of which one numbered six Muslim households and two households of Christians (Sofia, National Library, Orient. Dep., No D 649, p. 28). The document is an indication for the early start of the Islamisation of the district of Korča, an Islamisation which was not solely restricted to members of the old native nobility. The castle of Göriçe was maintained throughout the 15th and the first half of the 16th century. When it disappeared is apparently not recorded. A *ḥāṣṣ defter* (Başbakanlık arşivi [= BBA] T. D 70, p. 257) from 925/1519 mentions a *ǧemāʿat* of Christian *müsellems* of the castle. The village of ' Enborye, dependent on Göriçe" numbered, according to the same document, 18 households of Muslims, 7 Muslim bachelors, and 68 households of Christians as well as 10 Christian bachelors and 12 widows. According to a *ḥāṣṣ defter* of 936/1529-30, the same village numbered 15 Muslim households, 4 Muslim bachelors, 4 people with a *berāt*, 1 *sipāhī ʿādo*, and 101 Christian households and 25 Christian bachelors (BBA. T. D. 267, p. 172). The same document states that there was a *ǧemāʿat* of Christian *müsellems* in the castle of Göriçe consisting of 22 households and 9 bachelors. These *müsellems* were freed from *ispenǧe*, *ʿawārıż* and *tekālīf-ı örfiyye* in exchange for the fulfilment of the duties of repair and maintenance of the castle. Besides these privileged Christians, there was a *ǧemāʿat* of 5 Christian families in the castle who had to deliver yearly 1,500 arrows, for which service the state freed them from paying the *ʿawāriḍ* and the various *tekālīfāt*, but they had to pay *ʿöşr*, *ǧiftye* and *ispenǧe*. The *ḫāṣṣ* Aydın, son of Dimitri, thus a recent convert, was freed from *ḫarāǧ*, *ispenǧe*, *ʿawārıż* and *tekālīf-ı ʿörfiyye* for the service of keeping the water supply of the castle in good order.

The actual town of Korča is an Ottoman foundation, intentionally founded in order to form a Muslim urban centre in the district. The history of the foundation of Korča can be reconstructed with help of some Ottoman documents. In 891/1486 the Master of the Imperial Stables (*Mīrāḫōr*), Ilyās Beg, received from Bāyezīd II the village of Bostinče (Boboštice, 7 km. south of Korča), dependent on Göriçe, as full possession (Gökbilgin, *Edirne ve Paşa livâsı*, 426). In 901/1495-6 the same person constructed a mosque and some other buildings in the village of Piskopiye near Göriçe. In 920/1504-5 Ilyās Beg drew up the *waḳf-edme* for his mosque in Istanbul, (the former Studion Basilica near Yedi Kule) and for his foundations in Piskopiye: a mosque, an *ʿimāret* (in the sense of a building for the distribution of food to the poor), and a *maḥalle-i maḥṣūṣa*. For the upkeep of these foundations, he allotted the tax revenue of four villages in the district of Korča (including Bostinče and Piskopiye), the revenue of a village near Premedi a *ḥammām* and seven shops in Istanbul, and another *ḥammām* and a mill in Jannina (Yanya) in Epirus (extract of the *waḳfiyye* by Gökbilgin, *Paşa livâsı*, 427-8). The full extent of the foundations of Ilyās are not known, with certainty. According to a late 18th-century source, the *Ḥadīḳat al-ǧewāmiʿ*, Istanbul 1281/1864-5, I, 198, Ilyās Beg founded "benevolent works like an *ʿimāret*, a mosque, a *madrese*, and a *mekteb*" in Korča. The *Kāmūs al-aʿlām*, (v, 3929) mentions "a blessed mosque, a *madrese*, an *ʿimāret* and a *tekke*." Local tradition also attributes a *ḥammām* to Ilyās Beg. The *Kāmūs* states explicitly that the Beg "laid the foundations of the town" by building the above-mentioned objects. It is possible that Ilyās Beg, or his sons, added to the foundations of 910/1504-5 at a later date.

The *Kāmūs* further states that Ilyās was one of the dignitaries of the time of Meḥemmed Fātiḥ and tutor and *atābēg* of Bāyezīd II. The *Ḥadīḳat* noted that he was an Albanian by birth and that he was buried in Göriçe. In a *waḳfiyye* of 913/1507-10 (see Gökbilgin, *Paşa livâsı*, ii, 222), he styles himself "Ilyās Beg b. ʿAbd Allāh". He was thus of local Christian origin. Ilyās Beg was married to the Ottoman princess Hundī Ḫātūn, daughter of Murād II and Umm Kulṯūm Ḫātūn. The place where he erected his buildings, Piskopiye, explicitly styled a " village" in the 910 *waḳfiyye* must have been the seat of a local bishopric in pre-Ottoman times. The *Kāmūs* states that Ilyās Beg constructed his buildings on the site of a destroyed old monastery. The name "Göriçe", sc. Korča, came to be used for the new urban settlement which developed around the nucleus formed by Ilyās's buildings. In the Istanbul *Taḥrīr* of 953/1546, edited by Barkan and Ayverdi (Istanbul 1970, 375), the buildings of Ilyās are situated in the *maḥalle* of Göriçe. The new settlement thus supplanted the old one and probably absorbed its population, as it did with that of Mborje or Enborye 3 km. away from the new centre. The latter sank down to a hamlet of a few houses around the preserved Byzantine church of 1390.

The development of Korča in the 18th and 17th centuries cannot have been a spectacular one. Ḥāǧǧī Ḫalīfa (tr. Von Hammer, *Rumeli und Bosna*, 141) mentions it in the first half of the 17th century as an administrative subdivision of the *sanǧaḳ* of Ohrid. Ottoman lists of the *mufaṣṣal*s of Rumeli from 1078/1567-8 and 1203/1788 mention Göriçe as the seat of a *ḥāṣṣ* of one of the lowest orders (Özergin in *Uluçarşılı armağan*, Ankara 1976, 265, 300). Neither Muḥammad ʿĀṣıḳ nor Evliyā Çelebi describes Korča, nor does Marie Bizzi or other travellers, without doubt because it lies almost 80 km. off the Via Egnatia, the main road through the country.

In the second half of the 18th century, the development of the town received a strong impetus from the immigration of inhabitants of the Walachian trade metropolis of Voskopoje (Moschopolis), 20 km. due west in the mountains. Between 1768 and 1779 this

large Albanian settlement fell prey to the disorder which at that time reigned supreme. The French consul of Thessaloniki, Félix Beaujour, and the British traveller Colonel Leake, both writing in the first decade of the 19th century, describe Korča as a place with 450 houses and a population of 3,000 souls. After that time the development of the town increased at speed. J. G. von Hahn (*Albanische Studien*, Jena 1854, 55) spoke of "dem rasch aufblühenden Gjortscha." Other sources mention 10,000 inhabitants in 1859. In the eighties of the last century, Sāmī Bey describes the town in his *Kāmūs al-aʿlām* as a place with 18,000 inhabitants, 757 shops, 23 *khāns*, two mosques, one *medrese*, one *tekke*, one *ʿimāret*, two *hammāms*, a clock tower and four churches. At the end of the century the town was burnt down in a general conflagration. It was rebuilt under Ahmed Eyyub Pasha according to a new and modern plan with wide and straight streets which crossed at a right angle, a plan which still characterises the place. Between 1887 and 1900 Korča possessed a special Albanian school, the very first school where lessons were given in the Albanian language. As such, the place played a role of first importance in the development of Albanian nationalism.

From the sixties of the 19th century, Korča was the capital of a sizeable *sandjak* which comprised much of south-eastern Albania and a part of present day Greek Macedonia. Around 1900, Heinrich Gelzer numbered 2,027 houses in Korča, of which 1,420 were inhabited by Albanian Orthodox Christians, 102 by Vlachs and 505 by Muslim Albanians (*Vom Heiligen Berge und aus Makedonien*, Leipzig 1904, 200). Other sources also mention population two-thirds Christian and one third Muslim. During the upheavals of the Balkan Wars (1912-13), the town suffered particularly from the struggle between pro-Greek Albanian-speaking Christians and Albanian nationalists, both Muslim and Orthodox. During the French occupation, in 1916, a short lived "Republic of Korča" was proclaimed. After the First World War, Korča remained within the frontiers of the new Albanian state. According to a French census of 1926 it numbered 22-23,000 inhabitants, of whom 17,779 were Orthodox and 5,464 were Muslim, all Albanian-speaking (Justin Godart, *L'Albanie en 1921*, Paris 1922, 94). The total number in the district of Korča was 39,533 Muslims and 17,871 others. At present, the number of inhabitants of the town has passed the 50,000 mark.

Korča is the native town of the Ottoman Montesquieu", Koči Bey [*q.v.*]. His family lies buried in the yard of the Mirākhor Mosque. The famous man himself rests, according to Bursalī Mehmed Ṭāhir's *ʿOṯmānlı muʾellifleri*, in the graveyard along the Manastir Road, but according to Babinger (*Geschichtschreiber*, 285), in the yard of the Korča mosque itself. The family of the famous viceroy of Egypt, Muḥammad ʿAlī [*q.v.*] also came from Korča.

Korča is today a modern industrial centre, manufacturing textiles. The mosque of Mirākhor Ilyās Bey remains standing and is, together with the *türbe* of the Beg, an officially recognised Monument of Culture. It lost its tall minaret during the fury of the Albanian Cultural Revolution of the spring of 1967. The mosque is one of the best examples of early classical Ottoman architecture in the country, a building which contributed considerably to the formation of Islamic architectural forms in Albania in the succeeding centuries.

Bibliography. Given in the text, but see also A. Birken, *Die Provinzen des osmanischen Reiches*, Wiesbaden 1976, 71 (The *Tapu defters*, preserved in Istanbul and Sofia, have not yet been published).

(M. Kiel)

KORDOFĀN (Kurdufān) a region of the Democratic Republic of the Sudan lying west of the White Nile roughly between lats. 16° and 10° N. and longs. 32° and 27° E.; it is now divided into two provinces, Northern and Southern Kordofān, with a population of 3,103,000 (1973 census). The name, often pronounced locally and earlier written as Kordofāl, is said to come from a small hill some ten miles south-east of al-Ubayyiḍ (lat 13° 11′ N., long 30° 14′ E.); before the present century the name referred to the central settled area rather than to the whole region.

1. Geography and ethnology

A vast (about 147,000 square miles) open plain, forming a segment of Africa's Sudanic Belt, Kordofān may be divided into a number of ecological zones; the semi desert in the north, a central *bor* (stabilised sand dune) zone and the Nuba Mountains of the south-east. The mean annual rainfall ranges from less than 100 mm. in the far north to between 6 to 800 mm. in the south, the human ecology reflects this transition from camel and sheep nomadism in the northern zone which itself merges into the Bayūḍa Desert, to mixed hoe agriculture and pastoralism in the central zone and cattle nomadism in the south. Only in the Khayrān depression north of Bāra is irrigated agriculture practised.

The ethnography of Kordofān is complex, being historically the result of an Arab or Arabised component immigrating and intermingling with a discrete indigenous population, Arab nomads and semi-nomads, predominantly Kabābīsh, Dār Ḥāmid, Ḥamar and Ḥilāyziyya live in the north and centre, while in the south the cattle nomads (*Baḳḳāra*), Muṭriyya, Ḥumr and Hawāzma, form but a part of the "Baḳḳāra belt" that stretches west to Lake Chad and east across the White Nile. The towns, established in the 18th century mainly by Dja'alliyyān and Danāḳila immigrants from the Nile Valley, are found in the central zone, al-Ubayyiḍ, Bāra, Umm Ruwāba and al-Rahad, an area of rain-fed agriculture which produces Kordofān's main export, gum arabic from the *haḳīḳ* tree (*Acacia senegal*). The Nuba Mountains are inhabited by a medley of ethnic groups, whose generic name, Nuba, conceals a linguistic and ethnic diversity which defies generalisations; at least thirty languages belonging to several different language groups are spoken. In the 20th century, partly because of colonial policies, the Nuba have increasingly moved their settlements down from the mountains onto the plains below.

2. History

Neither the name nor any certain information about the region appear in the mediaeval Arabic geographical literature; nor can anything very certain be said of the early peopling of Kordofān or of the course or chronology of the Arab immigration. A letter from the ruler of Bornū dated 794/1392 to Sultan al-Ẓāhir Barḳūḳ of Egypt may imply the penetration of Djudhām and other Arab nomads through Kordofān and beyond to the Lake Chad region (al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, viii, 125 ff.; Yūsuf Faḍl Ḥasan, *The Arabs and the Sudan*, 163), but of the two possible directions from which the original Arab nuclei of the modern Baḳḳāra tribes might have come, North Africa seems more likely than the Nile. The Baḳḳāra tribes in their present formation probably do not go

back beyond the 17th century. Oral traditions remember the existence of an Arab nomad confederation, the Fazāra, in Northern Kordofān in the 10th-11th/16th-17th centuries; recent research has discovered references to Egyptian merchants trading with merchants from *barr al-ʿādān fāsher ca.* 1530. The Kābabīsh of Kordofān and the Zayyādiyya *al* Dār Fūr [*q.v.*] appear to have emerged out of the débris of this confederation. In turn, it would appear that the earliest Arab penetration cannot be dated much before the 8th/14th century, probably following the collapse of the Christian Nubian kingdoms of the Nile Valley.

Fundj, Musabbaʿāt and Fūr rule. Following the emergence of the Islamised Fundj [*q.v.*] sultanate of Sinnār at the beginning of the 10th/16th century, Kordofān experienced a secondary wave of Arabisation and Islamisation through commercial and political influences from the Nile Valley and the missionary activities of itinerant *fakīhs*. The spread of Islam among the indigenous inhabitants is illustrated by the emergence of Takalī, a small Islamised kingdom, whose foundation at least as a Muslim state is traditionally ascribed to Muḥammad al Dafaʿallāh, *a fakīh who came from the north in about* 935/1530. Occasional glimpses of this spread of Islam may be found in the biographical dictionary of Wad Ḍayf Allāh; in the early 11th/17th century Tāj al-Dīn al-Bahārī from Baghdād visited Takalī. Later in the century the *fakīh* Ibn al Kaddāl visited Kordofān, he taught a local *fakīh*, Dawdat Allāh, whose son Mukhtār was killed by Dhankal (see below) (Muḥammad al-Nūr b. Dayf Allāh, *Kitāb al-Ṭabakāt*, ed. Yūsuf Faḍl Ḥasan, Khartoum 1971, 227-9, 87-8, 130, 345-6).

In historic times Kordofān became a "buffer territory, now the prey of its eastern, now of its western neighbours" (MacMichael, *Kordofān*, 5), that is, between Sinnār and the rising Dār Fūr sultanate (established *ca* 1650). Bādī II of Sinnār (1054 9a/1644-5 to 1681) invaded and subdued Takalī, and Sinnār and occasionally recruited Nūba as mercenaries. Thereafter Sinnār exercised an informal hegemony over central and eastern Kordofān through their protégés, the Ghudiyyāt, living to the south of al-Ubayyid, some of whose chiefs appear in Fundj documents with the title *shaykh Kurdufān*.

Sinnār's overlordship was disputed in the late 17th and 18th centuries by three generations of Musabbaʿāt (sing. Musabbaʿāwī) chiefs, who attempted to carve out a kingdom for themselves in Kordofān. By origin from Dār Fōr, Dhankal, ʿIsāwī and Hāshim, grandfather, father and son, attempted to play off Sinnār and Dār Fūr against each other.

Although the Musabbaʿāt succeeded in ousting the Fundj, in about 1200/1785-6 Hāshim's activities provoked an invasion by Sultan Muḥammad Tayrāb (*ca.* 1166-1200/1752-3 to 1785-6) from Dār Fōr. Thereafter, despite Hāshim's attempts at resistance, Kordofān was ruled by Dār Fūr. Among Dār Fūr's governors (*mahdūm* pl. *mahādīm*) in Kordofān, Muḥammad Kurra and Musallam al Tarjāwī encouraged trade in gum, ostrich feathers and slaves, granted land to *fakīhs* and others around al-Ubayyid and Bārā, and curbed the nomads.

Turco-Egyptian rule 1821-85. In 1821, as part of a wider invasion of the Northern Sudan, Muḥammad ʿAlī Pasha [*q.v.*], *wālī* of Egypt, sent an expedition of 3 to 4,000 troops and an artillery battery under his son-in-law, the *defterdār* Muḥammad Bey Khusraw, to conquer Dār Fūr and Kordofān (al Dabarī, *ʿAdjāʾib al-āthār*, iv, 318). After successfully crossing the desert, the *defterdār*'s army destroyed the Dār Fūr garrison and killed the *mahdūm* Musallim at Bārā on 30 August 1821; Khusraw was prevented from invading Dār Fūr by a fierce revolt along the Nile. Al-Ubayyid continued as the capital of what was now a province of the Turco-Egyptian Sudan, although the actual administrative arrangements fluctuated greatly (the governors are listed in R. L. Hill, *Rulers of Sudan, 1820-1885*, in *Sudan Notes and Records*, xxxiii/1 (1952), 65-95).

Muḥammad ʿAlī had conquered the Northern Sudan to obtain slaves and gold. Kordofān yielded both, some alluvial gold from Djabal Shaybūn in the Nūba Mountains and slaves from those owned within Kordofān or captured by Bakkāra raids upon the Nūba and other southern peoples. As in other parts of the Sudan, the authorities themselves organised slave raids to the south; Rustum Bey (governor 1826-33) on one raid in 1830 seized 1,400 captives. Despite prospecting by W. P. F. S. Rüppell, J. von Russegger and others, the hopes of substantial gold deposits proved largely chimerical. For most of the Turco-Egyptian period neither the Bakkāra nor the Nūba were ever brought under an effective *administration*; Djabal Takalī put up a particularly prolonged resistance.

The Mahdiyya 1883-98. Kordofān was the scene of the first and final acts of the Mahdiyya [see KHALĪFA, iv. In the Sudanese Mahdiyya]. Although its history belongs to the wider history of the Mahdist Sudan, events in Kordofān contributed decisively to the success of the Mahdist Revolution. Thus, among the Djaʿaliyyūn settled in the province, a bitter conflict had developed between two factions led by Ilyās Pasha Umm Birayr and Aḥmad Bey Dafaʿ Allāh al-ʿAwadī. The former was appointed Governor of Kordofān by C. G. Gordon, but was dismissed following a revolt by the Ghudiyyāt instigated by his rivals. It was with Ilyās and others, embittered with the Turco-Egyptian régime, that Muḥammad Aḥmad, the future Mahdī, made contact on a visit to al-Ubayyid, probably in 1879.

Following his manifestation (*ẓuhūr*) on 29 June 1881 and initial successes against the Turco-Egyptian authorities, the Mahdī following prophetic precedent, made his withdrawal (*hidjra*) into Kordofān to Djabal Kadīr in the Nūba Mountains. It was in Kordofān that the Mahdī found the support and won the victories that finally established his rule, on 19 January 1883 al-Ubayyid finally capitulated and the destruction of the Hicks Pasha relief expedition at Shaykān, south of al-Ubayyid, on 5 November 1883 gave the Mahdī complete control over Kordofān. In the context of these victories, Gordon's proposal that the Mahdī be made "Sultan of Kordofān" was derisory.

During the Mahdist period, Kordofān was basically administered from al Ubayyid by a deputy governor (*wakīl*), but for most of the period was combined with Dār Fūr to form one great province of the West (*ʿimālat al gharb*) under ʿUthmān Ādam (1888-91) and Maḥmūd Aḥmad (1891-96). Not everyone in Kordofān accepted the Mahdiyya; the Kabābīsh under their Shaykh, Sālih Faḍl Allāh Sālim, who was in touch with the Anglo-Egyptian authorities, resisted until he was killed in May 1887. A revolt of a different nature was the mutiny of the *djihādiyya*, slave troops armed with rifles, at al-Ubayyid in 1885, they marched off to the Nūba Mountains killing the provincial governor, Maḥmūd ʿAbd al-Kādir, when he attempted to stop them.

In late 1896, under the threat of the Anglo-Egyp-

tian advance, the *Khalīfa* ʿAbdallāhi ordered Mahmūd Aḥmad to march east with the bulk of the forces of Kordofān and Dār Fūr. After the defeat of Karrārī (Omdurman) on 2 September 1898, the *Khalīfa* withdrew to his eastern Kordofān to Shirkayla, he was hunted down and killed at Umm Dibaykarāt, near Kosti, on 24 November 1899.

Condominium rule 1898-1956 and independence. At the outset of Anglo-Egyptian Condominium rule in the Sudan, Kordofān was in a state of chaos; bands of Mahdist supporters roamed un checked and the tribal order had largely disintegrated both as a result of the deliberate policy of the *Khalīfa* and through the loss of herds and slaves. Order was gradually imposed by punitive patrols, the Nūba under their *mahās* (chiefs) and *hukkāms* (ritual experts) forming particularly strong pockets of resistance until the 1920s. By 1927 the railway joined al Ubayyiḍ to Khartoum and the gum trade was revived.

In the 1920s direct military administration gave way to "Indirect rule", and local administration came to be largely committed to the tribal chiefs. Tribes like the Kabābīsh under a strong leader, Sir ʿAlī al-Tūm Faḍl Allāh Jālīm (1874 1938), prospered, others, such as the Hamar, were re-assembled from the fragments left by the Mahdiyya. Al-Ubayyiḍ grew rapidly as the centre for the gum trade.

Since independence (1 January 1956) Kordofān has been one of the most prosperous and peaceful regions of the Sudan, although the rapid encroachment of the desert has become a major threat. Provincial and local government reorganisation in the early 1970s has largely transferred power from the tribal leadership to the administrators and locally-elected committees of the Sudanese Socialist Union.

(R. S. O'Fahey)

KORDOS, the Ottoman Turkish name of the ancient Greek city of Corinth in the Morea [q.v.]. It has a naturally fortified citadel (Ἀκροκόρινθος) overlooking a fertile plain (whose main product is currants) and dominating the isthmus between continental Greece and the Morea or peninsula as well as the two adjacent ports on either side. Corinth remained under Byzantine rule up to 1210, when it was conquered by the Crusaders, it passed to the Florentine family of the Accaiuoli (1358), to the Greek despot of the Morea (1395), to the Hospitallers of Rhodes (1400) and again to the Greeks (1404). The region of Corinth was attacked by the Turks of Aydın in 1327, and in 1361 it is reported to have been deserted owing to Turkish raids. The city was attacked by the Ottomans under Evrenos in 1395 and conquered after a siege by Meḥemmed II in 1458. In 1488-9 Corinth had a Christian population of approximately 18,000, after ca. 1490 the existence of Albanian settlements was signalled in the region. According to Ewliyā Çelebī, it formed a *sanǧaḳ* of the *eyālet* of the Morea (*Seyāḥat-nāme*, i, 185). In 1684 it was temporarily conquered by the Hospitallers of Rhodes, in 1686 it passed to the Venetians and again to the Ottomans in 1715. Finally, in 1822 (the second year of the Greek War of Independence) it was taken by the Greeks.

(E. A. Zachariadou)

KÖRFÜZ, KÖRFÜS (the first spelling in e.g. Pīrī Reʾīs and Rāshid, the second in Peçevī), the Turkish name for the island of Corfu off the coast of Epirus. Pīrī Reʾīs gives a full account of the island, together with a map, in his *Baḥriyye* (ed. Kahle, Berlin and Leipzig 1926-7, i, 113-16, No. 54). The Ottomans never succeeded in dislodging from Corfu the Venetians, who controlled it from the opening of the 15th century until 1797, but there were two major Turkish attempts to occupy the island.

The first took place in Rabīʿ I 944/August 1537 in the reign of Süleymān the Magnificent. The fleet assembled in spring of that year at Awlonya under the great corsair captain Khayr al-Dīn Barbarossa and Luṭfī Pasha, then third *wezīr* [q.v.], with the sultan in charge of the land forces. The town of Corfu was besieged for 43 days, but with the approach of winter, the Turks withdrew, the sultan returning to

Edirne whilst the fleet attacked and plundered Cephalonia (see Peçevī, *Taʾrīkh*, Istanbul 1283/1866-7, i, 194 seq.; Ḥādjdjī Khalīfa, *Tuḥfat al-kibār*, tr. J. Mitchell, *History of the maritime wars of the Turks*, London 1831, 55 ff., drawing on the *Ghazawāt nāma* of Sayyid Murād, see Ibn. to KHAYR AL-DĪN PASHA, BARBAROSSA). The second and last attempt took place in 1124/1716 under Aḥmad III, towards the end of the Ottoman reconquest of the Morea [q.v.] from Venice, when the attack was led from the land by the Ser-ʿaskar Kara Muṣṭafā Pasha and from the sea by the Kapudan-ı Deryā Meḥmed Pasha, and was again unsuccessful (Rāshid, *Taʾrīkh*, Istanbul 1281/1865-6, iv, 186, 189, 246).

Bibliography. given in the article; for a good general account of Corfu's history, see *Enciclopedia Italiana*, art. *Corfù*, and for the two Ottoman campaigns, Danişmend, *Izahlı osmanlı tarihi kronolojisi*, ii, 285 ff., iv, 9 (ED.)

KORITZA [see KORČA].

KORKUD b. BĀYAZĪD, ABŪ ʾL-KHAYR MUḤAMMAD (874 919/1470-1513), Ottoman prince and eldest of the eight sons of Sultan Bāyazīd II [q.v.]. He was born in Amasya where his father was governor (Laṭīfī, *Tadhkira*, 66, Niṣhāndjī Meḥmed Pasha, *Taʾrīkh*, 181; Cf. Kemāl pasha zāde, *Tawārīkh-i āl-i ʿOthmān*, Millet mss. 32, f. 23 etc., and Ḥüseyin Husameddin, *Amasya tarihi*, iii, 226). He spent his childhood and had his early education in the Old Palace at Istanbul in the care of his grandfather Meḥemmed II, after whose death in 886/1481 he was briefly placed on the throne, for some 17 days, by the Janissaries until his father returned from Amasya to assume power. Later, Korkud returned to Amasya and in 898/1492 was appointed governor of Sarukhān. His request to have the governorship of Bergama instead of Manīsa was refused by his father, and perhaps upon the suggestion of his brother Aḥmad, governor of Amasya now, he was transferred to the governorship of Teke and Antalya in 907/1502. Shortly afterwards, the *sandjak* of Ramīd with a *khāṣṣ* of 845,363 *akçes* and the *zaʿāmet* of Lāzkiyye, amounting to 200, 721 *akçes*, were added to his personal *khāṣṣ* of 837,091 *akçes* (see the *fermān* of Dhu ʾl-Kaʿda 908/May 1503 in Topkapu Saray arşivi E 8336).

The fact that his father and the leading state dignitaries headed by the Grand Vizier Khādim ʿAlī Pasha, favoured Aḥmad as heir to the throne offended Korkud, and cause him to withdraw into seclusion on Antalyan coast (Muḥarram 914/May 1508; see ʿĀlī, *Kunh al-akhbār*, Istanbul Univ. Libr., Tkmh. 909, 5959, ii, f. 152), despite his *khāṣṣ* being increased to 2,502,755 *akçes* (for the *fermān* dated 5 Shaʿbān 914/29 November 1508 and sent to Korkud, see TKSA E 6357). He obtained permission to go on the Pilgrimage, and left for Egypt with 50 men and 87 slaves in Muḥarram 915/May 1509, sailing with five ships under the *Raʾs* Ab bash. He landed at Damietta after five days and arrived in Cairo on 9 Safar/29 May (for details, see ʿĀlī, f. 153), but did not feel that he was wholly welcome (details in TKSA, various letters to dossier No. 6684). However, it is clear from the Mamlūk sultan's letters to Bāyazīd II that he was pleased to welcome Korkud, but after a month was able to convince the latter to return, in the light of "a son's obedience due to his father". Korkud received the promise of restoration to his governorship, and set sail back to Turkey.

Despite an attack by the Knights of Rhodes on his Egyptian escort off the shores of Tekke at the end of 916/beginning of 511, Korkud was able to get through to Antalya and to send a warning letter to Sayyidī Yūnus, who was coming an inter from Egypt with baggage, to postpone sailing in order to avoid attacks by the Knights (TKSA, letter in dossier No. 6684). It is recorded that his health deteriorated on his return and that he asked for treatment from the physician ʿAlāʾ al-Dīn (letter to the Vizier in ibid.). Meanwhile, he was dismayed to hear of the appointment of his younger full brother Selīm to Sarukhān (TKSA E 3587 in ibid.), and he immediately left Antalya for that province (Dhu'l-Ḥidjdja 916/March 1511). His sudden departure from Tekke brought about the outbreak of a Shīʿī inspired rising under Shāh Kulī in that province, and the Grand Vizier Khādim ʿAlī Pasha had to be sent to suppress it.

Meanwhile, Korkud was being informed of Selīm's movements, and sent a letter to the latter adjuring him not to act precipitately (TKSA dossier 6684). At the same time, he was aware of Aḥmed's ambitions for the throne. Certain of the court officials, aware of Bāyazīd's intention to proclaim Selīm the heir, invited Korkud to the capital. He travelled to Istanbul in disguise and went to the mosque of the Janissaries, seeking their support in a bid for the throne. Although they held him in respect, they considered him less capable as a potential ruler than Selīm. Selīm arrived at Istanbul on 22 Muḥarram 918/19 April 1512 in order to forestall Aḥmad [for details, see BĀYAZĪD II], and ascended the throne on the abdication of his father. He then gave Korkud the governorship of the island of Midilli, together with Sarukhān again (Saʿd al-Dīn, *Tādj al-tawārīkh*, ii 204). But Korkud also demanded the *sandjaks* of Aydın Manīsa and Teke, so that Selīm, considering him a threat to the throne's stability, marched secretly to Manīsa and surrounded Korked's palace there. Korkud managed to escape with his confidant Piyāle, disguised, but was betrayed by the governor of Tekke Ḳāsım Beg and caught near Antalya. He was strangled in his sleep by the *Kapidjī-bashī* Sinān Beg's men at Egrigöz on the way back to Bursa, and was buried near Orkhān Ghāzī's tomb in Bursa (Muḥarram 919/March 1513; Saʿd al-Dīn, ii, 230 ff.).

Korkud was highly educated, and skilled as a poet and musician, being able to play many types of musical instrument (Sehī, *Tadhkira*, 18). His verses, written under the pen-name of *takhallus* of Marḥūl, were collected into a *dīwān*. He wrote several works in Arabic, including commentaries and *ḥāshiyas*. His extant works include (1) *Wasīlat al-ajnād* (dated 25 Ṣafar 915/4 June 1509, autograph in Aya Sofya 3529), (2) *Ḥall ishkāl al-afkār fī ḥill awwāl al-muffār* (Aya Sofya 2142), (3) *Daʿwat al-nafs al-ṭāliba ila ʾl-aʿmāl al-ṣāliha* or *Kitāb al-Ḥarīmī fī ʾl-tasawwuf* (thus in the 20th copy in R. Yelkenci; in Aya Sofya 2763, this is simply called *Kitāb fī ʾl-tasawwuf*); (4) *Sharḥ nifāḥ kafr* or *Hāfiz al-muʾmin ʿan ifāḍ al-aymān* (Aya Sofya 2289); (5) *Korkudiyya* or *Fatāwā-yi Korkudkhāniyya* (see *Kashf al-ẓunūn*, ii, 1228), and (6) *Dīwān* (Millet 104).

[M. TAYYIB GÖKBILGIN]

KÖRKUD DEDE [see DEDE KORKUD].

KÖROGHLU, a rebel of the Anatolian Djelālī movement [q.v. in Suppl.] in the 10th/16th century and the hero of a popular romance. The real Köroghlu came from the region of Bolu, and is probably the same person as the soldier-bard of that name who is said to have taken part in the campaigns in the Caucasus and Ādharbāydjān of Özdemiroghlu Pasha in the years 992-3/1584-5.

Until fairly recent times, Köroghlu remained a legendary personality, whose exploits were chanted by bards and story-tellers in Anatolia, Ādharbāydjān, Turkmenistān and Uzbekistān. Manuscript versions, and later on, lithographs and prints, circulated in Turkish-speaking lands, and more or less extensive episodes of this great epic-romantic cycle even passed into the story telling repertoire of peripheral Turkish-speaking communities like the Kirgiz, the Kazaks and the Tatars of Tobol, as into that of non-Turkish peoples like the Armenians, Kurds, Georgians and Tādjiks.

The historicity of the figure of Köroghlu was nevertheless asserted by writers as far back as the 11th/17th century. Ewliyā Čelebi speaks of him—without giving a precise date—as an honourable bandit whose exploits were still remembered in the mountainous parts of north-western Anatolia; and Arakel of Tabriz cites him as a Djelālī chief whose adventures, together with those of his companions, formed the sons around the early 11th/17th century of a "romance" chanted by the minstrels of the lands bordering on the Ottoman empire and Persia. Towards the end of the 19th century and at the beginning of the present one several attempts at identifying him were made, some people basing themselves on contradictory local traditions, and others putting forth hypotheses about the hero's historical prototype or about the origin of some feature or other or some legendary motif of the romance concerning him.

The discovery in 1942 of Ottoman archival documents has firstly confirmed Ewliyā Čelebi's information, and secondly allowed us to date his exploits as a Djelālī rebel. We have here a series of imperial orders from the years 988-90/1580-2 addressed to the Bey of Bolu and the *kādī* of Gerede concerning a Djelālī called Köroghlu Rüshen. Now Rüshen is also the forename of Köroghlu in several oral versions, Anatolian and Ādharbāydjānī, of the legend of our hero. Moreover, even in the cultural environments most distant from Ottoman territory, tradition has retained, in versions deformed in varying degrees, the name of Bolu Beyi as one of the hero's opponents, as well as allusions to the Ottoman sultan. Finally, several of Köroghlu's companions are mentioned with the same names in the Ottoman archival documents as in the different versions of the romance.

The ideas evoked by the name Kör-oghlu "son of the blind one" have contributed to the attracting around the genuine exploits of the bandit-hero legends of diverse origin, some of them going back to a long way in time, on the theme of the "hero, son of a blind father", who rises up against the masters who had mutilated his father.

(P. N. BORATAV)

KORON (Ottoman Turkish Koron; Venetian Coron; in modern Greek Κορώνη), a fortress in the south west Peloponnesus [see MOREA] and on the west coast of the gulf of Koron, situated some 15 miles by land from the fortress of Modon [q.v., modern Greek Μεθώνη], with which, in the period of Venetian and Ottoman rule, its history was linked and which, in some degree, overshadowed it. The Byzantine fortress of Koron, "un fuogo di maggior difesa . . . di forma triangolare, posta in mezzo d'una lingua di terre" (P. Garzoni, *Istoria della Repubblica di Venezia in tempo della Sacra Lega*, Venice 1705, 100-1) passed, with much of the Morea, under Frankish rule in 1204, but was seized by Venice two years later and was ceded to her in 1209. Koron remained a Venetian colony for nearly two centuries, serving as a vital provisioning station for the Venetian fleet and becoming, with Modon, "the chief eyes of the Republic" (W. Miller, *The Latins in the Levant*, London 1908, 59, 158).

As early as 1428 Koron was attacked from the sea and pillaged by the Ottomans, and after 1460, when Mehemmed II completed the conquest of the Greek principalities of the Morea, its territories were contiguous with those of the sultān. It was not, however, until the Ottoman-Venetian war of 905/1499 to 909/1503 that Koron fell to the Ottomans in 906/1500, after Modon had been taken by storm and its defenders massacred. Koron and Navarino "yeelded themselves by composition"—i.e. *ṣūr ile*—to Bāyazīd II (Knolles, *Generall Historie of the Turkes*[1], London 1603, 460). This event took place on 25 August 1500, 17 August according to Bāyazīd II's *fetḥ nāme* for Modon and Koron, addressed to the inhabitants of Chios, and written at Koron on 22 August (M. Sanuto, *I Diarii*, iv, Venice 1880, 827 ff.). Bāyazīd II installed in Koron a garrison of 500 Janissaries and 1200 *sipāhī* troops (*ibid*, 815 f.)

In 938/1532 Koron was retaken by the Genoese admiral Andrea Doria while Sulaymān I was engaged in the Güns campaign. In the spring of 939/1533 Koron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sultān's summoning the North African corsair chief Khayr al-Dīn Barbarossa [q.v.] to Istanbul, from where, having kissed the hand of the sultān and received an appointment as *ṭersāne beglerbegi*, he was sent with a naval force against Koron in mid-Dhu'l Ka'de 940 (Luṭfī Pasha, *Tevārīḫ-i Āl-i Osmān*, Istanbul 1341, 343-4). Khayr al-Dīn Pasha's approach, an outbreak of plague amongst the defenders, and the hardships of the winter of 1533-4 all caused the Spanish garrison under Mendoza, which Doria had installed there, to abandon the fortress and withdraw to Naples, Koron, accordingly, was once more reoccupied in an uncontested way by the Ottomans (*cf.* further on the events of 1532-4, Paulo Giovio, *Historiae sui temporis*, Paris 1553, ii, 114v ff., *passim*).

In the reign of Sulaymān I according to a *tahrīr defteri* utilised by M. T. Gökbilgin (*Belleten*, xx, 280, 327), Koron was the seat of a *ḥāṣṣ* with a revenue of 150 *akčes per annum*, in the *sanǧaḳ* of Modon, *īnāl* of Mora. The fortress and its dependent territories formed an imperial *ḥāṣṣ* (*ḫāṣṣ-ı ḥümāyūn*) which yielded 162,081 *akčes* of revenue *per annum*: these revenues, according to Th. Spandugino, *Commentarii*, 78, were bestowed with those of Modon by Bāyazīd II on Mecca.

Later in the 11th/16th century (by 991/1582 cf. Gökbilgin, *loc. cit.*) the *ḥāṣṣ* of Koron was annexed to the *sanǧaḳ* of Meccare (Mistra). At this time the town contained 300 Christian and 10 Jewish households, the entire Muslim population of garrison officials and some 300 *ḥāṣṣ neferāti* must have been what it appears to have remained in succeeding centuries (cf. the testimony of Evliyā Čelebi for the late 17th century and Leake for the early 19th), i.e. of *'askeri* status.

Western travellers apart, Koron was visited in 1040/1630-1 by the Ottoman historian Peçevī (*Ta'rīḫ*, Istanbul 1283, i, 272) who recalls the events of a century previously, and, later in the century (1668) by Evliyā Čelebi, who has left a description of the fortress and its inhabitants (*Seyāḥat nāme*, Istanbul 1314/1896-7 to 1938, viii, 328 ff., cf. Ulrich Welfart, *Die Reisen des Evliya Celebi durch die Morea*, Inaug. Diss., Munich 1970, 59 ff.).

In the Sacra Liga War of 1095/1684 to 1110/1699, Koron was the first fortified place to fall to Venice in the course of her reconquest of the Morea, despite a vigorous defence and attempts to relieve the garrison by land. (Dīvānīdi 'l-ākhir 1096/15 June to 7 August 1685, cf. Silāḥdār, *Ta'rīḫ*, Istanbul 1928, ii, 218 ff., Pietro Garzoni, *op. cit.*, 101, 107-17, Alessandro Locatelli, *Racconto historico della Veneta guerra in Levante* ... 1684-1699, Colonia 1691, 124-38, 158 ...).

Koron was recovered for the Ottomans by the Grand Vizier Čorlulu 'Alī Pasha in Sha'bān 1127/August 1715. In this last phase, the town and its trade insensibly declined. Leake, in 1805, found that the export of silk and olive-oil, which down to the 1770s had supported four French merchant houses, was no longer flourishing, the harbour, blocked and ruinous already at the time of Bernard Randolph's visit in the late 17th century, offered only an insecure anchorage, while the town itself was much affected by the depredations of the "Janissaries of Koroni" (W. M. Leake, *Travels in the Morea*, London 1830, i, 483). Koron finally passed from Ottoman, and Islamic, rule to the course of the Greek War of Independence.

Bibliography (apart from works already cited in the text): Plans and perspective views of the fortress and town of Koron as it appeared at the time of the Venetian reconquest (1685) are given by P. M. Coronelli, *Memorie istoriographiche del Regno della Morea*, Venice n.d., 56-77; cf. O. Dapper, *Nauwkeurige Beschryving van Morea*, Amsterdam 1688, 25-30. The most accessible recent description of the fortress is by Kevin Andrews, *Castles of the Morea*, Princeton, N.J. 1955 (= Gennadeion Monographs, iv), 11-23, with extensive further bibliography of western sources. Cf. also Pīrī Re'īs, *Kitāb-ı Baḥriyye*, Istanbul 1935, 300-6; Silāḥdār Findiḳlī Meḥmed Āgha, *Nüzhetnāme*, ed. (C. J. Heywood)

ḲORYÜREK, Enis Behīǧ, modern Turkish orthography Enis Behiç Koryürek, Turkish poet (1891-1949). Born in Istanbul, the son of an army doctor, he attended schools in Salonica, Üsküb (Skopje) and Istanbul and graduated from the School of Political Science (*Mekteb-i mülkiyye*) in 1913. He served as a diplomat in Bucarest (1915) and Budapest (1916-22) and as a civil servant in various ministries. He died in Ankara on 18 October 1949. Like most poets of his generation, Enis Behīǧ wrote poems in the style and manner of the *Ḥarvret-i fünūn* school [*q.v.*] and of its extension, the *Fecr-i ātī* [*q.v.*], one, in *'aruḍ* metre and with an artificial language loaded with Arabic and Persian elements, and published them mainly in the periodical *Šāhbāl* (1918 ff.) until he came under the influence of Ziyā' (Ziya) Gökalp [*q.v.*], who was leading the "national literature" trend (*Milli edebiyyāt ḥareketi*). Under Gökalp's guidance, he switched to syllabic metre (*heǧe* verse), spoken Turkish and "national" themes, and soon became one of the five leading young exponents of syllabic metre known as *beǧeniš beš šā'irler* (the others being Khālid Fakhrī (Otansoy), Orkhan Seyfī (Orhon), Yūsuf Diyā' (Ortaç) and Fārūḳ Nāfiḏh (Çamlıbel)). Koryürek was particularly successful, with an enigmal approach and style, in his epic poems (e.g. *Milli meşkūre*, *Sumērliler*) and in his evocative tales of the exploits of Turkish seamen in the Mediterranean (e.g. *Gemiǧiler*, *Wenedikli ḫoǧa-yı ḥiri*, *Uǧursuz baskın*). He published his collected poems in *Mīrāṯ* ("The legacy", Istanbul 1927). His *Güneşin ölümü* ("The death of the sun"), containing his later, less interesting, poems, was posthumously published, with a new edition of *Mīrāṯ*, by F. Tevetoğlu as *Enis Behiç Koryürek'ten, Miras ve Güneşin ölümü*, Ankara 1971. During the last years of his life he was subject to depression and wrote old style pseudo-mystic poems of mediocre quality supposedly inspired by a 11th/17th century *ḫayāl*, *Varidat-ı Süleyman*, Ankara 1949.

Tevetoğlu, in *op. cit.*, Introd., vi-lii, Kenan Akyüz, *Batı tesirinde Türk şiiri antolojisi*', Ankara 1970, Behçet Necatiğil, *Edebiyatımızda isimler sözlüğü*', Istanbul 1975.

(Fahir Iz)

KÖSE DAGH, a land-corridor some 50 miles/80 km. to the north-west of Siwās where there took place in 641/1243, probably on 6 Shawwāl/26 June, the decisive battle which opened up Asia Minor to the Mongols and sounded the knell for the Saldjūḳ sultanate of Rūm. The first contacts of the Mongols and Saldjūḳs went back to the last years of 'Alā' al-Dīn Kaykubād I [*q.v.*], but at that time Anatolia was too well protected in relation to the conquests already effected by the Mongols for the latter really to have any plans for conquering it. It was only under Kaykhusraw II [*q.v.*] that the threat took definite shape, without one being able to ascertain how far the invaders intended to advance. However, after the Great Khān Ögedey's death, the new Mongol head of the Caucasian region, Bayǰū, seized Erzerum in the midst of the winter of 1242, and thus opened up the way into Asia Minor for the following spring.

The sources give few details about the campaign and the battle. Kaykhusraw seems only very late to have fully realised the seriousness and imminence of the danger. He summoned forces together, comprising his allies or vassals, even including Armenians, Greeks and "Franks", ending up with what was certainly a force numerically superior to Bayǰū's.

But the impatience of his young commanders prevented him from awaiting the complete grouping of the Saldjūḳ forces. The Mongols, almost all cavalrymen, had recourse to their customary and invariably successful tactic of a simulated flight and then an unforeseen return to the attack against disorganised pursuers. The sultan lost his head and fled, and only the initiative of his vizier Muhadhdhab al-Dīn, combined probably with the Mongols' own prudence, allowed him to keep his throne as a vassal. In reality, the process now began which led to a de facto Mongol protectorate.

The weaknesses of the Saldjūḳ state at the time have often been stressed, this was true, but the Mongols, partly by the terror which they inspired, had overcome many other powers. It is hard to maintain that, even without these weaknesses, the course of history would have been any different.

KÖKE MIḲHĀL [see MIḲHĀLOGHLU]

KÖSEM WĀLIDE or **KÖSEM SULṬĀN**, called MAHPEYKAR (ca. 1589-1651), wife of the Ottoman sultan Aḥmad I and mother of the sultans Murād IV and Ibrāhīm I [q.vv.]. She was Greek by birth, and achieved power in the first place through the harem, exercising a decisive influence in the state during the reigns of her two sons and of her grandson Meḥemmed IV.

The views put forward concerning her origin and her first name—Nasya being derived from Anastasia (Aḥmed Refīḳ, *Kadınlar saltanatı*, Istanbul 1332, 47-8, deriving information from Guer, *Mœurs et usages des Turcs*, Paris 1747, ii, 474, see also Fétis de la Croix, *Abrégé chronologique de l'empire ottoman*, Paris 1768, ii, 74)—do not seem to be reliable. According to Pietro della Valle, *Voyages*, Rouen 1645, i, 94, she was given the nickname Kösem because of *her smooth and hairless skin* (*kös* = "hairless, beardless"). However, the epithet *kösemsiḳösemsen* could also have been given to her on account of her ability as a leader and virtual ruler (for the meanings of *kösem* in Ottoman, see Muṣṭafā Kāzim, *Türk lügati*, Istanbul 1940, iv, 181, K. Kerestedjian, *Quelques matériaux pour un dictionnaire etymologique de la langue turque*, London 1912, s.v. *kesemsen* and *kesen*. Radloff, *Versuch eines Wörterbuches der Türkdialecte*, iii/2, 1299. "ram, bell wether, leader, free, without a care, independent").

Through her beauty and intelligence, Kösem Wālide was especially attractive to Aḥmad I, and drew ahead of more senior wives in the palace. She bore the sultan four sons—Murād, Sulaymān, Ibrāhīm and Ḳāsim—and three daughters—ʿĀʾisha, Fāṭima and Diawharkhān (Von Hammer, *GOR*, cf. Naʿīmā, *Taʾrīkh*, Istanbul 1280, iii, 67 ff.). These daughters she subsequently used to consolidate her political influence by strategic marriages to different viziers.

After Aḥmad I's death on 22 Dhu ʾl-Kaʿda 1026/23 November 1617, she supported the succession of his brother Muṣṭafā I, under whose feeble rule she was able to exercise effective power in the state. Muṣṭafā's deposition three months later was a set-back for her, and she was relegated to the Old Palace (Eski Sarāy) and at Bāyezīd under Aḥmad's young son ʿOthmān II, but she came to the fore again when ʿOthmān was deposed and executed and Muṣṭafā briefly restored (9 Radjab 1031/20 May 1622). Her full influence now became apparent when her minor son Murād IV ascended the throne in 1032/1623 and she thus became officially the Wālide Sulṭān, ruling as regent for five years till her son was old enough to take up the reins of power himself (Kātib Čelebi, *Fedlleke*, Istanbul 1287, ii, 220, Von Hammer, *GOR*, quoting a Venetian report). Even thereafter, Murād greatly respected his mother's opinions, and she took a close interest in state affairs when he was away from the capital. Thus the *Shaykh al-Islām* Akhīzāde Ḥüsayn Efendi's disapproval of Murād's hanging the *bekī* of Izmīk was communicated by her to the sultan, then on his way to Rumia, he immediately returned to Istanbul and hanged Akhī-zāde Ḥüsayn—an act which had taken place only three times in Ottoman history (Kātib Čelebi, *op. cit.*, ii, 160; Naʿīmā, iii, 183). She saved the Otteman dynasty from extinction by preventing Murād, who had executed his other brothers, including Sülaymān and Ḳāsim, from killing Ibrāhīm also (Sagredo, *Histoire de l'empire ottoman*, Amsterdam 1732, vi, 447; Vanel, *Abrégé nouveau de l'histoire générale des Turcs*, Paris 1680, ii, 545, *Histoire des grands vizirs*, Paris 1676, 34, Du Loir, *Voyages*, Paris 1654, 127, von Hammer, *GOR*)

Together with the Grand Vizier Ḳara Muṣṭafā Pasha [q.v.] she became most active in affairs when Ibrāhīm succeeded to the throne after Murād's death on 16 Shawwāl 1049/9 February 1640 (Naʿīmā, iii, 449), especially as her son gradually became more and more involved with his concubines, the expenditure involved having disastrous repercussions on the treasury (Kātib Čelebi, *op. cit.*, ii, 309 ff.). He subsequently came under the influence of other Palace women, and Kösem Wālide therefore lost her ascendancy and left the *Sarāy-i Djedīd-i ʿĀmere* to live as a summer house outside Topḳapı. When Ibrāhīm learnt that his mother was plotting with the Grand Vizier Ṣāliḥ Pasha do dethrone him, he moved her to the Iskanda Čelebi garden in Florya and hanged Ṣāliḥ (Wedjīhī, *Taʾrīkh*, Istanbul Univ. Library Turkish MS. 2543, fols. 29b, 32b). Ibrāhīm's weak rule caused a deterioration in affairs, whilst the Cretan war was dragging on and creating feeling against him. The chiefs at the Janissary corps, under Ḳara Murād Agha, Muṣliḥ al-Dīn and Baktāsh Agha, killed the Grand Vizier Ahmad Pasha Ḥasākirzāde and decided to depose Ibrāhīm. The new Grand Vizier, Sofu (or Kodja) Meḥmed Pasha and the *Shaykh al-Islām* ʿAbd al-Raḥīm Efendi, together with other leading officials, obtained Kösem Wālide's consent after a meeting with her at Topḳapı, dethroned Ibrāhīm and put in his place his eldest son, the seven-years old prince Meḥemmed on 18 Radjab 1058/8 August 1648 (Naʿīmā, iv, 314, 369; Ḳara Čelebi zāde ʿAbd al-ʿAzīz Efendi, *Risāle al abrār fī ḥaḳḳ*, Istanbul Univ. Library Turkish MS. 2635, pp. 9 ff.; Meḥmed Khalīfe, *Taʾrīkh-i Ghilmānī*, Istanbul 1340, 25 ff.; Murād Bey, *Taʾrīkh-i Abe ʾl-Fātiḥ*, Istanbul 1309, iv, 48). Ten days later, Ibrāhīm was strangled by the executioner Ḳara ʿAlī, for fear that his partisans might attempt a restoration, with the consent of his mother and with a *fatwā* from the *Shaykh al Islām* (Kara Celebi-zāde, *op. cit.*, 27 30, 57 ff.).

With Meḥemmed IV's accession, Kösem Wālide's power started to revive, and she was given exalted titles like Büyük Wālide "Grandmother of the Sulṭān", Wālide yi Muʿazzama, Umee al-Muʾminīn, Ṣāḥibat al-Maḳām, Wālide-yi ʿAṭīka, etc. (see Wedjīhī, fol. 44b, Kātib Čelebi, ii, 367, 376, Naʿīmā, iv, 279, 299, 325, 317-19, 413, 448, 450, v, 108). However, her influence was not unbounded. The

authority of the Janissary aghas was wrong, and Turkhān Sultān, Mehemmed's mother and Ibrāhīm's widow, became her rival; this rivalry, and misunderstandings between the state officials and the Janissaries (Naʿīmā, v, 7), caused disturbances in Istanbul and Anatolia. Kösem Wālide and her supporters therefore decided to replace Mehemmed with his brother Sülaymān, whose mother Dilāshūb Sultān was regarded as unlikely to interfere in state matters. But Turkhān Sultān learnt of these intentions (Naʿīmā, v, 108), took the initiative, and had Kosem Wālide strangled with a curtain-string by the Palace Janissaries (Naʿīmā, v, 112, her executioner was someone called Küčük or Kushču Mehmed, see Rycaut, *Histoire de l'état présent de l'empire ottomane*, Paris 1670, 63; Naʿīmā, v, 109, 112, 157; von Hammer, *GOR*). Her body was taken from Topkapi to the Eski Saray and then buried in the mausoleum of her husband Ahmad I (Wedjdī, fol 45a).

Kösem Wālide had exercised power in public affairs for nearly 30 years. She left much wealth and estates (Naʿīmā, v, 122; Kātib Celebi 2de, 20), and much of her income was devoted to charitable and other humanitarian works, such as a Friday mosque of Üsküdar, completed in 1066/1850 (Avvānsarāyi Husayn, *Hadīkat al-djawāmiʿ*, Istanbul 1281, ii, 284-5) and the Wālide Khān in Istanbul, built in 1056/1646 (Ewliyā Celebi, *Seyāhat-nāme*, Istanbul 1314, i, 325; Thévenot, *Relation d'un voyage fait au Levant*, Paris 1664, 49) (this latter building collapsed in March 1926). Also from these revenues she financed irrigation works in Egypt and provided relief for the poor in Mecca. In fact, she left behind in the popular Turkish mind a reputation for magnanimity, generosity and high intelligence.

Bibliography Largely given in the article, but see the general histories of Von Hammer and Zinkeisen, which utilise both Turkish and European sources, e.g. the reports of the Venetian *bailo*, Umunçarşılı, *Osmanlı tarihi*; S. J. Shaw, *History of the Ottoman empire and modern Turkey*, Cambridge 1976, i, 190 ff. There is a detailed article in *IA* by M. Cavid Baysun, of which the above is a shortened version. See also Müctebā Ilgürel, *Kösem Sultanın bir vakfiyesi*, in *Tarih Dergisi*, xvi/21 (1966), 83-94.

(M. CAVID BAYSUN)

KOSH-BEGI, preferable to KÖSH-BEGI, title of high officials in the Central Asian khanates in the 16th to 19th centuries. There are two different etymologies and explanations of the term: (1) from Turkish *koš* "bird" and *beg* [*q.v.*], thus *koš beg*i meaning, presumably, "commander of falconers", (2) from Turkish *koš*, "detachment of nomads or troops, esp on the march", "nomadic and military camp" (cf. Radloff, *Wörterbuch*, ii, 635b), thus *koš-begi* meaning "commander of the (royal) camp", "quartermaster". The first explanation is found in an administrative manual *Madjmūʿ al-aškāl* compiled in Bukhārā in 1212/1798, where it is stated that the *kush-begi-yi kalān* (see below) in Bukhārā was chief of the royal hunt (see facsimile in *Pis'mennïye pamyatniki vostoka 1968*, Moscow 1970, 56). The etymology, however, remains dubious, because in this case one should rather expect *kušči-beg* [or *kušči-bashi*], from *kušči* "falconer" (the latter post actually existed at the Central Asian courts, as well as in Iran, but the chief of the hunt had the title *mīr-shikār*). Significantly, Iskandar Munshī [*q.v.*] in his *Taʾrīkh-i ʿĀlam-ārā-yi ʿAbbāsī* (ed. Ī. Afshār, i, 486) mentions the post of *koš-begi* (*mansab-i koš-beg gari*) and, in another place (ii, 1040), the post of a falconer (*khidmat-i kušči-gari*), who became later the head of the royal hunt (*be-mansab-i mīr shikār sar-afrāz gašt*). On the other hand, many historical references to *koš-begs* in the Uzbek period show them as high military commanders, mentioned among the most high ranking Uzbek *amīrs*, which, apparently, makes the second etymology and explanation of the term more plausible. The European Turkologists who visited Central Asia in the middle of the 19th century also transcribe the term as *koš-begs* and explain it, in the first place, as "Chef des Dieners oder des Beamtenzirkels der Fürsten" (H. Vámbéri, *Čagataische Sprachstudien*, Leipzig 1867, 328), or "Lord of the household" (K. B. Shaw, *A sketch of the Turki language as spoken in Eastern Turkistan*, Calcutta 1878, 156). see also Radloff, *loc. cit.*

The title *koš-beg*i is not attested in the Golden Horde and its immediate successors in the Eurasian steppes in the 15th century. The *Rāḥat al-sudūr* (ed. Beveridge, 174b) mentions a Turkish *amīr* as a *koš-beg* of Sultān Husayn Mīrzā [*q.v.*], but nothing is said about his duties. Frequent references to *koš-begs* in historical sources appear only in the late 16th century. The *ʿĀbd Allāh-nāma* (MS of the Leningrad Branch of the Institute of Oriental Studies, D 88, B 3222, 338a, 339b, 340b etc.) mentions a *koš-begi* among the chief commanders of the army of Bukhārā. In the 17th century *koš-begs* did not apparently play an important role in the khanate of Bukhārā. The *Bahr al-asrār* by Mahmūd b. Walī (second quarter of the 17th century), in a description of the ceremonial at the court of the Ashtarkhānids, only mentions the *koš beg* among the servants closest to the *khān*, and his place was the second after that of *kurči bashi*, commander of the body-guards (see V. V. Bartol'd, *Sočineniya*, ii/2, 391, 396). The rise of power of the *koš-begs* in Bukhārā took place at the beginning of the 18th century, with the decline of the Ashtarkhānids. In 1121/1709 ʿUbayd Allāh Khān established the rank of "the great *koš beg*" (*koš beg-yi kull*), who became first minister. *Koš begs* remained the head of the Bukhārā administration also under the Mangits [*q.v.*], when his official title was *kull-i koš-begi* [*sic*], or *koš beg-yi bālā* "the upper K.", because he had to live in the residence of the *amīr*, the *ark* (citadel), situated on a hilltop, there was also ' the lower K.", *koš-beg-yi pāyīn*, whose residence was at the foot of the *ark* and who held the post of *nāzir-i yi kalān* (head of the collectors of *zakāt* [*q.v.*]). The "great *koš-begs*" under the late Ashtarkhānids and the Mangits were usually of mean origin, mostly former Kalmuk and Persian slaves. Besides the general supervision of the state affairs and, especially, the administration of finance, they were also governors of one or more *wilāyats* (provinces), especially that of Bukhārā itself.

Different development took place in Khīwa [*q.v.*], where the local historian Munīs (early 19th century) mentions for the first time the title *koš beg*i, without defining his duties, when he tells about the administrative reforms of Abu 'l-Ghāzī Khān (died in 1074/1664 [*q.v.*]). It seems, however, that *koš-begs* did not play any important role in Khīwa in the 17th century. Only under the Kungrat [*q.v.*] dynasty (from the last third of the 18th century) did the *koš-begi* become one of the highest officials in the khanate, but he shared power with the *mehter* (Pers. *mihtar*) [*q.v.*] The latter was the head of the civil administration, had the title *wazīr-i aʿẓam* and belonged to the hereditary bureaucracy recruited from among the Sarts [*q.v.*], while the *koš beg*s always belonged to the Uzbek nobility, the *amīrs* (and sometimes was a relative of the khān), and was in charge,

mainly, of military affairs. Besides that, the *kosh-begs* governed the northern part of the khānate of Khīwa inhabited by nomadic and semi-nomadic Uzbeks, Karakalpaks and Turkmens (that is, he mainly supervised the collection of taxes in this region), while the *mehter* governed the southern part inhabited by sedentary Sarts. This division of authority seems to be a continuation of the administrative practice of the Timūrid period.

In the khānate of Khokand [*q.v.*] in the 19th century, the title *kosh-begi* is also attested by the local sources, but evidence about his duties is still unavailable, in any case, he had a lower status than in Bukhārā (the highest official in Khokand in the 19th century was the *mang-bashi*), according to V. V. Vel'yaminov-Zernov (in *Trudi Vostochnago Otdeleniya Imp. Russkago Arkheologicheskago Obshchestva*, ii [1856], 331), *kosh-begi* was here a honorary title given to the governors of main towns and provinces. In the Čaghatāyid state of Eastern Turkestan, at least in the 17th century, the *kosh-begi* was supreme military commander or commander of the right wing (*ōng-u burunghār*), and had the rank of the senior *amīr* (*amīr al-umarā'*), but the civil administration, apparently, was in the hands of a *wazīr* (see Shāh Mahmūd b. Mirzā Fādil Curās, *Ta'rīkh*, ed. O. F. Akimushkin, Moscow 1976, text, 24, 32, 53, 70, Russian tr 170, 178, 200, 218). Thus this system was probably similar to that which existed in Khīwa.

Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iii, 363, No. 1301. (YU. BREGEL)

KÖSHK, from Pers. *kūshk*, a pavilion in a pleasance which could be merely a modest shelter or have several rooms. The *kiosques* of the rulers of Samarrā were much larger, and were country houses in the manner of the *konaks* of Anatolia and the Balkans. The word *kasr* (*kasr*) could be synonymous, but came also to mean castle and always implied more than one chamber, whereas *kūshk* rarely suggested a substantial building, and in naval terminology was even the name given to the after-deck or poop cabin.

Although the Ottomans developed the *kūshk* as a pavilion consisting of a single hall, it did occasionally take the form of a suite of rooms. Mehemmad II Fātih modelled his Çinili Köshk in the outer court of Topkapïsarāyi on Timurid pavilions. It included two floors of apartments for himself and his officers, for it served as a lodging when he did not wish to return to his residence in the centre of the city. It was a *kūshk* in the sense of being a pied-à terre. Later examples such as the Sand Pavilion at Edirne (*Kum Kasïr*) were designated *kasïr*. But the essential characteristic which governed the transliteration of *kūshk* into English as "kiosk" was that of a chamber under a dome with three sofas and a hooded open grate, forming the four arms of a cross with a balcony or terrace overlooking a garden and a pool or other expanse of water. There a day might be passed at any season of the year, enjoying a partly-indoor and a partly-outdoor life. The pavilion was, to a sense, a permanent tent and its portico the uplifted awning on poles common to nomadic life. However, a royal *kūshk* was tiled, its woodwork gilded, ceilings elaborately painted, doors inlaid with ivory and mother of pearl and the sofas covered with silks and velvet brocades, the floor with rugs. In this form, they were ideal and intimate drawing rooms, the antitheses of the Napoleonic concept of the Piazza at Venice.

They also served as hunting lodges, like that of Sïyāwush outside the walls of Istanbul, which is elevated above its own pool in a park. Originally it was a single domed chamber with a vestibule and closet. Similar *kūshks* or *kasïrs* were built as royal retiring rooms from which access could be gained to the mosque or *djami'*. Less wealthy citizens built examples so modest that they were little more than bowers with shutters that served as walls in winter but which could be dismantled in the spring. These, rather than the ornate *kūshks* of the rich, inspired newspaper stands and the like in 19th century Paris and other cities in Western Europe.

Bibliography: References to kiosks appear in the descriptive works of travellers, more particularly of Topkapïsarāyi, by pages who escaped from there. Among these are D. Hieronsalinitano, Harley mss. 3408, British Museum; O. Bon mss., Bibliotèca Marciana, Venice, Cl. vii, cod. 378, 923; (the last in English by R. Withers, ed. Greaves, *A description of the Grand Signor's seraglio*, London 1650); also in E. G. Clavijo, *Embassy to Tamerlane, 1403-6*, tr G. Le Strange, London 1928. Engravings of examples are illustrated in R. Walsh and T. Allom, *Constantinople*, London 1838 and J. Pardoe, *The city of the sultan*, 3 vols., London 1838. Standard historical works on Islamic architecture, tiles, furnishings and the other decorative arts include *E. H. Ayverdi, Fatih devri mimari eserleri*, Istanbul 1953 and *Murad II devri mimari eserleri*, Istanbul, 1963; G. Marçais, *L'architecture musulmane d'Occident*, Paris 1954, A. (G. GOODWIN)

KOSHMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word, it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic *'arūd* [*q.v.*]. The term corresponding in Eastern Turkī to the Western Turkī *koşma* is *koshuk* or *koshugh*.

In the oldest source, e.g. in the *Kuḥadīḳa-i ḥaḳīḳa* (composed in 562/1069-70 [see VOSOR xxxiv, 1911]), *koshuḳ* still has the quite general meaning of "poem, verse", e.g. in Radloff's edition, St. Petersburg 1891, i, 1. 2 from below: *bu kitābnı koshuḳnı aymaḳ* "has composed this book, this poem"; *ibid.*, 5, l. 4, *bu turkčā koshuḳlar uzatdum sanā* "I have polished (i.e. composed) these Turkish verses for thee". In Maḥmūd al-Kāshgharī (*q.v.*) also, *Dīwān lughāt al-turk* (begun in 464/1072), ed. Kilisli Rif'at Bey, i, 314, *koshuḳ* is equated with the Arabic *shi'r*, *radjaz* and *ḳaṣ'ad*. The Persian musician and scholar ʿAbd al-Ḳādir of Marāgha (8th-9th/14th-15th centuries, cf. E. G. Browne, *Literary history of Persia*, iii, Cambridge 1920, index s.v.), in his work entitled *Makāṣid al-alḥān* does not yet discriminate between *koshuḳ* and the quantitative quatrain *tuyuḳ* (see Raʾūf Yekta, *Esās türk musīḳīsīnın dörd tesīsātı*, in *Mīlli tetebbuʿlar mecmūʿası*, i, 461). On the other hand, in a verse by ʿAlī Shēr Nawāʾī (d. 906/1500 [*q.v.*]) quoted in Pavet de Courteille, *Dictionnaire Turc Oriental*, 432, s.v., and in Radloff, *Versuch eines Wörterbuches der Türk Dialecte*, ii, col. 640, the *koshuḳ* is definitely contrasted with the *tuyuḳ*.

Later, we find poems and songs composed according to the rules of Turkish popular poetry expressly called *koshma*, *koshuḳ*. The characteristic features of this poetry are the following: 1. Strophic structure. The strophes are usually quatrains. The *koshma* poems contain at least two strophes. 2. Syllabic or accented syllable rhythm, i.e. the lines of the strophe have the same number of syllables and the value of the syllables as regards stress is either a matter of indifference or stronger and weaker syllables follow one another in definite order, which is repeated. In the latter case, after a definite number of syllables, we always have of necessity a cæsura in the middle of the line. In the later *koshma* strophes the most popular lines are hendecasyllabic divided into 6-5 with one cæsura or 4-4-3 (with two cæsuras). 3. There is rhyme or assonance of at least two endings in the strophe. The rhyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two halves of the verse. The rhyming in the *koshma* strophe is usually *abab* or *aaba*. 4. Alliteration of the initial syllables of the lines is not maintained among all Turkish people (cf. T. Kowalski, *Études sur la forme de la poésie des peuples turcs*, in *Mémoires de la Comm. Orient. de l'Acad. Polonaise*, No. 5, Cracow 1922, in Polish with a French résumé, 157 ff.).

In earlier times, the *koshma* songs were usually sung by the bards (*usan*) to the accompaniment of a musical instrument, especially by the *kobuz* beloved of the Turks, at court festivities or in the camp of the army. The *koshma* poetry was always industriously cultivated among the people, in spite of the increasing popularity of the classical quantitative poetry. The popular forms like *kaya bashi*, *deyish*, *ezgi*, *ir*, *tüshti*, *varsaghi* and *türkmäni*, some cultivated among the Āḏarbāydjān and some among the Ottoman Turks, all belong to the *koshma*. The songs of popular mystics called *ilāhī* and *nefes* from the time of Yūnus Emre (7th-8th/13th-14th centuries) are composed according to the rules of the *koshma* (see Koprülüzāde Mehmed Fuʾād, *Türk edebiyyātında ilk mutaṣawwiflar*, Istanbul 1918, 334-6). The *koshma* popular poetry, which sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers (*ʿāshīḳ*, also called *ozan* or *bozuḳ*). Many of them, like ʿĀshīḳ ʿOmer, ʿĀshīḳ Kerem, ʿĀshīḳ Gharīb, Dertli and Dyewheri, attained great fame, and the collections of their songs or life stories are among the most popular books among the Turks (cf. Koprülüzāde Mehmed Fuʾād, *Türk edebiyyātında ʿāshīḳ tarzındaki menẓūmāt ve tekāmülü*, in *Mīlli tetebbuʿlar mecmūʿası*, i, idem, ʿĀshīḳ Dyewherayye ʿAṣrī ve eṣerleri in the periodical *Yeni Mecmūʿa*, No. 84; G. Jacob, *Türkische Volkslitteratur*, Berlin 1901, 27-28). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, *Chansons des Janissaires turcs d'Alger*, in *Mélanges René Basset*, Paris 1925, ii, 93-175.

The term *koshma* (but not the kind of poetry to which it was applied) seems to have fallen out of use, and if the Āḏarbāydjānī poet Dhawāḏ, who died in the first decades of this century, called his collection of songs *Koshma*, this is probably simply to be explained by an archaicising popular movement in modern literature. The name has survived in the form *koṣoṅ* (*koshoṅ*) among the Altai Turks (Tatars). The Altai *koṣoṅ* (on them, cf. W. Radloff, *Über die Formen der gebundenen Rede bei den altaischen Tataren*, in *Zeitschr. f. Völkerpsychologie und Sprachwissenschaft* [1866], iv, 85-114, and Kowalski, *Études*, etc., 140-51) are very important in so far as from their structure and name we can make a definite deduction regarding the original meaning of the words *koshma*, *koshuḳ*, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From this we see that *koṣoṅ*, from *kosh-* "to join together", *koṣo* "two and two", etc., refers to the parallelism in thought and syntactical structure, which originally formed the essential feature of Turkish popular poetry.

The *koshma* poetry has not been without influence on more artistic forms of literature. The modern Turkish poets, for example, have taken many of their forms from popular poetry.

Finally, one should note that the term *koshma* applies also to a folk-musical form, which varies in different parts of Anatolia and Āḏarbāydjān, but which contains typically an instrumental introduction, followed by a vocal recitative and melody. This would be the normal setting for the *koshma* as a literary form.

N. Boratav, *IA* art. *Koşma* (with many details about the regional forms of the *koshma*). R. R. Arat, *Eski türk şiiri*, Ankara 1965, Introd.; Hikmet Dizdaroğlu, *Halk şiirinde türler*, Ankara 1969. On the rhythmic structure of Turkish popular poetry, cf. Th. Korš, *Drevnejegyšiy narodnyy stikh tureckikh plemion*, in *ZVOIRAO*, xix/3 (1909), 139-67. (T. Kowalski)

KOṢOWA, KOSOVO, the name of an upland plain of the Balkans, in upper Macedonia or southern Serbia, and the scene of two significant battles in the struggles of the Ottomans and the Christian powers of the Balkans for hegemony there. In the last quarter of the 19th century, it also became the name of an Ottoman *wilāyet* or province.

The South Slavonic expression *Kosovo polje* means "plain of the blackbirds" from *kos* "blackbird" in Old Slavonic, Czech and Bulgar. Ottoman Turkish

sources give various less convincing etymologies. For those sources which derive the Koṣowa from Turkish *kösa* or *köse* see "bare, treeless plain", etc., see ʿAlī Haydar, *Koṣowa sanyāḳı muḥārebesi*, Istanbul 1328, Bursalı Meḥmed Ṭāhir's preface. The name is spelt as Kus owasi in ʿĀṣḥḳpaṣazāde, *Taʾrīḫ*, Istanbul 1332, 62, 134, Neṣrī, *Ḏiḥānnümā*, ed. F. Taeschner, Leipzig 1951, 70, 139, 174, and as *Kūs owasi* in ʿOrūdj b. ʿĀdil, *Tawārīḫ-i āl-i ʿOṯmān*, Hanover 1925, 45. Saʿd al-Dīn's explanation that the name means "plain of the kettle-drums" is, of course, yet another folk etymology.

The Koṣowa plain lies at an altitude of some 500-600 km., and is 14 km. wide and 84 km. long, covering an area of 502 km.² It is surrounded by high mountains, and has a north west to south east orientation. From this region, streams flow westwards to the Adriatic via the Drina, southwards to the Aegean via the Vardar, and northwards to the Danube via the Ibar and Mrcava. During mediaeval times, it was a meeting-point of several trade routes; today it forms part of the Novo Brdo-Kopaynik mining region of Yugoslavia.

The Koṣowa plain originally formed part of the Byzantine dominions, and Slav peoples were settled there at the beginning of the 7th century. During the 10th century it changed hands between Serbs, Byzantines and Bulgars (for the names of the Serbian *bans* who were active in the Koṣowa region, see V. Radovanović, *Kosovo Polje*, in *Narodna Enc. Srpsko-Hrvatsko-Slovenačaha*, Zagreb 1926, ii, 434-8). After the victory gained over the Byzantines in 1168 by Stephan Nemanja, prince of eastern Serbia, Koṣowa passed under Serbian control, and the name became applied to the whole plains region. It now remained within the resurgent Serbian empire, with its zenith under Stephan Dushan (d. 1355), but Serbian grasp on the region became relaxed under his weaker son and successor Uroš V (1355 71), and thereafter, the Serbian princes were unable to offer any united opposition to the increasing Ottoman Turkish pressure.

The defeat of Serbia at the hands of the Ottomans at Koṣowa took place according to the Serbian and the western sources on 15 June 1389 and according to the Ottoman ones, on 4 Ramaḍān 791/27 August 1389. The Turkish army was commanded by Sultan Murād I b. Orkhān, and included his two sons Bāyezīd from Kütahya and Yaʿḳūb from Karasi and contingents from the vassal *begs* of Ṣārūkhān, Menteshe, Aydın and Hamīd. They were opposed by the Serbian prince Lazar Gresljanović, with contingents from the Bosnian King Tvrtko I. On the dawn of the battle, a Serbian noble, Miloṣh Kobilić, Lazar's son in law, gained access to the Ottoman camp by posing as a deserter and stabbed Murād to death. But Bāyezīd immediately assumed command, and in the ensuing fighting—the details of which are little known—the Turks gained the eventual victory. Lazar was taken prisoner and executed after the battle; a mausoleum was built on the spot where Murād had died, but his body was buried at Bursa. The death of Murād and the withdrawal of the Turkish army immediately after its victory caused false rumours to spread in Christian Europe of a Serbian victory; in fact, the consequence of the battle was that Serbia became an Ottoman vassal state, and Lazar's successor, his son Stephan Lazarević, had to pay tribute and supply an army under his personal command to the Ottomans. Koṣowa also gave rise to a great cycle of popular ballads among the Serbs, expressive of national feeling. For the Turkish sources on the battle, see Saʿd al-Dīn, i, 113; ʿOrūdj, 25; ʿAlī Haydar, 27 32, ʿĀṣḥḳpaṣazāde, 63, Neṣrī, 82 ff., Solaḳzāde, 30, and also Von Hammer, *GOR*, i. After this first battle of Koṣowa, Bāyezīd I appointed Yigit Pasha as *sanǧaḳ beg* of Üsḳüb/Skopje and the southern district of Koṣowa, and thus region was now settled by Turks from Menemen and Tatars from Anatolia.

The second battle of Koṣowa took place on 17-19 October 1448, when a Hungarian army under John Hunyadi, and including also Wallachians and German Bohemian arquebusiers, met an Ottoman army under Murād II. the struggle was at first indecisive, but was gained by the Turks through the treachery of the Wallachians and the flight of the Hungarian king. During the reign of Meḥemmed the Conqueror, the northern part of the koṣowa plain also came under Ottoman control. In the 10th/16th century the town of Vuditrn became the administrative centre of the *sanǧaḳ* of Koṣowa in the *eyālet* of Rumili. When Ewliyā Čelebi passed through the Koṣowa plain in 1070/1659 60, he found that Vuditrn had a Turkish and Albanian population and contained 2,000 households (*Seyāḥat nāmesi*, Istanbul 1315, v, 350). In 1688 9 the region was invaded by an Austrian army under Piccolomini, but driven out in the following year by Koǧa Khalil Pasha and Selīm Girāy Khān (Findikilili Meḥmed Agha, *Silaḥdār taʾrīḫi*, Istanbul 1928, ii, 269-70, 351-2, 423 ff.; Rāshid, *Taʾrīḫ*, Istanbul 1282, ii, 95-112; V. Corović, art. *Kosovo*, in *Narodna Enc. Srpsko-Hrvatsko Slovenačha*, ii, 433 4)

During the last quarter of the 18th century and the first decades of the 19th, the Koṣowa district was involved in various attempts by local governors, such as the Bushatli governors of Scutari or Ishḳodra, Meḥmed Pasha and his son Kara Meḥmūd Pasha, to break away from control by the Porte, the region was only finally reattached to Istanbul after the defeat of the last Bushatli, Muṣṭafā Pasha, by Meḥmūd II's new western style army [see ANAWAWTLU. 6. History]. After the Russo-Turkish War of 1877 8 new *wilāyat*, called specifically that of Koṣowa, was formed consisting of the regions of Niš and Prishtina and with Sofia as its centre (see Sami Bey, *Kāmūs al-aʿlām*, Istanbul 1316, v, 3746-8 ʿAlī Haydar, *Midḥat Paṣha*, Istanbul 1325, 13-24). In 1888 its centre was moved to Üsḳüb/Skopje and in 1896 its boundaries widened to include six *sanǧaḳs*, sc. Üsḳüb, Prishtina, Senitsa, Ipek, Tashlidja/Plevlje and Prisren (see M. Rūḥdī and M. Eshref, *Meḥmūmai ser mufaṣṣal atlas*, Istanbul 1325, 21-4; *Sālnāme-yi wilāyet i Koṣowa*, year 1314). The region was meanwhile considerably disturbed, for in 1878 a congress had been formed to protect the rights of the Albanians and to establish an autonomous *wilāyet* of Koṣowa, with its centre at Monastir. Albanian volunteers under the leadership of Süleymān Vokhri captured Üsḳüb, Prishtina and Mitrovitsa early in 1881, but in April of that year, were defeated by an army sent out from Istanbul under Derwish Pasha. However, the Albanians subsequently took advantage of the erratic policies of repression alternating with indulgence practised by ʿAbd al-Ḥamīd II, and gradually captured all the villages outstanding up in the Koṣowa plain, until the restoration of the Constitution in 1908. Eventually, a Serbian army under General Janković captured Lab during the Balkan War of 1912, and by 25 October of that year the whole of the Koṣowa region passed into Serbian hands permanently, a state of affairs confirmed by the Treaty of London of 30 May 1913 which ended

the was. It was estimated that the population of the province at that time was two million, three-quarters of this being Muslim Turks and Albanians, and the rest Christian Serbs and Bulgars.

After the First World War, the region came of course within the new Yugoslavian state, and a policy of slavicisation was followed, so that the Muslim population shrank with the exodus to Albania and to Turkey. Today it is an autonomous unit of the Yugoslavian People's Republic under the name of Kosovo-Metohija and with its centre at Prishtina.

Huart, and for the first battle of Kosova, *The Cambridge Mediaeval History* iv. *The Byzantine Empire*. Part 1, Cambridge 1966, 550-1. (M. Münir Aktepe)

KÖSTENDJE (in Rumanian, Constanța), a port on the Rumanian shore of the Black Sea, situated on the ruins of the Milesian colony of Tomes (Ovid, *Tristia*, i, 10, 41, iii, 9, 5) founded at the beginning of the 6th century B.C., and the place of exile of the Roman poet Ovid (9-18 A.D.). Mentioned in 260 A.D. (Mamnon, *Fragmenta historicorum graecorum*, ed. C. Muller, iii, Paris 1849, 537), Tomes enjoyed great prosperity in the Greek and Roman period and earned, under the Antonines, the title of metropolis of Western Pontus (μητρόπολις τοῦ Εὐξείνου Πόντου). Under the later Roman Empire, Tomis became the capital of Scythia Minor, being designated in the epigraphic and literary sources by the name Constantia or Constantiana after the emperor Constantius II (337-61 A.D.), who contributed to its development. Sacked by the Huns (456 A.D.), the town was fortified by the Byzantine emperors Anastasius (491-518) and Justinian (527-65) (Procopius, *De aedificiis*, Bonn, iii/2, 307) and resisted attacks by the Avars. In 679 it was destroyed by the Bulgḥārs of the *Khān* Asparukh.

The fishing station set on the ruins of the ancient city continued to bear the name Κωνσταντία, in the writings of Byzantine authors of the 9th and 10th centuries, while the map drawn up in 548/1154 by al-Idrīsī (*q.v.*) calls it Tuntānā (P. A. Jaubert, *Géographie d'Edrisi*, ii, Paris 1840, 382). In the 14th century, Italian nautical maps give the name Costanza—derived from the Rumanian *Constanța*, Turkish Köstendje—to the Genoan trading mission used as a harbour by Genoese ships. When Dobrudja was joined to Wallachia (Eflāk) by Mircea the Old (1386-1418), the town followed the same destiny as the rest of the province. According to Ewliyā Čelebi, Köstendje was reportedly conquered by Bāyazīd I (*q.v.*), who ordered the dismantling of its walls. This event seems to have taken place during the reign of Vlad the Usurper (1394-6) in the province of Wallachia. Taking advantage of the fact that Bāyazīd was detained in Anatolia, Mircea recaptured Köstendje, which he retained after the Ottoman defeat at Ankara (28 July 1402) under the reigns of the *amīr* Süleymān (1403-10) and of his protégé Mūsā Čelebi (1410-13) in Thrace and Macedonia. But in the course of the expedition of Muḥammad I (1413-21) dated by N. Iorga to 820/1417 (*GOR*, i, 375), and more plausibly by H. Inalcık to 821/1418 (*Ibn Hacer'de Osmanlılara dair haberler*, in *AÜDTCF Dergisi* vi, 525; O. Turan, *Tarihi tahrirler*, Ankara 1954, 29, 56), the town was once again captured by the Ottomans. Its annexation did not become definitive until after 1445, since the captain of the Burgundian fleet, Walerand de Wavrin, met no Ottomans at Mangalya, on the coast of the Black Sea to the south of Köstendje, when he landed there. In the 16th century, it was a fairly prosperous town, leased *in a subaṣhi* and with a harbour and a market which, dealing in the major products of Dobrudja (Ankara, *Tapu ve Kadastro* collection, 483, 30-32), played an important rôle in the supplying of cereals, fish and timber to Istanbul. The harbour was also used for the exporting of Wallachian products (hides, wax, honey, salt) which were much in demand by the merchants of Ragusa and Ancona.

At the beginning of the 17th century, Köstendje suffered devastation at the hands of Polish cossacks (1602, 1616). Although this port was not included in the list of towns (M. Tayyib Gökbilgin, *Kanuni Sultan Süleyman devri başlarında Rumeli eyaleti, livaları, şehir ve kasabaları*, in *Belleten*, xx, (1956), 254-5, 266-7), the Ragusan traveller Paolo Giorgi regarded it as such. According to Evliyā Čelebi, it was a town of small prosperity belonging to the *eyālet* of Silistria (Istanbul, *Başbakanlık Arşivi* D-BMK SLM, *Silistre ve Rusçuk muhasebesi*), comprising one hundred and fifty houses, between forty and fifty granaries, some shops, a *ḥāmm* and a mosque, and serving as the residence of a *mīr*. Though possessing the status of a *ḳadā'*, in the 18th century Köstendje had the appearance of a large market-town whose *ṣūrṣāḥ aghāsī* (i.e. *muḥtasib*) was in charge of the supplying of grain to Istanbul. Devastated and depopulated during the Russo-Turkish wars (1711, 1718-39, 1768-74 and 1787-92), Köstendje was fortified by the Ottomans, who considered its port one of the most important in Dobrudja for the purpose of supplying their capital with cereals, cattle, sheep, hides and wool.

During the Russo-Turkish war of 1806-12, Köstendje was captured by the Cossacks (1809), who destroyed the fortress and the town, reducing it to the status of a village. Returned to the Ottoman Empire by the Treaty of Bucharest (1812), Köstendje was surrounded by a line of fortifications. In 1829 the town surrendered to the Russians without a struggle and its defences were dismantled. During the Crimean War the French troops of General Canrobert, in alliance with the Ottomans, disembarked at Köstendje (July 1854) but remained there only for a short time. In 1857, a British company, The Danube and Black Sea Railways Company, obtained from the Ottoman government a concession for the reconstruction and development of the port and of a new railway linking Boğaz köy (Carvaveda) with Köstendje, which as a result of this enjoyed a new period of prosperity. In 1877 the troops of the Russian general Orlov Denisov occupied the town, which was ceded to Rumania on 23 March 1878. At this time it was a *ḳadā'* of the *wilāyet* of Tuna, created in 1281/1864. The Treaty of Berlin (13 Rajab 1295/13 July 1878) recognised this union. Köstendje then possessed two *dārüṭ-ṭi*'s: the Maḥmūdiyya (1822) and the *ʿAzīziyya* (1822). It was at Constanța that the first newspaper of the Dobrudja was published, the *Dobrudja gazetesi* (1888-94), as well as the newspapers *Dobrudja* (1901) and *Dobrudja yadīsi* (1910-14) published by Mehmed Niyāzī.

KOTA KOTA, An Arabic corruption of the Chi-Hiyao place-name Ngotangota, a town la East Africa, situated in lat. 14° S. on the west side of Lake Malawi (Lake Nyasa). It was the seat of four Jumbes, or Walis, subject to Zanzibar between ca. 1845 and 1895. The first Jumbe, Salim b 'Abd Allāh, came to Lake Malawi via the Arab settlement of Tabora in the present Tanzania, and built up an ivory and slave-trading state, and at the same time made Kota Kota an effective centre for the dissemination of Islam. He was succeeded by another Swahili, Mwinyi Mguro (? Nguno), who ruled from after 1870 to ca. 1875-6. Under his successor, Mwinyi Kibuta, a member "of a good Zanzibar family", the town was visited by H. B. Cotterill in 1876. It had many handsome square houses and numerous oil palms, the Zanzibar flag flew over the Jumbe's house. Although a slave-trader, when the British took power in Nyasaland in 1891, he co-operated with them until his death in 1894. His successor, Mwinyi Kheiri, the son of his predecessor, ruled from 7 September 1894 until May 1895, when he was deposed for conspiring to overthrow the British administration. Kota Kota remains an important Islamic centre in Malawi.

Bibliography: H B Cotterill, *On the Nyasos and a journey from the north end to Zanzibar*, in *Proc. Royal Geogr Soc London*, xxii (1878), G Shepperson, *The Jumbe of Kota Kota and some aspects of the history of Islam in British Central Africa*, in I M. Lewis, ed , *Islam in Tropical Africa*, 1966, 193-207, gives a detailed bibliography and references to public records.

(G. S P. Freeman Grenville)

KOTOKO, a people of Black Africa. The Kotoko live south of Lake Chad on the lower Shari and Logone rivers Most of their territory is presently in the Republic of Cameroun, but there are villages of the Kotoko also in Chad to the east and in Nigeria to the west.

The Kotoko (whose number was estimated at 50,000 in 1950) are a minority in their own territory They are outnumbered by the Shuwa Arabs, who penetrated into these lands since the 18th century. Smaller groups of Kanuri, Fulbe and Hausa moved in later. Each of these ethnic groups, however, lives separately in homogeneous villages. The Kotoko live on fishing and hunting, supplemented by agriculture. The grassland between the rivers is left for the Arab pastoralists.

The etymological origin of the name Kotoko is obscure. Some authors referred to them as Makari, which is in fact the name of a northern group of Kotoko, first known to visitors coming from Bornu. Makari is the most important dialect among the northern Kotoko, as Lagwane (often spelled Logone) dialect is in the south. The linguistic diversity of the Kotoko reflects their political division as the extent of each dialect is almost identical with the area of one principality. The particularism of each group is as strong that even under modern conditions no one dialect prevails, and almost all the Kotoko now speak the Arabic dialect of the Shuwa. The Kotoko dialects belong to the central sub group of the Chadian languages They are distantly related to Hausa, which is classified in the western sub group of the Chadian languages (J. H. Greenberg, *Studies in African linguistic classification*, New Haven 1955, 43 68).

The Kotoko are considered direct descendants of the Sao or Se people, to whom the historical traditions of Kanem [*q.v.*] and Bornu [*q.v.*] refer as the early inhabitants of the area around Lake Chad Those Sao who had not been assimilated or exterminated by the Kanembus and the Kanuris sought refuge in the less accessible flooding area of the Shari and Logone rivers, where they gave rise to the Kotoko. In the second half of the 16th century, Bornu under Idris Alāma expanded to the south The northern Kotoko principalities, Makari and Afade, were brought within the political ambit of Bornu and under the cultural and Islamic influence of the Kanuri. Because of the imperial and dynastic connections with Bornu, islamization among the Kotoko began chiefly in the courts. The southern Kotoko had been for a long period subject to the harassment of Bagirmi [*q.v.*] Towards the end of the 18th century, the south was consolidated under the authority of the ruler of Logone-Birni, who was converted to Islam at about that period. Logone was visited by Major Denham in 1824 and by H Barth in 1852 In between these two dates, probably ca. 1830, Logone became a tributary of Bornu. The Kotoko often saw their territory invaded by their more powerful neighbours. It was the battleground for Bornu's wars with its rivals Waday [*q.v.*] and Bagirmi. Between 1893 and 1900 it was overrun by Rābih [*q.v.*] and his warriors.
