**DJULLANĀR** is the blossom of the pomegranate (< Persian *gul-i anār*), in Greek βαλαύστιον, accordingly *bālawustiyūn* (with variants) in the Stephanos-Hunayn translation. It is the blossom of the wild pomegranate tree (*rummān barrī*), also called *al-mazz* by the Arab botanists. It is mentioned in passing by Aṣmaʿī (*K. al-Nabāt*, ed. ʿAbd Allāh al-Ḡhunaym, Cairo 1392/1972, 36) and described in detail by Abū Ḥanīfa al-Dīnawarī (*Le dictionnaire botanique*, ed. M. Hamidullah, Cairo 1973, no. 1028). According to this source, the tree grows in the Yemen highlands, puts forth blossoms (*djullanār*) but does not bear fruit and has a hard, inflammable wood. The outer layers of the seedshell—and not the blossoms themselves, as the texts have it—yield a jelly-like, tasty juice which produces a satisfying effect and is used as a medicine. *Djullanār al-ard* is occasionally put together or compared with the Hypokistis (*hibūkistidhās* = ὑποκιστίδος), a pulpy herb growing in the roots of the Cistus and also used for extracting juice. Both also largely correspond as far as healing effect is concerned, as was already emphasised by Dioscorides in the respective sections: they have an astringent effect and are good for gastric complaints, dysentery and enteric ulcers; they knit together fresh wounds, staunch venous and arterial blood and secure loose teeth (*al-asnān al-mutaḥarrikā*); applied on the head in compresses with vinegar, they check congestion of the blood to the brain. In the absence of blossoms, one can also use the shells of the pomegranate.

AL-DJURDJĀNĪ, ABŪ BAKR ʿABD AL-ḲĀHIR B. ʿABD AL-RAḤMĀN (d. 471/1078), philologist and literary theorist, was born in Gurgān where he spent his entire life, about which very little is known. He studied grammar with Muḥammad b. al-Ḥasan al-Fārisī, a nephew of Abū ʿAlī al-Fārisī. Yāḳūt alone (*Irshād*, v, 249) reports that he was also tutored by al-Ḳaḏī al-Djurdjānī, but later on

(vii, 3) asserts that al-Fārisī was his only teacher.

To his contemporaries, al-Djurdjānī was famous mainly as a grammarian whose work included such popular manuals as *Mīʾat ʿamil* and *K. al-Djūmal*, as well as *al-Mughnī* (a commentary in 30 volumes on Abū ʿAlī al-Fārisī's *K. al-ʾIḏāh*) and a short version of it called *al-Muktaṣad*. He also wrote on *ʾiḏjāz* (the inimitability of the Ḳurʿān), etymology and prosody, and he compiled an anthology of the poetry of Abū Tammām, al-Buḥturī and al-Mutanabbī.

However, to later generations and especially to modern scholars, al-Djurdjānī's reputation rests on his powerful and sophisticated theoretical work on stylistics, syntax, poetics and poetic imagery, which many critics have compared with modern literary theory, demonstrating that he anticipated a number of the most recent trends in the study of poetic structure. His books *Dalāʾil al-ʾiḏjāz* and *Asrār al-balāgha* have won him wide acclaim as the founder of the two "sciences" *ʿilm al-maʿānī* and *ʿilm al-bayān*. He himself does not, however, use these phrases as technical terms designating two independent branches of literary analysis.

Al-Djurdjānī's exploration of poetic structure originated as an inquiry into the mysteries of *ʾiḏjāz*, but soon developed into a comprehensive theory on the nature of language, meaning, the imagination and poetic imagery. Going beyond the dualism of *maʿnā* (meaning) and *lafẓ* (words), he argues that eloquence and expressiveness are functions neither of meaning nor of words but of the construction (*naẓm*) of linguistic elements into harmonised syntactic patterns determined by a set of rules which form the grammar of the language. In other words, construction is nothing but *nurʾāt maʿānī al-naḥw* (lit. "observing the meanings of grammar").

At the roots of al-Djurdjānī's theory of construction lies a psychological view of the nature of literary creation. He believes that the linguistic structure of a literary composition is underlined by a structure of experience and that the order of words in the former follows the order of meanings in the psyche (*nafs*) which is presupposed by the intellect (*ʿaql*). Identifying some of the basic syntactic structures in Arabic, he explores the correspondence in them between the structure of language and the structure of thought. He then outlines a symbolic theory of language according to which language is a system of relations (a concept fundamental to modern linguistics) governed by two principles: the arbitrary nature of linguistic signs and the conventional nature of language itself. The first principle means that there is no inherent relation between a word and its referent and, therefore, a word in isolation does not possess any qualities which render it better or worse than any other word. In fact, a word does not mean much until it has entered into a set of syntactic relations with other words. Consequently, the same meaning cannot be expressed in two different ways. Any syntactic change in a composition generates changes on the semantic level. Thus the unit of linguistic analysis ceases to be the single word and becomes the fully meaningful formulation in which every element is an organic part of the total structure. No element is extraneous or superfluous. This applies to all aspects of structure, including imagery.

Al-Djurdjānī identifies two distinct ways of expression, one direct, the other indirect. The content of the first he calls "meaning", that of the second the "meaning of meaning". Meaning is conveyed by literal statement, the meaning of meaning by meta-

phorical language, *kināya* and one type of *tamthīl*. An image is thus viewed not as an alternative to, or ornamentation of, literal statement (as widely believed in both Arabic and western criticism until this century), but as a distinct act of imaginative creation which expresses a meaning otherwise impossible to express.

The *Asrār* is devoted to the study of imagery, its nature, function, relationship to thought and various forms. Al-Djurdjānī identifies two types of *madjāz*, one pertaining to language (*luḡhawī*), the other to the intellect (*ʿaklī*) and differentiates the types of *madjāz* based on transference from those involving no transference, distinguishing sharply between two fundamental relationships, contiguity and similarity. The latter he asserts to be the *raison d'être* of *isti'āra* [q.v.]. Refining the concept of *isti'āra* further, he denies the dominant view that *isti'āra* involves transference. One type of *isti'āra* he shows clearly to be based on proportional analogy and to involve no transference of a single word at all, the other type (involving the usage of a single word) he defines in contextual terms. *Isti'āra*, he believes, consists in using a word to refer to a thing other than its original referent, on the basis of some similarity revealed between the referents, while however still possessing its original meaning and thus becoming a double-unit underlined by tension. In this fashion he anticipates I.A. Richard's work which has revolutionised the study of metaphor.

All types of imagery, except *kināya*, originate in similarity, and similarity, al-Djurdjānī argues, is a sharing (*iṣṭirāk*) of an attribute, or set of attributes, between two entities, which may occur either in the attribute itself (*fi 'l-sifa naṣsihā wa-haḳikat dūnsihā*, or in something presupposed by or resultant from the attribute (*fi ḥukm<sup>in</sup> lahā wa-muḳtaḍā*). Similarity also varies in its remoteness and intensity from one image to another. Al-Djurdjānī uses these basic distinctions to classify the various types of imagery and explore their imaginative and stylistic role. He thus establishes two inseparable criteria to define an image: the imaginative basis underlying it and the linguistic apparatus in which it is formulated. *Tashbīh* is thus differentiated from *tamthīl* and *isti'āra*, and the ambiguous structure involving the copula "Zaid is a lion" is described as an intensified simile (*tashbīh balīgh*) rather than an *isti'āra* (a distinction not yet made sufficiently clearly in modern European criticism). Consequently, al-Djurdjānī denies the interchangeability of *tashbīh*, *tamthīl* and *isti'āra*.

The central piece of al-Djurdjānī's work on *isti'āra* is his classification of its types according to the nature of the dominant trait or point of similarity in each type. This fundamentally anti-Aristotelian classification represents one of the latest developments in the analysis of metaphor in European studies (cf. K. Abu Deeb, *Al-Jurjānī's classification of isti'āra with special reference to Aristotle's classification of metaphor*, in *Journal of Arabic Literature*, ii (1971)).

Throughout his analysis, al-Djurdjānī uses psychological criteria of a strong Gestaltian nature. He also hints at an organic approach to poetry according to which a poem is to be studied as an organic whole whose parts interact with, and modify, each other, their interaction being determined by the dominant emotion underlying the poem. His practical criticism is a fine example of the power of this approach to illuminate aspects of the poem which would remain otherwise hidden.

AL-DUWAYHĪ, IBRĀHĪM AL-RASHĪD B. ŠĀLIḤ AL-DUNKULĀWĪ AL-ŠĀ'IKĪ, Šūfī *shaykh* of Nubian extraction and belonging to the *Shādhiliyya* order, and a disciple and *khaliḳa* [q.v.] of Aḥmad b. Idrīs [q.v.]. He was born in 1228/1813 in Duwayḥ near Dunkulā (Dongola) on the Nubian Nile and belonged to the tribe of the *Shā'ikiyya*. He joined the religious community of Aḥmad b. Idrīs in 1246/1830 in the town of Šabyā in 'Asīr [q.v.], where the latter had sought refuge from prosecution for heresy by the Meccan 'ulamā', and succeeded him as leader of the *Aḥmadiyya* (al-Idrisiyya) *ṭarīqa* upon his death in 1254/1837. Rivalries about the *ṭarīqa* leadership, which involved the two most notable of Aḥmad b. Idrīs's disciples, Muḥammad 'Uṭhmān al-Mirghānī [q.v.] and Muḥammad b. 'Alī al-Sanūsī [q.v.], caused him to leave Šabyā. He went first to Egypt and later to the Sudan where he propagated the order. Finally, he settled in Mecca where he faced charges of heresy on two occasions in 1273/1856-7 brought against him at the instigation of competing factions from among Aḥmad b. Idrīs's disciples. These charges were dropped due to intervention by the Ottoman governor of the *Hidjāz*, and on the second occasion due to intervention by the *shaykh* al-'ulamā' of Mecca. Le Chatelier (see Bibliography) reports that he was one of the most popular *shaykhs* of Mecca, in particular with Indian pilgrims who flocked to his *zāwiya* [q.v.] and from whom he received substantial donations. After his death in 1291/1874, when the *ṭarīqa*, which had by then

become known as al-Rashīdiyya and had obtained a membership in Syria, Egypt, Sudan and Yemen, has passed under the leadership of his successor Muḥammad b. Šālih (d. 1909), his nephew, a decline set in. A distinct branch, al-Šālihiyya [*q.v.*] developed in Somalia under the latter's disciple Muḥammad Gülēd al-Rashīdī (d. 1918; cf. E. Cerulli, *Somalia. Scritti vari editi ed inediti*, Rome 1957, i, 187 f.) and allegiance to the Meccan *zāwiya* as the *ṭarīka*'s principal centre ceased to be paid by Ibrāhīm's *khulafā'* in Egypt. In the latter country, an independent branch known as al-Dandarāwiyya emerged under the leadership of the son of one of Ibrāhīm al-Rashīd's *khulafā'*, Abu 'l-'Abbās al-Dandarāwī (d. 1950), which obtained membership in Egypt and in Somalia in particular (cf. al-Mirghānī al-Idrīsī, *Da'wat al-hakk fi 'l-ṭarīka al-Dandarāwiyya al-Idrīsīyya*, Cairo 1952, *passim*).

The claims by members of al-Rashīdiyya that their *ṭarīka* embodied the purest form of Aḥmad b. Idrīs's teachings were disavowed by Āmin al-Riḥānī, *Mulūk al-'Arab*, Beirut 1951<sup>3</sup>, i, 285 ff., who based his conclusions upon personal observations of religious practice of a Rashīdiyya group in Aden.

*Bibliography*: In addition to the references given in the article, see J.S. Trimmingham, *Islam in the Sudan*, Oxford 1949, 230 f.; idem, *Islam in Ethiopia*, Oxford 1952, 235, 243 f.; idem, *The Sufi orders in Islam*, Oxford 1971, 120 f., who draws heavily upon the account given by A. Le Chatelier, *Les confréries musulmanes du Hedjaz*, Paris 1887, 92-7; Muḥammad Khalīl al-Hadīrasī,

*al-Kaṣr al-mushīd fi 'l-tawhīd wa-fī ṭarīka Sīdī Ibrāhīm al-Rashīd*, Cairo 1314/1896-7, contains the most extensive biography in Arabic and biographical data on some of his *khulafā'* in Egypt (98 ff.); This biography may be found back in an abbreviated form in Muḥammad al-Bashīr Zāfir, *al-Yawākūt al-thamīna fī 'āyān madhhab 'ālim al-Madīna*, Cairo 1324-5/1906-7, 94; For names of Ibrāhīm al-Rashīd al-Duwayhī's *khulafā'* in Somalia, see also 'Aydarūs b. 'Alī al-'Aydarūs al-Naḍīrī al-'Alawī, *Bughyat al-āmāl fī ta'riḫ al-Sūmāl*, Mogadishu 1954, 223 f.; Ibrāhīm al-Rashīd himself wrote a biography of his teacher Aḥmad b. Idrīs entitled *al-Ikd al-durr al-naḥīs* of which only sections were published by Šālih b. Muḥammad al-Madanī, in *al-Muntakā al-naḥīs fī manāḥib kulb dā'irat al-takdīs . . . Aḥmad b. Idrīs*, Cairo 1960, 39 ff.

**EKINČI** B. KOÇKAR, Turkish slave commander of the Saldjūks and governor for them in *Kh*<sup>w</sup>ārazm with the traditional title of *Kh*<sup>w</sup>ārazm-*Shāh* [*q.v.*] in 490/1097. He was the successor in this office of Anūshūgin *Gharča'i*, the founder of the subsequent line of *Kh*<sup>w</sup>ārazm-*Shāhs* who made their province the centre of a great military empire in the period preceding the Mongol invasions. According to Ibn al-Athīr, x, 181-2, Ekinčī was one of Sultan Berk-Yaruḳ's slaves (but according to *Djuwaynī*, ii, 3, tr. Boyle, i, 278, one of Sandjar's slaves), and was appointed to *Kh*<sup>w</sup>ārazm by Berk-Yaruḳ's representative in the east, the Dād-Beg *Habashī*, probably when Berk-Yaruḳ came himself to *Khurāsān* early in 490/1097. Ekinčī did not enjoy power there for long, however, being killed later that year by a conspiracy of *ghulāms*, his successor as *Kh*<sup>w</sup>ārazm-*Shāh* then being Anūshūgin's son *Kuṭb al-Dīn Muḥammad*. Ekinčī's son *Toḡhrīl-tigin* is mentioned also by Ibn al-Athīr as a subsequent rebel against *Kuṭb al-Dīn*.

Ekinčī came from the *Kun* tribe [*q.v.*] of Turks, and Minorsky surmised that he was the transmitter

of information about that group in Marwazī's *Tabā'i al-hayawān* (*Sharaf al-Zamān Tāhīr Marwazī on China, the Turks and India*, London 1942, tr. 29-30, comm. 98, 101-2), noting that he must have been a person experienced in and knowledgeable about Central Asian affairs in order to have been appointed governor in *Kh*<sup>w</sup>ārazm.

**ELECTUARY** [see ADWIYA].

**ELIČPUR**, ILIČPUR, modern AÇALPUR, a town of the mediaeval Islamic province of Berār [*q.v.*] in southern Central India, lying near the headwaters of the Purnā constituent of the Tāptī River in lat. 21° 16' N. and long. 77° 33' E. Up to 1853, Eličpur was generally regarded as the capital of Berār, after when Amraotī became the administrative centre.

The pre-Islamic history of Eličpur is semi-legendary, its foundation being attributed to a Jain Rādjā called *Il* in the 10th century. By Baranī's time (later 7th/13th century), it could be described as one of the famous towns of the northern Deccan. The Dihlī Sultan 'Alā' al-Dīn *Kh*<sup>w</sup>alājī captured it in 695/1296 during his first expedition against the Rādjā of Deogīrī Ramačandra [see DAWLATĀBĀD], who was made tributary to the Sultans; and when

Deogīrī finally fell in 719/1318, Eliçpur and Berār came under direct Muslim rule. Under the Bahmanīs [q.v.], it was the capital of Berār province, and featured prominently in the campaignings of the *Khaldjī* ruler of Mālwa [q.v.], Maḥmūd Shāh (839-65/1436-62) against the Bahmanīs, being sacked in 870/1466, so that the Bahmanī Sultan Muḥammad III Lashkarī was compelled to cede to Mālwa Berār as far as Eliçpur [see also *KHĒRLA*]. From 890/1485 to 980/1572 Eliçpur was under the Bahmanīs' epigoni, the 'Imād-Shāhīs [q.v.]. Under the Mughals, it was at first placed in the shade by the new centre of Bālāpur, but soon regained its importance as the capital of the *sūba* of Berār, with a fort being built there of brick and stone; according to the *Ā'in-i Akbarī* of Abu 'l-Faḍl, the revenue of Eliçpur (which came within the *sarkār* of Gāwil, see below) amounted to 14 million *dāms* (ii, tr. H.S. Jarrett, Calcutta 1949, 237, 240).

But after the rise of the first independent ruler in Ḥaydarābād, the Āṣaf Džān Nizām al-Mulk (d. 1161/1748 [see *HAYDARĀBĀD*. b. Ḥaydarābād State], Eliçpur sank to only local significance under governors of the Nizāms. The governor Salābat Khān erected various public buildings in the town in the early years of the 19th century, and he and his son Nāmdār Khān held the title of Nawwāb of Berār till the latter's death in 1843 and the subsequent extinction of the line.

In later British India, Berār was taken over in 1853 from the Nizām as the "Hyderabad Assigned Districts", nominally on perpetual lease, and then it became *de facto* part of the Central Indian Province. Eliçpur, by now the largest town in Berār (population in 1901, 26,082, including 18,500 Hindus and 7,250 Muslims), gave its name at first to one of the Districts of Berār, but in 1905 it was incorporated in the Amraoṭī (Amravatī) District. In the present Indian Union, Eliçpur is now called Açalpur and falls within the Amravatī District of the Nagpur Division of Maharashtra State. The 1971 census gave population figures of 43,326 for Açalpur town and 24,125 for Açalpur camp.

The monuments of Eliçpur include a famous shrine or *dargāh* of the Muslim warrior 'Abd al-Rahmān Ghāzī, described as a kinsman of Maḥmūd of Ghazna (like the much more celebrated Salār Mas'ūd, buried at Bahrā'ic in Uttar Pradesh [see *GHĀZĪ MIYĀN*]), but more probably a commander of Firūz Shāh Khaldjī's. To the south of Eliçpur is the hill fortress of Gāwilgarh [q.v.], and there is a group of Jain temples at Muktagīrī nearby.

**ERGUN**, SA'D AL-DĪN NÜZHET, modern Turkish SADETTİN NÜZHET ERGUN, Turkish scholar and literary historian (1901-46). Born in Bursa, he was educated at the Faculty of Letters of Istanbul

University and taught Turkish literature in various secondary schools in Anatolia and later in Istanbul, where he also worked as a librarian. He started his career as a scholar while he was a teacher in the Konya lycée, with a book on the folk-lore of Konya. A hard-working and prolific scholar, his works are based on first-hand research into what is mostly original manuscript material, this being presented with only limited criticism. He is the author of a great number of studies and monographs on many classical and folk poets and on some modern writers. His major works are *Konya khalkiyyatı ve harthiyyatı*, (with Mehmed Ferid), Istanbul 1926; *Khalk şairleri*, 3 vols, Istanbul 1926-7; *Karacaöğlan, hayatı ve şiirleri*, Istanbul 1932 (a pioneer work on the great folk poet); *Baki divanı*, Istanbul 1935; *Türk şairleri*, 3 vols., Istanbul 1936-45 (his most important work, published in fascicules comprising alphabetical biographies of poets, together with examples, which stopped at the letter F, in the 96th fascicule); *Türk musikisi antolojisi* 2 vols, Istanbul 1943; *Cenap Şehabettin*, Istanbul 1934 (a pioneer work on C. Ş., whose poetical works are put together for the first time in this monograph); and *Bektaşî şairleri ve nefesleri*, Istanbul 1944.

(FAHİR İZ)

**ERMINE** [see *FARW*].

**ERSARİ**, one of the major tribes of the Turkmen [q.v.] in Central Asia.

The name is not mentioned in the lists of the Oghuz tribes by Maḥmūd al-Kāshgharī and Rashīd al-Dīn. It appears for the first time in historical works of Abu 'l-Ghāzī [q.v.] written in the 17th century. According to the Turkmen tradition as rendered by Abu 'l-Ghāzī (*Şadğara-yi Tarākima*, ed. A.N. Kononov, text, 67-9, Russian tr., 72-3), Ersarī Bay (the eponym of the tribe?) was the great-grandson of Oghurdjik Alp, a descendant of Salur Kazan (cf. on this personage, *Kitāb-i Dedem Korkud, passim*), who left Irāk after a quarrel with Bayandur Bek and came to Mangışlak [q.v.] with a part of the Salur tribe. Thus this tradition indicates the genealogical kinship of Ersarī with the well-known Oghuz tribe Salur (Salghūr of Maḥmūd al-Kāshgharī). In another place of the same work (text, 73-4, tr., 75), Abu 'l-Ghāzī tells that Ersarī Bay, who lived in the Balkhān [q.v.] mountains, was a contemporary of Shaykh Sharaf Kh'ādja of Urgenç, who wrote for him, on his request, the *Mu'in al-murīd*, a religious and didactic treatise in verse, in Turkī (about the book, written in 713/1313-4, and the author, see: A.N. Samoylovič, in *Mir-Ati-Şhūr*, Leningrad 1928, 138; A.Z. Velid, [Togan], in *Türkiyat mecmuası*, ii [1928], 315-30; J. Eckmann, in *Philologiae turcicae fundamenta*, iii 279 f.). Ersarī Bay appears also in another place of *Şadğara-yi Tarākima* (text, 78, tr., 77-8) as an ancestor (*uluğ ata* "great-grandfather") of the tribe Ersarī, which owned a number of springs in the Great and Little Balkhān mountains. The Turkmen tradition, as related by Abu 'l-Ghāzī, places this story in the middle or the second half of the 14th century (after the death of the khān of the Golden Horde Berdi Bek, 1359); the same tradition shows that the tribe Ersarī was already rather numerous by that time, so that its origin must be related to some earlier period rather than the beginning of the same century, when Ersarī Bay allegedly lived.

Ersarī Bay was probably an historical figure; his tomb, known as Ersarī Baba, is situated near the south-eastern corner of the Kara-Boghaz gulf, on the heights bearing the same name Ersarī Baba, and was described by Russian traveller N. Murav'yev in the early 19th century, as well as by modern archeologists. The latest archeological researches in western Turkmenia, apparently, confirm also the Turkmen genealogical tradition connecting the Ersarī with the Salur (see S.P. Polyakov, *Etničeskaya istoriya Severo-Zapadnoy Turkmenii v srednyye veka*, Moscow 1973, 122-3, 102-4).

At the beginning of the 16th century, the Ersarī were spread over a vast territory in western Turkmenia, from Mangīshlak to the Little Balkhān mountains. Not only the tribe itself, but also its main clans are mentioned in the *Shadjara-yi Turk* by Abu 'l-Ghāzī (ed. Desmaisons, text, 237, 267, 315, tr., 254, 286, 337) in connection with the history of the Khānate of Khīwa in the 16th century. At the beginning of this century, the Ersarī were at the head of the tribal group known as the "outer Salur" (*Tashkī Salur*, *ibid.*, text, 209, tr., 223), which included also the tribes Teke [q.v.], Sarīk [q.v.] and Yomut [q.v.], nomadising between Mangīshlak and northern Khurāsān, while the "inner Salur" (*Iki Salur*), or the Salur proper, remained in the north-west of Mangīshlak. However, already by the end of the same century, the Ersarī began to move eastwards, partly as a result of pressure from the north by the Mangīt [q.v.], but mainly because of growing desiccation of western Turkmenia, salinisation of wells and shortage of pasture. At the beginning of the 17th century, at least part of Ersarī returned to Mangīshlak, but in the second quarter of the same century they were finally driven out of this region, this time by the Kalmuks [q.v.]. For a short time, during the reign of Isfandiyār Khān (1032-52/1623-42), Ersarī apparently played some role, together with the Salur, in the Khānate of Khīwa, but they had to leave it as a result of the military campaigns of Abu 'l-Ghāzī and his son Anūsha against the Turkmens described in *Shadjarayi Turk*. Apparently, at that time the Ersarī migrated to the middle course of the Āmū Daryā [q.v.], the Labāb (cf. A. Vámbéry, *Travels in Central Asia*, London 1864, 231), where they have remained till the present time. There are also, probably, some indications of another route of their migration, through Marw (either directly from Mangīshlak and Balkhān or from Khārazm) and Marūčak to the Afghān Turkestan. In 1740 they fled before the army of Nādir Shāh which marched on Bukhārā along the Āmū Daryā, and came again to Mangīshlak (Muhammad Kāzīm, *Nāma-i 'alam-ārā-yi Nādirī*, facsimile ed., Moscow 1965, ii, f. 257a), but in the next year they returned to their homes.

On the Āmū Daryā, the Ersarī became mostly sedentarised and settled in a narrow strip of land (from 4 to 20 miles wide) along the river, mainly on its left bank from Denau in the north to Kalif in the south, where they were occupied with farming based on irrigation. This territory formed a part of two *wilāyats* of the Khānate of Bukhārā, those of Čārdjūy [see AMUL] and Karkī; now it forms the Čārdjū region (*oblast'*) of the Turkmen Soviet Republic. Shortage of land suitable for cultivation caused permanent emigration during the 19th century, especially to Afghān Turkestan, where Ersarī settled in the regions of Andkhūy [q.v.], Aqča and Mazār-i Sharīf [q.v.]. It seems that cattle-breeding was for these groups of Ersarī of greater

importance than for their kinsmen on the Āmū Daryā.

The exact number of Ersarī has never been known. Figures given by 19th century travellers vary greatly (from 25 to 110 thousand families); at present, neither in the Soviet Union nor in Afghānistān are there any statistical data on individual Turkmen tribes.

**ES'AD PASHA**, SAĞIZLI AHMED, twice Ottoman Grand Vizier and holder of various high offices, military and civil, born in Scios (Tkish. Sağız) in 1244/1828-9, son of Mehmed Agha, locally known as *Kule aghası*. A graduate of the War College at Istanbul (Harbiyye [q.v.]), Es'ad was appointed aide-de-camp to Fu'ad Pasha [q.v.], who, when Grand Vizier, appointed him as director of the Ottoman military school in Paris as well as military attaché. Es'ad in 1868 became lieutenant-general (*ferik*) commanding Bosnia-Herzegovina and governor-general (*wālī*) of Scutari (Ishkodra). His career, military and civil, was a succession of appointment, dismissal and reappointment, characteristic of this period: field-marshal or commander (*müşir*) of the First Army (Istanbul), *wālī* of Yemen, minister of war and commander-in-chief (*ser'asker*), commander-in-chief of the Fourth Army and *wālī* of Erzurum, *wālī* of Ankara (for one day only), *wālī* of Sivas, Minister of Marine, again *ser'asker*, Grand Vizier from 15 February till 15 April 1873, *wālī* of Konya, field-marshal commanding the Fifth Army in Syria and *wālī* of Damascus, again Minister of Marine, and from 26 April till 29 August 1875 again Grand Vizier, then Minister of Works, and *wālī* of Aydıń. He visited his birthplace Scios again, and he died at Izmir in the same year of 1875. Es'ad Pasha was chosen for the suite of Sultan 'Abd al-'Aziz on his European tour in 1867. But his lack of political experience caused him to stay only a short while at the top; thus he could not deal effectively with the revolt in Herzegovina (July 1875). In politics, Es'ad seems not to have belonged to a leading group. He was a young military man enjoying the Sultan's favours up to a point, but was a mere figurehead in politics.

(A.H. DE GROOT)

**ESENDAL**, MEMDÜH **ŞHEWKET**, modern Turkish MEMDUH ŞEVKET ESENDAL, Turkish short story writer and politician (1883-1952). He was born in Çorlu in Eastern Thrace, the son of Kahyabeyoğlu Şhewket, a modest farmer of an immigrant (*göçmen*) Turkish family from the Balkans. He did not have any regular schooling but was self-taught; then when his father died in 1907, he looked after the family until 1912 when the Balkan War broke out and the family moved to İstanbul. He had joined the Committee of Union and Progress (CUP) in 1907; at the outbreak of the First World War he was appointed inspector of the CUP, so that he was able to get to know at first-hand conditions of life in Anatolia and in Thrace. In 1919 he fled to Italy to avoid arrest by the occupying forces, but soon after he was invited to Ankara by Muştafa Kemâl Paşa, who sent him as the representative of the Nationalist government to Ađharbâyđjan. He continued with mainly a diplomatic career (with short intervals as teacher or member of Parliament) and served as ambassador in Tehran (1925-30), Kabul (1932) and Moscow (1932-8), and as Secretary-General of the Republican People's Party for four years (1941-5). He was elected deputy for Bilecik in 1946 and served until 1950. He died in Ankara on 16 May 1952.

Because of his absorbing political and diplomatic engagements, he wrote very irregularly and at lengthy intervals and generally signed his writings with the initials M. Şh. and later (after 1934) M. Ş. E.; occasionally he used pen-names such as Mustafa Yalinkat and M. Ođulcuk. Although a contemporary of the pioneer short story writer 'Ömer Seyf al-Din [q.v.], he did not begin to publish his short stories (written mostly much earlier) until 1925 in the periodical *Meslek*. Esendal's short stories differ substantially, in subject matter, plot and style from the "classical", Maupassant-type short stories preferred by most of his contemporaries. There is hardly any plot in them; they are character studies or sketches of the moods of ordinary people with emphasis on women, written in spoken Turkish, in a most natural, and spontaneous manner, without any elaboration or embellishment, and imbued with human warmth and optimism. Only a small number of his short stories have been published in book form. Some remain in the collection of periodicals and newspapers, some have never been published and are in the hands of his heirs. The published volumes are *Hikâyeler I* and *II* (1945). Some stories, with the addition of new ones, were post-humously published under the titles *Temiz sevgiler* (1965) and *Ev ona yakıştı* (1972). Esendal is the author of three novels which have the same characteristics of his short stories: *Mirâth*, serialised in *Meslek* (1925) but not published in book form; *Wassâf Bey*, never published; and *Ayaşlı ve Kıracıları* (1934), an interesting and realistic series of sketches of characters in the early days of Ankara as the new capital.

*sonra hikâye ve roman*, ii, İstanbul 1965, 1063-84; S.K. Karaalođlu, *Resimli Türk edebiyatçıları sözlüğü*, İstanbul 1974, 143-4; *Türk ansiklopedisi*, xv, Ankara 1967, s.v. (FAHİR İZ)

**ESHREF**, MEHMED, modern Turkish MEHMET EŞREF, Turkish satirical poet (1846-1912). He was born in Gelenbe, near Manisa, in Western Anatolia the son of Hâfız Muştafa, of the Usuoghulları family. He attended for a while a *madrasa* in Manisa, where he learnt Arabic and Persian, and after serving as a government official in neighbouring provinces, went to İstanbul (1878), where he passed the required examination to become a *Kâyim-makâm* and served as such in various parts of Anatolia, including in distant *kadâs* in the East and Eastern Black Sea region. By this time, his virulent satires imbued with anger against the injustice, tyranny and corruption of the Hamîdian régime, which were known all over the country, reached the ears of the Palace. When he was serving at Gördes, near Manisa, following a *zhurnal* (report), his house in İzmir was searched and he was arrested (1902), brought to İstanbul and detained for seven months and then sentenced to one year's imprisonment. On the completion of his term, he was allowed to go to İzmir (1903) where he became a very popular character, although under strict supervision. In 1904 he fled to Egypt where he continued to write his satirical poems against 'Abd al-Hamîd II and his régime.

Eşref is the author of the following works, all published in Cairo: *Deđđâl* ("Antüchrist"), 2 vols. 1904-7; *Istimâd* ("S.O.S."), 1906; *Hasb-i hâl* ("Friendly talk"), 1908; *Şah ve pâdishâh*, 1908; and *İranda yangın var* ("Iran is burning"), 1908. Returning to İstanbul after the restoration of the Constitution in July 1908, Eşref began to publish a weekly humorous paper *Eşref*, where he re-published poems of his Egyptian period as well as new ones. He died in *Çara-agmaç* near Manisa on 22 May 1912.

Eşref had a passionate temperament and a boundless satirical power, but he lacked a sense of balance in his literary expression and skill in verse technique. His satires, like those of the 17th century poet Nef'i [q.v.], are often unrefined and even vulgar. However, he wrote many unforgettable satirical lines which are still frequently quoted with satisfaction, even though the language and style are antiquated.

*Bibliography*: Mustafa Şatim (Eşref's son), *Meşhur şair Eşref'in hayatı*, İzmir 1943; Cevdet Kudret, *Eşref, hicviyeler*, İstanbul 1970; *Türk ansiklopedisi*, xv, Ankara 1967, 473; Tahir Alangu, *100 Ünlü Türk eseri*, s.v.

**ESPARTO** [see HALFA].

**ESHREFOĞLU** 'ABD ALLÂH, also known as EŞREF-İ RŪMÎ, Turkish poet and mystic, the founder of the Eşrefiyye branch of the Kâdiriyya Şüfi *tarîka* (d. 873/1469). His father Eşref left Egypt as a young man and settled in İznik (Nicaea). Eşrefođlu himself was educated in Bursa where he was introduced to the famous 9th/15th century saint Emîr Sulţan [q.v.], on whose recommendation he went to Ankara where he joined the famous *şaykh* and mystical poet Hâđđđî Bayram, who liked him and gave him his daughter in marriage. On Hâđđđî Bayram's instructions, Eşrefođlu went first to İzmit, and then to Hamâ, where he worked with Kâdirî *şaykh*s, and then returned to İznik, where he set up a convent. His reputation soon spread as far as İstanbul, and Mahmûd Paşa

(Weli) (d. 878/1474), the famous *wazîr* of Mehmed II, became one of his disciples. Eshrefoghlu died in Iznik, where he is buried. The Eshrefiyye *tarikâ* which he founded is a blend of the Kâdiriyya [q.v.] and the Bayramiyya, with special emphasis on isolation and asceticism.

Eshrefoghlu's poems are written in a warm and flowing style where both *'arûd* and *heдже* metres are used, following the poetic and mystic traditions of Yûnus Emre [q.v.]. His *diwân* was printed in Istanbul in 1280/1864 and in Roman script in 1944 (edited with an introduction by Asaf Halet Çelebi). A further popular edition was published in 1972.

Eshrefoghlu is also the author of many popular mystic works on an edifying nature, the most famous of which is *Muzakkâ 'l-nifûs* ("The Purifier of souls"), which remained a practical manual of dervish life for centuries and is a masterpiece of 9th/15th century Turkish prose; it was printed in Istanbul in 1281/1865 (for a good MS., see Konya, Archeol. Libr. no. 5452; for specimens based on MSS, see Fahir İz, *Eski Türk edebiyatında nesir*, Istanbul 1964, 70-92).

*Bibliography*: İsmet Parmaksızoğlu, in *Türk ansiklopedisi*, xv, 1967, 477-8; A. Gölpinarlı, *Türkiye'de mezhepler ve tarikatlar*, 1969, *passim* (with further bibliography). (FAHİR İZ)

**ESRÂR DEDE**, Turkish Mewlewî poet of the 18th century, a close friend and protégé of the great poet Ghâlib Dede [q.v.]. Born in Istanbul, Esrâr was trained as a Mewlewî dervish in the Galata convent, under the supervision of Ghâlib Dede, its *shaykh*. He died in 1211/1796-7 before his master (who wrote a famous elegy for him) and was buried in the convent cemetery.

Esrâr wrote mystical poems in the line of Ghâlib Dede. His little *Diwân* has not been edited. Esrâr Dede is also the author of an incomplete *Tedhkirê-yi şuharâ'-i mewlewîyye* which contains the biographies of more than 200 Mewlewî poets. The work, which has also not been edited, is based on Şâhib Dede's *Sefîne-i mewlewîyye* and was published in a shortened form by 'Alî Enwer under the title of *Semâ'khâne-i edeb* (Istanbul 1309 Rûmî/1893).

*Bibliography*: Gibb, *HOP*, iv, 207-11; A. Gölpinarlı, *Mevlana'dan sonra mevlevîlik*, Istanbul 1953, *passim*; S.N. Ergun, *Türk şairleri*, s.v.

**EYYÜBOGHLU**, BEDRÎ RAHMÎ, modern Turkish BEDRÎ RAHMÎ EYÜBOĞLU, Turkish poet, writer and painter (1913-75), younger brother of the following. He was born in Görele, near Trabzon on the Black Sea. Educated at Trabzon lycée and the Istanbul Academy of Fine Arts, he spent two years in Paris for further study in painting. On his return (1933) he was appointed to the staff of the Istanbul Academy of Fine Arts, where he taught until his death from cancer on 21 September 1975.

His writings and sketches began to appear in *Yeni adam* in 1933. As a painter he became interested in folk arts and crafts and studied popular motifs in rugs, scarves, socks and colour patterns, and was greatly inspired by them. In his predominantly descriptive poetry, which brought a new tone to contemporary Turkish verse, he used the same colourful technique, strongly influenced by folk poetry and

music. His first volume of verse was published in 1941: *Yaradana mektuplar* ("Letters to the Creator"), followed by *Karadut* ("Black mulberry") in 1948. Then several volumes followed which were all put together in *Dol karabakar dol* (1974). His essays, written in an informal small-talk style, were posthumously published in book form, *Delifışek* (1975) and *Tezek* (1976).

*Bibliography*: Asım Bezirci, *Dünden bugüne türk şiiri*, Istanbul 1968; Behçet Necatigil, *Edebiyatımızda isimler sözlüğü*, Istanbul 1978, s.v.

(FAHİR İZ)

**EYYÜBOGHLU**, ABÂH AL-DİN RAHMÎ, modern Turkish, until 1934 SABAHATTİN RAHMÎ, afterwards SABAHATTİN EYÜBOĞLU, Turkish essayist, writer and translator (1908-73). Born in Akçaabat (Polathane) near Trabzon, the son of Rahmî Eyyüboğhlu, a civil servant, he was educated in Trabzon. He then went to France on a government scholarship and studied French literature and aesthetics in Dijon, Lyon and Paris universities (1928-32). Becoming lecturer (*doçent*) in French literature in the University of Istanbul (1933-9), he was invited, together with some of his colleagues, by Hasan 'Alî Yüdjel (Yücel), the reforming Minister of Education (1938-46), to Ankara where he served respectively as member of the Advisory Board (*Talim ve terbiye kurulu*) deputy chairman of the Office of Translation [of world classics], and teacher at the Hasanoğlan Higher Village Institute [see KÖY ENSTRİTÜLERİ]. Back in Istanbul after one year's study leave in France, he taught in Istanbul Technical University (1951-8). Because of his liberal ideas, he was arrested and detained for several months in 1971, during the emergency régime of 1971-2. He died in Istanbul of a heart attack on 13 January 1973.

Şabâh al-Dîn Eyyüboğhlu developed a theory of nationalism which is mainly based on Kemalism, with particular emphasis on secularism and "populism" (*halkçılık*) and with the addition of the notion of an "Anatolian" people accepting as "ours" all the peoples, arts and cultures which have flourished on Anatolian soil (without distinction of race, language and faith). Many of his essays elaborate on this theme, rejecting rival ideologies like Turkism, Turanism, Islamism and Westernism. His numerous essays were published in various periodicals, particularly *Varlık*, *İnsan*, *Yaprak* and regularly in *Yeni ufuklar*, and they cover a great range of subjects from literature, language and cultural change to art, folklore and politics. He always laid special emphasis on the need for the fusion and identification of intellectuals with ordinary people in order to develop an original culture.

Eyyüboğhlu writes in a simple straightforward style and is considered, together with Ataç, as a master of contemporary Turkish prose. However, he lacks Ataç's originality and conciseness and is often shallow and repetitive. His major contribution is his translations from the French, some of which are masterpieces of the genre (see below). Şabâh al-Dîn Eyyüboğhlu is the author of the following major works: *Mavi ile kara* ("Blue and Black"), Istanbul 1961, enlarged edition 1967, a selection of his essays; *Sanat üzerine denemeler* ("Essays on art"), Istanbul 1974, published posthumously, contains most of the essays omitted from the previous work; *Yunus Emre*, Istanbul 1971, an impressionistic study of the 13th century Turkish poet; and *Turan yolunda* ("On the way to Turan"), Istanbul 1967, which satirises Pan-Turanism and is based on a misreading

of the allegory in André Malraux's autobiographical work *Les noyers de l'Altenberg*. Among more than fifty titles of his translations, the following are outstanding: Montaigne's *Essais*, Rabelais' *Gargantua*, verse translations of La Fontaine's *Fables* and 'Umar Khayyām's *Rubā'īyyāt* (mainly based on a Turkish paraphrase). Eyyüboğlu collaborated in the

preparation of several art books and in the making of films on early Anatolian culture.

*Bibliography*: Mehmed Seyda, *Edebiyat dostları*, İstanbul 1970 (contains autobiographical notes); *Yeni ufuklar*, special number, March 1973; *Milliyet san'at dergisi*, no. 17 (26 January 1973) (complete list of his works and translations). (FAHİR İZ)

## F

### FABLE [see MATHAL].

AL-FADL B. AL-HUBĀB B. ABĪ KHALĪFA MUHAMMAD B. SHU'AYD B. ŞAKHR AL-DJUMAḤĪ, (d. 305/917-18), littérateur, poet, traditionist and *kādī* of Baṣra. He was a *mawlā* of Djumaḥ of Quraysh and the nephew, on his mother's side, of Ibn Sallām [q.v.]. He was born in and died at Baṣra, where he made himself the transmitter of a fairly extensive number of religious, historical, literary and genealogical traditions. He also received a legal training sufficient for him to act as the *kādī* of Baṣra towards 294/907 with functions delegated by the Mālikī *kādī* Abū Muḥammad Yūsuf b. Ya'qūb b. Ismā'il al-Azdī, whose seat of office was in eastern Baghdād (L. Massignon, in *WZKM* [1948], 108) but who also had jurisdiction over southern 'Irāq (Wakī', *Akhbār al-kudāt*, Cairo 1366/1947, ii, 182).

At this time, Abū Khalīfa was already famous in his native town, where he was in contact with well-known personages, especially the Tanūkhīs [q.v.]; he had a particularly deep knowledge of Arabic poetry, taught the works of his maternal uncle and was himself the author of a *Kitāb Tabakāt al-shu'arā' al-djāhilyyin* and a *Kitāb al-Fursān*. He also gathered into a *diwān* the poetry of 'Imrān b. Hiṭṭān [q.v.], which brought him accusations of Khārījī sympathies, but Shī'ī tendencies were also imputed to him, and one verse implies that in *fikh* he was a Hanafī. His works do not seem to have survived, and his verses only exist in part, but his name is often cited in *adab* works. He is, moreover, the hero of a certain number of anecdotes in which his tendency to express himself in rhymed prose is ridiculed. One of these, if it is authentic, allows one to affirm the survival at the end of the 3rd century of a Baṣran tradition which sent as delegates to the caliphal court orators charged with expressing, in rhymed prose, the people's complaints, who had always cause to lament the hardness of the times and the arbitrary ways of the local authorities. Abū Khalīfa, as the mouth-piece of a delegation sent to al Mu'taḍid (279-98/892-902), was able to obtain satisfaction through provoking his audience to mirth because of the affected nature of his speech (al-Mas'ūdī, *Murūdj*, viii, 128-34 = §§ 3264-70). His biographers classify him amongst the blind scholars.

FADL AL-SHĀTRA, AL-YAMĀMIYYA AL-'ABDIYYA, MAWLĀT AL-MUTAWAKKIL, Arab poetess, died in 257/871 (or 260/874). Born probably as a *muwallada* and brought up in Baṣra, she was presented to and later on freed by al-Mutawakkil. She was called the "most gifted poetess of her time" by Ibn al-Sā'ī and, being a good songstress and lute player too, held a famous literary circle in Baghdād. Amongst her admirers were the poet Sa'īd b. Ḥumayd and the musician Bunān b. 'Amr al-Dārib. Ibn al-Djarrāh (quoted by Ibn al-Nadīm) knew a small collection of her poetry. Her verses were set to music by several contemporary court musicians.

(E. NEUBAUER)

FAITH, BELIEF (in God) [see 'AKĪDA].

FAKHR-I MUDABBIR, the *shuhra* of FAKHR AL-DĪN MUḤAMMAD B. MANŞÜR MUBĀRAK SHĀH AL-KURASHĪ, Persian author in India during the time of the last Ghaznawids, the Ghūrīds and the first Slave Kings of Dihlī (later 6th/12th century-early 7th/13th century).

His birth date and place are both unknown, but he was a descendant, so he says, on his father's side from the caliph Abū Bakr and on his mother's side from the Turkish *amir* Bilgeṭigin, the immediate predecessor in Ghazna of Sebūktigin and father-in-law of Maḥmūd of Ghazna; he may well have been born and reared in Ghazna itself. He first appears in Multān as a youth during the reign of the last Ghaznawid sultan in the Pandjāb Khusrāw Malik b. Khusrāw Shāh. After the defeat and deposition of this last in 582/1186 by the Ghūrīd Mu'izz al-Dīn or Shihāb al-Dīn Muhammad b. Sām, Fakhr-i Mudabbir went to Lahore and undertook genealogical researches there for thirteen years. The fruits of all this work were his extensive genealogical tables, extending from the Prophet to the Ghūrīds' slave commanders in India, the *Shahjara-yi ansāb*, extant in a unique British Museum ms.; this book was brought to the attention of Kuṭb al-Dīn Aybak [q.v.], and led to Fakhr-i Mudabbir becoming *persona grata* in court circles. It was to the Dihlī sultan Shams al-Dīn Iltutmish [see ILTUTMIŞĪ] that he dedicated his other great Persian prose work, the *Ādāb al-harb* (see on this, below), and since he des-

cribes himself as being by then an infirm old man (*pīr-i dāfī*), he probably died before the end of that sultan's reign in 633/1236.

There is some uncertainty over the possible identification of our Fakhri Mudabbir with a Fakhri al-Dawla wa'l-Dīn Mubārak Shāh b. al-Husayn al-Marwarrūdhī mentioned by the literary biographer 'Awfi in his *Lubāb al-albāb*, ed. Sa'īd Nafīsī, Tehran 1335/1956, 113-17, as a good poet in Arabic and Persian and a *naḍīm* or confidant of the Ghūrīd Ghīyāth al-Dīn Muḥammad b. Sām (558-99/1163-1203). E. Denison Ross, in his edition of the introduction and early part of the *Shadjara-yi ansāb*, London 1927, accepted this identification. Storey, however, rejected this, despite a similarity of names, adducing detailed arguments in his *Persian literature*, i, 1166-7, and his reasoning seems conclusive; the poet Mubārak Shāh al-Marwarrūdhī seems to have been the author also of works on astronomy and ethics.

The main claim of fame of Fakhri Mudabbir himself is his authorship of the *Ādāb al-ḥarb wa'l-ṣhakhṣā'a*, or as the name appears in one of the extant mss., the *Ādāb al-mulūk wa-kifāyat al-mamlūk* (edition by Aḥmad Suhaylī Khānsārī, Tehran 1346/1967, unfortunately based on the shorter mss. and not on the fuller India Office one, which has 40 *abwāb* or chapters as opposed to only 36). This is both a treatise on kingship and statecraft (hence partaking of the "Mirrors for princes" genre) and also a rather theoretical and idealised consideration of the art of war. In addition to advice on tactics, the organisation of troops, the use of various weapons, etc., the book is liberally interspersed with historical anecdotes, giving it a distinct value as a historical document, above all for the development of the eastern Islamic world. The eighteen anecdotes relating to the Ghaznavids have been translated into English by Miss Iqbal M. Shaḥī as *Fresh light on the Ghaznavids*, in *IC*, xii (1938), 189-234; they furnish useful information on the dynasty not found elsewhere. A translation of the whole work into a western language would be welcome.

**FAKĪR OF IPI**, the name given in popular parlance to Hādījī Mīrzā 'Alī Khān, Pathan *mullah* and agitator along the Northwestern Frontier of the Indo-Pakistan subcontinent in both the later British Indian and the early Pakistani periods, d. 1960.

A member of the Tōrī Khēl group of the 'Uḥmānzay Wazīrs of North Wazīrīstān, probably one of the most unreconciled of the Pathan tribes of the Frontier in British times, he came to especial prominence in 1936-7, inflaming the Tōrī Khēls and the Mahsūds of the Tochi valley against the British military presence, and then retreating to a series of caves at Gorwekht near Razmak, not far from the Afghān frontier, which served as his headquarters for the rest of his life. In 1941 he was apparently contacted by Axis agents from the German and Italian embassies in Kabul with a view to raising the frontier against Britain, but nothing much materialised. After the Partition of 1947 between India and Pakistan, the Faḳīr actively identified

himself with the Afghān-sponsored "Paštūnistān" movement, and after 1950 became president of a southern "Paštūnistān" local assembly based on Gorwekht, where stocks of food and arms and a small Pašto printing press were kept. He died in 1960.

**FAMILY** [see 'Ā'ILA].

**FA'R** (A., pl. *fī'rān*, *fī'ara*, *fu'ar*) masculine substantive with the value of a collective (noun of singularity *fā'ra*) designates, like the Persian *mūsh*, firstly, among the Rodents (*kawārid*, *kawādim*), the majority of types and species of the sub-order of the Myomorphs (with the Dipodids, Glirids, Murids, Spalacids and Cricetida), secondly, among the Insectivores (*ākilāt al-ḥaṣharāt*), the family of the Soricids. The term is applied equally well to the largest rats as to the smallest shrews and gerbils. The adjectives of abundance *fā'ir*, *fā'ira*, *maf'ara* and *muf'ira* which are derived from it contain the same general idea, so that, in texts, *fā'r* and *fī'rān* always present a problem of discrimination between rats and mice; this lack of precision persists with the dialectal form *fār* pl. *fī'rān*, as well as with its Berber equivalent *agherda* pl. *igherdagen*.

However, jointly with this collective of broad semantic extent, several more precise nouns fortunately help towards a skeleton classification of all this prolific world of mammals which flee the light and whom humanity treats, in general, as undesirable, by reason of the depredations to which their way of life forces them. Without pretending to be able to apply, with the existing Arabic philological resources, a scientific system which proves most complicated, it is, nevertheless, possible to give a glimpse of all the known species of the Muslim populations by dividing these species under one of the four following most significant rubrics: *qūradh*, *fā'ra*, *khuld* and *yarbū'*.

A. **DJURADH** (pl. *qūrdhān*, *qūrdhān*) and its derivative *qūrdhawn*, with the dialectal forms *qūred*, *qūred* in the Maghrib and *qūrdūn* in Syria, defines all rats of a large size without distinction of species. Among the numerous strains of rats, the ordinary man of every people has for long recognised two categories according to their ethology, the town-dwellers and the rustics, and the fable of the meeting between the town rat (*ḥaqarī*) and the country rat (*rīfī*) remains one of the themes of fables common to all literatures. The majority of rats whose life is linked with towns are of a large size (*adal* pl. *idlān*), the Brown rat (*Mus decumanus*) or "Sewer rat", which is grey-brown, hence his name *marnab* (Maghrib: *ṭubba*, Tamaḥaq *taḡhūlit*, pl. *tighūliin*) and the Black rat (*Mus rattus*), both of which owed their rapid extension of their area of distribution to the maritime commercial traffic in the Mediterranean basin since the high Middle Ages. It was the same for the Alexandrian rat (*Mus alexandrinus*) also called "palm rat" or "roof rat" (*Mus lectorum*) and whose chosen habitat is in high places (granaries, terraces, the tops of date-palms) and not in the infrastructure of buildings. Proper to Egypt, this rat was introduced into Italy by merchant shipping; it makes a nest at the top of palms and, when it is hunted, is able to let itself fall to the ground without injury by blowing himself up like a balloon. In the

large oases it is confused with the "palm rat" (Saharan: *tunba*, Tamahaḡ *akkolen*), an erroneous name of a small ground squirrel (*Euxerus erythropus*) which feeds on dates. Still included among the "true rats", so the naturalists say, there must also be cited the large burrower rat of Egypt and Arabia called the Fat sand rat (*Ps. obesus*) which is cream-coloured. All the Maghrib used to know the Striped rat or "Barbarian rat" (*Arvicanthus barbarus*) by the name of *zurḡānī* (Tamahaḡ *akunder*, pl. *ikunderen*). Numerous geographical strains, such as the *Mus calopus* and *Mus peregrinus*, still remain to be studied in Morocco.

In the vast group of country rats, scourge of farmers and habitual nourishment of nocturnal predators, the Voles and Field-mice (types *Arvisola*, *Microtus* and *Apodemus*), confused under the name of 'akbar (Hebrew 'akbār, in I. Sam. vi, 4-5; Isaiah ii, 20, lxvi, 17; Levit. xi, 29), have had since the most ancient antiquity the just reputation of being terribly harmful. The most common, the Common vole (*Microtus arvalis*) 'akbar ḡakli, fa'rat al-ḡhayt, is present in all the cultivated zones, along with the strains *Mus micrurus* in Persia and *Hypodoeus syriacus* in Syria; a close neighbour in Egypt is the semi-aquatic "Nile rat", *ḡuradh al-Nīl* (*Arvicanthis niloticus*), while the Sudan has its opposite number in the "Khartoum rat", *ḡuradh al-khartūm* (*Arvicanthis testicularis*). The Field mouse (*Apodemus sylvaticus*), *daḡhīma*, fa'rat al-ḡirāḡī (in Syria, *ḡurdhān*) prefers living in trees, and is found in company with the Dormouse, the Garden dormouse (types *Glis*, *Myoxus*, *Eliomys*), *ḡuradh sindjābī*, *karḡadūn*, and the Small dormouse (*Muscardinus*), *zughba*. On the Saharan borders lives Munby's dormouse (*Eliomys munbianus lewinus*), *ḡadghaḡāḡī* in Berber, which the Tuareg eat on occasion, as well as the Goundis (types *Ctenodactylus* and *Mossouteria*), *kundī/gundī*, Tamahaḡ *telūt*, *taralemt*, large, very suspicious, burrowing rodents rather similar to the Cobaye (*Cavia porcellus*). It is perhaps to the latter as well as to the Hamsters that the Arab philologists attribute the name of *yahyarr*, defined as being "the largest of all the rats".

Al-Djāhīz was happy to record all the information that he had been able to glean on the subject of rats (*ḡayawān*, v, 245 ff. and *passim*). Regarded as noxious creatures, he tells us that in *Khurāsān* and Antioch the rats are particularly aggressive, holding their own against cats and going as far as nibbling the ears of sleeping persons; the frightful trench wars with their train of rats which our century has known, alas, only confirm these sayings. Their depredations and their less engaging aspects arouse in every man repulsion, as nothing resists their inexorable incisors, unless it is metal. On the other hand, al-Djāhīz shows, out of concern for justice, a positive aspect in the presence of these parasite hosts; if they invade a dwelling, it is because they find there something to satisfy their appetites and so it is a sign that it enjoys a certain prosperity. Hence the wish expressed in this old adage is understandable: *akḡhar' llāh' ḡurdhān' baytik'* "may Allah multiply the rats of your house". With the same intention, a storyteller of Medina used to offer up this prayer: *Allahumm' akḡhīr ḡurdhānā wa-akill' sibyanānā* "O Allah, give us many rats and few children", evoking implicitly the danger of misery which overpopulation could bring about. On the contrary, the expression *ḡafarrakat ḡurdhān' baytihi* "the rats of his house have dispersed" may

be an image of being wrecked by poverty; in our days and with the same idea, sailors may see a sign of the inescapable loss of the ship when the rats desert it. Furthermore, rats often show proof of ingenuity; faced with an oil container, the rat will know how to sample the contents by dipping in its tail a number of times. Caught in a cage, it soon manages to escape with the help of its sharp teeth. In the countryside, rats take care not to dig their hole (*khabār*) on roads in order to avoid the danger of being trampled by beasts of burden. Some rats may be attracted, like the so-called "thieving" Magpie ('ak'ak), by anything which shines and steal jewels and money, and the adage *asrak min ḡuradhī* "more thieving than a rat" is truly spoken; al-Damīrī records, with reference to this, (*ḡayāt al-ḡayawān*, i, 191-2) the discovery, in the time of the Prophet, of a cache concealing several *dīnārs* thanks to a rat, and the one who discovered it had full possession of the find, which was attributed to divine intervention.

Before Islam, certain rats, especially the country ones, were hunted for their flesh, as were the uromastix lizard [see *ḡABB*], the hedgehog and the porcupine [see *KUNFUḢH*] and the jerboa (see below). These primitive tastes did not disappear immediately with Islam since, according to Abū Zayd al-Naḡwī (*ḡayawān*, iv, 44, v, 253, vi, 385), the famous *raḡīz* poet Ru'ba b. al-'Adīḡḡāḡī [q.v.], of the 2nd/8th century, used to feast on roasted rats caught in his own house.

In the *Hidjāz*, the palm rat used to be so common that the expression *umm ḡurdhān* "mother of rats" designated metaphorically the top of the date palm where the animal chose to live, and *ḡurdhāna* became the name of a variety of date. Finally, authorities on horses gave the name *al-ḡuradhān'* "the two rats" to two symmetrical dorsal muscles of the horse because of their shape.

B. FA'RA, while being the noun of singularity of *fa'r*, designates more especially the mouse and every small rodent which resembles it. The Common mouse or "grey" mouse (*Mus musculus*), *fa'rat al-bayt*, present wherever there is man, numbers numerous geographical strains, of which *M. m. gentilis*, *alḡirus*, *far* and *ḡayū* are to be found in the Maghrib, *M. m. variegatus* in Egypt, *M. m. pretextus* in Syria and *M. m. flaviventris* in Arabia.

At every time, the mouse was at the origin of misdeeds, seen as catastrophes, coming unexpectedly to disturb daily life. Already in the Ark of Noah, according to the legend, its depredations excited the complaints of the women, from which resulted the creation of the pair of cats, then that of the pair of pigs [see *KHINZĪR*]. The Prophet Muḡammad himself had set a trap to get rid of this "little rascal" (*faḡaysika*) which, according to several traditions, had only just missed setting fire to his house by pulling, in order to nibble it, the wick of the lighted lamp; thanks to the immediate intervention of the master of the house, the only damage it did was to make a hole in his prayer carpet. From this episode, which was no doubt authentic and not the first of its kind, an irrevocable curse fell upon the mouse, which was then added to the list of the four execrable species (*faḡāsik*), i.e. the crow, [see *ḡHURĀB*], the kite, *hidā'*, the scorpion [see 'AKRAB] and the biting dog [see *KALB*], a list to which Mālik b. Anas added the lion [see *ASAD*], the panther, *namīr*, *nīmr*, the leopard [see *FAHD*] and the wolf [see *ḡHĪB*], to be destroyed at all times and everywhere in Islam, even by the pilgrim in a sacralised

state. It was, furthermore, enjoined on the young community to extinguish every lamp at night, in their homes and in the mosques, and not to do as the Christians who imprudently left permanently lighted a sanctuary night-light in their churches and chapels (*Hayawān*, v, 121, 269, 319).

Before Islam, the mouse scarcely enjoyed, among the Arabs, any greater credit, since it passed as being the metamorphosis of a Jewish sorceress to some and that of a dishonest crow to others (*Hayawān*, vi, 477). In addition, some proverbs such as *alaṣṣ min fa'ra* "more thieving than a mouse", *aksab min fa'ra* "more hoarding than a mouse" presented it as a pilferer and an inveterate miser. In the climate of such a reputation one can understand the energetic refutation with which al-Djāhīz opposes (*Hayawān*, iv, 298 ff.) the words of the Avesta which propose that the mouse was a creation of Ormuzd, genius of Good, while the cat was that of Ahriman, genius of Evil.

The words *fa'ra* and *birr* include, apart from the Common mouse, all the other species of small rodents such as the Dwarf mouse (*Micromys minutus*) also called *zubāna*, the Arian mouse (*Mus arianus*) called *sikīm*, the Desert mouse (*Mus barbarus*) or *faṣ'a* and *fa'rat al-ṣaḥra* and all the representatives of the *Acomys* type or Spiny mouse, *kunfū' / kinfī'*, with *A. viator* in Tripolitania, *A. Cahirinus* in Egypt, *A. Chudeau* in Mauritania and *A. dimidiatus* in Iran. *Fa'ra* also extends to cover the small insectivores with a very elongated snout which form the Shrews (of types *Sorex*, *Crocidura*, *Suncus*, *Elephantulus*). More precisely, the Shrew is called *zabāba* and the Arab authors speak of it as deaf because of the absence in it of an external ear (*Hayawān*, vi, 317). It bears in addition the names *fa'rat al-bīṣh* "wolf's-bane mouse" and *fa'rat al-samm* "poison-mouse" by reason of its supposed resistance to the poison of venomous plants, whose roots it nibbles at the time when insects are in short supply.

Arab poets and prose writers have often dealt with the atavistic hostility of the cat towards the mouse, which it makes its favourite prey; the ancestral cat-and-mouse antagonism is well set in relief by the old expression *lā ya'rif<sup>u</sup> hīr<sup>m</sup> min bir<sup>m</sup>* "he doesn't know a cat from a mouse" being applied to one who is completely ignorant.

There should also be mentioned an extension of the use of *fa'r* and *fa'ra* to designate other animals having the appearance of rats and mice. Also to be found is *fa'r al-būṣ* "cannaies rat" given to the aulacode (*Aulacodus*) as well as *kubā'*; the *fa'r al-khayl* "horses' rat" is the Polecat, the *fa'rat al-khayl* "the horses' mouse" is the Weasel [see *IBN 'IRS*], the *fa'r fir'awn* "Pharaoh's rat" is the Ichneumon (*nims*) and the *fa'r al-thayyil* "Scutch-grass rat" is the Golunda, a countryside predator of the rice-plantations. Finally, by contamination between the roots *F<sup>2</sup>-R* and *F-W-R*, *fa'ra* is wrongly substituted for *fāra* "odour" in the names *Fa'rat al-ibil* (for *fārat al-ibil*), a special odour which camels emit once they are watered, after being satiated with fragrant plants, and *fa'rat al-misk* "odour of musk" (and not "musk rat"), a name given to the contents of the musk vesicle (*nāfidja*) of a "small animal" (*duwaybba*) hunted in Tibet and which, despite its false name *djawadh al-misk* "musk rat", is not a rat (*Hayawān*, iii, 514, v, 301-4, vi, 27, vii, 210-11). Al-Djāhīz adds that the name of *fa'r al-misk* is given to certain house rats which emit a characteristic odour similar to musk.

C. **KHULD** (pl. *khlūdān* and dial. *khlūda*) and its doublet *djuldh* (pl. *madjāliḏh*, *manādjūdh*), of Aramaic origin (Hebrew *hōled* in Levit. xi, 29), is the name of the Mole rat or Blind rat (*Spalax typhlus*) a vegetarian rodent and burrower widespread in Egypt, in the Near East and in Arabia, especially in Yemen; it there takes the place of the common mole (*Talpa europaea*) which does not exist there. This Mole rat is also called *abū a'mā*, *fa'r a'mā* "blind rat" because its very small eyeball disappears beneath a cutaneous fold; similarly, the absence in it of an external ear made it said (*Hayawān*, ii, 112, iv, 410; *Hayāt al-hayawān*, i, 297 ff.) that it was also deaf and that it only guided itself underground by its sense of smell. Furthermore, its great distrust is at the origin of the proverbial expression *asma' min khuld* "with hearing finer than that of the Mole rat". So believing it blind, deaf and an insectivore, the ancients supposed that it fed itself by staying with its mouth open at the entrance of its hole and swallowing the flies which came to settle on its tongue (*Hayawān*, ii, 112).

Known since the most ancient antiquity, the Blind Mole rat (the ἀεπάλαξ of Aristotle) was however more familiar to the Arabs as it was, according to the sayings of all the Muslim authors, the direct agent of Allāh in the breaking of the famous dam of Ma'rib [see MA'RIB] around the year 542 A.D. It was said to have provoked by its labyrinth of galleries the fatal fissures through which the mass of devastating waters burst forth, the *sayl al-'arim* mentioned in the Kur'ān (XXXIV, 15-16). With the word 'arim, probably of Himyarite origin, the Arab philologists tentatively saw in it a plural (sing. 'arima) signifying at once "dikes", "rats" and "torrential rains" (*LA*, s.v. '-R-M). Although archaeologists have established the majority of the combined causes of this catastrophe (poor maintenance, silting up and hence raising of the level, flooding of the wadi and perhaps simultaneous earth tremors) which brought about a diaspora of the local tribes, it is the Mole rat which, in the general opinion, remains the instrument of this divine chastisement. It is not, however, to be ruled out that it played its part in the collapse of the gigantic earth dike, magnificently linking the works at the two ends of the dam, for this eager borer of the soil lives in sizable colonies and is particularly prolific; the proverb *afsad min khuld* "more ravaging than a Mole-rat" is there to confirm its misdeeds.

As for the mole (of the two strains *europaea* and *romana*), it is only known in the Maghrib, and it is to the Latin *talpa* that it owes its names *tawbīn / tūbīn* in Hispano-Moorish (cf. Spanish *topo*) and *tūbba* in the modern dialects; compared to a rodent, it is also named *fāra 'amyā* "blind rat". By failing to distinguish between the mole and Mole rat, the majority of Arab lexicographers, with *khuld*, maintained the confusion between these two quite different species. For a good system, it seems that in modern Arabic *khuldīyyāt* defines clearly the Spalacids and *tawbiyyāt* the Talpids.

D. **YARBŪ'** (fem. -a, pl. *yarabī'*) having passed to *djarbū'* pl. *djīrābī* in dialects (Pers. *mūsh dō pā*, Tamahak, *edawi*, pl. *idawan*), designates at once the jerboa in general (types *Dipus*, *Jaculus*, *Alactagalus*, *Alactaga*), and the gerbil and the jird (types *Gerbillus*, *Meriones*, *Psammomys* and *Pachyromys*). All these small rodents and leapers of desert and steppe are very similar in appearance, gait and ways; each of them can be compared with a miniature kangaroo with a long tail ending in a brush rather

like a spear and its head, hence its ancient name of *dhū 'l-rumayh* "with the small spear" given to every species. The Arabs, nevertheless, distinguished the jerboa and gerbil, calling the former *yarbū' shufārī* "the great" and the latter *yarbū' tadmūrī* "the small"; in our own time, the Marāzīg of Tunisia make the same difference with *shāhī* and *fār aḥmar*. From Africa to Arabia, as many geographical strains of jerboas are enumerated as of gerbils and jirds, but, without attempting a system for the most part complicated, it is to be maintained that the most common jerboa is that said to be of Egypt (*Jaculus jaculus* or *Jaculus aegyptius*) which is to be found from Mauritania to the Arabo-Persian Gulf; it is this of which the Arab authors speak and al-Djāhīz (*Hayawān*, v, 260, v, 385) then al-Damīrī (*Hayāt* . . . , ii, 409) mention some similarities between its behaviour and that of the hare [see ARNAB, above], notably in their common ruse of *tawbīr* or *zamū'* consisting of only resting, in light soil, on the shaggy pads (*zama'āt*) of the heels in order to leave the faintest possible tracks. But it is especially for its genius at escaping (*nifāk*, *tanfīk*) when it is hunted that the jerboa is famous among the Bedouins who, at all times, eagerly hunted it as choice game. By day, the jerboa lies asleep at the bottom of its underground lair with many obstructed outlets, with a small pile of spoil earth showing them on the outside. The hunter who, in order to dislodge it, sounds the corridors of the burrow with a long stick cannot divine the exit from which the animal is going to spring out; if it finally comes out, it is with such bounds and such abrupt swerves that it very often keeps in check the most alert saluki. After tens of metres of frantic running, it soon seeks to plunge back into the ground. These retreat outlets of the jerboa bear the names *nāfīkā'*, *kāšī'ā'*, *rāhī'ā'*, *dām-mā'* (see Ibn Sīduh, *Mukhašṣas*, viii, 92), and it is from the first of these words (root *N-F-K*) that there is derived (according to the philologists and exegetes) the Qur'ānic meaning of *nifāk* "dissimulation, duplicity, hypocrisy" in the matter of faith (al-Damīrī, *Hayāt* . . . , ii, 408-9).

In the pre-Islamic period, the Bedouins used to refrain from hunting the jerboa by night for, like the hedgehog and porcupine [see KUNFUDH], it passed for a mount of the *qinn*. Jerboas, gerbils and jirds live in small societies, of which each one colonises a sector (*arḍ marba'a*), and it was also believed that, as with the monkeys [see KIRD], they each had a chief in the role of nocturnal sentinel of the group and ensuring a permanent surveillance for the security of the young (*dīrs*, pl. *adrās*, *durūs*) who could easily stray, as the proverb says *aḍall min walad al-yarbū'* "straying more than the young of the jerboa"; if the chief relaxed his vigilance, he was hunted and replaced.

Finally, the great round, jet black eye of the jerboa is used as an image in the Maghrib, where *ayn al-djārbū'* designates a large buck-shot for shooting large game and, in Tunis, the colour "mouse grey" is called *djārbū'rī* "jerboa grey".

Of all these small creatures of the soil (*hasharāt al-arḍ*) which *fa'r* represents, only the jerboa, in Qur'ānic law, was recognised as legal for consumption by three of the four juridical schools of orthodoxy, the Hanafis contesting this legality. For all the other rodents, the prohibition of consumption relates not only to their flesh, but also to every commodity in which they have put their teeth (*su'r al-fa'r*) "rats, mice scraps" and every alimentary liquid (oil, milk, honey, vinegar, etc.) in

which one of them has fallen (*fa'ir*); also any product "contaminated" cannot be put on sale.

In urban areas, the destruction of invading rats and mice has always been a permanent necessity and the means employed, in mediaeval Islam, were very varied, but their absolute efficacy was rarely assured. The most widespread method was poisoning with the aid of baits prepared for the purpose; the poisons which they contained were either of vegetable or chemical origin. As toxic plants they used the sea-onion (*scilla maritima*), *unsul baḥrī* called *baṣal al-fa'r* "rat onion", the rose bay (*nerium oleander*), *diflā*, *samm al-himār* "donkey's poison" and the hyoscyamus (*hyoscyamus albus*), and *bandjī*. Among chemical products they had vitriol (*kalkand*), sulphur of arsenic (*shakk*, *shubha*, *rayb*, *rahaḍjī*) or "ratsbane" (*samm al-fa'r*), called in Irāk *turāb hālik* "killer earth", which was extracted in Kḥurāsān, and litharge (*murtak*, *mur-dāsandjī*); oxgall, donkey's urine and iron filings were also included in these preparations. Another practice was to smoke out the holes of the rodents by burning cumin, horn of horse's hoof and natron (*naṭrūn*). Cages were made with several systems of fall-traps and box-traps in pottery, whose patterns are still in use, but the simplest and most effective was that which al-Asadī (*Djāmhara*, . . . ms. Escorial, Ar. 903, fols. 165b-166a) advocates in the 7th/13th century and which consists of a basin filled with water and on which is placed a rolling-pin (*shaubak*), baited in the middle with some dripping or cheese; attracted, the greedy rodent, creeping along this unsteady pole, makes it shake unavoidably with its own weight from one side to the other and ends up by drowning. Complementing all these stratagems, a permanent hunt was assured in homes and shops by small domestic carnivores such as the cat, the aforementioned weasel, the civet (*zabād*) and the genet (*djāmīṭ*). The protection of doves [see HAMĀM] against the rats which preyed on the eggs consists, in our own time still, of encircling the outside of the flight grilles with a covering of completely varnished ceramic squares at the bottom of a slope; sometimes the exit holes consisted of pottery pipes going well outside in order to place an insurmountable obstacle in the way of every climber, and this is a method constantly employed in the pigeon-houses which adorn the Nile Valley. To all these direct means of defence must be added the rich arsenal of magic formulas, talismans and conjuring practices which serve to reinforce in the imagination the chances of success; of these, one of the most widespread was to kill a mouse, cut off its tail and bury it in the communal room of the house.

In ancient healing, the specific virtues attributed to the corporeal elements of rodents were relatively limited. The head of a mouse placed in a linen cloth and applied to the head was used to dispel migraine and headache. The eye of a rat carried as a talisman allayed malaria; the upper lip of a Mole rat had the same effect, while the blood of the latter was a beneficial eye-lotion for all ocular troubles. The spoil earth of its galleries and its brain mixed with rose water made a good plaster against gout. Finally, one of the most curious and useful properties was that of the urine of a mouse which, it appears, perfectly erases ink on parchments. It is to be supposed that the difficulty was in procuring a little of this precious liquid, but it could be achieved by capturing in a small cage-trap, one or a number of mice and rigging up at the bottom of the device a small spout leading to a bottle. It was then suffi-

cient to provoke a sudden irruption of the house cat in order to achieve, under the effect of the terror, among the captives, the awaited physiological reaction of urination; it is this, at least, which al-Damīrī (*op. cit.*, ii, 2009 suggests, who seems to have experimented with this stratagem with the aim of reusing parchments, this material being always very highly valued in the Middle Ages.

From this glimpse of the manner in which Muslim opinion treated rats and mice, these terrible carriers of plague and cholera, it is evident that in Islam they scarcely enjoyed any more credit than in Christianity and that there was no good to be expected from this race of parasites on the fruits of man's labour; the experience which this old Moroccan adage conceals: *al-fār mā ka-yūled ghēr haḥḥār* "the rat/mouse can only beget a grave-digger" sums up well this general contempt.

(F. VIRÉ)

AL-FĀRĀBĪ, ABŪ IBRĀHĪM IŠHĀḶ B. IBRĀHĪM, lexicographer. The early sources are sparse in regard to him. Only Yāqūt gives him a whole notice (*Udabā'*, vi, 61-5 = *Irshād*, ii, 226-9); al-Suyūṭī reproduces a few extracts from this adding nothing (*Bughya*, i, 437-8); and al-Ḳifīṭī speaks of him only incidentally in his *Inbā'* (i, 52-3), in his notice on Abu 'l-'Alā' al-Ma'arrī.

His date of birth is unknown, but he probably died in 350/961 (the date given by Brockelmann, F, 133, and Kraemer, 212). He was the maternal uncle of al-Djawharī, author of the *Ṣiḥāḥ* (d. ca. 400/1009 [q.v.]), which keeps al-Fārābī within the 4th/10th century and includes the date of 450/1058 (Yāqūt, vi, 62; cf. al-Ḳifīṭī, *Inbā'*, i, 53). He lived in his natal town of Fārāb [q.v.]. Yāqūt, *loc. cit.*, reports, however, on the authority of the *kādī* Yūsuf b. Ibrāhīm al-Ḳifīṭī (father of the author of the *Inbā'*) from the Yemen, where he resided, that al-Fārābī went to the Yemen, lived in Zabīd, composed there his *Dīwān al-adab* and died there also, before he had been able to teach it, at a date ca. 450 A.H.; but Yāqūt himself, on the basis of all the historical details which he had brought together (vi, 63-5), rejects the reports of the *kādī* Yūsuf (vi, 65). Yāqūt bases himself here on, in particular (vi, 63), the fact that he had read as follows, written in al-Djawharī's own hand, *karā'tuhu 'alā Ibrāhīm, rahimahu Allāh, bi-Fārāb* "I read it [sc. the *Dīwān al-adab*] at Fārāb with [Abū] Ibrāhīm [the author]". Elsewhere Yāqūt says (vi, 159, notice on al-Djawharī), "I found at Tibriz a copy of the *Dīwān al-adab*, written in al-Djawharī's hand (*bi-khaṭṭ al-Dj.*) in the year 383". It is also appropriate to consider the old mss. to be mentioned further on.

For his part, al-Ḳifīṭī (*Inbā'*, i, 52) repeats an anecdote which brings in Abu 'l-'Alā' al-Ma'arrī in order to explain how the Yemenis were able to believe that al-Fārābī had come to the Yemen, as they asserted; this anecdote has pungency, but hardly any value.

The *Dīwān al-adab*'s editor, Aḥmad Mukhtār 'Umar, in his sketch of the author (i, 3-10), also rejects this alleged trip to Yemen (6) and considers

it reasonable to think that he went to Bukhārā and Baghdād, especially as he would only have been able to find in the latter city the necessary material for the composition of the *Dīwān al-adab*; hence it is very probable that it was put together in Baghdād. All this, however, is a question only of probabilities. For al-Fārābī's sources, see *ibid.*, i, 31.

He taught his book at Fārāb and it became known in neighbouring regions (i, 7), and it was there that the earliest study on his work appeared, in the shape of the *Tahdhīb Dīwān al-adab* of al-Ḥasan b. al-Muzaḥḥār al-Naysābūrī, a *luḡhawī* who lived in Kh̲wārazm and died in 442/1050-1 (*ibid.*).

The *Dīwān al-adab* [*fi bayān luḡhat al-'Arab*], according to the complete title in the Oxford ms. (Kraemer, 212) is an original dictionary. The vocabulary is set forth according to the forms (*wazn*); under each *wazn*, in the alphabetical order of the *last* radical consonant. This innovation had a great renown in Arabic lexicography; al-Djawharī adopted this arrangement for his *Ṣiḥāḥ*, and it became widespread. Al-Fārābī nevertheless retained something of al-Ḳhalīl's way: he divided the subject-matter up into six *katib* (1) the *Kitāb al-sālim*; (2) the *K. al-muḍā'af*; (3) the *K. al-miṭhāl*; (4) the *K. dhawāt al-thalātha* [the *adḡwaf*]; (5) the *K. dhawāt al-arba'a*; and (6) the *K. al-hamza*. In each *kitāb* there came first the nouns and then the verbs, strictly separated.

This dictionary arranged by *wazn* is a precious aid for Arabic philological studies, for it permits one to study these *wazns*. But for practical consultation it is not easy. Aḥmad Mukhtār 'Umar's edition is with the *muḥadḡa'a* of Ibrāhīm Anīs, who opens the first volume with a *taḡḡīr*. So far, three volumes have appeared at Cairo (1394/1974 and each following year), and a fourth will give the *Kitābs* 5 and 6 and indices. Brockelmann lists 30 mss. (F, 133, S I, 195-6, III, 1196); the editor cites 23 of these (i, 31-2), but has based his text on five, and especially on the two oldest, from 391 and from before 390 (i, 57-60).

Ḥādīdjī Ḳhalīfa in his *Kashf al-zunūn* confused the *Dīwān al-adab* with al-Zamaksharī's *Mukaddimat al-adab*, see the editor's *muḥadḡima* (p. 1), and there is also a confusion between al-Fārābī the lexicographer and al-Fārābī the philosopher (*ibid.*).

The *Dīwān al-adab* had a deep influence on al-Djawharī's dictionary, which not only followed the arrangement by the last radical, but also took over the same subject matter, making Kopf observe justly [see AL-DJAWHARĪ] that the latter's own contribution was minimal. Al-Fārābī's work also had an influence, in regard to method, on the *Shams al-'ulūm* of Nashwān al-Himyārī, according to the editor (i, 52-3), and on two Arabic-Persian dictionaries, those of Abū 'Abd Allāh al-Ḥusayn al-Zawzanī (d. 486/1093) and of Abū Dja'far Aḥmad al-Bayḡhārī (d. 504/1110-11). It was further the model, in regard to form, of the Turkish dictionary by Mahmūd al-Kāshgharī, the *Dīwān luḡhat al-turk* (Kraemer, 212).

Lost works of al-Fārābī include a *Bayān al-irāb* and a *Sharḥ Adab al-kātib*, mentioned by Yāqūt (vi, 63). Al-Suyūṭī, *Muzḡir*, i, 211, gives an extract from a *K. al-Alfāz wa 'l-hurūf* on the value of the tribes for their 'arabīyya. He begins it thus: *kāla Abū Naṣr al-Fārābī*, which was the *kunya* of the philosopher, and the editor, following Ibrāhīm Anīs, sees here an error by al-Suyūṭī (as earlier by Abū Ḥayyān) and prefers to connect the work with Abū Ibrāhīm al-Fārābī the lexicographer. Both these scholars are unaware of the *K. al-Hurūf* of Abū Naṣr al-Fārābī, published in Beirut

1969 (Recherches, Série 1, vol. 46) and edited by Muḥsin Maḥdī. *K. al-Hurūf* is the oldest title by which the work has been known, but since Ibn Abī Uṣaybī'a it has been known as the *K. al-Alfāz wa 'l-hurūf* (*muḥaddīma*, 34). Al-Suyūṭī's citation is indeed there (147, and not at the beginning), but not word-for-word; it seems that al-Suyūṭī made a résumé of what al-Fārābī said and then added something of his own, according to the editor's explanation (*muḥad-dīma*, 40). Hence there is no reason for attributing to the lexicographer al-Fārābī an allegedly lost *K. al-Alfāz wa 'l-huruf*.

*Bibliography*: J. Kraemer, *Studien zur altarabischen Lexikographie*, in *Oriens*, vi (1953), 201-38; al-Kifṭī, *Inḥā' al-ruwāt 'alā anbah al-nuḥāt*, i, Cairo 1369/1950; al-Suyūṭī, *Buḥyāt al-uw'āt fī tabakāt al-nuḥāt*, i, Cairo 1384/1964. There is a description of the *Diwān al-adab* by Ḥusayn Naṣṣār, in *al-Mu'djam al-'arabī, naṣḥ'atuhu wataṭawwuruḥu*, i, Cairo 1375/1956, 176-81, exposition by the editor at i, 10-53; See also the authors cited in the text.

(H. FLEISCH)

**FARĀMŪSH-KHĀNA** (P. *farāmūsh* "forgotten" and *khāna* "house"), the word used in Iran to designate a centre of masonic activities. The term seems to have originated in India, where a masonic lodge was first founded by the British in 1730. The earliest known references in Persian sources to the idea of freemasonry in general and to Indian masonic activity in particular can be found in the writings of 'Abd al-Latif Shūshṭarī Dajāz'irī, a Persian émigré to India. Writing in 1801, 'Abd al-Latif believed that the reason why the Indians and the Persian-speaking people of India call the freemasons *farāmūsh* was that whatever questions were put to them—many of whom were Muslim—they answered: "It is not in my memory" (*Tuḥfat al-'alam*, Ḥaydarābād 1846, 292). The usage might have easily passed from India to Irān, as, in the opinion of 'Abd al-Ghanī Mīrzāyev, it also passed from there to the Persians of Central Asia, where Aḥmad Makhdūm Dānīsh of Bukhārā saw elements of absolute happiness for mankind in the idea of a *farāmūsh-khāna*, see his *Asnād-i dīwadī rādīf bi farāmūsh-khāna wa ba'd-i az maḳāshid-i ahl-i ān*, in *Djāshn-nāma-yi Muḥammad Parwīn Gūnābādī*, ed. Muḥsin Abu 'l-Kāsimī, Tehran 1975, 409-20).

One of the early Persian-speaking travellers to Europe who gave an account of freemasonry was Mīrzā Abū Ṭālib Isfahānī, son of another Persian émigré to India. He travelled and lived in Europe from 1798 till 1803. While in London (21 January 1800 to 7 June 1802), Abū Ṭālib, who was in close association with a number of distinguished English men and women, was urged to join "the freemasons who are being called *farāmūshān* by foreigners". Being somewhat critical of freemasonry, Abū Ṭālib claims to have refused the offer, but he describes in detail a high-class and colourful party to which "no one but the freemasons" were invited (*Maṣīr-i Ṭālibī*, Tehran 1973, 151-2).

The first Iranian person known to have joined freemasonry in Europe was 'Askar Khān Afshār Arūmī, a high-ranking dignitary of the Qādjār royal court. 'Askar Khān, who was on a diplomatic mission to the court of Napoleon, was initiated into the lodge of the Philosophic Scottish Rite in Paris in 1808. The second initiate is known to have been Mīrzā Abū 'l-Ḥasan Khān Īlčī, the first Iranian ambassador to England. He was initiated in London in 1810 under the guidance of Sir Gore Ouseley who, after Īlčī's initiation became the British

Ambassador to Iran. Īlčī's friendly relations with the British were so close that he received a monthly payment from the East India Company from 1810 till his death in 1846. Another early Iranian man to have been happily initiated into freemasonry was Mīrzā Šāliḥ Shīrāzī, one of the students sent to England in 1815. Mīrzā Šāliḥ joined the *farāmūsh-khāna* in London in 1817. A "Mr. Harris" who was known to Mīrzā Šāliḥ as "the chief of the *farāmūsh-khāna*" had honoured him with two masonic ranks. A week before his departure from London, Mīrzā Šāliḥ was urged by Mr. Harris to attend their masonic lodge in order to receive the rank of a master in masonic hierarchy; "otherwise", Harris said to Šāliḥ, "you will go back to Iran with defects" (Mīrzā Šāliḥ, *Safar-nāma*, Tehran 1968, 189, 372, 374).

Generally speaking, almost all the Iranian notables who went abroad in the 19th century, either as exiles like Riḍā-kuṭī, Naḍjaf-kuṭī, and Taymūr, three Qādjār princes (in 1835), or as diplomatic representatives such as 'Abd Allāh Garmrūdī (in 1839), Farrukh Khān Amīn al-Dawla (in 1857), and many others, were initiated into freemasonry lodges. According to some reports, the Iranians were very curious to find out about freemasonry; they were given the impression that freemasonry had an oriental origin and that the Persians should revive this ancient tradition. Masonic activity particularly appealed to Iranian modernist thinkers because of the attachment of the impressive and generally misleading slogan "liberté, égalité, fraternité" to continental freemasonry. Thus we see spokesmen of modernism such as Sayyid Djamāl al-Dīn Asadābādī "Afghānī" and Mīrzā Fath 'Alī Ākhūnd-Zāda well-inclined to freemasonry. It seems, however, that Ādjudānbāshī, who believed that the *farāmūsh-khāna* "lacks anything which may bring benefit to religion and state", was one among few exceptions (Muḥammad Muṣṭafī, *Sharḥ-i ma'mūriyyat-i Ādjudānbāshī*, Tehran 1968, 398).

Despite their existence in Irān, the Iranian masons do not seem to have carried on any noticeable masonic activity during the first half of the 19th century. However, in 1858 Mīrzā Malkam Khān Nāzīm al-Dawla who had been initiated into the *Sincère amitié*, a masonic lodge in Paris, in 1857, established for the first time a *farāmūsh-khāna* in Tehran. Malkam had reportedly secured Nāṣir al-Dīn Shāh's full consent for this, but his *farāmūsh-khāna* was not recognised by any internationally-known masonic lodge. Many distinguished individuals joined the *farāmūsh-khāna*. Accounts of the motives behind the establishment of the *farāmūsh-khāna* are abundant, but it seems clear that through this secret organisation, Malkam was able to introduce his audiences to modern social and political ideas. However, some internal forces, including traditionalist conservatives, and external elements such as the Russians, turned Nāṣir al-Dīn Shāh against it, so that he declared its abolition in 1861 in these words: "From now on, if the phrase *farāmūsh-khāna* comes out of anyone's mouth, let alone his possible involvement in its organisation, he will be most severely punished by the government" (Maḥmūd Katīrā'ī, *Farāmūsh-nāma dar Irān*, Tehran 1968, 74).

Malkam Khān's *farāmūsh-khāna* was accordingly closed, but the secret activities did not entirely die out. Those who were acquainted with the *farāmūsh-khāna* gathered together secretly and, after the assassination in 1896 of Nāṣir al-Dīn Shāh, they

founded a secret society called the *Djāmi'ī-ādamīyyat* ("League of Humanity") on the basis of Malkam's *farāmūsh-khāna* and propagated Malkam's ideas. This secret society was headed by 'Abbās-kulī Khān Ādamiyyat and composed of distinguished Iranians; it was actively involved in the Persian Constitutional Revolution of 1906. Certain members of this society organised a masonic lodge (*ibid.*, 95), and, according to Ismā'īl Rā'īn, the society itself contributed to the forward-ing of British policy in Irān (*Farāmūsh-khāna va farāmāsūnī dar Irān*, i, Tehran 1968, 576-7). This society was banned by Muḥammad 'Alī Shāh in 1908. The *andjuman-i ukhūwat* which began to operate openly in 1899 and was active in the Constitutional Revolution is also known to have been formed of members obedient to the international masonic lodges.

Although Sir Arthur Hardinge speaks of a certain amount of masonic activity in Irān at the turn of the present century (Ismā'īl Rā'īn, *Andjumanhā-yi sirī dar inkilāb-i mashrūṭīyat-i Irān*, Tehran 1967, 45 ff.), it seems that the first internationally-recognised masonic lodge was established in Tehran in 1907 by the Grand Orient de France and called "Loge du Réveil de l'Iran". Some of the men initiated into this lodge were among the most active participants in the Persian Constitutional Revolution, and some of them, like the Sardār As'ad (Hādījī 'Alī-kulī Khān Bakhtiyārī) were regarded as pro-British (Abdul-Hadi Haiiri, *Why did the 'ulamā' participate in the Persian Revolution of 1906-1909?*, in *WI*, xvii (1976), 127-54). Later on, more masonic lodges were established in Shirāz (1919), Ābādān (1920), Masjīd-i Sulaymān (1924), and Tehran (1951, 1957). Also, an American lodge was founded in Tehran in 1962; to this lodge were reportedly affiliated the Rotary Club, World Brothers' Club, and Moral Re-armament (Rā'īn, *Farāmāsūnī*, iii, 11-477).

Due to the secret character of freemasonry, literature on Persian masonic experience was quite scanty and fragmentary until recently. Some treatises were written for and against the Malkam *Farāmūsh-khāna* in the 1860s, but they were not then published (for the text of two such treatises, consult Kāfirā'ī, *op. cit.*, 159-93). Apparently the first Persian book which was wholly devoted to the subject was published in India in 1874. For more elaborate accounts of Persian freemasonry, we have to had wait until the 1960s, when a number of informative books and articles appeared, although most of them were largely inaccurate and poorly-documented. The most informative of all is Rā'īn's above-quoted three-volume work (1968) which contains, among other things, the names of many living Iranians who have been affiliated to masonic lodges. The author's own name, however, was omitted "despite his alleged membership of an American affiliated lodge" (Hamid Algar, *An introduction to the history of Freemasonry in Iran*, in *Middle Eastern Studies*, vi (1970), 293).

(ABDUL-HADĪ HAIRĪ)

**FARANGĪ MAḤALL**, a family of prominent Indian Ḥanafī theologians and mystics flourishing from the 12th/18th century to the present day. The family traces its ancestry through the great scholar and mystic Kh<sup>h</sup>ādja 'Abd Allāh Anṣārī of Harāt to Ayyūb Anṣārī, the Prophet's host in Medina. It is not known when the family migrated to India but, according to the family biographers, one 'Alā' al-Dīn settled in Sihālī of the Awadh [q.v.] province of north India during the 8th/14th century. His descendant, Mullā Ḥāfiz, was acknowledged as a distinguished *'alim* by the emperor Akbar who made a generous *madad-i ma'ash* grant in his favour in 967/1559 (Anṣārī, *A very early farmān of Akbar*, see *Bibl.*). In 1103/1692 the great-great-grandson of Mullā Ḥāfiz, Mullā Kuṭb al-Dīn, who was also hailed as a leading *'alim* of his time, was murdered in a squabble over land and his library burned. The emperor Aurangzīb recompensed his four sons by assigning to them a European indigo merchant's palace in Lucknow and by granting pensions to support their scholarly work. Around 1106/1695 the family moved from Sihālī to the palace which was known as Farangī Maḥall.

The descendants of Kuṭb al-Dīn made Farangī Maḥall into a centre of learning which for 250 years attracted scholars not only from all parts of India but also from places as far away as Arabia and China. Teaching was the profession of most Farangī Maḥallīs and the man who first established their reputation was Mullā Niẓām al-Dīn [q.v.], the third son of Kuṭb al-Dīn. In the early 12th/18th century he made Farangī Maḥall into the biggest centre of learning in north India. Students from outside Lucknow were boarded at the city's Tila mosque, which had room for 700, and the expenses involved were met in part by the Mughal emperors (Anṣārī, *Bānī-i Dars-i Niẓāmī*, 88-9). Yet there was at this time no *madrasa* in Farangī Maḥall, and no central organising institution; members of the family simply taught in their homes those who came to them. This remained the pattern of teaching for over 200 years. Attempts were made to found a *madrasa* in the 19th century, but only in 1323/1905 did one Farangī Maḥallī, 'Abd al-Bārī [q.v. in Suppl.], coordinate the efforts of his relatives and bring them within an institutional framework. This *Madrasa-yi 'Āliya Niẓāmiyya* continued its work until the 1380s/1960s.

Although Farangī Maḥall always remained their base, many of the descendants of Kuṭb al-Dīn travelled widely as teachers. Some like 'Abd al-Bārī and 'Abd al-Bākī (b. 1286/1869-70) taught in Medina; others taught and set up *madrasas* in India. Notable amongst these are: the great logician, Mullā Ḥasan (d. 1209/1794-5), who left a reputation in Rampūr capable of winning respect and support for the teaching efforts of the Farangī Maḥall family

nearly 200 years later; the extremely successful Malik al-'Ulamā' Mullā Ḥaydar (d. 1256/1840-1), who established the Hyderabad branch of the family and brought Farangī Maḥall into a continuing association with India's most powerful Muslim state; but most important of all, 'Abd al-'Alī Baḥr al-'Ulūm [q.v.] who in the sixty years before his death in 1225/1810-1 taught in Lucknow, Shāhḏjahānpūr, Rampūr, Buhār and finally in Madras where, through his teaching and through the *madrasa* which he set up in the Wālādjhāhī mosque, he inspired a revival of learning in South India.

In Lucknow and wherever they travelled, the Farangī Maḥall family pioneered a new curriculum known as the *Dars-i Niẓāmiyya*. Till recently this curriculum has formed the basis of most *madrasa* courses in India, including that of the *Dār al-'ulūm* at Deoband. The *Dars-i Niẓāmiyya* was created by Mullā Niẓām al-Dīn. It is designed to direct the student only to the most difficult or most comprehensive books on each subject, so that he is both forced to think and has a chance of finishing his education by the age of sixteen or seventeen. The curriculum has been criticised for placing too much emphasis on the rational sciences. This seems unjustified. It stipulates no specific bias and insists on no particular books. It is at bottom a way of teaching and the emphasis is left to those who use it.

Members of the Farangī Maḥall family also wrote much, and amongst the most prolific were Mullā Mubīn (d. 1225/1810-11) and 'Abd al-Bārī who wrote 111 books. Of course, many of their books were glosses and super-glosses on the classical texts they taught, but there were also works on mysticism and collections of poetry; there were biographies like 'Ināyat Allāh's *Tadhkirā-yi 'ulamā'-i Farangī Maḥall* which is the major source of family history; and then there was a variety of work from versatile scholars like Walī Allāh (1182-1270/1768-1853) who ranged from a commentary on the Qur'ān in five volumes to a treatise on government, *Ādāb al-salāṭīn*. Works which should be noted in particular are: Mullā Ḥasan's text on logic which has been popular for nearly 200 years amongst those teaching the *Dars-i Niẓāmiyya*, Baḥr al-'Ulūm's study of Rūmī's *Mathnawī*, and Mullā Niẓām al-Dīn's work on the life and deeds of his friend and *pīr*, Sayyid 'Abd al-Razzāq of Bānsa, *Manākib-i Razzākiyya*. The works of one prolific scholar, who wrote almost entirely in Arabic, stand before all. 'Abd al-Ḥayy al-Lakhnawī's *al-Sī'āya fī kashf mā fī sharḥ al-wiḳāya*, his *al-Ta'tīk al-mumadḏjīd* and his *Zafar al-amānī* establish him as one of the greatest scholars of recent times [see 'ABD AL-HAYY]. These books, together with his collection of *fatāwā*, are still much used by Muslims both inside and outside India and have led to Lucknow being known as the "city of 'Abd al-Ḥayy".

The scholarship of the Farangī Maḥall family placed particular emphasis on jurisprudence and logic, which was to be expected from *'ulamā'*, many of whose pupils were initially destined to become government servants and who with this in mind were patronised by the Mughal emperors. They represented a distinctly different tradition to that founded by Shāh Walī Allāh [q.v.] of Dihlī in the 12th/18th century and sustained by the Deoband school from the 13th/19th century. The Farangī Maḥallīs fostered the skills designed to support Muslim states; the followers of Walī Allāh were concerned to develop the resources to enable Muslims to cope with the loss of political power. They looked

back to classical Islam emphasising in their scholarship the Qur'an and the *Hadīth*. Followers of the two traditions of course crossed swords. 'Abd al-Hayy had a notable exchange with Nawwāb Ṣiddīq Ḥasan Khān [q.v.], the leader of the Ahl al-Ḥadīth (Saeedullah, 93-101), while 'Abd al-'Alī debated so successfully with 'Abd al-'Azīz of Dihlī, Shāh Walī Allāh's son, that 'Abd al-'Azīz felt compelled to address him as Baḥr al-'Ulūm or "Sea of knowledge" ('Ināyat Allāh, *Tadhkira*, 141). A further feature of the Farangī Maḥall tradition was tolerance, and though Lucknow is renowned for its Shī'ī-Sunnī quarrels, many Shī'īs sat at the feet of these learned Sunnīs. Their independence of mind was another characteristic. Mullā Nizām al-Dīn, for instance, gave *fatāwā* at variance with many of those in the great legal guide of his time, the *Fatāwā 'Alamgīrī* (Anṣārī, *Bānī-i Dars-i Nizāmī*, 163-4), while the great strength of 'Abd al-Hayy as a scholar was his capacity to cast aside precedent and go back to first principles in promoting an understanding of Islam. Much work needs to be done before the scholarly achievement of the Farangī Maḥall family can be fully appreciated, but Shīblī Nu'mānī did not exaggerate when, after visiting Farangī Maḥall in 1313-14/1896, he summed it up in these words: "This is the Cambridge of India" (Shīblī, 99).

The Farangī Maḥallīs, however, were not just scholars; they were also, to a man, mystics. Even 'Abd al-Hayy, whose grave is one of bare earth open to the skies, stressed the benefits of visiting the shrine at Bānsa and in his will urged his relatives to study Imām al-Ghazālī's *Ihyā' 'ulūm al-dīn*. As in their scholarship, the mysticism of the Farangī Maḥallīs with its heavy concentration on the saint's tomb and the celebration of 'urs contrasted strikingly with the later Walī Allāh-Deobandī tradition which eschewed such practices. Moderate supporters of the doctrine of *wahdat al-wuḍūd*, they continued to study and to teach the works of Ibn al-'Arabī up to the 20th century. Sayyid 'Abd al-Razzāk (d. 5 Shawwāl 1136/27 June 1724), the illiterate *pīr* of the Kādirī order, was the saint to whom all members of this learned Farangī Maḥall family looked. They regarded their association with 'Abd al-Razzāk as crucial to their spiritual well-being, while the *sādīdjādas* of his shrine at Bānsa some 30 miles from Lucknow were careful to pay the scholars of Farangī Maḥall especial respect. There are also three important centres of devotion within the family. The shrine of Mullā Nizām al-Dīn in Lucknow, which is renowned for the benefit it can bring the mentally disturbed and scholars in difficulty; the shrine of Shāh Anwār al-Ḥaḳḳ, and his successors and followers, which is also in Lucknow; and the shrine of Mawlānā 'Abd al-'Alī Baḥr al-'Ulūm which is in the Wāladjāhī Mosque at Triplicane, Madras. There are, furthermore, three important *silsilas* which run through the family: the Kādirī flowing from Sayyid 'Abd al-Razzāk of Bānsa, the Čishtī-Nizāmī from Shāh Kudrat Allāh Nizāmī of Saḥīpur, and the Čishtī-Sābirī which goes back through Mullā Kuṭb al-Dīn to Shaykh Muḥibb Allāh of Allāhābād, the great proponent of Ibn al-'Arabī, to Shāh Aḥmad 'Abd al-Ḥaḳḳ of Radawli.

By the present century, the springs of Indian mysticism were failing, but where they still flowed, the Farangī Maḥall family were often prominent. They had connections with many of the major shrines in North India. They taught the sons of many *sādīdjādas* at the Madrasa-yi 'Āliya Nizāmīyya, the calendar of which was arranged to enable stu-

dents to attend important 'urs. Consequently, the Farangī Maḥallīs were given much respect. The last important *pīr* of the family was 'Abd al-Bārī. His influence was ramified widely throughout North Indian society, where his disciples ranged from the cadets of great landed families to politicians such as Muḥammad and Shāwḳat 'Alī and to relatives of the *sādīdjādas* of the most important shrine in India, that of Mu'īn al-Dīn Čishtī at Adjmīr. His influence, and that of Farangī Maḥall, was demonstrated when at the 'urs of Mu'īn al-Dīn Čishtī in 1334/1916 he played the leading role in founding the Bazm-i Šūfiyya-yi Hind, which aimed to revive and to reform Indian mysticism.

From the time when they were established in Farangī Maḥall, the descendants of Kuṭb al-Dīn, through the expansion of the family, through teaching, through writing, through giving *fatāwā* and through providing spiritual leadership, made wide connections throughout Indo-Muslim society. As modern politics developed, these connections represented a significant network of influence reaching from Lucknow to Madras and from Karachi to Chittagong. When the Farangī Maḥallīs wished to organise an India-wide movement, as in the campaign to protect the holy places of Islam embodied in the Anđjuman-i Khuddām-i Ka'ba [q.v. in Suppl.] founded in 1331/1913, or in the campaign to support the Šarīf Ḥusayn against Ibn Sa'ūd in 1343-4/1925-6, their activities were based on this network. Moreover, it played a similar role when Farangī Maḥallīs joined "modern" politicians in the great religio-political movements of the period. They were in the forefront of those driving forward the Indian *Khilāfat* movement up to the end of 1338/1920, while they were again prominent in the revival of the All-India Muslim League after 1356/1937. In all these campaigns Farangī Maḥall '*ulamā*' promoted policies which, as in most other things, Deobandī '*ulamā*' either found difficult to support or opposed outright. This Deobandī opposition only serves to illuminate the point that the Farangī Maḥallīs were the first '*ulamā*' to enter modern Indian politics. Men such as 'Abd al-Bārī, Salāmat Allāh and 'Ināyat Allāh, orators, writers and builders of organisations, were important channels through which modern politicians based in Dihlī and Lucknow made contact with the Muslim masses.

The contributions of the Farangī Maḥallīs to Muslim education, learning and politics over three centuries make them remarkable among Indo-Muslim families. Family tradition itself helps to explain this record of sustained achievement. Each generation has placed great emphasis on maintaining the family's standards of learning and mystical knowledge. And this process has been helped by the way in which the family has kept together; however far Farangī Maḥallīs strayed in search of a living, most returned to Lucknow to marry, to find solace in times of difficulty and to die. Moreover, the family has remained united except for one division which developed over the succession to Baḥr al-'Ulūm in Madras. Only from the middle of the present century, as Islamic education has retreated before western education and as the partition of the subcontinent has divided the family between India and Pakistan, has the hold of family tradition weakened, and the record of achievement declined.

*Bibliography:* Much biographical material relating to members of the Farangī Maḥall family may be found in: Walī Allāh Farangī Maḥallī, *al-Aghsān al-arba'a*, Nadwa ms., Lucknow;

Mawlawī Hafīz Allāh, *Kanz al-barakāt*, n.d.; Altāf al-Rahmān Kidwāī, *Aḥwāl-i 'ulamā'-i Farangī Mahall*, 1907; 'Abd al-Bārī, *Aḥār al-uwal*, n.d.; Mawlawī 'Ināyat Allāh, *Tadhkira-yi 'ulamā'-i Farangī Mahall*, Lucknow 1928; Mawlawī 'Ināyat Allāh, *Risāla-i ḥasrat al-āfāk ba waḥāt maḍmū'at al-akhlāk*, Lucknow 1929; Sibghat Allāh Shāhid Anṣārī, *Ṣadr al-mudarrisīn*, Lucknow 1941. The following works offer information primarily on the educational activities of the family: Muḥammad Raḍā Anṣārī, *Bānī-i Dars-i Nizāmī*, Lucknow 1973; Shibli Nu'mānī, *Maḳālāt-i Shibli*, A'zamgarh 1955, 91-123; Altāf al-Rahmān Kidwāī, *Ḳīyām-i nizām-i ta'lim*, Lucknow 1924; G.M.D. Sufī, *Al-Minhaj*, Lahore 1941, chs. ii and iii. For the Farangī Maḥallī interest in mysticism, in addition to the biographical works above, see: Nūr al-Ḥasan Aḍjīmīrī, *Khādimāna guzārīsh*, Lucknow 1923; 'Abd al-Bārī, *Urs Ḥadrat Bānsa*, Lucknow n.d.; and for their political activities, see: F. Robinson, *Separatism among Indian Muslims: the politics of the United Provinces' Muslims 1860-1923*, Cambridge 1974 chs. vii-ix. Light is shed on other aspects of the family's history and activities by Muḥammad Raḍā Anṣārī, *A very early farmān of Akbar*, cyclostyled paper, Centre of Advanced Study, Aligarh Muslim University, and Saeedullah, *The life and works of Muhammad Siddiq Hasan Khan Nawab of Bhopal 1248-1307/1832-1899*, Lahore 1973, 93-101.

(F.C.R. ROBINSON)

**FARAS AL-MĀ'** (A., pl. *khayl al-mā'*, *khuyūl al-mā'*) and synonyms *faras*, *al-baḥr faras al-nahr*, *faras nahr*, *ḥiṣān al-baḥr*, denoting the hippopotamus, are nothing other than Arabic translations of its Greek name ὄ ἵππος ὁ ποτάμιος in the works of Herodotus, then ἵπποπόταμος in the works of Galen and Aristotle; Herodotus also calls it ὄ ἵππος τοῦ Νείλου, whence *faras al-Nīl* "horse of the Nile" and Pliny simply translated the Greek as *equus fluvialis*. In Nubia it bears the name *bimik* and in the Touareg country, *agamba* (pl. *igambaten*) and *bango* (pl. *bangōten*). The epithets *khinzīr al-mā'* (Kazimirski) and *ḡāmūs al-baḥr* (Amin al-Ma'lūf) attributed to the hippopotamus seem to be errors of definition.

Belonging to the order of non-ruminant artiodactylae, this bulky African pachyderm (*Hippopotamus amphibius*) forms, with its dwarf relative from Liberia, the recently-discovered pygmy hippopotamus (*Choeropsis liberiensis*), the family of hippopotamids, which is closely related to the suids and whose habitat at the present stretches over central and south-eastern Africa, from Senegal to Ethiopia and the Transvaal. In the mid-Quaternary period it was present in large numbers in Europe and North Africa, as is proved by fossil remains. It was widespread throughout the Sahara in the Neolithic period and at the dawn of recorded history; Hannon, in the course of his famous journey, came across the animal in a river which was probably the Saguiet-el-Hamra flowing to the north of the Rio de Oro. The Nile was a home for these creatures the whole length of its course, including the Delta, until very recent times, since the Neapolitan doctor Zerenghi captured a pair of them in a ditch-trap, in 1609, near Damietta. At the beginning of the 19th century, according to Rüppel, the hippopotamus was still common in Nubia, but today, in order to find it, one must travel down the Nile to a point well beyond Khartoum; the shrinking of its habitat and the rapid drop in its numbers are due to the combined action of the progressive drying-up of the Sahara

and associated regions and uncontrolled destruction on the part of man, black as well as white.

The first mention of the hippopotamus appears to be Biblical, since exegetes identify it with the *Behemoth*, the brute beast (arabised as *bahimūt*, associated with the root *B-H-M*) described in the Book of Job (xl, 10-19), as being one of the first works of God and as embodying blind force along-side the "Leviathan" (possibly the crocodile); whatever the case may be, it is very probable that the waters of the Jordan were acquainted with the creature in those remote times. Common throughout ancient Egypt, the hippopotamus, the walking scourge of crops, was the incarnation, in local mythology, of the maleficent goddess Thoueris, partner in evil to the crocodile god Sobek; a statuette in varnished blue ceramic (Paris, Museum of the Louvre) dating from the 11th Dynasty, or about two thousand years before the Christian era, definitely constitutes one of the most ancient representations of the pachyderm. After the Bible, it is in the works of Herodotus (*Histories*, ii, 71) that we find the oldest description of the "horse of the Nile" based on information, now lost, given by Hecate of Miletus (6th century B.C.); Aristotle was to reproduce this account (*Natural history*), tr. J. Tricot, Paris 1957, i, 127) and after him, a number of authors including Plutarch, Diodorus of Sicily, Strabo, Pausanias and Pliny. For all of them, the image of the hippopotamus is that of a cloven-footed beast like the cow, with a mane and with a horse's whinny, but with a very large and snub nose, and with the tail and tusks of the wild boar. It kills and eats the crocodile and devastates crops on the banks of the river; it is the size "of a donkey" and its hide, impenetrable so long as it is kept dry, is used to make javelins, shields and helmets. In spite of the exhibition of hippopotami at Rome on the occasion of triumphs, and especially at that of Augustus after his victory over Cleopatra, in spite of the presence of a specimen in the menageries of Heliogabalus, and in spite, finally, of a precise description of the animal given by Achilles Tatius and repeated, in the year 325 of the present era, by Eusthatus of Cappadocia, the western world was to remain until the Renaissance in almost complete ignorance of the hippopotamus, to the extent that in his *Treasury*, the Florentine Brunetto Latini (13th century) could still write: "Typpotame est un peissons qui est apelez cheval fluviel por ce que il naist el flun de Nile." The creature only began to be known with the accounts, in 1544, of P. Gilles and P. Belon who were able to observe at leisure, in Constantinople, one of these animals kept in captivity. In the East, Arab authors, cosmographers and encyclopaedists, while retaining the assertions of Aristotle, were able nevertheless to collect, from Nubia and Abyssinia, more precise information. Thus al-Djāhīz, without himself knowing the animal, reproduces on the subject (*Ḥayawān*, vii, 129-45, 250) some interesting details supplied by travelling merchants. He declares notably that the traces left by the hippopotamus, in the course of its nocturnal sorties, on the muddy banks of the Nile, shows to the river farmers the farthest limit to which the river will rise when in flood, and that, if captured young, the hippopotamus is easily domesticated and used to be kept in homes in close proximity to women and children; this was said to be an effective means of protecting them from the jaws of the ever-lurking crocodile. When it leaves the river to graze, adds al-Djāhīz, the hippo-

potamus goes a considerable distance and only starts browsing while returning to the water, as if it has calculated in advance the quantity of food that will be necessary for it during the night. Its teeth had the power, among the Nubians, to soothe their frequent stomach ailments, caused by their crude diet of raw fish and their habit of drinking muddy water; the invalid would wear one of these teeth over his stomach. Besides, the internal organs of the hippopotamus were regarded by them as a good remedy against the periodical seizures of epileptics at the time of new moons (*ṣar' al-ahilla*). To these observations, al-Mas'ūdī adds (*Murūdj*, § 805) that while feeding, the hippopotamus deposits its excrement here and there and that the intact seeds that it contains ensure a regrowth of the vegetation. However, this manner of restitution did little to compensate for the havoc wreaked in the planted fields, whose owners were often obliged to suppress the creatures that were to blame for the damage; in order to do this, they did not hesitate to sacrifice generous portions of lupins (*turmus*, *tirmis*) offered to the greedy pachyderms, which would gorge themselves with them before returning to the water and soon after burst with meteorism.

Those who, after these two authors, made mention of the hippopotamus were content to repeat what had previously been said. It is, however, curious to find that al-Idrīsī, describing the Nile and Nubia (*Nuzhat*, climate I, section 4), devotes only two lines to the animal, stating that it has webbed feet. Still more astonishing is the lack of attention paid to it by al-Makrīzī (*Khīṭat*, ch. xx) in the context of "wonders of the Nile"; repeating al-Mas'ūdī, he adds only that the animal is present in large numbers in the mining district of the Ṣhanḳīr, on the double bend of the river. Al-Damīrī completes all the preceding with his customary rubrics about the permissibility of eating it, the particular qualities of its organs and the animal's role in oneiromancy. Thus we know (*Hayāt al-hayawān al-kubrā*, Cairo 1356/1937, ii, 221-2) that according to the scheme of Ḳur'ānic law, the flesh of the hippopotamus may be consumed because it is a wild herbivore "resembling" a horse. We also learn that the skin of the pachyderm, buried in the middle of a village, protects the latter from every scourge; that after burning, the ashes of this skin mixed in a paste with flour of the vetch (*kir-sanna*) makes a plaster which, in three days, cures abscesses; and that the gall, after prolonged soaking, is dried to make a powder for treating eyes affected with the dark cataract (*al-mā' al-aswad*). What al-Damīrī omits to mention is the high value accorded to the ivory of the teeth and tusks of the hippopotamus. In fact, this ivory was exported from East Africa along with that of the elephant [see 'ADJ and FĪL] and the "horn" of the rhinoceros [see KARKADDAN], but at a higher price because of the superiority of its grain, of which the pure white does not grow yellow in the course of time; confused with the ivory of walrus-tusks under the name *rohart* (Nordic in origin), the West imported it as a high-quality material for craftsmen of inlaid goods, of high-class cutlery, and, most of all, of artificial dentures; the production of synthetic materials with resin base destroyed this market to some extent.

In short, all these mediaeval texts relating to the hippopotamus are nothing more than echoes of accounts where imagination frequently prevails over reality; also, the only true Arab testimony of real documentary value concerning the animal remains

that of the indefatigable Moroccan globe-trotter Ibn Baṭṭūṭa, who saw it with his own eyes in its Nigerian habitat. In fact, having left Sijdilmāsa and crossed Mauretania and the vast desert of the Touaregs, he came, in the course of the year 754/1353, to the Muslim kingdom of Mali [*q.v.*] on the Niger which, like all men at that time, he believed to be a branch of the Nile. There he was in the very heart of hippopotamus country, since *mali* is its name in Bambara, in Malinka and in Mandingo. His first encounter with the animals took place in the vicinity of a broad bay (*khaliḏj*) in the river (possibly Lake Debo) which he had to cross by boat with his caravan (*Rihla*, Cairo 1346/1928, ii, 201). "... There were there," he tells "sixteen enormous quadrupeds which astonished me and which I took to be elephants in view of their large numbers in this same place. Then I saw them plunge into the water of the river and I consulted Abū Bakr b. Ya'kūb (the caravan guide) about these huge creatures. They are, he explained to me, "horses of the river" (*khayl al-bahr*) that have left the water to graze on dry land. They are larger than horses, but they have the mane, the tail and the head, although their foot is that of the elephant. I had occasion to see these hippopotami again when we travelled down the Nile (= the Niger) in canoes from Timbuktu (*Tunbukū*) to Gao (*Kūkū*, formerly called Gogo); they were swimming in the middle of the river, lifting their heads above the surface and breathing noisily. For fear of these animals the canoists moved closer to the bank lest they capsize us. The natives have a cunning method for fighting these beasts; they use javelins of which the (barbed) iron tip is pierced with a hole through which they thread strong cords. They attack the animal with these throwing-weapons and, if the spear strikes the foot or the withers, the iron becomes deeply embedded; all the hunters then have to do is drag the victim to the bank with the ropes; they then dispatch him and feed on his flesh. Hence the abundance of bones strewn the whole length of the banks of the river." We may add that, since then, the massacre has not ceased and has intensified with the coming of the Whites to Africa; the hippopotamus provided, to a considerable extent, the subsistence of the armies fighting in the Cameroons at the time of the First World War, and it has since paid a heavy tribute to suppliers of shipyards and to local militia chiefs, without counting "safari" enthusiasts in search of spectacular trophies. Some partial measures towards the protection of the animal have fortunately intervened in some modern African states, for there can be no doubt, as an English explorer has written, "... that once civilization has driven the hippopotami away from an African river, that river loses one of its greatest charms and one of its major ornaments."

**FARMĀSŪNIYYA** (A.), freemasonry (also in Arabic: *Firmāsūniyya*, *Māsūniyya* and *Bināya Hurra*; in Turkish, *Franmasonluk*, *Farmasonluk*, *Masonluk*).

I. In the Ottoman empire and its successor states.

Freemasonry first penetrated the Empire via lodges (Arabic *mahfil*; Turkish *mahfel*, *loca*) established by Europeans. As many of the lodges were established without the authority of organised freemasonry, they were frequently short-lived. Several lodges were reported in Aleppo, Izmir and Corfu in 1738, in Alexandretta in the early 1740s, in the Armenian parts of Eastern Turkey in 1762 and in Istanbul in 1768 or 1769. Individual freemasons—although not lodges—were reported in Tunisia in 1784 (Jews of Livornese origin) and a year later in Algeria (local Muslims). In Egypt, lodges were allegedly set up by French officers during the Napoleonic Occupation. Despite the small number and limited activities of freemasons in the 18th century, the Ottoman authorities restricted them, with only moderate success, as early as 1748. More information is available on masonic activity since the 1820s, especially among foreigners and local Christians and Jews in Istanbul, Izmir, Syria, Thrace, Macedonia, Epirus and other parts of the Empire. From the mid-19th century onwards, more and more international freemasonic organisations founded lodges in the main population centres of the Empire, through their European residents. The spread of freemasonry was indeed a facet of European influence; it progressed more rapidly in areas under European political control, e.g. in Algeria after 1830 (1851: 842 freemasons in 14 lodges), Tunisia after 1881 (1910: more than 300 freemasons) and Egypt after 1882. European economic penetration had an impact as well; the first lodge in Jaffa was set up by French railway engineers in 1891. Robert Morris, an American freemason who toured Asia Minor in 1868 and founded the first lodge in Jerusalem, in that year calculated that 17 English, 15 French and 8 Italian lodges were active throughout the Empire. Actually there were more; by the end of the century, there was hardly a city or town of importance without at least one lodge. Christians, Muslims and Jews mingled freely in these lodges (although certain lodges were preponderantly of one faith, such as Sion's Lodge, founded among the Izmir Jews in 1870), which were among the few meeting-places for members of different faiths, as well as for foreigners and natives. This created a language problem, and the ritual was sometimes performed in more than one language. Membership figures were generally modest—between approximately one dozen and one hundred per lodge—but the importance of freemasonry was enhanced by such important persons as the Algerian *amīr* 'Abd al-Kādir (1864), Mehmed Rashid, *wālī* of Syria (1868), Djamāl al-Dīn al-Afghānī [q.v.], Muḥammad 'Abduh [q.v.] and several members of the Khedivial family (from the 1860s onwards). Moreover, many local freemasons were people-of-means—generally of the upper middle classes—because of the relatively high membership dues. This remains true, to a great extent, to this very day.

It was perhaps inevitable that the lodges would serve, at times, as nuclei for anti-establishment and even revolutionary political activity, owing to their clandestine nature. Prince Ḥalīm, Grand

Master of the Grand Orient of Egypt in 1867-8, attempted to use the freemasons in his struggle against the Khedive Ismā'īl. In 1876, the deposed Sultan Murād V unsuccessfully sought to enlist the assistance of the freemasons in Istanbul to ensure his safety from 'Abd al-Ḥamīd II's designs and probably even for launching a counter-coup. Early in the 20th century, masonic lodges, mostly those in Salonica, served as a cover for the meetings of leaders of the Young Turks, of whom at least one, Ṭal'at, was an active freemason. There is, however, no conclusive evidence that freemasonry as such played a role in the preparation and implementation of the Young Turk Revolution. True, freemasonry could—and did—operate more freely in the post-Ḥamīdian era (it had been proscribed during 'Abd al-Ḥamīd II's reign), although only for a short period, as Enver forbade its activities soon after World War I broke out. Persistent rumours about freemasonry have nonetheless discredited it in Republican Turkey and some of the Arab states (in Syria and Egypt freemasonry is prohibited; in several others, it is severely limited). This is hardly due to the number of freemasons: There were about 500 freemasons in Turkey in 1923 and ca. 2000-2400 between 1930 and 1935—when all lodges were closed down. They reopened in 1948 as an Association of the Masons of Turkey (*Türkiye Mason Derneği*) which has been publishing since January 1951 a periodical, *Türk Mason Dergisi*, renamed *Mason Dergisi* in July 1973. Turkish membership reached 2,367 in 1966; figures for other Middle Eastern states are not available, but seem to be equally modest (e.g. in 1931, there were ca. 1500 in Palestine and ca. 1000 in Tunisia) and declining since the disappearance of the Mandates and Protectorates. Rather, freemasonry's universalist and international character, partly beyond the state's immediate control, awakened suspicion in nationalist circles, while the non-Muslim origins of its founders and the marked secularist spirit in many of the lodges aroused animosity among devout Muslims. Freemasonry's social and educational philanthropy has been resented, as well, which may explain why many, if not most published works on freemasonry, in both Arabic and Turkish, tend to attack rather than defend it. Several of those printed in the Arab states link freemasonry and Zionism (without tangible proof), denigrating both. Such works have been published in Turkey, too, where the most prolific exponent of anti-freemasonry was Cevat Rifat Atilhan. Recently, Turkish organs sympathetic to the Nationalist Action and National Salvation Parties have systematically been presenting freemasonry as evil and hostile to both Turkey and Islam. These attitudes notwithstanding, masonic activity continues in Turkey and nearly all the Arab states, with varying degrees of success.

(J.M. LANDAU)

2. In Persia. For this, see FARĀMŪSH-KHĀNA, above.

FAROUK [see FĀRŪK].

FARRUKHĀN, the name of two *ispahbadhs* of Ṭabaristān: Farrukhān Djlānshāh, ancestor of the Dābūyid dynasty of Ṭabaristān and of the Bādhūspānid dynasty of Ruyan, and Farrukhān the Great, his great-grandson and the second Dābūyid *ispahbadh* of Ṭabaristān.

1. FARRUKHĀN DJILĀNSHĀH, *ispahbadh* of Ṭabaristān at the time of the Arab conquest, in about 22/643. He claimed to be the great-grandson of Djamasp, brother of the Sāsānid king Kawādī I (488-531), at least according to Ibn Isfandiyyār, 97, who asserts that he ruled over the south-Caspian provinces (Ṭabaristān, Djlān, Daylam) and the land of the Khazars and the Slavs; but his titles contradict these assertions, in fact, according to Bal‘amī, iii, 493; Ibn Khuradādhbih, 119, tr. 91; al-Ṭabarī, i, 2659, he adopted the pompous titles: Djlī Djlān, *ispahbadh* *ispahbadhān*, *ispahbadh* *Khurāsān*, *Padhish-khwārdjarshāh*, which are to be translated as: King of the land of Djlān, chief of the *ispahbadhs* (of Ṭabaristān), (holding his office from the) *ispahbadh* of Khurāsān, king of the mountain regions (of Ṭabaristān). If then control of the land of the Khazars and Slavs is to be excluded, there is no reason to suppose that Farrukhān exercised effective control of Daylam and Djlān, in spite of his title of Djlānshāh, which simply indicates that he was a native of Djlān, as is confirmed by Bal‘amī, iii, 493. In fact, Daylam and Djlān are not mentioned among Farrukhān’s possessions in the treaty of capitulations which he concluded with the general Suwayd b. Muqarrin, in 22/643 (al-Ṭabarī, i, 2659-60). All that is attested by the sources is that Farrukhān, profiting from the decline of the central Sāsānid power, enjoyed autonomy over Ṭabaristān, and occupied a senior position with regard to the other local chieftains. His allegiance to the Sāsānids is shown by the fact that he sent military contingents to the battle of Nihāwand (21/642) which decided the fate of the Iranian plateau (al-Balādhurī, 280; al-Dīnawarī, 141).

After their victory, the Arab armies marched against the northern provinces of Persia and took control of al-Rayy (in spite of the intervention of troops sent from Ṭabaristān, Bal‘amī, iii, 489), of

Dunbāwand, Kūmis and Djurdjān, thus encircling Ṭabaristān. Also, "when the *ispahbadhs* of Ṭabaristān became aware of these facts, they went to consult their suzerain, upon whom they all depended, and who lived at Āmul, in the centre of the province. This was a powerful man, a Gilānī, his name was Farrukhān and he was called *ispahbadh* of the *ispahbadhs*..." (Bal'amī, iii, 493). Farrukhān advised submission with the payment of a meagre 500,000 *dirhams* in tribute for Ṭabaristān (Bal'amī, iii, 493-4; al-Ṭabarī, i, 2659-60), which was far less than the sum paid to the Sāsānids, according to Ibn Isfandiār, 118. This submission was to prove purely formal, hence this led in 30/651 to an expedition by Sa'īd b. al-'Ās, which initially met with fierce resistance (al-Ṭabarī, i, 2836, ii, 1322; Bal'amī iv, 334-5; al-Balādhuri, 334-5; Ibn Isfandiār, 98). The local historians indicate neither the length of the reign of Farrukhān, nor the date of his death, but state that his son Djil Djāwbara seized control of Daylam and Djilān (which were reckoned to form part of the possessions of Farrukhān Djilānshāh), raised an army there and threatened to invade Ṭabaristān (another of his father's territories). The King of Kings Yazdgird III (632-51) was obliged to accept the *fait accompli* and to invest Djil Djāwbara with the title Djil Djilān, *Padhish-khwārjārshāh* (Ibn Isfandiār, 97; Zahir al-Dīn, 42).

Now these events are placed in the 35th year of the new Persian era, which corresponds to 667 A.D., if the era in question is that of Yazdgird III, who fled from his capital, Ctesiphon-Seleucia, in 637 A.D., and was assassinated in 31/651. One might suppose that Farrukhān Djilānshāh had been deposed, which would explain the reconquest by his son, but the strangest thing is that Ibn Isfandiār, 97, claims that Djil Djāwbara established his capital at Fūman, in Djilān, reigned 15 years and divided his territories among his elder son Dābüya (eponymous ancestor of the Dābüyids) and his younger son Bādhuspān (eponymous ancestor of the Bādhuspānids [*q.v.*]; the Dābüyids continued to dominate the other local princes of Ṭabaristān (the Zarmihrids of Miyāndurūd near Sāriya; the Kārinids of the Kārīn mountains; Bāwandids of the Sharwīn mountains; the Marzbāns of Tamīsha; etc.) and had their capital at Āmul, while the Bādhuspānids controlled Rūyān. On the other hand, the death of Djil Djāwbara is placed by the local historians in the year 50 of the new era of the Persians, which corresponds to 682 A.D., if the era in question is that of Yazdgird III. Now Ṭabaristān inaugurated its own era on the 1st Farvardīn I/27th Shawwāl 31/11th June 652, and the year 50 of the era of Ṭabaristān corresponds to 82-3/701-2. This shows that the exploits attributed to Djil Djāwbara are probably a legendary account, inspired by the etymology of his name Djāwbara, which means "he who rides a bull"; according to the local sources, Djil Djāwbara disguised himself, for a reconnaissance of Ṭabaristān, by pushing in front of himself two cows from Djilān (Zahir al-Dīn, 39; Rehatsek, in *JBBRAS* (1876), 438). As for the new era of the Persians, it is the era of Ṭabaristān (since the length of the reigns of the Dābüyid *ispahbadhs*, as given by the local historians, corresponds within a few years to the dates shown by the Dābüyid coinage discovered up to the present) rather than that of Yazdgird III (which differs by 20 years from the era of Ṭabaristān). So we have a reign of Farrukhān Djilānshāh lasting until roughly 61/680; his successors were his son Djil Djāwbara who reigned 15 years (*ca.* 62-77, 681-96), then Dābüya

who "reigned over Ṭabaristān in a severe and inflexible manner" (Ibn Isfandiār, 98) for 16 years, that is *ca.* 77-92/696-710, and finally Farrukhān the Great, surnamed *Dhu 'l-Manākib* ("the Virtuous"), who reigned for 17 years according to the local sources.

2. FARRUKHĀN THE GREAT, great-grandson of Farrukhān Djilānshāh, and second *ispahbadh* of the Dābüyid dynasty of Ṭabaristān. His reign begins with the issue of coinage in the name of the Dābüyid *ispahbadhs*, dating from the year 60 of the era of Ṭabaristān 93/711. The coinage consists of silver half-drachmas, of the same type as the Sāsānid dirhams of Khusrav II (590-628), but their originality lies in the fact that they are dated by the era of Ṭabaristān, which begins on the 1st Farvardīn 21 of the era of Yazdgird III, corresponding to the 11th June 652 (according to Mordtmann, in *ZDMG*, viii (1854), 173-4, and not 651 as is supposed by Marquart, *Ērānsāhr*, 133). The year of issue is indicated on the left on the reverse side of the coins, in Pahlavi, of which the writing is ambiguous, which explains how its interpretation may be difficult and sometimes uncertain. It is thus that Unvala insists that there are two princes: Farrox' (the Farrukhān the Great of the local sources) who reigned 10-11 years, from 60 to 70 T., and another prince, whom he calls Farrox'ān, who would be the son of Farrox', and who would have reigned 8-9 years, from 72 to 79 T. (reproduction of the coinage of Farrukhān the Great, of the years 60, 63 65-70 75, 77 T. in Unvala, Plate). To justify this distinction, he stresses the difference in the orthography of the names: Farrox' and Farrox'ān, which is also found in Ibn Isfandiār, 114. This historian mentions in the reign of the last Dābüyid, Khurshīd, a Fakhrān and a Farrukhān, both sons of Djusnas. Furthermore, Unvala declares that the coins of Farrox' have no marginal inscription on the right, whereas those of Farrox'ān bear the words *apd* and *nwak* (= "miraculous, marvellous, good"), after the year 72 T. (Unvala: 7, § 3; 8, § 4, 5, 7, 9, 10; 30, § 10; n. 6; 31, § 11, 15). These arguments did not convince J. Walker (according to Unvala, 7-8, § 4), who thinks that the reference is to the same individual, Farrukhān the Great, of whom the local historians speak (reproduction of the coinage from 60-2, 65-70, 75, 77, in Walker, i, Pl. xxiii), but does not give reasons.

In our opinion, there are important objections to Unvala's hypothesis: seeing that Ibn Isfandiār distinguishes so carefully the sons of Djusnas, there is no reason why he should confuse Farrox' and Farrox'ān. On the other hand, Unvala (8, § 4; 31, § 15) makes Farrox'ān the son of Farrox' "as the patronymic indicates", which is not conclusive, for Fakhrān and Farrukhān are two brothers, and not father and son. Finally, the supplementary marginal inscriptions do not imply *ipso facto* the existence of two persons: in fact the coins of the governor of Ṭabaristān Hāni' b. Hāni' have marginal inscriptions on the right, which vary (reproduction in Walker, i, Pl. xxv, 12-15, xxxviii, 12-15); some of them mention only the name of the governor, other bear the initial ع of عدل (= "justice") above the name (according to Unvala: 12, § 6). There is no question here in Unvala's mind of two distinct governors.

On the other hand, the anonymous coinages of 134 T., 135 T., and 137 T. are of three varieties: the first are marked *nwak(u)*, *nwak*, عفف (= "very, good"); the second *Djārīr*, *nwak(u)*, ع; the third *apd*

and *nwak(u)*, *apd* and *nwak*, *apd* and  $\epsilon$  (according to Unvala: 12, § 9; 10, § 25; reproduction in Walker, iv, Pl. xxvi, 15-17, xxvii, 1-9, 13, xxxviii, ii, 14). The Pahlavi words *apd* and *nwak* are thus homologues of the initial  $\epsilon$  of *عد*, and it is clear therefore that a Farrox' and a Farrox'ān cannot be distinguished in the manner employed by Unvala.

According to Ibn Isfandiyyār, 27, Farrukhān the Great took control of the territories lying between Ṭabaristān and Nīshāpūr, and put an end to the incursions by the Turks of Dihistān with whom he made a truce. This respite was put to advantage in reinforcing his realm, so well that when hostilities were resumed, the Turks were crushed at Tūrān-čār or Turīsha. This narrative in fact recalls an episode of the reign of Khusraw I (Christensen, *Sassanides*, 380), which was associated elsewhere with the grandfather of Farrukhān the Great, Dījl Dījāwbara. This story is not to be believed, especially since Ibn Isfandiyyār states elsewhere (105) that Farrukhān maintained friendly relations with the governor of Khusrāsān, Ḳutayba b. Muslim (86-96/702-15) [q.v.]. All these errors are explained by the fact that the local historians claim that the Dābūyids ruled over Ṭabaristān, Gīlān and Daylam because they bore the title Gīl Gīlān, Iṣpahbadh Iṣpahbadhan (king of the Gīls, Iṣpahbadh of the Iṣpabadhs). Now, neither Gīlān nor Daylam was under the rule of Farrukhān the Great, for Ibn Isfandiyyār, 99-100, mentions an attack made by the Daylamīs against Ṭabaristān, an attack which was frustrated by a trick. Similarly, when Yazīd b. al-Muhallab tried to conquer Ṭabaristān in 97/717, Farrukhān the Great "appealed for help to the King of Daylam who sent him 10,000 men" (Bal'amī, iv, 228). These Daylamī reinforcements and the nature of the terrain, suitable for ambushes, saved the *iṣpahbadh* from annexation of his territory, but he was obliged to consent to a heavy tribute to obtain the withdrawal of Yazīd's troops (al-Ṭabarī, ii, 1320-1, 1327-9; al-Balādhurī, 336-8; Ibn Isfandiyyār, 105-7, presents a different version, which cannot be accepted). Farrukhān the Great concerned himself with the development of Ṭabaristān until his death, ca. 110-12/728-30. He was succeeded by his son Dādhburzmīhr who reigned for 12 years (Ibn Isfandiyyār, 108) until ca. 122/739.

(M. REKAYA)

**FĀRŪK**, King of Egypt, son of King Fu'ād (1923-36) [see FU'AD AL-AWWAL] and Queen Nazlī

(née Šabīrī), grandson of the Khedive Ismā'īl (1863-79) [see ISMĀ'ĪL PAŠĀA], was born in Cairo on 21 Dījumādā al-ūlā 1338/11 February 1920. He was proclaimed Crown Prince on 13 April 1922, officially named Prince of the Ša'īd (Upper Egypt) on 12 December 1933, and proclaimed King of Egypt on 28 April 1936 in succession to his father who died on that day. He officially ascended the throne on 6 May 1936. On 20 January 1938 he married Šafīnāz Dhu 'l-Fīkār, daughter of Judge Yūsuf Dhu 'l-Fīkār, Vice-President of the Alexandria Mixed Court of Appeals. Šafīnāz was given the name and title of Queen Farīda of Egypt. There were three daughters from the marriage, before it was dissolved in November 1948, when Fārūk divorced Farīda. On 6 May 1951 Fārūk, at thirty-one, married Nārīmān Šādīk, the seventeen-year old daughter of Ḥusayn Fahmī Šādīk, who was already betrothed to Zakī Ḥāshīm, an Egyptian official of the United Nations Secretariat. She bore him a son, Crown Prince Aḥmad Fu'ād, who was born in Cairo on 16 January 1952.

Fārūk's intended education was suddenly cut short at sixteen when his father died. It is, however, unlikely that he would have taken to serious study in preparation for his royal duties even had his father lived longer. Until he was fifteen, Fārūk was tutored at home. His English governess, Mrs Ina Taylor, was generally in charge. She tried to impart the main features of a typically English formative education into a prince living in ornate, European-modelled palaces, but in which much of court life, practice and behaviour remained a mixture of imported European formalities and native Ottoman oriental standards. His father tried gradually to introduce the young prince to his future royal duties. Thus Fārūk was made Chief Scout of Egypt in 1933 at the tender age of thirteen. A year before that he had made his first appearance in a public function. The following year, 1934, he deputised for his father at the Air Force celebrations in Heliopolis. At fourteen and fifteen he cut a dashing young figure of a handsome, polite prince. King Fu'ād, however, was a politically-involved monarch. Between 1930 and 1935, crucial years in Fārūk's life, Fu'ād was involved in one constitutional or political crisis after another, an economic depression, and mounting opposition from the so-called popular political parties such as the Wafd. He hardly had much time to devote to his son. Consequently, Fārūk spent those crucial formative years mostly with his three sisters, his governess, his mother and her female relatives. His only frequent male companions were palace servants, guards and his French gymnastics master. It is not known, for instance, if during those formative years, he had any male friends of his age.

Fārūk failed to gain a place at Eton. Nevertheless, his father sent him to England in 1935 with a view to entering the Royal Military College, Woolwich. He was accompanied by his officially-designated tutor Aḥmad Ḥasanayn (Pašā), a Balliol man, champion fencer and famous explorer, who was later to have a great influence over the young king, especially in the period from 1941 to 1945. The notoriously anti-British General 'Azīz Alī al-Mašrī accompanied Fārūk as his military tutor. Fārūk failed the entrance examination to Woolwich, but he was allowed to attend some lessons two afternoons a week. The rest of the time he spent at Kenry House, Kingston Hill, Surrey, where he settled with his entourage in October 1935. Sgt.-Major W.H. Parker looked after his physical fitness train-

ing, including fencing. Fārūk's six-month sojourn in England was short and of limited education value since he attended no formal or regular course of study. He did, however, acquire a taste for London's attractions, particularly its famous shops.

Returning to Egypt upon the death of his father, Fārūk could not assume his full royal duties until he had attained his majority which, by the Hijra calendar reckoning, was to be in August 1937. Until then a Regency Council, consisting of his uncle Prince Muḥammad 'Alī, 'Azīz Paṣha 'Izzat and his maternal uncle Ṣharīf Paṣha Ṣabrī, acted for him. 'Alī Māhīr, a man close to King Fu'ād, had been Prime Minister since January of that year, and generally exerted a direct influence over the new young monarch. Subsequently, as Chief of his Royal Cabinet and Prime Minister again in 1939-40, he was to complicate Fārūk's relations with the more popular leader of the Wafd, Muṣṭafā Nahḥās Paṣha, embroil him in contacts with the Axis powers and thus further exacerbate his relations with the British Ambassador Sir Miles Lampson especially, and the British generally. Another early, dubious influence on the young inexperienced king was that of Ṣhaykh Muṣṭafā al-Marāghī, Ṣhaykh of the Azhar, a man who was also close to his father and who harboured anti-Wafdist, anti-British sympathies. Both these men, as well as others among his courtiers, were to involve Fārūk in the treacherous shoals of Egyptian politics from 1936 to 1952. They seemed to counter the influence of his mentor, Aḥmad Heibareiodot;asanayn, an ambitious though dexterous and consummate politician, who somehow tried to smooth relations between the king, the political parties and the British.

Fārūk, however, began his reign quite auspiciously as a highly-popular young monarch. His month's tour of Upper Egypt in January-February 1937 was a great success and the envy of the politicians. A second tour of Europe in April-July 1937 seemed to initiate Fārūk into the less edifying delights of European capitals. By 1940, before he was 21, the men around him, led by 'Alī Māhīr, had fully acquainted him with the need jealously to guard his political prerogatives against the Wafd and the British. Thus he tacitly approved of Māhīr's use of certain new radical youth movements, such as the Young Egypt Society, and of the Azhar in order to push forward his leadership of a national Islamic regeneration. When, at the insistence of the British, 'Alī Māhīr was dismissed as Prime Minister in June 1940, Fārūk was left at the mercy of the politicians and Britain's war needs. In fact, as early as 29 November 1937, Sir Miles Lampson, who did not particularly like Fārūk and whose relationship with him resembled that between Cromer and the young Khedive 'Abbās (Hilmi) II [g.v.] from 1892 to 1914, cabled to the Foreign Office in London:

HM by all indications is shaping for the role of traditional oriental despot... His ultimate overthrow will occur when Nahhas goes...

Lampson was forty years older than Fārūk and his opinion of the young Egyptian king may have been influenced accordingly. What is certain, however, is that Lampson did not appreciate Fārūk's flouting of British war interests in his persistence appointed governments of his choice, his refusal to deal firmly with several crises in 1940-1, occasioned by Italy's entry into the war and the collapse of France, and his continued connections with 'Alī Māhīr and his anti-British agitation through the use

of extremist political groups such as the National party, the Muslim Brethren, the Young Egypt Society and the Azhar. It seems that he took Aḥmad Hasanayn's advice in appointing both the Ḥasan Ṣabrī and Ḥusayn Sirrī coalition governments (June 1940-January 1942). But neither of these governments was strong enough to deal with the exigencies of war. Both were open to the machinations of the palace and to the attacks of the majority Wafd party. Actually, the latter began to agitate against them in order to recapture the initiative in the nationalist cause. Nahḥās Paṣha in June 1941, when the British were being pressed by Rommel's forces practically at the gates of Alexandria, approached the British with a view to his returning to power. The timing was crucial, for Britain was in a most difficult military position in Greece and the Western Desert. When Nahḥās threatened to foment popular agitation in the country, Lampson felt he must act. It was the concatenation of these events that suggested vigorous British intervention in Egyptian affairs. The intervention was to prove fateful for the career and future of Fārūk.

Amidst anti-government and anti-British demonstrations in January 1942, largely inspired and organised by pro-'Alī Māhīr elements, the King procrastinated over severing diplomatic relations with Vichy France. When his Prime Minister Ḥusayn Sirrī, did so, the King dismissed his Foreign Minister, a move against which the British protested vehemently, leading to the resignation of the Sirrī government on 1 February. A British request that Nahḥās be invited to form a government went unheeded for three days, while Fārūk gathered the leaders of all the political parties in his palace to discuss the crisis. As Lampson did not specify in his Note to the King what kind of government Nahḥās might lead, Fārūk invited him to lead a national coalition government. But Nahḥās insisted on a purely Wafdist cabinet, which the King would not accept.

When Lampson marched into 'Ābdīn Palace at 9 p.m. to confront Fārūk, accompanied by General Stone, GOC British Land Forces, and backed up by a battalion of armoured troops that had surrounded the Palace, he did not do so with the intention of imposing on the King a purely Wafdist government. Rather, the ultimatum he read to the King demanded his abdication. Fārūk, however, on Ḥasanayn's advice, offered with alacrity the compromise formula of a purely Wafdist government headed by Nahḥās.

The so-called Palace Incident of 4 February 1942 had paradoxical consequences. It made Fārūk, temporarily at least, very popular with Egyptian nationalists as well as with the Egyptian officer corps, but created a permanent rift between him and Nahḥās of the Wafd, whom he planned to dismiss at the earliest opportunity. It also deepened the incurable antipathy between him and Lampson. In fact, Fārūk acquired a deep resentment for the British in general. A motor accident in al-Ḥaṣṣāshīn on 15 November 1943 added to his fears, fantasies and resentments. Yet after the Battle of Alamein, he had no choice but to affect an overtly pro-British attitude.

Immediately after the War, Fārūk faced serious political problems in the country, made even more difficult by the greatly strengthened violent movement of the Muslim Brethren [see AL-~~KH~~WĀN-AL-MUSLIMĪN], army officer conspiracies, Communist and other extremist groups. He escaped annually to Cyprus or Europe on prolonged summer holidays.

He grew corpulent, lazy and coarse. He seemed to sleep most of the day and wander at night, accompanied by his trusted servants Antonio Pulli, Ernesto Verucci, Pietro Garo, his ADC 'Umar Fathī and his Albanian bodyguards. He divided his time between the Auberges des Pyramides and the Helmia Palace nightclubs, his various private garçonniers in Cairo and Alexandria, and the Royal Automobile Club gambling table in the centre of modern Cairo. The insecurity and unhappiness of his childhood, and his interrupted or nonexistent education, added to his inferiority complex and inability to concentrate. He was estranged from his wife and mother and sought escapist pleasures in the company of women procured for him by his servants. He became addicted to all kinds of pills, hormonal preparations, a variety of elixirs, food and gambling. He acquired a mania for collecting coins, stamps, pornographic literature, aids and ephemera. He became more elusive, unpunctual and socially impossible, with his coarse practical jokes, kleptomania, compulsive boasting and bad sportsmanship, characterised by a streak of cruelty. He could neither lead—and thus mitigate the internecine warfare between Egyptian politicians—nor be led by anyone other than by sycophantic courtiers like his Press Adviser, Karīm Thābit, or his Business Adviser, Elias Andrawus. He lived in the gilded cages that were 'Abdīn, Ḳubba, Muntazah and Ra's al-Tin palaces, or in his fortress-like estate at Inshās, 35 miles from Cairo, where 2,500 *feddāns* of the best agricultural land produced citrus fruits and housed a model poultry farm. He coveted everything which he did not own, including other men's women and possessions.

Fārūk's scandalous European holiday from August to October 1950 prompted a petition signed by most opposition party leaders and politicians protesting against his shameful behaviour. At the same time, extremist groups led by Young Egypt, and other underground organisations such as the new Free Officers and the Marxists, openly called for the overthrow of his régime. Considered widely to have committed the ill-equipped and unprepared Egyptian army to the war in Palestine in order to indulge his rivalry with King 'Abd Allāh of Jordan, and openly accused of having profited from arms purchases connected with that war, his marriage to Nārimān in 1951 and the birth of the Crown Prince in January 1952 did not improve Fārūk's image or fortunes. The rot was too advanced. By autumn 1951 Fārūk was set on a collision course with the stirring forces in the country, chief among them the Free Officers. He appointed the pro-British Ḥāfiẓ 'Alfīfī Pasha as Chief of his Royal Cabinet and recalled his ambassador to Britain, 'Abd al-Fattāh 'Amr, to serve as his political adviser. More significant was his attempt to pack senior military posts with his own men, such as General Ḥaydar, the Chief of Staff, and General Husayn Sirrī 'Amir, who replaced General Muḥammad Naḡjīb (Naguib) as Commander of the Frontier Defence Force.

The violent events which accompanied the problems of Anglo-Egyptian relations since 1946 culminated in the Wafd's demagogic but fateful unilateral abrogation of the 1936 Anglo-Egyptian Treaty in October 1951 and the explosion of the mob that burned the centre of modern Cairo on 26 January 1952, Black Saturday, and these gave Fārūk the pretext to dismiss Naḡhās and the Wafd from power. A succession of palace-appointed ephemeral governments, including one led by his old mentor 'Alī Māhir, were unable to deal with the

drifting, explosive political situation. In the meantime, Fārūk had himself proclaimed a *Sayyid*, or descendant of the Prophet, a most unlikely genealogical claim in view of his Macedonian-Albanian forefathers. Neither Lampson nor his successors were able or willing either to deal with Fārūk firmly or to conjure up a for-mula to resolve the impasse. Nor was a Conservative government in London after 1951 willing to play an imperial role in Cairo, barely four years after leaving India.

Yet Fārūk's security agents had uncovered the real threat to his throne, namely, the Free Officers. His courtiers, however, were suspicious of each other as always, ever-solicitous and sycophantic, but were incapable of concerted action. Equally, the politicians were sunk in their petty quarrels, all anxious to keep the Wafd, by now weakened and relatively corrupt, out of power at any cost. On the very day when Fārūk in Alexandria ordered the arrest of the Free Officer conspirators at 9 p.m. (22 July 1952), the latter seized power three hours later.

Fārūk believed that the British were behind the army conspiracy. Even though he tried to contact British GHQ in the Canal for help, he did not trust them. Instead he sought the help of the Americans with a view to saving his and his family's lives. Ironically, his father's old friend and his own erstwhile mentor and adviser, 'Alī Māhir, brought Fārūk the army officers' demands, signed by Naguib, requiring the dismissal of his immediate entourage of courtiers. Two days later on 26 July 'Alī Māhir returned as Prime Minister of the new military régime with the order for Fārūk to abdicate in favour of his infant son, Crown Prince Aḥmad Fu'ād, and to leave the country permanently by 6 p.m. Less than a year later in June 1953, the monarchy in Egypt was abolished in favour of a republic.

Like his grandfather the Khedive Ismā'īl, Fārūk sailed off to Naples on the Royal Yacht "Maḥrūsa" with his family, gold ingots and over two hundred pieces of luggage. He had been depositing money in Switzerland, Italy and the United States for many years, at least since the end of the Second World War. What he could not take with him were the vast tracts of land (over 30,000 *feddāns*) and palaces, and his remarkable coin, stamp and pornographic collections. He finally settled in Rome. His daughters from his marriage to Farīda were packed off to Switzerland, and his second wife Nārimān soon returned to Egypt with her mother. She was divorced from Fārūk and remarried a Dr. Adham Naḡīb. Fārūk reverted to his life of girlfriends and nightclubs, a familiar massive and rotund figure in the bistros and nightspots of Rome, interspersed with occasional visits to Switzerland and to the gambling tables of Monaco, which principality had granted him citizenship.

Two weeks after he had left a heart clinic in Switzerland, he drove one of his Italian girl friends to a roadside inn, the "Ile de France", for dinner around midnight. He suffered a heart attack while just starting to enjoy the Havana cigar which he had lit after a gargantuan dinner. He died two hours later at 2.08 a.m. on 18 March 1965 in a Rome hospital, aged 45 years, 2 months and 7 days. At the request of his family and according to his will, he was buried in Cairo two days later very quietly and in the dead of night, alongside his forefathers. His was the last effective reign of the Muḥammad 'Alī dynasty, founded by that soldier of fortune from Kavalla in 1805.

(P.J. VATIKIOTIS)

**FASĀ'Ī**, **ḤĀDJDĪ** MĪRZĀ ḤASAN, Persian scholar of the 19th century and author of a historical-geographical work on his native province of Fārs, the *Fārs-nāma-yi Nāsirī* (the latter part of the book's title being a reference to the Kādjar sultan Nāsir al-Dīn Shāh, in whose reign Ḥasan Fasā'ī wrote).

He was born, according to the autobiography inserted into his book, in 1237/1821-2 in the small town of Fasā [q.v.] in Fārs, of a family which had been prominent in the intellectual and religious life of Shīrāz for at least four centuries; various members of it had been famed for their scholarship or their administrative expertise, and one of his forebears, Niẓām al-Dīn Mīrẓā Aḥmad, had been vizier to the Kutb-Shāhī ruler of Golconda in the Deccan, 'Abd Allāh b. Muḥammad (1020-83/1611-72) [see KUTB-SHĀHĪS]. Ḥasan Fasā'ī himself studied theology and then medicine, practising in Shīrāz as a physician and becoming involved in a protracted legal dispute over his family's ancestral pious foundations or *aukāf*.

In 1289/1872 the governor of Fārs, Mīrẓā Mas'ūd Zill al-Sultān, commissioned him to use earlier cartographical work of his to make a general map of the province. Subsequently, he came to enjoy the favour and patronage of another governor, the reformist Farḥād Mīrẓā Mu'tamad al-Dawla (on whose draconian measures in Fārs see E.G. Browne, *A year amongst the Persians*<sup>3</sup>, London 1950, 115-18, and also Storey, i, 204), travelling extensively around southern Persia in the entourage of the governor's son Iḥṣāḥ al-Dawla. Then in 1296/1879 Farḥād Mīrẓā ordered him to compose a geography of Fārs on the basis of his maps. This eventually became the *Fārs-nāma-yi Nāsirī*, in two volumes, one on the history of Fārs from the beginning of Islam till his own days (in fact, up to 1300/1883), and one on its geography and topography. A lithographed edition was printed at Tehran in 1313-14/1895-6; the author's own death took place at some unknown date after this. The historical section is written on the traditional Islamic annalistic pattern. The author utilises earlier histories of Persia and of Fārs, and for his especially valuable treatment of the Kādjar period, he quotes archival material, including diplomatic letters and treatises, as well as eyewitness accounts of events. All in all, the *Fārs-nāma-yi Nāsirī* may be regarded as the culmination of the long tradition of annalistic historiography in Persia, much as Djabartī's chronicle was for that science in Egypt.

*Bibliography:* The *Fārs-nāma-yi Nāsirī* has been recently reprinted at Tehran in 1965; the section on the Kādjar dynasty and Fārs under its rule has now been translated into English by H. Busse, *History of Persia under Qājār rule*, New York 1972, with a useful introduction; See also Storey, i, 353, and Storey-Bregel, ii, 1031-5.

(C.E. BOSWORTH)

**AL-FĀSĪ**, individual *nisba* of the members of a prominent family of Moroccan scholars. Descended from the Qurayshite clan of the Banū Fīhr, originally established in Spain but settling in Fās at the end of the 10th/16th century, this family is known collectively under the name Fāsiyyūn, while the citizens of the town are called rather Ahl/Āl Fās. In view of the fact that the article

AL-FĀSIYYŪN in Volume II of the *EI* deals with the population of Fās in general, it has been considered useful to collect in this Supplement the basic facts relating to the members of this line who have contributed the most actively, over the last four centuries, to religious, intellectual and literary life, without limiting themselves simply to passing on a varied, and still highly appreciated, form of teaching.

In general, the genealogical tree drawn by E. Lévi-Provençal (*Chorfa*, 242) continues to be valid, and we shall confine ourselves to referring the reader to it; the accounts devoted by the learned historian to the most notable personalities of the Fāsiyyūn have lost none of their value, but they can be considerably enlarged and made more accurate in the light of documents, mostly manuscripts, that are now available. The work of Muḥammad al-Fāsī and M. Hajji in Arabic or in French, of 'A. Gannūn in Arabic, of M. Lakhdar in French and of still others, enables us to acquire an increasingly clear view of the merits of a group of eminent scholars who could, however, be better served by a detailed monograph in view of the extensive documentation provided by biographical sources, whether long-established or recently discovered.

I. — **ABU 'L-MAḤĀSIN** [q.v.] Yūsuf (d. 18 Rabī' I 1013/14 August 1604) was the founder, in Fās, in the district of the Kaḷkaliyyūn (see Le Tourneau, *Fēs*, Casablanca 1949, index), of the *zāwiya* of the Fāsiyyūn, which was given the name Sidi 'Abd al-Kādir al-Fāsī.

II. — His brother Abū Zayd 'ABD AL-RAḤMĀN b. Muḥammad (d. 1036/1626) founded a second *zāwiya* in the same district and wrote commentaries and annotations of religious works; a number of these have been published, notably *al-Anwār al-lāmī'āt fī sharḥ Dalā'il al-khayrāt*, lith. Fās 1317/1899.

III. — Among the four sons of Abu 'l-Maḥāsin, AḤMAD AL-ḤĀFĪZ (971-1021/1564-1612) also wrote commentaries on works relating to liturgical pieces (*al-djān bi 'l-dhūkr*, lith. Fās) or ecstatic dancing (*ḥukm al-samā' wa 'l-raḳs*, lith. Fās).

IV. — The brother of the latter, Abū 'Abd Allāh/Hāmid MUḤAMMAD AL-'ARBĪ (988-1052/1580-1642) was the author of a number of works, among which the *Mir'āt al-maḥāsin min akhbār al-Shaykh Abi 'l-Maḥāsin* (lith. Fās 1324) is important for the account that it gives of his father and the early history of the family.

V. — The following generation is represented most notably by 'ABD AL-KĀDIR (1007-91/1599-1680) [q.v.], b. 'Alī (960-1030/1553-1621) b. Abi 'l-Maḥāsin who left only some *responsa*, but whose prodigious scholarship and teaching inspired his son 'Abd al-Raḥmān (no. VI) to write two hagiographic pieces (*Tuḥfat al-akābir fī manāqib al-Shaykh 'Abd al-Kādir* and *Bustān al-aẓāhir*) and a treatise relating to his disciples (*Ibtihādī al-baṣā'ir*); this last has been studied by M. Ben Cheneb, in *Actes du XIV<sup>e</sup> Congrès des Orient.*, vi, Paris 1907).

VI. — The son of the preceding, Abū Zayd 'ABD AL-RAḤMĀN (1042-96/1631-85), has been made the subject of an article in vol. I of the *EI*; add to the bibliography M. Lakhdar, *La vie littéraire*, 88-95, and bibliography cited; see also 'AMAL, 3.

VII. — Another great-grandson of Abu 'l-Maḥāsin, Abū 'Isā/'Abd Allāh MUḤAMMAD AL-MAḤDĪ (1033-1109/1624-98) b. Aḥmad (d. 1062/1653) b. 'Alī b. Yūsuf, was the author of a number of important works some of which have survived, on the Qur'ānic readings, the *Sīra*, law, mysticism etc. and most notably of a biography of Abu 'l-Maḥāsin, *al-*

*Ḍjawāhir al-saʿīyya* (ms. Rabat D 1234), an abridgement of his *Rawḍat al-mahāsīn al-zahīya*.

VIII. — Abū 'Abd Allāh MUḤAMMAD AL-ṬAYYIB (d. 1113/1701) b. Muḥammad (d. 1116/1704) b. 'Abd al-Kādir (no. V) left no works of importance, but his cousin Abū 'Abd Allāh MUḤAMMAD (1058-1134/1648-1722) b. 'Abd al-Rahmān (no. VI) was the author of several works, among which attention should be drawn to a *fahrasa* [q.v.], entitled *al-Minaḥ al-bādiyya fi 'l-asānid al-āliyya* and used by al-Īrānī [q.v.] (ms. Rabat K 1249; see also al-Maknāsī, *Aḥam maṣādir*, 121-2).

IX. — ABŪ MADYAN MUḤAMMAD (1112-81/1701-68) b. Aḥmad b. Maḥammad b. 'Abd al-Kādir (no. V), preacher and teacher at the Ḳarawīyyūn, wrote, besides conventional commentaries, some literary compositions of which the titles are sufficiently revealing: *al-Muḥkam fi 'l-amṭhāl wa 'l-hikam*, *Tuḥfat al-arīb wa-nuḣḣat al-labīb* (ms. Rabat D 590, fols. 81 b - 144 b; summarily edited and translated into Latin by Fr. de Dombay, Vienna 1805), *Madjmū' al-zuraf wa-ḡāmī' al-turaf* (ms. Rabat K 1717, fol. 2-93); these are *adab* compilations.

X. — Abū 'Abd Allāh MUḤAMMAD (1118-79/1706-65) b. Aḥmad b. Maḥammad, brother of the preceding, was the author of biographical works of which only one, a short treatise on the Chorfa of Morocco, would appear to have survived.

XI. — The son of the preceding, Abu l-'Abbās AḤMAD (1166-1213/1753-99) composed, on his return from the Pilgrimage (1211/1796) a *riḥla* of which a number of manuscripts exist and which has recently been published by M. El Fasi (Rabat); this story of a journey is remarkable among works of the genre on account of the simplicity of the style, the detail of the description and the accuracy of observation.

XII. — His brother Abū Mālik 'ABD AL-WĀHID (1172-1213/1758-99) was a poet who wrote a *fahrasa* partially in verse, a monograph on the Šikāliyyūn Chorfa (ms. Rabat G 97) and an *uḍḡūza* on the Kādirīyyūn (ed. Tunis).

XIII. — A descendant of Muḥammad al-'Arbī (no. IV), Abū Ḥafṣ 'UMAR (1125-88/1713-74) b. 'Abd Allāh b. 'Umar b. Yūsuf b. Muḥammad al-'Arbī was a polygraph who composed various commentaries, annotations, letters of a judicial nature and a *Dīwān* containing numerous imitations of more or less well-known poems on subjects generally of a mystical flavour.

XIV. — A distant cousin of the preceding, Abū 'Abd Allāh MUḤAMMAD (1130-1214/1718-99) b. 'Abd al-Salām b. Maḥammad b. 'Abd al-Salām b. Muḥammad al-'Arbī (no. IV) specialised in the Ḳur'ānic readings, to which he devoted a number of writings that have in part survived.

XV. — Abū 'Abd Allāh MUḤAMMAD AL-ṬĀHIR (1246-85/1830-68) b. 'Abd al-Rahmān is considered to be one of the most brilliant members of the family, although he went against the example of his parents and entered government service; as Palace secretary he was a member, in 1276/1860, of a diplomatic mission sent to London, to the court of Queen Victoria, by Sultan Sīdī Muḥammad (1276-90/1859-73) and, on his return, composed an account of his journey which has just been published by M. El Fasi. As usual, the traveller expresses his wonder at the novelties that he has seen and relates his experiences in language that is simple and devoid of all pretension.

XVI. — Finally, one should mention 'ABD AL-KĀBĪR (d. 1296/1879) b. al-Madḡidhūb (d. 1260/1844)

b. 'Abd al-Hāfiḣ b. Muḥammad (no. IX) a preacher of Fās who is said to have been the author of a chronological index entitled *Tadhḡīrat al-muḣsinīn bi-wafayāt al-a'yān wa-hawādiṭh al-sinīn*, which is still missing.

Were one to attempt to assess the contribution of the Fāsiyyūn to Arabic culture and literature, it would appear from their impressive corpus of writings that they contributed most of all, as much by their teaching as by the commentaries and annotations that they composed, to the maintenance of the classical tradition in the intellectual capital of Morocco; some of them were composers of verse, but not one of them proved to be a true poet. Hence we can doubtless declare without injustice that their most tangible contribution consists in their *fahrasas*, their accounts of journeys, and their monographs on their family or on certain of its members.

*Bibliography*: In addition to the general biographical works, see especially Muḥammad al-Fāsī (no. IV), *Mir'āt al-mahāsīn*, lith. Fās 1324; Sulaymān al-'Alawī, *Īnāyat ūlī 'l-madḡid bi-dhīkr āl al-Fāsī b. al-Ḍjadd*, Fās 1347/1928; E. Lévi-Provençal, *Chorfa*, index; M. El Fasi, in *Hespérie*, xxix (1942), 65-81; 'A. (CH. PELLAT)

**FAṢṢĀD, HADJĪJĀM** (A.), two terms denoting blood-letting (*faṣṣād*, lit. "phlebotomist" and *hadḡḡām*, lit. "cupper"). Al-Ḍjāhīz indicates that *hidḡāma* (cupping) and *faṣḣ* (phlebotomy) are similar professions. Some pseudo-scientific books on phlebotomy and blood-letting were written by reputable physicians in 'Abbāsīd Baghdād and Aḡhlabīd Ḳayrawān in the 3rd/9th century, e.g., Yuḣannā b. Māsawayḣ (d. 243 H./857) wrote a *Kitāb al-Faṣḣ wa'l-hidḡāma* ("Book of phlebotomy and blood-letting"), and Iṣḣāḣ b. 'Umrān (d. 279/892) wrote in Ḳayrawān a medical treatise called *Kitāb al-Faṣḣ* (cf. Ibn Ḍjuldjul, *Ṭabaḡāt al-aṭibbā' wa'l-ḣukamā'*, Cairo 1955, 65, 85). The phlebotomist was required by customary law to be learned and reliable in the anatomy of organs, veins, muscles and arteries, and he practised his craft in consultation with a physician. They bled veins of the human body and also performed circumcision (*ḣitān*) for men as well as women in Arab society. Phlebotomy involved some hazards. Many persons actually died as a result of improper venesection, according to Ibn Bassām al-Muḣtasīb. Arab customary law made the *faṣṣād* liable to pay compensation in the event of injury or death of a patient resulting from careless opening of veins. This was probably the reason why the *muḣtasīb* stipulated that the *faṣṣādūn* should practise their craft in public places and that they must keep a number of their instruments, including lancets, in good condition. Among Muslim jurists, Abū Ḥanīfa reckoned phlebotomy as a recommendable practice (*sunna*), and not a compulsory duty, but others regarded it as a compulsory duty. Available evidence suggests that the *faṣṣād* had a better social position than the *hadḡḡām*, and that there was no stigma attached to the phlebotomist's profession.

*Hidḡāma* (cupping) was a less hazardous profession than *faṣḣ*, but it was also a less popular work than phlebotomy. The *hadḡḡām* existed in pre-Islamic Arabian society and continued to render service to Islamic society until recent times. The cupper is a much-satirised character in Arabic tales, and had a

very low status. Unlike the phlebotomist, the copper practised blood-letting on parts of the human body other than veins, and used his cup for relief of pain or itching.

Abū Ṭayyiba was a *ḥaḍḍjām* who served the Prophet Muḥammad and was much honoured in early Islamic society. He performed *ḥiḍjāma* on men as well as women. Although *ḥiḍjāma* was permitted by the *sunna*, there are conflicting Islamic traditions about it. A saying attributed to the Prophet described the earnings of a copper as evil (*khābīth*), analogous to the earnings of a whore. Some other traditions state that the copper was paid in cash and kind by the Prophet. The anti-*ḥaḍḍjām* traditions are likely to be apocryphal and they only express the prejudices of the Arabs of the Umayyad and 'Abbāsīd periods. Arab writers cite instances of coppers, including the poet Abu 'l-'Atāhiya, who did not accept any fee for *ḥiḍjāma* from their clients. Tuesday and Saturday were regarded as auspicious days of the week for *ḥiḍjāma*, according to an Arab taboo of the 'Abbāsīd and Mamlūk periods.

A proverbial saying of the 3rd/9th century crystallised public opinion: "A look in the mirror of the *ḥaḍḍjām* is demeaning (*dana'a*)." The copper was said to be given to gossip, and the allegation was illustrated by anecdotes about Abū Ḥanīfa [*q.v.*] and a copper, and also about Ḥarūn al-Raṣḥīd [*q.v.*] and a talkative *ḥaḍḍjām*. The social isolation of coppers probably led some of them to narrate traditions (*aḥādīth*) on chains of narrations from one *ḥaḍḍjām* to another only, says al-Sam'ānī. The prejudice against the copper may be explained in part by the fact that body services were generally considered repugnant, and also partly by the fact that most coppers were men of inferior social origins, such as *mawālī* and slaves. The copper was disqualified from giving valid testimony (*shahāda*) in a court of law, and the *ḥaḍḍjām* was deemed unfit to marry a woman from a social group outside his profession; one source further states that the son of a *ḥaḍḍjām*, irrespective of his merits, was automatically unsuitable to be a boon-companion (*nadīm*) of the sovereign.

(M.A.J. BEG)

**FATE** [see AL-ḲADĀ' WA-'L-ḲADAR].

**FAYD**, an important settlement in Naḍjd during mediaeval times, now a village, situated in lat. 27° 8' N. and long 42° 28' E. It lies on a plain in the borderlands between the two regions of the Djabal Ṣhammar to the north-west and al-Ḳaṣīm [*q.v.*] to the south-east, some 80 miles/130 km. south-east of Ḥā'il [*q.v.*]. The early Islamic geographers locate it in the territory where the pasture grounds of the B. Ṭayyī' and the B. Asad marched together, near to the frequently-mentioned "two mountains of Ṭayyī'", sc. Salmā and Adjā'. Bakrī, followed by Samḥūdī, describes it as a famous *ḥimā* [*q.v.*] of pre-Islamic times, and they and Ḥarbī mention that when the chief of Ṭayyī' Zayd al-Ḳhayl b. Muḥalhil became a Muslim, the Prophet renamed him Zayd al-Ḳhayr and awarded him Fayd as a *kaṭī'a*. Apparently there was a popular belief that its full name was Fayd b. Ḥām b. 'Amālīf after the first dweller there. Accordingly, the settlement probably existed in some form during the Djāhiliyya, especially as it is mentioned in early poems like Zuhayr b. Abī Sulmā and al-Shammākh (Ibrāhīm b. Iṣḥāk al-Ḥarbī, *K. al-Manāsik wa-amākīn turuk al-ḥaḍḍjī wa-ma'ālim al-djazīra*, ed. Ḥamad al-Djāsīr, Riyadh 1389/1969, 306-9; Bakrī, *Muḍjam mā 'sta'djam*, iii, 1032-5; Samḥūdī, *Wafā' al-wafā'*, iii, 1102).

Fayd's importance under Islam came from its position being roughly half-way along the pilgrimage route from Kūfa in 'Irāk to Mecca and Medina, that route known subsequently as the Darb Zubayda [*q.v.* in Suppl.]. Already in the earliest decades of Islam, the caliph 'Uṭmān is said to have done irrigation works there (Ḥarbī, *op. cit.*, 309; Samḥūdī, *loc. cit.*); in the early 'Abbāsīd period, similar charitable works are attributed to al-Manṣūr, al-Mahdī and the vizier al-Faḍl b. al-Rabī'; whilst in the 4th/10th century, the Būyid *amīr* 'Aḍud al-Dawla made further improvements, according to Muḳaddasī (see below). It now became a place of fair importance, and the Arabic geographers and travellers describe it as possessing two well-fortified citadels, a bath, a Friday mosque and many other amenities. It had ample supplies of running water from springs and from wells, used to irrigate date palm groves and stored in cisterns. Supplies of food and fodder were kept there for the pilgrims, and heavy baggage could be deposited there with reliable agents and recovered when the pilgrims returned from the Haramayn. It was consequently the headquarters of the state-appointed warden of the pilgrimage and its route across Arabia, the *amīr al-ḥaḍḍjī* or *'amīl al-tarīk*, and his contingent of guards (see Ḥarbī, *loc. cit.*; Ibn Ḳhurādādhbih, 127; Ibn Rusta, 176, tr. Wiet, 204; Ya'kūbī, *Buldān*, 312, tr. Wiet, 146; Muḳaddasī, 108, 254; Ibn Ḍjūbayr, *Rihla*, 205-6, tr. R.J.C. Broadhurst, 214; Yāḳūt, *Buldān*, Beirut 1374-6/1955-7, iv, 282-3). The arts of peace must also have been cultivated to some extent, since Yāḳūt, *loc. cit.*, lists certain '*ulamā*' stemming from Fayd.

The stationing of the *amīr al-ḥaḍḍjī* at Fayd was vital, for travel along the pilgrimage route was always fraught with dangers from the predatory Bedouins or from schismatics, and the historical annals abound with accounts of attacks [see ḤADJDJ. iii. The Islamic Ḥaḍḍj]. Thus in 294/906-7 the Ṭayyī' besieged al-Muktafi's *amīr al-ḥaḍḍjī* Waṣīf b. Suwārtigin in Fayd for three days (Ṭabarī, iii, 2278;

Ibn al-Aṭhīr, Beirut 1385-7/1965-7, vii, 553); in 312/924 the Carmathians under Abū Ṭāhīr al-Djannābī massacred near there a large part of the pilgrimage caravan of the East and elsewhere (ʿArīb, *Šilat T. al-Ṭabarī*, 118-19; Hamadānī, *Takmilat T. al-Ṭabarī*, ed. A.Y. Kanʿān, Beirut 1961, i, 43); whilst in 412/1021-2 the Nabhān of Tayyīʿ, under their chief Ḥammād b. ʿUdayy, besieged in Fayd the pilgrimage from Khurāsān financed by Maḥmūd of Ghazna, after receiving already a payment of 5,000 *dīnārs* as protection-money [see *ḫḫḫḫḫḫ*], but were finally repelled (Ibn al-Djāwzī, *al-Muntaẓam*, viii, 2; Ibn al-Aṭhīr, ix, 325). Ibn Djuwayr, *loc. cit.*, and Ibn Baṭṭūṭa, *Rihla*, i, 409-10, tr. Gibb, i, 252-3, record that in their time, the pilgrims entered Fayd in warlike array in order to ward off the Bedouins.

In later times, Fayd began to lose its importance in favour of Hāʾil when the pilgrimage route began to pass through the latter town and caravans went via the oasis of al-ʿAdwa (cf. A. Musil, *Northern Negd, a topographical itinerary*, New York 1928, 66). It is first described in its more modest circumstances by European travellers in the later 19th century. W.G. Palgrave passed through it en route from Hāʾil to al-Kašīm (*Narrative of a year's journey through Central and Eastern Arabia (1862-63)*, London and Cambridge 1865, i, 227-30), as did C.M. Doughty, when Fayd was in the territories of Ibn Rašīd, *amīr* of Hāʾil (*Travels in Arabia Deserta*, London 1921, ii, 19). Musil says that it comprised only 35 huts, inhabited by Tamīmīs. It is now a large village, with date palms, pasture for beasts and a good supply of fresh water. The mediaeval settlement lies about one mile/1½ km. to the north, and has remains of buildings and cisterns, and possibly of a mosque, together with deep wells; these constructions have been much reduced in recent times by stone-plunderers.

*Bibliography*: Given substantially in the article, but see the survey of earlier historical and geographical information in Musil, *loc. cit.*, Appx. IV, The station of Fejd in history, 216-20, and now the doctoral thesis of S.ʿA.ʿA. al-Rašīd, *A critical study of the Pilgrim Road between Kūfa and Mecca (Darb Zubaydah)*, with the aid of field-work, Leeds 1977 (unpublished), with a full description and plan of the site.

(C.E. BOSWORTH)

**FAYD-I KĀSHĀNĪ**, the pseudonym by which Muḥammad b. Murtaḍā, called Mawlā Muḥsin, one of the most prolific Shīʿī theologians of his time, is better-known. He was a poet, philosopher, expert on *ḥadīth* and skilled authority on Shīʿī law; his mind dominated most of the religious sciences of his time, and his writings touched on several differing domains.

The exact date of his birth is unknown, but he died in 1091/1680 at an advanced age, so that he must have been born, in the town of Ḳum(m), in ca. 1007/1598. After initial studies in his natal town, he left for Shīrāz to hear the lectures of the famous philosopher Ṣadr al-Dīn Shīrāzī, who gave to him one of his daughters in marriage. His incisive mind allowed him to assimilate a large range of subjects, but he was generally recognised as one of those theologians especially attached to the traditions of the Prophet and the *Imāms*, and as a traditionalist scholar, was the adversary of the philosopher and founder of the *Shaykhī* trend of thought, *Shaykh* Aḥmad Aḥsāʾī [*q.v.*]. However, he incurred equally the hostility of some traditionalist theologians who opposed certain of his mystical ideas. He was, in

fact, a poet who also excelled at the philosophical sciences. His main work is undoubtedly the *Abwāb al-djinnān* ("Gates of paradise"), written in 1055/1645; as a philosophical mystic, his intuition and incisive mind made him close to al-Ghazālī. His other works include the *ʿIlm al-yakīn fī usūl al-dīn*, which is an exposition of the principles of Shīʿī faith, apparently modelled philosophically on Ibn Sīnā's *Ishārāt*, since it is made up of a series of *usūl* or principles just as Ibn Sīnā's work is a series of *ishārāt* or indications. His second important work here is the *Minḥāj al-naḍjāt*, in which Kāshānī deals with the practice of the principles of Shīʿī faith. It is divided into chapters corresponding to the five articles of faith, (1) the divine unity; (2) the divine justice; (3) prophet-hood; (4) the imamate; and (5) the resurrection.

Kāshānī's abundant output comprises over 90 works in Persian and Arabic, in all of which is discernible his predilection for poetry; all of his prose is sprinkled with his own verses or with those of the great Persian and Arabic poets, e.g. the Arabic text of his *Kalīmāt maḥnūna* is full of Arabic and Persian quotations. Several others of his family were noted as scholars, and especially his brother, the author of several works on ethics.

*Bibliography*: *Kh*ʿānsārī, *Rawḍāt al-djannāt*, 522-42; Fayḍ-i Kāshānī, *Mīrʿāt al-ākhīrāt*, introd., 1; Maʿšūm ʿAlī Shāh, *Tarāʾīk al-ḥakāʾīk*, i, 177, 179, 181, 183. (M. ACHENA)

**FAYOUM** [see AL-FAYYŪM].

**FAYṢAL B. 'ABD AL-'AZĪZ B. 'ABD AL-RAḤMAN AL SU'ŪD** (ca. 1323-95/ca. 1906-75), king of Su'ūdī Arabia (regn. 1385-96/1964-75). His mother was Ṭurfa ʿAl al-Shaykh. Educated traditionally, the young prince rode in battle at the age of 13 and soon became his father's stalwart commander; at the same age, he began his diplomatic career when, in 1337-8/1919, his father deputed him to congratulate the English king on the defeat of Germany. Abroad, he made characteristically acute independent observations of Western society and, most exceptionally, ultimately learned English and French privately. Soon after ʿAbd al-'Azīz [*q.v.* in Suppl.] conquered al-Hiǧāz (1345/1925), he appointed Fayṣal viceroy of the new province and foreign minister. He lived most of the next thirty years in al-Hiǧāz, but diplomacy took him to Europe frequently, and, following the establishment of diplomatic relations with the United States (1359/1940), to that country also.

Fayṣal had a total of four wives. First was Sulṭāna b. Aḥmad al-Sudayrī, by whom he had ʿAbd Allāh. In 1350-1, he married ʿIffat b. Aḥmad ʿAl Ṭhunayyān, a relative raised in Turkey. They had six sons: Muḥammad, Su'ūd, Turkī, Sa'd, ʿAbd al-Rahmān, and Bandar. Around 1359/1940 he married Ḥayya b. Turkī b. Djalwī, and they had Khālīd. All the sons were educated in the United States and England as, reportedly, were several of his six (?) daughters. Of his wives, two were divorced years before his death, and one died; ʿIffat remained his constant helpmate and encouraged him to more liberal attitudes toward women.

Before King ʿAbd al-'Azīz died in 1373/1953, he had arranged that his eldest living son, Su'ūd, should succeed him, and he had designated Fayṣal as Su'ūd's successor. Fayṣal served as prime minister for part of Su'ūd's reign as well as foreign minister. The reign did not prove successful. In 1376-7/1957 Fayṣal had several stomach operations in the United States, and when he returned home, he found

the kingdom in some disorder and near bankruptcy. Senior members of the royal family decided to ease out Su'ūd, who in 1377/1958 "voluntarily" surrendered power to Fayṣal while remaining king nominally. By 1379-8/1960 Su'ūd reasserted himself, but the family will prevailed, and in 1384/1964 Fayṣal was proclaimed king.

Intelligent and equally at home in Bedouin tent or Western capital, King Fayṣal proved a masterful ruler. Domestically, he faced with considerable success the challenge of leading a very conservative traditional society, propelled by unprecedented oil-based revenues, into the modern world. Externally, he opposed Israel and communism, headed the conservative Muslim bloc, and maintained friendship with the United States. After 'Abd al-Nāsir's [q.v. in Suppl.] death in 1390/1970, Fayṣal reached an understanding with the new Egyptian leader al-Sādāt, financed Egypt and Syria in the Arab-Israeli war of 1393/1973 and participated fully in the subsequent oil embargo and in the phenomenal OPEC-sponsored oil price increases.

When shot down in *maḡlis* [q.v.] on 26 March 1975 at the age of 70 by a youthful royal assassin, King Fayṣal's country had been set on a peaceful course of modernisation and was a major force in Arab and world affairs. Personally, he enjoyed wide respect for his astute politics, his piety, and his simple ways. He was succeeded by his brother Khālid.

(R. BAYLY WENDER)

**AL-FAZĀRĪ**, ABU 'L-ḲĀSĪM (?) MUḤAMMAD, SUNNĪ poet of al-Ḳayrawān and contemporary of the first four Fāṭimids. His life, like that of many of his contemporaries in Ifrīkiya, is very little known. Thus there is no notice of him in the ancient sources, unlike his grandfather Ibrāhīm (?), classed by al-Ḳhushānī amongst the Mu'tazila; convicted of *ta'fīl*, the "stripping away of God's attributes", he was executed for it. As for his father, 'Āmir, 'Abd Allāh or 'Alī, he is classed by al-Zubaydī amongst the grammarians of the Ifrīkiyan capital; he is said to have appropriated the sums of the *khawāḍi* which he had collected in the Sahel of Tunisia on behalf of the Shīrī caliphs and to have taken refuge in Egypt. These two "stains" on Abu 'l-Ḳāsim's lineage brought him the gibes of a certain Muḥammad al-Tūnisī, who may have been, we think, his pro-Shīrī compatriot al-Iyādī [q.v.].

Nearer our own time, H.H. Abdul Wahab has given a brief notice of him, from which it appears that the poet was born and lived at al-Ḳayrawān and that he died in 345/956, but these are pieces of information of little reliability since they are not based on any explicit source.

Some 112 verses only of al-Fazārī's poetry, scattered in the *Riyād al-nufūs* of al-Mālikī, have been recovered and put together by M. Yalauoui: a *kaṣida* against the "Ubaydīs", but largely made up of a lively eulogy of al-Ḳayrawān and its scholars; a fragment of another satire against the Fāṭimids, but more violent in its language; and an elegy in memory of al-Mammaṣī, one of the "85 martyrs" of al-Ḳayrawān who fell in the ranks of Abū Yazīd [q.v.]. To these gleanings should be added the 63 verses of the *kaṣida Fazārīyya* dedicated to al-Manṣūr [q.v.] after his victory over the Khārīdī. This poem seems to owe its fame not so much to the originality of its laudatory themes as to its curious prologue, viz. 33 verses in which the poet passes in review the legendary heroes of the Arabic knightly tradition, in a laboured parallel between these great names and that of the dedicatee, as if the poet, ashamed of his palinode, were reducing to a strict minimum the eulogy of a recent adversary.

In sum, al-Fazārī is a minor poet, but a representative one, at the side of his compatriot Sahl al-Warrāk, of the Mālikī current in urban Ifrīkiya, divided between his hatred of the Fāṭimids and his distrust of the revolutionary tendencies of the "man on the donkey", Abu Yazīd.

*Bibliography:* The poetry of al-Fazārī has been edited by Yalauoui in the *Annals of the University of Tunis (Hawliyyāt)* [1973], 119 ff.; see also al-Ḳhushānī, *Classes des savants de l'Ifrīqiya*, ed. Ben Cheneb, 220; al-Mālikī, *Riyād al-nufūs*, B.N. **FERGHANA** [see FARĠĤĀNA].

**FIBRE, NET** [see ṢAYD].

**FIDĀ'** (A., pl. *qđīya*) "redemption, repurchase, ransoming". The dictionaries give several meanings for *fidā'* and its derivatives, amongst which *fidā'* offers especial interest [see FIDĀ'Ī, FIDĀ'IYYĀN-I ISLĀM]. Another word derived from the same root, *fidya*, appears in the Ḳur'ān to denote the fast which compensates for the days of Ramaḍān in which fasting has not been practised (II, 180/184, 192/196) or the impossibility of purchasing a place in paradise (LVII, 14/15). The verbal forms *fadā*, *tafadā* and *iftadā* are more common there (e.g. *fadaynā-hu* in regard to the ransoming of Ismā'il, XXXVII, 107), but the sole occurrence of *fidā'* (XLVII, 4-5/4) concerns the ransoming of captives of war taken from Muḥammad's enemies: "When you come up against the infidels, smite their necks, then, when you have made wide slaughter among them, tie fast the bonds; then either set them free as an act of grace or by ransom until the war lays down its burdens". The present article deals with the ransoming of Muslims, prisoners or slaves held by unbelievers, in the West. For the East, see LAMAS-SU.

(ED.)

The most perfect form of *fidā'*, recommended in

the West by the Mālikī *fukahā'* as a means of redeeming believers held captive in Christian territory, is the payment of this ransom in the form of pigs and wine previously submitted by *dhimmīs* to the Islamic community, this contribution then being reckoned acceptable as an element of the payment of the *ḡiyya* owed by these tributaries. But this did not often happen.

More frequently, *fidā'* operates on a financial basis. In principle, it is the Muslim state which has the obligation to provide the necessary money, deducting it from public funds; however, the ransom is usually put together by relations or friends of the captives, and it consists of contributions made for this purpose by individuals. In 578/1182, for example, in the time of the Almohad caliph Abū Ya'kūb Yūsuf, the town of Seville ransomed, at a price of 2,700 *ḡinārs*, seven hundred of its citizens who had been captured by Alfonso VIII of Castille; this money had been raised by appeals made for this *fidā'* in the mosques of Seville.

The devout individual who devotes himself totally or episodically to the ransoming of Muslims held captive by infidels is called *al-fakkāk*. It is not often that such an agent is able to travel alone and spontaneously in Christian territory for the purpose of arranging the release of captives; the "infidel" power tends to be uncooperative. In 1318, for example, the king of Aragon rejected a request from his subjects in Lorca, asking him to grant safe-conducts authorising the free movement of "*alfaqques moros*" across his estates (*Registre de Chancellerie* no. 244, of the *Archives de la Couronne d'Aragon*, Barcelona, fo. 234).

In practice, *fidā'* is often linked to a reciprocal act of compensation; the liberation or ransom of Christian prisoners or slaves in the hands of Muslims. In fact, in a case where the infidel refuses to allow the Muslims whom he holds to be ransomed in any other way, Islam permits these men to be exchanged for Christian captives, even if the latter are subsequently likely to take up arms against the *dār al-Islām*.

At the same time, one should note the appearance in a Christian context of an equivalent of the Muslim "redeemer": he is called *alfaqque* in Castilian, *exea* in Catalan (from the Latin *exire* "to go out"). To some extent, members of the Trinitarian and Mercedarian religious orders, of which the former arose at the end of the 12th century, the latter at the beginning of the 13th, may be regarded as Christian *alfaqques*. The term *al-fakkāk* thus comes to denote not only the Muslim who ransoms one of his brothers, but, in a more general sense, the man who liberates a captive.

In principle, every *fakkāk* is respected by the opposing side: neither his liberty of his dignity is compromised. Sometimes, however, this rule is not followed. In 772/1371, for example, a Catalan "*alfaqque*" or "*exea*", from the island of Ibiza, was detained in Granada, although he arrived there armed with a safe-conduct from the Naṣrid sovereign; he was acting as guide to a group of Granadans whom he had ransomed in the Balearic Isles and whom he was in the process of returning to their compatriots. The sultan ordered his release once he was satisfied as to the authenticity of the official safe-conduct with which had been given to the Catalan, but he refused to set free some other Christians, who had accompanied this accredited "*alfaqque*" to Granada.

In the liberations thus effected, the *fidā'* is clearly

supplemented by a commercial enterprise, where the operative is inspired by the profit-motive. The agents who used their own funds to ransom Muslim slaves held in Christian lands and subsequently negotiated their return to Muslim territory, sought to profit by the operation; on their return, they repeated the process elsewhere, in the opposite direction. Very often, Jews took on the role of commercial *alfaqques*: in 1004, for example, the Count of Barcelona granted to four Jews the right to ransom and to restore to Islamic territory Muslim captives held in Catalonia.

Most often, liberations were effected in the course of diplomatic transactions, claims and exchange of ambassadors; normally, an ambassador acted as "redeemer", where necessary retaining a specialist *fakkāk* in his entourage. Examples of liberations by exchange made in the context of these missions and negotiations are: in 713/1313, between Bougiots held as slaves in Majorca, and Majorcan slaves in Bougie; in 1321, between Catalan slaves in the Naṣrid kingdom and Granadans held captive in the lands of the Crown of Aragon; also, in 837/1434-5 between subjects of Alfonso the Magnanimous, King of Aragon and Sicily, held prisoner in Ḥafṣid territory, and Tunisian slaves in the lands of King Alfonso; etc.

There were other ways in which the *fidā'* could operate; sometimes, a Muslim captive sends for a number of co-religionists from his own land and makes them hostages, as a guarantee for the ransom which he has promised and which he himself goes to raise. This was the course followed by, for example, in Oviedo, ca. 287/900, by an important member of the court of Cordova, who left in his place one of his sons, two of his brothers and a nephew, who had come to the Asturias for this purpose. Sometimes, a slave concludes a "contract of liberation" (contract of "talliage") with his proprietor: either because he is authorised to collect money, or because he is hired out to a third party and is allowed to keep the supplementary payments given him by the latter when the occasion arises, or because he makes his living in one way or another, or because he receives money from home, such a captive is free from the day that he succeeds in remitting to his master the sum required within a period determined under the contract. In 703/1303, for example, two Muslim slaves in the kingdom of Valencia were authorised by their proprietor to travel round the country to raise a certain sum within ten months, demanding from their co-religionists (the free Muslims of the kingdom) "alms of precept" and "supplementary gifts". This fact is known to us from a deed drawn up by a *kādī* of Valencia in Rabī' I 703, preserved in the archives of the Kingdom of Aragon in Barcelona; this is a document designed to facilitate fundraising on the part of slaves who were bearers of it, introducing them to all *fukahā'*, *ulamā'*, *imāms*, *ṣaykhs*, administrators, notables and other Muslims living in the territory of the King of Aragon.

linden, *L'esclavage dans l'Europe méditerranéenne*, i, Bruges 1955; ii, Ghent 1977.

A remarkable work inspired by a ransom mission is that of Ibn 'Uthmān [*q.v.* in Suppl.], *al-Iksīr fī fikāk al-asīr*, ed. Muḥammad al-Fāsī, Rabat 1965. (CH.-E. DUFOURCO)

**FIGS** [see TĪN].

**FİNDİKOĞHLU**, DİYĀ' AL-DĪN FAHRĪ, modern Turkish ZİYAEDDİN FAHRİ FİNDİKOĞLU (1901-74) (he also occasionally used his original name AĦMED KĦALĪL), Turkish sociologist and writer. He was born in Tortum near Erzurum in Eastern Anatolia, and graduated from the School of Posts and Telegraph (*Posta-Telgraf mekteb-i 'ālisi*) in 1922, and also from the Department of Philosophy of Istanbul University (1925). He taught philosophy and sociology in various schools in Erzurum, Sivas and Ankara, until in 1930 he went to France on a government scholarship and obtained a Ph.D. in philosophy from the University of Strasbourg (1936), being then appointed lecturer (*doçent*) in the University of Istanbul. In 1937 he transferred to the Faculty of Economics, where he became Professor in 1941. He died in Istanbul on 16 November 1974.

Findikoghlu became interested at an early stage in literature and folk-lore, and published poems and studies on folk poets (e.g. *Bayburtlu zihni*, 1928). Later, he concentrated on research about Diyā' (Ziya) Gökalp and Ibn Kḥaldūn and on problems of social change in their legal and sociological implications, and also on the co-operative movements, making considerable contributions to both these fields. From being a moderate liberal, he developed into an extreme conservative and traditionalist, and in his many articles in various periodicals, particularly in his own *İş* ("Action"), he waged a relentless war against reformist tendencies and against all innovations (e.g. he signed Findikoghlu Ziyaeddin Fahrī instead of Ziyaeddin Fahrī Findikoghlu, as the former was more in keeping with old Turkish usage). He joined the opponents of the language reform movement and carefully avoided all neologisms in his writings.

Findikoghlu is the author of the following major works: *Ziya Gökalp, sa vie et sa sociologie*, Nancy 1935; *Essai sur la transformation du code familial en Turquie*, Paris 1935; *Ibn Haldun'un hukuka ait fikirleri ve tesiri* ("Ibn Kḥaldūn's ideas on law and their impact"), 1939; *Ahlak tarihi*, 3 vols., 1945-6; *Sosyalizm* (1965); *Kooperasyon sosyolojisi* (1967).

(FAHRİ İZ)

**FINDIRISKĪ**, MĪR ABU 'L-KĀSİM B. MĪRZĀ HUSAYNĪ ASTARĀBĀDĪ, known in Persia as Mīr Findiriskī, Persian scholar and philosopher. He was probably born in Iṣfahān, where he studied and spent much of his life. He also travelled extensively in India, and died in Iṣfahān in 1050/1640-1. His tomb is located in the Takht-i Fūlād cemetery, and this shrine is visited by many devotees throughout the year. Mīr Findiriskī was one of the most famous of the philosophers and scientists of the Ṣafawid period, respected by both Shāh 'Abbās and the Mughal court in India, yet little is known of the details of his life. In Iṣfahān he taught the sciences, and especially the philosophy of Ibn Sīnā, above all the *Shifā'* and the *Kānūn*, and such well-known figures as Ākā Ḥusayn Kḥ<sup>ā</sup>ansārī, Muḥammad Bākīr Sabzawārī, Raḡjāb 'Alī Tabrizī, and possibly Mullā Ṣadrā, studied with him. Yet he was far

from being merely a rationalistically-oriented philosopher; he was also a Sūfī, an alchemist, a profound student of Hinduism, a gifted poet and one who was believed by his contemporaries to possess supernatural powers. Besides being, along with Mīr Dāmād and Bahā' al-Dīn 'Āmilī, one of the main figures of the "School of Iṣfahān", Mīr Findiriskī was also the most notable intellectual link between the tradition of Islamic philosophy in Persia and the movement for the translation of Sanskrit texts into Persian in India which is usually associated with the name of Dārā Shukōh [*q.v.*].

Few works survive from Mīr Findiriskī's pen, but those which do are all of exceptional interest. Perhaps the most important of his works, which is also unusual in both its theme and treatment in the annals of Islamic philosophy, is the Persian *Risāla-yi šinā'īyya*, which concerns the metaphysical study of human society. In this work, various occupations and professions in society are placed in a hierarchy corresponding to the hierarchy of knowledge and also of being. Another of this treatises, *Risāla-yi ḥarakat*, again in Persian, deals with a refutation of the Platonic ideas upon the basis of Aristotelian physics. This is quite surprising, because Mīr Findiriskī is the author of one of the most famous philosophical *kaṣīdas* of the Persian language, beginning with the verse:

Heaven with these stars is lucid,  
pleasing, and beautiful;  
Whatever exists in the world above,  
has in the world below a form.

These verses clearly confirm the reality of the archetypal world.

As a matter of fact, this *kaṣīda* is the best-known of Mīr Findiriskī's works in Persia, and one upon which his philosophical reputation rests. It was commented upon by such later figures as Muḥammad Ṣāliḥ Kḥalkḥālī and Ḥakīm 'Abbās Dārābī. In his Persian answer to the question of Ākā Muẓaffar Kāshānī on whether there is analogy in quiddities, he follows those who believe in the principality of quiddity, and is far from the position of a metaphysician of being such as Mullā Ṣadrā. Mīr Findiriskī, this contemporary of Michael Meier and Robert Fludd, was also widely known as an alchemist, and in fact was buried in an iron coffin to prevent his body from being stolen. He is thus the author of an Arabic treatise on alchemy, as well as a Persian poem on the royal art, both of which have been discovered recently but remain unedited. Finally, he is the author of a summary of the *Yoga Vasīṣṭha* and a voluminous commentary upon the Persian translation of this work by Nizām al-Dīn Pānīpātī, both of which are also still unedited. This commentary is without doubt one of the peaks of the intellectual encounter between Islam and Hinduism. Although only these few works survive from Mīr Findiriskī, and the manuscript of the *Usūl al-fuṣūl* on Hinduism and a history of the Ṣafawids attributed to him have never been discovered, he remains a vivid and lively figure in the later history of Islamic philosophy in Persia and survives to this day, even in the consciousness of the common people, as one of the greatest sages of the Ṣafawid period.

(SEYYED HOSSEIN NASR)

**FIRDOUSI** [see FIRDĀWĪ].

**FIRUZ** [see FIRŪZ].

**FIRŪZ**, **FIRŪM**, a stronghold in the Elburz Mountains mentioned in mediaeval Islamic times as held by the Iranian native princes of the Caspian region, firstly the Ḳārinids and then the Bāwandids [q.v.]. Its exact position is unfortunately not fixed in the itineraries of the geographers, and an authority like Ibn Hawḳal, ed. Kramers, 377, tr. Kramers-Wiet, 367, following **Iṣṭakhrī**, merely mentions it as the capital of the Ḳārinids since pre-Islamic times, where their treasures and materials of war were stored; Yāqūt adds to this information that it was one stage from Sārī, the town of Ṭabaristān in the coastal region (iii, 890; ed. Beirut, iv, 260). The information that Firrīm was the fortress of the Ḳārinids was anachronistic by these geographers' times, since the execution of Māzyār b. Ḳārin in 225/840 meant the extinction of that dynasty; it probably passed soon after then to the Kāwūsiyya line of the Bāwandids, who were certainly installed there in the 4th/10th century.

In the *Hudūd al-'ālam* (372/982) we have quite a detailed description of the Kūh-i Ḳārin, the district in which Firrīm was situated, and of the town itself, with some interesting sociological and folkloristic observations. Much of the population of the district was still Zoroastrian, but Firrīm contained Muslim immigrants, merchants and artisans; the Bāwandid Ispahbad's military camp was half-a-*farsakh* outside the town itself (tr. Minorsky, 135-6). A certain amount of Muslim settlement may have taken place from early 'Abbāsī times onwards, since Ibn Isfandiyyār in his *Ta'riḫ-i Ṭabaristān*, abridged tr. E.G. Browne, Leiden-London 1905, 122-3, records that al-Manṣūr's governor Abū **Khuzayma al-Tamīmī** (143-4/760-1) placed a garrison in Firrīm of 500 men under **Ḳhalīfa** b. Bahrām. It is also recorded that Māzyār established a mosque in Firrīm (Ibn al-Faḳīh, 306, tr. Massé, 362). From mentions in the sources on the confused fighting in northern Persia amongst Daylamī and other adventurers during the Būyid period, it seems that the Bāwandids continued to hold Firrīm. They minted coins there with legends of Shīrī type, usually acknowledging on them the 'Abbāsīd caliphs and the Būyids of Ray as their suzerains, during the second half of the 4th/10th century (coins of Rustan b. **Sharwīn**, reigned ca. 353-69/ca. 964-80, and of **Shahriyār** b. Dārā, reigned ca. 358-96/ca. 969-1006, the first perhaps with his power contested), though their extant issues from 499/1105 onwards are all from the Sārī mint (see G.C. Miles, *The coinage of the Bāwandids of Ṭabaristān*, in *Iran and Islam, in memory of the late Vladimir Minorsky*, ed. C.E. Bosworth, Edinburgh 1971, 443-60, and idem, in *Cambridge history of Iran*, iv, 373, 375).

None of these pieces of information enables us to fix with sureness the exact location of Firrīm.

P. Casanova, in *Les Isphebeds de Firīm*, in *'Ajābnāma, A volume of oriental studies presented to Edward G. Browne*, ed. T.W. Arnold and R.A. Nicholson, Cambridge 1922, 117-21, argued for an identification with the mediaeval and modern town of Firzūkūh [q.v.] on the Tehran-Sārī highway. Minorsky, on the other hand, in *Hudūd al-'ālam*, comm. 387, thought that Firrīm must have lain on the western branch of the Tidjīn-Rūd, to the south-south-east of Sārī and north of Simnān. Certainly, the geographers were not sure whether it should be attached administratively to Sārī and Ṭabaristān or to Kūmis [q.v.] on the southern slopes of the Elburz, cf. Ḥamd Allāh Mustawfī, *Nuḫlat al-ḳulūb*, ed. Le Strange, 162, tr. 158. The fact that in early 20th century Persia there was a *bulūk* or district called Farīm in the larger division of Hazārdjārīb (H.L. Rabino di Borgomale, *Māzandarān and Astarābād*, London 1928, 56-7) may strengthen the latter identification, but it is probably only really archaeological exploration which can finally decide.

*Bibliography*: In addition to references given in the text, see for the coins minted at Firrīm, E. von Zambaur, in *Wiener Numismatische Zeitschr.* xlvii (1914), no. 472 (discusses all issues then extant), and idem, *Die Münzprägungen des Islams zeitlich und örtlich geordnet*, Wiesbaden 1968, i, 185-6 (coins from 225-840 ('Abbāsīd) to 746/1345-6 (I-Ḳhānid)).

**FÜDHANDJ** [*fawḍandj*, *fawṭandj*, etc.] is mint *Mentha* L. (Labiatae). The term is of Persian, and ultimately of Indian origin (*pūdama*), which explains the various ways of transcription in the Arabic rendering. Under the name *ḥabaḳ* mint was well-known to the Arab botanists (Aṣma'ī, *K. al-Nabāt*, ed. 'Abd Allāh al-Ḡhunaym, Cairo 1392/1972, 17). They describe it as a fragrant plant with an acrid taste, square-sectioned stalk and leaves similar to those of the willow. It often grows near water and resembles the water-mint, called *nammām*. The Beduins considered it as a means to check in both man and animal the longing for coitus (Abū Hanīfa al-Dīnawarī, *The book of plants*, ed. D. Lewin, Uppsala-Wiesbaden, 1953, no. 247, and *Le dictionnaire botanique*, ed. M. Hamidullah, Cairo 1973, no. 840).

The Arabic nomenclature of the mint is abundant, as was already the Greek one, but it is rather confused, and so the identification of the individual kinds is made considerably difficult. Ibn **Djuldjul** [q.v.] of Cordoba equates the *καλαμίνθη* of Dioscorides, which appears as *kālāmīnḥī* (and variants) in Stephanos-Hunayn, with *fūdhandj* (see Anonymous, *Nuruosmaniye* 3589, fol. 99a-b) and knows the following three kinds of it: (a) *fūdhandj nahrī*, the "river-mint", also called *dawmarān*, apparently *Mentha aquatica* L.; (b) *fūdhandj djabalī*, the "mountain-mint", also called *nābūta* (< Latin *nepeta*, cf. F.J. Simonet, *Glosario de voces ibéricas y latinas usadas entre los mozárabes*, Madrid 1888, 397 f., with Mozarabic complementary forms), probably *Mentha*

tomentella Link; (c) *fūdhandj barrī*, the "wild mint", also known as *ghalikhun* (γλιχων), *Mentha pulegium* L.

This simple basic pattern was completed and differentiated by later pharmacologists. For the river-mint there appear the Arabic terms *nammām*, *habak al-mā'* and *habak nahrī*, in Egypt *habak al-timsāh*, in Andalusia the Mozarabic *mantarāshhtaruh* (*mastranto*, etc., see Simonet, *op. cit.*, 359); the last term indicates in fact another kind, namely *Mentha rotundifolia* L. In the literature of translations the river-mint probably corresponds with σισύμβριον = *sisinbaryūn* (and variants). The mountain-mint is later mostly equated with the "rocky" (*al-sakhri*) and with the wild mint (according to Ibn al-Wahshiyya in Nuwayrī, *Nihāya*, xi, Cairo 1935, 69, 7). In Mozarabic the wild mint is called *bulāyuh*, *fulāyuh* (*poleo* < Latin *pulegium*, German *Polei*, see Simonet, *op. cit.*, 452), and also *ghubayrā'* or 'imid. To this should be added above all the "cultivated mint" (*fūdhandj bustāni*), that is, the pepper-mint, *Mentha piperita*, the ἡδύσσομον *idyāsmun* of the literature of translation, well-known and favoured as *na'na'* or *nu'nu'*. Other kinds are also mentioned, which can be omitted here; they are not at all to be connected with the genus mint (like *faytal*), or only with some restriction (like *sufayrā'*).

As still today, mint had a many-sided medicinal effect, above all from the menthol contained in the volatile oil of the leaves of the peppermint. For the preparation of fragrant peppermint tea, Ibn Wahshiyya (in Nuwayrī, *op. cit.*, 70) recommends a method which is based upon all kinds of superstitious notions. The juice of the river-mint, taken with honey, has a strong heating and sweat-producing effect; taken with water, it helps against shooting pains and sciatica, promotes menstruation, drives off the tape-worm and is useful against jaundice since it opens up the sluggishness of the liver. Mountain-mint dilutes thick and sticky fluids which accumulate in the breast or lungs, and secretes them. Peppermint, taken with vinegar, does away with nausea and vomiting and checks haemorrhages. On the specific effect of menthol is based its use, common until now, for diarrhoea, gripes, flatulence and, above all, catarrh of the respiratory tubes. A few verses praising the fragrant peppermint tea are found in Nuwayrī, *op. cit.*, 71 f.

FUKAHĀ' AL-MADĪNA AL-SAB'Ā, the seven "jurists" of Medina, to whom tradition attributes a significant role in the formation of *fiqh*. J. Schacht, who was especially interested in these *fukahā'*, wrote (*Esquisse d'une histoire du droit musulman*, Paris 1952, 28; cf. idem, *An introduction to Islamic law*, Oxford 1964, 31): "The Medinans . . . traced back the origin of their special brand of legal teaching to a number of ancient authorities, who died in the final years of the first and the early years of the second century of the Hegira. In a later period, seven of them were chosen as representatives; these are the 'seven jurisconsults of Medina' . . . Almost none of the doctrines attributed to these ancient authorities can be considered as authentic. The transmission of the judicial doctrine of Medina only becomes historically verifiable at the same period, approximately, as in Iraq, with Zuhri (died in the year 124 of the Hegira)." It may further be noted, in this context, that the name of al-Zuhri [q.v.] figures prominently in the enumeration, by the biographers, of those who supposedly formed the audience of the seven *fukahā'*. J. Schacht (*The origins of Muhammadan jurisprudence*, Oxford 1950, 22 ff.; 243 ff.) is also able to show that the list of these jurisconsults, to some extent variable, but finally fixed *ne varietur*, rests on no foundation, and he considered that in fact it is a question of a conventional group of *uābī'ūn* mentioned for the first time in definitive form by al-Tahāwī (d. 321/933) in his *Sharḥ ma'ānī l-āthār* (Lucknow 1301-2, i, 163), then by Abu 'l-Faraj al-Iṣfahānī (d. 356/967) in the *Aghānī* (ed. Beirut, ix, 136, 145). He recognises, however, that this list was definitely drawn up at an earlier date, although he cites no reference in this context. Now the *Fihrist* (ed. Cairo, 315) mentions a work of Ibn Abī 'l-Zinād (d. 174/790-1 [q.v. in Suppl.]) entitled *Ra'y al-fukahā' al-sab'a min ahl al-Madīna wa-mā' khtalafū fīhī*, which creates the impression that this group—whose composition had been probably already fixed—was felt, towards the middle of the 2nd century A.H. not only as a historical reality, but also as early evidence of the doctrinal pluralism accepted by Islam, since it was possible to find out divergencies of opinion from among equally-respected "scholars". The fact remains, however, that the seven *fukahā'* chosen would appear above all else to be purveyors of tradition, for whom the sources are, in the nature of things, almost all the same. In addition, it may justifiably be supposed that their reputation was established considerably later than the time of their disappearance, since the date of death of the majority of them is not known with certainty; one might however expect it to be fixed in the year 94/712-13, designated precisely by the name *sanat al-fukahā'*, since according to tradition a number of them are said to have died in that year.

Whatever the case may be, the definitely-adopted list comprises the following personalities, with regard to whom it has not been judged beneficial, following

the studies of J. Schacht, to undertake researches into the works of *fikh*:

I. — ABŪ BAKR B. 'ABD AL-RAḤMĀN b. al-Ḥārith b. Hishām b. al-Mughīra AL-MAKḤZŪMĪ, a prominent Kurays̄hite who became blind and was surnamed al-Rāhib or Rāhib Kurays̄h on account of his piety. Al-Ṭabarī (ii, 272) is the only one to give him the name of 'Umar, and Ibn al-Kalbī-Caskel (Tab. 23) mentions only two other sons of 'Abd al-Raḥmān b. al-Ḥārith. Too young to serve as a combatant at the Battle of the Camel [see AL-DJAMAL], he remained in Medina, where he became intimate with 'Abd al-Malik b. Marwān, who commended him to the care of his son al-Walīd. He passed on some *ḥadīths* of Abū Hurayra and of the wives of the Prophet to a number of traditionists, among whom the most notable would appear to be al-Zuhrī. He died in 94/712-13.

*Bibliography*: Muṣ'ab al-Zubayrī, *Nasab Kurays̄h*, 303-4; Ibn Kutayba, *Ma'ārif*, 282, 588, 599; Ibn Khallikān, *Wafayāt*, ed. Ihsān 'Abbās, Beirut, no. 117; Ibn Sa'd, *Ṭabakāt*, ed. Beirut 1388/1968, ii, 383; Mas'ūdi, *Murūdj*, v, 132-4 = §§ 1889-90; Ibn al-'Imād, *Shadhārāt*, i, 104; Nawawī, *Tahdhīb*, 672-3; Ibn Ḥadjjar, *Tahdhīb al-Tahdhīb*, xii, 30-2; Šafadī, *Nakt al-himyan*, 131.

II. — KHĀRĪDJA B. ZAYD B. THĀBIT AL-ANŠĀRĪ, Abū Zayd (d. 99 or 100/717-19) son of the Prophet's secretary. Appointed *mufī* of Medina, he collected traditions from his father and passed them on, most notably to al-Zuhrī.

*Bibliography*: Ibn Sa'd, *Ṭabakāt*, index; Ibn Khallikān, no. 211; Nawawī, *Tahdhīb*, 223; Ibn Ḥadjjar, *Tahdhīb al-Tahdhīb*, iii, 74-5; idem, *Isāba*, no. 2136; Ibn 'Asākir, *Tārīkh Dimashk*, vi, 24-5; Ibn al-'Imād, *Shadhārāt*, i, 118.

III. — 'URWA B. AL-ZUBAYR B. AL-'AWWĀM, Abū 'Abd Allāh (b. ca. 23/644, d. between 91 and 99/709-18), grandson of the first caliph through Asmā' bint Abī Bakr [q.v.]. He was considerably younger than his brother 'Abd Allāh [q.v.], in whose activities he played no part; in fact, he avoided involvement in politics, but it was he who is said to have brought to 'Abd al-Malik b. Marwān, in 73/692, the news of the defeat and death of the anti-caliph. He lived subsequently in Medina, where he is said to have written, on the instruction of 'Abd al-Malik, a series of epistles on the beginnings of Islam. He collected traditions from his aunt 'Ā'isha, from his mother, from his father (?) and from Abū Hurayra and passed them on notably to his own sons, to Sulaymān b. Yasār (see below) and to al-Zuhrī. The biographers tell that he was most courageous and that he endured in silence the amputation of a foot.

*Bibliography*: Muṣ'ab al-Zubayrī, *Nasab Kurays̄h*, 245 and index; Ṭabarī, i, 1180, ii, 1266; Ibn Sa'd, *Ṭabakāt*, index; Ibn al-Kalbī-Caskel, Tab. 19 and ii, 575; Ibn Khallikān, no. 416; Nawawī, *Tahdhīb*, 420-1; Ibn Ḥadjjar, *Tahdhīb al-Tahdhīb*, vii, 180-5; Ibn Kutayba, *Ma'ārif*, index; I. Goldziher, *Muh. Studien*, ii, 20.

IV. — SULAYMĀN B. YASĀR AL-HĪLĀLĪ, Abū Ayyūb/Abū 'Abd al-Raḥmān/Abū 'Abd Allāh (d. ca. 100/718-9) *mawlā* of Maymūna, wife of the Prophet, who passed on traditions acquired from 'Ā'isha, Ibn (al-) 'Abbās, Abū Hurayra and others and whose audience included notably al-Zuhrī.

*Bibliography*: Ibn Kutayba, *Ma'ārif*, 459; Ṭabarī, index; Balādhurī, *Futūh*, 266; Ibn Sa'd, *Ṭabakāt*, index; Ibn Khallikān, no. 270; Nawawī, *Tahdhīb*,

302-3; Ibn Ḥadjjar, *Tahdhīb al-Tahdhīb*, iv, 228-30; Mas'ūdi, v, 462 = § 2214; Ibn al-'Imād, *Shadhārāt*, i, 134.

V. — 'UBAYD ALLĀH B. 'ABD ALLĀH b. 'Utba b. Mas'ūd al-Hudhālī, Abū 'Abd Allāh, great-nephew of 'Abd Allāh b. Mas'ūd [q.v.], who collected traditions from his father, from Ibn (al-) 'Abbās, from Abū Hurayra and other Companions and had a number of transmitters, in particular al-Zuhrī. He was extremely learned, according to his biographers, and he is said to have been the teacher of 'Umar b. 'Abd al-Azīz at Medina. He is known as a Murdjī'ite. He owes to his skill as a poet his inclusion in the *Aghānī* (ed. Beirut, ix, 135-47) and it is in the chapter devoted to him that Abu 'l-Faraj enumerates twice (135, 145) the seven *fukahā'*, the second time with reference to a passage in which 'Ubayd Allāh is supposed to cite his six colleagues; Schacht (*Origins*, 244) believes with some justification that this is a fabrication invented for the requirements of circumstances; it seems in fact to have a mnemonic quality, like two verses (with rhyme-*dīah*) quoted by Ibn Khallikān in the article on Abū Bakr b. 'Abd al-Raḥmān 'Ubayd Allāh, who was blind, died in about 98/716-7 and was buried at al-Bakr'.

*Bibliography*: Djāhīz, *Bayān*, i, 356 and index; idem, *Hayawān*, i, 14 and index; Ṭabarī, index; Abū Tammām, *Hamāsa*, ii, 126-7; Ibn Kutayba, *Ma'ārif*, 250, 251, 588; Ibn Sa'd, *Ṭabakāt*, index; Mas'ūdi, *Murūdj*, v, 376 = § 2129; Ḥuṣrī, *Djam' al-Ḍawāhīr*, 4; Harawī, *Ziyārat*, 94/215; Ibn Khallikān, no. 356; Nawawī, *Tahdhīb*, 400-1; Ibn Ḥadjjar, *Tahdhīb al-Tahdhīb*, vii, 180-5; Dhahabī, *Tadhkirat al-huffāz*, i, 74; Abu Nu'aym, *Hilyat al-awliyā'*, ii, 188; Šafadī, *Nakt*, 197-8; Ibn al-'Imād, *Shadhārāt*, i, 114; Ziriklī, iv, 360.

VI. — SA'ĪD B. AL-MUSAYYAB b. Ḥazn al-Makḥzūmī, Abū Muḥammad. A true Kurays̄hite, this oil merchant collected traditions from his father-in-law Abū Hurayra and from other Companions and acquired a great reputation for piety and knowledge in the domain of *ḥadīth*, of *fikh*, and of *tafsīr*. Given the title Sayyid al-Ṭābi'īn, he seems to have been preferred to the other *fukahā'* by the Medinans, who subsequently abandoned his doctrine, which was different from that of Mālik (cf. Schacht, *Origins*, 7) but was judged sufficiently important to merit a monograph by al-Dhahabī. Politically, he affirmed his desire for independence by refusing to recognise Ibn al-Zubayr, which cost him sixty strokes of the lash, then refusing to pay allegiance to the sons of 'Abd al-Malik, al-Walīd and Sulaymān, which earned him a second flogging. His biographers also speak of his ability to interpret dreams. The date of his death varies considerably in the sources, but it is possible to pinpoint the year 94/712-13. He was buried at al-Bakr'.

*Bibliography*: Ibn al-Kalbī-Caskel, Tab. 22 and ii, 501; Ibn Kutayba, *Ma'ārif*, index; Ibn Hishām, *Sīra*, index; Ṭabarī, index; Balādhurī, *Futūh*, index; Ibn Sa'd, index; Muṣ'ab al-Zubayrī, *Nasab Kurays̄h*, 345; Ya'qūbī, *Historiae*, ii, 276; Mas'ūdi, *Murūdj*, iv, 148, 254, 255, v, 118 = §§ 1479, 1581, 1874; Ibn Ṭīktaqā, *Fakhrī*, ed. Derenbourg, 167, 168; H. Laoust, *Ibn Baṭṭa*, 51; Harawī, *Ziyārat*, 94/125; Maḳḍisī, *Création*, index; Ibn Khallikān, no. 262; Nawawī, *Tahdhīb*, 283-5; Ibn Ḥadjjar, *Tahdhīb al-Tahdhīb*, iv, 84-8; Dhahabī, *Tadhkirat al-huffāz*, i, 51-3; Ibn al-'Imād, *Shadhārāt*, i, 102-3; Ibn Taghribardī, *Nudjūm*, i, 228; Goldziher, *Muh. Studien*, ii, 31, 97.

VII. — AL-KĀSIM B. MUḤAMMAD b. ABĪ BAKR, Abū 'Abd al-Raḥmān/Abū Muḥammad. Grandson of

the first caliph, and, as the story goes, of the last Sāsānid, because his mother was allegedly one of the three daughters of Yazdadjird (see al-Mas'ūdī, *Murūdj*, index, s.v. *Shahrbanū*), he was adopted by his aunt 'Ā'īsha after the death of his father in 38/658. He transmitted to al-Zuhrī and to a number of other recipients traditions from his aunt and from several Companions, including Abū Hurayra. He died in ca. 106/724-5 at Ḳudayd and was buried at al-Abwā' [q.v.].

*Bibliography:* *Djāhiz*, *Bayān*, ii, 322; Ibn

Kutayba, *Ma'ārif*, 175, 588; Muṣ'ab al-Zubayrī, *Nasab Ḳuryaysh*, 279; Ibn al-Kalbī-Caskel, *Tab*, 21; Ibn Sa'd, index; Abū Nu'aym, *Hilyat al-awliyā'*, ii, 183; Mas'ūdī, *Murūdj*, v, 463 = § 2214; Maḳdisī, *Création*, vi, 80; Ibn Ḳhallikān, no. 533; Harawī, *Ziyārāt*, 89/205; Nawawī, *Tahdhīb*, 507-8; Ibn Ḥaǧǧar, *Tadhīb al-Tahdhīb*, viii, 333-5; Ṣafadī, *Nakt*, 230; Ibn al-'Imād, *Shadhharāt*, i, 135.

## G

**GADĀ'Ī KAMBŌ**, *SHAYKH*, Ṣūfī saint of Muslim India.

He was the eldest son of *Shaykh* *Djamālī* KambŌ (d. 941/1535), an important Suhrawardī Ṣūfī saint, who enjoyed the status of poet-laureate at Sikandar Lōdī's court and later served the Mughal emperors, Bābur and Humāyūn as their courtier. Having completed the customary education, *Shaykh* *Gadā'ī* perfected himself in the exoteric as well as esoteric sciences of the Ṣūfī. His father then made him his *khālifa* or spiritual successor, with permission to enrol *murīds* or disciples in the Suhrawardī order. On *Shaykh* *Djamālī*'s death, he inherited half of his father's huge fortune as the remaining half going to his younger brother, *Shaykh* 'Abd al-Ḥayy, known as Ḥayāfī. In recognition of his father's services, Humāyūn made *Gadā'ī* his courtier in place of *Djamālī*. *Gadā'ī* was also a gifted poet and musician, composing verses both in Persian and Hindi, his musical compositions in Hindi being famous during Akbar's reign.

After Humāyūn's defeat by *Shēr Shāh* Sūr near *Ḳanawdj* in 947/1540, *Gadā'ī* fled to *Gudjarāt* out of fear of the *Afghāns*, for the Indian allies of the *Mughals* had to be punished, and from there went to Arabia for the pilgrimage. On his return he remained in *Gudjarāt* where he was joined by his *murīds*, some of whom belonged even to *Afghān* families, and he became famous in *Gudjarāt* for his opulent sessions of *samā'*.

With the restoration of *Mughal* rule in India in 962/1555, the political situation changed, and *Gadā'ī* again joined Akbar's court in the *Pandjāb* some time before the second battle of *Pānīpat* took place in *Muharram* 964/November 1556. Bayram *Khān Khān-i Khānān*, who had become the regent, appointed *Gadā'ī* as *Ṣadr* of the *Mughal* empire for old friendship's sake as well as for political reasons, hoping that *Gadā'ī* would act as a liaison between the *Mughals* and the Indian élite. But the *Mughal* historians of Akbar's reign, who generally compiled their works after the fall of Bayram *Khān*, are critical of *Shaykh* *Gadā'ī*, accusing him of arrogance, high-handedness and favouritism in the distribution of land-grants and stipends among the *Shaykhs*, *Sayyids*, scholars and other deserving persons. Akbar also complains in his *farmān* to Bayram *Khān*, issued at the time of the latter's dismissal, that one of his misdeeds was the elevation of *Shaykh* *Gadā'ī* to the *Ṣadārat* in preference to *Sayyids* and 'ulamā' of nobler origin. In fact, all such complaints and grievances were concocted to provide Akbar

with a pretext for removing Bayram *Khān* from power.

According to *Shaykh* *Rizk Allāh Mushtākī*, the earliest source, *Gadā'ī* played an important role at the beginning of Akbar's reign, and the regent consulted him on every matter because of his familiarity with Indian affairs. The *Tūrānī* nobles got annoyed with him when he did not join hands with them against the *Shī'ī* Bayram *Khān*, in spite of the fact that he himself was an orthodox *Sunnī*. He retired largely from politics after Bayram *Khān*'s dismissal and settled in *Djaysalmer*. After a few years, *Gadā'ī* came back to *Dihlī* and spent his last years as a Ṣūfī there. On his return, Akbar showed him much respect, most probably for his past services at the crucial time of his reign, and his land was also restored to him. Being wealthy, *Gadā'ī* led a luxurious life; he was very fond of participating in the 'urs ceremonies of the past saints of *Dihlī*, and spent much money on arranging *samā'* sessions. He also acquired a number of beautiful slave girls and enjoyed their company in his old age. He died at *Dihlī* in 976/1568-9 and was buried inside the tomb of *Shaykh* *Djamālī* in *Mihrawlī*.

(I.H. SIDDIQUI)

**GALENA** [see *AL-KUHL*].

**GALLEY** [see *SAFĪNA*, *SHĀNIYA*].

**GANGES** [see *GANGĀ*].

**GANGŌHĪ**, 'ABD AL-ḲUDDŪS, a prominent Ṣūfī saint of *Gangōh* (*Sahāranpūr* district, *Uttar Pradesh*, India). *Ḳuṭb al-'Ālam* 'Abd al-ḲuddŪs b. *Ismā'il* b. Ṣafī al-Dīn *Ḥanafī* *Gangōhī* was born ca. 860/1456 and received his Ṣūfī formation at *Rudawlī*, a *Čishtī* centre (*khānḳāh*) in the region of *Awadh* that was organised by *Aḥmad* 'Abd al-Ḥaḳḳ *Rudawlī* (d. 837/1434) and is supposed to derive its

tradition from 'Alā' al-Dīn 'Alī b. Aḥmad al-Ṣābir (d. 690/1291) of Kalyar, the founder-figure of the Ṣābirīyya branch of the Čiṣṭīyya. Though nominally the disciple and successor (*khālifa*) of his brother-in-law, Muḥammad b. 'Arif b. Aḥmad 'Abd al-Ḥaḥḥ, 'Abd al-Ḥaddūs appears to have been initiated into Ṣūfī practices by *Shaykh* Piyārē, an old servant at the *khānkāh*. In 896/1491 'Abd al-Ḥaddūs migrated to Shāhābād (midway between Sirhind and Pānīpat) at the suggestion of Sikandar Lōdī's *amīr* 'Umar Khān Kāsī. When Bābur sacked Shāhābād in 932/1526, 'Abd al-Ḥaddūs moved across the Djamnā River to Gangōh where he died in 944/1537 (not in 950/1543 as noted in *Ā'in-i Akbarī*), and is venerated at his shrine until today.

His most important disciples are his son, Rukn al-Dīn Muḥammad (d. 982/1574) who collected the anecdotes about his father in the *Laṭā'if-i Ḥaddūsī* (Dihlī 1311/1894; including the reminiscences of the Afghān soldier Dattū Sarwanī); his chief *khālifa*, Djalāl al-Dīn Muḥammad b. Maḥmūd Thānēsārī (d. 989/1582), the author of *Tahkik arādī al-Hind* (Karačī 1383/1963), to whom Akbar paid a visit (Storey, i, 17, no. 25; 1198); and 'Abd al-Aḥad (d. 986/1578), the father of Aḥmad Sirhindī [q.v.]. His grandson 'Abd al-Nabī b. Aḥmad (d. 990/1582), known as the author of two Arabic treatises (*GAL* S II, 602), held for some time the office of *sadr al-ṣudūr* at Akbar's court. 'Abd al-Ḥaddūs wrote commentaries on Suhrawardī's *Awārif al-ma'arīf* and Ibn al-'Arabī's *Fuṣūṣ al-ḥikam*. The scope of his influence as a spiritual guide during the period of transition from Lōdī rule to the Tīmūrid empire is reflected in the collection of his letters, *Maktūbāt-i ḥaddūsīyya* (Dihlī 1287/1870; abridged, Dihlī 1312/1895), some of which were addressed to Sikandar Lōdī, Bābur and Humāyūn as well as to various Afghān and Mughal nobles. His works also include the *Anwār al-ayūn fī asrār al-maknūn* (Lakhna'ū 1295/1878; 'Alīgarh 1323/1905; Lakhna'ū 1327/1909) which records the sayings of Aḥmad 'Abd al-Ḥaḥḥ Rudawlāwī; a Ṣūfī tract, *Gharā'ib al-fawā'id* (Djahdīdjar 1314/1897?); and two mystical treatises entitled *Nūr al-hudā* and *Kurrat al-ayun* (MS Ethé 1924, 14 and 16). His brief compendium of Ṣūfī principles, *Ruṣd-nāma* (Djahdīdjar 1314/1897), advocates a popularised version of *wahdat al-wuḥūd* [q.v.], alludes to Nathapanthī Yogic practices and includes a series of Hindi verses (added in the margin of MS Princeton 113). 'Abd al-Ḥaddūs was renowned for mystic states under the spell of *dhikr* [q.v.] which were induced by his fervent practice of *samā'* [q.v.] and *ṣalāt-i ma'kūsa* [q.v.].

**GARDEN** [see BŪSTĀN].

**GAZ**, a measure of length in use in Muslim India, considered equal to the *dhīrā'*, which was treated as a synonym for it. Sixty *gaz* formed the side of the square *bigha*, a traditional measure of area. Five thousand *gaz* made the length of a *kuroh* (Persian) or *krosa* (Sanskrit), the traditional measure of road-length.

The length of the *gaz* varied, often according to locality and also according to the subject of measurement (land, cloth, etc.). There is no way of knowing the standard length of the *gaz* under the Dihlī Sultans. But under Sikandar Lōdī (894-923/1489-1517) the measure known as *gaz-i Sikandarī* was about 30 inches long. The Mughal Emperor Humāyūn increased it to 30-36 inches. This measure continued in use until 994/1586, when Akbar instituted the *gaz-i ilāhī*, equal to ca. 32-32½ inches.

The *gaz-i ilāhī* was the standard unit of measurement during the reign of Akbar, and continued to be so during the reign of Djahāngīr. During the reign of Shāh Djahān, a slightly longer measure, the *dhīrā'-i Shāh Djahānī*, of about 32.80 inches, was introduced for calculating road lengths; while a much smaller *gaz* was brought into use for measuring area.

AL-GHĀFIKĪ, ABŪ DJĀ'FAR AḤMAD B. MUḤAMMAD B. AḤMAD IBN AL-SAYYID, Spanish-Arabic pharmacobotanist, native of the fortress Ghāfik near Cordova. His dates are not known, but he may have died around the middle of the 6th/12th century. He was considered to be the best expert on drugs of his time; he elaborated thoroughly the material transmitted from Dioscorides and Galen and presented it in a concise, but appropriately complete form in his *Kūtāb al-Adwiyā al-mufrada*. According to Ibn Abī Uṣaybi'a (*Uyūn al-ambā'*, ii, 133, 14), Ibn al-Bayṭār was accustomed to take this work continuously with him on his scientific journeys, together with a few others. Other writings of al-Ghāfikī are not known.

M. Meyerhof repeatedly expressed as his belief that al-Ghāfikī was the most important pharmacobotanist of the Islamic Middle Ages (latterly expressed in *Sharḥ asma' al-ukkār. Un glossaire de Matière médicale composé par Maimonide*, Cairo 1940, introd., xxix f.). In accordance with our actual knowledge, Ibn Samadjūn and Ibn al-Rūmiyya, both also Spaniards, will have to be put on the same level as al-Ghāfikī. The three of them, especially Ibn al-Rūmiyya, were primarily not pharmacists but botanists; because of their exact description of

plants they were copied by Ibn al-Bayṭār, not entirely—as Meyerhof thought—but to a great extent. The Arabic text of al-Ghāfikī has become known only in recent times; until then one had to depend on a Latin translation from which M. Steinschneider compiled a list of drugs, *Gafiki's Verzeichnis einfacher Heilmittel*, in *Virchow's Archiv für pathologische Anatomie und Physiologie*, lxxvii (1879), 507-48; lxxxv (1881), 132-71. To the manuscripts enumerated in M. Ullmann, *Medizin im Islam*, 277, should be added a valuable copy, found in Tamgrut and now preserved in Rabat, which contains the first part of the work (up to the letter *zāy*) (cf. Shaykh Muḥammad al-Fāsi, in *Trudy 15. Meždunarodnogo Kongresa Vostokovedov*, ii, Moscow 1963, 19).

Al-Ghāfikī arranged his collection according to the *abjad* alphabet. Names of drugs beginning with the same letter appear twice under this letter: firstly as heading of a *ḵism fi 'l-ḵalām 'alā 'l-adwiya*, in which the drugs are described in detail and the sources relating to this are mentioned, then again in a *ḵism fi 'sharḥ al-asmā'*, i.e. a short list of synonyms from various languages. As sources are mentioned Dioscurides, Galen, al-Rāzī, Abū Ḥanīfa al-Dīnawarī, Ibn Samādjūn, Ishāk b. 'Imrān, Masīh (al-Dimashkī), al-Tabarī ('Alī b. Rabbān), Ibn Wāfid, Ibn Sīnā, an unknown person (*madḥūl*, often), Ibn Māssa, Ibn Māsawayh, al-Isrā'īlī (Ishāk b. Sulaymān), *al-Filāḥa al-nabaṭiyya*—to name only those who occur most; personal observations of the author often form the conclusion. The status of the manuscripts now known is sufficient to justify a critical edition of this important work.

A century after al-Ghāfikī, Barhebraeus [see IBN AL-'IBRĪ] composed an extract from his book on drugs under the title *Muntakhab Kitāb Dhāmi' al-mufradāt li-Aḥmad . . . al-Ghāfikī*, available in an edition, with translation and valuable commentary, by M. Meyerhof and G.P. Sobhy, that unfortunately reaches only as far as the letter *dhāl*, *The abridged version of "The book of simple drugs" of Aḥmad ibn Muḥammad al-Ghāfiqī by Gregorius abu 'l-Farag (Barhebraeus)*, fascs. 1-3, Cairo 1932, 1933, 1938. The discovery of the Ghāfikī manuscripts was the reason for the interruption of the edition of the *Muntakhab*.

*Bibliography* (apart from the works mentioned in the article): Ibn Abī Uṣaybi'a, *Uyūn*, ii, 52; Ṣafadī, *al-Wāfi bi 'l-Wafayāt*, vii, ed. I. 'Abbās, Wiesbaden 1969, 350; al-Marrākūshī, *al-Dhāyil wa'l-takmila li-kitābay al-Mawṣūl wa'l-Sila*, ed. Muḥammad b. Sharīfa, i/1, Beirut n.d., 389; Maḵḵarī, *Nafḥ al-tīb, Analectes . . .*, ed. Dozy et alii, Leiden 1855-61, i, 934, i, 14, ii, 125, 18 = ed. I. 'Abbās, Beirut 1968, ii, 691, iii, 185; Dimashkī, *Nuḵḥbat al-dahr*, ed. Mehren, St. Petersburg 1866, 242; Brockelmann, F 643, S I 891; M. Levey, *Early Arabic pharmacology*, Leiden 1973, 109-12, 152-4; M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 276 f., with a bibliography of Meyerhof's numerous studies.

(A. DIETRICH)

AL-GHĀFIKĪ, ABU 'L-ḴASĪM [see AL-KABTAWRĪ].

GHALAṬA, a district, now called Beyoğlu, of Istanbul [*q.v.*], which occupies the broad angle of land between the lower northern shore of the Golden Horn (Ḵhalīdī) and the Bosphorus. Historically, Ghalaṭa comprises more particularly (a) the quarters *intra muros*, i.e. the site of the (formerly) walled Genoese colony of Pera which surrendered on terms (*vire ile*) to Meḥmed II in

1453; and (b) the post-conquest area of largely "Frankish" and Greek settlement *extra muros*, known to the Ottomans from the early 16th century as Beyoğlu and to non-Muslims as Pera. "Greater" Ghalaṭa—i.e. the area of at least partial "Frankish" settlement—in the 16th to 18th centuries and subsequently was bounded by what were commonly regarded as its suburbs: on the Golden Horn the Muslim quarter of Ḵāsim Paṣḥa, the site of the Ottoman arsenal (*tersāne-yi 'āmirē*) and, on the Bosphorus, that of Ṭopḵhāne, which developed after the conquest around the state cannon-foundry (*topḵhāne-yi 'āmirē*) outside the Porta de li Bombarde/Ṭopḵhāne ḵapısı.

Ghalaṭa (from the quarter "of the Galatians" in the early Byzantine settlement of Sykai) was of little significance until the aftermath of the Fourth Crusade and the restoration of Byzantine rule in Constantinople. The original concession situated in a *locus apud Galatham*, granted to Genoa in 1267, lay along the lower shore of the Golden Horn, between the present-day Atatürk bridge and the ferry terminus at Karaköy, with its landward limits marked by what is now Voyvoda Djaddesi and Yanık Kapı Soḵaḡhī. This settlement was burned by the Venetians in 1296; rebuilt and surrounded by a ditch; delimited by an Imperial edict of 1 May 1303 (translation in Belin, *Latinité*, 129); destroyed once more by fire in 1315 (*accessit . . . igne occidentali quasi tota Peyre combusta est*); and, despite a Byzantine interdiction, fortified on the land side and rebuilt in the following year. Thus established, Ghalaṭa *intra muros*, the "communità de Peyre", self-governing under the authority of a *podestà* sent out annually from Genoa, developed rapidly to reach its final form and extent in the years immediately preceding the Ottoman conquest of Constantinople. The first extension to the original *enceinte* was constructed in 1348-9, enclosing a triangle of steeply rising ground with its base formed by the eastern half of the long land-wall and its apex marked by the massive circular Torre di Christi, i.e. the Ghalaṭa Kulesi which has ever since been the major landmark and symbol of the district.

From this time, i.e. from the middle of the 8th/14th century, the Republic of Genoa and its colony of Pera cultivated close relations with the rising power of the Ottomans—cf. the letter of the Signoria dated 21 March 1356 to "Messers Orcham, grande amiraio (*i.e. amirī kabīrī*) de la Turchia", from which it is clear that the Genoese of Ghalaṭa—"li nostri de Peyra che sum vostri figi e servioi e veraxi"—were already closely involved in commercial relations with the Ottomans and acting as their political allies against Venice and Byzantium. By the latter part of the same century, if not earlier, Muslim merchants must have been a familiar sight on the streets of Pera: the agreement concluded in 789/1387 between Murād I and Genoa (Belgrano, 146-9) provided for the partial exemption from customs dues of "Turks" who were engaged in commercial activities in Ghalaṭa, and in the reign of Bāyezīd I Ottoman envoys were received by the *podestà*, and members of leading Perote families were sent to the Ottoman court as ambassadors (Belgrano, 153, 160).

In the late 14th/early 15th centuries, almost certainly in response to the first Ottoman siege of Constantinople by Bāyezīd I, Ghalaṭa *intra muros* took on its final form. The districts which lay immediately to the west of the original concession and the extension of 1348-9 were enclosed by a wall which

ran from the Tower to the Golden Horn, and slightly later the entire eastern quarter of Ghalata, fronting the Bosphorus, was also enclosed by a wall. The total area of Ghalata *intra muros* was thus brought to approximately 370,000 square metres, the circuit of the outer wall being approximately 2,800 metres (cf. J. Gottwald, *Die Stadtmauern von Galata*, in *Bosporus*, N.F. iv [1907], 22).

The fortifications of Ghalata were further strengthened and improved by the efforts of successive *podestàs* in the last decades of Genoese rule. Most of the surviving or recorded inscriptions date from this period (cf. the collections, made from the 17th century onwards, by Covel, de Mas Latrie, Belgrano, Gottwald, etc., listed in the *Bibliography*). The Genoese colony at this time played an ambiguous role between the Ottomans and the Christian powers, e.g. in 1444 field-guns ("canons et cullevrines") were supplied from Ghalata to Murād II (Wavrin, *Recueil de chroniques*, v, 49). Even at the last hour, when the fate of Constantinople was sealed, the authorities in Pera made desperate attempts to avoid the inevitable conquest by the Ottomans. In 1452 a semi-circular curtain-wall was built on the uphill side of the Tower in order to provide protection from artillery bombardment, but in the new era of gunpowder and greatly-improved siege guns, Ghalata and its defences were vulnerable from the heights to the north of the Tower. On 30 May 1453, the day following the fall of Constantinople, Ghalata surrendered. The last *podestà* and the principal citizens were allowed to depart and the colony passed into Ottoman hands.

The preliminary agreement to surrender Ghalata had been concluded in the Ottoman camp on 28 or 29 May; by the terms of the capitulation itself (cf. N. Iorga, *Le privilège de Mohammed II pour la ville de Pera (1er juin 1453)*, in *Académie Roumaine, Bulletin de la section historique*, ii [1913-14], 11-32; E. d'Allegio d'Alessio, *Traité entre les Génois de Galata et Mehmet II (1er juin 1453)*, in *Echos d'Orient*, xxxix [1940], 161-75), Ghalata, *urbem nostratium pulcherrimam et singularem* (Adam de Montaldo, *Genensis*, "de Constantinopolitano excidio", ed. C. Desimoni, *Atti Soc. Ligur. Patria*, x [1874], 342), was placed under the authority of an Ottoman *voivoda*. The inhabitants were permitted to retain "their property and houses; their shops and their vineyards; their mills and their ships; their boats and their merchandise entire; and their women and children according to their wishes". The property of the inhabitants who had fled was confiscated by the state. The inhabitants were given freedom to trade in the Ottoman Empire and to come and go by land and sea without paying any taxes except the poll-tax. The existing churches were to remain in the hands of the inhabitants, who might hold services in them, but without sounding bells or clappers. No new churches were to be built. Further conditions excluded the male children of the inhabitants of Ghalata from the *deushirme* [*q.v.*]: "we shall not take their children as janissaries", and prohibited the settlement of Muslims in Ghalata.

Under Ottoman rule, "greater" Ghalata came to be constituted one of the three important *kādīlīks* of the *bīlad al-ḥalāḥa*, i.e. Eyyüb, Ghalata and Üsküdar; much of the area appears rapidly to have been established as *wakf*. The topography of Ghalata *intra muros* in the Ottoman period has received considerable attention (cf. in particular A.M. Schneider and M.Is. Nomidis, *Galata. Topographischarchäologischer Plan*, Istanbul 1944; W. Müller-

Wiener, *Bildlexikon zur Topographie Istanbul*, Tübingen 1977, *passim*), and both western and Islamic literary sources are largely known (for a survey of the latter see E. Rossi, *Galata e i geografi turchi*, in *Studi bizantini*, ii [1927], 67-74). Detailed work on the demographic, social and administrative history of Ghalata in the high Ottoman period must await the full exploitation of the relevant Turkish archival materials (cf. the list for Istanbul generally in *EP*, iv, 244-5 by H. İnalçik).

The four centuries between the Ottoman conquest and the late Tanzīmāt period were marked in Ghalata by a slow but steady process of demographic change, cf. in particular, K. Binswanger, *Untersuchungen zum Status der Nichtmuslime im osmanischen Reich des 16. Jahrhunderts*, Munich 1977, 128-46. The guarantees given by Meḥemmed II for the security of the churches and the reservation of the area *intra muros* to non-Muslims were soon disregarded (e.g. by the conversion of the church of S. Paolo (e S. Domenico) ca. 880-3/1475-8 and the subsequent (late 9th/15th century) settlement around what thereby came to be called the 'Arab Djāmi'i' of large numbers of Muslim refugees from Spain (B. Palazzo, *Arab Djami ou Eglise Saint-Paul à Galata*, Istanbul 1946; Müller-Wiener, 79 f.). Partly-Muslim quarters also rapidly came into existence in the parts of Ghalata which were not covered by the capitulation of 1453, i.e., the strips of land outside the walls along the Bosphorus and the Golden Horn and the hilly area to the north of the Tower. Two centuries after the conquest, Ewliyā Çelebi noted (*Seyāhat-nāme*, i, Istanbul 1314, 426-36) that in the reign of Murād IV, Ghalata possessed 60,000 Muslim and 200,000 non-Muslim inhabitants, divided amongst eight Muslim, seventy Greek, three "Frank", i.e. Latin, and two Jewish quarters (*mahalle*).

Simultaneously with the establishment and growth of Muslim settlement occurred changes in the composition of the Christian population of Ghalata. Elements of the Latin population were enumerated in 1580-1 as 500 *ḥharāḡī*-paying subjects of the sultan; 5,000 liberated slaves; 2,000 slaves "of all nationalities"; five or six hundred "étrangers de passage", mostly from Spain, Sicily and Venice; one hundred staff of embassies and a further six or seven thousand slaves (? including the labour corps of the arsenals at Topkhāne and Kaşım Pasha). Many of these post-conquest Latin elements in Ghalata later came to claim a more exalted pre-conquest lineage.

After 1453 the walls of Ghalata lost most of their significance, and from the early 10th/16th century, settlement on the heights of Pera, e.g. by the "bey's son" Luigi Gritti, son of a doge of Venice and confidant of the Grand Vizier İbrahīm Paşa, from whom the district took its name of Beyoğlu, increased. The envoys of Venice established themselves there early in the reign of Süleymān I, sending their despatches "da li vigne di Pera". Pera in this period was thinly populated, a salubrious locality forming an easy refuge from the plague-infested alleys within the walls (cf. T. Bertelé, *Il Palazzo degli ambasciatori di Venezia in Costantinopoli*, Bologna 1932, 81). In the building of an embassy in this quarter, Venice was to be followed in the 16th century by France and England and, later, by Holland and other European states which sent envoys to reside at the Ottoman court, a fact which, above all others, gave to Beyoğlu its special character until the 20th century.

The greatest change since the conquest to affect

**Ghalata** occurred in the middle of the 19th century. In 1844 de Mas Latrie could still describe **Ghalata** as "une ville franque, qui existe en entier avec son donjon, ses tours, ses églises, ses crénaux". Within twenty years, the walls, with the exception of the Tower and some fragments, were demolished and the land-wall ditch filled in. This act, together with the construction of one, later two bridges across the Golden Horn, the rapid expansion of Pera/Beyoğlu to the north in the latter part of the 19th century; the granting of a degree of municipal autonomy to Beyoğlu and the construction of a short underground railway (1884) from Karaköy to the heights of Pera and of tramways, began the final effacement of Genoese and Ottoman **Ghalata intra muros** as an identifiable entity. Since then, the process has accelerated, and the development of a new economic centre of gravity in Beyoğlu on the axis of Taksim-Harbiye, when coupled with the decline into insignificance of the non-Muslim indigenous population of Beyoğlu and the demolition of older quarters for urban renewal and road-widening, has tended to erase further the differences between **Ghalata** and the rest of Istanbul.

**Bibliography:** Besides the bibliography of works on Istanbul, many of which deal incidentally or in part with **Ghalata**, cf. in particular: F.W. Hasluck, *Dr. Covell's notes on Galata*, in *Annual of the British School at Athens*, xi (1904-5), 50-62; E. d'Allegio d'Allesio, *Galata et ses environs dans l'antiquité*, in *Revue des études byzantines*, iv (1946), 218-37; idem, *Traité entre les Génois de Galata et Mehmet II (1er juin 1453)*, in *Echos d'Orient*, xxxix (1940), 161-75; idem, *La communauté latine de Constantinople au lendemain de la conquête ottomane*, in *Echos d'Orient*, xxxvi (1937), 309-17; J. (C.J. HEYWOOD)

**GHANAM** (A.), a feminine singular noun with the value of a collective (with the plurals *aghnam*, *ghunim* and *aghānim*) designates the class of small livestock with a predominance, according to the countries, of either sheep (*shā' al-dā'n*, *shiyāh al-dā'n*, *dā'ina*), or goats (*shiyāh al-mā'z*, *mā'iza*). Like the two other collectives *ibil* [q.v.] "camelidae" and *khayl* [q.v.] "equidae", **ghanam** defines one of the three aspects of nomadic pastoral life covered by the term *badw* [q.v.] as well as an important activity of the sedentary agriculturalist countryfolk [see **FİLĀḤA**], who may be periodic migrants; small livestock constitute for the one group a direct and unique source of subsistence (*kanī al-ghanam*) with the milk, fleece, hide and rarely the meat and, for the others, an extra product negotiable in the fairs through the intermediary of the sheep merchant (*ḡallāb*).

The root *gh-n-m* implies the acquisition of goods by means other than those of barter and purchase; the synonyms *ghunm* and *ghanima* [q.v.] "booty, war trophy" set in relief this idea, excluding from it any allusion to the means of illegal and immoral appropriation. Also, **ghanam** (dialect. *ghnem/ghlem*) is understood in the sense of "sheep-goat patrimony" (see **KUR'ĀN**, VI, 146/147, XX, 19/18, XXI, 78) completing with *bakar* [q.v.] "cattle" the full meaning of *na'am* "livestock" (pl. *an'am*, used 32 times in the **KUR'ĀN**). In Arabic, it is the equivalent of the Latin nouns *peculium* and *pecunia*, derived from *pecus* "herd". Parallel with **ghanam** and with the same meaning, one finds, especially in the Maghrib, the terms *māl* [q.v.] and *kasb/ksib* [q.v.], whence the dialectal *ksiba/ksib* "flock of sheep" (cf. Berber *ullī*, from the radical *l* "to possess").

Although the **KUR'ĀNIC** verse (VI, al-An'am, 144/143) saying: "[Allah has provided you] with eight species of animals in pairs, two for the sheep and two for the goats..." does not make any discrimination between the two species, a long polemic between intellectuals reported by al-Djāhiz (*Ḥayawān*, v, 455 ff.) brought into opposition the partisans of the sheep and those of the goat. However, this sheep-goat duality was not new, since echoes of it are found in the two monotheistic religions prior to Islam. In fact, to the degradation of the goats, the Jews had their rite of the "scapegoat" at the time of their Festival of Atonement, while Christian demonology saw in this animal an incarnation of the devil. By contrast, sheep enjoyed the favour of the two communities, as they were favourites of God; there is the ram of Abraham, the paschal lamb, the symbol of the mystical lamb applied to Christ and the parable of the "good shepherd" wisely leading his "sheep" (Vulgar Latin *ovicula*, from *ovis*). The Arabs, long

before Islam, used to sacrifice a ewe (*atīra*) to their divinities, in the month of Radjab, whence its name of *raḍjabīyya*, by way of prayer and as an act of thanksgiving; while in the Maghrib and Tunisia in particular, the cult of the ram was widespread, reminiscent of the Egyptian cult of Ammon Ra, and it was only definitively abolished by the energetic repressions of the Aghlabid *amīrs*, in the 3rd/9th century (see T. Lewicki, *Culte du bétier dans la Tunisie musulmane*, in *REI* [1935], 195-200; G. Germain, *Le culte du bétier en Afrique du Nord*, in *Hespéris*, xxxv [1948], 93-124). In veneration for Abraham, Islam preserves the rite of the sacrifice of the sheep on the 10th of the month of Dhu 'l-Hiǧǧja, the day of the pilgrimage [see *HADJ*], culminating at Minā [q.v.] called *yaum al-nahr* "day of slaughter"; for all the Muslim countries it is the "feast of the sacrificial victims" (*'id al-adhā*) or "feast of the offerings" (*'id al-kurbān*) and, in the Maghrib, "the great feast" (*al-'id al-kabīr*). Engaging in historico-religious arguments, the apologist for the sheep would point out the superiority of the former over the goat on account of its wool, its milk and its flesh; furthermore, in grazing, the sheep does not have the "acid tooth" of the goat which uproots the plants, damages the bushes by devouring the buds and breaks down buildings by its need to climb over everything, whence the proverb *al-m'zā tubhī wa-lā tubnī* "the goat destroys and does not build". Finally, the sheep with his thick fleece and covering tail decently conceals his posterior, whereas the stump of tail of the goats, shamelessly raised, is a defiance to modesty, not to mention the goatish odour which makes the company of the *tayyās* "goat-herd" shunned. Linguistically, to call someone a *tays* (pl. *tuyūs*, dialect. *tīs*) was a great insult and, notably, in the expression *mā huwa illā tays fī safīna* "he is only a goat in a boat", alluding to the nauseous and persistent smell which the animal leaves wherever it has stayed. On the contrary, the nickname *kabsh* "ram" was eulogistic and flattering, especially in the metaphor *huwa kabsh min al-kibāsh* "he is a chief ram", synonymous with *huwa fahl min al-fuḥūl* "he is a chief stallion", i.e. "he is a champion". Against these notions is the defender of the goats *sāhib al-mā'iz*, in whom one should see, at the time, either the Hiǧǧzī or the Yemenī, their respective homelands being particularly abundant in goats; for such a person, the goat outclasses the sheep as much by the varied products which it supplies as by its vitality and resistance. In the society of goat-herds one would say of an energetic man: *huwa mā'iz min al-riǧāl* "he is a goat among men", whereas one would snub the incapable weakling with *mā huwa illā nā'ija min al-ni'ādī* "he is only one of the ewes". Apart from the important place occupied by goats' hair, as smooth (*sabad*) as flock (*mir'izz*), the equal of wool (*labad*, *sūf*) among weavers, goats' hide was and still is the principal material for containers, bags, straps, shoes, cloths and covers (see the list in *Hayawān*, v, 485); although camel-breeders, the tribesmen of Muḍar remained faithful to their red tents of goats' hide.

In fact, this polemic, puerile as it may appear, was not solely literary, for it was the reflection of an old antagonism dividing the tribes according to the kinds of husbandry that they practised; a series of more or less authentic Prophetic traditions testifies to this antagonism between breeders (see al-Damīrī, *Hayāt*, s.v. *shāt*, ii, 41-8; *ghanam*, ii, 186-92; *mā'z*, ii, 326-7; *da'n*, ii, 76-80, and *Hayawān*, v, 503-8) and one of the most typical says "Pride

(*fakhr*) is characteristic of the owners of horses, brutal roughness (*dīafā*) of the owners of camels, and serenity (*sakīna*) of the owners of small livestock". Among the great nomadic camel-breeders scorn for the small nomadic sheep-breeders was expressed by degrading proverbs such as *al-unūk ba'd al-nūk* "the she-goats after the she-camels", stigmatising the misfortune of a group forced by poverty to give up camels for small livestock, for, to them, this meant really a descent, since *al-zīff lā yurā ma' al-khuff* "the cloven hoof [of the small livestock] is not seen alongside the hoof [of the camel]". All these tribal oppositions arising from the kinds of husbandry were to vanish with Islam, for the position of the Prophet in favour of small livestock was very clear; having been a shepherd himself, he was pleased to say "Among all things, small livestock is an invitation to modesty and an incitement to choose poverty, leaving aside grandeur and pomp; prophets and just men were pastors of small livestock". In his eyes, the sheep-goat association was for man a divine gift and he used to say, moreover, "I recommend you to have the greatest care for sheep, clean their mucus (*rughām*) and clear their enclosure of every thorn and stone, for these animals are also to be found in Paradise", advising the shepherd to perform his prayers near the fold. Small livestock also provide him with a metaphor to express his aspirations for the Islamisation of the conquered regions by encouraging the crossing of beasts with a black fleece (= the Persians) with those with a white fleece (= the Arabs, of superior race).

In the linguistic domain, sheep and goats were defined by a considerable number of terms which the great Arab philologists of the 2nd/8th and 3rd/9th centuries attempted to gather together in specialised works, of which very few have been preserved for us. One of the first seems to be al-Naḍr b. Shumayl (d. 203/818) [q.v.] with his *Kitāb al-Ghanam*, the fourth volume of his huge encyclopaedia of Bedouin life, the *Kitāb al-Šifāt*. At a later date there are a *Kitāb Na't al-ghanam* and a *Kitāb al-Ibīl wa 'l-shā'* of Abū Zayd al-Anṣārī (d. 214/829) [q.v.], a *Kitāb al-Ghanam* ascribed to al-Akhfash al-Awsaṭ (d. ca. 215/830 or 221/835) [q.v.], the *Kitāb al-Shā'* (ed. Haffner, 1895) of al-Aṣma'ī (d. 213/828) [q.v.], and, finally, a *Kitāb al-Ghanam wa nu'ūtihā* of Abū 'Ubayd al-Kāsim b. Sallām (d. 224/838) [q.v.]. Ibn Sīduh gives an idea of the extent of ancient terminology concerning goats and sheep in his *Mukhaysas* (vii, 176-95; viii, 2-20) in the chapter *kitāb al-ghanam*, consisting of about forty pages. To this ancient base must be added the other mass of material contained in the different Arab and Berber dialects, from 'Irāk as far as the Atlantic Ocean, of the tribes devoted to the husbandry of small livestock. The scanning of several lexicons dedicated to these dialects, such as that of G. Boris for South Tunisian (*Parler arabe des Marazig*, Paris 1958) or that of Cl. Denizeau (*Parlers arabes de Syrie, Liban et Palestine*, Paris 1960) allows the evaluation of a minimum of two hundred terms, the elementary word-store which each tribal group uses in the exercise of its pastoral activity; this approximate figure still remains well below the reality for some sections. Such an abundance of vocabulary sets in relief the vital character which the husbandry of sheep and goats presents for a mass of Muslim populations, sedentary as well as nomadic; this linguistic richness is not specifically that of the Arabic language, but is to be found among Turkish-speaking shepherds as

well as Persian-speaking ones and Berber speakers.

In spite of this plethora of terminology, it remains hard to define precisely the many strains of sheep and goats belonging to the Arabs and other Islamised peoples, just as in the West the zootechnicians have had some difficulty in unravelling the skeins of the domestic strains of the sheep (*Ovis aries*), undoubtedly descended from an oriental wild sheep (*Ovis ammon*), as well as those of the goat (*Capra hircus*), possibly a descendant of the Aegagrus or Pasang (*Capra ibex aegagrus*), as these two species are naturally polymorphs. Among the sheep one can distinguish, according to the language and in a very general manner, the strains with a large fatty tail (*alya*) or Barbary sheep (= from Barbary or the Maghrib), those with a long, non-fatty tail, those with long hoofs peculiar to India and Guinea and from which derive the strains of Northern Europe and, finally, those of Spain with the "merinos" introduced from the Maghrib under the dynasty of the Marinids whose Hispanicised name it has kept. All these strains are subdivided, according to the desired aim of their breeding, into wool sheep and dairy sheep; the sheep kept for its meat, despite the absolute legality of the consumption of its flesh, has not attained in the lands of Islam the importance that it has attained in feeding Western Christendom.

On the subject of zoological strains, the Arab authors and al-Djāhīz in particular (*Hayawān*, v, and vi, *passim*, see index), speak only of a few, especially in Arabia, the most widespread being distinguished by some typical anatomical anomaly such as dwarfishness. Also among the species with a very foreshortened shape there is the *hadhaf* "the docked one" of the Hīdījāz and Yemen with a black fleece and almost without a tail and ears; similar was the *kahd*, but with a russet-coloured fleece. Bahrayn had the *nakad* "puny beast", a stunted sheep, but a good wool producer, whose small size gave rise to the image *adhall min al-nakad* "slighter than the dwarf sheep". In Yemen the *haballak* is still bred, itself a dwarf, and the *timtim* with shorn ears and with a woolly dewlap under the throat; whereas the *sāḡisī* was large and its wool of a pure white, while the *ḡalam* of Tā'if, very high on its hooves, had a fleece so smooth that it appeared bald; it was of African origin. Among the strains with a fatty caudal wen, apart from the Barbary sheep (dial. *mazmūzī*), the "Caracul" [see KARĀ KŌL] of Central Asia cannot be omitted, with its long wavy black fleece whose lambs were frequently sacrificed for their precious coat called ("breitschwanz" or "astrakhan" [see ASTRAKHĀN]).

As for the goats, it can be maintained that the majority of the strains of Arabia and the Near East were of African origin. The *nūbiyya* "Nubian" and the *ḡabashīyya* "Abyssinian" goat were distinguished from each other, both large with broad, hanging ears and a short fleece. Quite similar was the *ḡadaniyya* (from Mount ḡadan) in Nadjd and whose hair was black or deep red. The *shāmīyya* "Syrian" strain was long-haired, being related to the strains of Asia whose most renowned representative across the centuries remains the "angora" (*ankarī*) [see ANKARA] from the name of the great Turkish commercial centre where its "flock" (*mī'izz*, *mī'izzā*, *mī'izzā'*, see LA under r-'z; *Hayawān*, v, 483; *Kūtib al-Tabaṣṣur*, tr. in *Arabica*, i [1954], 158, §§ 10-11) was woven (*ḡhawb mumar'az*) and exported, but which came, in fact, from the herds of Armenia and the Caucasus of Tibetan stock. The success which the textile "mohair" (an Arabo-English term

derived from *mukhtayyar* "chosen" with the complement of "hair") still has on the world market and the different "camelots" (diapered, waved, moiré and watered) testifies to the high quality of the goat fleeces and confers on them an equal rank in value to that of the best sheep's wools. It is the same with the goats of Kashmir and Tibet, whose silky down covered with long gander is collected daily by carding and woven and gives the shawls of India their renown.

Among the pastoral peoples, nomadic and sedentary, the methods of husbandry of each species have hardly varied since antiquity, having attained by experience a degree of adaptation which would be hard to improve upon. For the former, the rhythm of the seasons unfolds in a permanent quest for even only slightly green pastures (*marāṭī*) and unpolluted watering places, in the steppes bordering the great deserts, for access to the luxuriant, jealously-guarded oases is forbidden to them just as that to the private *himā* was forbidden to them in pre-Islamic times. In Africa as well as in the East and in Asia, these movements are apparently organised, i.e. codified, according to ancestral agreements in the manner of customary right based on group precedence; there is no need to dwell on the interminable conflicts which these questions of pasturage can lead to, especially in the period of drought. At the beginnings of the agricultural zones and after the cereal harvests, contracts of location of pasture (*sarḡa*) on the stubble and fallow can be concluded between cultivating owners and wandering or migratory shepherds (*uzzāb*). The encampment or *dawār* [q.v.] "circle of tents" is placed as near as possible to a well [see BŪR], a spring or a pool offering the watering place (*mawrid*) indispensable for the animals. The circular area delimited by the tents (*murāḡ*), whose enclosure is completed by a barrier of thorny brushwood, assures the flock of a relative nocturnal security reinforced by the vigilance of these half-wild dogs called with precision "camp dogs" [see KALB]. The twice-daily milking takes place after the separation of the unweaned young, before the morning departure of the flock for pasturage and in the evening on its return from the watering place; in the East it is mostly the men who perform it, whereas in the Maghrib it is one of the numerous women's chores (see G.S. Colin, *Chrestomathie marocaine*, Paris 1939, 214-18). The fresh milk (*ḡalib*) is immediately churned by swinging in the goatskin container (*shakwa*) hung on posts; there is derived from it, on the one hand, buttermilk (*laban*) consumed immediately either as a drink or as a food or put to curdle with the rennet (*infaha*) to make a mild cheese (*djubb*) whose residual whey (*mā' al-djubb*) is given to the lambs and kids or incorporated in culinary preparations. On the other hand, the fresh butter (*zubbda*), unwashed and separated from the buttermilk, is immediately put in the goatskin, sometimes salted, to obtain, after it has become rancid, preserved butter (*samm*), a substance based on the fat and used in all foods [see ḡUDHĀ']. To consume the fresh milk and the butter as it comes from the churn would be, in the eyes of the Bedouin, an unthinkable waste in view of the three or four sub-products present in the milk; hence comes the interest shown in the goatskin churn and its contents in this dialectical metaphor from the Maghrib *yeddoh fī sh-shakwa idhā mā djbbed el-lben yedjbbed ez-zabda*: "He has his hand in the churn; if he does not draw out buttermilk, he will draw out butter!" to describe someone who has

found a situation which is very lucrative and not very tiring, and parallel to the French image "avoir trouvé un bon fromage" (cf. American English "He became a big cheese").

Apart from the two daily necessities of the watering and the milking, the shepherd's year numbers several major activities for the life and survival of men and beasts. First, at the beginning of winter, there is the shearing (*djazza*) of the wool-bearers and the shearer (*djazāz*) has to know how to manage the shears (*djalām*) with dexterity and rapidity on the animal, while it is held on the ground; the mass of wool obtained (*djazīza*) will serve as exchange currency in the oases for utensils and durable foodstuffs (dates, sugar, flour etc.). Another crucial period and, perhaps, the most harrasing for those responsible for the flock who have to stay awake day and night, is that of the parturition (*nitādī*) of the pregnant females with all the care demanded by mothers and newborn, lambs and kids being confused at the beginning under the names *sakhlā* (pl. *sakhl, sikhāl, sukhlan*) and *bahma* (pl. *baham, bihām*). The latter, as they grow, take on different names whose system of nomenclature will not be treated exhaustively here, as it varies from one region to another. If a birth threatens to be difficult and may endanger the life of the female in labour and that of the young, there is no hesitation in practising a Caesarian section and the offspring saved is called *hullān, hullām*. In ancient terminology, the distinction between lamb and kid only appeared clearly at the age of weaning (*fiṭām*) around four or five months. Until then, the young lamb-kid (*badhadī, farūr, furūr, furfūr*), is left to its mother, but when it is over three months, the teats are progressively taken from it, ending by their being forbidden it, the maternal mammarys being enclosed in a bag (*shamla, shmal*), which may be made of a hedgehog skin [see KUNFUDH]; a gag (*fattāma*) is also used, applied to the muzzle of the young in the company of its mother. In the hours of milking the young are kept apart. After weaning, the kid becomes a *djafr* (pl. *djifār*) and the lamb *khārūf* (pl. *khirfān*) and, before it is one year old, the sex is distinguished, with *djadī* and *u'ut* for the he-kid, *'anāk* for the she-kid, *hamal* and *innar* (dial. *'allīsh*) for the he-lamb and *rikhl* and *innara* for the she-lamb. When one year has passed, with the goats, the male is the *'atūd* or the *'arūd*, then, around two years, the *djadha'* or *tays*, whereas the female becomes *'anz* or *saḥīyya*; progressively each of them are called *ṭhanī, rabā'ī, sadīs* and after seven years, *sāligh*. The he-goat sire is, in the dialects, the *'atrūs*. As for the sheep, by a similar terminological graduation, one arrives at the *kabsh* for the ram and the *na'dja* for the reproductive ewe; castration of the males is not always practised, for it is proscribed by Qur'anic law and the he-lambs and kids remaining are taken, in the care of the *djallāb*, to the abattoirs (*madjzar* pl. *madjāzir*) of the urban centres or delivered directly to the butcher (*kaṣṣāb*) of the nearest village. Those which supply the feasts and ceremonies of the tribal group are only an infinitesimal part.

According to the social organisations peculiar to each Muslim people, the groupings of sheep and goats can be very variable as to the number of heads of livestock; also, the term "troupeau" (French) and "flock" (English), without numerical precision, do not have a direct correspondent in Arabic. The small family flock of ten to forty animals (*kaṭī'*, dial. *rasla, kaṭ'a, nūba*) is called *fiṣr*, if there are only sheep, and *ṣubba*, if there are only goats. With the

hundred, one speaks of *kīnā* of sheep and *ghīnā* or *kaṭ* of goats. With two hundred, it is the *khīr* and above that the *wakīr* without distinction of species. The joining together, for common needs, of several *wakīr* with their dogs and carrier donkeys forms a *firk* or a *mughnam*, which may number several thousand head; such a moving mass can be described further as a *ghanam mughannama* (comp. "a sea of sheep and goats") and with this idea of multitude it will be said, *ad'ana 'l-ḥawm wa-am'aza* "the group is very rich in sheep and goats".

Equally highly variable is the condition of the pastor (*rā'ī*, dial. *sāriḥ*, Berber *ameksa, amaḍan*), shepherd or goatherd, or most often, both at once, according to the framework of the society in which he is integrated. Among the sedentaries, a youth suffices to guard the few beasts of the family circle, but, in some villages, the livestock of each is gathered into a single flock which may be quite large, each animal bearing the mark of its owner, and they also have recourse to a professional shepherd. He is engaged under a renewable seasonal contract covering two seasons (*kamāla*, either summer-autumn, or winter-spring) and he is paid mainly in kind. On the day of his engagement he receives a small sum as a deposit, the outer garment (*'abā', bumus*, Morocco *sel-hām*) indispensable against inclement weather, a large woollen haversack (*kurz, 'amāra*) to carry his personal possessions and, also, for those of the newborn who may arrive during the journey for pasture, and a crook (*'ukkāz, hanfa*) which can be a strong club as a defensive weapon. He is assured of daily food and at the expiry of his contract, he has the right to twenty lambs and kids (*ridāya*). In the case of his contract not being renewed, he gives back the deposit, the cloak and the haversack. In fact, the good shepherd is automatically re-employed and his services for the same employer can last a lifetime (see Colin, *Chrestomathie marocaine*, 216 ff.).

However small a flock may be, the shepherd has to be vigilant at all times; he must prevent the animals from trespassing on the cultivated lands, round up the stragglers, ward off every danger from predatory carnivores and thieves, assist a female in her labour and take care of the newborn. He is bound to compensate for every animal that dies through his negligence, but if a wolf or lion or panther kills it despite his intervention, he is cleared, if he can bring the carcass (*bitāna*) to justify himself. This last clause hardly functions nowadays where governments have practically eliminated the insecurity reigning in the isolated regions, but the danger from thefts has not entirely disappeared. In addition to his dog, the shepherd may have the help of a youngster (*rassāl*) to keep the young apart while their mothers are milked or to lead the animals in small groups to the watering place. It is in this school that the boys learn the craft. Even among his flock the shepherd finds auxiliary help with, on the one hand, the "leader" (*dalūl, marī', marī'*) wearing the chief's alfa collar (*shabbāh, shaband*), and old ram or billy-goat whom the flock follows blindly in ranks fleece against fleece and, on the other hand, the "haversack bearer" (*karrāz*), whose solid horns scarcely suffer from this extra burden. In the evening, the flock having returned to its covered or open fold (*zarb, zarība, markad, ḥazīra, ṣīra*), the shepherd goes to eat with his master and returns to sleep among his animals. They, confident in the man, obey his orders expressed by fixed onomatopaeic calls such as *birbi!* to gather them together, *sikk!, ikhl!, her!, tūi!, terr!* to urge them

on, *hiṣḥ!*, *kaḥkaḥ!*, *tahtaḥ!*, to stop them and *hiḥiri!* to invite them to the water. Contrary to the usage in Christendom, the animals of flocks, in Islam, do not wear bells.

In the mountainous regions (the Atlas, Lebanon, Sinai, etc.) an annual migration takes place following the periods of the growth of herbage at high altitude. For these fixed migrations the flocks of several clans or villages are joined together and the long line of horns and undulating chimes slowly climbs the slopes accompanied by the cohort of dogs, mules and donkeys charged with the food and necessary impedimenta for camps of several months. For this occasion, each owner delegates a man in charge (*ka'ād*) to coordinate and control the movements of the group and to ensure the feeding of the shepherds. This putting out to grass (*tarbī'*) can be prolonged for four or five months according to the atmospheric conditions encountered at the high altitudes. During the hot hours and the night, the animals are put under cover in caves (dial *kaḥḥīn*, *ma'zab*, *shakīf*) and other natural shelters.

Among the small sheep nomads, all the men are shepherds and their life is much harder than that of the sedentary shepherds, for it is linked to a constant quest for pastures and drinkable water, while having to face the merciless competition of the great camel nomads.

The condition of the shepherd of small livestock, notwithstanding the eulogistic Prophetic traditions, concerning him, seems always to have been the object of disrepute in general Muslim opinion; to be a *shāwī* still retains a pejorative nuance (see W. Marçais and A. Guiga, *Textes arabes de Takrouna*, i, Paris 1925, 257-9, nn. 37 and 39). In the eyes of the cultivator, the shepherd passes for a pilferer, when he is not reproached with particularly shameful practices with his animal (*Ḥayawān*, v, 458). In pre-Islamic Arabia the protection of the livestock was often the task of slaves and, in the Middle Ages, this scorn for the pastor might also be reinforced by racial oppositions (see Ibn Khaldūn, *Berbers*, i, 106). Al-Djāhīz cites (*Bukhalā'*, French tr. Ch. Pellat, *Le livre des avares*, Paris 1951, 198) this Bedouin's curse hurled at his adversary: "If you lie, may you draw milk seated" (= may Allah change your noble she-camels into vile ewes). In the Maghrib, the shepherd is in the lowest rank of the country proletariat, writes W. Marçais (*op. laud.*), lower than the *khammās* and the jobbing workman and, in the mouth of the countrywomen with their unpolished language, the supreme insult hurled at a rival is that of "maid for shepherds".

In spite of so much disgrace and by force of circumstances, the pastor of small livestock remains, in all the lands of Islam, one of the indispensable artisans, ensuring the subsistence of the rural and civic populations. Furthermore, the shepherds, constantly observing nature and the sky, and this since the domestication of the goat and sheep (the verb *rā'a* means at the same time "to pasture the flock" and "to observe the stars"), have made a great contribution through their experience acquired in the progress of the astronomy and meteorology proper to each season. To be convinced, one has only to consider the sum of precise evidence preserved, in a concise form, in the rhymed sayings that these contemplators of the heavenly vault composed for each of the twenty-eight *awwā'* of the year (see Pellat, *Dictions rimés, awwā' et mansions lunaires chez les Arabes*, in *Arabica*, ii [1955], 17-41); these sayings mention the notable influences on the flocks of the

evolution of time in the course of the twelve months; for the craftsman, their laconicness is very telling. By way of example, two of these sayings taken from the fifty best known will suffice to sketch the rough contrasts of climate which the shepherd had to endure. The first evokes the dog-days and the scarcity of water (Pellat, No. 14) in these brief terms, "When Sirius rises [at the end of June] in the morning (*saḥarā*), if you do not see rain (*maṭarā*), do not give food to the she-lambs or he-lambs (*immarā*) . . ." [for they will risk dying of thirst]. The second relates to mid-December when the water becomes ice (Pellat, No. 32), "When *al-Nā'ā'im* ("the Ostriches", i.e. γ, δ, ε, η, σ, φ, τ, ζ, Sagitarii) rise, the animals stay motionless (*al-bahā'im*) because of the constant (*al-dā'im*) ice, and the cold awakens every sleeper (*nā'im*). With this monthly guide to the constellations the shepherds regulate their migrations which, far from straying, lead them where their flocks will find the best conditions of subsistence.

Apart from the vicissitudes arising from the harsh weather to which the animals of the flock are exposed, they can also be the victims of accidents and individual or collective illnesses. In the past, with the lack of effective therapeutics, the shepherds had to lament a percentage of certainly high losses. Epi-demics (*wabā'*, *mawtan*) would occur periodically with their terrible consequences; spontaneous abortion (*ikhḥāḥ*, *iskāt*, *ikhḥād*), agalactia (*shišās*) and sterility (*ukr*). The causes were attributable especially to many neighbouring viruses of the brucella type entailing brucellosis or Maltese fever (*hummā māliṭiyya*) and foot-and-mouth disease (*ḥīlākh*, *hummā kulā'iyya*). The sheep pox (*amīḥa*, *nabkh*) also ravaged them, as did coccidiosis (*ḥū'am*), bringing on diarrhoea and anaemia. Sarcoptic mange or "black-muzzle" (*naghaf*), psoroptic mange (*kuḥāl*, dial. *bū ṭagga*), gastro-intestinal strongylosis and fluke-worm due to the small fluke of the liver (*Dicrocoelium lanceolatum*), all leading to aqueous or dry cachexia, also destroyed a good number of animals. Microbial infections of the feet and hooves such as foot rot (*ilthāb al-fawt*) and hoof inflammation (*kuu'am*), which could lead to the dropping-off of the horn cover and decalcification of the instep (*ukāb*, *khūmāl*), condemned their immobilised victims to enforced slaughter. Infections of the respiratory tubes were endemic, with pleuropneumonia of goats (*kaṣaba*, dial. *bū farda*), pulmonary strongylosis provoking sneezing (*kudās*, *nathīr*) and mucus or glanders (*mukḥāt*, *zikhīrīt*, *rughām*), attested by the Prophetic tradition cited above. Finally, cases of cenurosis or turnsick (*ḥawal*, dial. *bū nshīnīsh*) were frequent, as were swellings (*hubāt*) and convulsus of the oesophagus (dial. *farrās*) due to dehydration. Against this cohort of invisible enemies constituted by the microbes, the shepherd would find himself totally unarmed, attempting, despite everything, some empirical treatments for the external infections. Purulent sores were cauterised with a red-hot iron (*kayy*), and mange (*ḥjarab*) and ringworm (*karā'*) are, even nowadays, treated by the application of tar (*kaṭrān*, *kīr*). It is with tar also that the waters of the brackish or magnesian watering place are purified (*mashādī*) and, in Syria, a billy-goat or ram carries around his neck a cow-horn (*baṭṭāl*) full of this substance to provide for the hour of watering. Many other therapeutics, sometimes extravagant, mixed with conjuratory magical practices take place everywhere in Islam, as in Christendom, and the list would be very long.

Meanwhile, in modern times, veterinary science is propagated under the auspices of the authorities of each state, and competent services periodically bring effective prophylactic measures, to the countryside by means of vaccination (*talḳīḥ*), disinfection (*tathīr*) of contaminated sites and by injection (*ḥakn*) of powerful medications absorbed into the body of the sick patients; it can also be confirmed that at present the flocks of sheep and goats of the Muslim countries are almost freed from the scourge of the great epidemics.

Man has very often known how to exploit to his profit the natural gentleness and docility of sheep and goats, and the servility in which he keeps them makes them the object of griefs with which the ram reproaches him in the course of the whole philosophical "colloquium" which the *Iḥwān al-Ṣafā'* [q.v.] hold with the domestic animals in their memorable *Epistles* (see *Rasā'il*, ed. Beirut 1957, ii, 215). In fact, sheep and goats had not only to feed their dominator, but also to amuse him; jugglers and circus performers would be seen distracting the market crowds with their "knowledgeable" (*lakīna*) sheep and goats in association with dogs and monkeys [see *KIRD*] in turns of balance and dance, and the Meccan sheep (*ḡhāt makkiyya*) passed as particularly gifted in this kind of exercise (*Ḥayawān*, vii, 218). In the East and the Near East the public still shows an indefatigable taste for ram fights (*niḥāh*), giving rise to bets which can reach large sums; the organisation of these fights is the affair of the *kabbāsh*, breeder-selector of rams, whose lucrative profession was not besmirched with the disfavour of that of the goatherd (*ma'āz*), for it satisfied the innate passion of orientals for the game.

The names taken from the vast Arabic terminology concerning small livestock are numerous in the fields of zoology and astronomy. In the former are found *'anz*/*'anza*, designating at the same time the females of the vulture, the eagle and the houbara bustard; it is also the name of the reef heron (*Egretta gularis*), while the glossy ibis (*Plegadis falcinellus*) is nicknamed *'anz al-mā'* and *ma'āzat al-mā'* "water goat". *'Anz al-mā'* is also the trigger fish (*Balistes capricus*) and *'annāz* "goatherd" used to designate the black stork (*Ciconia nigra*), one of fourteen homologous birds (*tuyūr al-wāḡḡib*) for the sporting bands of crossbow shooters (*rumāt al-bunduk*) until the 7th/13th century. As for the *na'ḡja* "the sea ewe" (*na'ḡjat al-bahr*) represents both the turnstone (*Arenaria interpres*) and the oyster-catcher (*Haematopus ostralegus*), which are generally confused. The great white oryx and addax antelopes [see *MAHĀ*] are nicknamed *na'ḡḡ al-raml* "ewes of the sands" and the diminutive *na'ḡḡja* is applied the wood ibis (*Ibis ibis*). The manatee (*Manatus*) is called "sea lamb" and, finally, the cattle egret (*Bubulcus ibis*) is nicknamed *abū ghanam* because of its symbiosis with the flocks which it clears of flies and parasites of the fleece.

In astronomy, "the shepherd" is the constellation of Ophiuchus (or Serpentarius) with the star *Kāf al-rā'ī* "the shepherd's shoulder" (=  $\beta$  Ophiuchi) called wrongly "Celbalrai" (*kalb al-rā'ī* "the shepherd's dog"). A similar error is that of some authors who named *rā'ī* and *kalb al-rā'ī* the stars  $\gamma$  Cephei and  $\rho$ ,  $\kappa$  Cephei; the same applies to "Rigel" ( $\beta$  Orionis) which is *riḡl al-ḡjawzā'* "Orion's foot" and not *rā'ī al-ḡjawzā'*. By contrast, *rā'ī al-na'ā'im* "the shepherd of the ostriches" corresponds to  $\lambda$  Sagittarii. The constellation of the Coachman (*Auriga*) is named *'annāz* "goatherd", a name

confused with *'anāk al-arḡ* "ground lynx" or caracol designating the star  $\gamma$  *Andromedae*. In the Coachman, the star "Capella" ( $\alpha$  *Andromedae*) answers to the names *al-'ayyūk* "the she-kid" (= Alhayoc), *al-'anz* "the she-goat" and *al-'atūd* "the young ram" (= Alhatod). In the same constellation belong *al-ḡjadyān'* "the two kids" ( $\zeta$ ,  $\eta$  *Aurigae*) with the former (*mukaddam*) and the latter (*mu'akhhhar*). The first zodiacal constellation, the Ram (*al-hamal*), comprises *al-nāḥ* or *al-nāḥīḥ* "that which butts" (=  $\alpha$  *Arietis*) which with  $\beta$  *Arietis* represents "the two horns of the Ram" (*kamā 'l-hamal*). Finally, *al-ḡjady* "the kid" applies, on the one hand, to the tenth zodiacal constellation, Capricorn, with the star "Algedi" (=  $\alpha$  *Capricorni*) and, on the other, to the polar star or "Algedi" (=  $\alpha$  *Ursae minoris*), an abbreviation of *ḡjady al-farkadāyn* "kid of the two young oryx" i.e. the kid of the region of  $\beta$  and  $\gamma$  *Ursae minoris*. One must not forget that for a thousand years the Pole Star was, not  $\lambda$ , but  $\beta$  *Ursae minoris* (for all these stars, see A. Benhamouda, *Les noms arabes des étoiles*, in *AIEO*, Alger, ix [1951], 76-210; P. Kunitzsch, *Untersuchungen zur Sternnomenklatur der Araber*, Wiesbaden 1961).

**GHANĪMAT KUNDĪĀHĪ**, MUḤAMMAD AKRAM, poet of Mughal India and exponent of the "Indian style" (*sabk-i hindī* [q.v.]) in the Persian poetry of the subcontinent.

He was born at an unknown date in the first half of the 11th/17th century at Kundjāh, a small village in the Gudjrat district of the northern Pandjāb (now in Pakistan). He was an adherent of the Šūfī order of the Kādriyya [q.v.], but apart from stays in Kashmīr, Dihlī and Lahore, did not go very far from his native village, where he died in ca. 1106/1695. His works comprise a *Dīwān*, mainly of *ghazals*, and a *mathnawī* poem written in 1092/1681 called the *Nayrang-i 'ishk* "Talisman of love", a romance set in contemporary India with mystical and symbolical overtones (*Dīwān*, ed. Ghulām Rabbānī 'Azīz, Lahore 1958; *Nayrang-i 'ishk*, ed. idem, Lahore 1962, replacing Nawal Kishore texts). Azīz Ahmad has detected in the *mathnawī*'s sensuousness and sentimentality signs of Mughal decadence (*Studies in Islamic culture in the Indian environment*, Oxford 1964, 227). A. Bausani, whilst conceding this charge, has pointed out the interest of Ghānīmat's poetry as examples of the peculiarly "Indian style", and has suggested that his fondness for lengthy compound expressions echoes the enormous compound epithets of Sanskrit poetry of the *Kāvya* style, especially as Ghānīmat's century was one of considerable Muslim-Hindu cultural interaction, in which, for instance, several Sanskrit works were translated into Persian at the Mughal court (*Indian elements in the Indo-Persian poetry: the style of Ganimat Kunjāhī*, in *Orientalia hispanica sive studia F.M. Pareja octogenario dicata*, ed. J.M. Barral, Volumen I *Arabica-Islamica*, pars prior, Leiden 1974, 105-19).

**GHĀRŪKA**, a system whereby a debtor landowner transfers part of his plot, and the right to cultivate it, as security on a loan until redemption. Other Arabic terms for the same system were *rahn hīyāzī* and *bay' bi'l-istighlāl*, and in Ottoman Turkey *istighlāl* (Pakalın, ii, 97). This is the French *antichrèse*. It is not identical with *al-bay' bi'l-wafā'* (the French *vente à réméré*), i.e. a "conditional sale" to the lender to be nullified as soon as the debt is redeemed, a system preferred by fellahs who hesitate to part with the material possession of their land. In fact, however, the difference was small, since according to the latter contract too the creditor often "leased" the land to his debtor, i.e. the yield of the land served as interest on the loan in the form of "rent". Both systems were rather common prior to the 19th century because Islamic and Ottoman law did not provide for mortgages, but they did not disappear after the introduction of mortgages, because of administrative difficulties involved in the latter.

*Ghārūka* is a form of usury, and as such prohibited by the *sharī'a*. According to all four law schools or *madhāhib*, a profit derived from a pledge belongs to the debtor and the creditor is not allowed to gain from it. A Mālikī Azharī has even stated explicitly *wa-mā taf'alu al-'amma min al-ghārūka harām* (Shenouda, 39 n. 1). The Ḥanafī school, however, has created a loophole by making it lawful for the debtor to cede of his own free will the profit from the pledge to the creditor (*Multaqā al-abhur*, *faṣl* entitled *rahana radjūlun 'asīran*; *Hidāya*, book xlviii, ch. 4).

Early this century, *ghārūka* seems to have been common usage in Egypt. One of the customary systems of pledging land in 'Irāk was identical with the Egyptian *ghārūka* (S.M. Salīm, *al-Ābiyāsh*, Baghdad 1957, ii, 281).

**GHASSĀL** (A.), lit. "a washer of clothes and also of the dead", is nearly synonymous with the word *kaṣṣār* (al-Khaṭīb, cf. *Ta'rikh Baghdad*, vi, 127). In classical Arabic there are a number of terms for corpse-washer such as *ghassāl al-mawtā*, *ghāsīl al-mawtā* and simple *ghāsīl*. The modern Arabic term for a washer of clothes is *ghassāl*, but the corpse-washer (*ghāsīl*) in Syria is also called *mughassīl*.

The act of washing the corpse, putting a shroud on it, attending the funeral prayers and burying the deceased are some of the obligations on all Muslims, according to the *sharī'a*. The minimum qualification of the *ghāsīl* is that he must be well-versed in the *Kitāb al-Djanā'iz* (the book of funeral rituals) in Islamic jurisprudence. The corpse-washer is required to wash the dead body three times according to standard Islamic practices. In the case of a female corpse, the daughter of the deceased, a near relative or a female corpse-washer (*ghāsīla*) is employed for ritual washing. The corpse-washer must not look at the genitals of the deceased or divulge any knowledge of physical deformities of the *mayyūt*. It is, therefore, necessary that the *ghāsīl* should be a trusted (*amīn*), reliable (*thīka*) and an honest (*sālīh*) Muslim, says Ibn Kudāma. A tradition of the Prophet reads: "Let the trustworthy persons wash your corpse" (al-

*Mughnī*, ii, 379). Some individuals performed the work of corpse-washing out of an inner sense of piety (*warā'*), asceticism (*zuhd*) and observance of the *sunna*, wrote *Khāṭib al-Baghādī*.

Under normal circumstances, the male as well as female corpse-washers performed their work without any interference from government officials. But during the Fāṭimid rule in Egypt, the caliph al-Ḥākim imposed a number of restrictions on outdoor activities of women, who were prevented from going out of their house, from entering a public bath (*ḥammām*) and from asking a cobbler to make shoes for them. Consequently, every female corpse-washer (*ghāsilā*) had to seek a special permission or license from the *shāhib al-ma'ūna* and judicial authorities to practise her trade from the year 405/1014 onwards (cf. *al-Muntaẓam*, vii, 269). However, some writers tend to suggest that a similar ban on female corpse-washers was enforced for the first time in the year 253/867 in Egypt under 'Abbāsīd administration. The *ghāsil*'s work was probably a part-time occupation; it usually earned him an adequate wage which, of course, varied according to capability of payment of hirers, who naturally came from all strata of society. At least in one untypical case, a *ghāsil* sold off garments like a *kaṃīš* and a *djubbā* worn by a deceased person and thereby earned an extra sum of eight *dīnārs*, besides his usual wage, in the late Mamlūk period (ca. 905/1500). The profession of the corpse-washer has tended to become hereditary in some countries of the Middle East until very recent times, but in non-Arab Muslim countries we do not find the existence of a professional group of corpse-washers.

The *ghassāl*, washer of clothes, has been one of a group of manual workers since early Islamic civilisation serving mostly the middle and the upper classes of society. He had to adhere to a code of conduct outlined by *ḥisba* officials. The washerman was asked not to beat more than one set of clothes on his washing stone and not to press garments against wooden tools, in order to avoid damage. They were advised to wash clothes in clean water and not to mix up one customer's garments with another's. However, the washerman (*ghassāl*) and the bleacher often ignored this code of conduct and gained widespread notoriety for their untrustworthiness in mediaeval Arab society, according to one *ḥisba* official and writer. The *ghassāl*, it appears, not only washed clothes of customers but also cleaned up dilapidated sites of the 'Abbāsīd city of Baghdad. During the Buwayhid period, Fakhr al-Dawla bought at a price of three *dīnārs* some old stones from rings from a *ghassāl* who had found the precious objects while cleaning up the ruined sites of the city. One of these stones turned out to be a ruby and another a turquoise and both were set into a gold ring which fetched 20,000 *dīnārs* (Ibn Ṭīktaḳā, *al-Fakhrī*, Beirut 1966, 293-4). During the Salḍjūk period, some *ghassālīn* were arrested for their alleged dishonesty. The *ghassāl*, says *Djāhīz*, did not have any surplus income, but he lived on his meagre earnings, all of which he spent daily.

In the modern period, the work of washing clothes has been performed in Syria and Egypt by the washerwoman, *ghassāla*. These poor women workers visit the houses of the wealthy to wash and clean clothes and earn between three and six piasters (*ḳīrsh*) for each garment they wash. They supply soap, washing tools and their labour and in return get a cash wage as well as food from their employers. The wages of *ghassālāt* in Egypt were lower than those of Syria during the early decades of the 20th century.

The social position of the corpse-washer (*ghāsil*) has been higher than that of the washer of clothes (*ghassāl*). This difference has been influenced by Arab and Islamic traditions. A number of statements attributed to the Prophet Muḥammad describe corpse-washing as a meritorious work which delivers the *ghāsil* from sin (cf. *al-Mughnī*, ii, 379). In contrast with this favourable position of corpse-washer, the washer of clothes had a low status, due to the servile nature of his work. The word *ghassāl* was rarely used as a name indicating profession during the classical period of Islamic civilisation. Moreover, the *ghassāl*, like other workers of despised status, such as the copper (*ḥaḍḍjām*), the veterinarian (*bayṭār*), the sweeper (*kannās*), the watchman (*hārīs*), the fishmonger (*sammāk*) and the tanner (*dabbāgh*), were denied the honour of being addressed by their patronymic (*ḳunya*) in Arab society (cf. Tawḥīdī, *Baṣā'ir*, Damascus 1964-6, i, 355).

**GHAUTH** (A.), literally "succour, deliverance", an epithet of the *Ḳuṭb* [q.v.] or head of the Ṣūfī hierarchy of saints. It is used of him only when he is thought of as one whose help is sought, but that, from the nature of the *Ḳuṭb*, is practically always; thus it is a normal sequent to *Ḳuṭb*. Other, however, say that the *Ghauth* is immediately below the *Ḳuṭb* in the Ṣūfī hierarchy. In Sunnī Islam, such a figure as al-Ḥasan al-Baṣrī [q.v.] came to be thought of as the institutor of Sunnism and the *Ghauth* of his time; and we also find an allusion to the term in the title of one of the pseudopigraphia of 'Abd al-Ḳādir al-Djīlānī [q.v.], sc. the *Ghauthiyya* or *Mī'rāḍiyya*, a questionnaire on Ṣūfī terminology.

## GHAZAL.

i, ii. — See Vol. II, s.v.

iii. In Ottoman Turkish literature.

After their conversion to Islam, the Turks adopted and assimilated Arabo-Persian cultural institutions, but in literature they tended to follow the Persian type. Thus it was the Persian *ghazal* rather than the Arabic one which became a model both in Eastern (Çağhatay) and Western (Ottoman) Turkish litera-

ture. The Turkish *ghazal*, which became the most popular poetical form after the *mathnawī* [q.v.], is very similar to the Persian *ghazal* from the point of view of technique [see GHĀZĀL. ii. In Persian literature]. It is a short poem of 5-15 *bayts*, with a single rhyme. In the first *bayt*, called the *maṭlāʿ*, both *mişrāʿ*'s rhyme together; the last *bayt*, in which the author mentions his *makhlās* ("pen-name") is called *maklāʿ*. The content is of love, mystical or real, the joys of life, wine, the beauties of nature, etc. There are also edifying and didactic *ghazals* which concentrate on *hikmet* [see HİKMA], philosophical statements on the world, human destiny and actions, such as the majority of the *ghazals* of the 11th/17th century poet Nābī [q.v.]. Each *bayt* of a *ghazal* is an independent unit in content, and need not be connected with the preceding and following *bayt* except by rhyme. Occasionally a *ghazal* may have a unity of subject, in which case it is called *yek-āvāz* ("one harmony"). The most commonly-used metres in the Turkish *ghazal* are *hazāfī*, *ramal*, *radjāz*, *muḍārīʿ* and *mutakārib*. One shortcoming of Turkish poets writing in 'arūd is particularly striking in the *ghazal* form. This is *imāle* (*imāla*) (the reading of a short vowel as a long one in Turkish, which has no long vowels, simply for the sake of metre), which no master of versification ever succeeded in completely avoiding, so much so that the *imāle* (considered by some as a proof of the existence of long vowels in Turkish, see *Bibl.*) ended up by being considered as an embellishment during the post-classical period. Most folk poets (*Sāz şhāʿirleri*), with rare exceptions [see KARADĀOĞHLAN] occasionally used 'arūd and also wrote *ghazals* in imitation of *diwān* poets (M. Fuad Köprülü, *Saz şairleri*", Istanbul 1962, *Introd.*). The *ghazal* form was cultivated in Turkish literature from the 7th/13th century until the second half of the 19th one, and then only sporadically by some modernist and neo-classicists (see Köprülü-zāde Mehmed Fu'ād, *TURKS III. Ottoman Turkish literature, in EI*). Turkish biographies of poets (*tedhkir-e-yi şhu'arā'*) list the names of several hundred poets who each produced a *diwān* (the bulk of which, as a rule, consists of *ghazals*), but only half a dozen outstanding and about a dozen minor poets wrote *ghazals* which rise above the level of mediocrity and have a claim to art. Although Turkish poets (both Çāghatay and Ottoman) were inspired and influenced by classical Persian poets, it would be a superficial judgment to consider the former as blind imitators of the latter, as is often done. A common technique and limited vocabulary, and the same world of imagery and subject matter based mainly on Islamic sources, were shared by all poets of Islamic literatures (see Fahir İz, *Eski Türk edebiyatında nazm*, ii, Istanbul 1967, *Introd.*), and a mere parallelism of these in poets of the same or diverse languages might easily tempt one to draw easy and misleading conclusions (as e.g. by Hasibe Mazioğlu, *Fuzuli-Hafiz*, Istanbul 1962). A closer study reveals that outstanding Turkish poets of the early periods such as Kādī Burhān al-Dīn, Nesīmī [q.v.], 'Alī Shīr Newā'ī, Nedjātī, and many of the classical era like Fuḡūlī, Bākī, Shaykh al-Islām Yaḥyā, Nef'ī, Nā'īlī and particularly Nedīm [q.v.] and others, wrote, under common conventions, many original *ghazals* with a strong personal flavour (for a chronological selection of Ottoman Turkish *ghazals*, see Fahir İz, *op. cit.*, i). Many Turkish *diwān* poets, particularly Nef'ī and Nedīm, were conscious of this originality and they expressed their own feelings in many of their *ghazals* and *fakhrīyyes*. It is fair to say that

outstanding Turkish classical authors managed to retain their personal and their Turkish character, even though using Persian set themes, figures, conceits and imagery, in the same way that Corneille and Racine remained French in spite of their use of Greek and Latin poetical conventions, characters and plots. During the literary *Tanzīmāt* movement of the mid-19th century, the *ghazal* continued to be cultivated partly by modernists like Dīyā' (Ziyā) Pasha, Nāmīk Kemāl and others, and exclusively by the "neo-classicists" of the so-called *Endjūmen-i şhu'arā'* group (Leskofçālī Ghālīb, Yeñişehirlī 'Awnī, etc.). In contemporary Turkish literature the *ghazal* form was revived by Yaḥyā Kemal Beyatī (1884-1958 [q.v.]), who from 1918 until his death wrote a number of *ghazals* in the language and style of some 17th and 18th century poets (particularly Nā'īlī and Nedīm) which were posthumously collected in a book as *Eski şürin rüzgārīyle* ("With the breath of past poetry"). These very popular and successful pastiches did not go beyond being curiosities, and the *ghazal* form was not practised after the 1920s except by an occasional traditionalist or for humorous and satirical purposes (e.g. in Khalil Nihād Boztepe's *Sihām-i ihām* (1921) and Faruk Nafiz Çamlıbel's *Taht seti* (1938).

(FAHIR İZ)

**GHĀZĪ KHĀN**, Indo-Muslim military leader. Known to Kashmīr chroniclers as Sulṭān Ghāzī Shāh Çak, he was the son of Kādīj Çak, the leader of the Çaks [q.v.] and a powerful chief. Nothing is known of Ghāzī Khān's early life except that in 933/1527 Ghāzī with other chiefs defeated the Mughals sent by Bābur to help Sikandar, son of Sulṭān Faṭh Shāh, against Muḥammad Shāh the reigning Sulṭān of Kashmīr. Next year, however, the Çaks were defeated, and Ghāzī Khān, who fought under his father, was taken prisoner. In the middle of 959/1552, he joined the Kashmīr nobles to defeat Haybat Khān Niyāzī and his Afghān followers. Towards the end of 962/1555, he became *Wazīr* of Sulṭān Ismā'īl Shāh by setting aside his cousin Dawlat Çak and blinding him. Early in 963/1556, Abu 'l-Ma'ālī, a turbulent Mughal noble, having escaped from the wrath of Akbar, invaded Kashmīr, but Ghāzī Khān defeated him, and then suppressed the rebellion of Kashmīr nobles, who were against him. In the summer of 967/1560, Akbar sent Karā Bahādūr, a cousin of Mirzā Ḥaydar Dughlāt, with an army to invade Kashmīr, but the latter was defeated at Radjaurī and then at Danaor.

In 968/1561, under the pretext that Ḥabīb Shāh (964-8/1557-61), grandson of Muḥammad Shāh and his own nephew, was incompetent, Ghāzī Khān set him aside and himself ascended the throne, assuming the title of Sulṭān Naşīr al-Dīn Ghāzī Çak and thus laying the foundation of the Çak dynasty. He was brave, able and a man of strong will. He suppressed rebellions, established law and order and successfully defended Kashmīr against the Mughals. He was a cultured man and a poet and patronised learned men; but he was also the first Kashmīr ruler to introduce the practice of blinding his political rivals and cutting off their limbs. In his old age he suffered from leprosy, which impaired both his health and eyesight; hence he entrusted the work of the govern-

ment to his brother, Husayn Khān. Later, he changed his mind and tried to recover power, but Husayn Khān deposed him and himself ascended the throne. Ghāzī Shāh died after four years in 974/1566-7 at the age of 58.

*Bibliography:* the best accounts of Ghāzī Shāh are in the anonymous *Bahārīstān-i Shāhī*, India Office ms. 509, and in Haydar Malik's *Ta'rikh-i Kashmīr*, I.O. ms. 510; see also Mohibbul Hasan, *Kashmīr under the Sultāns*, Srinagar 1974; G.M.D. Sufi, *Kashūr*, Lahore 1948-9. (MOHIBBUL HASAN)

**GHĀZĪPŪR** (area, 1,473 sq. m.), a District in the easternmost part of the state of Uttar Pradesh in India. It lies in the great alluvial plains of the Ganges and extends in equal portions on either side of the river. Though one of the smallest in size, it is one of the most thickly-populated and closely-cultivated districts of the state. For administrative purposes, it is divided into four *taḥsīls*, namely Ghāzīpūr, Muḥammadābād, Sa'īdpūr and Zamāniyya. Paddy, wheat, cotton, sugar and tobacco are the traditional products of the district.

Ghāzīpūr is obviously a name of Muslim origin, and the Hindu tradition, which ascribes the foundation of Ghāzīpūr town to the eponymous hero Rādjā Gādī, who called his stronghold Ghāzīpūr, has no historical basis whatsoever. Though the territory constituting the modern District has a long history going as far back as the days of early Indo-Aryan colonisation, the town was not really founded until about the middle of the 8th/14th century. According to reliable local records, during the reign of Sultān Fīrūz Shāh, one Čakāwa Mandhāta, a descendant of the famous Rādjā Prithivirādj of Dihlī, obtained a large tract of land at Kathāwat near the present village of Ghausegunj in the *taḥsīl* of Muḥammadābād and later, building a fortress there, declared himself independent of the Dihlī Sultān. It is said that once his nephew and heir seized a Muslim girl, whose widowed mother appealed to the Sultān for the redress of the affront. Responding promptly, the then ruling Sultān Muḥammad Tughluq despatched a band of 40 warriors under one Sayyid Mas'ūd, who reached the place in 730/1330, and in a battle fought on the site of Ghāzīpūr town, Mas'ūd slew the rebellious Rādjā. The Sultān thereupon granted Mas'ūd the estates of his vanquished enemy, with the title of Malik al-Sādāt Ghāzī, which gave the name to the newly-founded city. Mas'ūd Ghāzī left behind six sons, one of whom, Sayyid Kuṭb al-Dīn, was married to the daughter of Sayyid Muḥammad and had himself two sons, Sayyid Dūst Muḥammad and Sayyid Yaḥyā, the descendants of the former settled in the village of Para, while those of the latter in Nonhera, both situated in the *taḥsīl* of Ghāzīpūr.

For the greater part of the 9th/15th century, Ghāzīpūr remained part of the dominions of the Sharḳīs [q.v.] of Dīawpūr, after whose decline it reverted to the possession of the Dihlī Sultān. After the battle of Pānīpāt in 932/1526, the Mughal emperor Bābur [q.v.] annexed Ghāzīpūr to his conquests of northern and eastern India. Ten years later, it went out of Mughal hands, following Humāyūn's defeat by Shīr Shāh in the decisive engagement fought at Baxar, close to the southern borders of the district. Ghāzīpūr remained under the peaceful administration of the Afghāns till it was recovered for the Mughals in 974/1569 by 'Alī Kulī Khān Khān-i Zamān, governor of Dīawnpūr, from whom the town Zamāniyya derives its name. Abu 'l-Faḍl

in his *Ā'in-i Akbarī* speaks in detail of Ghāzīpūr as being a flourishing *sarkār* in the *ṣāba* of Allāhābād. Sādāt Khān, the first Nawwāb-Wazīr of Awadh or Oudh [q.v.], placed Ghāzīpūr in charge of 'Abd Allāh Khān, a native of the district, who has left his imprint on the city by his magnificent buildings, whose ruins still exist. With the taking over of the district by the British in 1781, Ghāzīpūr enjoyed undisturbed peace till the outbreak of the Sepoy Mutiny of 1857 which took a heavy toll of life and property in the eastern part of the district, bordering Bihār. Normalcy could not be restored until five months of complete confusion had elapsed.

Ghāzīpūr town, which is the headquarters of the District of the *taḥsīl* of the same name, stretches along the north bank of the Ganges for nearly four km. Before the introduction of the railways, it used to be a centre for trade and river-traffic. Among the antiquities of the town, the most notable are the ruins of the Čihil Sutūn or "Hall of the Forty Pillars", which was the palace of the above-mentioned 'Abd Allāh Khān, who lies buried in the garden known as *Nawāb kī Čahār Dīwār*. Another landmark is the tomb of Lord Cornwallis, who died there in 1805; this consists of a domed structure supported on twelve Doric pillars, with a marble bust executed by Flaxman.

(ABDUS SUBHAN)

AL-GHAZZĀL, ABU 'L-'ABBĀS AḤMAD B. AL-MAHDĪ AL-GHAZZĀL AL-ĀNDALUSĪ AL-MALAḲĪ, the secretary of the sultan of Morocco Sīdī Muḥammad b. 'Abd Allāh (1171-1204/1757-89), who entrusted to him various diplomatic missions. In 1179/1766 he was the head of a delegation sent to negotiate an exchange of captives with Charles III of Spain; he was received with great honour in Madrid, and was able to return to Morocco with a Spanish mission which made a peace treaty with the sultan and an agreement about the exchange of prisoners. In 1182/1768 he was sent to Algiers to oversee the exchange of Algerian with Spanish prisoners and accomplished this with success. However, the Spanish king, after the sultan had besieged Melilla in 1185/1771, had to renounce the terms of the treaty made between the two rulers and drawn up by al-Ghazzāl, so that the latter fell into disgrace. He retired to Fās, where he died in 1191/1777 and was buried in the *zāwiya* of 'Abd al-Kādir al-Fāsī [see AL-FĀSĪ, above].

This diplomatist left behind an account of his journey to Spain called *Natījat al-idjīthād fi 'l-muhādama wa 'l-djīhād*, of which numerous mss. are extant; a résumé was made by Bodin in *AM*, iii (1918), 145-85, and it was published by A. Bustānī at Tetuan in 1941. Al-Ghazzāl's *riḥla* is doubly interesting. From the historical aspect, it is a valuable document since the author gives details about the aim of his mission and lists the names of the Muslim prisoners; from the literary point of view, although it is written in rhymed prose, it describes the stages of the journey and gives a picture of Spain under Charles III. He notes, like other travellers in Europe, the things which were new to him, but shows himself somewhat partial, insisting on the superiority of his own country.

He is, furthermore, the author, notably, of epistles in praise of his sultan and of a biography of the head of the 'Isāwa religious order, *al-Nūr al-shāmīl* (ed. Cairo 1348/1929).

(Ed.)

AL-GHAZZĪ, ABŪ IṢHĀK IBRĀHĪM [B. YAHYĀ?] B. 'UTHMĀN B. 'ABBĀS AL-KALBĪ AL-ASHHĀBĪ (441-524/1049-1129), Arabic poet of the Saldjūk period.

He was born in Ghazza [q.v.] at a time when that town was still under Fāṭimid rule, but as a Shāfi'ī Sunnī and as a person especially proud of emanating from the Imām al-Shāfi'ī's own birthplace, his life was to be orientated towards the East, where the establishment of the Saldjūks favoured a resurgence of Sunnī orthodoxy. He was studying in Damascus in 481/1088 as a pupil of the traditionist Naṣr b. Ibrāhīm al-Maḡḍisī (d. 490/1096, see Brockelmann, S I, 603), but then left for 'Irāk. Disappointed at Hilla in his expectations of the Mazyadid Sayf al-Dawla Ṣadaqa, he spent some time at the Nizāmiyya madrasa in Baghdād during the caliphate of al-Mustazhir, but then departed for Persia, where he spent the remainder of his long life, travelling extensively in search of congenial patrons.

He was in Ādharbāyḍjān and Shīrwān, where he was again disappointed, this time by the Yazīdid Shīrwān-Shāh Fariburz b. Sālār, in Iṣfahān, where he stayed with a member of the Banū Faḍlūya, the Shabānkārā'ī Atabegs of Fārs; in Kirmān, where he enjoyed the patronage of the vizier of the local Saldjūk amīrs Nāṣir al-Dīn Mukram b. 'Alā'; and also in Khurāsān, where he journeyed as far as Samarḳand and the court of the Karakhānids. Here in the farther east of the Saldjūk empire he seems to have found favour with the Sulṭān Sandḡar at Marw, and it was there that the scholar 'Abd al-Karīm b. Muḥammad al-Sam'ānī [q.v.] met him at the end of al-Ghazzī's life when he had, so al-Sam'ānī says, reached 90 years of age but had apparently fallen into poverty. Al-Sam'ānī, in his *Mudhāyayl* to the *Ta'riḫh Baghdād* of al-Khaṭīb [q.v.], cited by 'Imād al-Dīn al-Iṣfahānī, met him in Marw, where al-Ghazzī was staying at the local Nizāmiyya madrasa. When al-Ghazzī left for Balkh on his last journey, he sold about ten *riṭls*' weight of the autography manuscripts of his poems, which al-Sam'ānī was subsequently able to acquire and to copy out from them over 5,000 verses; the remainder of his verses, however, al-Ghazzī also sold, and these later perished in a fire at Balkh. Al-Ghazzī died before he could reach Balkh, and his body was taken there for burial.

Nearly 5,450 verses of his *diwān* survive, in a considerable number of manuscripts, but clearly in the course of a long life as a panegyric poet al-Ghazzī must have written much more than this; al-Sam'ānī says that he was "sparing" (*danīn*) of recording his poetry. It seems probable that the extant manuscripts stem ultimately from al-Sam'ānī's copy. The great majority of his verses are in the genre of eulogy, addressed to 58 different *mamduḥīn*; it seems that al-Ghazzī was willing to travel anywhere in the hope of reward. The rest of his poetry can be classified as satire, *itāb*, etc., with some erotic poems addressed *more temporis* to boys. Al-Ghazzī enjoyed considerable contemporary renown, at a time when Arabic poetry was still in its post-'Abbāsīd period of florescence, so that 'Imād al-Dīn could say that his poetry became proverbial in its time and that he was one of the quadrumvirate

of great contemporary poets, together with his friend and correspondent Abū Ismā'īl al-Ḥusayn al-Tuḡhrā'ī and with Abu 'l-Muzaffar Muḥammad al-Abīwardī and Abū Bakr Aḥmad al-Arradḡānī [q.v.].

*Bibliography*: 'Imād al-Dīn al-Iṣfahānī, *Khariḍat al-kaṣr, ḡism shu'arā' al-Shām*, ed. (C.E. BOSWORTH)

AL-GHITRĪF B. 'ATĀ' AL-DJURASHĪ, 'Abbāsīd governor. He was the brother of the famous Khayzurān [q.v.], the Yemeni girl of slave origin who married the caliph al-Mahdī and was mother of the two successive caliphs al-Hādī and al-Rashīd. Al-Ghitrīf is also given the *nisba* of "al-Kindī" in the biography of him by Gardīzī (probably stemming from al-Sallāmī's lost *Ta'riḫh Wulāt Khurāsān*) and by al-Sam'ānī, and may accordingly have been a *mawla* of the great South Arabian tribe of Kinda [q.v.] (*Zayn al-akhbār*, ed. 'Abd al-Ḥayy Habībī, Tehran 1347/1968, 96, 129-30). From complete obscurity, as a slave who watched over vineyards at Djurash in the Yemen, his fortunes rose with Khayzurān's great influence in the state and from his position as *khāl*, maternal uncle, of the caliphs. A daughter of his, 'Azīza, married Hārūn al-Rashīd. In 170/786-7 he was appointed governor of the Yemen (Khalīfa b. Khayyāt, *Ta'riḫh*, ed. Zakkār, ii, 742; al-Ya'qūbī, *Historiae*, ii, 481; *Aghānī*, xiii, 13), and then in 175/791-2 governor of Khurāsān, Sīstān and Gurgān in succession to al-'Abbās b. Dja'far, an office which he held until he was replaced in 177/793 by Ḥamza b. Mālik al-Khuzā'ī (Khalīfa, ii, 745; al-Ya'qūbī, ii, 488; al-Dīnawarī, *al-Akhbār al-tiwāl*, Cairo 1960, 387; al-Ṭabarī, iii, 590-1, 612, 626, 740; Ḥamza al-Iṣfahānī, *Ta'riḫh sinī mulūk al-ard*, Beirut 1961, 164-5; al-Azdi, *Ta'riḫh Mawsil*, 277). Establishing himself at Bukhārā in order to deal with the disturbed situation in Transoxania, with internal threats and threats from the Turks of the Central Asian steppes (cf. Barthold, *Turkestan down to the Mongol invasion*, 198 ff.), al-Ghitrīf despatched an expedition in 175/791-2 under 'Amr b. Djamīl into Farghāna against the *Yabghu* of the Karluk [q.v.] and one under his deputy Dāwūd b. Yazīd b. Ḥāṭim against the Khārīdīte rebel in Sīstān al-Ḥuḍayn of Ūḡ (Gardīzī, 129-30; *Ta'riḫh-i Sīstān*, 153-4, tr. M. Gold, Rome 1976, 121-2; Bosworth, *Sīstān under the Arabs* . . ., Rome 1968, 85). The sources are silent concerning al-Ghitrīf's career after his dismissal from Khurāsān, but a scion of his, one Muḥammad b. Aḥmad al-Ghitrīfī, is mentioned in one later source on Transoxanian history, see R.N. Frye, *City chronicles of Central Asia and Khurasan: a history of Nasaf*, in *Fuad Köprülü armağanı*, Istanbul 1953, 167 = *Islamic Iran and Central Asia (7th-12th centuries)*, London 1979, XXXII; presumably this last is the traditionist Abū Aḥmad Muḥammad b. Aḥmad b. al-Ḥusayn al-Ribāṭī al-Ghitrīfī of Gurgān mentioned by al-Sam'ānī, *Ansāb*, f. 410a.

The most enduring legacy of al-Ghitrīf's governorship in the East was, however, his role in introducing a new coinage into Bukhārā. The story is given in detail by Narshakhī in his *Ta'riḫh-i Bukhārā*, ed.

Mudarris Ridāwī, Tehran 1939, 42-5, tr. Frye, Cambridge, Mass. 1954, 35-7, and more briefly by al-Sam'ānī, *loc. cit.*, cf. also Barthold, *Turkestan*<sup>2</sup>, 203-6. The old silver coinage of the pre-Islamic Iranian rulers of the city, the Bukhār-Khudās, had largely disappeared from circulation, and Kh<sup>h</sup>ārazmian silver coins had had to be imported. Hence at the request of the local people, al-Ghitrīf coined *dirhams* from an alloy of six metals, henceforth known as "black" or Ghitrīfī/Ghidrīfī *dirhams*, and meant only for local circulation. Taxation requisitions were now fixed at the rate of six of these Ghitrīfī *dirhams* for one silver *dirham*, but the exchange subsequently fluctuated, causing hardship for those paying *kharaḡj* at the revised rate. The position was in the end stabilised, for alloy *dirhams*, Ghitrīfī, Muḥammadī (after a financial official, Muḥammad b. Ḍahda) and Musayyabī (after a preceding governor of Khurāsān, al-Musayyab b. Zuhayr al-Ḍabbī) ones, continued to be used sporadically in Transoxania for a long time to come. Ibn Hawkal, ed. Kramers, 490, tr. 470, describes Ghitrīfī *dirhams* as circulating in the region of Hayṭal, i.e. Bactria and the eastern fringes of Khurāsān [see HAYĀṬĪLA]; al-Muḥaddasī, 340, speaks of them as circulating in Bukhārā and certain other localities of Transoxania; and the translator into Persian of Narshakhī's history states that in his time (522/1128), 100 pure silver *dirhams* equalled 70 Ghitrīfī *dirhams*, and the gold *mithkāl* equalled 7½ Ghitrīfī *dirhams*. See further Frye, *Notes on the early coinage of Transoxania*, Amer. Numism. Soc. Notes and Monographs 113, New York 1949, 41-9.

*Bibliography*: Given in the article, but note that Zambaur, *Manuel*, 48, gives al-Ghitrīf's name and the date of his governorship wrongly.

(C.E. BOSWORTH)

**GHIYĀTH AL-DĪN BALBAN.** [See BALBAN, in Suppl.]

**GHUBAYRĀ**, site of an early Islamic city in Kirmān Province in Iran. It is situated some 70 km. south of Kirmān, the provincial capital, in the Bard Sīr Valley, at the confluence of the Čārī and Ghubayrā rivers. At the time of the Arab conquest the provincial capital was at Sīrdjān, some 200 km. to the south. The main caravan route from Sīrdjān to Bam runs considerably to the south of Kirmān city. Ibn Khurradādhbih, 49, describes the stations on this route, and Ghubayrā is mentioned as the fifth from Sīrdjān towards Bam. According to Iṣṭakhṛī, the stations between Sīrdjān and Bam were as follows: Shāmāt, Ghār, or Bahār, Khannāb, Ghubayrā, Kūghūn, Rāyin, Sarvīstān and Darēn, modern Darzīn (ed. Irāḡī Afshār, Tehran 1961, 140 f. and map facing p. 139). A detailed account of the town is given by Muḥaddasī, 462-3, who writes that "it is a small town surrounded by villages, with a fortress in its midst, while outside was the market recently built by Ibn Ilyās. Both this place and Kūghūn have fine mosques and the water comes from *kānāts*". During the 8th/14th century Ghubayrā belonged to the Muzaffarid realm. The town was looted and destroyed by Timūr's army in 795/1393. It appears that Ghubayrā as a town ceased to exist at that time, although archaeological evidence indicates that there was a small settlement on the site in Ṣafawid times.

The ruins of Ghubayrā were first reported in modern times in J.R. Caldwell's excavation report of Tall-i Iblīs (Caldwell, Chase and Fehérvári, in *Investigations at Tal-i Iblīs*, ed. J.R. Caldwell, Springfield, Ill. 1967, chs. vi, viii). Subsequently,

four seasons of excavations were conducted on the site under the direction of A.D.H. Bivar and G. Fehérvári (brief excavation reports were published by A.D.H. Bivar and G. Fehérvári in *Iran*, under "Survey of excavations", x (1972), 168-9, pls. II-III; xi (1973), 194-5, pls. IV-VIb; xiii (1975), 180-1, pls. V-VI; and xv (1977), 173-4, pls. IIa-b; also in the *Proceedings of the 1st, 3rd and 4th Annual Symposia of Archaeological Research in Iran*, Tehran 1972, 1974, 1975. The first interim report was published in *JRAS* (1974), 107-41.

*Bibliography*: given in the article.

(G. FEHÉRVÁRI)

**GHULDJA** [see KULDJA].

**GIAFAR** [see DJĀ'FAR].

**GIFT** [see HIBA].

**GILGIT**, a town in the northwest of Pakistan, with a population of 4,671, situated on the right bank of the Gilgit river, a tributary of the Indus, 4,890 ft. above sea level. Owing to its geographical position, being near the borders of several countries and because roads radiate from it into the surrounding valley and beyond to Sinkiang and Transoxiana, it has always been an important trading centre and of considerable strategic significance.

Gilgit's ancient name was Sargin, which, owing to reasons unknown, was changed to Gilgit. But its people call their country Shīnakos and their language Shīnā. They are of Aryan origin, of fair complexion, well-built but unwarlike, cheery, honest, frugal and industrious, given to polo and dancing.

Gilgit was noticed by the Chinese travellers Fa-hien and Hsuen-Tsang as well as by the Muslim scholar al-Bīrūnī, who says that its ruler's name was Bhattā-Shāh. However, Gilgit's early history is legendary. In 751 A.D. the Chinese, who had occupied it, were defeated and driven out by the Arabs. Early in the twelfth century Shamshīr, the youngest son of Azar, a Yārkanđī Turk belonging to the Trākāne (Tārā Khān) family, invaded Gilgit and, having overthrown its Buddhist ruler, Shṛī Budat, established his family's rule. It was during his reign that, according to tradition, six Ṣūfī saints, whose tombs still exist, converted the Buddhist inhabitants of Gilgit to Islam. Later, Tārā Khān (689-735/1290-1335) tried to introduce the Ismā'īlī creed, but Mīrzā Khān (972-1008/1565-1600) rejected it in favour of Imāmī Shṛīsm, which is still the majority faith of Gilgit.

The Trākāne family's rule came to an end in 1822 with 'Abbās Khān, after which Gilgit was in turn ruled by the chiefs of Puniāl, Nagar and Yasin. In 1842 Karīm Khān of Nagar, having seized Gilgit from Gawhar Amān of Yasin with the help of the Sikhs, became their tributary. But when in 1846 Kashmīr was transferred to Mahārāḡjā Gulāb Singh of Djamū by the British, claims to Gilgit were also made over to him. In 1889, however, the British, in face of Russian aggression, took control of Gilgit and the surrounding area and placed it under a British Agent. But before the grant of independence to the subcontinent in August 1947, it was restored to Mahārāḡjā Harī Singh. In November 1947 the local people, with the support of the Gilgit Scouts, imprisoned his governor, Gansārā Singh, and proclaimed Gilgit's accession to Pakistan, which readily took control of the area. Recently, the Chinese have constructed a road which links it with Rāwalpīndī and Sinkiang. This has enhanced Gilgit's both military and commercial importance.

**GOURARA** (Gurāra), oasis group of the central Sahara, in Algerian territory, contained within the southern fringe of the Great Western Erg to the north (the border on this side may be located at the furthest centres of permanent settlement), the north-west flank of the plateau of Tadmait to the south-east, and Oued Saoura to the west (the border on this side being the last centre of Berber-speakers, Baḥammou, as opposed to the exclusively Arabic-speaking population of the Saoura). To the south, on the Touat side, the border was traditionally imprecise, the oases allying themselves to Timimoun (Gourara) or to Adrar (Touat) by means of *soff* agreements. The French administration created an artificial border here, definitively fixed in 1944.

*Physical geography.* Between the plateaux of the *reg* of Meguiden to the east (altitude 325 m.), a mound of clays and red sandstones of Continental Intercalary, and the Villefranchian *hamada* (silicified limestone) of Ouled Aissa to the west (350 m.), the heart of Gourara is constituted by a depression, the base of which is occupied by plains of salinated clay (*sebkha*), unsuitable for any crop other than palm-trees, of which the biggest is the *sebkha* of Timimoun, a huge channel 80 km. in length and varying in width between 2 and 15 km., lying on a north-north-east to south-south-west axis at the foot of the Meguiden, the base of which dips to an altitude of 192 m. At its extremities, the *sebkha* adjoins sectors of more abundant vegetation, bearing the name "oued", which seems to be synonymous with "pasturage". The *sebkha* corresponds to an ancient water-course flowing towards the south, founded on the hamadian surface along a pre-tertiary rib, but the erosions of the quaternary periods of humidity have eaten more deeply than pre-tertiary erosion. No importance need be attached to the remarks of Ibn Khaldūn (*Histoire des Berbères*, tr. de Slane, 2nd ed., Paris 1925, i, 196), who did not know the region personally, on a river "flowing from west to east". No doubt this arises from a confusion with the Saoura. Between the *sebkha* and the plateau of Ouled Aissa, there stretches a complex morphological zone, where the substratum of carboniferous sandstone and limestone, modified by interwoven pleats giving rise to appalachian reliefs (the mound of Timimoun, east-west), partially fossilised by deposits of Continental Intercalary and Tertiary formed into projecting hillocks, is invaded by various dunary formations, branches of erg and lesser forms.

*Human geography.* In severe climatic conditions (15 mm. annual rainfall), there has persisted a sedentary population, descendants of an ancient stock of judaised Zenatas, which remains for the most part Berber-speaking. In 1952, out of a total of 25,000 habitants, the Gourara consisted of 61% Berber-speakers and 39% Arabic-speakers. The Arab elements, of Hilalian origin (Meharza and Khenafsa) arrived in the 6th/12th century, and it is this period

which saw the first appearance of the Arabic-speaking *ksour*, present only in the north in the Tinerkoug and in the south in the Deldoul and the Aouguerout, although the recent settlement of Chaanba nomads has joined an important Arab nucleus to the old Berber centre of Timimoun. This settlement process is actively continuing at the present day, and the sedentary population, which has grown steadily over the past three decades in spite of a considerable level of emigration towards the Tell, must currently be approaching the figure of 40,000, with a proportion of Arabic-speakers certainly superior to that of 1952. In addition, the dark-skinned Ḥarātīn (see HARTĀNĪ), either Berber-speaking or Arabic-speaking according to the language of their masters, in 1952 constituted nearly a half (46%) of the population (compared with estimates of 29% "Zenatas" and 25% "Arabs").

This population lives today in concentrated groups in villages (*ksour*), of which the largest is Timimoun (5,000 inhabitants), often dominated by a *kasba* containing the individual granaries where the people's crops are preserved (in other cases, granaries are attached to private houses). It seems that the habitat was formerly more dispersed, as is indicated by the existence of numerous small ruins, in a period of domination on the part of large semi-nomadic Zenata or Arab tribes on whom the sedentary population was strictly-speaking dependent. The progressive concentration of the habitat would testify simultaneously to a trend towards sedentary living and to a renewal of instability in the 19th century. The economic basis is provided by palm-trees (about 400,000), of which the surplus production (5 to 6,000 tonnes of dates) partially compensates for the inadequacy of cereal production (300 tonnes of wheat and barley), and permits the purchase of wool used in the weaving of *dokkali*, dyed materials manufactured by the women (350 looms) and partially marketed abroad. Small-holding is the rule, and indirect exploitation is common. Palms and gardens are irrigated largely by subterranean drainage channels (*foggara*) in the *sebkha* of the east, sometimes combined with hoisting machinery to raise the water of the channel when the level is too low for irrigation purposes, and with wells whose water is raised by balanced arms in the northern region at the fringe of the Erg.

(XAVIER DE PLANHOL)

**GÖVSA**, İBRAHİM 'ALĀ' AL-DĪN, modern Turkish İBRAHİM ALAETTİN GÖVSA, Turkish author, biographer and poet (1889-1949), was born in Istanbul, the son of Mustafā 'Aşim, a civil servant, from a Turkish family of Filibe (Plovdiv in present-day Bulgaria). Educated at the Wefā lycée, Istanbul, and in Trabzon, where his father was chief secretary (*mektübđju*) of the province, he studied in Istanbul University (1907-10), subsequently taught in Trabzon lycée and in 1913 went to Switzerland with a government scholarship, where he studied psychology and pedagogics at the University of Geneva and at the

Jean-Jacques Rousseau Institute. On his return (1916), he taught at the Istanbul Teachers' Training College (*Dâr al-mu'allimîn*), where later he also became Director. Appointed in 1926 as a member of the Advisory Board (*Ta'lim ve terbiyye dâ'iresi*) of the Ministry of Education in Republican Turkey, he was later elected a member of Parliament (1927), where he served until 1946, with a brief interval in 1935 when he was an inspector for the Ministry of Education. He died in Ankara on 29 October 1949.

Gövsâ started his career as a poet, published his first poems in the traditional 'arūd metre in the *Therwet-i finûn* [q.v.] (1908), but later switched to syllabic metre (*heдже weznî*) following the new literary trend in *Yeni medjimi'a* (1917 onwards). One of the pioneers of children's verse (*Çocuk şairleri*, 1910), Gövsâ continued to write poetry until 1940 on lyric and epic (*Çamakkale izleri*, 1926) topics, using alternately both metres. Though not outstanding as a poet, he occasionally reaches a level above the average when he is inspired by an unusual event (e.g. his famous elegy for Atatürk, *Tavaf*, 1938). He also wrote humorous verse and prose and successful pastiches (e.g. *Nazîf'ten Hamid'e ahiretten mektuplar*, 1932). But Gövsâ is particularly known as a biographer and encyclopaedist. A meticulous and responsible collector of materials from written and oral sources, he contributed greatly to contemporary biographical literature in Turkey. Apart from his great share in the planning and preparation of the Turkish Encyclopaedia (*İnönü Ansiklopedisi*, later *Türk Ansiklopedisi*) from 1941 onwards, of which he was also Secretary-General (1943-5), Gövsâ is the author of the following major works in this field: *Meşhur adamlar* ("Famous men"), 4 vols., 1933-8; *Kâşifler ve mucitler* ("Explorers and inventors"), 1939; *Türk meşhurları ansiklopedisi* ("Encyclopaedia of famous Turks"), n.d. [1946]; and *Resimli yeni lûgat ve ansiklopedi* ("New illustrated encyclopaedic dictionary"), 1947-9 (up to the letter L).

**GUL KHĀTŪN**, the queen of Sultān Ḥaydar Shāh of Kashmīr (874-6/1470-2). The chronicles do not say whether she belonged to a Muslim family of foreign origin or to a Kashmīrī family. It is more than likely that she was the daughter of a Bayhaḳī Sayyid [q.v.], for the Kashmīr rulers were always very eager to marry in the family of these descendants of the Prophet, and regarded such an alliance with pride. However, strangely enough, unlike the royal ladies of foreign origin, Gul Khātūn, according to Djonarādja's *Rāḡatarangīnī*, favoured Hindū customs and ceremonies. Gul Khātūn was active in the politics of the kingdom and played an important role in securing the throne for her son, Ḥasan Shāh. She was also interested in girls' education and established *madrasas* at her own expense. She was much respected and loved by her son, who constructed a bridge of boats in her memory over the Djeḥlam in Srinagar.

**GŪMĀL**, GOMAL, a river of the Indus valley system and the North-West Frontier region of the Indo-Pakistan subcontinent. It rises in eastern Afghānistān some 40 miles/62 km. east of the Āb-i Istāda lake. Flowing eastwards, it is joined from the south by the Kundar and Zhōb rivers, and forms the southern boundary of the South Wazīrīstān tribal agency of the former North-West Frontier Province of British India (now Pakistan). Below the settlement of Murtaḡā, it leaves the mountains and enters the lower-lying lands of the Dēra Ismā'īl Khān district [see DĒRADJĀT], and is diverted into many irrigation channels; from this point also it is known as the Lūnī River. The bed of the river is often largely dry in rainless periods, and only in times of flooding do its waters actually reach the Indus itself.

Where the river emerges from the northern end of the Sulaymān Mountains into the lower terrain we have the Gomal Pass, a defile some four miles long and one of the routes from Afghānistān to the Indus valley; although much used by nomadic Ghazals [q.v.] and other Pathan tribes bringing merchandise down to the plains, its comparative isolation and wildness have not made it such a historic route for the passage of armies as the routes further north of the Kurram [q.v.] valley and the Khyber Pass [see KHAYBAR], although in the spring of 910/1505 Bābur used part of the track along the swollen Gomal River when travelling from Bannū to Ghazna (*Bāburnāma*, tr. Beveridge, 235-6).

During the 19th century, Sarwār Khān, chief of Tank in Bannū, dammed the Gomal River just below where it emerges to the plains (see H.B. Edwardes, *A year on the Panjab frontier in 1848-9*, London 1851, i, 414-15). Towards the end of the century, Sir Robert Sandeman, the pacifier of Balūcīstān, planned to open up the Gomal Pass for general access and thus gain an alternative route to the one from Multān into the Zhōb valley of north-eastern Balūcīstān, occupied in 1889. In that same year, as part of the "Forward Policy", the Viceroy of India Lord Lansdowne authorised subsidies for the Wazīrīs and other tribesmen. Tribal *maliks* and *qirgas* were summoned to a *darbar* at Apozai in Zhōb, and military posts established in the Gomal valley in order to command the route and in the hope of exerting some influence in Wazīrīstān. The system worked for some time, but in the long run hopes of making the Gomal Pass generally accessible have proved vain for both the Government of India and its successor Pakistan.

(C.E. BOSWORTH)

**GŪMŪLDJINE**, the Ottoman Turkish form of the Greek Komotene, Komotini, a town of over 30,000 inhabitants in Western Thrace, the modern Greek province of Rhodope, which from the sixties of the 14th century until 1912 was without interruption a part of the Ottoman Empire.

The name Komotene is the academic version of

Koumoutsinas, which was already used by Cantacuzinos in the mid-14th century. The *Destān* of Ümür Paşa (ed. Mélikoff, 101, 124) appears to be the first Turkish source to use the form "Gümüldjüne" when relating Ümür Aydınoghlu's actions in Thrace in and after 745/1344.

Komotene emerged as a small urban centre (*polis-ma*) after the Bulgarian invasion of Czar Kaloyan in 1207, during which the old city of Mosynopolis was thoroughly destroyed. The remaining inhabitants of Mosynopolis fled within the walls of an uninhabited but rather well-preserved stronghold, Komotene. This new town is mentioned in connection with the actions of the Emperor Andronicus III against the Turkish pirates and during the Byzantine civil war of the 14th century, which were catastrophic for the lowland population of Thrace.

The old Ottoman chroniclers ('*Āshikpashazāde*, Neshri, Oruç, Anonymus Giese, Idris-*Destān* IV) unanimously place the conquest of Komotene by the Ottomans in or around 762/1361, after the capture of Zaghra (Stara Zagora) and Filibe (Plovdiv) and before the conquest of Biga. Feridün Ahmed Beg, in his *Münsh'e'at al-selāṭin*, has a letter from the ruler of Karamān to Murād I, congratulating him on the conquest of Filibe, Zaghra and Gümüldjine, and also the answer of Murād, dated 764/1362-3. Almost all the sources mention Ghāzī Ewrenos Beg as conqueror. Between 763/1361-2 and 785/1383 (capture of Serres or Siroz), Komotene was the seat of an *udj* confronting Serbian-controlled Macedonia, and stood under command of Ewrenos Beg. Somewhere in these two decades, Ewrenos Beg erected in his residence a large domed *mesdjid*, an *imāret*, a *hammām* and a large number of shops, and added the revenue of the villages of Anbarköy and Küçük Köy to this *wakf*. These buildings formed the nucleus of Islamic life in Western Thrace. The buildings were situated outside the old walled enclosure of Koumoutsinas, where the original Greek population continued to live. The colonisation of Muslim Turkish citizens in Komotene, and of large numbers of Turkish farmers in the deserted plains around the town, appears to be also connected with Ewrenos Beg. The toponymy of villages, hills, meadows and brooks is overwhelmingly Turkish, which may be an indication that the newcomers found little or no autochthonous inhabitants to transmit the existing toponyms. The fragmentarily-published registers of the 9th/15th and 10th/16th century Ottoman censuses point in the same direction, and show clearly the heavy preponderance of the Muslim Turkish population in these districts.

When in 785/1383 Ewrenos Beg moved the seat of his *udj* closer to the chief field of action (Western Macedonia), Komotene remained a relatively small town with a predominantly Muslim population. The Burgundian knight Bertrand de la Broquière passed "Caumussin" in 1433 on his way to Serres. He called it a "fairly good little town", which was "well-enclosed by walls and situated on a little river in a lovely country and good plain near the mountains".

According to the census of 925/1519, Komotene numbered 393 Muslim households, 197 unmarried Muslims, 42 Christian households, six unmarried Christians and eight Christian widows, as well as 19 Jewish households and five unmarried Jews. This gives a total of 2,500 souls, which is roughly the average of a local Balkan town of that time. It was by then the second urban centre in size of Western Thrace (after Xanthi or Iskeçe). According to the census of 936/1530, Komotene had 17 *maḥalles*

which all bore Turkish names. The same source mentions the names of all religious and educational institutions of the town: one mosque, 16 *mesdjids*, four *zawiyas*, four schools and one church. When in the middle of the 16th century the French traveller Pierre Belon du Mans (*Observations des plusieurs singularités*, etc., Paris 1588, ch. lx) passed the "petite bourgarde Commercine", he mentions the "ruines d'un petit chastelet, dedans lequel est l'Église Grecs Chrestiens". His remark that the town was "habité des Grecs, et peu de Turcs" is curious and certainly not in accordance with the real situation. The Ottoman geographer Mehmed-i 'Āshik visited Komotene in ca. 998/1590 and noted that "There are there [in Komotene] Friday mosques, baths and markets. The *hādījī* and *ghāzī* Ewrenos Beg constructed in Gümüldjine a public kitchen and dining hall for the travellers (sc. an *imāret*)". Shortly afterwards, in the first decade of the 17th century, Komotene shared the attention of the *defterdār* of Ahmed I, Ekmekdjizāde Ahmed Paşa, who dotted most of Thrace with buildings for the promotion of Islamic culture. In Komotene he erected a small but exquisite mosque, a double *hammām*, a domed and lead-covered *mekteb*, a *medrese* and an *imāret*. The mosque is the only Ottoman structure on Greek territory which has a number of multi-coloured tile panels dating from the best period of the Iznik kilns (988-98/1580-90).

Most of the information on Ottoman Komotene is contained in vol. viii of the *Seyāhat-nāme* of Ewliyā Çelebi, who visited the town in 1078/1667-8. By then, the place had apparently enjoyed a great expansion. Ewliyā numbers "4,000 prosperous, stone-built houses", 16 *maḥalles* and 5 Friday mosques, 11 *mesdjids*, two *imārets*, two *hammāms*, five *medreses*, seven *mektebs*, 17 *khāns* and 400 shops. A number of his figures can still be checked and are correct, others look suspiciously high (viz. the figure for the houses). This source especially sings the praises of the pious foundations of Ewrenos and Ahmed Paşa. His description of the latter's mosque is very accurate, and in no way exaggerated.

In the 18th century, epidemics of plague ravaged the Thracian lowlands and led to the disappearance of whole villages. (A lonely minaret in the fields 4 miles/7 km. of Komotene pathetically marks the site of the village of Eski Gümüldjine.) In the 19th century, the town witnessed again a considerable revival. Entire new quarters arose on its periphery, and especially on the eastern side. During that century, a number of Ottoman buildings were restored and new ones erected. The Eski *Djāmi'* (the old *mesdjid* of Ewrenos Beg) was greatly enlarged by enveloping it by a spacious prayer hall in the Ottoman "empire" style. The Yeni *Djāmi'* (of Ekmekdjizāde Ahmed) was enlarged in the same manner. In the time of 'Abd al-Ḥamīd II the town was linked with Istanbul and Salonica by a railway. The same sultan erected a large clock tower in the town as well as a *medrese*. Ottoman inscriptions, still preserved, record these actions.

Since the reorganisation of the provincial administration of the empire in the sixties of the 19th century, Komotene was the chef-lieu of a *sanjak* in the *wilāyet* of Edirne. In the eighties of the last century, the town is reported to have contained 13,560 inhabitants, ten Friday mosques, 15 *mesdjids*, two Greek and one Armenian churches, one synagogue, four *medreses*, two schools for higher education, ten *mektebs* and various schools for the education of the non-Muslim part of the population. The

*sālnāme* of the *wilāyet* of Edirne of 1310/1892 has substantially the same numbers, but adds details on individual buildings.

During the First Balkan War (1912), Komotene suffered a Bulgarian occupation. In the few months between Balkan War II and World War I, Komotene was the capital of a short-lived Muslim "Republic of Gümüldjine", as no Balkan power was then master of the territory. It was again occupied by the Bulgarians in World War I. After the Treaty of Lausanne (1923), town and territory were ceded to Greece, which promised to respect the ethnic-religious composition of its population (around 1900, 149,230 Turks (including a group of 20,000 Bulgarian-speaking Muslims, the Pomaks); 58,357 Greeks; and 35,122 Bulgarians). Under Greek administration, the Muslim element dwindled down to 112,665 in 1961, but the Greek element had mounted to 243,889 for all of Western Thrace. The Bulgarians disappeared during and after the two world wars.

Today Komotene is a mixed Muslim Turkish-Greek Orthodox town, roughly fifty-fifty between both groups. In 1961 the total number of inhabitants was 28,355. The town is the largest urban centre of Western Thrace. It is the seat of the *muftī* of all Muslims in Greece and has a Turkish high school, twenty mosques and *mesjīds*, and is the place where some Turkish and Islamic periodicals and newspapers are issued. Among the preserved monuments of Ottoman architecture are both mosques mentioned above, the Clock Tower, the *turba* of Fātima *Khānīm*, wife of the Grand Vizier Rusūçuklu Sherif Hasan Pasha, dating from 1195/1781, and the *'imāret* of Ghāzī Ewrenos. The latter was confiscated by the Greeks after 1923 and used as an electric power station till 1974, when some minor repairs were carried out, and a new purpose was sought for it (as a Museum of Turkish Folklore). In the time of the Colonels (1970), the *hammām* of Ghāzī Ewrenos was destroyed by dynamite; its 8th/14th-century Arabic inscription was already smashed in 1923. On the edge of the town is the *Poshposh* Tekke with a graveyard with a number of interesting steles belonging to local *ā'yān* and members of various dervish orders (*Naqshbandī*, *Rifā'ī* etc.). Until the early seventies, the town faithfully preserved its Ottoman physiognomy from the Hamidian age.

**GÜRAN**, SHAYKH ABU 'L-FATH B. SHAYKH MUHAMMAD, official and commander in 10th/16th century Muslim India. An Indian-born Muslim (*shaykhzāda*), he took service under Ibrāhīm Lōdī (923-32/1517-26) and was posted at Koyl [*q.v.*] (modern 'Aligarh). After the battle of Pānīpāt [*q.v.*] (932/1526), Bābur sent Mullā Apāk to Koyl for enlisting troops. Shaykh Gūran came over with two to three thousand men. He subsequently occupied Sambhal on behalf of his new master, and shortly afterwards seized Gwālīor from Tatār Khān. In the Battle of Kānwa (933/1527) he was one of the commanders of the right wing, and after the battle, he was sent to Koyl to expel the rebel Ilyās Khān. In Muharram 934/October 1527, at the invitation of Shaykh Gūran, Bābur paid a visit to his house at Pīlakhna (12 miles south of Koyl) and was entertained there hospitably. He participated in the siege of Cāndrīr (934/1528). In 936/1529-30 he was appointed *kīkadār* or castellan of Gwālīor, a post which he held till Bābur's death (937/1530).

During the reign of Humāyūn, he was appointed governor of Mālwa, and held this post till his death in 943/1536-7. He died in Mandsore and his dead body was brought from Mandsore to Koyl, where he lies buried in an identified grave.

Shaykh Gūran is said to have been an accomplished musician. He was usually referred to as Hindustānī Beg.

**GURĀRA** [see GOURARA, in Suppl.].

**GURĀNĪ**, a Balūč tribe of modern Pakistan, living partly in the Indus valley plains of the Dēra Ghāzī Khān District of the Panjāb [see DĒRADJĀT], and partly in the Mārī and Drāgā hills of the Sulaymān Mountains range and the upland plateaux of Shām and Paylāwagh, extending as far west as the modern Loralai District of northeastern Balūčistān.

The tribe is of mixed origin, some sections being Dōdāis of mingled Balūc-Sindh Rādjipūt extraction, whilst others are pure-blooded Balūc of the Rind and Lāshārī groups; the chief's family belongs to one of the Dōdāī sections.

In the early 19th century, the Gurcānīs had a reputation for turbulence and bellicosity, so that Edwardes could call them "troublesome" and "a vain and capitious race, ever ready to take offence and never to be relied on". After 1819 the Sikh ruler Randjīt Singh extended Sikh power across the Indus and by 1827 had overrun all the Dēra Ghāzī Khān district, this last being from 1832 to 1844 under the governorship (*kārdārī*) of Dīwān Sāwan Mal of Multān. He experienced much trouble from the Gurcānīs, and was compelled to build a fort in their country at Harand. This fort was in fact successfully defended for the Sikh cause by Muḥkam Čand against Lt. (afterwards Sir) H.B. Edwardes during the Second Sikh War of 1848-9, although the Gurcānīs, who controlled the surrounding countryside, joined the Balūc and Pathan levies of the British forces against their old opponents the Sikhs. Subsequently, in British India, the eastern part of the Gurcānī country came within the tribal area of Dēra Ghāzī Khān administered from the Panjāb, and the western part within the tribal agency areas of Balūcistān and the khanate of Kalāt [see KILĀT]; a complaint of the Gurcānīs in the later part of the 19th century was that these administrative divisions weakened the unity of the tribe and exposed them to depredations of their enemies in the adjacent territory of Kalāt, the Bugfīs and the Marrīs (see T.H. Thornton, *Colonel Sir Robert Sandeman, his life and work on our Indian frontier, a memoir*, London 1895, 337-8).

(C.E. BOSWORTH)

**GWĀDAR**, a town and district on the Makrān coast, formerly a dependency of the sultanate of 'Umān and since 1378/1958 a territorial possession of Pākistān. The district of Gwādar extends for 40 miles along the shoreline of Gwādar West Bay, from Cape Pishkān to Gwādar Head, and some 14 miles inland. The town stands on a sandy isthmus, about a mile wide, at the foot of a seaward, hammer-head promontory rising to 400 feet. Its inhabitants, numbering perhaps 5,000, are mostly Makrānī tribesmen of the Bulayday Maliki and Gički groups, along with small groups of Balūcīs, Arabs, Khōdjās and descendants of African slaves. They live mainly by fishing.

Until the mid-12th/18th century Gwādar, like the rest of Makrān, was in the hands of tribes who seldom recognised any paramount authority. Thereafter Makrān fell under the sway of Mīr Naṣīr Khān of Kalāt (regn. 1168-1209/1750 to 1794-5), the head of the Braḥūī confederation of the Balūc, who in turn acknowledged the Durrānī Shāh of Afghānistān as his suzerain [see KILĀT]. Naṣīr Khān gave Gwādar to Sayyid Sulṭān b. Aḥmad of Maskāt in 1198/1784 when the latter sought refuge at his court after being driven from 'Umān. Whether the grant was in perpetuity is unclear; for while the Āl Bū Sa'īd apparently continued to pay tribute for Gwādar to successive khāns of Kalāt, in the form of occasional gifts of slaves, until ca. 1274/1857-8, in 1277/1860-1 the ruling khān suggested that the government of India might purchase Gwādar from 'Umān and make it over to him.

The completion in 1279/1862-3 of the first section of the Indo-European telegraph from Karachi to Gwādar coincided with the assertion of Persian claims to Makrān, including Gwādar, and led the government of India to depute Colonel F.J. Goldsmid to investigate the nature of the 'Umānī title to Gwādar. He reported the right of possession to be prescriptive and indefeasible and the Persian claim to be groundless. The frontier of Persia with Kalāt was subsequently (1288/1871) fixed as starting at Gwāṭar Bay, some 50 miles west of Gwādar town.

The incorporation of Gwādar into Kalāt, which was under British protection, was suggested by the viceroy, Lord Curzon, in 1320/1902, both to prevent the smuggling of arms through the port to Persia and Afghanistan, and to preclude any possible French or Russian designs upon it. The suggestion was not acted upon lest it contravene the Anglo-French declaration of 1278-9/1862 on the integrity of the 'Umānī dominions. Gwādar remained an 'Umānī possession until it was ceded to Pākistān in 1378/1958, reputedly for the sum of 3 million sterling.

## H

**HABBA KHĀTŪN**, Kashmīrī singer and poetess. Called Zūn ("moon") before her marriage, she is a semi-legendary figure in the Valley of Kashmīr. Daughter of a peasant of the village of Čandahār, near Pāmpūr, 8 miles to the south-east of Srinagar, she was unhappy with her husband who ill-treated her, so she left him. Bīrbal Kāčrū in his *Wakīāt-i*

*Kashmīr*, which he wrote in the middle of the 19th century, says that, being a good singer and possessed of a melodious voice, she captivated the heart of Yūsuf Shāh Čāk (986-94/1578-86), who married her. But this account appears to be apocryphal, for it is not supported by any earlier authority. Neither the historian Ḥaydar Malik nor the author of the *Bahā-*

*ristān-i Shāhī*, who were contemporaries of Yūsuf Shāh, refer to her, although they mention all the prominent queens of the mediaeval period. This, however, does not mean that she did not exist, as some writers have begun to say in recent years. In the first place, there is a strong tradition, which is impossible to ignore, in Kashmīr that Habba Khātūn lived in the second half of the 10th/16th century; and in the second, there is a large body of her songs and poems in Kashmīr which are attributed to her and to no one else. What seems more probable is that she was a mistress of Yūsuf Shāh (*Tārīkh-i Hasan*, ii, 296), and Bīrbal wove round her all kinds of romantic stories. After Yūsuf Shāh surrendered to Akbar's general, Rādjā Mān Singh, at the end of Šafar 994/middle of February 1586, and he left Kashmīr with Rādjā Mān Singh, never to return, Habba Khātūn retired to the village of Pandačuk, about 5 miles to the south-east of Srinagar. She continued to live quietly in a cottage close to the mosque, both of which she had built, and died at the age of about 55 years.

Habba Khātūn appears to have been a cultured woman interested in music and the education of girls, for whom she opened *madrasas*. She was a poetess and introduced *lols* or love lyrics in Kashmīrī poetry. The songs which she composed are even to this day sung by the common people of Kashmīr; and it was she who is said to have introduced the melody known as *rast Kashmīrī*.

*Bibliography:* Bīrbal Kāčrū, *Mađīma' al-tawārīkh* (mss. in Punjab University Library, Lahore; Kashmīr University Library, Srinagar; and Bodleian Library, Oxford); Pīr Ghulām Ḥasan, *Tārīkh-i Hasan*, ii, ed. (MOHIBBUL ḤASAN)

**HĀBSIYYA**, a poem dealing with the theme of imprisonment. The term occurs in the Persian tradition for the first time about the middle of the 6th/12th century in Niẓāmī 'Arūđī's *Čahār makāla* (ed. Kazwīnī-Mu'īn, Tehrān 1955-7, *matn* 72). It is applied there to poems that were written by Mas'ūd-i Sa'd-i Salmān [*q.v.*] more than half-a-century earlier and which were still greatly admired as the sincere expression of the poet's sufferings. Although several Persian poets have composed poetry of this nature, the *hābsiyyāt* of Mas'ūd have remained both exceptional and exemplary. Not only was he the first to write them, but the theme itself was a characteristic of his work. It is developed by Mas'ūd to an extent that has not been equalled by any imitator of later times.

There is a very close link between the prison-poetry of Mas'ūd and the story of his life. Twice in the course of his career he became involved in the political downfall of his patrons at the provincial court of the Ghaznavids at Lahore. Consequently, he had to spend almost two decades, 480/1087-8 to 500/1106-7, banished to a number of remote fortresses (see C.E. Bosworth, *The later Ghaznavids, splendour and decay. The dynasty in Afghanistan and Northern India 1040-1186*, Edinburgh 1977, 16, 67-8, 72, 74, 88). The *hābsiyyāt* are, therefore, first of all topical poems, by means of which the poet tried to evoke the clemency of the Sultān of Ghazna, either directly or through the intermediary of influential friends.

Poems of various forms could serve this purpose. The structure of the panegyric *kašīda* offered the possibility to take the theme as the subject of the

prologue (cf. e.g. *Dīwān*, 19, 335 f., 356 f., 515). More often, however, a section especially devoted to an account of the poet's condition (*hāb-i hāl*) was added to the panegyric address of the patron (*Dīwān*, 58 f., 93 f., 107 f., 312 ff., 349 f., 489 f., 526 f.). In one instance, the two variants are combined (*Dīwān*, 427 ff.). There are also several non-panegyric *kašīdas* among the *hābsiyyāt* of Mas'ūd (e.g. *Dīwān*, 63 f., 67 ff., 106, 329 f., 331 f., 351 ff., 354 ff., 486 ff., 493, 503 f., 552 f.). Sometimes the characteristic *hābsiyya* motifs only occur incidentally in poems dealing mainly with other themes. Other forms besides the *kašīda* lent themselves for the use of a prison-poem.

The contents of the poems vary from complaints of the prisoner's misery in more or less general terms, hardly to be distinguished from the wider category of poetical complaints about any grievance whatsoever, to the specific portrayal of his life in the dungeon. In spite of the close relation between these latter poems and the reality to which they refer, there is a certain amount of conventionalisation to be noticed in the representation of the poet's condition. Recurrent motifs are the description of the physical and mental state of the prisoner, of the dungeon, the chains and the jailers, of the darkness and the long sleepless nights during which the poet contemplates the stars through the narrow window of his cell, and of the suffering on account of his long separation from relatives and friends. Mostly, the heavenly powers, instead of the Sultān, are blamed for the misfortune that has befallen the poet. But Mas'ūd sometimes admits that the real cause is to be sought in the fact that he, being only a poet, has aspired to political and military office (cf. especially *Dīwān*, 153 f., a *kašīda* addressed to a certain Muḥammad-i Khāṭībī who had met with a similar fate).

The *hābsiyya* elements are in these poems often connected with passages in which the poet speaks about his profession. These statements usually contain the conventional boast about the artistic abilities of the author, undoubtedly intended as an argument in favour of his release. But there are also utterances that are more specifically related to the *hābsiyya* theme: writing poetry is the sole comfort left to the prisoner; the poet resents the favours bestowed in his absence on worthless flatterers; and he becomes disgusted with the poetry of the court and pronounces his intention to abandon it altogether after he will be released (e.g. *Dīwān*, 109, 516, 526). Religious elements are only rarely mingled with these ruminations.

The models for prison-poetry set by Mas'ūd-i Salmān have continuously influenced other poets who for one reason or another have had to undergo a period of confinement. Two poets of Shirwān, Falakī and Khākānī [*q.v.*], who both flourished in the middle and later part of the 6th/12th century, are among the earliest imitators of Mas'ūd's *hābsiyyāt*. Khākānī's most celebrated prison-poems are the two odes in which he addressed Christian princes, although in these poems the display of the poet's exceptional knowledge of Christian terms and concepts overshadows the *hābsiyya*-elements (cf. V. Minorsky, in *BSOAS*, xi [1945], 550-78). With Khākānī, the motif of imprisonment is often only a metaphor. He likes to refer to Shirwān as his "place of imprisonment" (*hābsgāh*) where he has to stay against his will like a "captive" (*shahrband*). This is particularly evident in a *kašīda* written on the occasion of Sultān Sandjar's capture by the Ghuzz, which scattered the poet's hopes of a career in

*Khurāsān* (cf. *Diwān*, 155 ff.; see also 45, 282 and *Tuḥfat al-'Irāqayn*, ed. by Yahyā Ḳarīb, Tehrān 1333/1954, 29<sup>3</sup>, 30<sup>7</sup>, 108<sup>3-6</sup> (*dāmgāh-i Shīrwān*), 212<sup>3</sup>).

The close connection with actual experiences of imprisonment has made the conventional pattern of the Persian *ḥabsiyyāt* adaptable for use in later centuries, in spite of changing circumstances. In the Indian tradition of Persian poetry, prison-poems have been written up to the present day. Among the poets who resorted to it was Mirzā Ghālib [*q.v.*], who composed a few poems at the occasion of an imprisonment in 1848. *Ḥabsiyyāt* have also been written in Urdu (cf. Annemarie Schimmel, *The Islamic literatures of India*, Wiesbaden 1973, 11).

As far as modern Persian poetry in Iran is concerned, the best examples of prison-poetry are to be found in the works of Muḥammad-Taḳī Bahār [*q.v.*], who was imprisoned for political reasons on three occasions. Most of his *ḥabsiyyāt* came into being during the last two periods, which occurred respectively in 1929 and 1933-4. It is evident that Bahār was inspired directly by the mediaeval *ḥabsiyyāt*, although he introduced many contemporary elements, such as a complaint about the traffic noise outside his Tehran prison. Like Mas'ūd-i Sa'd-i Salmān, he used various forms of poetry. His most interesting work of this kind is a *mathnawī* entitled *Kāmāma-i zindān* (*Diwān-i aṣḥār*, ii, 2-126) in which the theme of the *ḥabsiyyāt* is combined with a wide range of other subjects. The poem has been designed to the model of ancient Persian didactical poetry. Bahār has made this influence explicit by inserting the narration of a dream about a meeting with the poet Sanā'ī [*q.v.*].

Modern Persian prose has also become a vehicle for the expression of the experiences of political prisoners. Outstanding examples of this new branch of the *ḥabsiyyāt* are *Ayyām-i mahbus* by 'Alī Daṣṭī and *Warāḳpārahā-yi zindān* by Buzurg 'Alawī.

*Bibliography*: Mas'ūd-i Sa'd-i Salmān, *Diwān*, ed. Rashīd Yāsīmī, Tehrān 1330/1951, *passim*; Falakī-i Shīrwānī, *Diwān*, ed. Hādī Ḥasan, London 1929, 57 f.; Khākānī, *Diwān*, ed. (J.T.P. DE BRUIJN)

AL-HADDĀD, AL-TĀHIR, nationalist and reformist Tunisian writer, considered as the pioneer of the movement for feminine liberation in his country.

Born in Tunis ca. 1899 into a family of modest status originally from the Ḥāma of Gabès, he studied at the Zaytūna [*q.v.*] from 1911 to 1920 and gained the *taṭwī'* (corresponding to the diploma for completing secondary education). He then took part in the trade union movement and was put in charge of propaganda in an organisation founded in 1924, the *Djāmī'at 'umūm al-'amala al-tūnisīyya*,

whose chief promoters were hunted down and banished in 1925. His experiences and his reflections inspired him to write an important work, *al-'Ummāl al-tūnisīyyūn wa-zuhūr al-ḥaraka al-nikābiyya* (Tunis 1927; 2nd ed. Tunis 1966), in which he gave an historical characterisation of trade unionism in Tunisia and of the *Djāmī'a* mentioned above, studied at length the social situation in Tunisia (but without trying to apply Marxian analyses, since his own country was too different from Europe and moreover under foreign domination), and put forward certain reforms.

However, he very soon affirmed that the first reform which should be put into practice concerned woman and the family, and in 1930 published *Imra'atunā fi 'l-sharī'a wa 'l-muḍḡama'* (2nd ed. Tunis 1972), in which he endeavoured to prove that his own liberal ideas were not in contradiction to the teachings of Islam, which had been the first to give dignity to the Arab woman, but should now develop progressively further. In this work, he inveighs against polygamy, the wearing of veils (assimilated to muzzles), the marriage of Tunisian maids with foreigners, divorce, which is a calamity, and finally, the ignorance in which women are kept. The first remedy for the ills of society is thus the education of girls and consequently, the setting-up of schools in which they can receive an education complete in every sphere, so that once they reach adult years, they will be on the way to organising more rationally the life of their family and to sharing in national activities just like the menfolk. Inevitably, there were criticisms. The main one directed at him was that of Muḥammad al-Ṣāliḥ b. Murād, in his *al-Ḥidād 'ala mra'at al-Haddād aw radd al-khata' wa 'l-kufr wa 'l-bida' allatī ḥawāḥā Kūb* "Imra'atunā fi 'l-sharī'a wa 'l-muḍḡama'" (Tunis 1931), see also 'Umar b. Ibrāhīm al-Barrī al-Madanī, *Sayf al-ḥakk 'alā man lā yarā al-ḥakk*, Tunis 1931.

Al-Tāhir al-Haddād, who died at Tunis on 7 December 1935, left also behind a certain amount of poetry in which he expressed some of his social ideas. Finally, in 1975 a collection of his reflections was published in Tunis under the title of *al-Khawāṭir*.

*Bibliography*: The personality and work of al-Tāhir al-Haddād are beginning to be the subject of studies and monographs, since he is now considered to some extent a figure of national pride. See in particular al-Djilānī b. al-Hādjīdj Yahyā and Muḥammad al-Marzūki, *al-Tāhir al-Haddād, ḥayātuhu, tuwāṭṭuhū*, Tunis 1963 (in which his poetry is to be found, already gathered together by Zayn al-'Abidīn al-Sanūsī, *Ta'rīkh al-adab al-tūnisī fi 'l-karn al-rābi' 'aṣḥar*, Tunis 1928); Aḥmad Khālid, *al-Tāhir al-Haddād wa 'l-bī'a al-tūnisīyya fi 'l-thuluth al-awwal min al-karn al-'ashrīn*, Tunis 1967; Dja'far Mādjid, *al-Tāhir al-Haddād*, Tunis 1979 (study, followed by selected passages and verse and some of the *Khawāṭir*); Mutafarrij [= L. Bercher], in *REI* (1935), 201-30; J. Berque, in *Études d'orientalisme... Lévi-Provençal*, ii, Paris 1962, 487-8; C. Lamourette, *Polemique autour du statut de la femme musulmane en Tunisie en 1930*, in *BEO Damas*, xxx (1978), 12-31. (Ed.)

AL-HĀDĪ ILA 'L-HAKK, ABU 'L-HUSAYN YAHYĀ B. AL-HUSAYN B. AL-ḲĀSIM B. IBRĀHĪM AL-ḤASANĪ, the founder of the Zaydī imāmate in Yaman, was born in al-Madīna in 245/859. His mother was Umm al-Ḥasan Fāṭima bint al-Ḥasan b. Muḥammad b. Sulaymān b. Dāwūd b. al-Ḥasan b. al-Ḥasan. He excelled early in religious learning and by the age of seventeen is said to have reached the level of rendering independent judgments in *fikh* and composing treatises. Because of his erudition, physical strength, bravery, and asceticism he soon came to be considered

by his family, including his fathers and uncles, as the most suitable candidate for the Zaydī imāmate. Between 270/884 and 275/889 he visited with his family Āmul in Ṭabaristān, then under the rule of the Zaydī 'Alid Muḥammad b. Zayd, evidently in order to seek the support of the adherents of the doctrine of his grandfather al-Ḳāsim b. Ibrāhīm [q.v.] there. His activity soon aroused the suspicions of Muḥammad b. Zayd and he was forced to leave precipitately. He also seems to have visited Baghdād briefly. In 280/893-4 he came to northern Yaman for the first time, invited by tribes in the region of Ṣa'da who were hoping that he might put an end to their feuds. He led a campaign as far south as al-Ṣharafa near Ṣan'ā', but meeting much disobedience among his followers, decided to return to al-Fara', a day's trip southwest of al-Madīna. Three years later, he was again urgently invited and on 6 Ṣafar 284/15 March 897 entered Ṣa'da which became his capital and permanent base of operation. Shortly after his arrival, he issued his formal call (*da'wa*) for support as the *imām* and assumed the title *amīr al-mu'minīn* with the caliphal name al-Hādī ila 'l-Ḥaḥḥ.

After consolidating his control over the area of Ṣa'da, he extended his rule over Nadjṛān in Djumādā II 284/July 897, where he concluded a special treaty with the large community of Dhimmīs. In the following year he conquered the towns of Khaywān and Athāfīt south of Ṣa'da. His efforts to gain possession of Ṣan'ā' were only temporarily successful. The town was voluntarily turned over to him by its ruler, Abu 'l-ʿAtāhiya of the Āl Ṭarīf, who had already previously supported him, and he occupied it for the first time on 22 Muḥarram 288/19 January 901 and then pushed his conquests south as far as Dhamār and Djayshān. The opposition of the Āl Yu'fir and the Āl Ṭarīf, who had been entrenched in these regions, was strong, and he quickly lost them again and definitely relinquished Ṣan'ā' in Djumādā II 289/May 902 in a state of severe illness. A year later, a new campaign to take the town ended in failure and the capture of his son Muḥammad by the enemy.

In Djumādā II 293/April 906 he again entered Ṣan'ā', invited by a coalition of Yamanī chiefs opposed to the Ḳarmaṭī leader 'Alī b. al-Faḍl. After a quarrel with As'ad b. Abī Yu'fir, he left voluntarily in Muḥarram 294/November 906, and the Ḳarmaṭīs took possession of the town. Only during a campaign of 'Alī b. al-Faḍl to Tihāma, an army of al-Hādī once more occupied Ṣan'ā' from 19 Raḍjab—12 Shawwal 297/7 April—23 June 910. Also abortive was a campaign of al-Hādī to Tihāma, probably early in 293/autumn 905. Even his rule in northern Yaman was shaken by numerous tribal rebellions, especially in Nadjṛān, where the Banu 'l-Hārith revolted on every occasion. In 296/908 they succeeded in killing his governor, and al-Hādī, already plagued by illness, was apparently unable to restore his rule over the province. His most loyal supporters were, besides members of his family and various other 'Alids, a small troop of "Ṭabarīs", i.e. Zaydī volunteers from Daylamān and Kalār who arrived in two groups in 285/898 and 289/902. He died on 19 Dhu 'l-Hiḍjja 298/18 August 911. His tomb in the mosque of Ṣa'da became a place of pilgrimage for the Zaydīs.

Al-Hādī's doctrine in *fiḥk*, laid down chiefly in his unfinished *K. al-Aḥkām* and the *K. al-Muntakhab* collected by his follower Muḥammad b. Sulaymān al-Kūfī, became authoritative among the Zaydīs in Yaman as well as part of the Caspian Zaydī community. It was based on the doctrine of his grandfather al-Ḳāsim b. Ibrāhīm, though in some points

al-Hādī adopted more strictly Shīrī views, and was further elaborated, in Yaman, by al-Hādī's sons Muḥammad al-Murtaḍā (d. 310/922) and Aḥmad al-Nāṣir (d. 322/934), and, in the Caspian community, by the *imāms* al-Mu'ayyad bi'llāh (d. 411/1020) and Abū Ṭālib al-Nāṣiḥ (d. 424/1033). In his theological works, al-Hādī generally espoused the doctrine of the Mu'tazilī school of Baghdād rather than that of his grandfather. It is unlikely, however, that he ever was a student of Abu 'l-Ḳāsim al-Balkhī, the contemporary head of this school, as some late sources state. Concerning the imāmate, he took a radically Shīrī position, sharply condemning Abū Bakr and 'Umar as usurpers.

**HADJDIJĀM** [see FAṢṢĀD, in Suppl.].

**HADJI** [see HADJDI].

**HĀDJDJĪ AL-DABĪR**, sobriquet of 'ABD ALLĀH MUḤAMMAD B. SIRĀDJĪ AL-DĪN 'UMAR AL-NAHRWĀLĪ B. KAMĀL AL-DĪN MUḤAMMAD AL-MAKKĪ AL-ĀṢAFĪ ULUGH KHĀNĪ, historian in Guḍjarāt under the Muẓaffarid dynasty. He was born in Mecca in 946/1540, the son of a Guḍjarātī official who had been sent there in 941/1535 with the treasure of the Muẓaffarid Bahādur Shāh Guḍjarātī [q.v.] and who returned to India in 962/1555, settling in Aḥmadābād. In 965/1559 Hādjdi al-Dabīr entered the service of Muḥammad Ulugh Khān, a noble in the party of 'Imād al-Mulk, who opposed I'timād al-Mulk [see GUḌJARĀT]. After the invasion and conquest of Guḍjarāt by Akbar in 980/1572-3, his father was entrusted with the *wakfs* under the Mughal administration, and Hādjdi al-Dabīr himself with the duty of conveying the funds to Mecca and Medina. He lost this post, however, in 983/1576, the year of his father's death. Subsequently we find him in the employ of another Guḍjarātī noble, Sayf al-Mulūk, in Khāndesh, and finally in that of the Khāndesh noble Fūlād Khān, who died in 1014/1605.

This is the latest date mentioned in his Arabic chronicle, *Zafar al-wāliḥ bi-muẓaffar wa-āliḥ*, in two *daf-tars*: (1) an account of the Muẓaffarids of Guḍjarāt and of the neighbouring rulers in Khāndesh and the Deccan, and (2) a general history of Muslim rule in northern India. Of the lost authorities he quotes, the most important is the *Ta'riḫ* (or *Ṭabaḳāt*)-i Bahādurshāhī of Ḥusām Khān, which covered the period down to 940/1535. The date of composition of Hādjdi al-Dabīr's own work is problematical, since he mentions the *Mir'āt-i Sikandarī*, which was presented to the world only in 1020/1611. Ross therefore hypothesised that he began to write in 1015/1606.

(P. JACKSON)

**HĀDJJĪ IBRĀHĪM KHĀN KALĀNTAR**, Persian statesman, was the third son of Hādjijī Hāshim, the headman, or *kadhudā-bāshī*, of the Haydarīkhāna quarters of Shīrāz in the reign of Nādir Shāh. His ancestors were said to have been converts to Islam from Judaism. One of them emigrated from Kazwīn to Iṣfahān and is said to have married into the family of Hādjijī Qawām al-Dīn Shīrāzī. Hādjijī Maḥmūd 'Alī, Hādjijī Ibrāhīm's grandfather, was a wealthy merchant of Shīrāz. After the death of Mīrzā Muḥammad, the *kalāntar* of Shīrāz in 1200/1786, Dja'far Khān Zand made Hādjijī Ibrāhīm *kalāntar* of Shīrāz, which office he continued to hold under Dja'far Khān's successor, Luṭf 'Alī Khān. He appears to have enjoyed a position of considerable influence in the city and among the tribal leaders and governors of the surrounding districts. Although his relations with Luṭf 'Alī Khān were disturbed by mutual suspicion already in 1204/1789-90, when Luṭf 'Alī set out to attack Iṣfahān in 1205/1790-1 he left Hādjijī Ibrāhīm in charge of affairs in Shīrāz. The latter seized the city during Luṭf 'Alī's absence. Disorders meanwhile broke out in Luṭf 'Alī's camp. He escaped and fled to Shīrāz, thinking that the city was still in his hands. After Hādjijī Ibrāhīm had refused him access, he retired to the south. Hādjijī Ibrāhīm sent an army after him, but this was defeated in Tangistān. Meanwhile, Hādjijī Ibrāhīm entered into negotiations with Ākā Muḥammad Khān Qādjār and was appointed *beglarbeg* or governor of Fārs. Zand resistance, however, continued and was not finally overcome until 1208/1794 [see **QĀDJĀR**].

In 1209/1794 Ākā Muḥammad Khān made Hādjijī Ibrāhīm *ṣadr-i a'zam*, in succession to Mīrzā Shafī Māzandarānī, with the title I'timād al-Dawla, which office he held for seven years, first under Ākā Muḥammad Khān and then under Faṭḥ 'Alī Shāh. He appears to have been a competent administrator and virtually to have presided over every department of state. His brothers and sons also held governments. His power, however, aroused jealousy. His enemies persuaded Faṭḥ 'Alī Shāh that he was plotting to overthrow him, and on 1 Dhu 'l-Hijjja 1215/15 April 1801 he was arrested in Tehran. Those of his relatives who held provincial governments were also seized. He was blinded and exiled to Kazwīn, where he died, and his estates were confiscated. Only two of his sons, twins, 'Alī Riḍā and 'Alī Akbar Qawām al-Mulk (b. 1203/1788-9), survived.

## HĀDJIB.

i.v. — See Vol. iii.

vi. — IN MOROCCO.

This office, which existed already in the Almohad organisation, though with a very modest role, appears again under the Marinids (J. Temporal, translator of Leo Africanus, calls the *hādjib* "chief of the menials", and A. Epaulard, another translator, makes him "a chamberlain", head of the "court attendants") and was still alive under the Sa'dids.

Under the 'Alawids, the *hādjib* was for long the most important official of the Sharīfian palace. He was specifically designated as the intermediary between the sovereign and the high officials on the *Makhzan* [*q.v.*], and it was through him that they were given their orders and commissioned for missions. He kept the seal or stamp for fixing to all official documents emanating from the ruler, and he had under his command all the internal professional groups (*hinta*, pl. *hnāṭi*) of the palace servants, e.g. tapestry-weavers, cooks, etc. In the protocol list, the chief minister came after him, and he himself had the place immediately behind the ruler, whom he followed like a shadow. The office seemed so necessary that the pretender al-Ḥiba [*q.v.* in Suppl.], almost immediately when he was proclaimed sultan in the Sūs in 1912, nominated someone as his *hādjib*. The Hādjib Aḥmad b. Mūsā known as Bā Ḥmād [*q.v.* above] was remembered as a great man in Morocco at the end of the 19th century.

However, since the recovery of independence in 1956, the *hādjib* has lost his importance, and many of his responsibilities have passed into the hands of the Director of Protocol appointed by the Ministry of the Royal Palaces.

## HĀDRAMAWT

The opportunity is taken of prefixing to the main body of the article, on Ḥādrāmawt in the Islamic period, some important recent items of information on the region in the pre-Islamic time.

### i. PRE-ISLAMIC PERIOD

In 1974 a French archaeological mission under the direction of J. Pirenne began work at Shabwa, which is still continuing. The most significant result has been the tracing of a very extensive town site to the north-east of the rectangular sacral enclosure which the earliest visitors had noted; included in this are some impressive ruins of what was probably the royal place, and there were large tracts of cultivated ground in the wadi.

In 1973 Muṭahhar al-Iryānī published a series of Sabaeen votive texts from Ma'rib which add much to

our knowledge of relations between Saba and Ḥaḍramawt. These were sometimes peaceful, as in the case when a Sabaean mission was sent to Ṣhabwa to take part in the festival of the Ḥaḍramite national deity (*Fī ta'riḫ al-Yaman*, 184). At other times relations were hostile, and the most striking text of this kind (no. 13) shows that while the main Sabaean and Ḥaḍramite armies were engaged in battle in the Wādī Bayḥān, a small Sabaean flying column, aimed at "rescuing" the queen of Ḥaḍramawt who was sister to the Sabaean king, managed to capture the royal palace in Ṣhabwa and hold out there for 15 days until relieved by the arrival of the main Sabaean army after it had decisively defeated the Ḥaḍramite force; the king of Ḥaḍramawt was sent back as a prisoner to Ma'rib. Subsequently, the Sabaean forces raided the port of Cane and destroyed a number of ships there—evidence that the later fame of the Ḥaḍramīs as seafarers goes back to early times.

In 1974-6 Garbini has plausibly argued that the view (up to then almost universally accepted) of the nature of the South Arabian pantheon is devoid of serious evidence in favour of it, and exposed to vital evidence contradicting it. Hence the reference in the earlier entry to "the astral triad of moon, sun and Venus-star", and the identification of the Ḥaḍramite national deity as a moon god, must be treated now as out-of-date. Garbini's re-evaluation of the Sabaean national deity as essentially a Dionysiac vegetation deity, having also affinities with a Herakles figure and solar associations, must extend to the Ḥaḍramite deity as well.

Significant new facts are now available about the foundation of a Ḥaḍramite settlement on the coast east of Salāla; this Pirenne identifies as the classical Moscha.

This opportunity may also be taken of saying that the spelling of the name of the sand-desert between Ma'rib and Ṣhabwa as Sab'atayn (a spelling deriving from Philby) seems to be mistaken; modern maps record it in the spelling Sab'atayn. It is what Yāqūt and other mediaeval Arab geographers call the Ṣayḥad desert.

## ii. IN THE ISLAMIC PERIOD

In Islamic tradition, the name is derived either from the personal name Ḥaḍramawt b. Ḥimyar, or from *ḥādīr mayyit*, or some such expression.

The name is applied to the wādī, the area and the *qabila* of South Arabia. The wādī runs roughly west-east along the 16° line about 48° 15' to 49° 15', at which point it becomes the Wādī al-Masīla, as it turns south-east and then due south to flow into the sea between Ḥayrīdj and Sayḥūt on the Indian Ocean coast.

The area of Ḥaḍramawt begins in the west at a line drawn between Ṣhabwa in the north to the sea at Mayfa' on the Wādī Ḥaḍīr and extends south of Wādī Ḥaḍramawt as far as Wādī al-Masīla in the east. The

main towns of the area, which covers the territories of the pre-independence Ku'ayfī and Kathīrī sultanates and now falls within the fourth and fifth governorates of the People's Democratic Republic of Yemen, are, in the north and along the Wādī, Ṣhabwa, Ḥurayḍa, Ṣhibām, Say'ūn, Tarīm, 'Ināt [*q.v.* below] and Ḳabr Ḥūd. The chief southern coastal towns are al-Mukallā, al-Shīḥr (though see below, on history) and Ḡhayl Bā Wazīr. Ḥaḍramawt is thus bounded by the sea in the south, Mahra country, the sixth governorate, in the east, the desert, the Empty Quarter, in the north and the western half of the fourth governorate in the west.

The tribal group named Ḥaḍramawt is supposed to inhabit the east and central areas of the Wādī itself, Ṣhibām being described as the beginning of its territory. Its members are descended through Saba' al-Aṣḡhar from Ḥimyar.

### 1. History.

It is difficult to build up a comprehensive picture of the early and mediaeval history of Ḥaḍramawt. This is due to the relative inaccessibility and lack of exploitation of local Ḥaḍramī chronicles, still with few exceptions in manuscript, and to the extremely cursory treatment of the area in the Yemeni histories, in which Ḥaḍramawt appears only as a distant province of the Yemen.

First contacts with Islam were made directly with the Prophet, rather than through the Yemen, however, and there was correspondence between him and the local Kinda leaders of Ḥaḍramawt, resulting in the visit of al-Ash'ath b. Ḳays (or perhaps Wā'il b. Ḥaḍīr) to Medina. There he was well received by the Prophet, who acceded to his request and appointed Ziyād b. Labīd al-Anṣārī as ruler of Ḥaḍramawt. The latter remained there until after the Prophet's death. There can be no doubt that the conversion of the Ḥaḍramīs to Islam was not carried out as simply and as speedily as the Muslim sources insist, and the role of Ziyād and his successors in the area must have been more one of religious propagandist than of political leader. Indeed, Ḥaḍramawt, like the Yemen with its appallingly difficult problems of communication, must have entered the Islamic fold very gradually over an extended period of time.

The Prophet, the Orthodox, Umayyad and 'Abbāsīd caliphs until the 3rd/9th century, all appointed governors to Ṣan'a', al-Djanad and Ḥaḍramawt. It is clear that the governor of the first always reported directly to the seat of Islamic government and that occasionally the latter two did also. For the most part, however, the governor of Ḥaḍramawt was merely a junior assistant of the governor of Ṣan'a', and thus Ḥaḍramawt became a province (*mikhlatf*) of the Yemen. It should be mentioned at this juncture that al-Shīḥr, perhaps because of the independence of strong local rulers, during the early and mediaeval periods invariably figures as a separate political entity, not part of Ḥaḍramawt at all and always mentioned alongside it. Probably due to the steady exodus of many prominent Ḥaḍramīs from their native land to other parts of the empire during the Orthodox caliphate, the area sank into relative obscurity in the Umayyad and 'Abbāsīd eras.

The year 130/747 saw the introduction into Ḥaḍramawt of Ibādī doctrines by Abū Ḥamza al-Mukhtār b. 'Awf al-Azdī al-Ḥarūrī, a close follower of 'Abd Allāh b. Ibād, from whom the Ibādīyya derived its name, and a Ḥaḍramī, 'Abd Allāh b. Yaḥyā al-Kindī. Khārīdjī ideas had in fact penetrated Ḥaḍramawt as early as 66/685, when a party of

Naḍjdiyya, the followers of Naḍjda b. ʿAmīr al-Hanafī, arrived. It is possible therefore that the area was still receptive to Ibādī ideas in the 2nd/8th century. Al-Mukhtār b. ʿAwf was a native of Baṣra and met ʿAbd Allāh b. Yahyā during the pilgrimage of 128/745. He was persuaded to return to Ḥaḍramawt with ʿAbd Allāh two years later. To what extent the Ibādīyya managed to control Ḥaḍramawt is not at all clear, though al-Masʿūdī, writing of the position in 332/943, states that they were predominant in the area and that there was no difference between them and the Ibādīs of ʿUmān. Certainly, the final blow to the movement in Ḥaḍramawt did not come until the intervention from the Yemen of the Ṣulayhīds, staunchly Shīʿī and maintaining close ties with Fātimid Egypt, in the mid-5th/11th century.

It is evident that the Ibādīyya did not exercise political control over the entire area of Ḥaḍramawt, however. The Banū Ziyād, originally ʿAbbāsīd representatives in the Yemen in the early 3rd/9th century, operating from their headquarters in Zabīd, conquered Tihāma and ruled independently. They then for some unknown reason became involved in Ḥaḍramawt also. The founder of the dynasty himself, Muḥammad b. Ziyād, had been appointed governor of the Yemen by the ʿAbbāsīd caliph al-Maʾmūn. It was he who brought about Ziyādīd rule in Ḥaḍramawt, rule which was to continue after his death in 245/859 until after the fall of the Ziyādīds in 407/1016.

In fact, Ḥaḍramawt fell into Ṣulayhīd hands after their capture of Aden in 454/1062. Aden, Laḥḍj, Abyan, al-Shīhr and Ḥaḍramawt were all at the time in the hands of the Banū Maʾn, the little-known descendants of Maʾn b. Zāʾida [*q.v.*], who were at first left to administer the territories on behalf of their conquerors. In 473/1080, however, after the Maʾnīds' refusal to pay the agreed *kharaḳj* to the Ṣulayhīds, the latter installed their Shīʿī protégés, the Banū Zurayʿ, to run the affairs of the area, including Ḥaḍramawt, on their behalf. Thus the situation remained until after the entry of the Ayyūbīds into the Yemen in 569/1171.

It is difficult at this stage to work out the exact chronology of events in Ḥaḍramawt. Certainly, with Ṣulayhīd control of Ḥaḍramawt through their clients, the Zurayʿīds, lost, three powerful local dynasties appeared on the scene. Centred on Tarīm, the Banū Ḳaḥṭān took over much of the area, while the remainder fell to the Banu ʿI-Daʿār in Shībām and the ʿĀl Iḳbāl on the coast in al-Shīhr. The greater part of Ḥaḍramawt was taken by ʿUṭhmān al-Zandjīlī, the Ayyūbīd *nāʾib*, in 576/1180 after the departure for the north of the first Ayyūbīd ruler, Tūrān-Shāh b. Ayyūb, however, though pockets of local rule continued into the 10th/16th century, for the Ayyūbīds were never in a position to pay much attention to Ḥaḍramawt; the demands of the troubled local situation on the Ayyūbīd administration in the Yemen proper were too great to allow the luxury of firm control there. Other local dynasties followed: the ʿĀl Yamānī, for example, from 621/1224 in Tarīm, surviving into the 10th/16th century.

The Ayyūbīds' efforts in pacifying almost the whole of the Yemen proper and in putting an end to all local dynasties, with the exception of the Zaydīs north of Ṣanʿāʾ, ensured for their successors, the Rasūlīds, a peaceful and stable country. The brilliant Rasūlīd administration, which had assumed power through bloodless change, was not only able to consolidate the efforts of their erstwhile masters, the Ayyūbīds, but was also able to think of eastwards

expansion and the recapture of Ḥaḍramawt, in any case a province of the Yemen. There was, therefore, considerable Rasūlīd activity along the south coast, even during the reign of the first sultan, al-Malik al-Manṣūr ʿUmar who died in 647/1249. During that of his son and successor, al-Muzaffar Yūsuf, who died in 694/1295, Rasūlīd power was first implanted as far along the coast as the port of Zaḑār, which under the Rasūlīds marked the eastern limit of their control.

Possibly the only, and certainly the greatest challenge to Rasūlīd authority in Ḥaḍramawt was that of the Ḥabūḍīs. Though originally from Ḥabūḍa in Ḥaḍramawt, the dynasty was founded in Zaḑār by Muḥammad b. Aḥmad (d. 620/1223). The family continued on the coast through Aḥmad b. Muḥammad (d. 628/1230) and Idrīs b. Aḥmad (d. 670/1271). The latter's son, Sālim b. Idrīs, seized the opportunity to take Ḥaḍramawt in 673/1274. Despite the cries of help to the Rasūlīds from the local population in Ḥaḍramawt, it took the plundering by the Ḥabūḍīs of a Rasūlīd ship off Zaḑār and the Ḥabūḍīs' urging the Rasūlīd vassals of al-Shīhr to cast off their allegiance to their masters to bring the latter with all speed eastwards from their Yemenī capital, Taʿizz. Zaḑār was recaptured and Ḥaḍramawt recovered. The Ḥabūḍī house was destroyed.

It was the Ṭāhīrīds who succeeded in the mid-9th/15th century to most of the territories held by the Rasūlīds, particularly those in the south and east, though they were never strong in the Yemen north of Taʿizz. Although much less is known of this dynasty than of the Rasūlīds, their predecessors, it is possible to assert that Ḥaḍramawt for a time came under their control. By the latter half of the 9th/15th century, however, the Kathīrīs, a tribal group originating from Zaḑār, had taken over some of the interior of the country. They also controlled al-Shīhr which they had at first held for the Ṭāhīrīds. Possibly as early as the beginning of the 10th/16th century, a new political force was introduced into the area, for with the Kathīrīs quarrelling among themselves, one faction brought into Ḥaḍramawt to assist it a group of Yāfīʿīs, a large tribal unit inhabiting the area to the north-east of Aden. Yāfīʿī influence lingered on after this dispute, particularly in the seaports of al-Mukallā and al-Shīhr. From now on down to the 20th century, the political history of Ḥaḍramawt is nothing more than the chronicle of disputes between the Kathīrīs and at least two Yāfīʿī tribal factions, though of course from the early 10th/16th century both the infidel Portuguese and the Turks had shown an interest in the seaports along the South Arabian coast and had at times attacked and even occupied them.

In the 20th century, under the British Protectorate Ḥaḍramawt was divided between the Kathīrī sultanate with its capital in Sayʿūn and the Kuʿaytī sultanate, originally a Yāfīʿī tribal group, centered on al-Mukallā. Both sultanates were thus part of the Eastern Aden Protectorate until the independence of the whole of South Arabia in 1967.

## 2. Social organisation.

In general terms Ḥaḍramī society can be divided into four classes: the *sayyīds*, the *mashāyikh*, the *kaḑāʿil* (tribesmen) and the *masākīn* or *ḑuʿafāʾ* ("poor").

It is interesting to note that the pre-Islamic South Arabian inscriptions refer to an aristocratic group of *musawwads*, a word used to this day in Ḥaḍramawt to denote the *sayyīds*. The latter are the descendants of the Prophet, while the *mashāyikh* are

those noble families with the right to the hereditary title of *shaykh*, a word denoting class distinction, not a tribal chief. The *sayyids* reached Ḥaḍramawt in the early 6th/12th century, where they found many scholars, particularly in Tarīm and mainly of the *mashāyikh* class. Petty jealousies and quarrels between the *sayyids* and *mashāyikh* have continued from the time of the arrival of the former in Ḥaḍramawt, though these have never prevented the transmission of knowledge and learning between the two social strata. By the close of the 6th/12th century only the 'Alawī group of *sayyids* remained to give their name to them—the 'Alawī *sayyids*.

In an area of constant warfare and hostilities, the institution of the neutral territory was essential. Thus in Ḥaḍramawt the *hawta* [q.v.] came into being at an early date. A saint in his own life-time would demarcate the area of the *hawta* and arrange for the agreement of the tribes and, if necessary, the authorities in the area, that a particular *hawta* should remain inviolate and under the control of a *manṣab*. Before the arrival of the *sayyids* in Ḥaḍramawt, the *hawtas* were in the hands of the *mashāyikh*. It was only then that the *sayyid hawtas* were gradually established, leading to the general decline of the *mashāyikh* ones.

### 3. Geography.

Ḥaḍramawt is a hot and, with the exclusion of the coastal strip, dry land. The coastal plain is naturally extremely humid, as well as hot. Again if one excludes the coastal areas, it is mountainous too, and this, together with the extremely low rainfall throughout the area, means that very little of the total can be made over to agriculture, the chief industry. Dates have traditionally formed the main crop, though in more recent times cotton has been an important commodity also. Local grain crops include maize and oats. Tobacco is also found in places. Agriculture is watered either by the perennial flow of water in the wādīs (*ghayl*) or by wells.

### 4. The people.

The inhabitants of Ḥaḍramawt are Shāfi'ī Sunnīs. As is not surprising in such a poor area, they have always been prepared to travel abroad in search of earning their livelihood. Many travelled to the East Indies, in particular to Java, and their financial gains remitted home have always been the mainstay of the local economy.

### iii. LANGUAGE AND DIALECT

The chief language of Ḥaḍramawt is, of course, Arabic. Until the most recent times, however, the literary Arabic of most regions of Arabia would include some non-literary vocabulary. These items were for the most part technical words of various trades and professions and, indeed, even at the present day there are often no literary equivalents for such technical words and expressions, except in the domain of commerce. Landberg and Serjeant have well documented the technical vocabulary of such trades as fishing and building. Some dictionnaires of Classical Arabic, such as the *Tāḏj al-'arūs* and Nashwān's *Šams al-'ulūm* give southern Arabian terms not appearing in the earlier lexical sources.

The Ḥaḍramī dialect does, however, have a limited literary application in various genres of popular poetry. This dialect is in any case fairly close in phonology, morphology and syntax to literary (that is to say modern Classical) Arabic. This poetry has been difficult to record in the past, though Serjeant made a most useful collection, because it is often of such a satirical or personal nature that the poet would prefer its circulation to be circumscribed. It may be, nevertheless, that this kind of poetry will find its way increasingly into print, in much the same way as *nabaḫī* poetry is now widely printed and read in northern Arabia.

The Mahra [q.v.] make up a considerable linguistic minority in Ḥaḍramawt, in that part adjoining Dhofar (Zafār), and it is undoubtedly true that Mahrī [q.v.] or an earlier form of this Semitic language was the principal language of the whole or most of the South, though even in pre-Islamic times Arabic would seem to have been an important language for the composition of formal works such as poetry.

The Mahrī of Ḥaḍramawt is fairly well-documented in the publications of the Austrian South Arabian Expedition, which are, to all intents and purposes, confined to this dialect of Mahrī. The Ḥaḍramī dialect of Mahrī is less conservative than that of Dhofar and a good deal more penetrated by Arabic. Indeed, many Mahra in Ḥaḍramawt now speak only Arabic, and this is particularly true of the settled elements. In Dhofar, on the contrary, many Mahra have adopted *Ḍjibbālī* (or *Šherī*), the language of the mountain area.

Most of the dialects of Mahrī, or languages closely related to it, are spoken in Dhofar, but there is in Ḥaḍramawt, close to the border, a language spoken, namely *Höbyöt*, whose existence has not previously been reported. On the basis of the little information available, *Höbyöt* seems to be a Mahrī dialect with a considerable intermixture of *Ḍjibbālī*. Another hitherto unreported language or dialect spoken not far over the Dhofar border, called *Whēbyöt*, may in fact be the same as *Höbyöt*, with perhaps a greater admixture of *Ḍjibbālī*.

(T.M. JOHNSTONE)

**HĀFĪZ TANĪSH** B. MĪR MUḤAMMAD AL-BUKHĀRĪ, with the poetical name Nakhli, historian of 'Abd Allāh Khān [q.v.], the Shaybānid ruler of Bukhārā.

His father was close to 'Ubayd Allāh Khān (940-6/1533-40). Hāfiz Tanīsh mentions in his historical work that he began to write it, being 36 years old, when 'Abd Allāh Khān established his rule over Transoxania and made Bukhārā his capital. It was believed for a long time (including by the present author) that he means the official accession to the throne of 'Abd Allāh Khān, which took place in 991/1583, and therefore the date of his birth was supposed to be 956/1549 (36 years before the date of the beginning of his work, cf. below). However, Hāfiz Tanīsh mentions also that he wrote a *kaṣīda* on the accession to the throne of Iskandar Khān, the father of 'Abd Allāh Khān (968/1560), which must place the date of his birth much earlier—probably, in the 1530s or even 1520s. In that case, Hāfiz Tanīsh may have meant by the establishment of the rule of 'Abd Allāh Khān over Transoxania the capture of Bukhārā (964/1557), or the accession of Iskandar Khān (under whom 'Abd Allāh was the actual ruler), or the capture of Samarkand (986/1578). Hasan Nīthārī in his anthology *Mudhakkir al-ahbāb*, written in 974/1566-7 (see Storey, 802, no. 1102), mentions a poet Nakhli among those poets who had not yet reached an advanced age and lived in Bukhārā (MS. of the Leningrad Branch of the Institute of Oriental Studies, B-4020, ff. 126-7); this person may very probably be Hāfiz Tanīsh.

He began to write probably his Persian history of 'Abd Allāh Khān in the 1570s or 1560s; it was known already in 993/1585, when his contemporary Mīr Sayyid Muḥammad praised it in his *Adhkār al-aṣkiyā'* (see B. Aḥmedov and K. Munirov, *Hāfiz Tanīsh Bukhārī* [in Uzbek], Tashkent 1963, 55). After 'Abd Allāh Khān had been proclaimed the supreme khān of all the Uzbeks (991/1583), Hāfiz Tanīsh was introduced to his court by the historian's patron, an influential *amīr* Qul-Bābā Kōkältāsh, and became an official historiographer, usually also accompanying the khān in his numerous military campaigns. In 992/1584 he began to re-write his history according to a new plan, and gave it the title *Sharaf-nāma-yi Shāhī* (a chronogram = the date 992); both in Central Asian historiography and in modern scholarly literature it became known also as the *'Abd Allāh-nāma*. According to the initial plan of this second version, as laid down in author's preface, it was to be divided into a *muḥaddima* (the genealogy of 'Abd Allāh Khān and a short history of the Djučids and the Shaybānids, his predecessors); two *makālas* (1) from 'Abd Allāh Khān's birth in 940/1533 to his accession and (2) from his accession onwards; and a *khātima* (on the outstanding qualities of the khān, the famous people of his reign, his buildings, etc.). The first *makāla* was apparently finished not earlier than 995/1586-7 (mentioned as the current date in the text) and before 998/1589-90 (mentioned as the current date in the preface to the second *makāla*, found only in one of the existing manuscripts). He carried his work up to 997/1588-9 (the date of the last event which he mentioned, the conquest of Harāt by the Uzbeks), but then the plan of the work was changed, and Hāfiz Tanīsh included the whole material in the first *makāla*. The *khātima*,

absent in all existing manuscripts, was most probably not written at all. It is not known when the author finished the work in its existing form.

The *Sharaf-nāma-yi Shāhī* is based mainly on personal observations of the author, reports of other eyewitnesses and official documents. In his *muḥaddima*, Hāfiz Tanīsh used various literary sources, which he partially named, as well as oral tradition. The work is written in ornate prose, with extensive use of *saḍī'* and numerous verses (their total number is 4,760), both by Tanīsh himself and other poets. The main deficiency of the work, besides its pompous style, is the frequent absence of precise dates. Nevertheless, it is one of the major works of Central Asian historiography and the most important historical source for the Shaybānī period.

The further career of Hāfiz Tanīsh is not clear. Nothing is known about his life in the last several years of the reign of 'Abd Allāh Khān, nor during the short reign of his son 'Abd al-Mu'min. Some sources mention a poet with the same poetical name of Nakhli at the court of the Aṣhtarkhānid Imām-Kulī Khān (1020-51/1611-42) (see *Tadhkira-yi Tāhīr-i Naṣrābādī*, Tehran 1316-17/1937-8, 435; *Tadhkira-yi Mukīm-Khānī* by Muḥammad Yūsuf Munshī, Russian tr. by A.A. Semenov, 83, 90); according to Naṣrābādī, after the death of Imām-Kulī Khān (1054/1644-5) this Nakhli went to Balkh, where he died. Two manuscripts of the *diwān* of Nakhli are preserved in Tashkent and Dūshanbe; one of the *kaṣīdas* in this *diwān* is dated 1045/1635-6. If this Nakhli is identical with Hāfiz Tanīsh, it must mean that the latter was still active at an age of about 100 or more. Even more doubts are thrown upon this identification by the fact that none of the poems belonging to Hāfiz Tanīsh and cited in *Sharaf-nāma-yi Shāhī* is included in the *diwān* of Nakhli. Some scholars, nevertheless, accept the identification without reservations.

*Bibliography:* biographical information about Hāfiz Tanīsh is discussed especially in the following works: B. Aḥmedov, in his preface to the first volume of the Uzbek translation of the *Sharaf-nāma-yi Shāhī* (see below) and in his work, together with K. Munirov, cited above; V.P. Yudin, in *Materiali po istorii kazakhskikh khanstv XV-XVIII vekov*, Alma-Ata 1969, 237-40; M.A. Salakhedinova, in *VII godičnaya naučnaya sessiya LO IVAN (kratkiye soobščeniya)*, Moscow 1971, 111-3, and in *VIII godičnaya naučnaya sessiya LO IVAN*, Moscow 1972, 48-52; N.D. Miklukho-Mayklay, *Opisanije persidskikh i tadžiksikh rukopisey Instituta Vostokovedeniya*, vīpusk 3, Moscow 1975, 295-6; The text of the *Sharaf-nāma-yi Shāhī* remains unpublished. Concerning the manuscripts and publications of short extracts, as well as Russian translations of extracts, see Storey-Bregel, 1130-3, no. 990; The publication of a full Uzbek translation begun in 1966 is still not finished: only two volumes (out of four) were published in 1966-9 (see Storey-Bregel, 1132).

**HAGIOGRAPHY** [see MANĀQIB].

**HAIFA** [see HAYFĀ].

**HĀ'IK** (A.), pl. *hāka*, also *hayyāk* (synonym, *nassāḍī*), weaver. Given the supreme importance of textiles in mediaeval Islamic life and economy [see e.g. HARĪR and BISĀṬ in Suppl.], the class of weavers was probably the most numerous and certainly one of the most important groups of artisans. The weavers of Damascus, Baghdād, Egypt, the Yemen, and a host of other towns throughout the Islamic

world wove fabrics ranging from the coarse and workaday types to the finest and most delicate (cf. R.B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, *passim*). Especially highly-skilled workers were to be found in the *tūrāz* [q.v.] factories producing for the court and for the state during the Umayyad, 'Abbāsīd and Fātimīd periods, and these were probably somewhat better-paid than the mass of textile workers. The overwhelming majority of these last worked in their own homes for dealers or middlemen or in small workshops situated in the markets of cloth merchants. On the whole, the weavers were, as in the ancient and classical societies of the Near East, an exploited and ill-paid class, working in vile conditions, and this fact no doubt contributed to their image in mediaeval Islamic times as a turbulent and socially-volatile group, easily swayed by heterodox religious and political doctrines; one recalls the similar image of weavers in mediaeval France, Flanders and England, when in the first two regions at least, *tisserand* was at times almost synonymous with "heretic". Certainly, at the beginning of the 3rd/9th century, the Coptic weavers of the Nile delta in Egypt earned only half-a-*dirham* per day, "insufficient for the bread of their mouths", as they complained to the Patriarch Dionysios of Tell-Mahré (see Mez, *Renaissance*, 433-4, Eng. tr. 461).

The materials used included cotton, wool, linen and silk. Some jurists recommended that a weaver should not weave silken cloth, which is forbidden for men's wear. The legality of whether a cloth should be woven in silk mixed with other material forms the subject of juristic discussion. If the warp of the fabric (*sadā*) is *ibrism* and its weft (*luhma*) is *kūtn* or *khazz* (floss silk), it was permissible (cf. Ibn Ṭūlūn, *Naḥd al-ṭālib*, Chester Beatty Ms. 3317, fol. 50). Weaving was carried on by men as well as women, but spinning was done by womenfolk only.

In mediaeval Islamic times, opinion was in general condemnatory of the manners and habits of the weavers. Typical anti-*hā'ik* opinions are as follows: "The most silly persons are the weavers"; "When a weaver is asleep, he is worthless and harmful; when he is awake, his companionship brings disgrace"; "The intelligence of a woman is equal to that of seventy weavers"; and the like. According to a legend, told by many Arab and Syriac writers, Jesus' mother Mary (*Maryam*) once lost her way in search of her son and she asked the weaver to guide her to the Sepulchre; but the *hā'ik* misguided her; she then asked a tailor (*khayyāl*), who showed her the right path. Thereupon Mary cursed the weaver but blessed the tailor. This is why the weaver is alleged to be damned for ever. This legend served as the basis for prejudice against weavers. Arab sentiment about the weavers is further epitomised in Ḍjāhīz's words, "The weavers in every age and in every country possess in equal measure foibles such as short temper, stupidity, ignorance and iniquity."

In Islamic tradition literature (*hadīth*), the trade of the *hā'ik* is often linked with other noisome and unpleasant callings, sc. those of the copper [see FAṢṢĀD in Suppl.], the tanner [see ḌABBĀGH in Suppl.] and the sweeper. This condemnation was noted by Goldziher, who pointed out that the *textor* in Roman times was despised, and that in the early Islamic period, many of the weavers, both male and female, were slaves (*Die Handwerke bei den Arabern*, in *Globus*, lxxvi [1894], 205 = *Gesammelte Schriften*, iii, Hildesheim 1969, 318). R. Brunschvig subjected the low status of the weaver to a detailed examination in

his *Métiers vils en Islam*, in *SI*, xvi (1962), 50 ff. He demonstrated that this could not be from the unpleasant and polluting nature of the trade, as with tanning and sweeping, but must rather have arisen on religious grounds, from the many traditions in circulation, attributed to 'Alī and to other prominent dignitaries of early Islam, condemning weavers as the offspring of Satan (cf. also the story of Mary and the *hā'ik*, above). However, the gradual spiritualisation of Islamic society by the 'Abbāsīd period, the notion of the equality of all believers, and the evident high economic value of the textile trade, did eventually contribute to an amelioration of attitudes towards weavers.

Thus Islamic society adopted paradoxical attitudes towards the weaver and his craft. The weaver is despised, but weaving (*hiyāka*) as a handicraft is praised. Ibn Kutayba, Tha'ālibī, and Bayhaḳī include *hiyāka* in a list of the crafts of the nobility (*sinā'āt al-ashraf*), and Ibn Taymiyya, Ibn Ṭūlūn and other scholars uphold the theory that weaving is one of the obligatory duties of the collective body of the Muslims (*Jard kifāya* [see FARD]). Ghazālī and al-Lubūdī say that weaving is a highly beneficial and indispensable craft. "Weaving and tailoring are two essential crafts in civilisation, because humanity is in need of them for comfort", argued Ibn Khaldūn also. In spite of these pronouncements on the importance of weaving, public invectives against the weavers persisted in traditional Islamic societies.

The legal status of weavers and other despised professions was weak, and there was discussion over their *'adāla*, their probity and their admissibility as bearers of legal testimony (*shahāda*) in courts of law [see 'ADL]. The attitudes of the law schools varied somewhat. The Ḥanafīs were inclined to admit the *'adāla* of the despised trades, if their practitioners displayed superior religious and moral qualities; the Mālikīs were the most rigorous, only admitting it where necessity had compelled adoption of the trade in question; the Shāfi'īs and Hanbalīs took up intermediate positions. The Imāmī Shī'ī attitude was more liberal than the Sunnī one on matters like *'adāla* and on the doctrine of *kafā'a* [q.v.], comparability of status in marriage. Social restraints notwithstanding, early Islamic civilisation produced learned men among sons of weavers, e.g., Abū Ḥamza Maḳjma' b. Sam'ān al-Hā'ik, an Islamic traditionist, and Ibn al-Hā'ik, the author of *Kitāb Ḍazā'ir al-Adab*.

**HĀ'IRĪ**, SHAYKH 'ABD AL-KARĪM YAZDĪ (1859-1937), a Persian religious leader with whom the history of the Shī'ī clergy entered a new phase.

After preliminary education in Ardkān and Yazd, Hā'irī left for 'Irāk in 1877 and studied mainly under Sayyid Muḥammad Fiḥārakī (d. 1898) in Sāmarrā' and Nadjaf. In 1900, upon the invitation of his colleague, Sayyid Muḥṣafā and the latter's father Hādjdjī Ākā Muḥsin, Hā'irī moved to Arāk (Iran) and established the Arāk Circle for Religious Studies. Hā'irī argued that politics in the Muslim world were being controlled by Western powers and were consequently hostile to Islam. In order to prevent the extinction of Islam, therefore, a responsible religious leader must not interfere in politics. This type of approach by Hā'irī to politics, which was pursued throughout his life, began to be noticed in Arāk and resulted in his departure from that city, where his host, Hādjdjī Ākā Muḥsin, was fighting against the Persian Constitutional Revolution of 1906 (Aḥmad Kasravī, *Tārīkh-i Maḥrūta-yi Irān*, Tehran 1951, 281-5, 409) and naturally expected Hā'irī's cooperation. Hā'irī then went to Nadjaf, but he found it also seriously involved in the Persian Revolution; therefore he moved to Karbalā where he limited himself to religious activities, including teaching *fiqh* and *uṣūl*. Hā'irī again moved to Arāk and lived there 1913-22, during which time he enjoyed a large body of disciples.

Meanwhile, in 1920, because of the death of two great *muḥjtahids*, Mīrzā Muḥammad Takī Shīrāzī and Shaykh al-Sharī'ā Isfahānī, the office of *marja'ī taklīd* was divided among Sayyid Abu 'l-Ḥasan Isfahānī and Mīrzā Muḥammad Ḥusayn Nā'īnī in Nadjaf and Hā'irī in Iran. By then, Hā'irī's apolitical character was widely known, and turned out to play a role not only in his own life but also in the fate of the clerical world of the Shī'ā. To see this role, one must keep in mind that the British, having a variety of interests in the Shī'ī world, had faced many difficulties caused by the Shī'ī 'ulamā' of 'Irāk, such as their involvement in the Persian Revolution, their declaration of *qīhād* in World War I, and their struggle for the independence of 'Irāk in 1919-22. After the imposition of the British mandatory rule in 'Irāk in 1920, efforts were made to curtail the influence of the 'ulamā'. This policy resulted, among other things, in the banishment in 1923 of Nā'īnī, Isfahānī, Shaykh Mahdī Khālīshī and many other 'ulamā', which injured the prestige and centrality of the Shī'ī institution of 'Irāk.

In the meantime, we see Hā'irī receiving particular attention in Iran. Upon the invitation of the notables of Ḳum, Hā'irī, in March 1922, went to Ḳum to establish the Circle for Religious Studies of that city, where he received a warm reception; the then monarch, Aḥmad Shāh, personally went to Ḳum to greet him. Through Hā'irī's efforts, the attention of the Shī'ā was directed to the Ḳum Circle; solutions for religious problems were sought in Ḳum and the students of religion, whose number at a time exceeded 1,000, found Ḳum a convenient alternative to Nadjaf and Karbalā. The latter development bore fruits favourable to the British policy in the area; the clerical institution of 'Irāk was partially transferred

to Iran, whose then strongest man, the Sardār Sipah (later Riḍā Shāh), was in fact to curtail it; there was created in Iran a strong religious base which would by its nature weaken the young Persian Communist movement; and finally (perhaps the most important of all), clerical leadership came in part to the hands of Hā'irī who, unlike his Nadjaf colleagues, would not intervene in politics. Hā'irī only once was drawn into these: in 1924 the Sardār Sipah attempted a republican form of government which gave rise to a popular uprising and involved the clergy, including the banished 'ulamā' then residing in Ḳum. On this subject, meetings were held by the 'ulamā' of the exodus and chaired by Hā'irī in Ḳum (F.O. 416/74, 26 March 1924, no. 126) and finally, to terminate the confusion, Hā'irī and other 'ulamā' were urged to declare that they requested the Sardār Sipah to dispense with republicanism. In other cases, however, Hā'irī rejected politics; he did not fully identify his position with that of the 'ulamā' of the exodus. Measures taken by Riḍā Shāh aroused clerical opposition led by Hādjdjī Ākā Nūr Allāh Isfahānī in 1927 and Hādjdjī Ākā Ḥusayn Kummī in 1935, to neither of which Hā'irī gave a noticeable response. Even the Circle founded by Hā'irī became the target of governmental pressures, to the extent that his special assistant, Shaykh Muḥammad Takī Bāfkī, was arrested in 1927 (Muḥammad Rāzī, *Risālat al-Takwā wa-mā adrāka mā al-takwā: Sharḥ-i ḥāl-i Shaykh Muḥammad Takī Bāfkī*, Tehran 1948), but no reaction was elicited from Hā'irī.

Hā'irī's biographers give him credit for his type of approach to politics at that specific period: "he protected religion in the light of his patience, prudence, and wisdom" (Āghā Buzurg Tīhrānī, *Ṭabaqāt al-'ālam al-Shī'a*, i/3 Tehran 1962, 1161-4). These pressures, however, did not preclude Hā'irī from undertaking with great interest cultural activities such as establishing a library, hospital, religious schools, public cemetery and mortuary, housing for the poor, and so on. It is interesting to note that he trained many disciples who later on became religious leaders, some of whom, unlike Hā'irī, undertook political activities; Āyat Allāh Sayyid Rūḥ Allāh Mūsawī Khumaynī, who was living in exile in Paris until his return to Iran in January 1979, may be mentioned as the best-known example.

(ABDUL-HADI HAIRI)

#### HAKARI [see HAKKĀRĪ].

AL-HĀKIM AL-DJUSHAMĪ, ABŪ SA'D AL-MUḤSIN B. MUḤAMMAD B. KARĀMA AL-BAYḤAKĪ AL-BARAWKANĪ, Mu'tazilī, later Zaydī, scholar, was born in Ramaḍān 413/December 1022 in Djusham (Persian: Djishum), a village in the region of Bayhak. According to Ibn Funduk, he was a descendant of Muḥammad b. al-Hanafīyya, but the family was not known by the *nisba* of al-'Alawī. His first teacher was Abū Ḥāmid Aḥmad b. Muḥammad al-Nadǧǧār, a student of the Mu'tazilī *kādī* 'Abd al-Djabbār, who taught him Mu'tazilī theology, *uṣūl al-fikh*, and *hadīth*. After Abū Ḥāmid's death in 433/1041-2, he continued his studies with Abu 'l-Ḥasan 'Alī b. 'Abd Allāh (d. 457/1067), a student of the Zaydī *imām* Abū Ṭālib al-Nāṭīk, in Bayhak. He also studied and taught in Naysābūr, where he read Hanafī *fikh* works with the famous Hanafī scholar Abū Muḥammad al-Nāshīhī, *kādī al-kudāt* of Bukhārā, in 434-6/1043-5. Other well-known scholars whom he heard in Naysābūr were the *amīr* Abu 'l-Faḍl al-Mīkālī, Abū 'Abd al-Rahmān al-Sulamī, and 'Abd al-Ghāfir al-Fārisī. Later he taught in the mosque of his native village Djusham, where he read the sixty lectures contained in his *K. Djalā' al-absār*, in the years 478-81/1086-8. Among his students was Aḥmad b. Muḥammad b. Ishāk al-Khā'arāzmi, the teacher of al-Zamakhsharī. He died in Mecca in Radjab 484/May 1101, allegedly killed by religious opponents because he had written a fictitious "Epistle of the devil to his fatalist brethren" (*Risālat Iblīs ilā ikhwānihi al-mudǧbira*) and because he publicly propagated Zaydī doctrine.

During most of his life, al-Hākīm al-Djushamī actively supported the Mu'tazilī theology of the school of 'Abd al-Djabbār and adhered to the Hanafī school of *fikh*. Though expressing philo-'Alid sentiments and recognising the imamate of the Zaydī *imāms*, he did so on the basis of Mu'tazilī doctrine on the imamate, and equally espoused the legitimacy of the imamate of Abū Bakr, 'Umar and 'Uthmān. Only late in his life does he appear to have completely turned to Zaydism and to have written works on the Zaydī doctrine of the imamate and on Zaydī *fikh*.

He is said to have composed 42 books, several of them in Persian. Many of his writings were brought to the Yaman, where they gained high esteem among the Zaydī scholars, who frequently referred to the author merely as al-Hākīm. His extant Kur'ān commentary *al-Tahdhīb*, in nine volumes, supports Mu'tazilī doctrine more consistently than al-Zamakhsharī's *al-Kashshāf* and contains numerous quotations from earlier, lost Mu'tazilī commentaries. It was later twice abridged. His continuation of 'Abd al-Djabbār's *Tabakāt al-Mu'tazila*, contained in his *Sharh al-'uyūn*, has been edited (by Fu'ād Sayyid, *Faḍl al-'itizāl wa-tabakāt al-Mu'tazila*, Tunis 1393/1974, 365-93). His *K. Djalā' al-absār*, a collection of wide-ranging lectures and narrations, was quoted by Ibn Isfandiyyār for its reports on the Caspian 'Alids (see *Ta'rīkh-i Tabaristān*, ed. 'Abbās Iḳbāl, Tehran [1320/1942], i, 101).

(W. MADELUNG)

HĀL (pl. *ahwāl*; *hāl* is normally fem. but often in Ash'arī texts is taken as masc.; the form *hāla* is occasionally found in both Mu'tazilī and Ash'arī sources), a technical term of philosophy employed by some of the Baṣran *mutakallimūn* of the 4th/10th century and the 5th/11th one to signify certain "attributes" that are predicated of beings. The term was taken over from the grammarians first by Abū Ḥāshim al-Djubbā'ī [q.v.] and subsequently used in two basic ways, one by Abū Ḥāshim and his followers in the Baṣran Mu'tazila and the other by al-Bāḳillānī and al-Djuwaynī [q.v.] in the Ash'arī school. The treatment of the *hāl* within the contexts of the two school traditions differs to such an extent that one must recognise two distinct concepts. The discussion of the *ahwāl* by later Ash'arī writers (e.g. al-Shahrestānī and Fakhr al-Dīn al-Rāzī), though they tend to focus primarily on the preoccupations of their own predecessors in the Ash'arī tradition, does not keep the two conceptions clearly distinct, and certain modern studies based chiefly on these sources have tended to misconstrue the problem, particularly in regard to the Mu'tazilī tradition.

A. *The Mu'tazila*. For Abū Ḥāshim and the Baṣran Mu'tazila following him, the expression *hāl* designates the "attribute" (*sifa*) as the latter is conceived to be an ontologically real and distinguishable perfection of a being or essential entity (*shay'*, *nafs*, *dhāt*). In the works of the classical Mu'tazila, accordingly, the *hāl* is most commonly designated by the term *sifa* (*sifa*, as defined below). In order to understand the concept it is necessary to clarify the verbal and conceptual context of its formulation and of its occur-

rence within the texts. Most importantly, there occurred in the development of the Baṣran *kalām* from the 3rd/9th century until the 5th/11th an accretion of new formal meanings for the terms *ṣifa*, *wasf*, and *ḥukm* (some of them peculiar to the Mu'tazila or to the Aṣḥ'arīs, and others shared by the two schools) that must be distinguished if the ontology of the *aḥwāl*, as treated in the texts, is to be understood.

So far as concerns the discussion of the nature of things, the teaching of the Baṣran *kalām* was from the outset explicitly cast in terms of an analysis of the predicates that are said of them: of the predicates (the Arabic nouns and adjectives: *al-asmā' wa 'l-awṣāf*) that are predicated of beings and those particularly that are said of God in the Qur'ān. The word *ṣifa*, in its first and probably original sense in the theology of the Baṣrans, is taken over and adapted from its use by the grammarians with the meaning "a descriptive term". In this sense, then (*ṣifa*<sub>1</sub>), it refers to any general or descriptive predicate term and so combines the grammarians' categories of noun and adjective (verbs being paraphrased into adjectives) (see e.g. 'Abd al-Djabbār, *al-Muḥḥiṭ*, v, 198). *Ṣifa* is thus virtually synonymous with *wasf*<sub>1</sub>; the expression (*kaul*) employed in describing (*waṣafa*) something, i.e. in formulating the sentence in which the particular word is predicated of a subject noun which is taken to denote some concrete entity (*ṣay'*). In another sense (*ṣifa*<sub>2</sub>), the predicate expression (*ṣifa*<sub>2</sub>) may be considered from the standpoint of its meaning (*al-ma'nā*): what is meant as opposed to the word or material utterance: *al-'ibāra*, *al-laḥẓ*) and so as signified by any of several expressions (*awṣāf*<sub>1</sub>, *asmā'*) that are considered to be synonymous in their strict sense (*ḥakīka*) as they are said of a particular entity (e.g. "*kādīr*" = "*kawī*" = "*azīz*", as said of God). A proposition affirming a particular *ṣifa*<sub>2</sub> as true of something may be thus formulated, employing any one of a number of *ṣifāt*<sub>1</sub> (= *awṣāf*<sub>1</sub>, *asmā'*) (see e.g. 'Abd al-Djabbār, *al-Maḥḥimū' al-muḥiṭ bi 'l-taklīf*, 172). Within the Baṣran tradition of the *kalām*, then, the question, whether to affirm a given predicate as true of an entity (*waṣafahu bihā*), is or is not to assert (*athbata*) the reality of an "attribute" belonging to it and that of the ontological status of such an attribute, if any is held to be asserted by the *ṣifa*<sub>2</sub>, are questions in terms of their various responses to which the major schools may be distinguished, and on the basis of which their conceptions of the *aḥwāl* are divided.

For Abū 'Alī al-Djubbā'ī, an entity (*ṣay'*) or essence (*nafs*, *dhāt*) is an object of knowing (*ma'lūm*) that strictly speaking exists (*wuǧūd*) or does not exist (*'udima*) and which, as an object of knowing, may be directly referred to (*dhakara*) and may be made the subject of a predication (*ukhbira 'anhū*) (see, e.g. al-Aṣḥ'arī, *Maḥalāt al-Islāmiyyīn*, ed. H. Ritter, Istanbul 1929-30, 519). It is not, however, said of something else. *Ṣifāt*<sub>1</sub> are employed in describe entities, i.e. to express what is known about them. According to the mature teaching of al-Djubbā'ī and of the Baṣran Mu'tazila after him, *ṣifāt*<sub>1</sub> are those expressions that name the "essence" or essential entity as such or that describe it as it is in some particular way distinguished from entities essentially similar to it. Generic terms, i.e. those which designate broader classes of beings, embracing several kinds of essential entities, they do not consider to be *ṣifāt*<sub>1</sub> in the strict sense but rather as quasi-*alkāb* (terms whose use to name or describe something is in part arbitrary). As predicate expressions or terms (thus excluding the use of an expression to name an

entity and to refer to it as the subject of the proposition), the *ṣifāt*<sub>1</sub> are not, as such, directly referential. They are, however, understood to have implicit reference when said of a particular being. That is to say, when predicated of a particular being, most *ṣifāt*<sub>1</sub> implicitly assert the entitative reality either of the being denoted by the subject term or of another being, and accordingly the various predicate expressions are systematically paraphrased in order to make explicit what ontological assertion (*iḥbāt*) is implicit in each particular affirmation. Thus for example, to say "Zayd strikes" is to assert that there exists an act of striking (*darb*) that has occurred on his part (*dārib* = *waḳ'a minhū darb<sup>m</sup>*) or to say "Zayd knows" is to assert that there exists an act of knowing that belongs to him (*'ālim* = *lahū 'ilm<sup>m</sup>*). In these instances, the entities whose reality is asserted in the affirmation of the propositions are termed the "cause" (*'illa*, pl., *'ilal* or *ma'nā*<sub>2</sub>, pl. *mā'ānī*) of the proposition or judgement (*ḥukm*<sub>1</sub>) that the thing is so, and the predicate term comes, therefore, to be called *ṣifat*, *ma'nān* (i.e. a term whose affirmation of the subject implies the reality of a *ma'nā*<sub>2</sub>; *ma'nā* originally meant the "sense" of the predicate or judgement: *ḥukm* the "sense" or "meaning" being contextually understood by the Baṣran *mutakallimūn* as the reality of that entity the presence of which, in a given relationship to the subject, is asserted by the particular predicate. By the time of al-Djubbā'ī, the two words *'illa* and *ma'nā* are employed as synonyms, being used interchangeably in most contexts, and within a century the semantic origin of this sense of *ma'nā* seems to have been forgotten). As conceived by the Baṣran *mutakallimūn*, the *mā'ānī*<sub>2</sub> are not, however, attributes. They are, rather, entities in the strict sense: beings that are themselves distinct objects and that as such are not predicable of something else. In al-Djubbā'ī's analysis, then, since God is absolutely one and undivided, when one says "God knows" (*Allāh 'ālim*) there is no assertion of the reality of any entity other than God's self (*nafsuḥū*) and accordingly the predicate term is, in this instance, called an "essential predicate" (*ṣifat*<sub>1</sub> *nafsi'*): a predicate expression whose affirmation of the subject implicitly refers to and asserts the reality only of the self or essence of the entity denoted by the subject term). All terms that name or describe the self or essence of a thing as such are, when used predicatively, *ṣifāt*<sub>1</sub> *nafs*. Thus al-Djubbā'ī nowhere speaks of attributes, if we understand "attribute" in its usual sense (as, e.g. a property, characteristic, or quality of a thing, as when we speak of a figure's "being triangular" or "triangularity" as a property belonging to it); he has no term for such a concept and uses no formal expression that would imply the reality of such a thing.

The concept of the attribute as an ontologically real perfection, property, or state of the being of an entity was introduced into the Baṣran *kalām* by Abū Hāshim. Though most often referred to in the Mu'tazilī texts by the term *ṣifa*<sub>3</sub>, the attribute, thus conceived, is also referred to by the word *ḥāl* (state). This latter term Abū Hāshim apparently took from the grammarians of the Baṣran school (the Kūfans employ a different expression reflecting their own grammatical analysis), and it is likely that he formed the philosophical concept partially in terms of a reflection on the significance of *ḥāl* expressions as these are understood and analysed by them. When explicitly discussing Abū Hāshim's conception of the attribute (*ṣifa*<sub>3</sub>, *ḥāl*) for the purpose of refuting it,

the Ash'arīs (e.g. al-Bākillānī and al-Shahrastānī) most often speak of it as *hāl*, probably to avoid the ambivalence of the word *ṣifa*, though in other contexts where the doctrine of Abū Hāshim and his followers is discussed, one often finds *ṣifa* in the Ash'arī texts and occasionally also *wasf*, the latter representing more peculiarly Ash'arī usage.

The attribute (*ṣifa*, *hāl*) is not an essential entity (*ṣayf*, *dhāt*) as this is strictly defined and understood. It is not therefore considered to be an object or entity that can be known in isolation (*bi-nfirādhā*, *bi-mudjarradihā*). Rather, the entity of which it is an attribute is known as qualified by it (*yu'lam 'alay-hā*) (cf. 'Abd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, 184, 9-14 and 366, 9-11). Thus though not a distinct object of knowing and so not "known" (*ma'lūma*) in the strict sense of this term, the attribute or state is nonetheless grasped and understood (*ma'kūla*) as one knows a thing is specifically qualified by it (*mukhtass bihā*). Furthermore, since the attribute or state is not an entity, it cannot be said to be existent (*mawjūdā*) or non-existent (*ma'dūma*) because these predicates are properly used only of entities. In that it is, however, an ontologically real perfection or state of the being of an entity, the attribute (*ṣifa*, *hāl*) does have actuality (*taḥṣul*) and so is said to be actual (*hāṣila*) as also one may properly speak of its non-presence (*zawāluhā*) or non-actuality (*intifā'uhā*) in a thing. Likewise, one does not speak of its coming to be (*hudūthuhā*) since "coming to be" (*al-hudūth*) refers properly to the initiation of existence (*tadjudud al-wudūd*); one speaks, rather, of the initiation of the attribute (*tadjududuhā*). In concrete instances, then, the attribute (*ṣifa*, *hāl*) is indicated by the expression "the thing's being thus and so", as one speaks, for example, of "its being existent" (*kawnuhū mawjūd<sup>am</sup>*) or of "its being living" (*kawnuhū ḥayy<sup>am</sup>*) or of a body's "being in motion" (*kawnuhū mutaharrik<sup>am</sup>*). Propositions such as "he is alive" (*huwa ḥayy*) are thus considered by Abū Hāshim and his followers in the Mu'tazilī school to assert the actuality of the attribute (*huṣūl al-ṣifa*, *huṣūl al-hāl*), viz. in this instance of his being alive or being living or the body's being in motion, and it is to the attribute or state thus that such a predicate (*ṣifa*) implicitly refers.

Though they disagree in certain matters of detail (some of which are philosophically important) Abū Hāshim and his successors classify the attributes (*ṣifāt*, *ahwāl*) into five basic categories according to the grounds to which their actuality is, in each case, to be ascribed. (Note that we are not here concerned with the classification of predicates in general, but only those that assert the actuality of *ṣifāt*, *ahwāl*.) These are:

1. The Attribute of the Essence (most often termed *ṣifāt al-dhāt*, though other expressions are frequently employed; cf. Frank, *Beings*, 80 n. 1); this is the thing's being itself what it is in itself. It is asserted, for example, in the statement "the atom is an atom" (*al-djawahar djawahar*). What is referred to here is "the way the thing is in itself" (*mā huwa 'alayhī fi dhātihi*). The attribute of the essence is, thus, irreducible (cf. e.g., 'Abd al-Djabbār, *al-Maḍmū' al-muḥit bi 'l-taklīf*, 61, 9 ff. and Abu Rashīd, *Ziyādāt al-sharḥ*, 192, 11 ff. and 278, 11 ff.), and is actual (*hāṣila*) even in the possible, for to posit the entity is to posit the actuality of the Attribute of the Essence. That is to say, God knows, out of an infinite number of beings of every class, each particular individual that He can create; thus although an individual entity whose existence is possible (*al-dhāt iz wudūduhū*) is non-existent and as non-existent

(*bi-kawnihī ma'dūm<sup>am</sup>*) has no ontologically real state (*hāl*), it has nevertheless reality as a possible existent (it is *dhābit al-djawāz*) in that it is a particular and distinguishable object of God's power (i.e. insofar as it is *maḥdūr 'alayhī*).

2. The essential attributes (commonly termed *ṣifāt*, *al-nafs*, *al-ṣifāt*, *al-dhātīyya*, or *al-muktaḍā 'ammā huwa 'alayhī fi dhātihi*, i.e. "the attribute that is entailed by the way the thing is in itself"); these attributes are those whose actuality is entailed by the Attribute of the Essence (by the way the thing is in itself) given the actuality of its existence. These are the manifest (*zāhira*) attributes that reveal the nature of the essential entity as it is in itself (*tunbi' 'ammā huwa 'alayhī fi dhātihi*), as for example, the atom's occupying space (*kawnuhū mutahayyiz<sup>am</sup>*) or God's being existent, living, knowing, etc.

3. The attributes whose actuality flows immediately from (*sadara 'an*) an entitative, determinant cause (*'illa*, *ma'nā*) and which are, accordingly, termed simply *li-'illa* or *li-ma'nā*, and are said to be "caused" (*ma'lūla*). Included under this category is, for example, a human individual's being knowing (*kawnuhū 'ālim<sup>am</sup>*), an attribute whose actuality is asserted in the sentence "Zayd knows" (*Zayd 'ālim*) and whose actuality arises immediately from the presence of the act of knowing (*al-'ilm*) that exists as a concrete entity in his heart. The attribute (*ṣifa*, *hāl*) in this instance is a perfection that specifically qualifies (*takhtass*) not its immediate physical locus (*al-mahall*), but rather the living corporeal whole (*al-djumla al-ḥayyā*) that is the individual, and it is for this reason that Abū Hāshim and his successors say that the predicate "knowing" is said of the whole and not of the organ or substrate. "Moving", on the other hand, is predicated only of the material substrate (*al-mahall*) since the attribute of "being in motion" (*kawnuhū mutaharrik<sup>am</sup>*) belongs only to the locus of the entitative cause of its actuality.

4. Attributes whose actuality depends upon the agent that effects the existence of the thing and which, therefore, are said to be *bi 'l-fā'il*. Though many characteristics (*ahkām*) of temporal entities are ascribed to an agent as their source, either immediately to his agency as such or mediately through the manner of the act's occurrence (*li-wadhīh wuḥūthi*), the only true attribute (*ṣifa*, *hāl*, in the strict sense) that is said to be "due to the agent" is that of a temporal entity in its being existent (*kawnuhū mawjūd<sup>am</sup>*).

5. Attributes whose actuality in the thing is due "neither to its essence nor to an entitative cause" (*lā li 'l-nafs wa-lā li-'illa li-ma'nā*); the designation of a class of predicates (*ṣifāt*, *awṣāf*, *asmā'*) as *lā li 'l-nafs wa-lā li-'illa* would seem to have originated with Abū 'Alī al-Djubbā'ī. Because of the basic difference of his analysis and ontology from that of the later school, however, the predicates that he so classed are not the same as those so classed by Abū Hāshim and his successors. What predicates (*ṣifāt*) and what attributes (*ṣifāt*) Abū Hāshim may have classed under this heading, if any, indeed, is at present uncertain. His followers, however, assign the attribute (*ṣifa*, *hāl*) of "being perceiving" (*kawnuhū mudrik<sup>am</sup>*) to this category, since perception, according to their view, arises directly from the perceiver's being living on the condition of the appropriate presence of the perceptible. (Perceiving is here distinguished from sensation—*al-hiss*—since the predicate "sensing"—*muhiss*—is taken to indicate not a true attribute but only the functioning of the sense organ.) It may be that "being perceiving" is the only true attribute which they class

thus; predicates (*ṣifāt*), which are implicitly negative are said to be *lā li 'l-nafs wa-lā li-'illa*, but they do not indicate ontologically real attributes.

For us the essential reality of a thing (*its ḥakīka*) is its essential attributes, for what we understand and refer to when we speak of it is its being as it is known to us in these attributes. Predications, according to the classical Mu'tazila, are said of essential entities that are known (*ma'lūma*) and distinguished as such; the predicates that refer to a thing's essential attributes (*al-ṣifāt al-dhātīyya*) are those which we employ to define it. According to Abū Hāshim and his followers in the Baṣran Mu'tazila, it is thus that through their essential attributes we know entities, i.e. in that they are so manifested to us as belonging to the same essential class (*ḡīns*) or to different classes, for beings that share (*ishṭaraka*) in one essential attribute must be alike (*tamāthala*) in that which entails (*iktadā*) the actuality of the attribute, and so must share in all their essential attributes. (See, e.g., 'Abd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, 108, 9-12 and 199, 3-5; *al-Mughnī*, iv, 270 f. and 252, 8-10).

One speaks also of the "modality" of an attribute (*kayfiyyat al-ṣifa*). Existence (a thing's being existent: *wadḡūdūhū = kawnuhū mawḡūdūm*), for example, is an attribute that is common to all existent entities. Some entities, however, (sc. God) are eternally existent (*lam yazal mawḡūdūm*) while others (sc. all beings other than God) are temporally existent (*muhḏath*). The terms "eternal" (*kadīm*) and "temporal" (*muhḏath*) refer to the modality of the attribute of being existent. Similarly the term "inherent" (*hāl*) used of the accident's inherence in its substrate (*kawnuhū hālūm fī maḥallihī*) refers to a modality of its existence. (See e.g., 'Abd al-Djabbār, *al-Maḡmū' al-muḥīṭ bi 'l-taklīf*, 163, 4-7 and Abū Rashīd, *Ziyādāt al-sharḥ*, 384, 14 f.).

Not all predicates that may be affirmed as true of an object imply the presence of an ontologically real attribute (*ṣifa*, *hāl*). Some terms, for example, refer to the "characteristics" (*ahkām*) of attributes; others (e.g. ethical terms) refer to contingent characteristics (*ahkām*) of acts which, determined by one or another of the states of the agent (*ahwāl al-fā'il*) (see, e.g., 'Abd al-Djabbār, *al-Mughnī*, viii, 159 and *al-Maḡmū' al-muḥīṭ bi 'l-taklīf*, 352), derive immediately from the manner of its coming to be (*wadḡih al-hudūth = wadḡih wukū'ihī*) and others to the modality (*kayfiyya*) of an attribute. Some, viz. those that describe a thing in its perceptible qualities, refer not to *ṣifāt*, (*ahwāl*) but to dispositions (*ḥay'āt*) of the material substrate; some descriptive terms are implicitly negative (e.g. "inanimate", "other", "dissimilar" and the like) and so refer to no real attribute; some refer primarily to a being other than that denoted in the subject, viz. the "derived predicates" (*al-ṣifāt al-muṣṭakka*) (see, e.g., 'Abd al-Djabbār, *al-Mughnī*, vii, 58, 3-7 and for the term of Ibn Fāris, *al-Sāhibī fī fikh al-lughā*, ed. M. el-Chouēmi, Beirut 1383/1964, 86 ff.), i.e. those that assert the actuality of an action performed by the subject and those that assert the actuality of the state (*hāl*) or act of another (e.g. "known" or "commanded"). Generic terms, finally, are not considered to be truly descriptive terms (*ṣifāt*) by the Baṣran Mu'tazila, as was noted above. Accordingly, one must distinguish those instances where the expression *kawnuhū* . . . ("its being . . .") is employed to denote an ontologically real attribute (*ṣifa*, *hāl*) and those in which it is employed merely as a nominal periphrasis for a sentence (e.g. *kawnuhū aswad* as a periphrasis for *huwa*

*aswad* "it is black") that does not assert the actuality of an attribute (*ṣifa*, *hāl*) of the being that is denoted by the subject term. The differences in the understanding of these terms by the Mu'tazila and the Ash'arīs are characteristic of those in their conception of the *ahwāl*.

B. *The Ash'arīs*. Among the Ash'arīs, the concept of the "attribute" (*hāl*) as conceived by Abū Hāshim was borrowed, adapted, and employed by al-Bākillānī and al-Djuwaynī and, it would seem, by no others (see, e.g., al-Shahrestānī, *al-Nihāya*, 131). Al-Bākillānī's acceptance and use of the concept was, however, inconsistent; in some works (among them his two published compendia, *al-Insāf* and *al-Tamhīd*) he expressly denied the validity of the concept (though it implicitly underlies the discussion in a number of important passages in both *al-Insāf* and *al-Tamhīd*) while in others, including his last major *kalām* work, *al-Hidāya*, he is reported to have asserted its validity and to have integrated it into his treatment of the predicates of being and of the divine attributes (see, e.g., al-Djuwaynī, *al-Shāmil*, 294, 629). Al-Djuwaynī, on the other hand, seems to have expressly employed the concept in most if not all of his *kalām* works, though he is reported to have rejected it in his late juridical writing (see, e.g., Abu 'l-Kāsim Sulaymān b. Nāsir al-Ansārī, *Sharḥ al-Irshād*, Princeton University ms. ELS 634, fol. 356). In the present absence of any direct, adequate evidence concerning al-Bākillānī's treatment and use of the *ahwāl* concept, the present outline reflects strictly only the discussion and terminology of al-Djuwaynī. The sources, however, indicate no major difference between al-Djuwaynī's understanding and use of the concept and those of al-Bākillānī; one may therefore suppose that their teaching in this respect was substantially the same.

Like Abū Hāshim, the Ash'arīs who employed the concept of the "attribute" as *hāl* describe it as "the thing's being such and so" (*kawen al-shay*). The context to which the concept was adapted and into whose overall structure it had to be integrated differs, however, in several important respects from that of the Mu'tazilī tradition of Basra, even though the Ash'arī analysis of the predicates that are said of beings is in some ways analogous to that of al-Djubbā'ī. Omitting those predicates that refer to actions (*ṣifāt al-af'āl*) and so to an entity essentially extrinsic to that denoted by the subject term, al-Ash'arī and his followers, in contrast to the Mu'tazila, recognise only two categories of descriptive predicates (*asmā*, *awṣāf*, *ṣifāt*), since they divide the entities which constitute the ontological basis for the truth of the predication (*istihkāk al-waṣf*: the thing's "deserving to be so described") and whose reality, accordingly is asserted (*muthbat*) as that which requires its affirmation (*mā awḡāba 'l-waṣf*) into (1) the "self" (*nafs*) of the being denoted by the subject, as when one says of a being that it is "existent" (*mawḡūd*) or "temporal" (*muhḏath*) or is a "colour" (*lawm*) or of God that He is "eternal" (*kadīm*) or "majestic" (*'aẓīm*); and (2) those that assert the reality of an entitative, determinant cause (*ma'nā*, *'illa*) subsistent in the subject, as when one says of a being that it is "living" ("living" = "life belongs to it": *ḥayy = laḥū ḥayāt*) or "knowing" ("knowing" = "an act of knowing belongs to it": *'ālim = laḥū 'ilm*) and the like. In addition to the words *ma'nā*, and *'illa*, the Ash'arīs often (and in some contexts almost always) refer to these entities (*al-ma'ānī*, as *ṣifāt*). (This, in fact, is the only sense in which al-Ash'arī himself employs the word *ṣifa*.) Against al-Djubbā'ī and others, the

Ash'arīs insist that predicates such as "living", "knowing" and the like always imply the presence of an entitative determinant (*ma'nā*, *'illa*, *ṣifa*) in the subject, whether they be said of a material being or of God, who is immaterial. Again, whereas the masters of the Baṣran Mu'tazila take descriptive predicates to be said of individual entities which, known and recognised as particular essences, are described by the predicate (*wasf*, *ṣifa*), the Ash'arīs understand the subject term to denote an individual entity simply as an object: as an existent (*mawḍūʿ*) whose existence is its "self" (*nafs*). (Thus *shay'* = *mawḍūʿ* = *wuḍūʿ* = *nafs*, *dhāt*, whilst the non-existent is simply the unreal subject spoken of in a negated proposition: "it is not true that there exists an object such that . . ."). Thus, where the Baṣran Mu'tazila after al-Djubbā'ī distinguished expressions that they consider to be descriptive (*ṣifāt*) strictly speaking, i.e. those which name the essence as such or describe it in some particular way, from those they consider to be quasi-*alkāb*, i.e. those which we employ to assign an essence to various broader, generic classes and which, therefore, are said univocally of beings that are essentially different, the Ash'arīs make no such distinction, but rather consider both kinds of terms to be truly descriptive, classing the second of the Mu'tazilī categories amongst the "essential predicates" (*al-ṣifāt*, *al-naṣīyya*), viz. those that assert as the basis of the validity of their affirmation of the subject only the reality of the object (*nafs al-mawḍūʿ* = *wuḍūʿuhū*) of which they are said. No more than al-Djubbā'ī, however, does al-Ash'arī speak of "attributes" as this word is commonly understood, nor does his analysis, or that of most of his followers in the two centuries immediately succeeding, make place for such a concept. The *ṣifa* is simply a *ma'nā* (*'illa*). They agree that the being of God's *ṣifāt* differs from that of those belonging to creatures and there is some question as to the exact ontological status of the former, i.e. as to whether God's *ṣifāt* are validly termed *aḥwāl* or *mawḍūʿa* or if they are denumerable; but it is nevertheless clear that *ṣifāt* are entities of some kind (more precisely, of two kinds) though not of a sort that nowadays we should term attributes. (Al-Bāḳillānī, cited in al-Kiyā al-Harāsī, *Uṣūl al-dīn*, fols. 114a and 123a, says that, in contrast to the *aḥwāl*, they are entitative objects or beings, *dhāt*, *shay'*, *ma'nā*.) One notes that with but two or three exceptions, common also to the Mu'tazila, abstract terms are not employed in the writings of al-Ash'arī and of the majority of his followers until the 5th/11th century and that the expression *kawnuhū* . . . is almost everywhere shunned, chiefly for accuracy of expression but also, no doubt, in order to avoid the semblance of accepting Abū Ḥaṣhīm's ontology.

Al-Djuwaynī rejects the common Ash'arī thesis that all the "essential predicates" (*ṣifāt*, *al-naṣ*, *al-ṣifāt*, *al-naṣīyya*) assert simply the being of the "self" of the subject and that what is asserted (*al-hukm*) in affirming one of the *ṣifāt* *al-ma'ānī*, (*al-ṣifāt*, *al-ma'nawīyya*) is simply the reality of the being of the *ma'nā*, (*ṣifa*) as belonging to the subject. For every positive predicate (*wasf*, *ṣifa*) he recognises an "attribute" (*wasf*, *ṣifa*), which he designates by the expression *kawnuhū* . . ., e.g. the atom's "being an atom" (*kawnuhū ḍiawhar*), "its being an entity" (*kawnuhū shay' wa-dhāt*), "its being existent" (*kawnuhū mawḍūʿ*), "its occupying space" (*kawnuhū mulahayyiz*), etc.; and so also with the *ṣifāt*, *ma'nawīyya*, the attributes (*ṣifāt*) signified by the latter being commonly termed *aḥkām*, as well

as *ṣifāt*, *awṣāf*, (see e.g. *al-Irshād*, 30, *al-Shāmīl*, 308, *et alibi*). He holds, moreover, in regard to those predicates which do not refer simply to the existent as such (to its existence as its "self": *nafs*) that one must posit the reality (*ḥabūṭ*) of the attribute (*wasf*, *ṣifa*, *hukm*) as a state (*hāl*). This, he says, is necessary in order to have an ontological basis for the true sense of the common or universal predicate terms and their definitions (viz. *al-hakā'ik wa'l-ḥudūd*) (see e.g. *al-Shāmīl*, 633, and the citation of al-Bāḳillānī in al-Kiyā al-Harāsī, *op. cit.*, fols. 115a and following), as also in order to explain what is known and asserted to be true in the case of the *ma'ānī*, (*aḥkām al-'ilal*), i.e. in order to explain what is known and asserted to be true (*al-hukm*) of the entity to which the *ma'nā*, (*'illa*) belongs as the effect (*ma'lūl*, *mūḍjab*) of the latter (see e.g. *al-Shāmīl*, 629 ff. and *al-Irshād*, 80 ff.) In these cases what is known ('*ulima*) of something is not the thing itself (*al-nafs* = *wuḍūʿuhū*) but an ontologically real attribute (*ṣifa*, *ḥābita*) or state (*hāl*) of it, and it is this that the descriptive predicate strictly speaking refers to and asserts as real (*ḥābit*). Regarding the "essential attributes", al-Djuwaynī says "Every attribute (*wasf*) that is not understood negatively and the ignorance of which is not contradicted by the knowledge of the existence of the being that is denoted by the subject (*al-mawṣūf*), is a state (*hāl*)" (*al-Shāmīl*, 630, 17 f.; cf. also *al-Irshād*, 80). Thus when one says of a being that it is a (unit or quantum of) black (*sawād*) or that it is a colour (*lawn*) or an accident ('*arad*) or that it is inherent in a substrate (*hāl fī mahāll*), the reference is to "its being black" (*kawnuhū sawād*), "its being a colour" (*kawnuhū lawn*), "its being an accident" (*kawnuhū 'arad*), and "its being inherent" (*kawnuhū hāl*): its "blackhood" (*as-sawādiyya*), "accidentality" (*al-'arādiyya*), etc. Each of these attributes (*aḥwāl*, *ṣifāt*, *awṣāf*) is a distinct object of knowing (*ma'lūm*). Likewise the knowledge of an entity's being knowing (*kawnuhū 'ālim*) is distinct from the knowledge that the act of knowing (*al-'ilm*) by virtue of whose subsistence in it is knowing, exists (*kawnuhū mawḍūʿ* = *nafsuhū*) and is an act of knowing (*kawnuhū 'ilm* = *al-'ilmīyya*); each of these attributes (*ṣifāt*), as an ontologically real state (*hāl*) or characteristic (*hukm*) of the subject, is a distinct object (*ma'lūm*), known in a distinct act of knowing (*ilm*). As the attribute (*hāl*, *ṣifa*) is other than the entity to which it belongs (the *ṣifa* is other than the *mawṣūf*), so al-Djuwaynī holds that existence (*al-wuḍūʿ* = *nafs al-mawḍūʿ*) is not a *hāl* (see e.g. *al-Irshād*, 31). Though it is an object insofar as it is known (*ma'lūm*), the *hāl* is not an entity (*shay'*) (*al-Shāmīl*, 640, 679) and so is not described as existent (*mawḍūʿ*) or non-existent (*ma'dūm*, *muntafī*). (See also the citations of al-Bāḳillānī in al-Kiyā al-Harāsī, *op. cit.*, fols. 114a and 115a.)

The "self" as such is understood and conceived not as an essence but as an object, and the predicates which assert the entitative reality of the "self" as such (e.g. *shay'*, *dhāt*, *nafs*, *mawḍūʿ*) neither are synonymous with those which assert the actuality of its *aḥwāl* (e.g. *ḍiawhar*, '*arad*, *lawn*, '*ilm*, '*haraka*) nor do they imply the assertion of its *aḥwāl*. Since, then, the *aḥwāl* are neither identical with nor derived from the "self" as such of the being of which they are attributes and are known separately from the knowledge of its existence, that a being should have one essential attribute (*ṣifāt*, *nafs*) does not necessarily entail its having another. Beings that are essentially diverse (*mukhtalifa*) may share

(*iṣhtaraka*) in common essential attributes, as for example a human act of knowing (*ʿilm*) and a motion of an atom share in accidentality (*al-ʿaradīyya*, i.e. *kawnuhumā ʿaradāyn*) and a human act of knowing (a *maʿnā*, which is an accident) and God's eternal act of knowing (a *maʿnā*, which is not an accident, i.e. is not a contingent entity inherent in a material substrate) have in common (*iḍṭamaʿā fī*) their being acts of knowing (*kawnuhumā ʿilmayn = al-ʿilmīyya*) and so are, both, correctly denoted and described by *ʿilm*. Like entities (*al-mūḥlān*, *al-mutamāthūlān*) are alike in and by virtue of their selves (*li-anfusihimā*) (see e.g. *al-Shāmīl*, 312); they are therefore those beings that are analogous (*sadda aḥaduhumā masadda ʿl-ākḥar*) or are equivalent (*mustawīyān*) in all their essential attributes (*ṣifāt, al-nafs, al-ṣifāt, al-nafsiyya*) (cf. e.g. *al-Shāmīl*, 292, 313 f.).

In no sense does al-Djuwaynī take up the ontology of Abū Hāshim and his Muʿtazilī followers. Nowhere does al-Djuwaynī treat the attribute (*ḥāl, ṣifa*) as an ontologically real perfection of a being in terms of which other perfections, properties, characteristics, qualities, or operations are to be understood and explained. He does not speak of an attribute's entailing (*iktadā*) the actuality of another attribute or of its effecting (*aḥṭṭhara*) a characteristic or quality of a thing, nor does he regard any attribute as constituting the immediate ground of the possibility (*sahḥaha*) of some qualification of an entity or as the condition (*ṣart*) of its actuality. Similarly, he does not speak of attributes (*ṣifāt, aḥwāl*) as having modality (*kayfiyya*) nor of the characteristics (*aḥkām*) of attributes. Finally, where the Muʿtazilīs distinguish four categories of *maʿānī*, one as effecting no *ḥāl* whatsoever, either of its immediate substrate of inheritance or of the whole of which the latter is a part, and others as producing one or another qualification (*ḥāl*) either of the immediate substrate or of the whole composite (*al-djumla*), al-Djuwaynī makes no distinction whatsoever, asserting simply that every *maʿnā*, causes a *ḥāl* (those of material entities only in their immediate substrate of inheritance) (see e.g. 'Abd al-Djabbār, *al-Mughnī*, vi/2, 162 and ix, 87, and al-Djuwaynī, *al-Shāmīl*, 629 ff.). Though there may be found sometimes a certain parallelism of argumentation (cf. e.g. *ibid.*, 637 f. and 'Abd al-Djabbār, *al-Maǧmūʿ al-muḥīṭ bi ʿl-taklīf*, 188 f.) the conception of the *aḥwāl* and their role within the integrated contexts of the systems is significantly different in the teaching of the Ashʿarīs and in the thought of Abū Hāshim and his followers. Al-Djuwaynī employs Abū Hāshim's distinction between the Attribute of the Essence and the essential attribute (categories 1 and 2 in A above) together with the concept of the *ḥāl* in order to found a distinction in the Ashʿarī essential predicates in terms of their denotation. Thus although he speaks of "attributes" in both instances, he distinguishes those predicates (*awṣāf, ṣifāt*) that denote or assert simply the existence (i.e. the "self") of an entity as such from the rest, which assert distinct attributes that are states (*aḥwāl*). Similarly, he posits the reality (*ṭhubūt*) of the "states" as real attributes (*ṣifāt, ṭḥābita*) or characteristics (*aḥkām, ṭḥābita*) as the effect (*maʿlūl, mūǧab*) of the *maʿānī*, in order to distinguish ontologically the assertion of the *ṣifāt, maʿnawīyya* from that of those expressions which refer to the *maʿānī*, and describe them as such (e.g. to distinguish the reference of *ʿilm* from that of *ʿilm*), a distinction effectively denied by most of the earlier Ashʿarīs (see e.g. al-Bākillānī, *al-Tamhīd*, § 97, and al-Djuwaynī, *al-Shāmīl*, 631). Al-Djuwaynī,

in short, (and the same is clearly true of al-Bākillānī when he used the *aḥwāl*) posits the *aḥwāl* only in order to supply referents for certain predicates and concomitantly to resolve certain difficulties of logical reference and extension, particularly in predicates that are said both of God and creatures; the *aḥwāl* serve no other function within the system. Whereas the concept of the *ḥāl* constitutes the very foundation and core of the metaphysics of the Baṣran Muʿtazila from the time of Abū Hāshim, al-Bākillānī and al-Djuwaynī employ it without introducing any essential alteration into the tradition of Ashʿarī metaphysics. Finally, by the explicit introduction of purely intentional referents (viz. concepts thematically understood as *entia rationis*) into the Ashʿarī *kalām* along with the Aristotelian logic, al-Ghazālī [q.v.] was able to resolve in a much less awkward manner the problem that his master, al-Djuwaynī, had sought to deal with by means of the *aḥwāl*.

**HALIKARNAS BALIĞÇİSİ** pseudonym of DJEWĀD ŞHĀKİR, modern Turkish form CEVAT ŞHĀKİR KABAĞAĞÇILI, Turkish novelist and short story writer (1886-1973).

Born in Istanbul, the son of the general, diplomat and writer Mehmed Şhākīr Paşa (1855-1914) (brother of the grand vizier Ahmed Paşa [q.v.]), he stemmed from a prominent family from Afyonkarahisar. He was educated at the American Robert College in Istanbul and at Oxford University, where he graduated in Modern History in 1908. He started his career as a short story writer, translator, graphic artist and a cartoonist contributing to various short-lived periodicals which mushroomed following the restoration of the Constitution. He spent several years in prison for killing his father in a *crime passionnel* in Afyonkarahisar (1914). During the turbulent early years of the Republic, a short story about the hanging of deserters without trial, based on his prison reminiscences, which he published, under the pen-name Hüseyin Kenʿan, in the *Resimli hafta* ("The Weekly Illustrated", No. 35, 13 April 1925) got him into trouble. He was arrested and tried by the Tribunal of Independence (*İstiklâl mahkemesi*) of Ankara, which

sentenced him to three years banishment in the fortress sea port of Bodrum (ancient Halicarnassus), for anti-military and defeatist propaganda (because at that juncture, troops were being sent to quell a large-scale revolt in the eastern provinces). When his term was over, Djevād Şhākır decided to settle in this small town which had captured his heart, and he laboured incessantly to develop it. He assumed the pen-name of Halikarnas Balıkcısı ("The Fisherman of Halicarnassus"), living there until 1947 when he moved to Izmir to work as a journalist and expert tourist guide and for his children's education. He died in Izmir on 13 October 1973 and is buried in Bodrum, honoured by its people for his opening-up of this isolated city to the world.

Halikarnas Balıkcısı began to write regularly in Bodrum after the age of fifty, and devoted his entire art to the sea and to seamen. He spent his daily life among sea folk, fishermen, sponge fishers, divers and boatmen and shared their lives, struggles, worries and joys; most of the characters in his short stories and novels are real people whom he had met in the Aegean region. Exuberant and expansive by temperament, he writes with uncontrolled romantic impetus works which defy all sense of discipline in technique and style. But he captured his reader with his *joie de vivre*, warm sense of humanity and deep understanding of his fellow-men. Halikarnas Balıkcısı is the author of the following major works. Short stories: *Merhaba Akdeniz* (1947), *Ege'nin dibi* (1952), *Yaşasın deniz* (1954). Novels: *Aganta, burina burinata* (1946), *Ötelerin, çocuşu* (1956), *Uluç Reis* (1962), *Turgut Reis* (1955), *Deniz gurbetçileri* (1969). Memoirs: *Mavi sürgün* (1961). He also wrote several popular books on Anatolian mythology and made many translations (For a bibliography of his publications, see *Yeni yayınlar* of October 1974).

(FAHİR İZ)

**HALİLADJ** is myrobalanus, the plum-like fruit of the Terminalia chebula-tree, a Combrataceae of South-Asia and the Malayan archipelago. Being a useful and cheap substitute (*badal*) for gall or oak-apples (*afş*), they were used already in antiquity for extracting tannic acid and as a medicine. The term appears also as *ahliladji* or *ihliladji* and goes through Persian *halīla* back to Sanskrit *haritakī*. Synonyms are *hārsar* (indicated as "Indian" and probably to be derived from the Sanskrit term mentioned above), and *mufarrah* (with variants). These fruits were allegedly unknown to the earlier Greeks: the βάλανος μυροβαλάνος of Dioscorides (*De materia medica*, ed. M. Wellmann, ii, Berlin 1906, 301 f. = lib. iv, 157) is the fruit of a kind of Meringa, known to the Arabs as behen-nut (*bān*). The later Greeks called this μρολάανος ("salve-acorn"), and when the Arabs imported from India the real myrobalanus both were confounded, notwithstanding their completely different medical effect.

The Arabs knew five kinds of myrobalanus, all of which had reached Europe perhaps already at the time of the School of Salerno, but they were imported in great quantities and used in the Western pharmacies only through the trade of the Portuguese. The following kinds are under discussion: (1) the yellow

myrobalanus (*halīladji asfar*, *Terminalia citrina*). Its juice has an aperient effect and purges yellow gall. As an ointment, it dries up wound-boils, and pulverised and diluted with rose-water, it heals burns; (2) the myrobalanus of Kābul (*halīladji kābulī*), the ripe fruit of *Terminalia chebula*, is considered as the finest. Its effect is like that of the first one and, besides, it has the property of conferring a lucid intellect; (3) the black myrobalan (*halīladji aswad*), the unripe fruit of the *Terminalia chebula*, as large as a small olive; (4) *balīladji*, *Terminalia bellerica*; and (5) *amladji*, useful against haemorrhoids, in the Eastern and Western Middle Ages considered as a kind of myrobalanus, in fact, however, the fruit of a completely different family of plants, namely the *Phyllanthus emblica* (Euphorbiaceae). However, the nomenclature is not established with certainty.

The fruits were harvested at various stages of ripeness: small, unripe, dried, they served as medicine; the ripe fruits of the size of walnuts were used for the preparation of tannin, which was in high demand. In India, where the myrobalanus tree is indigenous, the fruits were widely used as medicine, especially as stomachics and purgatives; the Tirphala or Triphala ("tri-juiced medicine"), consisting probably of three of the kind mentioned above, was in particular esteemed (cf. al-Kh'ārazmī, *Majāliṭh al-ʿulūm*, ed. van Vloten, Leiden 1895, 186: *tarī abhal ay thalāth al-akhlāt wa-hiya ahliladji asfar wa-balīladji wa-amladji*). The Arabs mixed the fruits with spices in order to increase their digestive effect. The myrobalanus has now disappeared from the pharmacopeias in the West, but may still be used here and there in the East; only for the preparation of tannin is it still to be found on the market.

In mathematics the various forms of the term, especially *ihliladji*, were also used to designate an ellipse (M. Souissi, *La langue des mathématiques en arabe*, Tunis 1968, Nos. 35, 37).

**HALKEVI** [see **KHALKEVĪ**].

**HALLĀK** (A.), lit. "barber", "hairdresser", synonymous with *muzayyin*; the *ḥaḍḍiām* ("cupper") [see **FAṢṢĀD**, in Suppl.] also used to be a part-time barber. The *hallāks* formed a group of skilled workers, of mixed social origins. The well-known barber in the Islamic society of Medina was **Khīrāsh** b. Umayya, who shaved the Prophet Muḥammad's hair. The Prophet had his hair shaved at Minā at the time of the *ḥaḍḍi*, and Muslims have followed this practice during the Greater and Lesser Pilgrimages ever since.

Some barber's work at the time of the Pilgrimage received attention from the Arab writers, who recorded unusual events. For instance, a *hallāk* while shaving the hair of Abū Sufyān [q.v.], accidentally cut the wart (*ḥulūl*) on his head, and this reportedly caused his sickness and death in 20/640, says al-Samhūdī. During the Umayyad period, another *hallāk* became widely known at the time of the *ḥaḍḍi* of Yazid b. al-Muhallab [q.v.], who paid 5,000 *dirhams* to the *hallāk* after ritual shaving of his hair. The event illustrates that some barbers received charity from pilgrims in addition to their usual fee. Some Muslims used to have a yearly hair-cut on the Day of Sacrifice (*yawm al-nahr*), as was the practice of Hasan al-Baṣrī [q.v.], and Muslims even today observe this custom.

The *hallāk* worked at market places and also in public baths in Islamic cities on specific days of the week. During the 'Abbāsīd period, the hairdresser was one of the five regular attendants at every *ḥammām*. The *muhtasib* demanded expertise from each *hallāk*, who could neither shave a child's hair without his guardian's permission nor cut a slave's hair without his master's approval. Usually a *hallāk* received a *dānik* or a *dirham* for each hair-cut. It was also customary for the *hallāk* to give free hair-cuts to the poorer members of society during the Mamlūk period, writes al-**Ibshīhī**. In spite of their useful services, the barber was a person of very humble status, ridiculed by writers. A *hallāk* could marry only within his own social group, according to the customary law of *kafā'a*, which imposed similar restrictions on sweepers, weavers, cuppers and grocers. Seldom did a barber attain prominence in early Islamic society, either by acquiring knowledge of Islamic sciences or otherwise. The only known exception to this was Abu 'l-Ḥasan 'Alī b. Muḥammad al-Ṣūfī al-Muzayyin, the barber who distinguished himself as a practising mystic and a close friend of al-Djūnayd [q.v.].

**AL-HAMADHĀNĪ**, 'AYN AL-ḲUDĀT [see 'AYN AL-ḲUDĀT, in Suppl.].

**HAMĀDISHA**, or **ḤMĀDISHA** as they are locally called, are the members of a loosely and diversely organised religious confraternity or "path" (*ṭarīka*) which traces its spiritual heritage back to two Moroccan saints (*walīs* or *sayyids*) of the late 17th and early 18th centuries, Sīdī Abu 'l-Ḥasan 'Alī b. Ḥamdūsh (d. 1131/1718-9 or 1135/1722-3), popularly called Sīdī 'Alī and Sīdī Aḥmad **Dghughī** (?).

Although little is known historically of the two saints, their lives, like the lives of other popular North African saints, are rich in legend. These legends stress the saints' acquisition, possession, and passing on of blessing or *baraka* [q.v.]. Sīdī 'Alī, who is generally recognised as the master of Sīdī Aḥmad, is thought to have derived his teachings from 'Abd al-Salām b. Mashīsh [q.v.] and his student Abu 'l-Ḥasan al-Shādhīlī. (Members of the confraternity recite on occasion a *ḥizb* which they trace to al-Shādhīlī.) Sīdī 'Alī spent years at the Karawīyīn University in Fās, and, according to the *Salwat al-anfās* of **Dja'far** al-Kattānī, he is to be classed among the *shaykhs* of the mystical tradition in which the trance (*ḥāl*) is powerful. He would occasionally fall into lion-like rages. Both Sīdī 'Alī and Sīdī Aḥmad are buried on the south face of the **Djebel Zarhūn** some sixteen miles from the city of Mīknās; Sīdī 'Alī in the village of Banī Rashīd, Sīdī Aḥmad in Banī Warād. Their sanctuaries (*kubbās*), which are under the charge of their (putative) descendants (*awlād al-sayyid*), are the object of individual and collective pilgrimages. The latter, the *mūsem* (*mausim*), takes place each year on the sixth and seventh day after the *mūlūd* (*maulūd*), the Feast of the Prophet's Birthday, and is attended not only by the **Ḥmādshā** but by tens of thousands of devotees of the saints.

The **Ḥmādshā** are in fact members of one or the other of two distinct confraternities which are closely related and often confused. The 'Allaliyyīn are the followers of Sīdī 'Alī and the **Dghughīyyīn** of Sīdī Aḥmad. Both brotherhoods have a network of lodges (*zāwīyas*) and teams (*tā'īfās*) that extend throughout the principal towns and cities or northern Morocco and through the **Gharb** and **Zarhūn** areas. The **Ḥmādshā** brotherhoods, which have neither the membership nor the fame of such popular orders as the 'Isāwā [q.v.], do not extend across the Moroccan frontier. In a figure that is undoubtedly too low, Draque estimated their membership in 1938 at 3,400. Today, despite a marked decrease in the popularity of the confraternities in Morocco, the **Ḥmādshā's** number is considerably greater than Draque's estimate.

The members themselves fall into three distinct classes: the *awlād al-sayyid*, who trace their descent back to their ancestral saint, live principally in the village in which he is buried, and do not usually participate in his ecstatic ceremonies; the *fukarā'* who are members of lodges (*zāwīyas*) or teams (*tā'īfās*); and the devotees, or *muhībūn* who are simply attracted to the saint and his cult. Each of

the brotherhoods is in the charge of the head, the *mazwār*, of its respective *awlād al-sayyid*.

The Hmādsha are notorious for their practice during trance of slashing their heads with knives or halberds (*shakria*) or beating them with water jugs, iron balls, or clubs studded with nails. The principal ceremony (*sadaka, layla, or hadra*) of the brotherhood is not dissimilar in form to the ceremonies of the 'Īsāwā, the Djilāla [see KĀDIRIYYA], and other popular Maghribī brotherhoods. (It tends to be more simply organised, and more frenetic, in the shanty towns and countryside than in the urban *zāwiyas*.) The ceremony usually begins with at least a perfunctory chanting of popular litanies—there is no standard *dhikr* or *hizb* for the brotherhood—and continues with the *hadra* or trance-dance. Men and women dance first to the music of drums (*tabl* and *gwal*) and oboe (*ghayta*) and then to that of the drums and either a reed recorder (*nīra*) or a guitar (*ganbrī*); they fall first into a light, somnambulistic trance called *hāl* and then into a deeper, wilder trance called *djedhba*. It is during *djedhba* that acts of self-mutilation (by men, rarely by women) are performed and animals (pigs and camels) imitated (see 'ĪSĀWĀ).

The *hadra* is not understood in terms of a mystical union or communion with God. Rather, the *baraka* of the saint is held responsible for the *hāl*; *djedhba* is usually interpreted as possession by a *djinn* (*djinnī*) or more frequently by a *djinnīyya*. The most common possessing spirit is the *djinnīyya* or *ghūla* 'Ā'isha Kāndīsha [q.v. above] who is said to manifest herself as either a beauty or a hag, always with the foot of a camel or some other hooved animal. The possessing spirit is thought to respond to a particular musical phrase (*nīh*), often accompanied by words, which it finds pleasing. The Hmādsha themselves serve primarily as curers of the *djinn*-struck and the *djinn*-possessed. Their aim is less to exorcise permanently the possessing spirit than to establish a symbiotic relationship between the spirit and its victim. Often membership in the brotherhood occurs after a Hmādsha cure. Their ceremonies are thought also to bring *baraka* to their sponsor, to those in attendance, and to the ceremonial area itself.

AL-HAMAL [see MINTAKAT AL-BURŪD].

**HAMĀSA**, the epic genre in Islamic literature.

#### vi. IN SWAHILI LITERATURE.

In Swahili literature, the word *hamasa* occurs rarely and has the meaning of "virtue, courage, energy". The normal words for "courage, valour" in Swahili literature are *ushyaa, uyasiri, usabiti* and *uhodari*, all words of Arabic version, and so is the word for virtue, *fadhila*. There are only a few non-narrative heroic poems known in Swahili literature, most of them self-praises in true African fashion. The most famous of these is the Ukawafi of Liongo, praising himself, and at the same time an Ode to Freedom: "I am a young eagle. When this iron is

broken, I will soar up into the skies, higher than all". [see MADĪH. 5. In Swahili].

The vast majority of heroic poetry in Swahili is narrative and composed in the *utenzi* metre of lines of eight syllables; every four lines form a stanza *ubeti* (the word is formed on the basis of *bayt*). The rhyme scheme is *a a a b*, in which *b* represents the rhyme of the last line of every stanza throughout the whole poem; there are in Swahili more than a thousand words ending in *ya, ri, etc.* Rhyme in Swahili means the identity of the last syllable, so that *amba, imba, omba, umba* are rhyme-words.

About the life of the semi-mythical poet-hero Liongo we possess a few epic fragments which however, are certainly not contemporary (he lived presumably ca. 1010/1600). The oldest datable Swahili epic in Swahili is also the finest ever written in it; the ms. in Hamburg is dated 1141/1728. Its theme is the myth of the Prophet Muḥammad's expedition to Tabūk where according to this legend, he encountered and defeated the Emperor of Constantinople, Heraclius I, hence the epic's title, *Utendi wa Herekali*, or *Chuo cha Tambuka*. The published text (1958) has 1,145 stanzas. The sophisticated structure, the compact language, the intense style and the rich imagery show that it stands at the end of a long evolution of epic poetry of which we have no documentation. All we know is that the *Herekali* had many imitators, none of whom ever reached the powerful diction and the visionary heights of this first epic. The author, Bwana Mwengo b. Athumani, worked for a time at the court of the sultan of Pate, who requested him to versify the Arabic legend (*hadithi*), in "Swahili." Mwengo's son Abu Bakari composed at least one epic on the theme of an other *maghāzī* [q.v.] tradition, the *Katirifu*, i.e. the expedition of Muḥammad against king Ghitrif (ms. in SOAS, undated, but probably ca. 1750-60). Here follows a list of the major heroic-narrative poems in Swahili. *Abdu-Rahmani*. This adventurous son of Abū Bakr, whose bride is a daughter of the infamous Abū Sufyān, fights numerous battles which made him so popular that there are two epic poems about him in Swahili.

*Ali*. 'Alī is by far the most popular hero in Swahili epic literature, but so far no complete epic about his life has come to light. His exploits are celebrated in the *Utenzi wa Anzaruni* in which he defeats the *shaytān* Anzarūnī (cf. Kur'ān, VII, 14); in the *Utenzi wa Herekali*; in the *Katirifu*; in the *Rasi'l-Ghuli* (ca. 1870), a Swahili versification of the *Futūh al-Yaman*, one of the longest Swahili epics (4,300 stanzas) and of course in the epic of Haibara, on the battle of Kḥaybar [q.v.], of which only an incomplete ms. survives. The *Utenzi wa Muhamadi* contains among others the episode of the Battle of the Trench (*Handaki* [see KHANDAK]); this epic of the life of Muḥammad is the longest in Swahili literature, and with that, the longest epic ever composed in an African language. The *Utenzi wa Badiri*, the Epic of the Battle of Badr [q.v.] is the next in length, with 4,500 stanzas; yet it is not length that makes an epic great literature.

Hajji Chum of Zanzibar (*fl.* ca. 1920) wrote an epic on the Battle of Uḥud which contains some beautifully dramatic scenes; it was edited by H.E. Lambert (East African Literature Bureau in Nairobi; 739 stanzas). Hemedi b. Abdallah al-Buhriy (d. 1922) wrote, apart from the long version of the *Abdu-Rahmani* mentioned above, an equally long epic about the German conquest of the Swahili Coast in 1884. For the pious Swahili, this was a Holy War

against "Christian" invaders who bombed women and children from their safe warships. It is by far the best modern epic, i.e. one that deals with recent historical events instead of the mainly mythical events set during the life of the Prophet. The only epic set after his life are the three known versions of the life and death of Huseni (i.e. al-Ĥusayn [q.v.]), which shows (as do the Swahili traditions about 'Alī) that there must have been considerable *Shīrī* influence on the East African Coast. The epics that deal with the lives of the prophets before Muĥammad (Ādam, Ayyūb, Mūsā, Yūnus, Yūsuf), and those on the lives of the first Muslim women (*Khādīġja*, Fāġima, 'Ā'ishā) are not heroic in the true sense of chivalresque and are left outside the scope of this article.

*Bibliography*: A complete list of titles, mss. and editions can be found in Knappert, *The canon of Swahili literature*, in B.R. Bloomfield, ed., *Middle East Studies and Libraries... for Prof. J.D. Pearson*, London 1980, 85-102. Epic poetry is discussed in Knappert, *Four centuries of Swahili verse*, London 1979, chs. 3, 5, 8; idem, *Traditional Swahili poetry*, Leiden 1967, ch. 3; text editions: idem, *Swahili Islamic poetry*, Leiden 1971, iii; *Utenzi wa Mūiraji*, see *Afrika und Uebersee*, xlviii (1964), 241-74; *Katirifu*, in *ibid.*, liii, 81-104, 264-313. The two great works on the Swahili epic are: E. Dammann, *Dichtungen in der Lamu Mundart des Suaheli*, Hamburg 1940, and: J.W.T. Allen, *Tendi*, London 1971.

(J. KNAPPERT)

AL-ĤAMDĀWĪ, ABŪ 'ALĪ ISMĀ'ĪL B. IBRĀĤĪM B. ĤAMDĀWAYĤĪ, better known as AL-ĤAMDŪNĪ (this *nisba* being due to a defective reading, cf. al-Sam'ānī, *Ansāb*, ed. Hyderabad, iv, 241), minor poet of Baṣra in the 3rd/9th century. From his profession (that of *kātib*, Ibn Ḳutayba, *Uyūn*, iv, 89) and his origin, he belonged to the class of high officials of Persian origin in the 'Abbāsīd administration; his grandfather had been *'arif al-zanādika* under al-Mahdī from 168/784-5 (Goldziher, *Sālih* b. 'Abd al-Ḳuddūs und das *Zindikthum* während der Regierung des Chalifen al-Mahdī, in *Trans. Congress of Orientalists*, London, ii, 1892, 108).

Nothing is known of his youth; the *Aghānī*<sup>1</sup>, xii, 61-2, mentions his relations with the libertine poets of Baṣra 'Abd al-Ṣamad b. al-Mu'adhḡal and Maḡraṭān. Like them, he does not seem ever to have left Baṣra to seek his fortune in Bagħdād. Amongst his patrons, especially notable was Muĥammad b. al-Muĥīra b. Ḥarb (genealogy in Ibn Ḥazm, *Djamhara*<sup>2</sup>, 369), known as Ibn Ḥarb. This scion of the Muhallabids, governor of Nahr Tīrā and a lover of bacchic sessions, offered a slightly worn *ṭaylasān* to the poet, who was angered and launched a series of ten epigrams in Ibn Ḥarb. Their success—al-Mubarrad's circle seems to have appreciated them, according to al-Ḥuṣrī, *Zahr al-ādāb*, 550—led al-Ĥamdawī to make the *ṭaylasān* the central motif of his poetry. Other fragments of his attack a descendant of Sulaymān b. 'Alī, the governor of Baṣra and outstanding patron, al-Ḥusayn b. *Dja'far* (*Aghānī*<sup>1</sup>, xx, 37) and al-Ḥasan b. Rabāḡ, an aristocratic Baṣran of whom al-Djāḡiḡ thought highly.

Towards the end of al-Ĥamdawī's life there took place the episode of Sa'īd b. Sabandād; a skinny and bony ewe triggered off an incident similar to that of the *ṭaylasān*. The only biographical detail attested is provided by a particularly rancorous distich directed against Sa'īd b. Humayd after his appointment in 248/862 as head of the Correspondence Department (al-Ṭabari, iii, 1515). But after this date, al-Ĥamdawī is no more mentioned.

Al-Ĥamdawī was essentially a satirist. One epigram of his was so boldly drawn that it was attributed, from its high quality, to Abū Nuwās (Ibn al-Ĥidġġa, *Ta'ḡil al-ġharīb*, ii, 249; Abū Nuwās, *Diwān*, ed. Wagner, ii, 152). The interest of his poetry lies in its treatment of themes: here we have a *ṭaylasān* and an ewe raised to the level of literary types (al-Ṭha'ālibī, *Ṭḡimār al-ḡulūb*, Cairo 1965, 376, 601, 673) and providing points of reference for scholars. Ibn al-Rūmī, Ibn Sukkara and Ibn Ṣarah evoke this famous *ṭaylasān*, and in the 9th/15th century, al-Suyūṭī, follows the same path in his *al-Aḡādīṭh al-ḡisān fī fadl al-ṭaylasān* (ms. Escorial 1972, fols. 27b, 29b-30a-b). This *ḡidġā'* of insinuation is thrown into relief by an effort of poetic style which is extremely bravura: *tadmīn* and metaphors (Ibn Abī 'Awn, *Taḡḡibḡhāt*, cites him twelve times) brought great delight to the scholars (al-Djurdġānī, *Kināyāt*, 123).

*Bibliography*: As well as references given above, see Ibn al-Mu'tazz, *Ṭabaġāt*, index; Ibn 'Abd Rabbīhī, *Ĥkd*, index; Mas'ūdī, *Murūġġ*, viii, 89 = § 3213 and index s.v. Fāṭih 3761, 26 b, 193 a, 354 a; Ḥusayn Ṣabīḡ al-'Allāġ, *al-Shu'ara' al-kuttāb fī 'l-'Irāġ fī 'l-kam al-thāḡīth al-ḡidġrī*, Beirut 1975, index; Ibn Kḡhallikān, *Būlak*, ii, 472-3, ed. Ḥisān 'Abbās, vii, 95, 98; Ṣafādī, no. 3994. The poet's *diwān* has been brought together and published in the Iraqi journal *al-Maurid*, iii/1 (1974) (additions in iv/1, 1975) by A. Dj. al-Naġġdī; it has been studied by A. Arāzi, *Themes et style d'al-Ĥamdawī*, in *JĀ*, cclxxvii (1979), 261-307. (A. ARĀZI)

ĤAMDŪN IBN AL-ĤĀDġġ [see IBN AL-ĤĀDġġ].  
ĤAMĪD ĶĀLANDAR, Ṣufī mystic and poet of Muslim India.

He was born in Kilōġḡarī (Dihlī) some time towards the close of *Khaldġīr* period. His father, Mawlānā Ṭāġġ al-Dīn, was a devout disciple of *Shaykh* Nizām al-Dīn Awliyā', and Ḥamīd Ķalandar visited the *Shaykh* along with his father when he was a mere child. His father made proper arrangements for Ḥamīd's education, and he completed his studies according to the traditions of his age. When Muslim families were forcibly transplanted by the order of Sultan Muĥammad b. Tuġḡluġ from Dihlī to Deoġīrī, Ḥamīd also had to move to the Deccan. In Dawlatābād (Deoġīrī) he benefited from the company of Mawlānā Burḡān al-Dīn Ķharīb, the *khāṭifa* of *Shaykh* Nizām al-Dīn Awliyā', and then in 753/1352-3 returned to Dihlī. In 754/1353 he paid a visit to *Shaykh* Naṣīr al-Dīn, the successor of Nizām al-Dīn Awliyā'. Being informed about his father's association with his master, *Shaykh* Naṣīr showed him much regard, asking "Mawlānā, how can I address you as *Ķalandar*?" (sc. because he was a scholarly man). He told him that once Nizām al-Dīn Awliyā' had told his father that the child would live in the fashion of a *Ķalandar* [q.v.]; he accordingly shaved his head, eye-brows, moustaches, beard, and wore saffron clothes like the *Ķalandars*.

Ḥamīd Ķalandar compiled the *Malṣūzāt* or sayings of *Shaykh* Naṣīr al-Dīn of Dihlī in Persian, depicting the great *Shaykh*, *inter alia*, as talking to different people who belonged to the various strata of society and came to the *Shaykh's khānġāh* with their manifold

problems. The work is characterised by clarity of thought and is free from miracles and other mystical lucubrations. He also left a *Diwān* of poetry which is not extant, although *Shaykh* 'Abd al-Ḥaḡḡ Muḥaddith says that his verses were of poor quality and unimportant. The *Maḡmū'a-yi latā'if wa-safīna*, an early 9th/15th century anthology (B.M. Or. 4110), contains a number of *kaṣīdas* composed by Hamīd Kalandar in praise of Sultan Fīrūz Shāh of Dīhlī, showing that he was a courtier also. The statement of Sayyid Muḥammad Gīṣū Darāz [q.v.] contains some truth that Mawlānā Ḥamīd and his companions, Mawlānā Ādam, Mawlānā Lādhū Shāh and Mawlānā Sharaf al-Dīn had no genuine aptitude for Ṣūfism, but it is nevertheless correct that Hamīd possessed neither a house, nor a wife or a child, and always lived as a Kalandar.

*Bibliography*: 'Abd al-Ḥaḡḡ, *Akhbār al-akhyār*, Dīhlī 1914; Hamīd Kalandar, *Khayr al-maḡjālis*, ed. K.A. Nizami, Aligarh 1960; Sayyid Muḥammad Ḥusaynī, *Djāwāmī' al-kalim* (sayings of *Shaykh* Muḥammad Gīṣū Darāz) ed. Muḥammad Hamīd Siddīqī, Kānpur 1356/1937-8; Mīr Khurd, *Siyar al-awliyā'*, Dīhlī 1302/1885. (I.H. SIDDIQI)

**HAMĪD AL-DĪN KĀDĪ NĀGAWRĪ**, MUḤAMMAD B. 'AṬĀ', Ṣūfī saint and scholar of Muslim India. On becoming a Ṣūfī he came to be known as *Shaykh* Hamīd al-Dīn. Having travelled to different Muslim countries, he came to Dīhlī during the reign of Iltutmish (607-33/1211-36 [q.v.]) and soon developed an intimacy with *Shaykh* Kutb al-Dīn Bakhtiyār Kākī, the leading *Čishtī* saint of Dīhlī. He himself belonged to the Suhrawardī order and was the *khalīfa* or chief disciple of *Shaykh* Shihāb al-Dīn Suhrawardī (539-632/1145-1234). Being fond of *samā'* (songs sung for the spiritual entertainment of the Ṣūfīs), he made it popular in Dīhlī. He is reported to have served in Nāgawr as *kādī*, thereby acquiring the *nisba* of Nāgawrī. Towards the end of his life he came to Dīhlī and died there in 641/1244, being buried near the grave of his friend, *Shaykh* Kutb al-Dīn Kākī.

Hamīd al-Dīn Nāgawrī was learned in both Arabic and Persian and wrote a number of popular books on religion and Ṣūfism, as well as composing verses. Once *Shaykh* Nizām al-Dīn Awliyā' quoted to his disciples the opinion of a certain leading scholar of the 7th/13th century who used to tell his pupils "Whatever you study is available in these pages [sc. in the works of the *kādī*], and whatever you do not know is also contained herein. Whatever (knowledge) I have acquired is based on (his works) and what I do not know is also in his (works)." Amongst his numerous works, only the *Tawālī' al-shumūs* and *Sharḥ-i Arbā'in* (mss. of both in the Habīb Gandj Collection, Mawlānā Āzād Library, Aligarh) are extant. The former explains the meanings of the names of God, while the latter is a commentary on the selected forty traditions of the Prophet relating to gnosis and the love of God. There are extracts from his famous works, the *Lawā'ih* and the *Lawāmī'*, contained in the *Akhbār al-akhyār*, and there is a quatrain composed by *Shaykh* Hamīd al-Dīn in praise of *Shaykh* Farīd al-Dīn Gandj-i Shakar of Adjōdhān quoted in the *Tārīkh-i Muḥammadi* of Biḥamad Khānī.

*Bibliography*: 'Abd al-Ḥaḡḡ Muḥaddith Dihlawī, *Akhbār al-akhyār*, Dīhlī 1309/1891-2; Ghawthī Shattārī, *Gulzār-i abrār* (a 17th century work), ms. Habīb Gandj Collection, Mawlānā Āzād Library, Aligarh.; Muḥammad Mubārak Kirmānī, known as Mīr Khurd, *Siyar al-awliyā'*, Dīhlī 1302/1885; Muḥammad Biḥamad-Khānī, *Tārīkh-*

*i Muḥammadi*, ms. British Museum Or. 137; Mīr Ḥasan Sidjī, *Fawā'id al-fu'ād* (collection of the table talk of *Shaykh* Nizām al-Dīn Awliyā'), Nawal Kishore 1302/1885; Storey, i, 5.

(I.H. SIDDIQI)

**HAMĪD AL-DĪN ŠUFĪ NĀGAWRĪ SIWĀLĪ**, Ṣūfī saint of Muslim India. He was the post-humous son of *Shaykh* Muḥammad al-Šūfī, and allegedly the first child to be born in a Muslim family associated with the ruling class in Dīhlī after its conquest by the Turks. When he was a grown-up young man, he became fond of a voluptuous life, but soon became disgusted with it and then decided to devote himself to religion and piety. He entered the circle of the disciples of *Shaykh* Mu'īn al-Dīn Čishtī in Adjimer and soon became a devoted Ṣūfī, repenting of his past sins and adopting a life of poverty. Being impressed by his sincerity and devotion, his *pir* gave him the title of *Sultān al-tārīkīn* "monarch of recluses", and he was also given a *khalīfat-nāma*, i.e. permission to enrol disciples.

*Shaykh* Hamīd al-Dīn finally settled down in Siwāl, a small village adjacent to Nāgawr, where he lived in a thatched house and dressed himself like a peasant, using two sheets of cloth to cover the upper and the lower parts of the body; he lived frugally and earned his livelihood by ploughing the land, never establishing any contact with the members of the ruling class nor accepting any aid from the state. He owned a cow that he milked himself, and was a strict vegetarian. His death took place in 674/1276 at an advanced age.

He was of the early *Čishtī* saints who made the order popular and widely-known in India. It is interesting to note that he lived and worked as a Ṣūfī in rural surroundings, while all the leading Ṣūfīs tended to live in the urban centres. He composed verses and wrote on religious problems, and his letters, addressed to *Shaykh* Bahā' al-Dīn Zakariyyā' Suhrawardī of Multān and other persons were very famous during mediaeval times. He wrote treatises also on Ṣūfism, the extracts from which are to be found in *Shaykh* 'Abd al-Ḥaḡḡ Dihlawī's *Akhbār al-akhyār*.

*Bibliography*: 'Abd al-Ḥaḡḡ Muḥaddith Dihlawī, *Akhbār al-akhyār*, Dīhlī 1309/1891-2; Sayyid Muḥammad Mubārak Kirmānī, known as Mīr Khurd, *Siyar al-awliyā'*, Dīhlī 1302/1885; *Surūr al-budūr*, an anonymous work, but certainly written by one of the grandsons of Hamīd al-Dīn Šūfī Nāgawrī, as the contents reveal, ms. Habīb Gandj Collection, Mawlānā Āzād Library, Aligarh.; Storey, i, 6, 1192. (I.H. SIDDIQI)

**HAMZA MAKHDŪM**, Ṣūfī saint of the Kubrawiyya. He was the son of Bābā 'Uḥmān, of Rādjpur descent, and was born in about 900/1494-5. He studied in the famous *madrasa* in Srīnagar known as Dār al-Shifā', which was founded by Sultān Ḥasan Shāh (876-89/1472-84). He studied the Kur'ān, *hadīth*, *fiqh* and Ṣūfism under able teachers like Bābā Ismā'īl Kubrawī, the principal of the *madrasa* and a great scholar of his time, his son Mullā Faṭḥ Allāh Shūrāzī and Mullā Luṭf Allāh. After completing his education, Hamza Makhdūm became a follower of the Kubrawī order. He exhorted the Muslims to adhere to the *Shari'a* and to give up all un-Islamic beliefs and practices which they had borrowed from the non-Muslims. He was also one of the leaders of the movement against Shīrīsm, which had begun to spread in the Valley in the first half of the 10th/16th century due to the efforts of Mīr Shams al-Dīn 'Irākī and his followers. Hamza Makhdūm, therefore, undertook tours in the Valley to prevent the spread of Shīrīsm and also to propagate Islamic fundamentalism. Ghāzī Shāh Čak (968-70/1561-3), the first

ruler of the Ćak dynasty, being a staunch *Shī'ī*, banished him from *Srīnagar* to *Bīrū*, a village 20 miles away. He was allowed to return to *Srīnagar* by *Sultān Husayn Shāh* (970-8/1563-70), who was a liberal ruler. But *Hamza Makhdūm* did not give up his anti-*Shī'ī* activities and was a party to inviting the Emperor *Akbar* to conquer *Kashmīr* and save *Sunnism*. He died at the age of 84 and was buried on the slope of the *Harīparbat* hillock in *Srīnagar*, below *Akbar's* fort. He is greatly revered by the *Kashmīrīs*, who hold his anniversary every year and visit his tomb in large numbers.

**HANAFITES** [see HANAFIYYA].

**HANDASA** [see 'ILM AL-HANDASA].

**HANDŽIĆ** (AL-KHĀNDĪ), MUĤAMMAD B. MUĤAMMAD B. ŠĀLIĤ B. MUĤAMMAD, a leading Bosnian Muslim and Arabic author who was born in Saray Bosna about 1909. He received his early education in Bosnia, and his higher education at al-Azhar in Cairo, where he was admitted to the degree of *al-ʿālimiyya*. After this he performed the *ḥadždj* with his father, and returned to his native country to teach. He belonged to the *Hanafī madhhab*, and followed the teachings of *Ibn Taymiyya* in *fiqh*. He died at Saray Bosna on 29 July, 1944.

During his short literary career he contributed both to the international literature of Islam, with his various works on theology, and to the Arabic literature of Yugoslavia with his poetry, his works dealing with various aspects of the local history of the Muslims in Bosnia, and his literary study *al-Djawahar al-asnā fī tarāđim ʿulamāʾ wa-shuʿarāʾ Būsna*. In addition to the latter work his published writings include a commentary on *Risālat Ḥayāt al-anbiyāʾ* by *Aḥmad al-Bayḥakī*, a commentary on *al-Kalīm al-tayyib* of *Aḥmad b. Taymiyya* and *Risālat al-Ḥakk al-ṣāḥih fī iḥbāt nuṣal Sayyidnā al-Masūh*. A number of his works remain unpublished, including some Arabic poems and a supplement to *Hādjdjī Khalīfa's Kashf al-zunūn*.

*Bibliography*: Zakī Muḥammad Mudjāhid, *al-ʿĀlām al-sharkīyya fī ʿl-mʾa al-rābiʾa ʿashra al-ḥidriyya*, ii, Cairo 1950, 174; ʿUmar Riđā Kaḥḥāla, *Muđđam al-muʿallifīn*, xi, Damascus 1960, 280; for his unpublished works, see K. (R.Y. EBIED AND M.J.L. YOUNG)

**AL-ĤĀRITH B. KALADA** B. ʿAMR B. ʿILĀDJ AL-ṬĤAKAFĪ (d. 13/634-5), traditionally considered as the oldest known Arab physician.

It is nevertheless difficult to pin down his personality. He came originally from al-Ṭāʿif, where he was probably born a few years after the middle of the 6th century A.D., and is said to have been a lute-player (trained in Persia?) before studying medicine at *Gondēshāpūr* [*q.v.*] and, adds *Šāʿid al-Andalusī* (*Ṭabaqāt al-umam*, ed. Cheikho, Beirut 1912, 47, tr. Blachère, Paris 1935, 99) with small probability, in the Yemen. He became the "physician of the Arabs", acquiring great fame, and according to some late sources had relations with the Persians, even to the

point that he is supposed to have had with one of the *Kisrās*—unhesitatingly identified with *Khusraw Anushīrwān*, who however died in 579 A.D.—a long conversation in the course of which he was led into revealing to the monarch the principles behind his medical treatments (see especially, *Ibn Khallikān*, *Wafayāt*, ed. I. ʿAbbās, Beirut 1965, vi, 373-6; *Ibn Abī Uṣaybiʿ*, *Atibbāʾ*, ed. Müller, i, 110-11). A document of this kind, which leads one to believe that *Ibn Kalada* was the author of a treatise on hygiene (see also al-Ġhuzūlī, *Maʿālīʾ al-budūr*, ii, 101-3), is clearly apocryphal, but it undoubtedly contains some of the aphorisms current among the Arabs of the time, remembrance of which has not entirely disappeared. It is mainly a question of pieces of advice on food and sexual hygiene which investigators of the 2nd-3rd/8th-9th centuries were able to gather together.

Since al-Ĥārith also practised at Mecca, on various occasions he tended *Muḥammad*, it is related, before his mission, and there are naturally attributed to him some spectacular cures of a patently folkloric nature. Among these figures his treatment of a youth whose illness, difficult to diagnose, was simply an impossible love which he felt for his sister-in-law (*Ibn Kayyim al-Djāwziyya*, *Akḥbār al-nisāʾ*, Cairo 1319, 21-2, citing al-Aṣmaʿī; cf. R. Basset, *Mille et un contes*, etc., Paris 1926, ii, 74-5, who brings forward several variants of this tale and points out its resemblance to the intervention of the physician *Erasistratos* with *Antiochus*). According to a legend of anti-Umayyad origin, when the wife of *Yūsuf al-Ṭḥakafī*, who had had al-Ĥārith as her first husband, brought al-Ḥādjdjādj [*q.v.*] into the world, Satan appeared amidst the family in the form of *Ibn Kalada* and made the baby drink some blood because he was refusing his mother's breast; this was the origin of the bloodthirsty nature of the great governor (al-Masʿūdī, *Murūđj*, v, 288-9 = §§ 2052-3).

The biographers also lay emphasis on one of his cures which had far-reaching consequences, that performed at al-Ṭāʿif on a person described as a king of Yemen called *Abu ʿl-Kḥayr* (*Ibn Kutayba*, *Māʿārif*, 288) or else al-Nūshadjan [b. *Wahrīz*] (*Yākūt*, s.v. *Zandaward*), or even simply a *Yashkurī* of *Kaskar* (al-Balādhurī, *Ansāb*, iv/a, 163); the sick man, now cured of leprosy, showed his gratitude by presenting to al-Ĥārith the famous *Sumayya*, who came originally from *Zandaward* and had belonged to the Persian emperor. This explicatory story is already fairly suspect, but may contain a basis of truth; it is difficult to make out subsequent events because of the anti-Umayyad traditions which have obscured things. This *Sumayya*, who is moreover sometimes mixed up with the mother of ʿAmmār b. *Yāsir* [*q.v.*], *Summayya bint Khubāt* (*Ibn Kutayba*, *Māʿārif*, 256), had several children: the third one, *Ziyād* [*q.v.*], gave rise to the well-known controversies; the second, *Nufayʿ*, known historically by his *kunya* of *Abū Bakra* [*q.v.*], was not recognised by al-Ĥārith, who gave out that his father was one his slaves called *Masrūh*; as for the first child, *Nāfiʿ*, several sources (in particular, al-Balādhurī, *loc. cit.*) make him the son of al-Ĥārith, but *Ibn al-Kalbī* (-*Caskel*, Tab. 118) only mentions a *Nāfiʿ* b. *Kalada*, who would accordingly be the brother of the physician. Without becoming aware of a contradiction, since he affirms that al-Ĥārith was childless, *Ibn Kutayba* (*loc. cit.*) attributes to him a daughter *Azda* who was the wife of *ʿUtba b. Ghazwān* [*q.v.*]; the latter brought his three brothers-in-law to *Basra* and employed *Ziyād* as a secretary (see also al-Balādhurī, *Ansāb*, iv/a, 164). Complicating the situation even further, *Ibn*

Ĥabīb (*Muḥabbar*, 460) further cites another daughter of al-Ĥārith, Kīlāba, who married a distant cousin, 'Amr b. 'Umayr b. 'Awf (Ibn al-Kalbī-Caskel, Tab. 118).

It can be seen that this family history is very difficult to disentangle, and it offers a characteristic example of the confusions brought about by the efforts of many *mawālī* to provide themselves with an Arab genealogy and in this particular case, by the fierce political propaganda aimed at blackening the Umayyad's names. According to the information mentioned above, Sumayya was apparently married at least once, since it was her husband 'Ubayd who was the alleged father of Ziyād. Now the historical sources reflect, in regard to Mu'āwīya's recognition of Ziyād's position as collateral relative (*istihāk*), an anti-Umayyad tradition according to which Sumayya was a prostitute, which makes this "physician of the Arabs" a procurer, since she had been installed at his instigation in the *ḥarāt al-baghāyā* in al-Ta'if in return for paying him a share of her earnings (al-Mas'ūdī *Murūdj*, v, 22, 24 = § 1778, 1781). Logically, the physiognomists ought to have intervened and pronounced upon the father of each of her children [see *Biḥār*, above], but the sources say nothing about this.

Al-Ĥārith b. Kalada probably gave up this latter activity—if indeed the information about it is authentic—after he was converted to Islam and had acquired the status of one of the Prophet's Companions. According to a tradition which has clearly been reshaped (see al-Tabarī, i, 2127-8; al-Mas'ūdī, *Murūdj*, iv, 184 = § 1518; cf. *al-Fakhrī*, ed. Derenbourg, 133), Abū Bakr was poisoned by the Jews, and al-Ĥārith, who had shared his meal, lost his sight and died soon afterwards.

One discerns that, if the historical existence of the "physician of the Arabs" cannot be put in doubt, his personality is surrounded by a host of legends which have secured a foothold in the historical and biographical literature and which make very difficult all attempts to disentangle the true from the false.

As well as the treatise on hygiene attributed to him, there are some verses given under his name, notably the following (al-'Askarī, *Sinā'atayn*, 123): "There are some people who shower strangers with their beneficence, whilst they afflict their relatives with unhappiness right till death".

AL-ĤĀRITHĪ, ŠĀLIḤ B. 'ALĪ (1250-1314/1834-96), prominent Ibādī leader of the second half of the 19th century and paramount *ṣayikh* (*tamīmā*) of the confederation of tribes of Eastern 'Umān known as the Šarkīyya Hināwīs.

This regional grouping began to crystallise under Ĥirṭh leadership during the civil war that marked the collapse of the Ya'āriba Imāmate in the first half

of the 18th century and continued to develop as one of the major political groupings around which the loyalties of the tribal moiety divisions within 'Umān tended to polarise in times of crisis, the so-called Hināwī and Ghāfirī *ṣayfs* (alliances). Within the Ĥirṭh clan itself, leadership was shared by three family groupings, the senior to which Šāliḥ belonged, with its "capital" (*'āšima*) at al-Kābil; a cadet branch (the Āl Ḥumayd) at nearby al-Muḍayrib; and the third controlling the original clan settlement of Lower Ibrā (whence the *nisba* Barwānī, var. Barvānī, in East African sources). These divisions were particularly important in the politics of Zanzibar where members of the Ĥirṭh tended to dispute the leadership of the old-established 'Umānī settlers (most of whom originated in the Šarkīyya); but at home, the paramount leadership of the Kābil branch seems to have been firmly established by at least the beginning of the 19th century, for 'Isā b. Šāliḥ, Šāliḥ's great-grandfather, is mentioned in the sources as being leader of the Šarkīyya Hināwīs from the beginning until the middle of the century.

In the latter part of his life, 'Isā joined the opposition to Sayyid Sa'īd b. Sultān (sultan ca. 1804-56) in 'Umān. His grandson, 'Alī b. Našīr (Šāliḥ's father), on the other hand, was a strong supporter of Sayyid Sa'īd in his East African domain; at one time he was Sa'īd's governor in Mombasa, later his envoy to England. He was killed in Sa'īd's service at the battle of Siu during the campaign against the Mazārī' of Pate (winter 1844-5).

Šāliḥ himself seems to have come strongly under the influence of his great-grandfather and was brought up in the tribal environment at al-Kābil. It was 'Isā who was also presumably responsible for sending him to study with Sa'īd b. Kḥalḥān al-Kḥalīlī (1820?-71), one of the Ibādī *'ulamā'* with whom he had been involved in the abortive attempts to promote Ḥumūd b. 'Azzān as *Imām* during the mid-1840s. Following the death of Sayyid Sa'īd, the Ibādī movement profited from the succession disputes and tended to cultivate the aspirations of members of the Ḳays b. al-Imām Aḥmad branch of the Āl Bū Sa'īd from Ruṣṭāk in 'Umān and of Sayyid Bargḥash b. Sa'īd in Zanzibar. Šāliḥ's first appearance in this political scene was during his sole recorded visit to Zanzibar in Sayyid Mādjid b. Sa'īd's time (sultan 1856-70); there he became involved in Sayyid Bargḥash's attempt to depose his brother with the help of the Ĥirṭh and other Ibādī leaders. After the failure of this coup in 1859, Šāliḥ took refuge in Somalia for a couple of years, during which time he completed his formal studies.

Upon his return to 'Umān, he immediately became involved in the increasingly complex political situation which revolved around the Āl Bū Sa'īd dynastic struggle, by now exacerbated by the Canning award of 1861 which divided Zanzibar from 'Umān, the Ibādī movement which tended to look for tribal support from the Hināwī faction in central 'Umān, Wahhābī expansionism and increasing British intervention in 'Umānī affairs. Eventually, in September 1868, the parricide sultan, Sālim b. Ṭḥuwaynī (sultan 1866-8), was evicted from Muscat by a tribal force drawn from the Ruṣṭāk and Bāṭina Hināwīs under 'Azzān b. Qays and the Šarkīyya Hināwīs led by Šāliḥ b. 'Alī; thereupon 'Azzān was elected an *Imām* with limited power (a *da'if Imām*) under the sponsorship of the then leading *'ulamā'*, Sa'īd b. Kḥalḥān al-Kḥalīlī (who was also paramount leader of the Hināwī Banī Ruwāḥa), Muḥammad b. Sulayyim al-Gḥārībī (from the Bāṭina Yāl Sa'īd) and Šāliḥ.

In 1871 Turkī b. Sa'īd re-established the sultanate with a Ghāfirī tribal army, encouraged by the British and financially aided by his brother Mādjid from Zanzibar. 'Azzān was killed in the siege of the capital and Sa'īd b. Khalfān al-Khalīlī murdered after he had eventually been persuaded to surrender by the British Agent in Muscat. From then onwards, Šāliḥ directed the Ibādī movement until his death in 1896.

In the Ibādī literature Šāliḥ is described as *al-Imām al-muhtasib*, that is, an 'alim with the dependability and integrity to lead and advise the Muslim community until such time as an *Imām* can be properly elected. It was in this guise that he continued his attacks, with the support of the Šarḳiyya Hināwīs and their *badw* Wahība allies, on the sultans in Muscat (1874, 1877, 1895), and against dissident tribesmen, notably the campaign in 1894 against the Banī Shuhaym of the Wādī Damā, who were the shaikhly clan of the Masākira, the Hīrth's great rivals in Ibrā, and in 1896 against the Banū Djabīr, leaders of the Ghāfirī confederation of central 'Umān who were harrying the Raḥbiyyān allies of the Šarḳiyya Hināwīs. It was during the latter attack that he met his death, struck by a bullet in the thigh at al-Djāyala.

During the first part of this period, Šāliḥ's main aim seems to have been that of undermining the position of Turkī b. Sa'īd (Sultan 1871-88), but after the failure of the 1877 attack he largely confined his activities to intriguing against the régime at Muscat and in maintaining his political authority in the interior. In Fayṣal b. Turkī's time, on the other hand, he does seem to have had ideas of sponsoring Sa'ūd, a son of 'Azzān b. Ḳays, as a candidate for the Imāmate. Šāliḥ was succeeded by his eldest son 'Isā (d. 1946) who, with another of his former pupils, 'Abd Allāh b. Ḥumayd al-Sālimī (d. 1914), were to play a major part in restoring the Imāmate in central 'Umān in 1913.

Šāliḥ's surviving literary work is a collection of *djāwābāt*, arranged in 1916-17 by A. Walīd Sa'īd b. Ḥumayd b. Khalīfayn al-Ĥārithī, later *kādī* of the *Imām* Muḥammad b. 'Abd Allāh al-Khalīlī (*Imām* 1920-54), under the title *'Ayn al-mašāliḥ* (see Bibliography).

AL-ĤASAN B. AL-ĤĀSİM B. AL-ĤASAN B. 'ALĪ

B. 'ABD AL-RAḤMĀN B. AL-ĤĀSİM B. AL-ĤASAN B. ZAYD B. AL-ĤASAN B. 'ALĪ B. ABĪ ṬĀLIB, AL-DĀ'Ī ILA 'L-ḤAḲḲ ABŪ MUḤAMMAD, Zaydī ruler of Ṭabaristān, was born in 263 or 264/876-8, probably in north-western Iran.

Nothing is known about his life before he joined the Zaydī *imām* al-Ḥasan al-Uṭrūsh [q.v.] al-Nāṣir li 'l-ḤaḲḲ while the latter was active in converting the Daylamīs and Gilīs east of the Safīd-rūd to Islam. He was commander of the vanguard of al-Nāṣir's army in the great victory over the Sāmānid army under Abu 'l-'Abbās Ṣu'lūk on the river Būrrūd, west of Shālūs in Djumādā II 301/January 914 which led to the conquest of Ṭabaristān by al-Nāṣir. Al-Ḥasan b. al-Ĥāṣīm pursued the fleeing enemy and on his return ordered the massacre of some 5,000 Khurāsānian soldiers descending from the fortress of Shālūs, denying knowledge of a promise of safety which al-Nāṣir had given them. During the reign of al-Nāṣir in Ṭabaristān, he remained in control of the army, though a rivalry and enmity developed between him and al-Nāṣir's son Abu 'l-Ĥāṣīm Dja'far, especially after the latter was appointed governor of Sāriya in 302/914-15. Al-Ḥasan conspired to depose al-Nāṣir with some Gilī and Daylamī chiefs, whom he had been sent to recruit with their tribes. When they arrived in Āmul, he arrested al-Nāṣir and imprisoned him in a castle in Lāridjān. Shortly afterwards, however, the Gilī chief Līlī b. al-Nu'mān arrived from Sāriya calling for support of al-Nāṣir, and al-Ḥasan was deserted by most of his supporters. As al-Nāṣir was restored to the rule, he tried to flee but was apprehended and brought before the *imām*, who pardoned him and permitted him to leave for Gilān. Some time later al-Nāṣir, upon the intercession of his son Abu 'l-Husayn Aḥmad, recalled him, granted him the title *al-Dā'ī ila 'l-ḤaḲḲ* and married a daughter of Aḥmad to him. Earlier he had apparently been married to a daughter of al-Nāṣir. Then al-Nāṣir appointed him governor of Gurgān and ordered his son Dja'far to assist him. The latter, however, worked against him and deserted him when he was attacked by a (Sāmānid?) army of Turks. Al-Dā'ī was forced to retreat and then besieged in a fortress near Astarābād, probably in winter 304/916-17. Eventually he escaped with a handful of men and went to Āmul and from there to Gilān.

After the death of al-Nāṣir in Sha'bān 304/February 917, Aḥmad, in accordance with the wishes of his father, recalled him from Gilān and surrendered the rule to him. Dja'far, however, reproached his brother for this and defected, first joining the Sāmānid governor of Rayy and then going to Gilān to gather supporters. Aḥmad remained loyal and subdued the Bāwandid Ispahbad Sharwīn b. Rustam and the Ḳārinid Shahrīyār, rulers of the highlands of Ṭabaristān, forcing them to pay a higher tribute to al-Dā'ī, but he prevented him from putting them to death. Then he was sent against the Sāmānid general Ilyās b. Ilyasā', who had seized Gurgān, and defeated him. Al-Dā'ī and Aḥmad occupied Gurgān but were forced to withdraw to Tamīsha before another Sāmānid army under Ḳarātakīn. Aḥmad now deserted al-Dā'ī and joined Dja'far in Gilān. On 5 Dhu 'l-Ḳa'da 306/12 April 919 Dja'far defeated al-Dā'ī and took possession of Ṭabaristān, whilst al-Dā'ī sought refuge with the Ispahbad Muḥammad b. Shahrīyār in the mountains. The latter seized him and sent him to the Djuṣtānid 'Alī b. Wahsūdān, 'Abbāsīd governor of Rayy, who imprisoned him in the fortress of Alamūt. He was released after the murder of 'Alī b. Wahsūdān by the latter's brother

Khushraw Firūz and went to Gilān to seek support. In *Djumādā II* 307/November 919 he retook Āmul while the two sons of al-Nāṣir were absent in Gurgān. He defeated Aḥmad near Astarābād and then won him over by offering to share the rule with him. *Dja'far*, who had remained in Gurgān and was deserted by his army, fled to Gilān. In 308/921 Līlī b. al-Nu'mān, al-Dā'ī's governor of Gurgān, conquered Dāmghān, Nīshāpūr and eventually Marw, introducing the *khutba* for the 'Alid. He was defeated by a large Sāmānid army and killed near Ṭūs in Rab' I 309/July-August. When the defeated army returned to Gurgān, a group of Daylamī and Gilī leaders conspired to depose al-Dā'ī and to put Aḥmad on the throne. Informed about the plot, al-Dā'ī hastened to Gurgān and during a reception killed seven of them, among them Harūsindān b. Tīrdādī, the king of the Gil. This ruthless punishment of the plotters led to a defection of many Daylamīs and Gilīs to the Sāmānids and eventually caused his downfall.

In 310/922-3 al-Dā'ī and Aḥmad were defeated by the Sāmānid general Sīmdjūr al-Dawā'ī at *Djalāyīn* in the region of Gurgān and were forced to retreat to Tamīsha. Aḥmad recovered Gurgān on 1 *Dhu 'l-Hijja* 310/22 March 923 and was entrusted with the government of the town while al-Dā'ī ruled in Āmul. Shortly afterwards, however, Aḥmad made again common cause with his brother *Dja'far* who had revolted in Gilān against al-Dā'ī. Aḥmad attacked al-Dā'ī in Āmul but was defeated and joined *Dja'far* in Gilān. The two brothers then invaded Ṭabaristān, supported by several Daylamī and Gilī leaders, among them Mākān b. Kākī [*q.v.*] and Asfār b. *Shīrūya* [see ASFĀR B. *SHIRAWAYHI*]. Al-Dā'ī fled, first to Sāriya and then into the highlands while Aḥmad took over the rule in Āmul on 28 *Djumādā I* 311/11 September 923. After Aḥmad's death two months later and the succession of *Dja'far*, al-Dā'ī attacked Āmul but was deserted by his supporters and sought again refuge in the mountains and later in Gilān. Only after Mākān, having been involved in a conspiracy, was expelled from Ṭabaristān, did al-Dā'ī gain again a powerful supporter. Early in 314/spring 926 Mākān seized Āmul, expelling the ruling 'Alid, Aḥmad's son Abū *Dja'far* Muḥammad, and brought al-Dā'ī from Gilān to restore him to power. At this time the Sāmānid Aḥmad b. Naṣr tried to invade Ṭabaristān, but was encircled in the mountains and forced to pay a ransom of 20,000 *dīnārs* to al-Dā'ī for his release. Disapproving of the conduct of Mākān, al-Dā'ī once more left for Gilān. Mākān kept urging him to return and, on his protest, immediately released Abū *Dja'far* Muḥammad, al-Dā'ī's brother-in-law, whom he had seized and imprisoned. Eventually al-Dā'ī rejoined Mākān in Āmul, and in 316/926 they set out on an ambitious campaign of conquest and took Rayy from its Sāmānid governor early in *Shā'bān*/latter half of September. Their absence from Ṭabaristān was used by Asfār, who was ruling Gurgān under Sāmānid overlordship, to invade that country. Al-Dā'ī quickly returned to Āmul with 500 men, but failed to get the support of the people there on which he had counted. He was defeated outside Āmul and on his flight was killed by Mardāwīdj b. Ziyār, who thus avenged the death of his uncle Harūsindān, on 24 Ramaḍān 316/11 November 928.

Al-Dā'ī was popular as a ruler in Ṭabaristān and was clearly preferred to his rivals of the descendants of al-Nāṣir. He is highly praised in the account of Ibn Isfandiyyār and in other sources for his justice for restraining the Daylamī and Gilī army from

transgressions, for patronising scholars and poets and for building *madrasas* and *khānaqāhs*. The Kūfan Zaydī supporters of al-Nāṣir also preferred him to the sons of the *imām*, and pressed the latter to appoint him as his successor. He never gained, however, recognition as a Zaydī *imām*, evidently because he lacked the necessary qualifications of religious scholarship. The renunciation of any claim to the Zaydī *imāmate* may have been expressed in the title *al-Dā'ī ʿila 'l-Ḥaqq* which was chosen for him by al-Nāṣir (see W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm*, Berlin 1965, 154 f.).

(W. MADELUNG)

AL-ḤASAN B. MUḤAMMAD B. AL-ḤANAFIYYA, grandson of 'Alī and half-brother of Abū Ḥāshim [*q.v.*], important member of the Ḥāshimī clan in Medina, author of the two earliest texts so far known of Islamic theology.

During the final crisis of Mukhtār's revolt in Kūfa (67/687) he decided to join the movement; he arrived, however, too late and went on to Nisibis where a certain Abū Ḳārib Budayr b. Abī Ṣakhr directed the last pocket of "Ḳhashābī" resistance against the troops of al-Muḥallab b. Abī Ṣufra, who supported Muṣ'ab b. al-Zubayr (cf. for this episode, *Aghānī*<sup>2</sup>, vi, 50, ll. 9 ff., where the name of Budayr is misread as Yazīd, and the Syriac author John of Phenek, in A. Mingana, *Sources syriaques*, Leipzig 1907, i<sup>2</sup>, 183\* ff.; also the sources given by W. al-Ḳāḍī, in *Akten des VII. Kongresses für Arabistik und Islam-wissenschaft* Göttingen 1974, 297, n. 9). He was captured and imprisoned by 'Abd Allāh b. al-Zubayr, but managed to escape to his father Muḥammad b. al-Ḥanafiyya in Minā. When, after the collapse of Ibn al-Zubayr's anti-caliphate, Muḥammad b. al-Ḥanafiyya decided to pay allegiance to 'Abd al-Malik in 73/693, al-Ḥasan, amongst all members of the clan, drew the most spectacular consequences from this step: he wrote an open letter, later on known as his *K. al-ʿirdjā*<sup>2</sup>, in which he implicitly declared Mukhtār's allegiance to his father to have been nothing more than intrusion and imposition and where he pleaded for postponing (*ʿirdjā*<sup>2</sup>) any judgment upon "those who first participated in the schism of the community" (*ahl al-furka al-uwal*), i.e. upon 'Uḥmān and his own grandfather 'Alī. This astonishing attitude against the claims of his family seems to have been born out of the insight that 'Abd al-Malik's reconciliatory policy towards dissident political groups deserved some recognition and that the daemonising view of history proffered by the few remaining followers of Mukhtār at Kūfa, who were known as Saba'iyya at this time (and not yet as Kaysāniyya), was too sectarian in order to have any future. Whether the caliph exerted any pressure, especially with respect to the weak financial situation of the 'Alids, is difficult to substantiate. Al-Ḥasan had his letter recited in different places by 'Abd al-Wāhid b. Ayman, a Meccan *maulā* with whom he was on

friendly terms, but he also personally made propaganda for his ideas in Kūfa. In spite of a certain success, he could not avoid criticism, and only a few years later those who were considered to be "Murđjītes" in Kūfa gave up the political passivity intended by al-Ḥasan's notion of *irdjā'* and joined the uprising of Ibn al-Ash'ath, especially in its final phase (82/701). Al-Ḥasan seems, however, to have been responsible for the invention of this term, which was to have a rather multifaceted history in early Islam.

In addition to the *K. al-Irdjā'*, he appears as the author of an extensive refutation of the Qadariyya which may have been composed only shortly afterwards, perhaps during the religious discussions preceding and accompanying the revolt of Ibn al-Ash'ath. The treatise does not yet refer to the *Risāla* written by al-Ḥasan al-Baṣrī to 'Abd al-Malik, and it is ignorant of certain Qadarī doctrines developed there, but it presupposes the existence of a rather elaborate Qadarī theology, which it attacks on rational as well as on exegetical grounds. Against his opponents, al-Ḥasan b. Muḥammad b. al-Ḥanafiyya stresses the omnipotence of God also with respect to human actions, but he does not say that God forces man to act against his will (only this would be *djibr* in his view). With al-Ḥasan al-Baṣrī and other Qadarīs, he shares a synergistic concept, but whereas the Qadariyya interpreted God's "leading astray" as a mere secondary reaction which is justified by man's sin, al-Ḥasan b. Muḥammad b. al-Ḥanafiyya sees sin as the result of the withdrawal of God's "support" (*tawfīk*). In his discussion of omnipotence he does not yet differentiate between divine predestination and divine foreknowledge. The treatise is structured in the form of hypothetical questions and answers (*in kāla . . . kulnā*) and as such represents the earliest example of *kalām* literature in Islam. It is not preserved in its entirety, but in extensive fragments embedded in a later refutation written by the Zaydī *imām* al-Ḥādī ila 'l-Ḥaḡḡ (245-98/859-911; cf. the edition in Muḥammad 'Imāra, *Rasā'il al-'adl wa 'l-tawḥīd*, Cairo 1971, ii, 113 ff.).

Al-Ḥasan b. Muḥammad b. al-Ḥanafiyya also enjoyed a high reputation as a jurist. A few *fatwās* of his are mentioned in later sources: on the appropriate distribution of the *khums* (which was a political problem because of the definition of the *dhu 'l-kurbā*), on *mut'a* marriage (which he prohibited, in contrast to later *Imāmī* opinion), on the unlawfulness of having more than four wives at the same time (cf. Makhūl al-Nasafī, *al-Radd 'alā ahl al-bida'*, Ms. Oxford, Pococke 271, fol. 45a, ll. 4 ff.), and on the unlawfulness of eating the meat of the domesticated donkey (against 'Abd Allāh b. 'Abbās). Ibn Ishāḡ [q.v.] took over from him some traditions about the life of the Prophet; al-Zuhri seems to have been closely associated with him. He died at an uncertain date; but this must have been either during the caliphate of 'Abd al-Malik (i.e. before 86/705), in 95/714 or during the caliphate of 'Umar II (99-101/717-20) at the latest.

**ḤASAN B. NUḤ B. YŪSUF B. MUḤAMMAD B. ĀDAM AL-BHARŪCĪ AL-HINDĪ**, Mustā'li-Ṭayyibī Ismā'īlī savant.

According to his own statement he was born and brought up in *Khambhāt* (Cambay) in India, and received his early education there. It is not known when and by whom the surname "Bharūcī", sc. from Bharūc or Broach, [see BHARŪC], was given to him. Urged on by a thirst for knowledge, he states, he renounced family, left his country, travelled to Yaman, and became a student of Ḥasan b. Idrīs, the twentieth *dā'ī muṭlak*. The books read by him with his teacher in various branches of the *'ulūm al-da'wa* are fully described in the introduction to his *Kitāb al-Azhār*. He was also closely associated with 'Alī b. Husayn b. Idrīs and Muḥammad b. Ḥasan b. Idrīs, who later became the twenty-second and twenty-third *dā'ī muṭlak*. He was the mentor of Yūsuf b. Sulaymān, the twenty-fourth *dā'ī muṭlak*, and died on 11 *Dhu 'l-Kā'da* 939/4 June 1533.

His claim to fame is rightly based on his voluminous work *Kitāb al-Azhār wa-maǧma' al-anwār al-malkūta min basā'īn al-asār*. It is a chrestomathy of Ismā'īlī literature in seven volumes wherein many earlier works, otherwise lost, are preserved either in full or in part. It also contains extensive excerpts from Sunnī and Zaydī works, especially on the life and character of 'Alī b. Abī Ṭālib [q.v.]. Volume one was edited by 'Ādil al-'Awwā in *Muntakhabāt Ismā'īliyya*, Damascus 1958, 181-250, whereas the remaining volumes are in manuscript. Major subjects of each volume are described in I. Poonawala, *Bibliography of Ismā'īlī literature*, Malibu, Calif. 1977, 178-83.

*Bibliography*: The main biographical source is the author's own work *Kitāb al-Azhār*, i, 186 ff.; Ismā'īl b. 'Abd al-Rasūl al-Maǧdū', *Fihrist*, ed. 'Alī Naǧī Munzawī, Tehran 1966, 77-88.

(I. POONAWALA)

**ḤASAN, MĪR GHULĀM** (1140-1201/1727-86), Urdu poet noted for his *mathnawīs*, was born in Dihlī, the son of Mīr Ḍāḡik, a poet of modest attainments who was satirised by Sawdā. Mīr Ḥasan had a liberal education, which included the Persian language, but apparently not Arabic. He learned the poetic art from his father and from Mīr Dard. After the sack of Dihlī in 1739 by Nādir Shāh, he emigrated with his father to Faizabad (or Fayḍābād [q.v.]), the capital of Oudh or Awadh [q.v.]. En route, they stayed at Dig, near Bharatpur, and joined the pilgrimage procession to the festival of the saint Shāh Madār at Makanpur. The poet was to describe this journey and festival in a colourful *mathnawī*, *Gulzār-i Iram*, composed about nine years before his death. In Faizabad, Mīr Ḥasan joined the service of the Nawwāb. In 1189/1775 the new Nawwāb, Āṣaf al-Dawla, transferred the capital to Lucknow, so the poet moved there also. Here he composed his longest and best-known *mathnawī*, *Šihr al-bayān* ("The enchantment of eloquence"), which won immediate acclaim, and is frequently known merely as "Mīr Ḥasan's *Mathnawī*". This was finished in 1199/1785, less than two years before the poet's death.

Mīr Ḥasan's complete poetical works do not seem to have been published. He is known to have written both *ghazals* and *mathnawīs*, and he was the grandfather of Anīs [q.v.], the famous Urdu elegist. But it is for his *mathnawīs* that he is chiefly remembered. Yet of the eleven with which he is credited, only

*Sīhr al-bayān* is widely known, and it may justly be described as the original model of the Urdu narrative *mathnawī*, and one of the two or three greatest examples of the form. It runs to about 2,000 couplets in *mutakārib* metre, and tells, in some detail, a story of royalty, love and magic of the kind current in India. The central plot concerns the love between Prince Binazir and Princess Badr-i Munir. There is a subsidiary love plot involving Nadjim al-Nisā', the *Wazīr's* daughter, and Firōz Shāh, son of the King of the Jinn. A magic flying horse plays an important part in the events of the story. But the supernatural elements in the story are no more important than in—say—Central European *Zauberoper* or *Zauberposse* in the 18th and 19th centuries. The elements which raise an incredible story to the level of great literature are many and varied, but they include the characterisation, which relates the characters to ordinary human beings; the vivid and colourful description of people and places; the effective use of rhetorical devices such as word-play; the timeless language, which seems remarkably up-to-date two centuries later; and the numerous examples of "gnomic" verse which embody simple philosophising and lend themselves to quotation in everyday life. In fact, few Urdu poets since have had his facility for saying things so simply yet effectively, often with internal rhyme. *Sīhr al-bayān* has been adversely criticised chiefly for its unnecessary length. But apart from the series of introductions devoted to God, the Prophet, the *Imām* 'Alī and others, ending with one to the Nawwāb Āṣaf al-Dawla, the length is duly chiefly to the detailed description, without which it would lose most of its charm.

From what the poet says about his poem in the last few couplets, he clearly regarded it as a new type of *mathnawī*, and as his chief claim to fame. He says:

It is a new type, and the language is new.

It is not a [normal kind of] *mathnawī*, it is the enchantment of eloquence.

From it my fame will endure throughout the world,  
For wherever these words are is a memorial.

Evidence of the immense popularity of the work can be seen in the various verse translation into other Indian vernaculars, and also in the dramatic versions. Thus in Bengali there is a verse translation of 1863, and a play entitled simply *Mathnawī* of 1876. Mīr Bahādur 'Alī's Urdu prose version, completed under the auspices of Fort William College, Calcutta, was printed there in 1803, and has since been frequently reprinted. It contains many poetical quotations from Mīr Ḥasan's original. The story provided a favourite plot for early Urdu drama in the late 19th century.

The qualities found in *Sīhr al-bayān*—apart from the involved story—are present in his other *mathnawīs*. Thus *Gulzār-i Iram* includes a vivid description of a crowded market; another, *Rumūz al-'arīfīn*, has a Šūfī background.

Mīr Ḥasan's other claim to fame is his account, in Persian, of Urdu poets, including his contemporaries, the *Tadhkira-yi-shu'arā'-yi-Urdū*, which has become a standard reference work.

*Bibliography:* There are numerous editions, as well as manuscripts of *Sīhr al-bayān*. That edited by 'Abd al-Bārī Āsī (*Mathnawīyāt-i-Mīr Ḥasan*, Lucknow 1945, is recommended because it also includes *Gulzār-i Iram* and *Rumūz al-'arīfīn*, and has a useful introduction, with numerous footnotes explaining difficult vocabulary.

*Mathnawī-yi-Mīr Ḥasan*, ed. Ḥāmid Allāh Afsar, Allahabad 1925, has a short introduction which discusses the poem's good and bad qualities (11-14), and a glossary. Mīr Ḥasan's *Tadhkira-yi-shu'arā'-yi-Urdū* was published at 'Alīgarh in 1922.

For accounts of Mīr Ḥasan, particularly *Sīhr al-bayān*, mention must first be made of R. Russell and Khurshidul Islam, *Three Mughal poets: Mir, Sauda, Mir Hasan*, London 1969, 69-94. This account is devoted chiefly to re-telling the story, but also includes a useful critical assessment. Saksena gives a general account of the poet in his *History of Urdu literature*, Allahabad 1927, 67-70; See also Muhammad Sadiq, *History of Urdu literature*, London 1964, 108-11; Urdu accounts of the poet include the following: Muḥammad Ḥusayn Āzād, *Āb-i-hayāt*, Lahore ed. 1950, 249-51; Maḥmūd Fārūkī, *Mīr Ḥasan aur khāndān kā dusrē shu'arā*, Lahore 1952; Waḥīd Kurayshī, *Mīr Ḥasan aur un kā zamāna*, Lahore 1959; For Mīr Bahādur 'Alī's prose version, see Major Henry Court's English tr., *The nasr-i Benazir*, Calcutta 1871, 2nd ed. 1889.

(J.A. HAYWOOD)

**ḤASAN BEDR AL-DĪN**, later PASĪA (1851-1912), Ottoman Turkish soldier and playwright, chiefly famed as the collaborator during the years 1875-9 of his fellow-officer and friend, the author and dramatist Manāstīrlī Mehmed Rifat [*q.v.*], in the writing of some 16 plays, some translations from the French and some original, which were produced at the Gedik Paşa Theatre in Istanbul (see MANĀSTĪRLĪ MEHMED RIFĀT for full details).

He was born at Sīnāw near Kütahya, the son of an army officer, was educated at the military school (*Fdādi*) in Damascus and then at the Istanbul War College (*Harbiyye*), where he graduated the first of his class and was the contemporary and classmate of his future collaborator Manāstīrlī Mehmed. He served briefly in the Imperial Guards, but in the increasingly repressive atmosphere of Sultan 'Abd al-Ḥamid II's reign he was soon banished from Istanbul to the eastern provinces, and served in Syria and Palestine with the rank of colonel. However, he was soon stripped of this rank, presumably as the result of a *zurnal* or delatory report, and taught in Damascus schools for a living. After the restoration of the Constitution in 1908, he returned to Istanbul, was rehabilitated under the Young Turk régime, promoted to brigadier-general and then general of a division, and was finally appointed commander and governor of Işkodra [*q.v.* in Suppl.] or Scutari (modern Shkodër in northern Albania). After a brief spell of service, he resigned on the grounds of ill-health, returned to Istanbul and died there in 1912.

*Bibliography:* See that for MANĀSTĪRLĪ MEHMED RIFĀT. (FAHİR İZ)

**ḤASAN NIZĀMĪ**, historian of the Dīhlī sulatānate in Muslim India.

He was the son of Nizāmī 'Arūdī Samarqandī, the famous Persian litterateur [*q.v.*], but left his hometown, Nīshāpūr, sometime towards the close of the 6th/12th century because of political instability there. In Dīhlī he made friends with high officers of Sultan Kutb al-Dīn Aybak (602-7/1206-10 [*q.v.*]), including the Šadr Šaraf al-Mulk. Impressed by his learning, his friends advised him to produce a literary work so that he might get royal patronage; hence Ḥasan Nizāmī decided to compile the history of Aybak's achievements in Arabic. But his friends persuaded him to write it in Persian, since there were in India few people literate in Arabic. In the meantime, the royal *famān* was proclaimed that Aybak's conquests in India should be recorded by scholars,

along with those of his master, Sultan Mu'izz al-Dīn Muḥammad b. Sām [see *ḤURĪDS*]. Hence the compilation of the *Tādj al-ma'āthir*.

The first part contains a description of Sultans Mu'izz al-Dīn Muḥammad and Ḥuṭb al-Dīn Aybak. On Sultan Aybak's death Ḥasan Nizāmī continued his work under Ilutmish, and according to Sir Henry Elliot, brought it up to the year 626/1229; but the extant copies of the work end with the description of the occupation of Lahore by Ilutmish in 614/1217. Since Ilutmish was his last patron, the author is not impartial in his criticism of his master's rivals, such as Tādj al-Dīn Yildiz and Sultan Naṣir al-Dīn Ḥubāca. He omits mention of Ārām Shāh, the son of Ḥuṭb al-Dīn Aybak, because Ilutmish has usurped the throne and killed him. Moreover, there is no space devoted to the description of the nobles of the early sultans of Dihlī, who had helped the sultans in stabilising Muslim rule in northern India at its very beginning. In fact, Ḥasan Nizāmī fails to produce a history in the real sense of the word; his work reads like a mere *Fah-nāma*.

It was, moreover, written in an ornate and florid style, full of verbosity and rhetorics. The historical details are interspersed with the Qur'anic verses and Arabic and Persian poems; more than half of the work comprises only verses. Despite these defects, the *Tādj al-ma'āthir* enjoyed fame because of its bravura style, much to contemporary literary taste, and much imitated subsequently.

**ḤASRAT MOHĀNĪ**, SAYYID FAḌL AL-ḤASAN, prominent Indian journalist, poet and politician, was born most probably in 1297/1880 in the small town of Mohān in Uttar Pradesh. His family, which numbered many scholars, physicians and mystics, claimed descent from Sayyid Maḥmūd who migrated from Niṣhāpūr in Iran and founded Mohān in 615/1218. One recent ancestor had been royal physician to the Kings of Awadh, another had been minister of religious affairs in the Hyderabad state. Ḥasrat was educated at government schools and privately in Arabic and Persian. In 1316/1899 he headed the provincial list in the matriculation examination and won a government scholarship to the Muḥammadan Anglo-Oriental College at Aligarh.

From his student days Ḥasrat was a prominent figure in the political and cultural activities of North Indian Muslims. He fought for Islamic causes in India and abroad. In 1903 he started an Urdū weekly, *Urdū-i mu'allā*, which appeared intermittently until 1938: its pan-Islamist and virulently anti-British views strongly influenced young educated Muslims. In 1909 he was jailed for a year for publishing an article critical of British educational policy in Egypt, and he was prominent in the explosion of pan-Islamic protest which preceded World War One. In 1916 he was interned for the duration of the War after he was found to be connected with 'Ubayd Allāh Sindhī's [q.v.] plan, the "Silk Letters Conspiracy", to raise the Frontier tribes against the British. During the *Khilāfat* movement he associated increasingly with the 'ulamā', coming to be called our "mad mullā" by Muḥammad and Shawḥat 'Alī [q.v.], and tried continually to drive the agitation more extreme: striving to make non-co-operation with government the policy of the *Khilāfat* movement

at its conference of Nov-ember 1919, declaring his support for an Afghān invasion of India at the Congress-*Khilāfat* meetings of June 1920, and attempting to make complete independence for India the aim of the Congress and the Muslim League at their sessions in 1921. He was imprisoned from 1922 to 1924. On his release he startled many by declaring himself a Communist as well as a Muslim, and he chaired the reception committee of the first Indian Communist Conference at Kānpur in 1925. From this point Ḥasrat's influence in Indian politics declined. He remained notable but could no longer find support amongst many. From 1937 he was active in the Muslim League, of which he had been a member from its foundation and President in 1921, but he was out of harmony with the direction it was taking. He opposed the League's demand for Pakistan and devoted much of his time from 1942 to 1947 to promoting his own plan for a three-tiered Indian confederation to solve the communal problem. In 1946 he was elected as a Muslim League candidate to the UP Legislative Council and to the Indian Constituent Assembly. He died in Lucknow in 1951.

Although vigorously engaged in politics, Ḥasrat maintained a considerable literary output. His most important prose works are his commentary on the 13th/19th century poet Ḥalīb, *Sharḥ-i Ḥalīb*, and his discussion of the conventions of Urdū poetry, *Nikāt-i sukhān*. Primarily, however, he was a poet. He contributed much to the refinement of the Urdū *ghazal* and was the only *ghazal* writer of modern times to become a "classic" while still alive. Djamāl Miyān Farangī Maḥallī has edited the most complete edition of his works, *Kulliyāt*, 2nd. ed., Lahore 1959.

Evidently, several somewhat contradictory themes mingle in Ḥasrat's life. There is his faith, as evident in his private life as in his public actions. A punctilious observer of prayer and fasting, he also performed the *Ḥajj* at least eleven times between 1932 and his death. He was, moreover, in the tradition of his ancestors, a mystic and a follower of the Farangī Maḥall family [q.v. above] of Lucknow, becoming a *murid* of Mawlānā 'Abd al-Wahhāb (d. 1321/1903-4) in 1894 and being made a *khāṭifa* in both Kādirī-Razzākī and Čishtī-Nizāmī *silsilas* by Mawlānā 'Abd al-Bārī [q.v. above] in 1917. There is his imperviousness to the communal attitudes which influenced so many of his contemporaries; hence he opposed Pakistan, admired Hindus of a revolutionary caste of mind like Tilak, Aurobindo Ghose and Subhas Bose, and wrote poems in Hindi praising Krishna and expressing his longing for Hindu holy places. Then there is his Communism, though it is unlikely that his understanding of Communist theory and practice would have withstood rigorous examination. Its attractions, it seems, stemmed in part from a very Muslim love of egalitarianism, in part from a hatred of British imperialism and in part from the fact that it took no account of communalism. Invariably, Ḥasrat propounded his position with sincerity and without fear. Such independence of mind invited conflict with others. He was expelled two times from Aligarh College, imprisoned at least three times by the British, had memorable confrontations with both Gandhi and Jinnah, led the party which stormed the Congress session at Kānpur in 1925, and refused to sign the Indian constitution because he did not think it brought the freedom for which Indians had fought. Above all things a rugged individualist, he was received with great respect throughout his life though heard increasingly by few.

**HASSANI** [see **HASANĪ**]

**HASSŪ TAYLI** "the oilman", a religious devotee of Muslim India, was born at an unknown date, some time in the 10th/16th century, at Makhiwal, on the bank of the Chenab, in the Panjāb.

A critical change in Hassū's life came when he was twelve. He met one of the living "nine naths of Gorakhnath". The latter recognised in him his sixty-first and premier disciple, who had spent 82 years in severe austerities before his birth. Hassū now embarked on his career as a saint. He went to Lahore where he worked as a porter, but subsequently became a grain merchant and opened a grain store at Lahori Mandī. A devout admirer of his, Sūrāt Singh, paints him as a merchant of a curious type—knowing everything about the future prices, he bought dear and sold cheap! He died at Lahore in 1104/1603. His tomb still survives, an object of some veneration; the spot is also remembered where he used to sell grain.

To his death, Hassū Tayli appears to have remained formally a Muslim, though he did not follow the five basic observances of Islam. For this latter, his disciple Sūrāt Singh has ready explanations: he prayed all the time, so why should he have prayed in public? Why should he have paid *zakāt*, or kept daily fasts when he never had anything stored up, and never broke his fast? Why should he have gone on Pilgrimage, to circumambulate the Ka'ba, when he went round the Ka'ba of his heart a hundred times in one breath? His chief disciple, Shaykh Kamāl, used the term *Malāmāṭiyya* [q.v.] to designate his master's school, with considerable aptness.

The significance of this religious sect lies in the fact that it openly drew its disciples from amongst both Hindus and Muslims, and declared its connections with ascetic and mystic predecessors in both religions. Nor did the followers of this sect make any attempt to hide the rather modest origins of their teacher.

**AL-HĀTIMĪ**, ABŪ 'ALĪ MUḤMMAD B. AL-HASAN B. AL-MUZAFFAR, literary critic and philologist of the 4th/10th century, who died in Baghdād on 27 Rabī' II 388/26 April 998.

Though the name of his father is sometimes given as al-Ḥusayn, the testimony of Abū 'Alī al-Muḥassin al-Tanūkhī (*Nishwār al-muḥādara*, ed. 'A. al-Shāliḍī, Beirut 1391-3/1971-3, iii, 14) and of al-Khaṭīb al-Baghdādī, who received traditions from al-Hātimī through Abū 'Alī's son, Abu 'l-Ḳāsim al-Tanūkhī (see *Tārīkh Baghdād*, ii, 214, 356, xi, 231) can probably be trusted. All biographers agree that he was a pupil of Ghulam Tha'lab [q.v.], but fail to mention other teachers, except Yāqūt (*Udabā'*, vi, 501), who states that al-Hātimī was born early enough to have been a pupil of Ibn Durayd [q.v.]. Since Ibn Durayd died in 321/933, this information, if correct, would indicate that al-Hātimī was born around 310/922 or even earlier. Yāqūt however also quotes an autobiographical note from al-Hātimī's [*Takrī*] *al-hilbāḍja*, a book

which al-Hātimī wrote for the vizier, Abū 'Abd Allāh [al-Ḥusayn b. Aḥmad] b. Sa'dān [see **IBN SA'DĀN** below], who held office from 373/983 till 374/985 (see Ibn Miskawayh, *Taḍjārīb al-umam*, iii, 85, 102, 107). In this note, al-Hātimī claims that he served Sayf al-Dawla at the age of nineteen. If we assume that al-Hātimī did not join the circle of Sayf al-Dawla before the latter had established himself firmly in Aleppo in 336/947, he could not have been born before 317. The question is whether al-Hātimī's autobiographical report can be trusted, since both the description of his character by contemporary authors (see Abū Ḥayyān al-Tawḥīdī, *al-Intā'* wa '*l-mu'ānasa*, i, 135, iii, 126-7) and the tone of many of his own remarks in the *Mūḍiḥa* (see below) suggest that he was given to unbridled self-glorification. A further reason for questioning the report in the *Hilbāḍja* is that he quotes in the *Hilya* (see below) 'Alī b. Sulaymān al-Akhfash who died as early as 315/927 (cf. Bonebakker, *Materials for the history of Arabic rhetoric*, in *AUON*, Suppl. no. 4, xxxv [1975], fasc. 3, p. 88). The autobiographical report quoted by Yāqūt goes on to say that at the court of Sayf al-Dawla, al-Hātimī was treated as the equal of the grammarians Abū 'Alī al-Fārisī, Ibn Khālawayh [q.v.] and Abū 'l-Ṭayyib al-Lughawī [q.v. above]. Since Abū 'Alī al-Fārisī joined Sayf al-Dawla in 341, al-Hātimī cannot have given up his career with Sayf al-Dawla before that date, again assuming that his report can be trusted. It is also likely that al-Hātimī left Aleppo not later than *Dhu 'l-Ka'da* 351/December 962, the date of the attack on Aleppo by Nicephorus Phocas (Abu 'l-Ṭayyib al-Lughawī died in the massacre that followed, according to the editor of Abu 'l-Ṭayyib's *Marātib*, Cairo 1375/1955, 5-6). In any case, we find him in Baghdād in the summer of 352/963 (or possibly 351/962, cf. M.S. Kiktev in *Literatura Vostoka* [1969], 81 note) involved in a discussion with the poet al-Mutanabbī, whom he may well have known already at the court of Sayf al-Dawla. The *Yatīmat al-dahr* of Tha'ālibī (ed. M.M. 'Abd al-Ḥamīd, Cairo 1375-7/1956-8, iii, 108-11, 131-3) quotes verses by al-Hātimī on the Ziyārid ruler Shams al-Ma'ālī [Kābūs b. Wushmagīr] [q.v.], on the Buwayhid vizier Sābūr b. Ardashīr and on the caliph al-Ḳādir bi 'llāh, but these do not throw any light on al-Hātimī's career during the second half of his life (the *Yatīma* text suggests that these poems were composed by a son of al-Hātimī; unless one follows the text in Yāqūt vi, 501-2, assuming at the same time, that this text contains, in a brief parenthesis, two lines by al-Hātimī's father and that Yāqūt should have read *li'bnihi* as in the *Yatīma* ed.).

From the introduction of a story in al-Tanūkhī's *al-Farājī ba'd al-shidda* (Cairo 1903, ii, 85 = Cairo 1375/1955, 305), it appears that al-Hātimī visited Egypt, but unfortunately there is no indication at which period of his life this visit took place. Nor do we know any details about his career as a *kātib*, though he is qualified as such by several biographers.

Al-Hātimī chiefly owes his fame to two *risālas* on the poet al-Mutanabbī which go under various names. The first of the two is known as *al-Risāla al-mūḍiḥa* [*fī dhīkr sarīkāt Abi 'l-Ṭayyib al-Mutanabbī wa-sākit sh'rīh*], *Djābhat al-adab*, *Munāzawat Abi 'Alī al-Hātimī li-Abi 'l-Ṭayyib*, or simply *al-Risāla al-Hātimīyya*. The correct title, at least of the longer version of this *risāla* which is preserved in the ms. Escorial 772 (and quoted in part by Ibn Khallikān and, following him, al-Yāfi'ī, *Mir'āt*, Hyderabad 1337-9, repr. Beirut 1390/1970, ii, 437-41), is undoubtedly *al-Mūḍiḥa*. This title is explained by the author

as referring to a type of wound inflicted on the head (Lane, s.v. *shadhā'a*), and may be a double entendre, since *mūdiha* means also "making apparent", "disclosing", i.e. the defects of al-Mutanabbī's poetry. The title *Ḍabhat al-adab* must be the result of a wrong interpretation of a sentence in the preface, though it appears in several mediaeval biographies (see the ed. of the *Mūdiha* by M.Y. Naḍjm, Beirut 1385/1965, 3, 11, 12-3, 4, 1, 18, and 6, note 1 of the introduction). The *risāla* is a caricature of al-Mutanabbī and a condemnation of his poetry, in the framework of a discussion between the poet and al-Ĥātimī. The attack was instigated by the Buwayhid vizier al-Muhallabī and reflected the rivalry between the Buwayhid Mu'izz al-Dawla and the Ḥamdānid Sayf al-Dawla (see R. Blachère, *Un poète arabe du IV<sup>ème</sup> siècle de l'Hégire*, Paris 1935, 223-5, 228). It ended, according to al-Ĥātimī, in al-Mutanabbī's flight to Kūfa. A shorter version of the same *risāla* exists in Yākūt's *Udabā'* (vi, 504-18), in Yūsuf al-Badī'ī's *al-Ṣubḥ al-munabbī* (ed. M. al-Saḳkā *et alii*, Cairo 1963, 128-42), in the MS Cairo, Dār al-Kutub 2039 (ed. I. al-Dasūki al-Bisāṭī, Cairo 1961, as an appendix to the *Ibāna 'an sarikāt al-Mutanabbī* of Abū Sa'd Muḥammad b. Aḥmad al-'Amīdī) and in at least two other manuscripts. There is a Russian translation in the above mentioned article by Kiktev. An even shorter version is preserved in *Shihāb al-Dīn al-Kḥatādjī* (ed. 'A.M. al-Ḥulw, Cairo 1386/1967, ii, 421-7), which does not make any mention of Muhallabī and Mu'izz al-Dawla. These shorter versions end in a reconciliation, after which al-Mutanabbī and al-Ĥātimī part as good friends. Al-Badī'ī's text, *Kḥatādjī* and the text published by al-Bisāṭī (but not the text in Yākūt) even add a last sentence to the effect that al-Ĥātimī became so much convinced of al-Mutanabbī's merits as a poet that he decided to write another *Risāla Ḥātimīyya*. This second *Risāla Ḥātimīyya* to which the shorter versions of the first allude may be the list of parallels between verses by al-Mutanabbī and pseudo-Aristotelian sententiae which is preserved not only in a considerable number of manuscripts, but also in the *Kutāb al-Badī' fī naḳd al-shī'r* by Usāma b. Munḳidh (ed. A.A. Badawī *et alii*, Cairo 1380/1960, 264-83) and in quotations in the Mutanabbī commentary by al-'Ukbarī (see Blachère, *op. cit.*, 268-9, and the examples translated by F. Rosenthal in *Das Fortleben der Antike im Islam*, Zürich 1965, 352-4, and cf. 118). Yet there may be some doubt about the authenticity of this second *risāla*, since biographies such as those by Yākūt and al-Suyūfī, which offer a detailed list of al-Ĥātimī's oeuvre, do not mention it. An accurate description of the *risāla* appears in *al-Muḥammadūn min al-shu'arā'* by Ibn al-Kifīṭī (ed. H. Ma'marī, Cairo 1390/1970, 231), though Ibn al-Kifīṭī fails to mention it in his Ḥātimī biography in the *Inbāh al-ruwāt*. A second description occurs in al-Ṣafadī's *Wāfi bi'l-wafayāt*, ii, 343; but several unpublished manuscripts of the *risāla* have only a descriptive title with no indication of the origin of the work. Nor does al-Ĥātimī's name (as far as the author of the article knows) appear in the above-mentioned Mutanabbī commentary and in Usāma's *Badī'*. Mention should be made of a curious manuscript in the Ambrosiana (F 300) which brings together a somewhat more elaborate rendering of the short version of the first *Risāla* and the second *Risāla* claiming (not very convincingly) that both were based on a verbal account given by al-Ĥātimī in 369/979-80. The best edition of the second *Risāla Ḥātimīyya* is that by F.A. al-Bustānī in *Machriq*, xxix (1931), 132-9,

196-204, 273-80, 348-55, 461-4, 623-32, 759-67, 854-9, 925-34, and in a separate ed. published in the same year. A facsimile edition with translation was published by O. Rescher in *Islamica*, ii (1926), 439-73; other editions can be disregarded.

As a document of mediaeval Arabic literary criticism, the longer version of the *Mūdiha* is by far the most interesting of the three texts, not only because of its penetrating and often rightful criticism of al-Mutanabbī's poetry, but also because of its lucid analysis of the distinction between slavish imitation of themes from ancient poetry and the subtle metamorphosis of such themes as he finds it in the work of truly gifted poets. This analysis goes beyond the original aim of the *risāla*, which sets out to be a satire against al-Mutanabbī and a grotesque picture of his character and habits. The first encounter between al-Ĥātimī and al-Mutanabbī is followed, in the *Mūdiha* but not in its shorter version, by a description of three further encounters at the house of al-Muhallabī in the presence of scholars of note, such as Abū Sa'īd al-Sīrāfī, 'Alī b. 'Īsā al-Rummānī and 'Alī b. Ḥārūn al-Munādjdjm. In the preface to his edition (11-12), Naḍjm raises the question whether the meetings at the home of al-Muhallabī actually took place and were not invented in order to find a suitable form for an elaboration of the theme of discussion of the first meeting. It is indeed unlikely that al-Mutanabbī would have allowed himself to be publicly humiliated on four different occasions.

Al-Ĥātimī is frequently quoted in mediaeval handbooks on literary theory as an authority on definitions of figures of speech by early critics. Many of these quotations can be traced in al-Ĥātimī's *Hilyat al-muḥāḍara*. The *Hilya* is not, however, a work on literary theory, but rather an anthology on poetry with short sections on literary theory. A work specifically dealing with this subject is quoted by al-Ĥātimī himself in the *Hilya* and was known to Usāma (see *Badī'*, 8) and perhaps to others (see *Materials*, 14-6, 20, 27). The survival of the *Hilya* in two Maghribī manuscripts (one of which has a marginal note indicating that a small portion of the book had already circulated in Spain before the rest arrived) and Ibn Ḥazm's [*q.v.*] recommendation of "the books of al-Ĥātimī" as manuals on poetry (*al-Takrīb liḥadd al-manāḳ*, ed. I. 'Abbās, Beirut 1959, 207), as well as other evidence (see *Materials*, 18) indicate that al-Ĥātimī enjoyed a considerable reputation in Spain.

Other writings by al-Ĥātimī have not apparently survived. As far as one can judge from the lists given by Yākūt and by others, al-Ĥātimī's main interest was literary criticism, though he wrote also books on lexicography and grammar.

**HAWKING** [see BAYZARA].

**HAWSAM**, the earlier Arabic name of the modern town of Rūdisar in eastern Gilān on the coast of the Caspian Sea. It is an Arabisation of the local name, which appears to have been **Khoshām** or **Khōshām**. Thus the name is given by al-Muḥaddasī (51, 355, 360) and probably by Abū Dulaf b. Muhalhil (ed. Minorsky, *Abū-Dulaf Mis'ar b. Muhalhil's Travels in Iran*, Cairo 1955, 23) as **Kh-sh-m**; by al-Bīrūnī (*al-Kānūn al-Mas'ūdī*, Hyderabad 1954-6, 569) as **Khawsam**; and by Aṣīl al-Dīn Zawzanī (ed. H.L. Rabino, in *JĀ* (1950), 327, 330) as **Hawshām**. The rendering of the initial **kh** as **h** in Arabic corresponded to the pronunciation of Arabic **hā'** by the Gil as **khā'** and the shift of Persian **shīn** to Arabic **sīn** occurred frequently. The identity of al-Muḥaddasī's **Kh-sh-m** with **Hawsam**, rejected by Muḥammad Ḳazwīnī and Minorsky, is ascertained by his reference to it (360) as "the town of the *dā'*." The itinerary given by him elsewhere (372), which places a **Kh-sh-m** at a two days' trip west of the Saffd-rūd, appears to refer to a different town also mentioned by Aṣīl al-Dīn Zawzanī (332).

**Hawsam** is generally described as the easternmost town of Gilān, located at the border between the Gil and the Daylam, whose territories extended west of it to the coast. It is first mentioned as a residence of the Zaydī *imām* al-Ḥasan al-U'rūsh [q.v.] al-Nāṣir li'l-Ḥakk, who was active in the region during the last decade of the 3rd century/903-13 converting the Gil and Daylam to Islam. After the collapse of the Zaydī 'Alid reign in Tabaristān in 316/928, it became the chief seat of 'Alid rule in the Caspian region and the centre of scholarship of the Nāṣiriyya, the school of al-Nāṣir in *fiḥh* and theology. It was ruled from ca. 319/931 to 350/961 by Abū 'l-Faḍl **Djā'far al-Thā'ir** fi'llāh [see **AL-THĀ'IR** FI'LLĀH], grandson of a brother of al-Nāṣir and, through his mother, of al-Nāṣir himself. His descendants remained in control of the town during much of the time until and beyond the end of the century, though often in contention with descendants of al-Nāṣir and other 'Alids, which also involved efforts by the Ziyārīds and Buwayhīds to secure their suzerainty over the region. The **Thā'ir**ids, though Zaydīs of the Nāṣiriyya school, ruled as *amīrs* without claiming the Zaydī imāmate. In 353 or 354/964-5, the Zaydī *imām* Abū 'Abd Allāh al-Mahdī li-Dīn Allāh took the town from al-Ḥasan Amīrkā, son of Abū 'l-Faḍl al-Thā'ir, and ruled there, with a short interruption, until his death in 359/970. Ca. 380/990 the *imām* Aḥmad b. al-Ḥusayn al-Mu'ayyad bi'llāh stayed in **Hawsam** for a year, and some time later for another period of two years. He eventually took his residence in Langā, west of **Hawsam**, leaving that town to the **Thā'ir**id Kiyā Abū 'l-Faḍl who nominally recognised his imāmate. In the early 5th/11th century, Abū **Djā'far al-Hawsamī**, the most famous collector and commentator of the works of al-Nāṣir, was active there. Ca. 432/1041-2 the Nāṣirī '*ulamā'*' of **Hawsam** set up al-Ḥusayn al-Nāṣir, a descendant of al-U'rūsh al-Nāṣir, as *imām*, and he reigned in the town until his death in 472/1079-80. He was buried next to Abū 'Abd Allāh al-Mahdī, and their tombs became a place of pilgrimage for the Caspian Zaydīs. Thereafter, **Hawsam** came under the rule of the *imāms* Abū Riḍā al-Kīsumī (d. after 493/1100) and Abū Ṭālib al-Akhīr (502-20/1108-28), though they did not take their permanent residence there. The town evidently declined in the latter part of the 5th/11th century and lost its rank as the chief town of eastern Gilān to Lāhīdjān [q.v.]. Around the turn of the century, the Bāwandīd Ispahbad Ḥusām

al-Dawla **Shahriyār**, after surrendering control of Tabaristān to his son Naḍīm al-Dīn Ḳārin, retired to **Hawsam**, where he built a *khānakāh* for himself. He bought much land in the region and ordered the construction of a market and shops. After he fell ill and was brought back to Tabaristān by his son, he put a former servant in charge of his property in **Hawsam** (Ibn Isfandiyyār, *Ta'riḫ-i Tabaristān*, ed. 'Abbās Iḳbāl, Tehran 1941, ii, 37 f.). The report reflects both the decline of the town and its continued attraction as a religious centre. The general decline continued during the following century. In a letter sent to the Yaman in 607/1210-11, a Zaydī scholar of Lāhīdjān mentioned the deplorable condition of the two shrines of Abū 'Abd Allāh al-Mahdī and al-Ḥusayn al-Nāṣir in **Hawsam**, expressing his hope that the Yamanī *imām* al-Manṣūr 'Abd Allāh b. Ḥamza would restore them. In the early 8th/14th century, **Hawsam** seems to have regained some importance as an administrative centre, for a coin was minted there for the Ilkhān Abū Sa'īd between 733/1332 and 736/1335 if the restoration of the name of the mint proposed by Fraehn, *De Ilchanorum seu Chulaguidarum numis*, in *Mém. Acad. Imp. Sciences St. Pétersbourg*, 6th ser., ii [1834], 530, 548, is correct. Zahr al-Dīn Mar'ashī (*Ta'riḫ-i Gilān*, ed. M. Sutūda, Tehran 1347, 143 f.), however, describes the town as having long fallen into ruin when Sayyid Raḍī Kiyā (789-829/1387-1426) of the Amīr Kiyā'ī dynasty of Lāhīdjān ordered its rebuilding and gave it the name Rūdisar. Raḍī Kiyā granted tax exemptions in order to attract people to the town, brought shipbuilders to the harbour, built a congregational mosque in a large square, a market with shops, a bath, palace, stable and hotel. The shrine and cemetery of al-Ḥusayn al-Nāṣir were preserved from the former town, and several royal personages were buried there in the 10th/15th and 10th/16th centuries.

**HAYDAR-I ĀMULĪ**, BAHĀ' AL-DĪN HAYDAR B. 'ALĪ B. HAYDAR AL-'UBAYDĪ (719/1319 or 720/1320—after 787/1385), early representative of Persian theosophy and commentator on Ibn 'Arabī.

Our knowledge about his life is based on two autobiographical passages written in 777/1375-6 and 782/1380 respectively. He originated from a family of Ḥusaynī *sayyids* in Āmul, Māzandarān, whose population had been known for its Shī'ī leanings for a long time. During his studies he left his hometown for Astarābād and Iṣfahān. But in his late twenties he returned and became a confidant, and afterwards a minister of Fakhr al-Dawla Ḥasan b. Shāh Kaykhusraw b. Yazdagird, the last ruler of Tabaristān belonging to the Kīnakh'āriyya branch of the Bāwandīd dynasty [q.v.]. This period seems to have been rather short, because in 748/1347 he was still in **Khurāsān**, as is attested by a vision which he had

there and which he reports in his works, whereas two years later, in 750/1349, shortly before Fakhr al-Dawla's assassination by members of his own family, he experienced a religious crisis which made him give up his courtly life, in spite of his reverence for his master, and perform the *ḥaǧǧ*. For the rest of his life, at least during the documented part of it, he stayed in 'Irāk. In Baghdād he studied with Naṣīr al-Dīn al-Kāshānī al-Hillī (d. 755/1354) and Fakhr al-Dīn Muḥammad b. Ḥasan, the son of the famous 'Allāma al-Hillī, two Shīrī scholars who enjoyed the patronage of the Djalā'irids [q.v.]. With the latter one he exchanged a theological and juridical correspondence which is preserved in an autograph (*al-Masā'il al-Āmulīyya*, dated 762/1361; ms. Tehran University no. 1022, fols. 71b-76b). He also wrote for him his *Risālat Rāfi'at al-khulāf'an waǧh sukūt Amīr al-Mu'minīn*, an apology for 'Alī's passive attitude towards the first caliphs.

The number of Ḥaydar-i Āmulī's works which are known to us, by title at least, amounts to 34. The earliest book preserved is his

(1) *Ḍiāmī' al-asrār wa-mambā' al-anwār*, an exposition of the deeper meaning of the *ḥarī'a* by means of *ta'wil* (ed. Osman Yahya and Henri Corbin, in Sayyed Ḥaydar Amoli, *La philosophie shī'ite*, Bibl. Iran. 16, Tehran-Paris 1969, 2 ff.; for an analysis of its contents, cf. Corbin in *Eranos-Jahrbuch*, xxx, (1961), 90 ff. and xxxi (1963), 80 ff., also in *En Islam iranien*, Paris 1972, iii, 149 ff.; P. Antes, *Zur Theologie der Schī'a. Eine Untersuchung des Gāmī' al-asrār...*, Freiburg 1971). It was finished about 752/1351; in the introduction, eight other works, obviously of smaller size, are mentioned, some of which may date back to the time before Āmulī settled in Irak. In one of them, his *Risālat al-arkān*, he had treated the same subject as in his *Ḍiāmī'*, restricted only to the five "pillars" of Islam.—After 760/1359 he wrote his

(2) *Risālat al-Wuǧūd fī ma'rifat al-ma'būd* which in itself has not been rediscovered yet, but a summary of which, finished at Naǧǧaf in 768/1367 under the title *Risālat Naǧd al-nuǧūd fī ma'rifat al-wuǧūd*, has been edited by Yahya and Corbin (*ibid.*, 620 ff.). The problem of being is treated under the aspects of its unity and multiplicity (i.e. its epiphany, *zuhūr*), more in correspondence with the ideas of Ibn 'Arabī than with the tradition of Ibn Sīnā.—In 777/1375-6 he finished his

(3) *al-Muḥīt al-a'zam*, a huge commentary on the *Kur'ān* in seven volumes written after the model of the *Bahr al-ḥakā'ik wa 'l-daǧā'ik*, the *tafsīr* by Naǧǧim al-Dīn-i Dāya (d. 654/1256). For its structure, cf. H. Corbin, in *La philosophie shī'ite*, French introd., 46 ff.—Between 781/1379 and 782/1380 he wrote

(4) *Naṣṣ al-nuṣūs*, a commentary on Ibn 'Arabī's *Fuṣūṣ al-ḥikam* to which he added, after the model set by earlier commentators like Dāwūd b. Maḥmūd al-Kaysarī (d. 751/1350), voluminous prolegomena (ed. Yahya and Corbin, in *Bibl. Iran.* 22, Tehran-Paris 1975). In them, he proved the insuperability of Muḥammad among the prophets and of Ibn 'Arabī among the mystics. Muḥammad and Ibn 'Arabī are connected historically by the *revelatio continuata* through the Shīrī *imāms* and phenomenologically by the *mundo imaginālis* (*'ālam al-mithāl*), the world of spiritual being from which emanated the vision in which Ibn 'Arabī claimed to have received the *Fuṣūṣ* from the Prophet himself during his stay in Damascus in 627/1230. In spite of all reverence, however, Āmulī deviates from Ibn 'Arabī in the question of the *khātām al-wilāya*, the "seal of sainthood". Whereas Ibn 'Arabī saw this ideal realised

in an absolute sense in Jesus (= *wilāya muṭlakā*), and whereas many of his adherents believed that, in momentaneous limitation, it had been represented by Ibn 'Arabī himself (= *wilāya muḥayyada*), Ḥaydar-i Āmulī puts 'Alī and the twelfth *imām* in their place, his originality thus merging with his Shīrī conviction. He criticises Dāwūd al-Kaysarī, who had been of Anatolian descent and had lived in Sunnī Egypt, for his unclear, i.e. non-Shīrī, attitude in this problem (which came closer to Ibn 'Arabī's intention). Two other commentators, both of them of Iranian origin, Mu'ayyad al-Dīn al-Kḥudǧandī (d. 690/1291) and Kamāl al-Dīn 'Abd al-Razzāk al-Kāshānī (d. 730/1330) are mentioned with respect. Complicated numerical speculations concerning the *imāms* and the prophets are clarified through diagrams (treated by Corbin in *Eranos-Jb.*, xlii [1973], 79 ff.).—Āmulī's latest attested work is his (5) *Risālat al-'Ulūm al-ilāhiyya* which he composed in 787/1385 at the age of 65. The autograph is preserved in Naǧǧaf.—A full list of Āmulī's works is found in *La philosophie shī'ite*, French introd. 37 ff. (H. Corbin), Arabic introd. 19 ff. (O. Yahya).

Ḥaydar-i Āmulī combined Shīrī convictions hereditary in his family with an 'Irākī and Persian Sūfī tradition strongly imbued with the ideas of Ibn 'Arabī [q.v.]. In this high esteem for the *shaykh al-akbar* he follows earlier mystics of Persian descent like Sa'd al-Dīn-i Ḥammūya (587-650/1191-1252) and Naǧǧim al-Dīn-i Dāya (d. 654/1256), both of whom he quotes quite frequently. Like them, he was a speculative type; in contrast to two other famous Iranian Sūfīs who were his exact contemporaries, 'Alī al-Ḥamadḥānī (714-86/1314-85), equally originating from a family of *sayyids*, and the Sunnī Bahā' al-Dīn al-Naǧshbandī (717-91/1318-89), he did not found a separate *ṭarīqa* nor did he adhere to any of them. More strongly than anybody else before him, he insisted on the common origin of Shīrīsm and Sūfīsm, thus laying the ground for a dogma held by Iranian mystical orders until today. This is why he pleaded for a transcending of the normal juridical approach to Islam by a union of *sharī'a*, *ṭarīqa*, and *ḥakīka*; the Muslim who combines these three aspects is not only a believer (*mu'min*), but a believer put to test (*mu'min mumtaḥan*), equally remote from literalist Shīrīsm as from antinomian Sūfīsm. Shīrīsm is thus understood as the esoteric side of Islam, but not in an extremist sense. It may be noted, in this connection, that the term *mu'min mumtaḥan* was also used by extremists like the Nuṣayrīs; Ḥaydar Āmulī may have reinterpreted it in opposition to radical tendencies in popular Islam.

All knowledge (*ma'rifā*) is derived from the *imāms*; they represent the Shīrī *nūr Muḥammadī* as well as Ibn 'Arabī's *ḥakīka Muḥammadīyya*, this latter entity being understood by Āmulī as consisting of 14 light aeons which correspond to the metaphysical persons of the 14 "sinless ones" (*ma'ṣūm*): Muḥammad, Fāṭīma, and the 12 *Imāms*. The 12 *Imāms* and the 7 Prophets are summed up in the mystical number 19 which pervades revelation and universe (the *Basmala* has 19 letters; the universe consists of the Universal Intellect + the Universal Soul + 9 spheres + 4 elements + 3 realms of nature + man; more about numerical speculations of this kind in the article by Corbin in *Eranos-Jb.*, xlii [1973], 79 ff.). God as the *mubdī'* of the universe is ὑπερουσίος; He can only be recognised in His epiphanies. This leads to a metaphysics of the divine names and attributes; the normal monotheism propagated by Muḥammad is differentiated, as *tawḥīd ulūhī*, from the *tawḥīd*

*wuḍūdī* administered by the *imāms*, i.e. the insight that God alone is in the real sense of the word. In combining these elements, Ḥaydar-i Āmulī's thinking represents an "open" system which is based on meditation and pneumatic exegesis more than an discursive reasoning.

(J. VAN ESS)

**HAYDAR KHĀN 'AMŪ UGHĪ**, originally known as Tariverdiyev (1880-1921), Persian revolutionary and activist. He was born into a Persian family living in Armenia and brought up there. He began his education in Alexandropol (Leninakan), Armenia, and studied at a higher level in Erivan and Tiflis, receiving a degree in electrical engineering in 1899 from the latter place. He then began to work for a company in Baku. In 1900 Ḥaydar joined the Caucasian Social Democratic Party led by Nariman Narimanov, and soon afterwards he helped to establish the Committee for the Persian Social Democrats in Caucasia.

In 1902, at the invitation of the Persian government, Ḥaydar went to Mashhad to supervise the Power Station installed for the Shrine of Imām Riḏā, where he however stayed for only eleven months, seeing it as unfertile ground for political activism and finding both the governor of **Kh**urāsān and the custodian of the Shrine oppressive. During his short stay, nevertheless, Ḥaydar played a part in an uprising against the Shrine custodian, Sihām al-Mulk, who was believed to have been a grain hoarder. He then left Mashhad for Tehran in 1903.

While working for the railway and later on for the Amīn al-Darb Power Station in Tehran, Ḥaydar propagated constitutionalism, and when there was widespread opposition to the Belgian financial adviser, M. Naus, Ḥaydar encouraged the clerical students of the Sipahsālār Mosque to take refuge in the British Legation at Tehran by giving each of them a certain amount of money.

After the first parliamentary election in Tehran, Ḥaydar established the first branch there of the Social Democratic Party, the aim of which was declared to be "uprooting the existing despotism". Since the Party believed in armed struggle, Ḥaydar planned a number of bomb explosions. In June 1907 he himself exploded a bomb at the house of Mīrzā Aḥmad **Kh**ān 'Alā' al-Dawla, a prominent member of the *andūman-i khidmat*, and the party also threatened 'Alī Aṣḡhar **Kh**ān Atābak, the Grand Vizier. Thus in September 1907 Atābak was killed by 'Abbās Ākā Ṣarrāf, a party comrade of Ḥaydar. Towards the end of 1907 Ḥaydar planned the

assassination of Muḥammad 'Alī Shāh, who was then attempting to extinguish the Persian constitutional system established in 1906. This plan, however, misfired; the Shāh himself remained safe, and Ḥaydar was arrested, though released subsequently.

Upon Muḥammad 'Alī Shāh's bombardment of the Persian Parliament in 1908 and his repression of the constitutionalists, Ḥaydar fled to Baku. While in Russia, he continued his campaign by publishing articles in the Georgian press against the Shāh's régime. He also recruited some 700 Georgian volunteers for the constitutionalists' camp in Tabrīz, and later he himself joined the Tabrīz movement led by Sattār **Kh**ān. Ḥaydar took an active part in the constitutionalists' victorious actions in Marand and **Kh**uy, and he also helped to establish a school and a newspaper in **Kh**uy, where he appeared as a hero in the poetry produced at that time.

When he heard about the rise of the constitutionalists in Gilān and Iṣfahān he went to the latter city and closely co-operated with the anti-Shāh forces. In 1909, together with Shaykh Muḥammad **Kh**iyābānī and others, he established the Democrat Party in Tehran. He also founded a branch of the same Party in Mashhad in 1910. In the meantime, Ḥaydar was accused of the assassination on 15 July 1910 of Sayyid 'Abd Allāh Bihbahānī, a clerical leader of the Persian Constitutional Revolution, who was believed to have turned against the revolutionary factions; Ḥaydar was interrogated but released later. In retaliation for Bihbahānī's murder, some members of the *Fitdāliyyūn* Party made an attempt on Ḥaydar's life (Mahdī Malik-zāda, *Tarīkh-i Inḡilāb-i mashrūṭiyyat*, vi, Tehran 1953, 219).

In 1910 Sattār **Kh**ān and his fellow *muḡāhidīn* moved to Tehran. The various revolutionary factions now fell into confused, internecine struggles; there ensued several assassinations among the *muḡāhidīn* and other revolutionary groups, and finally the government forces defeated Sattār **Kh**ān. In this bloody warfare, Ḥaydar, at one time a good friend of Sattār **Kh**ān, is said to have fought against him.

Meanwhile, Ḥaydar undertook a secret mission among the **Bakhtiyārīs**, but no longer feeling safe in Iran, fled the country and joined Lenin, the Russian Bolshevik leader, in Europe in 1911. On his way to Europe, Ḥaydar, through his friend, Sadekov, received a sizable amount of money from Muḥammad 'Alī, the ex-Shāh of Iran, having falsely promised him help to regain his throne. Later, Ḥaydar excused himself by saying that he took the money in order to reduce the source of the ex-Shāh's power and corruption ('Abd al-Ḥusayn Nawā'ī, *Ḥaydar 'Amū Ughlī va Muḥammad Amīn Rasūl-zāda*, in *Yādgar*, v/1-2 (1948), 43-67).

While in Europe with Lenin, Ḥaydar was also in touch with the Iranian exiles in Paris and Berlin. In 1915, he joined the anti-Allied Committee organised by Sayyid Ḥasan Taḡī-zāda and others, and was commissioned by the committee to go to 'Irāq and organise an armed force against the British; this mission was not however successful. He then returned to Berlin, and shortly afterwards went to Moscow where he took part in the 1917 Soviet Revolution. In September 1920, Ḥaydar participated in the Congress of the People of the East held in Baku and, together with Avetis Sulṭān-zāda, represented Iran in the Publicity Council of the Congress.

Aiming at profound structural changes in Iran, Ḥaydar wrote an essay analysing the political and social situation of Iran and proposing certain revolutionary measures to be carried out by the newly-

born Communist Party of Iran; this essay, which was written in January-March 1921, is known as "Haydar Khān 'Amū Ughlī's theses" (Mazdak, *Asnād-i ta'rīkhī-yi djunbish-i kargārī, sūsiyāl dimukrāsī va kumūnistī-yi Irān*, iii, Florence 1972, 45-53).

He now made an unsuccessful attempt to unite all the anti-British revolutionary forces organised by Muḥammad Takī Pisyān in Khurāsān, by Khīyābānī in Ādharbāyḍjān, and by Kūčāk Khān in Gīlān, and also made a strenuous effort to create peace between the rival factions within the Djangalī movement in the north of Persia [see KŪČĀK KHĀN DJANGALĪ]. He then was invited by Kūčāk Khān and other Djangalis to Gīlān, and joined the revolutionary Republic of Gīlān as Foreign Commissioner. However, factional hostilities and ideological conflicts within the Djangalī forces finally resulted in the murder of Haydar and in the extinction of the Djangalī movement in 1921.

*Bibliography:* For Haydar Khān's own writings and political speeches, consult Mazdak, *Asnād*, i, iii, vi, 1970-6, and Nasrollah Saifpour Fatemi, *Diplomatic history of Persia 1917-1923*, New York 1952; Haydar's autobiography was dictated to Ibrāhīm Munshī-zāda, a Russian dissident in Iran, and appeared in 'Abbās Ikbāl, *Haydar Khān 'Amū Ughlī*, in *Yadgār*, iii, no. 5 (1947), 61-80; an English translation of the autobiography is given in A. Reza Sheikhholeslami and Dunning Wilson, *The memoirs of Haydar Khān 'Amū Ughlū*, in *Iranian Studies*, vi (1973), 21-51; Because of Haydar's involvement in the Persian Constitutional Revolution of 1906-11 and subsequent political developments in Iran, all the works concerned with the period provide extensive information and ample references about Haydar; See especially the articles: DJAM'YYA; DUSTŪR; HUKŪMA; KHĪYĀBĀNĪ, Shaykh Muḥammad; KHURĀSĀNĪ, Mullā Muḥammad Kāzīm; KŪČĀK KHĀN DJANGALĪ, Mīrzā; (in Suppl.) (ABDUL-HADI HAIRI)

**HAYDAR MALIK**, Kashmīrī soldier, scholar and engineer. He was the son of Ḥasan Malik of Čādura, a village about 10 miles south of Srīnagar, and descended from Rāmčandra, the commander-in-chief of Radja Suhādeva (1301-20). His family seemed to have gone into eclipse during the early period of the Sultanate, but with its conversion to Shī'ism early in the 10th/16th century, it became active in the social and political life of Kashmīr. Haydar Malik's grandfather, Malik Muḥammad Nādjī, played an important role in bringing about the overthrow of Mīrzā Haydar Dughlāt in 958/1551; and his father, Ḥasan Malik fought against the Mughal

army sent by Emperor Akbar to conquer Kashmīr. Haydar Malik also took up arms against the Mughals. He served Yūsuf Khān Čak, son of Sulṭān Ḥusayn Shāh (970-8/1563-70), for 24 years, and accompanied him in exile to Hindustan. He fought side-by-side with Yūsuf Khān, who was sent by Akbar to suppress the refractory *zamīndārs*; and when Djahāngīr sent Yūsuf Khān with Kuṭb al-Dīn, governor of Bengal, to suppress Shīr Afkan, who held a *djāgīr* in Burdwan, for being in league with the Afghān rebels, and Shīr Afkan was killed, Haydar Malik gave protection to his widow, Mihr al-Nisā', the future Nūrdjahān, and sent her safely to Āgra. On Yūsuf Khān's death, Haydar Malik entered the service of Djahāngīr, who conferred upon him the titles of *Čaghatay* and *Rā'īs al-Mulk*.

Haydar Malik was versatile, being not only a soldier but also a historian, an architect and an engineer. His *Ta'rīkh-i Kashmīr*, written in simple, lucid Persian in 1031/1620-1, describes the history of Kashmīr from the earliest times to 1027/1617, the twelfth year of Djahāngīr's reign. Although a Shī'ī, he wrote objectively, and his work is an important source for the history of the Sultanate in Kashmīr.

When the Djāmi' Masjid of Srīnagar was destroyed by fire, Haydar Malik's father was accused of having set fire to it. Djahāngīr sent Haydar Malik to rebuild it, which he did at his own expense. He also rebuilt the tomb of Shams al-Dīn 'Irākī, the Nūrbakhshīyya saint, which had been destroyed by the Sunnīs as a reprisal for the destruction of the Djāmi' Masjid. Later, Haydar Malik constructed by order of Djahāngīr a canal from the river Sind to irrigate the Nūr Afzā garden. He was also entrusted with the supervision of the construction of the waterfall at Vernāg. He died in Kashmīr at a ripe old age in the reign of Shāhḍjahān, who had in 1036/1627 appointed him as superintendent of buildings to be built around Vernāg.

**HAYS** (A.; noun of unity, *haysa*), an Arab dish made from dates (of the variety called *barī*) crushed and then kneaded with some preserved butter; to this is added skimmed, dried and crumbly camels' milk cheese, or some flour, or even some crumbled bread. The invention of this mixture of ingredients is attributed traditionally (see al-Djāhīz, *Bukhālā'*, ed. Hādījīrī, 211; tr. in *Arabica*, ii/3 [1955], 336) to a prominent member of Makhzūm called Suwayd al-Haramī (Ibn al-Kalbī-Caskel, *Djamhara*, Tab. 22), who is also said to have been the first to serve milk as a drink in Mecca (Muṣ'ab al-Zubayrī, *Nasab Kuraysh*, 342).

Judging by some anecdotes (e.g. in *Bukhālā'*, 65, 112, 163, tr. 106, 180, 259) and by a frequently-cited verse (metre *kāmīl*, rhyme *-bū*; *Bukhālā'*, 211; Ibn Kutayba, *Uyūn*, iii, 19; al-Marzubānī, *Mu'ājam*, 215; al-Kālī, *Amālī*, iii, 86; al-Baghḍādī, *Khizāna*, ed. Būlak, i, 242 = ed. Cairo, ii, 32; *LA* and *TA*, root *h - y - s*), it was a much-appreciated foodstuff, especially suitable for travellers (al-Baghḍādī, *Kitāb al-Tabīkh*, Mawṣil 1353/1934, 82), but equally favoured by sedentary peoples. However, this dish was not considered worthy of "being included in the haute cuisine" (M. Rodinson, *Recherches sur les documents arabes relatifs à la cuisine*, in *REI* [1949], 148).

Furthermore, the idea of a mixture or *mélange* contained in the root led to the word *hays* being used in a pejorative sense. Indeed, there was a saying *hādhā 'l-amr hays* "this is a wretched affair", and a proverb, *'āda 'l-hays yuhās* "the *hays* has been remixed", that is to say, "it was already bad, but has now become worse", uttered when someone criticises a second person who has performed his task badly, but himself fails to do it any better (al-Maydānī, *Maǧma' al-amthāl*, i, 484).

(Ed.)

**HAZĀRADJĀT**, a region of central Afghānistān spanning the modern (post-1964 reorganisation) provinces of Bāmiyān, Wardak, Ghaznī, Ghōr and Uruzgān. The region is almost wholly mountainous, its northern backbone being formed by the Kūh-i Bābā range [*q.v.*] and its outliers. There are consequently very few towns and these tend to lie in the river valleys, e.g. Dawlatyār on the upper Herī Rūd and Pandjāb or Pandjāō on the Pandjāb tributary of the upper Helmand. The sedentary agriculturist Hazāras [*q.v.* below] are the main ethnic element of the region, but there are also Pashtūn or Afghān nomads, e.g. Ghazays [*q.v.*], who have moved in from the east and who have clearly-defined grazing grounds.

**HAZĀRAS**, the name of a group of peoples inhabiting the central mountains of Afghānistān; they form one of the principal population elements of the country, amounting perhaps to 900,000.

The Hazāras are almost certainly an ethnically mixed group, whose components may or may not be related to each other. In appearance, Hazāras are predominantly brachycephalous, with Mongoloid facial features, though this is by no means universal. There is therefore much in favour of Schurmann's hypothesis that the Hazāras of the core region, the Hazāradjāt [*q.v.* above], at least, are a mixed population formed from a fusion of an aboriginal Iranian mountain people with incoming Mongol-Turkish elements. The Hazāras early attracted the attention of 19th century western travellers and scholars because of persistent legends that the Hazāras are descendants of Mongol soldiers, the human débris of Čingiz Khān's campaigns in the early 13th century — these traditions were retailed, for instance, by Mountstuart Elphinstone at the beginning of the 19th century — and because it was believed, on the basis of linguistic material collected in the 1830s amongst the Aymāks by E. Leech, that the Hazāras still substantially spoke Mongol at that time. It now seems more probable that Mongol-Turkish elements infiltrated into central Afghānistān, via the more low-lying and open river valleys of the south and west rather than across the mountain barriers to the north, in the Čaghatayid and Tīmūrid periods, mingling with the indigenous Iranian population there; whilst the vestigial communities of ethnic and linguistic Mongols have now been shown to be centred on the Ghōrāt region to the west of the Hazāra ones, cf. Schurmann, *The Mongols of Afghanistan*. The name Hazāra "group of 1,000 men" (P. *hazār* "1,000") is certainly reminiscent of the military-tribal system of the Mongols, with its contingents of 1,000 cavalry-men (Mgl. *mingan* "1,000", Tk. *biñ/minñ*), but the Hazāras themselves must have become essentially Iranian speakers by ca. 1500; their language

does, it is true, include a considerable admixture of Turkish and Mongol words [see IRAN. iii. Languages, in Suppl.].

Various sub-groups can conveniently be distinguished amongst those peoples included under the blanket designation of Hazāras. The main body is that of the Hazāradjāt or Dāy Kundī Hazāras, who are sedentary agriculturists with only small herds, living in fortified stone villages (*kakās*). Their agriculture is necessarily a limited, irrigation one, restricted by the altitude and the climate, with short summers and snow for 4-6 months of the year. Until the later 19th century and the extension to the Hazāradjāt of the central power in Kābul (see below), the power of the Dawlat-Begs, an upper class of landowners, was dominant, and still remained strong after that time. The Kūh-i Bābā Hazāras live to the north of that range, and stock rearing, with transhumance to summer pastures of *yaylaks*, plays a great part in their economy. The Shaykh 'Alī Hazāras occupy the region around Bāmiyān and the Ghōrband valley northwards to the foothills of Afghān Turkistān, and are unusual among the Hazāras for their use of summer *yurt*-type tents, whereas the tents used by the more southerly Hazāra groups are of the "black tent" variety [see KHAYMA. iv. In Central Asia]. There is a little-known group of Hazāras in Badakhshān; amongst the Taymannīs of the Ghōrāt is a small group of Hazāras; and there are the Berberī Hazāras in northeastern Persia, in the Turbat-i Djam district south of Mashhad, apparently immigrants from Afghānistān during the disturbances of the 19th century. Finally, there are the so-called Hazāra Aymāks of northwestern Afghānistān, in the western section of the Paropamisus Mountains, including the mediaeval Islamic regions of Bādghīs and Gūzgān. These are mainly semi-nomads, with *yurt*-type tents, but with some non-irrigation agriculture; they are Persian-speaking, but their Persian has affinities with Khurāsānī Persian, whereas that of the Hazāradjāt and the more easterly Hazāras is close to the Darī of Kābul and other Tādjik groups of the north and east of Afghānistān. Also, they and the Taymannī Hazāras are distinguished from other Hazāra groups by their adherence to the Sunnī *madhhab*. Perhaps one should note, too, the place-name Hazāra [*q.v.*] for a district in the North-West Frontier Province of Pakistan.

The Shī'ism of the majority of the Hazāras distinguishes them from the predominant, strongly Sunnī milieu of the rest of Afghānistān. The Hazāradjāt Hazāras are Imāmī or Twelver Shī'īs, and it has been suggested that this intrusive Shī'ism came during the Šafawid period of Persian history, when the expanding Šafawid state intermittently controlled Kāndahār and southern Afghānistān; the remnants of the Mongols in the Ghōrāt are Sunnīs. Today, these Hazāras have no mosques in their villages, but *takiya-khānas* instead. Amongst the northeastern Hazāras, the Shaykh 'Alīs and Badakhshān ones, Ismā'īlī Shī'ism is widespread; there were doubtless connections between these groups and the Ismā'īlism of the upper Oxus districts and the Hunza-Gilgit region.

Within Afghānistān, the Hazāras have tended to suffer discrimination on account of their Shī'ism and supposedly Čingizid origins, and they still suffer today from imputations of stupidity and simple-mindedness. As an isolated and independent-minded mountain people under their own *khāns* and *mīrs*, they resented the centralising policies of the Afghān rulers of Kābul. Dūst Muḥammad [*q.v.*] whipped up Sunnī sentiment against the Hazāras; in 1888

the Hazāras rebelled against the authority of 'Abd al-Rahmān Khān [q.v.], and in 1891 the Khān organised the suppression of Hazāra unrest as a *ḡihād* by Sunnī fighters for the faith or *ghāzīs* against Shī'ī political enemies. It was after this fierce fighting that many Hazāras emigrated to Persian Khurāsān and the Quetta region of British Balūčistān, and many Hazāras were also resettled in Afghān Turkistān. Already Elphinstone noted that there were many Hazāras in Kābul, including 500 in the royal guard, and in the early 20th century, Ḥabīb Allāh Khān recruited a labour force of several thousand Hazāras for his road-building and public works policies. Today, there are Hazāra immigrant colonies in all the main towns of Afghānistān, sending remittances back to their families; in Kābul, they are, in particular, building and general labourers and wood sellers.

**HIDJRA** in *fiqh*. For Muslims residing in the *Dār al-Harb*, emigration to the *Dār al-Islām* (*hidjra*) is a recommendable act. If they cannot perform their religious duties in freedom, emigration becomes obligatory. These prescriptions are founded on Ḳur'ān, IV, 97-100 and some traditions, like Muḥammad's saying: "I have nothing to do with Muslims residing amongst the polytheists" (Abū Dāwūd, *ḡihād*, 95; Nasā'ī, *kaṣāma*, 27). The Mālikīs hold that emigration is always obligatory and that the tradition: "No emigration after the Conquest [of Mecca]" (Bukhārī, *ḡihād*, 1, 27, *imān*, 41, *sayd*, 10, *maghāzī*, 35; Muslim, *imāra*, 85-6; Abū Dāwūd, *ḡihād*, 2; Tirmidhī, *siyar*, 32; Nasā'ī, *bay'a*, 15\*\*), which other *madhāhabs* consider as an abrogation of the general command to emigrate, only applied to the Muslims abiding in or around Mecca, who were no longer obliged to emigrate, as their territory had become *Dār al-Islām*. During the 19th and the beginning of the 20th century, as a reaction against colonial expansion, some Islamic politico-religious movements gave this doctrine a new lease of life, inducing their followers to leave Islamic territory which had fallen under foreign domination; see e.g. KHILĀFA, KHILĀFAT MOVEMENT.

**HIERARCHY OF SAINTS** [see ABDĀL, IKHŴĀN AL-ṢAFĀ'].]

**HIEROGLYPHS** [see BARBĀ].

**HIKR**, one of the various forms of long-term lease of *wakf* property. Originally, the aim of these contracts was to give tenants an incentive to maintain and ameliorate dilapidated *wakf* properties, which are inalienable. In exchange, the tenant is granted—according to different schools of law or interpretations—priority of lease, the right of permanent lease, the usufruct of the property or even co-proprietorship with the *wakf*. *Hikr* contracts, which were common in Egypt and Syria, are perpetual or made for a long duration. The tenant may erect buildings or plant trees, which become his full private property. He is entitled to transfer and sell the property and the right of perpetual lease to any other person and they are inherited according to the *Sharī'a*. The tenant pays a yearly rent which varies according to the current value of the land (*adīr al-mithl*). According to the prevalent view, *hikr* of a *wakf* property has to be authorised by a *kādī*, and he is supposed to do so only if there is no other way in accordance with *wakf* law to secure income for the *wakf*.

Theoretically, *hikr* rights may be acquired on *mulk* property as well, and indeed there seem to have been such cases (cf. Mubārak, *Khūṭat*, iii, 11), but in general, *hikr* was confined to *wakf*—probably because the interest shown by private owners in their property generally was greater than the administrators' interest in their *wakfs*.

A similar system, *idjāratayn*, was common in Anatolia and in all countries formerly part of the Ottoman Empire, apparently since the 16th or 17th century (for Ottoman Egypt see, e.g. 'Abd al-Rahmān al-Djabartī, *Adjā'ib al-āthār*, Būlak, 1297/1880, iv, 94; M.-A. Lancret, *Mémoire sur le système d'imposition territoriale*, *Description de l'Égypte, État moderne*, i, Paris 1809, 239). *Idjāratayn* contracts involve immediate payment of a lump sum, *mu'adḡḡal*, as well as yearly, variable, rather low rents, *mu'adḡḡal*. For repairs and setting up of installations in Egypt and Palestine, a system called *khuluww al-mitifa'* was used, whose main features were a loan made to the *wakf* (*muṣṣad*) and the right of the *wakf* at any time to repurchase the property and repay the tenant the added value. *Khuluww*, according to Mālikī law, in Algeria and Tunis, was rather like *hikr* and involved perpetual usufruct or even "co-proprietorship" with the *wakf*. The same is true for the Tunisian *enzel* (in-

zal), which was found not only on *hubūs* but also on *mulk* properties. In Morocco, the prevalent system of perpetual lease by the *hubūs* of dilapidated shops and workshops was the *ḡiālsa* (*guelsa*), also called 'anā' or *zīna* (cf. Dozy, *Suppl.*, i, 207). The tenant makes the necessary repairs, pays an annual rent and thus acquires the perpetual usufruct of the property. *Nasba* in Tunis and *gedik* in Egypt were similar arrangements involving, in addition to perpetual lease, the ownership and use of tools and installations of shops and workshops. However, there was a major difference between all the Mālikī—North African systems and those which were prevalent in Egypt, Syria, and Turkey, according to Ḥanafī law: in the Maghrib the lessee paid a fixed annual rent, while the yearly rents paid in the East were supposed to vary according to market fluctuations (*adīy al-mithl*). (For these and various other systems, see Pröbster, 153 ff.; Milliot, 55 ff., 126-6; Abū Zahra, 107 ff.)

In Egypt, *hikr* has existed at least since the 12th century (cf. S.D. Goitein, *Cairo: an Islamic city in the light of the Geniza documents*, in I.M. Lapidus, *Middle Eastern cities*, Berkeley and Los Angeles 1969, 92; Hassanein Rabie, *Some financial aspects of the waqf system in medieval Egypt*, in *al-Maḡjalla al-Ta'rikhiyya al-Misriyya*, xviii [1971], 1-24). *Hikr* and similar practices of perpetual lease flourished after periods of decline in the power of the central government which involved deterioration of *waqfs*. This is what happened in various parts of Cairo after the decline of the Fātimids (Mubārak, *Khiṭat*, iii, 2, 102), and in the Maghrib with the decline of the Marīnid dynasty and the disorders under the Sharīfians which brought about the dilapidation of the *waqfs* (Milliot, 43). The recurring fires in Istanbul and other Anatolian towns have been considered as a primary reason for the spreading of *uḡāratayn* contracts in Ottoman Turkey. The *hikr* served as a useful expedient to develop deteriorated *waqf* estates in periods of economic prosperity. In the second half of the 19th century in Egypt, 'Alī Pasha Mubārak, the Minister of Awkāf, granted a large amount of *hikrs* to private persons to develop Cairo, Ṭanṭā and others towns (Mubārak, *Khiṭat*, ii, 119; ix, 53).

Another reason for the increase in *hikr* was the attempt by debtors to save their estates from the encroachment of their creditors. This they achieved by selling the *rakaba* of the estate to a mosque at a nominal price while keeping the usufruct and paying an annual *hikr*, equivalent to the interest on the price originally paid by the mosque. Thus they retained the right to transfer their property, but it could not be touched by their creditors (J.H. Scott, *The Law affecting foreigners in Egypt*, Edinburgh 1907, 120-1). *Hikr* has often been used as a way to encroach upon *waqf* property. Frequently administrators neglected to collect the rent, and after some time the estate became known as the lessee's property. Usurpers even claimed to be entitled to become proprietors by prescription (cf. 'Azīz Khānkī, *al-Waqf wa 'l-hikr wa 'l-takāddum*, in *Maḡjallat al-Kānūn wa 'l-Iktisād*, vi [1936], 779-829).

Moreover, in all periods *hikr* and similar practices have been used by dishonest *nāzirs* as a convenient means of fraud. In Palestine, "the conversion of *Waqfs* held as *ijare wahide* into *ijaretein* proceeded at a rapid rate in the nineteenth century, mainly through the dishonesty of the local Kadīs and Mudirs of Awkāf, who were often interested parties in such transactions. It was an easy matter for a Mudir to advance the plea that a property had been

incorrectly registered... vast tracts of land were converted about this period into *ijaretein*, the *Waqf* being the sole loser, whilst the mutawali received a considerable accession to his income. The Law of 19 Jemazul-Akhīr, 1280, categorically forbade conversion unless there is the sanction of the Sher', and an Imperial Irade had been obtained" (J.B. Barron, *Mohammedan Waqfs in Palestine*, Jerusalem 1922, 32).

As a result, the number of perpetual leases of *waqf* property in Islamic countries grew tremendously. At the end of the 19th century, the number of persons who had made *hikr* contracts in Egypt was estimated at 20-25,000 (*Maḡmū'at al-karārāt wa 'l-manshūrāt*, Būlāk 1899, 236 f.), and in the 1930s, the Ministry of Awkāf alone administered more than 11,000 *hikrs* (Abū Zahra, 135). *Hikr* contracts were made predominantly on *khayrī* (public) *waqfs*, i.e. those whose income was dedicated to hospitals, mosques, the poor, etc. (Pröbster, 141-2; Milliot, 36). Many of Cairo's public baths (*ḡammām*) had to pay yearly *hikr* rents to various *waqfs* (to whom, apparently, the property had originally belonged) (Mubārak, *Khiṭat*, ii, 28, 38, 113, 116; iv, 45; vi, 66-71). Recently-discovered documents have shown that very large parts of Cairo were *hikr* which for years had been considered private property. However, income from *hikr* was extremely small. According to Mubārak's data on some Cairo mosques, their income from *hikr* in the third quarter of the 19th century was between 0.4 % and 1.31 % of their total income (Mubārak, *Khiṭat*, iv, 45, 59, 60; v, 99). In the course of the first half of the 20th century, the percentage of income from *hikr* in the total income of the Ministry of Awkāf from *awkāf* declined from 2.59 % in 1899 and 1.88 % in 1904 to about 1 % from 1908 onwards (with few exceptions of lower or higher percentages). The highest percentage was obtained in the *Waqf al-Haramayn* category and a somewhat lower one in *khayrī waqfs*, while *ahli waqfs* had the lowest percentage (1.91, 1.30, and 0.07 respectively in the 1928-9 budget). Percentages of *hikr* income in the total *waqf* revenue in Palestine were similar: in 1927 the Supreme Moslem Council estimated *hikr* income at 1.95 % of its budget, and in fact received a sum which constituted only 1.10 % of the total *waqf* revenue (Israel State Archives, K/102/34, 24). Though legally there should be no difference between *hikr* rates and the rent of the same land prior to the improvements made by the lessee, the report of an official committee appointed in Egypt in the 1930s put average rents on *hikr* lands at one-third of usual rents. *Shari'a* Courts calculated the value of *waqf* lands encumbered with *hikr* as one-third of the value of similar lands free of *hikr* (Abū Zahra, 129-51).

Since the beginning of the 20th century, attempts have been made to abolish *hikr*. The Egyptian Awkāf Administration had declared as early as 1898 that its aim was to sell the *hikrs*, since their revenue was too small compared with the cost of collecting it. The problem was that theoretically it is forbidden to sell *waqf* property and that it was too complicated to exchange the great number of *hikrs*. Attempts made to do this during the first years of the century had failed. *Hikr* on *waqf ahli* was abolished together with such *waqfs* in Egypt in 1952 by art. 7 of Law no. 180 of that year, and Law no. 649 of 1953 and no. 295 of 1954 provided for the voluntary sale and termination of *hikrs* on *waqf khayrī*. The owner of the *rakaba* (the *waqf*) was to receive three-fifths of the price paid and the holder of the *hikr* the rest. Apparently these laws were not effective, and in 1960 a new law

(no. 92) was enacted, according to which all *hikr*s were to be liquidated: the holder was given the option to buy the property from the *wakf* for three-fifths of its value, otherwise it would be put for auction and the proceeds divided between the *wakf* and the holder in a ratio of 3 to 2. In Turkey, *idjāratayn* and *mukāṭa'a* (= *hikr*) were liquidated by the Vakıflar Kanunu of 5 June 1935. According to this law, the establishment of such arrangements in future was prohibited and existing ones were dissolved. Lessees were made owners of properties they held and required to pay compensation amounting to twenty times the yearly rent, according to a scheme of easy terms (Köprülü, 246 ff.). In İrak, the 1929 Law of Waqf Administration had already abolished *hikr* and *idjāratayn*, but apparently not effectively. In 1960 and 1962 new laws called *İfā' ḥakk al-hikr* were enacted, according to which administrators and other people concerned were entitled to apply to a law court for the dissolution of *hikr*, *idjāratayn*, *mukāṭa'a*, and similar systems of perpetual lease. The law court would fix the value of the property and the share of the *wakf* and the lessee (Muḥammad Şhafīk al-Ānī, *Ahkām al-wakf*, Baghdād 1965, 60, 244-6).

**AL-HILĀLĪ**, ABU 'L-'ABBĀS AḤMAD B. 'ABD AL-'AZĪZ B. RAŞĪD AL-SİDĪLMĀSSĪ, Moroccan scholar who owned his *nisba* to Ibrāhīm b. Hilāl (d. 903/1497; see Brockelmann, S II, 348), the ancestor of a family of intellectuals in Sidjilmāssa. He was born in that town in 1113/1701, and began his studies there, going on to Fās for them, and then returning to the Tāfilālt, where he gathered round himself numerous pupils. He also obtained *idjāzas* from various eastern scholars on the occasions of two pilgrimages. He died at Madagħra (Tāfilālt) on 21 Rabī' I 1175/20 October 1761.

Al-Hilālī owed his fame to the quality of his teaching and to a fairly abundant output of works which entitle him to be considered as one of the greatest Moroccan scholars of the 12th/18th century. His work is partially preserved (see the list of mss. in Lakhdar), and includes some *fahrasas*; a *riḥla*, which appears to be lost; some commentaries on works of *fikh*, on the subject of the Qur'anic *kirā'āt*, on lexicography and on logic; and finally, some poetry. His piety is displayed in a *qaṣida* on the *asmā' ḥusnā* [q.v.] and above all in a poem of 129 verses in which he sums up the rule of life for the true believer, and recommends this latter to prepare for the next life in this present one, to fight against evil

tendencies and desires and to conform to the obligations of Islam. This poem enjoyed a very great vogue in Morocco.

**HINDIBĀ'**, endive, *Cichorium endivia*, the cultivated form of a species of the ligulate chicory family. Through Syriac *antūbiyā*, both terms *hindibā'* and "endive" go back to Greek ἴντροβοϋς, which is recorded only sporadically; normally the plant is called σέρϋς, in the Arabic translations *sāris* or *sa'īs*. The nomenclature, rich and confused, can be summarised as follows: the wild endive (*hindibā' barī*) was already known to the earlier Arab botanists under various names: *'alath* or *ghalath* (Abū Hanīfa al-Dīnawarī, *Le dictionnaire botanique*, ed. M. Hamidullah, Cairo 1973, nos. 735, 804), further *ya'did*, *baḳla murra*, *tarkhashkūk* and variants (*op. cit.*, no. 1115). As indicated by the last but one name, it is a "bitter vegetable" and is therefore also called *amarūn* (and variants). The latter term is not of Greek origin, as the books on medicine have it, but is to be derived from Latin *amarum*. The cultivated endive, usually called *hindibā'* (also by al-Dīnawarī, *op. cit.*, nos. 1103, 1104), is the popular, tasty salad-plant, particularly widespread in the Arab West and known there under the Mozarabic name *sharrāliya* or its arabicised form *sarrākh* (Castilian *sarrajā*, cf. F. J. Simonet, *Glosario de voces ibéricas y latinas*, etc., Madrid 1888, 584), while in Morocco the Berber term *ijfāf* is mainly used.

The medicinal effect of endive was exceptionally extensive, as can be seen in Ibn al-Bayṭār's long article, where numerous older sources are indicated. It is above all effective against eye-diseases and poisoning, in minced form also against boils when in their initial stage, and it strengthens the liver and stomach. The root helps against scorpion-stings, and the juice against jaundice, constipation, persistent fever and suppurations. The *tarkhashkūk* mentioned above is *taraxacum*, the dandelion used in popular medicine because of its bitter substance. On the cultivation of endive in Spanish agriculture, in particular on sowing, planting out and irrigation, ample information based on several sources is given by Ibn al-'Awwām, *K. al-Filāḥa*, tr. J.-J. Clément-Mullet, ii, Paris 1866, 146-9.

**HINN**, an inferior species of *ḡinn* [q.v.]. Mas'ūdī (*Murūdj*, iv, 11 = § 1340) states that many people believe that the **Hinn** are a sub-species of the *ḡinn* who are of a weaker and lowlier kind, but condemns the belief in them as a delusion. Belief in the **Hinn**, is, however, accepted by the Druzes (see H. Guys, *Théogonie des Druzes*, Paris 1863, n. 78, p. 106; *Takṣim Djabal Lubnān* (Leeds Arab. MS 178, fol. 14b); C.F. Seybold, *Die Druzenschrift: Kūāb Alnoqat Waldawāir. Das Buch der Punkte und Kreise*, Kirchhain 1902, 71), and they are occasionally mentioned elsewhere in Arabic literature, e.g. al-Djāhīz, *Bukhālā'*, Beirut 1960, 58.

*Bibliography*: in addition to the works mentioned in the article, see D.R.W. Bryer, *The origins of the Druze religion*, in *Der Islam*, liii (1976), 8, and the literature there cited.

**HIPPOCRATES** [see BUKRĀT, above]

**HIPPOPOTAMUS** [see FARAS AL-MĀ, above]

**AL-ḤIṢĀFĪ**, ḤASANAYN, founder of the al-Ḥiṣāfiyya al-Šhādhiyya *ṭarīka*. He was born in 1265/1848-9 in the village of Kafr al-Ḥiṣāfa, Qalyūbiyya province, Egypt.

Originally he was a *khālifa* [q.v.] of an offshoot of the Madaniyya branch of the Darkāwa [q.v.], known as al-Makkiyya al-Fāsiyya. He had been initiated into this *ṭarīka* by its founder, Muḥammad b. Muḥammad al-Fāsī (d. 1288/1872), when in Mecca for the pilgrimage in the year of the latter's death. He defied as unlawful certain forms of *dhikr* [q.v.] characteristic of the *ṭarīka* and introduced into it certain elements of teaching and ritual peculiar to al-Tidjāniyya [q.v.]. This brought about a conflict within al-Makkiyya al-Fāsiyya which resulted in the formation of an independent and distinct *ṭarīka* which became known as al-Ḥiṣāfiyya al-Šhādhiyya.

After Ḥasanayn's death in 1910, when the *ṭarīka*'s position of supreme leadership had passed to his son Muḥammad 'Abd al-Wahhāb (d. 1949), various factions emerged under local leaders who paid only nominal allegiance to the successors of the *ṭarīka*'s founder. One of these factions in Banī Suwayf, led by Muḥammad Aḥmad al-Tukhāwī (d. 1361/1942), developed into an independent and distinct *ṭarīka* known as al-Tukhāwiyya. Another faction in al-Maḥmūdiyya (Buḥayra province) led by Aḥmad al-Sukkarī was virtually severed from the main body of the *ṭarīka* when it was organised into the Djāmīyya al-Ḥiṣāfiyya al-Khayriyya, an organisation which was the root and forerunner of the Ikhwān al-Muslimūn [q.v.].

Ḥasanayn al-Ḥiṣāfī was buried in Damanhūr, where his shrine is venerated; a *mawlid* [q.v.] is celebrated there yearly.

*Bibliography*: 'Alī al-Djā'farāwī, *al-Manhal al-sāfi fī manāḳib al-sayyid Ḥasanayn al-Ḥiṣāfī*, Cairo 1330/1911-12, contains the principal biography in addition to a number of his sermons (71-87) and a short treatise in which he gives instruction in the fundamentals of *ṭasawwuf* and elaborates his position with respect to *dhikr* (61-109). This section may be found also in a much more expanded form in the principal manual of the order, which is Ḥasanayn al-Ḥiṣāfī's *al-Sabil al-wāḍiḥ*, Cairo 1951. Other writings of al-Ḥiṣāfī are mentioned in a biography by Muḥammad Zakī Muḍjāhid, *al-'Ālam al-šarḳiyya*, 4 vols., Cairo 1949-63, iii, 101 f., which is largely based upon the biography by al-Djā'farāwī. A discussion of the early history of the order and of its exceptional position among the *ṭarīkas* in the 19th century Egypt may be found in F. de Jong, *Turuq and turuq-linked institutions in 19th century Egypt*, Leiden 1978, 101-3.

(F. DE JONG)

**HIYAL** (A.), with the basic meaning of "devices, subterfuges", has had its sense considerably extended, and in particular, denotes in Classical Arabic ingenious contrivances, automata, various pieces of machinery, and finally, the science of mechanics. Since the article **HIYAL** in Vol. III deals mainly with legal fictions and ruses and with casuistic processes, the present article is especially concerned with automata, with the Arabic works describing them and with the tradition of which they are the most remarkable expression.

The mediaeval Arabic books on machines are often called "automata treatises" by modern writers, but the designation is somewhat misleading. The books deal with *hiyal* [q.v.], which in one of its senses denotes mechanical contrivances and covers a much wider field than that of automata. The descriptions in the treatises, supplemented by references in histories and by archaeological evidence, enables us to list the following constructions: water-clocks and candle-clocks; trick vessels and liquid dispensers, measuring devices; fountains, lamps; water-raising machines; musical automata; locks. According to Abū 'Abd Allāh al-Kh'arazmī [q.v.], who compiled his scientific encyclopaedia *Maḡānīh al-'ulūm* towards the end of the 4th/10th century, trebuchets (*mandjānik*) are also *hiyal* (ed. van Vloten, Leiden 1895, 247). The word therefore means virtually any mechanical contrivance from small toys to large machines. *Hiyal* may indeed be automata, as in the case of trick vessels; they may display a variety of automata, for instance on the monumental water-clocks; or the automatic element may be completely lacking. The closest Arabic word for automaton is in fact simply "movement" (*ḥaraka*), which is used frequently by the writers, e.g. al-Djazarī [q.v. above] and Ibn al-Nadīm (*Fihrist*, 397). Often a variety of *ḥarakāt* is described for the more complex devices, and the craftsman is instructed to select those that suit his tastes and purposes. The concern of this article is mainly with the contrivances that incorporated automatic effect.

Several treatises composed in Arabic are known to us, including: *Kitāb al-Hiyal* by the Banū Mūsa, written in Baghdād ca. 236/850 (Hauser; Wiedemann and Hauser - W.H. 1); *Kitāb 'Amal al-sā'āt wa 'l-'amal bihā* by Ridwān, written in 600/1203, describing the repairs of a monumental water-clock built by his father Muḥammad al-Sā'ātī in Damascus ca.

545/1150 (W.H. 2); *Kitāb fī ma'rifat al-hiyāl al-handasiyya* by al-Djazarī, written in 602/1206 (Hill 1); and a treatise on clocks written by Taḳī al-Dīn b. Ma'rūf (932-72/1526-65), namely *al-Kawākib al-dawriyya* (ed. and tr. with commentary by S. Tekeli, *The clocks in [the] Ottoman Empire in [the] sixteenth century*, Ankara 1966). A second work by Taḳī al-Dīn, dealing with various types of machines, entitled *al-Turuk al-saniyya fī 'l-ālāt al-ruḥāniyya* has recently been edited in Arabic (Aḥmad Y. al-Hasan, Aleppo University 1976).

Almost certainly there are manuscripts yet to be discovered, and there are known manuscripts that await close study. Perhaps the most important of these is a manuscript in the Biblioteca Medicea Laurenziana in Florence. Numbered 152 (formerly 282) it is catalogued as *anonymi tractatus de mechanicis*. The section of the work that concerns us here is entitled *Kitāb al-Asrār fī natā'iq al-afkār* and occurs amid a number of mathematical treatises attributed to Abū 'Abd Allāh, known as Ibn Mu'ādh, who worked in Cordoba in the 5th/11th century. (For Ibn Mu'ādh, see the article *al-Jayyānī* in the *Dictionary of Scientific Biography*.) It has not yet been possible to make a close study of this treatise, which is dated 664/1266. It is unfortunately in poor condition, with several of its pages torn, but it is written in a clear Maghribī script and it may be possible to decipher large parts of it. An examination of photographs of some of the leaves indicates that it describes water-clocks, and other machines. The drawings are well-executed and suggest considerable sophistication—for instance, they incorporate geartrains in the main parts of the machinery. This work, even if its authorship cannot be established with certainty, may prove to be of considerable importance for the study of mediaeval Islamic mechanical technology.

Apart from the treatises themselves, there are other attestations to support the existence of a thriving tradition of machine technology in mediaeval Islam. Al-Djazarī mentions a candle-clock built by a certain Yūnus al-Aṣṭurlābī (Hill 1, 87) and a musical automaton constructed by Hibat Allāh b. al-Ḥusayn (Hill 1, 170), otherwise known to us as an astrolabist (Suter, 117). There are also references to be found in the works of geographers and historians concerning mechanical devices which they had seen: for instance, the striking water-clock with automata presented to Charlemagne by vassals of Hārūn al-Raṣhīd (Eginhard, *Annales Francorum in Monumenta German. Script.* i, 194), and the silver tree with whistling birds in the garden of the Caliph al-Muḳtadir [see BAGHDĀD, History]. Remains of two water-clocks built in the 8th/14th century are still to be seen in Fās (D. de Solla Price, *Mechanical water clocks of the 14th century in Fez, Morocco, in Ithaca*, 26 VIII-2 XI [1962], 599-602). It cannot be doubted, therefore, that there was a tradition of mechanical engineering in Islam that probably originated in the 2nd/8th century and continued until it merged with the developing European engineering in the 10th/16th century. It was a tradition that was concerned mainly with devices to provide amusement and aesthetic pleasure, with some utilitarian elements, and almost certainly reached the peak of its achievements in the work of al-Djazarī.

One impetus for the establishment of this tradition was undoubtedly the availability in Baghdād in the 3rd/9th century of Arabic translations of Greek treatises, especially those of Philo (ca. 230 B.C.) and Hero (fl. ca. 60 A.D.). The works of Hero, in particular, were highly regarded in mediaeval Islam—several,

including one on automata, are mentioned by Ibn al-Nadīm (*Fihrist*, 397). A number of the Banū Mūsā's devices closely resemble devices described by Philo and Hero, and there seems little doubt that the brothers had access to the Greek treatises. It would be incorrect, however, to assume that Philo and Hero were the sole inspiration for the Banū Mūsā and their successors, or even the most important one.

From the time of Archimedes onwards, it now seems certain that a tradition of mechanical engineering, more practical than that represented by the known works of Philo and Hero, had spread throughout the eastern Mediterranean and western Asia. Monumental water-clocks, for instance, had been built in Syria in Byzantine times (H. Diels, *Über die von Prokop beschriebene Uhr von Gaza, in Abh. Preuss. Akad. Wiss. Berlin, Phil.-Hist. Klasse* [1917], No. 7). According to Riḍwān (W.H. 2, 179-80), this tradition was continued in Damascus in the Umayyad period and remained unbroken up to the time of his father. Riḍwān, in the same passage, also mentions a two-way transmission of ideas between Byzantium and Sāsānid Iran. It is indeed highly probable that mechanised technology developed in Iran in the Sāsānid period and continued into Islamic times: from the Banū Mūsā onwards many of the technical expressions used are of Persian origin. Nor can a similar interchange between Iran and India be left out of account.

Activity also continued in Byzantium. A treatise on a complicated musical automaton, probably written in Byzantium in the 1st/7th or 2nd/8th century, was described by al-Djazarī (Hill 1-170), see E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim 1970, ii, 50). Three Arabic versions of this treatise, ascribed to a certain Apollonius, are extant. A most important work, attributed to Archimedes, and describing the construction of a water-clock, exists in several Arabic mss. Both Riḍwān and al-Djazarī acknowledge that the basic water-machinery of their monumental clocks was derived from the "Archimedes" treatise (Hill 2, W.H. 3). The origins of this work are still somewhat obscure. It may have contained basic ideas from Archimedes, developed by Philo, with later accretions from Byzantine and Islamic writers. Indeed, this treatise exemplifies the problems that arise when we try to identify the various cultural elements in the Arabic "translations". The "Philonic" corpus, to cite another example, has been transmitted in Latin versions, a Greek fragment, and a late Arabic version. The last-named certainly includes later Hellenistic and Islamic additions, and it is difficult to isolate Philo's own contributions.

For the present, we can make the following hypotheses for the origins and development of Islamic mechanical technology: (1) At the time of the Islamic conquests, there was an established tradition for the manufacture of water-clocks and other mechanical devices in an area that stretched from the eastern Mediterranean to India. Chinese influence cannot be excluded. This tradition was recorded not only in documentary form, but in the experience of craftsmen, and in the existence of earlier constructions. (2) This tradition was continued in Islam, but no results were committed to writing before the Banū Mūsā in the 3rd/9th century. The Banū Mūsā drew upon translations from Greek treatises, and from the experience of craftsmen, adding many refinements of their own. (3) Later writers, such as al-Djazarī, were able to exercise an eclectic judgement, using elements from Greek works and from the established Islamic corpus as they saw fit. Because al-Djazarī in

particular was a fine engineer, he made significant improvements on the work of his predecessors. (4) It was essentially practical engineering, and the Islamic writers derived much of their knowledge from the works of other craftsmen—astro-labists, millwrights, irrigation specialists, metalworkers, jewelers, and the makers of articles for domestic use and ornament.

Islamic mechanical engineering was based upon a sophisticated, if empirical, use of the principles of aerostatics, hydrostatics and mechanics. Their materials included timber, sheet brass and copper, cast bronze, iron (for small components, nails and axles), iron and copper wire, rope and string. From these they fashioned the devices and mechanisms to produce the desired effects: vessels of various shapes, figures of men and animals, tanks, air-vessels, bent-tube and concentric siphons, pulleys, tipping-buckets, axles and bearings, pipes, conical valves, taps with multiple borings, gears, and special mechanisms designed for individual machines. Orifices, graduated for a given flow, were made from pieces of onyx.

Eighty-five of the Banū Mūsā's one hundred devices, and about twenty of al-Djazarī's fifty, are trick vessels of various kinds. They demonstrate a bewildering variety of effects. For example, wine and water were poured into a jar and issued in succession from the same tap; a pitcher would not accept any more liquid once impouring was interrupted; several liquids could be withdrawn separately from the same tap; when tilted, a pitcher could be allowed to discharge or not, according to the wish of the pourer (to prevent discharge he covered a concealed air-hole with his finger). These effects were obtained by using a repertoire of about ten basic motifs, together with components designed for individual machines. These components were assembled inside the main container, often with great ingenuity. In all the cases, the vessel itself was the automaton, and the visible effect was the discharge of liquid. The fountains described by the Banū Mūsā and al-Djazarī, in which the discharge changes shape at regular intervals, are essentially large versions of the trick vessels, but with a much greater aesthetic content.

Undoubtedly, the large water-clocks are the most important constructions of the Islamic engineers, for the engineering skills that went into their manufacture, for their beauty, and for their relevance to the history of mechanical engineering. Two of al-Djazarī's clocks (category I, 3, 4) are operated by a submersible float, the *tarđjahār*, a bowl with a graduated orifice in its underside that submerges in a given period. The *tarđjahār* is an ancient device for measuring time, but these clocks are the only instance we know of in which the *tarđjahār* is incorporated in working machinery. They have the additional feature in that some of the automata are not simply for display, but also form an essential part of the operational cycle. The standard type of monumental clock, however, is exemplified by the first two described by al-Djazarī, and by the clock constructed by Muḥammad al-Sā'ātī. Apart from its use of masonry for its casing, al-Sā'ātī's clock is very similar to al-Djazarī's monumental clock (category I, ch. 1), which may be taken to exemplify this type of timepiece. This clock was reconstructed in the Science Museum, London, for the 1976 World of Islam Festival; it is quite beautiful, and works perfectly. The display screen is about 3.50 metres by 1.60 metres in width. At the bottom of the machine are the figures of five musicians—two trumpeters, two drummers and a cym-

balist—who perform at the sixth, ninth and twelfth hours. Above these figures is a semicircle of glass roundels, at the side of which are the figures of brass falcons. Above the apex of the semicircle are two rows of twelve doors each, in front of which a small representation of the moon moves at a steady speed. The clock operates on "solar" or "temporal" hours, obtained by dividing the hours of daylight by twelve. Every hour one upper door opens to reveal a standing figure, one lower door revolves to show a different colour, each of the falcons drops a bronze ball from its beak on to a cymbal, and one of the glass roundels becomes fully illuminated. The clock is crowned with a Zodiac circle, painted with the appropriate signs, and having glass discs representing the sun and moon set to their correct positions in the Zodiac. The circle rotates at a constant speed throughout the day. All the automata, except the musicians, are operated by the steady sinking of a heavy float in a cylindrical reservoir—a string from the top of the float passes through a pulley system to the actuating mechanisms. The outflow from the reservoir is kept constant by a sophisticated system of feed-back control and flow-regulation. The musicians are made to perform by the sudden release of the outlet water, which is collected in a special tank.

Taken as a whole, one may distinguish the work of the Islamic engineers from that of their predecessors by their greater pre-occupation with automatic control. For example, their confident use of conical valves in flow systems, the use of a crank in a machine, segmental gears, etc. They also used manufacturing techniques that were unknown in earlier times, notably the use of closed mould-boxes with green sand for casting metals. Many of the components and techniques of this identifiably Islamic engineering were later incorporated into European machine technology, but we have as yet little certain knowledge of how and when the transmission took place. As far as we know, none of the Arabic machine treatises was translated into a European language before modern times, but the dissemination of engineering ideas and practices has always been fairly rapid and, until recently, without documentary assistance. Traveller's reports, contacts between craftsmen, and inspection by craftsmen of machines built by their predecessors, were the usual means for the transmission of mechanical knowledge. Al-Djazarī, for instance, mentions several times that he had inspected machines made by earlier craftsmen, or that their constructions had been described to him (Hill 1-83, 170, 199). It seems likely that the passage of information occurred at different times and places, although the designs may not have been put to immediate use, but have lain dormant until their usefulness became apparent to later generations of engineers. It seems probable, however, that the most important transmission took place in the Iberian peninsula towards the close of the 6th/12th century, with the adoption by Christian Spain of Islamic ideas, particularly the monumental water-clock, which itself incorporated most of the techniques and components used by Islamic engineers. The large clocks of al-Sā'ātī and al-Djazarī do not incorporate gears in their main operating mechanisms, but the "Archimedes" clock and the clocks in the "Ibn Mu'adh" treatise do so. These clocks are the direct ancestors of the mechanical clock; if one replaces the steadily descending float with an escapement-controlled weight; then the mechanical clock, with its driving mechanisms, and automata, does not differ essentially from its predecessor. The mechanical clock exercised a potent influence upon the development of machine

technology, and the waterclock is therefore directly relevant to this development. Islamic components and techniques were also incorporated into European engineering from the 7th/13th century onwards and were an important element in the establishment of modern machine design, particularly in the fields of delicate mechanisms and control systems.

There were less tangible influences of the Islamic automata tradition. Culturally, they are related to the "live" puppets of western literature and folklore, such as Pinocchio and the doll Olympia in one of the *Tales of Hoffman*. The cultivation of aesthetic delight, exemplified by the fountains of the Banū Mūsā and al-Djazarī, was continued in Europe by men such as Tomaso da Siena, who created the water gardens at the Villa d'Este and Bagnaia. More importantly, the representation of cosmological and biological phenomena was one of the factors that led men to adopt a rationalistic, mechanistic view of the universe, an attitude that has been immensely fruitful in the development of modern science.

*Bibliography:* (in addition to works mentioned in the text): There are as yet no Arabic editions of any of the *hiyal* treatises and one must therefore have recourse to translations. (An edition of al-Djazarī's work is however being prepared by A.Y. Hasan and will be published by Aleppo University.) (In the works cited the location of the Arabic ms. is given.) Descriptions of thirteen of the Banū Mūsā devices, with illustrations and notes are given by E. Wiedemann and F. Hauser in *Über Trinkgefäße und Tafelaufsätze, in Isl.*, viii (1918), 268-91 (W.H. 1); the remainder are dealt with by Hauser in *Über das Kitāb al-Hiyāl—das Werk über die sinnreichen Anordnungen der Benū Mūsā, in Abhandl. zur Gesch. der Naturwissenschaften und der Medizin*, Erlangen 1922; (A fully annotated English translation of the entire work is currently being prepared by the writer.) For al-Djazarī, see D.R. Hill, *The Book of knowledge of ingenious devices*, Dordrecht 1975, a fully annotated English version (Hill 1). Riḍwān's treatise is available in an abbreviated translation with notes and illustrations, by Wiedemann and Hauser, *Über die Uhren in Bereich der Islamischen Kultur, in Nova Acta der Kaiserl. Leop.-Carol. Deutschen Akad. der Naturforscher*, c (Halle 1915), 169-272 (W.H. 2). Two translations of the pseudo-Archimedes are available, both with notes and illustrations: Wiedemann and Hauser, *Uhr des Archimedes und zwei andere Vorrichtungen, in Nova Acta*, ciii (1918), No. 2, 164-202 (W.H. 3); D.R. Hill, *On the construction of water-clocks*, London 1976 (Hill 2). For the Arabic version of Hero's *Mechanics* and Philo's *Pneumatics*, there are edited Arabic texts with French translations, both by Carra de Vaux: *Les mécaniques ou l'élevateur de Héron d'Alexandrie sur la version arabe de Qostā ibn Lūqā*, in *JA*, 9<sup>e</sup> Série (1893), i, 386-472; ii, 152-92, 193-269, 420-514; and *Le livre des appareils pneumatiques et des machines hydrauliques par Philon de Byzance, in Académie des Inscriptions et Belles Lettres*, xxxviii (1903), Pt. 1. A recent work on Philo is F.D. Prager, *Philo of Byzantium, in Pneumatica*, Wiesbaden 1974; there is useful discussion of the Latin and Greek versions, but the Arabic section is inadequate, and inferior in every way to Carra de Vaux's edition. For Hero's pneumatics, there is an English translation, B. Woodcroft, *The Pneumatics of Hero of Alexandria*, London 1851, re-issued with an introduction by M.B. Hall, London 1971. The studies of A.G.

Drachmann are of the greatest value for the classical tradition, notably *The mechanical technology of Greek and Roman antiquity*, Copenhagen-Madison-London 1936; and *Ktesibios, Philon and Heron; a study in ancient pneumatics*, in *Acta Historica Scientiarum Naturalium et Medicinalium*, Bibliotheca Universitatis Hauniensis, Copenhagen, iv (1946), 1-197. For automata in general, see A. Chapuis and E. Droz, *Automata*, tr. A. Reid, Neuchatel-London 1958; D. de Solla Price, *Automata and the origins of mechanism and mechanistic philosophy*, in *Technology and Culture*, v/1 (1964), 9-23. On the influence of the Greek tradition, there is a valuable survey by Price in *Gears from the Greeks*, Science History Publications, New York 1975, 51-62. The Indian tradition of mechanical devices and its connections with Greek and Islamic ideas is described by V. Raghaven in *Yantras or mechanical contrivances in Ancient India*, in *The Indian Institute of Culture*, Basavangudi, Bangalore, Transaction No. 10 (1952) 1-31. The index to J. Needham's *Science and civilisation in China*, iv/1, Cambridge 1965, should be consulted for transmission from and into China, particularly the entries under "Automata", "Clocks", "Clock-work" and "Water-power". (D.R. HILL)

**HOESEIN DJAJADININGRAT**, PANGERAN ARIA, Muslim scholar and Indonesian statesman, historian and linguist (1886-1960).

Born at Kramat Watu, the chief town of a sub-district in the residence Bantam (Bantén) in West Java, where his father was a government official, he sprang from an old prominent family which was related to the former Sultans of Bantam [see *INDONESIA*, iv]. In his early youth, Hoesein's historical interest must have been evoked by reminiscences of the period of the Bantam Sultans, kept alive through stories and legends and through old buildings such as the monumental mosque in the former town of Bantam, the remains of the Sultan's residence (Kraton) and pleasure gardens. More than any other region of Java, Bantam is also the area of centuries-old Muslim piety; there are many *pěsantrěns* (religious schools), where the Muslim sciences are studied industriously from Arabic text-books, and in every village there are people who have performed the pilgrimage to Mecca at least once. At an early stage Hoesein was destined for a European education and academic career by his progressive father, who had been promoted to be Regent of Serang. After previous training in Batavia and at the gymnasium in Leiden, Hoesein was matriculated into Leiden University in 1905 as the first Indonesian student of the section "Languages and Literatures of the East-Indian Archipelago". He read Sanskrit with J.S. Speyer, and Arabic, first with M.J. de Goeje and, from 1906 onwards, with the latter's successor C. Snouck Hurgronje. When a prize was offered for the best essay on data preserved in Malay works concerning the history of the sultanate of Atjeh, he was distinguished with a golden medal of honour. In 1913 he received his Ph.D. degree for the thesis *Critische beschrijving van de Sadjarah Bantem* ("Critical examination of the Sadjarah Bantén"), a Javanese chronicle dealing with the history of Bantén, but containing also traditions concerning the earlier history of Java and the period of its conversion to Islam. Back in Indonesia, Hoesein was appointed to the academic function of "official for the study of Indian (i.e. Indonesian) languages" and commissioned to devote himself to the Achinese language. At the beginning of 1914 he went to Atjeh and, after his return to

Batavia by mid-1915, continued his studies with the aid of the material collected, the extensive Achinese literature preserved in manuscript, and with the assistance of Achinese informants. His *Atjèsch-Nederlandsch Woordenboek* ("Achinese-Dutch Dictionary") was published in two volumes in 1934.

Being the only Indonesian Ph.D., he several times had to sit on various official committees, and in 1916 he was appointed as assistant to the then governmental commissioner for Native Affairs, G.A.J. Hazeu, and as such he was mainly in charge of Islamic affairs. From 1920 till 1924 he was Assistant-Adviser for Native Affairs to the Government, and then received an appointment as a professor at the University of Law, newly-erected in Batavia, where he taught Muslim Law and Indonesian languages. From this period date a number of articles on Indonesian languages and literature, Islamic and Indonesian history; as monographs were published: *De Mohammedaansche wet en het geestesleven der Indonesische Mohanmedanen* ("Muslim law and spiritual life of the Indonesian Muslims") (1925), and: *De magische achtergrond van de Maleische pantoen* ("The magical background of the Malay pantun") (1933).

Hoesein turned his attention to statesmanship, when, in 1935, he became a member of the Council of Dutch East India, the highest government committee. As such, he had a great part in the reform of religious Muslim judicial administration in Java, which led to such institutions as the panghulu-courts (religious courts) and in 1938, to the Court of Islamic Affairs (the higher religious court) at Batavia. While Hoesein was holding for one year the office of Director of the Department of Education and Worship, the first Indonesian Faculty of Letters was opened (4 December 1940). During the war (1942-5) and the first disturbed years afterwards, he mostly remained inactive, reading and studying (his membership of the Council of Dutch East India ended in 1946). When in 1948 the provisional Federal Government was formed, he became Secretary of State for Education, Arts and Sciences. As such, he was present at the Round Table-Conference at the Hague in 1949. When the Republic of Indonesia became independent on 27 December 1949, Hoesein lost his office, but his scholarly qualities were recognised in 1951, when he was invited to take the Chair of Arabic and Islamology at the University of Indonesia in Jakarta (formerly Batavia). Now over seventy, he was free to teach the subject of his preference; he chose the history of Indonesia's conversion to Islam. He published some more articles and wrote the chapter on "Islam in Indonesia" in Kenneth W. Morgan, *Islam—the Straight Path: Islam interpreted by Muslims* (New York 1958), in which are treated the origin of Islam in Indonesia, religious education, the actual situation of Islam in Indonesia, arranged according to the concepts *shari'ah*, dogma, Sūfism and reform, and finally a characterisation of Indonesian Islam. He died in 1960.

A Javanese aristocrat by origin and through his marriage to a daughter of the Javanese royal house of Mangkunagara, and the first Indonesian to devote himself to the study of Islam after a Western academic education, Hoesein Djajadiningrat remained a devout Muslim throughout his life and as such enjoyed the confidence of his co-religionists. Through his uprightness and justice he was held in reverence by Indonesians, Arabs and Dutch alike.

*Bibliography:* given in the article. A list of

Hoesein's writings, compiled by Atja, has been published in *Bahasa dan Budaya*, viii/5-6 (1960).

**HUBAYSH** B. AL-HASAN AL-DIMASHKĪ, surnamed al-A'sam "the one with the withered limbs", translator of Greek medicinal writings into Arabic. He was a Christian and a nephew of the master-translator Ḥunayn b. Ishāq [q.v.], who esteemed him highly as a collaborator and considered him very talented but not particularly assiduous. The quality of his translations was so high that later they were held often for Ḥunayn's work; because of the similarity of the consonant ductus, uncritical users are even said to have been of the opinion that the name Ḥubaysh—the real translator—should be changed into Ḥunayn. His dates are not known; he may have lived at the 'Abbāsīd court towards the end of the 3rd/9th century. He belonged to those prominent translators who had been awarded by the Banu 'l-Munadjjim a fixed monthly salary of ca. 500 *dīnārs* (*Fihrist*, ed. Flügel, 243, 18-20).

Hubaysh had only a very scant knowledge of Greek, or none at all; with the exception of the Hippocratic oath and the herb-book of Dioscurides, he translated Galen's works exclusively, 35 of them from Arabic into Syriac, and three from Syriac into Arabic (cf. *Ḥunayn ibn Ishāq über die syrischen und arabischen Galen-Übersetzungen*, ed. and tr. G. Bergsträsser, *AKM*, xvii/2, Leipzig 1925, index, 45). His language is that "of a scholar who aims only at clearness, who is little trained linguistically and does not care much for linguistic beauty, but on the other hand sets himself to some kind of correctness" (G. Bergsträsser, *Ḥunayn ibn Ishāq und seine Schule*, Leiden 1913, 41). On the basis of the then known translations, Bergsträsser (*ibid.*, 28-46) classified the linguistic peculiarities of Ḥubaysh; additions are given by M. Meyerhof and J. Schacht, *Galen über die medizinischen Namen*, in *Abh. Preuss. Akad. Wiss., Phil.-hist. Kl.*, Berlin 1931, 4-7. In view of the tight relation between teacher and pupil, the many similarities in language of Ḥunayn and Ḥubaysh are not surprising.

Besides the translated works, Ḥubaysh is also the author of original writings. They are completely based on his knowledge of Greek medicine, but, as far as pharmacology is concerned, they often reach further back and prove that already in those days other sources were used or that personal observations were introduced. Mention should be made firstly of his additions (*ziyādāt*) to Ḥunayn's *kūlāb al-Mas'ūl al-tibbiyya*, which became extraordinarily widely diffused, cf. A. Dietrich, *Medicinalia arabica*, Göttingen 1966, 39-44; this enlarged edition became a standard work which was to occupy quite a number of commentators and epitomists. Other works of Ḥubaysh preserved in manuscript are: (1) *kūlāb Islāh al-adwiya al-mushila*; (2) *k. al-Aghdhiya*; (3) *k. fi 'l-Istiskā'* and (4) *Makāla fi 'l-nabd*. Only from quotations are known: (5) *k. al-Adwiya al-mufiada* (often cited by Ibn al-Baytār); (6) *Ta'rif amrād al-'ayn*, quoted in *Khalifa's al-Kāfi fi 'l-kuhl* (see J. Hirschberg, etc. in *Anhang der Abh. Preuss. Akad.*

Wiss., Berlin 1905, 13, 20 f., and idem, *Die arabischen Augenärzte*, ii, Leipzig 1905, 158); and (7) a dispensatorium (*akrābādīn*), possibly composed not by Ḥubaysh but by Ḥunayn.

*Bibliography* (besides the works quoted in the article): Ibn al-Nadīm, *Fihrist*, ed. Flügel, 297; Ibn al-Kifī, *Hukamā* 177; Ibn Abī Uṣayb'a, *Uyūn*, i, 202 and *passim*; Barhebraeus, *Duwal*, ed. (A. DIETRICH)

**HUDHAYFA B. 'ABD B. FUḲAYM B. 'ADĪ** [see **AL-KALAMMAS**]

**HUDŪD AL-'ĀLAM**, "The limits of the world", the title of a concise but very important anonymous Persian geography of the world, Islamic and non-Islamic, composed towards the end of the 4th/10th century in Gūzgān [*q.v.*] in what is now northern Afghānistān. The work exists in a unique manuscript of the 7th/13th century (the "Toumansky manuscript") which came to light in Bukhārā in 1892. The Persian text was first edited and published by W. Barthold in Leningrad in 1930 as *Hudūd al-'ālam, rukopis' Tumanskago*, with an important preface (this last reprinted in his *Sočineniya*, viii, 504-46; an English tr. of this was included by Minorsky in his translation of the whole work, see below), and subsequently by Djalāl al-Dīn Tīhrānī, Tehran 1314/1935, and Manūčīhr Sūtūda, Tehran 1340/1962. Soon after Barthold's edition appeared, V. Minorsky produced an English translation, together with a lengthy commentary of immense erudition, *Hudūd al-'Ālam, "The regions of the world", a Persian geography 372 A.H.—982 A.D.*, GMS, N.S. xi, London 1937. A second edition (London 1970) includes Minorsky's own "Addenda to the *Hudūd al-'Ālam*", originally published in *BSOAS*, xvii (1955), 250-76, and also a second series of addenda.

The authorship of the work still remains a puzzle, though it was dedicated to the *amīr* of Gūzgān, of the Farīghūnīd line, Abu 'l-Ḥārīṭh Muḥammad b. Aḥmad b. Farīghūn [see **FARĪGHUNIDS**]. Minorsky suggested the possibility, though the evidence is indirect and requires further investigation, that the author might have been the *Shā'yā* b. Farīghūn [see **IBN FARĪGHŪN** below] who wrote an early encyclopaedia of the sciences, the *Djawāmi' al-'ulūm*, for an *amīr* of Čaghāniyān [*q.v.*] on the upper Oxus in the middle years of the 4th/10th century; cf. his *Ibn Farīghūn and the Hudūd al-'Ālam, in A locust's leg, studies in honour of S.H. Taqizadeh*, London 1962, 189-96, reprinted in his *Iranica, twenty articles*, Tehran 327-32.

The form of the *Hudūd al-'ālam* is concise and pithy. Unlike such contemporary geographers as Ibn Ḥawkal and Muḥaddasī, the author does not personally seem to have been a traveller, but he relied instead on earlier sources and reports, such as those

of Ibn Kḥurradādhbih [*q.v.*] and, apparently, 'Abd Allāh Muḥammad al-Djayhānī [see **AL-DJAYHĀNĪ**, above], except for the immediate region of his home in northern Afghānistān. Its archaic language and style are interesting pieces of evidence for early Persian prose, cf. G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 53-4. Original features of the author's approach are his concern for exact enumeration of physical features (the seven seas, rivers, lakes, islands, etc.) of the inhabited world; his division of this last into three main parts, Asia, Europe and "Libya" (= Africa); his enumeration of 45 distinct countries (*nāḥiyat*) lying to the north of the equator; and the unusually large proportion of space allotted to the non-Islamic lands, even though the Muslim ones, surveyed roughly from east to west, naturally occupy the greater part of the work. The information on the local topography of Afghānistān is probably first-hand, with special emphasis on Gūzgān, Ghārčistan, Ghūr, etc.; the material on the Eurasian and Turkish steppes and their peoples is likewise very significant. Finally, the author furnishes useful details about local products and trade movements.

*Bibliography*: In addition to references given in the article, see I. Yū. Kračkovskiy, *Arabskaya geografičeskaya literatura*, in *Sočineniya*, iv, Moscow-Leningrad 1957, 224-6, partial Arabic tr. Cairo 1963, 223-4; A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du XI<sup>e</sup> siècle*, Paris 1967, xxxiii, 398-9; see also **DJUGHĀFIYĀ**, iv, c, i.

(C.E. BOSWORTH)

**HUNAYN**, site of a mediaeval seaport in western Algeria, not far west of Beni-Saf (B. Šāf) and, as the crow flies, about 45 km. N. W. of Tlemcen. Within a walled area (41,000 sq. m.) are ruins of a *kašba* and traces of a mosque's, and possibly also a *ḥammām*'s, foundations. On dry land below the *kašba* lie the remains of a rectangular interior dock (4,250 sq. m.), once protected by rampart and towers and entered, seemingly via a channel, by a large arch of carved stone of the kind characteristic of certain parts of Muslim Spain. Most of what remains is in the Marīnid architectural tradition and thought attributable to the sultan Abu 'l-Ḥasan.

Words in Ibn Abī Zar's *Rawd al-kirātīs* must not be taken as implying the existence of Hunayn as the port of Tlemcen in 237/851-2. Hunayn finds no place in Ibn Ḥawkal's 4th/10th century description of the Oran-Melilla coast, but it was known to al-Bakrī in the 5th/11th century as a fortress (*ḥiṣn*) with a good and busy anchorage. Inhabited by Kūmiyya Berbers, it had more orchards and varieties of fruit than any neighbouring coastal *ḥiṣn*. A century later al-Idrīsī's description is "a charming and prosperous small town with solid wall, market and trace." *Extra muros*, large tracts of land were farmed. Under the Almohads its importance grew, for not only was 'Abd al-Mu'min [*q.v.*] from the Kūmiyya, but he also championed the *djihad* in Spain. And so he made Hunayn—only two days' sailing away from Alberia—a naval shipyard. Thereafter it gradually emerged as the new port of Tlemcen, wholly ousting Arshgūl, the old. In the 7th/13th century Tlemcen became the capital of the 'Abd al-Wādids [*q.v.*] and a great commercial metropolis. As the northern terminal of the major trans-Saharan trade axis running from sub-Saharan Africa, it was ideally placed for exchanges with Mediterranean Europe. In its brisk trade with Christian and Muslim Spain and elsewhere, Hunayn played a major role and prospered, even during the long 'Abd al-Wādīd-

Marīnid struggle. In 698/1298 it wisely submitted to the Marīnid Abū Ya'kūb and emerged unscathed when his eight-year siege of Tlemcen ended with his death in 1307. In 736/1335-6 it again fell into Marīnid hands, this time for ten years under Abū 'l-Ḥasan, and then to a Kūmiyya rebel from whom the 'Abd al-Wādid Abū Ṭhābit recovered it in 1348. It was at Hunayn that Ibn Khaldūn was arrested by Marīnids in 1370 and to Hunayn that he was deported from Spain in 1374.

After the Spanish seizure of Oran in 1509, Venetian trade was diverted thence to Hunayn. Around the same time the port became a haven for corsairs, a fact which eventually led to its seizure in 1531 by the Spaniards, who chose, however, to abandon it in 1534, presumably after rendering the port unserviceable. Hunayn never regained its old prosperity.

(J.D. LATHAM)

AL-ḤUSAYMA is the name which, since the independence of Morocco in 1956, has been given to a bay and small archipelago on the coast of the Rif between the Cape of Quilates on the East and the More headland to the West. It is known also by the name of Alhucemas as well as by that of San Jurjo, the town founded by the Spaniards in 1926; today, it is the capital of the province.

The origin of the old place name as well as the new one poses unsolved problems. In classical antiquity the bay seems to have had no particular name, for the *Itinerary* of Antoninus merely indicates the two groups of three islets: *ad sex insulas*. The Marquis de Segonzac in 1901 passed through the territory of the Banī War'yāghal (Uryāghal) and speaks of the bay of Nukūr [see NAKŪR, NĀKŪR], a town and famous principality which have been destroyed several times in the past but of which traces seem to have been found on the banks of the *wādī* of the same name five miles from the sea. This seems acceptable, because the Arab geographers and the Moroccan government have always given the name Ḥadjrat al-Nukūr to the small archipelago, and another French traveller in 1904, Ch. René Leclerc, confirms the existence of the name then. Although in Spanish the word *alhucema* "lavender", is derived from Arabic *al-khuzāmā*, with the same meaning, the place name is not derived from the plant name. *Al-khuzāmā* is never encountered in ancient geographical or historical texts in the Western Arabic sources, nor in old maps of the strait of Gibraltar. However, recently al-Bū'ayyāshī, with some other scholars supporting him, admits that the name Alhucemas has an unquestionably Arabic origin and that the new name al-Ḥusayma which has been adopted by the Moroccans is no more than an arabised form of the Hispano-Arabic word. Others, like the author of the voluminous encyclopaedia *Espasa-Calpe*, say that the name Alhucema is a corruption of al-Mazimma, but this suggestion needs further discussion, see below.

The largest islet of the archipelago, which is

170 m. long and 75 m. broad, is about 1300 m. from the coast; it was ceded with the others to Spain in about 1554 by the Sa'did Mawlāy 'Abd Allāh [q.v.]. This was to prevent the Turks, who had temporarily taken the Peñon de Velez from Spain, from seizing them in a similar manner. But Spain did not consider it necessary to follow up this action by even a symbolic occupation of these strategic islands. The affair was conducted so well that France was not aware of the cession, and in 1665, a French commercial company, which was intent on exploiting the possibilities of the coast of the Rif, decided to set up an establishment in the bay of Nukūr under the name of the *Compagnie d'Albouzème*. In contemporary sources sometimes the term "Albouzème" is used, but otherwise it is "Les Albouzèms", or variants. The first term denotes the earlier town (called in Arabic al-Mazimma) which the 'Alawī sultan Mawlāy Rashīd [q.v.] was to destroy. The second term denotes the town together with its port and its islands, but the words are often interchanged. There are frequent references to the name al-Mazimma in ancient and modern texts, especially in the *Description of Africa* of Leo Africanus, who devotes an interesting chapter to it.

But where is al-Mazimma? Al-Bādisī, writing at the end of the 19th century in his *Maḥṣad*, speaks of ramparts with gates overshadowed by a rock. At the beginning of the 20th century, René Leclerc noted the existence of a village on the side of a hill amongst several ruins; this was probably Nukūr, and al-Mazimma seems to have been the port associated with it. Wherever the town and the port may have been exactly, it was Cardinal Mazarin who first planned to set up a commercial establishment "on the islands of Albouzème". He went as far as appointing a consul for it, but when the cardinal died, the project was abandoned. However, the plan was not forgotten and on 4 November 1664 a decree from the French Conseil d'État authorised the creation of a company to be conducted by two brothers from Marseilles, Michel and Roland Fréjus. Roland did not reach Morocco until 1666 and, although his journey across the Rif delighted him, one made in order to see Mawlāy Rashīd at Tāzā, it did not produce the expected results and he returned to France. The company was declared bankrupt, and was replaced by the *Compagnie du Levant* (on all this episode, see J. Caillé, *Représentative diplomatique*, 31).

It was not until 1673 that Spain occupied these islands (*peñons*); on one of them, the largest, she set up a *presidio* (penitentiary) and a cemetery on another one nearby. Concerning life on this waterless archipelago, see J. Cazenave, *Présides espagnols*, 457-507. The Peñon d'Alhucemas, like Melilla and the Peñon de Velez, was besieged by the troops of Muḥammad the Great in December 1774. The Spanish resisted the bombardments bravely, and on 19 March 1775, the siege was lifted. It was also in the bay of Alhucemas that Spanish troops disembarked on 8 September 1925 to end the violent revolt of 'Abd al-Karīm [q.v.] whose headquarters were at Adjdir, 8 kms. away.

The archipelago, like the rest of the Spanish zone of the protectorate, was returned to the Moroccan authorities after Morocco regained her independence. The new provincial capital, al-Ḥusayma (pop. 5,000) is a young modern city, aiming at becoming a prosperous tourist centre and seaside resort.

**HUSAYN B. 'ALĪ B. ḤANZALA** [see 'ALĪ B. ḤANZALA, above].

**HUSAYN DJAJADININGRAD** [see HOSEIN DJAJADININGRAT, above].

**AL-ḤUSAYNĪ**, ṢADR AL-DĪN ABU 'L-ḤASAN 'ALĪ B. NĀṢIR B. 'ALĪ, author of the late Salḍjūk period and early decades of the 7th/13th century, whose work is known to us through its incorporation within an anonymous history of the Salḍjūks and succeeding Atabegs of Āḍharbāyḍjān, the *Akhbār al-Dawla al-salḍjūkiyya* (ed. Muhammad Iqbal, Lahore

1933; Tkish. tr. Necati Lugal, Ankara 1943; cf. Brockelmann, I<sup>2</sup>, 392, Suppl. I, 554-5). Al-Ḥusaynī apparently composed the *Ẓubdat al-tawārīkh, akhbār al-umarā' wa 'l-mulūk al-salḍjūkiyya*, which forms the first part of the longer, anonymous work. The *Ẓubda* was in turn based on the history of the Salḍjūks by 'Imād al-Dīn al-Kātib al-Iṣfahānī [q.v.], continued up to 590/1193-4, the date of the death of the last Great Salḍjūk sultan, Toghrīl III. The author of the *Akhbār al-dawla al-salḍjūkiyya* then continued his own work with the history of the Atabegs of Āḍharbāyḍjān, either up to 620/1223-4 or 622/1225-6, the latter being the date of the deaths of the caliph al-Nāṣir [q.v.] and of Özbeḡ b. Pahlawān [see ILDEŪZIDS].

There are considerable problems regarding both al-Ḥusaynī and the anonymous author and their respective works, which have been discussed by K. Süßheim, *Prolegomena zu einer Ausgabe der im Britischen Museum zu London verwahrten Chronik des Seldschukischen Reiches*, Leipzig 1911, by M.T. Houtsma, *Some remarks on the history of the Saljūks*, in *AO*, iii (1925), 145 ff., by Lugal in the Introd. to his translation of the *Akhbār*, by Cl. Cahen, *Le Malik-nāmeḡ et l'histoire des origines seljukides*, in *Oriens*, ii (1949), 32-7, and by Angelika Hartmann, *an-Nāṣir li-Dīn Allāh (1180-1225)*, *Politik, Religion, Kultur in der späten 'Abbāsidenzeit*, Berlin 1975, 17-18.

It seems that al-Ḥusaynī's name became attached to the *Akhbār* through a copyist's mistake, the real author being, in Hartmann's view, an official in the administration at Baghdād. As for al-Ḥusaynī, he remains an enigmatic figure; he was apparently an 'Alid, and may conceivably be identical with the "al-Ṣadr al-Adjall, Ṣadr al-Milla wa 'l-Dīn" of Niṣhāpūr, historian and poet, whom 'Awfī [q.v.] mentions and knew personally in the early 7th/13th century, see his *Lubāb al-albāb*, ed. Sa'īd Nafīsī, Tehran 1335/1956, 125-7.

## I

**IATROMANCY** [see FIRĀSA, ISTIKHĀRA].

**'IBĀDAT KHĀNA**, literally "House of Worship", the name of the chamber or building where religious discussions among theologians were held under the patronage of the Mughal Emperor Akbar. It was constructed by Akbar at Fathpūr Sikrī [q.v.] the seat of his court, in 983/1575. He was then interested in finding a common interpretation of Muslim law, and invited Muslim jurists and theologians to hold discussions with a view to resolving their disputes; he was himself present at many of these. It was discovered, during the course of discussions, that Muslim orthodoxy was divided not only on the fine points of law but also on basic principles. Akbar's subsequent disenchantment with Muslim orthodoxy were ascribed by Badā'ūnī to the effects of the open and bitter theological disputes of the 'Ibādat Khāna. Akbar then enlarged the scope of the debate by inviting non-Muslim divines to discussions in the 'Ibādat Khāna, and Hindus,

Christians and Parsees could now explain articles of their faith and engage in controversy with Muslim divines. The *Dabistān-i madhāhib* contains an interesting record of these discussions among representatives of various religions.

With the *maḥḍar* of 987/1579, when Muslim theologians set forth high claims for Akbar as an interpreter and enforcer of Muslim law, the 'Ibādat Khāna sessions seem to have ended. The *maḥḍar* did not win much support among Muslims; and Akbar himself began to hold larger religious views. Moreover, he left Fathpūr Sikrī soon afterwards, and his sessions with such religious divines as appeared at his court were held elsewhere.

The actual building of the 'Ibādat Khāna at Fathpūr Sikrī has not been properly identified.

(M. ATHAR ALI)

**ΙΒ'ΑΔΙΥΥΑ** or **ΑΒ'ΑΔΙΥΥΑ** (pl. *abā'id*) was the term used in 19th century Egypt for land surveyed in 1813 under Muḥammad 'Alī, but not included in the cadaster and not taxed because it was uncultivated. These lands extended over an area of 0.75 to 1.0 million *faddāns* (a *faddān* amounted, at the end of Muḥammad 'Alī's rule, to 4,416.5 square metres). To increase the country's wealth he made free grants of *ib'ādīyya* to high officials and notables, exempting them from taxes on condition that they improved the land and prepared it for cultivation. The first relevant decree was issued on 1 December 1829, after which grants rapidly increased. At first recipients only enjoyed usufructuary rights, but in order to encourage investment, Muḥammad 'Alī was compelled in 1836 to decree these lands as being inheritable by eldest sons and, on 16 February 1842, to grant almost complete rights of ownership, including the right of sale and transfer. Sa'īd, who needed money to implement the modernisation policy begun by Muḥammad 'Alī, imposed on 30 September 1854 a *ṭiṭhe* (*'ushūr*) on *ib'ādīyya* and similar categories of land granted as private property, all of which were classified from then onwards as *'ushūrīyya* lands. He reinforced, however, property rights to these lands. Clause 25 of his 1858 Land Law explicitly stated that they were "the full property of whomsoever received them . . . and that he might deal with them in every respect as a property owner". *Ib'ādīyya* owners were even entitled, from then onwards, to endow these lands as *wakf* or to bequeath them in their wills. A major expansion in grants of *ib'ādīyya* land after Muḥammad 'Alī's rule occurred under Ismā'īl, from 1863 to 1876, mainly in the northern part of the Delta. After that grants of *ib'ādīyya* discontinued.

Cultivators residing on *ib'ādīyya* lands were exempted from the *corvée*, i.e. forced labour for public works, such as strengthening dikes and for fighting locusts. This attracted the fellahs of neighbouring lands, thus enriching even more the notables owning *ib'ādīyyas* and encouraging differentiation in landownership.

In Fayyūm, *ib'ādīyya* lands were granted to Western Desert Bedouin tribes in order to encourage their settlement. In contrast to other *abā'id*, the tribes did not receive legal title to their land, but gained exemption from taxes, forced labour, and conscription, by cultivating it. The experiment did not always meet with success, and many Bedouins farmed the land out to fellahs for half the yield. Decrees issued in 1837, 1846, and 1851 outlawing this practice, and many threats issued to the tribes that they would lose their *ib'ādīyya*, were not implemented. Sa'īd turned Bedouin *abā'id* into *kharādīyya* (not *'ushūrīyya*) land and thus refrained from granting the Bedouin full private ownership. Full ownership was achieved by Bedouin owners of *abā'id*, together with other owners of *kharādīyya* land, at the end of the century.

*Ib'ādīyyas* were also freely granted by Muḥammad 'Alī to foreign subjects, although Muslim law did not allow strangers (*musta'man*) to settle

permanently in a Muslim country and thus debarred them from acquiring landed property without becoming *dhimmīs*. Problems arising from foreigners owning land under the Capitulations [see ΙΜΤΙΥ'ΑΖΑΤ] were solved by *Tanzīmāt* legislation and the establishment of the Mixed Courts in Egypt in 1876.

**ΙΒΕΧ** [see ΑΥΙΛ].

**ΙΒΝ ΑΒΙ Ἰ-ΑΣΗ'ΑΘΗ**, ΑΒŪ DJA'FAR AḤMAD B. MUḤAMMAD B. MUḤAMMAD, Arab physician. According to a statement of the Syro-Arab physician 'Ubayd Allāh b. Djibrīl b. Bakhtīshū', given by Ibn Abī Uṣaybi'a, Ibn Abī Ἰ-Ash'ath originated from Fārs. Having been originally an administrative official, he hurriedly left the country after his income had incurred *muṣāḍara*, and reached Mosul in a wretched condition. There he treated with success a son of the Ḥamdānid Naṣīr al-Dawla, who had been taken ill. Having thus risen to distinction, he stayed in Mosul where he had many pupils and where he died at a very advanced age, shortly after 360/970. He was considered to be an excellent specialist on Galen [see ΓΑΛΙΝŪS]; like him he had presented his knowledge in a logical and systematic way, rather than on the basis of personal observations; the statement, e.g., according to which he tested repeatedly the results of medicines, is a rather informal topos which is often found in the introductions to pharmacopoeias.

Apart from a theological work, finished in 355/966 and only known by its title (*Kiṭāb fi ḷ-ilm al-illāhī*), and apart from the explanation of unnamed Aristotelian works, Ibn Abī Ἰ-Ash'ath wrote books on medicine, zoology and veterinary science, some of which have been preserved in manuscript but none of which has been published so far. There are in the first place revisions of some of Galen's works: (1) Περὶ τῶν καθ' Ἰπποκράτην στοιχείων *K. al-Ustukussāt 'alā ra'y Abukrān*; (2) Περὶ κρᾶσεων *K. al-Mizādī*; (3) Περὶ ἀνωμόλου δυσκρᾶσιος *Maḳāla fi Sū' al-mizādī al-mukhtalif*; (4) Περὶ ἀρίστης κατασκευῆς τοῦ σώματος ἡυῶν *Maḳāla fi Afḍal hay'at al-badan*; (5) Περὶ εὐεξίας *Maḳāla fi Khīsh al-badan*. Among his own works, there should be mentioned above all: (6) *K. Kiṭwā al-adwiyā al-mufrada*, a book on the powers of simple medicaments, written in 353/964 at the request of some pupils and preserved in several good manuscripts. It is mainly based on Galen's Θεραπευτικὴ μέθοδος (*Ḥīlat al-bur*), has an instructive arrangement and would deserve an edition. Further have been preserved: (7) "On food and those who feed themselves" (*K. al-Ghādīh wa ḷ-mughṭadhī*), a dietary work written in Armenia in 348/960; (8) "On sleeping and being awake" (*Maḳāla fi ḷ-Nawm wa ḷ-yakẓa*); and (9) a *K. al-Ḥayawān*, evidently remarkable because of its precise zoological observations. A dozen other writings are only known by title or from isolated quotations; mention should be made of a book on dementia and pleurisy (*K. fi ḷ-Sirsām wa ḷ-birsām*) in three chapters, written in 355/966, and further of commentaries on Galen's Περὶ αἰρέσεων *K. al-Firaq* and Περὶ διαφορᾶς τυρετῶν *K. al-Hummayāt*, and also of an explanation of the famous synopsis of sixteen works of Galen (*al-kutub al-sitta 'ashar*, alias *al-Djawāmī'*).

**IBN ABĪ DJUM'Ā** [see KUTHAYYIR].

**IBN ABĪ DJUMHÜR** AL-AḤSĀ'Ī, MUḤAMMAD B. 'ALĪ B. IBRĀHĪM B. ḤASAN B. IBRĀHĪM B. ḤASAN AL-HADJĀRĪ, Imāmī scholar, was born in al-Aḥsā' ca. 837/1433-4 into a family with a scholarly tradition. He studied first in al-Aḥsā' with his father and later in al-Nadījaf with various scholars, among them al-Ḥasan b. 'Abd al-Karīm al-Faṭāl. In 877/1472-3 he visited Karak Nūh in Syria in order to hear traditions from 'Alī b. Hilāl al-Djazzārī. After a pilgrimage to Mecca, a visit to his home country and to the shrines of the Imāms in Baghdād, he travelled to Mashhad in 878/1473-4 where he stayed in the house of the Sayyid Muḥsin b. Muḥammad al-Riḍawī al-Ḳummī and engaged in debates with a Sunnī scholar from Harāt described in an extant *Risāla*. During the next two decades, he seems to have mostly been teaching in Mashhad, al-Nadījaf and al-Aḥsā'. He is known to have been in Mashhad in 888/1483 and, for a third visit, in 896-7/1490-2. In 893/1488 he was in al-Aḥsā' and, after a visit to Mecca, he taught in al-Nadījaf in 894-5/1493-4 where he completed his *K. al-Mudjīlī*. In 898-9/1493-4 he stayed in the region of Astarābād and dedicated one of his works to the Amīr 'Imād al-Dīn. A commentary on al-'Allāma al-Hillī's creed *al-Bāb al-hādī 'ashar* was completed by him on 25 Dhu 'l-Ka'da 904/4 July 1499 in Medina. The date and place of his death are unknown.

Ibn Abī Djumhūr's numerous extant writings, mostly still unpublished, include treatises and books on ritual, law, legal methodology, tradition, theology, and controversy about the imamate. His fame rests, however, on his *K. al-Mudjīlī* or *Mudjīlī mir'at al-nūr al-mudjīlī* (lith. eds. Tehran 1324 and 1329). Formally a supercommentary on his own *kalām* work *K. Maslak (masālik) al-aḥām fī 'ilm al-kalām*, it offers a theosophic synthesis of Imāmī scholastic theology, philosophy of the school of Ibn Sīnā, illuminationist thought of al-Suhrawardī and Ṣūfism, chiefly of Ibn al-'Arabī and his school. His work anticipated the endeavours of the philosophical school of Iṣfahān of the Safawid age to synthesise the thought of the same school traditions, though it seems to have had little direct influence on them. Later Imāmī opinion about Ibn Abī Djumhūr was generally favourable, though some criticised his *K. al-Mudjīlī* as excessively Ṣūfī in tone.

**IBN ABĪ 'L-ZINĀD**, ABŪ MUḤAMMAD 'ABD AL-RAḤMĀN B. 'ABD ALLĀH B. DHAKWĀN, Medianan traditionist and jurist of the 2nd/8th century, who came from a *mawālī* family. His father Abu 'l-Zinād (d. 130/747-8) had been made head of the *khayāḍī* of 'Irāk, and he himself was appointed to a similar office at Medina. He then went to Baghdād, where he died in 174/790-1 at the age of 74. His

brother Abu 'l-Kāsim and his son Muḥammad also transmitted *hadīths*. Goldziher (*Muh. Studien*, i, 24<sup>2</sup> 32-3, Eng. tr. i, 31, 38) noted that 'Abd al-Rahman was one of those who, if they did not invent it, at least spread, in order to buttress the prohibition of wine, a tradition which said that 'Abd Allāh b. Djūd'an [q.v.] abstained from wine. He was the contemporary and also opponent of Mālik (d. 179/795-6 [q.v.]), and seems to have tried to found a personal legal rite. The *Fihrist*, ed. Cairo 315, attributed to him two works of *fikh*, one on successions (*K. al-Farā'id*) and the other on the divergencies of the *fukahā'* of Medina [q.v. above], the *Ra'y al-fukahā' al-sab'a min ahl al-Madīna wa-mā khtalafū fihī*; this last would doubtless have been of first-rate importance for the study of the origins of Islamic law.

**Bibliography:** Ibn Ḳutayba, *Ma'ārif*, 220, 464-6; idem, *Uyūn al-akhbār*, i, 44; Djahshiyārī, *Wuzarā'*, 20, 54-5; Khaṭīb Baghdādī, *Ta'rikh*, x, 228; Nawawī, 718-19; Ibn Hadjar, *Tahdhīb al-Tahdhīb*, vi, 170-2; Bustānī, *DM*, ii, Ziriklī, *A'lām*, iv, 85. (ED.)

**IBN AL-ADJDĀBĪ**, ABŪ IṢḤĀK IBRĀHĪM B. ISMĀ'ĪL AL-TARĀBULUSĪ, Arab philologist from a family originally stemming from Adjdābiya (Libya); he himself lived at Tripoli, where he died at an uncertain date, probably in the first half of the 7th/13th century. Hardly anything further is known about his life, and the biographers limit themselves to emphasising the breadth of his knowledge and his contribution to the technical literature of scholars of his time. They attribute to him some eight works, whose titles show that he was interested in lexicography, metrics, the *anwā'* [q.v.] and genealogies (he is, in particular, the author of an abridgement of the *Nasab Ḳuraysh* of Muṣ'ab al-Zubayrī [q.v.]). From amongst his writings, Yāqūt (*Udabā'*, i, 130, and *Buldān*, s.v. Adjdābiya) and al-Suyūtī (*Bughya*, 178) preserve the titles of only two, the *Kifāyat al-mutahaffiz wa-nihāyat al-mutalaffiz fī 'l-lughā al-'arābiyya* and the *Kitāb al-Anwā'*, and it may be that these are the only ones to have survived. The first one, a lexicographical compendium, seems to have enjoyed wide success, to judge by the number of surviving manuscripts (cf. Brockelmann, I, 308, S I, 541); it was even put into verse and several editions of it have appeared (in particular, Cairo 1285/1868 and Beirut 1305/1887).

The second work was apparently lost until 'Izzat Ḥasan discovered, in Ankara University Library, a manuscript which he published in 1964 at Damascus (in the collection *Ihyā' al-turāth al-kadīm*, ix). This work, which has the title *K. al-Azmina wa 'l-anwā'*, is often mentioned in the list of *kutub al-anwā'* compiled by the Arab philologists (cf. Ch. Pellat, *Dictions rimés* . . ., in *Arabica*, ii/1 [1955], 37). It is slenderer in size than Ibn Ḳutayba's book (ed. Hamidullah-Pellat, *Haydarābād* 1956), but is more systematic and less involved. It deals with the various calendars (Arabic, Roman, Syriac), describes the main stars or asterisms as well as the planets, defines the seasons, the zodiac signs and the lunar mansions, explains how to calculate the hours for prayer and to determine the direction of Mecca, and lists the various winds. It then goes on to define the *naw'* and follows the order of the months of the Julian calendar, giving the Syro-Arabic and Latin names, in order to point out the varying astronomical phenomena which show the way to them [see ANWĀ'], without forgetting too to note the beginning of the corresponding Coptic month. Its details on the agricultural round are

traditional in nature, as are its maxims and sayings, though these are sometimes different, it is true, from those which the present author of this article has gathered together. One peculiarity worth mentioning is the indicating of the star or asterism which passes to the meridian at sunset, midnight and the time of the morning prayer. Altogether, this little treatise on popular astronomy and meteorology, although chronologically quite late and marred by numerous errors, has a very honourable place in the series of *kutub al-umwā'*.

*Bibliography:* In addition to the sources mentioned in the article, see 'Izzat Ḥasan's introd. to his edition; Ḥādījī Khalīfa, v, 54; Zirikī, *A'lām*, i, 25; Bustānī, *DM*, ii, 328.

(CH. PELLAT)

**IBN AL-AKFĀNĪ** (a *nisba* referring to the seller of shrouds, *akfān*), cf. al-Sam'ānī, *K. al-Ansāb*, f. 47b). Several persons were known by this name, amongst which three deserve some mention.

1. AL-ḲĀDĪ ABŪ MUḤAMMAD 'ABD ALLĀH B. MUḤAMMAD B. 'Abd Allāh b. Ibrāhīm b. 'Abd Allāh b. al-Ḥusayn b. 'Alī b. Dja'far b. 'Amir b. AL-AKFĀNĪ AL-ASADĪ, jurist. Born in 316/928, and dying in 405/1014 in Baghdād, he was *kādī* in al-Madīna, then in Bāb al-Tāq, then in Sūḳ al-Thulāthā' (both in Baghdād), and from 396/1005-6 *kādī* for the whole of Baghdād. He was weak in relating traditions, but a liberal patron to traditionists (cf. al-Khaṭīb al-Baghdādī, *Ta'riḫh Baghdād*, x, 141-2, no. 5284).

2. HIBAT ALLĀH B. AḤMAD b. Muḥammad al-Anṣārī al-Dimashqī, ABŪ MUḤAMMAD AL-AKFĀNĪ, historian, who died in 524/1129 as an octogenarian in Damascus, and was the author of biographical works: *Djāmi' al-uṣafiyāt* (now lost), and *Tatimmat Ta'riḫh Dāravyā wa-tasmiyat man ḥaddathā min ahlihā* (cf. Ṣ al-Munadǧǧid, *Mu'djam al-mu'arriḫīn al-Dimashqīyyīn* . . ., Beirut 1978, 31-2, and the sources quoted there, especially Ibn al-Imād, *Shadharāt*, iv, 73, and also Maḳḳārī, *Nafh al-ṭib*, ed. Dozy *et alii*, i, 562).

3. MUḤAMMAD B. IBRĀHĪM b. Sā'īd, Shams al-Dīn Abū 'Abd Allāh al-Anṣārī, known as IBN AL-AKFĀNĪ, physician and encyclopaedist. Born in Sindjār, he died in 749/1348 in Cairo of the plague. A scholar of many talents, he was employed in al-Bimāristān al-Manṣūrī (see BĪMĀRISTĀN) in Cairo in an influential position, and wrote many books and treatises. A contemporary account on him is given by al-Ṣafadī in *al-Wāfi bi 'uṣafiyāt*, ii, 25-7, and in his *ʿĀyān al-ʿaṣr* (ms. Atif Efendi 1809, s.v., a very exaggerated biography full of laudatory remarks); and letters by Ibn al-Akfānī are quoted in al-Ṣafadī's *Alhān al-sawādǧī'* (ms. Berlin, cat. Ahlwardt, 8631, iii, 33a ff.). Other biographical accounts (Ibn Hadjar, *Durar*, iii, 279-80; al-Maḳrīzī, *al-Muḳaffā*, ms. Leiden Or. 1366a, ff. 38b-40a; al-Shawkānī, *al-Badr al-tālī*, ii, 79-80; al-Zirikī, *al-A'lām*, vi, 189) are all, directly or indirectly, derived from al-Ṣafadī's account.

Some 22 books or treatises by Ibn al-Akfānī are known to have existed, more than half of these being concerned with medicine and related sciences. Others treat of logic, *tafsīr*, *fiṣāsa* [see AFLĪMŪN], astronomy, the *arba'in*, mathematics and gemmology. None of these is remarkable for great originality. Ibn al-Akfānī's fame rests mainly on his encyclopaedia *Irshād al-kāsid ilā asnā al-maḳāsid*. In this he deals with 60 sciences, along the lines of al-Fārābī's *Iḥṣā' al-ʿulūm*. After two introductory chapters on education in general and the division of the

sciences, Ibn al-Akfānī treats of *al-adab* (10 subdivisions), *al-manṭiq* (9 subdivisions), *al-ilāhī* (9 subdivisions, with heresiology), *al-ṭabī'ī* (10 subdivisions), *al-handasa* (10 subdivisions), *al-hay'a* (5 subdivisions), *al-'adad* (7 subdivisions, the last of which is *al-musīkā*). Added to these are *al-siyāsa*, *al-akhlāk*, and *tadbīr al-manzil*, comprising the practical sciences (*al-ʿulūm al-'amaliyya*). All sections have a bibliography. The book concludes with a short list of philosophical terms and their definitions. The *Irshād al-kāsid* stood as a model for the *Miftāḥ al-sā'ada* by Tāsh-köprüzāda [q.v.], as can be seen easily from the table of contents of both works and from the arrangement of the material in the sections.

*Bibliography:* in addition to references given in the article, note that there are some 40 mss. of the *Irshād al-kāsid*, dispersed in libraries from Rabat to Rampur. Editions: A. Sprenger, Calcutta 1849, and Maḥmūd Abu 'l-Naṣr, Cairo 1900 (both unsatisfactory). For a survey of the life, works and influence of Ibn al-Akfānī, see the introduction of the forthcoming edition of *Irshād al-kāsid* by J.J. Witkam; the work was an important source for E. Wiedemann, the historian of Arabic science, cf. his *Aufsätze zur arabischen Wissenschaftsgeschichte*, ed. W. Fischer, Hildesheim 1970, index s.v. Afkānī. The chapter on music was published and translated by A. Shiloah, in *Yuwal*, i (1968), 221-48. See also Brockelmann, II<sup>2</sup>, 171, S II, 169-70.

(J.J. WITKAM)

**IBN 'AMR AL-RIBĀṬĪ**, ABŪ 'ABD ALLĀH MUḤAMMAD B. MUḤAMMAD B. 'AMR AL-ANṢĀRĪ, MOROCCAN poet and *fakīh*, of Andalusian origin, who was born at Rabat, fulfilled the office of *kādī* for some time, and from 1224/1809 taught at Marrākush. Whilst making the Pilgrimage, he stopped at Tunis, and received there some *idjāzas*; he died in the Hijāz on 10 Rabī' I 1243/1 October 1827.

Ibn 'Amr was neither a great *fakīh* nor a great poet. His works, which include in particular a *dūwān*, a *fahrasa* and a *riḥla*, have not been preserved in *toṭo*, and his fame rests essentially on an imitation of the *Shamaḳmaḳīyya* of Ibn al-Wannān [q.v.], a *kāfiyya* known by the name of *al-'Amriyya* which enjoyed a celebrity mainly because of the religious sentiments expressed in the last verses. In this *kaṣīda*, of classical mould, the author piles up rare words of the type that one can often describe as *hūshī* [see HŪSHĪ] and resorts to rhetorical devices in order to arrive at a eulogy of the Prophet who, according to tradition, had supposedly cured him of gout.

*Bibliography:* Marrākushī, *al-Flām bi-man halla Marrākush*, no. 509; Kattānī, *Fihris al-fahāris*, Fās 1346/1927, i, 202-5; Sā'ih, *al-Muntakhabāt al-'abkarīyya*, Rabat 1920, 95-100; M. Lakhdar, *Vie littéraire*, 306-9, and bibliography cited. (ED.)

**IBN 'ASKAR**, MUḤAMMAD B. 'ALĪ B. KHADIR B. HĀRŪN AL-GHASSĀNĪ, an Andalusian *fakīh*, philologist, poet and man of letters, who wrote a history of Málaga. Born in a village near this important sea-port ca. 584/1188-9, he was later to hold high judicial office there. Between 626/1229 and 631/1234 he served as deputy of Ibn Hūd's [see HŪDĪD] *kādī*, Abū 'Abd Allāh b. al-Ḥasan al-Judhamī. In 635/1238 he was appointed *kādī* of Naṣrīd Málaga by Muḥammad I, and he continued in that office until his death on 4 Djumāda II 636/12 January 1239. As a young man Ibn 'Askar was a pupil of Abū 'l-Ḥadǧǧādī b. al-Shayḫh (d. 604/1207), author of the *K. alif bā'*, to which M. Asín Palacios

devoted the well-known study *El "Abecedario" de Yusuf Benaxeij* (Madrid 1932). His own pupils included his nephew, biographer and continuator, Abū Bakr b. al-Khamīs, and the celebrated Ibn al-Abbār [q.v.].

Ibn 'Askar's history of Málaga is frequently mentioned and quoted by Andalusian authors of the 7th/13th and 8th/14th centuries. Its title is *al-Ikmāl wa 'l-ʿilām fī silat al-Flām bi-mahāsīn al-aʿlām min ahl Mālaqa al-kirām*, suggesting that it is a continuation of the *Flām* of the Málaga scholar Aṣḡagh b. al-Abbās (d. 592/1196). By Ibn al-Khaṭīb [q.v.], however, for whom the work was a main source of the *Ihāta*, it is called *Maṭlaʿ al-anwār wa-nuḡhat al-abṣār*, etc. There are other variants, including the simple and commonly used title *Taʾrīkh Mālaqa*. At the time of the author's death the work was unfinished, and the task of completing it fell to Ibn Khamīs (see above), who seems to have flourished somewhere around the middle of the first half of the 7th/13th century. The one extant manuscript which we have of the *Ikmāl* (in private hands) is incomplete, but a large part has fortunately survived, and from this an assessment can be made of its literary and historical value. The biographies of Málaga notables included in it have a distinct literary value in that they offer, in addition to biographical data, worthwhile specimens of biographers' poetry (unfortunately, no account is taken of *muwaṣṣahāt* and the *zajal*). On the historical side it contains material that can be utilised to supplement, complement and control our existing accounts from the 8th to the 13th centuries A.D.

Ibn 'Askar was the author of a number of other works, namely (i) *al-Maṣḥrāʿ al-rauʿī*, a supplement to al-Harawī's works on unusual terms in the Qurʾān and *hadīth*; (ii) *Nuḡhat al-nāzīr fī manākīb ʿAmmār b. Yāsīr*, a work dedicated to the Banū Saʿīd of Alcalá la Real and devoted to the life of the first member of the family to come to Spain (Ibn 'Askar was a close friend of the family); (iii) *al-Djuzʿ al-mukhtaṣar . . . ʿan dhahāb al-baṣar*, a work on blindness written to console a blind friend; (iv) *Iḏḥḏḥkḥār al-ṣabr*, an ascetic work; (v) *al-Arbaʿīn al-hadīth*; and (vi) *al-Takmil wa 'l-ʿitām li-Kiṭāb al-Taʾrīf wa 'l-ʿilām*, a commentary on and supplement to a work by al-Suhaylī of Fuengirola (507-81/1113-85) on proper names not occurring in the Qurʾān.

*Bibliography:* All important references are given in J. Vallvé Bermejo, *Una fuente importante de la historia de al-Andalus: la "Historia" de Ibn 'Askar*, in *Al-Andalus*, xxxi (1966), 237-80 (includes translations of some of the most notable historical passages).

(J.D. LATHAM)

**IBN 'AZZŪZ**, called **SĪDĪ BALLĀ**, ABŪ MUHAMMAD 'ABD ALLĀH AL-KURASĪ AL-ŠĪADHILĪ AL-MARRĀKUSĪ, a cobbler of Marrakesh to whom thaumaturgic gifts were attributed and who died in an odour of sanctity in 1204/1789. His tomb, situated in his own residence at Bāb Aylān, has been continuously visited because of its reputation of curing the sick. Although he had not received a very advanced education, Ibn 'Azzūz nevertheless succeeded in leaving behind an abundant body of works, dealing mainly with mysticism and the occult sciences, but also with medicine. However, his works display hardly any originality, and none of them has interested a publisher, despite the success in Morocco of his *Dhahāb al-kusfī wa-naḡy al-zulumāt fī ʿilm al-ṭibb wa 'l-ṭabāʿīʿ wa 'l-ḥikma*, a popular collection of therapeutic formulae (see L. Leclerc, *La chirurgie d'Abulcasis*, Paris 1861, ii, 307-8;

H.P.J. Renaud, in *Initiation au Maroc*, Paris 1945, 183-4); his *Kaṣf al-rumūz* concerning medicinal plants is equally well-known. Out of his three works on mysticism, the *Tanbīh al-tilmīdh al-muḥtādī* is perhaps the most original, since it endeavours to reconcile the *ṣarīʿa* with the *ḥakīka* [q.v.]. Finally, in the field of the occult sciences, his *Lubāb al-ḥikma fī ʿilm al-ḥurūf wa-ʿilm al-asmāʿ al-ilāhiyya*, of which at least one manuscript survives, is a treatise on practical magic and divinatory magic.

*Bibliography:* On the manuscripts of Sīdī Ballā's works, see Brockelmann, S II, 704, 713; M. Lakhdar, *Vie littéraire*, 253-6; see also Ibn Sūda, *Dalīl muʾarrikh al-Maghrib al-Akṣā*, Casablanca, 1960, ii, 446, 449; A. Gannūn, *al-Nubūgh al-Maghribī*<sup>2</sup>, Beirut 1961, i, 304-5, 310. (Ed.)

**IBN BĀBĀ AL-KĀSHĀNĪ** [see AL-KĀSHĀNĪ].

**IBN AL-BALKHĪ**, Persian author of the Saldjūq period who wrote a local history and topographical account of his native province Fārs, the *Fārs-nāma*. Nothing is known of him save what can be gleaned from his book, nor is the exact form of his name known, but his ancestors came from Balkh. His grandfather was *mustawfī* or accountant for Fārs under Berk-yaruḡ b. Malik Shāh's governor there, the Atabeg Rukn al-Dawla or Naḡīm al-Dawla Khumār-tigin, and Ibn al-Balkhī acquired his extensive local knowledge of Fārs through accompanying his grandfather in his work. He was accordingly asked by sultan Muḥammad b. Malik Shāh to compose a historical and geographical account of the province; since he mentions the Atabeg of Fārs Fakhr al-Dīn Čawli as being still alive, the composition of the *Fārs-nāma* must be placed between Muḥammad's accession in 498/1105 and Čawli's death in 510/1116.

The first two-thirds of the *Fārs-nāma* on the pre-Islamic history of Persia and the Arab conquest of Fārs are entirely derivative, being based on Ḥamza Iṣfahānī, but the remainder is a very important account of the province's topography and notabilia, concluding with a section on the Shabānkāra Kurds and containing details of contemporary happenings. This last third of the book was much used in the 8th/14th century by Ḥamd Allāh Mustawfī [q.v.] for the geographical part of his *Nuḡhat al-kuḏub*.

*Bibliography:* G. Le Strange and R.A. Nicholson edited the last third of the Persian text, *The Fārsnāma of Ibn al-Balkhī*, GMS, N.S. i, London 1921; Le Strange had previously translated this in *JRAS* (1912), also as a separate monograph, *Description of the province of Fars in Persia*, London 1912. See also Storey, i, 350-1, and Storey-Bregel, ii, 1027-8.

(C.E. BOSWORTH)

**IBN AL-BAZZĀZ AL-ARDABĪLĪ**, TAWAKKULĪ (TŪKLĪ) B. ISMĀʿĪL, *murīd* of Shaykh Ṣadr al-Dīn al-Ardabīlī (d. 794/1391-2), son and first successor of Shaykh Ṣafī al-Dīn al-Ardabīlī (d. 735/1334), the founder of the Ṣūfī order of the Safawiyya and, as ancestor of Shāh Ismāʿīl I (d. 930/1524 [q.v.]), the eponym of the Safawids [q.v.; see also ARDABĪLĪ]. The exact dates of Ibn al-Bazzāz are unknown. At the stimulus of Shaykh Ṣadr al-Dīn he composed a biography of Shaykh Ṣafī al-Dīn, with the title *Safīyat al-safāʿ* or *Mawāhib al-safiyya fī manākib al-safawiyya*. Written in a simple style without rhetorical ballast, this voluminous work gives first of all information on the miracles (*karāmāt*) and Ṣūfī doctrine of the Shaykh, but describes also in a vivid way daily life in the sanctuary of the order

and gives an account of the relations of the *Shaykh* with the secular rulers in the period of the *Ilkhāns* [q.v.].

From the colophon of the manuscript India Office no. 1842 (Ethé, *Cat. of Pers. mss.*, i, col. 1008), probably erroneously described as an autograph, it follows that Ibn al-Bazzāz finished his work in *Shābān* 759/July-August 1358. The numerous manuscripts of the *Ṣafwat al-ṣafāʾ*, among which there exist also Turkish translations, prove the popularity of this important hagiographic work. A critical edition is not yet available; a lithograph was published by Aḥmad b. Karīm Tabrīzī in Bombay in 1329/1911.

In the 10th/16th century, the chroniclers of the Ṣafawid dynasty used the *Ṣafwat al-ṣafāʾ* as their main source for the early period of the Ṣafawiyya order and for the genealogy of the Ṣafawids, who claimed descent from the seventh Imām Mūsā al-Kāzim. This genealogy is, however, very much disputed, because the pedigree of the Ṣafawids, at least in its complete form, was apparently inserted into the work only by Abu 'l-Fath al-Ḥusaynī, who revised the *Ṣafwat al-ṣafāʾ* (Storey, i/1, 13 ff. and i/2, 1196 ff.) at the order of the Ṣafawid *Shāh* Talmāsp I (d. 984/1576).

*Bibliography:* Storey, i/2, 939 ff.; Browne, *LHP*, ii, iv, 34-40; Nikitine, *Essai d'analyse du Ṣafwat-us-ṣafāʾ*, in *JA* (1957), 385-94; Z.V. Togan, *Sur l'origine des Ṣafawides*, in *Mélanges Massignon*, iii, Damascus 1957, 345-57; Hanna Sohrawide, *Der Sieg der Ṣafawiden in Persien und seine Rückwirkungen auf die Shīʿiten Anatoliens im 16. Jahrhundert*, in *Isl.*, xli (1965), 97 ff.; Mahmud Bina-Motlagh, *Scheich Safi von Ardabil*, diss. Göttingen 1969, 19-22 and *passim*; Erika Glassen, *Die frühen Ṣafawiden nach Qāzī Aḥmad Qumī*, *Islamkundliche Untersuchungen*, 5, Freiburg i. Br. 1970, 18 f., 21-52; M.M. Mazzaoui, *The origins of the Ṣafawids, Shīʿism, Sūfism and Gulāt*, *Freiburger Islamstudien* 3, Wiesbaden 1972, 47 ff. A critical edition of the *Ṣafwat al-ṣafāʾ* is being prepared by a joint team working at the Universities of Utah and Freiburg-im-Breisgau under the direction of Mazzaoui.

(E. GLASSEN)

**IBN BIKLĀRISH**, YŪSUF (YŪNUS?) B. IṢḤĀK AL-ISRĀʾĪLĪ, Judaeo-Arab physician and pharmacist who lived in Almeria ca. 1100 A.D. There he wrote the *K. al-Mustaʿīnī* for al-Mustaʿīn billāh Abū Djaʿfar Aḥmad b. Yūsuf al-Muʿtamin billāh (reigned 478-503/1085-1109), the Hūdīd ruler of Saragossa [see *HŪDĪDS*], after whom the work was named.

The book must have attracted attention immediately, for it is often quoted by al-Ḥāfīkī [q.v. above], a younger contemporary of Ibn Bīklārīsh, in his *K. al-Adwiyā al-mufrada*; in the Latin version of the latter under the name *Buclaris* or *Boclaris* (i.e. from *Biclaro*?). It is also remarkable that both authors quote almost the same sources. After a theoretical explanation of pharmacology which is essentially based on Galen, the *Mustaʿīnī* contains a special table-like section, arranged in five unequal columns. The first two small columns give the names (*asmāʾ*), and characteristics (*tibāʾ*) of the simple medicines, the third (*tafsīrūhā bi-khulāf al-lughāt*) contains their explanation together with their Greek, Syriac, Persian, Latin and Mozarabic synonyms, the fourth the *Succedanea* (*abdāl*) and the fifth their utility, specific effect and region of application (*manāfiʿuhā wa-khawāṣṣuhā wa-wuḍūʿihā istiʿmālīhā*). The covering text on the upper and lower margin

contains further details, and above all the sources. The order of the total of 704 drugs follows the *abjad* alphabet in its Maghribī form. In Europe, attention has been given so far almost exclusively to the third column (synonyma): it contains important vocabulary material, especially of the Romance languages, and was used abundantly by Simonet for his *Glosario* and in particular by Dozy for his *Supplément*. H.P.J. Renaud made several investigations into the *Mustaʿīnī*, the last in *Hesperis*, x (1930-1), 135-50; he planned an edition with translation and commentary, but this did not come to fruition; such a work is, however, long overdue.

Of other writings of Ibn Bīklārīsh, only one work on dietetics is known by its title; in the introduction to the *Mustaʿīnī* it is quoted twice as *Risālat al-Tabīʿ wa 'l-tarīb*.

*Bibliography:* Ibn Abī Uṣaybīʿa, *ʿUyūn*, ii, 52; M. Steinschneider, *Die arabische Literatur der Juden*, 147 f.; M. Meyerhof, *Un glossaire de matière médicale composé par Maimonide*, Cairo 1940, xxviii; Brockelmann, I<sup>2</sup>, 640, S I, 889; M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 201, 275.

(A. DIETRICH)

**IBN DAQĪK AL-ʿĪD**, TAQĪ AL-DĪN ABŪ 'L-FATH MUḤAMMAD B. ʿALĪ B. WAḤB B. MUṬṬĪʿ B. ABĪ 'L-ṬĀʿA, jurist and traditionist who was born in *Shābān* 625/July 1228 in Yanbuʿ in the *Hijāz* (not in Lower Egypt as stated by Brockelmann), although his parents came from Manfalūt in Upper Egypt. He was brought up in Kūṣ in Upper Egypt, and travelled to Cairo and Damascus to hear *hadīths*. He later taught jurisprudence according to the *Mālikī* and *Shāfiʿī* schools. He became a judge in 675/1295, and died in Cairo on 11 Ṣafar 702/6 October 1302.

He wrote a number of books on *fiqh* and *hadīth*, including a work in twenty volumes entitled *al-ʿIlmām fī ahādīth al-ahkām*, and he also left some poetry and a collection of sermons. He was deeply interested in alchemy, a fact mentioned by Ṭāshkōprūzāde in his *Miftāḥ al-saʿāda wa-miṣbāḥ al-siyāda*, i, Hyderabad 1911, 281, although he appears to have left no writings on this subject. However, an anonymous writer (in the short treatise *Fī bayān ʿamal al-fidda wa 'l-dhahab*) has preserved a record of the methods used by Ibn Daqīk al-ʿĪd in attempting to transmute quicksilver and sulphur into gold, and quicksilver and arsenic into silver.

*Bibliography:* Dhahabī, *Huffāz*, iv, 262 ff.; Kutubī, *Fawāʾid*, Būlāk 1283, 305 f.; Ziriklī, *al-ʿĀlām*, iii, 949; Brockelmann II, 75, S II, 66; Kaḥḥāla, *Muʿdjam al-muʿallifīn*, xi, 70 f.; R.Y. Ebied and M.J.L. Young, *An anonymous Arabic treatise on alchemy*, in *Isl.*, liii (1976), 100-9.

(R.Y. EBIED and M.J.L. YOUNG)

**IBN DĀRUST**, TĀDĪ AL-MULK ABU 'L-GHANĀʾIM MARZUBĀN B. KHUSRAW-FĪRŪZ SHĪRĀZĪ (438-86/1046-93), high official in the Great Salḍjūk administration under Sultan *Malik Shāh* [q.v.], and his ruler's last vizier.

Born of a secretarial family in Fārs, he began his official career in the service of the slave commander Sāwtigin, who eventually recommended him to the sultan as a person of promise. *Malik Shāh* made him superintendent of the education and possessions of various of his sons, then overseer of the royal palace and its ancillaries, and finally head of the Salḍjūk chancery, the *Diwān al-Inshāʾ wa 'l-Tughrā* [see *DĪWĀN*, iv. Irān].

Much of the internal history of *Malik Shāh*'s reign reflects a struggle for authority in the administration (the *diwāns*) and at court (the *dargāh*), in which

various officials were ranged against the great vizier Nizām al-Mulk [*q.v.*], his sons and his partisans, the so-called Nizāmiyya; in this Ibn Dārust placed himself on the side of the vizier's enemies. Hence when Nizām al-Mulk was assassinated in Ramaḍān 485/October 1092, many contemporaries assumed that the real instigators of the murder, in which the Ismā'īlī *fidā'i* were a mere tool, were Ibn Dārust and even the sultan himself, suspicious of the vizier's commanding power and presence in the state.

Malik Shāh now appointed Ibn Dārust as his vizier, but the latter's triumph was short-lived, for the sultan himself died next month (mid-Shawwāl 485/mid-November 1092). Ibn Dārust now allied with Malik Shāh's wife, the Karakhānid princess Terken Khātūn, to place the latter's son Mahmūd on the throne in Baghdād, even though Mahmūd was only a small child, and on grounds of experience and potential, was obviously inferior to Berk-yaruḡ, Malik Shāh's son by another wife and, at twelve or thirteen years old, on the threshold of adulthood. Although Ibn Dārust and Terken Khātūn managed to seize Isfahān, their forces were defeated by those of Berk-yaruḡ's partisans, with the Nizāmiyya as their driving-force, at the battle of Burudjird at the end of Dhu 'l-Hijja 485/end of January 1093. Ibn Dārust was captured, and although Berk-yaruḡ, mindful of Ibn Dārust's administrative expertise, was inclined to take him as his own vizier, the Nizāmiyya insisted on exacting vengeance for their dead leader, and secured his execution in Muḥarram 486/February 1093.

Ibn Dārust was the *mandūh* of various Saldjūk poets like Mu'izzī, and he was also one of several great men in the Saldjūk state, both civilian and military, who were active in founding colleges and other charitable and educational works; his Tādjīyya *madrasa* was begun in 480/1089 in Baghdād at the Bāb Abrāz as a Shāfi'i college, rivalling Nizām al-Mulk's own more famous foundation; the celebrated scholars Abū Bakr al-Shāshī and Abū Hāmid al-Ghazālī's brother Abū 'l-Futūh taught there.

*Bibliography:* There are very brief biographies in Ibn al-Djāwzī's *Muntazam*, ix, 74, and Sayf al-Dīn Faḍlī 'Ukaylī's *Alḥār al-wuzarā'*, ed. Urmawī, Tehran 1337/1959, but for the rest, see scattered references in the historical sources for the Saldjūk period (Ṣadr al-Dīn Ḥusaynī, Rāwandī, Bundārī, Ibn al-Djāwzī, Sibṭ Ibn al-Djāwzī, Ibn al-Aḥṡir), utilised in Bosworth, *Cambridge history of Iran*, v, 74 ff., 82, 93, 102-5, 216; M.F. Sanaullah, *The decline of the Saljuqid empire*, Calcutta 1938, 9, 40-1, 83; İ. Kafesoğlu, *Sultan Melikşah devrinde Büyük Selçuklu imparatorluğu*, Istanbul 1953, 169, 200 ff.; Abbas Eghbal, *Wizārat dar 'ahd-i salāḡin-i buzurg-i Saldjūki*, Tehran 1338/1959, 93-100; C.L. Klausner, *The Seljuk vezirate: a study of civil administration 1055-1194*, Cambridge, Mass. 1973, 28-9, 52. For Ibn Dārust's educational foundations, see G. Makdisi, *Muslim institutions of learning in eleventh-century Baghdād*, in *BSOAS*, xxiv (1961), 25-6, and idem, *Ibn 'Aqil et la resurgence de l'Islam traditionaliste au XI<sup>e</sup> siècle*, Damascus 1963, 137-41, 209-10, 225-6.

(C.E. BOSWORTH)

**IBN DIRHAM**, seldom-used patronym of an eminent family of Mālikī jurists and *kādīs*, originally of Baṣra, who bear the ethnic name AL-AZDĪ in some sources; but since the members of this family are most often cited under their personal name or simply by their *kunya*, and since the line of parentage which connects them is consequently

difficult to determine, it has been judged expedient to assemble them here under this somewhat official appellation, following the example of F. al-Bustānī who, in the *Dā'irat al-ma'ārif* (iii, 61), adopted it for one of them, the tenth of those listed below. These *kādīs*, who for the most part held office in Baghdād in the 3rd and 4th/9th and 10th centuries, are cited by L. Massignon (*Cadis et naqibs baghdadiens*, in *WZKM*, li/1-2 [1948], 108, where Ismā'īl b. Ishāk should be read in place of b. Hammād), following the articles devoted to them by al-Khaṭīb al-Baghdādī (*Tārīkh Baghdād*), after Wakī' (*Akhbār al-kuḍāt*) and especially al-Tanūkhī, who gives them considerable space in *al-Faraḡj ba'd al-shidda* and particularly in the *Nishwār al-muḥādara*.

The following table, which cannot be regarded as exhaustive, contains the names mentioned in the principal sources for the period until the mid-4th/10th century; it is unlikely that the family ceased to exist at this time, but it does not seem to have given any more eminent practitioners to the legal profession.

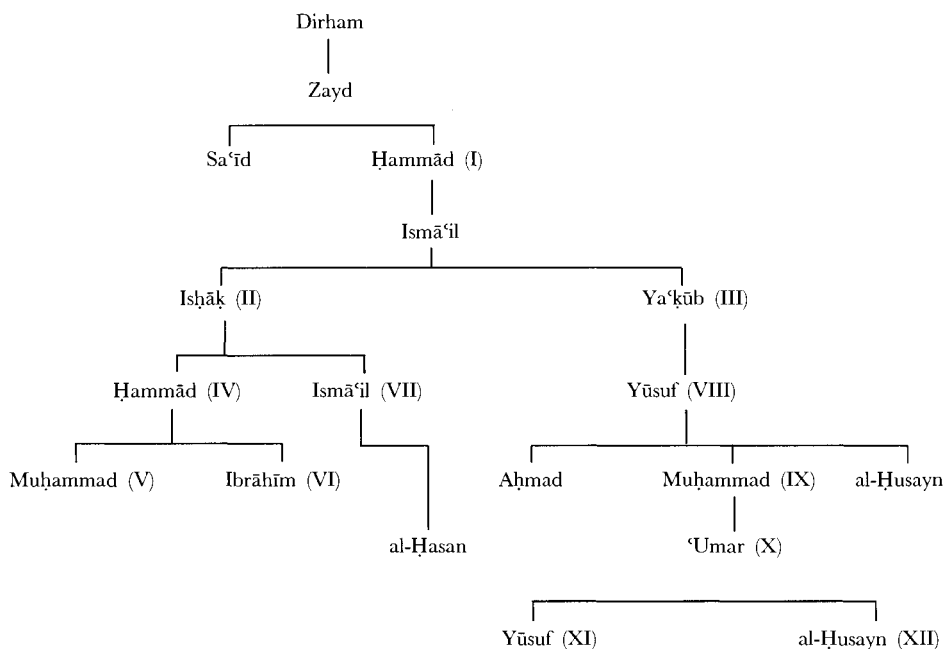

I. — Abū Ismā'īl ḤAMMĀD B. ZAYD B. DIRHAM (98-179/717-95) is the first member of the family to have made a mark on history. A blind slave of Hāzim b. Zayd al-Djāḡamī (Azd), he was affranchised by his two sons, Djārīr and Yazīd (see Ibn Qutayba, *Ma'ārif*, index), devoted himself to the study of *hadīth* and passed on his knowledge to a number of traditionists, including Bishr al-Hāfi [*q.v.*]. He is to a certain extent regarded as the founder of an independent *madhhab* and accorded the same status as al-Thawrī in Kūfa, Mālik in the Hīdjāz, and al-Awzā'ī in Damascus; he thus represented Baṣra, his home-town, but in spite of the respect with which he was treated he does not seem to have founded a school, since his descendants were themselves Mālikīs.

*Bibliography:* Ibn Sa'd, *Tabakāt*, vii/2, 42; Balādhurī, *Futūh*, 283; Ibn Qutayba, *Ma'ārif*, 502-3, 525; Tabarī, index; Mas'ūdī, *Murūj*, vi, 294 = § 2500; Ibn Baṭṭa-Laoust, index; Ibn al-Djazarī, *Kurrā'*, i, 258; Makdisī, *Creation*, ii, 52, 145; Abū Nu'aym, *Hilyat al-awliyā'*, vi, 257-67; 'Iyād, *Tartīb al-madārik*, index; Nawawī, *Tahdhīb al-asmā'*, 217-8; Dhahabī, *Tadhkirat al-huffāz*, i, 211-2; Ibn al-Imād, *Shadharāt*, i, 292; Ṣafadi, *Nakt al-himyan*, 147; Massignon, *Lexique technique*, 168, 197, 243.

II. — Abū Ya'qub ISHĀK B. ISMĀ'ĪL B. ḤAMMĀD (176-230/792-845), grandson of the preceding, was responsible for *mazālim* in Egypt under the caliphate of al-Ma'mūn (in 215/830), then in Baṣra under that of al-Mu'taṣim ('Iyād, *Madārik*, ii, 558-9; Ibn Taghribardī, *Nuḡūm*, ii, 212).

III — Abū Yūsuf YA'QUB B. ISMĀ'ĪL B. ḤAMMĀD (d. 246/860), brother of Ishāk, was, it seems, the first *kādī* of the family; having served in this office at Medina, he made his way to Baghdād where he frequented the court of al-Mu'taṣim and transmitted *hadīths*. Subsequently, al-Mutawakkil appointed him for the second time *kādī* of Medina, then of Fārs, where he resided until his death (al-Tanūkhī, *Nishwār*, vii, 16-18; 'Iyād, *Madārik*, ii, 560).

IV. — Abū Ismā'īl ḤAMMĀD B. ISHĀK B. ISMĀ'ĪL (199-267/815-81) was described in a general sense as being *kādī* of Baghdād (Khaṭīb Baghdādī, viii, 159), but there can be no doubt that the area in question was the Round City of al-Manṣūr (in 251/865, according to Massignon, *Cadis*, 108). He is mentioned among the companions of al-Muwaffāq, and to him are attributed a *Kitāb al-Muḥādana* and a *Radd 'alā*

*l-Shāfi'ī* (al-Tanūkhī, *Nishwār*, vi, 21, vii, 51; 'Iyād, *Madārik*, iii, 181-2).

V. — MUḤAMMAD B. HAMMĀD B. ISHĀK (d. 276/889) was appointed *kādī* of Baṣra by al-Muwaffāq (Wakī', ii, 191-2).

VI. — Abū Ishāk IBRĀHĪM B. HAMMĀD (240-323/854-935), who survived his brother by many years, is considered principally as a traditionist. According to al-Khaṭīb al-Baghdādī (vi, 61-2), he was also a *kādī*, but at what date, or in what town, is not known; he died, however, in Baghdād (al-Ṣūlī, *Akhbār ar-Rādī*, etc., tr. M. Canard, Algiers 1946, 107; see also Ibn Farḥūn, *Dībādī*, 85; Ibn Taghribardī, *Nudjūm*, iii, 249).

VII. — Abū Ishāk ISMĀ'IL B. ISHĀK B. ISMĀ'IL B. HAMMĀD [see AL-AZDĪ, in Suppl.].

On his son Abū 'Alī al-ḤASAN, who was a celebrated wit and an *adīb*, see Tanūkhī, *Nishwār*, vi, 326; Khaṭīb Baghdādī, vii, 284.

VIII. — Abū Muḥammad YŪSUF B. YA'QŪB B. ISMĀ'IL B. HAMMĀD (208-97/823-910), was the first member of the other branch of the family to serve as *kādī* in Baghdād, where he first assumed charge of the *ḥisba* (271/884-5) and of the *naḥkāt* of al-Muwaffāq. This latter, on the death of Muḥammad b. Hammād (No. V), appointed as his successor Yūsuf b. Ya'qūb, who remained titular *kādī* of Baṣra, of Wāsiṭ and of the districts of the Tigris from 276/883 to 296/909, but he was represented there by a deputy, for he was then living in Baghdād, where the jurisdiction of *maẓālim* was entrusted to him in 277. On the death of Ismā'il b. Ishāk (No. VII), he was given the post of *kādī* of East Baghdād, which he combined with that of Baṣra, having as *nā'ib* in the capital his son Muḥammad from 289/902 onward. When in 296/908 the latter gave his support to Ibn al-Mu'tazz [q.v.], his father was dismissed and he spent the last year of his long life in retirement. He passed on some *ḥadīths* handed down by his cousin Ismā'il b. Ishāk (No. VII) and wrote a number of works: *Fadā'il azwādj al-Nabī*, *K. al-Ṣiyām wa 'l-du'a' wa 'l-zakāt* and a *Musnad* of Shu'ba b. al-Ḥādīdjādī [q.v.].

*Bibliography*: Wakī', ii, 182; Tanūkhī,

*Nishwār*, v, vi, vii, viii, indices; 'Iyād, *Madārik*, iii, 182-7; Ibn al-'Imād, *Shadharāt*, ii, 227; Ibn Taghribardī, *Nudjūm*, iii, 171.

IX. — Abū 'Umar MUḤAMMAD B. YŪSUF B. YA'QŪB (243-320/857-932) is the most celebrated member of the entire family, and his *kunya* alone is sufficient to identify him. Born in Baṣra, he followed his father to the capital and held the office of *kādī* over the Round City of al-Manṣūr from 284/897 to 292/905, then over al-Sharḥiyya from 292 to 296. Dismissed after the Ibn al-Mu'tazz affair, he remained unemployed for a few years, but was reinstated in 301/914 in East Baghdād and al-Sharḥiyya, where he remained until his death, after receiving, in 317/929, jurisdiction over the entire capital and being given the title of grand-*kādī*. Abū 'Umar played an important political rôle under the caliphate of al-Muqtadir; in particular, it was he who, in 309/922, issued a *fatwā* against al-Hallādī [q.v.], whom he ultimately condemned. L. Massignon paints a severe portrait of the man and accuses him of having given too much servile obedience to the authorities: "An accomplished courtier", he wrote, "with a magnificent command of manners which will always be legendary, and curiously devoted to the use of perfumes, he was able to contradict himself with the most disconcerting cynicism; he compensated for the imperfect subtlety of his Mālikī rite in matters of *ḥadīth* and of *kiyās* with a fastidious concern for the form in canonical casuistry; he must have been very proud of having finally succeeded, for the 'common good', in concluding such an arduous case with such an ingenious solution" (*Le cas de Hallāj*, in *Opera minora*, ii, 181). It is a known fact that he had drawn from the doctrine of al-Hallādī concerning the seven turns around the Ka'ba of the heart "an argument to make him one with the Carmathian raiders who sought to destroy the Temple of Mecca" (*ibid.*, 178).

In 310, his name was also put forward for the post of vizier and, in 317, he officiated when al-Muqtadir agreed to abdicate, although he destroyed the records of the abdication.

*Bibliography:* Tabarī, index; 'Arīb, index; Süli-Canard, 40, 103, 107, 150; Mas'ūdī, *Murūdj*, viii, 217-9, 256, 284 = §§ 3361-2, 3394, 3437; idem, *Tanbih*, ed. Sāwī, 322, 329; Tanūkhī, *Nishwār*, iii, index, v, 208-11 and index, vi, vii, indices, viii, 106, 186-8; Khaṭīb Baghdādī, iii, 401-4; Ibn Taghribardī, *Nudjūm*, iii, 235; Ibn al-'Imād, *Shadhārāt*, ii, 286-7; Ibn al-Djāwzī, *Muntaẓam*, vi, 222; Massignon, *Passion*, index; Sourdel, *Vizīrat*, index.

X. — Abu 'l-Husayn 'UMAR B. MUḤAMMAD (d. 328/940), his father's *nā'ib* in East Baghdād from 311/923 onwards, succeeded him in the office of grand-*kādī* (320-8). In the court of al-Rādī, who is said to have wept when he died, he acted as vizier and undertook numerous political missions; in 323/935, he participated in the case of Ibn Shannabūd [q.v.], although he did not preside over the tribunal. Al-Šulī, who had been his teacher, devotes to him a panegyric entry, recording his death on 16 Šahbān 328/27 May 940 (tr. Canard, 219). He appears to have been well versed in matters of *farā'id*, of *ḥadīth*, of lexicography, of grammar and poetry, and several works are attributed to him: a *Musnad*, a *K. Ghārīb al-ḥadīth* and a *K. al-Faradj ba'd al-šidda* which was the first of this genre.

*Bibliography:* Süli-Canard, index; Miskaway, *passim*; Tanūkhī, *Nishwār*, iii, vi, vii, indices; Khaṭīb Baghdādī, vii, 284; Yākūt, *Udabā'*, xvi, 67-70; Ibn al-Djāwzī, *Muntaẓam*, vi, 307; Suyūfī, *Bughya*, 364-5.

XI. — Abū Naṣr Yūsuf B. 'UMAR (305-56/918-67) was already deputising for his father and astonishing the public with the extent of his knowledge when he sat for the first time as *kādī* in the mosque of al-Ruṣāfa (East Baghdād) on 25 Muḥarram 327/22 November 938. As *kādī* of West Baghdād in 328/940, it was he who recited the prayer for the dead over al-Rādī on 16 Rab' I 329/19 December 940. He was retained in office by al-Muttakī, then dismissed and reinstated on 24 Šahbān 329/24 May 941, but the sequence of events is not clear; there is no doubt that he was soon dismissed once more, making his way to Iṣfahan; at his death, he was *kādī* of Yazd. In the meantime, he had adopted the Zāhirī doctrine.

*Bibliography:* Süli-Canard, 177, 220; Tanūkhī, *Nishwār*, iv, 23-5 and index, v, 261, vi, 14, vii, 16-8; Khaṭīb Baghdādī, xiv, 322-4; Ibn al-Djāwzī, *Muntaẓam*, vi, 300, vii, 42.

XII. — Abū Muḥammad AL-HUSAYN B. 'UMAR (d. after 360/971) succeeded his father together with his brother and was given East Baghdād in 328, then, the following year, he took on the duties of Abū Naṣr, but it seems that he did not retain them for long, since all trace of him is soon lost.

*Bibliography:* Süli-Canard, 227; Tanūkhī, *Nishwār*, iv, 203-4, vi, 74, vii, 17-18.

It would certainly be very interesting to pursue further study of this eminent family and to examine in a more exhaustive manner its links with authority on the one hand, and on the other, with the contemporary Banū Abī 'l-Šhawārib. (CH. PELLAT)

**IBN DJUMAY'**, ABU 'L-MAKĀRIM HIBAT ALLĀH B. ZAYN B. ḤASAN: see the article **IBN DJĀMĪ'**, where should be read **IBN DJĀMĪ'**; at present **IBN DJUMAY'** is generally considered as the right form of the name.

**IBN DJURAYDJ**, ABU 'L-WALĪD/ABU KHĀLĪD 'ABD AL-MALĪK B. 'ABD AL-'AZĪZ B. DJURAYDJ AL-RŪMĪ AL-ḲURĀSĪ AL-MAKKĪ (80-150/699-767), Meccan traditionist of Greek slave descent (the ancestor being called Gregorios) and probably a *mawla* of the family of Khālid b. Asīd.

After having first of all become interested in gathering together traditions of philological, literary and historical interest, he brought together *ḥadīths* from the mouths of 'Aṭā' b. Abī Rabāh, al-Zuhrī, Mudjdjāhid, 'Ikrima and other famous persons, and passed them on, notably to Waki', Ibn al-Mubārak and Sufyān b. 'Uyayna; his erudition was such that he was considered as the *imām* of the *Hidjāz*.

Little is known of his life, except that he accompanied Ma'n b. Zā'ida to the Yemen, soon returned from there and towards the end of his life made his way to 'Irāk and al-Manšūr's court. His name is connected, on one hand, with the question of the legality of the transmission of *ḥadīths* by letter and not by *samā'*, and on the other, with the writing down of traditions. Like Sa'īd b. Abī 'Arūba [q.v.] in 'Irāk, he was regarded as having been the first in the *Hidjāz*, and even in the whole Islamic empire, to gather together *ḥadīths* into a work *fi 'l-aḥar waḥurūf al-tafsīr*; these two scholars are often cited together, especially by al-Dhahabī in Ibn Taghribardī, *Nudjūm*, i, 351, year 143), who enumerates with some regret the authors of the oldest collections. Goldziher, in *Muh. Studien*, ii, 211-12, Eng. tr. ii, 196-7, has shown that the priority accorded to Ibn Djuraydj was unmerited, and has remarked that collections of *ḥadīths* are mentioned at an earlier period; at all events, his work was a selection of legal traditions in classified form, as the *Fihrist*, ed. Cairo 316, notes, grouped by chapters on legal purity, the prayer, the *zakāt*, etc.

*Bibliography:* Djāhīz, *Bayān*, iii, 283; idem, *Hayawān*, index; Ibn Ḳutayba, *Ma'ārif*, 488-9, 519; Ibn Khallikān, *Wafayāt*, no. 348, ed.; Ihsān 'Abbās, iii, 163-4; Khaṭīb Baghdādī, *Ta'rikh*, x, 400-7; Ibn Taghribardī, *Nudjūm*, i, 351; Ibn al-'Imād, *Shadhārāt*, i, 226-7; Nawawī, *Tahdhīb*, 787; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, vi, 402-6; Dhahabī, *Tadhkirat al-huffāz*, i, 160; Goldziher, *Muh. Studien*, index; Brockelmann, S I, 255, and bibl. given there; Bustānī, *Dā'irat al-ma'ārif*, ii, 404-5; Ziriklī, iv, 305.

(CH. PELLAT)

**IBN FARĪGHŪN**, ŠHA'YĀ (?), author in the 4th/10th century of a concise Arabic encyclopaedia of the sciences the *Djawāmi' al-'ulūm* "Connections of the sciences". The author wrote in the upper Oxus lands, and dedicated his work to the Muḥtādīd *amīr* of Čaghāniyān [q.v.], Abū 'Alī Aḥmad b. Muḥammad b. al-Muzaffar (d. 344/955). Minorsky surmised from his name (if this has been interpreted correctly) that he was a scion of the Farīghūnīs [q.v.] in northern Afghānistān, rulers of the district of Gūzgān [q.v.] as tributaries of the Sāmānids, and latterly, of the Ghaznawids; a connection too with the unknown author of the Persian geography, the *Hudūd al-'ālam* [q.v. above], is not impossible, though as yet unproven (see V. Minorsky, *Ibn Farīghūn and the Hudūd al-'Ālam*, in *A locust's leg, studies in honour of S.H. Taqizadeh*, London 1962, 189-96).

The author of the *Djawāmi'* was first identified by D.M. Dunlop in his article *The Gawāmi' al-'ulūm of Ibn Farīghūn*, in *Zeki Velidi Togan'a armağan*, Istanbul 1950-5, 348-53. He was clearly a pupil of Abū Zayd al-Balkhī, presumably the author of the geography *Suwar al-aḳālim* re-edited and completed by al-Iṣṭakhrī [see AL-BALKHĪ and DJUGHRĀFIYĀ. IV c, ii], d. 322/934, who had himself written a *K. Aḳṣām al-'ulūm* "Book of the divisions of the sciences". Ibn Farīghūn used the *tashdjir* system in his arrangement of the sciences, i.e. that of "trees" and "branches" for the groups and sub-groups. The

*Ḍjawāmi'* resembles the slightly later *Mafāṭih al-ʿulūm* of Abū 'Abd Allāh al-Kh̄'ārazmī [q.v.] in that it is divided in the first place into two *maqālas*, one on the Arabic sciences and one on the non-Arabic ones, but it is not so clearly arranged as the *Mafāṭih*. A full evaluation of the work must await publication of the text, for which several mss. exist.

**Bibliography:** In addition to references given above, see H. Ritter, *Philologica XIII*, in *Oriens*, iii (1950), 83-5; F. Rosenthal, *A history of Muslim historiography*, Leiden 1968, 34-6; Brockelmann, S I, 435; Sezgin, *GAS*, i, 384, 388 (reading the author of the *Ḍjawāmi'*'s name as "Mutaghhabī (?Mubtaghā) b. Furay'un").

(C.E. BOSWORTH)

**IBN GHIDHĀHUM** (usual French spelling: Ben Ghedaem), 'ALĪ B. MUḤAMMAD, leader of the 1864 revolution in Tunisia.

Born around 1815 as the son of a Badawī doctor and *kāfī* of the Mādjir tribe in the district of *Thala*, he is said to have studied at the Great Mosque, became secretary to the *kā'id* of his tribe, al-'Arbī (Larbi) Bakkūsh, then *kāfī*, but was dismissed by the latter. When the Khaznadār government decided (December 1863) to double the *maḍjibā* tax, a revolt, starting in the south of March 1864, soon engulfed most of the country. Ibn Ghidhāhum was proclaimed "Bey of the People" by the Mādjir and recognised by some neighbouring tribes, probably thanks to his religious prestige (as an alleged *sharīf* and marabout of the Tidjāniyya), as well as to his promises. He killed the *kā'id* Bakkūsh and his entourage, yet appealed to the tribes for moderation. His movement and authority having declined by July, he accepted an offer of amnesty and obtained an estate for himself and tribal commands for his aides. On 26 July, 400 *shaykhs* and notables surrendered in the northwest after the government had promised to halve the *'ushr* tax, appoint native *kā'ids* instead of Mamlūks and abolish the constitution. Yet, the Khaznadār having merely played for time, Ibn Ghidhāhum took up arms again in the autumn, but in January his forces were crushed near Tebessa. He crossed into Algeria and was interned till January 1866. The chief of the Tidjāniyya recommended him to the French as one of his best *ahbāb* and as a learned man who had never mixed in politics. Hoping for the Tidjāni's intercession with the Bey, Ibn Ghidhāhum slipped back to Tunisia, but was caught and died in prison (10 October 1867). The significance of the rebellion and the personality and role of Ibn Ghidhāhum have been reconsidered since the thirties. M. Emerit sees the former as an "episode in the perennial struggle of the Badū against the settled population and beylical authority in general" (*RT* [1939], 227). In A. Temimi's view, Ibn Ghidhāhum lacked vision, resolve and a plan; he was carried along by the events rather than shaped them, and failed to embody the aspirations of the revolution; he betrayed them and dealt the latter a death blow (*ROMM*, vii [1970], 176).

**Bibliography:** further to references in the text: Ch. Monchicourt, *La région du Haut Tell en Tunisie*, Paris 1913, 230, 298, 318; M. Gandolphe, *Les événements de 1864 dans le Sahel*, etc. in *RT* (1918), 138-53; P. Grandchamp, *Documents relatifs à la révolution de 1864 en Tunisie*, Tunis 1935; J. Ganiage, *Les origines du protectorat français en Tunisie (1861-1881)*, Paris 1959, 226 f., 232, 248 f., 251, 262 f.; Ibn Abi 'l-Diyāf, *Ithāf ahl al-zamān bi-akhbār mulūk tūnis*

**IBN AL-HĀDJIDJ**, HAMDŪN B. 'ABD AL-RAḤMĀN AL-SULAMĪ AL-MĪRDĀSĪ AL-FĀSĪ (1174-1232/1760-1817), "one of the most outstanding scholars of the reign of Mawlay Sulaymān" (1206-38/1792-1823), according to E. Lévi-Provençal, *Les historiens des Choifa*, Paris 1922, 342, n. 5).

As the *fakīh* appointed to the Moroccan sultan, he filled the office of *muhtasib* of Fās, then of *kā'id* of the Gharb, before devoting a great part of his activities to literature. He is the author of several commentaries and glosses, of epistles of a religious character and of an account of the pilgrimage which he made, but also the author of a *maḡṣūra* [q.v.], of a poetic version of the *Hikam* of Ibn 'Aṭā' Allāh al-Iskandarī [q.v.], of a poem of nearly 4,000 verses in praise of the Prophet (with a commentary in 5 volumes) and a series of eulogies of the sultan. Some of his writings have been preserved in manuscript at Rabat (see Lévi-Provençal, *Les manuscrits arabes de Rabat*, Paris 1921, nos. 292 (5), 305, 337, 338, 434, 497 (11-12), and part of his poetic output (mss. 337 and 338 above; now K 963 and K 2707) has been gathered together into a *Diwān* lithographed at Fās and containing notably a certain number of *muwashshahāt*. This versifier, who still enjoys a certain celebrity, sometimes gave himself up to some curious pyrotechnics. M. Lakhdar (*Vie littéraire*, 283-4) sets forth a poem in 26 verses rhyming in *-di* and in the metre *basīṭ*, of which each hemistich is divided into four sections written successively in red, black, blue and black; if the blue column is removed, the metre *munsarīh* results, if the blue and the red, *muḡtabad*, and if the red alone, *madṭā makhbūn*.

The genealogy and the *manāḡib* [q.v.] of HAMDŪN Ibn al-Hādjidj were the subject of a monograph by his son Muḡammad al-Ṭālib (see Lévi-Provençal, *Choifa*, 342-5) called the *Riyāḍ al-ward* (ms. Rabat 396).

(ED.)

**IBN HĀTIM**, BADR AL-DĪN MUḤAMMAD AL-HAMDĀNĪ, state official and historian under the second Rasūlid sultan of the Yemen, al-Muzaffar Yūsuf (647-94/1249-95).

Ibn Hātim's name appears nowhere in the biographical literature of mediaeval Yemen, and neither the date of his birth nor that of his death is known. The last reference to him falls under the year 702/1302-3. However, from his history of the Ayyūbids and early Rasūlids in the Yemen, *al-Sim' al-ghālī al-ṭhaman fī akhbār al-mulūk min al-Ghuzz bi 'l-Yaman* (ed. G. R. Smith, *The Ayyūbids and early Rasūlids*, etc., GMS, N.S. xxvi/1, *The Arabic text*, London 1974), it is possible to cull some information concerning the man and his official life. He belonged to the Banū Hātim of Yām of Hamdān, who at the time of the Ayyūbid conquest of the Yemen in 569/1173 controlled the area of Ṣan'ā', the country's

chief town. He was thus an Ismā'īlī, though this proved no handicap to his rise to a high position in the staunchly Sunnī Rasūlid state under al-Muẓaffar Yūsuf. He was a member of the small cadre of some four or five officials employed by the sultan in the capacity of roving ambassador, personally representing him wherever in the country he was needed, now negotiating with recalcitrant tribes, now conveying a personal message from the sultan, at times even participating in military operations.

His official state position, however, did not restrict or hamper his historical writing in any way. His account of the Ayyūbid and first two Rasūlid sultans is a refreshingly impartial one, perhaps slightly biased towards his own family, the Banū Hātim, but containing much otherwise unknown information on this crucial period of Yemenī history, when the country was beginning to form a political unit after centuries of rule by numerous petty dynasties. He writes in the *Simṭ* of al-Muẓaffar Yūsuf's reign as a dispassionate eye-witness. We know too that he wrote *al-'Ikd al-ḥamīn fī akhbār mulūk al-Yaman al-muta'akhhirīn*, though this remains undiscovered. It was clearly a more general history of the Yemen, covering a longer time-span than the *Simṭ*.

*Bibliography*: see the edition mentioned above and Smith, *The Ayyūbids*, etc., Part 2, London 1978; idem, *The Ayyūbids and Rasūlids—the transfer of power in 7th/13th century Yemen*, in *IC*, xliii (1969), 175-88; Sir J. Redhouse and Muhammad Asal, *el-Khazrajī's History of the Resūlī Dynasty of Yemen*, GMS, iii, Leyden and London 1906-18.

(G.R. SMITH)

**IBN HISHĀM AL-LAKHMĪ** AL-SABTĪ, ABŪ 'ABD ALLĀH MUḤAMMAD B. AḤMAD B. HISHĀM B. IBRĀHĪM B. KHALAF, lexicographer, grammarian, *adīb* and versifier. He was probably born at Seville, and certainly died in that city in 577/1182, after having lived for a long time at Ceuta.

We know very little of his life, but his biographers list his masters and his pupils and indicate the titles of his works, amongst which one notes several commentaries; one may merely remark that these included a *sharḥ* on the *Maḥṣūra* of Ibn Durayd, which was especially appreciated by al-Ṣafadī (*Wāfi*, ii, 1301) and al-Baghḍādī (*Khizāna*, Būlāk, i, 490 = Cairo, iii, 105), *al-Fawa'id al-maḥṣūra fī sharḥ al-Maḥṣūra* (of which several mss. exist; see Brockelmann, S I, 172; partial ed. by Boysen, in 1828 [see MAḤṢŪRA]) and a *sharḥ* on the *Faṣṭḥ* of Tha'lab which already shows up Ibn Hishām's taste for the purity of the language (cf. al-Suyūṭī, *Bughya*, 20). There are extant a small quantity of verses on the various senses of the word *khāl* and above all, a treatise on the *laḥn al-'amma*, given this title by Ibn al-Abbār and al-Suyūṭī (for *m.h.n.* read *laḥn*), but otherwise called *Takwīm al-lisān* by al-Marrākushī, and given two different titles in the Escorial ms. 46, *K. al-Radd 'alā 'l-ḥubaydī fī laḥn al-'awāmm*, and ms. 99, *K. al-Madkhal/al-Mudkhal ilā takwīm al-lisān wa-ta'lim al-bayān*. This work, which provides precious information on Spanish and Moroccan Arabic, comprises two basic sections: in the first one, the author makes critical remarks on the parallel books of al-Zubaydī and Ibn Makkī [q.v.], defending at the same time actual usages with arguments drawn from the old lexicographers. The transitional part is brought about by means of an exposition of the terms which provide dialectical variants (*luḡāt*), amongst which speakers have a tendency to choose

the less good one and thus end up committing faults. The second section, now thereby introduced, deals with current faulty expressions caused by phonetic, morphological or semantic changes; unnecessary borrowings are mercilessly tracked down and replaced by the corresponding Arabic words. Incorrect forms are introduced by the formula "they say . . .", followed by "whilst the correct usage requires one to say . . ." or by an equivalent formula. The treatise ends with a series of proverbs drawn from classical poetry, but corrupted and deformed by the 'amma; the use of this latter term poses, as in all analogous works, a difficult problem, concerning which one should refer to the article LAḤN AL-'AMMA.

The last chapter has been edited by 'Abd al-'Azīz al-Ahwānī in *Mélanges Taha Husain* (Cairo 1962, 273-94); this same scholar had already published a study on the work and its author followed by a selection of western terms (*alfāz maghribiyya*) appearing in the second section (see *RIMA*, iii/1 [1376/1956], 133-57, and iii/2, 285-321). The remainder of this same section has been edited critically, with abundant annotation, and presented by M. El-Hannach as a *thèse du 3<sup>e</sup> cycle* at the University of Paris IV in 1977, but this has not yet been published.

It may be of interest to note that the *Madkhal* was put together as part of a fairly common process of which it is possible, for now, to follow the details. Thus the treatises of al-Zubaydī and Ibn Makkī inspired in Ibn Hishām various observations which he communicated to his pupils without actually putting them together in the form of a book; the notes which he left behind or which his pupils took were brought together in 607/1210 for a man named Ibn al-Shārī under the title of *K. al-Madkhal fī takwīm al-lisān*; at the beginning of the 8th/14th century, Muḥammad b. 'Alī b. Hānī' al-Lakhmī al-Sabtī (d. 733/1332; see al-Suyūṭī, *Bughya*, 82, and Pons Boigues, *Ensayo*, 319) arranged all these materials and "published" them under the title of *Inshād al-dawāl(l) wa-irshād al-su'āl*; in the course of this same century, this latter work was in its turn worked on by Ibn Khātima (d. 770/1365 [q.v.]), who called the résumé which he had made the *Irād al-la'āl min Inshād al-dawāl(l)*; finally, an unknown author extracted from this last avatar a section which G.S. Colin thought worthy of publication as a document (in *Hesperis*, xii/2 [1931], 1-32); it is the introduction of this extract which allows us to trace back this chain.

*Bibliography*: In addition to works already mentioned, see Ibn al-Abbār, *Takmila*, no. 1053; Ibn Dihya, *Muṭrib*, Cairo 1954, 183; Ibn 'Abd al-Malik al-Marrākushī, *al-Dhayl wa 'l-takmila*, ms. B. N. Paris 1256, f. 25; Suyūṭī, *Bughya*, 20-1; H. Derenbourg, *Catalogue*, i, 58; Pons Boigues, *Ensayo*, 280; Brockelmann, I, 308, F, 113, 375, S I, 541.

(CH. PELLAT)

**IBN KABAR**, ABU 'L-BARAKĀT, SHĀMS AL-RĪ'ĀSA AL-NAṢRĀNĪ, Copt from Egypt (d. between 720 and 727/1320-7) who was secretary to Baybars al-Manṣūrī [q.v.], author of the *Ḍubdat al-fikra*. Certain historians, e.g. al-Ṣafadī, followed by Ibn Ḥaḍjar and al-Makrīzī, allege that Ibn Kabār helped him compile his book. It is difficult, impossible even, to evaluate the importance of this help, for Baybars undeniably had a talent as historian and a most lively taste for books and chronicles, as attests clearly al-Mufaḍḍal b. Abī Faḍā'il, Ibn Kabār's contempo-

rary and co-religionist, and this view is shared by Abu 'l-Maḥāsīn Ibn Taghribardī.

Moreover, it is certain that Ibn Kabar made a résumé of Baybars al-Manṣūrī's history, the *Mukhtār al-akhbār*, the ms. of which is preserved in the Ambrosiana collection of Milan (Ms C 45 Inf.). The section of the Fātimids, together with part of the reign of al-Manṣūr Kālāwūn, is lacking in this manuscript, and the text stops abruptly in the year 702/1302.

Ibn Kabar's main work is a book on the ecclesiastical history of the Copts, *Kitāb Miṣbāḥ al-zulma wa-īdāḥ al-khidma*. This has been edited and translated by Dom Louis Villecourt, with the collaboration of Mgr. E. Tisserant and Gaston Wiet, in *Patrologia Orientalis*, xx/iv, Paris 1928. Ibn Kabar also left behind a Coptic-Arabic dictionary, published by Athanasius Kircher under the title *Scala magna*. A few others of his works remain unpublished.

*Bibliography*: al-Mufaḍḍal b. Abī 'l-Faḍā'il, *al-Manḥaj al-sādīd*, ed. Blochet, *PO*, xiii, xiv, xx, Paris 1919-28; Maḳrīzī, *Sulūk*, ed. (ABDEL HAMID SALEH)

**IBN AL-ḲAṬṬĀN**, a name well-known to historians of the mediaeval Muslim West and, as such, long thought to have been borne by only one person. There is, however, no doubt that it was the name of two different people who, in all probability, were father and son. Since nothing further can be said of this putative relationship, it seems prudent to speak of the two persons as the "Elder" and the "Younger".

1. **IBN AL-ḲAṬṬĀN THE ELDER**. This person is to be identified with one Abu 'l-Ḥasan 'Alī b. Muḥammad b. 'Abd al-Malik b. Yaḥyā al-Kutāmī al-Fāsī, a religious scholar and jurist from Fās, for whom we have only the date of his death, viz. 1 Rabī' I 628/7 January 1231. As all his biographers agree that he died in A.H. 628, he can hardly have been the author (as supposed by Lévi-Provençal and others after him) of the *K. Nazm al-djumāna* (see below), since the author of this work served the Almohad caliph al-Murtaḍā (reg. 646-65/1248-66). Of the early background of this Ibn al-Ḳaṭṭān, all we know is that he was of Cordovan origin. We can only assume that either he or his father and family had emigrated from Andalusia to Fās. In later life his importance seems to have lain in the prominence of his position in the Almohad hierarchy, for we are told that he was head of the *ṭalaba* in Marrakesh and that he enjoyed great prosperity in the service of the ruler (on the *ṭalaba* as a high-ranking class of Almohad dignitaries, and on Ibn al-Ḳaṭṭān in particular, see Hopkins, *Medieval Muslim government in Barbary*, 104 f. and 108, respectively). After the death of the caliph Abū Ya'qūb Yūsuf al-Mustaṣfir, Ibn al-Ḳaṭṭān the Elder fell victim to the Almohad power struggle which ended in the victory of Muḥammad 'Abd Allāh (al-'Ādil) over the caliph 'Abd al-Wāḥid

after only eight months' rule. Leaving Marrakesh in 621/1224, Ibn al-Ḳaṭṭān was able to return later, but in fact he seems never again to have been able to make a secure and permanent home there or indeed to lead a settled life. When he died, he was *kādī* of Sidjilmāsa, a city then in rebellion against the reigning caliph. Among writings attributed to this Ibn al-Ḳaṭṭān are a commentary on the *K. al-Aḥkām* of 'Abd al-Ḥaḳḳ al-Ishbīlī (confused with the *K. al-Aḥkām* of Ibn al-Ḳaṭṭān the Younger), a *Makāla fī 'l-awzān* and *al-Nazar fī aḥkām al-nazar*.

2. **IBN AL-ḲAṬṬĀN THE YOUNGER**, otherwise Abū 'Alī (and/or Abū Muḥammad) al-Ḥasan (or al-Ḥusayn) b. 'Alī b. al-Ḳaṭṭān, historian, jurist and traditionist. Unlike the Elder, this Ibn al-Ḳaṭṭān has, surprisingly, found no place in known biographies. If "b. 'Alī b. al-Ḳaṭṭān" is any guide, we may be right in supposing him to have been a son of the preceding Ibn al-Ḳaṭṭān. The dates of his birth and death are unknown; the most we can say is that he flourished in the reign of al-Murtaḍā (see above), whose favour he enjoyed and for whom he is said by Ibn 'Idḥārī to have written a history entitled *K. Nazm al-djumān wa-wāḍiḥ al-bayān fīmā salafa min akhbār al-zamān* (there are variants of the title) as well as a number of other works, viz. *K. Shijā' al-ghalal fī akhbār al-anbiyā' wa 'l-nusul*, *K. al-Aḥkām li-bayān āyātihī 'alayhī 'l-salām* (on *ḥadīth*), *K. al-Munādīāt*, and *K. al-Masmū'āt*. Of all these writings, only a part of the *Nazm* seems to have survived. Until this part was discovered, the work was only known through the use which other Maghribī writers had made of it, notably Ibn 'Idḥārī. The complete *Nazm* was, so far as can be gleaned, a large encyclopaedic work covering the history, and to some extent the geography, of North Africa and Spain from the Arab conquest to the author's own time. The extant portion, dealing with the period 500-33/1106-7 to 1138-9, bespeaks a tendentious "palace" chronicle, but it is valuable as it not only reproduces original official documents and quotes authors whose works are no longer known to us, but it also reports on the Fātimids in Egypt, giving information not to be found elsewhere.

*Bibliography*: J.F.P. Hopkins, *Medieval Muslim government in Barbary*, London 1958, loc. cit.; Maḥmūd 'Alī Makkī, *Djuz' min Kitāb Nazm al-djumān* (Muhammad V University Publications), Rabat n.d., but ca. 1966 (almost all the main references may be found in Makkī's introduction to this edition); on Abu 'l-Ḥasan, see I. 'Abbās, *Contributions to the material on the history of the Almohads, as portrayed by a new biography of Abū al-Ḥasan Ibn al-Ḳaṭṭān (628/1230)*, in *Akten des VII. Kongresses für Arabistik und Islamwissenschaft*, Göttingen 1976, 15-38.

(J.D. LATHAM)

**IBN KAYSĀN**, ABU 'L-ḤASAN MUḤAMMAD B. AḤMAD B. IBRĀHĪM, Baghdādī philologist who according to all the known sources, died in 299/311-12; this date is nevertheless challenged by Yāqūt who, believing that al-Khaṭīb al-Baghdādī is in error, opts for 320/932.

He was the pupil of al-Mubarrad and Tha'lab [q.v.], and is said to have brought together the doctrines of the grammatical schools of both Baṣra and Kūfa, though his own preference was for the former; he was moreover the author of a work, no longer surviving, a *K. al-Masā'il 'alā madhhab al-nahwīyyīn mimma khtalafa fīhī al-Kūfīyyūn wa 'l-Baṣriyyūn*. Abū Ḥayyān al-Tawḥīdī relates in his *Imtā'* (iii, 6) that he had written over his door "enter

and eat". In another, unspecified work, the same author (cited in particular by Yākūt and al-Suyūfī) describes the programme of his lecture courses and describes the crowd which surrounded him, leaving about a hundred mounts in front of the gate of the mosque where he was teaching, but Yākūt does not seem to take Abū Ḥayyan's account at its face value. In addition to the *K. al-Masā'il*, Ibn al-Nadīm attributes the following works to Ibn Kaysān: *al-Muḥadḍhab fi 'l-nahw*, *K. al-Shādhānī fi 'l-nahw*, *al-Mudhakkār wa 'l-mu'annath*, *al-Maksūr wa 'l-mamdūd*, *Mukhtaṣar al-nahw*, *al-Mukhtār fi 'l'al al-nahw*, *al-Hidjā' wa 'l-khatī*, *al-Wakf wa 'l-ibtidā'*, *al-Hakā'ik*, *al-Burhān*, *al-Kūwā'āl*, *Ma'ānī al-Kur'ān* and *Gharīb al-hadīth*, to which one should perhaps add *Ghalaṭ adab al-kātib*, *al-Lāmāt*, *al-Taṣarīf*, *al-Fā'il wa 'l-ma'fūl bihi*, cited by Yākūt, *Sharḥ al-ḥiwāl* (al-Anbārī) and a *Talkīb al-kawāfī wa-talkīb harakātihā*, which is doubtfully authentic. The *Kūtab Maṣābīh al-kitāb* (read the latter word thus) ascribed by A.J. Arberry, *Chester Beatty Library. Handlist of the Arabic manuscripts*, Dublin 1955, to Ibn Kaysān seems to be in fact by an author of Shīrī sympathies, the well-known Abū 'l-Ḳāsim al-Ḥusayn al-Wazīr al-Maghribī [see AL-MAGHRIBĪ]; see U.Y. Ismail, *A critical edition of al-Maṣābīh fī tafṣīr al-Qur'ān al-'azīm attributed to Ibn Kaysān al-Nahwī* . . ., Manchester Ph.D. thesis 1979, unpublished.

*Bibliography*: Ibn al-Nadīm, *Fihrist*, 81 (ed. Cairo 120); Khaṭīb, *Baghdādī*, *Ta'riḫ Baghdad*, i, 325; Kifī, *Inbāh*, ed. Cairo 1369-74/1950-5, iii, 57-9; Zubaydī, *Ṭabakāt al-nahwīyyīn*, ed. Cairo 1373/1954, 170-1; Anbārī, *Nuḥḥa*, ed. A. Amer, Stockholm 1963, 143; Yākūt, *Udabā'*, xvii, 137-41; Suyūfī, *Bughya*, 8; F. Bustānī, *Dā'irat al-ma'arīf*, iv, 484; Brockelmann, I, 111, S I, 170.

(CH. PELLAT)

**IBN KHALAF**, the name of a family, of whom the best-known two members are:

1. ABŪ GHĀLIB MUḤAMMAD B. 'ALĪ B. KHALAF, called Fakhr al-Mulk, vizier of the Būyids, born at Wāsiṭ on Thursday 22 Rabī' II 354/27 April 965, and killed by Sulṭān al-Dawla Abū Shudjā' Fanā-Khusraw on 27 Rabī' I 407/3 September 1016. The poets and scholars, to whom he had been extremely generous, composed for him a great number of poetic eulogies, and al-Karadī [q.v.] dedicated his *Fakhrī* and his *Kāfī* to him.

2. ABŪ SHUDJĀ' MUḤAMMAD AL-ĀSHRAF B. MUḤAMMAD B. 'ALĪ B. KHALAF, son of the preceding, whose date of birth is unknown, but he was killed in 466/1073-4 by Badr al-Dīamālī [q.v.], at the time when this latter arrived in Egypt at the summons of the Fātimid caliph al-Mustanshir. Abū Shudjā' was this caliph's minister on two occasions: firstly, for two days only, in Muḥarram 457/December 1064-January 1065, and secondly, at the end of the same month in the same year, and this tenure of office lasted till mid-Rabī' I of the same year/February 1065.

It seems that this minister should not be confused with 'Alī b. Khalaf al-Kātib [see the following article], despite some recent attempts at this identification which are conjectural and unjustifiable.

*Bibliography*: Ibn Khallikān, *Wafayāt*, ii, 85; Ibn al-Sayrafi, *Ishāra*, 53; Šābi', *al-Wuzarā'*, ed. Farrādī, *passim*; Ibn Mu'yassar, *Ta'riḫ Miṣr*, ed. Massé, ii, 15, 23, 33; Suyūfī, *Husn al-muḥādara*, ii, 203; Dawādārī, *Kanz al-durar*, vi, 382; Makrīzī, *Iti'āz*, ii, 271, 313, 333; Ibn al-Kalānīsī, *Dhayl*, 64; Šafadī, *Wāfī*, iv, 118; Yākūt, *Udabā'*, xviii, 260, xviii, 234; idem, *Buldān*, v, 350; Ibn Sa'īd,

*Mughrib*, section al-Ḳāhira, ed. Naṣṣār, 359; Ibn Taghrībardi, *Nudjūm*, iv, 242, 257; G. Shayyāl, *Maḍmū'a*, i, 114-5; A.H. Saleh, *A source de Qalqaṣandī*, Mawādd al-Bayān, *et son auteur*, 'Alī b. Ḥalaf, in *Arabica*, xx/2 (1973), 192-200. (ABDEL HAMID SALEH)

**IBN KHALAF**, ABŪ 'L-ḤASAN 'ALĪ B. KHALAF B. 'ABD AL-WAHHĀB AL-KĀTĪB, one of the great secretaries (*kuttāb*) of the Fātimids of Egypt (al-Kalkashandī, *Subh*, vi, 432; idem, *Daw'*, 402). The date of his birth is unknown, but it is known that in 437/1045-6 he was living in Egypt, where he wrote his work for the secretaries of the *dīwān al-mshā'*, his manual called the *Mawādd al-bayān*, which contains in particular model letters and official documents. An incomplete manuscript of this work has recently been identified in the Süleymaniye Library in Istanbul (Fatih 4128).

Ibn Khalaf was also the author of two works which he cites in his *Mawādd*, the *Ālat al-kuttāb* (fols. 162b and 166a) and a *Kūtab al-kharāj* (fols. 16a and 25b), but these have not come to light. The date of his death is uncertain. Al-Habbāl al-Miṣrī records, in his *Wafayāt al-Miṣriyyīn fi 'l-ʿaṣr al-Fātimī*, in Shawwāl 455 the death of a certain Abū 'l-Ḥasan 'Alī b. Khalaf al-Zayyāt (cf. *RIMA*, ii/2 [1956], 336-7), who could be our secretary.

*Bibliography*: In addition to references given in the article, see Ḥādīdjī Khalīfa, ii, 559; G. Shayyāl, *Maḍmū'āt*, i, 14-15; S.M. Stern, *Fatimid decrees*, 105; A.H. Saleh, *A source de Qalqaṣandī*, Mawādd al-Bayān, *et son auteur*, 'Alī b. Ḥalaf, in *Arabica*, xx/2 (1973), 192-200.

(ABDEL HAMID SALEH)

**IBN KIRĀN**, ABŪ 'ABD ALLĀH MUḤAMMAD AL-ṬAYYIB B. 'ABD AL-MADJĪD B. 'ABD AL-SALĀM B. KIRĀN (1172-1227/1758-1812), *fakīh* and littérateur of Fās. He received a traditional education from the local scholars, and himself taught rhetoric to numerous pupils, including Ibn al-Ḥādīdjī [q.v.], Ḥamdūn, Ibn 'Adjība, al-Kūhin [q.v.] and the sultan Mawlay Sulaymān (1205-38/1792-1823), who continually showed his high opinion of Ibn Kirān by consulting him and by entrusting to him, with other *fukahā'*, the applying of his ordinances. His work is largely preserved, and comprises commentaries on various sūras and other writings (mss. Rabat K 1373, K 1379, K 1673, K 2534), notably *al-Murshīd al-mu'īn 'alā 'l-ḍarūrī min 'ilm al-dīn* of Ibn 'Āshīr (lith. Fās 1296; ms. Rabat K 81), and also an *urđūza* on the logic of his pupil Ibn al-Ḥādīdjī (ms. Rabat 434). He also wrote glosses to Ibn Hishām's commentary on the *Alfyya* of Ibn Mālik (Fās 1315) and, in collaboration with three other scholars, a commentary on the forty *hadīths* of al-Nawawī (ms. Rabat 55). Amongst his original works, one might mention two short grammatical works on *law* (ms. Rabat D 938) and *kāla* (K 1072, 1373); an *urđūza* on metaphor (Fās 1310; the commentary of al-Būrī in ms. Rabat D 921); and a short work meant to exhort the faithful (K 1072 with some *responsa*).

His brother Muḥammad b. Abd al-Madjīd (d. 2 Muḥarram 1214/6 June 1799) has left behind an *urđūza* on *ir'āb* (ms. D 1348, with comm.), and his son Abū Bakr (d. 4 Djumādā II 1267/16 April 1851) was an *imām* at Fās.

**IBN AL-ḲUFF**, AMĪN AL-DAWLA ABU 'L-FARĀḌJ B. MUWAFFAḲ AL-DĪN YA'ḲŪB B. IŠHĀḲ, KNOWN AS AL-MALIKĪ AL-MAŠḤĪ (the Melkite Christian) AL-KARAKĪ, physician and surgeon.

He was born at Karak [q.v.] in 630/1233. His father, MuwaffaḲ al-Dīn Ya'Ḳūb, was a learned court clerk under the Ayyūbids, who excelled his peers in Arabic philology, literature, calligraphy, poetry and history. Ibn Abī Uṣaybi'a, in his *Uyūn al-anbā'*, Cairo 1882, ii, 273-4, gives the first and only complete, contemporary biography of Ibn al-Ḳuff, brief though it is. From it we learn that the family moved from al-Karak to Sarkhad in southeastern Syria, whither the father was transferred to work for the state, possibly ca. 643/1245. Becoming acquainted with Ibn Abī Uṣaybi'a, the father's relationship with the latter soon developed into a lifelong friendship. Upon request, Ibn Abī Uṣaybi'a gladly accepted to be Abu 'l-Farāḍj's first medical teacher, finding the latter a very intelligent student. Under this master, Abu 'l-Farāḍj mastered first of all the basic courses and doctrines of the healing art. He then took the advanced subjects of therapeutics and clinical medicine. When towards the middle of the century, the father again moved to Damascus for a new job there, Abu 'l-Farāḍj accompanied the family and continued his education at the Syrian capital. Besides medicine, he studied philosophy and logic, natural history, metaphysics and mathematics. Here also, no doubt, he obtained medical training at the city's hospitals. During the reign of the Ayyūbid al-Nāṣir Ṣālah al-Dīn Yūsuf (648-58/1250-60), Ibn al-Ḳuff was appointed as the first known military physician-surgeon at 'Aḍjlūn [q.v.]. There he stayed for several years, until he was summoned during the reign of the Mamlūk al-Zāhir Baybars (658-76/1260-77) to become the physician-surgeon at the Damascus citadel.

Ibn al-Ḳuff's fame seems to have spread widely, and he gained the respect of his colleagues and medical students. Upon requests from a number of them, he composed several works, including his best-known manual on surgery, *Umdat al-islāh fī 'amal ṣinā'at al-ḡarāh*, ed. Hyderabad 1356/1937. Other works still extant in manuscript include his text on the healing art, *al-Šifā' fī 'l-ḡibb*; his commentary on Ibn Sīnā's *al-Ḳānūn* on medicine *Šarḥ al-Ḳānūn*; his commentary on Hippocrates' *Aphorisms*, *al-Uṣūl fī Šarḥ al-fuṣūl*, which deserves an independent investigation; and his compendium on health care and the treatment of diseases, *Ḍjāmī' al-gharad fī ḥifẓ al-ṣiḥḥa wa-daf' al-marad*. He died at Damascus in 685/1286 at a relatively early age.

(S.K. HAMARNEH)

**IBN KULLĀB**, 'ABD ALLĀH B. SA'ĪD B. MUḤAMMAD AL-ḲATTĀN AL-BAṢRĪ (died 241/855?), foremost representative of a compromising theology during the time of the *mihna* [q.v.]. Nothing is known about his life. He contradicted the Mu'tazilī doctrine of *khalk al-Ḳur'ān* by introducing a distinction between the speech of God (*kalām Allāh*) and its realisation: God is eternally speaking (*mutakallim*), but he can only be *mukallim*, addressing himself to somebody, if this addressee exists. Speech is a permanent and unchangeable attribute (*ṣifa* or *ma'nā*) which subsists in God; but when, in revelation, it becomes speech to somebody, it is subject to alteration: it may be represented in various languages and must adapt itself to various situations by taking the form of an order, a statement etc. The expression *khalk al-Ḳur'ān* is thus misleading: it is true insofar as the "trace" (*rasm*) of God's speech is concerned, its reproduction (*ḥikāya*) in historical reality, especially in a Holy Scripture, and its subsequent recitation (*ḳur'ān* = *ḳirā'a*), which is a meritorious action (*kaṣb*) performed by man; but it does not allow for the conclusion drawn by the Mu'tazilī that God is only speaking through temporal speech and not *per se*. That there is uncreated speech is proved by the word *kun* "Be", by which God created everything else and which can therefore not be created itself. This uncreated speech does not yet consist of letters and sounds; it can therefore not be heard by anybody (in contradiction to *sūra IX*, 6 which had to be interpreted metaphorically). The only exception was Moses, to whom God said: "I have chosen thee, so listen to what is suggested" (XX, 13); he heard God speak to him directly. But we do not have any information about how Ibn Kullāb explained this kind of perception.

God's speech is eternal not by itself (which would mean that one attribute or "accident", namely eternity, were to subsist in another one, namely speech), but by the eternity of God's essence. God's attributes are related to each other in a most intimate way: they are "neither identical nor not identical". They share common features, but they are not interchangeable. The same must therefore be said with regard to their relationship with God's essence: *lā ḥiya huwa wa-lā ḥiya ghayruhā*. They are not entirely different from Him, but also not completely identical with Him, i.e. no mere "names" in the sense of 'Abbād b. Sulaymān [q.v.], the Mu'tazilī with whom Ibn Kullāb held frequent discussions. There was no necessity, in this context, for a distinction between *ṣifāt al-dhāt* and *ṣifāt al-fī'l*: God's will, which was considered a "factual quality" and as such temporal by the Mu'tazilīs, is eternal according to Ibn Kullāb, likewise His kindness (*karam*) and His generosity (*ḡiād*). His friendship (*uwalāya*) and His enmity (*'adāwa*, *sakht*). The formula was also applied to the *ṣifāt khabariyya*, attributes which are only accepted because they form part of revelation, i.e. the anthropomorphisms: God's face, His hands, His eye, etc., are "neither identical with Him nor not identical with Him". We do not know what this meant exactly, but we hear that God is "sitting on His throne" with His essence, not as a body and not in a definite place.

Ibn Kullāb did not restrict God's attributes to those mentioned in the *Ḳur'ān*. An attribute may be inferred from any description (*wasf*) given about God. But there are some of them which do not fit into the "formula". God is eternal and thus possesses eternity (*kidam*, which does not belong to the

Qur'ānic vocabulary), but this eternity must be directly identical with Him because nothing eternal exists besides Him. Similarly, His being can in no way be "not identical" with Him. The character of God's divinity was discussed among Ibn Kullāb's followers.

In other theological problems, Ibn Kullāb supported the view of the *aṣḥāb al-ḥadīth*. He believed in the *ru'ya bi'l-abṣār*, in the final salvation of all Muslims in spite of their sins, and in a moderate form of predestination. Man has no immanent capacity of acting (*kuḍra*); he only receives it in the moment of the performance. He may use it for the contrary of his action, i.e. for sin as well as for obedience, but this freedom of choice does not influence the salvational status determined by God from the beginning.

Ibn Kullāb's *ṣifāt* theory was prepared by earlier speculations inside and outside the Mu'tazila, especially by discussions between Abu 'l-Hudhayl [q.v.] and Hishām b. al-Hakam [q.v.] and by the ideas of the early Zaydī theologian Sulaymān b. Djarīr al-Rakkī (for whom cf. W. Madelung, *Der Imām al-Qāsim ibn Ibrāhīm*, 61 ff.). He was, however, the first to elaborate them into a coherent system which corresponded to the tenets of the *aṣḥāb al-ḥadīth*. He also apparently put them on a broader basis by adding, e.g., a theory of human speech which worked with the same differentiation between speech as such and its reproduction through letters and sounds. He wrote several books, among them a *K. al-Ṣifāt* and a refutation of the Mu'tazila. Only a small fragment of one of them has been found up to now (cf. *Oriens*, xviii-xix [1965-6], 138 f.). Among his adherents in Baghdād was the mystic al-Hārith al-Muḥāsibī (died 243/857); in Nišāpūr his doctrine seems to have been supported by al-Ḥusayn b. al-Faḍl al-Baḍjalī, a contemporary who was mainly known as a commentator of the Qur'an. The orthodox reaction under al-Mutawakkil and the prohibition of *kalām* in 238/852-3 seriously hampered the expansion of the school. Theologians who held similar ideas were attacked by Ahmad b. Ḥanbal and his disciples as *Lafziyya*, people who believed in the createdness of the pronunciation (*lafz*), i.e. the recitation of the Qur'an. But two generations later, Ibn Kullāb's ideas were renewed by Ahmad b. 'Abd al-Raḥmān al-Kalānisi from Ray and by his contemporary al-Ash'arī (died 324/936 [q.v.]). The Kāḍī 'Abd al-Djabbār (died 415/1025) still polemicalises much more against the Kullābiyya than against al-Ash'arī, and seems not always to distinguish sharply between them. But al-Mukaddasī notes already in ca. 375/985 that the Ash'ariyya school was superseding its predecessor. The last traces of the school disappear in the 5th/11th century.

**Bibliography:** The main information about Ibn Kullāb's doctrine is found in Ash'arī's *Makālāt al-Islāmiyyin*, cf. index s.v. 'Abd Allāh b. Sa'īd, cf. also Ibn al-Nadīm, *Fihrist*, ed. R. Taḡjaddud, Tehran<sup>2</sup> 1973, 230, ll. 6 ff. These and other sources are analysed in J. van Ess, *Ibn Kullāb und die Mūhna*, in *Oriens* xviii-xix (1965-6), 92 ff. See also M. Allard, *Le problème des attributs divins*, Beirut 1965, 146 ff.; W.M. Watt, *The formative period of Islamic thought*, Edinburgh 1973, 286 ff.; F.E. **IBN MANGLĪ**, MUḤAMMAD AL-NĀSIRĪ, a Mamlūk officer of the guard [see HALKA] of Sultan al-Malik al-Ashraf Sha'bān (764-78/1362-77 [q.v.]), known as the author of several works on the art of war and of a treatise on hunting.

According to a laconic item of information given by Ibn Manglī himself, he must have been born in Cairo at the opening of the 8th/14th century, between the years 700 and 705/1300-6. As his arabised name shows (perhaps originally Mōngli), his father was a Kīpčak [q.v.], who had been brought at a tender age to the Mamlūk training school and recruited to the corps of the Bahriyya [q.v.] under Sultan al-Malik al-Nāsirī Nāsir al-Dīn Muḥammad [q.v.], who held three separate periods of power between 693/1293 and 741/1341; this is the origin of the title of affiliation, al-Nāsirī, applied to him. Our author fell therefore into the class of *awlād al-nās* [q.v.] "sons of the people of high rank", which allowed him to become a member of the sultan's guard of honour. After having undergone the wide-ranging military education of the "youths of good family", he ended his long career as a military man, in this same élite corps, with the high rank of *muḥaddam* (= colonel or brigadier?), ensuring him comfort of life and respect. To his cultural interests, Ibn Manglī added a deep religious sense, almost asceticism; at the end of his treatise on hunting, he thanks God for allowing him not to take a wife, the source of unhappiness. It is unknown whether his own death preceded or followed the ignominious end of his master, strangled to death.

Ibn Manglī's works on the art of war and on military and naval tactics are only known to us through titles and citations, but his treatise on hunting, put together in 773/1371-2, is preserved in a unique manuscript (Paris, B.N., Ar. 2832, ff. 53) called *Uns al-malā bi-waḥsh al-falā* "The sociable contact of the élite people with the wild beast of the open desert". The author did not intend to compile an original work, but, so he says, conceived the idea of it as an abridgement (*mukhtaṣar*) of the great encyclopaedia on ventry *al-Djamhara fi 'ulūm al-bayzara* "Compendium on the arts of falconry" (Escorial, Ar. 903; Istanbul, Aya Sofya 3813; Calcutta, Asiatic Soc., Ar. 865 M9) written in 638/1240 by the Baghdādī author Abu 'l-Rūḥ 'Isā b. 'Alī b. Ḥassān al-Asadī. To the basic fabric of al-Asadī's work Ibn Manglī was able to add, in addition to the fruits of his own long experience on the subject, references to the best authors, such as al-Damīrī, al-Djāhiz, Ibn Kūtayba, Ibn Waḥshīyya, Ibn Zuhr, al-Rāzī and many others. One is grateful to him for not having conceived of it as an *adab* [q.v.] work; his clear, precise and curt style reflects the military man, whilst certain dialectical expressions show the contemporary language.

In 1880 one Florian Pharaon, a person of Levantine origin, brought out an edition and translation, under the title *Traité de vénerie* (Paris, pp. 154 text, 143 tr.), of Ibn Manglī's work; but the manuscript which he used, very lacking and defective, is not the Paris one. As a result, one wonders whether this Pharaon knew Arabic and anything about hunting at all, since the work of the Mamlūk author is so mangled.

As well as the great interest which Ibn Manglī's treatise holds for the devotee of the chase and the specialist on animals, the historian can glean from it a host of details on the horses, the style of riding and the handling of weapons as known amongst

the Mamlūks of the 8th/14th century, for whom hunting served as a school for war.

**IBN MATTAWAYH**, ABŪ MUḤAMMAD AL-ḤASAN B. AḤMAD, Mu'tazilī theologian. Virtually nothing certain is known about his life beyond that he was a student of Kādī 'Abd al-Djabbār (d. 415/1025) in Rayy and survived him. His grandfather Mattawayh has been erroneously identified, on the basis of the title page of Houben's edition of his *al-Madjmū' fi 'l-muḥīt bi 'l-taklīf*, as 'Alī b. 'Abd Allāh b. 'Uṭba (read 'Aṭīyya) b. Muḥammad b. Aḥmad al-Nadjrānī, who was rather the scribe of one of the manuscripts of this book. The death dates given, without mention of a source, by Houben (469/1076) and by 'Abd al-Karīm 'Uṭhmān (468/1075) do not appear reliable. There is no evidence in his extant works that he survived his teacher for over half a century. His *K. al-Tadhkira* was evidently composed soon after 'Abd al-Djabbār's death, for none of the latter's students except Abū Muḥammad b. al-Labbād is mentioned in it, while Abū Rāshid al-Naysābūrī (who cannot have survived 'Abd al-Djabbār very long) quotes it in his *K. Ziyādāt al-sharḥ*. There is a possibility that he is identical with, or related to, the Ibn Mattawayh or "Sibī Mattūya" lampooned by the vizier al-Ṣāhib b. 'Abbād (d. 385/995), 'Abd al-Djabbār's patron in Rayy, in some obscene verses, especially since one of the verses seems to allude to his belonging to the Mu'tazila (see al-Tha'ālibī, *Yatima*, iii, 101 f.; Yāqūt, *Uḍabā'*, ii, 342).

Ibn Mattawayh generally set forth the doctrine of his teacher 'Abd al-Djabbār, whose *K. al-Muḥīt bi 'l-taklīf*, a comprehensive Mu'tazilī theology, he paraphrased, commented upon and, in a few points, criticised in his *K. al-Madjmū' fi 'l-muḥīt bi 'l-taklīf* (vol. I edited by J.J. Houben, Beirut 1965, and by 'Umar al-Sayyid 'Azmi, Cairo 1965). Also extant is his *K. al-Tadhkira*, a work in two volumes on the nature of substances and accidents (vol. I edited by Sāmī Naṣr Luṭf and Fayṣal Badīr'ūn, Cairo 1975). A commentary on it by an anonymous author writing ca. 570/1174-5 is preserved in manuscript (see S.M. Dānīshpazhūh, in *Nashriyya-yi Kitābkhānāyi Markazī-yi Dānīshgāh-i Tūhrān*, ii [1341/1962], 156 f.). His *K. al-Kīfāya* is quoted in Ibn Abī 'l-Ḥadīd's *Sharḥ Nahj al-balāgha*. In it he argued at length for the superior excellence of 'Alī over Abū Bakr. Going beyond any previous Mu'tazilī position, he affirmed the impeccability (*iṣma*) of 'Alī but maintained, against the Imāmī Shī'ī doctrine, that impeccability was no prerequisite for the validity of the imāmate. A *K. al-Tahrīr* by him is quoted in Maḥmūd b. al-Malāḥimī's *K. al-Mu'tamad fi usūl al-dīn*.

*Bibliography:* al-Ḥākīm al-Djushamī, *Sharḥ al-'uyūn*, in *Faḍl al-'itizāl wa-tabaḳāt al-Mu'tazila*, ed. Fu'ād Sayyid, Tunis 1393/1974, 389; Ibn al-Murtada, *Ṭabaḳāt al-Mu'tazila*, ed. S. Diwald-Wilzer, Wiesbaden 1961, 119; Sezgin, *GAS*, i, 627; 'Abd al-Karīm 'Uṭhmān, *Kādī 'l-kudāt 'Abd al-Djabbār b. Aḥmad al-Hamadhānī*, Beirut 1386/1967, 51.

**IBN MIKSAM**, MUḤAMMAD B. AL-ḤASAN B. YA'KŪB B. AL-ḤASAN B. AL-ḤUSAYN B. MUḤAMMAD B. SULAYMĀN

B. DĀWŪD B. 'UBAYD ALLĀH B. MIKSAM, ABŪ BAKR AL-'AṬṬĀR AL-MUKRĪ' AL-NAḤWĪ, who lived from 265/878-9 until 354/965, was one of the most learned experts in *kirā'a* [q.v.] and also noted for his knowledge of Arabic grammar as practised in the school of Kūfa. According to his contemporaries, his only fault was that he, when teaching the Qur'an, instructed in various readings (*kirā'āt*) which were not agreed upon by the majority of scholars of his days (*idjmā'*). Thus, instead of *nadjjyyan* in XII, 80, he read *nuḍjabā'a*, which did not make sense in the context. He tried to justify his controversial readings with grammatical arguments. This evoked the scorn of other Qur'an teachers, and the matter was brought to the attention of the sultan who demanded that he recant. Ibn Miksam yielded to the pressure, but in other reports it says that he abided by his readings until his death. Apparently this caused some concern with the theologians of his days in regard to those ignorant people who were taken with his teachings and, subsequently, led astray. The whole episode bears a strong resemblance to what happened one year later to Ibn Shanabūdī (d. 329/939 [q.v.]). Yāqūt mentions the titles of eighteen books attributed to Ibn Miksam, mainly dealing with Qur'an and the Arabic language, but also including a refutation of the Mu'tazila. All of these seem to have been lost.

*Bibliography:* Nöldeke-Schwally, *Gesch. des Qurans*, index s.v.; al-Khaṭīb al-Baghḍādī, *Ta'rikh Baghdād*, ii, 206 ff.; Yāqūt, *Uḍabā'*, vi, 498-501; Ibn al-Djazarī, *Ghāyat al-nihāya*, ii, 123 ff.; Ibn al-Anbārī, *Nuzhat al-alibbā'*, 360-3; Ibn Ḥadjar, *Lisān al-mizān*, iv, 130 f.

(G.H.A. JUVNBOLL)

**IBN MĪTHAM**, ABŪ 'L-ḤASAN 'ALĪ B. ISMĀ'ĪL B. SHU'AYB B. MĪTHAM (often read as al-Haytham) B. YAḤYĀ AL-TAMMĀR (whence the less common name for him, IBN AL-TAMMĀR), AL-ASADĪ (al-Ṣābūnī, according to Ibn Ḥazm, *Fiṣal*, iv, 181), *Imāmī theologian* of the 2nd/8th century.

Mītham was a Companion of the Prophet (Ibn Ḥadjar, *Isāba*, no. 8472) who had adopted the cause of 'Alī b. Abī Ṭālib and had settled at Kūfa, where his great-grandson was born at an uncertain date; nor is the date of his death known. Having left his natal town for Baṣra, 'Alī b. Ismā'īl frequented the great Mu'tazilī scholars of the time, especially Abū 'l-Hudhayl and al-Nazzām [q.v.], with whom he engaged in controversy, but apparently without great success (cf. al-Khayyāt, *Intiṣār*, index, who states that he was under the influence of the young (*aḥdāth*) Mu'tazilīs). Al-Mas'ūdī, in *Murūj*, vi, 369 = § 2566, mentions him at the head of the theologians who took part in a colloquium organised by Yaḥyā b. Khālid b. Barmak on *'iṣḥāq* [q.v.], and records (vi, 371 = § 2569) the presence there of Hishām b. al-Hakam [q.v.]. The latter, who died in 179/795-6, is considered as the main representative of Imāmī theology in his time, and Ibn Mītham did not enjoy a parallel fame; but it is probable that Ibn Mītham was his elder, since he is cited before him by Ibn al-Nadīm, *Fihrist*, ed. Cairo, 249, who states that he was the first to formulate the doctrine of the imāmate, and attributes to him a *Kutāb al-Imāma* (called *al-Kāmil*) and a *K. al-Istihkāk*. If al-Nawbakhtī (*Firāk al-Shī'a*, 9) is to be believed, this political doctrine may be summed up in the following manner: 'Alī was the most meritorious (*afḍal*) after the Prophet, and the community committed an error in choosing Abū Bakr and 'Umar, but did not however fall into sin; on the other hand, 'Uṭhmān was to be rejected (*takfīr*). For his part,

al-Ash'arī, *Maḳālāt*, 42, 54, 516, delineates the main outlines of his theological doctrine: the Divine Will is, for him, as for Hishām, a moving force (*haraka*), but for him, a moving force external to God, which moves Him. In regard to faith, this consists essentially in respect for the divine obligations; whoever infringes them loses the quality of *mu'min* and becomes a *fāsik*, without however being wholly excluded from the community, since he can marry within it and inherit.

**IBN AL-MUBĀRAK AL-LAMAṬĪ** [see AL-LAMAṬĪ].  
**IBN MUḲBIL**, ABŪ KA'ĀB (Abu 'l-Ḥurra in Ibn Durayd's *Ishūkāk*, 12) TAMĪM b. UBAYY b. MUḲBIL b. al-'Adjlān al-'Amirī (i.e. the 'Amir b. Ṣa'ṣa'a; see Ibn al-Kalbī-Caskel, Tab. 101), Bedouin poet of the *muḳḥaḍram*, who is said, like many other people of his age, to have lived 120 years (although al-Sidjīstānī does not cite him in his *K. al-Mu'ammarin*). He died after the battle of Ṣiflīn (37/657), to which he alludes in one of his poems (*Diwān*, 345), probably in Mu'āwīya's reign and in any case, at a time when al-Akḥṭal [q.v.] had already made himself known to him.

Ibn Muḳbil seems to have led the rather monotonous life of the Bedouins of his time, and his biographers, eager for pieces of information, record hardly any striking facts. They give prominence to his marriage to his father's widow, al-Dahmā', whom he had to divorce in conformity with the laws of Islam (Ibn Ḥabīb, *Muḥabbar*, 325-6), but he long regretted this, judging by the numerous verses where her name is mentioned (see *Diwān*, index). When he had reached an advanced age, he asked for hospitality from a certain 'Aṣar al-'Uḳaylī, who had two daughters; these last mocked him, because he was blind in one eye, so their father compelled one of them, Sulaymā, to marry him (*Diwān*, 76-7). As a good Bedouin poet, Ibn Muḳbil mentions several women in the *nasīb* of his poems, and in particular a certain Kabsha/Kubaysha (see *Diwān*, index), but of course, no precise information can be drawn from this. Although Ibn al-Kalbī does not mention any progeny of his, he is said to have had a dozen children (Ibn Rashīk, *Umda*, ii, 291), all poets in their turn, and al-Bakrī (*Mu'djam mā sta'djam*, i, 131) adds the name of an Umm Sharik who is said to have transmitted her father's verses.

Another fact lacking from his life story is an exchange of *hiḍā'a* [q.v.] verses with a poet who was a partisan of 'Alī b. Abī Ṭālib, al-Nadjāshī [q.v.]; the latter had attacked his tribe in the time of 'Umar b. al-Kḥaṭṭāb, and the dispute was brought before the caliph, who first of all shrank back from delivering a judgment but was subsequently forced to throw al-Nadjāshī into jail (this happening is recorded by numerous authors, in particular, Ibn Ḳutayba, *Shīr*, 290; al-Bakrī, *Faṣl al-makāl fī sharḥ Kitāb al-amṭhāl*, Beirut 1391/1971, 310-11; Ibn Rashīk, *Umda*, i, 37-8; al-Ḥuṣrī, *Zahr al-ādāb*, i, 19-20; al-Baghdādī, *Khizāna*, Būlak, i, 113 = Cairo, i, 214-15; etc.). The two poets exchanged insults over a period of years, and once again one sees Ibn Muḳbil replying to his enemy, who had attacked Mu'āwīya after the battle of Ṣiflīn (*Diwān*, No. 42).

He had previously expressed pro-Umayyad sentiments in an elegy inspired by the murder of 'Uṭhmān (*Diwān*, no. 3), but apart from his polemics with al-Nadjāshī, he seems to have been uninterested in political affairs and to have held aloof from addressing eulogies to highly-placed personages. Hence if *madīh* [q.v.] is little represented in his *diwān*, boasting poetry (*fakhr*), personal or tribal, abound on the other hand. As a Bedouin poet, he defends naturally the Bedouin qualities such as generosity, contempt for riches, courage and endurance; the main characteristic of his work is indeed description (*wasf*), of the desert, atmospheric phenomena, the camel, wild animals, and especially, the arrows (*kidāh*) used in the gambling game called *mayisir* [q.v.], to such a point that he became proverbial for them and one spoke of the *kidh Ibn Muḳbil* (Ibn Ḳutayba, *Shīr*, 427). His work was exploited by the philologists (Sībawayh cites him ten times; see also, e.g., al-Mubarrad, *Kāmil*, 498; al-Baghdādī, *Khizāna*, Būlak, i, 111-13 = Cairo, i, 211-15, *shāhid* 32, etc.), and because of the number of place names in his poetry, he was a source for the compilers of geographical dictionaries (Yāḳūt cites him 142 times in the *Mu'djam al-buldān*).

He was reproached basically because he regretted too much the pre-Islamic times and found himself ill at ease (Ibn Sallām, *Ṭabaḳāt*, 125; see *Diwān*, 129-41), and it may be because of this that the judgments of the critics on him differ considerably. Ibn Sallām, 119, places him in the fifth class of the *Djāhiliyya* poets with *Khidāsh* b. Zuhayr, al-Aswad b. Ya'fur and al-Muḳḥabbal b. Rabī'a, who are not remarkable as poets. Most curiously, al-Akḥṭal, whom he had in fact attacked (*Diwān*, 109-12, 312-14), is said to have delivered a very favourable verdict on him (*Ṭha'lab*, *Maḍjālis*, 481; Ibn Rashīk, *Umda*, i, 80), whilst al-Asma'ī [q.v.] did not consider him at all as one of the *fuhūl* (al-Marzubānī, *Muwashshah*, 80); this severe judgment did not however prevent this same scholar from collecting together his *Diwān*, of which other recensions were made by Abū 'Amr al-Shaybānī, al-Tūsi, Ibn al-Sikkīt and al-Sukkarī (*Fihrist*, ed. Cairo, 224) and a commentary written by Muḥammad b. al-Mu'allā al-Azdi (Yāḳūt, *Udabā'*, xix, 55). One at least of these recensions was known in Ifrikiya, as the *Umda* of Ibn Rashīk and the *Mas'ūl al-intikād* of Ibn Sharaf (who adjudged Ibn Muḳbil's poetry as archaic and solidly constructed) attest in particular, and also in al-Andalus (see Ibn Ḳhayr, *Fahrāsa*, 397), but it is only recently that there has been discovered at Çorum [see ÇORUM] the manuscript of an unidentified recension. A very careful edition of the *Diwān* has been done by 'Izzat Ḥasan (Damascus 1381/1962), to which he has appended a *Ḍḥayl* and various highly useful indices; another ed. by Ahmet I. Türeker, Ankara 1965.

*Bibliography*: The main sources have been given in the article; 'Izzat Ḥasan's introduction to the *Diwān* contains the sparse biographical details which are known and a study of Ibn Muḳbil's works. See further Ziriklī, *A'lām*, s.v.; Wahhābī, *Marādīf*, i, 123-5, where some new references may be found. (CH. PELLAT)

**IBN NĀDJĪ**, ABŪ 'L-KĀSIM/ABU 'L-FADL b. 'ISĀ b. NĀDJĪ AL-TANŪKĪ, *kādī*, preacher and biographer, who was born and who died at al-Ḳayrawān (ca. 762-837 or 839/ca. 1361-1433 or 1435). He studied in his natal town and in Tunis, and then filled various posts as *kādī* and as *khāṭib* (in *Djarba*, Beja, Lorbeus, Sousse, Gabès, Tebessa and al-Ḳayra-

wān), and put together commentaries on *fiqh* works, in particular, on the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī (this *sharḥ* was printed at Cairo 1914, 2 vols.). However, his fame stemmed especially from a collection of biographies of religious scholars of his natal town from its origins till the 9th/15th century, the *Ma'ālim al-īmām fī ma'rifaṭ ahl al-Ḳayrawān*, only the part with the notices on the 8th/14th century being completely from his own pen; and the opening is in reality a borrowing from a collection by a predecessor, al-Dabbāgh [q.v. above].

*Bibliography:* Aḥmad Bābā, *Nayl al-ibtihādī*, 223;

Ibn al-Ḳāḍī, *Durrat al-ḥidjāl*, No. 1330; Introd. to Ibrāhīm Shabbūh's ed. of the *Ma'ālim*; see also the *Bibl.* to AL-DABBĀGH. (Ed.)

**IBN NĀSĪR**, the name, nowadays replaced by AL-NĀSĪRĪ, of a Moroccan family who founded the branch of the Shādhiliyya order [q.v.] known as Nāsiriyya and founded its headquarters at the *zāwiya* of Tamgrūt [q.v.] in southern Morocco. The numerous biographical sources, published and unedited, as well as a monograph on the family, the *Tal'at al-muḥṣṭarī* (Fās 1309) by Aḥmad al-Nāsiri al-Salāwī, allow its history to be traced easily and allow a genealogical tree to be constructed; the reader will find information on this in the article AL-NĀSIRIYYA, and there will merely be given here some information on those members of the Banū Nāsir who took part in a conspicuous fashion in literary and intellectual life over the last four centuries.

1. AL-ḤUSAYN b. MUḤAMMAD b. Aḥmad b. Muḥammad b. Husayn b. Nāsir b. 'Amr b. 'Uṭhmān al-Dar'ī (d. 1091/1680) succeeded his father (d. 1052/1642) as head of the *zāwiya* of Ighlān (a few miles from Zagora). This *zāwiya* was, however, definitively abandoned after an outbreak of plague which broke out in 1091/1680, of which al-Ḥusayn was himself a victim; he had made three journeys to the East and had composed a *Fahrasa* extant at Rabat (ms. 506j).

2. His elder brother, Abū 'Abd Allāh MAḤAMMAD b. MUḤAMMAD (1015-85/1606-74) had left the Ighlān *zāwiya* in 1040/1631 in order to settle in the one at Tamgrūt, which he now headed; according to the most reliable tradition, it was he who founded the Nāsiriyya order. He wrote several works of *fiqh*, some poetry, letters and *adwiba* on points of law.

3. Maḥammad's son AḤMAD (1057-1129/1647-1717) succeeded his father as head of the order. He made the pilgrimage four times, and utilised these occasions to establish branches of the order in various parts of North Africa, as far as Egypt, and composed concerning his pilgrimage of 1121/1709-10 a voluminous *Rihla* (lith. Fās 1320; partial tr. A. Berbrugger, in *Exploration scientifique de l'Algérie*, ix, 1846, 165 ff.); this travel account has a certain interest because the author adds his personal observations on the regions which he passed through and records events of some importance, in addition to his mention of his itineraries and the religious personages whom he met en route. Since Aḥmad left behind no children, the headship of the *zāwiya* passed to the descendants of his brother Muḥammad al-Kabīr.

4. Abū 'Abd Allāh MUḤAMMAD (al-Makkī) b. Mūsā b. Muḥammad (al-Kabīr) b. Maḥammad succeeded his father, who died in 1142/1729. The task of inspecting the order's branches in the various towns of Morocco led him to write a travel narrative, *al-Rayāhin al-wardīyya fī l-rihla al-Marrākushīyya* (ms. Rabat 88 G, 1-83), but he also left behind some poetry and several biographical works, amongst

which may be noted the *Faṭḥ al-malik al-Nāsir fī idjāzāt marwīyyāt Banī Nāsir* (ms. Rabat 323 K) on the *idjāzāt* received by his forebears, and above all, *al-Durar al-muraṣṣa'a fī akhbār a'yān Dar'a* or the *Kashf al-ra'wa fī l-tarīf bi-sulahā' Dar'a* (ms. Rabat K, 265 and 88 G, 84-116), finished in 1152/1739, which traces the history of the Nāsiriyya order. He died after 1170/1756.

5. Abū 'Abd Allāh MUḤAMMAD b. ABD AL-SALĀM b. 'Abd Allāh b. Muḥammad (al-Kabīr), who died in 1239/1823. He made the pilgrimage to Mecca twice and wrote two accounts of these. The autograph ms. of the first, *al-Rihla al-kubrā*, is extant in the Royal Library at Rabat (no. 5658); the author adds his own personal observations and is not afraid to contradict his predecessors (notably al-'Ayyāshī and al-'Abdarī [q.v.]). He further left behind *al-Mazāyā fī-mā ḥadathā/uhditha min al-bida' bi-Umm al-Zawāyā*, a *Fahrasa* (ms. Rabat 3289 K), a commentary on the 40 *ḥadīths* of Maḥammad al-Djawharī (ms. Rabat 137 Q) and some *responsa* on some cases in point, the *Kaṭ' al-watīn min al-marāk fī l-dīn* (ms. Rabat 1079 D, fols. 107-15).

6. It is convenient, finally, to note that the famous author of the *K. al-Istikṣā*, AḤMAD AL-NĀSIRĪ [see AL-SALĀWĪ] was a direct descendant of Ibn Nāsir.

*Bibliography:* To the works by members of the family cited above, one should add the great biographical collections of Moroccan authors like Ifrānī, *Safwat man intashar*, lith. Fās n.d.; Ḳādirī, *Nashr al-mathānī*, Fās 1310/1892; Muḥammad al-Kattānī, *Salwat al-anfās*, lith. Fās 1316; 'Abd al-Ḥayy al-Kattānī, *Fihris al-fahāris*, Fās 1346-7/1927-9; the manuals of Moroccan literature; Ibn Sūda, *Dalīl mu'arrikh al-Maghrib al-Akṣā*, Casablanca 1960-5; Lévi-Provençal, *Chorfa*, index s.v. Ibn Nāsir; M. Lakhdar, *La vie littéraire au Maroc sous la dynastie 'alawide*, Rabat 1971, index s.v. Ibn Nāsir and the *bibl.* cited there.

(Ed.)

**IBN NĀZIR AL-DJAYSH**, TAḲĪ 'L-DĪN 'ABD AL-RAḤMĀN, *kādī*, official and author of the Mamlūk period in Egypt. His precise dates are unknown, but he was apparently the son of another *kādī* who had been controller of the army in the time of Sultan al-Nāsir Nāsir al-Dīn Muḥammad b. Ḳālāwūn, and he himself served in the *Dīwān al-Insḥā'* under such rulers as al-Manṣūr Ṣalāḥ al-Dīn Muḥammad (762-4/1361-3) and his successor al-Ashraf Nāsir al-Dīn Sha'bān (764-78/1363-76). His correspondence was apparently collected into a *madjmu'*, for al-Ḳalkashandī [q.v.] quotes four letters from it, to external rulers, in his *Subḥ al-a'shā*. Ibn Nāzīr al-Djaysh was also, in a well-established Mamlūk tradition, the author of a manual for chancery secretaries, the *Tathkīf al-Ta'rif*, an improved version of the well-known guide of Shihāb al-Dīn Ibn Faḍl Allāh al-'Umarī [see FAḌL ALLĀH], *al-Ta'rif bi l-muṣṭalah al-sharīf*; the *Tathkīf* has survived in at least four manuscripts (not however recorded in Brockelmann) and is again quoted several times by al-Ḳalkashandī.

Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 69, 75, 129; C.E. Bosworth, *Christian and Jewish religious dignitaries in Mamlūk Egypt and Syria: Qalqashandī's information on their hierarchy, titulature and appointment*, in *IJMES*, iii (1972), 67.

(C.E. BOSWORTH)

**IBN AL-RĀHIB**, Coptic polygraph, born between 1200-10 and died between 1290-5. Known principally as a historiographer on account of the *Chronicon orientale*, which has been falsely attributed to him since the 17th century, Nushū' al-Khilāfa (or simply al-Nushū') Abū Shākir b. al-Sanā (abbreviation of Sanā' al-Dawla) al-Rāhib Abu 'l-Karam (alias Abu 'l-Maǧǧid) Butrus b. al-Muhadhhdhib in fact represents, with Abū Ishāk b. al-'Assāl [q.v.] and Abu 'l-Barakāt Ibn Kabar [q.v.], the leading encyclopaedist of the golden age of Christian Arabic literature, in the 7th/13th century. He wrote about all the disciplines of human knowledge which an Arab Christian of the period was in a position to cultivate: chronology and astronomy, history, philology and hermeneutics, philosophy and theology (in the full spectrum of their ramifications). But it is not this fact alone which confers upon his work an encyclopaedic character; such versatility was not unusual in his milieu. The decisive factor is most of all his method of working, the very dimensions of his studies and finally, the abundant wealth of textual sources, Greek and patristic, Muslim Arab and Christian, which he quotes or incorporates to a large extent in his own works. It is in this work of compilation, besides, even more than in original thought, that the value of his writings seems to reside.

Ibn al-Rāhib was born into a large and distinguished Coptic family of Old Cairo, all of them churchmen as well as senior officials of the Ayyūbid state. His father, known at the time under the name al-Sanā al-Rāhib or al-Rāhib Anbā Butrus (he became a monk at an advanced age), enjoyed a considerable reputation both in public administration, where for two periods he was responsible for state finance, and in ecclesiastical circles, where he virtually played the role of interim patriarch in the latter part of the long period during which the diocese of Alexandria was vacant (1216-35), before becoming spokesman for the opposition under the much-contested patriarchate of Cyrillus b. Laḳḳa (1235-43). His son, al-Nushū' Abū Shākir, was, for his part, deacon of the renowned church of al-Mu'allāqa and played a senior role in the administration, apparently in the *diwān al-djuyūsh* [q.v.].

It was relatively late, probably after leaving public service in the wake of political repercussions which accompanied the rise to power of the Mamlūks, that he began his literary activity. It is in fact confined to the period between the years 655/1257 and 669/1270-1. Beyond the latter date, Ibn al-Rāhib limited himself to reproducing and improving his works. Extremely extensive and hitherto unedited, these are, in chronological order:

(a) *K. al-Tawārīkh*. Recently identified in three manuscripts, this is the work on which, in reality, Ibn al-Rāhib's renown is based. It comprises three distinct parts, unequally divided into fifty-one chapters: a study of astronomy and chronology (chs. 1-47); a history of the world (ch. 48), of Islam (ch. 49) and of the Church (in the form of a history of the patriarchs of Alexandria—ch. 50); and finally, a brief account of the Seven Ecumenical Councils of the Orient (ch. 51). The celebrated *Chronicon orientale* represents, in fact, only a mediocre abstract of the long chronological section (chs. 48-50). The *K. al-Tawārīkh* was, in addition, exploited to a large extent by the Christian historiographer, al-Makīn b. al-'Amīd [q.v.] and—through the latter, apparently—constantly mentioned by al-Makrīzī and Ibn Khaldūn [q.v.]. In the first half of the 16th century it was translated into classical Ethiopic (Ge'ez) by no less

a person than the Etcheguié Enbaqom, which acquired for it a position of considerable eminence in Ethiopian literature. For this the manual of the ecclesiastical year and of universal chronology, entitled *Abushākēr*, is not the least of the evidence.

(b) The study of Coptic philology, completed in 1263, includes a rhymed vocabulary (*sullam mukaffā*) according to the method used by the Arab lexicographers, preceded by a grammar (*mukaddima* [q.v.]) which, through its originality, is distinguished from the series of Coptic prefaces of the Middle Ages. Although the vocabulary itself hitherto seems to be lost, an attentive reading of the prologue—which is available to us along with the grammar and in which the author sets out his project in detail—enables us to see there a work of lexicography far superior to the *Scala rimata* of his contemporary Ibn al-'Assāl [see SULLAM].

(c) *K. al-Shifā* (1267-8). A work of Biblical Christology, of an exclusively exegetical character. Conceived according to massive proportions, it was originally structured on the basis of the image of the Tree of Life, consisting of a triple trunk (*ast*), each part bearing three branches (*far*) loaded with innumerable fruits (*thamarat*). The abundance and the variety of patristic and other commentaries (especially the *Firdaws al-naṣrāniyya* of the Nestorian Ibn al-Ṭayyib [q.v.], which are dotted throughout the work, make it an interesting Arabic florilegium of Biblical commentaries relating to the person of Christ.

(d) *K. al-Burhān* (1270-1). An extensive theologico-philosophical summa in fifty chapters (*mas'ala*), dealing with almost all the questions of philosophy, theology, ethics and culture likely to be of interest to an educated Copt of the period. It is particularly to be noted that the theodicy of the *K. al-Burhān* (chs. 28-40) hinges entirely on that of the *K. al-Arba'in* of the great Persian theologian Fakhr al-Dīn al-Rāzī [q.v.].

*Bibliography*: Graf, *GCAL*, ii, 428-35; Adel Y. Sidarus, *Ibn al-Rāhib's Leben und Werk. Ein koptisch-arabischer Enzyklopädist des 7./13. Jahrhunderts* (Islamkundliche Untersuchungen 36), Freiburg 1975, with detailed analysis of sources and complete bibl.

(A. SIDARUS)

**IBN AL-RŪMIYYA**, ABU 'L-'ABBAS (sporadically: Abu Dja'far) AḤMAD B. ABĪ 'ABD ALLĀH MUḤAMMAD B. MUḤARRIR B. ABĪ 'L-KHALIL 'ABD ALLĀH AL-UMAWĪ AL-HAZMĪ AL-ZĀHIRĪ AL-NABĀTĪ AL-'ASHSHĪB, Spanish-Arabic pharmacobotanist. He was born in Seville in 561/1166 (according to others, 567/1172) and died there in 637/1240. His allegedly Byzantine origin on the maternal side may have procured him the nickname by which he became known, but which he did not like hearing. In any case, he was a freedman of the Umayyads. He was educated as a Mālikī traditionist and jurist, but then joined the Zāhiriyya and became an ardent adherent of Ibn Ḥazm [q.v.]. None of his writings bearing upon this activity seems to have survived; some *riḍā'āl*-works may be mentioned here: *al-Mu'lim bi-zawā'id* (or: *bi-mā zādahu*), *al-Bukhārī 'alā Muslim*, *Iktisār Ghara'ib hadīth Mālik* (*li-l-Dārakutnī*), *Nazm al-darā'ī fi-mā tafarrada bihi Muslim 'an al-Bukhārī*, further an abstract from Ibn al-Kaṭṭān's (d. 360/971) *K. al-Kāmil fi 'l-du'afā' wa 'l-matrūkīn*, and a supplement to this work under the title *al-Hāfil fi tadlīl al-Kāmil*, finally legal investigations on the performance of the prayer, like *Hukm al-du'a' fi adbār al-salamāt* and *Kayfiyyat al-aḥḥān yawm al-djūm'a*. The knowledge related to these subjects he acquired during an

extensive study-tour, made in connection with the pilgrimage which he undertook in 613/1216, and which led him through North Africa, Egypt, al-Hijāz, Syria and 'Irāk. His extraordinary long biography in Marrākushī's *Dhayl* (see Bibl.) can be explained by the fact that this author cites most, if not all, of the traditionists and jurists whose lectures Ibn al-Rūmiyya attended and who were his authorities in *hadīth*.

His real renown, however, is based on his achievements as a pharmacobotanist. As he himself relates, he was initiated into pharmacology in 583/1187 in Marrākush by 'Abd Allāh b. Šālih, one of Ibn al-Baytār's teachers. With him he studied three works: (1) the *Materia medica* of Dioscorides; (2) the work by Ibn Dījulḍjul [*q.v.*] in which the latter explains the simple medicines named by Dioscorides (*Tafsīr asmā' al-adwiya al-mufrada min kitāb Diyus-kūrīdis*); and (3) the brief treatise of the same author on medicines not mentioned by Dioscorides (*Maḳāla fī dhikr al-adwiya allatī lam yaḏḥkurhā Diyus-kūrīdis ilḥi*). Seventeen years later (600/1204), Ibn al-Rūmiyya in his turn taught the works mentioned, also in Marrākush. The shortcomings and inaccuracies which meanwhile had struck him in the works of Ibn Dījulḍjul induced him now to write a corresponding book by himself, namely *Tafsīr asmā' al-adwiya al-mufrada min kitāb Diyus-kūrīdis* (the title thus being identical with that of Ibn Dījulḍjul). In all probability, bordering on certainty, it is this work which exists in an anonymous text of the *maḏmū'a* Nuruosmaniye 3589; the present writer is preparing a text-edition together with an annotated German translation. Ibn al-Rūmiyya shortened considerably the contents of Dioscorides' work, to the extent that he left out almost completely the therapeutic uses of the medicinal herbs; instead, he did, however, give much space to their botanical description. The nomenclature of the herbs is also particularly important: it offers significant material for the knowledge of Mozarabic [see ALJAMĪA] and of the Berber dialects in Morocco at that time. Above all, it is noteworthy that the author makes a sharp distinction between the certain and the uncertain, especially between what was transmitted and what he had seen himself. If one bears in mind that ancient natural science already at an early stage abandoned personal investigation in favour of compilation and came to rely more and more on written sources, the endeavour, recognisable here, to gain a solid basis, particularly by examining nature itself, has to be rated highly.

It is reasonable to assume that Ibn al-Rūmiyya wrote down the *Tafsīr* before he started on the journey to the Orient mentioned above. The second botanical work, however, *al-Rihla al-mashrikiyya*, more comprehensive but only known to us through numerous extracts by Ibn al-Baytār, turns out to be the richly scientific result of this journey which lasted about two years. Of particular interest for the history of civilisation is the description of the manufacture of papyrus, the oldest one since Pliny (for this and the other Arabic accounts, see A. Grohmann, *Allgemeine Einführung in die arabischen Papyri*, Vienna 1924, 35 f.). The *Rihla* is of high quality and has led both L. Leclerc (*Histoire de la médecine arabe*, ii 244) and M. Meyerhof (*Maimonide*, xxxiii) to the judgement that Ibn al-Rūmiyya is the botanist par excellence among the Arabs and that he can only be compared with al-Ghāfiḳī [*q.v.* above] as far as independence of scientific method is concerned. With the latter, Ibn al-Rūmiyya found moreover many faults; his work *al-Tanbīh 'alā aghlāt al-Ghāfiḳī*

*fī adwiyatihi* (quoted by Marrākushī, *Dhayl*, 1/2, 513) has been unfortunately lost, as is also a treatise on compound drugs (*Maḳāla fī tarkīb al-adwiya*), mentioned by Ibn Abī Uṣaybi'a.

*Bibliography:* Ibn Abī Uṣaybi'a, *Uyūn*, ii, 81; Ibn al-Abbār, *al-Takmila li-Kutāb al-Sila*, Cairo 1955, i, 121; Abū Shāma, *Tarāḏīm riḏāl al-ḳamayn al-sādis wa 'l-sābi'*, Cairo 1366/1947, 170; Ibn Sa'īd, *Ikhtisār al-ḳidh al-mu'allā fī 'l-tarīkh al-muḥallā*, ed. (A. DIETRICH)

**IBN RUSHD**, ABU 'L-WALĪD MUḤAMMAD B. AḤMAD, AL-DJADD ("the grandfather" of the celebrated philosopher Averroes or Ibn Rushd [*q.v.*]), the most prominent Mālikī jurist of his day in the Muslim West, whose very real merits as an exponent of Mālik have been eclipsed by his grandson's fame as an exponent of Aristotle. Born in 450/1058-9, he died on 21 Dhū 'l-Ḳa'da 520/8 December 1126 and was buried in the cemetery of (Ibn) 'Abbās in east Cordova, his native city.

From 511/1117 until 515/1121 Ibn Rushd was, as *ḳādī 'l-djama'a* in Cordova, holder of the highest office in the Andalusian judiciary. For some reason that is not very clear, he either resigned or, less probably, was dismissed. What is clear is his important political role following the defeat, on 13 Šafar 520/19 March 1126, of Alfonso I of Aragon (El Batallador) at Arniswāl (? Anzul). Until his defeat, Alfonso had made rapid progress in his attempt to recover al-Andalus for Christendom and had gained widespread Mozarab sympathy and collaboration. Quick to perceive the danger that still threatened Islam from within, Ibn Rushd hastened to Marrakesh on 30 March 1126 to warn the Almoravid ruler 'Alī b. Yūsuf b. Tāshufīn [*q.v.*] and to advise him. Expressing his legal opinion that the Mozarabs had, by their treachery, lost all right to protected status, he prevailed upon 'Alī to have large numbers deported, and in consequence many were transported to Salé, Meknès and other places in Morocco. At the same time, he advised the construction of walls around Andalusian cities and towns as well as a wall around Marrakesh for the protection of the Almoravids against rivals on their own soil. He is also said to have recommended the replacement of 'Alī's brother, Abū Ṭāhir Tamīm, as Almoravid representative in Spain, possibly because of his inability to defend Islam there. Five months after his return to Spain he died—in the same year as his famous grandson was born.

Abu 'l-Walīd Ḳurtubī, as our Ibn Rushd was known, was a great teacher of Mālikī *fiḥh* and the author of commentaries and compendia of basic works. One of his most important commentaries was that on the *Mustaḥḳraja* of al-'Uṭbī (d. 255/869), viz. *K. al-Bayān wa 'l-taḥṣīl li-mā fī 'l-Mustaḥḳraja*, etc. (in 110 parts). Better known today is his *K.*

*al-Muḥaddimāt al-mumahhadāt li-bayān mā 'ktadathu nusūm al-Mudaw-wana* (Cairo 1324; Muḥannā repr. Baghdad, n.d. but 1960s). To his pupil Ibn al-Wazzān (*not* -Warrāk) we owe an important—historically and otherwise—collection of *fatwās* entitled *Nawāzil Ibn Rushd*, a selection of which, together with an illuminating introduction, has been published by Iḥsān 'Abbās in *Al-Abhāth*, xxii (Beirut 1969), 3-63). In such of Ibn Rushd's writings as have come down to us, one perceives an incisive and logical mind and clarity of thought matched by lucidity of expression.

*Bibliography*: All the essential references have been brought together in Iḥsān 'Abbās's introduction to the *Nawāzil* cited above.

**IBN SA'DĀN**, ABŪ 'ABD ALLĀH AL-ḤUSAYN B. AHMAD, official and vizier of the Būyids in the second half of the 4th/10th century and patron of scholars, d. 374/984-5.

Virtually nothing is known of his origins, but he served the great *amīr* 'Aḍud al-Dawla Fanā-Khusraw [*q.v.*] as one of his two inspectors of the army (*'arīd al-djaysī*) in Baghdad, the *'arīd* responsible for the Turkish, Arab and Kurdish troops. Then when 'Aḍud al-Dawla died in 372/983 and his son Ṣamsām al-Dawla Marzubān assumed power in Baghdad as supreme *amīr*, he nominated Ibn Sa'dān as his vizier. He occupied this post for two years, and seems to have made it his policy to reverse some of the trends of the previous reign; thus according to Abū Ḥayyān al-Tawḥīdī [*q.v.*], he favoured the release in the new reign of the historian Ibrāhīm b. Hilāl al-Ṣābi' [see AL-ṢĀBI'] and took charge of the proper burial of the corpse of Ibn Baḳīyya [*q.v.*], the former vizier of 'Izz al-Dawla Baḳḫūyār executed by 'Aḍud al-Dawla. However, his enemy Abu 'l-Kāsim 'Abd al-'Azīz b. Yūsuf [*q.v.* above], formerly *kātib al-inshā'* to 'Aḍud al-Dawla, secured his dismissal on what was, according to Rūdhrawārī, a trumped-up charge of complicity in the military revolt in Baghdad of Asfār b. Kurdīya in support of Ṣamsām al-Dawla's brother and rival for power, Sharaf al-Dawla Shīrīzīl. Ibn Sa'dān was accordingly imprisoned and then executed in 374/984-5.

The sources say of him that he was liberal to his dependants, but kept himself inaccessible from the populace of Baghdad—in Rūdhrawārī's phrase, *bādhil<sup>m</sup> li-'atā'ihī, māni<sup>m</sup> li-lkāt'ihī*—thus incurring unpopularity to the point that his personal boat on the Tigris (*zabzab*) was once stoned. His claim to lasting fame lies in his role as a Maecenas—he renewed the pensions of scholars which had lapsed on 'Aḍud al-Dawla's death—and as the organiser of a circle of literati in Baghdad embracing both Muslims and Christians and at which all kinds of speculative and philosophical questions were discussed. He was the friend and patron of Tanūkhī (see the latter's *Nishwār al-muḥāḍara*, ed. 'Abbūd al-Shāldjī, Beirut 1391-2/1971-2, iv, 96-7). Tawḥīdī was one of his *nudamā'*, and dedicated to Ibn Sa'dān his epistle on friendship, the *K. al-Sadāka wa 'l-sadīk*, although this was not completed for another 30 years (cf. M. Bergé, *Une anthologie sur l'amitié d'Abū Ḥayyān al-Tawḥīdī*, in *BEO*, xvi [1958-60], 15-60). He was intimate enough with Ibn Sa'dān to address to the vizier an epistle on statecraft (in his *K. al-Imtā' wa 'l-mu'ānasa*, ed. Aḥmad Amīn and Aḥmad al-Zayn, Cairo 1953, iii, 210-25, tr. by Bergé, *Conseils politiques à un ministre. Épître d'Abū Ḥayyān al-Tawḥīdī au vizir Ibn Sa'dān al-'Arīd*, in *Arabica*, xvi [1969], 269-78). In both the *K. al-Imtā'* and the *K. al-Sadāka* Tawḥīdī gives us a picture of these scholarly sessions;

the participants included the Muslim philosopher Abū Sulaymān al-Manṭiqī [*q.v.*], the Christian one Yahyā b. 'Adī and 'Isā b. Zur'a [see IBN ZUR'AS], Ibrāhīm al-Ṣābi', Miskawayh [*q.v.*], the engineer and mathematician Abu 'l-Wafā' al-Būzadjānī [*q.v.*], the *mādjīn* poet Ibn al-Ḥādīdjādī [*q.v.*], and several others. It was at the request of Abu 'l-Wafā' that Tawḥīdī composed a record of 37 of the sessions, forming his *K. al-Imtā'*; and Tawḥīdī's collection of philosophical discussions, his *K. al-Muḥābasāt*, derives also to a considerable extent from these meetings.

*Bibliography*: (in addition to references given in the text): For the scanty details of Ibn Sa'dān's life, see Abū Shudjā' al-Rūdhrawārī's *Dhayl* to Miskawayh, ed. Amedroz, in *Eclipse of the 'Abbasid caliphate*, iii, 40, 85, 102-3, 107, and Ibn al-Aḥṭir, ix, 27, 29. Concerning Tawḥīdī's information, cf. D.S. Margoliouth, *Some extracts from the Kitāb al-Imtā' wal-Mu'ānasa of Abū Ḥayyān Tawḥīdī*, in *Islamica*, ii (1926), 380-90; For the text of a letter of Ibn Sa'dān's to the Būyid Fakhr al-Dawla [*q.v.*], see Kaḳkashandī, *Ṣubḥ al-aṣḥā*, viii, 137. Chr. Bürgel, *Die Hofkorrespondenz 'Aḍud al-Daulas*, Wiesbaden 1965, 118-19; H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Beirut-Wiesbaden 1969, 65, 239, 509-10; M. Bergé, *Pour un humanisme véu: Abū Ḥayyān al-Tawḥīdī*, Damascus 1979, index, s.v. al-'Arīd.

(C.E. BOSWORTH)

**IBN AL-SARRĀDJ**, appellative of a family prominent in the 9th/15th century history of the Naṣrid kingdom of Granada. Passing into Spanish literature as "Abencerraje" in the 16th century ("Bencerraje" may date from the end of the 15th), the name appears more than a century later in French as "Abencérage" (which, *pace* Lévi-Provençal (*Hist. Esp. Mus.*, i, 351) does not derive from Sirādj), and finally in English as "Abencer(r)-age".

The patronymic "b. al-Sarrādj" is known well before the 9th/15th century. It is borne, for example, by an Abū 'Abd Allāh Muḥammad of Málaga, a 5th/11th century panegyrist of the Ḥammūdids [*q.v.*], and in the 7th/13th century both by a grammarian of Pechina living in Almería and by yet another Abū 'Abd Allāh Muḥammad, a *fakīh* and *khaṭīb* of the Great Mosque of Granada. Early in the next century we find an Abū 'Abd Allāh Muḥammad b. Ibrāhīm b. al-Sarrādj, a Granadan doctor and botanist whose works, now lost, were esteemed in their day.

Up to the beginning of the 8th/14th century the patronymic is borne by isolated figures whose connexions with one another are really indeterminate. If, as claimed, the B. al-Sarrādj were of noble Arab lineage—seemingly of old Yemenī stock—it is strange to find no mention of them in the great Hispano-Arab genealogical treatises.

From the mid-8th/14th century we begin to discern in Granada the emergence of a clearly definable family, militarily successful and increasingly influential. One notable member was Abū Ishāḳ Ibrāhīm b. Abī 'Abd Allāh b. al-Sarrādj (d. 766/1364), commander of the *kaṣaba* of Ronda and governor of its highly important military district. By the early 9th/15th century the family was playing a vital part in defending Naṣrid frontiers and enjoyed a reputation for valour in the *djihād*. Before mid-century it

already constituted a powerful and ruthlessly ambitious political party.

In 1419 the party staged its first rebellion through members in command of Guadix and Illora. Resentful of 'Alī al-Amīn, then regent for the Naṣrid minor Muḥammad VIII *El Pequeño*, they slew the former and replaced the latter by Muḥammad IX *El Zurdo*, a grandson of Muḥammad V. The grand vizierate fell to Abu 'l-Ḥaǧǧdjādī Yūsuf b. al-Sarrādj, organiser of the coup, and thereafter for eight years the Abencerrajes held sway in Granada.

When, in October 1427, Muḥammad was restored by loyalists led by Riǧwān Bannigash (Banegas), Yūsuf b. al-Sarrādj and his followers opted not to follow their sultan into exile at the court of the Ḥafṣid Abū Fāris in Tunis, but to lie low and spy a chance for pardon. This once gained, they plotted and achieved the restoration of Muḥammad IX with the aid of Juan II of Castile and Abū Fāris. By December 1429 Yūsuf b. al-Sarrādj and his sultan were back in power in Granada and so remained till December 1431, when the former fell at Loja fighting a joint Castilian and loyalist Granadan force, whose success put Yūsuf IV on the throne. But Yūsuf's reign was brief: by April 1432 Muḥammad IX was back on the throne and Yūsuf dead. Throughout Muḥammad IX's third reign—up to 1445—prominent positions were assigned to the sons of Yūsuf b. al-Sarrādj (Muḥammad and Abu 'l-Kāsim) and other members of their family and party. The period 1445-60, on the other hand, was one of vicissitudes as the Naṣrid throne fell successively to Muḥammad X *El Cojo* and Yūsuf V, and then reverted first to Muḥammad X and then to Muḥammad IX, who reigned till the end of 1453 or early 1454.

Since the sultan Sa'd (*Āḥmad/Muley Ṣād/Ḥah; reg. 1454-62, 1462-4*) owed his throne to the B. al-Sarrādj—now led by one Abu 'l-Surūr al-Mufarridj—the family enjoyed his favour for a time. In 1460 we find the son of Abu 'l-Kāsim (above), another Abu 'l-Ḥaǧǧdjādī Yūsuf, as one of the most influential *kā'id*s of the realm, and yet another Yūsuf b. al-Sarrādj as a *wazīr* in Mufarridj's administration. But soon came a rift: resentful of tutelage, perhaps, and indignant at covert attempts to have his son Abu 'l-Ḥasan 'Alī (Muley Ḥacén) supplant him, Sa'd had Mufarridj and the *wazīr* Yūsuf summarily executed in the Alhambra (July 1462). Muḥammad and 'Alī b. al-Sarrādj fled to Málaga and set up Yūsuf V (Aben Isma'el)—who was assured of Castilian support—as counter-claimant. His premature death brought Abu 'l-Ḥasan 'Alī to the fore again, and in August 1464, the latter, in concert with the B. al-Sarrādj, overthrew Sa'd and seized the throne. The B. al-Sarrādj were back in power: an Ibrāhīm b. al-Ash'ar, an influential *kā'id* who had married into the family, became grand *wazīr*, and his administration included Abū 'Abd Allāh Muḥammad, son of Muḥammad b. Yūsuf al-Sarrādj (above). A strange circumstance was soon to undo them. In 1419 'Alī had married Fātima, daughter of Muḥammad IX. On his death, the veneration in which they held him as their patron shifted to Fātima. And so 'Alī's late marriage to a Christian renegade was seen as a personal affront, and they drifted into rebellion. Savage retribution followed. Those who escaped with their lives fled, some to asylum in the noble houses of Medina Sidonia and Aguilar, other to various Castilian border towns. In 1482 they then slipped back to supplant 'Alī by his eldest son—by Fātima—Abū 'Abd Allāh Muḥammad (XII), the famous Boabdil. Till the end of Boabdil's reign and of Muslim

Granada, the family's party held supreme political power. Granada once in Christian hands (1492), the Abencerrajes sold up and moved to the Alpujarra, then in March 1493 emigrated almost en masse to the Maghrib. Ironically, the family that had once defended Islam in Spain so well, had, by their part in ruinous civil wars, done so much to bring about its downfall.

Their story as told in Pérez de Hita's *Historia de los vandos de Zegries y Abencerrajes* (1595, 1619) is fiction born of a few grains of truth. In this celebrated novel, which moulded most subsequent literary treatment of "moros de Granada", the Abencerrajes are the model of all chivalry, valour and charm. Their rivals are the brave but jealous and brutally perfidious Zegries—from *thaghrī* "borderer", a term seemingly applied to Maghribī *muǧāhidūn* in Spain (who were in fact politically a spent force well before the 9th/15th century). Falsely and secretly accused of dishonouring Boabdil and plotting against him, the leading Abencerrajes are unsuspectingly summoned to the Alhambra and assassinated. Not all perish; the word gets out, and insurrection follows. After a fierce struggle Muley Ḥacén is proclaimed, but finally the rebels are pacified, and Boabdil is restored. The Abencerrajes are banished and take refuge in Castile where they convert to Christianity. The honour of Boabdil's wife—besmirched by the Zegries at the beginning of the whole saga to turn Boabdil against the Abencerrajes—is finally vindicated and the accusers slain by Christian knights. During the 17th and 18th centuries the theme of the Abencerrajes was taken up by other European authors, notably Chateaubriand in his *Les aventures du dernier Abencérage*.

The *Sala de los Abencerrajes*, in the *Cuarto de los Leones* of the Alhambra, derives its name from various assertions that thirty-odd Abencerrajes were slain there by Muḥammad X or, as others say, Muley Ḥacén or Boabdil. The fiction appears to have its roots in (a) Sa'd's assassination of Mufarridj and Yūsuf (above), and (b) Hernando de Baeza's account of the murder of Muḥammad IX and his sons by Sa'd and Abu 'l-Ḥasan 'Alī in the *Cuarto de los Leones*.

(J.D. LATHAM)

**IBN SHAKRŪN** (pronounced *Shukrun*) AL-MIKNĀSĪ, ABŪ MUḤAMMAD OF ABŪ NAṢR 'ABD AL-KĀDIR B. AL-'ARABĪ AL-MUNABBAḤĪ AL-MADAGHIRĪ, Moroccan physician and poet who was contemporary with sultan Mawlāy Ismā'īl (1082-1139/1673-1727) and who died after 1140/1727-8. He received a traditional education at Fās, studied medicine under Ādarrāk [*q.v.* above] Aḥmad b. Muḥammad, performed the pilgrimage and profited by the opportunity to follow courses in medicine at Alexandria and Cairo. He then returned to settle at Mekkè, where he entered the sultan's service, but led a fairly austere and cloistered life.

As well as a commentary on a grammatical work and various poems which reveal a certain talent for versifying, Ibn Shagrūn owes mainly his fame to an *urǧūza* of 673 verses on food hygiene, the *Shagrūniyya*, which has always been highly popular among the people; it gives interesting pieces of information on food practices of the time (ed. Tunis 1323/1905; lith. Fās 1324/1906; ms. Rabat K 1613). He was also the author of a *risāla* called *al-Nafḥa al-wardiyya*

fi 'l-'uṣṣba al-hindīyya on sarsaparilla and the treatment of syphilis; this text has been studied and made use of H.J.P. Renaud and G.S. Colin in their *Documents marocains pour servir à l'histoire du "mal franc"*, Paris 1935, index.

*Bibliography:* Ibn Zaydān, *Ithāf al'ām al-nās*, Rabat 1347-52/1929-33, i, 264, v, 320-30; 'Alamī, *al-Anīs al-muṭrib*, lith. Fās 1315, 193; Lévi-Provençal, *Chorfa*, 297; Renaud, *Médecine et médecins marocains*, in *AIEO Alger*, iii (1937), 90-9; M. Lakhdar, *La vie intellectuelle au Maroc*, Rabat 1971, 161-6 and bibl. cited there. (Ed.)

**IBN AL-ŠUQĀ'Ī** (vars. Sukā'ī, Ṣaḳā'ī, Ṣaḳkā'ī), AL-MUWAFĀK FĀDL ALLĀH B. ABĪ 'L-FAḲḲR AL-KĀTĪB AL-NAṢRĀNĪ, official of the Mamlūk administration, who died almost a centenarian in Damascus in 726/1325, leaving behind the reputation of having been a good Christian and a chronicler worthy of trust. He composed a Harmony of the four gospels (a work which corresponds to the description of ms. 1029 in the Sbath collection, at present inaccessible) in Hebrew, Syriac, Coptic and Latin, and as well as a biographical work on singers (*Wafayāt al-muṭribīn*), three historical works: a continuation of the *Ta'riḳh* of al-Makīn Ibn al-'Amīd, a résumé of the *Wafayāt al-'ayān* of Ibn Ḳhallīkān whose title is unknown to us, and a continuation of this last, the *Tāli Kūlāb Wafayāt al-'ayān*. The historian al-Šafādī acquired for his personal library the copy of the *Tāli* at present in the Bibliothèque Nationale in Paris as arabe 2061.

The *Tāli* is thus the sole work of Ibn al-Šuqā'ī which has survived. It is in the conventional form of a biographical collection containing entries, arranged in alphabetical order, of persons who died between 657/1258 and 725/1324. Beyond the apparently monotonous nature of the compilation, it is from the choice of persons covered, the terms used to describe them and the anecdotes retailed about them, that the personality of the author emerges. He appears as a Christian firmly attached above all to moral standards, a skilful diplomat who knew how to retain the friendship of his contemporaries at a time of violent changes when the Mongol invasions led to a deterioration of relations between Muslims and *Dhimmīs*, and a trusty official who held the posts of *kātib* in the *diwān al-murtaḍā'*, the *diwān al-birr* and the *diwān al-mawārith*. The exercise of his functions in the matter of frauds and inheritances gave him access to the records of several financial scandals which the authorities had probably stifled, since the chroniclers contemporary with Ibn al-Šuqā'ī, although very fond of retailing these matters, do not mention them. However, his frequenting of Damascene intellectual circles where tasty anecdotes were passed round by word of mouth, gave him the subject-matter for several stories which he gives and which can also be found, with variants, in al-Dhahabī, al-Yunīnī and al-Djazarī, and which al-Šafādī was to insert in his own work after the text of the *Tāli*.

Ibn al-Šuqā'ī's moderation in depicting his contemporaries was not merely dictated by prudence. One should see in it rather the indulgence of a person who had reached an advanced age and who, although he allowed himself some lively and ironical comment on those who had, either at close hand or from a distance, made up part of his life, prided himself that in the eventide of his life he had as a Christian been able to come to terms with his Muslim environment, to gain confidence and attract confidences, and to behave as a well-balanced individual without losing

any of his personal dignity and without compromising his faith.

*Bibliography:* Ibn Kādī *Shuhba, al-Flām bi-ta'riḳh al-Islām*, ms. Oxford, Or. (J. SUBLET)

**IBN AL-TAMMĀR** [see IBN MĪTHAM, above].

**IBN 'UQDA**, ABU 'L-'ABBĀS AḤMAD B. MUḤAMMAD B. SA'ĪD B. 'ABD AL-RAḤMĀN B. IBRĀHĪM B. ZIYĀD B. 'ABD ALLĀH (B. ZIYĀD?) B. 'ADJLĀN AL-HAMDĀNĪ AL-HĀFĪZ, Kufan traditionist, was born on 15 Muḥarram 249/10 March 863. His ancestors, 'Adjlān and Ziyād were clients of 'Abd al-Rahman b. Sa'īd b. Ḳays al-Sab'ī al-Hamdānī (d. 66/686) and 'Abd al-Wāḥid b. 'Īsā b. Mūsā al-Hāshimī respectively. His father was a Kūfan Zaydī making a living by copying books and teaching the *Qur'ān*, literature and grammar, and was given the nickname 'Uqda because of his knowledge of the intricacies of Arabic grammar and inflection. Ibn 'Uqda visited Baghdād three times. The first time, in his youth before 272/886, he heard *ḥadīth* from a number of renowned traditionists. The second time, most likely in the first decade of the 4th century (913-22 A.D.), he incurred the enmity of the popular traditionist Yaḥyā b. Ṣā'īd (d. 318/930) by contesting the reliability of the *isnād* of one of his *ḥadīths*. According to one account, he was briefly imprisoned by the vizier 'Alī b. 'Īsā [q.v.] at the instigation of the followers of Ibn Ṣā'īd until his criticism was proved correct. This detail is not confirmed by another, more elaborate account. A third time, he visited Baghdād towards the end of his life and taught in the mosque of al-Ruṣāfa, where he is known to have transmitted *ḥadīth* in Ṣafar 330/November 941, and in the *Shī'ī* mosque of Barāthā. His only other trip was to the Ḥijāz. Thus he transmitted mostly from Kūfāns and visitors to Kūfa. He died on 7 *Dhu 'l-Ḳa'da* 332/1 July 944 in Kūfa.

Ibn 'Uqda was generally recognised as the greatest traditionist of Kūfa in his time. Fabulous stories were related about his prodigious memory and the hundreds of thousands of traditions collected and memorised by him and the camel-loads of books which his library contained. His transmission spanned the whole gamut of Kūfan traditions, Sunnī, Imāmī, and Zaydī, and Sunnī and *Shī'ī* traditionists were equally eager to hear from him. Among his prominent Sunnī students were al-Dāraḳuṭnī, Ibn 'Adī, al-Tabarānī, and Abū 'Ubayd Allāh al-Marzubānī. Though he was criticised for relating objectionable (*munkar*) *ḥadīths*, reports on the blemishes (*maḥālib*) of Abū Bakr and 'Umar, and traditions from newly-discovered books (*wiḍ'āda*), and on this basis was accused of having spoiled the *ḥadīth* of Kūfa, he was considered a faithful transmitter. Among the Imāmīs, Hārūn b. Mūsā al-Talla'ukbarī and Aḥmad b. Muḥammad b. al-Šalt transmitted from him. He appears frequently as the only Kūfan transmitter of early Kūfan Imāmī traditions in his time complementing the common Imāmī transmission of the school of Ḳumm. The Imāmī *riḍā'āl* books hold him in high esteem as a transmitter, though emphasising that he remained a *Djārūdī* Zaydī until his death. Actually, he seems to have

supported the views of the Ṭālibiyya, who considered in principle all descendants of Abū Ṭālib as suited for the imamate, rather than those of the sectarian Zaydiyya of his time, who restricted it to the descendants of 'Alī and Fāṭima. He appears as an important informant of Abū 'l-Faraj al-Iṣfahānī in his *K. Makātil al-Ṭālibiyyīn*, to whom he transmitted in particular the *K. Nasab Āl Abī Ṭālib* of the 'Alid Yahyā b. al-Ḥasan b. Ḍja'far.

Ibn 'Uḡda's own works, whose titles are listed in the Imāmī *riḍjāl* works, included a book on the merits of Kūfa (*K. Faḍl al-Kūfa*), an enormous *K. al-Sunan*, a Kur'ān commentary, books on the transmitters from 'Alī, al-Ḥasan, al-Ḥusayn, 'Alī Zayn al-'Ābidīn, Muḥammad al-Bākir, Zayd b. 'Alī, Ḍja'far al-Sādiq, Abū Ḥanīfa, as well as *musnads* of 'Alī, Zayd b. 'Alī, and Abū Ḥanīfa. A fragment of his *K. Dhīkr al-nabī* has been published from a papyrus (N. Abbott, *Studies in Arabic literary papyri*, i, Chicago 1957, 100-8). His book on the transmitters from Zayd b. 'Alī was the chief source of an extant similar work by the Kūfan Zaydī Abū 'Abd Allāh Muḥammad b. 'Alī al-'Alawī (d. 445/1053).

(W. MADELUNG)

**IBN 'UMĀRA** [see AL-DĪKDĀN, above].

**IBN 'UTHMĀN AL-MIKNĀSĪ**, ABŪ 'ABD ALLĀH MUḤAMMAD B. 'ABD AL-WAHHĀB B. 'UTHMĀN, a Moroccan diplomat and vizier of the 12th/18th century, who played a prominent role in the forging of ties between his country and Spain. At the start of his career he followed his father as preacher in one of the mosques of Meknès; here he came to the attention of the Sultan, Sīdī Muḥammad b. 'Abd Allāh (1171-1204/1757-89) who, at a date difficult to determine, took him into his service as a secretary. In 1193/1799, he was sent to the court of King Charles III of Spain with the object of obtaining the redemption of Algerian captives and of renewing friendly relations between the two states; this mission met with success and led to the treaty of Aranjuez which was signed in 1780 (see V. Rodríguez Casado, *La embajada del Talbe Sidi Mohamed Ben Otomán en 1780*, in *Hispania*, xiii (1943), 598-611; idem, *Política marroquí de Carlos III*, Madrid 1946, 285-306; M. Arribas Palau, *El texto árabe del Convenio de Aranjuez de 1780*, in *Tamuda*, vi (1958); idem, *Carta árabes de Mawlay Muḥammad b. 'Abd Allāh relativas a la embajada de Ibn 'Uthmān de 1780*, in *Hespéris-Tamuda*, ii/2-3 (1961), 327-35), and Ibn 'Uthmān has left a detailed account of his mission,

*al-Iksir fī fikāk al-asir* published by M. El Fasi in Rabat in 1965, with a long introduction describing the life and work of the diplomat.

On his return, he was appointed vizier, but the success of his first mission induced the sultan to entrust him with a second, to Malta and Naples, to secure the redemption of more captives; this mission, carried out in 1196/1782, was also made the subject of an account entitled *al-Badr al-sāfir fī 'fikāk al-asārā min yad al-aduww al-kāfir* (this has been summarised by Ibn Zaydān, *Ithāf*, iii, 320-9, and a number of manuscripts exist in Rabat and Meknès).

Three years later, Ibn 'Uthmān was entrusted with a new mission, this time to the court of 'Abd al-Ḥamīd I in Istanbul, with the object of resolving with the Ottoman sultan a conflict provoked by Turkish soldiers on the borders of Algeria and Morocco. The diplomat set out on the 1st Muḥarram 1200/4th of November 1785 and did not return to Morocco until 29th Sha'ban 1202/4th of June 1788; he had in fact taken advantage of his stay in the Orient to make the Pilgrimage, which provided him with the material for a third *rihla*, with a more elaborate title than the preceding two: *Ihrāz al-mu'allā wa 'l-raḳīb fī ḥadīdj Bayt Allāh al-ḥarām wa-ziyārat al-Kuds al-sharīf wa 'l-Khaṭīb wa 'l-tabarruk bi-kabr al-Ḥabīb* (see Ibn Zaydān, *Ithāf*, iii, 30-5; an edition by M. El Fasi has been in the course of preparation for a considerable length of time).

On his return, he was sent to escort to Algeria the captives released by Spain. On the death of Muḥammad b. 'Abd Allāh, he continued in the service of Mawlāy al-Yazīd (1204-6/1789-92) who sent him on to the court of Charles IV of Spain; setting out at the end of December 1790, he was received by the sovereign in Madrid on the 27th of January 1791, but his mission was unsuccessful and he set out for home on the 18th of August; the following day, Charles IV declared war on Morocco; Ibn 'Uthmān was however permitted to return to Madrid, where he lived as a private citizen until April 1792. Some very interesting documents concerning his stay in Spain have been discovered and published by M. Arribas Palau (*La estancia en España de Muḥammad ibn 'Uthmān (1791-1792) en Hespéris-Tamuda*, iv/1-2 (1963), 120-92; cf. the same *Cartas árabes de Marruecos en tiempo de Mawlay al-Yazid (1790-1792)*, Tetuan 1961). On the death of al-Yazīd, Ibn 'Uthmān returned to Morocco and entered the service of Mawlāy Sulaymān (1206-38/1792-1823), who had already written to him in Spain entrusting him with a diplomatic mission. The new sultan did not hesitate to appoint him governor of Tetuan, as well as his representative in dealings with foreign consuls in residence in Tangier (see M. Arribas Palau, *Muḥammad ibn 'Uthmān designado gobernador de Tetuán a finales de 1792*, in *Hespéris-Tamuda*, ii/1 (1961), 113-27). Because of his talents as a diplomat, he was also given the task of resolving internal problems; one of his major achievements was persuading, in 1797, the governor of Safī, 'Abd al-Raḥmān b. Nāṣir, to support the new administration; the latter had previously refused to recognise Mawlāy Sulaymān. His last important diplomatic act was the signing on 22 Ramaḍān 1212/2 March 1799 of the treaty between Morocco and Spain (see M. Arribas Palau, *El texto árabe del tratado de 1790 entre España y Marruecos*, in *Tamuda*, vii (1959), 9-51). He died soon after at Marrakesh, where he was travelling in the Sultan's entourage (beginning of 1214/mid-1799) and it was his rival al-Zayyānī [q.v.] who was entrusted with the task of returning his belongings to Meknès.

In addition to descriptions of journeys, which are also historical documents of great value, Ibn 'Uthmān is the signatory of a considerable corpus of diplomatic correspondence which has for the most part been published and translated by M. Arribas Palau. He has also left a number of poems which bear witness to a considerable poetic talent and confirm what one might be entitled to expect of a Moroccan with a strong grounding in traditional culture. His account of the journey to Istanbul and the Holy Places also reflects the education that he had received, and it often gives the impression of a stylistic exercise in rhymed prose, rich with religious and literary reminiscences. On the other hand, his other writings are composed in a simpler and more natural style; a number of dialectical forms are encountered here, and the author does not hesitate to transcribe Spanish words when he talks about Spain and describes, not without precision and colour, the novelties that he has observed in that country.

*Bibliography:* In addition to the fundamental works of M. Arribas Palau given in the article, see Marrākushī, *al-Flām bi-man halla Marrākush wa-Aghmāt min al-a'lām*, Fās 1355-8/1936-9, v, 142-3; Ibn Zaydān, *Ithāf al-a'lām al-nās*, Rabat 1347-52/1929-33, iii, 301-5, 318-30, iv, 159-68; Zayyānī, *Turjūmān*, ed. and tr. (Ed.)

**IBN WAHB**, ABU 'L-ḤUSAYN IṢHĀK B. IBRĀHĪM B. SULAYMĀN B. WAHB AL-KĀTĪB, scion of an old and distinguished secretarial family and author of a remarkable Shīfī work on Arabic rhetoric, style and the secretary's art, the *K. al-Burhān fī wudjūh al-bayān*. His grandfather Sulaymān was vizier to al-Muhtadī and al-Mu'tamid, fell in disgrace under al-Muwaffaq and died in his prison in 292/905. About his father and himself we know almost nothing. His *floruit* belongs to the first half of the 4th/10th century. His book must have been composed in or after 335/946-7, since it mentions the vizier 'Alī b. 'Isā [q.v.] as already dead. He is thus a contemporary of Ḳudāma b. Dja'far [q.v.], under whose authorship the work was placed by the editors of the truncated Escorial ms., 'A.Ḥ. 'Abbādī and T. Ḥusayn, despite strong doubts of the latter, and published under the title *Nakd al-nathr* (Cairo 1351/1933). The discovery by 'Alī Ḥasan 'Abd al-Kādir of a complete copy of the work in the Chester Beatty Collection (ed. A. Maṭlūb and Kh. Hadīthī, Baghdad 1387/1976) made possible the correct identification of author and title.

The *Burhān* represents an interesting attempt to apply Greek, Mu'tazilī and Imāmī doctrines to Arabic rhetoric. The latter trend is evidenced by positive references to some *imāms* of the Twelver line, including the eighth, and by the use of principles such as *taḳīyya*, *'isma*, *zāhir/bāṭin*, *ta'wīl*, *rumūz* (in the Ḳur'ān), *kūmān* and *badā'*. It also shows some influence of Djāhīz's *Bayān*, but is strongly critical of it. Whether he was also influenced by Ḳudāma has not yet been conclusively proved. The author also cites four writings of his own, the *K. al-Hudūdīya*, *K. al-Idāh*, *K. al-Ta'abbud* and *K. Asār al-Ḳur'ān*. None of these seems to have survived, nor has any mention of them been found in the sources so far.

*Bibliography:* T. Ḥusayn and 'A.Ḥ. 'Abbādī

(eds.), *K. Nakd al-nathr*, Cairo 1941, Introd. 20-4; 'A.Ḥ. 'Abd al-Kādir in *al-Risāla*, xvi (1948), 1257 ff. and in *RAAD*, xxiv (1949), 73-81; B. Tabāna, *Ḳudāma b. Dja'far wa 'l-nakd al-adabī*, Cairo 1373/1954, 94-108; S.A. Bonebakker (ed.), *K. Nakd al-shī'r*, Leiden 1956, 16-20; Sh. Dayf, *al-Balāgha taṭawwūr wa-ta'riḳh*, Cairo 1965, 93-102; Maṭlūb and Hadīthī (eds.), *K. al-Burhān*, Introd., 1-41; (For his conception of the term *bayān*, see art. s.v. in i, 1115a).

(P. SHINAR)

**IBN WARSAND**, 'ALĪ B. AL-ḤUSAYN AL-BADJALĪ, founder of a Shīfī sect in the Maghrib known as the Badjaliyya [see AL-BADJALĪ]. His books (*kutub*), in which he gathered Shīfī legal traditions, are quoted by the Ḳādī al-Nu'mān in his *K. al-Idāh*. These quotations indicate that he wrote in the first half of the 3rd/9th century and belonged to the Mūsawī Shīfīa, who recognised Mūsā al-Kāzim as their last *imām* and as the Mahdī. He lived and taught in Naftā in Ḳasṭīliya. His doctrine seems to have been propagated first by his son al-Ḥasan [see AL-BADJALĪ] in Dar'a and then, still before 280/893, by a Muḥammad Ibn Warsand, quite likely a son of al-Ḥasan, in the Sūs al-Aḳṣā. There the Badjaliyya come to constitute one of the two factions into which the population of Tārūdānt was divided and engaged in constant fighting with the other, Sunnī Mālikī, faction. They supported, and were led by the Idrīsīd *amīrs* of the region who were themselves converts to their doctrine. Their close association with them probably lies behind the, evidently mistaken, assertion of some sources that they restricted the *imāmate* to the Ḥasanid descendants of 'Alī to the exclusion of Ḥusaynids. The Badjaliyya were wiped out in Tārūdānt after the Almoravid conquest of the town in 458/1066. The sect survived, however, in Tiyūyūwīn, the second major town of the Sūs. It was most likely absorbed or extinguished after the middle of the 6th/13th century by the Almohad movement originating in the same region.

(W. MADELUNG)

**IBN ZAKRĪ**, a name of at least two Maghribī scholars, one from Tlemcen, of the 9th/15th century, the other from Fās, of the 12th/18th century. As well as Zakariyā' in the Ḳur'an (III, 37, 38, VI, 85, XIX, 2, 7, XXI, 89, 90), an Arabic form of the Zacharias of Luke (i, 5-25), Maghribī nomenclature recognised and still recognises, among Muslims and Jews, the name Zakrī (orthography Zekri, and, as a patronym, Benzekri, Benzekri and Ibnou-Zekri).

These two scholars are:

1. IBN ZAKRĪ (Abu 'l-'Abbās Aḥmad b. Muḥammad al-Maghrawī al-Tilimsānī) born at the beginning of the 9th/15th century and died in Ṣafar 900/1494 at Tlemcen, whence his *nisba*. Brosselard (315-16) put an end to the uncertainties of the Arabic biographical sources which placed the date of his birth sometimes in 899/1493 and sometimes in 906/1505, and to the errors of oral tradition which located his burial place at Yabdar three leagues from

Tlemcen, by publishing the epitaph of his tomb discovered by him at Tlemcen "three hundred paces from that of Sanūsī", also corroborating the assertion of al-Warḥilānī (1121-93/1710-79) who says he had "visited his tomb, at al-'Ubbād, in the vicinity of those of Abū Madyan, al-Sanūsī, the 'Ukbānīs, Ibn Marzūk and the two sons of the Imām".

After losing his father at an early age and being brought up by his mother, Ibn Zakrī was placed at the age of twelve as an apprentice weaver. With a gift for study, the young Ibn Zakrī made his way, when he was able, to the mosques and *madāris* of Tlemcen (al-'Ubbād, al-Ya'qūbiyya) to hear the lectures of the 'ulamā' of the age, among others Ibn Zāghū (Aḥmad b. Muḥammad, d. 845/1441; see Aḥmad Bābā, 78, 308; al-Hafnāwī, ii, 42), who was also a weaver; al-'Ukbānī (Kāsim b. Sa'īd, d. 854/1450; see Ibn Maryam, 147; Aḥmad Bābā, 85; al-Hafnāwī, ii, 85); Abū 'Abd Allāh Muḥammad b. al-'Abbās b. 'Isā al-'Ubbādī (d. 871/1467; see Ibn Maryam, 223). On his relations with his masters and on his character, the biographical accounts report some anecdotal details which show him as studious, obliging and, moreover, gifted with a fine voice.

Having become in his turn a doctor of religious law, engrossed in the sources of *fiqh*, jurisprudence, Qur'ānic exegesis, theology and Arabic grammar, he exercised successfully the functions of *kāfi*, *mufī* and professor, and had future masters as disciples, including Zarrūk (Aḥmad b. Muḥammad b. 'Isā al-Burnusī al-Fāsī, 846-79/1442-93; see Ben Cheneb, no. 51; Brockelmann, S II, 361), who was a cobbler; Ibn Marzūk (Aḥmad b. Muḥammad *hafīd al-Hafīf* [g.v.], d. 925/1519); Abū 'Abd Allāh Muḥammad b. Muḥammad b. al-'Abbās (d. 920/1513; see Ibn Maryam, 259); Aḥmad b. Muḥammad b. al-Hādīdj al-Mannāwī (d. 930/1521; see Ibn Maryam, 8, 17, 18, 23).

His biographers have also noted that he had a memorable controversy, doubtless theological, with his rival al-Sanūsī (Muḥammad b. Yūsuf b. 'Umar b. Shu'ayb 830-95/1427-90 [g.v.]), and that he is the author of the following writings:

(a) *Bughyat al-tālib fī sharḥ 'Akīdat Ibn al-Hādīdj* (Esc. 2, 1538; Fās, Ḳarawiyīn, 1594; see Brockelmann, I, 539);

(b) *al-Manzūma al-kubrā fī 'ilm al-kalām*, a theological treatise of more than 1500 verses in *radjāz* metre, also entitled *Muḥaṣṣil* (or *Mukammil*) *al-makāšid* (Esc. 2, 1561; Rabat, 89; Fās, Ḳarawiyīn, 1569, 1571, 1587), which was made the object of a commentary in two versions, one long and one short, entitled *Naẓm al-farā'id wa-mubdī 'l-fawā'id li-muḥaṣṣil al-makāšid* by Aḥmad al-Mandjūr (926-95/1579-87 [g.v.]);

(c) *Comm. on al-Warakāt fī usūl al-fikh* of al-Djuwaynī (Abu 'l-Ma'ālī 'Abd al-Malik b. 'Abd Allāh, called Imām al-Haramayn [g.v.], entitled *Ghāyat al-marām bi-sharḥ muḥaddimat al-inām*, Cairo i, 390; see Brockelmann, S I, 672, who gives a list of ten other commentaries on this work and S II, 85);

(d) *al-Masā'il al-'aṣhr al-musammāt bi-bughyat al-makāšid wa-khulāṣat al-marāšid*, Cairo 1344/1925;

(e) a certain number of *fatāwā* reproduced in the *Mi'yār* of al-Wānsharīshī (the above lith., Fās 1315/1899 in 12 volumes);

(f) *Masā'il al-kaḍā' wa 'l-fuyā* on which there is no information;

(g) *Urdjūza fī ḥisāb al-manāzil wa 'l-burūdj* on which no information is available.

Hādīdjī Khalifa attributes to him erroneously some works of his homonym from Fās.

Tlemcen had a mosque bearing his name (called *Djāmi'* *Sīdī Zegrī* [*siċ*]) to which Brosselard devoted a study, publishing an inventory of its endowments contained in an act of *hubs* dated 1154/1741. For its part, popular belief made of him a *walī* or saint and a *Ṣūfī*, capable of performing miracles (*karāmāt*) and of overcoming, by the gift of ubiquity, terrestrial distances (*tayy al-ard*). Finally, speaking of the 'ulamā' of Tlemcen, an Andalusian author said "Knowledge is with al-Tanaṣī, virtue with al-Sanūsī and pre-eminence (*riyāsa*) with Ibn Zakrī", whom another described as *ibn dhūwā'i-hi* ("son of his arms" or "son of his works").

It should be added that Ibnou-Zekrī (Muḥammad al-Sa'īd b. Aḥmad al-Zawāwī al-Djannādī, professor of *fiqh* in the upper division of the Algiers *madrasa* and *mufī* of Algiers, originally from the tribe of Ayth Zekrī of Great Kabylia (1267-1322/1851-1914), author of *Auḍāḥ al-dalā'il 'alā wudjūb iṣlāḥ al-zawāyā bi-bilād al-Ḳabā'il*, Algiers 1321/1903, used to say that he was a descendant of Ibn Zakrī al-Tilimsānī, as al-Hafnāwī remarks, who, with a note of scepticism, declares "In the matter of genealogy, people have to be taken at their word".

*Bibliography:* Ibn Maryam, *al-Bustān fī dhikr al-aḥliyyā' wa'l-'ulamā' bi-Tilimsān*, Algiers 1326/1908; Aḥmad Bābā, *Nayl al-ibthādīj bi-taṭrīḥ al-dībādīj*, Cairo 1351/1932, 170; Ibn al-Ḳāḍī, *Djādhwat al-iktibās fī man ḥall min al-a'lām madīnat Fās*, lith. Fās 1309/1891; Ibn 'Askar, *Dawḥat al-nāshir*, lith. Fās 1309/1891, i, 88; Ifrānī, *Safwat man intashar*, ed. Fās 1310/1892; Warḥilānī, *Nuḥat al-anzār*, Algiers 1326/1908; Brosselard, *Les inscriptions arabes de Tlemcen*, in *RA* (1858-61); Abbé Bargès, *Complément à l'histoire des Bēni Zēyan, rois de Tlemcen*, Paris 1887; Hafnāwī, *Ta'rīf al-khalaf bi-riḍjāl al-salaf*, Algiers 1324/1906, i, 38-41; Ben Cheneb, *Étude sur les personnages mentionnés dans l'Idjāza du Cheikh 'Abd El Ḳādir el-Fāsy*, Paris 1907, 218, 244.

2. IBN ZAKRĪ (Abū 'Abd Allāh Muḥammad b. 'Abd al-Raḥmān al-Fāsī), born at an unknown date in Fās where he always lived and where he died in 1144/1731, was at first a young apprentice tanner (*dabbāgh*) in the service of his father with whom he used, after his manual work was done, to attend classes given by the latter's friend Abū 'Abd Allāh Maḥammad b. 'Abd al-Raḥmān b. 'Abd al-Ḳādir al-Fāsī [see AL-FĀSĪ in Suppl.]. He also followed the lectures given by Abū 'Abd Allāh Muḥammad, otherwise known as al-Hādīdj al-Ḳhayyāt al-Ruḳ'ī (d. 1115/1703; see al-Ḳādirī, ii, 172, al-Kattānī, i, 230), always staying shyly at the rear of the auditorium. One or the other, or both, of these two *shaykhs* noticed the pertinence of the questions that he asked them and the active part that he took in discussions, and they immediately suggested to his father that he be given leave of absence from the tannery and encouraged to study, offering to take upon themselves the cost of his tuition. Their advice was followed. The young man completed his education with other teachers, including: Abū 'Abd Allāh Muḥammad b. 'Abd al-Ḳādir al-Fāsī [see AL-FĀSĪ in Suppl.]; Aḥmad Ibn al-Hādīdjī (d. 1109/1697, see Lakhdar, 107-8 and Index); Abū 'Abd Allāh Muḥammad b. Aḥmad al-Masnāwī (1072-1136/1661-1724, see al-Ḳādirī, ii, 204; al-Kattānī, iii, 44; Ben Cheneb, §

13; al-Nāṣirī, iv, 44; Lévi-Provençal, 301). He soon became *imām* of a small mosque in the jewellers' quarter (*sāgha*), where he gave, every Thursday and Friday, lectures on Sūfism according to the *Hikam* of Ibn 'Aṭā' Allāh [q.v.] with such success that the place became too small for his rapidly-growing audience. It is true that in this context his biographers are unanimous in saying that he was unrivalled, and that he was well versed in other branches of scholarship current at the time: Arabic grammar, lexicology, metrics, rhetoric, epistolary art, genealogy, biography, history, etc. He also used the practice and technique of *idjūhād*, in the sense of rational effort at explanation and deduction in the judicial sphere.

Among those who attended his lectures were: his own master al-Masnāwī, mentioned above; Mas'ūd al-Tāhirī al-Djūfī (d. 1150/1737, see al-Kattānī, i, 326); Abū'l-Ḥasan 'Alī b. Muḥammad al-Manālī al-Zabādī (d. 1163/1750, see al-Kattānī, ii, 187); al-Wazīr al-Ḡhassānī (1063-1146/1653-1733, Lakhdar, 122-5) who wrote his biography in a pamphlet entitled *al-'Aḥf al-sihri fī ba'd jadā'il Ibn Zakrī*, of which a manuscript copy is to be found in the Aḥmadiyya library in Fās (see Ibn Sūda, i, no. 724, p. 189); Gannūn, 288, attributes it, probably mistakenly, to the above-mentioned al-Zabādī.

In 1140/1727 he performed the duty of *hadjī* and noticing, while passing through Cairo, the people's addiction to tobacco, he took it upon himself to embark on a campaign for the prohibition of this, which he regarded as a vice. The result of this campaign was the convening, at the University of al-Azhar, of a colloquium in the course of which his arguments commanded respect, although the objection was raised that he was speaking as a Mālikī, whereas in Egypt one was either a Ḥanafī or a Shāfi'ī. He asked his opponents: "Would you smoke in the presence of the Prophet?"—"No," was the reply, "abstinence would be imposed by decency and by respect for the Prophet."—"Well then," he added abruptly, "should not anything that cannot be done in the presence of the Prophet be forbidden? To abstain from the performance of a duty is a *bid'a* (culpable innovation) and *bid'a* and its agent are condemned to the fires of Hell. Furthermore, to practise indecency outside the view of the Prophet and believe oneself blameless is hypocrisy!" Disconcerted, the *'ulamā'* of al-Azhar made no reply.

Ibn Zakrī al-Fāsī enjoyed visiting the *chorfa* of Wazzān, in particular Mawlāy al-Ṭayyib (d. 1089/1679), and was associated with their disciple and biographer al-Hādījī al-Khayyāt al-Ruḳ'ī, whose pupil he was. He was ultimately regarded as a miracle-worker who believed that, when wide-awake, he had seen the Prophet. It is also said that, endowed with a considerable fortune, he used it to render aid to the disinherited.

His writings, dealing with various subjects, were, it is said, "numerous, read and studied to advantage almost everywhere." These are, on the one hand, commentaries on works of grammar, theology and mysticism composed by Muslim authors of East and West, and annotations and glosses which have for the most part been left incomplete, and on the other hand, didactic poems concerning various matters, and at least one original prose work. Kattānī, i, 158, supplies the following list:

*Sharḥ al-Farīda fī 'l-nahw wa'l-taṣrīf wa'l-khatt* of al-Suyūfī (lith. Fās 1319/1901); *Sharḥ al-Hikam*

*al-'aṭā'īyya*, ms. Paris 1351, on the programme of his teaching and the object of more than twenty glosses by Zarrūḳ (Aḥmad b. Aḥmad b. 'Isā al-Burnusī al-Fāsī (846-99/1442-93 [q.v.]), not to mention other commentaries, of which the most important would seem to be that of the Spanish mystic Ibn 'Abbād al-Rundī entitled *Ḡhayth al-mawāhib al-'aliyya*, Būlāk, 1285/1868; see Brockelmann, G II, 143-4; S II, 145-7, IBN 'ABBĀD AL-RUNDĪ and IBN 'AṬĀ' ALLĀH; *Sharḥ al-kawā'id fī 'l-taṣawwuf* by Zarrūḳ, considered the most important and the best known of the latter's writings, Cairo 1318/1900 (see Brockelmann, S II, 326); *Sharḥ al-Naṣīha al-kāfiya li-man khaṣṣa-hu Allāh bi'l-'āfiya* by the same Zarrūḳ (see Brockelmann, S II, 361, who gives a list of other commentaries on this work); *Sharḥ Ṣalāt 'Abd al-Salām b. Maṣūsh*, also known as *al-Salāt al-maṣūshīyya* (see its text in al-Fāsī (Abū 'Abd Allāh and Abū Ḥāmid Muḥammad al-'Arabī b. Yūsuf, 988-1052/1580-1643), 63; in Gannūn, 356, and in Hādījī, 175) which has been the object of a number of other commentaries (see al-Kattānī, i, 146; Lévi-Provençal, 312); notes (*ta'ālīk*) on al-Bukhārī's compilation, exegesis of Qur'anic verses, an incomplete marginal gloss (*hāshīya*) on the commentary by Ibn Hishām on the *Alfiyya* of Ibn Mālik, poems on various subjects, miscellanea mentioned by al-Ḳādirī and al-Kattānī whose continued existence cannot be verified; a *Hamziyya* in praise of the Prophet, modelled on that of al-Būṣīrī [q.v. in Suppl.], with a commentary in two volumes (mss. Rabat K. 1372 and 1245); an original work which, after his death, seems to have caused a sensation in Morocco and which bears two titles, *al-Sayf al-ṣārim fī'l-radd 'alā'l-mubtadī' al-zālim* and *al-Fawā'id al-mutabā'a fī'l-'awā'id al-mubtadā'a*; in these he propounds the thesis according to which "merit is a matter of piety, not of genealogy." This work exists in a manuscript volume in the library of 'Abd al-Raḥmān b. Zaydān at Meknēs (see Ibn Sūda, i, no. 418, p. 118). It aroused among the Moroccan *'ulamā'* a polemic which lasted for almost a century, on the problem of racism and anti-racism. Al-Ḳādirī, who could have known Ibn Zakrī at the age of twenty, since he died only forty-two years later than him, at the age of sixty, claims that he heard a very widespread rumour (*mustafīda*) that the latter had been responsible for the publication of a book in support of the *Shu'ūbiyya*, which asserted the superiority of non-Arabs over Arabs; he adds that all the contemporary men of religion reproached him for this and vilified him ruthlessly and justly. In the long biographical notice which he devotes to him, al-Ḳādirī invokes the authority of more than twenty teachers, and derives support from many Qur'anic verses and *hadīths* in the attempt, first to give a definition of the *Shu'ūbiyya*, those who put non-Arabs and Arabs on the same level and those who put non-Arabs above Arabs, and then to lay emphasis on the merits of the Arabs, who gave birth to the Prophet Muḥammad and supported him in his noble mission, finally concluding that, as regards Muslim law, all Muslims, irrespective of race and irrespective of the period in which they embraced Islam, enjoy equal rights. However, a careful reading of this article gives the impression that, according to al-Ḳādirī, Ibn Zakrī had appointed himself the spokesman of Muslims of Jewish origin, then very numerous in Fās, who did not care for the Arabs, to whom they denied any distinctive merit, making no exceptions in this regard even for

the *Anṣār*, the Quraysh and the parents of the Prophet, to whom a great many authentic *ḥadīths* explicitly gave a privileged status. Furthermore, these neo-Muslims prided themselves on being the descendants of the Banū Isrā'īl and of the prophets Mūsā, Hārūn, Zakariyyā, and others, and on this account they considered themselves superior to the Arabs. By his action, again in the words of al-Kādirī, Ibn Zakrī had committed a reprehensible deviation and cut himself off from the faith, thus deserving "the punishment laid down for those who allow themselves to be led astray by passion." Moreover, had he not spent his time "among groups of men of his own kind, men living in ease and opulence, who arranged performances of musical entertainment in his presence, and whose sympathy he made great efforts to gain, putting forward ideas of the type which have been attributed to him, so well and to such an extent that all his associates ultimately became his disciples"?

More than half a century before, Mayyāra al-Akbar (Abū 'Abd Allāh Muḥammad al-Fāsī, 999-1072/1590-1662, see al-Kādirī, 235; al-Kattānī, i, 165; Lévi-Provençal, 259, n. 4, 7<sup>e</sup>) had also written a book dealing with this problem and entitled *Nashīhat al-mughṭarrīn fi'l-radd 'alā dhawī 'l-tafrīka bayn al-Muslimīn* (Royal Lib., Rabat ms. 7248, fols. 71a-123b); its author, according to al-Kādirī, had a valid excuse and did not deserve reproach because, in his time, the neo-Muslims were the victims of harassment and even persecution on the part of Muslim Arabs. Mayyāra took their part, arguing in favour of the unity of the Muslim community.

Ninety years after Ibn Zakrī, Abū 'l-'Abbās Aḥmad b. 'Abd al-Salām b. Muḥammad al-Bannānī (d. 1234/1818)—the Bannānī family is known to have been of Jewish origin—took up the defence of al-Zakrī and, with the object of dismissing al-Kādirī's accusations, wrote two books which, between them, bear no fewer than eight different titles, as follows: *Tahliyat al-ādḥān wa'l-masāmi' bi-nuṣṣat al-'allāma al-tjāmi'*; *al-Nūr al-lāmi' wa-kanz ruwāt al-maḍjāmi'*; *al-Manhal al-'adhb al-murwī fi nuṣṣat al-'allāma Ibn Zakrī*; *Bustān al-fawā'id al-muhdathāt al-badā'i'*; *Rashf al-darab bi-tafḍīl Banī Isrā'īl wa'l-'Arab* (these five titles are those of the first book, which comprises two volumes, the first of which still exists, in private hands, in Fās; see Ibn Sūda, no. 256, p. 84); *al-Waḍḥ al-mughṭarī 'alā nuṣṣat al-'allāma Ibn Zakrī*; *al-Tadhīl wa-shifā' al-ghaṭīl wa-izālat dā' al-'alīl*; *al-'Uḍāla al-mūfiya bi-muḥtādīj al-manzūma al-yūsiyya*, for the second book, completed in 1222/1807 in one volume, which still exists in the form of an autograph manuscript by Muḥammad b. 'Abd al-Sallām Bannānī, and which was apparently a kind of commentary on a *kaṣīda* of about three hundred verses composed by Abū 'Umar 'Uṭmān b. 'Alī al-Yūsī (d. 1084/1674; see al-Ifrānī, 113; al-Kādirī ii, 13; al-Yūsī, *in fine*; Ben Cheneb, § 5); "in reply to those who denigrate the merits of the Banū Isrā'īl and who maintain, wrongly, that Islam owes them nothing" (see Ibn Sūda, no. 427, and 1954, pp. 120 and 426).

This controversy over racism and anti-racism, at the end of the 12th/18th century and at the beginning of the 13th/18th century, throws an unexpected light on the ideas and pre-occupations of the Moroccan thinkers of that time and on their attitude towards non-Arabs and Jews converted to Islam.

3. H. al-Kattānī (i, 161) devotes a brief biographical notice to another IBN ZAKRĪ (Abū 'l-'Abbās Aḥmad, d. 1154/1741 in Fās) who is none other than the son of the preceding and who lived an ascetic life in the *khayva* of the well-known Moroccan saint Sīdī Būshṭa (Abū 'l-Shīṭā).

(M. HADJ-SADOK)

**IBRĀHĪM SHĪRĀZĪ**, better known as HĀDJDJĪ IBRĀHĪM SHĪRĀZĪ, was a Persian Prime Minister of the early Kādjār period, and a most influential agent in the transfer of power from the Zand dynasty to the Kādjārs.

His father, the one-eyed Hādjdjī Hāshim, reportedly of Jewish stock, had secured him a position of chief magistrate in the office of the *kalāntar* [q.v.] of Shīrāz. In the course of the chaotic period which followed the death of Karīm Khān Zand, the flattering attitude which he took towards his chief Mīrzā Muḥammad Kalāntar earned him the favour of the Zand ruler Dja'far Khān, who subsequently, on the withdrawal and death of Mīrzā Muḥammad, offered him the office of the *kalāntar* of Shīrāz (1200/1782). Luṭf 'Alī Khān Zand, the youthful son and successor of Dja'far Khān, added his rather unthinking support to this parvenu's career, and, in the course of his ensuing struggle against the Kādjār Ākā Muḥammad Khān, he entrusted the holding of his capital to this rather dubious *kalāntar*.

Hādjdjī Ibrāhīm, however, either in order to protect his fellow-citizens against the consequences of the dynastic wars, or just to dissociate himself from a losing cause, was brought to betray his brave but tyrannical sovereign. Thus in 1205/1791, while Luṭf 'Alī and his soldiers had camped outside Shīrāz, and the capital was entrusted to Hādjdjī Ibrāhīm, an incident in the Zand camp plotted by the Hādjdjī, together with a surprise coup d'état which the latter staged against the Zand party in Shīrāz, resulted in Luṭf 'Alī's fleeing, upon which Shīrāz was lost for ever to the Zand. Meanwhile, as Hādjdjī Ibrāhīm, probably due to his fear of a Zand revanche, made an appeal to the Kādjārs, Ākā Muḥammad Khān occupied Shīrāz and appointed—not without some reservation—the old *kalāntar* as the Governor-General of the whole province of Fārs (1206/1791). Nevertheless, when after the extirpation of the Zands, and probably in order to curb the local influence of Hādjdjī Ibrāhīm, Shīrāz and the whole province of Fārs were granted to the Kādjār Crown Prince Bābā Khān (i.e. the later Faṭḥ 'Alī Shāh), the Hādjdjī was given an honorific title of I'timād al-Dawla [q.v.], with a rather nominal premiership, to keep him as an attendant in the Shāh's retinue (1209/1795).

Under Faṭḥ 'Alī Shāh, who owed his accession

partly to the wise arrangements made by the old Hādījī Ibrāhīm, the latter's prestige and fortune increased rapidly, and his sons, brothers, and relatives obtained vast tracts of land with important positions throughout the Persian provinces. However, his own arrogance, along with the offensive behaviour of his relatives, caused considerable administrative hostility, and some of his opponents presented to the Shāh convincing documents—forged or authentic—to prove his involvement in treasonable activities. A royal decree, issued in great secrecy, directed the royal emissaries to seize and prosecute Hādījī Ibrāhīm and all his relatives at one time, on a previously fixed date, in Tehran and the provinces (1215/1801). Of all his male descendants, only two small boys were spared.

Hādījī Ibrāhīm's downfall, in which his rival Mīrzā Shafī' Māzandarānī had an important rôle, was later deplored by Faṭḥ 'Alī Shāh. His political opponents, however, did not cease to criticise him severely for his so-called treacherous character, his selfish impetuosity and his lack of tact in diplomatic affairs.

(A.H. ZARRINKOOB)

**IBRĪK** (in Islamic art), a term used for any kind of ewer, irrespective of function or material, but generally a vessel for pouring water or wine. Together with a basin, it is also used for washing hands and feet. Other terms for specific kinds of ewers are *kubra* or *bulbula* (see Abū Nuwās, *Diwān*, ed. Wagner, i, Beirut 1958, 54, 3).

The chronology and geographical origin of early metal ewers up to the 4th/10th century have not yet been definitely established. They can be classified typologically into five groups, representing a slow departure from mainly Sāsānid and Soghdian prototypes towards the formation of truly Islamic shapes. The most characteristic features are: a tendency towards heavier bodies, with an emphasis on the lower part of the body in the earlier phases, shifting to the formation of shoulders; a development of shapes in which the transition between body, neck, mouth and foot is clearly marked and set off; and a preference for faceted shapes. One group is characterised by a bipartite neck which is contracted in its lower part and is cylindrical and faceted in the upper half. The ovoid or cylindrical body rests on three small feet (*Survey*, Pl. 244A). Another group is best known from the "Marwān" ewer in Cairo (*Survey*, Pls. 245-6), but its traditional association with the Umayyad caliph Marwān has to be dis-

carded. The chronologically latest type has an ovoid body, a low footring and a straight, slightly flaring neck with a flat lip. It is well-balanced in proportion and its shape was retained up to Saldjūk times. Except for one group (the "Marwān" ewer), the handles meet the neck by its lip. Popular types of thumb rests are a pomegranate or a full palmette.

Between the early 5th/11th and the beginning of the 7th/13th century, workshops in Khurāsān and Transoxania produced bronze ewers which carry an oil lamp-shaped spout. Early examples have been found in Akhsīkath, in ancient Farghāna, and in Shahrastān, ancient Ushrusāna. Late 6th/12th to early 7th/13th century specimens are inlaid with silver and copper. One ewer in Paris is dated 586/1190-1 (*Survey*, Pl. 1309A). Khurāsānian workshops active in the late 5th/11th and 6th/12th centuries also produced ewers with a high, raised spout. Some have spherical bodies, while in other cases the body is either melon-shaped, faceted or fluted. One of the fluted ewers is signed by Maḥmūd b. Muḥammad al-Harawī and dated 577/1181 (Mayer, *Islamic metalworkers*, 1959, 59; for the whole group see Abu 'l Faraj al-Ushī, *A bronze ewer with a high spout*. The dates suggested by the author are debatable).

In the 7th/13th century, Mosul, Damascus and Cairo workshops produced richly decorated inlaid brass ewers with a pear-shaped, plain or faceted body, cylindrical neck and straight spout. Dated and signed specimen are the "Blacas" ewer in the British Museum (Barrett, *Islamic metalwork*, 1949, pls. 12-13), and two ewers in Paris (Rice, *Inlaid brasses*, appendix, nos. 16 and 21). The pear-shaped body and straight spout remain characteristic features of 8th/14th century Mamlūk ewers. They have a high body, which is contracted in its lower part, and the neck is surmounted by a top-heavy cup (*The arts of Islam*, Hayward Gallery 1976, no. 216). Ewers with a strongly swelling body, curving spout and handle, a contracted or funnel-shaped neck and a high splayed foot occur in 9th/15th century Egypt and Iran simultaneously (J. Carswell, *Six tiles*). Their occurrence on painted tiles from Cairo and Damascus suggests a wider distribution than that attested to by preserved objects. Ewers depicted on contemporary and later miniatures seem to point to a continuation of this type in the 10th/16th and later centuries.

Ceramic ewers follow the metal shapes very closely. Some early ceramic renderings even imitate soldering marks. Ewers with a fluted or cylindrical body and a raised spout are particularly common among Persian monochrome glazed relief wares of the 6th/12th and 7th/13th centuries.

Wine ewers and washing services are frequently depicted in miniatures and other media (for 8th/14th century washing sets, see M. S. Ipşiroğlu, *Saray alben*, Diez'sche Klebebände aus den Berliner Sammlungen, Wiesbaden 1964, pls. XVII and XVIII).

#### İÇOGLAN [see İÇ-OĞHLANĪ].

**IDRĪS** B. AL-ḤASAN, 'IMĀD AL-DĪN, the last great exponent of the Ismā'īlī *dā'wa* [q.v.] in Yaman, came from a prominent al-Walīd family of Kuraysh which headed the Musta'īlī-Ṭayyibī *dā'wa* since the beginning of the 7th/13th century. He was born in 794/1392 in the fortress of Shībām, a high peak of Mount Harāz and a stronghold of the Ismā'īlīs. In 832/1428 he succeeded his uncle 'Alī b. 'Abd Allāh as the nineteenth *dā'ī*. Besides being a versatile author, he was also a politician and a warrior; he fought several battles against the Zaydīs of Ṣa'da, thereby regaining control of several Ismā'īlī fortresses. He died on 19 Dhu 'l-Ḳa'da 872/10 June 1468.

He is considered the most celebrated historian of the *dā'wa*. His three historical works are the main sources for the history of the Ismā'īlīs from the 5th/11th century until the second half of the 9th/15th century. The first, *Uyūn al-akhbār*, in seven volumes, is the most comprehensive work on the history of the Ismā'īlī *imāms* and the Fāṭimid dynasty. It also contains valuable information on the beginning of the *dā'wa* in Yaman and on the Sulayhīds [q.v.]. The second work, *Nuzhat al-aḳkār*, in two volumes, deals with the Ismā'īlī history in Yaman, especially after the collapse of the Sulayhīds, until the year 853/1449, and is considered to be the most important source for the three-hundred-year history of the *dā'wa* there. The third work, entitled *Rawdat al-akhbār*, is a continuation of the preceding work, wherein the events are brought up to the year 870/1465. Both the latter works are of great importance, since they deal with contemporary events and shed light on an obscure period of Yamanī history.

In addition to panegyrics of the *imāms* and the *dā'īs*, his poetic *Dīwān* contains some historical information. His work on Ismā'īlī doctrine entitled *Zahr al-mā'ānī* is regarded as the highest achievement on *ḥaḳā'ik* [q.v.] ever reached by the Yamanī *dā'wa*. He also composed several refutations of Sunnī, Zaydī and Mu'tazilī doctrines. Most of his works have survived and have been preserved in private collections.

*Bibliography*: The main biographical sources are the author's own works mentioned above; see also Ismā'īl b. 'Abd al-Rasūl al-Madjdū', *Fihrist*, ed. 'Alī Naḳī Munzawī, Tehran 1966, 34, 44, 73-7, 85, 97, 103, 150-1, 239-42, 270, 275-7; for a detailed description of his works and sources see Ismāil Poonawala, *Bibliography of Ismā'īlī literature*, Malibu, Calif. 1977, 169-75.

(I. POONAWALA)

**IDRĪS** B. AL-HUSAYN B. ABĪ NUMAYY, ABŪ 'AWN, Sharīf of Mecca in the early 11th/17th century. He was born in 974/1566, and became *Sharīf* and governor of the Ḥijāz in 1011/1602-3 after his brother Abū Ṭālib and in conjunction with his nephew Muḥsin. This division of power ended, however, in a fierce internal family dispute, apparently over Idrīs's retinue and followers (*khuddām*), and in 1034/1624-5 the family deposed Idrīs from the governorship of the Ḥijāz in favour of Muḥsin. The conflict was resolved by a truce, during the time of which Idrīs promised to leave Mecca altogether. He now fell ill, and died and was buried at Yaṭīb in the Ḍjabal Shammar (17 Ḍjumādā II 1034/25 February 1625). Muḥibbī quotes extensively from the eulogistic poetry addressed to him in his heyday of power.

*Bibliography*: The main biographical notice is in Muḥibbī, *Khulāṣat al-aḥḥar*, Cairo 1284/1867-8, i, 380-4; see also 'Uḥmān b. Bīshr al-Naḳdīf, *Unwān al-madīd fī ta'rīkh Naḳdīf*, Riyadh 1385-8/1965-8, i, 32; Aḥmad b. Zaynī Daḥlān, *Khulāṣat al-kalām fī bayān umarā' al-balad al-harām*, Cairo 1305/1887-8, 64-6; Ziriklī, *al-'Ālām*, i, 266.

(ED.)

**AL-IDRĪSĪ**, ḌJAMĀL AL-DĪN ABŪ ḌJA'FAR MUḤAMMAD, B. 'ABD AL-'AZĪZ B. ABĪ 'L-ḲĀSĪM (d. 649/1251), upper Egyptian author of Moroccan background who wrote, under the Ayyūbid sultan al-Malik al-Kāmil, his monograph on the monuments of Ḍjīza (Gīza), the *K. Anwār uluww al-adjrām fī 'l-kashf 'an asār al-aḥrām*. The oldest extant version of this text is preserved in a copy commissioned by the Ottoman philologist 'Abd al-Ḳādir b. 'Umar al-Baḥḍādī (d. 1093/1682) [q.v.], who compiled—on the basis of Idrīs's writing—his own *K. Maḳṣad al-kirām fī 'adjā'ib al-aḥrām*.

Idrīs's tract on the Pyramids is distinguished from the copious earlier and later writings on the subject by its systematic and concise structure, its comprehensiveness and the rigorous application of the techniques and standards of *ḥadīth* scholarship to his presentation. Each of the six chapters of the book is a complete short monograph. Ch. I deals with the genre of the pagan *'adjā'ib* and their compatibility with the tenets of Islam; considerable space is devoted to the question why the Pyramids are not, or are only summarily, mentioned in the *Qur'ān*. Idrīs vigorously defends the protection of the Pharaonic monuments. He names as witnesses for his standpoint the *Ṣaḥāba* who wrote pious graffiti on the Pyramids, settled and died in Ḍjīza in the shadow of these pagan structures and "whose hands were not stretched out to them (sc. the Pyramids) in bad intent" (ms. Munich, Aumer 417, fol. 32a). He even contrives to declare Ḍjīza, by virtue of the *Ṣaḥāba*'s presence, a "holy land" (*ard mukaddasa*), and ranks the *ziyāra* to these *'adjā'ib*—tokens of God's majesty and warning—as obligations incumbent upon every scholar coming to the area (*ṭalab al-'adjā'ib*). More than once the book betrays signs of a strong local pro-Egyptian, quasi-Shu'ūbī bias: Idrīs takes up the *topos* of the legendary intelligence of the Egyptians and skilfully intertwines it, firstly with the tradition (from a *Kitāb Masīsūn al-Rāhib*) that the dust of Ḍjīza and of Anṣinā/Antinoe, another old Egyptian sanctuary, constitute a talisman which gives the people of Egypt their unique mental gifts; and secondly with the role of Hermes [see *HIRMIZ*], whom he introduced as the Greek warden of sagacity and wisdom, apart from his

function as one builder of the Pyramids. In the late 13th and the 14th century, we observe the dramatic widening of this chasm between iconoclastic Muslim zealots and the moderates of Idrīsī's kind who point at the unadulterable place of these 'adḡā'ib within Muslim *Heilsgeschichte*.

In chs. 2 to 6, Idrīsī gives valuable data on the sites of Dījza, many of which are not repeated by later compilers. He gives a detailed description, also architectural, of the way the traveller takes from the Bāb Zuwayla, the south gate of the Fātimid city of Cairo, to the Pyramids. He mentions all the holders of high office who, between the days of al-Ma'mūn and his own, came to the Pyramids, often in search for treasures, *maṭālib*, as the Egyptians say. The Fātimid period saw the apogee of activities around the Pyramids; in al-Aḡḡal b. Badr al-Djamālī's days fires were lit on top of the Great Pyramid in certain nights. Idrīsī gives a list of contemporary scholars who saw, or wrote on, the Pyramids, among them Ibn al-Djawzī, 'Abd al-Laṭīf al-Baġhdādī (whose description of the Pyramids and the Sphinx he faithfully reproduces) and Ibn Mammāṭ (who composed a book on the Pyramids which Idrīsī counts among his sources), but also, *min ġhayr ahl al-kibla* "from among the non-Muslims", the envoy of Frederick II to al-Kāmil (Count Thomas of Acerra<sup>2</sup>), who showed great zeal in deciphering a Latin inscription on the Pyramid of Cheops.

Idrīsī devotes extensive space to the controversial issue whether the Pyramids were built before or after the Deluge. He presents the arguments of those who held the latter position (among them a Jewish author who claims Aristotle as builder of the two great Pyramids), yet in an uncompromising fashion refutes their theories for the other, antediluvian, even pre-Adamite, theory. Unfortunately, the sphinx, *Abu 'l-Hawl* [q.v.], is given only passing mention. Too many stories circulated about it, as he complains.

(U. HAARMANN)

AL-IDWĪ AL-ĤAMZĀWĪ, ḤASAN, one of the principal protagonists of the events preceeding the British occupation of Egypt in 1882, was born in the village of 'Idwa near Maghāghā in al-Minya province, Upper Egypt in 1221/1806.

He studied at al-Azhar [q.v.] and taught there from 1242/1826-7 onwards. He was a man of considerable wealth, which allowed him to spend generously on pious works and the publication of his writings. However, his inability adequately to regulate his financial affairs led to solvency problems and to a case raised against him in Court by the owner of the printing press, al-Maṭba'a al-Kāstīliyya, where he had most of his books printed (cf. al-Āfūkātū Kāṭīskī (ed.), *Risāla... 'an al-da'wā allatī bayn... Mūsā Kāstīlī wa 'l-Shaykh Ḥasan al-Idwī*, Cairo 1287/1870-1). In these works, which are listed in Brockelmann, *GAL*, II, 486, S II, 729, he concerns himself mainly with *fiḡh* and related issues, while in addition he wrote on *ḡadīth*, *tawhīd* and *tasawwuf*. His writings pertaining to the latter field reflect his adherence to al-Shādhīliyya order [q.v.]. He had been initiated into various branches of this *ṭarīqa*, amongst others into al-'Afīfiyya [see AL-'AFĪFĪ above].

He was among the religious notables who actively supported the Khedive Ismā'īl in his efforts to counter the danger of increasing international control, and played a significant role in the events preceeding the Khedive's deposition in 1879.

His role during the 'Urābī [q.v.] insurrection, when he sided with the 'Urābiyyūn and publicly demanded the deposition of the Khedive Tawfīk, caused his arrest following the British occupation of Cairo in September 1882. He was set free in the course of the subsequent court proceedings against those involved in the insurrection, on condition that he return to his native village of 'Idwa. He died in Cairo on 17 Ramaḡān 1303/19 June 1885 and was buried in the now-demolished mosque which had been constructed by him near the mosque of al-Ḥusayn (cf. 'Alī Mubārak, *Khīṭat*, v, 48) and close to the newly-erected mosque named after him, where his shrine may be found today (cf. the monthly *al-Muslim*, xix (Cairo 1969), 9, 4).

*Bibliography:* For biographies, see 'Alī Mubārak, *Khīṭat*, xiv, 37, where al-'Idwī's role in the 'Urābī insurrection is omitted (cf. G. Baer, *Studies in the social history of modern Egypt*, Chicago-London 1969, 243); Zakī Muḡammad Muḡjāhid, *al-'Ālām al-sharīfiyya*, Cairo 1950, ii, 98; Muḡammad al-Baḡḡūr Zāfir al-Azharī, *al-Yawāqīt al-ṡamīna fī a'yān madḡhab 'ālim al-Madīna*, Cairo 1324-5/1906-7, i, 126 f.; Khayr al-Dīn al-Ziriklī, *al-'Ālām*, ii, 214. For additional biographical data, see Ilyās al-'Ayyūbī, *Tārīkh Miṡr fī 'l-'ahd al-ḡhīdīw Ismā'īl Bāshā min sanat 1863 ilā sanat 1879*, Cairo 1923, i, 42 f.; and A.M. Broadley, *How we defended Arabi and his friends*, London 1884, 365 ff., 369 f. On his *ṭarīqa* allegiance, see Muḡammad Zakī Ibrāhīm, *Dalīl al-muḡīmal ilā al-ṭarīqa al-Muḡammadīyya al-Shādhīliyya*, Cairo 1969, 49. (F. DE JONG)

İKĀ' (form IV from *w-k-*), literally "to let fall" the wand (*kaḡṭīb*) in order to mark the rhythm in singing, a term denoting musical metrics or "rhythm" in the sense of measuring the quantity of notes. The early Islamic *ikā'* can be considered as a forerunner of mediaeval European mensura. Based on oriental practices inherited by the Arabs, it shows elements of Greek *rhythmos* and similarities to Indian *tāla*. According to Saḡīf al-Dīn al-Urmawī, the roots of *ikā'* go back to Sāsānid Iran, where Indian musical presence is attested.

The internal structure of *ikā'* is obviously of Arab origin, being built up in analogy to the prosodic rules of Arab poetry. One *ikā'* consists of two "cycles" (*adwār*), each of them being composed of several "basic" notes (*uṡūl*) and a pause (*fāṡīla*). In modifying the basic notes, the musician gets at the metrical patterns of the chosen "form" (*ḡīms*) of *ikā'*. The early music schools knew seven or eight forms, namely *al-ṡaḡīl al-awwal*, *al-ṡaḡīl al-ṡāni*, *al-ramal*, *al-hazaḡī* and their "quick" (*khafīf*) forms.

Al-Khalīl b. Aḡmad (d. 175/791), author of a lost *Kitāb al-İkā'*, is regarded as the "inventor" of this science. Citations in later sources or original texts give information about the *ikā'*-theories of more than ten authors up to the 5th/11th century, the most important being al-Fārābī, who dedicated two chapters of his *Kitāb al-Mūsīkī al-kabīr* and two remarkable monographs to this subject.

The *ikā'* tradition of the Mawṣilī school, preserved in the *Kutāb al-Aghānī* of Abu 'l-Farādī al-Iṣbahānī, persisted for a long time in Spain, whilst the development in the Eastern caliphate had already given birth to more elaborate systems. The metres described by Ṣafī al-Dīn al-Urmawī (d. 693/1294) led to the basic musical practice of the last "international" school of 'Abd al-Ḳādir al-Marāghī (d. 838/1435) as well as to the *uṣūl*, *awzān*, *ḍarūb* or *adwār* (*al-ikā'*) of the succeeding local traditions in Iran (disappearing there in the 12th/18th century), in Turkey (where practice and theory continues up to our own days) and in the Arab countries (where the late 19th and the early 20th centuries have brought a revival of local metrical forms).

*Bibliography:* Almost all Arabic, Persian and Turkish musical treatises and most encyclopaedias dealing with music contain a chapter on *ikā'*. For its early Arabian theory, see F. Dieterici, *Die Propädeutik der Araber im 10. Jahrhundert*, Berlin 1865, 112-17; H.G. Farmer, *Sa'ādah Gaon on the influence of music*, London 1943, 78-89; A. Shiloah, *L'épître sur la musique des Ikhwān al-Ṣafī'*, in *REL*, xxxiv (1966), 176-8; E. Neubauer, *Die Theorie vom iqā'*. I: *Übersetzung des Kutāb al-Iqā'āt von Abū Naṣr al-Fārābī*, in *Oriens*, xxi-xxii (1968-9), 196-232; H. Avenary, *The Hebrew version of Abū l-Sall's treatise on music*, in *Yuval* (Jerusalem), iii (1974), 68-71. For later Arabian theories and modern practice, see R. d'Erlanger, *La musique arabe*, Paris 1930-59. For Turkish forms, see Suphī (Ezḡī), *Nazarī ve amelī Türk musikisi*, Istanbul 1933-53; H.-P. Seidel, *Studien zum usul "devri kebir" in den peşrev der Mevlevi*, in *Mitteilungen der Deutschen Gesellschaft für Musik des Orients*, xi (1972-3), 7-69; S. (E. NEUBAUER)

**İKHTISĀN**, MUḤAMMAD ṢADR 'ALĀ', secretary and author under the Dihli sultanate.

He was the son of Aḥmad Ḥasan, a native of Dihli, and entered his ancestral profession of *dabīr* or secretary in the *Dīwān al-Inṣhā'* or royal chancery some time towards the close of the *Khaldjī* period. On his accession to the throne in 720/1320, Sultan *Ghiyāth* al-Dīn Tughluḳ Shāh raised him to the position of *Dabīr-i khāṣṣ* in recognition of his learning whilst he was still in his early twenties, and in this capacity he accompanied the sultan on an expedition to Bengal. After the conquest of Bengal, the sultan, on his way back to Dihli, invaded the independent territory of Tīrhut, seized it and entrusted its charge to Aḥmad Yalbugha. In Tīrhut, *Ikhtisān* fell ill because of the overwhelming heat and was confined to bed for quite a long time; during this illness he translated a Sanskrit romance into ornate Persian, completing it in 725/1325, and calling it the *Basātīn al-uns*.

The *Basātīn al-uns* shows *Ikhtisān*'s mastery of the Persian language. It contains an introduction giving us information about his own career and the grandeur of sultan Muḥammad b. Tughluḳ, so that this introduction is a document of considerable historical significance, supplementing Baranī's *Tārīkh-i Firūz Shāhī* with regard to the radical views of Sultan Muḥammad b. Tughluḳ. Like Baranī, *Ikhtisān* also belonged to the sultan's faction and subscribed to his rationalist views about religion and society. Being an intellectual, well-versed in Islamic sciences, the sultan emphasised the need for re-interpreting the Islamic *Shari'a* according to the

requirement of the time. The orthodox '*ulamā'*' opposed the sultan, whilst liberal thinkers like *Ikhtisān* supported him in this respect; *Ikhtisān* calls Muḥammad b. Tughluḳ Nu'mān-i *Thānī*, while the orthodox *Ṣūfīs* and '*ulamā'*' condemned him as a tyrant and oppressor (*djabbār* and *kahhār*).

On Muḥammad b. Tughluḳ's death, his confidants were either killed or thrown into jail. Fortunately, *Ikhtisān* happened to be in Iran at that time, having been sent there by the late sultan as an ambassador to the *Ilkhānīd* Court. He may have got information of his patron's death and the accession of Sultan Firūz Shāh III to the throne (752/1351) in Multān, then a border city. It was there that he fell ill and died after a short illness. Thus *Ikhtisān* escaped imprisonment, while Baranī, the author of the *Tārīkh-i Firūz Shāhī* underwent it as a result of the reaction against Muḥammad b. Tughluḳ's policies.

(I.H. SIDDIQUI)

**İKHTIYĀRIYYA**, the *élite* or veterans of an Ottoman guild or army unit (*ođjak*).

*Ikhtiyār*, "choice" in Arabic, had acquired the meaning of "old" both in Turkish and in modern Arabic, and thus came to designate the chosen and the elders of certain units, two attributes which in traditional society were virtually identical. The *ođjak ikhtiyārī* in Ottoman Egypt consisted of retired officers and veterans of the *ođjaqs*, and their function was mainly ceremonial and advisory. They were headed by a *bāsh* *ikhtiyār*. In the guilds the informal group of *ikhtiyāriyya* was also designated by a large variety of other similar terms (cf. Baer, *Egyptian guilds*, 53, and *Structure of Turkish guilds*, 183). There were no rules to determine when and under what conditions an *usta* became a member of this group. Similarly, its members had no well-defined tasks. Originally, as long as *futuwa* traditions survived in the guilds, they played an important role in the ceremonies of initiation. Later, it was their principal function to support the head of the guild in his relations with the authorities and thus to demonstrate that he was acting in the guild's name. It was upon their recommendation that the head of the guild was appointed by the *kādī*, and the chief assistant of the *kelkhudā* [*q.v.*] of the Turkish guilds, the *yigīt bashī*, was chosen from among them, and apparently by them, but their choice had to be confirmed by the authorities.

In 19th century Egypt, the traditional term for veteran masters in the guilds was replaced by the term '*umda* (pl. '*umad*'), but the character and functions of this group remained the same. Documents from that period show that they participated in the control of prices of comestibles and the distribution of the tax burden among the members of the guilds.

(G. BAER)

**IKLĪL AL-MALIK** is the melilot, *Melilotus officinalis* (Leguminosae) (Greek μελίλωτος, French "mélilot", German "Honigklee"), a plant of the Papilionaceae family, of which about 16 kinds are or were used as medicine. The Arabic term ("royal crown") is a rendering of Syriac *k'īl malkā*; more infrequently-used synonyms are *nafal*, *hantam*, *shadjarat al-hubb* ("love-tree"), etc. In general, distinction is made between the yellow-blossomed plants, which grow one m. high, and the white-blossomed plants growing still higher. Both are slender biennial herbs which are indigenous to uncultivated lands in Europe and Asia, but not in the North. One of these kinds—or still another one?—is the *iktīl al-malik al-mu'akrab* "scorpion-like melilot", thus known because of the form of its blossom-pods which resemble the tail of a scorpion. Certain roots, introduced from Syria into the Arab West under the name *'irḳ al-hayya* ("serpent's root") and used there as antidote against poisonous snakebites, are said to be roots of the melilot. Finally, it may be remarked that the plant was known in Arabic Spain under the Romance name *kurunilla* (= *coronilla*, cf. F.J. Simonet, *Glosario de voces ibéricas y latinas...*, Madrid 1888, 135 f.). The Arab translators describe it, of course, under *mātilūtus*.

In conformity with its Greek name, it was already known in antiquity that the melilot is a honey-producing plant. The Arabs adopted its therapeutic use largely from the Greeks. The aromatic herb was—and still is—used in compresses to soften and ripen hot, hard boils and all kinds of calluses. In warm compresses it is also useful for articular pains, if before a successful "purification" of the body takes place (through purging, blood-letting and vomiting). Together with other ingredients, the melilot cures stomach, ear and headaches. Taken internally, it procures the discharge of urine, menstruation and the foetus, and mitigates the irritation of itching with diseases of the testicles.

(A. DIETRICH)

**IKRĀH** (A.), a legal term denoting "duress". The jurists distinguish two kinds: unlawful (*ikrāh ghayr mashrū'*), and lawful (*ikrāh bi-hakk*). Only the first of these is recognised by the Ḳur'an (*lā ikrāh fi 'l-dīn*, II, 256), and has legal effects.

Unlawful duress may be of two degrees, being grave (*ikrāh tāmm* or *mulaḍḍijī'*) if it involves severe bodily harm, or slight (*ikrāh nāḳiṣ* or *ghayr mulaḍḍijī'*) if it only involves verbal threats or minor buffets. Lawful duress, which has no legal effect, may take the form, for example, of a judge exerting duress on a debtor to discharge his debt by selling property surplus to his personal needs.

The authorities differ regarding the degree of validity in contracts agreed under duress, but in general the effect of duress in civil law is to make a declaration voidable by *khayār*, i.e. the injured party has the right unilaterally either to cancel or to ratify the contract. In criminal law, the effect of duress is to diminish responsibility to the point of removing the penal sanction and making the act itself allowable; thus drinking wine under threat of death or mutilation is permissible.

Consequently, the attestation of absence of duress is an important element in the drafting of deeds of sale and other legal documents involving contractual obligations, and such absence of duress may be declared in phrases such as *bi-lā ikrāh wa-lā idjibār*.

(R.Y. EBIED and M.J.L. YOUNG)

**ILĀHĪ ERA**, also known as *Ta'rikh-i Ilāhī* "Divine Era", was introduced by the Mughal Emperor Akbar in 992/1584. The first year of this era was the year of Akbar's accession, 963/1555-6, and it was a solar year beginning with Nawrūz (the day of vernal equinox, about 20 March). The names of the months were the same as those of the ancient Persian calendar. The number of days in a month varied from 29 to 32. The calculations were made, and rules for the era drawn up, by Faṭḥ Allāh Shīrāzī. Abu 'l-Faḍl justified the introduction of Ilāhī era on the ground that the Islamic lunar era, being ancient, should be replaced by some other era commencing from a recent epoch-making event. As the accession of Akbar was such an event, so the Ilāhī era was set to commence from that date. The Ilāhī era made it possible to keep a regular account of the officers' allowances, of book-keeping and of audit. In 1069/1658-9, Awrangzīb [*q.v.*] abolished the observation of the Nawrūz festival, but did not prohibit the use of the Ilāhī months in the official records. He ordered that the *hidjra* months and years should be written before the Ilāhī months. In 1079/1668-9 he prohibited the publication of almanacs, but the officials protested

that without the use of almanacs it was not possible to follow the Ilāhī calendar properly; and some discrepancy between the actual vernal equinox and the initial day of the official solar year gradually appeared in course of time. Mirzā Rādjā Džā'ī Singh's *zīd-i Muḥammad Shāhī* in the next century was an attempt to evolve a new solar calendar for official use, based largely on the same principles as the Ilāhī calendar.

(M. ATHAR ALI)

**İLĀK**, the region of Transoxania lying within the great northwards bend of the middle reaches of the Jaxartes river and to the south of the right-bank affluent the Āhangarān (Russian form, Angren) river. It thus lay between the provinces of Shāsh [see TASHKENT] on the northwest and Farghāna [q.v.] on the east. The Arabic and Persian geographers of the 3rd-5th/9th-11th centuries describe it as a flourishing province, with its mountains producing silver and salt. They give the names of many towns there, the chief one being Tūnkath, whose ruins have been identified by Soviet archaeologists 50 miles (90 km.) from modern Tashkent.

In early Islamic times, İlāk lay on the frontiers between the abode of Islam and the pagan Turkish steppes. During the Sāmānid period and just afterwards, its local princes (given the title of *dihkān*) enjoyed considerable prestige, and minted their own coins during the period of Sāmānid collapse, e.g. in 388/998 and 399/1008-9. The author of the *Hudūd al-'ālam* describes the people of İlāk as adherents of "those who wear white", presumably the supporters of the "veiled prophet" al-Muḥanna' [q.v.], whose rising took place in the late 2nd/8th century. This information may be anachronistic for his own time, but we do read that in the period of the Sāmānid *amīr* Naṣr b. Aḥmad (301-31/914-43) the local *dihkān* was sympathetic to the Ismā'īlī propaganda current then.

(C.E. BOSWORTH)

**İLİÇPUR** [see ELİÇPUR, above].

**İLLAYSH**, MUḤAMMAD B. AHMAD B. MUḤAMMAD, onetime Mālikī *muftī* of Egypt and one of the principal protagonists in the events preceding the British occupation of Egypt in 1882. He was born in Cairo in Rādjab 1217/October-November 1802 into a family of Moroccan extraction. After a period of study at al-Azhar [q.v.] from 1232/1816-7 until 1245/1829-30, he was engaged in teaching at this institution, as well as at the Ḥusayn mosque. In 1270/1854 he was appointed to the office of *shaykh al-sāda al-Mālikīyya* [q.v.] in succession to Muḥammad Ḥubaysh, and remained in office until the end of his life.

Concomitantly, he held supreme leadership of a *Shādhiliyya* [q.v.] *ṭarīqa*, that of al-'Arabiyya, in which position notable Azharī scholars such as Muḥammad al-Amīr al-Kabīr and Muḥammad al-Amīr al-Ṣaghīr had been his predecessors.

However, the mystical conception of Islam to which he must have adhered is only incidentally

manifest in his writings—the scope of which encompasses the majority of the fields of traditional Muslim learning—such as in his *Fath al-'alī 'l-mālik fī 'l-fatwā 'alā madhhab al-Imām Mālik*, Cairo 1319/1901-2, i, 5, where he supports the doctrine of *al-nūr al-muḥammadī* [q.v.]. He was opposed to the reforms introduced at al-Azhar by its *shaykh* Muḥammad al-Mahdī al-'Abbāsī. During the campaign for removal of the latter from office—which resulted in the appointment of Muḥammad al-Imbābī as *shaykh al-Azhar*—Muḥammad 'Illaysh became the favourite candidate of the Azharī 'ulamā' and of the students for succession of al-'Abbāsī. His involvement with the 'Urābiyyūn [see 'URĀBĪ], his active support of their cause and his effort to mount resistance against the British invasion—he was among the first to call for the proclamation of *djihad*—resulted in his arrest and detention following the British occupation of Cairo in September 1882. He died in prison on 9 Dhu 'l-Hijdja 1299/22 October 1882.

(F. DE JONG)

**'ILM AL-AKTĀF** [see KATĪF].

**'ILM AL-HANDASA** (A.), geometry. From the 3rd/9th century onwards, the Arabs were introduced to geometry through the translation of Greek works, especially that of Euclid's *Elements*. They then adopted for this science the Greek name under the form *djūmatrīya*. Subsequently, they came into contact with the applied geometry of Archimedes, of Hero of Alexandria, and with the Indian *Siddhantas* (in Arabic, *Sind Hind*), and definitively adopted the word *handasa* (borrowed, according to al-Khalīl, from the Persian *andāzah* = measure, size).

In the evolution of geometry among the Arabs, two important periods may be distinguished:

I. The period of translations and of initiation (3rd/9th century).

A. The first place belongs to the *Elements of Geometry* of Euclid (*Kitāb al-Uṣūl* or *K. al-Arkān*), one of the most translated and annotated books. (a) We may mention two translations owed to Ḥadjdjād b. Yūsuf b. Maṭar, one entitled the *Hārūnī*, the other, more precise, known by the name of the *Ma'mūnī*. (b) A translation by Ishāḳ b. Ḥunayn revised and corrected by Thābit b. Kurra of Harrān (219-88/834-901). (c) al-'Abbās b. Sa'īd al-Djawharī (214/829) wrote a commentary on it, including, among other things, a number of figures and particular cases

added to the first proposition of these *Elements*. (d) A commentary on the fifth proposition by Abū 'Alī Muḥammad b. 'Īsā al-Māhānī (between 239 and 270/853-84) comprises 26 figures and is concerned principally with proofs that do not make use of reasoning by absurdity. (e) A commentary by Abū 'l-'Abbās al-Faql b. Hātim al-Nayrīzī (d. 310/922-3). (f) A commentary by Abū Dja'far al-Khāzin of Khurāsān (d. 310/922-3). (g) Abū 'l-Wafā' al-Buzdjānī (323-88/934-98) has left an incomplete commentary on it. (h) al-Kindī (184-259/800-73) devotes a *risāla* to the "objectives of the work of Euclid" (*Aghrād K. Uklīdis*); he comments here, in particular, that the work is, in reality, a compendium of ancient knowledge set in order and annotated by Euclid, and that one of his followers, Hypsicles, added on the fourteenth and fifteenth propositions.

B. The *Data* (*Mu'tayāt*) of Euclid, translated by Ishāk and revised by Thābit.

We must mention at this point—and we shall have occasion to return to it—the criticisms made of Euclid's postulates by al-Nayrīzī in his *Risāla fi 'l-muṣāḍara al-mashhūra li-Uklīdis* "Letter relating to the famous postulate of Euclid"; by al-Hasan b. al-Haytham (354-430/965-1038); by 'Umar al-Khayyām (467-517/1074-1123) in his *Risāla fi sharh mā ashkala min muṣāḍarāt Uklīdis* "Letter explaining some difficulties raised by the postulates of Euclid"; and by Naṣīr al-Dīn al-Tūsī (597-672/1201-74) in his *Tahrīr uṣūl Uklīdis* "Restatement of the Elements of Euclid", and his *Tahrīr muṣāḍarāt Uklīdis* "Observations on the postulates of Euclid".

C. The *Conic sections* (*al-Kuṭū' al-makhrūṭiyya*) of Apollonius, a work which apparently comprised 8 propositions; the first four were translated, under the supervision of Aḥmad b. Mūsā b. Shākīr, by Hilāl b. Abī Hilāl al-Himṣī (d. 218/833), and the last three by Thābit b. Qurra.

D. The *Elements of geometry* of Menelaus. Thābit translated three of its propositions. An unknown translator revised the chapters relating to triangles. The problem of transversals and their applications in the study of conic forms inspired Thābit to compose his work *al-Kawf fi 'l-shakl al-kattā' wa 'l-nisba al-mu'allafa* ("Survey of the transversal and harmonic division"), a work translated into Latin by Gerard of Cremona (*Liber Thabit de figura alchata*). Naṣīr al-Dīn al-Tūsī also made this work the basis of his treatise *Kitāb al-Shakl al-kattā'*, in which he set out to establish the fundamental principles of spherical trigonometry.

E. The work of Pappus (the *Collection of mathematics*), notably a translation by Thābit of his commentary on the Book of Ptolemy relating to the area of the sphere; and his commentary on the tenth proposition of Euclid.

F. The geometrical work of Archimedes: (a) His work *On the sphere and the cylinder*, translated by the Banū Mūsā, later by Thābit and by Ishāk b. Hunayn. A translation by Kustā b. Lūkā (299/912) served as the basis for the Hebrew translation of Qalonimos b. Qalonimos (728/1328). (b) *On the squaring of the circle* (*Fī takṣīr al-dā'ira; Tarbī' al-dā'ira; Misāhat al-dā'ira*), translated by Thābit and by Hunayn b. Ishāk, a translation revised by Naṣīr al-Dīn al-Tūsī (ed. Hyderabad 1359/1940). (c) The *Lemmata* (*al-mā'khūdhāt*), translated by Thābit and annotated by Abū 'l-Hasan 'Alī b. Aḥmad al-Nasawī (370-431/980-1040); Tūsī makes use of it in his study published in 1940 at Hyderabad. (d) *Measuring the side of a regular heptagon inscribed in a circle* (*tasbī' al-dā'ira*), a work which inspired in particular, Abū Sahl al-Kūhī.

G. The work of Hero of Alexandria, notably the *K. Hall shukūk Uklīdis* ("Resolution of doubts concerning Euclid"); and the *K. al-Hiyal al-rūḥāniyya* ("Pneumatics").

We may note, finally, the translation of the *Sindhantās* which familiarised the Arabs with problems of surveying and of the measuring of surfaces and volumes, and in a general manner, with the various applications of geometry.

II. The period of creativity (4th-9th/10th-15th centuries).

The translated material was, as we have noted, progressively annotated, discussed and corrected.

From the 3rd/9th century, but especially after the 4th/10th one, the specific contribution of the Arabs became more important. The latter supplemented the ancient works in a number of disciplines (astronomy, optics, algebra), with new proofs and with the resolution of geometrical problems; new applications came into being, especially in sculpture and in architecture; trigonometry was discovered and codified; important theoretical questions were raised; the authority of ancient masters was contested, and the way was open for the progress of geometry in hitherto unknown directions.

But before reviewing certain of the most celebrated Arab contributions to geometry, here follow, century by century, the authors and the works which may be mentioned:

3rd/9th century: al-Kh'arazmī (d. ca. 232/846), *Bāb al-misāḥā*—al-Djāwhari (214-15/839-30); *Kitāb tafṣīr K. Uklīdis* "Commentary on the Book of Euclid"; *K. al-Ashkāl allatī zādaha fi 'l-makāla al-ūla min Uklīdis* "On the figures that he has added to the first proposition of Euclid"; *Ẓiyādat fi 'l-makāla al-khāmisa min K. Uklīdis* "Supplement to the fifth proposition of Euclid", cf. *Fihrist*, Cairo 1348/1930, 379; and Suter, 21.—the Banū Mūsā b. Shākīr (Muḥammad, d. 259/873), *Ma'rifat misāhat al-ashkāl al-basīta wa 'l-kuriyya* "Information on the surfaces of plane and spherical figures" (mss. Carullah 1475, 3; 1502, 9; Köprülü, 930, 14; 931, 14; Rampūr 311; Bodl. i, 960); *Mukaddimat a-makhrūtāt* "Introduction to the conical forms" (mss. Bodl. i, 943, 5; Leiden 979; Sarton 193); *Kisimat al-zawāyā bi-thalātha aḡsām mutasāwiya* "Trisection of angles" (cf. *Fihrist*, 379.—al-Māhānī, *Risāla fi 'l-nisba* "Treatise on proportions" (*Fihrist* 379; mss. Bodl. 6009; Paris 3467, 1<sup>o</sup>); *R. fi 'l-mushkil min al-nisba* "Epistle on complex proportions" (ms. Paris 2457, 39); *R. fī 26 shakl<sup>m</sup> min al-makāla al-ūla min Uklīdis* (*Fihrist*, 379, Thābit b. Qurra; see D. above); *K. al-Shakl al-kattā'* (*Fihrist*, 380; mss. Paris 2457, 37; 2467, 13; Esc. 971, 2; Algiers 1446, 5); *K. fī misāhat ka'f al-makhrūt alladhi yusammā 'l-mukāfi'* "Surface of the conical form known as the parabola" (mss. Paris 2437, 25; Cairo vi, 197).—al-Battānī (244-317/858-929); we note in particular his contribution to trigonometry and his elegant solutions to problems of spherical trigonometry by means of orthographical projection, solutions known and partially imitated by Regiomontanus (1436-76).

4th/10th century: al-Nayrīzī, *Sharḥ Uklīdis* (*Fihrist* 389; S. 363); *R. fi 'l-muṣāḍara al-mashhūra li-Uklīdis*.—al-Buzdjānī, *K. fīmā yahtādū ilayhi al-'ummāl wa 'l-kuttāb min ṣinā'at al-ḥisāb* "Elements of calculus essential for the accountant and the secretary"; 3rd part, *fī a'māl al-misāha* "Methods relating to surfaces".—al-Sidjzi (358-89/969-99) one of the greatest Muslim geometers, *R. fī ikhrāj al-khuṭūt*

fi ‘l-dawā’ir al-mawdū’a min al-nukat al-mu’lāt “In a given circle, to draw certain straight lines through given points” (ms. Paris 2458, 1; Sédillot, *Notices et Extraits*, xiii, 143); *R. fi ‘l-djāwāb ‘an al-masā’il allatī su’ila ‘anhā fi ba’d al-ashkāl al-ma’khūdhā min K. al-ma’khūdhāt li-Arshādāt* (ms. Paris 2458, 8; Sédillot 116); *Tahṣīl al-kawānīn al-handasiyya al-mahdūda* (ms. Paris 2458, 2; Sédillot, 139); al-Sidjzi was particularly interested in circles and in conical sections.

*5th/11th century*: Ibn al-Haytham is well-known for his studies in optics (Problem of Alhazen). Among his geometrical works we note the following (cf. ‘*Uyūn al-anbā’*’, ed. Beirut 1377/1957, iii, 154 ff.); *Sharḥ Uṣūl Uklīdis fi ‘l-handasa wa ‘l-‘adad wa-talkhīṣuḥu* (“Commentary and summary of the *Elements* of Euclid”); *K. al-Taḥlīl wa ‘l-tarkīb al-handasiyyaynī* (“Analysis and synthesis in geometry”); *Maḳāla fi ḥall shakk, radd<sup>m</sup> alā Uklīdis fi ‘l-maḳāla al-khāmisa kitābih fi ‘l-Uṣūl al-riyādiyya* “Analysis of a doubt, in response to Euclid in the 5th proposition of his work ‘*Elements* of mathematics”); *Maḳāla fi misāḥat al-mudjassam al-mukāfi* “On the surface of the paraboloid”; *Maḳāla fi ḳhawāṣṣ al-kaṭ’ al-mukāfi* “On the properties of the parabola”; *Maḳāla fi ḳhawāṣṣ al-kaṭ’ al-zā’id* “On the properties of the hyperbola”; *Maḳāla fi ḥall shukūk al-maḳāla al-ūlā min K. Uklīdis* “Analysis of doubts concerning the 1st proposition of the Book of Euclid”. Let it be added that Ibn al-Haytham, besides his theoretical work, tried to find practical applications for his results. It is sufficient to recall, in this context, the anecdote related by al-Ḳifṭī (iii, 149, 150) concerning his attempt to construct a barrage on the cataracts of the Nile, near Aswān, with the object of regulating the course of the river.

*6th/12th century*: ‘Umar al-Ḳhayyām, *R. fi sharḥ mā ashkala min muṣādarāt K. Uklīdis* “Explanation of difficulties raised by the postulates of the Book of Euclid” (mss. Leiden 967; Paris 4946); *Maḳāla fi ‘l-djābr wa ‘l-mukābala* (mss. Leiden 1020; Paris 2458, 7, 2461); in particular, geometrical solutions of second-degree equations.

*7th/13th century*: Naṣīr al-Dīn al-Ṭūsī, *R. al-shakl al-kaṭ’ā’*; here he expounds the theory of transversals from which he deduces original connections enabling him to lay the foundations of spherical trigonometry; *Tahṣīr ‘Uṣūl Uklīdis* “Examination of the *Elements* of Euclid” (mss. Tunis 56R, 58R, Latin tr., Rome 1594); *Tahṣīr muṣādarāt Uklīdis* (ms. Tunis 4761); the method employed in these studies is adopted by a number of commentators on Euclid, including, especially, Shams al-Dīn al-Samarḳandī, *Ashkāl al-ta’āsīs*, and the commentary by Mūsā b. Muḥammad Ḳādī-zāda al-Rūmī (815/1412) (mss. Tunis 2705, 223R, 2746; Esc. 952, Paris 6853); commentary by Ḥasan b. Muḥammad Naẓẓām al-Nisābūrī (811/1408) in his *Tawdīḥ* of the *Tadhkira* of Ṭūsī (ms. Tunis 236, copy dating from 860/1398).

*9th/15th century*: Al-Ḳāshī (d. 832/1429): *al-Risāla al-muḥīṭiyya fi ‘stikhṛādī muḥīṭ al-dā’ira* “Determination of the perimeter of the circle”.

A brief analysis of the contribution of the Muslims towards the progress of geometry:

A. *Analysis*.—1. First one may note, in the guise of introduction to books on various disciplines, a number of geometrical questions, the solution of which is necessary for the explanation of the ideas studied subsequently in these works; this is the case with the opening chapters of treatises on astronomy where the properties of circles drawn on spheres are described in detail and where there are solutions to

problems of distances, volumes of solids, plane or spherical trigonometry.

On the other hand, in spite of the duality of origin of geometry and of arithmetic or of algebra, the two latter being initially discrete sciences, the former of continuous scope, the Muslims, since al-Ḳh’arazmī, have used algebra for the solving of geometric problems; they have also made use of geometry for the solving of new algebraic problems. It is sufficient, in this context, to recall the solution by al-Ḳhayyām of cubic equations by means of intersection of circles, parabolas or hyperbolas; we may also cite al-Māhānī’s problem concerning the plane sections of the sphere, which led him to the third-degree equation  $x^3 + b^2 = bx^2$ .

2. It is impossible to overestimate the importance of the revolution brought about in astronomical calculations, in particular, or in physics, by a sister science of geometry, developed and codified by the Muslims who made of it an independent discipline, sc. trigonometry. Thanks to this new science, a whole range of problems was completely solved, and with a precision depending uniquely on tables (zīdī) established at an early stage.

In the 3rd/9th century, al-Battānī solved the equation  $\sin x = a \cos x$  discovering the formula

$$\sin x = \frac{a}{\sqrt{1+a^2}} \quad (\text{for the arcs of the 1st quadrant}).$$

Habash compiled the table of tangents. In the 4th/10th century, Abu ‘l-Wafā’ brought real progress to trigonometry. He established the relations:  $\sin (a + b) = \sin a \cos b + \sin b \cos a$

$$2 \sin a = 1 - \cos 2a$$

$$\sin 2a = 2 \sin a \cos a$$

$$\sec a = \frac{1}{\cos a} = \sqrt{1 - \tan^2 a}$$

He set out the formula of sines in a spherical triangle:

$$\frac{\sin a}{\sin A} = \frac{\sin b}{\sin B} = \frac{\sin c}{\sin C}$$

Ibn Yūnus (958/1009) author of the Ḥakīmī table, demonstrated the formula:

$$\cos a \cos b = \frac{1}{2} [\cos (a + b) + \cos (a - b)],$$

permitting the passage from a sum to a product, an operation which was to be of importance in the logarithmic system of calculation invented later.

In the 6th/12th century, Ḍjābir b. Aflāḥ knew the equation  $\cos b = \cos B \sin c$ . In short, Arabic trigonometry was already a long-established science when Fibonacci used it, ca. 1220, for the measuring of surfaces and when, ca. 1464, Regiomontanus, putting al-Ṭūsī’s work to good use, composed the first treatise on trigonometry published in Europe in 1485.

3. Geometry was further applied by the Arabs in geodesic measurements, executed to check the ancient proportions and to verify the conclusions of the *Almagest* of Ptolemy (scientific expeditions by the Banū Shakkir, ca. 212/827, in the region of Palmyra and Raḳqa, then in the neighbourhood of Sindjār, the Latin *Singara*, with the object of measuring the earth’s inclination). Al-Battānī fixed the geographical coordinates of 310 locations, including 30 in the West; al-Ḥasan al-Marrākūshī gave the coordinates of 135 locations, of which 71 belong to the western Mediterranean. Al-Bīrūnī dealt with the problem of cartography and of the representation, on a plane surface, of the celestial or terrestrial sphere. He reviewed various methods of projection, conical, cylindrical, orthographic or

stereographical, the lines of the sphere being represented by ellipses, parabolas or hyperbolas.

4. "Geometry", wrote the *Ikhwān al-Ṣafā'*, "has as its principal field of application the measurement of surfaces, measurement which is essential for surveyors, accountants, tax agents, landowners, in their various operations or transactions, such as the collection of property tax, the drainage of water-courses, the postal service, etc."

5. An important area in the application of geometry is that of architecture and sculpture; Muslim art, inspired by geometry, invented the extended arch, cupolas resting on regular polygons, corbellings, stalactites, groups of polyhedrons of stucco and light. The work of the sculptor in stone or in stucco was designed by the mathematician.

B. *Works*.—Among the works of pure geometry written by the Muslims, Suter mentions only two treatises, in the 3rd/9th century the book by the Banū Shākir (*Ma'rifat al-ashkāl al-bāṣita wa 'l-kuriyya*), and in the 4th/10th century, the *Geometry* of Abu 'l-Wafā which has come down to us in a Persian edition owed to one of his pupils (cf. F. Woepcke, in *JA* [1855], 218-56 and 309-59).

However, it is possible to take account of other writings which in our view are of great importance:

The ms. of Ṭhābit b. Qurra mentioned above *Fi miṣḥat kaf al-makhrū' alladhī yusanmā 'l-mukāff*, where, following the example of Archimedes, the former uses a method of integral calculus in the quest for the limit of the equivalent on "integral sums" for the determination of the surface of a segment of a parabola, or the volume of a paraboloid revolving around its axis or around any other straight line passing through the focus.

An important fact deserves to be remembered; this is the attitude of a group of Muslim scholars towards the principle of authority and the enormous prestige enjoyed by the name of Euclid since ancient times, a prestige which has not ceased to be immense up to a period close to the present day. In the list which we have presented, it is notable that, since the 3rd/9th century, scholars have not refrained from expressing serious reservations in regard to certain of Euclid's postulates, and in particular the famous 5th postulate concerning parallel lines.

In a closely-argued discussion, they first insist on the fact that Euclid himself, not entirely convinced by his proposition, does not see it as a "first truth" or an axiom, but a postulate which he simply invites the reader to adopt. Thus they attempt to go further and construct the theory of parallels by using other axioms and postulates, and employing the methods of Eudox and Archimedes.

The most remarkable works are those of Djawharī (3rd/9th century), of Abharī, of Nayrīzī (4th/10th century), of Ibn al-Haytham and Khayyām (5th/11th century) and of Ṭūsī (7th/13th century). These works were translated into Latin and Hebrew; their influence is evident in the work *Commentaries to the introduction of Euclid's elements* by Levi ben Gerson (14th century), in *Rectifier of wrong* by Alfonso (14th-15th century) and in the commentaries on the Elements of Euclid by Clavius (16th century).

The demonstration of the 5th postulate by Ṭūsī (published in Rome in 1594 and in London in 1657) was known to John Wallis (1616-1703) and to Saccheri (1667-1733). The essential point of the demonstration of Khayyām and of Ṭūsī rests on the possibility of constructing a quadrilateral ABCD (made famous later through the work of Saccheri) such that  $AB = CD$ ,  $\widehat{ABC} = \widehat{DCB}$ ,  $\widehat{BCD} = \widehat{CDA}$ , thus

entailing that  $\widehat{BAD} = \widehat{ADC}$ . Three cases are theoretically possible for these angles: they can be right-angles, acute or obtuse. Khayyām and Ṭūsī concluded that only the first case is really practicable. It is known that subsequently, the basic theorems of non-Euclidian geometry of Lobachevski and of Bolyai rest essentially on the hypothesis of the acute angle; the obtuse-angle hypothesis corresponds to the geometry of Riemann.

In conclusion, it may be said that the studies of the Muslims constituted an important milestone in the sequence of progress of geometry; they posed some essential questions, from a scientific as well as from a philosophical point of view. They had the excellent idea of not limiting geometry to continuous scales. They were remarkably adept at holding the balance between theoretical abstract thought and practical art, i.e. concrete application. If they were to a great extent the disciples of Euclid and of other masters of Greek geometry, they had the courage to criticise the works that they had inherited and to express serious doubts on their subject, and their theoretical scruples were great. They thus prepared the way for the subsequent development of geometry.

(M. SOUSSI)

'IMĀD AL-DĪN 'ALĪ, FAḲĪH-I KIRMĀNĪ, Persian mystical poet of the 8th/14th century, was born at Kirmān about 690/1291-2.

In the *Ṣafā'-nāma* he relates that when his father died in 705/1305, he and a brother took over the direction of a *kānākāh* which had been founded in Kirmān by his father's *shaykh*, Nizām al-Dīn Maḥmūd, for the benefit of the followers of the *kuṭb al-aḳṭāb* Zayn al-Dīn 'Abd al-Salām Kamūyī. Through this line of mystical tradition, 'Imād al-Dīn was connected with the teaching of Abū Ḥafṣ 'Umar al-Suhrawardī [q.v.]. Besides his occupation as the *shaykh* of a convent, he was also a doctor of Islamic law, as his *laḳab* suggests. Little reliable information concerning his life can be drawn from the traditional biographies. According to a frequently retold anecdote appearing for the first

time in the *Habīb al-siyar*, the cat of ‘Imād al-Dīn could imitate his master in the performance of his prayers. The origin of the story can be traced to a line in one of the poems of Ḥāfiẓ, which has been interpreted as a reference to a rivalry between the two poets for the favours of the Muẓaffarid ruler Shāh Shudjā’ (cf. Humāyūn-Farrukh, Introduction, 81 ff.). Many panegyric references in the poems of ‘Imād al-Dīn indicate that he was on good terms with the rulers of his age and several of their ministers. His most important patrons were the Muẓaffarids. Though Shāh Shudjā’ favoured him in particular, ‘Imād al-Dīn already wrote poems dedicated to Mubārīz al-Dīn Muḥammad. Occasionally, he praised their opponent, Abū Ishāq Indjū of Shīrāz, as well and it is possible that he stayed some time at Shīrāz himself. His poetry was also appreciated at the court of the Ī-Khān Abū Sa’dī.

Most of ‘Imād al-Dīn’s life was apparently spent at Kirmān where, according to Dawlat-Shāh, he died in 773/1371-2. The alternative, but less probable, date of 793/1391 is mentioned by Taḳī Kāshī (cf. Sprenger, *Oudh catalogue*, Calcutta 1854, 436-8). The convent and the tomb of ‘Imād al-Dīn were still visited in the late 9th/15th century.

The known works of ‘Imād al-Dīn consist exclusively of poetry. As a pen-name he used the form ‘Imād, or more rarely, ‘Imād-i Faḳīh. The *Diwān* contains predominantly *ghazals*. His place in the development of the Persian *ghazal* is an interesting one, as he was among the most prominent writers who cultivated the genre during the interval between the lives of Sa’dī and Ḥāfiẓ. The former is named by ‘Imād as an admired predecessor. The latter was a younger contemporary who must have been acquainted with ‘Imād’s work. Not only did ‘Imād and Ḥāfiẓ share a number of patrons; their poetry shows that they made use of many similar motives. Listings of these common elements have been made by some modern researchers (e.g. Ibn Yūsuf Shīrāzī, Muḥammad Mu’īn and Humāyūn-farrukh). On the other hand, the style of ‘Imād is clearly distinguishable from that of Ḥāfiẓ on account of the former’s greater simplicity of language and the more coherent structure of his *ghazals*. The central theme is the longing of the lover for the transcendental Beloved. Anacreontic and *kalandarī* elements, though not lacking, are only subordinate motives. The mystical intention of ‘Imād’s *ghazals* cannot be mistaken, even in those cases where the poem serves as the prologue to a short panegyric address. The poet used to recite and discuss poems of his own in his *khānākāh*, as Djāmī tells us in the *Bahārīstān*. From this notice, the conclusion may be drawn that he used them as a tool for this mystical teaching. The *ghazals* of ‘Imād have been analysed by K. Stolz, *Der Diwān des ‘Imāduddīn Faḳīh*, in *WZKM*, xlix (1942), 31-70.

The second part of ‘Imād’s literary output consists of a series of *mathnawīyyāt*. Apart from a few very short pieces, there are five poems of an intermediate size:

1. The *Safā’-nāma*, or *Mu’nis al-abrār*, is a didactic poem written in imitation of Niẓāmī’s *Makhzan al-asrār*, with which it has the metre *sarī’* in common. It was completed in 766/1364-5 and dedicated to Shāh Shudjā’. One of its original features is a description of Shīrāz. The text has been edited by Muḥammad Iḳbāl in *Oriental College Magazine*, v-viii (1929-32), *passim*.

2. The *Suḥbat-nāma*, or *Tarīḳat-i suḥbat-nāma*, in the same metre as the *Būstān* of Sa’dī, was com-

pleted in 731/1330-1. It was dedicated to the *wazīr* of the Ī-Khān, Ghīyāth al-Dīn Muḥammad b. Raḡhd al-Dīn Faḳl Allāh. In ten discourses, the manners are described of the rulers, the saints, the students, the scholars, the anchorites, the travellers, the *ahl-i futuwwat*, the beautiful ones, the lovers and the singers and musicians. To each discourse, one or more illustrative stories are added. The seventh chapter has been edited and translated by H.W. Duda, *‘Imāduddīn Faḳīh und die Futuwwa*, in *ArO*, vi (1934), 112-24.

3. The *Mahabbat-nāma-i ṣāhibdīlān*, a short *mathnawī* preceded by a prose introduction containing the dedication to the Ī-Khān *wazīr* Kh“ādja Taḳī al-Dīn ‘Irākī. The metre used in the second part is *hazadj-i musaddas-i mahdhūf*. The theme of love, studied here in all the realms of nature, is treated in the form of a series of ten disputations, between the soul and the body as well as between a number of entities which belong to the mineral, the vegetable and the animal kingdom. The illustrative stories, added in each case, deal with famous pairs of lovers (cf. H.W. Duda, *Ferhād und Schīrīn*, Prague 1933, 98-100, where the story of the fifth disputation is discussed). The title of the poem is a chronogram indicating that it was completed in 732/1331-2.

4. The *Tarīḳat-nāma*, composed in the same metre as the preceding poem, was completed in 750/1349-50 according to a chronogram hidden in one of the lines, but Humāyūn-Farrukh regards the line as corrupt and dates the work between 754-9, i.e. during one of the last years of the reign of Mubārīz al-Dīn Muḥammad, to whom it is dedicated. The subject of the poem is an adaptation of the *Miṣbāh al-hidāya*, the Persian translation by ‘Izz al-Dīn Maḥmūd Kāshānī (died 735/1334-5) of the *‘Awārif al-ma‘ārif* of Abū Hafṣ ‘Umar al-Suhrawardī (for a list of the ten chapter headings, see Munzawī, iv, 2994-5).

5. The *Dah-nāma* (in the ms. Aya Sofya no. 4131, dated 841 A.H., the work is called *Naṣīhat-nāma*) belongs superficially to a genre of *mathnawīs* in the metre of the preceding poems which consists of collections of ten letters exchanged between an imaginary pair of lovers. ‘Imād has introduced several changes into the conventional pattern: he uses other metres as well, alternates between the forms of the *mathnawī* and the *qaṣīda*, and even deviates from the basic theme by inserting letters to some of his patrons instead of love-letters. See further T. Ganjei, *The genesis and definition of a literary composition, the Dah-nāma* (“Ten love-letters”), in *Isl.*, xlvii (1971), 59-66.

Contrary to the relative oblivion that has become the fate of the works of ‘Imād in later centuries, they seem to have been held in high esteem during his own lifetime and the immediately-following century. Several early manuscripts have been preserved, one of which (Maḳḳilīs no. 1030) may be an autograph. Among the writers of the beginning of the 9th/15th century, Bushāḳ and Ādharī highly praised the poetical talents of ‘Imād.

*Bibliography:* the *Diwān-i ‘Imād-i Faḳīh-i Kirmānī* has been edited by Rukn al-Dīn Humāyūn-Farrukh, Tehran 1348/1969, with an extensive introduction.; the aforementioned *mathnawīyyāt*, together with a short poem entitled *Humāyūnnāma*, have been edited by the same in *Pandj gandj*, Tehran 2537/1978; For descriptions of the most important manuscripts, see further Sir G. Ouseley, *Biographical notices of Persian poets*, London 1846, 195-200; Sachau-Ethé,

(J.T.P. DE BRUIJN)

'IMĀDĪ is the pen name of a Persian poet of the 6th/12th century whose personal name has not been transmitted. Sometimes the title Amīr is added to it, presumably referring to his prominence as a poet of the court in his own days. Another *nisba* often attached to the name 'Imādī is Shahrīyārī. The biographical sources interpret the latter differently. According to some, it is derived from the name of a district of Rayy, implying that 'Imādī originated from that area, which is not unlikely. Others, however, have connected it with the founder of the Islamic branch of the Bāwandid dynasty [q.v.] of Māzandarān. It is certain, anyhow, that the former *nisba* refers to the poet's allegiance to a member of that family, Sayf al-Dīn 'Imād al-Dīn Farāmūr, designated as *shāh-i Māzandarān* (*Rāhat al-ṣudūr*, 210), although he cannot be identified definitely with any ruler known from other historical sources (cf. M. Kazwīnī, *Mamdūh-i 'Imādī*, in *Bist maḡāla*, Tehran 1332/1953, ii, 343-51). 'Imādī apparently started his literary career under the protection of this ruler, on whose death he wrote an elegy (*Rāhat al-ṣudūr*, 371-2, cf. especially the note by the editor). Afterwards, 'Imādī went over to the service of the Salḡūk court and composed several panegyrics for Sulṭān Rukn al-Dīn Toḡhrīl II (526-9/1132-4). Many other patrons are mentioned in the poems of 'Imādī, one of the latest may have been the Eldigüzid *atābak* Djihān-Pahlawān Muḡammad (570-81/1175-86) (cf. the different opinion of Kazwīnī, *op. cit.*, 348). It is less certain that he also praised Sulṭān Toḡhrīl III (571-90/1176-94), as is sometimes asserted (for the full list of the patrons of 'Imādī, see S. Nafīsī, *Ta'liḡāt-i Lubāb al-albāb*, 724 f.). Of the two dates mentioned for his death, 573/1177-8 (Takī Kāshī) and 582/1186-7 (*Ātashkada*), the former seems to be the most probable.

'Awfī has entered a few of 'Imādī's poems under the name of 'Imād al-Dīn Ghaznawī. This has led to speculations about an eastern origin of 'Imādī. Later biographers mention the Ghaznawid poet Mukhtārī as his father. According to a notice given

by Takī Kāshī, 'Imādī studied treatises on *taṣawwuf* with Sanā'ī at Balkh. The same writer proposes the possibility that there might have been two different, but contemporaneous, poets by this name. This assumption was rejected already in the *Haft iklīm*. There is no evidence known from his own works that could corroborate the theory of his connection with Ghazna.

Although 'Imādī was first of all renowned as a poet of the court, he also wrote religious poetry. He recites poems of this nature during the sessions held by the famous preacher Ibn 'Abbādī (*Rāhat al-ṣudūr*, 209). In one of his *ghazals*, 'Imādī clearly refers to the transcendental meaning that should be read into the conventional imagery (cf. e.g. Djamī, *Mu'nis al-aḡrār*, ii, Tehran 1350/1971, 1108 f.).

There are some indications that point to a fairly high esteem for 'Imādī's poetry in his own time. Ḥasan Ghaznawī Ashraf even recommended his work as good material for the study of tyro poets (*Rāhat al-ṣudūr*, 57). 'Imādī exchanged poems full of mutual praise with another poet of Rayy, Kīwāmī. Both poets were in many respects imitators of the style of Sanā'ī. 'Imādī even went so far that he adapted one of Sanā'ī's poems for his own use (Shams-i Kayy, 464 ff.). A modern critic (Furūzānfarr) has praised 'Imādī's ability to maintain a fair balance between subtlety of concepts and simplicity of language.

Quite soon, however, 'Imādī's poetry appears to have lost the interest of the public. No complete copy of his *Dīwān* is now known to exist. The largest collection now extant is the British Museum ms. Or. 298 containing more than 1400 lines, most of which belong to *qaṣīdas*. More material is scattered over a great number of sources, but a comprehensive collection is still lacking.

(J.T.P. DE BRUIJN)

AL-IMĀRĀT AL-'ARABIYYA AL-MUTTAHĪDA (the United Arab Amirates), the federation of seven shaykhdoms of the lower Gulf, formerly known as the Trucial States, inaugurated on 14 Shawwāl 1391/2 December 1971. The member states are Abū Zabī (Abū Dhābī), Dubayy, al-Shārīka (Shārdja), 'Adjmān, Umm al-Qaywayn, Ra's al-Khayma and Fuḡjajra. The federation's total area is about 30,000 square miles and its population (180,226 at the 1968 census) has been variously estimated, in the absence of reliable statistics, at anything between 320,000 and 700,000, mostly concentrated in Abū Zabī and Dubayy shaykhdoms.

Until December 1971, the seven shaykhdoms were

linked to Great Britain by a series of treaties, the oldest dating back to 1236/1820, whereby Britain exercised responsibility for the conduct of the shaykhdoms' foreign relations and ensured their observance of the engagements they had entered into over the years to respect the maritime truce and to abstain from piracy and slave-trading. It was generally accepted that an implicit reciprocal obligation devolved upon Britain from these engagements to defend the Trucial Shaykhdoms against their enemies. A first step towards promoting some form of association among the shaykhdoms was taken in 1371-2/1952 with the establishment of the Trucial States Council, made up of the rulers of the seven shaykhdoms. Further steps were the setting up of the Trucial States Development Council to assist economic, and especially agricultural, progress, and the organisation of the Trucial Oman Scouts (first formed as the Trucial Oman Levies in 1950 on the model of the Jordanian Arab Legion) to keep the peace throughout the shaykhdoms and along their borders. The definition of these borders was, for the most part, accomplished in the years between 1374-5/1955 and 1380-1/1961.

In *Shawwāl* 1387/January 1968 the British government announced that it intended to withdraw from its special position in the Gulf by the end of 1971 (*Dhu 'l-Ka'da* 1390), and at the same time to terminate its treaty relationship with the Trucial States, Bahrayn and Qatar. A month after the statement was made the rulers of Abū Zabī and Dubayy announced (on 19 *Dhu 'l-Ka'da* 1387/18 February 1968) that they were forming a union of their two shaykhdoms with the intention of co-ordinating their foreign and defence policies, and of co-operating over such matters as internal security, education, health services and immigration. At their instigation a conference of the Trucial Shaykhs and the rulers of Bahrayn and Qatar was held at Dubayy the following week, and on 28 *Dhu 'l-Ka'da*/27 February a decision was reached in principle to create a federation of the nine shaykhdoms. Ultimate power in the federation would reside in a supreme council made up of the nine rulers, while executive authority would be vested in a federal council. The agreement to establish the federation, which was to be called the "Federation of Arab Amirates" (*Itihād al-Imārāt al-‘Arabīyya*), was to come into force on the last day of *Dhu 'l-Ka'da* 1387/30 March 1968.

Over the next two years, little discernible progress was made towards the creation of the federation. Much of the preliminary work—on a common currency, a unified educational system, federal communications, integrated medical and social services, etc.—was delegated to committees, whose effectiveness was hampered by their lack of authority and their dilatoriness. The chief obstacles, however, were political. For nearly two centuries the shaykhdoms concerned had been at odds—and frequently in open conflict—with one another over territorial disputes, dynastic rivalries and tribal dissensions. These underlying and enduring sources of discord found an outlet during the negotiations towards federation in acrimonious disagreements over the site of the provisional federal capital, the selection and term of office of the federation's president, and, most seriously of all, the distribution of power in the supreme and federal councils and representation in the proposed consultative assembly.

Bahrayn and Qatar were insistent that they, Abū Zabī and Dubayy should have one vote each on the supreme council, while the remaining five

Trucial States were to be confined to one collective vote. They further insisted that all decisions taken by the council should be unanimous. For their part, the Trucial States wanted equality of voting rights, though they were divided over the question of unanimous or majority decisions, with Abū Zabī pushing most strongly for the principle of majority decisions. Perhaps the greatest disagreement of all was over the allocation of seats in the proposed consultative assembly. Bahrayn wanted representation to be on the basis of population, which would have given her twice as many seats as the other eight states combined. They in turn, and for this very reason, wanted equal representation for all states. Fear of Bahrayn's predominance in the federation, not only because of her numerical strength but also because of the superior skills and educational attainments of her people, was perhaps the most potent single reason why the federation of nine shaykhdoms languished and eventually expired.

Another important reason was the uneasiness engendered among some of the shaykhdoms' rulers by the overhanging threat of major territorial claims against two of their number—the Persian claim to sovereignty over Bahrayn, and Sa'ūdī Arabia's claim to a considerable portion of Abū Zabī shaykhdom, including the Buraymī oasis on its border with 'Umān. It was her desire for support in resisting the Persian claim that had greatly influenced Bahrayn's decision to participate in the federation. The other states, however, were reluctant to risk offending Persia by according Bahrayn the support she sought. Dubayy, for instance, because of her close commercial ties with Persia, was most averse to becoming embroiled in the dispute. There was a similar aversion on the part of most of the shaykhdoms to being drawn into Abū Zabī's frontier disagreement with Sa'ūdī Arabia. Qatar's relations with the Sa'ūdīs had been intimate for many years, whereas those with Abū Zabī had been distant, and at times hostile, for generations. Bahrayn was counting upon Sa'ūdī diplomatic help against the Persians, while Dubayy had for years been locked in a contest with Abū Zabī for political influence in Trucial 'Umān.

A fateful stage in the negotiations towards a federation of the nine shaykhdoms was reached in *Rabī' I* 1390/May 1970, when a resolution of the Perso-Bahraynī dispute was achieved. At the request of both parties, and of Britain as the protecting power, the UN secretary-general had appointed a personal representative in *Muḥarram* 1390/March 1970 to ascertain the wishes of the people of Bahrayn regarding the future political status of the shaykhdom and its relationship to Persia. The secretary-general's representative reported at the beginning of May that the Bahraynīs were "virtually unanimous" in wanting a fully independent, sovereign state, and that "the great majority" desired it to be an Arab state. The UN security council unanimously endorsed the report on 11 May, and later that month (*Rabī' I* 1390) the Persian government accepted it. The renunciation of the Persian claim to Bahrayn, although it was henceforth to determine Bahrayn's attitude to the Federation of Arab Amirates, had no effect upon the other threats to the federation's territorial integrity. In the first week of May, Sa'ūdī Arabia reasserted her claim to the western and southern areas of Abū Zabī and to the Buraymī oasis. A fortnight later Persia put forward a claim to the islands of Abū Mūsā and the Greater and Lesser Tūnbs (*Tūnb-i Buzurk* and *Nahīyy Tūnb*),

situated a few miles inside the Gulf to the west of the Straits of Hurmuz. Abū Mūsā had up to this time been regarded as a possession of the Trucial Shaykhdom of al-Shāriqa, and the Tūnbs as belonging to Ra's al-Khayma.

Having secured the abandonment of the Persian claim, the Bahraynīs had no wish to create a fresh source of friction with the Persians by taking the part of al-Shāriqa and Ra's al-Khayma in the controversy over Abū Mūsā and the Tūnbs. This caution, combined with the resentment felt over what was considered to be the insufficient weight given to Bahrayn's interests and importance in the projected federation and the aversion to siding with Abū Zabī in its resistance to the Sa'ūdīs, served to set Bahrayn after May 1970 on a political course that took it steadily away from the federation and towards independence. Where Bahrayn led, Qatar was bound to follow, as much for reasons of *amour propre* (its ruling family had been at feud with that of Bahrayn for over a century) as out of considerations of political advantage and prudence. The final spur was applied by the decision of the Conservative government in Britain, which had been elected to power in June 1970, to adhere to its predecessor's policy of withdrawal from the Gulf by the end of 1971. (The decision was announced in March 1971 but there is evidence that it had been reached some time previously.) Bahrayn declared its independence on 22 Djumāda II 1391/14 August 1971, and Qatar followed suit on 11 Radjab 1391/1 September 1971.

A few weeks earlier, six of the seven Trucial States, having concluded that a federation of the nine shaykhdoms was no longer feasible, had decided to form a federation of their own. The Trucial federation, entitled the "United Arab Emirates" (*al-Imārāt al-ʿArabiyya al-Muttaḥida*), was proclaimed at Dubayy on 25 Djumāda I 1391/18 July 1971. The ruler of Ra's al-Khayma, Shaykh Ṣaqr b. Muḥammad al-Kāsimī, refused to join the federation, partly because its members showed no anxiety to assist him actively in opposing the Persian claim to the Tūnbs, partly because of his jealousy of the position and power which the rulers of Abū Zabī and Dubayy commanded within the federation. His fellow Kāsimī ruler, Shaykh Khālīd b. Muḥammad of al-Shāriqa, proved more pliable over the extension of Persian authority over Abū Mūsā Island. His acquiescence in a Persian occupation was obtained in late November in return for an annual subsidy and an equal share in the exploitation of the submarine oilfields located off Abū Mūsā. On 12 Shawwāl 1391/30 November 1971, the day before Britain's special treaty relationship with the Trucial States was due to end officially, Persian troops occupied Abū Mūsā and the Tūnbs, meeting with armed resistance on the Greater Tūnb from the retainers of the ruler of Ra's al-Khayma. There were a number of repercussions from the Persian occupation of the islands, among them the expulsion of several thousand Persians from Irāk and the nationalisation by the Libyan government of the British Petroleum Company's assets in Libya. The most violent individual reprisal was the murder in Dhu l-Hiǧǧidja 1391/late January 1972 of the ruler of al-Shāriqa, Shaykh Khālīd b. Muḥammad al-Kāsimī, by his cousin the ex-ruler, Shaykh Ṣaqr b. Sulṭān al-Kāsimī, ostensibly in revenge for the alienation of Abū Mūsā to Persia. Shaykh Ṣaqr b. Muḥammad of Ra's al-Khayma was so shaken by the assassination that at the end of Dhu l-Hiǧǧidja 1391/mid-February 1972 he joined the federation.

The treaties between Britain and the Trucial

States were abrogated on 13 Shawwāl 1391/1 December 1971, and the United Arab Emirates was formerly inaugurated the following day. Its president was Shaykh Zāyid b. Sulṭān al-Nihayyān, the ruler of Abū Zabī, and the vice-president, Shaykh Rāshid b. Sa'īd al-Maktūm, the ruler of Dubayy. Under the terms of the provisional constitution drawn up over the previous two years in consultation with an Egyptian jurist, Dr Wahīd al-Rifā'at, they were to hold office for five years and be eligible for reappointment at the end of that time. The capital of the UAA was temporarily established at Abū Zabī until a permanent capital had been built on a site on the border of Abū Zabī and Dubayy.

The *fons et origo* of executive and legislative power within the federation is the supreme federal council, composed of the rulers of the seven constituent shaykhdoms or emirates. Decisions of the council are by majority vote, with Abū Zabī and Dubayy both possessing the power of veto. The president appoints the prime minister, the deputy minister and the other ministers (some two dozen) who together make up the federal council or cabinet. The cabinet's prime function is to carry into effect the decisions of the supreme council and the instructions of the president. The provisional constitution, which runs to 152 articles, also established a federal national council to serve as a consultative assembly. It consists of forty delegates appointed for a term of two years by the rulers of the emirates, Abū Zabī and Dubayy each having eight delegates, al-Shāriqa and Ra's al-Khayma, six, and the other three emirates, four. Although the constitution would appear to empower the national council to initiate legislation, its principal task is clearly to discuss and approve the budget and draft legislation presented to it by the council of ministers. The constitution also provides for the establishment of a supreme court for the federation and a number of courts of first instance. Responsibility for the defence of the federation is vested in a higher defence council, headed by the president and consisting of the vice-president, the prime minister, the minister of defence and the interior, and the commander of the Union Defence Force, which has been formed around the nucleus of the Trucial Oman Scouts.

The constitution of the UAA, both in its provisions and in its operation, reflects the primacy within the federation of Abū Zabī and Dubayy, the two wealthiest and most populous emirates. At the end of their term as president and vice-president in 1396/1976, Shaykh Zāyid of Abū Zabī and Shaykh Rāshid of Dubayy were re-elected to their respective offices for a further five years. Members of their families and close adherents hold the chief portfolios in the council of ministers. The federal budget is provided almost exclusively by Abū Zabī from its large oil revenues. (Dubayy, although deriving a substantial income from oil and commerce, refuses to contribute more than a token amount.) Abū Zabī also has a defence force considerably larger and better equipped than that of the union. Naturally, the wealth and political predominance of the two shaykhdoms has inspired envy and some resentment among the less fortunate members of the federation, with the exception perhaps of al-Shāriqa, which enjoys a moderate degree of affluence from oil revenues. The arbitrariness of fortune which has blessed Abū Zabī and Dubayy has tended to perpetuate and even to intensify the longstanding rivalries and animosities among the shaykhdoms, more particularly those between the northern Kāsimī tribal confederations

tion and the southern Banī Yās confederation. There are other strains within the federation besides those caused by the imbalance of wealth and by old tribal and dynastic vendettas. Social and economic changes in recent years have been rapid and profoundly unsettling. A huge influx of immigrants of all kinds has broken the traditional mould of society. Unearned affluence of an unreal magnitude has corroded customary morals, values and restraints. Alien ideological notions have undermined the old political certainties, with what eventual consequences it is impossible to foretell. The basis of the UAA was, and remains, a coalition of interests among its member states, especially the need for some kind of mutual security against the larger Gulf powers. Whether the federal structure erected thus far will prove sturdy enough to withstand the fissiparous pressures within it remains to be seen.

**IMPECCABILITY, SINLESSNESS** [see ‘İSMA].  
**IMPROVISATION** [see İRTİDİJĀL].

**İNAK** (spelt *ināk*, *ināgh* and *ināk*), a title which existed in various Turkic and Mongol states.

The word is evidently a deverbal noun from the Turkic verb *inan-* [‘*ina-*’ “to trust, to rely on” etc., with the basic meaning “close friend, confidant, trustworthy person”. (The spelling ‘*ināk*’, with initial ‘*ayn*’, very often found in the Central Asian sources of the 19th century, is most probably only an indication of the initial back vowel; an explanation of this spelling given by A.A. Semenov, deriving the word from Arabic ‘*ināk*’ “embrace”, is, at best, a late literary invention.) A similar derivative from the same verb, *inanē* “reliance”, “trust”, is registered in the Turkic texts of the 10th century and later as a title or rank of persons belonging to the close retinue of the ruler (cf. especially *inanē beg* in Mahmūd Kāshgharī, i, 119, and *Ḳutadgu bilig*, Farghāna MS. 293); this title was used through the whole Saldjūk period (cf. also such titles as *inanē payghu*, *inanē bilge* etc.; see Sir G. Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 187). The same meaning, probably, had also the title *inal* (another deverbal noun from the same stem), found already in the runic inscriptions of the Yenisey (see *Drevneturkskiy slovar*, Leningrad 1969, 218; S.E. Malov, *Yeniseyskaya pis’mennost’ Tyurkov*, Moscow-Leningrad 1952, 38, 45, 49). The titles *inal*, *inal-tegin*, *inalčuk* (*inalčik*) were also widely used during the Karākhānid and Saldjūk periods (see G. Clauson, *op. cit.*, 184-5); there is, however, another reading and explanation of this title for *inal* “deputy” [?], found in the Orkhon inscriptions and in Chinese sources of the same period (see *Drevneturkskiy slovar*, 209, 218; G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iv, 196-9, No. 1900; cf., however, P. Pelliot, *Notes sur l’histoire de la Horde d’Or*, in Paris 1949, 182-3, n. 2). The word *ināk*, which is not found in runic inscriptions and appears first only in the texts written in the Uyghur characters, was borrowed into Mongolian from Turkic already before the end of the 12th century; it existed in the time of Čingiz-*Khān* as a title of close companions (*nikers* [q.v.]) of the *khān*.

After the Mongol conquests this title, probably under the Mongol influence, superseded other derivatives of *inan-* also among the Turks. It is mentioned in Persian historical sources of the Mongol and Tīmūrid periods, without a definition of its meaning, but clearly as a title of high-ranking persons especially close to the ruler (examples given by Quatremère, *Histoire des Mongols de la Perse*, i, pp. L-LI, n. 84; see also the *Ẓafar-nāma* by Niẓām al-Dīn Shāmī, ed. F. Tauer, i, 96, 142, ii, 109, 118, 148). Sometimes the *inaks* (*inākān*, *inākiyān*) are mentioned in these sources as a special category of the retainers of the ruler (cf. such expressions as *umarā’ wa inākiyān*, *mukarrībān wa inākān*, *khawāṣṣ wa inākān*, *farzandān wa nūkarān wa inākiyān* [of an *amīr*], etc.). The term had the same meaning also in the Aḳ Ḳoyunlu [q.v.] state, where one source mentions an *amīr* among the *inaks* whose post was equal to that of a *muhrdār* (see V. Minorsky, in *BSOAS*, x/1 [1940-2], 170-1).

It seems that in the post-Tīmūrid period this title was used only in the Uzbek *khānates* of Central Asia. It is not mentioned by Maḥmūd b. Walī, the author of *Baḥr al-asṣār*, in his description of the ceremonial at the court of the Aṣhtarkhānid ruler in Balkh (cf. V.V. Bartol’d, *Sočineniya*, ii/2, 390-3), though it certainly existed during the Aṣhtarkhānid period; according to the ‘*Ubayd-Allah-nāma* by Muḥammad Amīn Bukhārī (early 18th century; see Russian tr. by A.A. Semenov, Tashkent 1957, 33), a person in the rank of *ināk* was keeper of the royal seal (cf. above, under the Aḳ Ḳoyunlu) in the reign of Subḥān-Ḳulī *Khān* (d. 1114/1702). A retainer of ‘Ubayd Allāh *Khān* (1114-29/1702-11), a Kalmuk (i.e. a person of slave origin), was promoted simultaneously to the post (or rank?) of *ināk* and to the post of the first minister, *kosh-begi-yi kull* [see *koṣh-begi*] (see *ibid.*, 45, 191); he was also the keeper of the seal (*ibid.*, 204). His two successors, also of slave origin, were also given the rank of *ināk* together with the post of the great *kosh-begi* (*ibid.*, 230, 276). The administrative manual *Madjma’ al-arkām* compiled in Bukhārā in 1212/1798 mentions two *inaks*: first, “the great I.” (*ināk-i kalān*), who was the third (after the *kosh-begi*) among the four dignitaries especially close to the sovereign, and whose duty was to pass the royal orders to persons under the rank of *amīr*; and second, “the little I.” (*ināk-i khurd*), who kept the box with the royal seals and also had to receive all reports from the province and messages brought by foreign ambassadors, to open them and to pass them to the *munshī* for reading (see facsimile in *Pis’menniyé pamyatniki Vostoka 1968*, Moscow 1970, 56, 57). N. *Khānikov* (*Opisanie Bukharskogo khantwa*, St. Petersburg 1843, 183-5, 187) mentions only one *ināk*, whose duty was to set his seal on the reverse of the diplomas granting the ranks of *mīr-i akhūr*, *ishik-aghāsī* and *čaghatāy-begi*; apparently, this was the office of the former *ināk-i khurd*. At the time of the last Mangits [q.v.], however, the title *ināk*, as well as some other titles, became simply a honorary rank—the fifth from the top in the hierarchy of Bukhārā, between *dakhī‘ah* and *parwānācī*—given to various officials.

In the *Khānate* of *Khīwa*, the title *ināk* was given to the leaders of the Uzbek tribes, and it was originally the second in importance after the title *atalik* [q.v., above]. The historian of *Khīwa* Mu‘nis [q.v.], in his account of the administrative reform of Abu ‘l-Ghāzī [q.v.] (1053-79/1643-63), mentions that the *khān*’s council of 34 ‘*amaldārs*’ established by Abu ‘l-Ghāzī included four *inaks* and four “Čaghatāy *inaks*” (*Firdaws al-iḳbāl*, ms. of the Leningrad Branch of the

Institute of Oriental Studies, C-571, f. 65b). There was one *īnāk* from each of four *tupā*, into which all Uzbek tribes in Kh<sup>h</sup>ārazm were apparently divided already in the 16th century: Uyghur and Nayman, Kungrat and Kiyat, Mangit and Nukuz, Kangli and Kīpčak; the meaning of the title *Čaghatāy īnāk* is not clear. Mu'nis (*ibid.*, f. 101a) claims that already in the reign of Abu 'l-Ghāzī, Umbay Īnāk, the ancestor of the Kungrat [*q.v.*] dynasty became the khān's powerful first minister in reward for the service rendered by him previously. In the concluding part of the *Shadjara-yi Turk* written on behalf of Abu 'l-Ghāzī's son Anūsha (ed. Desmaisons, text, 327, tr., 351) there is mentioned a Yādīgār Īnāk brought by Abu 'l-Ghāzī from Hazārasp to Khīwa and given the *īnāklīk*, though he certainly already held the title *īnāk* before (cf. *ibid.*, text, 326, tr., 349); this may be interpreted as a promotion of one of the Uzbek *īnaks* to the post of the "great I", like that which Umbay Īnāk held (later?). The reports of the Russian ambassadors, who were in Khīwa in the reign of Anūsha Khān, show, however, that the *īnaks* were still on the second place after the *atalīks* (see *Nakaz Borisu i Semenu Pazukhinim* . . ., St. Petersburg 1894, 43-4). Artuk Īnāk, from the Mangit tribe, became actual ruler of the Khānate of Khīwa after its conquest by Nādir Shāh (1740).

In the third quarter of the 18th century, Muḥammad Amīn Īnāk, chief of the Kungrat tribe, became the ruler of the khānate and the founder of the dynasty, which remained in power till 1920 and is called sometimes in scholarly literature "Īnākids". The third ruler from this dynasty, Eltuzar Īnāk, proclaimed himself khān in 1219/1804. After that, *īnāk* became the highest title for the Uzbek nobility in Khīwa (the historians of Khīwa mention cases of promotion from the rank of *atalīk* to the rank of *īnāk*, see e.g. *Firdaus al-ikbāl* (ms. cit., ff. 317b, 578a). During the reign of Muḥammad Raḥīm Khān (1220-40/1806-25), his elder brother Kutlugh Murād had the title *īnāk-bek* and was styled *amīr al-umarā'* (*ibid.*, f. 316a; but the *atalīk* was still considered as senior Uzbek *amīr*); he was called also *biy-īnāk* and *īnāk-ākā*. In the middle of the 19th century, the title of *īnāk-bek* (that is, senior I) was given to the khān's heir, who was mostly governor of the town of Hazārasp; before the Russian conquest (1873), however, this title was applied not to the heir, but to one of senior relatives of the khān (cf. A.L. Kuhn's papers in the Archives of the Leningrad Branch of the Institute of Oriental Studies, file 1/13, ff. 36a-38b). Besides him and the four *īnaks* of the Uzbek tribes, the title was granted sometimes to the tribal chiefs of the Turkmens.

The title *īnāk* existed also in the Khānate of Khokand [*q.v.*], where it was given to a court official (or officials) in charge of the provision for the court and for the khān's bodyguards; they supervised also the personal domains of the khān. At the same time, apparently, it was here also, as in Bukhārā, an honorary rank given to various dignitaries, such as provincial governors (cf. V.P. Nalivkin, *Histoire du Khanat de Khokand*, Paris 1889, 104).

(YU. BREGEL)

'INĀT, a town in Ḥaḍramawt, about 10 miles/15 km. due east of Tarīm, and situated at the confluence of the Wādīs 'Īnāt and Ḥaḍramawt. The holy family of 'Īnāt is the Al Bū Bakr b. Shaykh and the illustrious *mansab*, Shaykh Bū Bakr b. Sālīm, known as Mawlā 'Īnāt, is buried in the town. The family has been subjected to severe criticism from other Sayyid groups because of its bearing arms. 'Īnāt has become one of the most important *hawṭas* [*q.v.*] in Ḥaḍramawt. It is famous for its own breed of hunting dogs which seem to be indistinguishable from the common "pie-dog". With these dogs the inhabitants participate in the ibex hunt under the direction of the Manṣab. The number of the inhabitants of the town was greatly reduced after the war-time famine in Wādī Ḥaḍramawt, and a fairly recent figure suggests a population of about 1,300. The old quarter organisation has in reality disappeared, though originally there were several quarters. Landberg employs the spelling 'Eynāt ('Aynāt), though it seems that all other European forms proposed are erroneous.

'INĀYAT KHĀN, a noble of the Indian Mughal emperor Awrangzīb. He stemmed from Kh<sup>h</sup>āf [*q.v.*] in Khurāsān, but no information about his early career is available. In 1077/1666-7 he was appointed head of the *diwān-i khāliṣa* (*diwān* of crown lands). In 1079/1668-9 he was promoted to the rank of 900 *dhāt* and 100 *suwār*. In 1080/1669-70 he reported that the expenditure had increased since the time of Shāh Djahān and that there was a large deficit; Awrangzīb thereupon ordered an enlargement of the *khāliṣa* lands and a reduction in expenditure. In 1082/1671-2 he was appointed *fawājdār* [*q.v.*] (commandant) of Čakla Barēi and in 1086/1675-6, *fawājdār* of Khayrābād. In 1088/1677-8 he was again appointed *piṣhadst-i daftar-i khāliṣa*, and was promoted to the rank of 1000 *dhāt* and 100 *suwār*. In 1092/1681-2 he was promoted to be head of the *diwān-i buyūtāt* (in charge of the Imperial Household accounts), and shortly after, at his own request, was appointed governor of Adjmēr. He took part in a campaign against the Rathors, but died in 1093/1682. He was not apparently implicated in the conspiracy of Pādshāh Kulī Khān, his son-in-law, who was killed at about this time.

*Bibliography*: Mustafid Khān, *Ma'āthir-i Ālamgīrī*, Bib. Ind., Calcutta 1871; Shāh Nawāz Khān, *Ma'āthir-al-umarā'*, Bib. Ind., Calcutta 1888, ii; Kh<sup>h</sup>āf Khān, *Muntakhab al-tubāb*, Bib. Ind., Calcutta 1860, ii. (M. ATHAR ALI)

'INĀYAT KHĀN, an obscure general of the Mughal Emperor Awrangzīb [*q.v.*]. He was the father-in-law of Tahawwur Khān, one of the principal supporters of Awrangzīb's son Akbar during the rebellion of 1091-2/1680-1. When in Dhu 'l-Ḥijja 1091/January 1681 Awrangzīb advanced to Dō-rāha, in the Adjmēr region, 'Ināyat Khān was ordered to write to Tahawwur Khān inducing him to desert the prince's army,

then at Kurkī; Tahawwur Khān complied, but on his arrival in Awrangzib's camp some confusion arose in which he was killed.

**INCENSE** [see LUBĀN].

**INDEPENDENCE** [see ISTIKĀL].

**INFALIBILITY** [see 'ISMA].

**INHĪSĀR**, or in Ottoman Turkish also HAŞĪR, were the words used for monopolies and restrictive practices of Ottoman guilds, the full term being *inhīṣār-i bey'i ve şirā*. These monopolies included restrictions concerning the number or kind of people allowed to perform a trade or a profession, as well as limitations imposed on production or on commerce. Restrictions of this kind were considered necessary and beneficial to society. As against this, monopolistic hoarding or cornering was condemned and prohibited by the government. To distinguish between the two kinds, the second was called in Turkey *ihūkār*, but this term was used in Arabic for both kinds of monopolies (cf. Baer, *Monopolies*, 145-6; *Egyptian guilds*, 107 n. 11, 159-61).

Documents relating to Istanbul and Cairo dating from the 18th and 19th centuries show that a craftsman or merchant who wanted to practice his craft or trade independently needed the agreement of the guild's head. In earlier periods, and in some smaller towns, economic activity seems to have been less restricted, though there is evidence that in the 17th century Cairo craftsmen in various branches underwent ceremonies of initiation in order to acquire an *idjāza*, without which they were not allowed to practice their craft. One of the main purposes of these restrictions was to limit the number of shops or people occupied in a trade or craft. Such limitations are indeed documented for Istanbul from the 16th century onwards well into the 19th. In addition, efforts were made to prevent the establishment of "wildcat" enterprises, and especially to eliminate the illicit trade of hawkers and pedlars (*koltukçular*).

Another kind of restriction was the limitation of each guild to producing or selling specific goods only. The aim of such measures was to eliminate external and internal competition and thus to prevent social upheavals and unrest. For the same purpose it was ordered, in some cases, that specific production of particular dresses was limited to specific communities in order to maintain their distinctive costume. Many trades or guilds were confined to specific places or markets, which often bore the name of the craft or the trade.

Most of these restrictions were controlled by the *gedik* system. *Gedik* literally means "breach" and hence acquired the meaning of privilege. Thus a *gedik* was the right to exercise a craft or a trade, either in general or, more frequently, at a special place or in a specific shop. Most *gediks* included the right to the tools of a workshop or a business. The number of *gediks* in each craft was fixed, though it could be changed from time to time. Since nobody was allowed to become a master or open a shop without owning a *gedik*, new masters could be accepted only when a vacancy occurred. *Gedik*s were inheritable if the heir fulfilled all other conditions for becoming a master in the craft; otherwise the rule was that they be transferred to apprentices or journeymen of the guild, not to outsiders.

All monopolies and restrictions of the guild system were sanctioned by the authorities, decreed as gov-

ernment orders and enforced by the officers of the state. After some unsuccessful attempts to abolish them in Egypt in the middle of the 19th century, they gradually disappeared, in Egypt as well as in other parts of the Ottoman Empire, in the course of the second half of the century. On 9 January 1890 it was decreed in Egypt that every person was free to exercise any craft or occupation or profession or trade, except for dangerous occupations or for those which were government monopolies.

**INIMITABLENESS OF THE KUR'ĀN** [see I'DJĀZ].

**INSPECTION OF TROOPS** [see ISTI'RĀD and (above) DĀGH U TASHĪHA].

**INSTITUT DES HAUTES ÉTUDES MAROCAINES** (I.H.E.M.) *al-Ma'had li 'l-'ulūm al-'ulyā al-maghribiyya*, one of the most important centres of intellectual life in Morocco over a period of forty years, bearing in mind the fact that it followed on from the École Supérieure de Langue Arabe et des Dialectes Berbères opened in Rabat in 1915 for the training of highly-qualified civilian interpreters.

The I.H.E.M. was established, by decree of the grand vizier, on 11 February 1920/20 Djumādā I 1338, with "the object of instigating and encouraging scientific studies relating to Morocco, of coordinating them and centralising the results." It was replaced, in 1956, after Moroccan independence, by the Faculté des Lettres et des Sciences Humaines of Rabat.

If the École Supérieure had been directed by interpreters of distinction like M. Nehlil and I. Hamet, the I.H.E.M. was headed by a succession of professors of high renown, sc. H. Basset, E. Lévi-Provençal, L. Brunot and H. Terrasse. The staff of directors of studies, lecturers and research supervisors has included among its more distinguished members now dead, F. Arin, A. Basset, E. Biarnay, R. Blachère, H. Bruno, H. de Castries, J. Céliér, P. de Cénival, L. Chatelain, G.S. Colin, J. de Cossé-Brissac, R. Hoffher, M. Bendaoud, E. Laoust, C. Le Cœur, R. Le Tourneau, V. Loubignac, G. and W. Marçais, G. Marcy, P. Mauchaussé, J. Meunié, R. Montagne, L. Paye, H. Renaud, P. Ricard, J. Riche and A. Roux. Many of these have been contributors to this Encyclopaedia.

The achievement of the I.H.E.M. has been considerable. Morocco has witnessed the emergence of a strong school that has addressed itself with energy and enthusiasm to the scientific study of the country and has almost entirely re-evaluated our knowledge of the Maghrib and Muslim Spain. The Institute first published, as successor to the review *Les Archives Berbères*, a *Bulletin de l'I.H.E.M.* which after the first issue, took on the splendid title *Hespéris*, which it kept until it ceased publication. The scientific authority and exceptional documentary interest of this publication were such that in 1972 a complete facsimile edition was published (comprising the *Archives Berbères* and the unique *Bulletin*).

*Hespéris* published among its articles a *Bibliographie Marocaine* of a very wide-ranging character since it embraces, under some forty headings, all that is known concerning Morocco and its successive

civilisations. Edited by specialists from the Bibliothèque Générale of Rabat, it has made an unrivalled contribution to any methodical study of the Maghrib. This bibliography was published between 1923 and 1953.

*Hespéris* merged in 1960 with the review *Tamuda*, born in Tetuan in the last years of the Spanish Protectorate, and it continues in this form to serve Morocco and the pursuit of knowledge.

Besides *Hespéris*, the I.H.E.M. has published several collections comprising the complete *Hesperis* (15 volumes); collected Arabic texts (12 volumes); Publications of the I.H.E.M. (62 volumes); collected articles of the Centres d'Études Juridiques (45 volumes); Proceedings of the Congresses of the I.H.E.M. (9 volumes); some extra-mural publications, including *Initiation au Maroc* (3 editions), a *Notice sur les règles d'édition des travaux* and some *Brefs conseils pratiques* for the transcription and printing of Spanish and Portuguese words (R. Ricard); collected Notes and Documents (21 volumes); and collected Moroccan Berber Texts (2 volumes).

In addition to research, publications, public sources in Arabic (classical and dialectal), in Berber and in Moroccan civilisation, the I.H.E.M. provided training for the various degrees in arts and the law degree awarded by French universities. It thus enabled many young people to start and complete their higher studies in Arabic and in law without the obligation to go to France.

Also worthy of mention is the Institut Scientifique Chérifien, founded in 1920, an institution of higher education devoted exclusively to the study of scientific problems related to Morocco. Very advanced for its time, it was awarded the patronage of the Académie des Sciences of Paris. It continues to produce admirable work and numerous publications.

(G. DEVERDUN)

**INSTITUT DES HAUTES ÉTUDES DE TUNIS**, an institution of higher learning founded in 1945, by the amalgamation of the Centre d'Études Juridiques, a subsidiary of the University of Algiers, and the École Supérieure de Langue et Littérature Arabes. This Institute benefited from its inception from an administration arranged under the patronage of the University of Paris and supervised by the

Department of Public Education of Tunis under the Protectorate, later by the Minister or Secretary of State for National Education of the Tunisian government. This administration was not altered by the Franco-Tunisian Cultural Convention of 1 September 1955: the latter in particular maintained the patronage of the University of Paris. Thus the Institute has continued to prepare students for degrees and diplomas offered by the French state and, simultaneously, to award Tunisian diplomas.

The Institut des Hautes Études of Tunis was directed by a president, assisted by a deputy president, resident in Tunis. The presidents have successively been William Marçais and Jean Roche, the deputy presidents Jacques Flour, Roger Jambu-Merlin and Pierre Marthelot. It comprised four sections, later to become faculties: legal and economic studies, science, literature and arts, philology and linguistics. Instruction was provided by French and Tunisian professors and lecturers, with qualifications entitling them to teach to the standards of French higher education, and by tutors, assistants and course supervisors appointed on the recommendation of the heads of section.

These studies were pursued by students registered in the normal way and also, after the independence of Tunisia, by the pupils of the École Normale Supérieure, of the École Nationale d'Administration and of the Centre d'Études Économiques, attending a number of joint courses. Thus, in 1958-9, the total strength numbered 1,522, of whom 382 were girls. Tunisians numbered 44.7 % of the total.

Apart from routine education, the Institut des Hautes Études included a number of laboratories and study centres, providing and co-ordinating specialised equipment and research facilities for the students of the various departments. Similarly, a university library offered its resources to the students, resources that in time were added to the study facilities provided by the General Library of Sūḵ al-'Attārīn.

Finally, the Institut des Hautes Études was responsible for the creation of two reviews: the *Cahiers de Tunisie*, a quarterly review of the arts, replacing the former *Revue tunisienne*, and the *Revue de droit*, also quarterly. A certain number of volumes were published in the form of specialised collections: a Library of Law and Economics, Publications of the Science Section and the Literature Section (Paris, P.U.F.).

Thus there operated for some fifteen years an institution of modern higher education, equivalent to that of the French universities. The patronage of the University of Paris, reinforced by numerous visits from French professors, ensured that a high standard was maintained.

It was by virtue of these high standards that the Institut des Hautes Études of Tunis became the University of Tunis, by the decree of 31 March 1960.

If the patronage of the University of Paris has disappeared, along with an obsolete administrative council, links with the French university have remained very strong, although not institutional, and, naturally, not exclusive, since progressively with their acquisition of State doctorates, Tunisian professors have advanced in number and in responsibility in their own university. The guardianship of the Tunisian state was established with the least risk of friction when one of the heads of department, a Tunisian, Mahmoud Messadi, became Secretary of State for National Education; the pro-rector, for his part, was none other than a former professor of the Institute and director of the École Normale

Supérieure, Ahmed Abdesselem, both of them intellectuals, writers and academics of great distinction.

Thus the University of Tunis, totally and progressively integrated with the country, and totally independent in its fortunes, in the framework of the institutions of independent Tunisia, has become straightaway, in spite of its relative youth and in spite of (and to some extent, thanks to) its original links with the French university, one of the most distinguished and effective universities of the Arab world.

(P. MARTHELOT)

**INSULT** [see *SIATM*].

**INTERPRETER** [see *TURDJUMĀN*].

**INTERROGATION** [see *ISTIFHĀM*].

**INVECTIVE** [see *HIDJĀʿ*].

**INZĀL** (French spelling: "enzel", from *anzala*, to lodge, give hospitality), traditional type of lease peculiar to Tunisia. Presumably a survival of the Roman *emphyteusis*, it served as a means of circumventing the inalienability of pious foundations. The Mālikis define it as a "lease in perpetuity (*kirāʾ muʿabbad*) of a property to a person engaging himself to build a house, or any other edifice, or plant trees on it and pay a perpetual rent calculated by the year or month" (D. Santillana, *Istituzioni di diritto musulmano malichita*, Rome 1925, i, 441). E. Clavel's definition distinguished between the two domanical aspects of the estate: "L'enzel est un contrat sui generis, par lequel le wakf ou le propriétaire d'un bien mulk se dépouille, à perpétuité, . . . du domaine utile d'un immeuble, n'en conservant que le domaine éminent, à charge par le tenancier de payer un canon annuel fixe" (*Le Wakf ou Habous*, Caire 1896, 2, 188). The rights of the lessee are so wide as to place him in *loco domini*: he may build, plant, make improvements (which become his property), bequeath or transfer his rights, etc. The *inzāl* resembles the Tunisian *kirādār* and the Egyptian *hikr*, but differs from both in four points: (1) it has lost its original purpose, viz. to render *wakf* property productive thus providing income to its beneficiaries; (2) it is no longer limited to *wakf*, but includes private property as well; (3) it is annulled in case of non-payment of rent for two consecutive years; (4) the amount of rent cannot be adjusted to the fluctuations of the rental value of the property. Under the French protectorate, the practice of *inzāl* gained momentum, as it enabled the colons to acquire extensive land holdings without prior capital investment.

(P. SHINAR)

AL-ʿIRĀKĪ, SAYYID SHĀMS AL-DĪN, religious leader active in the evangelisation of Kashmīr. He was the son of Sayyid Ibrāhīm, a Mūsawī Sayyid, and was born in the small town of Kund-Sūlkān, situated near Tehran on the road to Qazwīn. He received a good education, and, while still young came under the influence of Sayyid Muḥammad Nūr Bakhsh (795-869/1393-1464), the founder of the Nūrbakhshīyya Order [see *KUBRĀ*, *NAḌM AL-DĪN*]. Impressed by his eloquence and learning, Sultan Ḥusayn Mīrzā Bāykarā (873-911/1469-1506) took

him into his service and sent him as his envoy to Sulṭān Ḥasan Shāh (877-89/1472-84) of Kashmīr. On arriving in the Valley, where he stayed for eight years, he became the disciple of Bābā Ismāʿīl, a Kubrawī saint, and then secretly won over Bābā Alī Naḍjdjār, one of his most devoted followers, to the Nūrbakhshīyya creed, which was a mixture of Shīʿa and Sunnī doctrines, leavened by Šūfī pantheism. But his success was limited because, being an envoy, he could not preach openly. Besides, the Sunnī 'ulamā' came to know of his religious beliefs and compelled him to leave Kashmīr. He returned to Harāt, but as he lost the favour of Sulṭān Ḥusayn Mīrzā on account of his unorthodox beliefs, he left for Ray to live with Shāh Kāsim, the son of Sayyid Muḥammad Nūr Bakhsh.

While he was in Ray, Shams al-Dīn heard that those whom he had converted in Kashmīr had relapsed into orthodoxy; so, on the advice of Shāh Kāsim, he decided to proceed to the Valley. He left Ray in Rabīʿ I 907/September 1501. Travelling via Mashhad-Kandahār-Multān, he entered Kashmīr in the spring of 1502 through the Punč-Bārāmūla route. On arriving in Srīnagar, he again won over Bābā 'Alī Naḍjdjār. But the most important convert was Mūsā Rayna, a powerful noble, who supported him in his activities, and gave him money to build a *khānkāh* [q.v.] at Dījaddibal in Srīnagar. But on account of the opposition of the orthodox 'ulamā' and of Sayyid Muḥammad Bayhaḳī, the *wazīr* of Sulṭān Muḥammad Shāh, he left Kashmīr. He went to Baltistān, to the north-east of Kashmīr, and carried on missionary work among its Buddhist inhabitants with considerable success. He stayed there for over two months until the defeat and death of Sayyid Muḥammad Bayhaḳī [see *BAYHAḲĪ SAYYIDS* above] in 911/1505, and returned to Srīnagar at the invitation of Mūsā Rayna, who had again become powerful. During the nine years that Mūsā Rayna was *wazīr*, Shams al-Dīn carried on his activities without any hindrance. The conversion of Tādjīr Čak and other Čak nobles further enabled him to consolidate his work.

Meanwhile, a great change had come over the Nūr bakhshīyya which, under the influence of Šafawid Irān, increasingly began to identify itself with Shīʿism by shedding those of its doctrines which it had borrowed from Šūfism and Sunnī Islām. Shams al-Dīn, too, felt the impact and, inclined as he had always been towards the doctrine of the Twelvers, he now openly preached it, so that by the time he died in 932/1526, Shīʿism had become well established in Kashmīr. In remote Baltistān, however, the Nūrbakhshīyya beliefs survived.

*Bibliography*: The only biography of Shams al-Dīn known to exist is a *Tuḥfat al-ahbāb* by a contemporary of his whose exact name is not known. The manuscript of the work is with Sayyid Muḥammad Yūsuf, a Shīʿī *muḍṭahid* of Kashmīr and a descendant of Shams al-Dīn; Other works to be consulted are: Pīr Ḥasan Shāh, *Taʾrīkh-i Ḥasan*, ii, Srīnagar 1954; Mīrzā Ḥaydar Dughlāt, *Taʾrīkh-i Rashīdī*, tr. ## IRAN

## iii. LANGUAGES

- (a) **Pashto** [see **AFGHĀN**. (ii). The **Pashto** language]  
 (b) **Kurdish** [see **KURDS**, **KURDISTĀN**. v. Language]  
 (c) **Zaza** [q.v.]  
 (d) **Kh<sup>h</sup>ārazmian**  
 (e) **Sogdian** and **Bactrian** in the early Islamic period  
 (f) **New Persian**  
 (g) **New Persian** written in Hebrew characters [see **JUDAEO-PERSIAN**. ii. Language]

(d) **Kh<sup>h</sup>ārazmian**.

**Kh<sup>h</sup>ārazmian**, last attested late in the 8th/14th century (before yielding to Turkish), belonged to the Eastern branch of the Iranian language family, being most closely related to Sogdian, its southeastern neighbour. Pre-Islamic records are limited to coin legends and other inscriptions in a regional, partly ideographic development of the Aramaic script, found on wooden tablets, ossuaries, and silver vessels, and some documents on leather. Surviving Islamic sources consist almost exclusively of (a) some 400 isolated sentences quoted in Arabic books of case-law, and (b) the **Kh<sup>h</sup>ārazmian** glosses (in one case almost complete) in different copies of al-Zamakhshārī's Arabic dictionary *Muqaddimat al-adab*. They use the Arabo-Persian script, augmented by two letters (*h* and *f*) with triple dots above, producing *ç* (for both affricates *çs* and *çz*, as originally in **Pashto**) and *β* (i.e. *v*, distinct from *w*) respectively. While *p*, *ç*, *çj* (*j*), *kh* (*x*), *gh* (*γ*), *sh* (*š*), *zh* (*ž*), *k* (*k* and *g*) and the emphatics *ç*, *h*, *k* (*q*), *s*, *d* (*ž*), *t*, *z* presumably had their Persian values, the remaining letters, including *th*, *dh* (fricative *θ*, *δ*), evidently kept their original pronunciation. The letters are, however, often unpointed and for the most part unvowelled. Remarkable is the distinct spelling of vowels in pause position, with a presumably stressed vowel *-y-* before the last consonant, e.g. *'wrk* [*\*urg*] 'wolf', in pause *'wryk* [*\*urég*]. The basic numerals exemplify some typical consonant developments: 1 *'yw* (< *aiwa-*), 2 *'div* (< *duwa-*), 3 *'jy* (as Christian Sogdian, < *θraya-*; also 30 *'jys* < *θrisas*, but 13 *hds* < *\*θridasa*, cf. Parthian *hryds*), 4 *çfr* (< *çāθbārō*, cf. Parth. *çfr*), 5 *pnc* (< *pančā*), 6 *'x* (< *xšwaš*), 7 *'βd* (as Sogd., < *\*haftā*), 8 *'zē* (< *astā*), 9 *'sδ* (< *\*fjāda* 'increase', but 19 *nwδs*), 10 *δs* (< *dasa*), 20 *'wsc* (< *wšatē*), 100 *sd* (< *satam*).

The morphology was characteristically Eastern Middle Iranian. Nominal forms distinguished two grammatical genders, two numbers and, in combination with pre- and postpositions, five variously inflected cases: nominative-accusative, genitive-dative, possessive, ablative and locative. A complex system of personal and demonstrative pronouns included many suffixed forms. There was a definite article, masc. *'y*, fem. *'y'*, plur. *'y*, often coalescing with prepositions. Adjectives mainly preceded nouns. Examples: *'y k'm* 'the mouth', *ç-y k'm'-h* 'from his mouth', *f-y k'm'-h* 'in, into his mouth', *f-y pçwçç f-y k'm'n* 'in the corner (*\*pçwçç*) of the mouth'; *'y' (θ-zrçwçk) βwm* 'the (grassy) earth', *'y βwmy'-δr* 'the earth (direct object)', *ç-βwmy* 'from the earth', *'y bfjynk 'y βwmm'n* 'Creator of the earths'; *'y pšk* 'the back', *'y b'r y' pšk'y* 'the load of the back', *pr-<sup>2</sup> pšk-h* 'on his back'; *wdnc pxyk* 'old wine (*pxyk*)', *'y wdnc bdw* 'the old property'; *wdncy r'c* 'old veins (*r'k*)'. The verbal system was based on a present stem and an imperfect formed from it, marked in polysyllabic stems by an *ā* substituted for the vowel of the first syllable: verbs with an initial vowel took a prefix *m-* instead. Through the use of various stem or final suffixes four tenses (present, imperfect, injunc-

tive and future), six moods (indicative, subjunctive, conditional, optative, potential and imperative) and a permansive aspect were all distinguishable. Compound tenses, formed with the past participle and the auxiliary *δr-* 'to have', are only rarely attested. Notable, besides the third-person singular present endings in *-ç* (< *-ti*), are the third-person plurals in *-r*. The most striking syntactic feature was that of 'anticipation', whereby the objects of verb or preposition appeared as pronominal suffixes early in the sentence, in a regular order, even when they appeared later as independent forms, e.g. *hyδd'-hy-n'-d'-br 'y sl'm* 'he recited the greetings before him' (literally, 'he read-him-them-off-upon the greetings').

(e) **Sogdian** and **Bactrian** in the early Islamic period.

1. **Sogdian** (or **Soghidian**) was the Middle Iranian language of **Šughd** [q.v.] and adjacent areas. As an Eastern Iranian language, Sogdian is related fairly closely to Choresmian (**Kh<sup>h</sup>ārazmian**, see (d) above) and Bactrian, more distantly to Middle Persian (**Pahlavī**). The form of Sogdian known from texts seems to be based on the language of the capital Samarkand, but the limited evidence available indicates that the dialects spoken in areas such as **Bukhārā** and **Čāč** (**Shāsh**, **Tashkent**) were quite similar and no doubt mutually comprehensible with Sogdian proper.

Most of the surviving Sogdian manuscripts date from the 4th to 10th centuries A.D.; in addition to secular texts such as letters and business documents, they include a mass of Buddhist, Christian and Manichaean literature, written in four different scripts. Almost all of this material was found far to the east of the Sogdian homeland, in areas where Sogdian merchants had founded trading colonies, in particular the **Turfan** [q.v.] oasis in Chinese Turkistan (**Xinjiang**) and **Dunhuang** in western China. The most important Sogdian texts found in **Šughd** itself are the so-called 'Mug documents' (published by **Livshits** and **Bogolyubov-Smirnova**). These date from the period of the Islamic conquest of **Šughd** under **Kutayba b. Muslim** [q.v.] at the beginning of the 2nd/8th century and represent part of the administrative archives of its last independent rulers. Of particular interest is a letter in Sogdian from an Arab official named 'Abd al-Rahmān b. Šubh to the Sogdian king **Dhēwāshtrē** (see I. Yakubovich, *Mugh 1.1 revisited*, forthcoming in

*Studia Iranica*, xxxi [2002], 215-30). The Sogdian documents from the eastern colonies also contain a few references to the people and events of the Muslim world: a life of the Christian saint John of Daylam mentions al-Hadjjādī b. Yūsuf, the *amīr* of Khurāsān (d. 95/714) (see W. Sundermann, in *Acta Antiqua Academiae Scientiarum Hungaricae*, xxiv/1 [1976], 95-101), while the trilingual (Sogdian-Turkish-Chinese) inscription of Karabalgasun in Mongolia possibly alludes to events connected with the rebellion of Rāfi' b. Layth [q.v.] of Samarkand in 190-4/806-10 (according to Y. Yoshida, in *Documents et archives provenant de l'Asie Centrale*, ed. A. Haneda, Kyoto 1990, 119-20).

As a result of the important role of the Sogdian merchants in the long-distance trade between China, India and the West, Sogdian came to be used as a *lingua franca* of the Central Asian trade routes and many Sogdian documents may have been written by and for non-native speakers. This is particularly obvious in the latest Sogdian documents (3rd-4th/9th-10th centuries), some of which display strong influence from Turkish. Soon after the beginning of the 5th/11th century, Sogdian seems to have gone out of use as a written language, having been superseded by Turkish and in Sughd itself by Persian. Although New Persian is in origin the language of the south-western Iranian province of Fārs, its development into a literary language had begun in the east of the Iranian world, especially in Transoxania, with the result that the language of the earliest Persian poets is full of Sogdian and other Eastern Iranian words (see W.B. Henning, *Sogdian loan-words in New Persian*, in *BSOS*, x/1 [1939], 93-106). A certain amount of Sogdian linguistic material is also preserved in the writings of Muslim scholars such as al-Bīrūnī, who gives both the standard Sogdian and the Bukhāran names of many months, festivals, plants, etc. (see Henning, *Mitteliranisch*, 84-6). Particularly remarkable is the philosopher al-Fārābī's discussion in his *Kitāb al-Hurūf* of the means for expressing the notion of existence in Sogdian (see A. Tafazzoli, *Three Sogdian words in the Kitāb al-Hurūf*, in *Bull. of the Iranian Culture Foundation*, i/2 [1973], 7-8).

The disappearance of Sogdian as a language of culture and administration did not immediately lead to its disappearance as a spoken language. Indeed, one Sogdian dialect has survived to this day as a result of its speakers' location in a remote mountain valley in northern Tajikistan. Now known as Yaghñōbī, this language was estimated in 1975 to be spoken by some 2,000 persons, mostly Sunnī Muslims.

Spuler, I/IV/1, Leiden-Cologne 1958, 20-130; *Sogdiyskie dokumenty gory Mug. II. Yuridicheskie dokumenty i pis'ma* (ed. V.A. Livshits). III. *Khazyaystvennie dokumenty*, ed. M.N. Bogolyubov and O. Smirnova, Moscow 1962-3; N. Sims-Williams, *Sogdian*, in *Compendium linguarum iranicarum*, ed. R. Schmitt, Wiesbaden 1989, 173-92; R. Bielmeier, *Yaghñōbī*, in *ibid.*, 480-8.

2. Bactrian was the Middle Iranian language of ancient Bactria with its capital Bactra, later Balkh [q.v.]. Bactrian is generally reckoned as an Eastern Iranian language, but it is now becoming clear that it has almost as much in common with Western Iranian, especially Parthian, as with Eastern Iranian languages such as Sogdian and Choresmian (Kh<sup>h</sup>ārazmian).

Unlike other Middle Iranian languages, Bactrian was usually written in the Greek script, a legacy of the conquest of Bactria by Alexander the Great. It is chiefly known from short inscriptions on coins and

seals from Afghānistān and the north-west of the Indian sub-continent; a few more substantial monumental inscriptions (mostly found in Afghānistān, but also in the neighbouring areas of Uzbekistan and Pakistan); a handful of manuscript fragments from Chinese Turkistan (Xinjiang), including a unique folio in Manichaean script; and a recently-discovered group of more than 150 documents, including letters, legal and economic documents and a couple of fragmentary Buddhist texts, most of which appear to originate from the principality of Rōb (al-Ṭabarī's Ru'b, modern Rūi in the northern Hindūkush). These documents now form by far the largest part of the surviving corpus of Bactrian, so that all surveys of the material written before they began to come to light in the 1990s must be regarded as seriously out of date.

The earliest Bactrian inscriptions date from the 1st to the 2nd centuries A.D., when Bactria was the centre of the Kushān empire, the latest to the 3rd/9th century. The documents belong to the intervening period, from the 4th century A.D. to the 2nd/8th century, during which time Bactria was subject to a succession of foreign rulers: the Sāsānid dynasty of Iran, the Chionites, Hephthalites (Arabic *Haytāl* [see HAYĀṬĪLA]), Turks and finally Arabs. By the middle of the 2nd/8th century, the area was substantially under Muslim control. Some of the latest Bactrian documents refer to the use of "Arab silver dirhams" and to taxes payable to the Arabs (the word used being *Tāzīg*), while the very last (dated in the year 549 of the local era, probably corresponding to 164/781) seems to have been written by a Muslim ruler, who prefaces the text with a Bactrian version of the *bismillāh*.

A number of Bactrian words and titles are cited by Muslim writers, who refer to the language as *al-balkhiyya* (the language of Balkh) or *al-ṭukhāriyya* (the language of Ṭukhāristān [q.v.]), a term commonly used in Islamic sources but first attested in two Bactrian documents of the Hephthalite period, ca. 6th century A.D.). A list of Bactrian month-names is found in some manuscripts of al-Bīrūnī's *Chronology*, for example, though this does not seem to have the authority of al-Bīrūnī himself (see N. Sims-Williams and F. de Blois, *The Bactrian calendar*, in *Bull. of the Asia Institute*, x [1996 (1998)], 149-65).

i. *General introduction*

1. *Definition*

New Persian is the name given by Western scholars to the language written in modified Arabic script,

which has been used roughly in the past millennium, from the 9th century A.D. up to the present day, that is, historically, in the Islamic period of the Persian-speaking population. Geographically, it was first spoken in western Iran, with the south-western province Pārs or Fārs (Arabicised form; Lat. Persis) acting as a centre in mediaeval times. However, the bulk of its earliest literary documents (9th-10th centuries) originated from the north-east (Khurāsān, including Nīshāpūr, Marw, Harāt, etc.) and Central Asia; but from the late 10th century, it became the literary language in Western Iran as well. In the subsequent centuries, parallel with the Islamisation of the neighbouring countries, Persian as a language of culture, administration and everyday communication dominated vast territories ranging from Anatolia to the Indian sub-continent (North India), including Transoxania and Afghānistān, developing various written and spoken standards and dialects. Shortly after its emergence, Classical Persian became the culturally-dominant language of the area in question. Its latest representative, Modern Persian, called *Fārsī* by native speakers, with its closely related dialects and variations is spoken by approximately 50 million people as their mother tongue or their second standard language. Today, Modern Persian is the official language of Iran, spoken as a mother tongue by 50% of the population (ca. 30 million). Its closest relatives are *Tādjīkī* [q.v.], the official language of Tādjikistān, written in modified Cyrillic script, and Afghān or Kābulī *Darī* [q.v.], the second official language after *Pash̄to* (which was declared to be the first in 1936) [see AFGHĀN. ii] in Afghānistān (ca. 5 million) and, in Central Asia, in the modern republics of the former Soviet Union (ca. 5 million). These three languages, Modern Persian, *Tādjīkī* and *Darī*, regard Classical Persian as their common ancestor with which unbroken continuity is supposed to have been maintained. Therefore the latter two are sometimes described as the varieties or dialects of Persian (see G. Lazard, *Le persan*, in *Compendium linguarum iranicarum* (= *CLL*), ed. R. Schmitt, Wiesbaden 1989, 289; J. Wei, *Dialectal differences between three standard varieties of Persian, Teheran, Kabul, and Tajik*, Center for Applied Linguistics of the Modern Language Association of America, Washington D.C. 1962; G.L. Windfuhr, *Persian*, in *The world's major languages*, ed. B. Comrie, London and Sidney 1987, 523). Small segregated Persian-speaking communities can be found in neighbouring multilingual areas as well.

2. The position of New Persian among the New Iranian languages

New Persian is a member of the South Western group of the New Iranian languages within the Indo-Iranian branch of the Indo-European language family. From among the Western New Iranian languages (e.g. Kurdish dialects, Balōčī, etc.) New Persian is the major representative, sharing a series of phonological and grammatical features with them while also exhibiting innovations. See, for instance, the preservation of the Old Iranian initial voiced plosives *b*, *d*, *g* both in the South-West Iranian New Persian *brādar* < Middle Persian *brādar* < Old Iranian \**brāt̰ar*- "brother" and in the North-West Iranian Balōčī *brāt* vs. Eastern Middle Iranian Sogdian *br't* and Eastern New Iranian *Pash̄to uror* (cf. D.N. MacKenzie, *Pash̄to*, in Comrie, *op. cit.*, 548). New Persian is the only New Iranian language which is documented in all three of its historical periods (Old, Middle and New Persian), displaying various local dialects as well. After an approximately two-century period of cultural and linguistic dominance of Arabic between the collapse of

the Sāsānid empire (7th century) and the emergence of a new literary Persian language (ca. mid-9th century), it became the culturally dominant language in subsequent centuries. Its first documents appeared in the eastern provinces after its having supplanted Middle Persian and Arabic in the written medium and other Middle Western and Eastern Iranian languages such as Parthian in Khurāsān, and Sogdian, Bactrian and Kh̄wārazmian in Transoxanian (cf. Lazard, *The rise of the New Persian language*, in *CHIr*, iv, Cambridge 1975, 595-632).

Genetically, New Persian derives from Middle Persian, although not without breaks in the continuum. Geographically, the two preceding phases, Old Persian and Middle Persian, are linked to the regions of the southwest of Iran (i.e. the province of Pārs), while New Persian appears to have emerged first as a language of literature in the East. Typologically, however, the differences between Old Persian and Middle Persian are very considerable (especially in phonology and grammar), but less so between Middle Persian and New Persian (see H. Jensen, *Neupersische Grammatik*, Heidelberg 1931, 4; Lazard 1975, 596; idem, *Les modes de la virtualité en moyen-iranien occidental*, in *Middle Iranian studies*, ed. W. Skalmowski and A. van Tongerloo, Leuven 1984, 1-13). The changes concerned mainly the exponents of inflectional morphology which induced alterations in the language type. Old Persian, like many other old Indo-European (Greek, Latin) and Indo-Iranian (Sanskrit, Avestan) languages, was inflectional, while Middle and New Persian became a language of a mixed type displaying less inflectional and more agglutinative characteristics. That is to say, grammatical categories earlier expressed by inflection and conjugation were partially preserved, even though with significant restructuring in the verbal paradigm, but some of them were completely abandoned (see W. Sundermann, *West-mitteliranische Sprachen*, in *CLL*, 110-11). In nominal morphology, for instance, the old case system was supplanted by new ways of expressing grammatical categories such as by pre- and postpositions, *idāfa* structure or word order, supposedly due, among other factors, to stress placement. As a result, analytic structures began to be dominant in New Persian morphology, while inherited Old Iranian synthetic structures came to be gradually, but not completely, abandoned. Simultaneously, the vocabulary incorporated a large number of northwestern and eastern Iranian elements (see W. Lentz, *Die nordiranischen Elemente in der neupersischen Literatursprache bei Firdosi*, in *Zeitschrift für Indologie und Iranistik*, iv [1926], 251-316, and W.B. Henning, *Sogdian loan words in New Persian*, in *BSOAS*, x [1939-42], 93-106) and, in increasing proportion, Arabic lexical items. More recently, there has been considerable borrowing from various Turkic languages and neologisms from such Western languages as French, English and Russian.

### 3. Periodisation

New Persian, which spans more than a thousand years, has undergone considerable changes. Persian as it appears today is markedly different from the language of the classical authors, displaying considerable variations in both the spoken and written standards. Traditionally, the periods of Persian, especially those of its written variants, are linked to the alternation of the ruling dynasties (cf. Old Persian as the official language of the Achaemenids in the 6th-4th centuries B.C., or Middle Persian, the language of the Sāsānids in the 3rd-7th centuries, and further used by the Zoroastrian clergy in religious writings in the 8th-10th

centuries; see J. de Menasce, *Zoroastrian literature after the Muslim conquest*, in *CHI*, iv, 543-65.). Similarly, the emergence of New Persian is connected with the fall of the Sāsānid empire and the Arab conquest. The transition periods, however, appear to be the most tangible if they are accompanied by a change in the writing system, or in close connection with it, a change in faith. Nevertheless, neither Middle Persian and New Persian nor the various stages of the last thousand years' history of New Persian in the Islamic era can easily be separated. It is well known from the more recent periods of Persian how much written and spoken varieties can differ from each other. Certain spoken forms were used in Persian for centuries without being incorporated in the literary language, or else they were taken over with a certain delay, sometimes centuries later, under social pressure, as a result of literary and political movements. As a consequence, the various linguistic stages can only be set up *post hoc* and always with a certain degree of idealisation and oversimplification. This is the more so since the transmission of all ancient texts was very uncertain because the copyists often "normalised" them by introducing or abolishing archaisms and dialecticisms. Consequently, the actual use of the language, which must have been marked by individual features and plenty of idiosyncrasies, often fails to be accounted for.

According to generally accepted views, after its emergence in the spoken registers (ca. 7th-9th centuries) New Persian is divided into Early Classical (9th-12th centuries), Classical Persian (from the 13th century on), and Modern Persian (from the 19th century on), which is supposed to be based on the local dialect of Tehran. Windfuhr provides a classification into five periods such as "formative" (7th-10th centuries), "heroic" (10th-12th centuries), "classical" (13th-15th centuries), "post-classical" (15th-19th centuries) and finally "contemporary" Persian, following a predominantly literary periodisation (*Persian grammar. History and state of its study*, The Hague 1979, 166).

Other views, found especially in former Soviet studies written in Russian, ascribe the splitting of Classical Persian into three new, closely related literary languages such as the Modern Persian of Iran (*Fārsī*) and Afghān (or Kābulī) *Darī* and *Tādžikī* to the beginning of the 16th century when the disintegration of the earlier common classical heritage and the first steps towards developing new local standards might have begun (see L.S. Peysikov, *Problema yazika daru v trudakh sovremennikh iranskikh učenikh*, in *Voprosi yazikoznaniya* 1960, 120-5; V.A. Yefimov, V.S. Rastorgueva and Y.N. Sharova, *Persidskiy, tadžikskiy, dari in Osnovi iranskogo yazikoznaniya* (= *OIY*); *Novoiranskiye yaziki, zapadnaya gruppa*, eds. V.A. Abaev, M.N. Bogolyubov, V.S. Rastorgueva, 1982, 7 *Tādžikī*, by I. Steblin-Kamenskiy; *Zs. Telegdi, Beiträge zur historischen Grammatik des Neupersischen. I. Über die Partikelkomposition im Neupersischen*, in *Acta Linguistica Academiae Scientiarum Hungaricae*, v [1955], 68 n. 1). In earlier Soviet publications the denomination "klassičeskij persidsko-(dari)-tadžikskij" (*OIY* 1982, 20) or simply "*Tajik*" (Rastorgueva, *A short sketch of Tajik grammar*, Bloomington, Ind. 1963, 1) was used to refer to the common origin, claiming an unbroken continuity with the Classical Persian language and literature (*OIY*, 1982, 9, 13). Another periodisation marks off the last (19th-20th) centuries, when the emergence of the three modern languages was supposed to have begun (A. Pisowicz, *Origins of the New and Middle Persian phonological systems*, Cracow 1985, 9 n. 1; Lazard 1989, 289). The divergent opinions on the periodisation can be attributed to the differ-

ent ways of evaluating spoken and written forms. The new written varieties, *Darī* and *Tādžikī*, are obviously based on ancient local spoken dialects (Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 15), but the characteristic features of these dialects were first observed in written media only in the last century (see W. Geiger, *Bemerkungen über das Tadschikī*, in *Grundriss der iranischen Philologie* (= *GIPH*), ed. W. Geiger and E. Kuhn, Strassburg 1895-1904, i, 2, 407-8; I.M. Oranskij, *Die neuiranischen Sprachen der Sowjetunion*, The Hague 1975, i, 22; A. Farhādi, *Le persan parlé en Afghanistan: grammaire du Kāboli*, Paris 1955, 2; L.N. Dorofeeva, *Yazik farsi-kabuli*, Moscow 1960, 9-10). Meanwhile, the overall cultural dominance of Persian, both as a common *Hofsprache* and as a spoken language continued also to prevail in the former Persian-speaking area.

#### 4. Denominations

As the periodisation indicates, the division between the classical language and its modern continuations presents peculiar difficulties, reflected in the denominations of Persian in Western scholarship and in the native tradition. The two main varieties of New Persian are generally called Classical and Modern Persian in the West with further subdivisions into diachronic, local and style or register variants. In linguistic literature, both scientific and popular, New Persian is sometimes called Modern Persian (e.g. J. Darmesteter, *Études iraniennes*, 2 vols., Paris 1883; H. Paper, in *Current Trends in Linguistics* (= *CTL*), vi [1970], Introduction, or Windfuhr 1979, 7) vs. contemporary Persian or contemporary colloquial or Neo-Persian (see F. de Blois in *Persian literature. A bio-bibliographical survey begun by the late C.A. Storey* (= *PL*), v, part 1, London 1992, part 2, 1994 or in French, *néopersan* (Lazard 1989, 263). Native speakers use the name *Pārsī* or its Arabicised form, *Fārsī*, or both, without distinction (see M.T. Bahār, *Sabk-shināsi ya ta'avuvur-i nathr-i fārsī*, <sup>2</sup>Tehran 1337/1958, i, 2), denoting all varieties of New Persian. In scholarly publications, the denomination *fārsī-i bāstāni* vs. *fārsī-i naw* distinguishing an "old archaic" and a "new" variety of [New] Persian, can also be found in Iran (see *Lughat-nāma* (= *LN*) by Dihkhudā). *Fārsī* is the name of the official language of today's Iran, which has come to be used as an equivalent of Modern Persian, or simply Persian in modern text and grammar books outside Iran as well (A.K.S. Lambton, *Persian grammar*, Cambridge 1967, p. xi n. 1; D. Crystal, *The Cambridge encyclopedia of language*, Cambridge 1987, 301; similarly Lazard, *Le persan*, 1989, 263). In native sources the name *Darī* [q.v.] or *Fārsī-i darī* is also used, referring to the oldest and most respected variety of the [Classical] literary Persian or, simply as an equivalent of *Pārsī* or *Fārsī*. The speakers of *Tādžikī*, which is very closely connected to Persian, use also *Fārsī* to designate their mother tongue (*Fārsīwān*, *Fārsībān*, or *Fārsī-gū[š]*) *Tādžikī*.

#### ii. History of the language

I. The emergence of New Persian: *Pahlawī*, *Pārsī*, *Darī*

##### 1. The native tradition

The complexity of the linguistic situation in Iran is clearly indicated by the wide range of names used for Persian since the time of its emergence, either as common names, synonyms or denominations, with or without clear distinctions being made. Therefore the history of the language starts here with investigations into the early native tradition as a source of language history. The early history of the names applied to the various forms of Persian and the alleged change of

their references may elucidate the eclectic use of these denominations in more recent periods and the difficulties of the periodisation of the language history as well. It must be emphasised, though, that the authors of these early Islamic sources who spoke about the varieties of Persian were not linguists but historians, geographers and literary men, in most cases of the last category, poets. Hence the information they gave about the dialects once spoken or still spoken in the age they lived in was more "narrative" than "technical", and it was often embedded in myths with much folklore and obscure details. The picture one can gain from these texts is thus not always clear or coherent. A truly technical treatment of linguistic issues in Iran lies in the distant future.

## 2. Mediaeval Arabic and Persian sources on Persian language

The intricate problems of the transition period between Middle Persian and New Persian (7th-9th centuries) has been extensively treated by G. Lazard in a series of studies based on the analysis of mediaeval Arabic sources, Early and Classical New Persian texts as well as Persian and non-Persian dialects (see the summary in *La formation de la langue persane*, Paris 1995). One of the earliest sources mentioning the names *Pahlawī*, *Pārsī* and *Darī*, which denoted the languages used in Iran at the end of the Sāsānid period, was attributed to Ibn al-Muḳaffā' (d. 757 [q.v.]) by Ibn al-Nadīm (d. 987) in his *Fihrist* and repeated by Kh̲ārazmī (d. 985), and by Yākūt (d. 1229) through Ḥamza al-Iṣfahānī (d. 970) (see Bahār 1958, i, 19; Lazard, *Pahlavī, Pārsī, Darī. Les langues de l'Iran d'après Ibn al-Muḳaffā'*, in *Iran and Islam. In memory of the late Vladimir Minorsky*, ed. C.E. Bosworth, Edinburgh 1971, 361-91; idem, art. *Darī* in *Elr*, vii, 1994, 34-5). These descriptions continued to be repeated by Persian lexicographers until the 19th century, albeit with certain modifications (cf. É.M. Jeremiás, *Pahlavī, Pārsī and Darī in Persian lexicography*, in *Acta Ant. Hung.*, xxxviii [1998], 175-83).

In the following, some shifts in the meanings of these terms will be shown through some characteristic passages quoted from this native tradition. After talking about *Pahlawī* as the language of Fahla (i.e. the ancient Media) the earliest informant, Ibn al-Muḳaffā', says that *Darī* is "the language of the cities of Madā'in; it is spoken by those who are at the king's court. [Its name] is connected with presence at court. Among the languages of the people of Khorasan and the east, the language of the people of Balḵ is predominant." He continues on to say that *Pārsī* is "the language spoken by the *mowbeds* (priests), scholars and the like; it is the language of the people of Fārs" (translated by Lazard in his art. *Darī*, 34). This rather incoherent description can be better elucidated by Arabic and Persian sources originating from the subsequent (10th-11th) centuries, e.g. al-Mas'ūdī and al-Muḳaddasī or Firdawsī, Bal'amī, Ḥakīm Maysarī, Kaykāwūs b. Iskandar, etc. As evidenced by these texts, the denominations *Pahlawī*, *Pārsī* and *Darī* may have changed their references to varying degrees during the first centuries of the Islamic era, denoting various written and spoken varieties depending on the text where they appeared. Accordingly, *Pahlawī* or *Pahlawānī* (literally meaning "Parthian" originating from *Pahlaw* < *Parthava* "Parthia"), appears to have referred at one time to Parthian and Middle Persian but also to the local dialect of the northern region called Fahla in an Arabised form (see the poems written in this dialect and called *Fahlawīyya*, cf. *Elr*, ix, 158 and the most

recent publications on this topic in *Madjalla-i zabānshināsī*, xv [1379/2000], no. 1). *Pārsī*, "the ancient language" first denoted Middle Persian (*Pārsīg*) as described by Ibn al-Muḳaffā', but with a shift of meaning it came to mean New Persian and has continued to denote New Persian of whatever kind until today (see *LN*, art. *Pārsī/Fārsī*). *Darī* (etymologically, "belonging to the royal court") also denoted the Persian language which was supposed to be spoken both in the capital of the Sāsānid empire (Ctesiphon) and in the East. It was the name of the language of literature which appeared in the eastern part of Iran, sc. *Khurāsān*, and has been used in Persian texts since the 10th century. All the quotations in Arabic sources attributed to Persian kings or their subjects were thought to have been in *Darī* (cf. Bahār 1957, i, 19) and the language of all the ancient texts was called *Darī* or *Pārsī-i Darī* (Lazard 1989, 264), sometimes contrasted with *Pahlawī* when the latter denoted Middle Persian or *Pārsī* (Lazard 1994). The expression *Pārsī-i Darī* (in Arabic *al-fārsīyya al-darīyya*) indicates that occasionally, it might have been distinguished from *Pārsī* as a special variety, the *Darī* form of *Pārsī* (e.g. al-Muḳaddasī and Kaykāwūs b. Iskandar, ca. 1082-83; cf. Lazard 1994, 34). Other than that, it was often used as a synonym for *Pārsī*. The expression *Pārsī u Darī* (in the *Shāh-nāma* by Firdawsī, ed. Moscow, viii, 254) seems to be a "distortion" (see P.N. Khānlari, *Tārīkh-i zabān-i fārsī*, 3 vols., new ed. Tehran 1365/1986, i, 273).

In his earlier studies, G. Lazard explained the linguistic situation of the post-Sāsānid period by contrasting *Pārsī* and *Darī* as the written and spoken form of the same language. According to his interpretation, it was the spoken language that spread to the eastern region, as Ibn al-Muḳaffā's report suggested, after having gradually supplanted the local dialects (e.g. Parthian). As a spoken variety, it was supposed to have been used in the whole empire, but it was in *Khurāsān* that it was first used for literary purposes and became the new literary language of the subsequent centuries.

## 3. Early dialectal sources (8th-11th centuries): the evidence of Judaeo-Persian texts

Recently published sources on local dialects and on the Judaeo-Persian texts, however, have helped throw new light on the linguistic situation and the rise of the new literary language in the first centuries of the Islamic era, as described earlier (Lazard, *Lumières nouvelles sur la formation de la langue persane: une traduction du Coran en persan dialectal et ses affinités avec le judéo-persan*, in *Irano-Judaica*, ii, ed. Sh. Shaked and A. Netzer, Jerusalem 1990, 184-98 = 1995, 107-21). A manuscript discovered in Mashhad which contained an anonymous and undated *Ḳur'ān* translation (*Ḳur'ān-i *Ḳuds*, *kuhantarīn bargardān-i Ḳur'ān ba fārsī*, ed. 'A. Rawāḳī, Tehran 1362/1984) was written in a local dialect of Sīstān in the 11th century, as supposed by Lazard. This text shares a series of dialectal features with Judaeo-Persian texts (mainly Bible translations and paraphrases), and both show common peculiarities with Middle Persian, mainly regarding words and certain morphological features. The properties which the two sources share are unknown in literary New Persian, which induced Lazard to develop a new hypothesis that at the beginning of the Islamic period "there were important differences between the common language spoken in the south and that in use in the north. The former, as represented by literary Middle Persian, retained most of its ancient forms; the latter evolved from the same Persian language,*

which had spread throughout the north, but evinced the influence of the dialects that it had supplanted there, particularly Parthian. It thus diverged noticeably from the original form. Both were called *Pārsī* (Persian), but it is very likely that the language of the north, that is, the Persian used on former Parthian territory and also in the Sasanian capital, was distinguished from its congener by a new name, *Darī* ([language] of the court). It was only natural that several centuries later, literary Persian, based on the speech of the Northeast, bore the same name" (1994, 35; see also 1989, 263 n. 1).

This hypothetical reconstruction might be extended in the future by investigating other Persian sources as well, the text editions of which are far from being completed, and these may help clarify some more details. True, there are other interpretations also. For instance, Khānlari has developed the (unlikely) hypothesis, relying on al-Muḩaddasī's report (10th century), that *Darī*, the chancery language of Bukhārā, had been transported there from the royal court of the Sāsānids by the state officials (1986, i, 280-1).

#### 4. More recent native sources on the languages of Iran: lexicography and grammar from the 17th-19th centuries

Extensive descriptions of the languages used in Iran, like those of Ibn al-Muḩaffā' and his compatriots, can only be found much later, in the huge Hindustānī lexicographic compilations written in and after the 17th century. These works, of which the most famous are the *Farhang-i Dīhāngirī* (= *FDj*), 1608-9, ed. R. 'Affī, Mashhad 1351/1972; *Burhān-i kāfī*' (= *BK*), 1652, ed. M. Mu'īn, Tehran 1341/1962; and *Farhang-i Rashīdī* (= *FR*), 1654, ed. M. 'Abbāsī, Tehran 1337/1958 (see *qāmūs*. 2. Persian lexicography), partly preserved the old heritage and partly added some more information on language varieties, grammar, style of letter writing, etc. These accounts about the grammar, dialects, history and vocabulary of Persian, which occasionally bear witness to fantasy at work, were collected in chapters and placed as an introductory part to the *farhangs*, serving as a kind of grammatical introduction. The very first chapters usually dealt with the varieties of Persian (*Pārsī*) which were supposed to be of seven *gūna* "species": four of them (*harawī*, *sagzī*, *zāwulī* and *sughdī*) were regarded as obsolete (*matrūk*), in which "letter, book and verse cannot be written" (*FDj* 15; *FR* 46) and three others as currently used (*mutadawīl*), these being *Darī*, *Pahlawī* and *Pārsī*. Apart from the suprising fact that these languages were treated as the variations of *Pārsī* still in living use in Iran in the 17th century (e.g. *Pārsī* was described as the common language of Iran, with Iṣṭakhr as its capital), they covered slightly or markedly different notions as compared to earlier sources, but also contained ideas similar to those found in the first grammatical compilations that relied heavily on lexicography, e.g. 'Abd al-Wāsī' Hānsawī's *Risāla* from 18th-century India (lith. Kānpūr 1872) or Irawānī's *Kawā'id* (lith. [Tabriz] 1262/1846; see Jeremiás, *Tradition and innovation in the native grammatical literature of Persian*, in *Histoire, Epistémologie, langage* (Paris), xv [1993], 51-68). The three denominations were treated fairly consistently in these recent sources, differences existing only in detail, emphasis and arrangement. In comparison with older sources, however, the authors of these compilations did not bother to reconcile the most contradictory and fabulous accounts in the description of the single languages; they simply quoted them as differing opinions on the same subject (e.g. on *Darī*: "some said that it was spoken in Balkh, Marw, Bukhārā, Badakhshān . . . , but according to others it was spo-

ken in the Kayānīan court, and then there were those who regarded it as the purest, unmixed language" (see *FR* 47; *FDj* 16; *BK* 20, 500). Entirely new motives also appeared in these descriptions: one was something like "ideological", and another might be called a "linguistic argument". Both concerned the reputation of Persian among the languages spoken by Islamic peoples. The eminence of Persian as the second language after Arabic was illustrated by various stories and supported by a *tafsīr* [*q.v.*] called *Daylamī* with the intention of symbolising the role of *Pārsī* as a common language in the whole empire (*BK* 500; Irawānī, fol. 4b, see Jeremiás 1998, 181). The superiority or dignity of the Islamic languages like Arabic, Persian or Ottoman Turkish appears to have been a matter of debate since the 15th century, enthusiastically treated by Mīr 'Alī Shīr Nawā'ī and Kemāl Pashā-zāda [*q.v.*] (see R. Brunschvig, *Kemāl Pāshāzāde et le persan*, in *Mélanges d'orientalisme offerts à Henri Massé*, Tehran 1963, 48-64 (= *Études d'islamologie*, Paris 1976, i, 379-95); B.G. Fragner, *Mīr 'Alī Shīr Nawā'ī: the "Judgement" reconsidered*, in *Irano-Turkic cultural contacts in the 11th-17th centuries*, ed. É. Jeremiás, Budapest 2002; idem, *Die "Persophonie". Regionalität, Identität und Sprachkontakt in der Geschichte Asiens*, in *Anor*, v, Halle-Berlin 1999).

This linguistic argument was even more clearly spelled out in the 17th-century lexicography where *Darī* was treated. The compilers declared that "*Darī* is the language in which there is no deficiency (*nuḩṣānī*)" (see *FDj*, 16; *FR* 47; *BK*, 20). The idea of *nuḩṣānī* seemed to denote something missing from the "authorised" (*saḩīh*) word form. As examples, the authors quoted two lists of doublets: nouns with the same meaning, but written with or without the initial *alif*, which represented the vocalic onset, e.g. *abrīshum/barīshum* "silk", *ispīd/sapīd* or *sipīd* 'white', *ishkam/shīkam* "belly", *uṣhtur/shutur* "camel" etc. and imperative verbal forms with or without the verbal prefix *bi-*, e.g. *bi-raw/raw* "go"; *bi-ṣnaw/ṣnaw* "listen", etc. According to the commentary, the "defective" words are not correct *Darī* forms. The sources say almost unanimously that Persian is regarded as "correct, uncorrupted" (*fasīh*) only if there is no *nuḩṣānī* in it.

This very peculiar interpretation of *Darī* goes back to the traditional treatment of lexical and grammatical doublets based on a peculiar analysis of the (morphological) structure of the word. Ancient lexicographers and prosodists listed all the so-called "meaningful letters" (*hurūf-i ma'ānī*) occurring in different positions in the word, first at the end where rhymes appeared (see Shams-i Kay's rhyme science in *al-Mu'djam fi ma'āyir aṣḩār al-'adjam*, ed. Mudarris Raḩawī, <sup>2</sup>Tehran 1338/1959, in the 13th century), and later, as an extension of this practice, at the beginning and in the middle of the word. The technical terms denoting the base (*aṣḩ*) and the extension (*waṣḩ* or *zā'id*), were borrowed from the Arabic grammatical and literary tradition, but they were adapted to Persian with a special connotation. *Aṣḩ* denoted the base which always appeared as a word, while *zā'id* marked any additional element, mainly inflectional and derivational morphemes attached to this base form. Later, the term *zā'id* came to be used in a somewhat different meaning in lexicography denoting any letter which was added to or removed from the base form without changing its meaning (cf. Jeremiás, *Zā'id and aṣḩ in early Persian prosody*, in *JSAI*, xxi [1997], 167-86). All the sources from the 17th century seemed to agree that these doublets were used only in poetry as required by prosody but never in common speech. However,

talking about *Darī*, the author of *FR* (47) added that the “defective” forms were also used in towns, by which he probably meant that these forms were used both in poetry and the spoken idiom. The problem with the doublets of the imperative forms is somewhat different. Imperative forms may appear with or without the verbal prefix *bi-* in literary texts. But it was obligatory for the imperative in genuine *ṣaḥīḥ darī* forms, as *Shams-i Kay*s remarked (232). Prestigious authors such as Ni‘mat Allāh (ca. 1540, cf. A.M. Piemontese, *Catalogo dei manoscritti persiani conservati nelle biblioteche d'Italia*, Rome 1989, no. 403, fol. 296) or even earlier, Muḥammad b. Hindūshāh Nakhčiwānī [q.v.], the author of *Shihāḥ al-Furs* (1328), seems to share this opinion (cf. ā [“come” imperat.] *ba-mānī dar-ā wa bi-yā*, ed. ‘A. Tā‘atī, Tehran 1341/1962, 19). Moreover, *BK* and *FDj* make a clear distinction between the two functions of the verbal prefix *bi-*: it was regarded as obligatory in the imperative but obsolete in past forms, where it was used as embellishment. This usage may have indicated a change in the language (see below, on grammar). In more recent native sources, however, this distinction seems to have become dimmed and the verbal prefix *bi-*, in both present and past forms, was called *zā‘id* in most cases, that is, an element which only has an aesthetic function (cf. *FR*, 15; Hānsawī, 3; Irawānī, fol. 22b). This topic was also dealt with by Irawānī (1846), who used a strange “linguistic” argument proving the eminence of Persian against other Islamic languages; this argument rests on its [grammatical] simplicity: there is no *‘rāb*, no dual and no feminine gender which would make the language difficult for beginners, says Irawānī (fol. 3b).

These scattered references on language and its different variations may help one to draw the following conclusions. It seems to be a *communis opinio* that from the very beginnings the most highly respected literary variety of Persian was called *Darī* in indigenous sources, sometimes as an extension, and sometimes as an equivalent of *Pārsī* or *Fārsī*, and this view continued to prevail in subsequent centuries. More recent sources, however, tend to talk about the “rules of *Pārsī*” or *Fārsī* (see Ni‘mat Allāh, ‘Abd al-Wāsi’ Hānsawī, Rawshān ‘Alī Djawnpūrī, Irawānī, Tālākānī, Ḥabīb Isfahānī, to mention only a few, cf. the references in *PL*, iii/1, 1984, 123ff.). But despite this preference for the name *Darī* in older sources, the denominations *Pārsī*, *Fārsī* or *Fārsī-i Darī* or *Darī* seem to have been used almost interchangeably. One must not forget that these eclectic sources did not use well-defined terms when they talked about language. On the contrary, literary persons (*ahl-i zabān*) usually thought of the language in terms of “ancient” or “modern” and “common (spoken)” or “dialectal” forms. The reason for that was quite obvious: there was no grammatical tradition in Persian, “no exact norm (*mikyās*) of the rules (*kawānīn*) of Persian (*Darī*) on the basis of which the correct (*ṣaḥīḥ*) and corrupt (*fāsid*) usage could be defined and on which one could rely when defining what was right (*ṣawāb*) and wrong (*khatā*) in Persian speech (*kalām-i Pārsī*), to which one could turn in case of need”, thus noted by *Shams-i Kay*s in the 13th century (*op. cit.*, 205) and repeated almost word for word by *Shams-i Fakhri* in the 14th century (*Lexicon persicum id est libri Mi‘yār i G‘amālī pars quarta*, ed. C. Salesmann, Kazan 1887, 3) and the author of *FDj* in the 17th century (4). But even if writers were unaware of the fine grammatical distinctions of social or historical dimensions, they must have had some knowledge of the differences between

the usage of the “ancient” (*mutakaddimīn*) and “modern” (*muta‘akhhkhirīn*) poets (see *Shams-i Kay*s, 208-9) or of the language of literary or common speech (*muhāwarāt-i pārsī*, in *FDj* 40; *BK* 26; Ḥabīb Isfahānī, *Dastūr-i sukhān*, [Istanbul] 1289, 54) or poetry and prose (see ‘Abd al-Wāsi’ Hānsawī, 41; Ḥabīb Isfahānī, 15). Scattered hints at some “virtual” norm in *Shams-i Kay*s poetic manual, which never came to be institutionalised, or the lists of doublets and denominations such as *Furs-i kadīm* (*FDj* 8; *FR* 47), *Pārsī-i bastānī* (*FDj* 4; *BK* 500) in lexicography might serve as proofs (cf. Jeremiás, *Grammar and linguistic consciousness in Persian*, in *Proceedings of the Third European Conference of Iranian Studies*, ii, ed. C. Melville, Wiesbaden 1999, 19-31). The literary model was but the poets’ use of the language, which was far from being uniform. This discrepancy between linguistic and literary norms may be the very reason for the lack of clarity and the contradictions in the sources (see the definition of *Darī* in *LN*: *zabān-i fārsī-i rasmī-i mā‘mūl-i imrūza* “the official Persian language used today”), which makes the separation of *Fārsī* and *Darī* almost impossible. Paradoxically, however, the lack of a strictly regulated norm preserved more of the linguistic reality of the previous periods in comparison with the Arabic grammatical literature which often dealt with an idealised construct which differed considerably from actual speech (see K. Versteegh, *Landmarks in linguistic thought. III. The Arabic linguistic tradition*, London 1997, 156).

## II. The impact of Arabic

With a few exceptions (see below, V. Scripts, 2), all the sources discussed above were written in the Perso-Arabic script (the earliest manuscript dates from the beginning of the 10th century, cf. L.P. Elwell-Sutton, *Arabic influences in Persian literature*, in *Elr*, ii, 233-7). It was not only the script that was taken over, but Arabic became the medium of written expression, both in administration, science and literature in the eastern areas (*Khurāsān* and *Transoxania*) in the first two centuries after the Muslim conquest. As a consequence, the supreme dominance of the Arabic language and culture almost completely supplanted Persian in the written medium during this period. Even though the western part of Iran preserved longer the ancient culture, as the Pahlawī writings from the 9th-10th centuries attest, the knowledge of the “old” language, that is, Middle Persian, and its insurmountable script was a privilege of a few. However, Persian was never abandoned but was allowed to thrive in the spoken idiom and from the mid-9th century in the East, and from the end of the 10th century in the West, it began to regain its position in culture and literature (cf. IRAN. v. History (a)). Moreover, Persian not only survived as a spoken idiom, and began to appear in the written documents, but was also imported by Muslim conquerors into further eastern areas, unlike the other territories of the caliphate, and a considerable proportion of the Arab population which had settled in the towns of Iran were assimilated rapidly. In the subsequent centuries, in *Transoxania*, *Afghanistan*, *North India* (and later also westwards to *Anatolia*), Persian became the main literary language.

But this new literary language, which is called *New Persian* and was based on the spoken variety of the East, showed essentially new characteristics due to the impact of Arabic and the culture imported by this language. Despite the Persians’ increasing national identity, Arabic as the language of science became gradually adopted and cultivated by a growing number of significant scholars of Iranian origin (cf. C.E. Bosworth, *The political and dynastic history of the Iranian*

world (A.D. 1000-1217), in *CHIr*, v, 4). Contemporaneously, models of Arabic scientific thinking began to be adapted to Persian. The sphere of literature adduces a good example of this development: although Iranians retained and cherished the ancient tradition in mind and memory, as Firdawsī's *Shāh-nāma* shows, Persian poets tried to follow the rules of the Arabic prosody from the early beginnings of New Persian poetry, in sharp contrast to the previous literary canons. As a consequence, the following centuries saw the infiltration of a large number of Arabic loan words into New Persian (ca. 30% in the 10th century and 50% in the 12th century: cf. Lazard, *Les emprunts arabes dans la prose persane du X<sup>e</sup> au XII<sup>e</sup> siècle: aperçu statistique*, in *Revue de l'École nationale des langues orientales*, ii [1965], 53-67; 'A.A. Šādiqī, *The Arabic element in Persian*, in *Elr*, ii, 229-31). As a result, Persian, as a new literary language "appears to have been from the start a mixed language, based on the Persian dialect but bearing marked traces of other Iranian dialects and infiltrated with Arabic words" (Lazard 1975, 597). This mixed nature of Persian, and the fact that their language is essentially different from those of their neighbours, was well known to the Iranians themselves from the start, as evidenced by the first works in literary sciences (prosody and lexicography), which made a clear distinction between the Arabic and Persian letters, words and word formation in most cases. Moreover, this knowledge subsisted until quite recently in the native tradition (see "the [fārsī] language is a mixture of two languages" (*murakkab az du zabān*), written by Ḥabīb Iṣfahānī, *op. cit.*, preface, 4, in the 19th century).

### III. Classical Persian and its variants

The script, religion and literary models (e.g. the new system of versification) are the most decisive characteristics which distinguish the period of New Persian from the previous ones (see also W.B. Henning, *Die Schrift als Symbol der Einheit des Mitteliranischen, in Mitteliranisch*, Hdb. d. Or., I, iv, *Iranistik, Linguistik*, Leiden-Köln 1958, 21). Despite its bewildering variety at the outset—Khuṛāsān and Sīstān especially displayed markedly distinctive features—New Persian appears to have become a surprisingly "unified" literary language after the 13th century (Lazard 1963, 23-4) and continued to be regarded as such during the subsequent centuries, as the common name *Pārsī* indicates. But this was an *apparent homogeneity* which might be attributed to at least two main factors: the highly conservative script, which remained practically unchanged over the last thousand years, and the prestige of Classical Persian literature. Due to its Semitic character, the Arabic script by its very nature disguised changes in the pronunciation of words or in the meaning in most cases of the grammatical morphemes, giving the impression of a static language situation. On the other hand, the general respect and admiration surrounding the classical literature, especially poetry, helped keep the language of the classical authors alive for centuries until fairly recently.

It does not mean, however, that men of letters and scholars were or are not aware how significantly speech and writing differ in Persian (see, for instance, P.N. Khānlari, *Zabān u lahja*, in *Dar bāra-i zabān-i fārsī*, Tehran 1340/1961, 75-85; M.R. Bātinī, *Tawṣīf-i sākhṭimān-i dastūr-i zabān-i fārsī*, Tehran 1348/1969, 11; 'A.A. Šādiqī, *Zabān-i fārsī wa gunahā-i mukhtalif-i ān*, in *Farhang u zindagī*, ii [1349/1970], 61-6; T. Waḥīdiyān, *Dastūr-i zabān-i 'āmiyāna-i fārsī*, Tehran 1343/1964). However, the first attempts to include linguistic expressions closer to the colloquial style in

text and grammar books (e.g. Šādiqī, and Gh. Arzhang, *Dastūr, Sāl-i duwum*, Tehran 2535/1976) were received with sharp criticism at first (see M.S. Mawlā'ī, in *Yaghmā*, xxx [2536/1977], 245-51), though it was common experience that the characteristic features of classical and modern standards, even the least formal or vulgar forms, could appear in literature either intermingled in the same work or clearly distinguished. This might also explain why the language is simply called *Fārsī*, that is, "Persian" implying all the variants. The differences between the diachronic ("les formes anciennes" Lazard 1989, 288) and synchronic variants (formal and colloquial standards, local usage or the new literary standards like *Tājīkī* and *Alghān Darī*) in phonology, grammar and vocabulary came to be described by linguists, although much remains to be done. It must be emphasised, however, that the apparent variations in the grammar of Persian do not always reflect ongoing changes in the language but rather the standardisation process of the literary language. As the formation of the Classical Persian literary language clearly testifies, dialectal or colloquial forms may have disappeared or become incorporated in the written language, occasionally or else in varying degrees, depending on the literary genre. Poetry, for instance, preserved more of the earlier archaic forms, supposedly due to the requirements of prosody, while prose displayed considerable variation in the same genre (see, for instance, the early *tafsīrs*, in Jeremiás, *Some grammatical problems of early New Persian syntax*, in *Proceedings of the second European conference of Iranian studies*, Rome 1995, 325-34). This linguistic diversity was occasionally associated with divergent stylistic values. For instance, some recurrent patterns could be classified either as archaic, dialectal or colloquial or as social variants. This was mainly due to the lack of a firmly established linguistic norm based on a highly respected canon such as the *Kur'ān* in Arabic, on the basis of which the grammar of the language might have been worked out. Paradoxically, this diversity inside Classical Persian or between classical and modern usage, and the maintenance of the classical literary norm, causes difficulties in defining stages in the linguistic history of Persian (see A.V. Rossi, *Sprachübergänge und historische Übergänge in der iranischen Literatur, in Transition periods in Iranian history*, Studia Iranica, Cahier 5, 1987).

### IV. Modern Persian: spoken and written variants

This phenomenon gives a special status to Persian: the fact that even today, native speakers can understand (though not always in the strictly linguistic sense of the word) ancient texts, and by reading and memorising them they become acquainted with some grammatical characteristics of the ancient language, sometimes dating from a thousand years back. The message of the novels or poems written occasionally (not typically) by modern authors in the style of the ancient language seems to be fully understood (see, for instance, *Parizād u Parimān* by Šādiq Čubak in the collection of short stories, *Čarāgh-i ākhir*, Tehran 1948). In these literary works, the ancient language is imitated by using "classicising" grammatical archaisms like obsolete prepositions or verbal forms. The maintenance of this very formal style as a literary norm has been backed by social institutions: this language was taught in school as the norm of Persian. The same divergence between the newly-arising spoken variant and its acceptance as a literary (written) standard is likely to have existed throughout the modern period, which makes it almost impossible to tell the

exact point in time of the beginnings. But Modern Persian, as it appears today, is distinctly different from the classical language, displaying also a wide range of social, dialectal, diachronic and stylistic variations, which are consciously used by authors in most cases. *Style*, therefore, seems to be the most essential factor in the definition of Modern Persian (see C.T. Hodge, *Some aspects of Persian style*, in *Language*, xxxiii [1957], 355-69).

The crucial question is, therefore, in what sense the term Modern Persian is used. It is generally linked with the spoken dialect of Tehran (see IRĀN, vii, Literature; J. Towhidi, *Studies in the phonetics and phonology of Modern Persian*, Hamburg 1974; Peysikov 1960; Wahidiyān 1964; etc.). This view is a consequence of the periodisation which marks the beginning of the modern period with the rule of the Kādjar dynasty, with the capital Tehran as a centre from the 19th century onwards. It must be emphasised, however, that, on the one hand, certain typical characteristics of Modern Persian's formal and informal standards began to appear centuries earlier in the written literature and, on the other, some typical colloquialisms can be traced back in other local dialects as well. That is, not all the typical features of Modern Persian can be restricted topographically to Tehran and chronologically to the 19th century, though there are many belonging to them. For instance, from the 15th century on, a set of "archaisms" (e.g. the verbal prefixes *hami-* instead of *mi-* or *bi-* with past forms such as *bi-guft* and certain preposition like *farā*, *furū* or the combination of the pre- and postposition *mar . . . rā*, etc.) were gathered in a separate chapter and labelled as embellishment (*zīnat*, *taḥsīn*) by native lexicographers (*Lughat-i Nīmat Allāh*; *FDj*; *BK*; *FR*), clearly indicating their archaic character. Similar lists were repeated time and again until recent times in native lexicography and grammar (see 'Abd al-Wāsi' Hānsawī; Irawānī) as well. This shows that native scholars came to realise that grammatical forms such as certain prepositions or verbal forms, abundantly used in ancient texts, had ceased to belong to living usage. They became obsolete and served only as a "decoration" of style for their age (see Telegdi 1955, 134 n. 133; M. Bākīr, *Bā-i zīnat bar sar-i fīl* ("The ornamental verbal prefix bi-"), in *MDATeh*, viii [1961], 1-10; Jeremiās 1993, 63, 1997, 183). Similarly, in some of the earliest descriptions of Persian in the West—though not in all of them—the verbal morpheme *bi-* prefixed to simple past forms was characterised as redundant or pleonastic (W. Jones, *A grammar of the Persian language*, London 1828, 49; J. Platts, *A grammar of the Persian language*, London 1894, 174; C. Salemann and V. Shukovski [Žukovskiy], *Persische Grammatik*, Berlin 1889, 60). Beyond doubt, these grammars were intended to describe the language of the Classical texts, but occasionally hints were made at the living usage, which might have differed from the classical forms in many ways. Early evidence for this may be the first collections of Persian and non-Persian spoken local dialects from the last century. Žukovskiy, one of the first dialectologists of Persian patois, immediately recognised the richness of the non-standard Persian local varieties during his first field trip (1883-86) along the Tehran-Šhīrāz-Isfahān route. In his materials of Persian and non-Persian dialects, and in those of his later followers such as O. Mann (1901-3, 1906-7), K. Hadank and A. Christensen, a set of characteristic features which are the same or similar to those of the spoken (colloquial) language of Tehran appears. See some examples from the phonology and

morphology: (a) *āN* > *u*, *o* (Žukovskiy, *Materialidnya izučeniya persidskikh narečij*, i, St. Petersburg, 1888, 212; V.W. Geiger, *Kleinere Dialekte und Dialektgruppen*, in *GIPh*, i, 2, 357, 422; K. Hadank, *Die Mundarten von Khunsār . . .*, in *Kurdisch-Persische Forschungen*, 1926, iii, 1, XXXIX; A. Christensen, *Iranische Dialektzeichnungen aus dem Nachlass von F.C. Andreas*, zusammen mit Kaj Barr und W.B. Henning, in *Abhandl. Göttingen*, Phil.-Hist. Kl., Dritte Folge, Nr. 11, 1939, 15; Lambton, *Three Persian dialects*, London 1938, 44; O.I. Smirnova, *Isfahānskij govor*, Moscow 1978, 13); (b) the colloquial variations of the verbal personal affixes in Sing. 3. *-ad* > *-e* (*-i*, *-ē*, etc.) (Geiger in *GIPh*, 411; Mann, *Die Mundart der Mukri Kurden*, in *Kurdisch-Persische Forschungen*, iv, III, 1, 1906, LXXXV; idem, *Die Tājik-Mundarten der Provinz Fārs*, in *KPF*, i, 1909, 24; Christensen, *op. cit.*, 267), in Pl. 2. *-id* > *-in*, *-i(t)* and in Pl. 3. *-and* > *-an*, *-in* (Mann, *op. cit.*, 1909, 25); (c) the progressive verbal forms constructed with the auxiliary *dāštan* collected in Isfahān in 1885 (see Žukovskiy, *Osobnoe značenie glagola dāštan v persidskom razgovornom yazıke*, in *ŽVORAO* iii [1888], 376-77; A.Z. Rozenfel'd, *Vospomogatel'naya funktsiya glagola dāštan v sovremennom persidskom yazıke*, in *Sovetskoe Vostokovedeniye*, v ([1948], 305-310) and also used in the Central dialects and Māzandarānī (see the bibl. in Jeremiās, *On the genesis of the periphrastic progressive in Iranian languages*, in *Medioiranica* [1993], 104 n. 10); (d) colloquialisms in the nominal morphology: the omission of the *idāfa* vowel (Žukovskiy, 1888, 214) or the determinative morpheme, the stressed suffix *-ā* ~ *ā(h)*, *-e* (Hadank, *op. cit.*, 10-13, Christensen, *op. cit.*, 42), etc.

This selection of the relevant features seem to support the opinion that some essential characteristics of Modern Persian, both its literary written form (*fārsī-i kitābī*) and its oral variants (*fārsī-i muḥāwara'ī*), must have existed centuries earlier. Its modern descriptions, however, are primarily based on the usage as it is written and spoken in Tehran (*fārsī-i āmiyāna*), the present capital of Iran, which is becoming the common spoken standard all over Iran through the modern mass media (cf. Lazard 1989, 289; Pisowicz, 9).

## V. Scripts

### 1. Perso-Arabic script

New Persian, including its chronological and dialectal variants used in Iran, Afghānistān and Central Asia (except Tādjīkī [*q.v.*] in the 20th century), since the Islamic conquest has been written predominantly with the Arabic script augmented with four modified letters for denoting peculiar Persian phonemes (پ پ, چ چ, zh ž, گ گ) which do not exist in Arabic. These "Persian letters" were created from their nearest equivalent letters (ب ب, j ج, z ز, k ک), and both series continued to be used in the manuscript tradition until the 12th century and beyond (for the details of adaptation from the time of Šibawayhi (8th century [*q.v.*] see P. Horn, *Neupersische Schriftsprache*, in *GIPh*, i/2, 12; Lazard 1963, passim; F. Meier, *Aussprachefragen des älteren neupersisch*, in *Oriens*, xxvii-xxviii (1981), 71; Kḥānlārī, *Wazn-i šīr-i fārsī*, Tehran 1354/1975, 117, etc.). The Arabic writing being a Semitic, consonantal alphabet, it was not designed for an Indo-European language like Persian, consisting as it did only of consonantal signs (*harf*) representing the semantic load whereas, in Persian, consonants and vowels are of equal value. In this system vowels are represented only partially and in various ways: by consonantal letters, orthographic devices and superscript signs. In the script, therefore, there is no one-to-one correspondence between graphemes and phonemes (e.g. the geminated consonants are written with one *harf* with

the superscript sign called *tašhdīd* as *ḥm'm* = *ḥammām* "bath" in most cases), although there is a regularity in denoting or omitting certain phonemes. The Persians, while having for the most part, adapted the letters and the principles of the Arabic writing, developed innovations in order to denote the peculiarities of the Persian language. In the Semitic system, three letters (*ḥarḥs*), *alif*, *yā'* and *wāw* are used to mark long vowels *ā*, *ī*, *ū* and the sequences *ay*, *aw* (traditionally called diphthongs), whereas short vowels remain normally unwritten. Exceptions are the word initial and word final positions: word initial short vowels (*a*, *i*, *u*) are represented graphically by the letter *alif* and their long equivalents with *alif* and the corresponding *ḥarḥs* (*yā'* or *wāw*). Furthermore, the letter *alif* is the sign of the glottal stop which is practically used as an orthographic device following the principles of the Arabic (Semitic) orthography which do not allow a syllable to start with vowels, and do not allow a sequence of two vowels (cf. G. Endress, *Die arabische Schrift*, in *Grundriss der arabischen Philologie*, 1, ed. W. Fischer, Wiesbaden 1982, 165-97), e.g. *ʾakwān* = *akwān* "now", *ʾiftādan* = *iftādan* "to fall" and *ʾiṣfahān* = *iṣfahān* "Iṣfahān", *ʾw* = *ū* "he/she" and *ʾyrān* = *īrān* "Iran". Initial long *ā* is rendered with *alif* surmounted by the superscript sign *madd* *ī*.

The Perso-Arabic script gradually developed a special system of denoting word final short vowels (*a*, *i*, *u* in the Classical Persian transcription system and *e*, *o* in the Modern system) by the "silent" letters (*bayān-i ḥaraka*), e.g. *ḥā'*: *ṣ'ḥm'mh* = *Shāh-nāma*, *kh* = *kī* (in ancient texts also written as *ky*, *k*) and *wāw*, e.g. *dw* = *du* "two" and *tw* = *tu* "you", but *tr'* = *tu-rā* "you (acc.)". Historically short vowels (*a*, *i*, *u*) can be denoted optionally in all positions by superscript signs (*zabar* or *zebar* in Modern Persian) = Ar. *faṭḥa*, *zīr* = Ar. *kasra* and *pīsh* = Ar. *ḍamma*). In ancient manuscripts, the early classical long vowels (*maḍjḥūl*) *ē* and *ō* were distinguished occasionally by special superscript signs on the letters *yā'* and *wāw* (e.g. *Codex Vindobonensis*, ed. F.R. Seligmann, Vienna 1859, and Bukhāran Jewish-Persian texts, cf. Horn, in *GIPh*, i/2, 33; the Lahore *Tafsīr* (*maḍjḥūl ē*), cf. MacKenzie, *The vocabulary of the Lahore Tafsīr*, in *Iran and Islam. In memory of the late Vladimir Minorsky*, 419 n. 7; and see further Meier 1981, 86, and Windfuhr 1979, 150). The orthography of *alif* and *hamza* representing phonemes or serving as orthographical devices display intricate problems both in Arabic and Persian. The complexity or sometimes confusion in their description can be ascribed to the double adaptation (first of the Nabatean Aramaic writing to Arabic in the late 7th century, then the Arabic script to Persian) and to its relatively late standardisation. Its orthography was not yet fixed in the 9th century (see Endress, 189). A Persian characteristic of the orthography is that *hamza*, the sign of the glottal stop in Arabic, does not necessarily appear as a separate letter, but it is used as a hiatus symbol (Windfuhr 1979, 139) on syllabic or morpheme boundaries (there is a disagreement on this point; see HAMZA; Lazard 1957 = 1992, 48; Windfuhr 1987, 527). The Arabic loans, however, can follow or disregard the rules of the classical Arabic orthography (e.g. the vocalic restriction rules) according to registers and contexts where they appear.

The Perso-Arabic script, which is written from right to left, contains 32 letters: 28 letters are taken over from Arabic plus four special Persian letters supplied with three dots. But not all the letters distinguish phonemes in Persian (see below, iii. Phonology). These letters (allographs) came mainly, but not exclusively

through Arabic loan words, e.g. *ذ*, *ض*, *ظ* = /z/, *ص*, *ث* = /s/, *ط* = /t/, *غ*, *ق* = /gh/, *ح* = /h/, *أ*, *ع* = ' (or zero). Some of these letters (*ث*, *ذ*, *ص*, *ط*, *غ* and *ق*) do occur in words of Persian origin due to various reasons, e.g. as reflexes of earlier linguistic periods or the unfixed and wavering orthography (see, for instance, *padhīruftan*, in Modern Persian pronunciation *pazīroftan*, *Tahmūrath* vs. *Tahmūras/Tahmūrat*, *ṣad* or *ṣad* "hundred", *Tīhrān* or *Tīhrān* "Tehran" (see Horn, in *GIPh*, 12; Meier 1981, 105). The digraph *kh<sup>w</sup>/kh<sup>v</sup>* (= /kh/) is a remnant of the archaic spelling of a labialised fricative (Pisowicz, 121). Ancient manuscripts show sporadically the spellings of the early New Persian period. E.g. the triple-dotted letter *fā'* (ف) denoted the postvocalic spirant labiodental /v/ (see also some sparse examples in word-initial position in Lazard 1963, 137-8; idem, 1989, 264; Meier 1981, 72; Pisowicz, 119), and the dotted *dāl* (ذ) denoted the spirant pronunciation of the postvocalic *d* (commonly transcribed with the Greek letter *δ*) in words of Persian origin (see the wavering manuscript tradition in Meier 1981, 105). While the letter *fā'* was abandoned early, the use of the letter *ī*, which appears to have been more widespread (except in Transoxania, Balkh and Ghazna, see Shams-i Kays, 221), continued to be preserved through the old poets' practice of selecting rhyme long after its disappearance from the living usage (ca. 13th century, see Rempis, in Lazard 1963, 144, n. 1). This phenomenon was included in the traditional lexicography as "the rule of *dhāl* and *zāl*" until the 19th century (see Shams-i Kays, 254-6; BK, 21; Irāwānī, fol. 6b; cf. Lazard 1963, 143; Meier 1981, 111; Pisowicz, 107). Some words have preserved the archaic spelling, but the pronunciation of this letter has merged with /z/ in Modern Persian, e.g. in *pazīroftan*.

The first attempts to put Persian texts into Arabic script originate from the 9th century. After some fluctuation and instability (see Meier 1981; Lazard 1963, 4) a standard system of script appears to have developed by the 12th century and has remained almost unchanged until recently. The lack of punctuation and capital letters, the disguised pronunciation and an apparent inconsistency in the orthography of certain words and compounds can cause considerable difficulties in reading Persian texts. Although in the most recent period there are some attempts to improve orthography, this question is far from being settled (see Windfuhr 1979, 150).

For the various styles of handwriting, see KHATṬ. ii.

2. *Non-Arabic scripts used for New Persian texts* (for a summary, see Meier, 88-9; Lazard 1989, 264-5)

(a) Hebrew characters have been used from the 8th century onwards by Jewish communities to denote their own dialect called Judaeo-Persian [*q.v.*], related very closely to the southern dialect of early New Persian.

(b) An undated bilingual Psalm-fragment written by Christians in New Persian with Syriac characters has been preserved in the materials found in Chinese Turkestan (see F.W.K. Müller, *Ein syrisch-neupersisches Psalmenbruchstück aus Chinesisch-Turkestan*, in *Festschrift Eduard Sachau*, ed. G. Weil, Berlin 1915, 215-22; W. Sundermann, *Einige Bemerkungen zum syrisch-neupersischen Psalmenbruchstück aus Chinesisch-Turkestan*, in *Mémorial Jean de Menasce*, ed. Ph. Gignoux et A. Tafazzoli, Louvain 1974, 441-52).

(c) Among the fragments written in Manichean script there are also some New Persian texts (see M. Boyce, *A catalogue of the Iranian manuscripts in Manichean script in the German Turfan collection*, Berlin 1960, 150; W.B. Henning, *Persian poetical manuscripts*

from the time of Rūdākī, in *A locust's leg. Studies in honour of S.H. Taqizadeh*, London 1962, 89-104).

(d) Religious writings and a fragmentary dictionary were written by Armenian Christians in their own script in the 15th century (see Pisowicz, 76).

(e) The Latin script was used by travellers and missionaries to describe Persian texts for centuries, the supposedly oldest one in the *Codex Cumanicus* written in the 13th century (see D. Monchi-zadeh, *Das Persische im Codex Cumanicus*, Uppsala 1969; A. Bodrogligeti, *The Persian vocabulary of the Codex Cumanicus*, Budapest 1971; Pisowicz, 73 ff.). Glosses, grammars and vocabularies compiled especially for practical purposes, can be found abundantly from the 16th-17th centuries onwards (see P. Orsatti, *Sistema di trascrizione e fonetica neopersiana nel Dictionarium Latino-Persicum di P. Ignazio di Gesu*, in *AIUON*, xlv [1984], 41-81; Jeremiás, *Grammatical rule and standard in the first Persian grammars written in Latin (XVIIIth c.)*, in *Italia ed Europa nella linguistica del Rinascimento*, ed. M. Tavoni, Ferrara 1996, 569-80). Though these texts can give some useful information on the pronunciation of Persian, as a whole they must be regarded as unreliable sources on crucial points of the history of Persian phonology (see Pisowicz, 79).

(f) Apart from modern *Tāqīqī* the Cyrillic alphabet was used by a Russian traveller in his account of his journeyings, to denote some Persian words in the 15th century (see Pisowicz, 79).

### iii. Phonology, grammar, word formation and vocabulary

#### I. Generalities

In spite of its apparent homogeneity owing to many factors, New Persian of the Muslim period underwent profound changes affecting all levels of grammar and vocabulary. The distinction, therefore, between the various stages of Persian is necessary, but, as the periodisation indicated (see above, i), it cannot easily be made. There are two main approaches to the description of linguistic phenomena in Iranian studies. Diachronic or historical studies trace the changes that took place between various phases, while synchronic description is concerned with the Persian used at a given time. But while Modern Persian can be described on the basis of its present use, the synchronic description of Classical Persian can only be carried out with limitations due to the absence of a standardised Classical Persian. Otherwise comparisons can be made between the language style used by Firdawsī (10th c.), Bayhaqī (11th c.), Nizāmī (12th c.), Sa'dī (13th c.) or Djāmī (15th c.), etc. Their varieties of Classical Persian share a set of common features but they also differ inasmuch as they display different language forms. In linguistic studies, the dominance of the diachronic approach is clearly felt, whereas synchronic studies have only recently begun to emerge.

#### II. Phonology

The phonemic status and the exact phonetic characterisation of Persian sounds can be established with certainty for the most recent period; the following analysis therefore starts with formal Modern Persian and aims to identify the characteristic features of the previous phases in comparison with it (cf. Windfuhr 1979, 7; Lazard 1989, 265; Pisowicz, 9).

The sound system of the formal Modern Persian consists of 6 vowels and 24 consonants. There is, however, a considerable disagreement on the phonemic status of certain phonetic sequences or the conditioned and optional allophonic variations, which can reduce or increase the number of phonemes depending on the currently applied theory of analysis or the register examined. The phonemic status of the glottal stop or that of the sequences [e] and [ou]

(traditionally called diphthongs) are such variables.

The six vowels of Modern Persian are the front /i/, /e/, /a/ and the back /u/, /o/, /ā/ articulated with a high /i, u/, a mid /e, o/ or a low /a, ā/ (or, according to others, with high, mid-high and mid-) tongue position. Historically there was a phonological opposition between long and short vowels in Classical Persian (/ā/ - /a/, /ī/ - /i/, /ū/ - /u/), but length ceased to be a phonemic characteristic in the modern period (/ā/ - /a/, /ī/ - /e/, /u/ - /o/), although it has been retained in certain positions as a redundant phonetic property. Therefore *ā, ī, u* are occasionally distinguished as long or "stable vowels" (*ā, ī, ū*) vs. short or "instable ones" (*a, e, o*) in the descriptions of Modern Persian (cf. Lazard 1989, 265). The diphthongs [e] and [ou] occurring within one word are commonly analysed as the combination of two phonemes, a vowel and a consonant /e/ + /y/ and /o/ + /w/ in Modern Persian (see the summary, including the history of the monophonic interpretation, in Windfuhr 1979, 137-8, Pisowicz, 22-7 and Lazard 1989, 265). The biphonic interpretation of the sequence /ow/ entails the postulation of a phoneme /w/ in Modern Persian (cf. the phonemic inventory in Classical Persian), which appears in a certain style with a limited distribution, after /o/ and in word final position (see Pisowicz, 24). As for the distribution of vowels, there is no restriction except for the final position: there is no final /a/ (see Classical Persian final /a/ > /e/) except in two words (*na* "non-", *va* "and") and /o/ occurs rarely (see the studies on experimental phonetics in Lazard 1970, 67; esp. Š.G. Gaprindašvili and Dj.Š. Giunašvili, *Fonetika persidskogo yazika*, Tbilisi 1964, i; J. Towhidi, *Studies in the phonetics and phonology of Modern Persian*, Forum Phonetikum 2, Hamburg 1974).

The most significant characteristics of the phonological development in New Persian are the loss of contrast between long and short vowels and the lowering of the historically short high vowels /i/ > /e/, and /u/ > /o/. Early Classical Persian contained two more long vowels /ē/, /ō/, which merged with /ī/ and /ū/ by the Classical period (see F. Meier, *Aussprachefragen des älteren Neupersisch*, in *Oriens*, xxvii-xxviii [1981], 70-176), but were preserved by the rules of classical rhyming long after their disappearance from living use. For allophonic variations and fluctuations in vowels, see M. Shaki, *The problem of the vowel phonemes in the Persian language*, in *ArO*, xxv [1957], 45-55; Pisowicz, 13-16; Lazard, *A grammar of contemporary Persian*, Costa Mesa 1992, 19-22.

The consonants of Modern Persian include the voiceless and voiced plosives and affricates /p/, /t/, /č/, /k/, /q/, /ʔ/, /b/, /d/, /j/, /g/, the voiceless and voiced fricatives /f/, /s/, /š/, /x/, /h/, /v/, /z/, /ž/, the nasals /m/, /n/, the liquids /l/, /r/ and the semivowels /w/, /y/. (See the transcription: /q/ = *q̄*, /j/ = *č̄*, /š/ = *š̄*, /x/ = *č̄h*, /z/ = *ž̄*, [ɣ] = *gh̄*.) The phoneme /q/ represents three conditioned allophones, the uvular voiceless plosive [q] in the (absolute) initial position (*kānun* [qānun] "law" or in the medial geminate sequence (*baqqāl* [baqqāl] "grocer"), the voiced fricative [ɣ] in intervocalic position (*makāle* [mayāle] "study") or in certain consonant clusters (*taqyir* [tayyir] "change") and the uvular voiced plosive [G] after /n/. There is, however, a disagreement about the place of /q/ in the system of phonemes, whether it is a plosive /q/ or fricative /ɣ/, due to its considerable fluctuations in pronunciation (see the details in Pisowicz, 42-7).

The occurrence of the glottal stop /ʔ/ as a separate

phoneme is restricted to certain medial and final positions before and after consonants in careful speech represented with the letter *ʿayn* and the signs *hamza* or *alef*, such as *ma'lum/ma'lum* "known", *al-'ân/al-'ân* "now" or *rob'/robb'* "quarter". It can also occur in intervocalic position in words of Arabic origin in place of the genuine *ʿayn* as in *sâ'at/sâ'at* "hour". Its rise was due to the impact of two separate Arabic phonemes /ʔ/ and /ʕ/ transmitted by loans, but the pronunciation of the Arabic voiced pharyngeal /ʕ/ merged entirely with the glottal stop. The phonemicity of the initial glottal stop is questioned (cf. Pisowicz, 50-1). Besides, there is a non-phonemic indigenous glottal articulation represented by the signs *hamza* or *alef* (which may have helped the incorporation of the glottal stop of Arabic origin into Persian), e.g. in a vocalic onset before any initial vowel after a pause /emruz/ → [ʔemruz] "today", before any internal vowel preceded by a vowel /pâiz/ → [pâ'iz] "autumn" or at a morpheme boundary between vowels /bi-ârâm/ → [bi'ârâm] "restless". In various registers of Modern Persian the glottal stop can alternate with zero (hiatus) or an intrusive element like the glide *y* (rarely *w* or *h*), e.g. /xâen/ → [xâ'en] ~ [xâyen] "traitor" or /xâne-i/ → [xâne'î] ~ [xâneyî] "a house", except when the glottal stop represents an etymological pharyngeal spirant. The latter can be replaced by a hiatus, but never by a glide, e.g. *sâ'at/sâ'at* → [sâat] (Pisowicz, 49). In general, its appearance or disappearance, occasionally with a compensatory lengthening of the preceding vowel or, more rarely, consonant (/ma'lum/ → [ma:lum], /da'ʕe/ → [daffe]), or substitution by an intrusive element can vary according to register under certain conditions (see the details in Windfuhr 1979, 139-40; Pisowicz, 20-2, 47-51; Lazard 1992, 11-4, 31-4). In the spoken register, the glottal stop does not exist at all (Lazard 1992, 12), but according to others it is pronounced at a morpheme boundary after a consonant before the following vowel in all styles (see [mano] "I and..." vs. [man'o] "prohibition and..." in Pisowicz, 48). For other characteristics of the colloquial style such as assimilation, contraction, the dropping of *h*'s, etc. see Hodge 1957; E. Provasi, *Some notes on Tehrani Persian phonology*, in *Iranica*, ed. Gh. Gnoli and A.V. Rossi, Naples 1979, 257-80; Pisowicz, 57-8; Lazard 1992, *passim*. On the impact of Arabic loans, see Ali-Ashraf Sadeghi, *L'influence de l'arabe sur le système phonologique du persan*, in *La linguistique*, ii (1975), 145-52.

Characteristic of Classical Persian is the full phonemic status of the semivowel /w/ with the labiodental fricative [v] as an allophone (preserved in Afghan Dari, cf. Farhâdi, 37-8). The reconstruction of phoneme /w/ for the early Classical Persian and the fact that there is no initial cluster in Persian (see syllable structure) make the postulation of the phoneme /x<sup>w</sup>/ plausible. But the labial articulation disappeared gradually (/x<sup>w</sup>/ > /x/) with an accompanying labialisation of the following short vowel (/x<sup>w</sup>âš/ > Mod. Pers. /xoš/ "happy", but /x<sup>w</sup>âstan/ > Mod. Pers. /xâstan/ "to wish"), while the archaic spelling has been retained (cf. Meier, 75; Pisowicz, 121). Another characteristic of Classical Persian is that /q/ and /ɣ/ were separate phonemes, as they still are in certain modern dialects, such as Tâdjîkî. Another remarkable feature is the distinct spellings of certain allophones, such as the labiodental fricative [v] (written with the triple-dotted *f*), the spirant pronunciation of the phoneme /d/ in intervocalic or final postvocalic positions [ð] (written with the dotted *d*), originally a dialectal feature in central and southern Iran in early Classical

Persian. The former disappeared early, but the latter seems to have been in use until the 13th century, as the spellings of the ancient manuscripts testify. The fluctuations of dialectal origin such as *b ~ f* (*abzâr - afzâr*) or *b ~ w* (*nabard - naward*) are also attested in manuscripts (cf. Lazard 1963, 137 and *passim*).

The syllable structures are V, CV, VC, CVC, VCC and CVCC, if initial glottal stop is disregarded. But their types are CV, CVC and CVCC if it is regarded as a separate phoneme. There are no genuine clusters in initial position in New Persian. Old and Middle Persian initial clusters were replaced by syllables containing prothetic or anaphytic vowels (Middle Persian *spêd* > Classical Persian *ispêd* or *sipêd* / *sifêd* > Modern Persian *sefid* "white"). For details, see J. Krámský, *A study in the phonology of Modern Persian*, in *ArO*, xi [1939], 66-83; C.T. Scott, *Syllable structure in Tehran Persian*, in *Anthropological Linguistics*, v [1964], 27-30; Windfuhr 1979, 143-4; Lazard 1989, 266.

Stress in Modern Persian is expiratory and non-phonemic. In general it falls on the final syllable of non-verbal forms (nouns, adjectives, adverbs). Certain conjunctions, adverbs and particles have initial stress, such as *vâlî* "but", *âri* "yes", *âyâ* "whether", etc. Nouns (incl. infinitives, participles or verbal nouns) retain their final stress if the following suffixes are attached to them: the indefinite marker *-i*, the object suffix *-râ*, the connecting vowel of the *idâfa* *-e*, the conjunction *-o* "and", *ham* "also" or one of the pronominal clitics *-am*, *-at*, *-ash*, *-mân*, *-tân*, *-shân* or, one of the clitical forms of the verb "to be" *-am*, *-i*, *ast*, *-im*, *-i*, *-and*). By contrast, the plural markers *-hâ* and *-ân* carry the stress (*ketâb-hâ* "books", *zan-ân* "women") and forms in apostrophe (vocative) preserve an archaic initial stress (*pedâr* (voc.) vs. *pedâr* (nom.) "father"). On the other hand, all verbal forms have non-final stress (except for the form of the 3rd person singular in the simple past, which carries the stress on the final syllable, e.g. *kharid* "he bought"). It may fall on the stem (*kharid-am* "I bought"), on the verbal prefixes (*mi-khar-am* "I am buying/I buy", *bê-khar-am* "[that] I buy"), on the preverbs (*bâr mi-andâz-ad* "he abolishes") or on the nominal part of the verbal phrase (*hârf mi-zan-am* "I am speaking/I speak"). The verbal prefixes of negation or prohibition (*na-*, *ne-*, *ma-*) are always stressed (*nêmi-khar-am* "I am not buying/I do not buy", *nâ-kharid-am* "I did not buy", *mâ-khar* "don't buy"). In true compounds or in compound nominal phrases, a secondary (weaker) stress may occur on the first nominal part in addition to the main or primary stress, e.g. *âtes-parâst* "fire-worshipper", *ketâb-e pedâr* "the father's book".

As the examples attest, stress is relatively fixed in words and phrases. However, it may be weakened, shifted or completely disappear according to the speaker's purport, if there is emphasis upon one segment, e.g. *hârf mi-zan-am* vs. *hârf mi-zan-am*.

In a typical sentence, the primary stress falls on the last syntagm, which is normally a verb or verbal phrase. At the beginning, a conjunction, an adverb or a vocative may appear with initial accent followed by nominal phrases with final or nearly final accent. Affirmative sentences have a falling intonation, but in interrogative sentences the pitch rises.

Although stress is non-phonemic, certain phonemic sequences may appear as contrasting minimal pairs, such as *mâhi* "fish" vs. *mâh-i* "a moon" or *shâh-i* "kingship" vs. *shâh-i* "a king", but this contrast as a distinctive feature does not exist in the lexicon (cf. *mâhi* - *mâh*, *shâhi* - *shâh*). In colloquial Persian there are several such minimal pairs originated from contracted

forms, e.g. *kharidām* (< *kharidē am*) "I have bought" vs. *kharid-am* "I bought".

For further details, see M. Lucidi, *L'accento nel persiano moderno*, in *Ricerche linguistiche*, ii [1951], 108-40; G.E. Nye, *The phonemes and morphemes of Modern Persian: a descriptive study*, Doct. Diss. Series no. 11, Ann Arbor 1955; Ch.A. Ferguson, *Word stress in Persian*, in *Language*, xxxiii [1957], 123-35; Towhidī 1974; Windfuhr 1979, 144-9; Lazard 1970, 67-8; 1992, 37-46; 1989, 266-7.

### III. The problems of transliteration and transcription

Persian script disguises pronunciation, therefore a certain extent of interpretation in transcription with Latin (or Cyrillic, etc.) characters is necessary. More than one system has been conceived representing historical, etymological or stylistic factors. For instance, the differences between the phonological inventories of Classical and Modern Persian appear to be so essential that they may be represented by different systems of transcription. See the transcription of Classical Persian phonemes: *ā, ī, ū, (ē, ō), a, i, u, p, t* (or *f*), *č, k, k* (or *q*), *ʔ* (or *ʕ*), *b, d, đ, g, f, s* (or *s, s* = Arabic *ḥ*), *š, kh, kh, kh*<sup>1</sup>, *h* (or *h*), *z* (or *z, ž* = Arabic *ḏ*), *zh, gh, m, n, l, r, w, y*, and that of Modern Persian: *ā, i, u, a, e, o, p, t, č, k, k* (or *q, gh*), *ʔ* (or *ʕ*), *b, d, đ, g, f, s* (or *s, š, sh, kh* (or *kh*)), *h* (or *h*), *v, z* (or *z, ž, ž*), *zh, m, n, l, r, w, y*. The transcription of Classical texts according to Modern pronunciation is also justified because that is the way they are read today. For practical reasons, however, here the transcription of titles, names or grammatical terms follows the system used throughout in the *EI* which represents Classical Persian consonants in an Arabised form reflecting the written forms closely (e.g. *idāfa*, but Class. Pers. *ižāfa*, Mod. Pers. *ežāfe*). Occasionally, Modern Persian pronunciation is indicated as well. Archaic and dialectal spellings (except for the digraph *kh*<sup>2</sup>) are omitted and the morphological structures in the examples are phonemically represented, which means that non-etymological glides or intrusive elements (e.g. *khāna-i* "a house" in Classical Persian or *khāne-i* in Modern Persian) or apphaeresis (e.g. *dānešdju ast > dānešdju-st* "he/she is a student"), etc., normally remain unwritten.

### IV. Grammar: morphology and syntax

In this section, first a formal classification of word classes will be given with occasional references to their occurrences in smaller and larger grammatical units (words, phrases) and then to their functional classification in larger constructions (clause, sentences).

1. *Verbs and verb phrases* (morphology, semantics of verb forms, colloquial and archaic features, etc.)

The morphology of verbs is clear and transparent, but their semantics gives rise to considerable difficulties. Verbal forms can consist of either one word or more than one word and can express a wide range of grammatical categories like number (singular, plural), person (first, second, third), tense (present, past, future, etc.), mood (indicative, conjunctive, imperative), aspectual nuances (imperfect, perfect, progressive, inferential, etc.) and voice (active, passive). Simple verbs have a clear-cut morphological pattern: the minimal verbal form consists of a stem and a personal suffix, but the majority of simple verbs have also a verbal prefix. These forms are based on two stems, i.e. present (I) or past (II). Past stems always end in dental plosives (after vowels, *n, r* in *-d*, otherwise in *-t*) and are derived from infinitives by dropping the ending *-am*. Present stems can be either regular or irregular. The first group can be obtained from past stems by cutting *-id*, e.g. *kharidan* "to buy" → *kharid-* (II) → *khar-* (I). Present stems of irregular verbs are to be found in

vocabulary, e.g. *kardan* "to do" → *kard-* (II), *kon-* (I) or *didan* "to see" → *did-* (II), *bin-* (I). Certain groups of irregular verbs share certain common features in deriving their present stems from past stems, e.g. *sākhthan* "to make" → *sākh-* (II), *sāz-* (II), *gorikhtan* "to flee" → *gorikht-* (II), *goriz-* (I) or *farmudan* "to order" → *farmud-* (II), *farmây-* (I), *sorudan* "to sing" → *sorud-* (II), *sarây-* (I), etc. (see more details in Lazard 1992, 131-5). Verbal stems can combine with two sets of personal suffixes: the first set is attached to the forms based on stem (I): 1. *-am*, 2. *-i*, 3. *-ad* in singular and 1. *-im*, 2. *-id*, 3. *-and* in plural; the second set attached to the forms constructed with the stem (II) is the same except sing. 3rd person (a zero morpheme  $\emptyset$ ). Complex (called also "compound" or "analytic" vs. "synthetic") verb forms consisting of more than one constituent are constructed on certain nominal forms of the main verb, i.e. the past participle (past stem + *-e*, e.g. *kharid-e, sākh-t-e*) or the so-called short infinitive (which is formally equivalent with the past stem, e.g. *kharid*) plus auxiliary verbs like the various types of the verb "to be" (i.e. the full verb *budan, bās-* or its clitic forms like *-am, -i, ast, -im, -id, -and*), *khvāstān, khvāh-* "to wish/will" or *šodān, šow-* "to become". The so-called progressive form has a special structure: both the main verb and the auxiliary (*dāstān, dār-* "to have") are conjugated forms (*dār-ad mi-kon-ad, dāst-ō mi-kard-ō, dāste mi-karde ast*) and can be separated from each other by other word(s). The use of this periphrastic progressive is restricted in several ways, e.g. it can be used only in indicative mood and in affirmative sentences (see for more details, below). The future tense is expressed with a special morphology of the auxiliary *khvāstān, khvāh-* "to wish" (the present form of the auxiliary without the verbal prefix *mi-* plus the short infinitive of the main verb, e.g. *khvāh-ad kard* "he will do" cf. also the use of *khvāstān* as a modal auxiliary, e.g. *mi-khvāh-ad be-kon-ad* "he wants (would like, etc.) to do"). The majority of finite verb forms have one or two verbal prefix (*mi-, be-, na-, ma-*), which may express various meanings like mood, aspect, negation or prohibition. Their use is partly, but not wholly, exposed to the stylistic levels of their context. The verbal prefix *mi-* (< Classical Persian *hamī* < Early Classical and Middle Persian *hamē*) occur with both simple and complex forms constructed on present and past stems or on past participles: *mi-kon-ad, mi-kard-ō, mi-karde ast, dāste mi-karde ast*. The prefix *be-* (< Classical < Middle Persian *be-*) or its allophonic variations *bi-* or *bo-* are used only with non-indicative forms in Modern Persian, based on the present stem such as subjunctive present (*be-kon-ad*) and imperative (*be-kon*). All simple and complex verb forms in the indicative are negated with *na-*. It is prefixed to the finite forms of simple main verbs (*na-kard-ō*) or to the participles of complex verbs (*na-karde ast, na-karde bude ast*, etc.), except for the future and passive forms where it is prefixed to the auxiliary (*na-khvāh-ad kard, karde na-šod-ō*). In the prohibitive, the prefix *na-* (*na-kon, na-kon-id*) is used generally, except for very formal (literary) style where *ma-* (*na-kon, ma-kon-id*) appear instead. Colloquial language does not use *ma-* at all. The prefixes *na-* and *mi-* may be used simultaneously (with the allophone *ne-* of the morpheme *na-* if it is followed by *mi-*, e.g. *ne-mi-kon-ad*), but *be-* and *mi-/na-/ma-* may not in Modern Persian (see the different usage in Classical Persian).

The paradigm of the verb *kardan, kon-* "to do": indicative mood: present *mi-kon-am* "I do, I am doing", preterite (simple or "aoristic" past) *kard-am* "I did", imperfect *mi-kard-am* "I was doing, I used to do", etc.,

progressive forms in the present and the past: *dâr-am mi-kon-am* "I am (in the act of) doing", *dâst-am mi-kard-am* "I was (in the act of) doing", (present) perfect *karde-am* "I have done", etc., past perfect (or pluperfect) *karde budam* "I had done", etc.; there are three more ("double") complex forms based on the perfect, *mi-karde-am* "I have been doing (inferential)", *karde bude-am* "I had done" (inferential) and *dâste mikarde-am* "I have been doing" (inferential); periphrastic future *kh'âh-am kard* "I will/shall do"; subjunctive mood: present *be-kon-am* "I may do", "that I do", subjunctive past *karde bäs-am* "I may have bought", "that I did", etc.; two imperative forms *be-kon* "do" (sing.), *be-kon-id* (pl.). Nominal forms (traditionally called participles, or participle adjective, used as modifiers or agential noun) are based on two stems: *nevis-ande* (present stem plus *-ande*) "writing (adj.), writer" (see *nevis-ande-gân* "writers"), *nevešt-e* (past stem plus *-e*) "written, writing" (see *nevešte-hâ*, *nevešte-jât* "writings"). Nominal forms derived from verbs are the full (or long) infinitive *kardan* which can be used in all functions where a noun can appear, but the occurrence of the short infinitive is strictly limited: apart from future forms it appears after impersonal expressions only (*bâyad raft* "one must go"). The two participles, *nevis-ande* "writing" or "writer" based on stem (I) plus *-ande* and *nevešt-e* (see above) can be used as verbal adjective, e.g. *sâl-e âyande* "the next (coming) year", or as noun, e.g. *nevešte-hâ-ye Bahâr* "B.'s writings". The participles *nevešte*, *karde*, etc., are suggested to have active meaning in modern Persian (see Telegdi, 1961, 186; Humâyunfarrukh, 78-9; see also LN *nevešte* = *nevešte šode*) in contrast to ancient usage in which it was regarded as having passive meaning. A homophone form of the past participle of certain transitive verbs (actually nonfinite verb forms) has been distinguished by Lazard (*gérondif*) expressing co-ordinated "circumstantial complementation" on the basis of their differing syntax (see *baste* "closed" used as "gerundive" in *baste ast* "it is closed" or *baste nist* "it is not closed" vs. the verbal form "perfect" like *baste ast* "he has closed" and *na-baste ast* "he has not closed" (cf. Lazard 1989, 273, 281; 1992, 168-9; see also *fi'l-i wasf'i* in Humā'i, in LN, *Muqaddima*, 120, and Humâyunfarrukh, 519). Similarly, forms derived from present stem with (non-productive) *-ân* or *-â* with limited force, e.g. *ravân* "running" or *dânâ* "learned, wise" are suggested to be also called "gerund" (see *gérondif* in Lazard 1989, 273; idem 1992, 167-8). This distinction itself and the true nature of these forms, however, remain to be clarified. The participle of obligation or possibility is formed by the full infinitive plus a suffix *-i* like *didan-i* "[things ought] to be seen".

Passive formation: certain verbs can express the passive with the fully conjugated forms of the auxiliary *šodan* (or *gaštan*, *gardidan* in formal style or *âmadan* in very formal style and in the classical language) attached to the past participle of the main verb, e.g. *kharide mi-šavad* "is being bought", *kharide šod* "was bought", *kharide šode ast* "has been bought", *kharide kh'âh-ad šode* "will be bought", *kharide šavad* "be bought" (subj.), etc. The agent of the action is rarely expressed by circumlocutions such as *be tavassot-e* "by (lit. the intermediation of)", *az dast-e* "by (lit. by the hand of)", *az taraf-e* "on behalf of", "by (lit. from the side of)", e.g. *Hasan az tavassot-e Ahmad košte šod* "H. was killed by Ahmad", etc. The spoken style avoids passive formation. The place of passive forms in the verbal paradigm and the details of its morphology and semantics, especially those of verbal compound phrases (locutions) need further investigations (cf. *taqsim kard*

"he divided (something among some persons)"—*taqsim šod* "it was divided (into sg.)", but *towzih dâd* "he explained (sg.)"—*towzih dâde šod* "explanation was given" (on the passive see J.A. Moyne, *The so-called passive in Persian*, in *Foundations of Language*, xii (1974), 249-67).

Note some additional features of verbal morphology: the so-called primary verbs like "to be", "to exist" or "to have" have a special, sometimes deflected morphology, e.g.: the notion of the substantial verb is expressed with full forms (a), defective forms (b) or with clitics (c): a) forms based on *bud-* (II), *bâs-* (I) (or its archaic variant *bov-*) "to be", e.g. indic. present *mi-bâs-am* "I am" (lit.), past *bud-am* "I was" (it never takes the prefix *mi-* except in hypothetical clauses) and in present subj. *bâs-am* "may I be, etc.", imperative *bâs* "be" (these two forms never take the prefix *bi-*), old optative (used in formulas only) *bâd* or *bâdâ* "may it be!"; *has* "exists" (*has-am*, *has-i*, *has*, etc.), in negation *nistam*, *nisth*, *nist*, etc., but it has no infinitive); *dâstan* "to have" never takes the prefixes *mi-* and *be-* (it may take in certain verbal phrases, e.g. *dust mi-dâram* "I love (s.o.)"). For other defective forms of modal auxiliaries such as *kh'âstan*, *kh'âh-* "to wish, will", (*mi-*)*bâyest*, *bâyad* (inc. such archaic forms as (*mi-*)*bâyesti* "it is necessary, one must", see Lazard 1992, 137-42. On the other hand, the auxiliary *tavânestan*, *tavân-* "can" has a regular conjugation. On the modern usage of auxiliary expressions, see Parwiz Na'il Khānlari, *Dar bâra-i zabân-i fârsi*, Tehran 1340/1961 (*passim*); Bâtinî, *Masâ'il-i zabānshünâsi-i navin*, Tehran 1354/1975, 191.

This rather poor inventory of verbal morphology does not reveal all the underlying semantic distinctions which verb forms can cover. The overlap of tense and aspect or mood and aspect cause considerable difficulties whose details have not been wholly explored. In addition, the syntactic realisation of aspect can be limited by further facts, e.g. by social context or lexical choice. Therefore, the main oppositions may differ to some extent in formal and informal standards: the use of the so-called progressive forms, for instance, can alter aspectual oppositions (on this novelty in colloquial Persian see Salemann and Shukovski, 1888; Rozenfel'd 1948; Lazard 1957, 151 = 1992, 160; K. Kishāvarz, *Mudârî wa mâdi-i malmûs*, in *Râhnâmâ-yi kitâb*, v (1962), 687-94; S. Obolensky, *Persian basic course*, Washington 1963, 8, 253; M.R. Bâtinî, *Sâkhtinân-i dasturi-i zabân-i fârsi*, Tehran 1348/1969, 15; Jeremias, *Diglossia in Persian*, in *Acta Linguistica Acad. Scient. Hung.*, xxxiv (1983), 280-3). The most essential points of the semantics of verb forms are as follows: the present forms *mi-kon-am* "I do" and *be-kon-am* "that I do" (meaning obligation, possibility, etc.) express a clear opposition of moods between indicative and subjunctive expressed by verbal prefixes (*mi-*, *be-*). On the other hand, *mi-kon-am* "I do" and *dâr-am mi-kon-am* "I am (in act of) doing" are contrasted with reference to aspect: the first form is unmarked for aspect and *mi-* simply indicates indicative, but the periphrastic construction expresses a progressive ongoing action. This latter construction is stylistically marked: it occurs in the written and spoken informal standard only. In addition, its use is morphologically and also lexically limited: verbs form two disjoint sets according to their inherent aspectual properties: those which can appear in the progressive and those which cannot. The latter group called "stative" or "non-progressive" verbs, e.g. *istâdan* "to stand", *mordan* "to die", etc. expresses the present progressive by means of perfect (*nešaste-am* "I am sitting") and the past progressive by means

of pluperfect (*nešaste budam* "I was sitting"). These "stative" verbs have also progressive forms conveying another modal implication, the so-called "ingressive": *dār-am mi-nešān-am* "I am going to sit down" (cf. Šādīkī-Arzang 2535/1976, 40; Waḥīdīyān, 68). Because of this restricted use of progressive forms, the present indicative *mi-kon-am* can also convey various imperfective (continuous, durative, iterative, progressive, etc.) values, but in formal Persian only ("I do" or "I am doing"); in Modern spoken Persian this "aoristic" form means "I do" only.

The past tense offers a larger scale for expressing aspectual nuances than the present. The past forms *kard-am* "I did" and *mi-kard-am* "I was doing" convey distinctions between perfective (traditionally called simple past or "aoristic") and imperfective. Here the verbal prefix *mi-* can cover various aspectual values, e.g. continuous, iterative, durative and also progressive in formal Persian. Similarly to the present forms, informal Persian has an additional form with progressive value *dāst-am mi-kard-am* "I was doing" in the past. This latter verb contrasts with continuous but non-progressive within imperfective (*mi-kard-am*) as well as with non-continuous (perfective) past forms (*kard-am*). It means that both *mi-kon-am* and *mi-kard-am* can cover more aspectual values in the formal language than the same form in the informal register. On the other hand, *mi-kon-am* "I do" (and also "I am doing" in formal Persian) and *kard-am* "I did" can be in opposition with the perfect *karde-am* "I have done" which indicates the present relevance of a past situation (e.g. *nāme-yā nevoste-am* "I have written the letter"). Note that this phonological form of the perfect belongs to the formal language. In the spoken variety, contracted forms are used like *karde-am* > *kardam* with an ultimate stress vs. *kard-am* in the simple past which has stress on the stem (cf. stress in (iii) Phonology, above). The past perfect (called also pluperfect) *karde bud-am* "I had done" indicates an anterior event completed before another action was taking place (*vagt-i ke Ḥasan vāred šod Piruz rafte bud* "When Ḥ. arrived P. had (already) gone"). In fact, these perfect forms belong to a semantically complex category of fairly wide applicability expressing various aspectual features of resultative character. It also includes an aspectual nuance called "inferential", "distanced past" or "auditive", a well-known aspectual category in Tādjik and Turkic languages ("non-evident" verb forms). These terms indicate that the speaker is reporting an event which he has not witnessed himself and his knowledge is from second hand ("reported speech"). A series consisting of four such verbal forms (*karde-ast*, *mi-karde ast*, *dāste mi-karde ast*, *karde bude ast*) began to be interpreted as "inferential" in the Modern Persian paradigm only recently (see Windfuhr, *The verbal category of inference in Persian*, in *Acta Iranica*, xxii (1982), 263-87; Lazard, *L'inférentiel ou passé distantié en persan*, in *Stud. Ir.*, xiv (1985), 27-42; idem, 1989, 273). It should be noted, however, that in earlier descriptions of Persian grammar (Horn, in *GIPh*, 154; Jensen 1931, 158; Rastorgueva 1964, 38; Lazard 1957 = 1992; idem, 1963, 295) the "double" compound verb forms (sometimes mentioned only cursorily) were interpreted on the basis of their morphology as extended forms of the perfect, the imperfect or the past progressive (see *mi-karde ast* "the compound imperfect" in Lazard, 1992, 154 or "perfect durative" in Rastorgueva 1964, 43, *rafte bude ast* "the double compound past" or "the completed past of the perfect" in Lazard 1992, 156, *dāste ... mi-karde ast* "the completed past" of the progressive in Lazard, 1992, 160) and accordingly, they

were regarded as forms which combined certain nuances of the perfect ("completed time") with the durative meaning of the imperfect, etc. Their relationship with equivalent Tādjik forms were expressly denied (cf. Lazard, *Caractères distinctifs de la langue tadjik*, in *Bulletin de la Société Linguistique*, lii (1956), 151; idem 1963, 295). On the other hand, in one of the earliest descriptions of the informal standard of Modern Persian, Waḥīdīyān (1964, 62-4) described these forms as *naqli* "narrative" verb forms by giving the following examples: [*be-tovari ke mi-guy-and*] *Vahid az safar bar gaste [ast]* "[it is said that] V. has returned from journey" in contrast to *Vahid az safar bar gast* "V. returned from journey", [*goft zohr-hā mi-khr'ābide-i*] "He said [that] you used to sleep at noon" and [*mi-guy-and*] *dāste mi-khr'orde* "[it is told] he was eating (had been eating)" (cf. also Šādīkī 2535, 60-6). It is emphasised that if there are expressions like *zāheran*, *guyā* "apparently", *mi-guy-and* "it is told" or *šanide-ast* "it is heard (reported)", etc. the use of the inferential is obligatory, otherwise it is the language users' choice.

For compound or periphrastic verbs, see below, V. Word formation and vocabulary.

*The characteristics of the verbal system in the early classical periods of Persian:* The morphological structure of verbal forms (prefix + stem + verbal suffix) is the same in the earlier periods of Persian as in Modern Persian. There are, however, essential differences both in the behaviour of certain constituents of the verbal form and also in the set of grammatical devices, the use of which was abandoned in the subsequent periods or preserved only for conveying highly formalised archaic or "neo-classical" style. Such a difference between Modern and Classical Persian appears in the use of verbal prefixes: the meaning and rules of their order and combination with each other and the two stems (past and present) varied widely: e.g. the classical prefixes (*hamī-* and *bi-*) expressed mainly aspectual differences and could combine with both stems, e.g. *bi-raft*, *bi-šud* "(he) went away, passed away" with perfect, resultative nuance vs. (*hamī-ravad*) "(he) is going" with continuous, progressive, iterative, etc., aspectual meaning (note that *hamī* was still used as an adverb in early classical sources written separately). These verbal prefixes preserved certain features of their origin in ancient texts: *bi* < Middle Persian *be-* was a preverb attached inseparably to the verb, while *hamī* < early Classical and Middle Persian *hamē* "always", being an adverb, moved freely, and its place became fixed only in later periods.

On the other hand, the minimal verbal form consisting of the present stem joined by personal suffixes (*rav-ad*) was used widely as an "aoristic" unmarked neutral form. Thus, with some oversimplification, the set of prefixes and suffixes attached to verbal stems remained unchanged almost totally in the past millennium, but the meaning and ordering of morphemes, that is, the internal composition of verbal forms varied significantly throughout history. For the details of the combinations of the verbal prefixes (*hamī-* and *bi-*) or *bi-* and the negation *na-* or (*hamī*) prefixed to imperative and nominal forms, or *bi-* prefixed to forms in the simple past, complex verbal forms or nominal forms, etc. see Lazard 1963, 274-326; Aḥmadi Giwī, *Dastūr-i tānkhī-i fīl*, passim; on the pre-classical use of the preverb *bi-*, see J. Josephson, *The preverb be and the verb kardan in Book Pahlavi Texts*, in *Proceedings of the Second European Conference of Iranian Studies*, ed. B.G. Fragner et al., Rome 1995, 335-46.

Early Classical Persian texts have preserved a group of archaic elements of verbal morphology (see the

ancient forms of personal suffixes or verb forms without any suffix, etc.). The most characteristic features of this early period are: the morpheme  $-i < \bar{e}(d)$  attached to conjugated forms (incl. the clitic forms of the verb "to be" or rarely, stem forms) was used in differing functions in present and past forms expressing various values of mood (optative, conditional or irreal modality), but in the past it could also convey the habitual, durative, etc., nuances of aspect (similarly to  $(h)am\bar{e}$ ). In old prose it appears to have been a productive morpheme and was used simultaneously with the verbal prefixes  $bi-$  and  $(h)am\bar{e}$ , but subsequently it fell into disuse and its function was taken over gradually by the verbal prefix  $m\bar{i}$ —even though not completely—the morphology and semantic values of these forms or the differing use of  $-e$  and  $-ed$  have not been fully explored, see the examples in Aḥmadī Gīwī, 337-42, and Lazard 1963, 327-38, e.g. *agar man ānjā na-budam-ē . . .* "If I had not been there . . ." (irreal), or *čūn pēs-i payghāmbār āmad-ē guft-ē* "when he used to come to the Prophet he used to say . . ." (habitual). For other archaic elements occurring in ancient texts such as the old precativ or optative ( $dār-\bar{a}d$ ,  $rasān-\bar{a}d$ ,  $kun-\bar{a}d$ ), the imperative formed by  $-ē$  ( $dih-\bar{e}$ ,  $bi-firist-\bar{e}$ ), the type of the perfect ( $kardast-am$ ), or verbal (and also nominal) forms followed by the morpheme  $-ā$  conveying the vocative or exclamative ( $guft-\bar{a}$ ), and for the verbal morphology and syntax of ancient texts, consult Lazard 1963; Bahār, *Sabk-šmāsi*, Tehran <sup>2</sup>1337/1958; Aḥmadī Gīwī, Tehran 1380/2001.

## 2. Nouns and noun phrases

*Generalities:* Nouns, adjectives and partly adverbs are forms which do not exhibit any specific morphological feature (e.g. ending) that would indicate their word class individually. They easily enter into another word-class while materially they remain the same and may occur in various syntactic functions. See the examples *pir* "old" and "old man", *mard* "man" and "brave" (cf. *mard-tar* comp., *kheyli mard ast* "he is very brave"), or *bālā* used as an adverb (*bālā āmadan* "to come up(wards)") or as an attributive (*otāq-e bālā* "the upper room", cf. *bālā -tar* comp.) or as a noun (*bālā-ye khuyābān* "the upper part of the street"); or *khub* "good" and "well" (*dokhtar-e khub* "good girl" and *khub mi-khānād* "he reads well").

The noun or noun phrase can function as subject, object and various complements expressed by prepositional phrases in the sentence. These syntactic roles or such grammatical categories as determination (definiteness and indefiniteness) are expressed by postponed markers (called sometimes exponents, suffixes, particles or post-positions) and by determiners of various types; occasionally they can also remain unmarked. The markers attached to the noun (phrase) display a set of stressed and unstressed grammatical morphemes of various natures (*idāfa*, plural- or object-markers and articles). A striking characteristic of Persian is that the noun and its marker(s) are not closely knit; markers do not constitute inseparable elements of the word they are joined to. They can move relatively freely, although to varying degrees, and can be attached to one noun, to a chain of nouns or a noun phrase as a whole. The sequence of these markers, their phonetic forms (allomorphs) or even the rules of their presence or absence are not always firmly fixed. Their use is governed by stylistic factors and vary also in different phases of Persian. In ancient texts their place and sequence were freer than in more recent sources, where they tend to move towards the end of the noun phrase in an ordered sequence (esp. the object marker  $-rā$ ) if there is more than one marker. This

sort of "group inflection" (a traditional, but not quite appropriate term) is a characteristic of New Persian which, in this point, differs significantly from the behaviour of the formatives of the agglutinating languages or from the nominal inflection of the ancient Indo-European languages. In the latter, word-classes, traditionally called parts of speech, are morphologically recognisable and the basic syntactic relations are expressed by case endings attached to specific stem-forms and only to those. In Persian this old type of nominal inflection was gradually abandoned and the new way of marking morpho-syntactic categories developed by the Islamic period (see Telegdi, *Žur Morphologie des Neupersischen*, in *AO Hung.*, xii (1961), 183-99; idem, *Beiträge zur historischen Grammatik des Neupersischen. I. Über die Partikelkomposition im Neupersischen*, in *AO Hung.*, v (1955), 75; Lazard 1992, 262-4.

*Gender, number and other categories (the morphemes  $-i$ ,  $-e$ ,  $-rā$ ):* Gender is not marked morphologically in Persian. Female and male can be expressed lexically by the words *māde* "female" and *nar(re)* "male" pre- or postponed (the latter, which is more colloquial, is constructed with *idāfa*), such as *māde-šir* or *šir-e māde* "lioness" and *nar-šir* or *šir-e nar* "(male) lion". The feminine ending of the Arabic loans  $-at$  in Class. Pers.  $-a >$  Mod. Per.  $-e$  (*malek* "king", *maleke* "queen", but also  $-at$  as in *sā'at* "hour") is rarely used with words of Persian origin, such as *hamšir*—*hamšire* "brother—sister" (formal). In a very formal style an adjectival modifier following an Arabic broken plural may appear in an Arabised feminine form (*mamālek-e khāreje* "foreign countries" vs. standard *mamālek-e khārej*).

Plural is expressed by two alternating stressed morphemes:  $-hā$  with inanimates and  $-ān$  (variants:  $-gān$  or  $-yān$  according to the word's final vowel) with human beings, such as *ketāb-hā* "books", *zan-ān* "women" or *bande-gān* "servants" (exceptions are numerous, e.g. *derakht-ān* "trees", *akhtar-ān* "stars", etc.). The stressed plural marker has a firmly fixed position immediately following the noun. Sometimes it may also be added to constructions consisting of two nouns in juxtaposition or adjectival phrase, such as [*kot-o šāvwān*]-*hā* "coat-and-trousers = suits".

In Modern Persian, except in very formal styles,  $-hā$  is widely used in place of  $-ān$ . In addition, certain Arabic loans have preserved their original plural formation, both regular ( $-āt$ ,  $-jāt$ ,  $-iyāt$ ,  $-in$ ,  $-yun$ ,  $-ālāt$ ) or irregular ("broken plural"), such as e.g. *kalema* "word" and *kalemāt* "words" or *vazir* "minister" and *vazarā* "ministers". In the formal language, the plural marker  $-āt$  or  $-jāt$  occur with non-Arabic words as well, e.g. *farmāyesh-āt* "instructions" or *miwe-jāt* "fruits". Arabic broken plurals were widely used in Classical Persian and continue to be retained in modern formal style. Sometimes Persian plural markers are also added to Arabic broken plurals cumulating the two types of plural formation, such as *zarf* "vessel", *zoruf* or *zoruf-hā* "vessels". In the classical period, certain Persian words were re-borrowed from Arabic with their broken plurals modelled on patterns of Arabic morphology (where they are in use to this day), such as *farmān* "order" and *farāmīn* "orders", *bostān* "garden" and *basātīn* "gardens", etc. Certain nouns have double plurals, each with its separate meaning, such as *sar-ān* "chiefs" and *sar-hā* "heads" or *harf-hā* "letters" and *horuf* "speeches". Selection from among the alternative plural forms is mainly governed by stylistic factors.

There is a special use of the plural marker  $-hā$  occurring in adverbial expressions conveying a shade of meaning "approximation" (cf. *bā'd-hā* "afterwards" in Lazard 1992, 93; *birun-hā* "somewhere outside",

tu-hā "somewhere inside" in G. Hincha, *Beiträge zu einer Morphemlehre des Neupersischen*, in *Isl.*, xxxvii (1961), 143-60).

Historically, both *-ān* (< Old Iranian pl. gen. \**-ānām*) and *-hā* (< Book Pahlavi *-ihā*) had their roots in Middle Persian. The former was older and more widely used with all sorts of nouns, but the latter took its place gradually (see W. Sundermann, *Mittelpersisch*, in *CLI*, 155). For further details cf. Jensen, 38-41; Lazard 1963, 195-9; idem 1992, 57-66; R. Humāyūnfarrukh, *Dastūr-i dġāmī-i zabān-i fārsī*, Tehran n.d. (1337/1958), 253-74; M. Mu'īn, *Mufrad wa dġamī*, Tehran <sup>3</sup>1369/1991; Hincha 1961, 141-60.

*Idāfa* (possessive and attributive constructions): The modification of a noun with a following modifier is expressed by a clitic vowel *-e* or after vowels *-ye* (Class. Pers. *-i* or *-yi*) attached to the head noun(s). The construction is called *idāfa* (Class. Pers. *iẓāfa*, Mod. Pers. *eẓāfe*) "annexation" (cf. the similar but not wholly equivalent construction in Arabic). The head noun(s) in singular or plural is (are) followed by one or more modifiers, which can be an adjective (as in most cases) or a noun, a pronoun, or more complex spatial and temporal expressions consisting of nouns, adjectives, prepositions, etc. Two main types can be distinguished according to their inner structures: *ketāb-e bozorg* "the big book" and *ketāb-e pedar* "the book of the father" (called Ez. I and Ez. II by Hincha, 148-51, or *tarkīb-e vaṣfī* "descriptive composition" and *tarkīb-e eẓāfi* "possessive c." by native grammarians). If the first type is extended by another adjective, the new modifier refers to the head noun ([*ketāb*]-*e bozorg-e fārsī* "the big Persian book"), while in the second case the new modifier refers to the second noun-member of the construction (*ketāb-e [pedar]-e fārsī* "the book of the Persian father" which itself functions as a head as well. More complex noun-phrase structures may contain a long chain of modifiers (*tadvin-e dastur-e zabān-e fārsī* "the codification of the grammar of the Persian language" or [Ferdowsi,] *sokhangy-e pīruzi-ye niki bar badi* "[F. an orator of the victory of goodness over badness"], sometimes representing a reduced relative clause (*kaleme-hā-ye maktum be hā-ye ghey-e malfiz-e fārsī* "words with non-spoken final *h*"). Theoretically, noun phrases can be indefinitely extended, but their complexity is constrained by perception factors. Depending on the semantic relation between the head and its modifier(s), several subtypes can be listed: e.g. qualification by a noun indicating origin (*āb-e ʿešme* "well-water") or material (*ketāb-e adabiyāt* "the book of literature") or specification (*šahr-e Tehrān* "the city of T.", *mazhab-e ešlām* "the religion of Islam" etc.). Detailed descriptions of these types in rhetorical terms as *haqiḡi* "literal" vs. *majāzi* "metaphorical" etc., can be found in native literature (see Mu'īn, *Iẓāfa (the genitive case)*, Tehran <sup>3</sup>1370/1991). Titles and other designations may occur either with *idāfa* (*āqā* "mister", *janāb*, *hazrat* "excellence, honour, dignity", *marhum* "late") or without *idāfa* (*doktor*, *hakim*, *seykh*). If a head noun is suffixed by the indefinite *-i*, the adjective attributive follows it without *idāfa* (*ketāb-i bozorg* "a big book"). This construction is characteristic of formal Modern Persian only, but it was commonly used in Classical Persian. Another characteristic of the ancient language is that modifiers (both nouns and adjectives) often precede the head noun. In this case there is no *idāfa* construction, the constituents stand in juxtaposition (*delir mard* "a brave man", *Irān šahr* "the empire of Iran", cf. Lazard 1963, 200-3). The connecting vowel *-e* (in classical transcription *-i*) may be dropped both in the classical poetry due to the requirements of prosody

and in modern dialects or in colloquial styles (in rapid speech), especially in frequently used expressions (*pedar-bozorg* "grandfather", *janāb-āli* "Sir", etc.).

Historically, the *idāfa* construction developed fully by the New Persian period (see the use of the partly equivalent and scarcely occurring Middle Persian relative particle *-ī* in Sundermann, *Mittelpersisch*, 158-9).

Several details, esp. the syntactic-semantic relations between the constituents of the multiple *idāfa* structures, which are characteristic of the formal written style, remain unresolved (see L.S. Peysikov, *Voprosi sintaksisa persidskogo yazika*, Moscow 1959, 41-108 (the most detailed description); M.R. Bāṭini, *Tawṣīf-i dastūri-i zabān-i fārsī*, Tehran 1348/1969, 137-52; Lazard 1992, 66-71; idem 1989, 275).

*Definiteness—indefiniteness*: The unstressed clitic *-i* (< Class. Pers. *-ī*, < early Class. Pers. *-ē* < Old Persian *aiwa-* "one") traditionally called "indefinite article" or "article of unity" is joined to a noun in singular or plural or to a noun phrase, e.g. *ketāb-i* "a book" or *ketāb-hā-i* "some, certain books" (vs. *ketāb-hā* "books") or *ketāb-e bozorg-i* "a big book". In the colloquial language indefiniteness is often expressed by the numeral *yek* "one" which precedes the noun (*yek ketāb* "a book") and may be used simultaneously with the clitic *-i* (*yek ketāb-i*). Although the expressions *yek ketāb* and *yek ketāb-i* appear to be equivalent in certain contexts, they may also have different stylistic values. There are, for instance, cases, where *-i* and *yek* are not interchangeable; see the terms "Kennzeichnung der Individualisierung" ("the sign of individualisation") for *yek* and "Restriktion" ("restriction") for *-i* by Hincha, 169-70, e.g. *yek ruz* "eines (bestimmten) Tages" ("a particular day") vs. *ruz-i* "pro Tag, ein einzelner Tag" ("daily, every day"). Although the fine points of the use of the clitic *-i* have not been wholly explored, there can be a restricting function, which appears to make the reference of the noun phrase more precise. In addition, its relatively independent character are manifested in phrases like in the following examples by Hidjāzī (quoted from Telegdi, 1961, 192): *javān-e šekaste va nākhoš-i* "a tired (lit. broken) and sick young man" (Hidāyat) or *har jāhel-e az donyā bikhabar-i* "each ignoramus who does not understand the world", or *dar donyā-i digar* "einer anderen Welt" "in a different world" (Cubak). This latter type was especially common in Classical Persian, where the clitic *-i* tended to be joined to the first head noun.

The same clitic morpheme *-i* with a restricting function can be attached to the antecedent of a restrictive relative clause (*mard-i ke tu-ye oṭāḡ ast* "the man who is in the room"). (This morpheme is called *yā-ye ešāre* by native grammarians.) The antecedent noun may be preceded by a demonstrative pronoun and is compatible with the stressed object suffix *-rā* (*ān mard-i-rā ke...* "that man whom...") and the stressed morpheme *-e* which is used only in colloquial style (*ān mard-e-i ke...* "that man who..."). According to Hincha, the clitic *-i* is in complementary distribution with Ez. II and the pronominal possessive suffix *-ās* in each position (171). There is considerable disagreement, however, on whether these two functions of the clitic *-i* with different distributions are to be regarded as one or two morphemes. Native speakers seem to distinguish the two functions (cf. Lazard, *L'entlétique nominal -i en persan: un ou deux morphemes*, in *BSL*, li (1966), 249-64; idem, 1989, 275-6). For more details see Meier, 139-44; Windfuhr, 3-40; Ch. Lehmann, *Yā-ye ešārat. Zur Grammatik der persischen Relativsätze*, in *Indogermanische Forschungen*, lxxxii (1977), 97-106.

A stressed morpheme *-e* is used after nouns in

singular (*hotel-é* "the hotel [in question]") as if it was a definite article (Hincha's term is "Punktualisierung", 176), but its use is restricted to the colloquial style in Modern Persian only. In formal language there is no direct way of expressing definiteness, but it is possible to indicate the definite or indefinite nature of the noun acting as an object in the sentence (see the object suffix *-râ*). The morpheme *-e* has a limited distribution as it may occur with demonstrative pronouns (*ân pesar-ê*), but never with the so-called indefinite "article" *-i* (for a different view, see Hincha, 176). If the *-é* is joined to a noun phrase (Ez. I) the *e'zâfe* vowel *-e* is dropped, e.g. *ketâb-bozorg-é* (cf. 'A.A. Šadikî, *Dastûr. Sâl-i diuvarum*, Tehran 2535/1976, 131). Apparently its occurrence is widespread in both Persian and non-Persian dialects (see Christensen 1939, 42, and also Windführ, 41).

*The object marker -râ*: The unstressed morpheme *-râ* (also called particle or postposition, which indicates its relatively independent or word-like character) is attached to a noun in singular or plural, or to a noun phrase of whatever length, indicating direct object under certain conditions. These "conditions" are a matter of debate and are impossible to grasp by hard and fast rules: its place, functions, appearance or disappearance seem to be dependent on grammatical, semantic and stylistic factors. In the sequence of the postponed morphemes which can follow a noun or a noun phrase, *-râ* is always the last in the sequence in Modern Persian (e.g. *ketâb-hâ-i-râ*). It is said to mark the direct object in the sentence if it is made "definite" by pre- and postponed determiners, modifiers or by context, e.g. *ân ketâb-râ* "that book (acc.)", *ketâb-e u-râ* "his book (acc.)", *ketâb-râ kh'ândam* "I read the book". There are cases, however, where the direct object can also be followed both by the morpheme *-i* and by *-râ*. In these cases the morpheme *-i* appears to make the object not indefinite, but rather restrictive or "individuated", e.g. *ketâb-i-râ* "a certain book (acc.)". On the other hand, the object marker is not used if the object is generic, e.g. *šab-hâ ketâb mi-kl'ân-am* "in the evenings I read book(s)" (cf. Lazard 1989, 280). The rationale for its occurrence is far from clear. It may be connected with the semantic nature of the noun acting as object or with the relationship between object and predicate ("caractère humain de l'objet" or "absence d'affinité sémantique entre le verbe et l'objet") or, with the complexity of the expression (cf. Lazard 1989, 280; idem 1992, 74-6, 183-90). Its use in the colloquial language is very unsteady: it is often missing where formal language would use it.

In Modern Persian *-râ* sometimes appears where a direct object marker is not expected to occur. Some of the instances of these "uncommon" uses of the morpheme *-râ* do occur in both formal and informal Modern Persian, while others may be seen only in the very formal (literary) style. The first group includes elliptic exclamative phrases, such as *khodâ-râ šokr* "thanks to God", *to-râ be-khodâ* "I swear you by God" or *khodâ-râ* "for God's sake!" or *qazâ-râ* (= *az qazâ*) "by chance". An emphatic use of the morpheme *-râ* introducing a topic at the beginning of the sentence occurs in the less formal style, such as *to-râ ce kâr konam?* "What am I to do with you?" (lit. "As for you, what shall I do?"). Sometimes it is used with adverbial expressions denoting time (*zohr-râ* "at noon" quoted by Lazard from Šadikî Hidāyat). The second group whose construction is characteristic of the very formal (literary) style in Modern Persian consists of expressions where the noun followed by *-râ* features as indirect object, like *to-râ goftam* [= *be to goftam*] "I told you"

or *šomâ-râ kâr dâram* [= *bâ šomâ kâr dâram*] "I have to speak to you". In these examples *-râ* is substituted by prepositions in the equivalent expressions which are equivalent grammatically but not stylistically. Another archaic and very formal use of this morpheme is the construction where *-râ* is attached to the complement of the existential verb "to be" expressing possession (that is, to the possessor noun), such as *u-râ pesar-i bud* "he had a son", an equivalent of the sentence *u pesar-i dâšt* (cf. Lazard 1992, 191; Hincha, 186). These latter two functions are obviously remnants of old usage. Not only these two points but the whole domain of its use (place, functions, distribution, etc.) show differences between Modern and Classical Persian displaying also dialectal variations (cf. its use with the proposed particle *mar*). See further details in Telegdi 1961, 194; Lazard 1963, 356-84; idem, *Le morpheme râ en persan et les relations actancielles*, in *BSL*, lxxvii (1982), 177-207; I.K. Ovtšinnikova, *Funktsii postleloga râ v sovremennom literaturnom persidskom yazïke*, in *Trudi Instituta yazïkoznanija*, vi (1956), 356-391; idem, *Ispol'zovanie postleloga râ v proizvedeniyakh tadžikskikh i persidskikh klas-sičeskikh avtorov (XI-XV vv.)*, in *TIJ*, vi (1956), 392-408.

### 3. Adjectives and adjective phrases

Adjectives are invariable words in Persian showing no distinction of gender, number or case. Comparative adjectives are formed by the suffixes *-tar* and *-tarin* (*boland-tar* "high" *boland-tarin* "highest", note that the same suffix can be attached to adverbs as well). There are certain adjectives which have suppletive comparative and superlative forms, see *beh*, and *beh-tar* ("better"), *beh-tarin* ("best") in relation to *khub* "good" or *biš*, *biš-tar* ("more, numerous") in relation to *besyâr* "much, many", etc. These doublets can be used in different social contexts in Modern Persian. The comparison between two gradable adjectives are made by the preposition *az* (*in pesar az ân boland-tar ast* "this boy is taller than that"). Superlative forms usually precede the head noun (*qadim-tarin ketâb* "the oldest book"), similarly to certain adjectives with special semantic value (*khub pesar-i* "a good boy", see Lazard 1989, 277). Adjectives may be preceded by adverbs or adverb phrases. The most commonly used premodifiers of this type are *besyâr*, *kheyli* "very", *'ajab* "strange" (*mas'ale-ye kheyli mohem(m)* "very important problem").

For ancient comparative and superlative forms like *meh*, *mehin* ("greater, greatest"), *beh*, *behin* ("better, best"), the doublets *khub-tar/beh-tar* and some additional points of their use or modes of intensification in both Modern and Classical Persian, see Lazard 1992, 81-9; idem 1963, 201-14.

Because of their "unmarked" nature, adjectives easily change their word-class membership without any morphological modification—for instance, a large part of them can be used as nouns or adverbs (see above, I. Generalities). The syntactic behaviour of these words, which obtain their new meaning via transposition, is similar to the other members of the same word-class even though their original word-class attributes do not disappear completely. For instance, nominalised adjectives take the same exponents as the noun proper while preserving some features of their own in certain constructions (e.g. in *idâfa* or in compounds such as *deltang* and *tangdel*, see Telegdi, *Zur Unterscheidung von Substantiv und Adjektiv im Neupersischen*, in *AO Hung.*, xv (1962), 325-36).

### 4. Adverbs and adverb phrases

This heterogeneous class overlaps with other word classes such as nouns, adjectives or prepositions, etc. The group of words which are traditionally regarded as adverbs are *konun/aknun* "now", *emruz* "today", *fardâ*

"tomorrow", *zir* "under", *zebar* "above", *nazdik* or *nazd* "near", *dur* "far", *aqab* "behind", *piš* "before", *pas* "after", *birun* "outside", *bâlâ* "up", *pâin* "down", *sakht* "very", etc., in addition to the morphologically derived adverbs (of manner in most cases) created from adjectives by the still creative suffix of Arabic origin *-an*, e.g. *ettefâqan* "by chance", *jeddân* "seriously", *jânân* "whole-heartedly", etc. The syntactic behaviour of certain simple adverbs, however, varies according to the constructions where they occur. For instance, *piš*, *pas*, *birun*, *bâlâ*, *pâin* used in combination with verbs of movement function as adverbs of space (*bâlâ raft* or *raft bâlâ* "he went up" in modern colloquial); used in noun phrase they appear as attributives (*otâq-e bâlâ* "the upper room, mansard", *šab-e piš* "the previous night"); used in adverb phrases, they behave as nouns (called "adverbes-substantifs" by Lazard 1957, 84 = 1992, 90; for a different view see Telegdi 1961, 187-9) displaying nearly all the properties nouns have though to varying degrees. That is, they may occur with or without prepositions, with certain determiners (e.g. demonstrative pronouns) and plural markers indicating "approximation" (cf. Telegdi 1961, 189; Lazard 1992, 65). They also occur in *idâfa* constructions, but they never appear with articles (see *bâlâ* "the upper part, top, height" in the examples *dar bâlâ-ye* "above, over s.th.", *bâlâ-ye kuh* "at the top of the mountain", etc. or *hamin aknun* "just now", *ba'd-hâ* "later" or more complex phrases such as *az emruz be-fardâ* "from today till tomorrow", cf. Telegdi 1961, 187-9). Actually, a large group of nouns may also occur in such adverb phrases either with or without prepositions (e.g. (*dar*) *pošt-e divâr* "behind the wall", *be manzel [raff]* *manzel* "he went home" (colloquial), see prepositional phrases). Similarly, most of the adjectives may function as adverbials (of manner in most cases, called "adjectifs-adverbes" by Lazard 1957, 79 = 1992, 90, e.g. *tond* "quick, quickly"). For various ways of intensifying or concretising the meanings of adverbial expressions, see *tanhâ* "alone", *ham* "also, even", *niz* "also", *hatlâ* "even", *bâz-ham* "still, yet", etc. (see Lazard 1992, 90-5).

The manifold behaviour of certain adverbs might be explained by their historical development: e.g. *bâlâ* and *pâin* were originally nouns, but they became adverbs while preserving some features of their former class-membership. By contrast, some old adverbs (*bar*, *dar*, *foru*, *farâ*) became fixed in preverbal position used formally as verbal prefixes (and not as adverbs) and formed a single lexical item with the verb while abandoning their independent meaning as adverbs (e.g. MP *abar âmadan* > Class. P. *bar âmadan* "to rise [sun]" > Mod. P. *bar âmadan* "to cope, rise [dough]"). Note that some of them became obsolete already in the classical language and were substituted by "new" adverbs, e.g. *foru* by *pâin* "down" or *dar* by *tu* "in"; others merged into one single word (see the modern homophones of various origins, e.g. Class. Persian *andar* > *dar* "in" (adv.) and *dar* "door" (noun) in classical phrases such as *dar âmadan* "to come in" and (*ba-*)*dar âmadan* "to come out" > Mod. Pers. *dar âmadan* "to come out"—for substitution, see Class. Persian *bar âmadan* → Mod. Pers. *bâlâ raftan* "to rise, go up").

In addition, in the course of time certain adverbs had partly or wholly lost their ancient meaning, e.g. *piš* or *pas* were local-temporal adverbs in Classical Persian, but they have only temporal reference in Modern Persian, or *bar* in *bar ašoftan* = *ašoftan* "flare up, agitate" (see also the modern continuation of the old homophones: MP *abar* > Cl. Pers. *bar* "up, on" and MP *war* > Cl. Pers. *bar* "breast" [noun] > Mod.

P. (*az*) *bar(-e)* "over, upon, on [prep.]". For more details of these highly heterogeneous, sometimes obscure groups of words called adverbs or sometimes particles, see Telegdi 1955; idem, 1961.

##### 5. Prepositions or prepositional phrases

There are only a few true prepositions in Persian such as *be* "to, at, in, with", etc., *dar* "in, into (litera.)", *bar* "on, to", *az* "from, since", *bâ* "with", *bi* "without", *tâ* "until", *joz* "except", *čun/čon* "as, like". They can precede the noun (*dar otâq* "in the room"), the noun phrase (*dar otâq-e bozorg* "in the big room") or the co-ordinated nouns (*dar otâq va âšpa:khâne* "in the room and the kitchen"). These prepositions are never followed by *idâfa*.

In addition, there are various types of "compound" prepositions: e.g. adverbs followed by prepositions (*piš az* "before (of time)", *qabl az* "before", *pas az* "after"), nouns (or substantivised adverbs) with or without prepositions connected to another noun via *idâfa* (*dar pošt-e divâr* "behind the wall", *az taraf-e* "from the side of" *be-taraf-e* "towards", *be tavassot-e* "by (the intervening of)" (*dar*) *tu-ye* "in(side)", *az zir-e* "from under" etc., or adjectives followed by prepositions (*raje' be* "concerning", etc.).

Both true prepositions and the connecting vowel of *idâfa* may be dropped in colloquial style (see Lazard 1992, 76-9).

There were some more prepositions in Classical Persian, but they became obsolete in post-classical Persian as early lexicographic sources indicate, e.g. *andar*, *foru*, *farâ*, etc. Another characteristic of Classical Persian was the joint use of certain prepositions (*be*, *bar*) and certain postpositions (*bar*, (*an*)*dar*, *bâz*), e.g. *be Yaman dar* "in Y." (cf. Lazard 1963, 399-421; **Kh.Kh.** Rahbar, *Dastūr-i zabân-i fârsi. Ktâb-i hurūfi idâfa wa rabt*, Tehran 1367/1988, 69-396).

##### 6. Numerals

The cardinal numerals between 1 and 20 (*yek* "1", *do* "2", *se* "3", etc.), all tens (*sî* "30", *čehel* "40", *panjâh* "50", etc.), hundreds (*sad* "100", *devist* "200", *sišad* "300", etc.) and thousand (*hezâr*) are single words. The other numbers consist of either two or three or more words connected by *o* "and" (e.g. *bist-o yek* "21", *hezâr-o yek* "1001", *do hezâr-o bist-o yek* "2021", etc.). Nouns following the cardinal numerals are normally in singular (*do ketâb* "two books"). Characteristic of Persian is the use of so-called "numeratives" words, a certain type of classifiers, between the numerals and the head noun. The most used "numeratives" are *nafar*, *tan*, *tâ*, *dast*, etc. (*do nafar dânesju* "two (persons) students", *do tâ ketâb* "two (pieces) books"). Ordinals are derived from cardinals with the suffixes *-om* or *-omin* (*čahâr-om* or *čahâr-omin* "fourth"). If they consist of more than one member they are attached to the last member, e.g. [*yek hezâr-o panjâh-o hašš-om* "1058"]. The two series of ordinal numerals (*panj-om* or *panj-omin* "fifth") display different syntactic and semantic characteristics. The first type used as an attributive follows the head noun with *idâfa* (*ketâb-e panjom* "the fifth book") but the second precedes it (*panjomîn ketâb*). For their differing semantic values, see Lazard 1992, 101. The first cardinal numerals have a variety of forms (*yekom / avval/nokhost* "first", *dovvom/deyyom* "second", *sevjom / seyyom* "third"). For various numerical expressions, see Lazard 1992, 102-5.

7. Pronouns: personal, possessive, reflexive, reciprocal, demonstrative, interrogative and indefinite

Personal and some other pronouns can be expressed in two different ways: by stressed independent words or by clitic morphemes. The members of the two sets can substitute each other in certain, but not in all

positions. The choice of clitic pronouns is heavily dependent on stylistic factors.

Stressed personal pronouns have the distinction of number (singular and plural), person (1st, 2nd and 3rd), and gender with a strictly limited force (animate and inanimate in the 3rd person): *man* "I", *to* "you", *u*, *vey* (lit.) or *ân* (denoting inanimate things in most cases) "he/she/it", *mâ* "we", *šomâ* "you", *išân* or *ân-hâ* "they". There is a variety of forms and meanings in polite or colloquial usage. For instance, characteristic of modern colloquial is the occurrence of plural forms with a singular value or the forms *mâ-hâ* "we, us", *šomâ-hâ* "you". *Išân* (coll. *išun*) is often used as a polite equivalent of the third person singular pronoun. Similarly, in polite speech, the first or second person pronouns in singular may be substituted by various forms, e.g. *bandê* "servant", *in jāneb* "this side" (lit.), *janâb-e 'âli/âli janâb* "Your Excellency" (see further details, incl. concordance, below, in 8. *Syntax*).

Personal pronouns, as usual, share the functions of nouns, but not all of them. For instance, they may be preceded by prepositions, e.g. *bâ mâ* "with us", or postponed by object markers, e.g. *mâ-râ* "us (acc)" (but see *man-râ* > *mâ-râ* "me (acc.)"). Having determining function they are used with *idâfa* (*ketâb-e mâ* "our book") acting as a quasi-possessive pronoun. But in this function pronouns do not exhibit exactly the same syntax as nouns or adjectives when they act as modifiers. For instance, they do not allow any further extension of the noun phrase, but they terminate the chain of noun(s) and adjective(s) (cf. *ketâb-e bozorg-e mâ* "our big books", *ketâb-e pedar-e mâ* "the book of my father" or *ketâb-e pedar-e bozorg-e mâ* "the book of my grandfather").

Clitic pronouns are: *-am*, *-at/-et* (coll.), *-aš/-eš* (coll.) in the singular and *-emân*, *-etân*, *ešân* in the plural. As a matter of fact, these clitic morphemes are personal suffixes used in two differing functions: if they are attached to the noun phrase acting as determiner they refer to the possessor as a kind of "determinative possessives" or, if they are used as complements in verbal phrases they refer to the direct or indirect object, rarely (and redundantly) the subject. These clitics, although their phonological shapes and allophones are the same in both functions, differ as for their modification or complementation: clitics used in determinative functions appear to be suffix-morphemes and the word so produced has a complex morpheme structure (*ketâb-aš* = *ketâb-e u* "his book") which can take the object marker (*ketâb-aš-râ* "his book (acc.)"). In the second case, where clitics are used to denote complements of verbs or verbal phrases, the verb and its complement appear to be rather a syntactic construction that cannot be extended (*didam-aš* [= *u-râ didam*] "I saw him", *dâdam-aš* [= *be-u dâdam*] "I gave him (s.th.)" or *nist-eš* [= *u nist*] "he is out (coll.)"). This construction itself is rather unique in that it can be expressive of both the predicate and the object or (more rarely) the subject (cf. É. Jeremias, *Some grammatical problems of early New Persian syntax*, in *Proceedings of the Second European Conference of Iranian Studies*, ed. Fragner *et alii*, Rome 1995, 325-34.)

Other more peripheral functions (partitive, anaphoric, emphatic or pleonastic) of these clitic pronouns (especially the form *-eš*) are very common in informal registers (see more details in Lazard 1992, 109-16). Certain constructions, e.g. if prepositions are followed by such clitics (*az-eš* = *az u* "from him") or they are attached to the non-verbal part of compound verbs (*dust-et dâram* = *dust dâram to-râ* "I love you"), occur hardly ever in formal style. The use of pronominal

clitics in earlier periods of Persian was not exactly the same as in Modern Persian. Its occurrence as possessive affix is an innovation of New Persian shared by most of the West Iranian languages. The possessive affixes rigidly attached to the correlative words must have been fully developed in earliest prose. There is, however, a significant difference in frequency in comparison with modern usage. They are used less frequently and in most cases with a limited set of words (e.g. *pedar*, *mâdar*, *pesar*, *khodâ*).

On the other hand, their use as verbal complement continues an old tradition, which itself has not however remained unchanged. In old texts their place was not rigidly fixed; they appeared in various positions in the sentence, although a tendency can be seen to attach them to verbs or to the nominal part of verbal phrases. In some rare examples they appeared after words already extended by other grammatical morphemes (e.g. Class. Pers. *par-ê-š* "one of his feather(s)", cf. Jeremias 1995, 328). This very archaic usage disappeared later.

Reflexive pronouns are *khod*, *khîstan* "oneself" and *khîš* "his, her". The first two are pronouns used in formal language having no distinction of number or person, but they can be constructed with prepositions, followed by the object suffix *-râ* or used as a determinative possessive word with *idâfa* (*bâ khod*, *khod-râ*, *pedar-e khod*). In colloquial language they are always used with determinative possessive affixes (*khod-am*, *khod-et*, *khod-eš*, etc.). *Khîš* is an adjective acting as determiner (*mâdar-e khîš-râ dust dârad* "she loves her mother") and in this function it may be regarded as a formal equivalent of *khod* and *khîstan*. In Classical Persian *khîš* (< early Class. Pers. *khîš*) was also used as pronoun beside *khod* and *khîstan* (cf. Lazard 1963, 230).

Reciprocal pronouns are *yekdigar*, *hamdigar* "each other, one another" with the same distinctions as the reflexive pronouns obtain (*yekdigar-râ dust dârand* "they love each other"). See also the independent use of *ham* (*bâ ham* "together"), which is not to be confused with the particle *ham* "also, even" or the copulative conjunction *ham... va ham* "and ... and".

Demonstrative pronouns distinguish singular and plural and can be simple (*in* "this" and *in-hâ* "these", *ân* "that" and *ân-hâ* "those") or compounded with the particle *ham* "same, very" (*hamîn* "this same one", *hamân* "that same one") or *čon-*, *čen-* < *čun* (*čonîn*, *čenîn*, *hamčenîn* "like this", etc.). Simple demonstratives precede the noun and remain invariable in the plural if they are used as determiners (*in zan* "this woman", *in zan-ân* "these women").

Interrogative pronouns are: *ke/ki* (coll.) "who", *kehâ/ki(h)â* (coll.) (pl.), *čê/čî* (coll.) "what", *čehâ/čihâ* (coll.) (pl.), *kodâm(hâ)* "which one(s)". The latter two pronouns can be used as adjectives as well. *Čand/čandom* "how much/many" shares the syntax with cardinals: it precedes the noun in singular (*čand ruz* "how many days"), but its other form follows it with *idâfa* (*ruz-e čandom*). Interrogative pronouns can act as determiners with definitive or indefinite references, but their syntax is still to be investigated.

*Indefinite pronouns and determiners*: There is a relatively small number of simple indefinite pronouns which can be compounded with various nominal morphemes, like *kas*, *sakhs* "person", *čiz* "thing", *jâ* "place", *qadr* "quantity" or the pronoun *kodâm* "which (one)" to produce a large set of expressions acting as determiners and fulfilling various syntactic functions. Occasionally they can be followed by the indefinite *-i*, but the syntax of its use is not wholly explored (*hič kas* or *hič kas-i*

“no one”, *hič čiz* “nothing”, *hič vaqt* (determinative functions combined with the definite article *-i* or *yek*). Semantically they appear to belong to various classes (universal, assertive, negative, etc.) like *hame* “all”, *ba’zi* “some”, *kasi* “somebody”, *hič kasi* (in interrogative or negative sentence) or *har kasi* (in affirmative sentence) “anybody”, similarly “*čizi* “something”, *hič čiz(i)* or *har čiz(i)* “anything”, *hič yek*, *hič kodām* “neither”, etc. For further details, see Lazard 1992, 124-9.

#### 8. Syntax

The simple sentence consists of a subject and a predicate. The predicate, which occurs at the end of the sentence in most cases, can be a (conjugated) verb, a noun, a pronoun, an adjective or a prepositional phrase acting in predicative function followed by various forms of the verbal copula. The subject, however, can be omitted and in this case the predicate alone constitutes a sentence of minimal size (e.g. *raftand* “[they] went away”). Characteristic of Persian are the various types of sentences constructed with so-called “impersonal” verbs or verb phrases, e.g. *momken ast* “it is possible”, *čyb na-dārād* “it does not matter”, etc. In another common type of simple sentences the logical subject is expressed by the clitic pronoun attached to the predicative adjective, e.g. *sard-am ast* “I am cold”. The concord (or agreement) between the subject and the predicate is normally simple: a singular subject requires a singular object. But there are exceptions, mainly due to semantic or stylistic factors: if the subject is a collective noun or a noun designating inanimate things, the predicate is in singular; in elevated style, honorific addresses are used with predicate in plural, e.g. *šomā guftid* “you (sing.) told”, *āqā* (sing.) *nistand* (pl.) “the master is not at home” (for more details see above, 2, and Lazard 1992, 178-82; Mu’in, *Noun. Singular and plural*, Tehran 1369/1991).

The two major constituents of the simple sentence can be further extended by direct or indirect objects and adverbial phrases (for the details of their use, see previous sections). General characteristics of the behaviour of the constituents in the smaller or larger units of the sentence are mobility and optionality even though the constituents show these features in varying degrees. This means that grammatical exponents can be easily omitted and the word order is rather flexible. Normally, the predicate is at the end of the sentence and the subject is at the beginning followed by the object (SOV). Other complements come either before or after the object, but temporal expressions often occur at the initial position (e.g. *šabhā ketāb mi-khānd* “in the evenings he used to read a book”). Generally, objects or space and time expressions move comparatively freely and their syntactic features vary considerably (see the unstable use of grammatical morphemes like the object suffix *-rā* or the dropping of prepositions in less formal styles in above, 4; cf. also Lazard 1992, 183-212). Interrogative sentences have the same word order as affirmative ones differing only in intonation.

Juxtaposed units (phrases or clauses) are coordinated by *va* (or by the clitic *-o* in special cases), *ham . . . (va) ham* “and, also” (*-ham* also used as a clitic, e.g. *šomā-ham guftid* “you also told . . .”), *na . . . na* “neither . . . nor”, *yā* “or”, *kh’āh . . . kh’āh* “either . . . or” and *vali(kan)*, *ammā* “but, however”. Subordinate clauses of different types (object, subject, casual, temporal, etc.) are connected by the conjunction *ke* in most cases, esp. in informal styles, e.g. *goft ke pesar-āš āmad* “he said that his son arrived”. Normally this conjunction simply indicates subordination. The most common conjunctions (consisting of one or more words) that introduce subordinate clauses are: *tā*, *tā barā-ye*

*in ke* “that, until that”, etc. (object, final temporal, etc.), *čun*, *čon*, *čun ke*, *zirā (ke)* “when, as, because”, etc. (temporal, casual) and the conditional subordinator *agar* “if” (in negation *magar inke* “unless”). There is a relatively wide freedom in selecting the mood of the verb of subordinate clauses: it can be either in indicative or in subjunctive depending on the speaker’s choice of modality. Tense, mode and aspect features of the predicate in conditional clauses are more (but not wholly) fixed: the selection of the verb form in the main (or “matrix”) clause and in the conditional clause is directly connected with fulfilment of a real condition or a hypothetical one with present or past reference. See some examples by Šadiqi: *agar Hušang kār konad, movaffaq mi-šavad* “if H. works, he succeeds”; *agar Hušang bi-yāyad bā u be gardēš mi-ravam* (or *kh’āham raft*) “if H. should come, I (will) go walk with him”; *agar diruz barf nemi-bārid, havā sard nemišod* “if yesterday the snow had not fallen (or there had not been snow), the weather would not have become cold”, etc. (see more examples in his *Dastūr*, 103-6). Relative clauses are constructed in a special way: due to the lack of relative pronouns such clauses are introduced by the conjunction *ke* and the head noun can be (optionally) repeated in the clause by a pronoun: *yek mard vāred šod ke man u-rā nemi-šenākhтам* “a man entered whom (ke u-rā) I did not know”. In restrictive relative clauses constructed with a definite head noun the antecedent is supplied by the morpheme *-i*, e.g. *mard-i ke āmad* “the man who came” (see Lazard 1992, 229-36). Spoken style is developing special syntactic and semantic characteristics of subordinate clauses (see A. Nadjafi, *Kārburd-i “ki” dar fārsī-i guftārī*, in *Nāma-i Farhangistān*, i [1374/1995], 7-19).

This short enumeration of the semantic and syntactical properties of simple and complex sentences does not cover all the possibilities that occur in Modern Persian (see more details in Lazard 1992, 218-57, and for earlier usage, idem 1963, 455-92; Bahār, *Sabk-šināst, passim*). This field of Persian grammar, however, has remained unexplored.

#### V. Word formation and vocabulary

1. There are various ways of word formation in Persian such as transposition, derivation by suffixation or prefixation and composition, some cases of which have been already treated in the morphology of the verb, noun and prepositional phrase. Transposition is one of the most common and productive processes which makes new words without adding any morphological marker, e.g. adjectives from nouns or vice versa, or adverbs from adjectives (e.g. *kh’āb* “sleeping” in *kh’āb-i* “are you sleeping?”, *šoluq* “tumult” → “tumultuous”, *tond* “quick, quickly”, etc. See more examples above, in iii. IV. 2. *Nouns and noun phrases, Generalities*). Similarly, certain verbal stems or conjugated forms can be used as nouns (e.g. *khārid* [stem II = simple past tense, 3rd person, sing.] “he purchased, purchase”, *ma-gu* [prohib., 2nd person, sing.] “do not say, top secret”); see also more complex compound forms like composition made of the stems (II+I) of the same verb (*goft-o gu* “conversation”) or the stems (II+II) of different verbs (*āmad-o raft* “intercourse, familiarity = lit. coming and going”), etc.

Word formation via derivation displays a large set of suffixes, some of which are still productive, whilst certain others are stylistically coloured (e.g. colloquial, obsolete or archaic). The most common suffixes of nominal derivations are: *-i* (or *-gi* after final *-e*) which creates abstract (rarely concrete) nouns from adjectives and nouns (*bozorg* “big, great” → *bozorgi* “bigness, greatness”, *mard* “man” → *mardi* “manliness”, *bande*

"servant" → *bandegi* "servitude", *širin* "sweet" → *širini* "sweetness, sweets" [cf. pl. *širini-jāli*]; another -i forms adjectives from nouns (*Irān* "Iran" → *irāni* "Iranian"); -ak forms diminutives from nouns (*dokhtar* "girl" → *dokhtarak* "little girl"). The next series of derivations forming nouns and adjectives (-či, -če, -bān, -dān, -estān, -in, -mand, -var, -vār, -nāk) has various levels of productivity in Modern Persian (*ma'dan-či* "miner", *kitāb-če* "booklet", *bāgh-bān* "gardener", *qalam-dān* "pen-holder", *nārenj-estān* "orangery", *pašm-in* "woollen", *arzeš-mand* "valuable", *nām-var* "famous", *omid-vār* "hopeful", *nam-nāk* "humid", etc.). Another group of nouns is derived from verbal stems (I or II) by the suffixes -eš, -āk, -ār (*raftan*, *row* "to go" → *raves* "method", *khordan*, *khor* "to eat" → *khorāk* "nourishment", *raftan*, *rav* "to go" → *raftār* "behaviour", etc.). For other sorts of derivations by suffixation which are not productive anymore, see causative forms in verbal morphology (*šenākhtan*, *šenās* "to recognise" → *šenāsān* / *šenāsān(i)d* "to make known", etc.).

The most common types of derivation by prefixation are: *nā-* (*nā-pāk* "impure", *nā-mard* "[a] coward", *nā-māder* "step-mother"), *ham-* (*ham-vačan* "compatriot"), and *por-* (*por-harf* "loquacious").

Composition is a frequently used process of word formation in Persian. The principal types of compound words, according to the syntactic and semantic relations between their two constituents and according to the word class produced by the composition, are: "determinative" (endocentric) compounds made up of two nominal parts (*kār* "work" + *khāne* "house" → *kārkhāne* "work-shop, factory"); "possessive" (exocentric) compound (*fārsi* "Persian" + *zabān* "language" → *fārsizabān* "Persian-speaking, i.e. a person whose language is Persian"); a noun followed by a verbal stem (I), whose relation is equivalent to a verb and an object or a verb and another verbal complement and the compound so produced can have an active (or passive or locative, etc.) meaning, e.g. *ātaš* "fire" + *parastidan* / *parast* "to adore" → *ātašparast* "fire-worshipper", *dast* "hand" + *nevisān* / *nevis* "to write" → *dastnevis* "hand-written, manuscript (lit. written by hand)"; a noun followed by a verbal stem (II) forms a compound with passive or intransitive meaning, e.g. *khāne* "house" + *zādan* / *zāy*, *zād* "to be born" → *khānezād* "born at home". These compounds represent only a few of the possible types. In certain cases, however, one cannot judge with certainty whether they represent phonological sequences held together by stress and intonation, or whether they have become lexicalized compositions (see Lazard 1992, 261-91). Their exact nature and status, however, are still to be scrutinized although much has been done in this field (see the discussion of the types *deltang* "heart-tight(ened)" and *tangdel* "tight-heart(ed)" in Telegdi, *Zur Unterscheidung von Substantiv und Adjektiv im Neupersischen*, 325-36).

A particular type of verbal expression is represented by two large groups, called "verbs with preverbs" and "verbal phrases" (or "compound verbs", Fr. "locutions verbales"), whose use appears to be one of the main characteristics of Persian vocabulary since earliest times. The two sets present different types of lexical items with regard to their syntactic and semantic properties. The first group also consists of at least two subgroups which are very similar to each other, but only on the surface; they display two different types depending on their inner semantic structure: the first subgroup represents an ancient procedure of verbal composition, where verbs are preceded by true "living" adverbs of place (e.g. *piš* "before", *pas* "after",

*birun* "outside", *bālā* "up", *pā'in* (*pāyin*) "down") as in *bālā raftan* "to go up", *pā'in āmadan* "to come down", *birun bordan* "to take out". The meaning of such a phrase is made up of the meaning of the two constituents.

In the other subgroup, the first member is also an adverb of place, but in this kind of verbal phrase the adverb ceases to behave as an adverb (losing its original adverbial meaning), and the sequence acquires a new, secondary meaning, e.g. *farā-gereftan* "to learn", *foru-raftan* "to plunge" (very formal), *bar-gāstan* "to return" (neg. *bar na-gāšt*), *dar-yāftan* "perceive, understand" (note that *bar* and *dar* are formally identical to the prepositions *bar*, *dar*). In Classical Persian, this type of new verb formation was a living procedure, but over the course of time these verbs with preverbs have acquired a secondary meaning, e.g. *bar-āmadan* ("to overcome, result, rise (dough)"), and their original meaning began to be expressed by a new phrase, e.g. "to come up" > *bālā raftan* (see details in Telegdi, *Beiträge zur historischen Grammatik des Neupersischen. I. Über die Partikelkomposition im Neupersischen*, 67-183).

The most developed system of enlarging verbal vocabulary was, however, the formation of "compound" verbs. This heterogeneous group, including sometimes very peculiar verbal constructions, consisted of two, sometimes more words in addition to the "base" verb. The most common type is formed with verbs of exclusively Persian origin such as *kardan* "to do", *zadan* "to strike, cut", *dādan* "to give", *dāstan* "to have" following a nominal form of Arabic origin in most cases (noun, adjective, etc.), e.g. *haft zadan* "to speak", *dust dāstan* "to love", *bidār kardan* "to waken", *bidār šodan* "to wake up", etc. Even though this type of compound verb constitutes a semantically independent lexical item in the dictionary, whose components are not inflected separately, sometimes their sequence is broken up and the non-verbal parts follow the syntactic behaviour of their original word class, e.g. *haft-i zad* "he spoke (s.th.)", *birun-eš kard* (informal) = *u-rā birun kard* "[he] expelled him". Therefore sometimes the question whether they should be regarded as free constructions, syntactic phrases or lexicalised items, is difficult to answer (see for more details, Lazard 1989, 285-87; idem 1992, 291-301).

## 2. Loan words in Persian

New Persian in the past millennium has absorbed a large amount of foreign words. During its first centuries these loans were borrowed from various north-western and eastern Iranian dialects in most cases (see above, i. *General introduction*). Despite this relatively large group of loans (e.g. Parthian, Sogdian, etc.; see the citations of Henning, Lentz, Sundermann in the *General introduction*) which were taken over either via cultural channels or from substrata, the most effective and influential lenders were the Arabs. The infiltration of Arabic loans began in the earliest formative period (8th-9th centuries) of the Islamic period, increased heavily in the 10th-12th centuries and has continued until quite recently. Its linguistic influence is most clearly detectable in the lexicon, and somewhat less so in morphology. Loan words from Arabic constitute more than 50% of the contemporary Persian vocabulary, but in elevated styles it may exceed even 80% (Pisowicz, 19). Among these loans, for instance, words with the feminine ending (*tā' marbūta*), the largest class of Arabic borrowings in Persian, make up about 7% (see J.R. Perry, *Form and meaning in Persian vocabulary*, Costa Mesa 1991). Their quantity, however, varies according to media, literary genres and linguistic styles. The majority of these words, including

also broken plurals or genitive structures, appear as lexical borrowings. That is, these loans, though their Arabic morphological structures are clear, have not usually become integrated into the morphology of Persian except in some rare cases, but have mostly remained part of the vocabulary, signalling a highly elevated style in the majority of cases. This means that, apart from some rare examples, the Arabic grammatical structures, e.g. the Arabic plural or nouns supplied with Arabic feminine ending *-e* (*mālek-e* "queen", *hamšir-e* "sister"), or a feminine adjectival form governed by a broken plural, which are present in these loans, do not represent creative morphological categories in Persian. They do not generally function in order to create Persian structures analogically even though they occur sporadically in highly elevated style (see above, IV. 2.). Arabic lexemes, and especially participles used in Persian context, show some modification of various degrees in orthography, pronunciation and meaning. See Meier 1981, *passim*; **Dj.** Matīnī, *Tahawwul-i talaffuz-i kalimāt-i fārsī, in Madjalla-i dānistkhada-i adabiyāt-i Mashhad* (1350/1971), 249-83; Ali-Ashraf Sadeghi, *L'influence de l'arabe sur le système phonologique du persan*, 145-52; Pisowicz, *passim* (esp. 67). See more details on general and specific problems of borrowings in Lazard, *Les emprunts arabes dans la prose persane du X<sup>e</sup> au XII<sup>e</sup> siècle: aperçu statistique*, in *Revue de l'École nationale des langues orientales*, ii (1965), 53-67; Telegdi, *Remarque sur les emprunts arabes en persan*, in *Acta Iranica*, ii (1974), 337-45; Peysikov, *Leksikologiya sovremennogo persidskogo yazika*, Moscow 1975; W. Skalmowski, *Ein Beitrag zur Statistik der arabischen Lehnwörter im Persischen*, in *Folia Orientalia*, iii (1961), 171-5; **Kh.** Farshidard, *Arabī dar fārsī*, 1367/1988; M.D. Moinfar, *Le vocabulaire arabe dans le livre des Rois de Firdausi*, Wiesbaden 1970. For borrowings other than Arabic, see G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, i-iv, Wiesbaden 1963-75, and M.A. Jazayeri, *Western influence in contemporary Persian: a general view*, in *BSOAS*, xxix (1966), 79-96; Windfuhr (incl. Arabic) 1979, 155-8 (for earlier literature, see Horn, in *GIPh*, i, 2, 2-9; Jensen, 4-5 and Bahār, *Sabkshināst*, *passim*).

Persian, as the culturally dominant language in the area, has influenced considerably both the narrower and larger surrounding territories. This influence has been exercised both by literature and through everyday communication. There is some information on the influence made upon Ottoman Turkish, but only scanty information concerning such languages as Urdu or Hindi (see Hardev Bahri, *Persian influence on Hindi*, Allahabad 1960, cf. Windfuhr 1979, 219; and see further the general bibliographies on linguistics and languages).

iv. *History of grammar writing: Western-type and indigenous*  
1. *Studies on Persian in Europe.*

The first grammatical descriptions of Persian appeared from the 18th century onwards in Europe, although there were scattered references on Persian in the previous centuries as well (the oldest such source is the Persian part of the *Codex Cumanicus*, see D. Monchi-Zadeh, *Das Persische im Codex Cumanicus*, Uppsala 1969; A. Bodrogligeti, *The Persian vocabulary of the Codex Cumanicus*, Budapest 1971; P. Orsatti, *Prodromi degli studi europei sul persiano nel Rinascimento*, in *Italia ed Europa nella linguistica del Rinascimento*, ed. M. Tavoni, Ferrara 1996, ii, 551-67). These first descriptions written by missionaries, theologians, scholars or people of practical orientation (e.g. Ludovicus de Dieu [1628], John Greaves [1649], Ignazio di Gesù [1661]) were meagre collections of paradigms in most

cases. Sometimes they offered some (not always reliable) hints about the spoken variety, but their subject of "linguistic" description was the written (literary or formal) language (cf. P. Orsatti, *Grammatica e lessicografia Persiana nell'opera di P. Ignazio di Gesù, in RSO*, lv (1981), 55-85; Jeremiás, *Grammatical rule and standard in the first Persian grammars written in Latin (XVIIIth century)*, in Tavoni (ed.), *op. cit.*, ii, 569-80; eadem, *The impact of Semitic linguistics on the first Persian grammars written in Europe, in Irano-Judaica*, iv, ed. Shaul Shaked and Ammon Netzer, Jerusalem 1990, 159-71). However, the latest grammar of this century by J.B. Podesta (1691) stands pre-eminent in terms of quality and quantity (cf. Jeremiás, *The knowledge of Persian and a scholarly approach to the language: a Persian grammar by J.B. Podesta, 1691, Wien, in AO*, xlviii [1995], 71-86). On the famous "*Gazophylacium*", an early lexicographic work containing also a meagre description of Persian, see M. Bastiaensen, *La Persia Safavide vista da un lessicografo europeo. Presentazione del, in RSO*, xlviii (1973-4), 175-203. The earliest really good description written in a modern language was made by the famous Sir William Jones (see G.H. Cannon, *Sir William Jones's Persian linguistics*, in *JAOS*, lxxviii [1958], 262-73; Jeremiás, *The Persian grammar of Sir William Jones, in History of Linguistics*, ed. D. Cram et al., Amsterdam 1999, 277-88). The 19th century saw a proliferation of Persian grammars written in various languages of Europe (see C. Salemann - V. Shukovski 1888, 106-9; Windfuhr, *passim*, and below, *Bibl.*).

2. *Persian grammars by indigenous authors.*

The earliest Persian sources offering data on linguistic thinking came from "scientific" works such as those on prosody, metrics or philosophy (logic), e.g. *Shams-i Kay's al-Mu'jam fi ma'ayir ash'ar al-'adjam*, Ibn Sīnā's *Dānishnāma*, Naṣīr al-Dīn Ṭūsī's *Kutāb Asās al-iktibās* or **Sharīf Djurdjānī's** logical works (see Jeremiás, *Arabic influence on Persian linguistics, in History of the language sciences*, ed. S. Auroux et al., i, section IX. *The establishment of Arabic linguistics*, ch. 49, Berlin 2000, 329-34; eadem, *Rābiṭa in the classical Persian literary tradition: the impact of Arabic logic on Persian, in JSAL*, xxvii [2002], 550-74). After some abortive beginnings, the earliest description of Persian was written by Kemāl Pāshā-zāda or Ibn Kemāl Pāshā in the early 16th century in Arabic (see Brunschvig, *Kemāl Pāshāzāde et le persan*; Jeremiás, *Kemāl-pāshāzāda as a linguist, in Irano-Turkic cultural contacts in the 11th-17th centuries*, ed. Jeremiás, Budapest [2002] 2003, 79-110). In addition to lexicographic sources which contained chapters on issues of linguistic interest (see above *BQ*, *FDJ*, *FR*), one of the first Persian compilations based on such sources appeared in Tabrīz by Irāwānī (see Jeremiás, *Tradition and innovation in the native grammatical literature of Persian, in Histoire, Épistémologie, Langage* (Paris), xv [1993], 51-68). On the history of Persian, see **Khānlari**, *Tārīkh-i zabān-i fārsī*, Tehran, and on the history of writing grammar in Iran, see **Dj.** Humā'ī, *Dastūr-i zabān-i fārsī, in Lughatnāma-i Dihkhudā, Mukaddima*, Tehran 1337/1958, 110-47; **Ī.** Afshār, *Kitābshināst-i dastūr-i zabān-i fārsī, in Farhang-i Irānzamīn*, ii (1954), 19-45; M.B. Šanīr, *Sayrī dar dastūr-i zabān-i fārsī*, Tehran 1371/1992. On lexicography, see **kāmūs**. 2. *Persian Lexicography*; S. Nafīsī et alii, *Farhang-hā-i fārsī, in Lughatnāma-i Dihkhudā, Mukaddima*, 178-378.

*Bibliography:* Valuable grammatical studies on certain stages of the history of the language are numerous, but for some other fields research has only just begun. A concise descriptive grammar or a detailed and reliable description of the language history is still missing. In addition to the

references given above, for a general orientation, see Lazard, *Persian and Tajik*, in *CTL*, vi, The Hague-Paris 1970, 64-96 (bibl. from 1950 until 1968 at 77-96); Ehsan Yar-Shater, *Iran and Afghanistan*, in *ibid.*, 669-89; Windfuhr 1979; *CLI*, ed. Schmitt, 1989. For the best bibliographical journal for Iranian studies, see *Abstracta Iranica*, supplement to *Studia Iranica* published by L'Institut Français de Recherche en Iran, Paris-Tehran. In Iran there is an increasing number of general and specific bibliography and periodicals, e.g. M. Gulbun, *Kitābshīnāsi-i zabān u khatt*, Tehran 2536; Afshār, *Zabānshīnāsi*, in *Fihrist-i makālāt-i fārsi*, iv, Tehran 1369/1990; see also the studies published in *Madjalla-i zabānshīnāsi* (Iran University Press).

(ÉVA M. JEREMÍÁS)

### viii. ART AND ARCHITECTURE

#### (a) Art.

The arts of Iran will be analysed according to five broad periods; the first stretches from the Islamic conquest to the rise of the Saldjūkīds in the mid-11th century, a period characterised by the lingering effects of Sāsānid rule, and strong cultural, artistic and economic ties between Iran and 'Irāk. The second, which encompasses the next two centuries when Iran was ruled by the Saldjūkīds and their successors, is characterised by an expansion in the quality and quantity of goods manufactured in the cities of Iran. The third, which stretches from the consolidation of Mongol conquests in the mid-13th century to the rise of the Šafawīds in the early 16th century, is dominated by the artistic patronage of various courts. The fourth period coincides with Šafawīd rule (1501-1722); their contribution was to unify Iran under a single government which facilitated a diffusion of court culture to a broader spectrum of the population. Some members of the dynasty also fostered a more commercial focus in the works of art produced within the court itself. The concluding phase of traditional Iranian art lasted from the fall of the Šafawīds in 1722 to the end of the Kādjārs in 1925. During this time, Iran was subjected to new pressures that brought it into ever closer contact with other regions such as India and Europe. Some aspects of artistic culture suffered from external competition but others were reinvigorated, particularly court portraiture and the commercial production of carpets. The weaving, sale and collecting of carpets involved a wider spectrum of Iran's population than had earlier phases of artistic production and patronage.

#### 1. *The Sāsānid heritage and the beginnings of Islamic art 650-1050*

The abrupt demise of the Sāsānid Empire in the mid-7th century A.D. helped to shape artistic development of Iran under Islam. The hasty departure of the Sāsānid court from the royal palace at Ctesiphon allowed the conquering Muslim armies to witness the sumptuous surroundings in which those rulers had lived. Sāsānid defeats between 637 and 642 led the Muslim victors to acquire gold and silver vessels, bejewelled crowns and ornaments, silken garments ornamented with gems and precious metals and a jewel-encrusted carpet. The actual booty was distributed among the troops and soon disappeared from view, but its description in literary accounts helped to preserve an association of the Sāsānīds with an opulent court culture and in turn, generated later emulations. The court regalia or ceremonials of some Muslim rulers such as the Ziyārīds [q.v.] and Būyīds [see BUWAYHIDS] appear to have reflected Sāsānid tra-

ditions. The Islamic conquest's rapidity and the fact that it was not accompanied by large-scale destruction probably helped to maintain continuity of production among textile-, glass- and metalworkers in most regions of Iran. Popularised versions of Sāsānid court culture survived in aristocratic circles, particularly in the Caspian region. This broader tradition is evident in the continuity between the pre-Islamic and Islamic periods in the shape and decoration of objects used for festivals and feasts. These include ewers, boat-shaped drinking vessels and zoomorphic containers (A.S. Melikian-Chirvani, *Le rhyton selon les sources persanes*, in *St. Ir.*, xi [1982], 263-92; idem, *From the royal boat to the beggar's bowl*, in *Islamic Art*, iv [1990-1], 3-112).

The most public form of Sāsānid art, their rock-cut reliefs, were largely ignored in the Islamic era until the advent of the Kādjār dynasty in the late 18th century when they began to serve as models for reliefs portraying those rulers (see below, 5). Nevertheless, images depicting Sāsānid rulers in characteristic poses continued to be replicated in several media. Literary references mention the post-Sāsānid use of textiles bearing the likenesses of these monarchs, and depictions of "Bahrām Gūr at the hunt" appear on both metalwork and ceramic vessels of Islamic date (Maria Vittoria Fontana, *La Leggenda di Bahrām Gūr Āzāda*, Naples 1986). Memories of Sāsānid life were also transmitted through texts such as the *Shāh-nāma* of Firdawsī [q.v.] completed in 404/1010, describing the accomplishments of Iran's pre-Islamic rulers. Its themes were popularised through wall-paintings and eventually by illustrated copies.

In Iran there appears also to have been a substantial continuity in textile production between the pre-Islamic and Islamic era. The ties between a ruler and the textiles produced in his territory codified in the *tūrāz* [q.v.] system continued from the Sāsānid to Islamic periods, although there was a shift from the figural designs that included portraits of the rulers themselves in the pre-Islamic period to inscriptions giving the titles and epithets of Muslim rulers. The production of figural textiles did not, however, end with the Sāsānīds. Some silks ornamented with roundels containing birds or animals that survive in European collections, or have been discovered through archaeology, appear to postdate the Islamic conquest. Included among them are fabrics showing a composite creature that combines the legs and head of a feline with the wings and tail of a bird. One of these, made into a man's *khafīn* and now preserved in the Hermitage Museum, St. Petersburg, appears to date from the 10th century (Anna Jeroussalimskaja, *Soieries sassanides*, in *Splendeur des Sassanides*, Brussels 1993, 113-26, figs. 127-8). Melikian-Chirvani has identified this type of textile with a silk fabric known as *parand* that is associated with Khūzīstān in Persian sources (*Parand and Parniyān identified*, in *Bull. of the Asia Institute*, N.S., v [1991], 175-9). Older textile practices may also have lingered along the southern coast of the Caspian, an area noted for both its conservatism and its production of silk fabrics. These included green silk brocades known as *ṭabarī* after their place of production, Ṭabaristān. They were highly valued as carpets and may have had both figural ornament and Arabic inscriptions (R.B. Serjeant, *Islamic textiles. Materials for a history up to the Mongol conquest*, Beirut 1972, 74-80).

Iran's integration into the wider Islamic polity ensured that major changes also occurred in other artistic media such as calligraphy, bookmaking and ceramics. In all three cases, Iranian developments mirror those in 'Irāk at the centre of the 'Abbāsīd

caliphate. The rise of local lines of rulers such as the Būyids of central Iran or the Sāmānids of *Khūrāsān* and Transoxania (Mā warā' al-nahr [q.v.]) probably encouraged artistic production in their provincial capitals, but surviving examples testify more to the pervasive impact of 'Irākī culture than to the strength of any independent cultural developments. This is particularly true of the arts associated with Būyid patronage. The theory that the Būyid dynasty represented an "Iranian" phase in the history of Islamic Iran, popularised in the 1940s and 1950s, was followed by the "discovery" of silks, metalwork, and even a manuscript, the *Andarz-nāma*, all attributed to Būyid patronage. Today much of this corpus of "Būyid" art has been identified as of modern origin (Sheila S. Blair, J.M. Bloom, and Anne E. Wardwell, *Reevaluating the date of the "Būyid" silks by epigraphic and radiocarbon analysis*, in *Ars Orientalis*, xxii [1992], 1-42). There are, nevertheless, objects produced during the period and region of Būyid domination such as a gold jug bearing the titles of Abū Maṣṣūr Bakhtiyār (r. 967-78), a *Qur'ān* copied at Iṣfahān in 972, and an early copy of 'Abd al-Raḥmān al-Šūfī's *Šuwar al-kaṣā'ib al-thābita* ("Book of constellations") dated to 400/1009-10, in Oxford, all of which have a solid claim to authenticity (E. Wellesz, *An early al-Šūfī manuscript in Oxford*, in *Ars Orientalis*, iii [1959], 1-26).

The artistic currents manifested in *Khūrāsān* during the 9th, 10th and early 11th centuries, and broadly associated with the Sāmānids [q.v.], combine local traditions linked to the region's pre-Islamic past with innovations deriving largely from 'Irāk. The high quality of locally produced ceramics, metalwork and glass, known primarily through excavation, underscores the region's economic and cultural vitality. Glass excavated at Nīshāpūr exhibits close parallels to specimens found in 'Irāk (J. Kröger, *Nishapur. Glass of the early Islamic period*, New York 1995). The collection of twenty glass objects excavated at the Famen Temple in Shaanxi province, China, that were buried before 874, is a notable case of objects with parallels among finds from Iran and 'Irāk (An Jiyao, *Dated Islamic glass in China*, in *Bull. of the Asia Institute*, N.S. v [1991], 123-37).

Ceramics excavated at Nīshāpūr and other Sāmānid centres such as Samarkand, are notable for their varied technique, shape and decoration. Some vessels emulate types popular in 'Irāk which in turn reflect Chinese prototypes, whereas others exhibit local techniques, shapes and decoration. The most original, produced from the mid-9th to early 11th centuries, consist of plates, dishes and jugs embellished in slip-painting with both Arabic inscriptions, generally aphorisms, and patterns reflective of the local metalwork tradition. These handsome vessels with their well-written texts on a stark white ground often bear a striking resemblance to manuscript pages (C.K. Wilkinson, *Nishapur. Pottery of the early Islamic period*, New York [1973?]); *Terres secrètes de Samarcande. Céramiques du VII<sup>e</sup> au XIII<sup>e</sup> siècle*, Paris 1992). Although no dated manuscripts of this period appear to have survived, the Sāmānid ruler Maṣṣūr b. Nūh I (r. 961-76) initiated the translation of two major works in Arabic composed by Abū *Dja'far al-Ṭabarī* [q.v.]: his chronicle of early Islamic history, a task assigned to Abū 'Alī al-Bal'amī [see BAL'AMĪ. 2], and his *Qur'ānic* commentary. The latter's abridged translation into Persian, accomplished by a group of religious scholars, must have been produced in bilingual manuscripts. Later examples of *Qur'āns* with interlinear translations and Persian commentaries produced in *Khūrāsān* during the 11th and

12th centuries suggest that local calligraphers favoured variants of the "Abbāsīd" scripts used in contemporary 'Irāk (F. Richard, *Splendeurs persanes*, Paris 1997, 33-8).

## 2. Iranian art under the Saldjūkīds and their successors 1050-1220

The gradual westward expansion of the Saldjūkīds (r. 1040-1194 [q.v.]) during the 11th century allowed them to unify the eastern and western sections of Iran and to create a more homogeneous culture over the region as a whole. Paradoxically, even though these Turks were of tribal nomadic origin, the principal artistic consequences of their dominion appeared in Iran's urban centres. The Saldjūkīds ruled from a series of cities including Nīshāpūr, Rayy, Iṣfahān, Hamadān, Kirmān and Marw, but their zone of influence was also extended by alliances with other rulers including the *Kh*"ārazm *Shāhs* and the *Ghaznawīds*. In addition to the absence of a single administrative centre, the fissiparous character of the Saldjūkīd state stemmed from their tradition of dividing their domain among various family members, including minor princes who ruled with the assistance of a guardian or *atabeg* [see ATABAK]. After the dynasty's decline in the mid-12th century, effective power passed to a number of local rulers who had previously been Saldjūkīd tributaries or *atabegs* for various princes. Despite this political fragmentation, crafts flourished in towns from Harāt and Nīshāpūr in the east to Kāshān, Iṣfahān and Ṭabriz in the west.

Members of the Saldjūkīd dynasty are known principally as patrons of architecture (see (b), below), but the relative stability and prosperity associated with their rule was also a stimulus to the development of the portable arts. Metalwork and ceramic objects produced between the mid-11th and mid-13th centuries are noted for their innovative decorative techniques and their excellent craftsmanship. The strong foundations of this period's artistic culture also allowed it to survive for several decades after the demise of the Saldjūkīd dynasty itself. Dated and inscribed objects suggest that several crafts, including metalworking and ceramics, reached a peak of quality in the first two decades of the 13th century just prior to the devastation brought about by the Mongol conquests of the 1220s (R. Ettinghausen, *The flowering of Seljuq art*, in *Metropolitan Museum Journal*, iii [1970], 113-31; R. Hillenbrand (ed.), *The art of the Seljuqs in Iran and Anatolia*, Costa Mesa 1994).

The practice of inlaying objects of brass or bronze with copper, silver and gold was developed with particular skill in eastern Iran and *Khūrāsān*. During the 12th century this technique was associated with the city of Harāt, where some of the finest pieces are known to have been made, including a bath-bucket known as the "Bobrinsky Bucket" dated to 1186 and now in the Hermitage Museum. Objects given this distinctive and painstaking form of embellishment include ewers, bowls and trays intended for use in celebrations and implements such as pen cases and inkwells that were part of the paraphernalia of government officials. This technique was also practised by craftsmen in the western sections of Iran, and by the first quarter of the 13th century it had spread to the city of Mawṣil in 'Irāk. Melikian-Chirvani has suggested that the pieces made in western Iran drew their inspiration from the *Khūrāsānian* tradition, but it is unclear whether such connections would have been established through trade or because of the migration of craftsmen from east to west (*Metalwork from the Iranian world, 8th-18th centuries*, London 1982, 23-54, 136-42).

Although utilitarian ceramics continued to be produced in many places, the most ambitious objects are associated with the workshops of the central Iranian town of Kāshān. This centre was well endowed with the raw materials needed for the production of a new type of body based on the use of crushed quartz and other forms of silicon which could be shaped to an unparalleled thinness and even to create white bodies that were translucent. Although the ultimate inspiration for these changes is thought to have derived from a desire to imitate the thin and translucent bodies of Chinese porcelain, the Kāshān potters embellished their wares with painting executed in several different techniques (Etinghausen, *Evidence for the identification of Kashan pottery*, in *Ars Islamica*, iii [1936], 44-75).

The best-known decorative mode employed by the Kāshān potters is that of over-glaze painting in metal oxides and other pigments. The resulting "lustre-painting" [see KHAZAF] gave the objects a metallic sheen and brilliance. This technique had been applied to ceramics already in 9th-century 'Irāk and in Egypt during the 10th and 11th centuries. Its use at Kāshān appears to date from the late 12th century, and the technical secrets involved in its production may well have been carried there by emigré craftsmen fleeing the collapse of Fāṭimid rule in Egypt. Whatever the source from which this knowledge was obtained, the potters of Kāshān made this technique their own, applying it both to vessels destined for household use and to tiles used in the embellishment of architecture. They also employed other decorative techniques such as the use of moulded ornament or painting in under- and over-glaze colours. The most laborious of these techniques known as "seven-colour ware" could be executed with great finesse and allowed the ceramics to bear designs of increasing intricacy. Notable examples decorated in this technique include cups which narrate heroic tales or a large platter that depicts the siege of a fortress (O. Watson, *Persian lustre ware*, London 1985; Marianna S. Simpson, *The narrative structure of a medieval Iranian beaker*, in *Ars Orientalis*, xii [1981], 15-24; J. Soustiel, *La céramique islamique*, Freiburg 1985, 77-105).

The 11th and 12th centuries also witnessed the expansion of manuscript production in Iran; proportioned scripts developed in 'Irāk during the late 10th century and 11th century were adopted by calligraphers working in Iran (D. James, *The master scribes*, London 1992, 22-57). The most elaborate decoration occurs in Kūr'an manuscripts, such as the one copied and illuminated at Hamadān in 1164; but similar embellishments appear in a few secular manuscripts, and some illustrated books were produced in Iran and Saldjūkid Anatolia (Etinghausen, *Manuscript illumination*, in *Survey of Persian art*, 1937-54; Melikian-Chirvani, *Le roman de Varqe et Golšāh*, in *Arts asiatiques*, xxii [1970]).

### 3. Iranian art of the Mongol and Timūrid periods

The initial devastation of the Mongol invasion of Central Asia and Iran (1218-23) was followed by a second, less destructive wave of conquests in the 1250s which brought the remainder of Iran under Mongol control. Although skilled craftsmen were usually exempted from the general slaughter that ensued when a city or town resisted Mongol forces, the population and artistic productivity of the most devastated regions, such as Kūrāsān, plummeted and would not recover until the 15th century. By way of contrast, the cities and towns of western and southern Iran including Kāshān, Tabrīz and Shīrāz not only escaped destruction but even provided the cat-

alyst for a revival of artistic production in the later 13th and 14th centuries. Two major changes helped to transform the arts: increased connections between Iran and East Asia, especially China, and the growing importance of the princely courts as loci of artistic consumption and even at times of its production. This gave Iran's rulers a greater role in shaping its artistic traditions than they had previously exercised.

The first of the arts to revive may have been ceramics, led by the production of lustre-painted tiles and vessels at Kāshān. An important group of such tiles was produced to embellish a palace constructed by Abāka Khān (r. 1265-82) at Takht-i Sulaymān in north-west Iran (R. Naumann, *Die Ruinen von Tacht-e Suleiman und Zendan-e Suleiman*, Berlin 1977). Here for the first time vegetal and animal themes of Chinese origin such as lotus and prunus blossoms, many-clawed dragons and birds with extravagant plumage became part of the repertoire of Iranian craftsmen. Many of these same elements are also prominent in the luxurious silk textiles embellished with gold and produced under Mongol patronage in various sections of their domain, some of which have recently come to light among objects taken from Tibet. Even before their arrival in the Near East, the Mongols had demonstrated that they placed a high value on textiles, particularly those of silk brocaded with gold, and took pains to ensure their access to a steady supply. Those measures included seizing skilled weavers and moving them from one region to another to establish workshops where they would produce textiles for their Mongol masters (M. Rossabi, *The Silk trade*, in J.C.Y. Watt and Ann Wardwell (eds.), *When silk was gold*, New York 1997, 14-19). Although it is difficult to link surviving fabrics with any specific production centre, textiles depicted in Persian manuscripts of the late 13th and early 14th centuries demonstrate that textile designs of Far Eastern origin were in use there as well.

The history of Shīrāz shows a different aspect of this era. Its rulers, the Salghurids [q.v.], forged an alliance with the Ilkhānid Mongols which ensured the city's survival, and local traditions helped to shape its artistic production. A long-standing association of the nearby monumental ruins of Persepolis with a mythical past, in which deeds of the Biblical ruler Solomon and the Iranian hero Djamshīd were interwoven, provided the basis for a distinctive local titulature used by the city's Islamic rulers who declared themselves to be "heirs to the Kingdom of Solomon". These titles appear in a group of brass vessels inlaid with silver produced in Shīrāz during the 14th century. Although Kūrāsānī typologies of shape and decoration from the pre-Mongol era appear in some of them, other metalwork from Fārs displays complex faceted, fluted and imbricated shapes. The new emphasis on figural compositions in their decoration is akin to those used in illustrated manuscripts of the period (Melikian-Chirvani, *Metalwork from the Iranian world*, 136-230).

Ghazān Khān's acceptance of Islam in 1295 helped to integrate the traditional arts of Islamic Iran with the new cultural modes of the Mongol period. This is evident in two main areas—the creation of sumptuous, large-scale Kūr'anic manuscripts and the preparation of illustrated copies of Persian texts. Ghazān's interests included medicine and various scientific disciplines, and he commissioned the translation of Ibn Bukhtīshū's *Manāfi' al-hayawān* into Persian. An illustrated copy of it dated to either 1297 or 1299, now in the Pierpont Morgan Library, New York, was probably prepared for him (Barbara Schmitz, *Islamic and*

*Indian manuscripts and paintings in the Pierpont Morgan Library*, New York 1997, 9-23). Ghazān also ordered his vizier Rashīd al-Dīn to compile a history of the Turks and Mongols, a project that during the reign of Ghazān's brother and successor, Öldjeitü (r. 1316-35) was expanded to encompass the history of the rest of Eurasia. Some copies of the resulting text, the *Djāmi' al-tawārīkh* ("Compendium of chronicles"), were illustrated. The earliest and most important of these, now divided between the Edinburgh University Library and the Khalili Collection, London, was completed in 1314, probably for presentation to Öldjeitü (Sheila S. Blair, *A Compendium of chronicles*, London 1995, 16-31). As befits the text's wide-ranging sources, its illustrations show the impact of the several pictorial traditions available in Mongol Iran, including illustrations executed in Byzantine, Nestorian and Armenian workshops, Chinese cartography, Chinese printing, as well as earlier Persian paintings.

The gradual assimilation of the Mongols to Islamic culture was also marked by the creation of large-scale richly illuminated copies of the Qur'ān. The most impressive, executed by the period's leading calligraphers and embellished with full-page illuminations, were commissioned by Öldjeitü, most probably for the religious complex at Sulṭāniyya which became his tomb. Copies were prepared for him simultaneously in three cities: one was made in Baghdād, another in Mawṣil, and the third in Hamadān. All shared with the manuscripts of Rashīd al-Dīn's history an unusually large size, measuring 50 × 37 cm, and all were adorned with extensive gilded ornamentation (D. James, *Qurans of the Mamluks*, New York 1988, 92-126). A number of impressive Qur'ān manuscripts were also produced at Shīrāz for local dignitaries, including female patrons such as Tāshīr Khātūn, the mother of Abū Ishāq İndjū (r. 1343-57), and his sister Fārs Malik Khātūn. Their manuscripts combine well-executed gold calligraphy in 'Irākī modes with a local style of illumination (*ibid.*, 162-73; James, *The master scribes*, London 1992, 122-35).

The Mongol period also marks the beginning of the creation of illustrated copies of Firdawsi's *Shāh-nāma*, a text often regarded as historical and a source of edification for rulers. Copies produced between the late 13th and mid-14th centuries exhibit diverse features, suggesting that they were commissioned by a variety of patrons. Some, although lavishly illustrated, are compact in size, whereas others are on the scale of large Qur'ān manuscripts. One such large copy has been linked to the reign of the last important Mongol ruler, Abū Sa'īd (r. 1316-35), and may have been commissioned either by him or by his vizier, Rashīd al-Dīn's son Qhiyāth al-Dīn Muḥammad (O. Grabar and Sheila Blair, *Epic images and contemporary history: the illustration of the Great Mongol Shahnama*, Chicago 1980).

The death of Abū Sa'īd in 1335, without an heir, set the stage for conflicts between rival Mongol factions for control of his domain. The most influential among these factions for artistic development were the Djalāyirids [*q.v.*]. They seized the region of Tabrīz as well as much of 'Irāk including Baghdād, and embraced manuscript patronage with particular enthusiasm. Shaykh Uways (r. 1356-74) [see uways. 1] and his son Sulṭān Aḥmad (r. 1382-1410) gave painting and manuscript production a high priority within their courts. The Muẓaffarids [*q.v.*], who ruled Kirmān, Shīrāz, Yazd and Iṣfahān, continued to patronise the metalworkers and the Qur'ānic calligraphers of Fārs, and also commissioned illustrated copies of impor-

tant Persian texts, including Firdawsi's *Shāh-nāma* and Niẓāmī's *Khamsa*. The concern of these dynasties with artistic patronage was emulated by the Tīmūrid and Turkman dynasties that followed them.

Tīmūr's (r. 1370-1405) own relentless and destructive military campaigns left little time for cultivation of the arts, other than architecture which he apparently viewed as a tangible embodiment of his power, but many of his descendants made artistic patronage an integral part of their life. This activity came naturally to them, for it reflected an integration of craft production into the physical fabric of court life, a process which had begun with the mobile campcities of the Mongols. In the course of the 15th century, Tīmūr's feuding descendants gradually lost control over the territory which he had painstakingly assembled, but along the way they embraced the idea that a princely court should be a catalyst for connoisseurship in the visual arts. Craftsmen connected with Tīmūrid courts produced a variety of goods ranging from the accoutrements of nomadic prestige (tents, decorated saddles, embroidered silks, and jade drinking vessels) to manuscripts so lavishly ornamented that some were even written on gold-embellished paper and bound in bejewelled covers.

The list of Tīmūrid patrons of the book stretches from the incorrigibly rebellious Iskandar b. 'Umar Shaykh to Shāh Rukh and his sons Bāysonghor and Ibrāhīm Sulṭān, who were both noted calligraphers who had their own book-producing workshops. This process reached a climax with the last major Tīmūrid ruler, Sulṭān Husayn Baykara (1470-1506). His court at Harāt, enriched by the intellectual power of 'Alī Shīr Nawā'i, included the talented calligrapher Sulṭān 'Alī Mashhadī and the painter Bihzād [*q.v.*], whose fame later reached legendary proportions. It is a fitting expression of the interlocking realms of personal experience and aesthetic pleasure at Tīmūrid courts that the patrons themselves were often portrayed in their own manuscripts either directly in a frontispiece, or indirectly in the guise of participants in a literary narrative (T.W. Lentz and G. Lowry, *Timur and the princely vision*, Washington, D.C. 1989).

Despite the relatively short duration and intrinsic fragility of Tīmūrid control over Iran, the dynasty's legacy of combining patronage of the arts with other more obvious forms of royal prestige was also adopted by several of their rivals among the Kara Koyunlu and Ak Koyunlu dynasties, notably Pīr Budak Kara Koyunlu and Ya'kūb Aq Koyunlu. Relatively few works of art associated with these patrons are extant, but those manuscripts that have survived are notable for their intricate blue and gold illumination and expressionistic style of painting. Both of these features continued to be popular under the Ṣafawids.

It is generally believed that during the 15th century patterns and decorative schemes created by court workshops were first used in the design of textiles and carpets. Although literary references to carpets indicate that they were produced in Iran from the Sāsānid period onward, those descriptions are inadequate for reconstructing either their technical characteristics or their appearance. It seems that in Iran the production of knotted pile carpets only became common after the influx of Turkish nomads that began in the 11th century. Depictions of carpets in Persian manuscripts of the 14th and 15th centuries suggest that most had a central zone occupied by small-scale repetitive motifs similar to those used in Anatolian carpets of that period. During the 15th century, some carpets depicted in Tīmūrid paintings have designs focused

on a central medallion that may be round, oval or star-shaped. Often the carpet's corners contain quarter-medallions while the remainder of its field is filled with vegetal ornament usually in the form of spiraling vines with a variety of blossoms placed along them at intervals (Amy Briggs, *Timurid carpets. I*, in *Ars Islamica*, vii [1940], *II*, in *ibid.*, xi-xii [1946]). These painted carpets resemble the finest extant 16th-century carpets as well as designs used in manuscript illumination and book bindings [see also BISĀT, in Suppl.].

#### 4. Iranian art of the Šafawid period

The Šafawid creation of a kingdom whose boundaries resemble those of the modern Iranian state served to encourage a more homogenous artistic tradition within the region as a whole, a process also furthered by two of the dynasty's most influential rulers, Šāh Ṭahmāsp I (r. 1524-76) and Šāh 'Abbās I (r. 1587-1629). Šāh Ṭahmāsp's approach to the arts is an extension of the cultural attitudes which characterised late Tīmūrid Harāt in the period of Sulṭān Ḥusayn Bayqara, a connection that is understandable since Ṭahmāsp spent much of his youth in that city. The prince showed an aptitude for painting as well as calligraphy, so that when he returned to Tabriz to ascend the throne, he gave a great importance to the book arts. During the first decades of his reign, the royal workshop was engaged in the production of manuscripts, particularly copies of the classics of Persian literature. The most important manuscript associated with his patronage is a copy of Firdawsī's *Šāh-nāma* which is almost a picture album, for its 759 folios contain 258 illustrations and most of these occupy almost the entire surface of a page. As might be expected from a project of this size, it gives evidence of having been executed by numerous painters and the paintings show a range of styles and quality. By and large, the most impressive paintings are those situated in the manuscript's earliest sections where some of them continue trends originating in Tīmūrid Harāt while others echo features of western Iranian art under the Turkmans. The most elaborate compositions depict complex architectural structures the divisions of which are used to separate an event into narrative components (M.B. Dickson and S.C. Welch, *The Houghton Shahnama*, 2 vols., Cambridge, Mass. 1981). The impact of court etiquette and activities on the illustrative programs of a manuscript is particularly striking in the case of a manuscript of Niẓāmī's *Khamsa* also prepared for Šāh Ṭahmāsp and now in the British Library (Welch, *Persian painting*, New York 1976, 70-97).

Ṭahmāsp I's enthusiasm for manuscript patronage was echoed by other members of the dynasty, notably his brothers Sām Mīrẓā and Bahrām Mīrẓā as well as his nephew Sulṭān Ibrāhīm Mīrẓā. The last-named devoted considerable time and energy to artistic pursuits and employed a substantial number of calligraphers, painters and illuminators. A copy of Ḍjāmī's *Haft awrang* produced for him between 1556 and 1565, and now in the Freer Gallery of Art, shows the manner in which an illustrated manuscript could become a "world unto itself". Every folio provides a feast for the eye, contrasting finely executed calligraphy with colourful gold-decorated borders, while its paintings draw the viewer into a self-contained universe inhabited by people of various ages and social stations (Marianna S. Simpson, *Sultan Ibrahim Mirza's Haft awrang*, New Haven 1997).

During the Šafawid era, the popularity of illustrated manuscripts spread beyond the confines of the court, and they were produced also in non-royal workshops

for a widening circle of patrons. Workshops in the city of Šhīrāz were particularly active in the book-trade. During the 16th century, in addition to the ever-popular poems by Firdawsī and Niẓāmī, texts by several writers active in the late Tīmūrid period continued to be both widely copied and frequently illustrated, including the poetry of Ḍjāmī, Hāfi and the prose of Husayn Gawzargāhī (F. Richard, *Splendeurs persanes*, Paris 1997, 157-204). By the early 17th century, however, the attention of artists and collectors had shifted to single-page paintings, especially portraits, which were often gathered in *muraqqa's* [q.v.] (albums) (Sheila R. Canby, *The rebellious reformer*, London 1996).

The Šafawid court was also involved in the production of various other kinds of artifacts, particularly silk textiles embellished with gold and silver and carpets with complex patterns which echo the intricate designs of book illumination or even of book illustration. Annually on the occasion of Nawrūz [q.v.], following a well-established Islamic practice, Šafawid rulers were expected to provide their courtiers and retainers with garments appropriate to their status and position. Some garments worn by the ruler and his close associates were made of silk woven or embroidered in intricate patterns and embellished with gold and silver; used textiles were routinely destroyed in order to recover the metal which they contained. Šafawid rulers sent luxury textiles as diplomatic gifts to their rivals, the Ottomans and the Mughals. Historical accounts confirm that several towns in Iran produced luxury textiles and rugs, including Kāshān, Yazd, Kirmān and Iṣfahān, although it is difficult to link surviving examples with any particular centre (Carol Bier (ed.), *Woven from the soul, spun from the heart*, Washington, D.C. 1987; May Beattie, *The carpets of Central Persia*, Westerham 1976).

The few surviving rugs from 16th-century Iran follow designs created by professionally trained designers or painters. Some have elaborate figural and landscape compositions, whereas others are noted for their multi-level designs of vegetal scrolls. Šāh Ṭahmāsp I is known to have taken a personal interest in the production of carpets, and Šāh 'Abbās I is even said to have practised the weaver's craft. During his reign, weavers worked in the grounds of the royal palace at Iṣfahān, although production of luxury textiles and rugs also continued in other centres. The intricate time-consuming designs and lavish use of silver and gold that characterise Šafawid court carpets and textiles preserved in shrines or sent as diplomatic gifts suggest that court production was viewed as an index of royal prestige, rather than as a commercial venture (M. Aga Oghlu, *Safawid rugs and textiles*, New York 1941; Bier and Bencard, *The Persian velvets at Rosenborg*, Copenhagen 1995; F. Spuhler et al., *Denmark's coronation carpets*, Copenhagen 1987).

#### 5. Iranian art from 1722 to 1925: the Afshārid, Zand and Kādjār periods

Although the period from the effective end of the Šafawid dynasty in 1722 to the emergence of the Kādjārs in 1794 was marked by chronic political instability, artistic patronage still continued on an intermittent basis largely echoing trends of the late 17th century. Lacquerwork (actually varnished watercolour paintings, usually on a papier-mâché surface), which had earlier been used for bookbindings, was also used for pen-boxes, mirror cases and caskets. A few paintings and luxury textiles can be linked to Nadir Šāh (r. 1736-47), and his seizure of Mughal treasures during his invasion of India provided Iran's rulers with

jewels later used with great effect by the Kādĵars in their court regalia. Karīm Khān Zand's reign (1751-79) is notable for a stress on large-scale figure paintings on canvas that were used to embellish buildings, a practice expanded under the Kādĵars. It was that dynasty's second ruler, Fath 'Alī Shāh, who made the most concerted and skillful use of pictorial imagery as an adjunct to state policy. He revived the use of rock-cut reliefs for heroic images of himself and of his court and similar compositions were also used on portable objects such as lacquerwork bookbindings or mirror cases. Enthusiasm for large-scale figural painting was not limited to the Kādĵar court. Itinerant story-tellers used portable picture scrolls (sometimes identified as "Coffee-house paintings") as an adjunct to the recitation of stories and to performances of the passion play or *ta'ziya* [q.v.] (see Layla S. Diba and Maryam Ekhtian (eds.), *Royal Persian paintings. The Qajar epoch 1785-1925*, Brooklyn 1999).

The second half of the 19th century witnessed a decline in most local crafts due to the competition created by imports from Europe and India. One exception was the production of carpets, which were much in demand both within Iran and abroad. The old system of court production was replaced by commercial workshops that drew on the skill of many segments of Iran's population. Large-scale enterprises, situated in major urban centres such as Isfahān, produced standardised carpets to the specifications of a mostly foreign clientèle. Smaller production centres, situated in villages, the homes of private citizens or even in nomadic encampments, created more varied wares which often combined traditional schemes with idiosyncratic embellishments. This broadly based "folk-art" provided a kind of democratisation of Iran's artistic tradition that carried it into the 20th century (A.C. Edwards, *The Persian carpet*, 1953).

(PRISCILLA SOUCEK)

#### (b) Architecture.

The buildings erected in Iran during the Islamic period are some of the finest constructed anywhere in the Muslim lands. They are noteworthy for their sophisticated vaulting systems and their sublime use of coloured decoration on both interior and exterior. Both traits may have been encouraged by the materials available for construction. Although large supplies of wood grow near the Caspian Sea and good stone for masonry is found in Fārs and Aḡharbāyḡdĵān, brick is the predominant building material in most of the region. Already in pre-Islamic times, builders in Iran had devised ways of roofing their structures with domes supported on squinches, arches thrown over the corner of a room. Builders in Islamic times maintained the tripartite elevation of wall, squinch and vault, but divided the zone of transition into increasingly smaller and more elaborate segments, culminating in the *muḡarnas* [q.v.]. At the same time, they carved and painted the stucco covering interior sur-

faces and developed several methods of glazing tiles in a full range of colours, so that brick surfaces covered with brilliantly coloured tiles became a hallmark of Iranian Islamic architecture.

The following discussion surveys the development of these trends in Iranian Islamic architecture in five chronological periods. Within each period, a short assessment precedes discussions of the major building types and of form, materials and decoration. The article considers Iran in the broadest sense, comprising the plateau between the Tigris and Oxus rivers, and occasionally includes sites beyond these confines, such as Baghdād or Samarḡand. Naturally, more buildings and more types of buildings survive from the later period, making it possible to sketch a fuller picture from the extant record. By contrast, relatively few buildings survive from earlier times, and the evidence for early Islamic architecture in Iran has to be pieced together from widely scattered remains and snippets of information gleaned from texts.

#### 1. Before 900

Virtually nothing is known about buildings from the period of Umayyad rule when the Islamic capitals were in Syria, but, as befits Iran's position as one of the most important provinces in the 'Abbāsīd empire, most of the buildings erected there in the 3rd/9th century reflect the forms and styles used in the capital province in 'Irāḡ. Compared to 'Irāḡ, contemporary buildings in Iran are generally smaller, but show a wider variety of materials, including rubble and mortar, fired brick, mud brick (particularly in northeast Iran and the adjacent regions of Central Asia) and wood. Many are decorated with the styles of carved stucco development at the 'Abbāsīd capital of Sāmarrā' [q.v.].

The most important building type known from early Islamic times in Iran is the congregational mosque. Congregational mosques built in Iran resemble those constructed elsewhere in the 'Abbāsīd domains, for virtually all of them are (or were) large buildings with a central courtyard surrounded by porticos or arcades and a large covered prayer hall on the *qibla* side (in Iran, the southwest). The prayer hall was a hypostyle room, in which the roof was supported on a multitude of single supports, either piers or columns. The best standing example of a hypostyle congregational mosque is the one known as the Tārī Khāna, erected at Dāmghān in the 3rd/9th century. The remains of others have been excavated at several sites, including Sūsā in Khuzistān in southwestern Iran and at Sīrāf on the Persian Gulf (dateable A.D. 815-25), but the largest and most important of these hypostyle congregational mosques was the one erected at Isfahān. Founded ca. 771, it was expanded under the 'Abbāsīd caliph al-Mu'tasim (r. 218-27/833-42) and served as the basis for the present Friday Mosque (Masjdīd-i Dĵum'a) in the city.

In addition to the hypostyle congregational mosque, there were other types of small mosques. One type had an attached courtyard leading to a rectangular prayer hall (measuring between 5 and 10 m on a side) divided by one or more transverse arcades, with a projecting *mihrāb* [q.v.] in a rectangular salient. At least ten examples were excavated in the residential quarters at Sīrāf, and some may date as early as the 3rd/9th century. Another type of small mosque is a square covered with nine domes. The one that survives at Balkh is about four times the area of the small mosques at Sīrāf (measuring ca. 20 m to a side) and was elaborately decorated on the interior with extravagantly carved stucco.

The same forms and decoration were used on a smaller scale in domestic architecture. Vaulted and domed houses excavated at Marw (now in Turkmenistan) were decorated with Sāmarrā'-style stucco. Houses excavated at Nīshāpūr also had stucco dados elaborately carved in a similar style (several are now on display in the National Museum in Tehran and the Metropolitan Museum in New York).

Caravanserais [see KHĀN] erected along the major trade routes across Iran and Central Asia also reflect the plans of those found elsewhere in the 'Abbāsīd lands. Three mud-brick forts erected at Darzīn in Kirmān province, for example, are square buildings (25 m on a side) with round buttresses and tunnel-vaulted chambers.

## 2. 900-1250

This was the most creative period in Iranian architecture, and all of the distinctive features of Iranian Islamic architecture—the use of fine-quality baked brick as the primary material of construction and decoration, the development of glazed tile as an important medium of both interior and exterior decoration, the four-*iwān* plan, mausolea, minarets, the tripartite elevation of dome chambers, the subdivision of the squinch into increasingly smaller units and the *mukarnas*—appear for the first time during this period. Most of these features are commonly associated with the patronage of the Saldjūk dynasty (432-590/1040-1194), whose territories stretched from Central Asia to 'Irāk, but many were introduced earlier and were not limited to the Saldjūk domains.

New congregational mosques were built to suit the need of the growing Muslim community. Those erected in the 4th/10th century, as at Na'in and Ardistān, continued to use the hypostyle plan, but the major feature of this period was the development of a new plan having a courtyard surrounded by arcades linking four *iwāns*, high vaulted rooms open to the court at one end. The transformation from the hypostyle to the four-*iwān* plan is best seen in the mosque at Iṣfahān, an early capital of the Saldjūk domains. In 485/1086-7, the twenty-four columns in front of the *mihrab* were replaced with a free-standing domed pavilion supported on giant polylobed piers. Then, later, probably in the early 6th/12th century, four *iwāns* were added around the court. This combination of four *iwāns* plus dome chamber was soon repeated in congregational mosques in nearby towns such as Ardistān, whose hypostyle mosque was revamped between 553 and 555 (1158-60).

Despite the occasional use of other types of congregational mosque, the four-*iwān* plan became the standard for congregational mosques erected all over Iran from this period onwards. Scholars have long debated why this change occurred. Although the reasons are not entirely clear, it may have been simple practicality and utility. This plan had already been used in many pre-Islamic buildings in 'Irāk and Iran, ranging from the Parthian palace at Ashur (1st century A.D.) to Sāsānīd houses at Ctesiphon (6th century A.D.). It provided a suitable setting of monumentality, without any rigid princely or cultic associations.

From the 6th/12th century the four-*iwān* plan also became standard for many other types of buildings. To judge from later examples, this plan may have been used for *madrāsas*, which began to proliferate at this time. This plan was also used for caravanserais, such as Ribāt-i Sharaf, built in 508/1114-15 by the Saldjūk vizier Sharaf al-Dīn Kummī on the old route north from Nīshāpūr to Marw. Building civil structures was considered an act of piety and a sign of

sovereignty, and many local rulers embellished their domains in this way. The Kurdish prince Badr b. Ḥasanawayh (r. 370-404/980-1013), for example, erected a series of bridges along the pilgrimage route near Kḥurramābād; Kākūyid *amīns* added iron gates to the mud-brick walls around the city of Yazd in 432/1040-1, as did the Shaddādīd *amīr* Shāwūr I b. Faḍl at Gandja in 455/1063.

From the 5th/11th century onwards, minarets began to proliferate throughout Iran. Most are tapering brick cylinders about 30 m tall, decorated with horizontal bands of elaborate brick patterns and elegant inscriptions. In earlier 'Abbāsīd times, minarets had been attached to congregational mosques and normally set opposite the *mihrab*. In this period they were erected by a broader spectrum of people, including viziers, judges and private individuals, and sometimes set as isolated, free-standing constructions. Their proliferation may also indicate a revolution in technique which made these tall baked-brick towers resilient to earthquakes.

The monumental tomb [see KUBBA; TURBA] was another major type of building erected in this period. Tomb towers were popular along the Caspian littoral, as exemplified by the Gunbad-i Kābūs (397/1006-7), the earliest and also the most spectacular example to survive. The classic example of the domed tomb is the mausoleum of the Sāmānīds at Bukhārā (310s/920s), but its exquisite form and decoration in carved plaster and baked brick bespeak a long tradition. The domed tomb became the most popular type. Three fine examples were erected at Marāgha in the 6th/12th century, but the largest and most splendid is the one built at Marw for the Saldjūk sultan Sandjar (r. 511-52/1118-57).

Larger tomb complexes also developed during the period. Some, such as those at Mashhad or Kumm, surrounded the graves of Shī'ī *imāms*. They were underwritten not only by wealthy Shī'īs but also by government officials seeking to garner the support of heterodox segments of the local population. Other complexes grew up around the graves of such learned figures as al-Ḥakīm al-Tirmidhī or such mystics as Abū Yazīd al-Bisṭāmī [q.v.]. These shrine complexes were often agglomerative, and the specific stages of construction can only be revealed by detailed archaeological investigations, usually impossible because of the sacred nature of the sites.

Texts mention large palaces and elaborate houses for the upper classes in the Būyid capitals at Baghdād and Shīrāz and the Saldjūk capitals at Iṣfahān, Baghdād and Marw. Excavations have revealed only tantalising fragments from minor sites, such as limestone panels from the palace of the Hasanawayhids at Sarmādj in southwest Iran or carved stucco panels from Tirmidhī on the Oxus. Contemporary houses excavated at Nīshāpūr were lavishly decorated with painted stucco.

Domes were elaborated and articulated during this period. In order to lighten the domical mass, both physically and visually, builders developed the double dome, in which two shells of slightly varied profile are connected by intermittent ties. Nizām al-Mulk's *Siyāsāt-nāma* (ed. H. Darke, Tehran 1340/1962, 211, tr. idem, London 1978, 167) mentions that one of the 4th/10th-century tombs of the Būyids at Rayy already had such a double dome (*ba du pūshīsh*), and extant examples survive from the end of the 5th/11th century (e.g. the tomb at Kharraḡān dated 486/1093-4). Ribs were used to facilitate construction in a land where wood was unavailable for centring. As the dome

was built, the ribs were bonded into the construction and often exploited for decorative effect. The inventiveness Iranian builders displayed in the manipulation of domed spaces is clear from the Friday Mosque at Iṣfahān, where over two hundred examples cover the individual bays, although the exact chronology of the vaults has not been established and it is still unclear what percentage can be assigned to this period.

Dome chambers typically show a tripartite elevation, with the dome supported on an octagonal zone of transition, in which four squinches alternate with four blind arches, in turn supported on four walls arranged in a square. In more elaborate examples, builders inserted an intermediary sixteen-sided zone or squinch net between the dome and the octagonal zone. In a single example, the north dome at Iṣfahān, the parts are aligned vertically. In all other cases, the three parts are distinguished visually.

In addition to vaults, builders also manipulated arches. *Mihrābs* from this period, the earliest to survive in the region, consist of concentric niches within rectangular frames, as at the 4th/10th-century congregational mosque at Nā'īn. Builders also developed the *pīshṭāk* [q.v.], an arched opening surrounded by a free-standing rectangular frame. The ruined building at Sarwistān, which Bier has recently re-attributed to the early Islamic period, had a *pīshṭāk* in the middle of the façade, and by the 4th/10th century builders used this form in Iranian mosques and mausoleums (e.g. the Arab-Ata mausoleum at Tim in the Zarafshān Valley dated 367/977). The *pīshṭāk* soon became one of the most distinctive features of Iranian architecture, used in a variety of building types including caravanserais (e.g. Ribāṭ-i Malīk, rebuilt in 471/1078-9, and Ribāṭ-i Sharaf) and mausolea (e.g. Uzgand and Sarakhs, 5th-6th/11th-12th centuries).

Builders in this period also displayed their inventiveness by varying the shape of the arch, from round to keel-shaped, trilobed and polylobed, and by combining squinches of different shape in the same building. Five different types of squinch, for example, are used at Ribāṭ-i Sharaf. By further subdividing the squinch, builders seem to have developed the *muḳamas*, tiers of niche-like elements that project out from the row below. Already at the Gunbad-i Kābūs, a few tiers of *muḳamas* decorate the half-vault over the door, and *muḳamas* corbels were used to support the cornices of tomb towers, as at the Gunbad-i 'Alī (448/1056-7) in Abarkūh or the balconies of minarets, as at Bisṭām (514/1120-1). *Muḳamas* was clearly used to provide a visual transition, but its structural role remains to be documented.

During this period, fine baked brick was the pre-eminent material for the construction of important buildings, while mud brick, pisé and stone were used for subsidiary structures or in specific areas. By the 6th/12th century, a standard baked brick measuring ca. 25 × 25 × 5 cm had replaced the large rectangular bricks used in the early period and the smaller bricks associated with Būyid buildings in the Iṣfahān region. Bricks were laid in a variety of flush or basket bonds, from common and double bond to diaper patterns, or in combinations of recessed and projecting bricks.

Builders also exploited the spaces between the bricks for decorative effect. Builders in northeastern Iran often laid bricks in double bond so that the vertical joints created a pattern of light and shade across the wall. Builders sometimes filled the joints with plaster endplugs, which were stamped or carved with geometric, floral or epigraphic, patterns, or with pieces

of glazed tile, which contrasted with the matte, reddish or yellowish brick. Holes in the brickwork on the earlier tomb tower erected at Kharraḳān in 460/1067-8 were probably filled with these glazed pieces, and small fragments are still preserved in the dome chamber in the congregational mosque at Gulpāyagān erected under the Salḏjūk Muḥammad b. Malīkshāh (r. 498-511/1105-18 [q.v.]). From the 6th/12th century onwards, builders commonly set out glazed bricks which spelled out sacred words and phrases in the technique known as *bannā'ī* "builder's [technique]".

Builders or decorators (the distinction is unclear in this period) also realised the potential of other methods for adding colour to their brick buildings. The most labour-intensive and therefore the most expensive method was to cut the glazed tiles into small pieces to form geometric designs, strapwork or inscriptions. The most common glaze was light or turquoise blue, easy to prepare from copper. The tomb chamber at Natanz (389/998-9) has small pieces of glazed tile inset in the plaster decoration. The minaret at Sīn (526/1132) has a complete inscription made up of pieces of glazed tile. Two tombs at Marāgha, the Gunbad-i Surkh (542/1147-8) and the Gunbad-i Kābūd (593/1196-7), have elaborate strapwork patterns. One monument erected shortly before the Mongol invasions, the *madrasa* at Zawzan (616/1219), displays two additional colours of glazed tile, white and dark blue.

From ca. 1200, builders also decorated the interior of buildings with expensive lustre tiles. At major shrines such as Kumm and Mashhad, hundreds of individual tiles, some specially made to fit the site, were used to cover the cenotaphs, *mihrābs* and walls of the tomb chambers. These tile revetments were signed by the most famous potters of the day, Muḥammad b. Abī Tāhir and Abū Zayd, both members of prominent lustre-potting families from Kāshān, home to this speciality. As the city of Kāshān, located near important mines, had a monopoly on tile production, the term *kāshī* [q.v.] came to refer to glazed tile.

Similarly, builders often painted the stucco coating interior surfaces. Traces of red, blue and green paint are often visible on *mihrābs*, and walls were sometimes painted to imitate brick bonding patterns. Other subjects include geometric and vegetal ornament as well as figures, animals, and birds. The increased use of colour and the growing taste for covering up wall surfaces foreshadow later developments, but at this time structure and decoration were kept in balance.

### 3. 1250-1500

This period marked the triumph of coloured decoration. Builders elaborated the technique of tile mosaic so that it covered the entire surface. They also expanded the palette to a full range of seven colours (dark and light blue, white, black, yellow and green, in addition to unglazed brick). They added other techniques of tile decoration, including *cuerdas seca* and *lāḏwardīna*, overglaze painting. This period also saw an increase in the height, verticality and size of buildings, and the enormous complexes ordered by Mongol and Tīmūrid rulers attest the wealth available in this period of trans-Asian trade. Individual buildings were often incorporated into complexes, which combined a mosque, *madrasa*, *khānqāh* and other service buildings around a tomb, either for the founder (as in Ōldjeytū's tomb at Sulṭāniyya [q.v.] or Tīmūr's tomb, the Gūr-i Mīr at Samarḳand) or for a Šūfī saint (as at Natanz, Bisṭām and Gāzur Gāh outside Herat).

Congregational mosques followed the standard

four-*iwān* plan. The one built at Warāmīn in the 1320s exemplifies Ilkhānid work, but the most impressive is the elephantine one erected by Tīmūr in his new capital at Samarqand. Known as the Mosque of Bibī Khānum, after Tīmūr's favourite wife, it measures a gargantuan 100 × 125 m. Wherever space was available, as in these two examples, these congregational mosques had regular exteriors, but whenever they had to be shoehorned into the space available in a city, as in the one that Tīmūr's daughter-in-law Gawharshād added to the shrine of the Imām al-Riḍā in Mashhad in 821/1418-19, the exterior was irregular. As before, these mosques focus on the courtyard, and the one at Mashhad is truly magnificent, with dazzling tile mosaic and underglaze- and overglaze-painted tiles.

*Madrasas* of the period are even more homogeneous than mosques and have a similar plan of a court surrounded by two stories of students' cells connecting four *iwāns*, as at the Madrasa Imāmī (755/1354) at Iṣfahān or the one built at Khargird in 846-8/1442-5 by the architect Kawām al-Dīn Shīrāzī, the first Iranian architect whose career and style can be delineated. The *madrasas* built by Shāh Rūkh's son Ulugh Beg in Bukhārā and on the Rīgīstān in Samarqand (both 820-3/1417-21) are variations on the same theme.

A similar plan was also used for rural caravanserais, often erected along major trade routes as part of the flourishing overland trade. Caravanserais were also built within cities. One of the few urban commercial buildings to survive is the Khān al-Mīrdjān (or Khān al-Urtma) in Baghdād (758/1359); its sophisticated transverse-vaulted roofing system, which allows light to flood the interior, shows that the patron, the governor of Baghdād for the Djalāyirids, considered the caravanserai as important as the other parts of his complex.

Both the tomb tower and the domed square chamber continued to be used for funerary monuments. Mausolea built for lesser figures, such as descendants of the *Imāms* or minor princes or princesses, were relatively small, free-standing buildings (e.g. the Imāmzāda Dja'far at Iṣfahān, 725/1325). The most striking examples, notable for their fine tile decoration, are found in the necropolis outside of Samarqand known as the Shāh-i Zinda, where many domed structures lining the street leading to the principal shrine were built for female members of Tīmūr's family. Since some orthodox scholars condemned the building of mausolea, the cenotaph was sometimes set in the open air in front of an *iwān*. Several Tīmūrid examples of this arrangement, which has been called a *hazīra*, are found at Gāzur Gāh, Turbat-i Shaykh Djam and Ṭayyabād.

Richer patrons, mainly sultans and their chief ministers, built larger tombs as part of elaborate funerary complexes. The best example to survive from the Ilkhānid period is the mausoleum of the Khān Öldjeytū at Sulṭāniyya, but the foundations established by Ghazān Khān and his vizier Rashīd al-Dīn at Tabriz were equally large. Large complexes were also built around the tombs of Šūfī saints. A few honoured contemporary *shaykhs*, such as the complex built at Naṭanz in the opening decade of the 8th/14th century for the Suhrawardī *shaykh* 'Abd al-Samad (d. 699/1299-1300), but more commonly they honoured saints long since dead, as at the complex of Abū Yazīd Bisṭāmī, which underwent major restoration at the same time. These complexes, like mosques, had regular exteriors whenever space allowed, as at the gigantic shrine that Tīmūr erected on the steppe for Aḥmad Yasawī [*q.v.*]

at Turkistān (799-801/1397-99) and the one that Shāh Rūkh erected for 'Abd Allāh Anṣārī [*q.v.*] at Gāzur Gāh (829-32/1425-29).

A few palaces were permanent constructions. Ca. 1275, the Ilkhān Abāqa, for example, constructed a summer residence at Saṭūrīkh (now Takht-i Sulaymān [*q.v.*]) on the foundations of the Sāsānid sanctuary of Shīz. The quality and abundance of the architectural décor, particularly the marble carvings and the lustre and *lādjuvardīna* tiles, show that the Mongol ruler spared no expense. Both the site, which has been identified as the place where the Sāsānid emperors had been crowned, and the decoration, including lustre tiles with quotations and scenes illustrating themes from the *Shāh-nāma*, may have been chosen for their association with pre-Islamic Iranian kingship. The ruins of the Aḳ Sarāy, Tīmūr's palace at Shahr-i Sabz (781-98/1379-96) show the same concerns for size and fine tile decoration.

More often, however, the Mongols lived in elaborate tents [see KHAYMA. iv]. Ghazān's summer palace, for example, was said to have been a tent of golden tissue which took two years to make, and the Spanish ambassador Ruy Gonzalez de Clavijo described the even more sumptuous pavilions inhabited by Tīmūr. These tents were often set in gardens, and the Tīmūrids constructed several canals outside Harāt to water their extensive suburban estates set in gardens with such evocative names as the Bāgh-i Djahān-ārā "(World-adorning garden)". Observatories are the most notable civil structures to survive from this period. The one ordered by Hülegü in 758/1258 for the celebrated astronomer Naṣīr al-Dīn Ṭūsī [*q.v.*] on a hill north of his capital at Marāgha served as the model for the one that Ulugh Beg built at Samarqand in 823/1420 for Ghiyāth al-Dīn Kāshī [*q.v.*].

Builders in this period shifted their attention from structure to space, developing new and inventive ways of covering both square and rectangular areas. The solid walls of earlier buildings were pierced with openings and bays, and several types of transverse vaulting were developed to admit light and air. Experiments with transverse vaulting over rectangular spaces in the 8th/14th century led to the development of squinch-net vaulting in the 9th/15th. Builders transformed the traditional square room into a cruciform chamber with broad niches on the sides. Both the recesses and the central square are spanned by four broad arches. The intersection of these eight arches creates a smaller square which supports the traditional arrangement of four squinches, an octagon, a sixteen-sided zone and the dome. The interstices between the ribs and squinches are filled with faceted and painted plaster, hence the name "squinch net". This new system has many advantages: the vault itself is significantly smaller than the square room it covers; it is relatively light in weight; and the loads are concentrated on points rather than walls, as in Gothic architecture, so that the walls can be opened up with windows or filled with staircases and subsidiary rooms.

Builders also altered the proportions used in this period, making rooms taller, arches more pointed and minarets more attenuated. Typical of the new verticality and refinement of form are the monumental portals with soaring double minarets preserved in Iṣfahān, Yazd and Abārkhūh. Many of these soaring vaults are decorated with plaster *muqarnas* shells that are suspended from the outer shell by ropes. Those used at Naṭanz in the early 8th/14th century are relatively simple, but the ones erected a century later at Turkistān are of unparalleled complexity.

Decoration, too, became more complex. Entire wall surfaces were often covered with *bannā'ī*, thereby enveloping the building in a web of pious phrases. Tile mosaic became more common, with floral and curved designs replacing the angular ones used earlier. Interior plaster surfaces were often covered with intricate moulded and painted designs, often derived from book painting and thereby suggesting the existence of a central design studio in this period.

#### 4. 1500-1800

The buildings erected during this period are some of the most alluring and attractive in all Iranian architecture, and for many viewers, their glittering web of glazed tile, soaring portals, bulbous domes, and slender minarets epitomise the essential qualities of Persian architecture. In part, their fame is a matter of survival, for a large and impressive ensemble of buildings is easily accessible in Iṣfahān [*q.v.*], the third capital of the Ṣafawids, and Shīrāz [*q.v.*], capital of the Ṣafawid regent Muḥammad Karīm Khān Zand (*r.* 1164-93/1751-79). In part, the attractiveness of this architecture is due to its open and easy design, with simple compositions based on addition and symmetry. These buildings show little structural or formal innovation, for builders needed to build and decorate vast structures in the shortest time; hence colourful tile revetments sometimes conceal structural banality. The greatest strength lies in the planning and execution of large urban ensembles, in which a variety of commercial, religious and political functions are integrated in harmonious compositions. This was also the period when builders, like contemporary painters, developed an interest in the history of their art, be it the Timūrid tradition of dynastic architecture in Khurāsān or the local building traditions of Iṣfahān and Shīrāz.

In general, buildings, especially religious ones, use the same type of plans found in earlier periods. The four-*iwān* plan, for example, continued to be standard for congregational mosques, as in the splendid one, now called the Masjd-i Imām, that Shāh 'Abbās (*r.* 995-1038/1587-1629) ordered for his new capital at Iṣfahān. The same plan was also used for *madrasas* and *khāngāhs*. So, too, the domed tomb remained popular. The tomb of Kh'ādja Rābi' at Mashhad (1030/1620) is a domed octagon, whereas that for Tahmāsp's father Shaykh Djibrā'īl, in the village of Kalkhurān near Ardabil, is a square surmounted by a tall bulbous dome recalling Timūrid tombs of Central Asia.

In comparison with earlier times, much more civil architecture survives from this period, particularly from the reign of Shāh 'Abbās, who saw architecture as a means of enhancing his economic policies. An extensive system of *kanāts* [*q.v.*], subterranean aqueducts directly linked to aquifers, were dug to supply new settlements. Bridges were set up along important roads, as in the superb examples over the Zāyanda Rūd [*q.v.*] at Iṣfahān. Different types of buildings for collecting and storing water were developed, such as the water storage tank (Pers. *āb-ānbār*), usually a large domed cistern ventilated by means of pipes (Pers. *bādgīr* [*q.v.* in Suppl.]). To make and store ice, builders developed ingenious mud-brick structures (Pers. *yakhčāl*), often decorated with inventive brickwork. 'Abbās also encouraged the construction of thousands of pigeon towers (Pers. *burqī-i kabūtār*) on the fertile plain around Iṣfahān so that he could heavily tax the guano harvest. Similarly, the city of Bukhārā, one of the Shaybānid capitals in Central Asia, was dotted with caravanserais (Pers. *ṭīm*) and domed markets (Pers. *chār-sū*).

These many buildings were often integrated into fine ensembles centred around a large *maydān* [*q.v.*] or public square. In Iṣfahān, 'Abbās had four new buildings strategically and symbolically positioned around the *maydān*: the bazaar entrance on the north faced the congregational mosque, and a small mosque known as the Masjd-i Shaykh Luṭf Allāh on the east faced the 'Alī Kapu, the entrance to the palace precinct. Between 1596 and 1606, 'Abbās's governor Gandj 'Alī Khān laid out a similar complex in the provincial capital of Kirmān, with a bath, caravanserai, mint, water tower, mosque and other public buildings connected by a continuous portico around a large rectangular *maydān* (100 × 50 m). Many of these urban developments continued under Muḥammad Karīm Khān Zand at Shīrāz, who glorified his capital with broad avenues and more than 25 public buildings. As in Iṣfahān and Kirmān, the most important structures, including the citadel or *arg*, the congregational mosque known as the Masjd-i Wakīl (begun in 1766), a public bath and a vaulted bazaar, were grouped around a *maydān*.

This was also the period when the major shrine complexes in Iran took on their definitive shape. To mark their claims of sovereignty and establish their legitimacy, the Ṣafawids expanded and rebuilt the family shrine at Ardabil, making it one of the largest in the country, matched only by the shrine around the tomb of the eighth Imām al-Riḍā at Mashhad. Both shrines received substantial endowments, not only property and chattels but also precious objects, particularly books. 'Abbās also endowed a staggering 1,162 pieces of Chinese porcelain to the shrine at Ardabil, and had a new building, the Āb-Khāna, built to house it. Other shrines developed for Shūfī *shaykhs*. One of the most picturesque is that for Shaykh Ni'mat Allāh Walī at Māhān outside Kirmān, whose sequence of courtyards and richly-carpeted and splendidly-vaulted halls evokes the wealth and authority accorded these brotherhoods in Ṣafawid Iran.

Town planning and building on such a wide scale necessitated the employment of dozens of architects and master-builders assisted by calligraphers, tile-makers, plasterers, woodworkers and painters. The workforce, especially at the top, was highly mobile and dominated by the Iṣfahān school, which attracted the finest talent from throughout the Ṣafawid domains. The vast scale of architecture during this period led builders to standardise exteriors but to experiment with structure. They perfected the system of ribbed vaults developed during the 9th/15th century by empirical study of the strength of materials. For example, large rooms were spanned by ribbed arches with forked bases which distributed the weight on to piers concealed within the walls. These structural experiments have only been revealed during the course of restoration, as in the upper two floors of the 'Alī Kapu palace at Iṣfahān. New forms include the *tālār*, the pillared hall known from Achamaenid times and adopted during this period for audience halls.

Flat walls were often decorated with paintings of varied subjects. Some illustrate current events, such as the series of embassies and battles depicted on the walls of the Āb-Khāna palace at Iṣfahān. Others evoked classic Persian themes, such as the romance of Khusrāw and Shīrīn. A few, such as the murals in the Imāmzāda Shāh Zayd in Iṣfahān, depict religious scenes, and some others, such as a group of oil paintings, depict foreigners. In many cases, these wall paintings seem to be the work of the same artists who illustrated manuscripts and single-page paintings.

## 5. 1800 to the present day

Architecture in this period can be seen as a struggle between tradition and innovation. Under the Kādījārs [q.v.], new Europeanising features were grafted on to traditional ones. Thus congregational mosques, erected at Kazvīn, Zandjān, Simnān and Tehran, followed the now-classic plan of an open court with two or four *iwāns*, but interior façades were articulated with such new features as kiosks, windcatchers or clocktowers. The increasing acceptance of European architecture, especially under Nāṣir al-Dīn Shāh (r. 1264-1313/1848-96 [q.v.]), is especially clear in secular architecture, exemplified by several palaces in and near Tehran, such as the Gulistān Palace and the Kaṣṣ-i Kādījār. Traditional forms such as the *tālār* are combined with such European elements as tall windows, engaged pilasters and grand staircases. The mixture of traditions is also evident in the decoration, in which tile mosaic, underglaze-painted tiles and mosaic mirror-work mingle with floral, figural and landscape scenes in the Victorian style.

These experiments with European modernism continued in the 20th century under the Pahlawīs, as the best architects linked an appreciation of traditional values with such modern requirements as waste disposal. Nader Ardalan's Centre for Management Studies in Tehran (1972) followed the form of a traditional *madrasa* and used local construction methods and labour (see further on modern buildings in the capital, TИHRĀN. I. 3(b), (c)). Similarly, the enormous tomb constructed at Rayy for Āyatullāh Khumaynī [q.v. in Suppl.] in 1989 used the traditional form of domed tomb surrounded by minarets, although it was executed using relatively inexpensive materials and techniques of industrial construction.

**Bibliography:** The bibliography on Iranian architecture is enormous and expanding rapidly. The following includes only books and other major studies. **IRIČ**, also ERİČ, ERAČ, on modern maps Erachh, a small town of north-central India, situated on the south bank of the Betwā river, 65 km/40 miles northeast of Jhansi and 100 km/62 miles southeast of Gwalior (lat. 25° 47' N., long. 79° 9' E.). It is now in the Jhansi District in the extreme southwest of Uttar Pradesh Province of the Indian Union.

Although now within a region largely Hindu, the area round Irič is rich in Indo-Muslim remains and monuments. It was in Muslim hands by 709/1309, when the Khaldjī commander Malik Kāfūr [q.v.] stayed at Irič, then renamed Sulṭānpūr, en route southwards for Warangal [q.v.]. The Djāmi' Masjid there was built by Ghāzī Diyā' al-Dīn in 815/1412 during the time of the last Tughlukid Mahmūd Shāh II, and was added to in the time of Awrangzīb. There is also a fort and five gates to the town. Under the Mughals, it was the centre of a *sarkār* in the *ṣāba* of Agra, but by the mid-18th century was under Marāthā control until the region passed to the British.

(C.E. BOSWORTH)

**IRTISH**, conventionally Irtysh, a river of Siberia and the main left-bank affluent of the Ob [q.v.]. It rises from glaciers on the southern slopes of the Altai mountains near the modern frontier of the Mongolian Republic and Chinese Turkestan or Sinkiang [q.v.] through the Zaysan lake into the Kazakhstan Republic, then out of it into the Omsk oblast of the Russian Federation and joins the Ob at Khanty Mansiysk, its complete course being 3,720 km/2,312 miles, the greater part of it navigable.

The Irtish is mentioned, as *ärtis*, in the Orkhon inscriptions (Kültégin E37; Bilgä Kagan E27), where it is stated that the Kaghan's armies crossed the Altai and then the Irtish, and attacked the Türgesh on its farther (i.e. western) side (cf. Barthold, *Zwölf Vorlesungen*, 46, 112). But the history of the Irtish basin in early Islamic times is very obscure; none of its peoples can have become Muslim before the post-Mongol, later mediaeval period. A geography like the *Hudūd al-ālam* mentions the Artush (?r.l.ṭh) as located between the Oghuz and Kimäk tribes, but the author was clearly describing a river further west (possibly the Yayıķ [q.v.], which rises in the Urals and flows into the

Abarkūh, Gunbad-i 'Alī, 448/1056-7.

Tehran, Gulistān Palace, Shams al-Imāra, completed 1282-84/1865-67, view from the rear.

Isfahān, Masjed-i Imām, formerly the Masjed-i Shāh, begun 1020/1611, courtyard.

Sangbast, tomb and adjacent minaret, probably 6th/12th century.

Dāmghān, Congregational Mosque, known as the “Tārī-Khāna,” 3rd/9th century, courtyard looking toward prayer hall (vaults restored 20th century).

Nāyin, Congregational Mosque, 4th/10th century, court façade showing brickwork added during the Būyid period.

Māhān, Shrine of Ni'mat Allāh, vaulted hall adjacent to the tomb, early 11th/17th century.

Yazd, Congregational Mosque, west prayer hall, late 8th/14th century.

Nāyin, Congregational Mosque, 4th/10th century, stucco *mīhrāb*.

Caspian), since he says that it emptied into the lower Volga (tr. Minorsky, 75, §6.42, comm. 215). Maḥmūd al-Kāshgharī mentions the *Ertish suwi* as a river in the Yemāk/Yemāk steppes which flows, so he says, after receiving many tributaries, into a lake; this error would appear to stem from the same source as the *Hudūd al-‘ālam*, since the Arctic Ocean, the *Bahr al-Ḍulumāt* of Arabic travellers, can hardly be meant (*Diwān lughāt al-turk*, tr. Atalay, i, 97, tr. Dankoff and Kelly, i, 129). The Islamic geographers seem to locate the Kimāk [*q.v.*] roughly between the (true) Irtish and the Ob, and Gardizī writes of the trade route which led northwards from Transoxania to the land of the Kimāk, on the Irtish (cf. Barthold, *op. cit.*, 112-13; but the lower course of the river, beyond the Kimāk, must have been the home of Ugrian peoples, the ancestors of the peoples found there in the 16th century, the Ostyaks or Khanty). During these later mediaeval times, the former lands of the now-vanished Kimāk, were apparently occupied by the Tatars (perhaps including aboriginal Ugrians now Turkicised) and, to their south, the Kazakhs occupied this region (see J. Forsyth, *A history of the peoples of Siberia, Russia's North Asian colony 1581-1990*, Cambridge 1992, 10-16, 21-7).

It was on the banks of the Irtish that Čingiz Khān in 1208 defeated the remnants of his Mongolised Turkish rivals, the Nayman tribe; he halted in the summer of 1219 on the banks of the Irtish before his troops appeared in Transoxania; and towards the end of Čingiz Khān's life, his son Djoči established his *ordo* on the river (Barthold, *Turkestan*<sup>3</sup>, 361, 392-3, 403, 450; idem, *Ḍwölf Vorlesungen*, 165, 180). The Great Khān Ögedey was buried, when he died in 639/1241, on a mountain in Mongolia near the headwaters of the Irtish (Sharaf al-Dīn, in Barthold, *Turkestan*<sup>3</sup>, 473). Islam may have appeared amongst Turkish nomadic tribes in the region when the Blue (or White) Horde came to control its southern and western fringes. In 792/1390 Tīmūr despatched from Tashkent an army against a Khān called Kamar al-Dīn, and this marched north from the Issik-Kul [*q.v.*], crossed the Ili and reached the Irtish (Sharaf al-Dīn Yazdī, *Ḍafar-nāma*, Bibliotheca Indica, i, 495); and at the end of the 15th century, the Khānate of Sibir [*q.v.*] moved its centre to Sibir or Kashlik or Isker near the confluence of the Irtish and its tributary the Tobol. The overwhelming of the Khānate of Sibir in the 1590s [see KÜÇÜM KHĀN], however, brought the greater part of the course of the Irtish under Russian control.

*Bibliography:* Given in the article; and see OB and SIBIR. (C.E. BOSWORTH)

**ISFĪDJĀB**, a town and an extensive district of mediaeval Islamic Central Asia, identifiable with the later Islamic town of Sayram. Popular etymologising saw in the name the Persian component *sīpid*, *ispīd* "white". It lay on the Aris river, a right-bank affluent of the Sir Daryā [*q.v.*], 14 km/8 miles to the east of the later town of Chimkent (lat. 42° 16' N., long. 69° 05' E.); Chimkent itself, now in the southernmost part of the Kazakhstan Republic, is mentioned in the historical sources from Tīmūrid times onwards, e.g. in Sharaf al-Dīn 'Alī Yazdī.

Isfīdjāb apparently had a pre-Islamic history, though nothing is known of this; it may have had a local Iranian ruler, as did the adjacent regions of Ilāk [*q.v.* in Suppl.] and Ustrūshana [*q.v.*]. The incursions into Transoxania of Kutayba b. Muslim [*q.v.*] are said to have reached as far as Shāsh and Isfīdjāb, but it appears more firmly in history with a report that, in 225/840, the Sāmānid governor of Samarkand Nūh

b. Asad subdued it and built a wall round its vineyards and cultivated lands (presumably as protection against raids by the steppe Turks) (al-Balādhuri, *Futūh*, 422; al-Sam'ānī, *Ansāb*, ed. Ḥaydarābād, vii, 26). Being on the northernmost edge of the Islamic lands in Central Asia, Isfīdjāb was very much a frontier town, the resort of *ghāzīs* and other fighters for the faith, who congregated in *ribāts* [*q.v.*] fortified against the infidel Oghuz and Kimāk Turks, and numbered by al-Muqaddasī, 273, with palpable exaggeration, at 1,700. Many of these *ribāts* were built and financed by the people of the Transoxanian towns well behind the frontier, and manned by them in relays; *ribāts* of the men of Nakhshab, Bukhārā and Samarkand are mentioned, and another *ribāṭ* was that financed by the Sāmānid commander Karatigin al-Isfīdjābī, with Karatigin and his son Maṣūr buried nearby (al-Muqaddasī, *loc. cit.*; Ibn al-Athīr, ed. Beirut, viii, 492). That this Karatigin—obviously a Turk—was the local ruler of Isfīdjāb in the early 4th/10th century, as Barthold assumed, is by no means sure. At all events, because of its role as a vital frontier post (*thaḡhr djalīl wa-dār al-dijhād*) it was, unusually for Transoxania, exempt from taxation, and the local ruler paid only a token tribute and forwarded presents to the Sāmānid *amīr* in Bukhārā (Ibn Ḥawqal, 510, tr. 488; al-Muqaddasī, 340; cf. Barthold, *Turkestan*<sup>3</sup>, 175-6, 211-12, and idem, *A history of the Turkman people*, in *Four studies on the history of Central Asia*, iii, 77-8).

The geographers describe it at this time as thoroughly well defended, with a citadel (ruinous, however, in Ibn Ḥawqal's time) and walls round the *shahristān* and *rabaḍ* respectively. As a place where the products of the steppes could be exchanged for those of the settled lands, its markets were flourishing, and al-Muqaddasī mentions in particular the *sūkh al-karābis*, that of the cotton merchants, the rents from whose shops were a charitable *wakf* that yielded 7,000 dirhams a month (Ibn Ḥawqal, 510, tr. 487-8; al-Muqaddasī, 273; cf. Le Strange, *The lands of the Eastern Caliphate*, 483-4, and Barthold, *Turkestan*<sup>3</sup>, 175-6).

We do not know what ultimately happened to the local rulers of Isfīdjāb, but in 382/992 the Karakhānid ruler of Balāsāghūn, Bughra Khān Hārūn or Ḥasan, occupied the town as he advanced into the Sāmānid dominions, and it is mentioned that a certain Abū Maṣūr Muḥammad b. Ḥasan al-Isfīdjābī rebelled against Sāmānid authority in the very last days of the dynasty (387/997) and summoned help from the Karakhānid Iliḡ Naṣr.

In the early 7th/13th century, the inhabitants of Isfīdjāb, together with those of Shāsh, Farghāna and Kāsān, were removed by the Kh'ārazm Shāh 'Alā' al-Dīn Muḥammad and the land laid waste because he was unable to protect them from the destructive raids of the Mongol Küclüḡ [*q.v.*] (Yākūt, *Buldān*, ed. Beirut, i, 179; Ibn al-Athīr, xii, 271; Barthold, *Turkestan*<sup>3</sup>, 368-9). The second disaster which Isfīdjāb suffered, according to Yākūt, *loc. cit.*, was devastation by the Mongols of Čingiz Khān.

It is around this time that the name Sayram begins to replace Isfīdjāb, although already in the later 5th/11th century, Maḥmūd al-Kāshgharī, *Diwān lughāt al-turk*, tr. Atalay, iii, 176, tr. Dankoff and Kelly, ii, 241, equated Sayram/Saryam with the older Isfīdjāb. As such, Sayram figures in the history of the western part of what became, from the 8th/14th century onwards, Mugholistan [*q.v.*], e.g. in the history of the later Čaghataiyids as recounted by Mirzā Muḥammad Ḥaydar Khān. Thus it is recorded that 'Isā Bughra Khān devastated Sayram, Turkistān and Tashkent in

855/1451, and later in the century, Sayram was governed by Yūnus Khān, the maternal grandfather of Bābur [q.v.]. The Čaghataiyid Maṣūf Khān led an expedition against the Kirghiz [see KĪRGĪZ] in 928/1522 because these Turks had been ravaging the lands from Sayram to Farghāna (*Tārīkh-i Rashīdī*, tr. Elias and Ross, 79, 358). Thereafter, Sayram passed substantially under the control of the nomadic kingdom of the Kaḏāḑ. In 1723 Sayram, Turkistān and Tashkent passed under the control of the Kalmucks [see KALMUK] and remained within their vast nomadic empire until the destruction of this by the Chinese in 1758. Thereafter, the region reverted to Kaḏāḑ rule, and then, in the first half of the 19th century, passed under Russian control; see KĪRGĪZ.

**ISFIZĀRĪ**, Mu'īn al-Dīn Muḥammad Zam'ī, epistolary stylist and historian in Timūrid Khurāsān whose birth and death dates are unknown but who flourished in the second half of the 8th/14th century.

From what he says in his own works, he arrived in Harāt, probably from Isfizār in what is now western Afghānistān, in 873/1468-9, and was employed as a *munshī* at the court of Sultan Ḥusayn Bayḑara [see ḤUSAYN at Vol. III, 603a] under the patronage of the vizier Kīwām al-Dīn Niẓām al-Mulk (d. 903/1497-8). Isfizārī is most famous as the author of a history and compendium of information on the city of Harāt, its topography and its *fadā'īl*, the *Rauḏāt al-djannāt fī awṣāf madīnat Harāt*, dedicated to Ḥusayn Bayḑara, begun in Muḥarram 897/November 1491 and completed two years later at the end of 899/autumn 1494. Noteworthy here is his use of earlier, lost sources, such as a history of the Kart or Kurt dynasty of Harāt by one Rabī'ī Bushandjī. The history was edited by Sayyid Muḥammad Kāzīm Imām, 2 vols., Tehran 1338-9/1959-60, also by Muḥammad Ishāḑ, Calcutta 1380/1961 (*non vidi*); description and analysis of contents by Barbier de Meynard in *JĀ*, 5th ser., vol. xvi (July-Dec. 1860), xvii (Jan.-June 1861), xx (July-Dec. 1862). Isfizārī's *Risāla-yi Kawānīn*, an epistle in praise of Harāt and its ruler, is also extant, as is also an *inshā'* collection of his.

*Bibliography*: See also Browne, *LHP*, iii, 420-1; Storey, i, 355-6, 1296, iii, 256-7; Storey-Bregel, ii, 1045-8; Rypka *et alii*, *Hist. of Iranian literature*, 434, 447.

(C.E. BOSWORTH)

**ISHKĀSHIM**, a small settlement in the modern Afghān province, and the mediaeval Islamic region, of Badakhshān [q.v.].

It lies in lat. 36° 43' N., long. 71° 34' E., and should not be confused with Ishkāmīsh, further westwards in the Kunduz or Kaṭaghān district of Badakhshān. The historic Ishkāshim is on the left or southern bank of the Panj or upper Oxus river (only in Soviet times did a smaller settlement on the other side of the river become the chef-lieu of the so-called Ishkāshim *tuman* or district of the Gorno-Badakhshān Autonomous Region within the Tadjik SSR; cf. BADAKHSHĀN at Vol. I, 853b), and is at present connected with the provincial capital of the [Afghān] *wilāyat* of Badakhshān, Fayḏābād, by a road across the Sardāb pass. When Soviet Russia invaded Afghānistān, the Russian army in the early 1980s constructed a bridge across the Oxus at Ishkāshim for transporting troops and matériel. Ishkāshim has in fact played a part in history because of its position along the only winter route between Badakhshān and the trans-Oxus regions of Shughnān and Wakhān [q.v.]; and it was here that the British traveller John Wood crossed

the ice-covered river in 1837 (*A journey to the source of the River Oxus*, 2nd ed. London 1872, 204-6).

The place existed in early Islam, and the *Hudūd al-'ālam*, tr. Minorsky, 121, makes Sikāshim the chef-lieu of Wakhān and the residence of its *malik*; the people comprised at that time (late 4th/10th century) both Muslims and infidels (*gabrakān*, ? Zoroastrians). Many of the local people, on both sides of the Panj here, are Ismā'īlis, locally known as Mawlā'īs (see F. Daftary, *The Ismā'īlis: their history and doctrines*, Cambridge 1990, 544). The people of villages in the vicinity of Ishkāmīsh, also in one place on the right bank of the Panj, perhaps totalling in all some 2,000, speak a distinctive Eastern Iranian language of the so-called "Pamir group", Ishkāshimī (see the *Bibl.* to BADAKHSHĀN, and also J.R. Payne, in R. Schmitt (ed.), *Compendium linguarum iranicae*, Wiesbaden 1989, 417-44).

*Bibliography* (in addition to references given in the article): L.W. Adamec, *Gazetteer of Afghanistan. Badakhshan province and Northeastern Afghanistan*, Graz 1972, 85-6; Muḥammad Nādir Khān, *Rāhnamā-yi Kaṭaghān wa Badakhshān*, ed. M. Sutūda, Tehran 1367/1988, index.

**'ISHKĪ**, MUḤAMMAD RIDĀ MĪRZĀDA, modernist poet, playwright, journalist and fervent Iranian nationalist (b. 5 June 1894, d. 3 June 1924 = 12 Tīr ASH 1303).

'Ishkī's life is shrouded in legend because of his ultra-patriotic pronouncements in his writings and speeches, his unconventional and often militant ideas in politics and literature, and above all, his tragic death at the early age of thirty from an assassin's bullet. He received his elementary education in his native Hamadān, attending the Ulfat and Ālyāns (Alliance) high schools, in the latter of which he learned French and was introduced to Western civilisation. His knowledge of French helped him to gain employment as a translator/interpreter for a merchant in Hamadān. However, before finishing school, he travelled around the provinces and towns, his eyes being thereby opened to the dismal social and economic conditions of his country and countrymen. At the beginning of the First World War, 'Ishkī was back in Hamadān, where in ca. 1915 he started his career as a journalist by publishing *Nāma-yi 'Ishkī*; from the start, he was an *engagé* journalist with leftist leanings. As Iran became a theatre of war with the movement of foreign armies, 'Ishkī joined a group of expatriates and settled for several years in Istanbul. It seems that even before he left, 'Ishkī was a Turcophile and was interested in the activities of the reformist and nationalist group of the Young Turks. According to some writers, while in Istanbul he attended the *Dār al-Funūn* for courses in science and philosophy.

'Ishkī's poetic gift now suddenly blossomed. This took place whilst travelling in Mesopotamia, in the midst of the ruins of the Sāsānid royal palace at Ctesiphon. The remains of the palace, with its huge *iwān*, triggered off a poetic rapture in 'Ishkī, and he composed *Rastākhīz-i shahriyārān-i Irān* ("The resurrection of Iranian kings"). It became the first opera in the Persian language, and was first staged in Isfahān on 'Ishkī's return to his homeland, to the tumultuous reception of the audience. 'Ishkī himself sang the part of the poet. This one-act opera play is a mixture of realism and fantasy, and is full of patriotic pathos, with *dramatis personae* including the poet ('Ishkī); Khusrāw-dukht (the Sāsānid princess); Darius the Great; Cyrus the Great; Anūshīrwān; Khusrāw Parwīz and his wife Shīrīn; and the prophet Zoroaster. The

purpose of this opera was to juxtapose the glories of the ancient Iran with that of the land of 'Ishkī's own day; the ancient kings accuse contemporary Iranians of having no energy and will and of leaving the country in a state of apathy and lethargy. 'Ishkī's second poem inspired by the Sāsānid ruins was *Kāfan-i sīyāh* ("The black shroud"). This is an epic poem 427 verses long, composed in the *musammaʿ* form set in the time of *Khusrāw* and *Shīrīn*, and what was meant to be a romantic epic turned out to be a powerful social commentary and criticism.

'Ishkī's criticism of the Iranian polity was carried to its height upon his return to Iran from his self-imposed exile in Istanbul after the end of the War. He wrote his vehement opposition to the 1919 Anglo-Iranian treaty in a form of a patriotic *kašīda*, *Mukhālif-at bā Karārdād-i Irān wa Inglīs* ("Opposition to the Iran-England treaty), in which he ridiculed the Prime Minister *Wuthūk al-Dawla* [q.v.] as well as the passivity of his compatriots, and this resulted in his being sent to prison. In 1920, he published a new journal *Kān-i bīstūm* ("The twentieth century"). His poetry and prose now became more and more inflammatory as he demanded radical reforms from the government, the Russian Bolshevik Revolution of October 1917 having had a clear impact on his ideas; in 1922, on the occasion of the Iranian New Year, he composed a poem *Id-i kārgarān* ("Festival of the Workers"). In his poetry, as in his journalism, he focused unrelentingly on Iran's national and social problems. In his satirical works, 'Ishkī came to use an increasingly malicious language, full of invectives, against members of the government as well as against deputies in the *Maǰlis*, and he rapidly moved to the extreme position of vigilantism, calling for an annual bloodbath in order to cleanse Iran of corruption. In 1924, he participated in a nationwide canvass for an ideal model (archetype) of each field of endeavour to which prominent thinkers were invited to write and publish. Answering that call, he wrote his revolutionary narrative poem *Ših tāblū-yi idyāl* ("Three ideal tableaux"). Ahmad Karimi-Hakkak has written that this work was 'Ishkī's "solitary attempt to break through the constraints of poetic diction and to liberalize the concept of rhyme and meter . . .". Since, however, 'Ishkī ends his poem advocating a bloodbath "to cleanse the country of all traitors", Karimi-Hakkak adds that "*The Three Tableaux* must ultimately be seen as an angry young man's frustrated outburst against the political situation in Iran during the last years of Qajar rule." 'Ishkī's next angry outburst turned out to be fatal. It was the time when *Riḍā Khān* [see *RIḌĀ KHĀN*] was preparing to become the first President of the Iranian Republic, and 'Ishkī strongly opposed this idea for two reasons, being afraid that the president, *Riḍā Khān*, would establish a military dictatorship, and also that Iranians were not yet ready for a republican democratic polity. He opted therefore for the continuation of the *Kādjār* dynasty. A few days after the publication of his attack on *Riḍā Khān*, 'Ishkī was assassinated in Tehran.

'Ishkī's contribution to Persian literature, journalism and political thought has yet to be fully examined and described, but there is no doubt that, had he lived longer, he would have been regarded as the writer who laid the foundation of modern Persian letters.

(P. CHELKOWSKI)

**ISHKODRA**, the Turkish form of the name of the town of Shkodër/Shkodra (Slavonic, Skadar) in the north of modern Albania.

The town is situated at an altitude of 16 m/52 feet near the banks of the lake of the same name, at the confluence of an arm of the Drin, the Buna/Bojana and the Kiri, and is dominated by the fortress of Rozafa and by Mt. Tarabosh. This ancient urban centre was founded in the 4th century B.C., in the Illyrian period, around the acropolis. It was successively dominated by the Romans (in 168 B.C.), Byzantines, Serbs (from 1043), Byzantines again, Serbs again, Ottomans (1393) and Venetians (from 1396). It became definitively Ottoman after two sieges (1474 and 1478-9). After the departure of the greater part of its population in accordance with the Ottoman-Venetian peace treaty, *Ishkodra* (equally called *Iskenderiyye* or *Skutari*) became the centre of a *sandĵak* of the same name and was gradually repopulated and Islamised. The tax registers show that, in addition to the troops of the garrison and their families, there were in 1485 27 Muslim and 70 Christian hearths, in 1528 119 and 43 respectively, and in 1570-1 217 and 27 respectively.

The town owed its importance, right up to the early 20th century, to its politico-administrative role and also to its geo-strategic position, directly connecting it with the Adriatic Sea (some 20 km/12 miles away by water) and the Italian ports, plus its situation on important trade routes (northwards to Montenegro, eastwards to the centre of the Balkan peninsula (*Ishkodra-Prizren* road) and southwards to the plains of the Albanian coastland. As the centre of a frontier *sandĵak* (comprising the modern regions of Montenegro and northern Albania), *Ishkodra* enjoyed its greatest period of florescence from the mid-18th century onwards, when the office of *sandĵak-beyi* passed into the hands of a local *āyān* family, that of *Buṣṭatli*. There they succeeded at the head of the town and *sandĵak*, which last they tried to enlarge: *Mehmed Pasha*, then his three sons *Muṣṭafā Pasha*, *Kāra Mahmūd Pasha* [q.v.] and *Ibrāhīm Pasha*, and, finally, *Muṣṭafā's* grandson, also *Muṣṭafā Pasha* [q.v.], who was in the end subdued by the Porte in 1831. In 1862 *Ishkodra* became the centre of an *evālet* with just one *sandĵak*, then from 1875 it was the capital of the smallest Ottoman *wilāyet*, with two *sandĵaks*, those of *Ishkodra* and *Draç* [q.v.] (*Durrës*). Being on the frontier with Montenegro, the province retained a special character (*muṣteṭṭānā*) until the Young Turk revolution. Reforms were never completely introduced. The *wāli* was also the military commander. The Muslim population did not perform military service but went out on campaigns in *bayraks* (there being 15 in the town). No population census was made. The Muslims and Christians of the adjacent mountain areas freely bore arms.

During the last century of Ottoman occupation, the town expanded towards the north. Because of epidemics, flood problems (the Drin changed its course in 1865) and earthquakes (notably in 1905), the old quarters within and around the fortress (*Alibey*, *Tabak*, *Ayazma*, etc.) were abandoned for new ones (*Parutsa*,

Rus, Perash, etc.). According to the *sālnāme* of 1310/1892-3, Ishkodra had at this time 12 Muslim quarters and 2 Christian ones, with a population of ca. 40,000 (almost all Albanians), two-thirds of these being Muslims and the rest Roman Catholic Christians. Some of the Muslims were *muhāđirūn* from Bosnia-Herzegovina and Montenegro [see MUHĀĐIR, 2.]. There was also a small community of Orthodox Christians (ca. 600 persons, Slavs and Vlachs) and a quarter of Muslim gypsies. Towards the end of the 19th century, the bazaar [see *sūk*], which stretched between the fortress and the new town, and trade in general, lost their importance relative to that of Rumelia because of the development of Salonica and the construction of the Salonica-Mitrovica railway line.

The cultural and social development of Ishkodra was the product of oriental, western and local influences which met there. The importance of Islamic culture is attested by the rate of Islamisation, the existence of mosques (almost 30, without much architectural significance except for the "Leaden Mosque" in the Tabak quarter, south of the citadel), the presence of dervish *tekkes* (the Bektāshīs are said to have been expelled at the opening of the 19th century by Muṣṭafā Pasha; the Riḫā'iyya and Tidjāniyya [*q.vv.*] appeared there at the beginning of the 20th century) and the foundation of *medreses*. Though remote from the great centres of Islamic culture, Ishkodra produced poets writing in the oriental tongues (notably, members of the Bushatī family and numerous *ulamā* who enjoyed great authority in the town. "Catholic-Italian" culture was brought by merchants and by missionary orders (Franciscans and also Jesuits from the second half of the 19th century onwards). The consuls of France, Britain, Russia, Greece and, above all, Austria-Hungary and Italy (who oversaw educational establishments) had an important influence; some of them, like A. Degrand and Th. Ippen, have left writings on the town and its region. As for local influences, these were the result of the weight of villagers of the plain and, above all, the mountain people (*Malisos*), mostly Christian and living according to customary law (*kānūn*) in the surrounding regions (in 1856 the Ottoman authorities installed a Commission for the Mountains (*Djibāl Komisyonu*) at Ishkodra). At the end of the 19th to the beginning of the 20th centuries there began to develop an Albanian literary culture under the impulse of certain members of the religious orders and the stimulus of the Austro-Hungarian and Italian consuls.

Ottoman domination ended in 1913 after a long siege by Montenegrin forces. After various occupations, the town and its region became part of the new Albanian state in 1919-20. Although it was the most important urban centre of the new state, Shkodër was not chosen as the capital, to the great chagrin of its people, because of its eccentric position on the Montenegrin border. Its development was adversely affected by this. It had only 28,500 people in 1942 and 71,000 in 1985. In this post-Ottoman period, the town has remained both the centre of Albanian Catholicism and of traditional Islam. Its *ulamā* have been raised as opponents of the reforms introduced when the Islamic community was restructured in the new state. On the other hand, it was at Shkodër that, in November 1990, the first church and first mosque were re-opened after 23 years of the prohibition of all forms of religious activity by the Communist authorities who had seized power in 1944. Since then, several mosques have been restored or built. One of them, opened in the mid-1990s, is one of the biggest

mosques in the Balkans. A *medrese* has opened and an Islamic centre supported by an organisation based on Birmingham is active. Hence Shkodër is today one of the most important centres of Islam in Albania.

**ISHŪTKHĀN**, ISHTĪKHAN, a town and district of mediaeval Islamic Transoxania. It lay seven *farsakhs* north of Samarkand and was administratively separate from it. There were many arable fields, irrigated by a canal taken off the Zarafshan river [*q.v.*]. In the 4th/10th century, the town had a citadel, a *shahristān* and a *raḩād* or suburb; a village of the same name exists on the site today.

When the Arabs took over Samarkand in the second quarter of the 8th century A.D., the *Ikhshīds* of Sogdia transferred their capital to Ishūtkhān. In the 3rd/9th century the district furnished a body of troops for the 'Abbāsīd army, distinguished as *al-Ishkūtkhāniyya* in al-Tabarī, iii, 1362, and at Baghdād these were allotted, with other troops from the Iranian and Central Asia East, a special quarter, whilst at Sāmarrā' they were allotted land grants (*kaṭā'ir*) (al-Ya'akūbī, *Buldān*, 248, 262-3, tr. Wiet, 30, 55). The revenue of the market in the town of Ishūtkhān was granted to the 'Abbāsīd general 'Uđjāyf b. 'Anbasa [*q.v.*], confiscated by the caliph al-Mu'tašim on 'Uđjāyf's fall in 223/838, and subsequently granted to Muḩammad b. Ṭāhir b. 'Abd Allāh.

AL-IS'IRDĪ, NŪR AL-DĪN IBN RUSTUM, Muḩammad b. Muḩammad b. 'Abd al-'Azīz, 7th/13th century

Syrian poet. Born in 619/1222 in Is'ird or Sī'ird [*q.v.*] in Southeastern Anatolia, which he sentimentally remembers in his *Diwān*, he lived in Baghdād and visited Egypt, but most of his adult life was, it seems, spent in Damascus (and al-Šālihiyya). There the *kādī* Šadr al-Dīn Ibn Sanī al-Dawla (590-658/1194-1260), for whom al-Is'irdī expressed biting contempt, appointed him one of the official witnesses (attorneys) doing business under the famous clock of the great mosque. He won the favour of al-Malik al-Nāšir Šalāh al-Dīn Yūsuf, ruler of Aleppo (since 634) and of Damascus (since 648) until his sad end in 658/1260, who made him his boon-companion. He was in contact with many of the *littérateurs* and other important men of his time, such as Djamāl al-Dīn Ibn Yağhmūr (599-663/1203-64) and the ambassador Nađim al-Dīn al-Bādarā'ī (594-655/1198-1257). At the end of his short life, he suffered loss of vision. He died in 656/1258.

His *Diwān* is so far known to be preserved only in ms. Escorial ar. 472 (with the title-page bound into ms. ar. 399), incomplete at the end. In addition to the many poems addressed to al-Malik al-Nāšir on a large variety of personal and public events, it includes poems addressed to, among others, the caliphs al-Mustanshir and al-Musta'šim, and al-Malik al-Mu'azzam, as well as fellow-poets, *dūbays*, *ghazals*, riddles, and the like, as one would expect in a *diwān* of the period. Wine-drinking plays throughout its customary large role. The *Diwān* offers valuable sidelights on the political and cultural history of Syria and Egypt immediately before the coming of the Mongols. Another work, apparently lost, *Sulāfat al-zar(a)dđūn fi 'l-khalā'a wa 'l-mudđūn*, dealt, as the title indicates, with lewd verses of his own composition, and also by others. Most of the verses quoted by the biographers, including the *Rangstreit* poem of wine and *hashish* (cf. F. Rosenthal, *The Herb*, Leiden 1971, 6, 163-6), may well go back to this work, as only a couple of them can be traced in the extant manuscript of the *Diwān*. The same applies to additional verses quoted by al-Šafādī in *al-Ghayth al-musađđijam fi sharh Lāmiyyat al-'ađjam*.

Al-Is'irdī represents the lighthearted side characteristic of Syrian secular life and culture before "the end of the days of joy in Damascus" (Ibn al-Šukā'ī, ed. J. Sublet, 168, tr. 196) which came with al-Malik al-Nāšir's downfall and the Mongol invasion. Little as we know about him, it seems clear that he, in common with numerous contemporaries, combined serious activity with a great zest for life and provided and enjoyed an atmosphere in which, despite all the political turmoil of the age, ease and elegance flourished as they were scarcely ever to do afterwards.

*Bibliography:* Šafādī, *Wafī*, ed. H. Ritter, i, 188-92, who furnishes most of the information for later biographers, also, in a slightly shortened and rearranged form in his *Nakt al-himyan*, Cairo 1329/1911, 255-7; Kutubī, *Fawāt*, Cairo 1951, ii, 329-34, ed. I. 'Abbās, Cairo 1973-4, iii, 271-6; Ibn Kathīr, *Bidāya*, xiii, 212; Ibn al-'Imād, *Šadharāt*, v, 284; Hāđđjī Khalīfa, ed. Yaltkaya, 995; Brockelmann, I, 299 (where the wrong date of death, 652, goes back ultimately to Flügel's ed. of Hāđđjī Khalīfa). (F. ROSENTHAL)

**ISKĀF**, ISKĀFĪ (A., pl. *asākifa*), "shoemaker", the tradesman who in pre-modern Islamic times produced ordinary shoes (*khuff*, pl. *khifāf*), nailed boots used by the common people (*lālakā*, pl. *lawālik*) and also *šamushkāt* (sing. *šamushk*), a type of boots of Coptic Arab origin (cf. al-Subkī, *Tabakāt al-šāfi'iyya*, Cairo 1966, 360). The shoemakers' use of leather gave rise

to a proverbial expression *bayt al-iskāf* "the shoemaker's house" which looked like a "house of hides" because of the pieces of leather everywhere. Like other trades, shoemakers were subject to the practices of the *hisba* [*q.v.*], enjoined to use good quality materials and to deliver goods on time.

The *asākifa*, like other artisan groups concerned with leather-working, such as the sandal-maker (*hadhdhā'*) and maker of leather bags (*kharrāz*), had a low social status because their work was regarded as unclean, and until modern times they worked hard for low wages; the proverb *al-iskāfī hāfī wa 'l-hā'ik 'uyān* "the shoemaker goes barefoot and the weaver is naked" expresses this succinctly. Often they worked on the street or at a street corner because of their inability to rent a shop. 'Abbāsīd Baghdād did, however, have a *darb al-asākifa*, a special lane for them to ply their trade. In Ottoman Istanbul, the shoemakers had their own guild like the tanners and other workers with leather, such as saddlers and cobblers.

Shoemakers often died in indigency. Al-Rāghib al-Išfahānī describes a shoemaker's legacy: "Madjūnūn was asked, 'What do you say about an *iskāf* who dies, leaving behind his mother and sister?' He replied, 'His inheritance (*mirāth*) belongs to the dogs and his [funeral] expenses are borne by the tanners (*dabbāghūn*); there remains nothing for his mother and sister except throwing dust and tearing their clothes (sc. in despair and anguish).'" There is little evidence of social mobility amongst shoemakers in pre-modern Islamic society, although there were in the 'Abbāsīd era secretaries and traditionists bearing the *nisba* of al-Iskāfī [*q.v.*] and see the works of al-Sam'ānī and Ibn al-Athīr given in the *Bibl.*, s.v.; whether the *nisba* relates to their own past or, more probably, to an ancestor who had plied this trade, is unclear.

**ISKĀN** (A.), lit. "coming into a peaceful state, settlement, the allocation of living quarters or space", hence in modern usage, "sedentarisation" as a stage after a migratory or nomadic existence.

Unlike *badw* [*q.v.*], "desert, people of the desert", and *ḥadar* "settled lands, people of the settled lands", *iskān* is not a concept often used in the Arabian peninsula and its fringes. In the recent past, the Bedouin of northern Arabia, when talking about the town of Shaykh Miskīn in the Hawrān [*q.v.*], ostensibly connected the term *miskīn* with the root *s-k-n* (when it is, in fact, derived from a quite separate, ancient Semitic usage, see MISKĪN); these townspeople were said to be descendants of people who had been unable to cope with the rigours of Bedouin lifestyle and had therefore settled.

In fact, equating *iskān* with "sedentarisation" places an undue emphasis on a "nomad-settler" dichotomy, when town or village and countryside were generally enmeshed in multiple relationships. Hence in what follows, some separation of contexts is attempted in an otherwise generalised discussion.

The Arabian peninsula and its ancillaries include a great diversity of physical environments, habitats and natural resources. Urban and rural settlements differ, not only from each other but also between themselves, and over time. Movement patterns are similarly diverse and shift through time. Factors affecting settlement and nomadism over the region can be discussed in general terms only, with regional and historical examples indicated in the bibliographical references. Settling and settlement take place in economic and political—often administrative—contexts; religious reasons have been important at some times and places. The economic context changes from the traditional period when animals were an essential source of energy and the more recent one, starting about the 1850s or 1860s, and involving modern sources of energy culminating with oil from regional oilfields [see NAFT. 3] and electricity grids. In traditional political economies, governments or rulers got wealth from taxation, tribute and booty, most of which ultimately depended on localised agricultural production; modern nation states get wealth from oil, directly or indirectly, and participation in the global political economy.

Environmental factors necessitate some seasonal mobility in most modes of livelihood, agricultural, commercial, and administrative as well as pastoral. In most social groups, households were and are the productive and consuming units, which may or may not have all members present. They drew and draw resources from various directions, drawing on two or more components from herding, agriculture, commerce and services. Towns and countrysides continue to be enmeshed through a variety of networks which may change over time but have features that continue.

*IskĀn* as “settling” has been a decision made by households and families throughout millennia all over the Arab world. For some groups, at some times and in some places, the settling was permanent; for others, it was temporary. The reasons for settling (and its reverse) by individual households and families are usually economic and social, but sometimes political. When households provided their own shelter and needs, moving or settling were not so different. The ability to defend household persons and property, which gives honour [see ʾIRĀḌ], could be achieved as a settled person and as a nomad. Changing from nomadic to settled status, and vice-versa, was managed through existing and long-standing networks and a variety of contracts or agreements, and some settling by households in the present continues to function in this manner.

With larger groups, “settlement” is more a response to significantly changing political, religious or economic events; governments may also decide on a policy of settlement to resolve perceived problems, while fiscal policies may encourage or discourage settlement. Whereas individual households decide all the time to settle or to be nomadic, decisions by groups of households to settle or by governments to settle nomads are more episodic. A well-known historical example of a government settling nomads as a policy is that of the early Islamic state, which recruited nomadic tribesmen into the armies as *muḳātila* and settled them in garrison towns (Donner 1981, 264-7; Kennedy 1986, 62-9) as a method of control, these troops to be financed by booty and tribute. Islam regards nomadic life as incompatible with a truly Muslim way of life [see TAʾARRUB]. A more recent example of government policy of settling nomads was the Ottoman empire's *Tanzīmāt* [q.v.] reforms of the mid-19th century, which put legal, military and fiscal pressure on

pastoralists to settle and grow grain in Syria, Transjordan and ʾIrāk in order to replace supplies from the former Ottoman lands in the Crimea and the Balkans. Between 1908 and 1914, ʾAbd al-ʿAzīz Ibn Suʿūd planted settlements of *Ikhwān* [q.v.] among tribes unwilling to give their allegiance to him, and so extended his influence (Musil 1928, 283), although he was later unable to control *Ikhwān* forces. During the 1920s to the 1940s, the Mandate governments [see MANDATES] together with the new Suʿūdī kingdom, required tribal sections to follow the government in whose territory each section had its summer water sources. As pastoral livelihood became untenable for many, these summer water points became the bases for settlements, first as storage depots and then as villages. All modern nation states of the region, with the exception of Oman/ʿUmān, apart from its Dhofar/Ẓufār region (Chatty 1996, 9, 188-9), regard settlement of nomads as a means of imposing or encouraging incorporation into the state and identity as citizens. States with potentially rich agricultural areas like ʾIrāk and Syria initially left the settlement of nomads to market forces, changes in land laws and the provision of hydraulic schemes. Later, their more revolutionary governments saw tribalism and nomadism as primitive survivals to be eradicated by social engineering. Saudi Arabia set up agricultural schemes in the 1960s to settle nomads and established the National Guard to provide employment for tribesmen after a long series of drought years in the 1940s and 1950s (H.H. Hamza 1982; W. and Fidelity Lancaster 1986, 1993). Later, state provision of water, electricity, health and education services, and subsidies for agriculture and housing, distributed oil wealth to rural areas (W. Lancaster 1997, 139-50, 166-80; ʾA.-R. al-Sudairi 1995). The UAE urged settlement in government-sponsored housing schemes and employment as a way of forming a modern society. Oman, after 1970, provided services to all citizens without requiring settlement.

Living quarters may be allocated by an individual family with the agreement of the heads of other families of the place, by a *shaykh* or headman, or by a government agent, depending on the nature of the living place. Tent sites of nomad encampments arrange themselves along lines of closeness and distance of members; links through women influence the siting of particular tents. Women's relationships similarly affect those who live in small villages and in house groups throughout the peninsula. Some recent settlements developed by state governments attempted to break up traditional residence patterns and to form new bonds of citizenship. Large hydraulic and agricultural developments in Syria had, along with economic objectives, the political aim of generating a “new class of socialist peasants”. Between the late 1950s and early 1960s, rural people from more than a hundred villages wanting to acquire land poured into one development (Françoise Metral, 1984). The agricultural reform service scattered populations with shared common origins, settling individual families in housing along roads and canals. Twenty years later, these housing groups had not become communities; many households have rebuilt extended family structures inside a homogenous village, others have left the area and rent out their land. UAE government housing was allocated on strictly patrilineal lines, ignoring traditional practices of having neighbours who are closest through links through women.

Settlement by tribal groups occurred in the recent past as a result of government changes in the land

law and of changing market forces. From the 1860s in 'Irāk, Syria and what is now Jordan, as the value of transit trade and desert products declined, many nomadic and semi-nomadic groups moved to agriculture, or else to sheep-herding rather than camel herding. From the 1930s, there were mass movements from the 'Irākī countryside to towns and cities, caused by debt among agricultural workers, repressive land laws and the uncertainties of agricultural production (H. Batatu 1978, 35). In Syria, after the Second World War, nomads, especially camel herders, had to adapt fast to the fully mechanised cultivation of grain and cotton (J. Hannover 1980, 294); later, more grazing lands were lost to irrigated vegetable and fruit growing for export to the oil states of Saudi Arabia and the Gulf.

Scholars frequently discuss settlement in terms of "the frontier of settlement" and make a positive correlation between strong government, commercial agriculture and settlement. It used to be assumed that from near the end of the 'Abbāsīd period, settlement declined in rural areas but increased in cities, and nomadism took over countryside until the process was reversed from the middle of the 19th century onwards. Archaeological and historical research has shown that settlement continued, with fluctuations, in the countryside of Syria, Jordan and 'Irāk, although it appears that there was an urban demographic decline from the 15th century to the late 18th century (Beaumont, etc. 1988, 212-13). In the Arabian peninsula itself, the "frontier of settlement" thesis was not developed. It seems that there was here more rural settlement than had been previously thought; and that there was movement between settlement and nomadism, with some settlements disappearing and others being founded. The general thesis linking strong government, commercial agriculture and settlement is not wholly consistent with actual historical examples, since it ignores particular events and local circumstances along with governments' sources of revenue; what is meant by commercial agriculture; access to land, sources of labour and the established social processes utilising these; the service provision of pastoralism; distribution of goods by means other than an obvious market; and the nature of the household and multi-resource livelihoods. Such social practices negate ideas of settlement and nomadism as being absolutes.

At the present, the proportion of nomads to settled people in the states of the Arab Middle East has declined as compared with 150 years ago. Percentages are difficult, but for 'Irāk, nomadic tribes were estimated at 35% in 1870, 17% in 1905, and 5% in 1947 (Samira Haj, quoting Hasan 1997, 157); for Saudi Arabia, about 40% of the population were nomadic in the 1950s, 11% in 1970, and under 5% now (Eickelman 1998, 74). The basic reason for this massive change is that the bases of nomadic livelihoods (herding, together with processing and trading dairy and animal products, supplying services like transport and protection; or crafts and animal products for groups like the Šulayb [q.v.], have all become less viable. Profitable herding has been made more difficult by the imposition of state borders, involving the loss of seasonal grazing areas and markets, and by the loss of grazing land to government agencies and non-governmental organisations. The demand for animals for riding, carrying and draught in agriculture has virtually gone; states have taken over protection and mediation services in rural areas; entry to participation in administrative and security agencies of government now comes from education, which

usually means residence in a village or town, at least during term time. Since modern states need educated people, they provide schools in centres, together with health services and administrative functions throughout their territories. Oil-rich states encourage settlement by grants or by building housing with all modern services, and they provide schools and clinics. Throughout the whole region, many former herding tribespeople are employed by the state in security forces and other official employment; they or other members of their households may have irrigated land for vegetable or fruit cultivation, and/or sheep for meat or dairy products. Camels continue to be herded for milk, meat and racing in Saudi Arabia, the Gulf states and Oman.

Some authorities see a breakdown of traditional nomadic social structures arising out of settlement and its associated education and employment. Others consider that these structures come from tribal, rather than nomadic as such, customary social practice, and that these structures are resilient and adaptive.

Thus the fact that the terms "settled" and "nomadic" are of limited value has been indicated by some scholars (e.g. J.C. Wilkinson 1977, 189; Soraya Altorki and D.P. Cole 1989, 81; W. and Fidelity Lancaster 1999, 54-61), who regard them as simplistic. Linking "settled" and "nomadic" to the conceptual identities of *badw* and *hadar* is, according to these authorities, unsatisfactory, since here the crucial determinant is the ability to get one's living and security by one's own efforts and networks, rather than by accepting government employment and provision. Of course, there are many who do both at the same time, and are in fact "settled" and "nomadic". Movement is now important to households in order to link employment and traditionally-owned resources in the countryside.

(W. and FIDELITY LANCASTER)

**ISKANDAR KHĀN** B. **DJĀNĪ BEG**, ruler in Transoxania, from his capital Bukhārā, of the Turco-Mongol Shībānīd [q.v.] or Abu 'l-Khayrid dynasty, ruled 968-91/1561-83. Iskandar was in fact a weak and ineffective ruler. Real power was in the hands of his son 'Abd Allāh, who had shown his ability against rival families in Transoxania as early as 958/1551 and who became the greatest of the Shībānīds; after his father's death he was to reign unchallenged for a further sixteen years [see 'ABD ALLĀH B. ISKANDAR]. For the course of events in these decades, see SHĪBĀNĪDS and R.D. McChesney, *Elr art. Central Asia. vi. In the 10th-12th/16th/18th centuries*.

*Bibliography*: See those to the two arts. mentioned above, and also C.E. Bosworth, *The New Islamic Dynasties, a chronological and genealogical manual*, Edinburgh 1996, 288 no. 153. (ED.)

**ISKĀT** (A.), a legal term meaning "relinquishment", specifically of a right (*ḥakk*). In general, four conditions must be met to make the relinquishment of a right valid: (a) that the right should exist at the time it is relinquished (e.g. the right to collect a debt to be incurred in the future may not be relinquished); (b) that the right relinquished does not concern *milḥ al-ʿayn* (i.e. the ownership of the substance of a thing, whether movable or immovable, is not subject to relinquishment, but only to transfer, *nakl*); (c) that the interest of the person entitled to the right should be absolute and not limited by other interests (e.g. it cannot be an interest such as that of a trustee in a *wakf* property); and (d) that the relinquishment of the right does not involve an illegal result.

*Iskāṭ* may be of two kinds: *iskāṭ maḥd* (true relinquishment) and *iskāṭ ḡayr maḥd* (quasi-relinquishment). The first kind includes divorce (*talāk*), manumission of a slave (*i'tāk*) and the relinquishment of the right of pre-emption (*shuf'a*). In the latter case, short clauses of relinquishment of the right of pre-emption are often added to deeds of sale of houses (e.g. *ḡad askatnā shuf'atanā min dhālik*), neighbours of the vendor in Islamic law having the right of pre-emption [see SHUF'A].

The term *iskāṭ ḡayr maḥd* includes legal transactions such as acquittance of debt (*ibrā' 'an al-dayn*), which is not regarded as a pure relinquishment since it partakes of the nature of a donation (*tabarruf*).

## IŞLĀH

V. CENTRAL ASIA

Central Asia (here basically understood in the sense of the pre-modern Mā warā' al-Nahr [q.v.]), notwithstanding its regional peculiarities, historically is to be regarded as an integral part of the Islamic world. Hence, in one way or another, its Muslim community—at least until the Russian "October Revolution" of 1917—was influenced by and/or contributed to reformist trends and movements current in other Muslim regions, in particular, those of Russia, Ottoman Turkey, the Arab world and also India. Basic features of the religious discourse on *işlāh* in the 18th-20th centuries, as described in the previous sections of this article (see Vol. IV) are to be found in Central Asia as well. But, because of the impact of roughly seven decades of Soviet rule, our knowledge about the specific nature of *işlāh* in Central Asia, and about its various supporters, actual developments, exchange of ideas, etc., is still rather poor in comparison to that about other regions. The inaccessibility of relevant sources during the Soviet period, as well as the application of Marxist-Leninist concepts of history, have led to a somewhat eclectic picture.

As a result of the prolonged Soviet impact, reformism in Central Asia appears predominantly as a class-based (bourgeois), nation-cultural, and finally political (nationalist) movement among Muslim intellectuals emerging around the turn of the 19th to the 20th centuries, and considerably gaining strength after 1905-7 when censorship in the Russian empire was loosened and the press could function more freely [see DJARĪDA. iv]. This reform movement was the so-called Djadīdism [see DJADĪD], but the usual self-designations of its representatives were different, e.g. *işlāhātḡāh* ("reformer"), *tarakḡiparuar* ("progressive"), *munawwir* ("enlightener"), *yāsh* or *djāwān* ("young"). It figures as a historically more or less isolated phenomenon, directly inspired by an identical movement which started somewhat earlier among Russia's Muslims. A key role in these endeavours, in the first place directed to renewing the Muslim educational system, disseminating Western-type knowledge, and fighting harmful social conditions and customs, falls to the well-known Crimean Tatar modernist Ismā'il Gasprālī [q.v.] and the influential newspaper *Terdjūmān* founded by him in 1883. The reformist or modernist efforts of the Djadīds, at least to a certain extent, are characterised according to the Soviet jargon as "progressive", in sharp contrast to a more or less obscure stereotype of "reactionary" *Ḳadīmīs*.

Even though such views of developments in *işlāh* in Central Asia cannot, of course, be called entirely wrong, they nevertheless neglect some important traits of this phenomenon that are essential to an appropriate understanding of it. This lack of coherence is especially revealed by recent research, and concerns in particular the questions of: (a) indigenous roots and precursors of the so-called Djadīdism; (b) interrelations with other Muslim and non-Muslim regions, with their influence on the background of individual thinkers; and (c) fundamentals, causes, contents and the course of the debate with traditionalist *'ulamā'*, labelled by the modernists as *Ḳadīmīs*.

Far from our having comprehensive answers to these and related questions, some salient hints will have to suffice. Besides the oft-repeated statement that the Central Asia of the *Khānates* (Bukhārā, *Khīwa* and *Khokand* [q.v.]) in the 18th-19th centuries represented a bulwark of intellectual stagnation, obscurantism and religious dogmatism, it must be noted

that such eminent precursors of reformism and modernism in the Volga-Ural region as 'Abd al-Naṣīr al-Kūrṣāwī (1776-1812) and Shihāb al-Dīn al-Mardjānī (1818-89) both finished their studies in Bukhārā, Central Asia's most famous centre of Muslim learning. A decisive role in their taking up positions against *taklīd* and favouring *ijtihād* was played by Bukhārān *mudarrisūn* who were affiliated with the influential Nakshbandiyya (Muḍjaddidiyya) [*q.v.*, and see AHMAD SIRHINDĪ, its founder, who based his teachings rigorously on the Qur'ān and Sunna]. In this respect, it is worth mentioning that Central Asia, and particularly Bukhārā, was not an isolated region but was connected through extensive trade relations with China, India, Russia, and also Western Siberia where, besides Tatars, *bukhārīlik* played a major role in spreading Islam and building up Muslim institutions, thereby in some cases showing reformist approaches at a comparatively early date. "Critical erudition" also can be found in 19th-century Bukhārā itself, among what might be called the teachers' generation of its later modernists (the Young Bukhārāns, emerging around the end of the first decade of the 20th century), such as Ahmad Makhdūm Dānīsh (1827-97) [see ĀZĀDĪ, in Suppl.] who subsequently, under Soviet auspices, was praised as a [Tādjīk] "enlightener" (al-Kūrṣāwī and al-Mardjānī were removed from their Islamic context in a similar way); Mīrzā 'Abd al-'Azīm Sāmī (ca. 1835-1914?) who served as a *mumshī* of the *amīrs* Muzaffar (1860-85) and 'Abd al-Aḥad (1885-1910); Dāmullā Muḥammad Ikrām(ča) (1847-1925) who was appointed in 1913 one of the twelve official Bukhārān *muftīs*; Muḥammad Shharīf(djān) Makhdūm, named Ṣadr-i Diyā' (1867-1932), from a well-known *kādī* family, himself being appointed 1917 for three months *kādī-yi kalān*, the highest judicial officer in Bukhārā. All of them, except Ṣadr-i Diyā', shared the characteristic of having stayed for some time abroad, either by travelling to Russia or by performing the *Ḥadjj*.

To be sure, all this does not mean that Bukhārā in the 18th-19th centuries was a stronghold of *islāh*. On the contrary, al-Kūrṣāwī, for example, already met with sharp opposition and even condemnation by the overwhelming majority of Bukhārān *'ulamā'*, including the then ruling *amīr* Ḥaydar (1800-26), when he, in regard to the question of the divine attributes [see ŞİFA, 2], opposed the generally accepted doctrine that God possesses either seven or eight *ṣifāt* by arguing that the only way to formulate a qualification of God is His own word, the Qur'ān, in which the *ṣifāt* are not at all limited to a definite number of seven or eight. Leaving aside that kind of subtle debates, it can be stated at least that Bukhārā was in constant exchange with the outside world, and to some extent participated in current Islamic developments, thereby providing certain prerequisites for a more evident manifestation of reformist endeavours that was to happen only at the beginning of the 20th century, then taking shape in *Djādidism*, current amongst Russia's Muslims. The main impetus to *Djādidism*, the followers of which—beyond the basically regressive concept of *islāh*—also believed in Western ideas of progress, thus came from outside. But in Central Asia it met with an already existing specific spiritual basis of genuine *islāh*, namely, a critical attitude towards traditional ways of rule, social life and religious learning which, as their critics saw it, were incompatible with "true" Islamic principles.

Unlike the Muslims of the Volga-Ural region, who already for centuries had stood up against Russia's rule and various policies of Russification, Central Asia

had to face the challenges of colonial rule only from the second half of the 19th century, when it was conquered by Russia (abolishing the *Khānate* of *Khokand* finally in 1876, and reducing Bukhārā in 1868 and *Khīwa* in 1873 to protectorates). At that time Russia's Muslim communities had for about one hundred years received a slightly more favourable administrative status through the institutions of a *muftīyyat* in Ufa (1782) and the "Spiritual Assembly" in Orenburg (1788), allowing them a certain self-determination which was channelled particularly into strengthening and developing the *Sharī'a* and their own educational system (the *maktab* and *madrasa*). Within this framework, and by meeting the growing challenge of Western modernity, it soon happened that reformist and/or modernist trends gained ground. It also seems quite natural that they aimed at improvement according to "modern" requirements in fields like education, which had become fundamental to Muslim self-assertion. Given such a partly common goal of reformist and traditionalist forces on the one hand, and limited resources on the other hand—the Muslim educational system in Russia was not state-sponsored—conflict, beyond the level of the later, overemphasised purely ideological controversies between *Djādid*s and *Kādimī*s, was inevitable.

Though Central Asia played no visible role in this process in Russia which finally led to *Djādidism*, Central Asia had at least mediated the first reformist impulses in Russia which, roughly 200 years later, were re-imported in the form of developed concepts of Muslim modernism. These concepts met with a situation in Central Asia in which indigenous society and its traditional institutions had to cope with the serious setback of Russian conquest and rule. Hence, in addition to the existing traces of a "critical erudition" mentioned above, we find in the urban centres of Russian Turkistān and of the protectorates of Bukhārā and *Khīwa*, evidently from around the turn of the 20th century, small local circles of Muslim modernists who were in touch with one another and had a loose network of contacts with kindred spirits stretching as far as Russia, the Caucasus, Turkey, Egypt, the *Ḥijāz* and India. The more or less simultaneous introduction of a Western infrastructure, involving railways, postal services and telegraph, increased mobility and enhanced communication.

The majority of outstanding Central Asian modernists, although of different social origins, belonged to the younger generation and had gone through a traditional *maktab* and *madrasa* education. Some had a Russian education, and finally, a considerable number of them had fruitful experience of the outside Muslim world. Another group of supporters of modernism, at least in Bukhārā, was made up of traders and entrepreneurs. Their business interests led them to welcome efforts towards reform oriented towards interpretations of Western standards of knowledge and civilization. At the same time, endeavours of this kind were combined with a more or less conscious harking back to the fundamentals of the "true", early Islam. This synthesis of both following the dictates of the Qur'ān and "keeping up with the times" in practice mainly resulted in activities to disseminate knowledge (the press, publications, textbooks, founding of charitable societies (*djām'īyyat-i khayriyya*) and *uṣūl-i djādid* ("new-method") *maktabs*), and to criticise "backward" administrative institutions (e.g. the judiciary, *aukāf*) and social conditions (e.g. features of popular religion, certain activities of *Şūfī* brotherhoods, lavish festivities and moral decline—the latter, by the way, was a field

in which the *Djadîds* largely shared the opinion of the *Kadîmîs*).

These general characteristics are mirrored in the basic biographical data of distinguished Central Asian modernists (their backgrounds and their entire work are, for the most part, not yet sufficiently studied), such as: (1) Sayyid Ahmad Şiddîkî, named 'Adjzî (Samarkand, 1864-1927, *madrasa* education, published the first textbook for "new method" *maktabs* [*Ustâd-i awval*, Tashkent 1901], ca. 1901-3 *Hadîdjî* and residence in the *Hidjâz*, Egypt and Russia; then founding "new method" *maktabs*, writing textbooks and contributing to modernist press); (2) Maḥmūd Kh"ādja Bihbūdî (Samarkand, 1875-1919, *madrasa* education, 1900 *Hadîdjî*, 1903-4 stay in Cairo, Istanbul, Ufa and Kazan; then founding a "new method" *maktab*, acting as *muffî*, publisher, editor of the newspapers *Samarkand* [1913-4] and *Ā'ina* [1914-5], writer of textbooks, theatrical plays); (3) 'Abd Allāh Awlānî (Tashkent, 1878-1934, *madrasa* education, editor of newspapers *Shuhrat* [1907], *Āsiyâ* [1908] and *Tūrān* [1917], founder of "new method" *maktabs* [1908, 1912], charitable society [1909], writer [textbooks, anthology, theatrical plays], organising [1913] a theatre group); (4) Munawwar Kārî 'Abd al-Raḥîd Khān (Tashkent, 1878-1931[?], editor of newspapers *Khūrshîd* [1906], *Sadâ-yi Turkistân* [1914] and *Nadîjât* [1917], published textbooks); and (5) 'Abd al-Ra'îf Fîrât [q.v.] (Bukhārâ, 1886-1938[?], *madrasa* education, 1904 *Hadîdjî*, ca. 1910-14 studying in Istanbul, the starting point of his career as an important writer and as theorist of Central Asian modernism).

Within the Central Asian context, the activities of these and other adherents of modernism represented a remarkable phenomenon that to some extent challenged traditional society and colonial rule. But these modernists were few in number and, beyond shared basic ideas and goals, they seem to have formed a rather disparate movement of limited success. They lagged behind the modernist debate in other parts of the Muslim world. Their influence did not apparently reach beyond the borders of Central Asia, and even in their homeland they had no firm socio-political grounding. When finally, in the course of the Russian Revolutions of 1917, some of the Central Asian modernists entered the political stage (striving for an autonomy of Turkistân within a Russian federation, or for an implementation of reforms in Bukhārâ), they were quickly swept away and successively absorbed by various more firmly-based social and political forces and realities (ranging from Soviet power to the armed resistance of the *Basmaçîs* [q.v.]).

(R. EISENER)

**İSMÂ'İL HAKKÎ BALTADJİOĞLU** (1886-1978), Turkish sociologist, educator and author. He was born in Istanbul in 1886, the son of a government official, İbrāhîm Edhem, and Hamîde. He finished his *Wefâ İtdâsî* in 1903, and continued his education in the Department of Natural Science in the *Dâr ül-fünûn*, graduating in 1908. During the same year, he started his career as a teacher of calligraphy in the *Dâr ül-mu'âllimîn-i ibtidâ'îyye* and was sent to Europe in 1910 by the Ministry of Education to do research in pedagogy and handicrafts. After his return to Turkey in 1911, İsmâ'il Hakkî lectured on handicrafts, calligraphy, aesthetics, pedagogy and psychology in several schools and worked in certain administrative posts whereby he initiated various reforms combating the traditional methods of education. He was elected Dean of the Faculty of Letters in the *Dâr ül-fünûn* on several occasions between 1921-4 and was President of the school in 1923, resigning in 1927. He was removed from his position as a lecturer at the *Dâr ül-fünûn* with its closure on 31 July 1933. Between 1941-2, İsmâ'il Hakkî worked as a professor of pedagogy in the Language and History-Geography Faculty of Ankara University. He was elected to the Parliament as the Afyon representative of the Halk Partisi in 1942 and the Kırşehir representative in 1946. From 1950 until his death in 1978, he continued his career as an author and publisher.

Besides publishing *Yeni Adam*, a journal mainly devoted to pedagogy and culture, he wrote many books and articles for various newspapers and journals such as *İkdam*, *Yeni Fikir*, *Akşam* and *Ulus* throughout his life. In his works, he mostly concentrated on sociological and pedagogical issues, but also showed an interest in writing plays.

**Bibliography:** 1. Selected works. *Ta'lim ve terbiyede inkîlâb*, Istanbul 1912; *Terbiye-i 'awâmîm*, Istanbul 1914; *Umumi pedagojî*, Istanbul 1930; *Demokrasi ve sanat*, Istanbul 1931; *İhtimai mektep nazariyeleri ve prensipleri*, Istanbul 1932; *Andaval palas*, Istanbul 1934; *Felsefe*, Istanbul 1938; *Toplu tedris*, Istanbul 1938; *Dolap beyni*, Istanbul 1940; *Kafa tamircisi*, Istanbul 1940; *Rüyamdaki okullar*, Istanbul 1944; *Pedagojide ihtilâl*, Istanbul 1964.

**İSMÂ'İL HAKKÎ b. İbrāhîm b. 'Abd al-Wahhâb, MANÂSTİRLİ** (1846-1912), Ottoman religious scholar and preacher. Born and raised in Manâstîr in present-day Macedonia, he went to Istanbul as a young man, took *medrese* courses and taught at the Fatih Mosque. In 1874 he became preacher (*wâ'iz*) at the Dolmabahçe Mosque and then at the Aya Sofya, where he drew large crowds. He began his teaching career as professor of Arabic at the '*Askerî Rüşdiyye* in Eyüb, and in 1884 became teacher of jurisprudence in the *Hukûk Mektebi*, where he remained until he became a senator (*â'yan d'dâsî*) after the 1908 revolution. He taught courses on religious matters at various institutions (*Mühendishâne*, *Mülkiyye*, *Dârülfünûn*, '*Askerî Tıbbiyye*) and was also professor of exegesis at the recently founded Preachers' Seminary (*medreset ül-wâ'izîn*). On 5 December 1912 (25 *Dhu 'l-Hidjja* 1330), still a senator, he died at his waterfront resi-

dence in Anadoluhişar and was buried in the cemetery next to the Fatih Mosque.

In addition to Turkish, he knew Arabic, Persian and Bulgarian. His writings include a translation of, and commentary on, *al-Kasîda al-ninîyya* on the Islamic creed by Khidr Beg [q.v.]; *Beyyânât-î Ahmediyye* (Istanbul 1329/1911), an annotated translation of *al-Risâla al-Hamîdiyya fî haqqikat al-diyâna al-islâmîyya wa-hakkiyyat al-risâla al-Muhammadiyah* by Husayn b. Muhammad al-Djâr or al-Djîr al-Tarâbulusî (d. 1327/1909, the teacher of Rashîd Riçâ [q.v.], cf. Brockelmann, S II, 776, S III, 321); and *Hakkê ve haqqikat*, a critique of Reinhart Dozy's *Essai sur l'histoire de l'Islamisme* (traduit du hollandais par Victor Chauvin, Leiden and Paris 1879; originally published as *Het Islamisme*, Haarlem 1863), translated by 'Abdullâh Djewdet. For his other works, see *Bibl.*; he also contributed numerous articles to journals and newspapers.

[ca. 1940], 193; Kağhâla, ii, 266. Further works of Ismâ'il Hakkî: *Mew'îz*, İstanbul 1324/1906-7; *Koşova şahrâsi mew'îzası*, Salonica 1327/1909; *Usûl-u fîkh*, İstanbul 1328/1910 [text-book]; *Mawâhib al-Rahmân fî manâkib al-imâm Abî Hanîfa al-Nu'mân*, İstanbul 1310/1892-3, a translation of Ibn Hadjar al-Haytamî [q.v.], *al-Khayrât al-hisân fî fadâ'il al-Nu'mân*. (E.D.)

**ISMÂİL PASHA BAĞHDÂDLİ**, ISMÂİL B. MUHAMMAD AMİN B. MİR SÂLİM AL-BÂBÂNÎ AL-BAĞHDÂDÎ, in modern Turkish orthography, Bağdatlı İsmail Paşa (1839-1920), Ottoman army officer and author of two important bio-bibliographical reference works.

He was born in Bağhdâd, in a family originating from Bâbân, near Sulaymâniyya in İrak, hence his other *nisba* (variant: Bâbân-zâde). In 1908, after the Young Turk Revolution, he became a general (*mîr lîvâ*) in the gendarmerie (*djandarma dâ'iresi*). On his death in 1920 he was buried in Bakırköy near İstanbul. The most extensive notice on his life and work is by Hulûsi Kılıç, in *Türkiye diyanet vakti islâm ansiklopedisi*, iv (1991), 447-8 (with portrait and a specimen of handwriting, and with further references, mostly to Turkish sources). A short mention is given by Khayr al-Dîn al-Zirikî, *al-A'lâm*, <sup>4</sup>Beirut 1979, 326.

The two works whereby Ismâ'il al-Bağhdâdî is still remembered today are:

1. *İdâh al-maknûn fî l-dhayl 'alâ Kashf al-zunûn 'an asâmi al-kutub wa l-funûn*. This work, written mostly in Arabic, was posthumously edited by Muhammad Sharaf al-Dîn Yalîkâyâ (Şerefettin Yalîkaya) and Rif'at Bilka al-Kilîsî (Kilîsli Rifat Bilge) and published in two volumes (İstanbul 1945-7, with a portrait in vol. i, several times reprinted) on the basis of the author's copy, which is now kept in the library of the Head Office of the Yapı ve Kredi Bankası in İstanbul. It is written in Arabic and is in fact an annotated list of titles of works, put in alphabetical order, just like its great example, the *Kashf al-zunûn*, by the author's famous predecessor Muştafâ b. 'Abd Allâh Hâdjîdî Khalîfa, Kâtib Çelebî (d. 1067/1657 [q.v.]). The author's description of the books contain the title, the name and life span of the author, or the year of composition, reference to a printed version (if any), and occasionally the opening words of the text as well. If that latter feature is available, it shows that the author must have had a copy of the text at hand.

If a text is a commentary (*sharh*), reference is made to its *matn*. There are numerous references to Persian and Turkish works as well, and the *İdâh al-maknûn* is useful in this respect as well. Its main use is for Arabic bibliography, however, which includes the extensive Arabic literature produced by non-Arabs. His work is in more than one respect a supplement to the *Kashf al-zunûn*. It not only bridges the time gap of two-and-a-half centuries between the previous work and the supplement, but it also adds to the bibliographical material which was not known or available to Hâdjîdî Khalîfa. Although the bibliographical entries are not very extensive, the sheer size of the work, with its more than 10,000 titles, makes it an indispensable, and as yet unsurpassed, bibliographical tool for the literature of the late classical and early modern period. Its inclusion of Persian and Turkish works is witness to the scope of the literary interests of the Ottoman élite.

2. *Hadiyyat al-'arîfin. Asmâ' al-mu'allifîn wa-âthâr al-musannifîn*. This is the monumental biographical counterpart to the previous work. It is a list of approximately 9,000 authors of in all some 50,000 works (vol. i, which ranges from *alif* to *lâm*, mentions 5,398 authors and ca. 25,000 works). It was edited by Kilîsli Rifat Bilge and İbnülemin Mahmud Kemal İnal (vol. i, İstanbul 1951) and İbnülemin Mahmud Kemal İnal and Avni Aktuç (vol. ii, İstanbul 1955). It has been reprinted several times in Bağhdâd and Tehran. Nail Bayraktar has published a register of the *shuhras* mentioned in the *Hadiyyat al-'arîfin* (*Hedyyetü l-'arîfin, esmâü l-müellifîn ve âsârü l-musannifîn şöretlet indeksi*, İstanbul 1990). The work is arranged by *ism* of the author, followed by the patronyms and other name elements, with personal details, notably the year of demise, and it then provides the reader with the titles of the books composed by these authors.

*Bibliography:* Given in the article.

(J.J. WITKAM)

**İSMET İNÖNÜ** (Ottoman form, 'İşmet), b. 1884, died 1973, Turkish military commander and statesman, who served on three occasions as Prime Minister in the Turkish Republic (October 1923-November 1924; March 1925-November 1937; and November 1961-February 1965) and once as President (1938-50). He played an important part in the Turkish War of Independence (1919-12), made significant contributions to the institutional framework of the new Turkish Republican state, initiated multi-party politics in 1945, acted as champion of the procedural rules of democracy as well as of secularism, and had a critical role in the relatively speedy return to civilian politics following the military interventions of 1960-1 and 1971-3.

The son of a lawyer in İzmir, 'İşmet made a career in the Ottoman army, and during the First World War served on the staff of Ahmed 'Izzet Paşa in Yemen, commanded the Fourth Army in Syria in 1916, and at the time of the armistice of 30 November 1918 was Under-Secretary for War in İstanbul. 'İşmet Paşa, as he had become, was in 1920 elected to the last Ottoman Parliament as member for Edirne, but soon afterwards joined the cause of Muştafâ Kemâl (the later Atatürk [q.v.]) in resisting the Allied occupation of Anatolia, and when the Greeks invaded western Anatolia, he became chief of the General Staff of the Nationalist army and repelled the invaders at the two battles of İnönü to the west of Eskişehir (January and April 1921), from which engagements he later took his European-type surname.

When the Grand National Assembly met in Ankara

in 1922, İsmet became Foreign Minister, and represented Turkey at the Lausanne peace conference, strongly opposing Britain and France and gaining most of what Muştafa Kemal wanted in the final Treaty of Lausanne of 24 July 1923. When the Turkish Republic was proclaimed on 29 October 1923, İsmet became Atatürk's Prime Minister, remaining in power thus for nearly fourteen years. On Atatürk's death on 10 November 1938, he became President and permanent chairman of the ruling Republican People's Party [see DÜMHÜRIYET KHALK FIRKASI].

During this period, when westernising reforms were being imposed from above on Turkish society, and when in the 1920s there were rebellions in southeastern Turkey by traditionalist elements, İnönü adopted a rather authoritarian position, but then, in the 1939-45 period, he became much more flexible. He had a large measure of self-confidence in himself and in the future for Turkey. He believed that, together with Atatürk, a threatened resurgence of conservative Islam could be dealt with, when in 1930 many elements of the population seemed to sympathise with the Free Republican Party (*Serbest Cümhuriyet Fırkası* [see İHİZB. ii] of Ali Fethi Okyar [q.v.]), mistakenly perceiving that party as a religiously-oriented one. Similarly, during the 1939-45 years he oversaw the eventual transition to a multi-party political system. Under his skillful leadership, Turkey remained neutral in the Second World War, but the country became strained internally and there were pressures from the victorious Western powers for a more democratic political régime. İnönü was now led towards the formation of a multi-party system, and in the reaction against the RPP's authoritarian rule, the Democrat Party [see DEMOKRAT PARTİ], triumphed in the 1950 elections, entailing İnönü's replacement as President by Celal Bayar. He now became for a decade the leader of the opposition and defender of democracy in the increasingly authoritarian climate of Adnan Menderes' [q.v.] premiership in the late 1950s. After the military intervention of 1960, he formed three coalition governments between 1961 and 1965. However, the RPP suffered heavy defeats in the 1965 and 1969 elections, and İnönü was criticised by Kemalist and socialist elements within his party for the compromises he had made with his coalition partners and with conservative elements; but when he declared the ideology of the RPP as "left of centre", this led in 1967 to the secession of centrist elements in his party to form the Reliance Party (*Güven Partisi*). In 1972 he was replaced as RPP leader by the leader of its leftist faction, Bülent Ecevit, and he died in the following year.

İnönü was a pragmatist, always open to new experiences and ready to learn. He came to conceive of democracy as an exchange of views among the patriotic and knowledgeable sections of the population in order to discover the best public policies, and he thought that these last should be based on valued ideas and not on particularist interests. In this respect, he was an elitist. For him, the state as an entity representing the general interest had priority over a democracy perceived as responsiveness to the preferences of the people at large. Yet this elitism was tempered by a genuine belief in the common sense of the people and a belief in their potential for self-improvement. He did not identify harmony with unanimity, and regarded politics as ideally an adversarial process, since this produced exchanges of ideas and evolved good policies. He remains, therefore, a somewhat enigmatic figure.

## İSTANBUL.

### VIII. MONUMENTS

The first and most important of the Ottoman monuments of İstanbul is Saint Sophia. The only church to be transformed into a mosque immediately after the conquest of the city (others followed later, mostly in the reign of Bayezîd II), it remained symbolically the model of imperial religious architecture. From the reign of Selîm II onwards, it became a place of burial reserved exclusively for the Ottoman royal family and was restored on numerous occasions between 1572-3 and 1847-9.

Ottoman building activity dates from 1458, when Mehmed II built the mosque of Eyyüb and decided to construct his own imperial complex (Fâtiḥ) at the square of the Holy Apostles, and the Topkapı Palace on the site of the ancient acropolis of Byzantium. This plan, added to other decisions taken in the course of the same reign—building of the *bezistân* (1456), of the first palace on the site of the Theodosian forum (1453-5), of the barracks of the Janissaries (Eski odalar), of the saddlers' market (Sarrâdj Khâne, 1475), the markets of the major and the minor Karamân (after 1467)—led to the formation of a monumental axis which, while initially retracing the route of the Byzantine Mesus (Dîwân Yolu) from Saint Sophia to the Old Palace, from this point follows a northerly direction, across the complex of Fâtiḥ and extending as far as the Adrianople Gate (Edirne Kapısı).

This activity also corresponded with the choice of architects of non-Muslim origin, apparently in contrast to what is known of the builders of the first

period of Ottoman architecture, that of Bursa and of Edirne. This practice could also be linked with the policy of recruiting from among all the peoples of the Empire and even beyond, implemented broadly by Mehmed II in almost all sectors of public life, but also with the search for new stylistic and technical solutions. This appears to have been the case in choice of Sinan the Elder ('Atik), a freedman of Byzantine origin, supposed to have built the Fatih mosque on the model of Saint Sophia. This was also the time of the introduction into Ottoman architecture of the demi-cupola, as is mentioned in a passage from Tursun Beg (*Tārīkh-i Abu 'l-Fatih*, fol. 58), who applauds the outstripping of Saint Sophia, and another from the Anonymous Giese (99), who de-nounces the latter as sacrilege, inviting comparison with the imperial Byzantine model.

Parallel with the founding of these imperial edifices, Mehmed II encouraged his entourage to follow his example. This injunction was implemented to varying degrees: individuals such as Mahmud Pasha or Khass Murad Pasha, of Byzantine origin and graduates of the Palace school, built some important mosques, their architecture, paradoxically, mirroring that of the first Ottoman mosques of Bursa; others like Gedik Ahmed Pasha [see AHMAD PASHA GEDIK] or Ishak Pasha, contented themselves with constructing secondary buildings in the capital and established their major projects in the towns of Anatolia.

The accession of Bayezid II in 1481 marks a halt in monumental construction in Istanbul.

The sovereign initially built mosques and large religious complexes at Tokat, at Amasya and at Edirne, while other leading figures of the regime confined themselves to converting the churches of the capital into mosques. Seventeen of them are known to have been adapted for Muslim worship, as opposed to four during the reign of Mehmed II. The only monumental project completed during the last twenty years of the 15th century was the mosque built by Dawud Pasha (1485). It conforms to the model inaugurated by Bayezid II in the provinces, with a single cupola resting on a cube. With a diameter in excess of 18 m, this remains the largest cupola of all the vizieral mosques of the capital.

Deciding, at the opening of the 16th century (in 1500-4), to build a religious complex in the capital, Bayezid II borrowed the system of roofing of Saint Sophia, with two demi-cupolas flanking the central cupola, but also followed the model of the mosques of Bursa in adding *tāb-khāne* (lodgings for dervishes) on both sides of the prayer hall. The complex was built on land reclaimed in its entirety from the Old Palace and situated at the strategic point where the Dīwān Yolu joins the Great Bazaar and Usun Çarshī, the Makros Embolos of the Byzantines, linking the central axis of the city to the port. As is the case with the Fatih mosque, this axis traverses the complex passing between the mosque and the *medrese*, thus accentuating its role as a triumphal thoroughfare. Other dignitaries of the period were to follow this example: thus 'Atik 'Alī Pasha built a complex on both sides of the Dīwān Yolu (1506) on the site of the forum of Constantinople, around the Burnt Column (*Djemberli Tash*).

The great earthquake of 1509, followed by the unrest in the latter part of Bayezid's reign, resulted in another interruption in the monumental construction of the capital. Similarly, Selim I (1512-20) and his administration, too occupied in waging war, left no architectural vestiges, and it was Süleymān I who,

on his accession in 1520, built a mosque in memory of his father. It was situated in a place chosen more for the view that it offers of the Golden Horn, overlooking the Greek quarter of Fener, than for its centrality, but the effect of monumental edifices on the panorama of the city, for purposes of seeing and being seen, seems henceforward to have been a decisive factor; it was to find its most absolute expression with the Süleymāniyye. The mosque known as that of Sultan Selim (1522) is also the last imperial edifice to reprise the model of a single cupola resting on a cube; it is inspired directly by that of Bayezid II at Edirne.

This monument to filial piety apart, the first two decades of the reign of Süleymān I (1520-66) were niggardly in monumental constructions of religious character. On the contrary, the sovereign and his entourage were competing in the construction of palaces. Süleymān renovated the Topkapı Palace and built a palace on the hippodrome for his Grand Vizier İbrāhīm Pasha [*q.v.*]. Monumental building activity was resumed with the appointment of Sinan to the post of chief architect in 1538 and was to continue without intermission during the half-century of his activity [see SINAN].

The sovereign gave the signal for the start of this activity in 1539, ordering the construction of a complex for his wife Khürrem Sultāne [see KHURREM], built on the site known as 'Awret Bāzārī (women's market), in the vicinity of the column of Arcadius. It consists of a mosque, progressively complemented by an *'imāret* and a hospital (*dār-ül-shifā'*). It is probable that Süleymān subsequently decided, on his return from the Hungarian campaign in 1541, to begin a monumental assemblage situated on the triumphal axis, on the site of the Janissaries' barracks (*Eski odalar*) which he intended to appropriate. On the death of the prince Mehmed, in 1543, this mosque was dedicated to him, and the complex probably remained incomplete since it was situated exclusively on the northern part of the axis, the barracks situated to the south being retained. In this mosque, his first monumental project, Sinan took to the very limit the process in which Ottoman architecture had been engaged since 1453, proposing a system of roofing in perfect symmetry, with four demi-cupolas. But after the peace treaty concluded in 1547 with the Emperor Charles V, Süleymān decided to commission a new imperial complex, returning to the model of Saint Sophia and also attempting to attain its dimensions. This was to be the Süleymāniyye (1550-7), overlooking the Golden Horn and likewise built on land reclaimed from the Old Palace, competing with its rival for prominence in the vista of Istanbul. Similarly, the totality of religious and social institutions which surrounded it stole primacy from the Fatih complex, since henceforward the *medrese* of the Süleymāniyye constituted the highest level of religious education in the Ottoman empire.

Members of the Ottoman royal family and their entourage shared in this construction frenzy. Mihr-i Māh Sultāne [*q.v.*], daughter of Süleymān and Khürrem, had her first complex, consisting of a mosque, a *medrese* and a caravanserai, built at the quay of Üsküdar, on the Asiatic bank, the place where the Bosphorus was crossed (1548). Twenty years later Sinan completed, again on behalf of Mihr-i Māh, a mosque with a courtyard *medrese* at Edirne kapı, at the point where the triumphal axis joins the land wall. In experimenting with the cupola on pendentives, which frees interior space entirely, Sinan here definitively

outstripped the model of Saint Sophia, achieving the absolute unity and disengagement of interior space, more in accordance with the Muslim tradition.

The Grand Vizier Rüstem Paşa (in office 1544-53, 1555-61 [q.v.]), husband of Mihr-i Mâh, chose for his buildings the most densely populated areas of the city and found himself obliged, no doubt for this reason, to disperse them. He built a *khân* (ca. 1550) at *Ghalaṭa* [q.v., in Suppl.] on the site of the former Genoese cathedral dedicated to Saint Michael, a *medrese* with octagonal courtyard enclosed within a square, situated below the mosque of Maḥmūd Paşa (1550) and a mosque facing the *hammâm* of Taḥt al-ka'ā, completed after his death in 1562. This mosque, built on the site of that of 'Aṭṭār *Khalīl*, the most ancient attested in the city (1457), had interior surfaces entirely covered with magnificent ceramics from Iznik, used here on a massive scale for the first time. Sinān Paşa, brother of Rüstem, Grand Admiral of the Ottoman fleet (1550-4), built in his turn a mosque with a courtyard *medrese* at *Beshiktāsh*, embarkation-point of the fleet.

Kara Ahmed Paşa, Grand Vizier 1553-5, drew up shortly before his execution in the latter year a *wakfiyye* in which he gave instructions for the construction of a mosque with the sums bequeathed. His steward, Feruḫ *Ketkhudā*, undertook the search for a site and acquired a piece of land close to the land walls inside the gate of Topkapı, where in 1560 Sinān completed a mosque with a courtyard *medrese*.

While the successors of Süleymān, Selīm II (1566-74 [q.v.]) and Murād III (1574-95 [q.v.]) built their mosques respectively at Edirne and at *Maghnisa*, Istanbul continued to be endowed with monumental constructions under the long vizierate of Şokollu Mehmed Paşa (1565-79 [q.v.]), benefiting from the energy of Sinān's workforce. Şokollu's first project in the capital was a funeral monument, built in 1568-9 at Eyyüb. This consisted of a mausoleum accompanied by a *medrese*, a combination which became standard from the end of the century onward, contributing to the transformation of the suburb of Eyyüb into a necropolis for the military and religious dignitaries of the empire. Şokollu subsequently built below the hippodrome, near the docks used by galleys (*Qadırgha*), a complex situated in proximity to his palace. This consisted of a mosque with courtyard *medrese*, completed in 1572, to which a *zāwiya* was added. Another mosque was built by the same Grand Vizier in 1577-8, outside the walls of *Ghalaṭa*, beside the Arsenal, to commemorate his service at the head of the Admiralty (1546-50). Piyale Paşa [q.v.], High Admiral 1554-68, commissioned from Sinān a mosque situated behind the arsenal, in an area populated by sailors and workers in the naval dockyards. For this building, completed in 1572, where solemn prayers were to be offered before the departure of the fleet, Sinān reverted to the hypostyle model with six cupolas, combined with open-air spaces for prayer capable of accommodating entire ships crews. It was without doubt the same problem of capacity which induced the architect to adopt for the mosque of the High Admiral *Kilidj* 'Alī Paşa (1571-87 [see 'ULŪḐ 'ALĪ]), built in 1581 at Topkhāne, a revival of the model of Saint Sophia with lateral galleries.

In the mid-1570s, Nūr Bānū Sultāne [q.v.], mother of Murād III, undertook the construction of an important complex above Üsküdar [q.v.], a transit depot for caravans arriving from Anatolia. A caravanserai and a *zāwiya* enclosed a mosque and courtyard, with a *medrese* lower down. The whole was completed in 1583.

In the meantime, Sinān also constructed a little architectural jewel for Şhemsī Paşa, on the banks of the Bosphorus at Üsküdar (1581), as well as a mosque accompanied by two *medreses* on different levels for Zal Maḥmūd Paşa at Eyyüb (1580-81). Finally, among the last works of this architect, completed by his successor Dāwūd Agha, attention should be drawn to the mosque of Mesīḥ Mehmed Paşa [q.v.] (1586) at Kara Gümrük and that of Nishāndjī Mehmed Paşa (1588) on the main axis between Fāṭih and Edirne Kapı.

To complete the monumental landscape of Istanbul and its environs, also worth mentioning is the system of water supply completed between 1554 and 1563, comprising four monumental aqueducts upstream of the Golden Horn, as well as the bridge of Büyücekmedje on the Edirne road.

The death of Sinān, in 1588, also coincided with the beginning of the exhaustion of the financial resources of the empire, embroiled in a protracted war against Persia and, before long, against Austria. Prestige constructions were to become more modest and their functions modified. A surfeit of mosques was to be succeeded by complexes composed of a mausoleum and a *medrese*, the latter accommodating a large number of rural immigrants drawn by the functions of religious education and the judiciary—virtually the only professions open to persons of Muslim birth.

In 1593-4 *Djerrāh* Mehmed Paşa built the last vizieral mosque to be completed before the 18th century. The density of the city seems not to have permitted monumental constructions without costly expropriations. Thus in order to build her own mosque, on her acquisition of the title of queen-mother with the accession of her son Mehmed III in 1595, Şafiyeye Sultāne [q.v.] made inroads on the Jewish quarters of the city's port. Hampered by the death of the architect Dāwūd Agha in 1598, by technical problems arising from the digging of foundations at a site close to the water, and by the death of Mehmed III in 1603, relegating Şafiyeye Sultāne to the Old Palace, construction remained incomplete and was only to be resumed sixty years later by *Khadidje* Turkhān Sultāne, the mother of Mehmed IV, being completed in 1663 (*Wālide* *Djāmi'*).

The new sultan, Ahmed I (1603-17 [q.v.]), was the first since Süleymān to undertake the construction of an imperial complex. The latter, situated above the hippodrome, necessitated a massive expropriation of the vizieral residences which were situated there. The manner in which the buildings of the complex are dispersed is testimony to the difficulties of expropriation. The complex of the Blue Mosque, the name given to the mosque of Ahmed I on account of its extensive decoration in ceramics of this colour, marks the end of the first period of monumental edifices of Istanbul.

*Ghaḍanfer* Agha, senior eunuch of the palace, introduced into the capital the combination of a *medrese*, a mausoleum and a fountain. The latter, built in 1590-1 at the foot of the aqueduct of Valens (*Bozdoghān kemeri*) rapidly started a trend. These more modest combinations were more easily integrated into the dense urban fabric and contributed to the vitality of the principal axes of the city. Thus the combinations of this type built by Sinān Paşa (1592-3), *Ḳuyudju* Murād Paşa (1610), *Köprülü* Mehmed Paşa (1660-1 [see *KÖPRÜLÜ*]), *Merzifonlu* Kara Muştafā Paşa (1681-90 [see *KARA MUŞTAFĀ PAŞA*]), *Amdjāzāde* Hüseyin Paşa (1700-1) and *Dāmād* İbrāhīm Paşa (1719-20 [q.v.]) were situated on the triumphal axis of the city, while that of *Ekmekdjī-zade* Ahmed Paşa

(before 1618) was located on the street joining this axis to Wefā and beyond to the Golden Horn. A more complete complex, also containing a *zāwiya*, was that of Bayram Paşa (1634-5) situated in the vicinity of the complex of Khürrem Sultāne.

These combinations were virtually the sole markers of the 17th century, when new imperial constructions—with the exception of the completion of the Wālide mosque and the small mosque built by Kösem Sultāne on the heights of Üsküdar—were non-existent. The return of the sultans to Istanbul after a period of residence at Edirne, with the accession of Ahmed III in 1703, marked the start of a new phase of architectural activity, responding to new needs and new styles. The needs resulted from the development of the city, where density of population led to increasingly frequent fires and epidemics. These induced the prosperous classes to take refuge in the periphery, such as the Eyyüb, the northern shore and the Bosphorus, where new residences were to be constructed, soon to be followed by new mosques. At the same time, the need to protect collections of precious manuscripts from fire required the construction of libraries as independent buildings, while the shortage of water resulting from overpopulation led to new projects of water provision, including monumental fountains. These secular buildings, less hampered by the weight of tradition, also gave opportunities for new stylistic experiments, often described as Ottoman baroque art, first coming to prominence in the "Tulip Period" (1718-30) [see LÄLE DEVRI].

The fountains and the *sebil* (places for the distribution of water, see SABİL) regularly accompanied combinations of a *medrese* and a mausoleum, but it was to them that the first stylistic innovations were applied. These were already perceptible in the *sebil* of Amđjazāde Hüseyin Paşa, at the turn of the 18th century and were developed in that of Dāmād Ibrāhīm Paşa twenty years later. In another arrangement, where *sebil* and fountain became the principal elements in a small complex also containing a mausoleum, as well as a school no longer in existence, built at Dolma Baghçe by Hađjdji Mehmed Emin Agha (1741), the baroque elements attained their fullest expression. The *sebil* or fountain was also to be found in association with a primary school (*sibyan mektebi*) situated on the upper level (fountain school of Re'is ül-Kuttāb Ismā'il Efendi at Karaköy [1742] and *sebil* school of Redjā'ī Mehmed Efendi at Wefā [1775]), but this combination, frequently encountered in Ottoman Cairo, remained exceptional in Istanbul.

The monumental fountain standing alone in a covered space was first seen at the very end of the Tulip Period, the first five known examples being virtually contemporaneous. Dāmād Ibrāhīm Paşa, responsible for the drawing of water from Üsküdar, built the first of these four-faced monumental fountains beside the harbour of this suburb in 1728-9. The same year, Ahmed III built the monumental fountain before the main entrance of the Topkapı Palace. His successor, Mahmüd I (1730-54) undertook the conveyance of water from the northern shore of the Golden Horn (waters of Takşım) and three other monumental fountains were built in 1732-3 on this network: that of Topkhāne by the sovereign himself, that of 'Azap Kapı (in front of the Arsenal) by the queen-mother Şalīha Sultāne and that of Ka'ba Tāsh by the Grand Vizier Hekīm-oghlu 'Alī Paşa [see 'ALĪ PAŞA HAKİM-OĞLU].

The first independent library was built by Köprülü Fāđil Ahmed Paşa as an extension of the familial complex on the Dīwān Yolu (before 1676), and Şehid

'Alī Paşa also built a free-standing library behind the mosque of Şhāh-zāde in 1715. This type of building nevertheless acquired a monumental nature—while retaining modest dimensions—with the library built in 1719-20 by Ahmed III in the third courtyard of the Topkapı Palace. New architectural experiments were evident in that of 'Ātif Efendi at Wefā (1741) and were to be most fully expressed in the library of the Nür-u 'Othmāniye complex (1755). Among later buildings, those of Rāghīb Paşa (1762) at Lāleli and of Dāmād-zāde Mehmed Murād Efendi—known as Murād Mollā—(1775) at Çarshamba are worth mentioning.

A new type of building linked with projects for the provision of water consisted of dams, reservoirs placed in the Belgrade forest to the north-west of the city, a happy combination of utility and ornament. The oldest, a straight wall supported by four buttresses, is known by the name of the Dark Dam (Karalıık Bend); dating from 1620 it was located on the network set up by Sinān. The Topluza Bend, built in 1750 on the network of Takşım, introduced cut-off corners, more resistant to the pressure of water. By way of the Aywad Bendi (1765) and the Wālide Bend (1797), progress was made towards the vaulted dam, realised in 1839 with the dam of Maħmüd II.

The 18th century also marked a renewal in the construction of religious buildings, but the first phase was slow and hesitant. The mosque built by Ahmed III for his mother Emetüllāh Gülnüş Sultāne at Üsküdar (1708-10)—a place apparently reserved for the wives of the imperial family—revived the models of the 16th century, albeit with some adjustments to the lines of the *sebil* typical of the Tulip Period. Similarly, it was again the *sebil*, as well as the school placed above the entry-gate, rather than the mosque, which represented innovation in the monumental complex built by Hekīm-oghlu 'Alī Paşa in 1734-5. This makes even more surprising the full-scale renewal of architectural motifs in the Nür-u 'Othmāniye complex, begun in 1748 by Maħmüd I and completed in 1755 under 'Othmān III. Even though the daring solutions, such as the horseshoe-shaped courtyard, were not to be repeated in subsequent centuries, the Nür-u 'Othmāniye marked a new phase in imperial building activity which was not to be discredited for as long as the empire lasted.

Muštafā III (1757-74) built no fewer than three imperial mosques: that of Ayazma at Üsküdar, named after his mother, in 1758-61, that of Lāleli in 1760-3, and that of Fātiħ, rebuilt in 1766-71 after the earthquake of 1765. His successor, 'Abd ül-Hamīd I (1774-89) dedicated to the memory of his mother Rabī'a Sultāne the mosque of Beylerbey on the Asiatic shore of the Bosphorus, and to the memory of his wife Hümāshāh Kadın that of Emirgān on the European shore. He also built near the port his own funeral monument, consisting of a *medrese*, an *imāret*, a *sebil* and a mausoleum. In this complex, constructed in stages between 1775 and 1789, what is observed is the transition from baroque in the *sebil* to Ottoman neo-classicism in the mausoleum.

The reign of Selīm III (1789-1807 [q.v.]) marked the zenith of a flamboyant baroque which was expressed essentially through funeral monuments: the complex composed of an *imāret*, a *sebil* and a mausoleum of the queen-mother Miħr-i Şhāh Sultāne, built at Eyyüb in 1792-5, and the mausoleum was accompanied by a school and a *sebil* of the sovereign's sister Şhāh Sultāne, also at Eyyüb (1800). The tendency continued beyond the reign with the mausoleum and *sebil* of Nakshidil Sultāne built by Maħmüd

II in memory of his mother in the cemetery of Fâtüh in 1818. Finally, baroque and rococo decoration, abundantly present in those parts of the Topkapı Palace dating from the second half of the 18th century, also infiltrated the *zâwiya*, but it was only in the mosque-*zâwiya* of Küçük Efendi, completed in 1825, that the oval form of the plan supplemented the decorative effects. Selim III also built in 1802-5 a mosque in the proximity of the barracks designed to accommodate the new army which was to replace that of the Janissaries. Built in the centre of a chequer-shaped plot, it perpetuated the model of the Nür-u 'Othmâniyye while developing in the form of an annexe the imperial pavilion which seems henceforward to have corresponded to new formal functions, the sovereign receiving dignitaries here after the Friday prayer.

During the reign of Mahmüd II (1808-39), baroque was maintained but attempts were made to adopt a more imperial style. This was manifested particularly in imperial edifices: a pavilion of ceremonies (Alâi köşkü) in the angle of the wall of the Topkapı Palace (1810), a school of Djewri Kalfa on the Dîwân Yolu (1819) and, above all, the sovereign's mausoleum on the same axis (1839). However, in the second half of his reign the ascendancy of the Balyan family imprinted on monumental Ottoman architecture a style that, despite its boundless eclecticism, remained deeply original in its capacity for syntheses and infinitely varied interpretations of the historical forms of Ottoman architecture.

The first work that can be attributed with confidence to the Balyans is the Nuşratiyye mosque, situated in the quarter of Topkhâne, to the north of the Golden Horn, whither architectural activity was progressively transferred. Thus the mosque of Khırka-yî Sherîf, built in 1851 to accommodate the mantle of the Prophet, and that of Pertew Niyâl Sultâne, built in 1869-72 at the crossroads of Ak Sarây, could be considered the last *intra-muros* religious monuments of the city.

The activity of the Balyans was manifested essentially through the imperial palaces built on the shores of the Bosphorus: Dolma Baghçe (1846-55), Küçük Su (1856), Beylerbey (1863-65), and Çirâghân (1864-72), as well as the pavilion of İhlamur (1855) in the valley of the same name. The mosques erected during this period beside the Bosphorus (Dolma Baghçe, 1855, Ortaköy, 1853), or in the vicinity (Medjidiyye, 1848), belonged to same aesthetic movement, with interiors reminiscent of ballrooms. The first buildings of the palace of Yıldız on the heights of the Bosphorus and the mosque built close by (1877) are the last manifestations of this architecture.

New functions resulting from the reforms of the *Tanzîmât* (1839 onwards [g.v.]) entailed new architectural forms most often undertaken by foreign or Levantine architects. The Swiss brothers Gaspard and Giuseppe Fossati, sent from St. Petersburg to build the new Russian embassy, also worked for the Ottoman administration; Alexandre Vallaur, son of a French émigré, constructed a number of public buildings, from the Archeological Museum, in neo-classical style (1891-1907), to the office of the Ottoman National Debt (1897) and that of the Ottoman Bank (1890-2). Finally, the Italian Raimondo d'Aronco was invited by 'Abd ül-Hamîd II to become the quasi-official architect of the reign, constructing the last buildings of the palace of Yıldız, and introducing the Viennese Secessionist style to the Ottoman capital with the astonishing mausoleum of Sheykh Zâfir at Beshiktâş. The Young Turk revolution of 1908 put an end to the activity of these architects, and a national style was imposed.

The latter is manifested in modern buildings such as the main Post Office or the office building built for the benefit of *wakfs* (the fourth Wâkif Khân) as much as it is in mosques seeking classical inspiration from the 16th century (mosque of Bebek, 1913).

(S. YERASIMOS)

**İSTILHĀK** (A.), the verbal noun of Form X of the verb *lahika* "to reach, catch up with," having the meaning of "to try to reach, attach, adopt, affiliate s.o. to s.th." (see *WbKAS*, letter lām, 330). In early Islamic history, it was especially used for the attempt in 44/665 of the Umayyad caliph Mu'āwīya I [q.v.] to attach the very able official Ziyād b. Abīhī [q.v.] to his own, ruling clan of Umayya. Ziyād was of dubious parentage, his mother Sumayya being apparently a slave, and Mu'āwīya aimed at linking Ziyād to his own family as the putative son of his own father, Abū Sufyān [q.v.]. For details of this *istilhāk* process, see ZİYÂD B. ABİHİ, with full references.

(Ed.)

**İTHM** (A.), a term of Islamic theology meaning "sin", used in *Kur'an*, II, 216/219, V, 32/29, XLIX, 12, amongst various other terms denoting sin and sinfulness in varying degrees, such as *dhanb*, pl. *dhanüb*, used in *Kur'an*, III, 129/135 and *passim*. For a discussion of the concept of sin and its consequences, see **KHAT'Ā**.

**İTİŞÂM AL-DİN** B. **ŞH. TÂDJ AL-DİN**, **ŞHAYKH**, a resident of Tâdjpur, in the Nadiya district of Bengal, who went to England on a diplomatic mission in 1180/1769 and wrote an account of his journey in his *Şhigarf-nâma-yi wilâyat or Wilâyat-nâma*. İtîşâm al-Dîn began his official career as a *munshî* in the service of Mîr **Djâ'far** [see **DJĀ'FAR**, **MÎR**]. During the time of Mîr Kâsim [q.v.] he joined the service of Major Yorke. In 1177/1763 he fought on the British side against Mîr Kâsim. He served General Carnac (1765-6) for a short period and later entered the service of the Mughal **Şhâh 'Ālam**. In 1180/1769 he went to England with Captain Archibald Swinton bringing a letter (copy available in the Library of Royal Asiatic Society, no. 134; W. Morley, 128) from **Şhâh 'Ālam** to George III. Munîr al-Dawla, who, according to Sarkar (*Fall of the Mughal empire*, ii, 402), was a devoted partisan of the British at **Şhâh 'Ālam**'s court, insisted on paying İtîşâm al-Dîn 2,000 rupees towards his expenses. In this letter, **Şhâh 'Ālam** sought British help in conducting him to Dihli and placing him on the Mughal throne. İtîşâm al-Dîn returned from England in 1183/1769. In 1189/1775 he helped the East India Company's negotiations with the Marāthās [q.v.].

The *Şhigarf-nâma* is one of the earliest accounts of a journey to England written by an Indian. In about 86 chapters he gave his impressions about the various aspects of English society—religious life, clubs, the judicial system, public schools, sports, etc. He also visited Oxford University and the Bodleian Library. He describes London and its principal buildings, as also agricultural methods and farming. Some autobiographical references are also given. It appears that his relations with Swinton did not remain cordial to the last ('Alîğarh ms. fols. 100-5).

For mss. of the *Şhigarf-nâma*, see Storey, i, 1143; also 'Alîğarh, **Hâbîb gandj** Collection 35.7. An abridged Hindûstānî version of it was made by **Munshî Şhamshîr Kbhān** and was published by J.E. Alexander with an English translation, London 1827.

*Bibliography*: Storey, i, 1142-3; Rieu, *B.M. Catalogue* i, 383, ms. Or. 200; Garcin de Tassy, *Histoire de la littérature hindoue*, i, 463; *Swinton family records*, privately printed, Edinburgh 1906.

(K.A. NIZAMI)

**İYÂS B. KABİŞA AL-TĀ'Ī**, a pre-Islamic individual who played a certain role in the relations between Arabs and Persians, but whose biography is not absolutely clear. According to Ibn al-Kalbî-Caskel (*Ġamharat an-nasab*, Tab. 252, and ii, 361), his genealogy appears to be as follows: İyâs b. Kabîşa b. Abî 'Ufr/'Afrâ b. al-Nu'mân b. Hâyya b. Sa'na b. al-Hârîth b. al-Ĥuwayrîth b. Rabî'a b. Mâlik b. Safîr b. Hin' b. 'Amr b. al-Ġhawth b. Tayyî' (thus his *nisba* is to be amended in the article **ĤUW KĀR**).

This Arab chieftain succeeded in gaining the favour of **Khusraw Aparwîz** (Kisrâ Abarwîz), who apparently entrusted to him some months before the accession of al-Nu'mân III b. al-Mundhîr [q.v.], the administration of al-Ĥîra (al-Ṭabarî, i, 1017). It is difficult to establish exactly in which period the king granted him as a life possession 30 villages on the banks of the Euphrates and appointed him administrator of the region of 'Ayn Tamr, since the traditions are inconsistent. It is possible that **Khusraw** rewarded him in this way for services rendered when he was attacked and forced to flee by the usurper Vahrâm Ćübîn (Bahrâm [q.v.] **Djübîn**). Al-Nu'mân III [q.v.], the king of al-Ĥîra at this time, did not come to the aid of his suzerain, although a certain **Tā'î** had given him

his horse to enable him to escape at a time when he was in a perilous situation on the banks of the Nahrwān. According to some (e.g. al-Tabarī, i, 1029), the hero of this story is İyās; for others (Levi della Vida, *Liures des Cheaux*, Leiden 1928, 32; al-Mas'ūdī, *Murūdj*, ii, 216-7 = § 636), it was his nephew, Ḥassān b. Ḥamzala al-Ta'ī, who gave the king his horse, al-Dubayl, and subsequently received as a land grant the *ṣassūdī* of *Khutarmiyya*. The chronicles mention a victory won by İyās over the Byzantines near Şatīdamā, but the most important event of his life was his appointment to succeed al-Nu'mān III after the Emperor of Persia had taken his revenge by putting the latter to death. Although the date of this appointment is hard to establish, it may be located between A.D. 602 and 604/5; *Khuraw* Aparwiz appointed to serve at his court a Persian official whose title of *Nakhwiraghān* appears in various forms in the Arabic sources (cf. A. Christensen, *Sassanides*, 452). According to the same sources, İyās governed al-Ḥīra for nine years, and it was in the eighth year of his reign that the prophetic mission of Muḥammad began. He died probably in the year A.D. 611 or 612.

It was during the period when he governed al-Ḥīra that there took place the famous battle of *Dhū Kār* [q.v.], in which he participated as leader of the Arab warriors; the Arabo-Persian troops were defeated, but İyās was spared drastic punishment and retained his responsibilities. He was, essentially, the last Arab "king" of al-Ḥīra since the town was subsequently placed in the hands of exclusively Persian officials until the Islamic conquest. Finally, the sources consider him a talented poet, but very few of his verses have been preserved (see, however, *Abkāryūs*, 46-9).

(CH. PELLAT)

**İZMİD**, modern form İZMİR, a town of north-western Turkey, lying at the head of the Gulf of Izmit (Izmit Körfezi) in lat. 40° 47' N., long. 29° 55' E.

It is the classical Nicomedia, named after Nicomedes I of Bithynia, who in 264 B.C. founded it as his new capital. The Roman emperor Diocletian made it in the late 3rd century A.D. his capital in the east; it was there that he abdicated in 305 (see W. Ruge, art. *Nikomedeia*, in *PW*, xvii/1, cols. 468-92). The spelling *Nikumidiyya* appears in such Arabic geographers as *Ibn Khurradādhbih* and *al-Idrīsī*, and subsequently, forms like *Iznukumīd* and *Iznikmīd* are found in Islamic sources.

It was captured from the Byzantines by the *Saldjūks* when they swept through Asia Minor under Sulaymān b. *Kutulmish* (d. 479/1086 [q.v.]) towards the end of the 5th/11th century. Sulaymān made his capital at nearby Nicaea [see *IZNİK*], but shortly after his death Nicomedia was recaptured by Alexius I Comnenus, and apart from the brief period when the Latin emperors of Constantinople held the town (1204-7), it remained in Byzantine hands until captured after a long siege by the Ottomans under *Orkhan*. The dates for this vary in the Greek and Turkish sources, the former placing this in 1338; at all events, it must have been soon after the fall of Nicaea in 731/1331

(cf. Pitcher, *An historical geography of the Ottoman empire*, 38). In 1402 the Turkish town was sacked by a group of *Timūr's* troops. In Ottoman times Izmid, in the *sandjak* of *Ḳoçja-eli* [q.v.], became especially important as a naval arsenal, reportedly founded by the *Köprülüs*, and for building small merchant vessels using timber supplied by the extensive forests of the vicinity.

In the earliest register so far known, an *idmāl* dated 937/1530, the settlement is on record as one of the five towns (*nefs*) of the province. As it is mentioned first in the list, it must have been the residence of the local governor. The town contained 589 men of tax-paying age, 86 of whom were exempted from certain dues. Of the remainder, 351 were heads of households and 152 were bachelors. These figures indicate a settlement of about 2,000-2,500 inhabitants. In the *kaḏā*, there were two *medreses* and two children's schools, as well as two Friday mosques, in addition to five public baths (*Ahmet Özkılıç et alii* (eds.), *438 numaralı muhāsebe-i vilāyet-i Anadolu defteri (937/1530), dizin ve tıpkıbasım*, Devlet Arşivleri Genel Müdürlüğü 1994, ii, 65-6).

In 962-3/1555, *Hans Dernschwam* saw a fortress on a hill with a new mosque, which supposedly had been built in place of a previous church. A sizeable part of the town also was located on this hill. At the time of *Dernschwam's* passage, the classical ruins were being quarried for stone. This was sawn locally into the sizes required by Istanbul builders, presumably for use in the construction of the *Süleymaniyye*, then in progress (*Tagebuch einer Reise nach Konstantinopel und Kleinasien (1553/55)*, ed. F. Babinger, Munich and Leipzig 1923, 153-4). The area's abundant water resources also served for the operation of mills grinding flour for the consumption of Istanbul, including the Janissary bakeries. Due to its functional link with the capital, Izmid formed an exception to the rule that towns were to feed themselves from the product of their own *kaḏās*. For the hinterland was heavily forested rather than agricultural, with high-quality pine trees suitable for ships' masts abundant. As late as the second half of the 11th/17th century, the French ambassador was permitted to export a certain number for the use of the French navy (*R. Mantran, Istanbul dans la seconde moitié du XVII<sup>e</sup> siècle. Essai d'histoire institutionnelle, économique et sociale*, Paris and Istanbul 1962, 445).

The only surviving register enumerating individual taxpayers (*mufaṣṣal*) and covering Izmid dates from 1034/1624-5. At this time, the town consisted of 29 fully-fledged town quarters or, in some cases, recent accretions to older urban wards. The total tax-paying population numbered 849; no data on bachelors being available, our estimate of total population cannot be very precise, but probably the number of inhabitants had about doubled since 937/1530. One of the quarters was named for the local Friday mosque. Since another urban ward was called *Djum'a*, it is likely that the town possessed two structures suitable for Friday prayers; possibly one of these was the *Süleymān Pasha* mosque which, according to a rescript dated 1171/1758, was recorded in the official registers of the time but has not been located in the surviving *tahrīrs* (*Ahmet Kal'a et alii* (eds.), *Istanbul ahkām defterleri İstanbul vakf tarihi*, Istanbul 1998, i, 238). Near the port there was a Christian quarter; this may well have grown in later years, as in 1165/1752 the town boasted a *metropolid*, albeit one who resided in Istanbul (*ibid.*, i, 338-9). During this same period, the town also possessed some Jewish residents (*ibid.*, i, 164). As

the non-Muslim quarter is described as lying "under the town", we may assume that most of the Muslim wards lay on the hill, as they had done in Derschmann's time (Ankara Tapu ve Kadastro Genel Müdürlüğü, Kuyudu Kadime, no. 49, fol. 12b).

Ewliyâ Çelebi visited Iznikmîd about 1050/1640, describing the ruined fortress, which in his opinion had been destroyed by Sultan 'Othmân to prevent its use by the Byzantine nobles with whom this ruler was at war. Among the notable buildings, Ewliyâ mentioned a mosque built by Pertew Paşa on the seashore, a work of Mîm'âr Sinân, along with a public bath and *kerwânsarây* by the same vizier. A garden palace with an extensive park had been built for Murâd IV. The town contained 23 quarters, three of which were inhabited by Christians while one was settled by Jews. There was no *bedestân*, normally the hallmark of a major commercial centre, but the extensive depots located near the port seem to have served similar purposes. Timber merchants formed a significant part of the urban élite *Seyahatnamesi, Topkapı Sarayı Bağdat 304 yazmasının transkripsiyonu dizini*, Istanbul 1999, 39-40).

In the 12th/18th century, woodworking crafts, such as the manufacture of combs and spoons, appear to have been of some significance. However, the Iznikmîd craftsmen did not supply themselves with wood directly from the forest villages, but purchased it in Istanbul. Yet there must have been economic opportunities available in the town itself, as toward the end of the century, Izmîd supposedly held 30,000 people. A.D. Mordtmann Senr., who saw the town shortly after the end of the Crimean War, claims that it was inhabited by 2,000 Turkish, 1,000 Armenian and 200 Greek families, which means that he estimated a population size of about 15,000 (*Anatolien, Skizzen und Reisebriefe aus Kleinasien (1850-1859)*, ed. Babinger, Hanover 1925, 282-3). According to Mordtmann, a small salt pan, already mentioned by Ewliyâ, was in operation, the local harbour was still of some importance and the arsenal was, at the time, building a warship for the Ottoman navy. Further development of the town was, however, impeded by the prevalence of malaria. In the closing years of the 19th century, Izmîd formed the centre of the *mütesarrıflık* of the same name (V. Cuinet, *La Turquie d'Asie*, Paris 1890-4, iv, 301-400). Urban growth had probably been promoted by the railroad linking Istanbul to Ankara, and the town's population now amounted to about 25,000, living in 5,857 houses and purchasing their daily needs in 1,140 shops. Stone quarries and a sawmill were still active: two state-owned factories had been established, making fezzes and woollen cloth for uniforms; another such factory, producing fine silk fabrics and located in Hereke, administratively was situated in the *wilâyet* of Istanbul but geographically much closer to Izmîd. In the immediate vicinity, the townlet of Armach (Cuinet's spelling) was inhabited by Armenians who in 1019-20/1611 had immigrated from Iran. Housing a seminary for Gregorian priests, this locality specialised in silk cultivation.

However, Izmit's transformation into a major industrial centre has come under the Republic, and especially, after the Second World War, with the town benefiting from its easy access to Istanbul. Until 1970, a state-owned paper mill opened in 1936 produced practically all the paper used in Turkey (art. *Kocaeli*, in *Yurt ansiklopedisi*, Istanbul 1982-3, vii, 5037). Since the 1960s, car tyres, petrochemicals and liquid petrol gas (the major fuel for cooking in Turkey) have been developed there, and since there is now an autoroute

along the northern shore of the Gulf of Izmit, the area between Izmit and Istanbul is becoming the major coherent industrial area of Turkey. Izmit itself is now a city of over 300,000 which attracts migrants; its factory workers, now organised, were major participants in the labour unrest of summer 1970. It suffered badly from the 1999 earthquake, when amongst many others, buildings of the recently-established provincial university were destroyed. Yet despite this industrialisation, away from the coastline, some of the area's agricultural potential remains, including the cherries of Yarımcı, known to Ewliyâ Çelebi, and also tobacco, sunflowers and sugar beet.

*Bibliography*: In addition to references in the article, see J.B. Mordtmann's *Et*<sup>1</sup> art. s.v.; Cuinet, *op. cit.*, iv, 357 ff.; Naval Intelligence Division, Admiralty Handbooks, *Turkey*, London 1942-3, ii, 555 and index. (SURAIYA FAROQH)

**IZMİR**, the Turkish form of the ancient Greek name SMYRNA, one of the great mercantile cities of the Eastern Mediterranean. It lies in western Anatolia at the head of the Gulf of Izmir, and the pre-modern city lay mainly on the small delta plain of the Kızılçullu (ancient Melas) river.

Izmir has a history going back five millennia, archaeological excavations having revealed the earliest level of occupation as contemporary with the first city of Troy at the beginning of the Bronze Age (*ca.* 3,000 B.C.). Greek settlement is indicated from *ca.* 1,000 B.C., and Herodotus says that the city was founded by Aeolians but then seized by Ionians. It became a fine city, possibly re-founded by Alexander the Great in 334 B.C. Under the Romans it was the centre of a civil diocese of the province of Asia, and was one of the early seats of Christianity. In Byzantine times it continued as a metropolitan see and was the capital of the naval theme of Samos.

With the invasions of Turkmens across Anatolia towards the end of the 11th century, the Turkish chief Çağa/Tzachas established himself at Smyrna in 1081 and from there raided the Aegean islands. But after the Turks were driven out of Nicaea in 1097 [see IZMİD, in Suppl.], Smyrna reverted to Byzantine rule in 1098. It was over two centuries before it passed under Turkish control again, when it was conquered by the Aydınoğulları [see AYDIN-OGHLU] (716-17/1317: Kadıfe Kal'e; 729-30/1329: Ashağhî Kal'e) (Tuncer Baykara, *Izmir şehri ve tarihi*, Bornova-Izmir 1974, 28; for slightly variant dates, see Irène Mélikoff-Sayar, *Le destân d'Umur Paşa*, Paris 1954, 40). On his visit in *ca.* 731/1331, Ibn Battûta found a largely ruinous place, whose upper fortress was held by the Aydınoğulları and which possessed at least one *zâwiye* (*Rihla*, ii, 310-12, tr. Gibb, ii, 445-7). The city was captured by the Knights of Rhodes on 28 October 1344, although the Aydınoğulları and later the Ottomans held on to the citadel or upper fortress. The Knights were finally expelled by Timûr in 804-5/1402, when he took the lower fortress, and the Aydınoğulları briefly reinstated.

However, in 817/1414-15, Izmir became an Ottoman possession, after the last Aydınoğhlu to rule, Dîjüneyd, known as Izmir-oghlu, had been defeated by Sultan Mehmed I (Himmat Akin, *Aydinoğulları tarihi hakkında bir araştırma*, Ankara 1968, 80; for a later date of the final Ottoman conquest, namely 828-9/1425, see D. Goffman, *Izmir. From village to colonial port city*, in Ethem Eldem, Goffman and B. Masters, *The Ottoman city between East and West*, Cambridge 1999, 86). As the new governor, an Islamised son of the former Bulghar Tsar Shishman, was appointed, but

the first extant *tahrir* describing the town only dates from 935/1528-9 (physical damage to earlier registers accounts for this absence: Başbakanlık Arşivi, İstanbul, Tapu Tahrir no. 148).

In the 9th-10th/15th-16th centuries, İzmir was a small settlement; in 937/1530, 304 adult males, both tax-paying and tax-exempt, were on record; 42 of these were Christians (İsmet Binark *et alii* (eds.), 166 *numaralı muhâsebe-i vilâyet-i Anadolu (937/1530)*, Ankara 1995, 392). There were no more than five urban wards, one of them situated in the immediate vicinity of the port, rather active in spite of the town's small size. By 983/1575-6, İzmir had grown to house 492 taxpayers in eight urban wards; in addition, a group of former Izmirliis had settled in the nearby village of Boynuzsekisi, but continued to pay their taxes with the town's population (Tapu ve Kadastro Genel Müdürlüğü, Ankara, Kuyudu Kadime no. 167, fols. 3b ff.). One of the port's major functions was the supply of İstanbul with grain, raisins, cotton and other agricultural products (Zeki Arıkan, *A Mediterranean port. İzmir in the 15th and 16th centuries*, in *Three ages of İzmir, palimpsest of cultures*, ed. Enis Batur, tr. Virginia T. Saçlıoğlu, İstanbul 1993, 59-70).

But İzmir's remarkable growth really begins in the later 10th/16th century, when the cotton, cotton yarn and other products of the region began to attract French, English, Dutch and Venetian traders. İzmir thus took over the role of mediaeval Ayatholugh (Ephesus, Altiıuogo), which was losing its commercial significance due to the silting up of its port (D. Goffman, *İzmir and the Levantine world, 1550-1650* (Seattle and London 1990). At first illegal, the exportation of cotton was legalised in 1033/1623 (Suraiya Faroqhi, *Towns and townsmen of Ottoman Anatolia*, Cambridge 1984, 136-7). In the 11th/17th century İzmir and the surrounding region were settled by numerous migrants from other provinces, including Jews from Salonika who fled the mounting exactions and diminishing rewards of the Macedonian woollen industry (Goffman, *op. cit.*, 97-102). Toward the century's end, J.-B. Tavernier estimated the population at about 90,000 (*Les six voyages en Turquie & en Perse*, ed. St. Yérasimos, Paris 1981, i, 138; for a general overview of the descriptions of İzmir by 17th-century Europeans, see Sonia Anderson, *An English consul in Turkey*, Oxford 1989, 1-18). Turks formed the vast majority (about 60,000), while there were also 15,000 Greeks, 8,000 Armenians and 6,000 to 7,000 Jews. A major earthquake destroyed the city in 1099/1688, with the heaviest damage in the seaside quarter, but it was soon rebuilt (N.N. Ambraseys and C.F. Finkel, *The seismicity of Turkey and adjacent areas: a historical review 1500-1800*, İstanbul 1995, 90-1). To a large extent, the exportation of Persian raw silk to Europe passed through İzmir; thus this port had entered into a successful competition with the much older mart of Aleppo (Necmi Ülker, *The emergence of İzmir as a Mediterranean commercial center for French and English interests, 1698-1740*, in *Internat. Jnal. of Turkish Studies*, 1 [1987], 1-37). However the regular passage of caravans through a plague-infested mountain area on the Ottoman-Persian border meant that the city was exposed to contagion not only through ships' crews and cargoes, but also on account of overland trade (D. Panzac, *La peste à Smyrne*, in *Annales E.S.C.* [1973], 1071-93).

In the early 18th century, Persian silk was less frequently seen in İzmir, as wars accompanying the decay of the Şafawids impeded cultivation; moreover, English traders gained access to alternative sources in Bengal and China. While English merchants, specialised in

the commercialisation of silk, largely gave up trading in the Levant, French merchants, in particular, continued their activities. At the beginning of the 17th century, İzmir and Iskenderun constituted the major exporting centres as far as the Marseilles trade was concerned, while at the century's end, Iskenderun had fallen far behind, and İzmir uncontestedly handled the vast majority of French exports (Elena Frangakis-Syrett, *The commerce of Smyrna in the eighteenth century (1700-1820)*, Athens 1992, 257-9). In certain years, over 45% of all Ottoman goods shipped to Marseilles passed through İzmir. Exports included mohair yarn from Ankara, silk, cotton, both spun and raw, and wool. Among imports, the only manufactured item were Languedoc woollen fabrics, produced exclusively for the Ottoman market (Cl. Marquié, *L'industrie textile carcassonnaise au XVIII<sup>e</sup> siècle...*, Carcassonne 1993). In addition, İzmir imported coffee from the Caribbean, sugar and indigo.

Of the numerous public buildings of Ottoman İzmir, very little survives. Ewliyâ Çelebi, who visited the town in 1081-2/1671 and admired the relief of a female face at the entrance to the seaside fortress, praises the *Bıyıklıoğlu* *Djâmi'i*, later destroyed in the earthquake of 1099/1688, and also mentions the *Fâ'ik Pasha Djâmi'i*, one of the oldest mosques in town (*Seyâhatnâmesi*, İstanbul 1935, ix, 88-100). His descriptions in part reflect the data collected by the officials who, in 1068/1657-8, put together a *tahrir* under the orders of a certain *İsmâ'il Pasha* (for further information on this document, see Faroqhi, *Towns*, 276). At different times in İzmir's history, 25 *medreses* were active (Münir Aktepe, *Ottoman medreses in İzmir*, in *Three ages of İzmir*, 85-99). Ewliyâ also mentioned the multitude of *khâns* (Aktepe, *İzmir hanları ve çarşıları hakkında ön bilgi*, in *Tarih Dergisi*, xxv [1971], 105-54; W. Müller-Wiener, *Der Bazar von İzmir*, in *Mitteilungen der Fränkischen Geographischen Gesellschaft*, xxvii-xxviii, [1980-1], 420-54). In the late 18th and early 19th centuries, certain İzmir buildings were decorated with elaborate reliefs, featuring slightly stylised views of local mosques and other buildings. The popularity of this decoration may indicate the donors' pride in the prosperity of their city (Ayda Arel, *Image architecturale et image urbaine dans une série de bas-reliefs ottomans de la région égéenne*, in *Turcica*, xviii [1986], 83-118).

An active trade resulted in the residence of foreign consuls, the English historian Paul Rycout officiating as Charles II's representative between 1077-8/1667 and 1089/1678 (Anderson, *An English consul, passim*). By contrast, the Ottoman central administration was merely represented by the *kādî* and the tax farmers collecting customs and other dues. Unlike in many other Ottoman commercial centres, foreign traders were not obliged to reside in the *khâns* but could inhabit houses by the seashore, many of them with landing stages of their own. Houses for rent, known as *frenk khâne*, were built by Ottoman notables as an investment and sometimes passed on to pious foundations. Thus the seaside quarter became known as the "street of the Franks". The latter also were permitted their own churches, the French worshipping at St. Polycarpe, whose parish registers survive from the 18th century onwards (Marie Carmen Smyrnelis, *Colonies européennes et communautés ethnico-confessionnelles à Smyrne: coexistence et réseaux de sociabilité*, in *Vivre dans l'Empire ottoman*, ed. F. Georgeon and P. Dumont, Paris 1997, 173, 194). Entertainments might take on a semi-public character, with plays performed in the French consulate even in the 11th/17th century, while a hundred years later, the Jewish community also staged

plays (Eftal Sevinçli, *Theater in İzmir*, in *Three ages of İzmir*, 370). Officially speaking, neither French nor English merchants were expected to bring their wives, much less marry local Christian women, for this would have made them subjects of the Sultan; sojourn in the Ottoman Empire was expected to be a temporary affair. In practice, certain French and English families lived in the city for generations, and marriages of Frenchmen to Roman Catholics of Greek or Armenian background were common enough.

Ewliyâ Çelebi vaunted the enormous revenues which the *kādî* of İzmir enjoyed in his own time, partly due to regular emoluments and partly due to the presents which he could expect (ix, 89). But in the 18th century, the major Ottoman presence in the area was not the *kādîs* but a family of tax farmers and dues collectors acting for absentee governors and known as the *Çara 'Othmānoğulları*. The economic power of these personages derived from the fact that they marketed the cotton and other agricultural produce they collected from local peasants to foreign exporters (G. Veinstein, *'Ayân' de la région d'Izmir et le commerce du Levant (deuxième moitié du XVIII<sup>e</sup> siècle)*, in *ROMM*, xx [1975], 131-46; for a contrary position, emphasising the role of the family as actual landholders, see Yuzo Nagata, *Tarihle ayânlar, Karaosmanoğulları üzerinde bir inceleme*, Ankara 1997, 89-142). Political power and status allowed the *Çara 'Othmānoğulları* to drive hard bargains, so that peasants also entrusted them with the goods they wished to sell on their own behalf. Socio-political status also was documented by the numerous pious foundations this family established in the region, for which the two *khāns* constructed in İzmir by different *Çara 'Othmānoğulları* were meant to produce revenue (İnci Kuyulu, *Kara Osman-oglu ailesine ait mimari eserler*, Ankara 1992, with extensive bibl.).

In the 19th century, İzmir continued to function as a city specialising in foreign trade. However with the Ottoman Empire's increasing integration into a transcontinental economy dominated by Europe, the character of this trade changed, while its volume continuously expanded. Grain, sesame, figs, raisins (at the end of the century by far the single most valuable crop), the tanning agents sumach and valonia, and opium, all arrived in the depots of İzmir's "gentlemen traders", many but not all of them non-Muslims. Ottoman merchants operated as middlemen, dependent on exporting European merchants (Halit Ziya Uşaklıgil, citing a passage from *Kırk yıl*, 5 vols., Istanbul 1936, cited in English tr. in C. Issawi, *The economic history of Turkey 1800-1914*, Chicago and London, 1980, 72-3; V. Guinet, *La Turquie d'Asie*, Paris 1892-4, iii, 362 ff.).

İzmir's role as a centre of export trade encouraged investment in the construction of railroads; thus one of the first Anatolian railways linked İzmir to Turgutlu, then known as Kasaba, and another line connected Aydın and İzmir. However, the orientation of these railways according to the needs of import and export merchants limited their overall economic usefulness (Orhan Kurmuş, *İmperyalizmin Türkiye'ye gelişi*, İstanbul 1974). Between 1867 and 1875, the port of İzmir was modernised, with quays and a breakwater constructed (Mühahat Kütükoğlu, *İzmir rıhtımının inşaatı ve işletme imtiyazı*, in *Tarih Dergisi*, xxxii [1979], 495-558). A few industrial enterprises served the preparation of agricultural goods for export. While most of the olive, sesame and other vegetable oils were still pressed in old-style mills, there were a few ventures, undertaken by members of the Ottoman minorities but also by the occasional Englishman, to found modern-style fac-

ories (Abdullah Martal, *Değişim sürecinde İzmir'de sanayileşme, 19. yüzyıl*, İzmir 1999, 144-5). In the import sector, textiles assumed a greater importance after about 1840. At that time, the output of English cotton factories began to flood the İzmir market, unimpeded by any protective duty since the Anglo-Ottoman commercial treaty fixed custom dues at a low level and prohibited monopolies (Martal, *Sanayileşme*, 123-5). This did not, however, prevent the emergence of a flourishing textile industry specialising in home furnishings (Guinet, iii, 429).

Moreover, rising standards of living among the European middle classes, as well as the stylistic preferences of the Victorian age, led to an increased demand for carpets. What had previously been a luxury trade expanded to cater for mass markets which around 1900, came to include the more affluent sectors of the working class. While these carpets were manufactured in small towns of the Aegean region, notably Uşak [see 'UŞAK], they became known as Smyrna rugs in Europe, not only because they came out through the city's port but also because the merchants organising this venture, British traders occupying a prominent position, were frequently based in İzmir (D. Quataert, *Machine breaking and the changing carpet industry of western Anatolia 1860-1908*, repr. in *Workers, peasants and economic change in the Ottoman Empire 1730-1914*, İstanbul 1993, 117-36).

Trade and an active public administration had by the end of the 19th century stimulated urban growth, the population of İzmir proper reaching the 200,000 mark. About 89,000 were Muslim Turks and 59,000 Orthodox Greeks, while over 36,000 inhabitants carried foreign passports (Guinet, iii, 440; for further statistical information, largely culled from the *sālnāmes*, see the anonymous art. *İzmir*, in *Yurt ansiklopedisi, Türkiye il il, dönü, bugünü, yarını*, 4271-87). Steamboat lines and a tram assured intra-urban communication and, in 1905, electricity was introduced. The city became an educational centre, with nine state schools on the secondary level. For the Greeks, there was the "Evangelical School" famed for its high level of instruction, in addition to numerous foreign, especially French educational establishments.

İzmir was not directly affected during World War I, although many young men were drafted into the army or into labour bataillons. But in 1919, with the Ottoman Empire defeated and İstanbul occupied by the Allies, the Greek government, with the backing of the British Prime Minister Lloyd George, landed troops in İzmir and occupied the city until 1922, when the invaders were driven out by the Nationalist army under the command of Muşafâ Kemâl [Atatürk]. Both the Greek occupation and the later withdrawal of the Greek forces were accompanied by large-scale flight from İzmir, which in September 1922 was moreover destroyed by a major conflagration (M.L. Smith, *Ionian vision, Greece in Asia Minor 1919-1922*, rev. ed. London 1998). The exchange of populations decided upon in the Treaty of Lausanne (1923) involved the exodus of the remaining Greek population, whose places were taken by Turks who had been forced to vacate Greek territory.

In the 1960s, İzmir began to add new functions to its traditional role as an export-import centre serving an agricultural hinterland. Small-scale industry developed, and in automotive transportation, numerous minute undercapitalised entrepreneurs were also active. As in all large Turkish cities, migration from rural areas led to the hasty construction of shantytown housing and the emergence of a large "informal

sector" (Mübecceî Kiray, *Örgütlemeyen kent, İzmir'de iş hayatının yapısı*, Ankara 1972). By 1980, İzmir had developed into a city of over half a million inhabitants, surrounded by highly urbanised suburbs. Apart from the beginnings of an investment goods industry, factories processing tobacco, olives and fruits continue to be a local specialty, and tourism also plays an important role in the urban economy. With two universities, the city also has become one of the educational centres of Turkey.

Mordtmann, *ET* art. s.v. (SURAIYA FAROQHI)

**‘IZZET HÖLÖ** (AL-‘ĀBID, Aḥmad b. Muḥyī l-Dīn Abu l-Hawl b. ‘Umar b. ‘Abd al-Ḳadir, popularly known as **‘ARAB ‘IZZET** Pasha (1272-1343/1855-1924), late Ottoman statesman and close counselor of Sultan ‘Abd al-Ḥamīd II [q.v.].

Born in Damascus (hence his nickname “‘Arab”) as the son of a wealthy local notable, Hölö Pashā, he was educated in his hometown and in Beirut and became proficient in Turkish and French. Counted among the reformers, he edited a weekly in Arabic and Turkish, named *Dimashk*. Moving to Istanbul, he eventually joined the ranks of the chamberlains (*kurenā*) of ‘Abd al-Ḥamīd and then became a Second Secretary (*ikindji kاتب*) of the *Mabeyn* [q.v.]. He gained great in-

fluence at court and was finally appointed Vizier. In May 1900 he was made head of the supervisory committee for the Hıdjāz Railway [q.v.]. From gifts of the Sultan and from kickbacks paid to him by foreign companies he acquired great wealth, and became the object of public outrage. The then famous satirist Shā‘ir Eṣṣref (1847-1912), in a lampoon against ‘Abd al-Ḥamīd, wrote:

*Besmele gūsh eyleyen sheytān gibi,  
Korkuyursun “höi” dese bir edḡnebi.*

*Pādshāhum öyle alçaksın ki sen  
‘Izzet-i nefsin ‘Arab ‘Izzet gibi!*

Like Satan, when he hears the *bismillāh*,  
you panic, if a foreigner says “hum”.

My Lord, you are so lowly that your soul’s nobility is like unto ‘Arab ‘Izzet.

At the outbreak of the 1908 revolution he fled to London and thenceforward lived outside his own country, mainly in England, Switzerland and France. He died in Egypt, where he had gone for medical treatment, and was buried in Damascus.

## J

**JAMIA MILLIA ISLAMIA** (AL-DJĀMĪ‘A AL-MILLIYYA AL-ISLĀMIYYA), a Muslim University, formerly in British India and now in the Indian Union.

In September 1920, the Indian National Congress adopted the non-cooperation resolution against the British government. The Jamia Millia Islamia (National Muslim University) was the “lusty child of the non-cooperation days”, according to Jawaharlal Nehru, independent India’s first Prime Minister 1947-64.

Mawlānā Maḥmūd Ḥasan (1851-1920), the ‘ālim at the *Dār-al-‘ulūm* in Deoband, performed the opening ceremony on 29 October 1920. The Jamia’s principal architects were the Oxford-educated Mawlānā Muḥammad ‘Alī (1878-1931), the pan-Islamic leader Dr. Mukhtār Aḥmad Anṣārī (1880-1936), an Edinburgh-trained medical doctor, and Ḥakīm Adjmal Khān (1863-1927), a leading practitioner of the *unani* system of education and one of Dihli’s well-known citizens. Among its prominent vice-chancellors have been Dr. Zākir Ḥusayn (1879-1969) and Muḥammad Muḍjīb (1902-85).

In its nascent stages, the Jamia’s *raison d’être* was to keep Muslim education free from government aid and control and to evolve a philosophy of education that would be in keeping with national characteristics and in consonance with the Islamic spirit. The founders believed that communal peace and religious understanding were the fruits of true education. Consequently, they devised a curriculum to end religious discord between all faiths, to familiarise youth with their own cultural heritage without rejecting what was true and useful in the culture of others, and to evolve an organic thesis of traditional and modern education. The first *Amīr-i Djāmī‘a* (Chancellor), Ḥakīm Adjmal Khān, expected students to know each other’s

culture: “The firm foundation of a united Indian nationhood depends on this mutual understanding.”

M.K. Gandhi, the main inspiration behind the founding of the Jamia, hoped that this institution would interpret Muslim culture in a manner consonant with truth and the requirements of a people diverse in culture. He hoped that it would produce good Muslims who would be men of refinement and character, living according to the highest moral standards and serving the people with devotion and sincerity.

In 1935, Halide Edib Hanum, the Turkish author [see KHĀLIDE EDİB], lectured at the Jamia. According to her, the institution’s chief objective was to create a harmonious nationhood, and she observed that, in its aim, if not always in its procedure, it was nearer to the Gandhian movement than any other Muslim institution she had come across in India. In 1943, W.C. Smith, the historian of Islam, commented that the Jamia “has been constantly growing, ever refurbishing its methods, and branching out from time to time to meet new needs. . . Its education has aimed at being, and has been, progressive, Indian, and Muslim.”

The pursuit of such ideals ran into rough weather owing to paucity of funds, and yet dedicated teachers kept the Jamia going under adverse circumstances. They did not have money, and worked amidst and through poverty. They did not even have the shelter of houses, so they taught under the open sky. Yet they cheerfully faced the hard trials in an atmosphere of enthusiasm and optimism. Zākir Ḥusayn, vice-chancellor from 1926 to 1948, remembered those years of deprivation as “days of joy”.

In the 1930s, the All-India Muslim League staked its political claims as the sole spokesman of the Muslim community. Muḥammad Muḍjīb, the historian at Jamia,

toled Muḥammad Ikbāl (1876-1938 [q.v.]), the poet of Indian Islam, that his plea for a Muslim state in north-western India was opposed to their cherished ideal that Muslims live and work with non-Muslims in order to realise common ideals of citizenship. In March 1940, Muḥammad ‘Alī Djināh (1876-1948 [q.v.]) put forward the “two-nation” theory to legitimise his demand for a Muslim homeland. Unlike the university at ‘Alīgarh, which turned into an “arsenal of Muslim India”, the “two-nation” theory found no supporters in the Jamia *birādārī* (fraternity).

An institution with a nationalist record could not escape the fury of the angry mobs that rioted in independent India’s capital after the country’s Partition. The Jamia’s property was looted and destroyed. But it lived through this experience to provide the healing touch and was, in the opinion of Gandhi, “like an oasis in the Sahara”.

The university, in search of moral and political support after independence in August 1947, could have

turned into a quasi-religious or quasi-communal institution, but this did not happen, and the Jamia’s historic character has remained unchanged. “I look on this,” claimed Muḍjīb, “as a secular school.”

In the mid-1920s, the total enrolment of the schools and colleges was about eighty, with 25 to 30 teachers. Today, the Jamia is a central university, administered by an act of Parliament. Over 5,600 students receive education and training in social, physical and natural sciences, humanities, education, law, engineering and mass communication. From a few thousand rupees in the 1930s, its maintenance budget, in 2000-1, is approximately 36.11 crores.

## K

**KĀBĀDŪ**, MAḤMŪD B. MUḤAMMAD b. Muḥammad b. ‘Umar (1230-88/1815-71), poet, man of letters and religious figure, and one of the precursors of reform in Tunisia.

After having learnt the Qur’ān, Arabic language and the rudiments of *fiqh*, he left the *kuttāb* or Qur’ān school and plunged into individual readings of the mystics, and especially, the writings of Ibn al-‘Arabī [q.v.]. Under this influence, he spent his youthful life as a dervish. At the age of 18, his wanderings took him as far as Libya, where at Misrāta he met a famed Sūfī master, the *shaykh* Muḥammad Zāfir al-Madanī (d. 1854). In this *shaykh*’s company, he regained his desire for study. Three years later, he left him with the license, *idjāza* [q.v.], to transmit his teachings. On his return to Tunis, he attended the lectures of several *shaykhs* of the Zaytūna [q.v.], including Muḥammad Bayram al-Thālīth, Aḥmad b. Tāhir al-Luṭayyif and Muḥammad b. Mulūka. At the same time, he taught the Zaytūna students abridgements of grammar, logic and rhetoric. One of his masters recommended him to the minister Sulaymān Kāhiya as a tutor for his sons. The minister’s death in 1838 led him into exile for a second time, and he went to Istanbul and remained there till 1842. According to Ibn Abī Diyāf, who met him at the time of a mission to the Sublime Porte and who led him to return to Tunis, he spent these years in study and teaching, as he had done at the Zaytūna. One of his biographers, Zayn al-‘Ābidīn al-Sanūsī, states that he followed courses in mathematics at the Military College in Istanbul.

Back in Tunis, Kābādū was appointed professor at the Military Polytechnic School of Bardo, the first Tunisian to teach thus in this institution, whose director and teachers had been till then exclusively Europeans. During the years spent there (1842-55), he played a decisive role in the education of an élite, which was to be a spearhead of the reforms achieved between 1840 and 1875. Amongst his students, who also became his friends and protectors, was the great statesman and reformer Kḥayr al-Dīn (d. 1889 [q.v.]),

author of the celebrated *Aḳwām al-masālik fī marārifat aḥwāl al-mamālik*, and the general Ḥusayn (d. 1887), one of the authors of the *‘ahd al-amān* or Fundamental Pact, who functioned as, *inter alia*, minister of education and public works. His teaching at the Bardo School involved only Arabic language and literature, but he encouraged his best students to translate from French into Arabic manuals and scientific works that he thought necessary for the formation of an élite to guide the country along the path of reform and modernisation. He checked and corrected the Arabic versions of certain works and wrote prefaces for others.

As soon as he demitted his duties at the School, Kābādū was appointed to the Zaytūna, on the recommendation of the Hanafī *muftī* Bayram al-Rabī’, as a teaching *shaykh* of the first class, retaining this position till the year of his death in 1871, combining it with the offices of *kāḍī* of the Bardo and then that of Mālikī *muftī* (from 1868 onwards). These positions enabled him to retain his influence and even to enlarge his audience. Whilst teaching rhetoric and logic, he stimulated the formation of circles at the Zaytūna in which he introduced subjects relevant for the various disciplines. At the Bardo School, he encouraged students who had a scientific and technical education to take an interest in the literature and history of Arab Muslim civilisation. At the Zaytūna, he led students seeking a traditional education towards the modern sciences and the study of other civilisations, thus contributing to the forming of a generation of Zaytūna graduates open to the spirit of reforms which brought a religious legitimisation to the movement for modernisation by the Bardo-trained élite he had himself taught. His most notable disciples at the Zaytūna were the *shaykh* Sālim Būḥādījib (1828-1924) and Bayram al-Kḥāmīs (1839-89). The first of these was hailed by Muḥammad ‘Abduh [q.v.] as one of the minds most open to the reform he and al-Afghānī preached; he later became Mālikī *muftī* and then *shaykh al-islām*, a post previously reserved for

Hanafis, and president of the Consultative Council. The second held various offices with the reformist ministers before going into exile, after *Khayr al-Dīn's* fall, at Istanbul and then Cairo, where he instigated a reformist newspaper, *al-Flām*, and a reform movement.

If Muḥammad Kābādū is considered as a precursor of reform in Tunisia, this stems mainly from his role in the education of a political and religious élite to which he remained close and which put into action the reform of institutions in 19th-century Tunisia. At the Bardo School, as at the Zaytūna, he inculcated those reformist ideas which had begun to be known within the Muslim world at the end of the 18th century. This spirit, which Kābādū defended in his writings and in his official duties, rested on the will to reconcile the Arab-Islamic heritage with the ideas and knowledge that had brought about progress in Europe.

Not all of his work has come down to us, and what he wrote before 1842 is essentially lost. Even of his later works, at least a commentary on the poems of al-Mutanabbī is lost. His extant work is available in three editions: by M. al-Santūsī (1877); by the Tunisian Publishing Society (1972); and by the University professor Amor Ben Salem, based on scholarly research, and published by the CERES at Tunis (1984). His oeuvre contains a section on poetry (= Ben Salem's first vol.), which is more important than the prose works (= the second vol., with various annexes). His poetry reflects the different stages of his career. His political ideas are especially to be found in his eulogies of the three Beys whom he knew between 1842 and 1871, and of the viziers and influential figures of the same period, as also in his poems hailing such events as the promulgation of the Fundamental Pact in 1846 and the Constitution of 1861, the publication of *Khayr al-Dīn's* book, etc. His closeness to the ruling powers explains the limits of his reformist policies, as seen in certain poems, like those where he hails the suspension of the reforms after the rebellion of 'Alī b. Ghidhāhum [see *IBN GHIDHĀHUM*, in Suppl.] in 1864. His religious feeling is reflected in his invocations, addresses to saints and poems composed to glorify the great Sūfī leaders, the Prophet and his descendants, to which his own shar'fian origins attached him. Filled with classical culture, he was interested in the various forms of the Arabic poetic tradition, and his style and the forms adopted by him show a respect for classical canons of literature. These characteristics surface also in his non-poetic works, within which rhymed prose is dominant. This part of his work includes his letters, the editorials of the first 25 numbers of the *Journal Officiel*, his articles within that journal, the preface of the Arabic translation of Jommier's book on war, an epilogue to the Official Press of Tunisia's edition of the *Muwatta'*, a panegyric addressed to *Khayr al-Dīn's* book and the prefaces to his poems.

Kābādū's life and work have attracted much attention from those who consider him as a precursor of reform in Tunisia; the most complete and the most rigorously scholarly edition of his work remains that of Ben Salem.

(M.CH. FERJANI)

**KĀBBĀNĪ**, NIZĀR TAWFĪK (1923-98), the most widely read and, with over 18,000 lines of verse, the most prolific 20th-century Arabic poet, an important innovator of form and content.

Kābbānī became a diplomat in 1945 after finishing his law studies in his native Damascus, but he left the service in 1966 so as to devote himself to full-time writing in Beirut, where he started his own publishing house (Dār Manshūrāt Nizār Kābbānī) in 1967. He died in London, where, after a short spell in Geneva, he had spent his last years. He was laid to rest in Damascus.

Kābbānī's highly poetical and persuasive language is eminently accessible and has been described as a "third language", neither lexicographically classical nor educated vernacular. His departure from classical norms is, in the poet's own words, a deliberate attack on the haughty history of Arabic rhetoric. Still, many of his poems are in a traditional *Khalīlīan* metre with monorhyme and a fixed line-length (but often printed in a modern lay-out). However, more than a fifth of his poems (196 out of a total of 863) are non-metrical. In between are many poems in the tradition of *shī'r ḥurr* (lit. "free poetry") with varied rhymes and variable line-length (brought about by the fact that the constituent metrical foot—or *taf'īla*—is repeated a different number of times in different lines). An early example of this, already in his first *dīwān* *Kālat liya 'l-samrā'* (1944), is the poem *Indjāfā*.

Kābbānī's linguistic rebellion operates within a wider militant vision that defies a stagnant, underdeveloped and inhuman Arab society with its taboos on sexuality, religion and political power. This disposition is artistically expressed in hundreds of love poems, and some 140 overtly political poems. His "Notes on the book of the defeat" (*Hawāmīsh 'alā daftar al-nakṣa*), "the angriest poem in contemporary Arabic" (S. Jayyusi), which appeared in the aftermath of the June 1967 defeat, ushered in a new stage, as underlined in the poet's own words "Ah my country! You have transformed me/from a poet of love and yearning/to a poet writing with a knife." Through the unity of his poetic vision, however, love and politics in Kābbānī are not compartmentalised. Much of his love poetry can in fact be read as political, and the political poems resonate with his love poetry.

His detractors tend to read his love poetry as a narcissistic Don Juanesque catalogue of amorous exploits and accuse the poet of superficiality. His social and political criticism has been read as sadistic nest fouling, and his writings have been banned more than once. Yet his poetry is popular with the masses and is memorised by millions, to which the sung versions

of some twenty poems by singers such as Umm Kulthūm [q.v.], Fayrūz, 'Abd al-Halīm Hāfiz (d. 1977), Mādjida al-Rūmī (b. 1957), Kāzīm al-Sāhīr, Nađjāt al-Şaghīra and others have also contributed.

His prose works include statements on poetry, and the autobiographical *Kiṣṣati ma'a 'l-shīr* (1973) and *Min awrakī 'l-mađjhūla: sira dhātīyya thāniyya* (2000; not seen).

Kabbānī's contacts with Spain (with a professional stay at the Syrian embassy from 1963 till 1966) have contributed to a focus on Andalusian themes, and several poems have been translated into Spanish, notably three volumes by P. Martínez Montávez: *Poemas amorosas árabes*, Madrid 1965, <sup>3</sup>1988; *Poemas políticos*, Madrid 1975; *Tú, amor*, Madrid 1987. An Italian collection *Poesie*, tr. by G. Canova et al., was published in Rome 1976. Volumes in English are *Arabian love poems*, tr. by B. Frangieh and C.R. Brown, Colorado Springs 1992, with the original texts in the poet's own hand, and *On entering the sea: the erotic and other poetry of Nizār Qabbānī*, tr. by L. Jayyusi et al., New York 1996, with an introduction by Salma K. Jayyusi. Several translated poems are included in surveys of modern Arabic poetry.

**Bibliography:** 1. Works. The collected works (including poetry, prose and interviews) have been published in nine volumes, Beirut 1997. They lack a common name, and are entitled *al-'amāl al-shīriyya al-kāmila* (vols. i, ii, iv, v and ix); *al-'amāl al-siyāsiyya al-kāmila* (vols. iii and vi); and *al-'amāl al-nathriyya al-kāmila* (vols. vii and viii) [earlier editions in eight volumes]. Indexes of titles, first lines, metres and vocabulary are in Burhān Bukhārī, *Mudkhal ilā 'l-mawṣū'a al-shāmila li 'l-shā'ir Nizār Kabbānī*, [Kuwayt] Dār Su'ād al-Sabāh 1999.

2. Critical studies. G. Canova, *Nizār Qabbānī: poesie d'amore e di lotta*, in *OM*, lii (1972), 451-66; idem, *Nizār Qabbānī: "La mia storia con la poesia"*, in *OM*, liv (1974), 204-13; A. Moreh in *JSS*, xlv [2000], 221-3). (W. STÖTZER)

**KABĪR**, North Indian mystic and poet (d. ca. 1448). Although Kabīr is regarded as one of the most influential saint-poets of mediaeval Northern India, there is very little authentic information concerning his life. We can reliably state that he was born in Benares to a family of low-caste Muslim weavers called *ajulāhās*, probably in the opening years of the 9th/15th century. Beyond this, various hagiographies of Kabīr, depending on the authors' sectarian affiliation, make competing claims that he was a Muslim Şūfī, a Hindu with liberal Vaiśnava leanings or a champion of Hindu-Muslim unity who rejected institutionalised forms of both Islam and Hinduism. Kabīr's fame is based on the numerous couplets (*dohās*) and songs (*padas*) attributed to him and called *Kabīrānīs*, or "words of Kabīr". Written in a caustic

colloquial style in a mediaeval Hindi dialect and sung in folk melodies, these compositions have been an integral part of oral religious literature in North India, being recited by Muslims and Hindus alike. Selections of Kabīr's verses have been incorporated into the *Ādi granth*, the scripture of the Sikh community, as well as the *Pāñcāvānī*, the hymnal of the Dādūpanthī sect. The Kabīr Panthīs, "the followers of the path of Kabīr", have a compilation of his poetry called the *Bijāk*. Since Kabīr's verses, like most mediaeval Indian devotional poetry, were initially transmitted orally and recorded in writing only later, there are serious doubts concerning the authenticity of much of the corpus attributed to him.

Kabīr, who was influenced by various religious currents including forms of Şūfism and tantric yoga expounded by the Nāth yogis, is regarded as the pioneer poet of the *sant* movement that swept across North India in the 15th century. The *sants*, or poet-saints, were participants in a grass-roots religious reformation that rejected the worship of multiple deities in favour of an esoteric form of religious practice whose goal was union with the one attributeless (*nirguṇa*) God. They also questioned the efficacy of religious rituals and validity of scriptural authority. Expressing themselves in vernacular poems, the *sants* conceived of the human-divine relationship in terms of *viraha*, or yearning, longing love. Union with the Divine could be attained by anyone, regardless of caste, through meditation on the divine name and with the guidance of a *guru*. In poems attributed to him, Kabīr is particularly harsh in his attacks on the representatives of institutionalised religion, the Hindu *brāhmin* and the Muslim *mullā* or *kādī*, whose bookish learning and rituals he considered entirely useless in the spiritual quest. After his death, some of Kabīr's disciples organised themselves into a sect, the Kabīr Panth. Notwithstanding Kabīr's anti-institutional and anti-ritualistic stance, at the sect's central monastery in Benares, both monks and lay people engage in a ritualised recitation of Kabīr's poems and make offerings to an image of their master.

(ALI S. ASANI)

**KABĪRA** (A., pl. *kabā'ir*), a term of Islamic theology meaning "grave [sin]", occurring in *Qur'ān*, II, 42/39, 138/143 and *passim*. It was the stimulus for much discussion amongst theologians and sectaries like the *Khāriđjites* [q.v.] on what constituted a grave sin and how committing one affected a man's salvation. For a discussion, see *KHAT'Ā*.

**AL-KABĪK**.

History.

1. For the early Islamic period up to the Mongol and Timūrid periods, see Vol. III, 343-50.

2. The period 1500-1800.

Compared to previous and later epochs, these three centuries are among the least studied periods in the history of the Caucasus. The main reason for that lies not in the unavailability of sources but rather in their inaccessibility until the recent past. The Russian

archives, the most used ones, are far from having been fully scrutinised. In the Ottoman archives, only the surface has been scratched, chiefly due to the efforts of French scholars (A. Bennigsen, Ch. Lemerrier-Quellejey, G. Veinstein *et al.*). The rich local collections, or rather those that have survived wars, deportations, confiscation and deliberate destruction, have only begun to be intensively collected, catalogued and studied in the 1980s, mainly by Dāghistānī scholars (A. Shikhsaidov, Kh. Omarov, G. Orzaev *et al.*). Their works, published mainly locally, are not easily obtainable, however. The result is that most of the information available on this period is from the viewpoint of the neighbouring Great Powers (above all, Russia) competing for mastery over the Caucasus.

Yet even the scant information at our disposal points to the importance of the internal processes that occurred during these three centuries. To start with, this seems to be the time when the Northern Caucasus was converted to Islam. In the 16th and 17th centuries, the Adighe peoples (known collectively as Čerkes [*q.v.*]) and the Kabartay [see KABARAS] of the north-western and central Caucasus respectively, were Islamised by the Crimean Tatars and the Ottomans. In the east, the Islamisation of Dāghistān, as well as of the Ghumiks [see KUMUK] in the foothills to the north had been completed around the 16th century, to be followed by that of the Čečens [*q.v.*] (the Islamisation of the Čečens would be completed only in the first half of the 19th century). Contrary to the established view, Islam seems to have spread among the Ghumiks from the "Golden Horde" rather than from Dāghistān; and it was they, not the Dāghistānīs, who started to Islamise the Čečens. This is hinted at by the fact that these two peoples adhere to the Hanafī *madhhab*, while the Dāghistānīs belong to the Shāfi'ī one.

This difference in *madhhab* notwithstanding, Dāghistān, a major centre of Islamic scholarship since the 5th/11th century, supplied religious leadership to the north-eastern Caucasus well into the 20th century. This meant *inter alia* that, in this area, the main literary language had remained Arabic, which facilitated ties with the major Shāfi'ī centre of Zabīd in the Yemen (I. Yu. Kračkovskij, *Dagestan i Iemen*, in *Izbrannije sočinenija*, Moscow and Leningrad 1960, vi, 574-84). Nevertheless, the daily life of the Muslims in Dāghistān, as all over the Northern Caucasus, continued to be regulated by the local 'ada (pronounced 'adāt) rather than by the *Shari'a* (pronounced *shari'āt*). On some occasions the local 'adawāt were written down, usually in the local idiom (for an example in Russian tr., see Kh.-M.O. Khashaev (ed.), *Kodeks ummu-khanna awarskogo (spravedlivogo)*, Moscow 1948). A serious attempt to enforce the *Shari'a* and eradicate 'ada would be made only in the 19th century.

Another major process was that of forming a new social structure in parts of the north-eastern Caucasus. The Adighe and the Kabartay seem to have retained their stratified order, dividing society into nobles and commoners. The Čečens, on the other hand, seem to have forced out the nobility in the 16th century and established a society based on the equality of free men. Each community/clan was run by a council, *khel*, of its elders and pan-Čečen matters were discussed and decided in the *mehk khel* "the council of the land". In the eastern and northern parts of Dāghistān, all the principalities known from previous periods continued to exist, their rulers bearing different titles: the *Shāmkhāl* of Targhī, the *Usmī* (pronounced *utsmī*) of Kārakytāk, the *Mā'sūm* of Ṭabarsarān, the

*Sultān* of Ilišū and the *Khāns* of Ghāzī Ghumuq, Mekhtulī and Avaristān. The extent of their control, territory and influence depended on the personal qualities, power and charisma of each individual ruler. To this period belong, however, the first testimonies available to us concerning *djamā'as* (pronounced *djamā'āt*) in the inner and western parts of Dāghistān, independent of the principalities to the east and north (and thus dubbed by Russian sources "free communities", *vol'nie obščestva*).

The *djamā'a*, a community of several villages, usually confined within natural boundaries, was the basic political, social and economic unit in the country. It had most probably existed in previous times as well. Each *djamā'a* was headed by an elected *kādī*, who chaired the council of the elders. The most vital matters, however, were decided by a general assembly of the *djamā'a*. All men, whether noble, *uzdens* (free men) or *djanikas* (descendants of noble fathers and common mothers) were equal members of the *djamā'a*. The principalities were, in fact, a confederation of *djamā'as*, each deciding whether to accept a ruler's authority. The free *djamā'as* did not recognise any outside authority over them, though on some occasions they formed permanent loose confederations. The most prominent of these was the confederation of 'Akūšha (known also as Darghī) which headed the alliance that defeated the troops of the Persian ruler Nādir Shāh Afshār [*q.v.*].

The external affairs of the Caucasus have attracted relatively much more interest from scholars. The Caucasus was part of the last major realignment of Great Powers in the Muslim World, sc. that of the first two decades of the 16th century. In fact it became the main battle ground between two of them, the Sunnī Ottomans and Shī'ī Šafawids. After three Ottoman (1534-6, 1548-9 and 1554-5) and one Šafawid (1552) major campaigns, the peace of Amasya (1555) divided Trans-Caucasia between the two. Ottoman overlordship was recognised over the western part of Georgia (i.e. the kingdom of Imeret'i and its "vassal" principalities of Guri, Svanet'i and Abkhazia), while Šafawid overlordship was recognised over its eastern parts (the kingdoms of K'art'i and Kakhet'i), and present-day Armenia (Eriwān and Nakhđjivān), Ādhar-bāydjān (Shīrvān, annexed in 1536) and the southernmost corner of Dāghistān (Derbend, annexed in 1509). This line of division would remain in force throughout the period with two notable exceptions (1578-1602 and 1723-35), when the Ottomans took advantage on the first occasion of internal struggles within the Šafawid house, and on the second occasion, of the disintegration of Šafawid power temporarily to seize control over the entire Caucasus.

North of the main mountain range, the Sunnī Muslims habitually recognised the Ottoman Sultan's authority. This, however, was far from constituting even a shadowy Ottoman rule. In the west and centre, the Ottomans exercised a very limited, indirect and ineffective control over the Čerkes and Kabartay, mainly via the Crimean Khāns. In the east, in the various polities of Dāghistān (remote, cut off and claimed by the Šafawids and their successors), the Ottomans usually enjoyed nothing more substantial than sympathy. Nevertheless, their Sunnī identity added to the obstinate resistance by some Dāghistānī polities to the *rawāfid*, i.e. the Shī'ī Persians. Several fragments on the margins of manuscripts testifying of such acts of resistance in different places and times were published by Shikhsaidov in 1991 (in Russian tr., in A.A. Isaev (ed.), *Rukopnaya i pečatnaya kniga v Dagestane*,

Makhačkala 1991, 128-9). On many occasions the mountain dwellers managed to beat the invading armies, the most resounding defeat being that dealt in 1744 to Nādir Shāh's troops by the joint forces of the confederation of 'Aḳūsha and other *djāmā'as*. The futility of the attempts to conquer the mountains gave rise to a Persian proverb to the effect that "when Allāh wants to punish a Shāh, He inculcates into his head the idea of campaigning in Dāghistān."

The collapse of Nādir Shāh's empire after his assassination in 1747 was not followed by any Ottoman attempts to seize the area. This granted the kings of eastern Georgia half a century of freedom, and allowed for *de facto* independent khānates to be established in Derbend, Kūbhāh, Bākū, Shekkī, Shīrvān, Gandja, Qarābāgh, Erivān, Nakhdjivān and Tālīsh. The resulting vacuum on their southern borders permitted different Dāghistānī communities and rulers to expand and raid the lowlands, mainly into eastern Georgia. The boldest raids were carried out by 'Umar (pronounced 'Umma), Khān of Avaristān (1774-1801). Once the Kādjārs started to bring together the lands of the Šafawids, they turned towards the Caucasus. In 1795, after the local rulers had ignored a series of demands to acknowledge his suzerainty, Āghā Khān Muḥammad, the founder of the dynasty, led a campaign into Trans-Caucasia, which culminated in the sack of Tiflis. However, the Kādjārs' attempts to reincorporate the Caucasus into their empire met a new obstacle in the shape of Imperial Russia.

Muscovite Russia had shown interest in the affairs of the Caucasus already in the second half of the 16th century. Having seized control over the entire Itil (Volga) basin by conquering the khānates of Kāzān and Astrakhān [*q.v.*] (1552 and 1556, respectively), Tsar Ivan IV ("the Terrible") tried immediately to expand south into the Caucasus. For that purpose he pursued three goals: (1) the settlement of Cossacks on the Terek river; (2) alliances with local chiefs in the area, the most important of which was his marriage in 1561 to the daughter of a Kabartay prince; and (3) an attempt to help his coreligionists, the kings of Georgia, who had appealed for help to the new Orthodox power in the north. The Ottomans, though unsuccessful in capturing Astrakhān (1569), were nevertheless strong enough to thwart the attempts by Ivan as well as by his two successors Feodor (in 1594) and Boris Godunov (in 1604).

Weakened by the "time of troubles" of the early 17th century, Russia was deterred for more than a century and a half by the might of both the Ottomans and the Šafawids from any initiatives in that direction. Nevertheless, additional Cossacks settled on the Terek and were incorporated by Peter I ("the Great") into a continuous line of defence facing the eastern Caucasus. It was he also who ventured a campaign to the south. In 1722, following the Afghān invasion of Persia he marched with an army and navy along the western and southern shores of the Caspian as far as Astarābād. Yet he did not dare to challenge the Ottomans by advancing inland beyond the littoral, and the campaign achieved nothing tangible. Only Catherine II ("the Great") successfully resumed Russia's advance southwards with a double-pronged policy.

In the Northern Caucasus, the erection of the fortress of Mozdok (1763) was the immediate cause of the 1768-74 war with the Ottomans and of a fourteen-year long struggle with the Kabartay. Following the peace of Kūčūk Qaynarča [*q.v.*], Cossacks were settled opposite the western Caucasus and a con-

tinuous line of defence established, to be known in the 19th century as "the Caucasian Line". These events were the trigger for the ten-year long resistance (1785-94) led by Maṣṣūr Ushurma [*q.v.*], a Čečen who assumed the title *al-Imām al-Maṣṣūr*, and called on all the Muslims of the Caucasus to return to the *Shari'a* and to unite against Russian encroachment. In this he provided a foretaste of the events of the 19th century.

At the same time, Catherine re-established Russian ties with the king of K'art'li-Kakhet'i (i.e. Georgia; see AL-KURDJ) and during the war of 1768-74, a Russian force crossed for the first time the Caucasus range and then operated against the Ottomans in Georgia. In 1783 the treaty of Georgievsk made K'art'li-Kakhet'i a Russian protectorate. A Russian force was stationed in Tiflis and a paved road, "the Georgian military highway", was cut across the mountain range. However, the Russian force was soon withdrawn (1784), which left K'art'li-Kakhet'i exposed to the Kādjārs while the king, confident in Russian protection, provoked the 1795 sack of Tiflis by his refusal to accept Āghā Khān Muḥammad's overlordship. The Emperor Paul, Catherine's son and successor, was averse from involvement in the affairs of the Caucasus. Yet in 1799 he found himself obliged to protect K'art'li-Kakhet'i against the threats of Fath 'Alī Shāh, Āghā Khān Muḥammad's successor. Finally, on his deathbed, Giorgi XII, the last king of K'art'li-Kakhet'i, asked the Russian Emperor to take his kingdom under the Tsar's protection. On 30 December 1800 N.S., Paul issued a manifesto incorporating K'art'li and Kakhet'i into the Russian Empire.

Alexander I, Paul's son and successor, confirmed his father's decision on 24 September 1801 N.S. Unlike Paul, Alexander used the annexation of K'art'li and Kakhet'i as the first step in Russia's expansion into and beyond the Caucasus. Thus began the sixty-five years' long struggle to conquer the Caucasus, known in Russian historiography as "the Caucasian War", one that would drastically alter the political, religious, economic, social, ethnic and demographic composition of the Caucasus.

*Bibliography:* Some items have been mentioned in the text. Among the very few published Dāghistānī chronicles is Mirzā Hasan b. 'Abd Allāh al-Kadarī al-Dāghistānī, *Kitāb Āthār-i Dāghistān*, Bākū 1903. For a list of Dāghistānī sources published in the 1980s, usually in Russian translation, see the bibl. of A.A. Isaev (comp.) and A.R. Shikh-saidov (ed.), *Rukopisnaya i pečatnaya kniga v Dagestane (Shomik statei)* [Manuscript and printed books in Dāghistān (a collection of articles)], Makhačkala 1991, 183-8.

### 3. The period 1800 to the present day.

#### a. Introduction

Any attempt to furnish a coherent and objective overview of the history of the Caucasus in the modern period is hampered by the scarcity of local sources and by the inherent biases of the historical accounts generated by its colonisers, the Ottomans, Persians and Russians, who, for more than a century, were vying with one another for sovereignty over this strategically important area. The same goes for European historiography of the region, which was likewise shaped by political agendas of the European states and their colonial designs. This is especially true of the works of 19th-century British writers, both lay and academic, who viewed Russia as its principal colonial rival in the East. Following the Russian Communist Revolution of 1917, Russian colonial prejudices and stereotypes were superseded by Marxist axioms of class struggle and of the five historical socio-economic formations and modes of production specific to each of them. After World War II, these axioms were further aggravated by the ideological clichés of the Cold War epoch. From the 1920s until the disintegration of the Soviet Union in 1991, the area remained practically inaccessible to Western researchers. Most, therefore, had to rely on Soviet studies of the area, which were shaped by the official Marxist views of history. With the fall of the Soviet régime, a large body of historiography has emerged produced by scholars of Caucasian background. Coloured by a wide spectrum of nationalist agendas, this new historiography offers drastic revisions of the Russian and Soviet conceptions of Caucasian history, and especially of the Russo-Caucasian wars of 1829-64. The present account will focus primarily on the historical evolution of the mountaineer communities of the northern Caucasus (Kabarda, Dāghistān, Čečnyā, Ingushetiā, Circassia and Abkhāzia) with predominantly Muslim populations. Historical events in the Christian areas of the Caucasus (Georgia, Armenia and the Christian areas of Ossetia [see AL-KURDĪ; ARMĪNIYA; OSSETES]) will be touched upon briefly only in so far as they are relevant to the history of their Muslim neighbours [for developments in Transcaucasia, see ĀDHARBĀYDJĀN; SHĪRŪWĀN; GANDJA].

#### b. Russian expansion and Persian withdrawal

In the late 18th and early 19th centuries, three major outside powers vied for control of the Caucasus: the Ottomans, who maintained (largely nominal) control of the northwestern coast of the Black Sea (Circassia [see ĆERKES]), parts of present-day Georgia

adjacent to the Black Sea and the western regions of Transcaucasia; Persia, which exercised sovereignty (often only nominal) over several khānates in Ādharbāydjān, Dāghistān and the eastern areas of Transcaucasia; and Russia. The first decades of the 19th century witnessed a steady Russian military expansion into the Caucasus regions formerly controlled by Russia's Muslim imperial rivals. A large part of present-day Georgia, the kingdom of Kartli-Kakheti, handed the sovereignty of the Russian Empire in 1801, when its last independent ruler, George XII, handed the reins of government over to the Russians in the face of an impending Persian invasion. Soon afterwards, the Russian military authorities of the Caucasus began the construction of the Georgian Military Highway between the city of Vladikavkaz (presently the capital of the Autonomous Republic of North Ossetia) and Tiflis [*q.v.*] (presently Tbilisi, the capital of the Republic of Georgia). This ambitious project was intended to consolidate Russia's hold on her new dependencies in the Central Caucasus. In December 1802, the Russians convened a meeting of the rulers of the mountaineer communities and principalities of the northeastern Caucasus at the Russian fortress of Georgievsk. During the meeting, the rulers agreed to sign a treaty granting Russia a special status in Dāghistān and adjacent lands. Some rulers, including the powerful khān of Avaristān, recognised Russian tutelage over their lands and pledged to join forces with Russia in the event of a Persian invasion of their lands. Between 1804 and 1813, the khānates of Gandja, Bākū, Karābāgh, Shīrŵān, Darband [*q.v.*] parts of Abkhāzia [see ABKHĀZ], the principalities of Imereti and Akhalkhalaki, as well as several Muslim communities of Dāghistān, came under Russian rule. The intermittent hostilities between the Russian Caucasian Corps and Persian forces throughout 1804-13 were, as a rule, favourable in outcome to the Russians. Russian victories can be attributed at least in part to the dynastic struggles within the Persian ruling élite, which weakened its ability to resist Russian encroachments on Persia's former dependencies in the region.

Russian claims to its new domains in the Caucasus and Transcaucasia were formalised by the Gulistān Treaty of 1813. This document decisively redrew the map of the Caucasus in favour of the Russian Empire. In 1826, the Persian army led by the Qādjār Crown Prince 'Abbās Mīrzā [*q.v.*] invaded Karābāgh in an attempt to regain control of Persia's former dependencies in the central Caucasus and Transcaucasia. Despite initial successes, the Persian advance was eventually repelled by the Russian army under the command of Ivan Paskievič, who led the Russians to victory over 'Abbās Mīrzā's forces at the battle of Gandja (Elizavetpol) in September 1826. In 1828, after two years of hostilities in which the Russians scored one victory after the other, Persia was forced to sign the humiliating treaty of Turkomānčay [see TÜRKEMEN ČAY (i)]. This document all but eliminated Persia's influence in the northern Caucasus by denying it any direct contact with its potential Muslim allies in Dāghistān. On the Ottoman front, in 1828-9, Russian troops penetrated as far as Erzurum [*q.v.*] and Adjaria (Adjāristān) and blockaded the strategic Black Sea ports of Poti and Anapa [*q.v.*]. The Russian military successes drastically reduced the Ottoman Empire's ability to exercise its influence over the Circassian (Adyghe [see ĆERKES]) tribes of the northwestern Caucasus, which even at the height of Ottoman power were Ottoman vassals in name only. Under the treaty of Adrianople (Edirne [*q.v.*]) of 1829, the Ottomans

had to cede to Russia many of their former territories along the Black Sea coast. These territorial losses deprived the Ottomans of direct access to Circassia.

c. *Ermolov and the consolidation of Russian power*

Much of the credit for Russia's success in the Caucasus goes to the talented general Alexei Ermolov (Yermolov). His military genius and diplomatic acumen helped the Russian Caucasian Corps to defeat the Persians and to bring most of their former dependencies in the Caucasus under Russian rule. Appointed by Tsar Alexander I as the military governor of the Caucasus in 1816, Ermolov consistently implemented what many Russian and Western historians view as "policies of terror" toward the mountaineer communities and local principalities. His brutal treatment of his Caucasian adversaries was deliberately aimed at breaking their will to resist Russia's rule and to cow them into submission. Granted full authority over the area by the Tsar (in the Russian sources of the age, Ermolov was often referred to as the "proconsul of the Caucasus"); his own personal memoirs of the Caucasus campaigns seem to have been consciously patterned on Caesar's *Commentaries on the Gallic Wars*, reflecting his desire to emulate his illustrious predecessor), Ermolov ruled over Russia's new colonies with an iron fist, sparing neither his new subjects, nor his own troops, nor even the Russian irregulars, known as "Cossacks". Parallel to his often merciless "pacification" of Caucasian tribes and principalities, Ermolov embarked on a series of ambitious administrative and military reforms that sought to consolidate Russian colonial authority over the region and encourage immigration of Russian settlers (Cossacks) to the area. In some regions (e.g. Kabarda), Ermolov also implemented a sweeping judicial reform. Thus in 1822 he replaced the local *shari'a* and *'adāt* jurisdiction with civil courts staffed by Russian colonial officials. This measure undermined the positions of the local aristocracy and sparked several riots that had to be suppressed, with its usual brutality, by the Russian Caucasian Corps.

Controlling this vast and rugged area with just 49,000 troops (of which only 40,000 maintained at least some semblance of military readiness) proved to be a great challenge to Ermolov and his chiefs of staff. Their responses to the tremendous difficulties faced by the Russian colonial enterprise amounted to sustained social engineering, such as the forced resettlement of some tribes (Ossetes and Noghay Tatars [q.v.]), the brutal "pacification" of "hostile" mountaineer communities, and the imposition of corvée services on others, e.g. the Čečens [q.v.]. These measures disrupted the customs and lifestyles of the mountaineers, who retaliated by attacking Russian forts and settlements and carrying off prisoners and booty. Another source of resentment against the Russian military administration was its attempt to eliminate the widespread slave trade in the northern Caucasus. For many centuries this business had been an important source of income for many local tribes, which sold captives to Ottoman merchants. The captives were then re-sold in Ottoman slave markets. Initially, Russian efforts to eradicate the slave trade bore only limited results. It took the Russians several decades of thorough policing and enforcement of their anti-slavery edicts finally to put an end to this practice.

The mountaineers responded to Russia's interference in their traditional occupations with armed uprisings. They were brutally put down by the Russian Caucasian Corps. The rebels' villages and fields were burned to the ground. The "hostile" populations were

chased into the inhospitable mountains. Such punitive campaigns, however, had only a limited impact, since the villages were easily rebuilt once Russian troops had left the area. At the same time, this brutal repression against a people unaccustomed to foreign rule bred and sustained hatred towards the Russian administration among the mountaineers. Ermolov soon realised the inadequacy of his policy, and embarked on military and administrative measures aimed at consolidating Russian presence in the region. The new policy consisted in the construction of fortified defence lines. They were formed by Russian fortresses and forts connected by networks of roads. Cut through the virgin forests of Čečnyā, the roads were meant to separate "pacified" tribes and villages from those which continued to resist Russian rule. In the process, the "hostile" communities were pushed ever deeper into the barren mountains, where they faced hardship and starvation.

Throughout Ermolov's tenure as military governor of the Caucasus, mountaineer resistance (1816-27) in the eastern and central parts of the region remained spontaneous, unorganised and localised. Sporadic insurrections against Russian rule were easily suppressed by the better-equipped and disciplined Russian troops, which made good use of their superior firepower. Despite their personal bravery and intimate knowledge of the terrain, the mountaineer levies of Dāghistān, Kabarda, Čečnyā and Ingushetia were unable to defeat the Russians due to a lack of co-ordination and organisation. The local ruling élites were usually unable to provide leadership, since they had been either bribed by the Russians or torn by internal strife. In other cases (e.g. in Čečnyā and some "democratic" Čerkes (Adyghe) tribes of the north-western Caucasus), the mountaineer élite had not yet been formed. Such "democratic" mountaineer societies posed an especially severe problem for the Russian authorities, which preferred to deal with local nobility rather than entire communities. Furthermore, Ermolov's cunning implementation of "divide and rule" policies led to the decimation of many ruling families, who tried to resist Russian rule, especially in Dāghistān. Some historians of the Caucasus even argue that Ermolov, steeped in the idea of "progress" and "civilisation", viewed the local rulers as brutal and ignorant despots, who were inherently incapable of embracing Russia's "civilising mission" in the Caucasus. He therefore considered them irrelevant and dispensable.

Whether intentional or not, Ermolov's policies seem to have led to the considerable weakening and discrediting of the local élites, which may explain why most of the leaders of the mountaineer resistance to Russian rule in 1829-59 came from relatively humble backgrounds and relied for the most part on free peasant communities for their support. Be this as it may, it is obvious that Ermolov's rule permanently upset the earlier balance of power in the region. His draconian measures set the mountaineer resistance movement on its feet on an unprecedented scale. The movement derived its vitality from the idea of equality of all Muslims before the Divine Law and their duty to actively resist "infidel" Russian rule. Since the majority of the subjugated tribes and communities of the northern and central Caucasus professed Islam, it was only natural that resistance to Russian domination took the form of *djihād*, which, in the local tradition, is usually referred to as *ghazawāt*.

d. *The Caucasian ghazawāt and its leaders*

As with many contemporary Muslim movements, the leaders of Caucasian resistance often began their

careers by preaching a strict adherence to the *Shari'a* and fighting against such widespread "vices" as wine drinking, smoking, lax observance of Islamic rituals, dancing, singing and the free mingling of the sexes. Simultaneously, these self-appointed enforcers of the *Shari'a* often sought to reduce the sphere of, if not to eradicate completely, the application of the customary law (*ādāt*), which usually favoured local élites. Such measures appealed to the poorer strata of the mountaineer population, who hoped that the rule of the *Shari'a* would improve their lot and reduce their dependence on the nobles. Once the reputation of the religious leader as an uncompromising enforcer and advocate of the *Shari'a* had become firmly established, he could use his popularity to rally his followers around a certain political cause. In the mountaineer communities, whose traditional values and lifestyle were threatened by Russian colonial advances, a call to a holy war against the infidel Russian enemy was likely to receive an enthusiastic response.

In any event, the careers of the Čečen *Shaykh* Maṣūr Ushurma [q.v.] and the three Dāghistāni *imāms* of the northern Caucasus [see *SHĀMIL*] unfolded according to this scenario. The extent of these leaders' affiliation with what the Russian writers of the age called *myridizm*, namely, the Nakshbandiyya-Mudjaddidiyya-Khālidiyya Sūfi order (in the case of Ushurma there is no historical evidence of his association with any Sūfi *silsila*, while the three *imāms* were at least nominally Nakshbandī *shaykhs*) remains a moot point. However, many Russian and Western historians of the Caucasus continue to view *myridizm*/Nakshbandī Sūfism as the principal vehicle and source of inspiration for the movements in question.

The events of the thirty-year war led by the three *imāms* of Dāghistān and Čečnyā, Ghāzī Muḥammad (Kāzī Mullā), Hamzat (Gamzat) Bek and Shāmil (Shamwīl) are discussed in the article *SHĀMIL* and will not be detailed here. The war cost both sides dearly in casualties and material resources. Russia's initial military strategy, imported from the European theatre of war, was geared to winning victories in pitched battles through an orderly movement and deployment of large military contingents. Much value was placed by the Russian military command on besieging and capturing enemy strongholds and headquarters. Such strategic assumptions proved to be ineffective or outright counterproductive in the Caucasus, where the Russian army faced a highly mobile and elusive opponent. The headquarters of the mountaineer levies could be easily moved from one village to another without impairing their ability to effectively fight the Russians through swift night raids, ambushes, diversionary tactics, misinformation and other forms of guerilla warfare. These tactics were honed to perfection in Dāghistān and Čečnyā under the talented leadership of the *Imām* Shāmil, who implemented it with remarkable success from 1834 to the late 1840s, when the Russians were finally compelled to reconsider their military doctrine. Nevertheless, in spite of repeated military setbacks, the Russian military command continued to cling stubbornly to the ineffective "one-blow" strategy for over ten years. Its flaws culminated in the disastrous expedition of 1845 against Shāmil's headquarters at Dargho (Darghiya, in present-day Čečnyā). Led by the newly-appointed viceroy of the Caucasus Prince Mikhail Vorontsov, the Russian expeditionary force lost almost 1,000 men killed (including three generals), almost 2,800 wounded, 179 missing in action, three guns and all its baggage, including the army war-chest.

Vorontsov realised his error and convinced Tsar Nicholas I to implement the siege strategy that was first introduced by Ermolov but had been abandoned by his successors following his removal from office in 1827. Efforts were made to strengthen existing fortifications, to build new ones and to connect them with a network of improved roads. These defence lines cut through Shāmil's domains in Dāghistān and Čečnyā, gradually reducing his sphere of influence and depriving him of provisions and manpower. This slow and less spectacular military strategy, which following Vorontsov's retirement in 1854 was continued by his successor, Prince Aleksandr Baryatinskiy, eventually bore fruit. Deprived of the resources to wage war against the superior Russian military machine and abandoned by the majority of his former followers, the third *imām* of the Caucasus surrendered to the Russians in the summer of 1859. The bloodiest episode of the Russo-Caucasian war came to an end, although armed resistance to Russian rule continued throughout the Caucasus for another decade.

#### e. Circassia and Muḥammad Amīn

Shāmil's long resistance to Russian conquest had wide-ranging repercussions for the mountaineer communities and tribes throughout the Caucasus, including those areas that remained formally under Russian rule or were contested by the Russian and Ottoman empires, namely, Kabarda, Balkaria, Ossetia and the western Caucasus (Circassia, Abkhāzia, Guria, etc.). Thirty-seven Kabardian princes and nobles went over to Shāmil in 1846, following his raid into Kabarda. At the same time, the majority (around 200) remained loyal to the Russians and were richly rewarded by the Russian administration for their refusal to support Shāmil's movement. Throughout Shāmil's imāmate, the Transkuban region and Circassia (Adygheya) remained, for the most part, outside his direct influence. However, news about his military successes against the Russian forces periodically reinvigorated local resistance. In 1840 four major Russian fortresses along the coast of the Black Sea were captured and destroyed by Čerkes tribes. In 1842, Shāmil sent his emissary, Hādjdjī Muḥammad, to Circassia instructing him to spread *ghazawāt* among the Muslim populations of the western Caucasus. After Hādjdjī Muḥammad's death in 1845, he was succeeded by Shāmil's *nā'ib* (military governor) named Sulaymān Efendi. On Shāmil's instructions, he began to preach *ghazawāt* against the Russian garrisons stationed in the area and attempted to recruit several Čerkes (Adyghe) tribes to Shāmil's cause. However, Sulaymān Efendi soon fell out with Shāmil and defected to the Russians.

At the end of 1848, Shāmil appointed Muḥammad Amīn as his next *nā'ib* in Circassia. The new *nā'ib*, who was not familiar with local realities, soon became embroiled in a power struggle between the aristocracy and free squires (*ifokolles*) of the Abadzekh, the largest Adyghe (Čerkes) tribe. After flirting for some time with the Abadzekh princes, Muḥammad Amīn eventually decided to throw in his lot with the peasants, promising them independence from their aristocratic masters and equality under the *Shari'a* law. His populist politics alienated the nobility, who turned to the Russians, hoping to retain their traditional privileges. Throughout the 1850s, Muḥammad Amīn was able to secure the loyalty of just one Adyghe tribe, the Abadzekhs. He later extended his rule to some other Adyghe (Čerkes) communities, such as the Natukhays and Shapsugs. Muḥammad Amīn modelled his administration of the nascent Čerkes (Adyghe) state on that of Shāmil's imāmate. The lands under his jurisdiction

were divided into a number of territorial units called *mahkama*. Each *mahkama* consisted of around 100 households. The administrative centre of the *mahkama* was located in a fortified Čerkes village (*aul*), which usually had a mosque, a court of law, a prison and a *madrassa*. The *mahkama* was ruled by a religious official (*mufthi*) and a council of three Muslim judges (*kādīs*). Each Adyghe (Čerkes) household was to supply one mounted warrior (*murtazik*) for Muḥammad Amīn's military force. The *murtaziks* constituted the military foundation of Muḥammad Amīn's rule. In all, Muḥammad Amīn's state at its height consisted of four *mahkamas* among the Abadzekhs, one among the Shapsugs and two among the Natukhays.

f. *The Crimean War and its impact on the Caucasus*

The beginning of the Crimean War in 1853 galvanised the mountaineer resistance movement on both sides of the Main Caucasian Range. In the eastern and central Caucasus, Shāmil was preparing to invade Georgia, to cut the Russo-Georgian Military Highway and, finally, to effect a juncture with an invading Ottoman force at Tiflīs. The capital of the Caucasus was expected to fall to the allied Muslim army within a few days. In the western Caucasus, Muḥammad Amīn and his Čerkes levies, supported by an Ottoman sea-borne expeditionary force, were bound to disrupt Russian communications and capture the lands of the Turkic-speaking Karačay [q.v.] on the northern slopes of the Main Caucasian Range. Muḥammad Amīn was then to march across Kabarda and Ossetia and to join Shāmil's forces there. In Guria (a part of present-day Georgia), which had been under Russian administrations since 1840, a large Ottoman force attacked the fortress of Shekvetili (St. Nicholas Port) on the Black Sea and wiped out its small garrison, which consisted of a Russian detachment and pro-Russian Gurid militia.

These developments awoke the Russian administration of the Caucasus to the possibility of a powerful military coalition between the invading Ottomans and their local supporters among the Adyghes. In response to the repeated pleas of his viceroy, Prince Vorontsov, Tsar Nicholas I agreed to send reinforcements to the Caucasus. In the hostilities that followed, the Ottomans' expeditionary force (the so-called Anatolian Corps) was defeated by the Russians in several pitched battles in the southern Caucasus. The Porte's plans suffered another major setback in the harbour of Sinop in November 1853, when a Russian naval force led by Admiral Nakhimov attacked and destroyed the Ottoman fleet that was to land at Sukhum-Ķal'e in order to join forces with the Čerkes levies. In March 1854, a joint Anglo-French naval squadron sailed into the Black Sea. Its appearance forced the Russian military command to dismantle or to blow up a number of Russian fortresses along the Circassian coast (the so-called "Black Sea Defence Line"), including Anapa. Only those fortresses deemed able to withstand a prolonged siege from the sea were preserved and received fresh reinforcements.

These measures and the absence of a Russian naval presence in the Black Sea gave the Anglo-French fleet full control of sea communications off the Circassian coast. The allies tried to establish direct ties with Shāmil and Muḥammad Amīn in order to better coordinate their military operations in the Caucasian theatre of war. While the Anglo-French emissaries failed to reach Shāmil, they succeeded in securing Muḥammad Amīn's commitment to participate in joint Ottoman and Anglo-French operations against the Russians. The allied plans were upset in the summer

of 1854, when several Ottoman brigades were defeated by the Russian army in a series of bloody engagements. The Circassian tribes, which expected the Ottoman troops to help them in their unequal struggle against the Russians, were surprised to discover that their Ottoman allies were themselves in desperate need of assistance. These reversals may explain why Sefer (Safar)-bey (beg), an Adyghe prince of the Natukhay tribe, whom the Ottomans had appointed as governor of Sukhum-Ķal'e with the rank of *pasha*, was unable to recruit enough Čerkes fighters to form a separate corps under his command. The Abkhāz, who had both Christian and Muslim princes, were divided, with the Christian part of the population favouring the Russians. The Ottoman cause was not helped by Shāmil's inactivity. Burdened by the internal problems of his imāmate and incapable of undertaking any large-scale military operations due to the lack of resources and growing war fatigue among his followers, he was unable or unwilling to respond to the Ottoman and Anglo-French pleas for a more aggressive strategy against the Russians.

The next year (1855) of the Crimean campaign did not bring any dramatic changes to the stalemate on the Caucasian front. Shāmil remained inactive, while neither Sefer-bey nor Muḥammad Amīn were able to convince the Čerkes chiefs to form a separate corps under Ottoman command. Their efforts were hampered by their personal rivalry and their dependence on mutually hostile social groups within the Čerkes (Adyghe) communities. While Sefer-bey, a Čerkes prince, represented the interests of the mountaineer aristocracy, Muḥammad Amīn relied on the free Čerkes peasantry, which was anxious to minimise its feudal obligations *vis-à-vis* the nobles. As a result, the two leaders often worked at cross-purposes. The Russian military successes in Transcaucasia, such as the capture of Kars and Bayazet, and the lack of a decisive allied victory in the Crimea, hampered the efforts of Ottoman military commanders in the western Caucasus. With the fall of Sevastopol in September 1855, Muḥammad Amīn attempted once again to form a Čerkes corps under his command, but to no avail. The Čerkes tribes were not ready to relinquish their independence and to join the Ottoman-led military coalition, whose ultimate goals they did not share. Besides, the plans of the European allies to mount a massive offensive against the Russian troops stationed in the Caucasus never materialised. Without the support from their European partners, the Ottomans proved unable to dislodge the Russian forces from the western Caucasus. At the same time, with no major victories to their credit, they were unable to convince their potential allies among the Čerkes tribes of the necessity to launch an all-out attack against the Russians. 'Umar ('Ömer) Paṣha's initially successful campaign against a Russian force near Zugdidi (Georgia) in the autumn of 1855 failed to impress the Čerkes and Abkhāz enough to join his expeditionary force. In the end, the European powers' decision not to shift the centre of hostilities from the Crimean Peninsula to the western Caucasus, which would allow the Ottomans to make decisive advances in that area, worked to Russia's advantage. Despite the loss of its naval power in the Black Sea, Russia retained her overall strategic superiority in the region, which eventually enabled her to bring it firmly under control.

g. *The end of the Crimean War and the collapse of mountaineer resistance*

The allied plans to invade the Caucasus were shelved when the warring parties began peace negotiations

and signed a peace treaty in Paris during the winter of 1856. The results of the Crimean War, although by no means favourable to the Russians, failed to reverse Russia's inexorable expansion in the Caucasus and to put an end to her domination over the areas already conquered by Russian troops. If anything, it confirmed for many mountaineer leaders the futility of resistance against Russian rule. If Russia was able to withstand the attack of the greatest European and Muslim powers of the age, how could their small levies have any hope of defeating her on their own? It is even more remarkable that, despite the growing war fatigue and despondency among his supporters and the overall devastation suffered by his realm, *Shāmil* was able to continue his struggle until August 1859, when he surrendered to the Russian forces at the village of *Gunīb* in *Dāghistān*.

Following the collapse of *Shāmil's* movement, in November 1859, *Muḥammad Amīn* started negotiations with the Russian military command of the Kuban military district. He pledged allegiance to the Russian Empire, recognised its sovereignty over his lands, and was thus able to keep his position as the spiritual and political leader of the *Abadzekh* tribes. With the death of *Sefer-bey* at the end of 1859, *Čerkes* resistance to Russian rule was reduced to a few sporadic and unorganised uprisings among the largest *Adyghe* tribes—the *Ubykhs* [q.v.], *Shapsugs* and *Abadzekhs*, who tried to forge a military alliance, albeit unsuccessfully. Their attempts to stem the Russian advance lasted until 1864, which is considered by many historians to be the final year of the so-called Great Caucasian War (as we have seen, it is probably more appropriate to speak of a series of military conflicts of various intensities throughout the Caucasus). At the beginning of that year, a Russian expeditionary force conquered the town of *Tuapse*, one of the last *Čerkes* strongholds on the Black Sea. In the following months, the remaining sparks of resistance were extinguished by the Russian expeditionary corps directed from *Ekaterinodar*, the capital of the Kuban military district. The Russian military conquest of the Caucasus came to an end.

During and after the Crimean War, *Čerkes* rebellions against Russian rule were encouraged and assisted by outside powers, especially Britain and, to a lesser extent, France. The provisions of the Paris Peace Treaty seriously impaired Russia's ability to control the Black Sea coast. In the absence of a Russian naval force to patrol the coastal area (under the Paris Treaty, Russia was allowed to have only six corvettes in the entire Black Sea area), Britain and France gained free access to the *Čerkes* populations of the western Caucasus. Some elements within the British government accepted the advice of the British diplomat and Turkophile, *David Urquhart*, to assist the *Čerkes* in establishing an independent state that would serve as a buffer between the Ottoman lands and the Russian colonial possessions in the western Caucasus. To this end, the British and the French enlisted the help of Polish emigrants to England and France who had fled their country after the Russian crackdown against Poland's bid for independence in 1830. In addition, there were many Polish deserters from the Russian Army stationed in the Caucasus who had joined the *Čerkes* tribes to take an active part in anti-Russian resistance. Throughout the late 1850s and early 1860s, several Polish-led contingents of European volunteers equipped by England and France landed on the Circassian coast in an effort to encourage the local tribes to rise against the Russians. However, they

were not always welcomed by the *Čerkes*, who were wary of the motives of these self-appointed supporters of their independence. Moreover, the efforts of small foreign contingents were not enough to change the overall strategic situation in the Caucasian theatre of war, which was dominated by Russian military might. Faced with a lack of success and, consequently, a lack of support from the local populations, all foreign contingents gradually withdrew from the western Caucasus, leaving their *Čerkes* allies face-to-face with the Russian Empire.

#### h. *The tragedy of mass emigration*

In the early 1860s, the Russian administration of the Kuban military district (*oblast'*) embarked on a large-scale plan to resettle the *Adyghe* tribes. These measures were proposed and implemented by the military governor of the Kuban region, General *Nikolai Yevdokimov* (*Evdokimov*), who was intent on preventing the *Adyghe*s from resuming their resistance to Russian rule by undermining their economic and geopolitical foundations. Unlike *Dāghistān* with its barren mountains, the Kuban area with its extraordinary fertile arable lands was quite suitable for resettlement with Russian and Ukrainian peasants, who were considered to be much more "reliable" than the warlike *Čerkes* tribes with their long history of anti-Russian warfare. According to *Yevdokimov's* plan, the "hostile" *Čerkes* tribes were to be resettled from the mountains into the plains of *Transkuban* to live under the watchful eye of the Russian military administration. The lands vacated by the *Čerkes* were given to Russian settlers, mostly *Cossacks* from Russia and Ukraine, in return for their military service along Russia's new borders. Another objective of Russian colonial policy was to bar the *Čerkes* from any contacts with the Ottomans or any hostile European powers by removing them from the coastal areas, which were still easily accessible from the sea. From 1861 to 1864, the Russian authorities established 111 new *Cossack* settlements (*stanitsas*) with a population of 142,333 families.

These measures triggered a massive exodus of the dislocated mountaineer populations to the Ottoman lands. Encouraged and presided over by a few murky and unscrupulous adventurers of dual loyalties (such as *Mūsā Kundukhov*, a Russian general of *Kabardian* origin with connections at the Ottoman court) and some members of the local *Čerkes* and *Kabardian* nobility anxious to preserve their influence over their former bondsmen, the emigration turned out to be a terrible tragedy for the mountaineer peoples. The emigrants, known as *muhāđirūn*, came from practically every North Caucasian community: *Kabardians*, *Čečens*, *Ossetes*, *Natukhays*, *Abadzekhs*, *Shapsugs*, *Ubykhs*, *Bžedukhs*, *Ābāzins*, *Karačāys*, *Abkhāz*, *Temirgoys*, *Noghay* *Tatars* and a few others. During the winter and spring of 1864 alone, 257,068 individuals departed for Anatolia from seven Black Sea ports under Russian control. The refugees were motivated by a variety of factors, such as the dislocation and resentment produced by the Russian resettlement schemes and oppressive rule, hopes for a happy life under friendly Muslim rule in Anatolia (inspired in part by Ottoman propaganda), and the religious rulings issued by Muslim religious authorities, which proclaimed living under infidel rule to be a grave sin for any Muslim who had other options. Once the emigrants found themselves on board ships headed for Ottoman Turkey, they were readily preyed upon by Ottoman slave-traders and greedy crews who charged their passengers by the head and therefore packed as many of them as possible into each ship.

Cramped conditions combined with various infectious diseases took a heavy toll on the human cargo. The ships, usually commercial craft not intended for carrying passengers, quickly turned into abodes of death. According to some chilling eye-witness accounts, they left hundreds of dead bodies in their wake. The survivors found themselves at the mercy of Ottoman authorities at the ports of destination, which, for the most part, were totally unprepared for such a massive influx of refugees. The makeshift refugee camps at Trabzon (Ṭarabzun [q.v.]), Samsun (Şamsūn [q.v.]) and other Ottoman ports became abodes of human suffering. Reduced to starvation, parents sold their sons and daughters into slavery, driving the price of a child to all-time lows (30 to 40 roubles for a 10- to 12-year-old). Unmarried young men had the option of joining the Ottoman army, but, the majority of refugees, especially the sick and the elderly, were doomed to a life of misery and starvation. Estimates of the scale of the emigration and the death rate among the refugees vary dramatically depending on the political and ethnic background of historians. Some sources cite as many as 15 million emigrants, others speak of half a million souls, of whom only one half survived the tragedy of mass resettlement. The latter figure appears to be more realistic, although the real scale of this human tragedy is yet to be determined through a careful examination of Russian and Ottoman archives.

The causes of the Caucasian *hijra* remain a matter of debate, which has grown especially intense since the fall of the Soviet Union. It is clear that the Russian authorities did little to prevent the mountaineers from leaving their lands. Thus the Russian governor of the Kuban *oblast'*, writing in 1889, said that he saw "no particular harm to the interest of the state in the desire of the natives (*tuzemtsy*) to leave the area. On the contrary, [he saw] much benefit in the removal from the area of this troublesome element." No wonder that the Russian authorities not only did not try to prevent the mountaineers from emigrating, but on many occasions paid their sea-fare. The Ottomans, too, had a vested interest in the emigration since they hoped to resettle the mountaineers along the Ottoman-Russian border and to use them as border-guards and a military force in case of future hostilities between the two empires. To these imperial interests one may add the sheer human depravity of Ottoman slave-traders and the concerns of the mountaineer élites, especially the Kabardian ones, over the potential loss of their serfs after the expected implementation of the Russian anti-bondage laws. The end result, however, is obvious to everyone. The fertile plains south of the Kuban river and the coastal areas along the Black Sea lost most of their indigenous population. The land was gradually resettled by Cossacks, Armenians, Greeks and peasants from central Russia and Ukraine. Between 1867 and 1897, the Russian and Ukrainian population of the Kuban and Stavropol' *oblast's* had grown by 230% and 155% respectively, leaving the local population in the minority. At the turn of the 20th century, in the Kuban *oblast'* Russians constituted more than 90% of the population. By contrast, the number of "natives" had fallen to a minuscule 5.4%. According to a modern Western researcher, "the lands of the Circassians and the Abkhāz, once overwhelmingly Muslim, had become overwhelmingly Christian" (J. McCarthy, *The fate of the Muslims, apud P. Heinze, Circassian resistance to Russia*, in M. Bennigsen-Broxup (ed.), *The North Caucasus barrier*, London 1992, 104).

Those mountaineers who remained were transferred to the Transkuban steppes and resettled amidst the Cossacks under constant Russian surveillance. As envisioned by Yevdokimov, the resettlement effectively undermined their ability to launch large-scale resistance movements against Russian rule. The decree of 9 March 1873, issued by the Russian administration of the Caucasus, strictly prohibited any contacts between the Russian subjects of Čerkes background and their relatives in the Ottoman Empire. The former Adyghe lands remained under Russian military administration until 1871, when the Russians felt safe enough to replace it with civil rule throughout the Kuban region and the Black Sea area, by now thoroughly Russified and practically cleansed of "hostile elements". Nevertheless, the Russian military authorities continued to play a major role in the everyday administration of the region. The movements of the Adyghe were thoroughly monitored and restricted by the Russian police and the Cossacks, effectively confining the mountaineers to their *auls*. The *auls* were administered by an elected or appointed headman (*starshina*), who had to be approved by the local Cossack chief (*ataman*). At the same time, during the Russo-Ottoman war of 1877-8, Russian imperial authorities were sufficiently confident of the mountaineers' loyalty to the Russian government to enlist them as irregulars to fight against the Ottoman armies in Bulgaria, Romania and even Transcaucasia. The Russian expeditionary force in the Balkans and the southern Caucasus also included many irregular cavalry units from the central and eastern Caucasus, namely, Kabardīa, Dāghīstān, Ingushetia, Ossetia, and Čečnyā. Many mountaineer fighters distinguished themselves in the battlefield and were decorated for their bravery by the award of Russian medals. At the same time, on the Caucasus front many Čerkes and Abkhāz emigrants and their descendants took an active part in the Ottoman offensive against the Black Sea ports of Batumi and Sukhumi (Sukhum-Ķal'ē). They were driven in part by the desire to avenge themselves on the Russian Empire for the suffering inflicted upon them by its oppressive rule. While the Ottoman forces were able to make some important gains in the area, in the end, the Russian successes in the Balkans determined the favourable outcome of the war for the Russian Empire, which was reflected in the Treaty of Berlin signed in the summer of 1878 (see further, MUHĀDJIR. 2.).

i. *The rise of Dhikrism in Čečnyā: Kunta Hādjdjī Kīshiev, the man who preached peace*

In the late 1850s, not long before the fall of Shāmil's imāmate, Kunta Hādjdjī, a poor ĶumuĶ [q.v.] peasant (some sources consider him to be a Čečen) of Ilshān-Yurt, began to disseminate a new spiritual teaching among the war-weary Čečens and Ingush. Initially a follower of the NaĶshbandī brotherhood, Kunta Hādjdjī is said to have been initiated into the Ķādiriyya *ṭarīka* [q.v.] during his visit to Mecca on the *hādjdjī* in the late 1850s. The exact circumstances of his initiation into this brotherhood are obscure. According to some of his followers, he received the teaching of the Ķādiriyya directly from its founder, Shaykh 'Abd al-Ķādir al-Djīlānī [q.v.], who appeared to him in a dream. Contrary to the activist precepts of Shāmil's *myuridizm*, which preached a holy war against the Russians, Kunta Hādjdjī encouraged his followers to engage in acts of penitence (*tauba*) and individual self-purification through frugality, humility, abstention from worldly delights and withdrawal from this world. On the social plane, the new preacher

emphasised solicitude for the needs of one's neighbours, mutual assistance and the necessity to share one's wealth with the poor and needy. Kunta Hādjdjī also advocated peaceful co-existence with the Russians as long as they allowed the Čečens and Ingush the freedom to practice their religion and follow their customs.

As mentioned above, Kunta Hādjdjī's pacifistic message ran counter to Shāmil's ideology of armed resistance to Russian rule. Moreover, Shāmil also saw in Kunta Hādjdjī a rival in the struggle for the loyalties of the mountaineers, a struggle that Shāmil was already losing due to the growing war fatigue and despondency among his supporters in the face of Russian military superiority. Shāmil is said to have summoned the young preacher to his headquarters and subjected him to a close interrogation. Upon witnessing the vocal *dhikr* and dance that Kunta Hādjdjī performed in accordance with the precepts of the Kādīrī brotherhood, Shāmil allegedly declared it contrary to Nakshbandī precepts and "orthodox" Islam. He then ordered the preacher of *zikrism* (a Russified version of the Arabic *dhikr* [q.v.]) to leave the territory of his imāmate to perform a second pilgrimage and to gain a better knowledge of the intricacies of Islamic law.

Kunta Hādjdjī reappeared in Čečnyā after the collapse of Shāmil's imāmate in either late 1861 or early 1862. With Shāmil no longer on the scene, his message received an eager hearing among the war-weary Čečens and Ingush. Accounts of Kunta Hādjdjī's sermons indicate that, in addition to pacifism, his teaching was tinged with millenarian expectations and a doomsday mentality. He called upon his audiences to prepare for the Day of Judgement by purifying their souls, renouncing the transient allures of this life and adhering strictly to the pious precepts of the Kādīrī *tarikā*. Articulated in a simple language easily understood by the ordinary Čečens and Ingush, Kunta's teaching soon acquired a broad popular following. Initiation into the new *tarikā* was very simple. Kunta Hādjdjī or one of his lieutenants took the new member by the hand and asked him or her to acknowledge the spiritual authority of the *shaykh*, to repeat the *shahāda* [q.v.] one hundred times a day, and to participate in the ritual dance of the *tarikā*. Kunta Hādjdjī's followers recognised him as their spiritual master (*ustādh*) and considered themselves his faithful disciples (*murīdūn*). Seeking to spread his teaching among the masses, Kunta Hādjdjī sent emissaries to various Čečen and Ingush communities.

In the course of time, Kunta Hādjdjī's movement acquired institutional dimensions and administrative structure. Following Shāmil's example, he appointed a number of his foremost followers as his *nā'ibs* in various areas of Čečnyā and Ingushetia. According to the Russian colonial authorities of the day, Kunta Hādjdjī divided Čečnyā into five (according to some sources eight) *niyābats* or *nā'ibships*. Each *nā'ib* had under his command several lieutenants (*wakīls*), who were entrusted with spreading the teaching of the new *tarikā* among mountaineer communities. Kunta Hādjdjī's inner circle included his brother Mowsar (who was the *nā'ib* of the Avturkhān district), Myačik (the *nā'ib* of the area between Urus-Martān and Aėkhoi-Martān), Bamat-Girey Mitaev and Ćim-Mirzā Taumurzaev. The latter two were to found their own branches of Kunta Hādjdjī's *tarikā* after his arrest and exile. In all, Russian sources estimated the number of Kunta Hādjdjī's followers to be around 6,000 men and women. Most of them resided in the villages of Shali, Gekhi, Shaladji, Urus-Martān and Avtury.

Russian sources claim that, despite its pacifistic message, some of Shāmil's former fighters among the Čečens came to see Kunta Hādjdjī's teaching as a new version of Shāmil's *ghazawāt* ideology. The Russian authorities, ever suspicious of any popular religious teaching that could mobilise the mountaineers for a certain political cause, encouraged renowned local scholars, such as 'Abd al-Kādir Khordaev and Muṣṭafā 'Abdullaev, to condemn *zikrism* as being contrary to the *Shari'a*. In particular, the scholars denounced Kunta Hādjdjī's loud *dhikr* techniques and musical instruments that induced ecstatic states in the participants. They also pointed out that Kunta Hādjdjī had no scholarly qualifications to substantiate his claims to the spiritual leadership of the Čečens and Ingush. Kunta Hādjdjī responded with his usual humility. He readily acknowledged the authority of his learned critics as interpreters of the outward aspects of the Islamic revelation. However, he presented himself as an exponent of its true essence, which was hidden from the majority of believers. Later accounts, circulated by Kunta Hādjdjī's supporters, ascribe to him a number of miracles that allegedly demonstrated the superiority of his spiritual teaching over the dry scholasticism of his detractors.

In early January 1863, after some hesitation, the Russian authorities decided to put an end to Kunta Hādjdjī's preaching. On the orders of the viceroy of the Caucasus, the Grand Duke Mikhail Romanov, Kunta Hādjdjī and fourteen of his closest followers and *wakīls*, including his brother Mowsar, were arrested and sent to the Russian city of Novočerkassk. Several months later, he was separated from his companions and exiled to the town of Ustyuzhno in the Novgorod province of northern Russia. There he spent the rest of his days in misery under police surveillance. Throughout his exile he balanced on the brink of starvation, as his daily six kopeks' allowance was barely enough to buy a piece of bread. The Russian authorities ignored his repeated requests for an increase in allowance; his letters with pleas for help addressed to his wife and family were intercepted by the Russian secret police and never reached their destination. In any event, by that time, his wife and other members of his family had already emigrated to Anatolia with thousands of other *muhājirūn*. Kunta Hādjdjī died around 1867, his health undermined by a life of deprivation.

Kunta Hādjdjī's arrest in early 1863 triggered a rebellion of his followers that became known as "The Battle of Daggers" (Rus. *kinžal'nyi boi*). On 18 January 1863, a group of 3,000 to 4,000 of Kunta Hādjdjī's followers, armed only with daggers, sabres and sticks, charged against a Russian detachment near the Čečen village of Shali. As they found themselves within the firing distance of the Russian troops, dancing and singing Kādīrī litanies, they were mowed down by Russian fire. The "*dhikr* army" dispersed, leaving behind some 150 dead, including several women dressed as men. The site of the Battle of Daggers near Shali has become one of Čečnyā's most sacred places, along with the grave of Kunta Hādjdjī's mother at the village of Guni, in the Vedan district of Čečnyā. It is said that Kunta Hādjdjī's *nā'ib* Myačik-Mullā had persuaded the attackers that their *ustādh* would miraculously protect them from Russian bullets and cannon-fire. Following the massacre, the Russian administration arrested and exiled to Russia many members of the *dhikr* movement. Some of them managed to escape and became *abreks* (that is, bandits of honour, who vowed to fight the Russians to the death).

In May 1865, a Čečen shepherd of the *Kharačoi* *aul* named Taza Ekmirza(ev) proclaimed himself a new *imām* and attempted to raise the population of a mountainous part of Čečnyā known as Ičkəriya. Taza claimed to have performed an ascension to heaven (*mū'āđđ* [q.v.]), during which God himself had ordained him as the new *imām* of Čečnyā in the presence of the Prophet and *Shaykh* Kunta Hāđđđjī. Taza's claims were endorsed by a number of former followers of Kunta Hāđđđjī, especially Myaçik-Mullā. The Russian administration reacted strongly by sending three infantry detachments, led by Colonel Golovačev, against the rebels. Fearing Russian reprisals, the Čečen population of Ičkəriya seized Taza and his closest supporters and handed them over to the Russian command. Taza was convicted, sentenced to 12 years of hard labour and sent to Siberia. The spring of 1865 witnessed a massive exodus of the Muslim population, including many of Kunta Hāđđđjī's former supporters, from Čečnyā and Ingushetia to Ottoman Turkey. Scared by the rumours of impending forced resettlement and conversion to Christianity, some 23,000 Čečens boarded Ottoman ships bound for Anatolia. Of these, around 2,100 individuals later returned to the Caucasus, bringing with them stories of hardship and deprivation. These stories stemmed the tide of refugees, although some families continued to emigrate to the *Dār al-islām* in the decades leading up to the Russian Revolution of 1917.

j. *The Russo-Ottoman War of 1877-8 and beyond*

The *dhīkr* movement, now effectively banned by the Russian authorities, was reduced to a semi-clandestine existence. To protect its leaders from Russian persecutions, the *turuk* claiming descent from Kunta Hāđđđjī and his lieutenants grew extremely secretive and fractious. In 1877-8, some of their members took an active part in the rebellion of 'Alī-bek Hāđđđjī Aldanov, during which, for the first time, the *Kādirīs* fought side by side with the members of the *Naqshbandī tarīka* of Dāghistān led by Hāđđđjī Muḥammad of Sogratl (*Thughūr*). His father, 'Abd al-Raḥmān al-Thughūrī (d. 1882), also took an active part in the rebellion. A renowned scholar, 'Abd al-Raḥmān was considered to be the chief *Naqshbandī shaykh* of Dāghistān and Čečnyā after the emigration to the Ottoman realm of *Shāmil's* spiritual preceptor, *Djamāl al-Dīn al-Ghāzī Ghumuḳī*. After the followers of *Shaykh* Muḥammad Hāđđđjī proclaimed him *imām* of Dāghistān and Čečnyā, he began to send his *nā'ibs* and *wakīls* to various Dāghistānī communities, inviting them to fight the Russians in the name of "freedom and *Sharī'a*". The revolt was triggered in part by the Russian policy aimed at limiting drastically the jurisdiction of the *Sharī'a* and replacing it with the customary law (*ādāt* [q.v.]). This fact explains the large number of religious leaders among the rebels. Another important motive of the rebellion was Ottoman propaganda, which predicted an impending victory of the Ottoman army in the Caucasus and the Balkans. Some of the inflammatory flyers that circulated among the mountaineer communities were signed by *Shāmil's* second son, *Ghāzī* Muḥammad, now a general of the Ottoman army. The rebellion lasted for a whole year, until it was finally quashed by a Russian military force led by General Svistunov.

Following the suppression of 'Alī-bek Aldanov's movement, the abolition of Hāđđđjī Muḥammad's imāmate and the execution of twenty-eight of its leaders by the Russian military administration, their surviving supporters went underground. The early 1880s witnessed the emergence of three principal branches

(known locally as *wirds*) of the *Kādirīyya* under the leadership of *Bamat-Girey* (*Bamatgiri*) Hāđđđjī Mitaev and *Čim-Mīrzā* in Čečnyā and of *Baṭalḥāđđđjī Belkhoroi*(ev) in Ingushetia. Their influence on the mountaineer communities was of great concern for the Russian administration, which suspected the leadership of the new brotherhoods of trying to create an alternative power structure completely outside Russian control. Continual Russian surveillance and persecution turned the brotherhoods into secret societies, whose members often practiced endogamy and were suspicious of outsiders. This is especially true of the *Baṭalḥāđđđjī wird*, which was characterised by particularly strict discipline and fear of outsiders. Each male member of this brotherhood carried a long dagger, which he did not hesitate to use to protect his honour or to retaliate against any attack on the honour of his *ustāđđ*. Each of the three *wirds* that emerged from the Kunta Hāđđđjī movement practiced a distinctive type of *dhīkr*. Thus the members of the *Bamat-Girey wird* are known for their high jumps (hence their Russian sobriquet, *pryguny* "jumpers"); the *Baṭalḥāđđđjī dhīkr* is distinguished by the intensive clapping of hands, while the *Čim-Mīrzā* brotherhood is characterised by the use of drums (hence their Russian name *barabanshchiki* "drummers"). Many members of the *abrek* movement, including the famous Čečen "bandit of honour" *Zelimkhān*, were associated with one or the other *wird*. Consequently, Russian attempts to crack down on the *abreks* were often accompanied by persecutions against the Kunta Hāđđđjī *wirds*. Thus in 1911, the *shaykhs* of the three Kunta Hāđđđjī *wirds*, *Bamat-Girey*, *Baṭalḥāđđđjī* and *Čim-Mīrzā*, together with their closest followers (thirty in all) were arrested and exiled to Kaluga.

These persecutions and the dire economic conditions in Čečnyā and Ingushetia, which were suffering from chronic food shortages, triggered a new wave of emigration. In 1913 alone, some 1,000 Čečen families left their homeland for Anatolia in search of a better life. Paradoxically, similarly dire economic conditions in neighbouring Dāghistān did not prevent it from retaining its position as the major centre of Islamic learning and literacy in the northern Caucasus. In many areas of Dāghistān, even after the Russian conquest, Arabic remained the principal language of administration and correspondence among isolated mountaineer communities, whose multilingual inhabitants continued to use it as a *lingua franca* up until the late 1920s-early 1930s, when it was finally supplanted by Russian. Before the Russian Revolution there were, according to different estimates, from 800 to 2,000 *Kur'ānic* schools in Dāghistān alone, enrolling around 40,000 students. At the beginning of the 20th century, Dāghistān boasted five printing presses, including the *Mavraev Publishing House* at *Temūr-Khān-Shūrā* (*Makḥāc-kal'e* [q.v.]), which specialised in Arabic books. It also produced books in major Dāghistānī languages: Avar, *Darghin*, *Kumuḳ* and *Laḳ* [q.v.]. In 1911 alone, it published 256 titles in these languages.

The strong position of Islamic learning in Dāghistān was recognised by the Russian administration, which prohibited Russian Orthodox missionaries from proselytising in the area, fearing popular unrest among the local Muslim population. Russian attempts to replace local religiously-based education with Russian schools had only limited success. The so-called "new method" gymnasias and technical schools in the urban centres of Dāghistān, Čečnyā and Ossetia were dominated by non-native, Russian-speaking students and faculty. At the same time, the last decade of the 19th

century and first decade of the 20th century witnessed the steady growth of a small but active Russian-educated intelligentsia among the Caucasian ethnicities, which became an important vehicle in spreading Russian culture among their respective ethnic groups. Overall, however, the literacy level among the mountaineers remained relatively low throughout the Caucasus. The Russian census of 1897 shows Dāghistān to be in the lead with 9.2%, followed by Adyghēya (7%), Ķaraçay (4.6%), Kabarda (3.2%), and Balkariya (1.4%).

k. *The Caucasus on the eve of the Russian Revolution*

Following the discovery of commercial amounts of oil in some areas of Čeçnya in 1894, the region underwent a rapid economic and social transformation and by 1910 had become a major centre of oil production in the Caucasus, second only to Bākū. Radical changes in the social and economic landscape of the region were underway throughout the first decade of the 20th century, as Čeçnya and its neighbours were becoming increasingly integrated into the world economy. This process is attested by the emergence of a number of local companies with links to major European and Russian entrepreneurs and banks. They presided over many local projects, including the creation of the oil industry and attendant infrastructure in and around Grozny. Several newly-built railways linked central Russia to the major urban centres of the Caucasus—Ekaterinodar, Vladikavkaz, Novorossisk (former Sudjuk-Ķal'ē), Stavropol' and Bākū. These cities soon became centres of anti-government agitation spearheaded by, for the most part, Russian revolutionary intelligentsia and Russian-speaking industrial and railway workers. While the majority of the mountaineers of the northwestern and central Caucasus did not benefit from these developments (in fact, due to widespread land speculation, many local peasants lost their already tiny lots of agricultural land and were forced to migrate to the rapidly-growing cities), some members of the Čerkes, Čeçen and Ingush' ēlites, including some wealthy leaders of Šūfi *wirds*, profited from this economic boom. The growing economic inequality and abiding hostility between the Russian settlers (Cossacks) and the mountaineers fuelled rural unrest, especially in Čeçnya and Ossetia. As usual, the Russian administration resorted to the tactic of deportation and exile to Russia and Siberia of real or imaginary "troublemakers". Among those deported from Čeçnya and Ingushetia in the first decade of the 20th century were *shaykhs* of the Naḵshbandiyya (e.g. 'Abd al-'Azīz Shaptukaev, also known as Dokku Shaykh and Deni Arsanov), and *ustādh*s of the local Ḳādirī *wirds*, Baṭalḥādjī Belḵhoroev, Bamatgirey-Hādjī and their closest followers. The Russian revolution of 1905-6 galvanised local resistance movements, which were driven in part by the forced Russification of the rural population and the growth of the number of Russian settlers and landlords. In line with Marxist principles, the Russian Communist agitators, who, for the most part, were based in the industrial centres of the region, attempted to reach out to the mountaineer masses and to rally them to their cause. However, these attempts met with limited success among the majority of mountaineers, who remained suspicious of the goals of the agitators, many of whom espoused atheism. As a result, the revolutionary movement in the Caucasus was for the most part confined to the urban centres with a substantial Russian population. Local disturbances continued throughout the first decade of the 20th century, despite severe repression. In 1914-15, the hardships and short-

ages of World War I triggered another wave of anti-government protests both in cities and the countryside. The military defeats of Russian armies on the Western front and the wartime requisitions instituted by the Russian administration resulted in acts of sabotage and mass desertions among mountaineer recruits.

1. *The Russian Revolution and civil war*

The victory of the democratic revolution in Russia in February 1917 instilled in the Caucasian nations a hope to finally rid themselves of the oppressive imperial rule. In the heady days after the revolution, mountaineer leaders saw their chance to secure independence from Russia. Throughout the Caucasus, there mushroomed numerous "civil committees" and "revolutionary councils", which represented a wide spectrum of political views from "Muslim Communism" of various shades to bourgeois liberalism and parliamentary democracy. At the same time, many mountaineer communities remained committed to the more traditional religious values and leaders. Thus a "congress of the Čeçen people" that spontaneously assembled in Grozny in March 1917 demanded the reinstatement of the *Shar'ā* as the law of the land and the creation of the post of the chief *mufī* of the Terek *oblast'* with wide-ranging jurisdiction. Such demands were actively supported by local scholars, many of whom were leaders of the Caucasian Ḳādirī *wirds* and the Naḵshbandiyya, namely Sugaip-Mullā, 'Alī Mitaev, Deni Arsanov and 'Abd al-Wahhāb Hādjī Aksayskii. The spiritual authority and economic power (the individuals just mentioned were wealthy landowners and successful entrepreneurs) wielded by such traditional religious authorities made them indispensable for the new crop of local politicians, who represented the interests of the nascent mountaineer bourgeoisie. Thus the famous Čeçen oil tycoon and politician 'Abd al-Madḡid Čermoev was anxious to secure the support of the influential Šūfi *shaykhs* Yūsuf Hādjī and Deni Arsanov.

On 1 May 1917, the "First Congress of the Mountain Peoples" was convened at Vladikavkaz (North Ossetia). Presided over by the Balkar intellectual Basiyat Shakhhanov, it lasted for ten days. Of its 400 participants many were authoritative religious scholars and Šūfi *shaykhs*, namely, Deni Arsanov and Sugaip-Mullā Gayumov from Čeçnya, Uzun Hādjī and Naḡm al-Dīn Efendi Gotsinskii from Dāghistān, Hamzat Hādjī Urusov from Ķaraçay, etc. The Congress called for the formation of the Union of the Mountain Peoples of the Caucasus, which, in turn, was supposed to be part of a larger political structure called the "All-Caucasus Muslim Union". The resolutions of the Congress included a demand for the establishment of the office of *Shaykh al-Islām* at the government of the Russian Federation, who would preside over a consultative council of six representatives of the three major schools of law on the territory of the former Russian Empire, namely, Šāfi'ī, Hanafī and Dījāfarī (Šī'ī). Another resolution called for the creation of an "academy of *Shar'ā* sciences" at Vladikavkaz and the declaration of the *Shar'ā* as the only law of the land.

In June 1917, the famous Muslim scholar and Naḵshbandī *shaykh* of Dāghistān, Uzun Hādjī, arrived in Čeçnya. He had already acquired a reputation there for piety and clairvoyance during his earlier sojourn at the Čeçen village of Shatoi, whose inhabitants had given him shelter from the persecution of the Russian military police shortly before the Russian Revolution. At a meeting of the inhabitants of the Shatoi district, Uzun Hādjī declared Naḡm al-Dīn

Gotsinskii, a respected scholar of liberal leanings and son of a *nā'ib* of Imām Shāmīl, as *imām* of Čečnyā and Dāghistān. The *shaykh* confirmed his nomination by a display of his miraculous powers. According to some "eye-witness" accounts, he performed his prayer on his felt coat (*burka*) which he had spread in the middle of lake Eyzen-Am.

In September 1917, the Second Congress of the Mountain Peoples was assembled at Andy, on the border between Dāghistān and Čečnyā. It attracted some 20,000 participants from all over the Caucasus. In addition to traditional religious and political leaders and members of the nascent mountaineer bourgeoisie, the Congress was attended by representatives of leftist political parties, including the Bolsheviks, and a number of political emissaries from the Provisional Government of Russia. Another congress took place at Temīr-Khān-Shūrā, in Dāghistān. Its participants ignored Uzun Hādjdjī's appointment of Gotsinskii as *imām* of Dāghistān and Čečnyā. Instead, they bestowed upon him the title of chief *mufī*, which carried less political authority. This event upset Uzun Hādjdjī, since it nullified his earlier appointment of Gotsinskii as *imām*. Upon hearing the news, Uzun Hādjdjī withdrew from Temīr-Khān-Shūrā together with some 10,000 of his supporters. Uzun Hādjdjī's departure reflected his frustration with the growing influence of leftist, "socialist" groups on the events in Dāghistān and Čečnyā and their attempts to seize the initiative from the traditional mountaineer leadership and to use it to their advantage. Gotsinskii's authority was drastically reduced when a mass meeting of Dāghistānī villagers (apparently orchestrated by the opponents of Gotsinskii) named the Nakshbandī *shaykh* 'Alī Hādjdjī of Akūsha—a village in the Dargin region of Dāghistān—as the second *mufī*.

Similar tensions between various tribal, ethnic and political factions, often working at cross-purposes, were in evidence in other areas of the northern Caucasus. Thus at a meeting of the Čečen National Council, the *murīds* of the Nakshbandī *shaykh* Deni Arsanov attacked and beat up the Council's chairman Aḥmad-Khān Mutuṣhev. As a result, Arsanov became chairman "by default". The breakdown of centralised authority resulted in chaos and political assassinations, which had begun shortly after the February revolution of 1917 and which continued uninterrupted throughout the rest of the year.

Against this background, the long-standing animosity between the Russian and Ukrainian Cossacks and the Čečens burst into the open, leading to a tit-for-tat warfare between the two groups. Several Čečen and Cossack settlements were plundered and put to the torch. In the course of these hostilities, a Cossack detachment murdered *shaykh* Deni Arsanov, along with his 35 *murīds*, after he had attempted to broker a peace agreement between the warring parties. This tragic episode led to a further escalation of violence. In December 1917 the members of the Čečen National Council were forced to flee from Grozny, which had fallen into the hands of revolutionary workers and soldiers, most of whom were of Russian or Ukrainian backgrounds. This event led to the isolation of the capital from the rest of the country and the emergence of two parallel power structures, the Russian-dominated *Sovdeps* (councils of representatives of workers and soldiers) and the one which was controlled by traditional Čečen leaders, such as *shaykh* 'Alī Mitaev and the former chairman of the Čečen National Council, Aḥmad-Khān Mutuṣhev, both of whom were affiliated with different branches of the Kunta Hādjdjī

*tarīka*. Into this complex and near-chaotic political landscape came former officers of the "Wild Division" of the Tsarist army, who tried to form a political alliance with the traditional Čečen leaders against the Bolsheviks in Grozny.

The situation grew even further confused after the collapse in late October 1917 of the Provisional Government of Russia and the seizure of power in the Russian capital by the Bolsheviks and their radical political allies. In the Caucasus, the power vacuum created by the change of guard in St. Petersburg (Petrograd) was filled in the early months of 1918 by a series of short-lived "unions", "congresses" and "councils", which were usually organised by ethnicity. All these political bodies proved to be extremely fractious and incapable of reaching consensus on any given proposal or policy. Under the circumstances, leftist political parties, such as the Bolsheviks, Mensheviks, and Social Revolutionaries, which had been cemented by a strict party discipline and decades of struggle against the Russian imperial government, turned out to be the only viable alternative to the authority of the traditional religious leaders of mountaineer society. Steeped in the arts of political agitation and revolutionary demagoguery, the leftist parties soon gained the upper hand in the struggle to win over the masses. Their clear and catchy political slogans, promising social and ethnic equality and an equitable distribution of land, resonated with the aspirations of the impoverished Russian and mountaineer classes. To enhance their influence even further, in January 1918, a group of representatives of the leftist political parties of the northern Caucasus agreed to form the so-called "Socialist Bloc".

After a period of political jockeying, the Bolsheviks, led by Sergei Kirov, succeeded in wresting the leadership of the Bloc from their rivals, the Mensheviks and Socialist Revolutionaries. On 4 May 1918, the leaders of the Socialist Bloc declared the creation of the Terek Peoples' Republic, with its capital in Vladikavkaz. The new republic was to be part of the Russian Federation. It included Ossetia, Čečnyā, Ingushetia, Kabarda, Balkaria, and the lands of the Ḳumuḳs and Noghay Tatars. As Russia descended ever deeper into the chaos of civil war, many mountaineer leaders began to consider the possibility of creating an independent state. In the early months of 1918, a group of politicians led by Tapo Čermoev, Vassan-Girey Djabagi, Pshemakho Kotsev and several other mountaineer leaders of a liberal slant, formed the so-called "Mountain Government" at Tiflis. On 11 May 1918, they declared an independent "Mountain Republic". The primary goal of the new state, as envisaged by its founders, was the immediate cessation of civil war on its territory and the construction of a new life on democratic principles.

This programme was, however, never implemented. Soon after the fall of the Bolshevik-dominated Terek Peoples' Republic, the country was occupied by the White Army of General Denikin. Since Denikin's political programme rested on the idea of the restoration of Russian imperial rule and revival of a "one and undivided Russia", he hurried to abolish the independent "Mountain Republic" and attacked its supporters in Kabarda and North Ossetia. When the White Army arrived in Čečnyā and Ingushetia, it unleashed a brutal punitive campaign against the local population, burning down dozens of villages and executing hundreds of their inhabitants. The protests of the Mountain Republic's leadership addressed to the Western powers, which had actively supported and

equipped Denikin, went unheeded. In the meantime, the Bolsheviks of the Terek Peoples' Republic went underground. Many Bolshevik ministers (commissars) found refuge in the remote mountains of İčeriya (Čečnyā). From there, they directed a campaign of sabotage and agitation against the Whites. Their calls to resist the White Army and expel it from the country found an eager reception among the mountaineers, who had realised that Denikin's victory would lead to the restoration of the oppressive Russian imperial rule over their lands. Playing on such fears, the Bolsheviks made a pact with the local religious leaders, such the Kādīrī *shaykh* 'Alī Mitaev and the Naqshbandī elder *shaykh* Sugaip-Mullā, who enjoyed wide support among the mountaineer masses. The Bolsheviks did not hesitate to promise their allies, in the case of victory, full political autonomy and freedom to practice their religion and to implement the rule of the *Sharī'a*.

In June 1919, the popular Čečen revolutionary Aslanbek Sheripov and the Dāghistānī leader Uzun Hādjdjī agreed to form a unified front against the occupying White Army. In September, Uzun Hādjdjī proclaimed himself *imām* and military commander (*amīr*) of the "North Caucasus Emirate" with the capital at Vedeno (Vedan), the Čečen village that some 80 years earlier had served as a headquarters of Shāmil's *imāmate*. Simultaneously, Uzun Hādjdjī declared a "holy war" (*ghazawāt*) against the White legionnaires. Uzun Hādjdjī's headquarters became the recruitment point of mountaineer fighters from all over the northern Caucasus, especially Kabarda, Balkaria, Ingushetia, and Dāghistān. Many volunteer detachments were led by Süfī *shaykhs*, who often arrived in Vedeno accompanied by their *murīds*. Some of them were given ministerial posts in the Emirate government. The leaders of this new state, which they classified as a "*Sharī'a* monarchy" (Rus. *shariatskaya monarkhiya*), declared their primary aim to be full independence from Russia under the rule of the *Sharī'a*. The territory of the Emirate was divided into seven provinces that were administered by Uzun Hādjdjī's *nā'ibs*. In addition, he sent his ambassadors to the neighbouring states, such as Adharbāydzān, with which he maintained close ties throughout his political career.

Impressed by Uzun Hādjdjī's influence on the mountaineers of different ethnic and tribal backgrounds, the Bolsheviks endeavoured to secure his support in the struggle against their common enemy, the Whites. On 4 February 1920, the Bolsheviks formed a special "committee for the restoration of Soviet rule in the Northern Caucasus" under the chairmanship of Ordžonikidze with Kirov as his chief lieutenant. They succeeded in convincing the mountaineer leadership of the necessity to join forces against the White Army. From then on, the Caucasian Red Partisans and the Fifth Red Army led by the Bolshevik commander Nikolai Gikalo fought alongside the *murīds* of Uzun Hādjdjī and of other local *wirds*. Some members of the Ćim Mīrzā *wird* of the Kunta Hādjdjī *tarīka* even decorated their sheepskin hats (*papakhas*) with red bands to demonstrate their solidarity with the Bolsheviks.

In March 1920, after having suffered a series of crushing defeats at the hands of the Muslim-Bolshevik coalition, the White Army abandoned the major cities of Čečnyā and Dāghistān and began to withdraw to the coast of the Caspian Sea. The city of Darband was liberated after a nineteen-day, street-by-street battle, giving the Whites no alternative but to put their entire army on ships and sail from the port of Petrovsk.

Their departure ushered in a new stage of the war, during which the former allies soon found themselves locked in a life-and-death struggle for control of the country they had just liberated. This, however, did not happen overnight, as the Soviets initially did not feel strong enough to turn against their Muslim comrades-in-arms. A cable from Vladimir Lenin addressed to the Bolshevik Revolutionary Committee (*revkom*) of Grozny instructed its members to respect the mountaineers' desire for religious and political autonomy and independence. This was, however, apparently only a temporary tactical manoeuvre that was to be supplanted by a more aggressive strategy on the part of the Bolshevik party leadership, which was determined to bring the entire Caucasus under communist rule.

m. *The anti-Soviet rebellion of 1920-1 in Upper Dāghistān*

The death of Uzun Hādjdjī in May 1920 did not lead to the dissolution of his Emirate. His functions as head of a theocratic state were taken up by a number of authoritative religious leaders, such as the Süfī *shaykh* 'Alī Mitaev, who had about 10,000 followers in Čečnyā and Ingushetia. Like Uzun Hādjdjī, Mitaev maintained close relationships with Nadīm al-Dīn Gotsinskii, who was generally recognised as the new *imām* of Čečnyā and Dāghistān. However, for reasons that are not entirely clear, 'Alī Mitaev did not take an active part in Gotsinskii's bid for independence from Soviet Russia in the months that followed. Gotsinskii assembled under his command about 20,000 seasoned fighters, who were to become the core of his rebel army.

Throughout 1920, tensions were mounting between the former allies of the anti-White coalition in many parts of Dāghistān and Čečnyā. They were fuelled by the highhandedness of the Red Army's commanders and political commissars, who were ignorant of the customs, religious beliefs and social institutions of the local populations and tended to dismiss them as contrary to Communist ideology. Steeped in atheistic propaganda, they viewed the mountaineers' attachment to the Islamic religion as a "reactionary superstition" that had to be discouraged, if not uprooted altogether. The constant influx of fervent revolutionary propagandists and atheistic-minded political representatives (*upolnomočennye*) from Rostov and other cities of southern Russia added to the growing discontent with Soviet rule among the mountaineers and their leaders. The disaffected political groups established their base in the rugged mountainous areas of western Dāghistān, from where they attempted to orchestrate resistance to the Bolshevik authorities.

In August 1920, Nadīm al-Dīn Gotsinskii and Colonel Kaitmas 'Alīkhānov convened an assembly at the remote village of Gidatl, during which 'Alīkhānov was proclaimed "war minister" of the newly formed "Sharī'a Army of the Mountain Peoples". The uprising spread quickly among the mountaineers of Avaristān and the Andy range. The area's rugged terrain made it a natural fortress for the rebel army. In a matter of weeks, Soviet rule in Upper Dāghistān was effectively eliminated and replaced by authorities loyal to Imām Gotsinskii, including Sa'īd-bek (a great-grandson of Imām Shāmil, who had joined the rebellion at Gotsinskii's invitation), Colonel 'Alīkhānov, a few traditional leaders affiliated with Süfī *tarīkas* and some former officers of the Tsarist army, including Colonel Dja'farov, who was appointed commander-in-chief of the rebel military forces. Food and supplies were provided by the local population, but each fighter had to have his own weapons. The army was divided into 100 strong infantry units, supported by

small cavalry detachments. Throughout the rebellion, the rebels suffered from shortages of weapons and ammunition and had to rely heavily on the supplies captured from the Red Army. This disadvantage was counterbalanced in part by the rebels' intimate knowledge of the local terrain and their mastery of the art of mountain warfare.

The Bolsheviks' initial reaction to the rebellion was ineffective and confused. Their detachments stationed in the area suffered heavy casualties and had to abandon their base at Botlikh, which was occupied by the rebel troops. In less than six weeks, most of Upper Dāghistān on the border with Ādharbāyḍjān was cleansed of Red Army units and their local allies, the Red Partisans, and fell under the control of the rebels. The only Red Army units that still remained in Upper Dāghistān were trapped within their fortresses. To relieve them, during the first two weeks of October 1920, Red Army reinforcements were sent to Temūr-Khān-Shūrā from Ādharbāyḍjān. Upon arrival, they were dispatched to the rebel-controlled areas with the orders to occupy the strategic village of Arakany (Harakān). As a 700-strong Red Army expeditionary force led by the head of the Dāghistān ĆeKa ("Committee for Struggle Against Counter-Revolution, Sabotage and Speculation") was approaching Arakany, on 30 October 1920, it was enticed into a narrow gorge by the rebel levies under the command of Shaykh Muḥammad of Balakḥany and massacred to the last man.

Following this military disaster, which was a re-run of many similar ones suffered by the Imperial Russian army in the 19th century, the Bolshevik military command of the Caucasus began to prepare a massive military expedition into the mountains of Upper Dāghistān with the mission to crush the rebellion once and for all. The new Red Army force under the command of Todorskii was supported by the pro-Russian and pro-Bolshevik mountaineer fighters (Red Partisans), who had distinguished themselves in the struggle against the White Army of General Denikin. The Red Partisans took an active part in the ensuing hostilities and were instrumental in relieving the Red Army garrisons besieged at Kḥunzakḥ and Gunīb. Intent on quelling the rebellion at any cost, the Red Army command continued to pour more reinforcements into Dāghistān. They were deployed against the rebel army at Gḥimrāḥ (Gimry), Botlikh and Arakany, which counted some 3,500 fighters among its ranks. The Red Army detachments continued to suffer heavy casualties (almost 400 men) at the hands of the rebels throughout November 1920; during that month the Red Army garrisons were effectively reduced to holding their positions at Gunīb and Kḥunzakḥ. Their occasional punitive forays into the mountains failed to suppress the rebels, instead arousing the hatred of the local population, which actively supported the rebels. The loss of the élite "First Model Revolutionary Discipline Rifle Regiment" near Botlikh in late November 1920 was a dramatic evidence of Red Army's inability to achieve its strategic objectives as well as the counterproductive nature of its scorched-earth policy against the civilian population. On the other hand, the reversals suffered by the Red Army infused the rebel forces with confidence, and gave them much-needed supplies and ammunition. In the end, the Red Army regiments led by Nadīm al-Dīn Samurskii were forced to seek refuge in their last remaining strongholds at Gunīb and Kḥunzakḥ. Their siege by the rebel army lasted for two months, during which the Red Army fighters suffered terrible

deprivations. At the end of 1920, the Red Army command made another attempt to quash the rebellion. Fresh Red Army divisions from Russia and Ādharbāyḍjān were dispatched into the region with the orders to cut the rebels off from their supply base in Ćeṅya, to punish the local population for their co-operation with the rebel force, and to surround and eliminate the enemy force. Valley after valley was occupied by the fresh Red Army troops and a renewed scorched-earth policy applied to the conquered villages, forcing the rebels to withdraw ever deeper into the barren mountains. Supported by armoured vehicles, the Red Army scored an important victory in early January 1921 at Kḥodzhal-Makhi. The remaining rebels, some 1,000 men, retreated to the aul of Gergebil, where they took their final stand against the superior Red Army force. In the course of the all-out advance that began on 7 January, the Red Army forces suffered heavy casualties, and were still unable to capture the well-fortified aul until 26 January 1921. In the course of the siege, the Red Army units lost a total of 877 men, with the rebels' casualties probably twice, if not more that number. The remaining rebel forces evacuated the area around Gergebil and retreated to Arakany and Gḥimrāḥ (Gimry). Arakany was captured by a Red Army unit on 14 February 1921 after a fierce hand-to-hand street battle, leaving most of Upper Dāghistān under Soviet control. Gimry, an almost impregnable mountain fortress and the birthplace of Shāmil, remained the last rebel stronghold. Due to its natural defences, it could only be forced to surrender by around-the-clock artillery fire. Within a week, 90% of the buildings in the aul were reduced to rubble. The rebels responded by lightning night raids against the artillery units positioned around the village.

After the capture of Gimry on 17 February 1921, its surviving defenders withdrew to western Dāghistān. The Soviet victory was due in part to the fall to the Soviets of the independent Georgian Republic in late February 1921, which left the rebel forces exposed to Red Army attacks from Georgian territory, now firmly under Soviet control. The last rebel detachment led by Colonel Dja'farov counted some 250 to 300 men, including a few surviving leaders of the rebellion, such as the "war minister" Colonel Alīkhānov and Lieutenant Abakarov. They assembled at the aul of Gidat, the birthplace of their resistance movement, in April 1921. The aul fell in May after several days of fierce fighting. Some rebel commanders managed to escape, only to be hunted down, captured and executed by the Soviet interior troops within the next few years. Of the principal figures of the Dāghistān rebellion, only Sa'id-Bek, great-grandson of Imām Shāmil, was able to make his way to Turkey.

The war between the Soviets and their Muslim opponents was accompanied by atrocities on both sides. The bodies of the fallen Red Army combatants were routinely mutilated by the rebels in response to their indiscriminate violence against the population of the auls suspected of supporting the guerrillas. As a result of several years of hostilities, most of Dāghistān lay in ruins; it took more than a decade of strenuous effort to rebuild the country. The brutal suppression of Dāghistān's bid for independence left a legacy of mutual hatred between the local population and the Soviets. This hatred manifested itself in the series of small-scale uprisings that continued throughout the late 1920s and early 1930s.

n. "Class struggle" and Communist purges in Ćeṅya and Ingushetia, 1920-38

In Ćeṅya and Ingushetia, now firmly under Soviet

control, the Muslim population was in no position to participate actively in the Dāghistān rebellion, although some minor disturbances did take place on the border between Čečnyā and the rebel-controlled parts of Dāghistān. In Čečnyā, tensions between traditional leaders and pro-Communist elements came to the fore in the course of public debates over the future of the Autonomous Mountain Soviet Socialist Republic, which was proclaimed on 17 November 1920. It included the territories of present-day Čečnyā, Ingushetia, Ossetia, Kabarda, Balkaria and Karačay.

The government of the infant republic was dominated by revolutionary-minded intellectuals, who had supported the Bolsheviks from the early days of the February Revolution in Russia and were willing to co-operate with the Soviets in return for domestic autonomy. Under Lenin, the Russian political leadership was ready to accommodate their nationalist agendas and grant them independence *vis-à-vis* the Bolshevik régime in Moscow. The secularised revolutionary leaders of the Mountain Republic faced opposition from the more religiously-minded political factions, whom Bolshevik sources described as “supporters of the *Sharī‘a*” (*shariatisty*). At issue was the role and scope of the *Sharī‘a* legislation in the life of the new state. The *shariatisty* demanded the full and unconditional implementation of *Sharī‘a* legislation in all spheres of public life, whereas their leftist opponents sought to restrict it to the realm of private conviction and prohibit its public dissemination. The leftists eventually triumphed over the supporters of the *Sharī‘a* and declared Communist values and secular legislation to be the only law of the land. In August 1922, a decree issued by the Central Committee of the Soviet Mountain Republic officially abolished local *Sharī‘a* courts, although in Čečnyā and Ingushetia they remained active until 1926.

Gradually, the struggle against the *Sharī‘a* turned into a concerted political campaign against its learned exponents, the *‘ulamā’*. Since, by virtue of their special status in mountaineer society Muslim scholars continued to dominate local councils (soviets) in the Čečen and Ingush countryside, in September 1921 the Communist Central Committee based in Grozny issued a decree replacing local Soviets with Bolshevik-dominated revolutionary committees (*revkoms*). The anti-clerical campaign unleashed by the Bolsheviks was aimed at reducing the influence of traditional Muslim leaders on the masses and at isolating them politically. Some Muslim scholars sought to retain their social roles by cooperating with the Soviets. Among them was the Sūfi *shaykh* ‘Alī Mitaev. As the son of the renowned founder of the Bamatgirey *wird* (a branch of the Kunta Hādjdjī *tarīka*), Mitaev enjoyed wide popularity among the Čečens and Ingush. A veteran of the revolutionary war against the White Army, the Bolsheviks considered him reliable enough to appoint to the Revolutionary Committee of the Čečen *oblast’*. Once a month, he is said to have arrived at its meetings in Grozny accompanied by thirty mounted disciples (*murīds*), who patiently waited for him outside the Communist Party headquarters until the end of the meeting. ‘Alī Mitaev’s political agenda included the demand for an autonomous Mountain Republic under the rule of the *Sharī‘a*.

In 1924, the Bolshevik party, now headed by Stalin, embarked on a campaign to curtail national autonomies and subject them to the direct rule of the Central Committee of the Communist Party in Moscow. That year witnessed the dismantling of the Soviet Mountain Republic and the creation of a number of

regional autonomies, Karačay-Circassia, Kabarda-Balkaria, Adyghea, Čečnyā, Ingushetia and North Ossetia. This political manoeuvre was followed by a campaign to disarm the mountaineer communities, which was rightly seen by the mountaineers as a prelude to a new wave of repression. To forestall any possibility of rebellion, the communist security agency (OGPU, the forerunner of the KGB) accused many former members of the governing bodies of the Mountain Republic of disloyalty to the Communist party and of fomenting an armed rebellion against the Soviet authorities of Čečnyā and Ingushetia. Among those implicated in the “anti-party activities” was ‘Alī Mitaev. He was enticed into a trap by OGPU operatives, arrested and executed in 1925. The OGPU also arrested the prominent Nakshbandī elder and Islamic scholar Sugaip-Mullā Gaysumov. His life was spared, due in part to his old age and his active role in the struggle against the White Army. However, as with most members of the *‘ulamā’* class, he was to be kept under close police surveillance.

From that time on, the OGPU pursued a relentless campaign to isolate and neutralise the Muslim “clergy” of Čečnyā, Ingushetia and Dāghistān as well as other autonomous republics of the northern Caucasus. Many prominent local scholars versed in Arabic and Islamic culture were arrested on trumped-up charges of conspiracy, espionage or membership in the parties and factions that had been condemned by the Central Committee of the Russian Communist Party as “deviant” or “dangerous”. Later on, in 1926, the local party cadre, including the President of the Central Executive Committee of Čečnyā, Taštemīr Elderkhanov and his several aides, were accused of sympathising with the “reactionary clergy” and “bourgeois nationalists” and removed from their offices. They were replaced with Russian party apparatchiks, such as Ivanov and Černoglaz, whose wanton disrespect for local customs and beliefs and fervid implementation of anti-religious policies triggered several small-scale uprisings, which were brutally suppressed by the Soviet interior troops. Many participants of these movements, including those responsible for the assassination of Ivanov and Černoglaz, belonged to the local *wirds*, primarily those of Kunta Hādjdjī and Baṭalhādjdjī. In a sense, the “*tarīkat* conspiracy” was an invention of Černoglaz, who expected to receive substantial awards and promotion from the Central Committee of the Soviet Communist Party for “unmasking” it. His assassination at the hands of Kunta Hādjdjī *tarīka* members was an act of revenge for his dogged persecution of its leaders and ruthless implementation of anti-religious policies.

This act triggered a series of new persecutions against the members of the implicated *turuk* and their leaders, whom the Soviet authorities viewed as the bastions of “religious fanaticism” and “reactionary ideology”. In less than one month, the OGPU forces arrested 300 Čečens, Ingush and Dāghistānīs, including 39 religious leaders, and accused them of plotting an armed rebellion under “religious and nationalist banners”. Simultaneously, the Soviet administration of the northern Caucasus sought to undermine the economic foundations of the *‘ulamā’* class by confiscating local religious endowments and prohibiting the collection of the *zakāt* [q.v.]. These measures, combined with the introduction of the hated *kolkhozs* and crack-down on the *kulaks* (wealthy peasants) by the Soviet authorities, provoked a wave of local uprisings and unrest that continued throughout 1929-30. Some of the uprisings were led by the former Red Partisans,

such as Shita Istambulov and his brother Hasan of the village of Shali in Čečnyia. On 5 December 1936, the Čečen-Ingush Autonomous Region (*oblast'*) was "upgraded" to the status of an autonomous republic. This act was accompanied by another wave of reprisals against the so-called "anti-Soviet elements" of local societies. In the process, the NKVD (the Peoples' Commissariat of Internal Affairs) forces rounded up and imprisoned thousands of men and women. Most of the arrested were tried under Article 58 of the Soviet criminal code, which envisaged punishments by death and hard labour for such crimes as treason, espionage, fomenting an armed rebellion, sabotage, terrorism, anti-Soviet propaganda, etc. Hundreds of mountaineers were executed; others were sent to Siberia or concentration camps. Some Čečen and Ingush men escaped into the mountains, from where they launched revenge attacks against NKVD operatives and Communist Party functionaries. A decade of political purges left the Čečen and Ingush population demoralised and exhausted by the unequal struggle against the Soviet state and its giant apparatus of political repression. The ranks of the traditional religious leaders were decimated, while those who survived the horrors of Stalin's extermination campaigns were either forced underground or placed under the close surveillance of the Communist secret police.

*o. World War II and the mass deportation*

Against all odds, resistance to Soviet rule continued throughout the 1930s under the leadership of some members of the Soviet-educated intelligentsia, whose goal was to free their country of the Soviet yoke. Inspired by the Red Army reversals during the Finno-Soviet war of 1939-40, a former Čečen writer and party official, Hasan Israilov, started an armed insurrection in the remote mountain area of Galančož, near Shatoi.

His movement received a new impetus after Nazi Germany began a large-scale military operation against the Soviets on the eastern front and in the Caucasus. In February 1942, when the German troops approached the Russian city of Taganrog, approximately 350 miles from the Čečen-Ingush Republic, another rebel group headed by Mairbek Sheripov joined Israilov's insurrection. To suppress it, the Soviet military command resorted to an indiscriminate bombing of Čečen villages in the areas under rebel control. In 1943-4, Stalin and his Politburo, accomplished what some Russian military rulers (General Ermolov) and radical politicians (Pavel Pestel, a leader of the "Decembrist" movement) had only dreamed of a century earlier—a massive expulsion of the "hostile" mountain population to Russia and Siberia with the intention of eradicating its resistance to Russian rule. In 1943, a Communist Party decree abolished the Čečen-Ingush Republic, along with the neighbouring republics of Ķaračay and Balkaria. The abolition was justified by the fact that the population of these republics had not only "co-operated" with the Nazis, but also "invited" them to conquer their lands and promised them full support. While the German troops had indeed occupied briefly the lands of the Ķaračays and Balkars, they had never set foot on Čečen-Ingush territory. In any event, it made absolutely no legal sense to hold entire nations responsible for the "co-operation" with Germany of some of its representatives. However, the legal issues pertaining to the deportation of mountain nations were of no concern to Stalin and his henchmen (the deportation of the mountaineers was organised and executed by the NKVD chief Lavrentii Beria). They were determined

to punish the mountaineers for their long resistance to the cruel and arbitrary Communist rule and for their continuing struggle for freedom and independence. In late 1943-early 1944, the population of four Caucasian nations, Čečens, Ingush, Balkars and Ķaračays—men, women and children—were rounded up *en masse* by special Red Army detachments, placed in freight cars and transported to Central Asia. Only three-quarters (some say 50%) of the deported Čečens and Ingush are said to have reached their destination. The rest died *en route* of disease, crowded conditions and starvation. The survivors were placed in special settlements where they remained under the close surveillance of the forces of the Soviet Ministry of Internal Affairs until the end of exile in 1957. Those few Čečens and Ingush who were able to escape into the mountains, continued an *abrek*-style resistance to the Soviets by assassinating Red Army and police officers, robbing and burning down the farms of new settlers from Russia and neighbouring republics, engaging in sabotage, etc.

Deprived of the benefits of culture and education, many members of the exiled nations turned to Islam for consolation and guidance. For many, Islam became a badge of honour and a powerful source of identity and resistance to the Communist régime's attempts to erase any distinguishing ethnic and religious characteristics of its subjects. As a result, during the years of exile, the position of traditional religious leaders, which had been undermined by two decades of Communist rule and by competition from secular nationalists, was reinforced. This is especially true of the exiled Čečens and Ingush, among whom the traditional Šüfi *wirds* remained active throughout the exile. Moreover, a new *wird* named after Vis (Uways) Hādjdži, a branch of the Ćim Mirza Hādjdži *silsila*, is said to have come into being during this period. Šüfism survived also among the exiled Ķaračays, many of whom were affiliated with the local branch of the Naķshbandiyya *tarika*. At the same time, there is no evidence to support the oft-repeated claims that, in the 1960s, after the return from Central Asia, from 90% to 95% of the Čečen and Ingush believers were affiliated with a Šüfi *tarika*. Given the fact that this period coincided with Khrushčev's campaign to crack down on "religious superstitions" in all Soviet republics and that leaders of the atheist campaign tended to provide grossly inflated statistics in order to secure additional resources from the Communist Party authorities, such statements have to be treated with extreme caution.

The exile lasted for thirteen years for the Čečens and Ingush and fourteen for the Balkars and Ķaračays. In January 1957, the Twentieth Communist Party Congress, presided over by Nikita Khrushčev, declared the "rehabilitation" of the four deported mountain nations along with the other victims of Stalin's terror, namely, the Kalmuks, the Crimean Tatars and the Volga Germans. The Čečens, Ingush, Ķaračays and Balkars were allowed to return to their native lands and their autonomous republics were re-established by the Soviet government. Upon arrival, many exiles found their lands and houses occupied by the people who were resettled there on Stalin's orders. This created a fertile ground for conflicts over land between the new settlers and the returning indigenous population. Thus in Ingushetia, the lands that had been vacated by the exiled Ingush population were occupied by the settlers from neighbouring North Ossetia. With the weakening of the Soviet state in the late 1980s, the long-standing conflict between these

two ethnic groups escalated into violence and bloodshed to the extent that the Soviet government was forced to send regular army units to the area in order to separate the combatants. In Čečnyā, the majority of new settlers were Russian Cossacks from the neighbouring Stavropol' region (*krai*). The Russo-Čečen military conflicts of 1994-6 and 1999-2002 led to an upsurge of Čečen nationalism and anti-Russian sentiment. As a result, many Cossack families were forced to flee to Russia along with thousands of Russian and Ukrainian families that had resided in Čečnyā's urban centres, especially in Grozny and Gudermes.

p. *Conclusion*

The developments in the Caucasus following the dissolution of the Soviet Union in December 1991 cannot be detailed here, especially since many aspects of local social and political life are still in flux and require a careful analysis. In the absence of precise data and opportunities for on-site research, any general conclusions are at best premature. The old biases and stereotypes of Soviet historiography are now being replaced by new ones. They spring from the proliferation of nationalist mythologies associated with the process of nation-building and forging new religious and national identities. Unfortunately, despite the opening up of the area to Western scholars in the aftermath of the collapse of the Soviet régime, the ongoing warfare and continuing hostage-taking in various parts of the Caucasus, most notably in Čečnyā, Ingushetia, Dāghistān, Karābāgh, Abkhāzia and Ossetia, make research trips to the area extremely dangerous. In many senses, the Caucasus has all the typical characteristics of the so-called "post-Soviet" political, social and economic space, i.e. general political instability, near-disastrous economic conditions resulting from a steep decline in industrial and agricultural output, high unemployment and crime rates, a feeling of nostalgia for the stability and certainties of the late Soviet era, corruption at all levels of the state apparatus, etc.

Since the disintegration of the Soviet Union, the political landscape of the area has been determined by several military conflicts, of which the two Russo-Čečen wars, the war between Abkhāzia and Georgia and the struggle for [Nagorno-]Karābāgh [*q.v.*] between Armenia and Ādharbāyđjān, deserve special mention. In all these cases, religion plays an important role, at least on the rhetorical level, as the parties to the conflict adhere to different religious traditions, i.e. "Christian" Russia versus "Muslim" Čečnyā; "Muslim" Abkhāzia versus "Christian" Georgia; "Christian" Armenia versus "Muslim" Ādharbāyđjān. As the political space in the new ethnic formations is being contested by multiple forces and factions, Islam has come to serve as a powerful source of rhetoric and legitimacy for the participants. Furthermore, different political factions uphold different interpretations of Islam, which further complicates the local discursive landscape.

So far, the most prominent and consequential divide has been between the supporters of "traditional" Islam and the so-called "Wahhābīs". The former emphasise loyalty to the local version of Islamic religion as explained and maintained by mountaineer *ulamā*' and Šūfī elders (*ustādhs*). The "traditionalists" encourage the reverence of local saints, the continuing use of the local customs (*ādāt*), participation in Šūfī rituals and respect for the traditional clan structure. The "Wahhābīs", who style themselves *salafīyyūn* [see SALAFIYYA], claim to follow the teaching of Ibn 'Abd al-Wahhāb [*q.v.*] and its modernised version upheld by Su'ūdī-based scholars. They are particularly active

in Čečnyā and Dāghistān. In 1996-9, in the Buynaksk region of Dāghistān, several local "Wahhābī" groups attempted to create small enclaves of *Sharī'a* rule. Their leaders declared their independence of the official Dāghistānī government at Makhač-kaļ'e [*q.v.*]. In late 1999, they fought against Russian troops, which had been sent to suppress them, alongside the Čečen Wahhābīs led by the field commander, *Amīr* Šhāmīl Basaev. According to the Caucasian "Wahhābīs", their teaching represents the "pure and simple" Islam of the primaevial Muslim community. They demand that their followers and Muslims at large strictly adhere to their version of the "Islamic" dress code (described as "Arab" by its opponents) for men and women, carefully observe the basic Muslim rites and restrictions and participate in *djihad* against the "enemies" of the Muslim community worldwide. The supporters of Caucasian "Wahhābism" reject as *buġ'a* [*q.v.*] many key elements of "traditional" Caucasian Islam, namely, belief in the supernatural and intercessory powers of Šūfī *shaykhs* and *ustādhs*, the practice of *djihad* and the use of the local *ādāt* alongside the *Sharī'a*.

To what extent "Wahhābism" can be seen as a mere foreign import (as argued by its detractors), deliberately introduced into the Caucasus by missionaries and volunteer fighters (*muđjāhidān*) from Su'ūdī Arabia, the Arab states of the Gulf, Afghānistān and Pākistān, and cultivated through an elaborate system of material incentives and sophisticated propaganda, remains unclear. One cannot deny that "Wahhābism" has found a wide following among the Čečen and Ingush youth, as well as some middle-aged men and women, whose lives have been shattered by the brutality of the Russo-Čečen wars. By infusing its followers with a sense of camaraderie and common cause that goes beyond the immediate goals of nationhood and independence, "Wahhābism" serves as a powerful source of identity and mobilisation that renders it especially well suited for the trying times of war. At the same time, by its sweeping rejection of local customs and practices, Caucasian "Wahhābism" inevitably creates a rift between different groups of mountaineers. Often, but not always, this rift is generational in its nature. The fact that "Wahhābism" has been embraced by the younger generation of Čečen military and political leaders (Šhāmīl Basaev, Mowlādī Udugov, Arbi Baraev, etc.) in opposition to the "Šūfī" Islam of the supporters of President Maskhadov may indicate that the former are eager to free themselves from the traditional sources of legitimacy and authority in order to enter into a dialogue with, and perhaps secure assistance from, the Muslim community worldwide.

(A. KNYSH)

**ḲABṬŪRNUH**, BANU 'L-, a family of 5th/11th-century al-Andalus whose Arabic *nasab* was the Banū Sa'īd.

They comprised three brothers who were poets and also secretaries to the Aḡsīd prince of Badajoz, Abū Ḥalṣ 'Umar al-Mutawakkil (464-88/1072-95 [q.v. and AḤḤASIDS]), and then were subsequently in the chancery of the Almoravids. The *laḡab* of al-Ḳabṭūrnuh (according to other sources, al-Ḳabṭūrnah or al-Ḳubṭūrnuh) suggests an Hispanic origin, probably one stemming from the Low Latin \**capiturnus* "having a large head". The first of the three brothers, Abū Muḥammad Ṭalḡa (Ibn al-Abbār, no. 259) is the author of several fragments, of an epicurean and festive type, as well as three fragments elegising his wife, Umm al-Fadl. The second brother, Abū Bakr 'Abd al-'Aziz (Ibn al-Abbār, no. 1743), is the best known of them; he has left behind the most substantial written legacy, including a poem of 14 verses recounting nostalgically the days of his youth at Gordova, plus other poetic and prose fragments, including a short *risāla* in an artificial style (ed. Makkī, in *RIEM*, vii-viii, 186-8). Only a few very rare verses remain from the third brother, Abū 'l-Ḥasan Muḥammad. The family's poetry is often considered as exemplifying the Andalusī poetry of the Taifas period [see MULŪK AL-ṬAWĀ'IF. 2], hedonist in tone and in a brilliant but rather mannered style.

Ibn 'Aḡḡūr, Tunis 1990, 355-69 (both essential); Ibn al-Ḳhaṭīb, *Iḡāṭa*, ed. 'A.A. 'Inān, 4 vols. Cairo 1973, i, 520-3; Makkārī, *Nāḡh al-ṭīb*, ed. 'Abbās, 8 vols. Beirut 1968, i, 634-9; F. Velázquez, *Tres poetas de Badajoz: los Banū l-Qabṭūrnu*, según la "Iḡāṭa" de Ibn al-Jaṭīb, in *Anuario de Estudios Filológicos (Universidad de Extradadura)*, xxi (1998), 441-6. (I. FERRANDO)

**ḲADAMĠĀH** (A. and P.), literally "place of the [imprint of the] foot", a village in Khurāsān, on the highway to Mashhad and some 20 km/12 miles

east of Nishāpūr at the southern edge of the Kūh-i Bīnālūd (lat. 36° 07' N., long. 59° 00' E.). It is locally famed as a *zīyāratgāh* or place of pilgrimage, since the Eighth Imām of the Shī'a, 'Alī al-Riḍā [q.v.], is said to have halted there and left the imprint of his foot on a stone, henceforth to be regarded with reverence; see Bess A. Donaldson, *The wild rue. A study of Muhammadan magic and folklore in Iran*, London 1938, 59, 148-9).

The concept of sacred imprints on rocks, on the roof and walls of caves, etc., is widespread across the Old World, certainly from the Middle East to South and South-East Asia (in the latter regions, with e.g. footprints of the Buddha, as at Adam's Peak, Ceylon). In the Islamic lands, imprints of the Prophet Muhammad's foot are early found all over the Arab lands, and subsequently in Ottoman Turkey, and are especial objects of veneration in Muslim India (as likewise are imprints of holy men in non-Muslim India); see KADAM SHARĪF and also Annemarie Schimmel, *And Muhammad is His Messenger. The veneration of the Prophet in Islamic piety*, Chapel Hill, N.C. 1985, 42-3.

There are in fact numerous similar *kadamgāhs* or shrines of saints and holy men, often but not always 'Alids, apart from the one mentioned above near Nishāpūr, throughout Eastern Persia, Afghānistān and Northwestern India, including a footprint of the caliph 'Alī b. 'Abī Tālib at the (Sunnī) shrine of Mazār-i Sharīf [q.v.] in northern Afghānistān. One should also mention *panḍjagāhs*, "places of the [imprint of the] palm of the hand", impressions of the hands of holy men. Thus in Kābul, to the east of the Bālā Hīṣār above the city, is the shrine of the Panḍja-yi Shāh Mardān ("Lord of Mankind", i.e. the Prophet Muhammad) mentioned by the traveller Charles Masson (*Narrative of various journeys in Balochistan, Afghanistan, and the Panjab*, London 1842, ii, 236, iii, 93; and cf. R.D. McChesney, *Waqf in Central Asia. Four hundred years in the history of a Muslim shrine, 1480-1889*, Princeton 1991, 226).

*Bibliography*: Given in the article.

(C.E. BOSWORTH)

**KĀDĪ-ZĀDE RŪMĪ**, ṢALĀḤ AL-DĪN MŪSĀ b. Muḥammad b. Maḥmūd al-Rūmī, usually referred to as Kāḍī-zāde al-Rūmī or Mūsā Kāḍī-zāde al-Rūmī, lived ca. 760-ca. 835/1359-1432, dates derived from an early work written in 784/1382-3 and from his having outlived Ghīyāth al-Dīn al-Kāshī (d. 832/1429 [q.v.]), noted astronomer/mathematician from Bursa who played a substantial role in the Samarḳand observatory [see MARṢAD] of Ulugh Beg [q.v.] and whose commentaries were used extensively as teaching texts for mathematics and astronomy.

After studying for a time in his native Bursa, where his father Maḥmūd was a prominent judge at the time of Sultan Murād I, Kāḍī-zāde travelled to Persia to pursue an education in the philosophical and mathematical sciences. There he studied with the famous theologian al-Sayyid al-Sharīf al-Djurdjānī [q.v.], probably at the court of Tīmūr in Samarḳand; this was, however, an unhappy experience for both parties with al-Djurdjānī complaining of his student's infatuation with the mathematical sciences while Kāḍī-zāde made it known that his teacher was deficient in those subjects. After Tīmūr's death, Kāḍī-zāde found both a student and patron in Tīmūr's grandson Ulugh Beg, also in Samarḳand. He became the head of the large *madrasa* there and Ulugh Beg himself sometimes attended his lectures. Sometime later, ca. 823/1420, he collaborated with Ghīyāth al-Dīn al-Kāshī under the directorship and patronage of Ulugh Beg to build the famous Samarḳand observatory and undertake its

observational programmes. After al-Kāshī's death in 1429, he no doubt assumed additional responsibilities. By then he was assisted by the talented young 'Alī Kūshdjī [q.v.], who continued the observational programme after Kāḍī-zāde's death. Kūshdjī's daughter would marry Kāḍī-zāde's son Shams al-Dīn; a grandson of this union was the famous Ottoman astronomer/mathematician Mīrim Ālebī (d. 931/1525).

Kāḍī-zāde was not noted for his innovations or creativity, and his works reflect this. He was most famous for his commentaries on al-Djaghmīnī's [q.v.] astronomical compendium *al-Mulakhkhas fi 'l-hay'a* (814/1412) and Shams al-Dīn al-Samarḳandī's [q.v.] geometrical tract *Ashkāl al-ta'sīs* (completed 815/1412); the large number of extant manuscripts of both commentaries indicates their enduring popularity as teaching texts. A work on determining the value of  $\sin 1^\circ$  is heavily dependent on the more mathematically accomplished al-Kāshī. His supercommentary on Athīr al-Dīn al-Abhārī's [q.v.] *Hidāyat al-hikma* seems to be his only philosophical or theological work, though he did intend to write a refutation of parts of al-Djurdjānī's famous commentary on al-Īdījī's *Mawākif*. The common attribution to Kāḍī-zāde of Biblioteca Medicea Laurenziana or. MS 271, a commentary on Naṣīr al-Dīn al-Tūsī's astronomical work *al-Tadhkira*, is incorrect; it is actually by al-Djurdjānī.

**KAFAN** (A.), "shroud".

In the Islamic world, a dying person was often forewarned of imminent death by a dream, or by a dream that an inhabitant of his town had had during the preceding days, to the effect that the Prophet or some other great figure like Abū Bakr, 'Umar or 'Alī, was waiting for him and he should get ready for the meeting. Since death is the natural goal of life, its approach should be managed calmly. When the death agony is imminent, the dying person pronounces the *shahāda* or profession of faith, whilst raising one finger of the right hand to re-affirm for the last time his belief in the unity of God. If he is too weak, someone close to him murmurs in his ear just as his father murmured to him at his birth. The corpse is washed, unless the dying person has washed himself in preparation, and then wrapped in three cloths, white shrouds, or cloths of any other colour except red, fastened very tightly. A professional enshrouder, *kaffān*, takes charge of this process using cloths woven by an *akfānī*. The shroud has often been acquired long before death by the deceased, the sole piece of property which he retains after his death, since it does not figure in what he leaves behind as inheritance. Only the corpse of a martyr killed in the way of *djihād* is not washed, but buried where he has fallen and in his bloodstained garments.

For great persons, the number of shrouds and their

value could increase considerably. At his death, the Fātimid vizier Ibn Killis [q.v.] was buried, at the expense of the caliph al-'Azīz, in fifty perfumed shrouds and cloths of various fibres, with a total value of 10,000 dīnārs (see al-Maḳrīzī, *Ittī'āz al-hunafā'*, ed. Dj. Shayyāl, Cairo 1387/1967, i, 268-9; see also the store of Fātimid shrouds mentioned by al-Musabbihī, *Akḥbār Miṣr*, ed. A.F. Sayyid and Th. Bianquis, Cairo 1978, 107). The fibres used in spinning these costly shrouds, and also the inscriptions on them—a politico-religious content in Fātimid Egypt, and often poetical, on the theme of the inevitability of death, in Būyid 'Irāk—have been studied by both archaeologists and museum specialists (R. Gayraud, *al-Qarāfa al-kubrā, dernière demeure des Fātimides*, in M. Barrucand (ed.), *L'Égypte, son art et son histoire*, Paris 1999, 443-64; bibl. and characteristic texts in E. Garcin, *Le textile dans l'Islam médiéval, productions bŷyides et fātimides*, diss. DEA, Lumière-Lyon 2 1999, unpubl., 59-60).

The corpse was borne, on the same day, but rarely at night, on a simple bier, *nā'sh* (*wa-humila nā'shuhu 'alā aydīn*), al-Musabbihī, *op. cit.*, 108) by men who would sometimes run: "If I am good, bear me speedily to God, and if I am bad, get rid of me quickly." A prayer was pronounced over the corpse near a mosque. Everyone would stand as the corpse passed by, even for the corpses of Jews and Christians (it was usual to be present at the funerals of important members of the other religious communities), out of respect for the angels accompanying it. It was even more meritorious to bear a corner of the bier. Sometimes the dead person was borne along without a bier, like a package wrapped in a white shroud, or conversely, the corpse could be carried in an open wooden coffin (*ṣandūk, tābūt*, also meaning cenotaph). The chroniclers mention this fact as a sign of respect felt for someone of a distinguished social group.

The corpse, wrapped in the shroud, is lowered into a tomb dug out for this purpose (see the detailed description of the types of Muslim tombs in Y. Raghib, *Structure de la tombe d'après le droit musulman*, in *Arabica*, xxxix [1992], 395-403). The shroud is then loosened so that the dead person can be at his ease, and the face is turned towards Mecca (archaeologists have found skeletons with *post mortem* fractures of the cervical vertebrae). Three handfuls of earth are thrown over the corpse, whilst pronouncing the words "We created you with this [earth], We give him back to it, and We will resurrect him anew" (cf. the myths of ancient Mesopotamia and Qur'ān, XXII, 5, XXX, 19, etc.). The cavity is filled with earth and pebbles, with an orifice left for the deceased to get water. From this point onwards, and until the palms planted on the tomb become dried up, the deceased is given over to interrogation by the angels of death preparatory to the Last Judgement [see 'ADHĀB AL-KABR].

Gray, *Persian painting*, Geneva 1961, 32. See also DJANĀZA, KABR, MAḲBARA, MAWT, and their *Bibls.* (TH. BIANQUIS)

**KAFES** (A., T.) "cage", the popular term in Ottoman Turkish usage for the area of the harem

of the Topkapı palace in which Ottoman princes of the blood (*shēh-zādele*) were confined from the early 17th century onwards.

In a more abstract sense, historians apply the same term to the system whereby the rights of claimants to the Ottoman throne were determined, as opposed to the "law of fratricide" which it was gradually superseding during this period. In the sources, the term is of late usage only (d'Ohsson uses the word in the plural; *Tableau de l'Empire ottoman*, vii, 101; 'Aṣīm, *Tārīkh*, Istanbul n.d., ii, 32). Earlier and more widely attested, however, is the appellation *Shimshūrlik* (or *Çimshūrlik* "the box shrub") or *Shimshūrlik odası* ("the boxwood chamber"), a reference to the little courtyard planted with box, at the north-east corner of the courtyard of the Wālide Sultān (Sīlahdār, *Tārīkh*, Istanbul 1928, ii, 297; Uzunçarşılı, *Saray*, 91; Rāshīd, *Tārīkh*, Istanbul 1282/1865-6, ii, 2-3; Necipoğlu, *Topkapı Palace*, figs. 94, 168, 178). It consisted of a set of pavilions (twelve, according to d'Ohsson, who presents each as "comprising several rooms and surrounded by a high wall"), surmounted by cupolas, fitted with chimneys and windows which, for the preservation of sexual segregation, did not overlook the harem. Some were decorated with the mural tiles typical of the 17th century and with marble niches (Necipoğlu, 178). Similar arrangements existed in the palace of Edirne: the princes were transferred thither when the Sultan made it his residence.

Adult *shēh-zādele* began living in the interior (*enderūn* [q.v.]) of Topkapı from the time, in the second half of the 16th century, when the practice of entrusting them with provincial governorships in Anatolia was partially and then totally abandoned. This then became the exclusive prerogative of the son of the reigning sovereign. On the other hand, on the accession of Ahmed I, while still a minor (1603), the leading dignitaries of the state allowed his younger brother Muṣṭafā to live installed in a niche within the palace. Furthermore, on the death of the same ruler (1617), they preferred this brother to succeed him rather than his eldest son 'Oṯmān, who was still very young (Pecewī, *Tārīkh*, Istanbul 1283/1866-7, ii, 360-1; Kātib Çelebi, *Fedhlike*, Istanbul 1281/1864-5, i, 385). Having thus emerged from his confinement, Muṣṭafā I was deposed after an initial reign of three months, on account of mental disorders; he "returned to his former apartments" (Na'īmā, *Tārīkh*, Istanbul 1281/1864-5, ii, 163). He was brought out once again to be restored to the throne after the insurrection which resulted in the assassination of his nephew 'Oṯmān II (May 1622). No more successful than the first, this second reign lasted only sixteen months and Muṣṭafā returned to his prison, where he died in 1639.

These events were the harbingers of important changes: henceforward, despite continuing attacks mounted by 'Oṯmān II and Murād IV against their respective brothers—outdated practices denounced by public opinion—the brothers of reigning sovereigns were allowed to live, but were politically neutralised by rigorous seclusion in the most secure and secret area of the Palace. In parallel, despite the inclination of numerous sultans to promote one of their sons to the succession, the principle of seniority, made possible by the survival of the sultan's brothers, led, by gradual stages, to the establishment of a successorial system in the Ottoman dynasty: in the early 18th century, the chronicler Rāshīd presents the eldest of the brothers of Mehmed IV, Süleymān II, who succeeded the deposed sultan in 1687, as "the august person who in his turn took charge of the sultanate

(*nöbet-i salṭanat*), according to the order of birth" (*tertib-i sinn-i wilâdet üzere*, Râşhid, ii, 3). Silâhdâr confirms that seniority had become the rule when, on the occasion of the replacement of Muṣṭafâ II, deposed in 1703, Aḥmed III, son of Meḥemmed IV, was preferred by the arbiters of the situation, on account of the "order of succession" (*tertib-i nöbet*), as well as the qualities of the candidate, over the prince İbrâhîm, a son of Aḥmed II who, furthermore, was still a minor (*Nüşret-nâme*, ed. İ. Parmaksızođlu, Istanbul 1962, ii, 177).

Another consequence of the establishment of the *kaşes* was to promote, by constituting a reserve of legitimate candidates to the throne, the notion that the solution to political crises was not to be found only in the sacrifice of a number of senior dignitaries, serving as a "safety-fuse" for the reigning sultan; there was also the option of a change of sultan, a new accession (*đđülüs*): the sovereign himself became a safety-fuse to the benefit of the superior entity constituted by the dynasty, his throne, like other positions of eminence in the empire, being nothing more than "an ejectable seat".

This was indeed an eccentric preparation for an eventual reign: total seclusion which could last several decades (see in Alderson, 36, the table of periods spent in the *kaşes*, before their accession and after their eventual dethronement, by the twenty-three sultans concerned, from Muṣṭafâ I to 'Abd ül-Međjîd II). However, a distinction should be drawn, following the lead of d'Ohsson, between two categories of *şeh-zâdeler*: on the one hand, the sons of the reigning sultan who, while stringently kept apart from any political activity (and barred from procreation), were not altogether excluded from public life: on the contrary they participated in festivals which, when the case arose, were dedicated to them (circumcisions, the beginnings of education, etc.; cf. S. Faroqi, *Crisis and change*, in H. Inalcik and D. Quataert (eds.), *An economic and social history of the Ottoman Empire*, Cambridge 1994, 613-14), or in official functions (Aḥmed III received the French ambassador, Andrezel, surrounded by his four sons; illustration by J.-B. Van Mour, reproduced in A. Boppe, *Les peintres du Bosphore au XVIII<sup>e</sup> siècle*, Paris 1989, 29); and on the other hand, the other princes of the blood. To the latter alone the régime of the *kaşes* was applied in full rigour. Furthermore, as soon as their father ceased to reign, the princes of the first category were relegated to the second: thus on leaving the prison where he had just spent 39 years, to ascend the throne in place of his deposed brother Meḥemmed IV, Süleymân II issued a *khâtt-i humâyûn* ordering the transfer to the same place of his displaced brother, the latter's two sons Muṣṭafâ and Aḥmed, as well as his own younger brother Aḥmed (the future Aḥmed II) who had previously shared his prison (Silâhdâr, *Târikkh*, ii, 298). Reduced to the company of their pages, their eunuchs and concubines who were not permitted to give birth, to male children in any case (on *Akhîretlik Khânîm*, fathered by 'Abd ül-Hâmid I in the *kaşes*, see Uzunçarşılı, 115), these princes were strictly cut off from the exterior, deprived of any experience of the world and of any useful education, neglected and despised (on succeeding his brother, Süleymân II appeared wearing an old *anterî* robe and shod in heavy cavalry boots; Silâhdâr, *Târikkh*, ii, 298). Some coped with their boredom by practising various manual occupations (Ohsson, vii, 102). Added to these inconveniences was the fearful threat which the suspicions of the reigning sultan constantly posed to the lives of his potential rivals. The anxiety which could be thus

aroused among the latter is well illustrated by the attitudes of İbrâhîm or of Süleymân II when invited to take the throne; both were convinced that this was a trick on the part of their respective brothers, Murâd IV and Meḥemmed IV, to have them executed, and they stubbornly refused to leave their prison (Na'îmâ, *Târikkh*, iii, 450-2; Silâhdâr, *Târikkh*, ii, 198). It may be noted to what an extent the shadow of fratricide, although in fact no longer practised, continued to hang over the dynasty (as late as 1730, on leaving the throne, Aḥmed III entrusted to his nephew and successor Maḥmûd I, as "a trustee of God" the protection of his children (Ferâ'ıđjizâde, *Gülşen-i mâ'arif*, Istanbul 1252/1836-7, ii, 1251; 'Abdî, *1730 Patrona Halîl hakkından bir eser. Abdî Tarihi*, ed. F.R. Unat, Ankara 1943, 42). The vigilance of the Janissaries, anxious to maintain the freedom of manoeuvre guaranteed to them by a plethora of possible sultans, was the best safeguard of the sequestered princes: in 1632, rebellious Janissaries compelled Murâd IV to show them that his brothers were still alive (Uzunçarşılı, 227-8). According to Bobovius, adapted by Girardin, 30-1, "*la milice est toujours leur tutrice*".

Chroniclers have often stressed the negative effects of the system on the competence and mental health of the sovereigns produced by it (blaming it in particular for some of the psychological disorders associated with Muṣṭafâ I or with İbrâhîm), but this "black legend" is doubtless to be treated with caution: the stringency of confinement certainly varied according to reigns and circumstances: only Muṣṭafâ I, after his first deposition, or İbrâhîm after his dethronement, are presented as being immured alive, "already interred" (Na'îmâ, ii, 218, iii, 330). In other cases, the links of princes with their reigning parent, between themselves and even with the outside world were not entirely severed: "Sultan Soliman, brother of the current emperor, has acquired universal esteem throughout the empire... and his renown has induced all ranks of the militia to declare themselves his protectors," Bobovius noted (122-3), with regard to the future Süleymân, disparaged as he was in other respects. Worth noting, on the other hand, is the energy displayed by Aḥmed II when, on emerging from 43 years of the *kaşes* he inaugurated his brief reign (1691-5) (Silâhdâr, ii, 576-80). More generally, in the course of time a progressive humanisation of the *kaşes* is observable, associated no doubt with the individual personality of certain sultans, but especially with the stabilisation of the new successorial system; during his 39 years on the throne, Meḥemmed IV (1648-87) made no further attempts to harm his two brothers, even going sometimes to speak with them (Uzunçarşılı, 96; Bobovius evokes "a fairly comfortable prison"). Several decades later, Aḥmed III showed himself respectful and amicable towards his brother Muṣṭafâ II (1695-1703) whose place he took, not that this prevented the latter dying 140 days later in the *kaşes*, "of nostalgia for the crown and for the throne" (Defterdâr Şarî Mehmed Pasha, *Şühde-i vekâyi'ât*, ed. Özcan, Ankara 1995, 815, 835). When in 1730 it was the turn of Aḥmed III to be overthrown, the transfer of power between him and his nephew Maḥmûd I took place very smoothly: he kissed him on the forehead, while the other kissed his hand (Ferâ'ıđjizâde, 1251). But it was not until the end of the 18th century that the régime was definitively relaxed: on the death of his father Muṣṭafâ III in 1774, the future Selîm III was granted a considerable degree of freedom by his uncle 'Abd ül-Hâmid I, enabling him in particular to correspond with Louis XVI (Uzunçarşılı,

*Selim III'ün Veliht'iken Fransa Kralı Lâi XVI ile muhaberetleri*, in *Belleter*, ii [1938], 191-246; S. Münir, *Louis XVI et le sultan Selim III*, in *Revue d'Histoire diplomatique*, xxvi [1912], 516-48). Similarly, 'Abd ül-Medjîd (1839-61) was to allow a free hand to his brother 'Abd ül-'Azîz (he fathered a son before becoming sultan, Yûsuf 'Izz ül-Dîn, born in 1857) and having ascended the throne (1861-76) the latter showed the same latitude towards his nephews, having two of them accompany him on his journey to Paris and London in 1867 (Alderson 34-5).

(G. VEINSTEIN)

**AL-KAFF** (A.), verbal noun of the verb *kaffa* in the sense of "to abstain, desist [from s.th.]" and "to repel [s.o. from s.th.]" (see *WbKAS*, i, *Letter Kaf*, 236-9), in a religio-political context refers to the quiescent attitude of some *Kh*ârîdjîte [*q.v.*] groups in early Islam, called *ka'ada* "those who sit down", i.e. stay at home, in abstaining from overt rebellion and warfare against the ruling authority. See further *ku'ûd*.

(Ed.)

**KĀHĪ** (late 9th century-988/late 15th century-1580), the *takhalluṣ* [*q.v.*] or pen-name of an Indo-Muslim poet, Nađjm al-Dîn Abu'l-Kāsim Muḥammad, who wrote at the courts of the Mughal emperors Humāyūn and Akbar [*q.v.*].

According to most writers he was born in Transoxania at Miyan-kāl, a district situated between Samarkand and Bukhārā, but stayed a long time in Kābul, whence he is also known as Kābulī. When fifteen years old he is said to have visited Djamī (d. 898/1492 [*q.v.*]) at Harāt, and spent some seven years in the poet's company. Subsequently he went to India on two separate occasions, once in ca. 936/1530 and then in 961/1554. In his first visit he travelled to Bhakkar in Sind to meet the Sūfī mystic Shāh Djahāngir Hāshimī (d. 946/1539-40) of Kirmān, author of the Persian *mathnawī* *Mazhar al-āthār*, and lived in Guđjarāt writing for Bahādur Khān and Muḥammad Khān, who ruled that state from 932-43/1525-36 and 943-61/1536-53 respectively. In ca. 956/1549 he returned to Kābul and entered the service of prince Akbar. It was as a member of Akbar's entourage that he made his second visit to India, spending the remaining years of his life in that country. His patrons this time included, in addition to Humāyūn and Akbar, the noblemen of Banāras and Djawnpūr, Khān Zamān and his brother Bahādur Khān, who were both slain in their abortive revolt against Akbar in 975/1567. From 969/1561-2 onward he lived in Āgra, where he died in 988/1580 at an advanced age of 110 or 120 years.

Kāhī was an important figure of Akbar's reign, noted for his poetry as well as other attainments. Besides writing *kaṣīdas* and *ghazals*, he displayed special skill in composing chronograms and riddles. He is also said to have written a *mathnawī* on the model of Sa'dī's *Būstān* entitled *Gul-afshān*. His other accomplishments included the study of Qur'anic exegesis, scholastic theology, music, astronomy and mysticism.

**KAHTĀNITE**, QAHTANITE, a name which has been proposed for designating the ensemble of graffiti found in pre-Islamic South Arabia but whose use has not yet become generalised.

The numerous written documents found in Arabia and dated from pre-Islamic times, may be classed under three headings: (1) monumental inscriptions on stone or other durable materials, meant to be exposed and using varieties of the Arabian alphabet (South Arabian, Dedanite, Lihyānite and Hasaeen) or foreign scripts (Aramaic, Greek, Latin and Ge'ez); (2) private documents (correspondence, contracts, lists or writing exercises), written in cursive South Arabian script on wooden sticks or palm stalks, all of these having been found in Yemen; and (3) very numerous graffiti written on rocks in various forms of the Arabian alphabet.

The monumental inscriptions and the documents in cursive South Arabian script can be divided into several groups, to be defined by ranging over provenance, dating and the political, linguistic, religious and tribal information given in the text. For designating these ensembles, Western scholars have devised names derived from the political groupings where these writings have originated, or failing that, from the region where they have been found. Thus in South Arabia, there have been accordingly classified the Sabaic inscriptions (from the kingdom of Saba' [*q.v.*]; the Madhābic (from the region of the Wādī Madhāb), previously called Minaean [see MA'IN]; Katabānic (from the kingdom of Katabān [*q.v.*]; and Ḥadramitic (from the kingdom of Ḥadramawt [*q.v.*]). In the oasis of al-'Ulā (ancient Dedan) and of Madā'in Šālih (ancient Hegra/al-Hidjr [*q.v.*]) are recognised two successive ensembles, called Dadanitic (after the ancient name of the oasis) and Lihyānite (after the ancient tribe [see LIHYĀN]), which Michael Macdonald has recently suggested should be grouped under the single term Dadanitic (Macdonald, 2000, 29). Finally, on the Arabian shores of the Perso-Arabian Gulf, a group of some 50 texts has been called Hasaitic, after the name of the region al-Ḥasā' [*q.v.*] or al-Aḥsā'.

It is more difficult to classify the graffiti, which number tens of thousands, because their content, often poor and uninformative, gives hardly any indications of their language or tribe or cults. Contributing to

this difficulty is the fact that very few of them have been rigorously studied. Their typology is based mainly on adducing as evidence the various types of the Arabic alphabet and, additionally, on examining the distinct and homogeneous zones of their distribution.

It is further not very easy to give a name to the various groups of graffiti at present recognised, since the identity of their authors is unknown. At an early stage, specialists isolated two groups, called Šafaitic [q.v.] (from the Djabal al-Safā to the southeast of Damascus) and Thamudic [q.v.], making a connection with the ancient tribe of Thamūd [q.v.]. But it soon became apparent that the Thamudic ensemble, in which were grouped all the non-classified graffiti, was a vast hold-all term for an extremely heterogeneous group. A first tentative step to devise a new order for them was made by F.V. Winnett, who adduced five sub-groups, each defined by a variety of the Arabian alphabet and called by letter of the Latin alphabet, A, B, C, D and E. Later researches by this same author, continued by those of M. Macdonald and G. King (Macdonald-King, 2000), have shown that two of these sub-groups belong to particular regions, Ḥismā' (southern Jordan and northern Ḥidjāz) and the district of the Taymā' oasis, whence the names Ḥismaic (former Thamudic A) and Taymanitic (former Thamudic E) have been proposed.

There remains to classify the numerous other Thamudic graffiti, notably those found in the region between the Ḥidjāz and Yemen, these being especially numerous in the regions of Naḡrān [q.v.] and Karyat al-Fāw [see FĀ'W] (the latter 280 km/165 miles to the northeast of Naḡrān (Jamme, 1973). For these, the terms "Southern Thamudic" (see Macdonald-King, 2000, 44) or "Kaḥṭānite" (Robin, 1978, 106-7) have been proposed, but these terms remain provisional whilst a typology of the whole ensemble remains to be sketched out. The task is difficult because a number of these graffiti recall the proximity and prestige of the South Arabian states by mixing together, in varying proportions, the regular South Arabian script letters and those reflecting local graphic forms.

This name "Kaḥṭānite" stems from Kaḥṭān, the ancient eponym of the South Arabs, according to the purveyors of traditions on the beginnings of Islam (see especially, Ibn al-Kalbī's *Djamharat al-nasab*). The name of this eponym probably comes from a tribe established at Karyat al-Fāw (the ancient Karyat<sup>um</sup> dhāt Kahl<sup>um</sup>, sc. "the Karyā of Kahl", Kahl being the name of a god of the oasis). Two inscriptions mention this tribe. The first, found at al-Fāw, is the tombstone of "Mu'āwiyat, son of Rabī'at, of the line of M. . . , [the Ka]ḥṭānite, king of Kaḥṭān and of Madhḥiḡ"; from the style of writing, this would date from the 1st century A.D. (Ansāri-Qaryat al-Fāw 2/1-2). The second inscription, stemming from the temple of Awwām at Ma'rib in Yemen, has a dedication to the Sabaeen god Almaḡāh in which the writer evokes an expedition against "Rabī'at of the line of Thawr<sup>um</sup> king of Kiddat [= Kinda] and of Kaḥṭān", in the reign of the Sabaeen king Šhā'r<sup>um</sup> Awtar, ca. 220-5 (Ja 635/26-7). Ptolemy probably mentions the same tribe in the 2nd century A.D. in the form *Katavtāt* (VI, 7, 20 and 23).

The reason why Kaḥṭān, the pre-Islamic tribe at Karyat al-Fāw, associated in the first place with Madhḥiḡ [q.v.] and then dominated by Kinda [q.v.], has been chosen as an eponym for the South Arabs has not yet been solved. It is likely that we have here a tradition of Kindī origin, which would have been imposed when the tribe of Kinda had a dominant

position in Central Arabia, in the 5th and 6th centuries A.D. This hypothesis underlines once more that Kinda is the source of the greater part of Arab traditions bearing the verifiable historical information on pre-Islamic South Arabia.

**KĀ'IMĪ**, ḤASAN BABA (d. 1102/1691), Bosnian Muslim poet of the 11th/17th century.

After the Ottoman conquest of the 9th/15th century, Slavs converted to Islam began to write in the Islamic languages of Turkish, Persian and Arabic, whilst some authors continued to write in Slavonic but in Arabic characters (*alhamiādo*).

Ḥasan Baba, with the *makhlas* of Kā'imī, was the most celebrated poet of his time in Bosnia and the Balkans in general. Little is known of his life, but he seems to have been in easy circumstances and to have lived most of his life in Sarajevo [q.v.], where he was born by 1039/1630. He was apparently an adherent of the Kādiriyya *ṭarīqa*, and *sheykh* of the *tekk*e of Sinān Aḡha in Sarajevo, and he dedicated poems to the founder, 'Abd al-Kādir al-Djilānī. He seems to have left Sarajevo towards the end of his life, perhaps driven out of the Sarajevo rebellion of 1093/1682 and to have lived in Zvornik, where he died and where he has his *tūrbe*.

He is the author of two *Diwāns* in Turkish, the first one of mystical poetry and the second, smaller one of *kašidas* only called *Wāridāt* ("incomings, gains"), the whole comprising several thousand verses, extant in a hundred mss., mostly copied in the 19th century. In the *Wāridāt*, he touched upon political events, such as the long campaign by the Ottomans for the conquest of Crete from the Venetians, a war which also affected Dalmatia and its coastal towns. In the first *kašida* of this *Diwān*, comprising 174 *beyts*, he correctly foretold the date of the end of the war (1079/1669), giving him great celebrity; and much of the enthusiasm for copying Kā'imī's works arose after 1878 when the Austrians extended their protectorate over Bosnia and Hercegovina, since the poet had alluded to universal conquests by the Turks and the universal triumph of Islam. Modern Bosnian scholars, on the other hand, have claimed him as a Bosnian patriot (although the concept of "patriotism" did not exist in his time) or even as a proto-Marxist; at most, one can note his evident love for Bosnia and, especially, for Sarajevo.

Kā'imī also wrote *alhamiādo* poetry, including an

“ode against tobacco”, written when Murād IV banned the use of tobacco [see TUTUN] in the Ottoman empire, and a second, shorter ode on the Cretan War, in addition to the one in Turkish.

**KĀ'IN**, conventionally Qayen, etc., a town of eastern Persia (lat. 33° 43' N., long. 59° 06' E.), now in the administrative province of Khurāsān but in mediaeval Islamic times falling within the region known as Kūhīstān [*q.v.*]. It lies on the road connecting the urban centres of northern Khurāsān (Mashhad, Turbat-i Ḥaydariyya, etc.) with Birdjand, Persian Sīstān and Zāhidān.

Kā'in must be an ancient town, but virtually nothing is known of it before the descriptions of the 4th/10th century geographers. The 8th century Armenian geography attributes its foundation to Lōhrāsp, son of Wishtāsp, of Iranian legendary history (Markwart-Messina, *A catalogue of the provincial capitals of Erānshahr*, Rome 1931, 12, 53). In the 4th/10th century it appears as the administrative centre of Kūhīstān, with a citadel, also containing the *dār al-imāra* and congregational mosque, surrounded by a trench and rampart, and an outer wall with three gates. The water supply came mainly from *kanāts*. Al-Muqaddasī considered it a place of few amenities and harsh living conditions, but one which flourished as an emporium (*furda*) for the trade of Khurāsān passing southwards to the Gulf of Oman and the Arabian Sea shores (Ibn Ḥawqal, 446, tr. Kramers and Wiet, 431; al-Muqaddasī, 321; *Ḥudūd al-'ālam*, tr. Minorsky, 103). Nāṣir-i Khusraw passed through it in 444/1052 and found it a large, fortified town; he marvelled at the great arch (*tāk*) of its mosque (*Safar-nāma*, ed. M. Dabir-Siyāki, Tehran 1335/1956, 127, tr. W.M. Thackston, New York 1986, 102). In the ensuing Saljūq period, Kā'in and fortresses in its surrounding district became known as haunts of the Ismā'īlīs; an Ismā'īlī presence, including within the town of Kā'in, has persisted until today (see F. Daftary, *The Ismā'īlīs, their history and doctrine*, Cambridge 1990, 341, 387, 543; C.E. Bosworth, *The Ismā'īlīs of Qūhīstān and the Malīks of Nīmrūz or Sīstān*, in Daftary (ed.), *Mediaeval Ismaili history and thought*, Cambridge 1996, 221-9; and KŪHĪSTĀN).

It has often been assumed that the name of the Persian principality *Tunocāin* mentioned by Marco Polo is a conflation of Kā'in and the town of Tūn [*q.v.*] some 18 farsakh north-north-west of it (see Yule-Cordier, *The Book of Ser Marco Polo*, London 1903, i, 83, 86, 127-8); certainly, Bābur, two centuries later, continued to link the towns thus (*Bābur-nāma*, tr. Beveridge, 296, 301). Two generations or so after the time of Marco Polo, the town was still large and flourishing, on the evidence of Ḥamd Allāh Muṣṭawfī; he mentions how most houses had cellars from which they could tap into the adjacent subterranean *kanāts* and how the men all carried arms and were ready to use them (*Nuzhat al-kulūb*, 145-6, tr. 144).

The subsequent history of Kā'in is substantially that of the local emirate, whose capital it was until this last was moved to the larger and more important town of Birdjand in the 19th century, of the Khuzayma family, which traced its origins back to early Islamic Arab governors of Khurāsān. It fully emerges into history in Nādir Shāh Afshār's time, when the monarch bestowed the governorship of the Kā'ināt, the region around Kā'in, on Amīr Ismā'īl Khān Khuzayma. In the chaotic conditions after Nādir's assassination, Amīr 'Alam Khān (d. 1753) briefly expanded his power

beyond its traditional boundaries of Kā'ināt and Sīstān as far as Mashhad and Harāt in the north and Persian Balūčīstān in the south (1748-53). In the Kādjār period, the family continued as guardians of the eastern frontier of Persia against Afghān and Balūč marauders. Curzon described Amīr Hishmat al-Mulk 'Alam Khān III (d. 1891) as “probably the most powerful subject of the Persian crown” (*Persia and the Persian question*, i, 200), and C.E. Yate, who was at Kā'in in 1894, met his second son Shawkat al-Mulk Muḥammad Ismā'īl Khān, who became Amīr of Kā'ināt (*Khurasan and Sistan*, Edinburgh and London 1900, 66 ff., 76-7). The Khuzayma family adopted the family name of 'Alam when Ridā Shāh Pahlavī introduced this requirement in the 1930s, and Asad Allāh 'Alam (d. 1978) had a distinguished career under the last Shāh, Muḥammad Ridā, beginning with his appointment as the youthful governor of Sīstān and Balūčīstān in 1945 and ending as Minister of the Imperial Court in 1966-77; his memoirs, published in English as Assadollah Alam, *The Shah and I*, London 1991, are a prime source for the later years of the Shāh's reign. See for the history of the family and its role in the political and military history of Persia's eastern frontiers, Pirouz Moujtahed-Zadeh, *The Amirs of the borderlands and Eastern Iranian borders*, London 1995.

The region of Kā'ināt of recent times corresponded largely to the ancient Kūhīstān, but was in the 1973 administrative reorganisation subdivided into two *shah-rastāns*, that of Kā'in or Kā'ināt and that of Birdjand [*q.v.*]. This was modified in the 1980s under the Islamic Republic, when three *shah-rastāns* were formed: Kā'ināt; Birdjand to its south; and Nihbandān in the further south, adjoining Sīstān and Kirmān. Thus the town of Kā'in is at present the chief-lieu of its *shah-rastān* (which contains a single *bakhsh*, the *Bakhsh-i Markazī*, and eight *dihistāns*). The population of Kā'in itself was in 1986 15,955, and that of the whole *shah-rastān* 122,149 (Moujtahed-Zadeh, 50-5; this information on administrative arrangements replaces that given in the arts. BIRDJAND, in Vol. I, 1233b, and KŪHĪSTĀN, in Vol. V, 355b).

**KĀKAR**, a Gharghushṭ Pashṭūn tribe concentrated in southeastern Afghānistān and Pākīstānī Balūčīstān. Though not prominent among Afghān [*q.v.*] groups migrating to India during the early Dīhlī Sultanate [*q.v.*], Kākars are noticeable among military and political élites during the Lōdī, Sūrī and early Mughal [*q.v.*] periods. Haybat Khān Kākār, patron and collector of materials for Ni'mat Allāh's *Makhzān-i Afghānī*, demonstrates Kākār participation in Mughal literary production.

Kākāristān designates territory on and between the Tūba and Sulaymān mountain ranges, including the microregions of Būrī, Pīshīn, Sībī [*q.v.*] and Zhūb/Zhōb [*q.v.*]. Within this area Kākars incorporated non-Pashṭūn minority groups such as Gadūn and Watensī speakers in *hamsāya* dependency relationships, and there is a lack of consensus about whether other local Pashṭūn groups, including the Panrī and Nagher, are Kākars. Surrounding Ačakzay, Ghazay [*q.v.*], Tarīn and Wazīr Pashṭūns and various Balūč [*q.v.*] communities form the social boundaries of Kākār territory, which is economically linked to the greater Indo-Islamic world through the markets of Kandahār, Kwāfa, and the Dērādjāt [*q.v.*].

(SHAH MAHMOUD HANIFI)

**KALANSUWA**, *Ḳalansīya* (A), the name for a cap worn by men either under the turban proper or alone on the head.

The word, from which verbal forms are derived as denominative verbs, is apparently of foreign origin; while it used to be commonly connected with the Latin *calautica* (for which, however, the form *calantica* is difficult to quote and besides, it means a head-cloth for women), Fraenkel wished to derive it through the Aramaic *ḳ.w.l.s* (cf. Arabic *kālīs*, *kālis*, Dozy, *Supplément*, ii, 395) from *κῶνος* (*conus*). The Arab grammarians and lexicographers found in the manifold formation of the broken plural and the diminutive a reason for using *kalansuwa* as a paradigm for substantives of more than three radicals with such peculiarities.

Caps of different shapes were called *kalansuwa*; varieties of the *kalansuwa* are *ḡurtūr*, *burnus*, *uṣūṣa*, etc. While it is related of the Companions of the Prophet that they wore tight-fitting *kalansuwas*, later, a long peaked sugar-cone shape, supported within by pieces of wood, became fashionable, for which the name *ṭawīla* was usual. It seems to have come from Persia (cf. the head-dresses in the Dura-Šāliḥīya 1st century A.D. paintings, in J.H. Breasted, *Oriental forerunners of Byzantine paintings*, Chicago 1924) for it was regarded by the pre-Islamic Arabs as a noteworthy feature of Persian dress (G. Jacob, *Allarabisches Beduinenleben*, Hildesheim 1967, 237) and is said to have been first adopted in the reign of the first Umayyad by 'Abbād b. Ziyād from the inhabitants of the town of Qandahār, conquered by him (Yāqūt, ed. Wüstenfeld, iv, 184). High, black *kalansuwas* were worn by the 'Abbāsīd caliphs from al-Manṣūr to al-Musta'īn and by their viziers and *kādīs*. The latter adhered longest to the *kalansuwa*, so that in the course of the 3rd/9th century—this headgear being also popularly known as *dannīyya*, pot-hat, or *ṭawīla*—it became their regular official headgear, together with the neck-veil or *taylasān* [q.v.] and at times was strictly forbidden to other classes of the community (al-Kindī, *K. al-Kudāt*, ed. R. Guest, 460, 586). On the other hand, criminals had a *kalansuwa* put on their heads when they were led through the streets. The *kalansuwa* was also worn among the Umayyads in Spain, where *mukallas* meant a *muffī* wearing the *kālīs*. A headdress introduced by Tīmūr into his army was also known as *kalansuwa*.

The name *kalansuwa* appears several times in Ibn Baṭṭūṭa, according to whom (ii, 378, tr. Gibb, ii, 481) the Kīpčaks, for example, called their *kalansuwas* by the Persian name *kuṭāh*. Concerning the *futuwwa* [q.v.] societies in Anatolia (*akḥīyyat al-fīṭyān*), he says (ii, 264, tr. Gibb, ii, 421) that their members wore several *kalansuwas* above one another, a silk one on the head, above it a white woollen one, to the top of which was tied a strip of cloth two fingers broad and one

ell long: at meetings, only the woollen *kalansuwa* was taken off, the silk one remaining on the head. A similar pendant strip of cloth is also part of the dress of the Coptic priests of modern Egypt and is there called *ḳallūsa* or *ḳalasuwa*; here the name appears to have been transferred from the cap itself to its most striking and therefore better known part.

At periods when, as in the 2nd/8th century, both Muslims and Christians wore *kalansuwas*, the latter had to tie two knots of another colour to it (al-Ṭabarī, iii, 1389); but when the *kalansuwa* went out of fashion with the Muslims in the 3rd/9th century, it remained the mark of the Christians. The word is therefore frequently found in Arab authors meaning the headdress worn by Christian monks and hermits, Greek priests and even the Pope himself. Through the Crusades, the high cap with the veil seems to have found its way to Western Europe as a woman's dress.

The name *kalansuwa* was also given to other objects of similar shape: *ḳ. nuḥās* is the metal cap of the obelisk near Heliopolis ('Ayn Ṣhams [q.v.]); *ḳ. turāb* in modern Arabic is used for a chemical sublimating vessel; *ḳ. bukrāt* is used by surgeons for a particular kind of head bandage; and *kālīs* (*kūlis*) is the name of a plant, which seemed to represent a human head with a high cap. *Kalansuwa* was also the name of a fortress near al-Ramla in Palestine, see G. Le Strange, *Palestine under the Moslems*, London 1890, 476.

**KALIKAT**, locally *Kōḷīkōḍu* (interpreted in Malayalam as "cock fortress", see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, London 1903, 148), conventionally CALICUT and, in modern Indian parlance, KOZHIKODE, a town of the Western Deccan or Peninsular Indian coastland (lat. 11° 15' N., long. 75° 45' E.) in what was known in pre-modern times, and is still known, as the Malabar coast [see MA'BAR]. In British Indian times it was the centre of a sub-district (*tālūk*) of the same name in the Malabar District of the Madras Presidency, later Province; it is now the centre of the District of Kozhikode in the Kerala State of the Indian Union.

In pre-Muslim times, the region around Kalikat fell within the powerful Hindu kingdom of the Čolas. The commander of the Khaldjī sultans of Dihli, Malik Kāfūr [q.v.], broke through the Deccan to the Malabar coast for the first time in the opening years of the 8th/14th century, although this success was short-lived [see MA'BAR]. It was, however, probably as a result of Muslim knowledge of the region that the traveller Ibn Baṭṭūṭa was able ca. 739/1338 to visit the Malabar coast and, specifically, Kalikat (which he spells as *Kālīkūt*). He describes the ruler there as an infidel having the title of Sāmārī, a rendering of Malayalam *sāmīri* or *sāmītiri*, a vernacular modification of Skr. *sāmāndri* "sea king", which the Portuguese subsequently rendered as Samorin or Zamorin. There was already a substantial community there of Muslim traders, who

had commercial connections with the Maldive Islands, Ceylon, Java and China. There was a *shāhbandar* [q.v.] or head of the Muslim merchant community *vis-à-vis* the ruler, called Ibrāhīm, who came from Bahrayn, and also a *kādī* and the *shaykh* of a Šūfī *zāwiya* or hospice in the town. Ibn Baṭṭūṭa noted a large number of Chinese ships in the busy harbour, and it was in one of these junks that he then embarked for China (*Rihla*, iv, 88-94, tr. Gibb and Beckingham, iv, 812-14, cf. Yule-Cordier, *Cathay and the way thither*, London 1914-15, iv, 24-6; on the Chinese presence at Kalikat, see Yule-Cordier, *The Book of Ser Marco Polo*, London 1903, ii, 391-2 n. 5).

In 1370 the Malabar coast passed into the general control of the powerful Hindu kingdom of Viḍḍayanaḡar [q.v.] and remained under non-Muslim rule with the exception of a short period towards the end of the 17th century when the Mughal emperor Awrangzīb overran the Deccan. As in Ibn Baṭṭūṭa's time, Kalikat itself remained under the rule of its Zamorins till the 18th century.

Another Muslim, the historian 'Abd al-Razzāk [q.v.] al-Samarḡandī, was sent as an envoy to the Zamorin of Kalikat by the Timūrid Shāh Rukh in 846/1442, and mentions seeing ships from the Horn of Africa and Zanzibar in its harbour; the numerous local Muslim community had two mosques and a Shāfi'ī *kādī*. It was just after this, in 1444, that the first European to visit Kalikat, Nicolo Conti, came from Cochin. The Zamorins extended their authority with the help of the Muslim traders, and in the 15th century Kalikat became the most important town on the Malabar coast. Malabar was also a part of India where the Portuguese endeavoured to establish forts and trading factories, with Covilha at Kalikat in 1486 and Vasco da Gama there in 1498. A factory was set up in 1500, but immediately destroyed by the local Muslims, whose monopoly of trade was now seriously and, in the end, fatally challenged; a fort was built in 1511, but evacuated in 1525, the end of Portuguese activities at Kalikat. European settlements were more successful at Cannanore or Kannanūr [q.v.] and at Cochin, whose Rāḍjās were enemies of the Zamorins, hence sought European help and support.

The English first appeared at Kalikat in 1615 when three ships under Captain William Keeling arrived. In 1664 the English East India Company opened a factory; in 1698 the French Company opened one; and in 1752 the Danish did likewise. The extensive trade in cotton cloths exported from Kalikat—Marco Polo mentions the fine textiles of Malabar—was the origin of the English term calico (see Yule and Burnell, *Hobson-Jobson*, 147-8). By the later 17th century, the power of the Zamorins was in decline, but they continued to be hostile to foreigners. Kalikat suffered badly in the Mysore Wars of the later 18th century, being sacked by the Muslim armies of Ḥaydar 'Alī [q.v.] of Mysore in 1773, and those of his son Tīpū Sulṭān [q.v.] in 1788, who tried to establish a rival capital in Malabar on the south bank of the nearby Beypore river. In 1790 Kalikat was occupied by East India Company troops, and by the Treaty of Seringapatam of 1792, the town passed finally under British control.

A significant proportion of the town's population remained Muslim, under their Hindu and then British rulers, being part of the Māppīla community of Muslims on the Malabar coast [see MAPPILA]. In the 1901 census, they formed 40% of Kalikat's 77,000 population, with over 40 mosques, including the *Shēkkindē Pallī*, with the shrine and tomb of *Shaykh*

Māmu Koyā, said to have come from Egypt to Kalikat in the 16th century. In 1970 the town had a population of 330,000, and in 2003, 453,700.

**KALIMANTAN**, PULAU KALIMANTAN, OF KLEMANTAN, one of the pre-colonial names of the island of Borneo [q.v. in Suppl.], one of the larger Sunda Islands in present-day Indonesia and Malaysia. The name is officially used in Indonesia for the whole island, whereas in Malaysia the term Borneo, derived by the Portuguese from the name of the old and once powerful sultanate of Brunei [q.v. in Suppl.] in the north, is still in use. About three-quarters of the island is part of the Indonesian Republic, being divided into four provinces: West, Central, South and East Kalimantan. The northern states of Sarawak and Sabah [q.vv.] are part of the Federation of Malaysia (since 1963), while the Sultanate of Brunei re-obtained its independence from British protection in 1984.

The present article deals essentially with the ethnic and social structures of the whole island; for the Indonesian part of the island specifically, see BORNEO, in Suppl. The whole island covers an area of ca. 755,000 km<sup>2</sup>. As most of the area is, or was, covered by tropical rain forest growing partly on swampy ground, particularly in the vast plains in the south, the population density was very thin; an average of 22 people per km<sup>2</sup> was counted. Bigger settlements are usually found on river shores not too far away from their mouths, thus presenting themselves as strategic places for rule and commerce. The people used to live in villages or longhouses on the shores of the huge rivers that, until recently, together with their tributaries, were almost the only ways of communication for most parts of the island, except in the mountainous areas where rapids and ravines made shipping almost impossible.

Ethnologists usually divide the indigenous population of Kalimantan into two major groups: the "Malays" and the "Dayaks". These terms, however, should not be taken necessarily to denote ethnic, or even cultural identities. In both groups, a large variety of ethnic, cultural, linguistic and tribal entities exist. In very general terms, "Malay" denotes those individuals or groups who *masuk Islam* ("became Muslims") and therefore either considered themselves to have taken over "Malay" religion and *adat* (customs), or who were considered by their former kinsfolk to have left their old relationships and adopted a new and strange identity, namely, the Malay one. "Dayak" then covers all those indigenous tribes and groups who did not become Muslim but either kept to their traditional religious and cultural identities or, later, became Christians.

Such "ethnic switching" of the "Malays" was not a general rule, however, as sometimes is taken for granted. Some of those groups who turned to Islam still maintained a number of their traditions, e.g. living in longhouses, or continuing their own nutrition habits. Thus e.g. the Bakumpai in the south Barito districts in South Kalimantan did not take over Malay habits, although they became strong propagators of Islam to the Dayaks in the interior. Other tribal entities maintained parts of their traditional social structure and habits after converting to Islam, e.g. the Bajau on the west coast of Sabah and the Bajau Laut

(Sea Bajau) in the Tawau region (who may, however, originate from the Southern Philippines). The Islamic Madurese who were transplanted from the island of Madura and Eastern Java to West Kalimantan by the Indonesian army after 1965 and settled there on land owned formerly by Chinese refugees living there since the fall of the Ming dynasty in 1644, met with the unanimous hostility of the Chinese (now partly Protestant, Catholic or traditional Chinese), the Dayaks (partly Christian or traditional), and the "Malays" from the former sultanate of Sambas. After the collapse of President Suharto and the power of his army who had sheltered them, they suffered a severe series of massacres.

The first strongholds of Islam on Kalimantan were those settlements that were already established as harbour and military watch stations under the Maritime Kingdom of Sri Vijaya which had its centre near Palembang [q.v.] in south Sumatra, and which vanished in the 14th century (particularly in West Kalimantan, like Sukadana, Sambas), or by the Javanese Empire of Majapahit which decayed at the end of the 15th century (e.g. Kutai [q.v.] in East Kalimantan). Muslim sultans established their power, and their seats of power continued their roles as trading and administrative centres. Other centres like Brunei and Banjarmasin [see BANDJARMASIN] followed suit, and these increased in importance for the "Malay" or regional traders when, first the Portuguese and later the Spaniards, and then the British and the Dutch, attempted to promote their trading interests. These traders, although only few among them were ethnic Malays, continued to use Malay as their *lingua franca* as they had done already in the times of (Buddhist) Sri Vijaya, and they were also the main communicators of Islamic teachings, first from a foothold in the coastal and sub-coastal settlements and from there penetrating into some of the up-river regions. The interior of the island remained, however, closed to them.

**KĀMLIYYA**, an early Shī'ī sect which is normally mentioned for having criticised not only Abū Bakr and 'Umar, as did the Rāfiḍa [q.v.], but also 'Alī. The founder, a certain Abū Kāmil Mu'adh b. Ḥusayn al-Nabhānī, seems to have lived in Kūfa during the first decades of the 2nd century A.H., but has left no traces in later sources. He supported Zayd b. 'Alī [q.v.] and therefore did not acknowledge anybody as *imām* who abstained from coming out for his rights. This verdict applied to 'Alī as well as to his son Ḥasan; only Ḥusayn acted as an *imām* should do. Apart from that, Abū Kāmil seems to have shared some of the gnostic ideas proffered by Abū Maṣū'ir al-Idjlī (executed under Yūsuf b. 'Alī's sons, Yaḥyā first and then 'Alī, but when the latter joined al-Nafīs al-Zakiyya (Muḥammad b. 'Abd Allāh [q.v.]) and shared his defeat, they lost their orientation and faded away. Later heresiographers failed to recognise the identity of the sect; they had to entirely rely on a few lines of *hidā'* poetry. Malevolent reporters like Ma'dān al-

Shumayṭī changed the name into Kumayliyya. In Shī'ī tradition, the group sometimes appears as al-Ḥusayniyya (al-Nawbakhtī, al-Kummī, Kādī al-Nu'mān).

**KANBŌ**, KAMBŌ, SHAYKH DJAMĀLĪ, Suhrawardī Sūfī saint of early 10th/16th century Muslim India, who died in 941/1534-5 during the reign of the Mughal ruler Humāyūn [q.v.] and was buried at Mihrawlī. His son Gadā'ī [see GADĀ'Ī KAMBŌ, in Suppl.], whom Djāmālī had in his lifetime made his *khāliḥa* or spiritual successor within the Suhrawardī order, achieved equal religious influence at the courts of Humāyūn and then Akbar.

*Bibliography:* See that to GADĀ'Ī KAMBŌ.

**KANTIMİR**, DEMETRIUS (Cantemir, Kanti-miroglu) (1673-1723), Hospodar (Rumanian "lord") or tributary prince of Moldavia during Ottoman times, and renowned musical practitioner and theorist. Born on 26 October 1673 at Silișteni, he was the son of Constantin, Prince of Moldavia (1685-93). In 1687 he was sent as a princely hostage to Istanbul, and was to stay there until 1691 and then again from 1693 until 1710, when he was himself appointed *Boghdān beyi*, i.e. governor of Moldavia [see BOGHDĀN]. But he promptly formed an alliance with Peter the Great, and was forced to flee as a result of the unexpected Ottoman victory of 1711, thereafter living in Russia, attached to the court. In 1722 he took part in the Caucasian campaign, but fell ill, and died on 21 August 1723.

Whatever the importance of his political role, it is his prodigious scholarly and creative achievements that justify his reputation as a major figure. As familiar with Islamic as with classical and contemporary European culture, he was a polymath who had interests in architecture, cartography and geography, and also wrote on philosophy and theology. In Western Europe he was considered important above all as an authority on the history and current state of the Ottoman Empire, and his *Incrementa atque decrementa aulae Othomanicae*, first published in 1734-5 in an English translation, was to remain the standard source on the Ottomans for a century, and is still of interest for its personal observations. A further important work that remained undeservedly in its shadow is the *Systema de religione et statu Imperii turcici*.

In Turkey, on the other hand, where he is known as Kantemiroglu, it is for his musical accomplishments that he is renowned. He was an outstanding *tunbūr* [q.v.] player; his innovative treatise was to exert a major influence on theoretical writing down to the middle of the 19th century; and the modern repertoire preserves a considerable number of pieces attributed to him. Some are spurious, but it is evident from those he included in his collection of notations, itself invaluable as a comprehensive record of late 17th-century Ottoman instrumental music, that he was a skillful and innovative composer.

**KAPLAN MUŞTAFA PASHA** (d. 1091/1680), Ottoman vizier and *kapudan paşha* [q.v.]. Educated in the palace school at Istanbul, he made his early career in the private household of the sultan or *enderûn* [q.v.]. Launched afterwards into a military and administrative career, Kaplan Muştafa Paşha was appointed *beglerbegi* of Damascus before 1076/1666. From 6 February 1666 to April 1672, he served as Grand Admiral (*kapudan paşha*). Under the Grand Vizier and Commander-in-Chief Fâdil Ahmed Paşha Köprülü, he commanded the main squadron during the War of Candia (*Girit Seferi* [see İKRİTTİŞİ; KANDIYA]). In 1077/1666 his fleet of 47 galleys served to transport men and materials to Crete. On 30 October 1666, the Grand Vizier boarded the admiral's flagship (*başhtarada*) at Termis Iskelesi (the fortress of Termis, Thermisia, present-day Ermioni), or at Monemvasia, Menekşe [q.v.], in order to go to the front in Crete. In the next year, he made a punitive raid on the Cyclades, sacking the island of Paros [see PARA]. In 1672 he was made *beglerbegi* of Aleppo and appointed *ser'asker* (commander of the field army) for the Sultan Mehmed IV's Polish campaign, and in the following year he was made *beglerbegi* of Diyâr Bakr.

Muştafa Paşha fought before Cehrin (Çyhyryn), the seat of the Ukrainian hetman Doroshenko, at that time an Ottoman ally, in 1674/1085 and again in 1089/1678, reconquering that fortress on 2-3 Redjeb 1089/20-1 August 1678. From 1678/1089, Muştafa was Grand Admiral for the second time till his death in the harbour of Izmir on 10 Shawwāl 1091/5 December 1680 while cruising the Archipelago.

**KARAM** (A.), the qualities of nobility of character, magnanimity, generosity, all the virtues making up the noble and virtuous man (see *WIKĀS, Letter Kāf*, Wiesbaden 1970, 142-3). For a discussion of honour and nobility, see 'IRD; MURŪ'A and ŞĤARAF.

**KARAMANLIDIKA** [see TURKS. II. vi, in Suppl.] **KARATĀY** (or KIRTĀY) AL-'IZZĪ AL-KĤAZĪNDĀRĪ, an author of the Mamlūk period about whom very little is known.

His name would seem to indicate that he was a *mamlūk* of a *kĥāzindār* or treasurer. Three fragments of his chronicle, called *Ta'riĥh al-Nawādir mimma djarā li 'l-awā'il wa 'l-awākĥir*, have been preserved, the most interesting being that covering the years 626-89/1228-90 (Gotha A 1655), in which the author says that he was writing between 1293 and 1341. This latter part is not free from faults (chronological errors, anecdotes which are hard to verify, and legends mixed with real events), hence should be used only with care, but its interest lies in the fact that it transmits oral sources contemporary with the author, certain information stemming from highly-placed personages of the final years of the Ayyūbid period, such as Djamāl al-Dīn Ibn Maṭrūĥ [q.v.], and likewise some fragments of the abridged, and little-known, history of al-Nāşir Kalāwūn's reign composed by the *kādi* Şharaf al-Dīn Ibn al-Waĥīd. The author was, moreover, largely inspired by the well-known chronicle of Ibn Wāşil [q.v.] and may have used a source common to himself and Ibn al-Dawādārī [q.v.].

**KĀSİM ARSLĀN** (?-995/?-1587), Indo-Muslim poet, court panegyrist of the Mughal emperor Akbar [q.v.] in the later 10th/16th century.

Details regarding his life and career are scanty. According to *Muntakhab al-tawāriĥh*, he was originally a native of Tūs; but most other writers refer to him as Mashhadī, which would indicate that he might have lived in Mashhad. He was brought up in Transoxania and went to India during Akbar's reign. It is related that he took Arslān as his pen-name because his father claimed descent from Arslān Dīādhib, a military commander of Maĥmūd of Ghazna. Kāsim Arslān is described as a man of broad religious views, enjoying a witty, sociable and generous disposition. Apart from his status as a poet, he was known in his time as a skilled calligrapher, specialising in the *nasta'liq* style. His *dīwān*, which is rare, comprises various kinds of poems. One of his *kaşīdas* is addressed to the Eighth Imām 'Alī al-Ridā and expresses the poet's devotion to the ŞĤī'ī leader. His *ghazals*, mostly short, describe amatory feelings in simple speech. His chronograms, for which he is especially noted, are useful in providing dates of certain historical events. He died, according to most accounts, at Lahore in 995/1587.

**KAṢR** (A.), pl. *kuṣūr*, most probably from Grk. *kas-tro-n*, Latin *castrum*, has the general sense of "a fortified place", hence "residence of an *amīr* or ruler, palace, or any building on a larger scale than a mere house".

1. In the central and eastern Islamic lands. See for this, SARĀY, and note also that in the Persian lands, a synonym for this in early mediaeval usage (e.g. in Narshakhī, Bayhaḳī, Dīwānī) is often *kūshk* (MP *kōshk*), yielding Eng. and Ger. *kiosk*, Fr. *kiosque*.

2. In the Maghrib.

Here, from the vocalic changes frequent in Maghribī dialects, we often find the pronunciation *ḳṣar*, pl. *ḳṣūr*. The term has here various semantic strata that have to be illuminated by close examination of the various texts available and by archaeological investigation, and in the light of the complex material factors concerning the Maghribī habitat from mediaeval times until long afterwards. Hence it denotes here: (a) a palace, the place from which political authority is exercised, or an aristocratic residence; (b) a fortified place, a small fort or a full-scale fortress; (c) a fortified complex for community habitation; and (d) a collective granary or store house.

A. The evidence of mediaeval texts

*The palace.* The term is usually used in the texts to denote a palace, a place of residence for a person wielding authority, such as the *ḳṣar al-ḳadīm* which the Aghlabid *amīr* Ibrāhīm I had built in 184/800, on the site of the princely town of al-'Abbāsiyya, not far from al-Ḳayrawān [q.v.] (al-Balādhurī, *Futūh*, 328; al-Bakrī, *al-Masālik wa 'l-mamālik*, ed. and tr. de Slane, repr. Paris 1965, 28/64), or the palaces (*ḳṣūr*) built in 263/876 by the *amīr* Ibrāhīm II in his new princely residence of Raḳkāda [q.v.] (al-Bakrī, *op. cit.*, 27/62, 147/135; Ibn 'Idhārī, i, 299). Al-Mahdiyya [q.v.], the first royal residence founded by the Fāḫimids in Ifrīkiya, additionally included the palaces of 'Ubayd Allāh and Abu 'l-Ḳāsim (Ibn Hawḳal, 71/67; al-Bakrī, *op. cit.*, 30/67-8). In the far Maghrib, the fortress built by the Almoravids at the moment of the foundation of Marrākūsh [q.v.] was called the Ḳaṣr al-Haḍjar (Ibn 'Idhārī, iii, 20). The term served to designate at one and the same time palaces, including the governmental headquarters or princely residence, and also the residences (*ḳṣūr*) of the Almoḥad leaders, each of which comprised houses (*ḍiyār*), gardens (*basāṭīn*), a bathhouse (*ḥammām*) and stables (*iṣṭablāh*) (al-'Umārī, *Masālik al-abṣār fī mamālik al-aṣṅār*, B.N. Paris ms. No. 5868, fol. 67b, tr. M. Gaudefroy-Demombynes, Paris 1927, 179).

*Fortresses, places for garrisons and the fortified community habitats.* Although frequently used in texts from the mediaeval period, the term *ḳṣar* has no homogenous geographical distribution. It is rare in the western regions, from Tilimsān/Tlemcen to the Atlantic, where toponyms like *ḥiṣn* and *ḳal'a* are very clearly predominant, but places denominated as *ḳṣūr* are numerous from Tripolania to the region of Tāhart, passing through Ifrīkiya, where they often correspond to fortresses whose construction goes back to Byzantine times (al-Bakrī, *Masālik*, 31/69, 50/108; al-Idrīsī, *Maghrib*, 157/144-5). However, in their grouping, the fortified sites thus described as *ḳṣar* or *ḳṣūr* do not

appear to be, above all, places for garrisons but rather centres for population, a role that certain fortresses dating from Byzantine times already played at the time of the Arab conquest (Ibn 'Abd al-Ḥakam, *Futūh*, 224, 228, 239; al-Bakrī, *op. cit.*, 13/34). In Ifrīkiya, as in the far Maghrib, the term thus denotes a village or a fortified town (*ibid.*, 47/101, 153/292), or a fortified place where the surrounding people come to take refuge when necessary (al-Tidjānī, *Rūhla*, Tunis and Tripoli 1981, 56, 119). Corresponding to an agglomeration on a more important scale, the term finally denotes nuclei of people, and these may be of a pre-urban or an urban nature. Thus Tāhart was in origin made up of several *ḳṣūr* (B. Zerouki, *L'imamat de Tahart, premier état musulman du Maghreb*, i, Paris 1987, 132-3); it was probably similarly the case at Sidjilmāsa (Ibn Hawḳal, 91/89).

B. The pre-modern *ḳṣūr* in the Maghrib

*The fortified villages of the Saharan wastes.* In North African toponymy, Arabic *ḳṣar* frequently replaces its Berber equivalent *igherm* (pl. *igherman*) when applied to the fortified villages characteristic of a type of habitat peculiar to the ante-Saharan zones: in Morocco, in the valleys of the Ziz, Dadès and Draa, from the Sūs in the west to Tāfflāt in the east, and from the Atlas from north of the Draa to the south; and in Algeria, the regions of Tuwāt [q.v.] and Gourara [q.v. in Suppl.] and that of Mzāb [q.v.]. In its "completed" form, i.e. pre-modern one, such as one still finds in Morocco, the *ḳṣar* appears as a fortified village with a rectangular plan, surrounded by a protective wall flanked with towers and with angled bastions; the space thus circumscribed, with a dense network of contiguous houses, is criss-crossed by several narrow streets whose pattern is based on more or less orthogonal axes. The regular form depends on the topographical conditions of the site; if the *ḳṣūr* of the plains of southern Morocco most often show a regular pattern, the mountain villages are made up of houses huddled together and presenting a continuous front view, whilst in the Algerian Sahara, the overwhelming majority of *ḳṣūr* simply consist of an agglomeration with a dense and complex pattern whose general contours attest an organic pattern of growth. As an economic centre and place of refuge, and as a nucleus for sedentarisation, the *ḳṣar* forms the basic political unit of these regions. In the southeast of Morocco, the management of the internal affairs of the *ḳṣar* is confided to two distinct political entities: the chief (*shaykh* or *amghar*) elected once a year is seconded by the chiefs of the quarters or the great families (*mzarig* or *amur*) in order to avoid power being gathered up into the hands of a single kinship group. These balancing factors, which make up a small council (*ḍjamā'a* [q.v.]), are guarantees of a social order that is expressed by means of prescribed forms and customary rules, often set down in writing.

*The collective granary in the eastern Maghrib.* In south-eastern Tunisia, the term *ḳṣar* further denotes a collective storehouse where the local people, living in the valleys near to cultivated fields, come to store their grain. The mountainous Tuniso-Libyan arc and its outliers, some 150 km/95 miles long, contains a hundred or so of these *ḳṣūr*, with similar ones in Algeria, in the region of Gourara. Built on a hilltop with escarpmented slopes, the *ḳṣar* here generally has a quadrangular plan, with its protective wall formed by the placing together of narrow rooms (*ghurfas*) with cradle vaulting, sometimes placed above each other on two or three levels, access to them being by an improvised outside ladder. Although nobody lives there,

the *kašar* is nonetheless a focus for the social life of peoples living a dispersed or troglodytic way of life. Sometimes it provides shelter for some artisanal activities, and it forms the point near to which an important market may on occasion be held. Likewise, one finds the mosque or *muṣallā* [q.v.], sometimes with a cemetery associated with it, at some distance away from the *kašar* yet at the same time associated with it.

*The overall view.* It is extremely difficult, for reasons both historical and methodological, to trace the evolution of the habitat which finally contributed to the emergence of the “completed” form of the *kašar*, the fortified village of the high plateaux of the Moroccan steppelands, more characteristic of certain regions which are in majority Berberophone than really “typical”—as has often been said—of a certain “Berber style of architecture”. Various influences have been suggested in this regard: that of Africa, put forward at the time of the first exploratory travels, has speedily been forgotten, even if Terrasse perpetuated it in a certain manner by finding in the *kašar* an imprint of Pharaonic Egypt. The geometrical disposition of the Moroccan *kašar*, above all the presence of a principal axis which serves the groups of dwelling places, has generated as many arguments in favour of the thesis of an influence from the Roman-Byzantine *castellum*, whilst the brick decoration which often ornaments the whole ensemble has raised the question of connections with the East and with Hispano-Moresque art. Suffice it to say that these suggestions still today do not go beyond simple formal or stylistic likenesses.

The problem of tracing the origin of the type is further exacerbated by the difficulty of dating these groupings, given the very fragmentary historical data and the absence of archaeological remains which can be firmly dated. Thus, although the Moroccan *kašar* has for a long time been considered as an example of a “traditional” and “archaic” form of architecture, and therefore of an undateable nature, its existence is not attested by any sure material piece of evidence before at least the 17th and 18th centuries. The uncertainty over the dating—or at least, over the relative chronology—of these fortified villages has given rise to two postulates: (1) the prior dating of those with plans shows an organic growth compared with those having geometrical plans—*kašar* with regular plans are considered later than those which, in Tuwāt and elsewhere in the Sahara, show in their plans no concern for symmetry; and (2) *terre pisée* was substituted for stone—the *kašar* constructed of baked earth is seen as the end product of a process of change from the more ancient fortresses built in stone. These theories, even if they cannot be regarded as totally invalid, must, however, be approached with great prudence because of their neglect for the socio-economic and topographical considerations which brought about the conditions for the construction of these sites, and because of the *a priori* definition of a linear evolution of the construction techniques which they presuppose. Studies on the typologies involved, supported by the most rigorous possible surface explorations, are required to understand the phenomenon of the *kašar* in all its breadth, geographical and chronological. J.-Cl. Echallier has accordingly made an exploration and inventory of over 300 *kašar* in the Gourara-Tuwāt region. Starting from formal criteria, he proposes classifying the ensemble of these sites into six main groups, ranging from storehouses used as refuges on rocky peaks (type I) to regular walled enclosures in unfired brick, displaying a sense of care in the organisation of the interior spaces (type VI). In southeastern Tunisia, some inscrip-

tions on plasterwork placed on the arcing of the entrance vaulting, from which access leads into the *kašar*, bear a date. A. Louis has studied and published the account of a granary which served as a place of refuge, the *kašar* Zanāta, which in this way dates to 475/1082-3, whilst at the *kašar* Djouama, an inscription dates either the building or the restoration of this part of the building to 1178/1764-5. The gap between these two dates indicates the degree of uncertainty which still reigns in the studies on the evolution of these forms of habitation in the Maghrib.

Often placed in connection with the general phenomenon of a crisis which ruptured the complementary relationship between two types of economy, the nomadic and the sedentary, and which led to periods of conflict and change, it seems that the *kašar* of southern Morocco and southern Algeria, like the communal storehouses of southeastern Tunisia, can be placed, in a more global and more nuanced way, in relationship to a situation of transition between nomadism and sedentarisation. This particular form of a place for keeping commodities and for refuge, or as a place for habitation, would thus form a nucleus for sedentarisation around which the territory of a given human group becomes organised. The *kašar*, so characteristic of certain North African landscapes, is an architectural form on the verge of disappearing because of the major changes of recent decades in social relations and techniques. In these regions, it is now the village which has succeeded the *kašar* as the basic element of social cohesion.

**KAŠR ABĪ DĀNIS**, a settlement of Islamic Portugal, revealed by archaeological excavations on the ancient site of Salacia, to the south of Lisbon, and on the site of the present convent of Aracoeli, the modern Alcácer do Sal.

It dates from the 3rd/9th century, when coastal defences were being erected against the Viking attacks which had begun in 230/844 [see AL-MADJŪS]. The fortress occupied a major strategic site, up-river from the mouth of the Sado. According to Ibn Ḥazm and Ibn Ḥayyān, it was in the course of the *fitna* in this century, during the reign of the Umayyad *amīr* ‘Abd Allāh, that the Banū Dānis, Berbers driven from the region of Coimbra, besieged the place, which received their name. When ‘Abd al-Rahmān III brought the region under his authority, he confirmed the Banū Dānis as chiefs in the town, which now became the

capital of a *kūra* and grew into a prosperous centre. Ibn Abī 'Āmir [see AL-MANŞŪR BI 'LLĀH] made it into an important naval dockyard for attacking the shrine of St. James of Compostella in 387/997. As the main maritime outlet for the Aḫsāsids [q.v.] of Badajoz, Kaşr Abī Dānis retained its role as a dockyard and arsenal and was also, according to al-Idrīsī, a prosperous commercial port. After the fall of Lisbon in 542/1147, the town was first taken by Afonso Henriques, but recovered by the Almohad caliph al-Manşūr in 587/1191 before its definitive fall in 614/1217. Immediately after this, Muslim Alcácer declined in favour of Setúbal.

**KAŞR AL-MUSHASH**, an Umayyad period archaeological site in Jordan located 40 km/25 miles southeast of 'Ammān. The core of the site consists of a *kaşr*, a water reservoir and a bath, surveyed by King in 1980-1 and excavated by Bisheh in 1982-3. The *kaşr* measures 26 m/85 feet square and consists of rooms around an open central courtyard, without any corner towers, and could accommodate up to 40 people. Re-used in one wall is a stone with a Kufic inscription asking for the forgiveness of the sins of an unknown Radjā b. Başshār. Nearby is a plastered cistern 4.8 m/16 feet in diameter once roofed by stone slabs supported by arches, intended to supply the inhabitants of the *kaşr* with drinking water. At 400 m/1,312 feet west of the *kaşr* is a plastered water reservoir measuring 25 m/82 feet square. The excavated bath house was a simple structure with four rooms: an apodyterium, frigidarium, tepidarium and caldarium with a furnace. The bath has none of the lavish decorations characteristic of Kuşayr 'Amrā or Ḥammām al-Sarākh [q.v.]. Other uninvestigated reservoirs, cisterns, walled enclosures and barrages dot the site. The pottery at the site is predominantly Umayyad. The function of the site, without a sizeable resident population, was to serve as a watering stop for caravans travelling between 'Ammān and the northern Arabian Peninsula via the Wādī Sirhān. Reduced traffic along that route after the 'Abbāsīd revolution soon led to the abandonment of the site.

**KAŞR TŪBĀ**, one of the so-called "desert castles" in Jordan, is located ca. 100 km/60 miles southeast of 'Ammān. Since it is unfinished, information on the intended design of the elevations and the decorations are limited. The enclosure walls and the foundations were built of limestone, the remaining parts of brick. The building has a rectangular shape, measuring ca. 140 m (east-west) by ca. 70 m (north-south) and is flanked by five semicircular towers on the south side, two on the east and west sides. There was a round tower at each corner. In the north the arrangement is different (see below). The structure consists of two individual and identical halves, divided by a wall and connected with each other by a small passage. Each of the two buildings has a central courtyard of ca. 30 m by 30 m with rooms and/or smaller courtyards built around it. Entrance is given to each of the buildings by a gate flanked by square towers in the middle of northern façades. Between the two gates, a semicircular tower projects from the northern façade. Behind the gate, passages, ca. 6 m deep, lead into the courtyards. In each of the corners of the courtyards, traces of typical Umayyad *bayts*, i.e. two rooms flanking a central hall or courtyard on two sides, are to be found. This feature, in addition to the use of brick, the vaulting technique and the few decorations preserved, shows that the building must have been built in the late Umayyad period. Most authors consider al-Walīd II [q.v.] as the patron of this building.

**KAŞTAL**, one of the so-called Umayyad "desert castles", now in the Kingdom of Jordan. It lies ca. 15 km south of the centre of 'Ammān. Its existence became known only at the beginning of the 20th century, following a publication by Brunnow and von Domaszewski (see *Bibl.*).

Until the 1970s, the period of its construction remained speculative, but since then there is little doubt that this desert castle was built in Umayyad times. The site consists of a palace and a mosque, the latter lying north of the palace. Changes in the construction as well as ceramic finds indicate that the place was used in the Ayyūbid-Mamlūk period as well as in later Ottoman times.

The palace is a square construction of ca. 59 × 59 m (without counting the towers), made of ashlar with cast work between the surfaces, with round corner towers and three semicircular intermediate towers on the northern, southern and western sides each, while the entrance was on the eastern side. The latter has four semicircular intermediate towers, two of which can be considered as part of the wings of the main entrance. Through a ca. 2 m-wide gate one enters into a space inside the tower, which is ca. 16 m deep and leads to an inner court of ca. 28 × 28 m. Around the inner court was a peristyle, behind which lay six groups of rooms, arranged *bayt*-wise (four on the eastern and western sides, with adjoining rooms in the corners, two on the northern and southern sides). Remains of an upper storey, which formerly surrounded the entire building, are only found in the neighbourhood of the tower room. The building thus

resembles other Umayyad sites, the palace at Djabal Says [*q.v.* in Suppl.], Kharāna and Kaṣr al-Ḥayr al-Sharkī [*q.v.*] in particular.

A few metres off the western part of the northern palace wall lies a construction which originally was interpreted as a praetorium, but which is undoubtedly a mosque. Preserved are the remains of a rectangular surrounding wall of ca. 21 × 18 m, which encloses a courtyard and a prayer-house. Its north-western corner encloses a round tower with a diameter of ca. 6 m. From the southern side of the court a door leads to a rectangular prayer-room with a deeply vaulted *mīhrāb* [*q.v.*] in the middle of the southern wall. The mosque clearly shows three construction phases. The masonry of the earliest phase is the same as that of the inside constructions of the palace. It belongs to a mosque, which probably had a saddle roof. To this mosque also belonged the round tower, beyond all question one of the earliest minarets to survive. It proves that rectangular as well as round minarets were already erected in early Islamic times. In Ayyūbid-Mamlūk times the walls of the mosque were reinforced, and the original roof replaced by a barrel vault. In late Ottoman times, the mosque was further restored.

**KATHĪRĪ**, a South Arabian tribal group and sultanate, the latter eventually becoming part of the Eastern Aden Protectorate prior to the departure of the British from South Arabia in 1967. Their origins were in the area of Zafār [*q.v.*] on the Indian Ocean, now within the Southern Region of the Sultanate of Oman [see 'UMĀN], and they appear suddenly on the stage of history in the 9th/15th century. By the time the Eastern Aden Protectorate collapsed in 1967 after the departure of the British, the Kathīrī sultanate was made up of the centre and eastern end of the Wādī Ḥaḍramawt, tribal lands to the north of the Wādī towards the Empty Quarter [see AL-RUB' AL-KHĀLĪ] and to the south in the mountainous region towards the sea, although by this time they had no access to the sea. Their main towns were Say'ūn [*q.v.*], the capital of the sultanate, Tarīm [*q.v.*], the intellectual centre, al-Ghuraf, Būr and al-Ghurfa, all within Wādī Ḥaḍramawt.

The Kathīrī tribe was of Zanna (sometimes written Danna in the Arabic sources) and, according to al-Shāḥirī (*Adwār*, 234), Kaḥṭānis of Saba', and not of Hamdān. Al-Shāḥirī adds (352) that Zanna are believed to have come from Muscat (Maṣkaṭ) and Zafār.

The Kathīrīs first took Zafār in 807/1404 (al-'Alawī, *Tārīkh*, ii, 684). They took the important port of al-Shiḥr [*q.v.*] from the Ṭāhirīs [*q.v.*] in 867/1462. The port, always vulnerable from the sea, was not only the emporium of Indian trade in the area but also handled the traffic of the pilgrims bound for Kaḥr Hūd in Wādī Ḥaḍramawt (Serjeant, *Portuguese*, 25 and see also his *Hūd*). Both trade and the pilgrimage traffic were huge sources of revenue. The exact situation is not clear, however, and it seems that the Kathīrīs on occasion held al-Shiḥr as governors of the Ṭāhirīs.

The expansionist policies of the Kathīrīs are associated with the famous Badr Bū Tuwayriḳ (r. 922-77/1516-70). He fought the Mahra [*q.v.*] tribes to the east of al-Shiḥr, and endeavoured to keep the Portuguese and the Turks at bay as far as he could,

playing them off against each other. He was able to pursue campaigns into Ḥaḍramawt, using Turkish-Portuguese rivalry to his own advantage. Badr even made use of the Turks and the Portuguese: with the aid of the former in 926/1520 he took Shibām, and with Portuguese musketeers he made gains in Wādī Ḥaḍramawt in 945/1539 (al-Kindī, *Tārīkh*, i, 164; Serjeant, *Portuguese*, 28). His successes in Ḥaḍramawt may well have been because of his access to firearms introduced by the Turks in the expedition against Shibām. He had no strong religious sentiment against the Portuguese, but this earned him the resentment of many Ḥaḍramīs who urged holy war against him (Serjeant, *Portuguese*, 27-30, 57).

Al-Kindī in his *Tārīkh* provides a whole catalogue of Kathīrī activities in mediaeval times in Ḥaḍramawt and on the coast. In 926/1520, for example, Badr went on to take both Tarīm and al-Ghurfa. In 934/1527, he struck coins in al-Shiḥr. Under the year 942/1535, the killing of a number of Portuguese is reported, others being shackled and plundered. The Kathīrīs were also in touch with the Turks and the Egyptians. In 943/1536, Badr began the building of the fortress of Ghayl Bā Wazīr in the coastal area. The year 944/1537 marked the arrival in al-Shiḥr of a Turkish galley to assist Badr against the Portuguese. It was announced that the *khuṭba* was to be pronounced in the name of the Ottoman sultan, Sulaymān Bā Yazīd (i.e. Süleymān the Magnificent). After Badr's death in 977/1569, there was less stability in the Kathīrī house. Reports for the following years reflect internecine squabbles (al-Kindī, *Tārīkh*, i, 164, 165, 180, 182, 185, 215, 216 and *passim*).

The struggle in 1064/1653 between the two Badrs of the Kathīrī family, Badr b. 'Umar and Badr b. 'Abd Allāh, brought the Zaydis [see ZAYDIYYA] of the Yemen into the affairs of Ḥaḍramawt (al-Wazīr, *Tabaḥ al-habwā*, 135 ff.). Badr b. 'Umar al-Kathīrī, lord of Ḥaḍramawt, al-Shiḥr and Zafār, having already embraced the Zaydī rite, had the *khuṭba* pronounced in the name of the Zaydī Imām al-Mutawakkil (r. 1054-87/1644-76 [*q.v.*]). His nephew, Badr b. 'Abd Allāh al-Kathīrī, had Badr b. 'Umar arrested and imprisoned near Say'ūn (Serjeant, *Omani naval activities*, 78). Al-Mutawakkil reacted swiftly to Badr b. 'Abd Allāh's action against his uncle. Much correspondence passed between him and the Kathīrī, and the latter finally submitted, though Badr b. 'Abd Allāh was resentful of the Imām's intervention and his submission was clearly a sham. Badr b. 'Umar was obliged to flee Zafār, where the Imām had secured his governorship as part of his agreement with Badr b. 'Abd Allāh, and finally arrived at the Imām's court in Ṣan'ā' [*q.v.*] in 1069/1659. This state of affairs now brought about a full-scale Zaydī military expedition into Ḥaḍramawt under the command of Ṣafī 'l-Islām Aḥmad b. Ḥasan and accompanied by Badr b. 'Umar. Ṣafī 'l-Islām was able to subdue Ḥaḍramawt itself, but then experienced difficulties in supplying his large Zaydī army. He was thus unable to deal with the problem of Zafār, by this time under an 'Umānī *amīr*. He returned from Say'ūn to Ṣan'ā' (Serjeant, *Omani naval activities*, 79-80). By about 1080/1670, Zaydī influence in Ḥaḍramawt had declined and the Kathīrī sultans were in independent control there (*ibid.*, 84). Once again, sources provide a rather confused and lengthy catalogue of Kathīrī activities: military movements, battles, tribal problems and agreements, these involving also the Yāfi'īs [see YĀFI'Ī], who had entered the area, on occasion the Zaydis, and from the mid-19th century onwards the Ku'aytis.

The Government of Bombay's *Account of the Arab tribes*, compiled at the beginning of the 20th century, indicates (123) that Kathīrī territory had originally been carved out of 'Awlakī lands in the west and Mahra in the east, and included al-Mukallā on the coast, until 1881 when it passed to the Ḳu'ayṭī, and al-Shihr. The Kathīrī sultanate lost much ground to the Yāfi'is and Ḳu'ayṭis in the latter half of the 19th century. The *Account*, reporting on the Kathīrī, also reports a total of 7,000 fighting males. Many Kathīrī subjects were scattered over parts of India, Java, Singapore and East Africa, engaged in trade.

In 1883, Sultan 'Abd Allāh b. Ṣāliḥ al-Kathīrī visited the British Resident in Aden to assess the attitude of the British to his seizing al-Mukallā and al-Shihr from the Ḳu'ayṭī. The British answer was firm and to the point: if the Kathīrī attacked the ports, the British would come to the aid of the Ḳu'ayṭī with a gunboat. The Kathīrīs continued to smart at their loss of access to the sea (*Account*, 123).

It is interesting to note that in 1895, the Kathīrīs still at this time had designs on their native region and they took Zafār, although they were unable to hang on to it for longer than two years. The *Account* also reports (124) that there was little contact between the Kathīrī and the Aden Residency in the 1860s and '70s and that there was none at all in the '80s and '90s. Unlike most of the other Aden Protectorate states, the Kathīrī signed no 19th-century formal treaty of protection with Britain (*Account*, 130). They are, however, listed (154-5) among those states "having relations with Aden Residency". Their annual revenue is quoted as 24,000 rupees, although there was no stipend from the Residency. The sultan in 1906 when the *Account* was published was Manṣūr b. Ghālib.

It was only during the 1930s that relations between the Kathīrī and the British became closer, the rapprochement occurring in the wake of the famous "Ingrams Peace", when the first British political officer in Ḥaḍramawt, Harold Ingrams, brought about a general peace between the years 1937-40 in the tribal lands of both Ḳu'ayṭī and Kathīrī (Ingrams, *Arabia*, 10-19). This resulted in the political, social, agricultural, educational and medical development of both sultanates, including the completion of a road from Tarīm in Wādī Ḥaḍramawt to al-Shihr on the coast, and the increased British involvement in their affairs, culminating in the separate British administration of the Kathīrī, Ḳu'ayṭī, Mahra and Wāhidī [*q.v.*] sultanates as the Eastern Aden Protectorate. In March 1939, a treaty between the Kathīrī and the British was finally signed (Smith, "Ingrams Peace", *Ḥaḍramawt, 1937-40*, see *Bibl.*; for the texts of the treaty, see *Records of Aden*, 239-40).

The sultanates of the Eastern Aden Protectorate never entered the Federation which was formed and fostered by the British in the Western Aden Protectorate. At the time of the withdrawal of the British in 1967, the Kathīrī sultanate became a part of the People's Democratic Republic of Yemen. In 1990, with the unity of north and south Yemen, the whole of what had been the Eastern Aden Protectorate became a part of the Yemen Republic [see AL-YAMAN, 3(b)] with its capital at Ṣan'ā'.

AL-ḲAṬĪFĪ, IBRĀHĪM B. SULAYMĀN, Imāmī Shī'ī jurist of the 9th-10th/15th-16th centuries.

He is most famous for his acrimonious dispute with his supposed classmate (or teacher), the influential 'Alī b. 'Abd al-'Alī al-Karakī (d. 940/1534 [*q.v.*]). Al-Ḳaṭīfī moved from his birthplace Bahrayn to 'Irāq to study (some date this move to 913/1507). Apart from a pilgrimage to Mashhad, supposedly with al-Karakī, at some unknown date, he appears to have spent the rest of his academic life in southern 'Irāq (Nadījaf and later Ḥilla), teaching and writing. His academic output is mostly inspired by his personal and religious animosity towards al-Karakī. Al-Karakī had gained the favour of the Ṣafawid Shāh Ṭahmāsp I [*q.v.*], and al-Ḳaṭīfī accused him of egotism and legal chicanery aimed at personal enrichment. Such accusations can be found throughout al-Ḳaṭīfī's most famous work *al-Sirādī al-wahhādī*, a detailed refutation of al-Karakī's *Kāfi'at al-ladīdī*. The debate here concerned the legitimacy of land-tax (*ḫharāj*) payable to the ruler. Whilst al-Karakī, benefiting personally from *ḫharāj* revenue, argued that it was a permitted tax during the occultation (*ghayba* [*q.v.*]) of the Imām, al-Ḳaṭīfī maintained that Ṣafawid rule was (legally speaking) illegitimate; no Ṣafawid tax could be legitimate and no gifts bestowed by the Shāh could be accepted. In one incident in Karbalā', al-Ḳaṭīfī publicly refused to accept a gift brought by al-Karakī from Shāh Ṭahmāsp.

Most of al-Ḳaṭīfī's works remain in manuscript, and nearly all appear to be refutations of al-Karakī's views on subjects such as the *djum'a* prayer, fosterage and fasting. Some have linked al-Ḳaṭīfī to the emerging Akhbārī school [see AKHBĀRIYYA, in *Suppl.*], but his juristic reasoning, though conservative, appears within the mainstream of Shī'ī jurisprudence. His date of death is unknown, but he is reported to have been alive as late as 951/1544.

in *Imāmī Shī'ī history*, Ph.D. thesis, UCLA 1986, unpubl. (R. GLEAVE)

**KAWĀ'ID FIKHĪYYA** (A.), legal principles, legal maxims, general legal rules (sing. *kā'ida fikhīyya*). These are *madhhab*-internal legal guidelines that are applicable to a number of particular cases in various fields of the law, whereby the legal determinations (*ahkām*) of these cases can be derived from these principles. They reflect the logic of a school's legal reasoning and thus impart a "scaffolding" to the "case-law" (*furū'*).

Historically, general rules can be found already strewn throughout early *furū'* works. They were first collected by Ḥanafīs like Abu 'l-Ḥasan al-Karkhī (d. 340/952), but under the title of *uṣūl* rather than *kaḥwā'id*. (As a result, the term *uṣūl* acquires, minimally, a fourfold meaning: (1) an act that has already been legally determined and now serves as a "model" for similar cases; (2) a scriptural pronouncement (Qur'ān or Ḥadīth) that is considered decisive for the legal determination of a given act; (3) a legal principle, under which several individual cases are subsumed; (4) a source of the law, such as the Qur'ān.) But this early start hardly bore fruit, and it is only around the 7th/13th century that all the legal schools began to produce books on *kaḥwā'id* (predominantly with this term in the title of their books), except (!) the Ḥanafīs. This strange gap in the latter's record is probably not to be attributed to a loss of their works, because the Ḥanafī scholar, Ibn Nuḍjāyṁ (d. 970/1563 [q.v.]), complains about the fact that his school has nothing to compete with against the Shāfi'īs in this respect (*Ashbāh*, 15)—a situation that he tries to redress by writing a *kaḥwā'id* book on the model of the Shāfi'ī Tādj al-Dīn al-Subkī's (d. 771/1370 [q.v.]) work. Some of the most influential *kaḥwā'id* works of the later period bear the title *al-Ashbāh wa 'l-nazā'ir*, such as those of the Shāfi'īs Ibn al-Wakīl (d. 716/1317), Tādj al-Dīn al-Subkī, and al-Suyūṭī (d. 911/1505), as well as that of the Ḥanafī Ibn Nuḍjāyṁ. According to the co-editor of Ibn al-Wakīl's book, Ahmad b. Muḥammad al-'Ankarī, *ashbāh* refers to cases that are alike in appearance (*zāhir*) and legal status, while *nazā'ir* denotes cases that are alike in appearance, but differ in legal status. Whether this is generally true remains to be seen. Look-alike cases of the latter type are dealt with in the *furūḥ* literature, the *farḥ* being the decisive difference that brings about a different legal determination (*ḥukm*). Since sections on *furūḥ* do occur in *ashbāh wa-nazā'ir* works, one may consider such works an umbrella genre that comprises both the *kaḥwā'id* deduced from truly similar cases and the *furūḥ* indicating the differences between outwardly similar cases. Logically, and probably also historically, the establishment of similitudes among cases precedes the formulation of legal rules/maxims based on them as well as the recognition of *furūḥ* as obstacles to the subsumption of cases under a single rule.

However, with regard to the *kaḥwā'id*, this picture is too simple. Although generally valid rules (*al-kaḥwā'id al-kullīyya al-fikhīyya*) do exist, they are outnumbered by rules that are only "preponderant" (*al-kaḥwā'id al-aghlabīyya/al-akthariyya*). In the *Idāh al-masālik ilā kaḥwā'id al-imām Mālik* of al-Wanṣharīsī (d. 914/1508 [q.v.]) the relationship of the two types is 17 to 101, and a number of legal scholars assert that legal rules, as opposed to other rules, are always preponderantly valid. The generally valid rules are couched in maxims, the preponderantly valid ones in double questions, thus e.g. *dar<sup>20</sup> 'l-mafāsīd' muḥaddam<sup>21</sup> 'alā ḥjālb' 'l-masālih* "warding off corruptions has the priority over bring-

ing about benefits" is a *kā'ida kullīyya*, whereas *al-zann<sup>22</sup> hal yunkad<sup>23</sup> bi-'l-zann<sup>24</sup> am lā* "can a presumption be canceled by [another] presumption or not?" is a *kā'ida aghlabīyya*. The term *aghlabī* refers to the fact that the non-subsumable cases are *istihnā'at* "exceptions" to the rule, rather than constituting a competing *kā'ida*.

The unmistakable blossoming of *kaḥwā'id* literature from the 7th/13th century onward expresses several tendencies:

(1) The focus of the *fukahā'* is *madhhab*-internal, not independent, *idjtiḥād* (i. *mutlak*). A good command of the *kaḥwā'id* will qualify the jurist as a *muḍtāḥid al-fatwā*, someone who can issue a legal opinion on the basis of the *kaḥwā'id* of his school.

(2) The school-specific *kaḥwā'id* were collected from the *furū'* works or, where the imāms and other earlier authorities had not been explicit about their principles, were arrived at by induction from their *furū'* decisions (*kaḥwā'id istiḥrā'īyya*). Ibn al-Wakīl (d. 716/1317) and Abū 'Abd Allāh al-Maḥḥarī (d. 758/1357) are said to have done their own *istiḥrā'* of the major Shāfi'ī and Mālikī sources respectively (see al-Bāḥusayn, *Kawā'id*, 324 and 328).

(3) There is a certain competitiveness among the schools to reduce the *kaḥwā'id* to the lowest possible number. The most extreme of these attempts is what Tādj al-Dīn al-Subkī imputes to 'Izz al-Dīn Ibn 'Abd al-Salām (d. 660/1262 [see AL-SULAMĪ]), that he reduced the whole of the Law to one principle, to wit *ḥjālb al-masālih wa-dar<sup>25</sup> al-mafāsīd* "bringing about benefits and warding off corruptions" (see al-Subkī, *al-Ashbāh*, i, 12, referring to Ibn 'Abd al-Salām, *Kawā'id al-ahkām*, i, 6 and 11). These attempts at keeping the number small do not have any practical importance for the lawyer. They are an outcome of the desire to structure the law with the greatest economy.

Although the *kaḥwā'id* are mostly school-specific, some were generally accepted by all schools. Particularly famous are the so-called *al-kaḥwā'id al-khams* "Five Principles". Attested since the 8th/14th century, they are the following (there are variations in wording and sequence):

- (1) *al-umūr<sup>26</sup> bi-maḥāshidihā* "Things [acts] are what they are through the intentions that bring them about";
- (2) *al-dawar<sup>27</sup> yuzāl* "Harm shall be removed";
- (3) *al-'āda<sup>28</sup> muḥakkama* "Custom is made the arbiter";
- (4) *al-mashakkka<sup>29</sup> taḍḍub<sup>30</sup> 'l-taysīr* "Hardship brings about facilitation";
- (5) *al-yakīn<sup>31</sup> lā yuzāl<sup>32</sup> bi-'l-shakk* "Certainty is not erased (superseded) by doubt/uncertainty".

Restricting these principles, also called *al-kaḥwā'id al-kubrā*, the "Major Principles", to the number five may result from a desire for balance; an attendant saying goes: *buniya 'l-Islām<sup>33</sup> 'alā khams wa 'l-fikh<sup>34</sup> 'alā khams* "Islam has been built on five [sc. the *arkān*] and so has jurisprudence".

As for the position of the *kaḥwā'id* literature within legal studies, one may quote the Mālikī Shihāb al-Dīn al-Qarāfī (d. 684/1285), who says at the beginning of his *furūḥ* work that there are two kinds of *uṣūl*: *uṣūl al-fikh* and *al-kaḥwā'id al-fikhīyya al-kullīyya* (*al-Furūḥ*, i, 2), and the Ḥanafī Ibn Nuḍjāyṁ who made the shocking statement that the *kaḥwā'id* are the real *uṣūl al-fikh* (*al-Ashbāh*, 15). While the latter statement seems exaggerated, it is clear that the *kaḥwā'id* were considered an important third "player" alongside the *uṣūl* and the *furū'*.

It should be mentioned that the *uṣūlīs* formulated hermeneutical principles that were called *kaḥwā'id uṣūliyya*; these are at times not carefully separated from the *kaḥwā'id fikhīyya*.

(W.P. HEINRICHS)

**KAWĪR, DASHT-I** [see IRAN. i. 3].

**KAYSŪM** (modern Tkish. Keysun; Grk. Kaison; Arm. Kesun; Frankish Cressum and variants), a place situated to the south of Besnī [q.v.], in east-

ern modern Turkey on the Keysun-çay, an affluent of the Sürfaz-çay, in the upper valley of the Euphrates. Considered in the 9th century A.D. as one of the marches of the Byzantine frontier, it commanded a col on the Besnī road. Its fortress served as a base for the revolt of Naṣr b. Shahāth [q.v.] but was dismantled after Naṣr's submission to al-Ma'mūn in 209/824-5.

Kaysūm was re-occupied by the Byzantines ca. 958, and at the end of the 11th century became the capital of the Armenian lord Gogh Vasil (d. 1112). The Franks annexed it in 1116 and it became part of the lands of the lord of Mar'ash. Baldwin of Mar'ash (d. 1146) rebuilt the fortress in stone, but this has now disappeared. During this Frankish occupation, Kaysūm was the seat of a Latin bishopric. An Armenian bishopric is mentioned up to 1177 and a Jacobite one till 1174. It was even the place of residence of the Jacobite patriarch for a few years. All this indicates that there was living there an important Christian population.

Between 545/1150 and 568/1173 the Saldjūks of Rūm and Nūr al-Dīn b. Zangī occupied it alternately. During Ayyūbid times it came within the territory of Aleppo, but its strategic role declined, and after the passage through it of the Mongols in 1260 it is mentioned only as a village under Armenian domination.

(ANNE-MARIE EDDÉ)

**KAZAKSTĀN**, conventionally **KAZAKHSTAN**, a region of Inner Asia lying essentially to the south of Siberia and north of the older Islamic Transoxania [see MĀ WARĀ' AL-NAHR]; the southern part of what is now the Kazakstān Republic includes what was in mediaeval Islamic times rather vaguely known as Moghōlistān [q.v.]. The modern Kazakstān Republic (formally, Kazakstān Respublikasī) is the largest state of Central Asia; it borders on its north and west with the Russian Federation of States, on the east with China and on the south with Kīrgīzstān [q.v. in Suppl.], Ūzbekīstān [q.v.] and the northwestern tip of Turkmenīstān [q.v.]. The capital since 1997 has been Astana (formerly Aḳmola), although the former capital Almatī (older Russian name, Alma Ata [q.v.]) remains the largest city.

1. Topography and climate.

Kazakstān covers an area of 2,724,900 km<sup>2</sup> and stretches from almost the lower Volga and the Caspian Sea in the west to the Altai and Tien Shan Mountains in the east. Deserts occupy the central and western parts of the country, while the northern part is largely covered by steppes. The highest point is Khantāngīrī peak (6,995 m/22,944 feet) in the southeast. Main rivers are the Sīr Daryā [q.v.] which flows into the Aral Sea, the Ertīs (Irtīsh [q.v. in Suppl.]) and Esīm (Ishīm) which join the Ob' river, the Īle (Ili [q.v.]) which empties into Lake Balkash (Balkhash [q.v.]), and the Oral (Ural [see YAVIḲ]) river which drains into the Caspian Sea.

The average January temperature rises from -17° C

in the north to 0° C in the south, and the average July temperature increases from 19° C in the north to 28° C in the south. Annual precipitation levels are generally low, ranging from about 100 mm in the deserts to between 250 and 400 mm on the steppes, but higher levels of precipitation are observed in the foothills and mountains: e.g. in Almatı at the foot of the Alatau Mountains, it is 640 mm.

## 2. Demography and ethnography.

According to the results of the census in 1999, Kazakhstan has a population of 14,953,100, giving it an average population density of 5.5 persons per km<sup>2</sup>. The proportion of the urban population is the highest among the Central Asian states (56%).

The ethnic composition of the population underwent significant changes during the 20th century. In 1897, roughly 81% of the population of the present-day Kazakhstan territory were Kazaks, and 11% were Russians. But due to continuous large influxes of Russians and other Europeans, as well as mass starvation of Kazaks during collectivisation and forcible sedentarisation in the late 1920s-1930s, the proportion of Kazaks decreased to 30% in 1959, while Russians then occupied 42.7%. Deportation by the Soviet authorities of Čečens, Germans, Koreans and others to Kazakhstan on the eve of and during World War II also made the ethnic composition of the country diverse. In the 1970s, however, reverse migration of Russians to Russia started, and the proportion of Kazaks began increasing. In 1999, Kazaks formed 53.4% of the population; Russians, 30.0%; Germans, 2.4%; Ukrainians, 3.7%; and Uzbeks, 2.5%. The outflow of Russians, Germans and Ukrainians is so intense that the total population of Kazakhstan has been decreasing since 1993.

Most Kazaks were nomadic people until they were forced to settle in the 1930s. They raised sheep, horses, goats and camels, and lived in felt-covered tents (*kūz ūy* in Kazak, *yurta* in Russian) [see KHAYMA. iv]. Nomadism was the best form of adaptation to an arid environment before modern agricultural technology developed. Today, more than one-third of the Kazaks live in cities, whereas rural Kazaks engage in both farming and livestock breeding with limited seasonal migrations. In some areas during summer, Kazaks still live in felt-covered tents, which are also widely used as rest houses during festivals, even in cities.

Kazaks, except for the nobility and slaves, were traditionally divided into three large tribal confederations called *Djuz* (Kazak form, *Zhūz*; the etymology of the term is unclear, though one thinks of Ar. *djuz* 'part, section'): Senior (Ulī *Djuz*, Middle (Orta) *Djuz*, and Junior (Kishī) *Djuz*. The seniority among the *Djuz* was only nominal. The Senior *Djuz* occupied the southeastern part of Kazakhstan, while the Middle *Djuz* occupied the eastern, northern and central parts, and the Junior *Djuz* occupied the western part. Each *Djuz* was divided into numerous tribes and clans. Although these tribal divisions were based on the nomadic way of life in the past, many Kazaks are still conscious of belonging to a *Djuz* and to tribes.

Kazaks also live in Sinkiang in western China (1,257,000 in 1996), Uzbekistan, Russia and other former Soviet countries, Mongolia, Afghanistan and Turkey.

## 3. Languages.

The Kazak language belongs to the Kıpçak group of the Turkic languages, together with Karaikalpak, Noghay, Tatar, etc. Dialectal differences are not great. The written language of premodern times was a Kazak version of Çağhatay Turkic, though its use was lim-

ited. The Kazak literary language began to develop in the second half of the 19th century. In the early 20th century, Akhmet Baytūrsīnov and other intellectuals established the study of Kazak linguistics and reformed the Arabic alphabet so that it would fit the phonetic characteristics of Kazak. In 1928 the Latin alphabet was adopted, to be replaced in 1940 by the Cyrillic one [see further, TURKS. II. Languages, iv, v].

Kazak became the state language in 1989, but most non-Kazak citizens and some Kazaks do not understand it, while almost all citizens understand Russian. Russian was called "a language for inter-ethnic communication" by the language law in 1989, and the constitution in 1995 stipulated that Russian is to be used officially on equal terms with Kazak.

## 4. Religion.

The Kazaks are Sunnī Muslims of the Hanafī *madhab*. Islam was probably first introduced to a part of the sedentary population in southern Kazakhstan by the incoming Arabs from the 8th century onwards, but nomadic people continued to worship Tañrī (the sky [*q.v.*]), fire and other natural beings and spirits. There were Nestorian Christians also. Because of the affinity between Šūfism and local traditional beliefs, Šūfīs, including Ahmad Yasawī (1093?-1166 [*q.v.*]), who lived in Yasi (present-day "Türkistan" or Turkistan in southern Kazakhstan), greatly contributed to the propagation of Islam among both the sedentary and the nomadic populations. After the Mongol invasions, *khāns* of the *Djočid ulus* and the Çağhatayid *ulus* gradually came to support Islam. Kazak *khāns* also maintained close relations with the 'ulamā' and Šūfīs of Transoxania.

Nevertheless, animistic beliefs and shamanistic customs were strongly maintained by Kazaks. Social and political affairs were usually regulated by customary law, 'adat, not by the *Shari'a*. Although Tatar *mullās* strengthened Islamic norms among the Kazaks, Kazak intellectuals in the 19th and the early 20th centuries were more oriented towards European culture than towards Islam. Soviet anti-religious policies further weakened the influence of Islam on Kazaks.

From 1943, the Spiritual Directorate of Muslims of Central Asia and Kazakhstan (known as SADUM), which collaborated with the Soviet government, controlled mosques in Kazakhstan. In 1990, the Spiritual Directorate of Muslims of Kazakhstan was separated from SADUM. At the same time, a certain degree of Islamic revival began both within and outside the framework of the Spiritual Directorate.

## 5. History.

From ancient times, present-day Kazakhstan was the territory of various nomadic tribes and states: the Sakae, the Usun, the K'ang-yüeh, the West Turkic Kaganate, the Türgesh, Karluk and Oghuz Kaganates, the Karakhānids, the Karākhītāys, the Kimāks, the Kıpçaks, etc. Based on the Soviet theory which stresses the "autochthonness" of ethnogenetic processes, most Kazak historians think that all these tribes are the Kazaks' direct ancestors; but most Western scholars are sceptical about it.

After the Mongol invasions, the *Djočid ulus* and the Çağhatayid *ulus* were established there. In the mid-15th century, most of present-day Kazakhstan (the eastern *Dash-i Kıpçak*) was inhabited by the nomadic Özbeks, whose ruler was Abu 'l-Khayr, a descendant of Shībān, *Djoči's* fifth son. In ca. 1460, descendants of another son of *Djoči* (the first son, Orda, or the thirteenth son, Toka Temür), *Djānibek* and Girey, split from Abu 'l-Khayr and moved to Moghōlistān

[*q.v.*] (southeastern Kazakstān). After they increased their power, they returned to the Dašt-i Kīpčak and replaced the Ōzbeks, who moved to the south of the Sir Daryā. Their dynasty is known as the Kazak Khānate, but its government structure and territory were unstable, and there is a dispute among Kazakstānī scholars on whether the khānate can be called a "state" or not. In any case, there is scant evidence of the ethnic consciousness of its inhabitants, and it is not clear whether the word "Kazak", which originally means a "independent man" or a "wanderer", meant at this time a distinctive ethnic group.

In the late 17th and the early 18th centuries, fierce battles occurred between the Kazaks and the Oyrads or Oinats (Kalmaks [see KALMUK]) of the so-called Djungar Khānate (western Mongolia). This confrontation, on the one hand, consolidated the Kazaks' ethnic identity, and on the other hand, induced some Kazak khāns to swear loyalty to the Russian Empress Anna Ivanovna, though in practice they remained independent. In the 1820s, Russia abolished the khān's power in the Middle and the Junior Djuz, and started to rule directly most parts of Kazakstān. The territory of the Senior Djuz, which was under the rule of the Khoḡand [*q.v.*] Khānate, was incorporated into Russia by the 1860s.

During the 1917 October Revolution and the ensuing civil warfare in Russia, Kazak intellectuals established the Alash-Orda autonomous government. After it collapsed, the Autonomous Kazak (mistakenly called "Kirgiz" in Russian usage until 1925) Socialist Soviet Republic was formed inside Soviet Russia. After receiving and abandoning some territories in 1925, it was in 1936 upgraded to the Kazak SSR, one of the fifteen constituent republics of the USSR.

The 1920s and 1930s were especially hard times for Kazakstān: purges, mass collectivisation and forcible sedentarisation killed a large number of politicians, intellectuals, nomads and peasants. But at the same time, the Soviet government started the industrialisation of Kazakstān, which was accelerated during World War II, when factories were evacuated from Central Russia. The ethnic Kazak cadre grew, especially since the 1960s under Dīnmūkhamed Kōnaev, who served as first secretary of the Communist Party of Kazakstān for 25 years. When he resigned under pressure from Moscow in December 1986, Kazak youths in Almatī and other cities held demonstrations, which were suppressed violently.

#### 6. Post-Soviet Kazakstān.

Although the leadership of Kazakstān actively advocated maintaining and renovating the USSR, it declared independence in December 1991 when the USSR collapsed. Nūrsūltan Nazarbāev, who became first secretary of the Communist Party in 1989 and president in 1990, was known as a pragmatic and semi-democratic reformist. But in 1995 he took drastic measures to concentrate power in his own hands; the parliament was suddenly dissolved, the constitution of 1993 was abolished, and the new constitution increased the power of the president and restricted the functions of the parliament. The opposition's sphere of activity is very limited, though it has not been physically liquidated as in Uzbekistān and Turkmenistān.

Although the country is undergoing economic hardship, Kazakstān is rich in natural resources (especially oil and metals), which have not yet been fully exploited. Kazakstān's resources, as well as geopolitical importance, have drawn the attention of many foreign countries, and it maintains basically good relations with all neighbouring countries including Russia and China,

as well as with the United States, Japan and European countries.

**KELANTAN**, a state of northeastern Malaysia.

Lying on the coast adjoining the Malay areas of southern Thailand, Kelantan has long been a centre of devout Islamic scholarship and education, of Malay cultural creativity, and assertive forms of Malay-Islamic politics. Kelantan's traditional religious boarding school academies (*pondok* [see PESANTREN]) and their more illustrious teachers were well known throughout the Malay world; together with Malays from neighbouring Patani [*q.v.*] (Pattani) in southern Thailand, the Kelantanese constituted a sizeable component of the so-called *Djāwa* or Southeast Asian Malay community in 19th century Mecca. By the early 20th century, Kelantan was an important centre of publication of religious and Malay vernacular works and the site of important innovations in the collection and management of religious taxation (*zakat* and *fitra*) through its state religious council (*Majlis Ugama Islam*).

With its people intensely committed to their own local variants of the Malay language and culture, Kelantan has over time elaborated a powerful sense of its own distinctiveness within the wider Malay-Islamic world. It resisted Thai domination in the 19th century, succumbed to British rule in the first half of the 20th, and achieved independence in 1957 as part of the Federation of Malaya, later Malaysia. Since 1959 it has been the stronghold of PAS (*Parti Islam Se-Malaysia* [*q.v.*]), an avowedly Islamist party which, while playing a leading opposition role in national politics, has held power at the state level in Kelantan for much of the post-independence period (1959-78, and 1990 to present).

Since the 1980s, and especially since its return to power in Kelantan in 1990, PAS has promoted a strongly "*Sharī'a*-minded" neo-traditionalistic Islamism. Since 1993, Kelantan has mounted a powerful challenge to the ascendancy of Malaysia's ruling multi-ethnic coalition by questioning the national government's Islamic credentials, most notably through its efforts to secure constitutionally-required federal assent to implement the *Sharī'a* law, including the *hudūd* punishments, in Kelantan state.

**KHĀDJAGĀN**, a Šūfī brotherhood of Central Asia.

The movement of the Kh<sup>w</sup>Ādjagān belongs to the proto-history of the Nakshbandiyya [q.v.] order, which often combines the two groups as the Kh<sup>w</sup>Ādjagān-Nakshbandiyya. This movement, whose first figure is Abū Ya'qūb Yūsuf Hamadānī (d. 535/1140), took over a Sūfī tradition going back to the Prophet through Bāyazīd Bisṭāmī, Salmān al-Fārist and the caliph Abū Bakr. This Sūfī tradition was at first known as the *Tarīkat-i bakriyya* ("Abū Bakr's way") or *Tarīkat-i Šiddiqiyya*, and then at the time of Bisṭāmī, as the *Ṭayfūriyya* (from another name of Bisṭāmī). The main representatives of the Ṭayfūriyya were Abū 'l-Ḥasan Kharakānī, Abū 'l-Kāsim Gurgānī and Abū 'Alī Fārmadī. It is only with Hamadānī, a pupil of the last-named, that the Ṭayfūriyya assumed the designation of *Tarīka-yi Kh<sup>w</sup>Ādjagān* ("way of the masters").

Yūsuf Hamadānī, having studied *fikh* at Baghdād and being connected with the Hanafī law school, spent his time between the cities of Marw and Harāt in Kharāsān. He was initiated into Sūfism by Abū 'Alī Fārmadī and founded a *khānakāh* [q.v.] at Marw, which became famous as "the Ka'ba of Kharāsān". Also, Hamadānī politely refused the support of the temporal power, in his time represented by the powerful Saldjūk sultan Sandjar [q.v.]. Conflicts over the manner of performing *dhikr*—whether out loud, *qjahrī*, or inwardly and silently, *khafī*—caused divisions in Kh<sup>w</sup>Ādjagān circles and set these against the Yasawī Sūfīs [see YASAWIYYA], just as this later permitted the Nakshbandīs to distinguish themselves from all other Sūfī brotherhoods. This conflict did not, however, exist in the time of Hamadānī, who practised *dhikr* of heart (*dhikr-i dil*) in preference to a public one (*dhikr-i 'alāniyya*) but without rejecting this last; the *dhikr-i dil* was accompanied by the prolonged holding of the breath which made the Sūfī break out in violent sweats. In a short treatise, the *Rutbat al-ḥayāt*, attributed to Yūsuf Hamadānī, it is stated that "*dhikr* of the body", *dhikr-i tan*, which uses the tongue, *zabān*, is inferior to the *dhikr* of the heart. Moreover, it is averred, if *dhikr-i dil* is practised for forty days, lights will be manifested and will fill the heart.

Following the model of the Prophet and his preceptor Fārmadī, Hamadānī named four of his disciples as his successors. The first was 'Abd Allāh Barakī, originally from Kh<sup>w</sup>Ārazm, who died and left his position to the second person, Ḥasan Andakī, from Bukhārā, who was in turn succeeded by the third, Aḥmad [q.v.] Yasawī (d. 562/1166-7), eponymous founder of the Yasawiyya and a native of Yasi (the present-day Turkistān [q.v.] in Kazakhstān). The hagiographies that later developed in Kh<sup>w</sup>Ādjagān and Nakshbandī circles played down the role of Aḥmad Yasawī, and relate that Aḥmad, who had the reputation of a great spiritual master amongst the nomads, retired after having led the Kh<sup>w</sup>Ādjagān group for some time and installed the fourth of Hamadānī's disciples, 'Abd al-Khālīk Ghudjduwānī (d. 617/1220 [q.v.]), who had not, however, apparently known Hamadānī himself. It is from this period that there dates the opposition between the groups claiming to stem from Aḥmad Yasawī, affirming that Yūsuf Hamadānī favoured *dhikr-i qjahrī*, and the Kh<sup>w</sup>Ādjagān, who attribute to him *dhikr-i khafī*. According to the *Maḳāmāt-i Yūsuf Hamadānī*, attributed to Ghudjduwānī, *dhikr-i dil* was transmitted from Abū Bakr to Hamadānī's master Fārmadī, with an uninterrupted chain, and Hamadānī is reported on his death bed to have adjured his four disciples called to succeed him to only practise *dhikr-i dil* and avoid *dhikr-i qjahrī*.

'Abd al-Khālīk Ghudjduwānī is the main figure in

the Kh<sup>w</sup>Ādjagān movement, called "the first in the chain of the masters", *sar-daftar-i ṭabaka-yi kh<sup>w</sup>Ādjagān*, *sar-silsila-yi 'in 'azīzān*, although this title goes back to Yūsuf Hamadānī. Above all, he set forth and codified the main elements of Kh<sup>w</sup>Ādjagān doctrine, which were taken up by certain disciples of his, above all, by Bahā' al-Dīn Nakshband (d. 791/1389 [q.v.]), eponymous master of the Nakshbandiyya. Originally from a family of eastern Anatolia, 'Abd al-Khālīk was born at Ghudjduwān in the Bukhārā oasis, and studied in Bukhārā. He soon evinced an interest in silent *dhikr*, to which he was initiated in a dream by the prophet Khidr. The hagiographical traditions recount that he then met Hamadānī in Bukhārā, becoming the latter's disciple, and Hamadānī authorised him to continue in the way of silent *dhikr*. The great merit of Ghudjduwānī was to have stated succinctly and codified, in the form of the eight adages or rules called "Holy Sayings", *kalimāt-i kudsiyya*, the essentials of Kh<sup>w</sup>Ādjagān doctrine and thought. Bahā' al-Dīn Nakshband enriched these eight rules with three new ones, the whole making up his famous "Eleven Rules" of the Nakshbandiyya, adopted and made the subject of lengthy commentaries by adepts of the order right up to the present day.

At the time of 'Abd al-Khālīk, the "Holy Sayings" had the form of eight rules which, if followed, enabled the Sūfī to concentrate his attention and to organise for himself the contemplative life. 'Abd al-Khālīk seems to have given preference to four of the rules, and these were the subject of a special commentary by such a Nakshbandī author as Aḥmad Kh<sup>w</sup>Ādjagī Kāsānī (d. 949/1542; see his *Risāla-yi ḥāḥār kalīma*, ms. 501/XVI, Bīrūnī Institute of Oriental Studies, Tashkent). The four rules were: (1) "assuming awareness in breathing", *hūsh dar dam*; (2) "observation of one's steps", *naẓar dar qadam*; (3) "journeying in the homeland", *saḡar dar waṭan*; and (4) "taking up a position of retreat within society", *khahwat dar andjuman*. The remaining four rules were: (5) "retaining in memory", *yād kard*; (6) "return [to God]", *bāz gasht*; (7) "maintaining awareness", *niḡah dāsh*; and (8) "keeping in mind", *yād dāsh*.

Nevertheless, the Kh<sup>w</sup>Ādjagān movement had no doctrinal unity or agreement regarding the mystical exercises, and far from remaining united, Ghudjduwānī's disciples split into several rival groups after his death. One of these groups became known as the 'Abd al-Khālīkiyān, "the founder's partisans". The main Kh<sup>w</sup>Ādjagān who figure in the Nakshbandī order's *silsila* after Ghudjduwānī are: 'Arīf Riwgarī (d. 649/1251); Maḥmūd Andjūr Faghawī (d. 710/1310); 'Alī 'Azīzānī Ramitānī (d. 716/1316 or 721/1321); Muḥammad Bābā-yi Sammāsī (d. 755/1354); and Sayyid Amīr Kulāl (d. 771/1370). Despite the importance laid on it by Ghudjduwānī, to be likewise stressed by Bahā' al-Dīn Nakshband, silent *dhikr* was not followed by all Kh<sup>w</sup>Ādjagān circles. These circles developed a strong criticism of Sūfī movements contemporary with themselves and which they used to describe as corrupt. Above all, the Kh<sup>w</sup>Ādjagān held fast to a strict regard for the traditions of Islam, as reported in the *Rashahāt 'ayn al-ḥayāt*, where it is stated that Ghudjduwānī encouraged his disciples to study Islamic law and the *Hadīth*, to avoid ignorant Sūfīs (*sūfiyān-i qjāhil*), always to observe the Muslim worship, not to create any new *khānakāh* or to reside in such an institution, and not to be present at sessions of *samā'*.

There are two precious manuscripts, only brought to light and exploited in recent years, sc. the *Maslak al-'arifin* of Muḥammad b. As'ad al-Bukhārī (mid-8th/

14th century) and the *Manāḳib* of Kh'ādja 'Alī 'Azīzān-i Ramīṭānī (cf. D. DeWeese and J. Paul, below, in *Bibl.*), which are, at the present time, the two main sources on the practices and doctrines of the Kh'ādjaḡān before Bahā' al-Dīn Naqshband. The Kh'ādjaḡān were mainly divided by the questions of *dhikr* and pious retreat (*khālwa*). In Bukhārā, the group headed by 'Arīf Rīwḡarī had good relations with that headed by Awliyā-i Kabī, but these deteriorated after the death of the former because his successor, Maḥmūd Andjīr Faghnawī, made the group adopt the open, vocal *dhikr*. The sources also tell us that Bahā' al-Dīn Naqshband, who had been initiated into *dhikr khafī* by 'Abd al-Khālīk Ghudjduwānī in a dream, came into conflict with his own master, Sayyid Kulāl, who was personally a proponent of *dhikr qjāhri*. Ghudjduwānī's followers practised *dhikr* during which they held their breath, whilst concentrating on their *shaykh's* heart, keeping their eyes closed, lips pressed together and tongue up against the palate. Amongst certain of the Kh'ādjaḡān, music and dancing were not formally proscribed. Likewise, *khālwa*, rejected by 'Abd al-Khālīk as also rejected, later, by Bahā' al-Dīn Naqshband, was nevertheless adopted by some members of the order; it was done in a darkened cell, where the adept had to struggle with his self by means of *dhikr*. A famous expression attributed to 'Abd al-Khālīk, "close your door to *khālwa*, but open it to spiritual companionship (*suhba*)", shows the position of the early Kh'ādjaḡān on this subject and further reveals that 'Abd al-Khālīk attributed a major importance to *suhba*, mystical discourse with the spiritual master, which was to become an essential feature for the Naqshbandiyya. Like 'Alī 'Azīzān-i Ramīṭānī, 'Abd al-Khālīk was opposed to the institution of Ṣūfī communal life *par excellence*, the *khānaqāh*, but it is known that there existed amongst Sayyid Amīr Kulāl's disciples a form of association, whose precise nature is not clear, called a *djāma'at-khāna* "house for social gatherings".

The Kh'ādjaḡān nevertheless remained essentially united in face of the other Ṣūfī currents in Central Asia, against the *Ḳalandars* [q.v.] and, in particular, against the Yasawī groups, whom they castigated for their lack of respect for the precepts of Islam. In sum, everything which symbolised Ṣūfism in general was rejected, from the *khānaqāh* to the dervish cloak (*khirka*). The Kh'ādjaḡān were little attracted by asceticism, even if some of them preached abandonment of the secular world, *tark-i dunyā*, and encouraged *khālwa*, and Ramīṭānī went so far as to recommend that the Ṣūfī should have a trade (*hīrfa*), a feature later found amongst the Naqshbandiyya. In fact, a famous formula popularly attributed to Bahā' al-Dīn Naqshband, "the heart should be with God and the hand with some piece of work", *dil bā-yār u dast ba-kār*, seems to have been inherited from a very similar maxim which one group of Kh'ādjaḡān held as a "Fifth Holy Saying" added to the four first ones: "the heart should be with God and the body in the market", *dil ba-yār wa tan ba-bāzār*. Another criticism of the Ṣūfīs on which they were united was rejection of the hereditary succession of *shaykhs*. This explains why, after the deaths of 'Abd al-Khālīk and Bahā' al-Dīn Naqshband, their communities of disciples split into several groups. In the 8th/14th century, Bahā' al-Dīn was unable to unite the various Kh'ādjaḡān groups and was only the master of one group out of many. Even if he did succeed in giving a more homogenous form to the doctrines and practices taught by 'Abd al-Khālīk, and in retaining as vital principles for his own commu-

nity, the one which was to become the Naqshbandiyya, the obligation of a single, silent *dhikr*, the idea of *suhba*, adoption of the eight Holy Sayings and rejection of the practice of *khālwa* or retreat, it was only in the second half of the 9th/15th century, at Samarḡand, with Kh'ādja 'Ubayd Allāh Ahrār [q.v. in Suppl.], that the Kh'ādjaḡān-Naqshbandiyya were to take the form of a powerful, centralised Ṣūfī brotherhood.

**KH'ĀDJAS**, **ḲH'ĀDJAS**, the designation of two lineages of spiritual and political leaders in Eastern Turkestan, the later Sinkiang [q.v.], and, more specifically, in the Altīshahr ("six towns"), now in the western and southwestern parts of Sinkiang, where they played a decisive role from the late 10th/16th century to the last quarter of the 19th century. The lineages are distinguished as the White Mountain (Āfākiyya) line and the Black Mountain (Ishākiyya) line (*aktaghlik* vs. *karataghlik*, names possibly derived from the Tien Shan and Pamir [q.v.] mountain ranges, respectively).

Both lines were descended from the Kh'ādjaḡān-Naqshbandī *shaykh* Ahmad Kh'ādjaḡi-yi Kāsānī, known as Maḳhdūm-i A'zam (d. 949/1542) (Bakhtiyar Babadžanov, *Politicheskaya deyatel'nost' shaykhov Naqshbandiya v Maverannakhre (I polovina XVI v.)*, unpubl. diss., Tashkent 1996), who wielded considerable influence in the Shībānīd [q.v.] internal struggles. One of his sons (the fourth or the seventh), Ishāḳ, had to leave

Transoxania and came to Altīshahr at an unspecified moment (between 990/1582 and 999/1591) where he stayed for some years; he died in Samarqand in 1007/1599. He left behind an already powerful organisation that was to become the Black Mountain faction. Very much like their counterparts in Transoxania, the representatives of Kh<sup>w</sup>ādja Ishāk acted as intermediaries between the Āghatayid rulers and between the rulers, the begs and their subjects. They acquired considerable wealth (pious foundations, *waqf*, and donations, *niyāzmandī*) on which their influence rested as well as on the communal affiliations of settled and nomadic communities. Almost from the start, they were active promoters of Islam among the still shamanistic Kīrghīz [*q.v.*] and Kazakhs [see KAZAK] (J. Fletcher, *Confrontations between Muslim missionaries and nomad unbelievers in the late sixteenth century: notes on four passages from the 'Diyā' al-qulūb'*, in *Tractata Altaica*, ed. W. Heissig, Wiesbaden 1976, 167-74). These endeavours must have gone on throughout. Later on, the White Mountain faction was instrumental in spreading Islam to China proper, beginning in the middle of the 17th century. (Fletcher, *The Naqshbandīya in northwest China*, in his *Studies on Chinese and Islamic Inner Asia*, ed. B. Manz, Variorum, Aldershot 1995, no. XI, 1-46; this book also contains reprints of other relevant published texts by Fletcher).

It was unusual that a ruler came to occupy an elevated position in the spiritual hierarchy. This was, however, the case with Muḥammad Khān (r. 999-1018/1591-1609), who is even said to have been the Axis (*kutb*) (Shāh Mahmūd Ārās, *Tārīkh (Khronika)*, ed. O.A. Akimushkin, Moscow 1976 [Pamyatniki pis'mennosti vostoka, 45]). But apart from this, leadership in the Black as well as White Mountain group seems to have been hereditary, this principle extending even to the *khalīfas* and sometimes to affiliations as well. The spiritual organisation adapted itself to the strongly localised political system of Altīshahr: a city oasis governed by members of the ruling family or leading men of certain clans, with sometimes only nominal overlordship of the paramount khān. The cities all had their *khalīfas*. Whereas the centre of the Black Mountain faction was at Yārkand [*q.v.*], where the khān also had his capital, the White Mountain faction centred on Kāshghar [*q.v.*].

The Ishākiyya Kh<sup>w</sup>ādjas did not achieve a monopoly of spiritual guidance, however; at least in the north and northeast of Altīshahr and beyond in the area where the Āghatayid rulers held sway, other (sometimes local) groups were also active (in Kuldja: see Masami Hamada, *De l'autorité religieuse au pouvoir politique: la révolte de Kūcā et Khwāja Rāshīdīn*, in M. Gaboricau, G. Veinstein and Th. Zarcone (eds.), *Naqshbandis. Cheminement et situation actuelle d'un ordre mystique musulman*, Paris-Istanbul 1990, 455-89; in Turfan, the local shrine of Alpātā/Alfātā: see Akimushkin, *op. cit.*, 165). To what extent other brotherhoods were active in the region remains open to question.

The Ishākiyya supremacy did not last long. Sometime before the middle of the 17th century, another descendant of Makhdūm-i A'zam made his appearance in Altīshahr in the person of Muḥammad Yūsuf (d. 1063/1653), son of Muḥammad Amīn, the eldest son of the Makhdūm. He was able to gain a foothold in Kāshghar and soon became influential with the Āghatayid khān. As a result of the rivalries that surrounded and followed his death, his son Hidāyat Allāh, better known as Kh<sup>w</sup>ādja Āfāk ("Master of the Horizons", whence the name by which the White Mountain faction was also known, sc. Āfākiyya)

was compelled to take flight. The influence he had gained may be seen from the fact that he was given a Moghul (although not Čingisid) princess in marriage. Āfāk then succeeded in persuading Galdan, the Zunghar khān, to mount a campaign against Altīshahr (1090/1679, when Galdan was only beginning his career as a conqueror). The report of Muḥammad Sādiq that this was achieved due to a letter from the Dalai Lama (the Zunghars had by then become Lamaist Buddhists) should perhaps also be seen as indicative of the view that spiritual leadership should prevail over military (Muḥammad Sādiq, *Tadhkira-yi kh<sup>w</sup>ādjaġān*, epitome by R. Shaw, *A history of the Khojas of Eastern Turkistan*, in *JASB* [1897], extra number, pp. i-vi and 1-67, at 36-7; German version by M. Hartmann, *Ein Heiligenstaat im Islam. Das Ende der Āghatayiden und die Herrschaft der Choġas in Kasġarien*, in *Der islamische Orient. Berichte und Forschungen*, vi-ix, Berlin 1905, 195-374, at 210-2). The Zunghars conquered Altīshahr and reinstated Kh<sup>w</sup>ādja Āfāk as their vicegerent (r. 1090-1105/1679-94). The White Mountain faction now ruled with a degree of independence, but acknowledged Zunghar overlordship, paying them tribute (a comparatively heavy one, according to Fletcher's figures, unpubl. ms., ch. 3, 149-51) and accepting that members of their family be held as hostages. The area under this kind of Kh<sup>w</sup>ādja authority cannot have extended much over the four cities of Khotan, Yārkand, Kāshghar and Aqsu, the Oiroi Zunghars having established their rule over the northeastern regions already in 1659. Nor had Āghatayid rule come to an end; and even if the newly appointed khān 'Abd al-Rashīd (who married his daughter to Āfāk, who thus became tied to the Čingisid house) was a puppet of the Zunghars, he was influential enough to build a faction together with the ousted Black Mountain followers; his attempt at a Moghul-Black Mountain revival was, however, worsted in 1093-4/1682-3, and he was replaced by his brother. The White Mountain faction then set out to destroy their Black Mountain opponents, and after the Āghatayid figurehead had died in 1103/1692, they tried to make do without a Moghul khān. In the ensuing strife, the deciding force in the south-western part of Altīshahr came to be the Kīrghīz, but it was still a Moghul who called back Kh<sup>w</sup>ādja Dāniyāl of the Black Mountain faction. Dāniyāl established himself with Kīrghīz help, and until 1125/1713, when the Zunghars re-established their rule under Tsewang Rabtan, the oasis cities were under different nomad-Kh<sup>w</sup>ādja coalitions. After Dāniyāl had died ca. 1142/1730, the cities of Yārkand, Khotan, Kāshghar and Aqsu were divided up between his sons, thus furthering localisation. The next turn was induced by an attempt of the Black Mountain faction to break loose of the Zunghars, countered by their appeal to the White Mountain group (1166/1753); fights ensued between the two Kh<sup>w</sup>ādja factions, some Kīrghīz begs, urban local begs, the nominal Zunghar ruler and his opponent Amursana, who was backed by the Chinese. As a result, the Zunghar empire was taken over by the Manchu Emperors, who consequently also came to be overlords of the Tarim [*q.v.*] basin as well.

The Kh<sup>w</sup>ādjas failed because they were unable to build up a unified leadership, but more important still was their failure to gain a military basis of their own, not easily achieved under the circumstances. The resources available in the sedentary oasis economy could hardly support a state apparatus for revenue raising, and revenue was inadequate for building enough military strength to keep the nomads out.

Therefore, throughout this period, military power rested not with the urban-based Kh<sup>w</sup>Ādjas, but essentially with their mainly nomadic Zungghar overlords and, as far as the region itself is concerned, with various Kirghiz groups.

It might appear that after the Chinese conquest of Altīshahr, the fate of the Kh<sup>w</sup>Ādjas was sealed, but this was not the case. After the first attempts at restoring White Mountain power had been crushed by the Manchus and their representatives in Altīshahr (Amīn Kh<sup>w</sup>Ādja of Turfan [q.v.], whose spiritual affiliation is not altogether clear), a period of relative stability ensued, which came to an end in 1820. By this period, the Khōkand [q.v.] khānate had consolidated itself in the Farghāna basin, serving as a platform for repeated Kh<sup>w</sup>Ādja incursions, the last of which occurred as late as the 1860s when Buzurg Khān, together with Ya'kūb Beg [q.v.], invaded Kāshgharia. It was only after the short-lived state of Ya'kūb Beg had been crushed in 1878 that the region was incorporated into the Chinese empire under the name of Sinkiang (1884) ("New dominion" [q.v.]), and this seems to have been the end of open Kh<sup>w</sup>Ādja activity.

*Bibliography:* Partly given in the article. Islamic sources include hagiographic texts for both lineages as well as chronicles, many of them still remaining in manuscript; they are best discussed by Akimushkin and Fletcher. Chinese sources take prime importance only after the middle of the 18th century. *Tārīkh-i Kāshghar, faksimile rukopisi; izdanie teksta, vvedenie i ukazateli O.F. (J. PAUL)

**KHĀ'IR BEG** (Khāyir or Khayr Bey), the last Mamlūk governor of Aleppo, subsequently first Ottoman viceroy of Egypt.

He was the son of Malbāy b. 'Abd Allāh al-Djarkasī (sic), a Muslim Abaza trader in Circassian *mamlūks*. He was born at Samsun (on the Black Sea coast within the Ottoman Empire), and his father presented him, although not a slave, with his four brothers to the Mamlūk Sultan al-Ashraf Kā'it Bāy [q.v.]. He was enrolled in the Royal Mamlūks, and was formally "emancipated" by the grant of a steed and uniform. He became an *amīr* of Ten in 901/1495-6, and subsequently an *amīr ṭabkhkhāna*, making his first contact with the Ottoman court as an envoy in 903/1498 to announce the accession of al-Nāṣir Muḥammad b. Kā'it Bāy to Bāyezīd II. He was promoted *amīr* of a Hundred by al-Ashraf Djānbulāt (905-6/1500-1). Under al-Ashraf Kānāshah al-Ghawrī, he held the important post of great chamberlain (*hādīb al-hudūdājāb*) until in 910/1504-5 he was appointed governor of Aleppo, where he was regarded as a severe but capable administrator. He was very wealthy, and maintained a large *mamlūk* household as his power-base, significantly including a company of arquebusiers "as in the Otto-

man armies" (*kamā fī 'asākīr al-mamlaka al-rūmīyya: Durr*, i/2, 607). To Kānāshah he must have seemed an overmighty subject, and the sultan unsuccessfully attempted to poison him.

His governorship of Aleppo ended with Selīm I's conquest of Syria, in which he colluded by going over to the Ottomans at the decisive battle of Marḍj Dābiḳ [q.v.] (25 Radjab 922/24 August 1516). This act of treachery won him his final and supreme promotion, when Selīm, before leaving Cairo on 13 Shā'bān 923/24 August 1517, appointed him viceroy of Egypt. He held this position until his death on 14 Dhū 'l-Ḳa'da 928/5 October 1522, and although he kept up something of the state and usages of the defunct Mamlūk sultans, he remained ostentatiously loyal to his Ottoman suzerain. His viceroyalty began with the capture and execution of Kāsim Bey [see KĀSIM, 4], a grandson of Bāyezīd II, to whom Kānāshah al-Ghawrī had given asylum. When Süleymān became sultan in 926/1520, and Djānbirdī al-Ghazālī [q.v.], the governor of Damascus and his former accomplice at Marḍj Dābiḳ, rose in revolt, Khā'ir Beg studiously kept aloof, and prevented disaffected Mamlūks from joining him. Within Egypt, Khā'ir Beg's viceroyalty witnessed the restoration of stability. The terrorisation of the defeated Mamlūk soldiery ceased; they emerged from hiding, and resumed their traditional dress. Relations with the Ottoman troops, who envied their better pay and rations, were naturally uneasy. Although the former hierarchy of rank and office had fallen with the Mamlūk sultanate, the old administrative system largely survived, to be codified and perpetuated in the *kānūn-nāme* of Egypt, three years after Khā'ir Beg's death. Presiding over a crisis of transition in Egypt, Khā'ir Beg was thus one of the most successful survivors of the old régime.

*Bibliography:* For Khā'ir Beg's early history, see Ibn Iyās, *Badā'i' al-zuhūr*, ed. Mohamed Mostafa, v, 253-4 n. 22, tr. G. Wiet, *Journal d'un bourgeois du Caire*, ii, 193-4; for his governorship of Aleppo, Ibn al-Hanbalī, *Durr al-habab fī ta'rīkh a'yān Halab*, i/2, 603-9; for his vice-royalty of Egypt, Ibn Iyās, *Badā'i'*, v, 203-486; Wiet, *Journal*, ii, 193-467; other references in respective indexes. Ibn Zunbul, *Ta'rīkh ghazwat al-Sultān Salīm Khān m'a'a al-Sultān al-Ghawrī*, although apparently detailed, is essentially a prose saga forming a threnody on the passing of the Mamlūk sultanate. (P.M. HOLT)

**KHAL'** (A.), the verbal noun from the verb *khala'a* "to take off (a garment), to remove, to discharge from an office, to depose" (sc. 'an *'amalihi*, Lane, i, 2, 790a), "to dethrone (e.g. a ruler)", is the technical term for deposition. The modern Arabic term is *khala'a min al-'arsh* or *raf'a'a min al-manṣab*.

(i) *Historical development.* There are many cases of deposition or forced abdication throughout the course of Islamic history, e.g. in the Umayyad period (cf. Mu'āwiya II, 64/684 and Ibrāhīm, 126/744) and especially in 'Abbāsīd times. During this period, about a quarter of the rulers were deposed or forced to abdicate, pressured by the *de facto* ruling military leaders, after years of military disaster and misrule through favourites had amply demonstrated the incompetence of the caliphs. The unstable caliphs, many of whom had something of a genius for making bad situations worse, inevitably stimulated the claims of usurpers. After the war between the brothers al-Amīn and al-Ma'mūn, who each declared the other deposed [see KHALIFA, at Vol. IV, 940a], the situation culminated in the anarchic period of Sāmarrā' and continued under Būyid rule (320-447/932-1055) and that of their

successors, the Saldjūk sultans of 'Irāk and western Persia (447-590/1035-1194), in whose hands the caliph was but a mere tool. The majority of the 'Abbāsīd caliphs were forced to abdicate, e.g. al-Musta'īn in 252/866 and his two successors, al-Mu'tazz in 255/869, and al-Muhtadī the following year. One ruler, al-Muqtadir, had even to abdicate twice, in 296/908 and 317/929, and three caliphs, al-Kāhīr in 322/934, al-Muttakī in 333/944 and al-Mustakfī in 334/946, were blinded, so that they were legally incapacitated from ever regaining power. Often the military leaders forced them, sometimes brutally, to abdicate, issuing an elaborate, sometimes falsified, document of the deposition, accusing them of treason, oath-breaking, etc., and insisting on a formal, written document of abdication. This act, considered as an essential part of the deposition process and registered officially by the judges, aimed at the nullification of the oath of allegiance. The forced abdication was accompanied by symbolic acts such as the taking off of clothes or shoes (cf. in the Old Testament, Ruth, iv. 7; see Goldziher, *Abhandlungen* i, 47-8), or turbans, or rings, and the yielding up of the insignia. Thus deprived of the sovereign dignity, the deposed caliph had to pay homage to his tractable successor, who was speedily installed. Often kept prisoner thereafter, many rulers were murdered, usually by rivals and relatives, or soon died. A striking example of a real deposition is the dethronement *in absentia* of al-Rāshīd bi'llāh by al-Mas'ūd b. Muḥammad in 530/1135. The practice of deposing rulers remained widespread throughout the Islamic world, particularly in the period of the Mamlūks and in Ottoman times. Often accused of alleged debility, a dozen Ottoman sultans were deposed, sc. Muṣṭafā I (1027/1618 and 1032/1623), 'Othmān II (1032/1622), Ibrāhīm (1058/1648), Meḥmed IV (1099/1687), Muṣṭafā II (1115/1703), Ahmed III (1143/1730), Selīm III (1222/1807), Muṣṭafā IV (1223/1808), 'Abd al-'Azīz I (1293/1876), Murād V (1293/1876), 'Abd al-Ḥamīd II (1327/1909) and Meḥmed VI (1341/1922). Then, on 3 March 1924, the Grand National Assembly in Ankara definitively abolished the Ottoman caliphate, resulting in the creation of a secular Turkish state under Muṣṭafā Kemāl Atatürk [*q.v.*].

(ii) *Legal aspects.* The various instances of deposition became the starting point for subsequent discussions by Muslim writers. The question of the legitimacy of deposing a ruler was answered in different ways, but in general, Muslim writers denied to mere mortals the right of deposing rulers. The utterance *sultān 'ādil khayr min sultān zalūm wa-sultān zalūm ghashūm khayr min fitna tadūm* may demonstrate the attitude towards tyranny and the duty to obey even an unjust ruler (see details in U. Haarmann, "Lieber hundert Jahre Zwangsherrschaft als ein Tag Leiden im Bürgerkrieg", ein gemeinsamer Topos in islamischen und frühneuzeitlichen europäischen Staatsdenken, in U. Tworuschka (ed.), *Gottes ist der Orient, Gottes ist der Okzident. Festschrift für A. Falaturi*, Cologne-Vienna 1991, 262-9). The learned *kādī* al-Māwardī (d. 450/1058) defined in his *al-Aḥkām al-sultāniyya* (ed. M. Enger, Bonn 1853, 5, 23, 25-6, tr. E. Fagnan, Algiers 1915, 7-8, 30-1, 33) the office of the ruler and his duties. He laid down in his first chapter that any corrupt ruler who failed to meet the standards for the just, legitimate caliph might expect legitimate opposition and deposition, though he greatly feared misuse here. His exposition of the criteria for legitimate rulership played an important role in later times, and was cited again and again, for instance by Ibn Djamā'a (d. 733/1333 [*q.v.*]) (see his *Tahṭīr al-aḥkām*

*fī tadbīr ahl al-islām*, ed. H. Kofler, in *Islamica*, vi [1934], 349-414, vii [1935], 1-64, and [1938], 18-129, see ch. 1, § 3, and ch. 2, § 7). Other than a single passage in al-Fārābī's work on the perfect state (*Mabādi' āra' ahl al-madīna al-fāḍila*, ed. F. Dieterici, Leiden 1895, repr. 1964, ch. 29, 63, tr. F. Dieterici, Leiden 1900, 100, ed. R. Walzer, Oxford 1985, 258, tr. R.P. Jaussen *et alii*, Cairo 1949, ch. 29, 87), the sources of political theory contain no distinction in the two bodies of the ruler, the visible individual and the objective institution, as in mediaeval European theories; see the exhaustive study of E. Kantorowicz, *Die zwei Körper des Königs. Eine Studie zur politischen Theologie des Mittelalters*, Munich 1994, esp. 385.

**KHĀN, 'ABD AL-GHAFFĀR** (1890-1988), Pathan leader and politician.

He was born at 'Uḥmānzay in the Peshawar district of the North West Frontier region of British India, his father Bahrām Khān of the Muḥammadzay clan being a wealthy landowner and the chief khān of his village Hashtanagar. Educated first at a Kur'ān and then at a mission school, 'Abd al-Ghaffār's early career was similar to those of many of the Muslim activists of his generation. From 1910 he began founding schools to stimulate social reform amongst the Pathans. At the same time, he was in close contact with the 'ulamā' of Deoband, in particular 'Ubayd Allāh Sindhi, and was strongly influenced by the pan-Islamic journalism of *al-Hilāl* and *Ẓamīndār*. After World War I he threw himself into the Khilāfat movement [*q.v.*], and took part in the *Hidjrat* movement [see **KHILĀFA, KHILĀFAT MOVEMENT**] to Afghānistān.

In the late 1920s, after performing the *Ḥadīdj*, the two guiding principles of 'Abd al-Ghaffār's life became clear. The first was his concern to further the social and political advancement of the Pathans, or Pakhtūns as he called them. British rule had greatly enhanced Pathan identity by carving a Pathan province, the North West Frontier Province, out of the Punjab in 1901 to strengthen border security. The problem was that the British, given the province's strategic role and

the relative backwardness of its people, were unwilling to give it the political advancement which had been given to the rest of India. To remedy this situation, 'Abd al-Ghaffār founded in 1928 the *Pakhtun*, the first political journal in Pakhtu/Pashto, and in 1929, the *Khudāy Khidmatgār* or "Servants of God" organisation. *Khudāy Khidmatgārs*, who wore the uniform of a red shirt, did both social service and political tasks. 'Abd al-Ghaffār's second guiding principle was non-violence. His *Khudāy Khidmatgārs*, though drilled in a military fashion, bore no arms and vowed to be non-violent, while he cooperated closely with India's leading apostle of non-violence, Mahatma Gandhi; in 1940, for instance, he resigned from the Working Committee of the Indian National Congress when it rejected a pacifist stance in World War II. Not once throughout a long life of protest did 'Abd al-Ghaffār betray this principle, a remarkable fact given the warlike and vengeful traditions of his people.

From the early 1930s onwards, 'Abd al-Ghaffār was the most influential figure amongst the Pathans, and between 1931 and 1947 he led large numbers of them in support of the Indian National Congress. From 1931, his Frontier Afghān D̄jira [*q.v.* in Suppl.] became the Frontier Congress, and the *Khudāy Khidmatgārs*, the Congress Volunteers and their activities were largely responsible for bringing Congress ministries to power in the Province between 1937 and 1947. But why did these Pathans, staunch Muslims to a man, support the Congress which revealed, on occasion, strong elements of Hindu revivalism? The great personal influence of 'Abd al-Ghaffār and his close relations with Gandhi and Nehru played some part. The power of the Congress in India played the major part, however: it offered the best chance of promoting Pathan interests—of winning provincial autonomy, of destroying British rule and of resisting inclusion within a Panjabi-dominated Pakistan. Only in this last and most vital matter was there ultimately disappointment; in 1947 the Congress abandoned 'Abd al-Ghaffār and his Pathan Congressmen to their fate.

Within Pakistan, 'Abd al-Ghaffār fought for the establishment of a Pathan state, Pakhtūnistān, although the area which it should include, and the degree of autonomy which it should have, remained ill-defined. He was not able to publish the *Pakhtūn*, the *Khudāy Khidmatgār* organisation was banned, and he spent most of his remaining days either in prison or in exile. In January 1988 he died at Peshawar but was buried in Afghānistān at Djalālabād, which he considered the original homeland of the Pakhtūns.

**AL-KHAṢṢĀF**, ABŪ BAKR AHMAD b. 'AMR ('Umar) b. Muḥayr (Mahir? also Mihrān and Mihrawān) al-Shaybānī al-Khaṣṣāf (d. 261/874), famous Hanafī jurist in the practical fields of *wakf*, *hiyal* [*q.v.*], or legal stratagems and devices, and *adab al-kādī*, or laws of procedure and evidence. The sources speak of him as an expert also in the law of inheritance. He transmitted the doctrines of the Hanafī school from his father, who had transmitted them from Hasan b. Ziyād (d. 204/819-20) and Abū Yūsuf [*q.v.*], the students of Abū Ḥanīfa. He was also known as a student and transmitter of *ḥadīth* from no less than twenty scholars.

His family background, as well as the names of his father and grandfather, cannot be definitively determined, although the possible names of his grandfather suggest a Persian ancestry, as a client of the Arab tribe of Shaybān [*q.v.*]. In early life he must have worked as a cobbler (*khaṣṣāf*), since most sources say he lived off this calling. His scholarly endeavours nevertheless attracted the attention of the 'Abbāsīd court, then in Sāmarrā'. He was nominated by the former tutor of the caliph al-Mu'tazz [*q.v.*], with eight other scholars, for judgeships. But they were accused by palace personnel of being members of secessionist groups, so the caliph ordered their expulsion to Baghdād, and al-Khaṣṣāf was attacked by a mob (al-Ṭabarī, iii, 1683). Following the deposition of al-Mu'tazz in 255/869, and the start of the brief rule of al-Muhtadī (255-6/869-70 [*q.v.*]), al-Khaṣṣāf was brought back to the caliphal court as the court lawyer. It was during this period that he wrote a book about *kharāj* [*q.v.*], which unfortunately has been lost. Other books were also lost when his possessions were plundered following the murder of his patron, al-Muhtadī.

Ibn al-Nadīm, tr. Dodge, i, 509, says that al-Khaṣṣāf advocated the doctrines of the D̄jamiyya [*q.v.*]. Since it is known that some Hanafīs advocated these doctrines, it is not unreasonable that al-Khaṣṣāf was one of them.

In the descending order of seven ranks of Hanafī jurists in the practice of *iqṭihād* [*q.v.*], al-Khaṣṣāf has been placed in the third, following the first rank of Abū Ḥanīfa and the second rank of Abū Yūsuf and Muḥammad b. al-Ḥasan al-Shaybānī [*q.v.*]. Jurists of the third rank elucidated problems (*masā'il*) not previously covered by jurists of higher rank (see Taṣḥ-köprüzāde, *Ṭabakāt al-fukahā'*, Mawṣil 1954, 8-10).

His books, according to Ibn al-Nadīm, included the following: (1) *K. al-Kharāj*, which has been lost. (2) *K. al-Hiyal wa 'l-makhārīj*. This book, which deals with legal devices and stratagems, was edited by Schacht, Hanover 1923, but Schacht thought that the book was written in the 4th/10th century and retrospectively attributed to al-Khaṣṣāf. An earlier printing appeared in Cairo in 1314/1896. (3) *K. Ahkām al-awkāf*, Cairo 1322/1904, an early and authoritative treatise on *wakf*. (4) *K. al-Nafakāt*, ed. Abu 'l-Wafā' al-Afghānī, Haydarābād 1349/1930 and Beirut 1404/1984. (5) *K. Adab al-kādī*, which has been the subject of no less than ten commentaries (Ḥādīdī Khalīfa, i, 72-3) including the commentary by Ahmad b. 'Alī al-D̄jaṣṣās, ed. Farhat J. Ziadeh, Cairo 1978, and that by 'Umar b. 'Abd al-'Azīz b. Māza, ed. Muḥyī Hilāl al-Sirḥān, Baghdād 1397/1977. Other works mentioned by Ibn al-Nadīm, and not yet discovered/edited, may be looked up in Ibn al-Nadīm, tr. Dodge, i, 509-10.

*Bibliography:* In addition to the references given in the text, see 'Abd al-Kādir b. Muḥammad al-Kurashī, *al-D̄jawāhir al-mudhiyya fi ṭabakāt al-Hanafīyya*, ed. **KHATT**.

vi. In Chinese Islam.

The evolution of the calligraphic art over almost a millennium amongst Chinese adherents of Islam (those now called the Hui) reflects the history of the implantation of Islam in China and its Sinitisation. During the first centuries of its presence in China,

when this new faith was the achievement of merchants and of emigrants, temporary or permanent, coming from the Near East, Central Asia, Persia and India and mainly settled on the southern coastlands of China, the texts written in Arabic or Persian are to be found on tombstones and funerary stelae. Some date from the 12th century, but most are from the 13th and 14th centuries, the period when the Mongol rulers of China recruited foreigners for governing their Chinese subjects. They are first of all in an ornamental Kufic and then, later, in rounded characters—specimens of what one might call *muḥakkak*, or *rikāʿ*, or *rīḥān* (see the corpus of some 200 examples existing in southeastern China made by a Chinese Islamic scholar, Chen Dasheng, and by an Arabic epigrapher, French by adoption, Ludvik Kalus, *Corpus d'inscriptions arabes et persanes en Chine. I. Province de Fujian*, Paris 1991). But from the 15th century onwards, funerary inscriptions are in Chinese, bearing witness to the integration of foreigners within the enveloping Chinese environment.

However, it was inevitable that, in a land where, in association with poetry, calligraphy was par excellence the art of cultivated persons, the Muslims should develop a personal calligraphic art once they were in possession of their own literature. They themselves characterise their calligraphic hands (see [in Chinese] Ch'en Chin-hui/Chen Jinhui, *Shih-lun a-la-po shu-fa tsai Chung-kuo Mu-szu-lin chung-te ch'uan-po yü fa-chan/Shilun alabo shufa zai Zhongguo Muslin zhongde chuanbo yu fazhan* ["On the dissemination and development of Arabic calligraphy among Chinese Muslims"], in *Shih-chieh tsung-chiao yen-chiu/Shijie zongjiao yanjiu*, 1994, no. 2, 96-9) in terms of the actual instrument used for writing, whether a kind of bamboo reed or, more often, a brush made from the hairs of various animals, or in terms of a style inspired by Kufic, *nashk*, *thulth* or "Persian" (i.e. probably *nasta'liq*). But these styles are, in fact, all so strongly marked by Chinese influence that they speak of a "Chinese style" of their Arabo-Persian calligraphy, whence a cursive script which imitates the Chinese writing "of grass" (*ts'ao-tzu/caozī*), one almost unreadable for the uninitiated.

Another, more realistic, classification, operates substantially in terms of support for the writing and, consequently, of its destination. Books entirely in Arabic or Persian are extremely rare, Islamic literature being generally written in pure Chinese. Nevertheless, the Mission d'Ollone, which explored Western China during 1906-9, reported from the strongly Islamised region of Kansu [q.v.]/Gansu the existence of some ten manuscripts in Persian, locally written and in a good *nashkī* hand of the 18th or 19th century, and two in *nasta'liq* (see Mission d'Ollone, *Recherches sur les musulmans chinois*, Paris 1911, 284-93, or in *MM*, viii-ix [1909]). Of a wider distribution, there are, from the 19th century, cheap, bilingual publications, in which the Arabic words, glossing the Chinese words and themselves accompanied by an approximate phonetic "transcription" in Chinese characters, are in a clumsy script (arising from the difficulty that Chinese engravers find in preparing plates for impression in the Arabic alphabet and, probably also, because of an imperfect education in local Qur'ān schools). Books where the Chinese characters are in a deformed state in imitation of Arabic characters are especially curious.

The type of calligraphy of which the Chinese Muslims are excessively fond, in the 1990s more often than not, is a stylised, decorative calligraphy in which "calligraphy and design make up a single whole (*shuhua he-i/shuhua heyi*)" and which plays a role at the

same time both propitiatory and displaying identity. These may be on paper, at the head of certain publications; or, above all, in the form of the so-called "designs of Qur'ānic letters" (*ching-tzu-hua/jingzihu*), with a composite Sino-Arabic technique and model, often found in vertical decoration (causing an extreme distortion of the Arabic script) or in a band in the centre of the prayer room, either in two parallel bands here and there in the mosque's *mīhrāb* [q.v.] or the prayer corner in a private house, or else in four bands put together on screens. In passing judgement on a piece of decorative calligraphy in Arabic characters, the believers are unconcerned about the form of the letters or the deformations necessary to fit them within a geometrical figure or to form the silhouette of an auspicious Chinese character; they make, rather, a general judgement using the same ideas with which they would judge a piece of Chinese calligraphy. Hence they recognise the use of the "northern style" for what is vigorous, and the more supple "southern style", that of the northwest being the most distinguished. In China, calligraphy, however Arabic it may be, forms an undeniable role in making up the Chinese culture of believers.

(FRANÇOISE AUBIN)

**KHAWLA** BT. ḤAKĪM b. Umayya b. Hāritha al-Sulamīyya, an early supporter of Muḥammad's cause at Mecca and an associate of his.

She was the daughter of a man of Sulaym [q.v.] who had come to Mecca and had become a confederate there of 'Abd Manāf, and of a woman of 'Abd Shams b. 'Abd Manāf; hence Khawla was related maternally to the Prophet himself. She was an early convert to the new teaching, in company with her husband, the ascetic 'Uthmān b. Maz'ūn [q.v.]. When he died in 3/624-5, Khawla is said to have "offered herself" (*wahabat nafsahā*) to Muḥammad, but the latter "put her off" (*ardjā'ahā*). She plays a role in Muḥammad's life story as the person who looked after him when Khadīdja [q.v.] died and who counselled him to marry the child virgin 'Ā'isha and the widow Sawda b. Zam'ā [q.v.].

(C.E. BOSWORTH)

**KHAYRKHĀH-i HARĀTĪ**, MUḤAMMAD RIḌĀ B. SULTĀN ḤUSAYN, Nizārī Ismā'īlī *dā'ī* and author. Born into a leading Nizārī Ismā'īlī family in Ghūriyān near Harāt, in present-day Afghānistān, towards the end of the 9th/15th century, Muḥammad Riḍā b. Kh'ādja Sultān Husayn Ghūriyānī, better known as Khayrkh'āh-i Harātī, died not long after 960/1553, the latest date mentioned in his writings. Thus Khayrkh'āh flourished in the early Andjudān period in post-Alamūt Nizārī history, when the Nizārī *dā'wa* and literary activities had begun to revive under the direct leadership of the Nizārī *imāms* themselves. In fact, Khayrkh'āh represents the second most important literary figure, after Abū Ishāq-i Kūhīstānī (d. after 904/1498-9), in the contemporary Persian Nizārī Ismā'īlī community; and his works are invaluable for understanding the Andjudān revival in Nizārī Ismā'īlism and the Nizārī doctrine of the time.

A cheap production, from Shantung/Shandong in 1874, in which the Arabic gloss (comprehensible by turning the book through 90°) has a supergloss of a transcription of the Arabic with the help of Chinese characters the *Chiao-k'uan ch'ai-yao/jiaokuan jieyao* ("Quick résumé of the articles of the Faith") by Ma Po-liang/Ma Boliang, 1678.

A small Qur'anic manual from 1912, in which the Chinese script tries to resemble Arabic writing.

Examples of different types of artistic calligraphy made, as is stated in the lower part of the illustration, by the imām (ahong) Chang Kuo-chün/Zhang Guojun, of the mosque of Yang-chi'ao-chen/Yangqiaozhen ("town of the Yang bridge"), in the sub-prefecture (hsien/xian) of Chien-ch'uan/Jianquan in Anhui/Anhui province. In the centre, on the left-hand side, the Chinese seal of Chang Kuo-chün stands instead of a signature, according to Chinese custom (illustration taken from the journal of the Islamic Association of the PRC, the Chung-kuo Mu-szu-lin/Zhongguo Musilin (1995), no. 6, at p. 45.

Written by a celebrated calligrapher of the present time, an *imām* (in Chinese, *ahong*) of Tientsin/Tianjin, Liu Ch'ang-ming/Liu Changming (b. 1927), the Chinese character, above all auspicious, *shou/shou*, is formed by the upright shafts of the Arabic letters. The artist's signature is given in Arabic below, and above, with a Chinese seal (work dating from 1985).

In the autobiographical section of his *Risāla*, **Khayrkhāh** relates how his father, a *dā'ī* in the Harāt region, was murdered by brigands whilst on a journey to see the *imām* in Anḍjudān near Maḥallāt. Subsequently, the Nizārī *imām*, probably Mustanṣir bi'llāh III (d. 904/1498), better known as Shāh Gharīb, appointed **Khayrkhāh**, then only nineteen years of age, to the position of the chief *dā'ī* or *ḥudūdīya*, then more commonly designated as *pīr* of **Khurāsān** and **Badakhshān**. **Khayrkhāh** also visited the Nizārī *imām* of the time at Anḍjudān and has preserved unique details in his *Risāla* on how the *imām* managed the affairs of the Nizārī *da'wa* from his headquarters in Persia.

**Khayrkhāh-i Harātī** was a prolific writer and his works, all written in Persian, have been mainly preserved by the Nizārī Ismā'īlī communities of **Badakhshān** (now divided between **Afghānistān** and **Tādjikistān**), **Hunza** and other northern areas of **Pakistan**. **Khayrkhāh** also composed poetry under the pen-name (*takhalluṣ*) of **Gharībī**, based on the name of his contemporary Nizārī *imām*. His writings include *Faṣṣā dar bayān-i shīnākht-i imām* (ed. and tr. W. Ivanow in his *Isma'īlīca*, in *Memoirs of the Asiatic Society of Bengal*, viii [1922], 1-49; later editions and translations of this work by Ivanow were published in 1947, 1949 and 1960 in the series of publications of the Isma'īlī Society of **Bombay**), and the *Risāla-yi Khayrkhāh-i Harātī* (originally partially ed. and lithographed by Sayyid Munir **Badakhshānī** in **Bombay** in 1333/1915), critically edited together with his *Kita'āt* and selections of his poetry (*ash'ār*) by Ivanow and published in a collection entitled *Tasnīfāt* in Isma'īlī Society series A, no. 13, **Bombay** 1961. As Ivanow showed, **Khayrkhāh** also produced a plagiarised version of **Abū Ishāq-i Kūhistānī's** *Haft bāb* (ed. Ivanow, Isma'īlī Society series A, no. 10, **Bombay** 1959, 3-8) under the title of *Kalām-i pīr* (ed. Ivanow, Islamic Research Association series, no. 4, **Bombay** 1935, introd.), attributing it to **Nāṣir-i Khusrāw** in order to enhance its popularity among the Nizārī communities of Persia and Central Asia.

**KHIFĀD** [see **KHAFD**].

**KHODJĀ-ZĀDE**, Muṣliḥ al-Dīn Muṣṭafā b. Yūsuf, born into a well-to-do family in **Bursa**, was one of the leading Ottoman scholars of the 9th/15th century. Among others he studied with **Khidr Beg** [q.v.], and began his career as *kādī* in **Kaṣṭal** under **Murād II** [q.v.]. After 857/1453 he was appointed a private teacher of **Mehmed II** and held high positions in the law administration (*kādī 'askar* [q.v.], *kādī* in **Edirne** and **Istanbul**) and in the educational system of the empire (professor at the **Sultāniyya** in **Bursa** and in **Istanbul**). After 1470, following intrigues at the court, he was removed to **Iznīk**. Under **Bāyezīd II** [q.v.] he was rehabilitated and reappointed as professor and *mufṭī* [q.v.] in **Bursa**, where he died in 893/1488.

Most of his works have been lost, but those which have survived show the high level of his knowledge as well as of the educational system at the Ottoman universities in the 9th/15th century. Among the works

that have survived are publications on the following subjects: (a) *Grammar*: a commentary on **al-Zandjānī's** *al-'Izzī fi 'l-tayrīf* (evidently composed as a textbook for **Mehmed II**); (b) *Fikḥ*: 1. Glosses on **al-Taftāzānī's** commentary on **Maḥbūbī's** *Tanḏīh*. 2. Glosses on **al-Djurdjānī's** glosses on **al-'Idjī's** commentary on **Ibn al-Ḥādījīb's** *Mukhtasar Muntahā al-su'āl*; (c) *Kalām*: 1. Commentary on **al-Bayḍāwī's** *Tawālī' al-anwār*. 2. Glosses on **al-Khayālī's** glosses on **al-Taftāzānī's** commentary on **al-Nasafī's** *Alā'id*. 3. Glosses on **al-Djurdjānī's** commentary on **al-'Idjī's** *Mawākif* (this last work of **Khodja-zāde**, apparently unfinished, is critical of **al-Djurdjānī**); (d) *Philosophy*: 1. Glosses on **Mawlānā-zāde's** commentary on **al-Abḥārī's** *Hidāyat al-ḥikma*. 2. Commentary on **al-Urmawī's** *Maṭālī' al-anwār*.

**Khodja-zāde's** fame here is above all based on a work called *Tahāfut al-falāsifa* (printed in **Cairo** in 1321/1903-4, together with the *Tahāfut* of **al-Ghazālī** and the *Tahāfut al-tahāfut* of **Ibn Rushd**). The work was written at the instigation of **Mehmed II**, who organised a competition between **Khodja-zāde** and 'Alā' al-Dīn **Tūsī** to answer the question who had been right in the dispute between **al-Ghazālī** and **Ibn Rushd**. **Khodja-zāde** gave a politic answer. Basically he sided with **al-Ghazālī** but corrected the latter's views on several points. At the same time, he emphasised that only the less important philosophers had made mistakes, while **Ibn Rushd** had a thorough command of his subject. This compromising attitude apparently carried approbation, for **Khodja-zāde** was not only proclaimed winner by **Mehmed II**, but his *Tahāfut al-falāsifa* was still much read in the 10th/16th century and commented upon by several authors, among whom **Kemāl-Pasha-zāde** [q.v.].

*Bibliography*: **Tāshkōprūzade**, *Miftāḥ al-sāda*, **Beirut** n.d., ii, 161 ff.; idem, *al-Shāḳā'īk al-nu'māniyya*, tr. O. Rescher, repr. **Osnabrück** 1978, 76-88; **Muḥammad al-Shawkānī**, *al-Badr al-tālī*, **Cairo** 1348/1929-30, i, 306-8; **Mübahat Türker**, *Üç tahāfut bakımından felsefe ve din münasebetleri*, **Ankara** 1956; **Hassen Jarrai**, *Tahāfut al-falāsifa par Khwādja Zāde*, diss., **Paris** 1972, unpubl.; **Mustafa S. Yazıcıoğlu**, *Le kalām et son rôle dans la société turco-ottomane aux XV<sup>e</sup> et XVI<sup>e</sup> siècles*, **Ankara** 1990, esp. 101 ff.

(U. RUDOLPH)

**KHODJIAS** [see **KHĀDJIAS**, in Suppl.].

**AL-KHULAFĀ' AL-RĀSHIDŪN** (A.), literally, "the Rightly-Guided Caliphs", the four heads of the nascent Islamic community who succeeded each other in the thirty years or so after the death of the Prophet **Muḥammad** in **Rabī' I** 11/June 632. The qualifying term in the phrase has often been rendered as "Orthodox" (an anachronism, since there was no generally accepted corpus of Islamic belief and practice at this early time from which deviation could occur) or "Patriarchal", reflecting a view of this period as a heroic age for Islam.

The four caliphs in question comprised:

- |              |   |
|--------------|---|
| 11-13/632-4  | <b>Abū Bakr</b> b. <b>Abī Kūḥāfa</b> , called <i>al-Siddīk</i>  |
| 13-23/634-44 | ' <b>Umar</b> (I) b. <b>al-Khaṭṭāb</b> , called <i>al-Fārūk</i> |
| 23-35/644-56 | ' <b>Uthmān</b> b. 'Affān                                       |
| 35-40/656-61 | ' <b>Alī</b> b. <b>Abī Ṭālib</b>                                |

All four were from the Prophet's own Meccan tribe of **Quraysh** [q.v.], and all were already related to **Muḥammad** himself by marriage, whilst 'Alī, as a first cousin on the father's side, was also a close blood relation. A strong feeling was thereby created that the caliph, as both military and religious head of the community, responsible for protecting the Muslim

*umma* [q.v.] and its faith and for upholding the Prophetic heritage, should come from Kuraysh, a feeling later crystallised in a *ḥadīth* attributed to the Prophet, "authority shall not depart from this tribe of Kuraysh."

It was Abū Bakr who first adopted the title of *khalfat Rasūl Allāh* "successor of the Messenger of God", with the implication of a necessity for the caliph to uphold and to further the Prophet's heritage; for the genesis of the title and its early development, see **KHALĪFA** (i).

The three decades of the Rightly-Guided Caliphs saw the extraordinary expansion of the small Arab Muslim community based on Medina as the *mukātīla* or warriors overran the outlying parts of the Arabian peninsula, Sāsānid 'Irāk and Persia, and Byzantine Palestine, Syria and Egypt. By the time of 'Alī's death, the Arabs were already raiding across the Oxus and into southern Afghānistān in the east, into Armenia and the Caucasus region in the north, and beyond Barḳa [q.v.] towards Tripoli and Fezzān in the west. The administrative and fiscal bases of the later caliphate also being laid down at this time, with 'Umar's institution of the *diwān* in which the pay allotments of the Arab warriors were registered, this military role became the requisite for full membership of the new community, creating the entitlement to share in its privileges [see 'AṬĀ'; DĪWĀN. I.]. The longer-term financial stability of the new state was ensured by the ruling authority's utilisation of a considerable proportion of the booty captured from the conquered lands for state and community purposes rather than it being shared out among the warriors and thereby dissipated [see BAYT AL-MĀL; FAY'; GHANĪMA]. Hence by the end of the period of the Rightly-Guided Caliphs, the Islamic community was no longer a purely Arabian affair but was well established outside the peninsula. Although the Muslims were for long a minority in the conquered lands, the bases were being laid for the slow transformation of the societies of the conquered lands and their religious complexions. A pointer to this new orientation of the Muslim state was 'Alī's move of the capital from Medina to the new military encampment of Kūfa in 'Irāk; it was never to return to Arabia which, whilst remaining the locational focus for the Muslim cult, became from the political point of view, increasingly peripheral.

The end of 'Uthmān's reign and the whole of that of 'Alī's were marked by religio-political dissension. 'Uthmān's murder accordingly inaugurated for the community a period of *fitna* [q.v.] or internecine strife, out of which eventually emerged such groups as the *Khāridjites* and the *Shī'a* [q.v.]. Hence the preceding part of the age of the Rightly-Guided Caliphs came in later times to be regarded through a nostalgic haze as a Golden Age of early Islam, when the community was undivided. The period was invested with the pristine virtues of piety, simplicity, justice, equality of all (male, free) Muslim believers, all the more so as later pietistic, traditionalist circles contrasted it with what they regarded as the worldly-oriented *mulk* or kingship of the Rightly-Guided Caliphs' immediate successors, the Umayyads [q.v.]; G.E. von Grunebaum coined the term "Rāshidīn classicism" for this backwards-looking feeling, discernible still in some contemporary fundamentalist currents of Islam.

*Bibliography:* See, in the first place, the separate articles on the four caliphs and the *Bibls.* there.

AL-KHULD, KAṢR, the name of a palace of the early 'Abbāsids in Baghdād, so-called because of its being compared in splendour with the *ḡannat al-khuld* "garden of eternity", i.e. Paradise.

It was built by the founder of the new capital Baghdād, al-Manṣūr [q.v.], in 158/775 on the west bank of the Tigris outside the walled Round City, possibly on the site of a former Christian monastery (al-Ṭabarī, iii, 273; Yākūt, *Buldān*, ed. Beirut, ii, 382). It was strategically placed between the two great military areas of the Harbiyya and al-Ruṣāfa on the eastern side [see AL-RUṢĀFA. 2.] and adjacent to the Upper or Main bridge across the river. The early 'Abbāsīd caliphs, and especially Hārūn al-Rashīd and al-Amīn, resided in the *Khuld* palace, and the latter tried to escape by water from its riverside quay when Ṭāhir [q.v.] b. al-Husayn's attackers were about to break into the city in 198/813 (al-Ṭabarī, iii, 917 ff.). It suffered badly from Ṭāhir's bombardment, and al-Ma'mūn stayed elsewhere on his first visit to Baghdād from the East in 204/819. The seat of the caliphate was moved to Sāmarrā' some fifteen years later, and the *Khuld* palace must thenceforth have become completely ruinous; when, at the end of the century, al-Mu'taḍid moved back to Baghdād he occupied palaces on the eastern side. The site was only re-used when in 368/979 the Būyid 'Aḍud al-Dawla built there his Bīmāristān or hospital.

(C.E. BOSWORTH)

**KHUMAYN**, a small town in the province of Ḳum in modern Iran (lat. 33° 38' N., long. 50° 03' E.) some 70 km/42 miles to the south-south-east of Arāk/Sulṭānābād [q.v.]. It is unmentioned in the mediaeval Islamic geographers, but now has fame as the birthplace of the Ayatallāh Rūh Allāh *Khumaynī* (1902-89 [q.v. in Suppl.]). It is at present administratively in the *shahrestān* of Mahallāt. In ca. 1950 it had a population of 7,038, which in 2003 had risen to 59,300.

*Bibliography:* Razmārā (ed.), *Farhang-i djuḡhrāfiyā-yi Irānzamīn*, i, 81-2. (Ed.)

**KHUMAYNĪ**, Sayyid RŪḤ ALLĀH Mūsawī (1902-89), Āyatullah [q.v. in Suppl.] and prominent Iranian religious leader of the later 20th century.

He was born into a clerical family in the small town of **Khumayn** [q.v. in Suppl.] in central Iran, a few years before the Constitutional Revolution of 1906-11 [see *DUSTŪR*. iv] opened the era of modern politics in Iran. Sayyid Rūḥ Allāh's father was murdered before he was a year old, and his mother died when he was in his teens. The reign of Riḍā Shāh (1925-41 [q.v.]), whose secularisation policies and dispossession of clerics he never forgot nor forgave, encompassed his formative years in **Kum**, where as an atypical seminarian he quietly studied mystical philosophy alongside jurisprudence, and began his teaching career. The popularity of his lectures on ethics in the latter part of the 1930s apparently caused the local police some apprehension. **Khumaynī**'s entry into the public sphere began during World War II with the anonymous publication of *Kashf al-astār*, a book written in defence of the Shī'ī hierarchy against a modernist anti-clerical pamphleteer. In it, he maintained that the *muḍjtahids* had the authority to supervise parliamentary legislation and the deeds of the monarch. **Khumaynī** took a radically novel position in a tract on *idjtiḥād*, which was apparently written in the early 1950s but published in A.H. 1384/1964-5, in which he took the term *hākim* not only in the Arabic, technical, but also in the Persian everyday sense, to extend the judiciary authority of the *muḍjtahid* to the political sphere as the right to rule (*Kungrih-i imām Khumaynī*, ix, 15-17).

**Khumaynī** first appeared on the national political scene in A.S.H. 1342/1963 as an outspoken critic of the Shāh and his reform program. The Shāh characterised his movement as "black reaction", and took repressive measures against it. **Khumaynī** was imprisoned in June 1963, and demonstrations by his supporters were violently suppressed. He was exiled to Turkey in November 1964, and moved on to the Shī'ī holy cities in 'Irāq. In January 1965 a group of his followers assassinated the Prime Minister, Ḥasan-'Alī Maṣṣūr, with a plan for setting up a "unified Islamic government". While in exile in Nadjaf, **Khumaynī** developed his theory of *wilāyat al-fakīh* as the mandate of the jurist to rule, both in a series of lectures in Persian, which were published in Beirut in 1970 under the title of *Wilāyat-i fakīh*, and in a work of jurisprudence on transactions, published in the second volume of *Kitāb al-Bay'* in A.H. 1391/1971. He argued that the right to rule devolves from the Imāms to the *muḍjtahids* during the Occultation of the Twelfth Imām, and, further, that if one of them were able to exercise that right by establishing a government, it would be incumbent upon other *muḍjtahids* to obey him. With this theory made public in clerical circles, **Khumaynī** began to prepare a beleaguered Shī'ī hierarchy for the takeover of a hostile, secularising state. His former students played the leading role in his movement and mobilised many younger clerics from humble rural and small town backgrounds in opposition to the monarchy and to Western cultural domination. As the leader of the Islamic revolutionary movement, **Khumaynī** assumed the title of *imām*, a title reserved for the twelve holy Shī'ī Imāms and not used by anyone else in Persian for over a thousand years.

On the victory of the Islamic revolution, Imām **Khumaynī** exercised his prerogatives according to the

theory of *wilāyat al-fakīh*, in ordering the confiscation of the property of the Pahlawī family and other industrialists of the old régime as war booty, and in appointing Mahdī Bāzargān, who represented the liberal and nationalist elements in the revolutionary coalition, as provisional prime minister. However, he was careful not to alienate the followers of the lay Muslim intellectuals and ideologues, such as Djalāl Āl-i Aḥmad and 'Alī Shari'atī, and did not proclaim a theocratic government at once. The *wilāyat al-fakīh* entered public debate only when a clerically-dominated Assembly of Experts was elected, in place of a constituent assembly, and bypassed the draft constitution prepared by the provisional government to institute theocratic government according to **Khumaynī**'s theory. Some of the features of the original draft were retained, however, notably the elected president and parliament (*Maḍjlis*), and a Council of Guardians (*shūrā-yi niḡah-bān*) which was modified to increase the number and power of its clerical jurists by giving them the exclusive right to veto any *Maḍjlis* enactment they found in violation of Islamic standards. The new Constitution was approved by a referendum in December 1979, shortly after the occupation of the American embassy and the taking of its staff as hostages and the resignation of Bāzargān.

In the course of the ensuing power struggle of the early 1980s among the partners in the revolutionary coalition, **Khumaynī** sanctioned the violent suppression of the leftist and secular elements. Despite his apparent initial disinclination, the Iranian state and the revolutionary structures were brought under direct clerical control. Once the revolutionary power struggle ended with the complete victory of his supporters, **Khumaynī** sought to maintain unity between the conservative and the radical clerics and their respective allies, and intervened a number of times to prevent the tilting of the balance of power in favour of the former. Meanwhile, he oversaw the constitutional development of the Islamic theocratic republic he had founded. The failure of a variety of principles drawn from Shī'ī jurisprudence, including the distinctions between primary and secondary commandments (*ahkām*) of the *Sharī'a* and the introduction of a new category of "governmental (*hukūmatī*) commandments", to solve the impasse between the *Maḍjlis* and the Council of Guardians had become evident by January 1988, when **Khumaynī** proclaimed a new idea of the "absolute (*muṭlakā*) mandate of the jurist". This gave priority to what has increasingly been called the "governmental commandments" of the *walī-yi fakīh* over those of the *Sharī'a*, including prayer and fasting. In the following month, overcoming the traditional reservations of the Shī'ī jurists regarding the principle of *maṣlaḥa* (public interest), he appointed a clerically-dominated Council for the Determination of the Interest of the Islamic Régime (*maḍjma'-i tashkīḡ-i maṣlaḥat-i niḡām-i islāmī*) as the final arbiter of cases of disagreement between the *Maḍjlis* and the Council of Guardians. In April 1989, he ordered the revision of the Constitution, and the amended Constitution of 1989, which was completed and ratified after his death, awkwardly incorporated the phrase "absolute mandate to rule" (*wilāyat-i muṭlak-i amr*) into its Article 57, augmented the already considerable powers of the ruling jurist and gave the Council for the Determination of Interest the new function of setting the general policies of the state.

**Khumaynī** remained ruthlessly firm and resolute to his last days. He opposed the ending of the increasingly unpopular war with 'Irāq (1980-8) until he finally

decided to drink "the cup of poison", and accepted a ceasefire with Iraq on 18 July 1988. Two days later, the Iraq-based forces of the Islamic radical group, the *muǧāhidīn-i khalq*, attacked western Iran and were wiped out. In the following weeks, despite the vehement protest of his successor-designate, Ayatullāh Muntazirī (Muntazirī, chs. 9-10), he ordered the execution of about 3,000 Islamic radicals who had already served or were serving sentences given them by revolutionary courts. The incipient collapse of communism in the last year of his life renewed Khumaynī's optimism, and in January 1989, he told the Soviet leader Mikhail Gorbachev that he should learn about Islam as communism now belonged to the museum of history. Finally, Khumaynī caused another international crisis by issuing an injunction (*fatwā*) that sanctioned the death of Salman Rushdie, a non-Iranian writer who lived in England.

Khumaynī died on 14 Khurdād 1368/3 June 1989. He was a charismatic leader of immense popularity. Millions of Iranians massed to welcome him when he returned as the Imām from exile in 1979, and a million or more joined his funeral procession after he died ten years later.

(S.A. ARJOMAND)

**KHUMS** (A.), a one-fifth share of the spoils of war and, according to the majority of Muslim jurists, of other specified forms of income, set aside for variously designated beneficiaries.

1. In Sunnism.

For the Sunnīs, like the Shīʿīs, the starting point for the discussion of *khums* is Qurʾān, VIII, 41 (*āyat al-khums, āyat al-ghanīma*). The Sunnī exegetes take this verse to address the spoils of war specifically, but beyond that there is widespread disagreement about the circumstances of its revelation, its interpretation and the extent of its applicability after the death of the Prophet (Ibn al-ʿArabī, *K. al-Kabas*, ed. Walad Karīm, Beirut 1992, ii, 600). Although the institution of the *khums* is often regarded as replacing the pre-Islamic right of the commander to one-fourth (*marbāʿ*) of the booty (al-Wāqidī, *K. al-Maghāzī*, ed. J.M.B. Jones, Oxford 1966, i, 17; Muḥammad Rashīd Riḍā, *Tafsīr al-manār*, Beirut 1420/1999, x, 13; Lane, *Lexicon*, iii, 1015; Juynboll, *Handbuch*, 341), the acquisition of property, including the *khums*, through combat is regarded as unique to Islam among the revealed religions (Ibn al-Mulakkin, *Ghāyat al-sūl fī khaṣāʾis al-rasūl*, ed. ʿAbd Allāh, Beirut 1414/1993, 260-1; al-ʿAynī, *Umdat al-kānī*, ed. Cairo, xv, 41-4).

It is generally held that Qurʾān, VIII, 41, abrogates

Qurʾān, VIII, 1 (*āyat al-anfāl*), which put the spoils gained at Badr (2/624) entirely at the disposal of the Prophet to distribute as he saw fit (al-Kurṭubī, *al-Djāmiʿ li-ahkām al-Kurʾān*, Cairo 1387/1967, viii, 2; al-Māwardī, *al-Ahkām al-sultāniyya*, Cairo 1386/1966, 138-9). Qurʾān, VIII, 41 would thus have been revealed some time after Badr, and the rule of the *khums* was first implemented, according to some, in connection with the booty gained in the victory over the Jewish tribe of Banū Kaynuḳāʿ (2/624 [q.v.]). According to another account, ʿAbd Allāh b. Djaḥsh, shortly before the battle of Badr, on his own initiative set aside for the Prophet one-fifth of the spoils taken from Quraysh at Nakhla, the first spoils gained under Islam, and this rule was later affirmed by the Qurʾān (Ibn Hishām, *al-Sira al-nabawiyya*, ed. al-Sakḳāʿ et al., Cairo 1375/1955, i, 603-05, tr. Guillaume, Oxford 1955, 286-8). Some sources, however, place the introduction of the *khums* at other times: at Badr itself, at the victory over Banu ʿl-Nadīr (4/625) or over Banū Qurayza (5/627), at the conquest of Khaybar (7/628) or as late as the battle of Hunayn (8/630) [q.v.] (al-Qayrawānī, *al-Nawādir wa ʿl-ziyādāt*, ed. Ḥādīdī, Beirut 1999, iii, 221; Ibn Kayyim al-Djāwziyya, *Zād al-maʿād*, ed. al-Arnaʿūt, Beirut 1419/1998, v, 63).

Payment of the *khums* was taught by the Prophet as a cardinal religious obligation (*ʿUmdat al-kānī*, i, 302-11, *bāb adāʿ al-khums min al-īmān*, xv, 26-7; Ibn Baṭṭāl, *Sharḥ ṣaḥīḥ al-Bukhārī*, ed. Ibrāhīm, Riyāḍ 1420/2000, v, 257) and appears among the undertakings required of certain Bedouin tribes (Ibn Saʿd, i/2, 25, 30; Caetani, *Annali*, i, 682, ii/1, 303-04; W.M. Watt, *Muhammad at Medina*, Oxford 1955, 255-6). Two collectors of the *khums* who served the Prophet are named: Maḥmiya b. Djaʿz and ʿAbd Allāh b. Kaʿb al-Anṣārī (al-Khuzāʿī, *Takhrīrī al-dalālat al-samīyya*, ed. ʿAbbās, Beirut 1405/1985, 509-10). ʿAlī b. Abī Ṭālib was charged by the Prophet with distributing the portion of the *khums* that went to the Prophet's next-of-kin, a position he continued to hold into the caliphate of ʿUmar (Abū Yūsuf, *K. al-Khārāj*, Cairo 1352, 20).

The common opinion is that, during the lifetime of the Prophet, the *khums* was divided into five shares, with that of God and the Prophet constituting a single share (*khums al-khums*), which the Prophet used for his own upkeep and that of his family, with any excess being spent on the needs of the community. A small minority, including the Baṣran Qurʾān scholar Abū ʿĀliya Rufayʿ b. Mihrān al-Riyāḥī (d. 90/708 or 96/714 [q.v.]), and it is sometimes reported, his mentor Ibn ʿAbbās (d. 68/687-8 [q.v.]), were of the opinion that there was a distinct sixth portion for God. This portion, which was as much as the Prophet could grasp from the booty, was used for upkeep of the Kaʿba. According to Mukātil b. Sulaymān (d. 150/767 [q.v.]), the *khums* was to be divided into four parts, with one part representing the shares of God, the Prophet, and the Prophet's next-of-kin (*K. Tafsīr al-khams miʿa āya*, ed. Goldfeld, Shfaram 1980, 271), a mode of division followed by the Ibādīs (Ibn Kays, *Mukhtaṣar al-khīṣāl*, ʿUmān 1403/1983, 192; al-Kindī, *Bayān al-sharʿ*, ʿUmān 1414/1993, lxx, 374).

The Shāfiʿīs and Hanbalīs continue to recognise five shares after the death of the Prophet: (1) the Prophet's share, now used to meet the needs of the community of Muslims (*sahm al-maṣāliḥ*), (2) the share of the Prophet's next-of-kin (*dhu ʿl-kurba*), which goes to the Hāshimīs and Muṭṭalibīs without regard to need, with males getting double the share of females, (3) the orphans (*yaṭamā*) [see YATIM], defined as needy

minors who have no father, (4) the indigent (*masākīn*), who correspond to the "poor and indigent" of Qur'ān, IX, 60 [see *ZAKĀT*. 5. xi], and (5) the traveller, defined as for *zakāt* (cf. al-Bādjūrī, *Hāshīya 'alā Ibn Kāsim al-Ḡhazzī*, ed. Cairo, ii, 274). After the Prophet's death, his share and that of his family lapsed according to the Hanafīs, who appeal to the practice of the first four caliphs as evidence for this view (K. al-*Kharāj*, 19). The Hanafīs do, however, give preference to indigent members of the Prophet's family under the remaining three classes, in recognition of their ineligibility to receive *zakāt* [see *ZAKĀT*. 5. xi]. The Mālikīs regard the classes named in Qur'ān, VIII, 41, as illustrative (Ibn Ruṣhd, *al-Muḥaddimāt*, ed. Ḥadjjī, Beirut 1408/1988, i, 357) and treat the entire *khums* as *ḥay'* [q.v.] to be expended upon the needs of the Muslims as the ruler sees fit (Sahnūn, *al-Mudawwana*, ed. Muḥammad, Beirut 1419/1999, ii, 604), a view also adopted by Ibn Taymiyya (d. 652/1254 [q.v.]). They do, however, recommend that distribution of the *khums* begin with grants to the Hāshimīs (*al-Khīrshī 'alā mukhtaṣar Khālīl*, ed. Beirut, iii, 129).

The obligation of paying the *khums* is incumbent on Muslims (cf. al-Dardīr, *al-Sharḥ al-ṣaghīr*, ed. Waṣṭī, Cairo 1972, ii, 301, on Muslim slaves). Although it is sometimes stated that only Muslims are eligible to receive the *khums* (al-Shīrāzī, *al-Muḥaddithab*, ed. Cairo, ii, 247; Ibn Kudāma, *al-Kāfi*, ed. al-Shāfi'ī, Beirut 1421/2001, iv, 183), this restriction has been said not to apply to the expenditure of the share for the needs of the community (al-Ramlī, *Ḡhāyat al-bayān*, ed. Cairo, 345).

The rules for the *khums* apply specifically to *ghanīma* [q.v.], the spoils of war taken by armed force, except according to the Shāfi'īs (al-Shāfi'ī, K. *al-Umm*, ed. Cairo, iv, 64; al-Māwardī, *al-Ḥawā' al-kabīr*, ed. Maṭradjī, Beirut 1414/1994, x, 429-30) and some Hanbalīs, notably al-Khīrakī (d. 334/945) (Ibn Kudāma, *al-Mughnī*, ed. al-Turkī and al-Hulw, Cairo 1409/1989, ix, 284, 286), who fully extend the application of the *khums* to property taken from the enemy without such display of force, i.e. *ḥay'*, and the Mālikīs, who recognise an intermediate category, *al-mukhtaṣa*, between *ghanīma* and *ḥay'*, that includes property taken out of enemy territory by stealth, the *khums* of which must be privately distributed by its taker (al-Raṣṣā', *Sharḥ ḥudūd Ibn 'Arafā*, ed. al-Adjfan and al-Ma'mūrī, Beirut 1993, i, 229-30). The extent to which *khums* is due on property seized by small groups of raiders acting on their own initiative is disputed (al-Tabarī, *Das konstantinopler Fragment des Kitāb Iktilāf al-Fukahā'*, ed. Schacht, Leiden 1933, 78-80; Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 286).

The booty subject to division does not include food consumed by the combatants or their animals (*al-Mudawwana*, ii, 612-14; al-Kāsānī, *Badā'ī 'al-ṣanā'ī*, ed. Mu'awwad and 'Abd al-Mawḍjūd, Beirut 1418/1997, ix, 494-6) nor, during the Prophet's lifetime, such booty as he selected as a personal prize (*safī*) (K. al-*Kharāj*, 22-3). The *khums* is calculated on the total booty net such expenses as those incurred for its transport and safekeeping, and, according to the Shāfi'īs and Hanbalīs, after subtraction of the clothing, weapons, mounts, and other personal effects (*ṣalab*) of enemy soldiers earned by the individual Muslim combatants who have killed or disabled them (cf. Schacht, *Origins*, 70-1). The Hanafīs and Mālikīs treat such claims to personal effects as rewards (*naḥāl*), for which they require an express grant by the ruler, preferably, according to the Mālikīs, after the battle has ended so as not to compromise the purity of

motive of the combatants. The Mālikīs in all cases satisfy rewards from the *khums*; the Hanafīs from the *khums* if the grant has been made after the booty has been secured in Islamic territory (*iḥrāz*), otherwise from the four-fifths; the Hanbalīs from the four-fifths. The Shāfi'īs pay rewards from the twenty-fifth share devoted to the needs of the community. Special allocations (*radkī*) of the booty granted to slaves, women, and children who participate in the battle but do not otherwise qualify as combatants, are distributed from the total booty according to the Hanafīs, from the four-fifths according to the Shāfi'īs and Hanbalīs, and from the *khums* according to the Mālikīs, who in principle disapprove of such special allocations.

The rules for the *khums* apply in the first instance to moveable property, which includes the captured slaves of the non-Muslim enemy. In the case of combatants taken prisoner and captive women and children, the rule of the *khums* is applied most straightforwardly when these are enslaved and form part of the booty to be divided (cf. al-Dasūqī, *al-Hāshīya 'alā al-sharḥ al-kabīr*, ed. Cairo, ii, 184). There is disagreement as to real property: the Shāfi'īs divide such property among the combatants and subject it to the *khums*; the Mālikīs do not, while the Hanafīs and Hanbalīs leave the matter of division to the discretion of the ruler. Where the division is of the booty itself, rather than of its sale price, the determination of what constitutes the *khums* is made by lot, with a special designation for the *khums* (*li 'llāh, li 'l-maṣāliḥ, li-rasūl Allāh*) (al-Wākīdī, ii, 523-4; Ibn Abī Shayba, *al-Kitāb al-muṣannaf*, ed. al-Nadwī, Bombay 1402/1982, xii, 429-30; al-Ramlī, *Nihāyat al-muḥtādī*, Cairo 1386/1967, vi, 146; al-Ḥaṭṭāb, *Mawāhib al-ḡyālī*, ed. 'Umayrāt, Beirut 1416/1995, iv, 584).

There is disagreement as to what extent the ruler can avoid the application of the general rules for the division of booty, including that of the *khums*, by declaring that what each combatant takes is his as a reward (*al-Nawādir wa 'l-ziyādāt*, iii, 252; Ibn 'Abd al-Barr, *al-Istidhār*, ed. Kaḥ'adjjī, Cairo 1414/1993, xiv, 102-3; Ibn al-Nahḥās, *Mashārīf al-aṣḥwāk*, ed. 'Alī and Iṣṭanbūlī, Beirut 1410/1990, ii, 1035-6). According to many Hanafīs, the booty taken pursuant to such a general offer of reward (*tanfīl 'amm*), in the case of a detachment (*sariyya*), but not the entire army, dispatched from within enemy territory, is not subject to the *khums* (al-Djaṣṣās, *Aḥkām al-Kur'ān*, ed. Istanbul, iii, 55; Ibn 'Abīdīn, *Radd al-muḥtār*, Cairo 1386/1966, iv, 155-7; cf. Ibn Nudjajm, *al-Bahr al-rā'ik*, ed. Cairo, v, 92; C. Imber, *Ebu 's-Su'ud: the Islamic legal tradition*, Stanford 1997, 87 [with reference to a declaration of this sort on the part of the Ottoman sultan in 948/1541-2]).

The institution of the *khums* appears to have fallen into neglect from an early date. The students of Mālik (d. 179/796 [q.v.]) already addressed questions concerning the purchase of slave girls from sellers suspected of not having paid the *khums* (*al-Nawādir wa 'l-ziyādāt*, iii, 215-6; *Mawāhib al-ḡyālī*, iv, 568-70) as well as the status of privately owned Andalusī estates on which *khums* was not known to have been paid at the time of their conquest and, according to the Mālikīs, irregular distribution to individuals (*al-Nawādir wa 'l-ziyādāt*, iii, 364-65). Even revivalist movements such as that of the Almoravids and Almohads found it difficult to ensure consistent implementation of the law of the *khums* (J.F.P. Hopkins, *Medieval Muslim government in Barbary until the sixth century of the hijra*, London 1958, 28-9; al-Tadjkānī, *al-Iḥsān al-ilzāmī fi 'l-islām wa-taḥbīkātuhu fi 'l-Maghrib*, al-Muḥammadiyya 1410/

1990, 592). The Ottoman *mufti* Abū Su'ūd (d. 982/1547) took it for granted that the spoils of war were not being divided in accordance with the law and put the burden of paying *khums* on the purchasers of slave girls (Imber, 87; al-Ḥaṣkaṣī, *al-Durr al-muntakā*, on the margin of Shaykhzāda, *Maḍma' al-anhur*, ed. Istanbul, i, 651; cf. *Radd al-muhtār*, iv, 157-8).

Commonly treated by the jurists in connection with *zakāt* (cf. al-Zurkānī, *al-Sharḥ 'alā muwaṭṭa' al-imām Mālik*, ed. 'Awad, Cairo 1381/1961, ii, 321) but regarded by the Ḥanafīs, Mālikīs and Ḥanbalīs as analogous to the one-fifth payable from booty, is the one-fifth due upon the discovery under certain circumstances unrelated to combat of pre-Islamic treasure, as enjoined by the *hadīth* (*fi 'l-rikāz al-khums*) (Mālik, *al-Muwaṭṭa'*, ed. 'Abd al-Bākī, ed. Cairo, 170). The Shāfi'īs limit this obligation to gold and silver, to which they apply the same minimum amount (*nisāb*) as that for *zakāt* on gold and silver. While the Ḥanafīs distribute this one-fifth as they do the *khums* of booty (*Radd al-muhtār*, iv, 139), the Mālikīs and Ḥanbalīs class it as *fa'y* to be expended on the needs of the community, and the Shāfi'īs treat it as *zakāt* (*Umdat al-kārī*, ix, 104) [see *ZAKĀT*, 5. iv]. The Ḥanafīs, and to a limited extent the Mālikīs, extend the rule of one-fifth on treasure to the products of mining (*ma'ādin*): malleable metals, according to the Ḥanafīs (al-Samarḳandī, *Tuḥfat al-fuḳahā'*, ed. 'Abd al-Barr, Damascus 1377/1958, i, 505-09), pure or virtually pure pieces of gold and silver (*nadra*), according to the Mālikīs (al-Dardīr, *al-Sharḥ al-saghīr*, i, 653). The opinions of certain early scholars that one-fifth was due on pearls, ambergris and other products of the sea, even fish, were not widely followed (Abū 'Ubayd al-Kāsim b. Sallām, *K. al-Amwāl*, ed. Fiḳī, ed. Cairo, 345-8; cf. *K. al-Kharājī*, 70).

The label *khums* is also found in other senses. Loosely related to the *khums* on booty is the early use of the term *takhmīs* in N. Africa for the taking of Berber captives for the service of the state, such slaves being termed *akhmās* (Hopkins, *Medieval Muslim government in Barbary*, 27-8; Dozy, *Suppl.*, i, 404). In Egypt the term *khums* was applied to a tax of variable percentage, apparently of Fāṭimid origin, that was imposed on the sale by foreign merchants of imported merchandise (H. Rabie, *The financial system of Egypt*, London 1972, 90-3).

## 2. In Shī'ism.

Imāmī and Zaydī Shī'ī jurisprudence concerning *khums* differ in significant ways from those outlined in Sunnī *fiḳh*. The wealth liable for *khums*, the means of its collection and distribution and the constitution of the recipient categories (*ashnāf*) form the major topics of debate within both juristic traditions. The main Qur'anic reference is VIII, 41 ("Know that what you acquire, a fifth is for God, his Prophet, the near relatives, orphans, the needy and the wayfarer"). Whilst Sunnī exegetes consider this verse to relate to war booty (*ghanīma* [q.v.]), Imāmī and Zaydī writers associate the phrase *annamā ghanīmtum* ("what you acquire") to refer to wealth more generally.

In the Imāmī tradition, there are reports to support such a definition. "Everything from which the people gain benefit is *ghanīma*," the Imām al-Riḳā (d. 203/818) is reported as saying. A number of *akhbār* refer to the Imām's original ownership of the world and its produce (e.g. "all the earth is ours, and what God brings forth from it is also ours," al-Kulaynī [d. 328/939], *Kāfī*, i, 408). The *khums*, therefore, was analogous to a tenant's payment of a fixed percentage of the harvest to the landowner.

Since the Qur'anic verse appears in the midst of a discussion of war, some exegetical effort was required to reinforce this interpretation. This normally began with a grammatical analysis of the term *ghanīma* and the verb *ghanīma* (see al-Ṭūsī [d. 460/1067], *Mabsūt*, ii, 64, where the verb means "acquiring something with the purpose of turning it to profitable use"). This was supported by other *akhbār* (e.g. "a fifth of the earth is ours, and a fifth of all things is ours," al-Ṭūsī, *Tahdhīb*, iv, 123).

The items liable for *khums* were defined in both collections of *akhbār* and works of *fiḳh*. In the earliest works of *fiḳh*, the discussions formed part of the *kitāb al-zakāt* or occasionally *kitāb al-fay' wa 'l-ghanīma*; a separate *kitāb al-khums* (located after the *kitāb al-zakāt*) later became the norm (see e.g. Muḥammad b. Makkī, al-Shahīd al-Awwal (d. 786/1384), *al-Lum'a al-dimashkiyya*, 45-6). The earliest categorisation of taxable wealth comprised booty, produce of the sea, buried treasure, minerals and *malāha*. The last term, obscure in reference, was interpreted through juristic reasoning and the citation of other *akhbār* to refer to profit (from trade, agriculture and craft), *dhimmī* land bought by a Muslim and "*halāl* goods mixed with *harām* ones". This made seven categories in all (see such a categorisation in al-Muḥaḳḳīk [d. 676/1277], *Sharā'i'*, i, 179-81). These categories, once established, remained remarkably stable in the subsequent tradition.

When present, the Imām receives and distributes the *khums* (though he may, it seems, appoint a representative). The *khums*, following Qur'ān, VIII, 41, is distributed amongst the six categories mentioned (God, the Prophet, the near relatives, the orphans, the needy and the wayfarers). A minority of jurists argued that the shares of God and the Prophet were actually one (hence there are five not six recipients,

see Zayn al-Dīn 'Alī al-Shahīd al-Thānī [d. 966/1588], *Masālik*, ii, 470), but this opinion was not popular. The juristic reasoning (authoritatively summed up in the later tradition by al-Nadjafi's [d. 1266/1850] commentary on al-Muḥaqqik's *Sharā'ī'*: al-Nadjafi, *Djawāhir*, iv, 1-102) proceeded as follows: God's share was clearly owned by the Prophet, and he could dispose of it as he saw fit. After the Prophet's death, the two shares (of God and the Prophet) were, through inheritance, due to the Imām. The share of the "near relatives" was also due to the Imām, since they were the heads of the *ahl al-bayt* after the Prophet's death. The Imām, when present, was, then, due half the *khums*. The remaining shares were distributed by the Imām. The verse might indicate that the orphans, needy and wayfarers were from the population generally (as argued by Ibn Hamza [living in 566/1170] in his *al-Wasīla*, 718), though most jurists argued that these three categories applied to the family of the Prophet (the Banū Hāshim). A minority also argued that descendants of Hāshim's brother (Muṭṭalib) were also included (analogous to the *sayyid* status of descendants of both al-Ḥasan and al-Ḥusayn: see Zayn al-Dīn 'Alī al-Shahīd al-Thānī, *Sharḥ al-lum'a al-dimashkiyya*, 57-8), but this did not become the influential position.

The absence of the Imām through occultation provided the jurists with an opportunity to link the discussion with the vexed issue of community leadership during the *ghayba* [q.v.]. Was *khums* during the *ghayba* lapsed (*sākīl*) because the Imām could not collect it in person (a view attributed to Salār al-Daylamī [d. 463/1071])? This position was rejected quite early on in the tradition. Other solutions were proposed, such as burying one's *khums* in anticipation of the Imam's return (attributed to Ibn Barrādj [d. 481/1099]) or placing the *khums* in a perpetual will, until the Imam's return. Some jurists (Ibn Idrīs [d. 598/1202], *Sarā'ir*, i, 502-4) maintained that the option of a will applied only to the Imām's share (i.e. one half). The remaining three shares are distributed to the recipients (perhaps by the individual himself). Ibn Idrīs's assertion that the Imām's share must be preserved, pending his return, was not developed further. For al-Muḥaqqik, the Imām had given the Shī'ā permission (*idhn*) to use his property generally, and his *khums* specifically, during his absence. This did not constitute using a person's property without permission. The *khums*, according to al-Muḥaqqik, was distributed by "the one who possesses authority through delegation (*niyāba*)" (*Sharā'ī'*, i, 184). Al-'Allāma al-Hillī (d. 726/1325) identified the person as *al-hākīm* (a reference to *al-hākīm al-gharī*, sc. a member of the *fukahā'*). These terminological shifts became more nuanced until the time of the Ṣafawid jurist, al-Sabzawārī (d. 1090/1679), who wrote that the *khums* should be given to "the worthy recipients through the auspices of the just *fakīh* who is qualified to give *fatwās*" (*Kūyāya*, 45); that is, the *muḍṭahids* should receive and distribute the *khums*. This continues to be the position up to the present day. Naturally, those *'ulamā'* who were also *sayyids* benefited financially, but, more importantly, the authority of the *fukahā'* (as in other areas of *furū'*) was enhanced. The contributions obviously aided the independence of the *'ulamā'* from the Kādjār state, and may have provided part of the financial base for the *'ulamā'* opposition movement in 20th-century Iran.

Zaydī discussions of *khums* bear some similarities to both Imāmī and Sunnī views. The important work, *al-Azhār*, of the Zaydī Aḥmad b. Yahyā al-Murtadā (d. 836/1432), provides a useful summary of three categories of produce liable for *khums*: the produce of

the "land and sea" (*al-barr wa 'l-bahr*), war booty and the ongoing revenue after a campaign. This represents an expansion of the Sunnī system of categorisation. In the subsequent commentaries on *al-Azhār*, Zaydī jurists (e.g. Ibn Miftāḥ [d. 877/1472] and al-Shawkānī [d. 1250/1834]) elaborated on this brief explanation. The produce of the land and sea included the produce gained from fishing and farming (with some restrictions) as well as precious stones and metals obtained through mining. Also included was treasure (*khunūz*) found by the Muslim but buried during the *djāhili* period. War booty encompassed the booty from wars with both non-Muslims (*ahl al-ḥarb*) and non-Zaydī Muslims (*ahl al-baghy*). The ongoing revenue after a campaign included produce from land seized from the enemy, the *kharaḍj* (land-tax) and the *djizya* (the tax on non-Muslim communities living under Muslim control). It might be argued that Zaydī jurists envisaged an even larger amount of revenue as liable to *khums* than their Imāmī counterparts.

In Zaydī *fikh*, the *khums* is to be transferred to the Imām when he demands it. When there is no legitimate Imām in power, the *Azhār* records that the (Zaydī) Muslims must collect and distribute it themselves. The governance of an Imām does not affect the duty to give and distribute *khums*. The continued existence of a Zaydī Imām (though with limited suzerainty and disputed identity) did not encourage the discussion of delegation (*niyāba*) characteristic of the Imāmī tradition.

The distribution of *khums*, according to the Zaydīs, should be according to the established six categories of recipients. For al-Hārūnī (d. 424/1032), God's share is to be spent by the Imām on general benefits, such as mosques and roads (*maṣāliḥ*). The Prophet's share goes to the Imām who can spend it on his family, home and servants. The near-relatives' share is distributed, without regard for age, wealth or sex, to the descendants of the Prophets (with a broad definition of which lines of descent are to be included). The only restriction is that the descendants must recognise the Zaydī Imām (*mutamasikim bi 'l-ḥaqq li-imām al-muslimin*). The three portions for the orphans, needy and wayfarers of the Prophet's descendants can be diverted if there are no such persons within the Prophet's descendants. First, the portions are available for the descendants of the Prophet. If unexhausted, the portions are distributed amongst the *muhādijrūn*; if not, then amongst the *ansār*, and if not these last, then amongst the orphans, needy and wayfarers of the rest of the Muslim community (al-Hārūnī, *Tahrīr*, i, 166). Though Zaydī thought on *khums* bears some resemblance to Imāmī *fikh* (e.g. the expansion of the definition of goods liable for *khums*), it avoids the contentious issues of *'ulamā'* authority present in the Imāmī tradition.

The Ismā'īlī Shī'ī tradition produced very little in terms of juristic literature, but one can conclude that, in terms of *khums*, it was much closer to the Sunnīs than either Zaydī or Imāmī *fikh*. In al-Kādjī al-Nu'mān's (d. 363/974 [q.v.]) *Da'ā'im al-islām*, *khums* is discussed in the context of the *kitāb al-djihād*, mainly through citations of reports from Imām 'Alī. The implication is that *khums* is only due on war booty. The resultant jurisprudence could fit well within the Sunnī *ikhṭilāf* [q.v.] on the issue.

**KHURĀFA** [see **ḤIKĀYA**. I].

**KHUWWA** (colloquial A., said to be of Najdī origin, Barthélémy, 224), also *khāwa*, both from the root *-kh-w* (Landberg, 71-2): terms used in the Syrian desert, its borderlands, and northern Arabia to refer to certain payments levied by the Bedouin (references in Henninger, 34-36). In these highly Bedouinised areas even tribute paid by one sedentary group to another was sometimes called *khāwa* (Musil, *Ar. Petr.*, iii, 67, 69; *Mid. Euphr.*, 72); in Syria the term *khawwa* might also refer to a relationship of mutual assistance between an urban notable and a Bedouin *shaykh* (details in Oppenheim, ii, 65).

Wallin (122, 129) reported that *khāwa* was levied by almost all "genuine Bedouin tribes". Like Zakariyyā he distinguishes three groups who paid it: villagers, weak nomadic tribes (especially those not considered to be true Bedouin, for instance the *shāwiya* [q.v.]), and people crossing the desert (merchants, carriers, travellers). The Bedouin look on the regions where they live as being divided into tribal territories, and Wallin suggested that the payments to a tribe were made in exchange for the right to be in the territory of that tribe and to enjoy its protection. The degree of protection offered varied greatly: a village might receive no more from its "protectors" than the temporary cessation of their depredations, while a client tribe or a caravan might receive not merely protection against robbery and other offences (when committed by members of the protecting tribe, and sometimes at least also in other cases), but even indemnification. *Khawwa* was paid (in cash or kind) to the *shaykh* or leading men of the Bedouin tribe. Some tributaries paid a fixed amount collected annually in an orderly fashion, but villagers often had nomadic "brothers" whose brutal *khawwa*-collecting visits were scarcely distinguishable from raids (Schumacher, 144, offers an eye-witness account). For certain tribes—or for certain tribesmen—tribute must have been an important source of income (see Musil, *Ar. Petr.*, iii, 52-3 for an example); and at least in some instances, the right to *khawwa* from a particular source was assignable (Lancaster, 122).

As governments became stronger during the 19th and 20th centuries, they were able to suppress exactions of this kind; and though *khawwa* was still being paid in a remote corner of Lebanon as late as the

1960s (al-Rā'ī, 46), it may now be assumed to be a thing of the past.

It seems that *khawwa* and words from the same root are, when used to refer to payments of some kind, confined to the Mashriq (though such terms are alleged to have been used in North Africa to refer to something related to tribute, see Abu-Lughod, 82, and Dunn, 76); but the practice of paying tribute to powerful nomadic tribes was once well-nigh universal in the Arab world [see **HIMĀYA**, ii (I) (3) (b)]. The terms most widely used in the Maghrib appear to be *khafāra* [q.v.] or *ghafāra* and other words from the same roots (Pröbster, 395); words from these roots in the same and related senses are also common in the Mashriq (Combe; Dozy, *Suppl.*, i, 386, ii, 217-18). Other terms are also attested in North Africa. Thus in the Western Desert of Egypt and in Cyrenaica, the Sa'ādī tribes, who claimed that the land was theirs, used to receive a payment called *ṣadaka* from the subordinate Bedouin known as the *mrābīn al-ṣudkān* (Djawharī, 172; Peters, 41), while in the Western Sahara the tribute paid by inferior to superior tribes went by the names of *ḥuma* and *gharāma* (and also *ghafar*), to say nothing of other words that referred to payments exacted from sedentary populations (Caro Baroja, 34-42; Stewart, 56-8).

*Khawwa* is not sanctioned by Islamic law, and the tribute paid by settlements and nomadic tribes to pious rulers such as those of the Ibn Rashīd dynasty of Ḥā'il was not called *khawwa* (pace Al Rasheed, 113-15), but rather *zakāt* [q.v.] (Euting, ii, index s.v. *zēkā*; Musil, *N. Nēgd*, 4; Za'ārīr, 99-100).

**KĪRGĪZSTĀN, KIRGIZSTAN** (official designations, Kyrgyzstan, Kyrgyz Respublikasy), the smallest of the five Central Asian republics emerging from the collapse of the Soviet Union, with an area of 198,500 km<sup>2</sup> (77,415 sq. miles), and with boundaries adjoining China 858 km, Kazakstān 1051 km, Tadjikistān 870 km and Uzbekistān 1099 km. Kyrgyzstan is landlocked, like most of its neighbours. In 1999 it had a population of 4,823 million, its ethnic composition at various points in the 20th century being shown in Table 1 as percentages of the whole population.

Russians are concentrated in the capital and in the north, Uzbeks in the south (Ōsh and Djalālābād provinces). Changes in the ethnic composition of the Kyrgyzstani population are explained by much lower fertility among the Russians and other Europeans and massive outmigration of the "European" groups since the late 1980s. In the earlier Soviet period, the drop in the Kyrgyz population was linked to the crisis following collectivisation.

Kyrgyz, the official language, belongs to the north-western group of Turkic languages [see TURKS. II (v), and for Kyrgyz literature, III. 6 (e)]. Russian was declared an official language in territories and work places where Russian dominates in March 1996, and is now termed the "language of inter-ethnic communication". Uzbek is granted no official status. The capital has been called Bishkek since 1993 (750,000 inhabitants in 1999), Frunze in Soviet times since 1926, and Pishpek [q.v.] before then. Other towns include Talas [see TARĀZ] in the northwest and Ōsh and Ōzkend [q.v.] in the Farghāna valley. Regarding natural resources, Kyrgyzstan, as a mountainous country, is rich in water and has a high potential in hydro-electric power (Toktogul dam on the Naryn river, built 1962-75). Coal was mined for Central Asian consumption. After independence, gold has been deemed to be worthwhile exploiting (the Komtur gold field).

The country is divided into two main geographic zones by the Tien Shan mountains, with their highest peaks in the far eastern corner (Pik Pobedy, Zengish Čokusu, 7,439 m), and the Pamir Alai range. To the north, the hills slope down to the great steppe zone of Semirečye [see YETI sū], to the south, they border on the Farghāna valley [see FARGHĀNA]. Most of Kyrgyzstan is thus mountainous (40% of it over 3,200 m/10,000 feet). Arable land makes up a mere 7% of the area, whereas pastures account for more than 40%.

### 1. Pre-colonial history.

The area where the Kyrgyz Republic is situated was never defined as a political unit before Soviet times. It was, however, at the centre of the Karakhānid khānate [see ILEK-KHĀNS] from the 4th/10th to the 7th/13th centuries, and the khāns had one of their capitals at Bālāsāghūn [q.v.] with an appanage centre at Ōzkend, both situated within the boundaries of present-day Kyrgyzstan. A first wave of Islamisation occurred during this period; before, Buddhism, Nestorian Christianity and local cults prevailed. After the Mongol invasions, the area was part of the Čaghatay ulus [see MOGHOLISTĀN], and Islam receded as a consequence, primarily in the northern part of the country, remaining strong, however, in the Farghāna valley. It is not altogether clear when ethnic Kyrgyz came to the region; this point depends on whether the different groups thus called can be

seen as ethnically and linguistically continuous [see KĪRGĪZ]. At any rate, many of the former Moghol/Čaghatayid subjects now became known as Kyrgyz. The second wave of Islamisation among these people began in the late 16th century, but Islamisation was apparently still going on under the influence of Kokand [see KHOĀKAND] in the 19th century.

### 2. The Russian colonial period.

The Russian advance into what is now Kyrgyzstan was aided by a number of Kyrgyz delegations to St. Petersburg and to the Russian authorities in Siberia asking for help against the Khokand khānate, which, by 1830 had gained at least formal authority over the Kyrgyz tribes. In 1862, Kyrgyz contingents fought alongside Russian soldiers to take the fort of Pishpek, and when Russia liquidated the Khokand khānate in 1876, all of the Kyrgyz tribes had formally submitted to Russian rule (V.M. Ploskikh, *Kirgiz' i kokandskoe khanstvo*, Frunze 1977). The area they inhabited fell into the Governorates of the Steppes and of Turkistan, and there was continuous reshuffling of the administrative organisation. Russian rule at first did not deeply affect local affairs, but this changed soon with the influx of settlers into the Semirečye region (northern Kyrgyzstan); migration reached its highest levels in the years immediately preceding World War I. In the Semirečye, between 1903 and 1913 about 4.5 million ha were allotted to settlers, thus provoking a drop of about one quarter in livestock. Land issues, as well as ethnic conflicts and accelerated social differentiation among the Kyrgyz, are seen behind the great steppe uprising in 1916, which was triggered by a decree to recruit local people as labourers in support of Russia's war effort. The rebellion was crushed, leaving an unknown number of Kyrgyz dead; about a third of the Kyrgyz population is said to have fled to China, partly returning after the Revolution in 1917. Again, the Kyrgyz herds decreased by about 60% (D. Brower, *Kyrgyz nomads and Russian pioneers. Colonization and ethnic conflict in the Turkestan revolt of 1916*, in *Jahrbücher für Geschichte Osteuropas*, N.F., xlv [1996], 41-53).

### 3. Soviet times.

The Russian Revolution provoked the creation of new Kyrgyz and Kyrgyz/Kazak organisations; at first, locals were reluctant to participate in the institutions created by Russians. Local ("Muslim") organisations included the Alash Orda [see KAZĀKSTĀN, in Suppl.], *Shūrā-yi islāmiyya* (founded in Khokand in April 1917) and *Bukarā* (from Ar. *fukarā* "paupers"). National demands came to the fore, and federal structures were demanded in a number of meetings (e.g. the First All-Russian Muslim Conference held at Moscow in May 1917). All of them were intent on preserving local interests, above all regarding the land question, against Russian encroachments.

During the civil war, Kyrgyzstan changed masters several times. The "Turkistan Autonomy" (November 1917-February 1918) was a short-lived attempt at creating a state structure in the Farghāna valley and one of the origins of the Basmacı guerrilla movement, which became strong enough to pose a threat to Ōsh, Djalālābād and Naryn in late 1919. In the north, Alash Orda struggled between Whites and Reds to conserve a measure of regional autonomy. But in the end, Mikhail Frunze led the Red Army to success.

In April 1918 the territory of the Kyrgyz was included into the Turkestan Autonomous Soviet Socialist Republic. Only in 1922 was the question of a separate representation of the Kyrgyz raised; until then, the ethnonym "Kyrgyz" had denoted those peo-

Table 1

Year	Kyrgyz	Russian	Uzbek	Other groups	Others
1924	63.5	16.8	15.4	Kazak 1.3	3.5
1970	45	30	11.3	Ukrainians 4 Germans 3 Tatars 2.3	4.5
1989	52.4	21.5	12.9	Ukrainians 2.5 Germans 2.4 Tatars 1.6	7.7
1999	64.9	12.5	13.8	Ukrainians 1.0 Germans 0.4 Tatars 0.9	6.5

ple whom we presently know as Kazak, whereas the "real" Kyrgyz were called either Karakyrghyz "Black Kyrgyz" or otherwise, but in any case, were linked to the Kazaks. First, some former Alash members (now within the Bolshevik party) worked for the creation of a "Kara-Kyrgyz Autonomous Mountain District", arguing that the splitting of the Kyrgyz over several administrative units was detrimental to their development as a nation. The district was to include the northern foothills as well. This move was at first viewed positively by party and state organs, but quashed later in 1922. Thus, the "Kara Kyrgyz" had to wait until the national demarcation (*razmezhvaniye*) in the second half of 1924 (the date retained was the decision taken by the Central Executive Committee of the USSR—TsIK SSSR—on 27 October 1924); this process provided them, for the first time in their recorded history, with a state-like structure in the form of an "autonomous district" (*avtonomnaya oblast*) within the Russian Federation (not the Kazak ASSR). Soon afterwards, the structure was promoted into an Autonomous Soviet Socialist Republic (ASSR), still within the Russian Federation (1 February 1926). Status as a full member of the Soviet Union was achieved when the new Soviet Constitution was proclaimed on 5 December 1936, which counted eleven republics, among them the Kirgiz Soviet Socialist Republic.

Until then, the country had undergone significant change in line with the general evolution (for better or worse) within the Soviet Union. For the nomadic Kyrgyz the collectivisation of agricultural land (for which a ruthless campaign was launched in 1929) meant that they were forced to settle (R. Eisener, *"Konterrevolution auf dem Lande": Zur inneren Sicherheitslage in Mittelasien 1929/30 aus der Sicht der OGPU*, Berlin 1999 [ANOR, no. 6]). This again meant a sharp drop in livestock (from 3.8 million to 2.3 million in 1931-2; sheep and goats dropped from 3.1 million in 1924 to just under 1 million in 1932; livestock reached the levels of the late 1920s again only by the 1950s or later) and widespread famine; though the Kazak steppe regions were hardest hit, Kyrgyzstan also was a disaster area. Repression was rampant; in 1932 during tax collection, more than 100 persons were shot (*U istokov kirgizskoy natsional'noy gosudarstvennosti*, Bishkek 1996, 121). No reliable figures are available for human losses in this period, but they must have been massive. Hence by 1940, almost all Kyrgyz farmers worked on collective or state farms.

In 1938, as in other parts of the Soviet Union, the local intelligentsia was physically destroyed together with the "old guard" of revolutionaries. This included

some of the former Alash members who were involved in the affairs surrounding the "Social Turan Party".

Industrialisation was one of the main targets of Soviet development policies, and during the first Five-Year Plans, coal mining was developed, but also metal working and industries related to the agricultural production of the country (textiles, foodstuffs, meat). Nevertheless, Kyrgyzstan has remained a largely agricultural country.

In the post-Stalin period (beginning with the XXth Congress of the CPSU in 1956), developments in Kyrgyzstan closely followed the general Soviet pattern. This meant that a precarious balance was established by the Republic's leadership between utter devotion to the centre and the slow but irresistible localisation of decision making, using patron-client-relationships to a very large extent (O. Roy, *The new Central Asia. The creation of nations*, London 2000). These networks tend to have a regional basis; in Kyrgyzstan, this means the south-north divide. Whereas the last Soviet leaders were southerners, the new leadership is northern. During Turdakun Usunbaev's term as the party's first secretary (1961-85, when he was removed by the new leadership under Gorbachev), Kyrgyzstan was increasingly unable to attract new capital investment, and the republic was the second poorest part of the Soviet Union (after Tadjikistan).

#### 4. Independence and after.

In the case of Kyrgyzstan, national independence was spurred by an outburst of communal violence in Ösh between Kyrgyz and Uzbeks in the summer of 1990, with land shortages and poor representation of Uzbeks as background. This led to the election of an outsider as chairman to the Supreme Soviet (28 October 1990), Askar Akaev, who came to be the only president in the new Central Asian republics not to have held high party office before. Akaev was re-elected president on 24 December 1995 (75% of expressed votes) and again on 29 October 2000 (74.5% of expressed votes, but major competitors were prevented from running).

Kyrgyzstan won its independence on 31 August 1991. The country has made rapid moves towards democracy and a market-oriented economy, earning the label of "Central Asia's island of democracy"; this characterisation has been questioned since more autocratic features have appeared. Economically, crisis has bordered on collapse during the first years of independence, the GDP plummeting by around 45% in 1992-5, industrial production by nearly two-thirds and agriculture by around one-third. Again, as in other crises all through the 20th century, reduction in livestock numbers is a good indicator: sheep and goats

fell from 8,741,000 heads in 1993 to a mere 3,716,000 in 1997. Inflation has also been a major problem since the creation of a national currency, the *som*, in 1993; soaring up to more than 1000% in 1992-3, it has been down to 18% in 1998, rising again to 36% in 1999 in the aftermath of the financial crisis in Russia. In spite of this, the GDP was up by 3.6% in 1999, mainly due to over-average agricultural production. But economic prospects do not seem as bright now (2000-1) as in the latter 1990s.

Kyrgyzstan faces serious security problems, mainly in the Farghāna region. In 1999 and 2000, Islamists from northern Tadjikistan have made incursions into Kyrgyzstani territory. Previously, security had not been a priority issue for the Kyrgyzstani government, but in 2001, military expenditure was increased by 250%. Linked to this is the drug traffic (cannabis, but mostly opiates from Afghānistān and Tadjikistan), making Osh one of its major hubs in Central Asia. Other transnational problems include an increasing water problem (downstream Uzbekistan and Kazakhstan depend on water supplies from Kyrgyzstani sources; water demand has increased by over 25% during the last decade).

The nation-building process involves a re-interpretation of the past, focussing on attempts at statehood in the more distant past and a re-evaluation of the early Kyrgyz nationalists, including those who fell victim to the Stalinist purges.

### KIRMĀNĪ, HĀDĪDĪ MUḤAMMAD KARĪM KHĀN [see SHAYKHĪYA. 2].

**KISAKÜREK**, NECİP FAZİL (1905-83), Turkish poet who wrote metaphysical poems of anxiety, darkness, loneliness and death, and whose tone became progressively mystical and, at the end, dogmatically religious. Already a bohemian as a student of philosophy in Istanbul, he continued a life of gambling, drinking and womanising as he worked first as a bank inspector and then as a teacher at various post-secondary schools in Ankara. Meeting the Nakshbandī *sheykh* Abdülhakim Arvasi in 1934 became a turning point in his life by providing an answer in religion for his spiritual and intellectual crises. He quit his job in 1942 in order to devote all his time to writing and publishing. He published two journals: *Ağaç* ("Tree", 1936), and *Büyük doğu* ("The Great East", 1943-78). He was politically active in religious causes, and used especially *Büyük doğu* as an ideological platform.

Although he also wrote short stories, novels, monographs on as diverse topics as Imām 'Alī, 'Abd ül-Hamīd II and Nāmīk Kemāl, and plays of which the most noteworthy is *Bir adam yaratmak* ("To create a man", 1938), Kisaküreke is first and foremost admired as a poet. With his first three books of poetry, he was hailed as a new voice in Turkish poetry. The tone of feverish nightmare in his early poems is created by striking, sometimes erotically charged images, by paradoxical metaphors of being and nothingness which dissolve into each other, and by experiments

with the lengths of syllables that play with the traditional syllabic measure of Turkish folk poetry. After his conversion, he publicly disowned all but a few of his previous poems. His lifelong goal was to create one definitive book which would include all of his poems. He achieved this with *Çile* ("Suffering", 1974), which has 385 poems. In his later poems, the tone is of impatient waiting for death because he believed that the terror of death and loneliness ended in dying and uniting with God. He defines a poem as a thought stated in emotional terms, and argues that the structure of a poem should be completely absorbed by the theme. Details of his life can be found in his two books of memoirs: *O ve ben* ("He and I", 1974) and *Babali* (1975).

*Bibliography*: 1. English translations of some of his poems appear in Talat Sait Halman, (ed.), *Contemporary Turkish literature*, New Jersey, London and Toronto 1982, 353-4; Feyyaz Kayacan Fergar (ed.), *Modern Turkish poetry*, Herts. 1992, 62-3; Kemal Silay (ed.), *An anthology of Turkish literature*, Indiana 1996, 394-6.

(SİBEL EROL)

**KİT'A** (A.), pl. *kiṭ'a*, or *muḳaṭṭ'a*, pl. *muḳaṭṭ'āt*, literally "piece, part cut off from the whole, segment". As a literary concept *kiṭ'a* denotes a form of poetry.

1. In Arabic poetry

A *kiṭ'a* or *muḳaṭṭ'a* is a short monothematic poem or fragment of a poem, in contrast to the long (often polythematic) poem, the *ḳaṣīda* [q.v.]. The term *kiṭ'a* can actually denote a piece or part of a longer poem (e.g. poetic quotes in anthologies) [see MUKHTĀRĀT]. However, it is, in particular, independent short poems that are named thus (in rare cases, they are also termed *kiṣār al-ḳaṣīd'id*; see al-Djāhīz, *K. al-Hayawān*, iii, 98). Western scholars usually equate *ḳaṣīda* and *kiṭ'a* with polythematic and monothematic poems respectively, while indigenous Arab critics in general consider only the length of a poem as a criterion for distinguishing between the two forms (cf. van Gelder, *Brevity*, 79 f.). They could, however, never agree on the number of verses that determines the borderline between the two forms. Ibn Rashīk names seven or ten verses (*'Umda*, i, 188-9) as the lower limit for a *ḳaṣīda*; other numbers are mentioned as well, however (cf. van Gelder, 79-80). According to the Arab, and in contradistinction to the Persian, critics, the non-existence, of an opening verse (*maṭla'*) with internal rhyming (*taṣwī'*) does not count as a criterion for the *kiṭ'a*. As a matter of fact, there are more than enough *kiṭ'as* containing such opening verses even in the earliest times. Thoughts as to the purpose for which the ancient Arabs preferred short poems have already been formulated within the context of pre-systematic criticism. Abū 'Amr b. al-'Alā' and al-Khalīl b. Aḥmad [q.v.] are said to have remarked on this: they were used whenever a poem had to be memorised. Others think that the *kiṭ'a* is especially useful for expressing disputes, proverbs and jests (cf. Ibn Rashīk, i, 186).

*kiṭ'as* can be found in almost every *dīwān* of poetry and in numerous other works dealing with poetry and other topics (*inter alia* in the *ayyām al-'Arab*, and also in many historical works, such as Ibn Hishām's *Ṣira*, al-Ṭabarī's *Tārīkh*, and al-Balādhuri's *Ansāb al-ashraf*). The *kiṭ'a* is not subject to any thematic limitations. A classification and characterisation of the contents

of the *kiġa* among the ancient Arabs has been offered by Alfred Bloch. His principle of classification is the degree of the poem's "distance from life or from specific situations in life". As a result, the different categories are: (1) work-songs or songs that accompany a certain action (no or little "distance from life"; poetry of the moment); (2) poems containing a proclamation or message (medium distance from life; poetry of the occasion); (3) poems expressing a sentiment of life and poems of remembrance (timeless artistic poetry). (A group of verses of categories nos. 2 and 3 may form the final part of category no. 4, the *kaṣida*.)

Category no. 1 is an impromptu poem of the moment, very often composed in the easiest metre, *radjāz*. Mainly war cries belong to this category, in addition to songs for round dances to which mothers let their children dance, and work-songs in the narrower sense that accompany real activities (rarely ever transmitted) (cf. Ullmann, *Untersuchungen*, 18 ff.). The contents of the war poems is mostly self-praise: "I am Ibn Wars, horseman without pusillanimity, who through his courage inspires admiration, who advances boldly when the weakening retreats, and on the day of horror with the sword I strike the towering (adversarial) hero until he falls" (al-Balādhurī, *Ansāb*, v, 268, 6).

Category no. 2 is most abundantly represented in ancient Arabic poetry and is, according to Bloch, its most characteristic genre. In proclamation poems the poet expresses his opinion on a certain event; they are occasional poems born out of daily life, "pamphlet verses", the contents of which are valid for a considerable amount of time. Since they are mostly disputes with distant opponents, many of them are composed as messages: (*a-lā*) *abligh banī fulān* "send word to the Banū X that . . .", or (*a-lā*) *man mubligh* "annī fulān" "who will send word from me to X that . . ."; numerous others present themselves as reactions to messages that have arrived: *nubbi'tu anna* "it has been brought to my knowledge that . . .". As to content, these are poems of warning, blame (especially for poor hospitality), triumph, justification, challenge to blood revenge, etc. "To the Banū Dhuhl bring now . . . the message, that, as an atonement for your slaying of al-Muḳannā, we have slain 'Ubayda and Abu 'l-Djulāh. If you consider the matter settled now, then so will we; if not, the points of our lances [will await you]—[they are] pointed—and sharp swords, shining bright, cutting off heads and fingers" (*Sharḥ Dīwān al-Hamāsa*, recension of al-Marzūkī, ii, 772, no. 259).

All poems in which the poet does not express his opinion on a certain event are subsumed by Bloch under category no. 3: the poems in which he puts in words, let us say, his view of life or remembers bygone pleasures and deeds of youth, or puts forward aphorisms about the transitoriness of life and all sorts of other practical wisdom (sententious poetry), or praises himself or his tribe without referring to a specific deed, etc. According to Bloch, most of the (monothematic) self-praise and praise poems are to be put into this category, because, in general, they have not been brought about by a specific event.

While this categorisation may still be sufficient for pre-Islamic and early Islamic poetry—it has, however, been criticised in that the dirge (*marḥūya*) has not found its appropriate place therein (Wagner, *Grundzüge*, i, 68-9; Borg, *Mit Poesie*, 222-3)—it no longer covers the genres that came into being at the time of the Umayyads (and partly earlier) and unfolded their full potential at the time of the 'Abbāsids. This new sys-

tem is composed of genres that have, with good reason, been classified and named by the indigenous critics and, subsequently, by Western scholars primarily according to their topics (*ghazal* = love poetry; *khamriyya* = wine poetry, etc.). However, the topic often has additional characteristics of a genre-differentiating nature (e.g. the metre *radjāz* in hunting poems). According to their purely formal definition, poems belonging to the new genres are divided by the indigenous critics and editors of *dīwāns* into *kaṣidas* and *kiġas*, depending on their length. This procedure shows up most prominently in Ḥamza al-Iṣfahānī's chapter headings of his recension of Abū Nuwās's *dīwān* (e.g. *al-bāb al-sābi' fi 'l-zuhdiyyāt wa-fihī 20 kaṣīdat<sup>m</sup> wa-muḳaṭṭa'at<sup>m</sup>*; *al-bāb al-tāsi' fi 'l-khamriyyāt . . . yaṣṭamilu 'alā 323 kaṣīdat<sup>m</sup> wa-muḳaṭṭa'at<sup>m</sup>*, etc.). The poems of the new genres are often short; there are, however, also very long poems, sometimes even containing several parts, which can especially be found among the *khamriyyāt*. These poems may also be seen as approaching the praise *kaṣida* in their structure (they have—albeit seldom—a *nasīb*, or—very often—a parody of a *nasīb* as a prologue; the *raḥīl* can also be found). Among the so-called neo-classical poets (Abū Tammām, al-Buḥturī and al-Mutanabbī) the short poems, although abundant, stand entirely in the shadow of their *kaṣida* poetry. However, there are cases like Abū Tammām's *ghazaliyyāt*, whose importance should not be underestimated (see Bauer, *Abū Tammām's Contribution*, 13 ff.). Most of them are short and it is noteworthy that pieces consisting of four verses are particularly numerous (cf. *ibid.*, 18-19; Seidensticker, *Die Herkunft*, 920). In al-Mutanabbī's *dīwān* one can find numerous short poems addressing more than one theme; al-Wāḥidī, in his commentary, criticises two *kiġas* that contain sundry descriptions—a genre not mastered by al-Mutanabbī, according to him (*Dīwān*, ed. Dieterici, 774). The themes of *kiġas* from the 3rd/9th to the 5th/11th century are extremely varied. Next to the short poems of the now established new genres one can find pieces that in their themes are close to the epigrams of late antiquity: descriptions (Ar. *awṣāf*, sing *awṣf* [q.v.], Greek *ekphrasis*) of a large variety of objects (especially in Ibn al-Rūmī, Kūshādjīm, al-Sarī al-Raffā' and al-Ma'mūnī), descriptions of flowers and gardens (*zahriyyāt* [q.v.] (in Ibn al-Rūmī, Ibn al-Mu'tazz and al-Ṣanawbarī; especially in the latter, one can also find long garden poems), reflective poetry (especially in Ibn al-Rūmī), jesting, riddles, requests for gifts, mockery, blame, excuses, thank-you notes, requests, invitations, etc. In Ibn al-Mu'tazz's praise poetry one can find a remarkably large amount of short pieces; al-Ma'arri, finally, in his philosophical poems (*luṣūmiyyāt*) chooses the short form of the *kiġa* as often as its long form.

## 2. In Persian literature

The Persian critics define the *kiġa* or *muḳaṭṭa'a* as a poem that has the same metre and rhyme throughout, and the opening verse (*maṭla'*) of which does not contain internal rhyming (*taṣrī'*). Most often, two verses are named as the minimum amount whereas there is no upper limit as to the number of verses (Dihkhudā, s.v. *kiġa*, Rückert-Pertsch, 64). This means that the length of a poem, which for the Arabs is its decisive feature, has been completely abandoned as a criterion. As with the Arabic *kiġa* the choice of topic is arbitrary.

As can be expected, *kiġas* are found already among the poems of the oldest Neo-Persian poets (from Muḥammad b. Waṣīf via Rūdakī up to Manūčihri). A sizeable number of the short poems of these old

poets, however, begin with a *matla'* that contains a *tasvīr*, hence cannot be counted as *kīfās*. Such is the case with the whole of Manūčihri's wine and love poems (ed. de Biberstein Kazimirski, nos. 3, 4, 34, 69-75, 77-83, 85, 90, 92). Terminological *kīfās* occur much more rarely in Manūčihri. In the *diwāns* of poets beginning in the 5th/11th century the *kīfās* often occupy their own more or less voluminous chapter. Famous for their *kīfās* are Anwarī (d. 587/1191 at the latest [q.v.]) and especially Ibn-i Yamīn (d. 769/1368 [q.v.]). Anwarī's *diwān* contains a very large chapter comprising them. These are of extraordinary variety in their topics: in addition to praise, blame, mockery, threat, request (especially frequent is the request for wine), thanks, mourning, congratulation, complaint, description of personal circumstances (*ḥasb-i ḥāl*), one finds advice, admonishment, maxims, and reflective poems (occurring very frequently), jesting, epistles, riddles, chronograms, *munāzaras*, and many others, among them very unusual topics, for instance, a poem about toothache, in which the word "tooth" occurs in every verse. Descriptions are remarkably rare; there are, however, a few descriptions of banquets and palaces. Poems containing 20 and even 30 verses do occur. As for the *kīfās* of Ibn-i Yamīn who, all in all, is considered the most important Persian *kīfā* poet, see the article on this poet. The *diwān* of Ḥāfiẓ [q.v.] also contains a small section of *kīfās*; in addition to the usual themes (praise, mourning, longing, wine, chronograms, maxims, congratulations, request for a reward, etc.), there are also some more remarkable poems like the one in which Ḥāfiẓ describes in many verses the loss of his poetic powers, which can only be restored by the ruler's grace. Kamāl Khudjandī's and Djāmī's [q.v.] *kīfās* are predominantly short. Most of them consist of only two verses, a peculiarity that is not found in the *kīfās* of Kamāl's contemporary Ḥāfiẓ. Djāmī's three *diwāns* contain altogether only 128 *kīfās*; thematically, these do not offer anything out of the ordinary. It has been remarked, however, that Djāmī's "advice and admonishments" (*panḍ u mau'iza*) are mostly of a sarcastic and pessimistic character, since, in any case, the *kīfās* of this epoch are critical of society and complain about the upheavals of the day (H. Riḍā, in his introduction to the *Diwān-i kāmil-i Djāmī*, Tehran 1341/1962, 84).

**KITĀBA** [see INSHĀ'; KĀTĪB; KHATT].

**KOČO** (Khocho, Chotscho, Kōsō) (Uyghur; in Chinese Kao-Ch'ang), also known as Idikut-shahri, and locally as "Asus (Ephesus), the town of Dakyānūs", i.e. the Roman emperor Decius (*regn.* 249-51) [see AṢḤĀB AL-KAḤF] (cf. A. Von Le Coq, *Auf Hellas' Spuren*, 41), the name of an Uyghur state (850-1250) and of an ancient, walled city, now in ruins,

adjoining Karakhodja in the desert to the east of Turfān [q.v.] in Eastern Sinkiang Uyghur Autonomous Region, China.

According to Von Gabain, the name is neither Turkish nor Chinese, but an ancient, indigenous one, meaning "highly brilliant". In the 7th century A.D. the Kočo state reached as far east as Tunhuang in Kansu [q.v.], famous for its "Cave of the Thousand Buddhas", and its "Jade Gate" (Chin. Yü-mön-kuan), where all the traffic between China and the West had to pass. In the north this state included the so-called "Four Garrisons", i.e. Bishbalik [q.v.], Kuča, Karashahr and Kočo town itself, all on the northern branch of the Silk Route and described by the 7th-century Chinese traveller and monk Hsüan-tsang. In 791 the Tibetans, in alliance with the Karluq [q.v.] and the Sha-t'o ("the People of the Sandy Desert"; see Chavannes, *Documents*, 96-9), defeated the Chinese and the Uyghur, and occupied the Tarim Basin [q.v.]. In 840 the Kirgiz [q.v.] put an end to Uyghur power in Mongolia. Uyghur groups fled southward and settled in the Turfan region, where they established a state, with Kočo as its capital, which was recognised by the Chinese in 856. The earliest record of a Muslim presence in the oases along the northern branch of the Silk Route so far known seems to be the travel account which Sallām al-Tarjūmān [q.v. in Suppl.] dictated to Ibn Khurradādhbih (Ar. text 164, Fr. tr. 126) of his journey from Sāmarrā' to Sinkiang in 230-2/842-4. Before reaching Ha-mi [see KOMUL, in Suppl.], he met followers of the Prophet who apparently had settled there more or less permanently since they had mosques and *madrasas*.

In 848 Chang I-ch'ao, the Chinese regent of Sha-chou, "the town of the sands" as Tun-hang had been renamed under the T'ang dynasty (618-907), began to oust the Tibetans from northwestern Kansu, and in 855 the Kočo Uyghur followed his example. In the 10th century they entertained good relations with the Tibetans, as they did with the Kitai (Liao) [see KARĀ KHITĀY], who in 924 toppled the Kirgiz state of which Kočo had become a vassal. In 1001 the *khakan* of Kočo requested the emperor of China to wage war against the Tangut or Hsi Hsia, a people of Tibetan origin who lived in the great loop of the Yellow River [see ḤAMĀSA. iv; KANSU]. He boasted to the emperor about the large extension of his state. At that time the Kočo Uyghurs had moved their residence further westward to Kuča. In 1125 the Liao were overcome by the Jüchen, who until 1234 ruled over Manchuria, much of Central Asia and all of North China. With these new overlords, too, the Kočo Uyghurs had friendly relations. In 1209 King Barčuk of Kočo surrendered peacefully to Čingiz Khān in order to rid himself of pressure from the Naiman of Western Mongolia. He was adopted as "the fifth son". After the Mongolian conquest, Kočo was added to the Čaghatay khānate [q.v.]. The Mongols were instructed in Buddhism by the Kočo Uyghurs, Buddhism being strongly established in the region. But the famous Turfan finds also include fragments of Syrian manuscripts, most of them with texts from the Peshiṭta, while von Le Coq also found in Kočo a wall painting of Mani, the founder of Manicheism, dated to the 9th century A.D. The towns along the Silk Route thus had a rather mixed population of merchants who professed various religions. Over the centuries, Kočo seems to have adapted itself to its respective overlords in order to continue its lucrative trade.

(E. VAN DONZEL)

**KOMUL** (Uyghur; Chin. Ha-mi), a town and oasis in Eastern Sinkiang Uyghur Autonomous Region, China (42° 47' N., 93° 32' E.). The Chinese name Ha-mi is derived from *Khamil*, the Mongolian rendering of Uyghur *Qomul*.

This important stage on the northern branch of the Silk Route was occupied by the Chinese under the Han dynasty (206 B.C.-A.D. 220) in A.D. 73 and again in 86. In the 5th century the Tarim Basin [*q.v.*], probably including *Qomul*, was dominated by the White Huns or Hephthalites [see *HAYĀTILA*]. During the so-called "forward policy" towards the west under the Chinese T'ang dynasty (618-907), *Qomul*, and subsequently *Turfan* [*q.v.*], were wrested from Turkish supremacy, though the Turkish nomads kept looking for grazing grounds, thus causing disturbances. *Qomul* became the seat of a regular prefecture under the name I-chou. In the 7th century the famous Buddhist monk and traveller Hsüan-tsang was hospitably received by the Uyghur or Toghuzghuz [*q.v.*] ruler of *Qomul*, then a principality subordinate to the kingdom of *Qoço* [*q.v.* in Suppl.]. In 763 the town was taken by the Tibetans and in 840 it came under Uyghur rule. In 231/843 *Qomul* was visited by the Arab traveller Sallām al-Tardjūmān [*q.v.* in Suppl.] who calls it *İkkū* (إكك) (Ibn *Khurrādādhbih*, Ar. text 164, Fr. tr. 126; cf. Beckwith, *The Tibetan empire*, 149) after the Chinese name I-chou. Sallām describes it as having a circumference of ten parasangs, with iron gates which were closed by letting them down; inside the enclosure were fields and mills. This description seems to correspond with a Chinese *kuan*, i.e. a large, walled-in fortification with barracks, arms depots, fields, and two gates (see Luo Zhewen, *The Great Wall*, 39-41). According to Sallām, the distance between this town and *Dhu 'l-Qarnayn's* barrier (Ar. *sadd*), perhaps the famous "Jade Gate" in the western extension of the Great Wall of China (see Sir Aurel Stein, *On ancient Central Asian tracks*, 189), is three stages. The real distance is 350 km (Von Le Coq, *Buried treasures*). Sallām adds that *Dhu 'l-Qarnayn* camped in *İkkū*, but this remark is probably part of what he thought he should report to the caliph al-Wāṭṭihik [*q.v.*], who had sent him on his mission. During his journey to *İkkū/Qomul* along the northern branch of the Silk Route, Sallām, before reaching *İkkū/Qomul*, met a community of Muslims who spoke Arabic and Persian and had mosques and *madrasas*. He was astonished that they did not know who the caliph was.

In the 13th century, *Qomul* was Čingiz *Khān's* temporary capital. After the Mongol domination, it became one of the small Uyghur states in the region. At the end of the 13th century it was visited by Marco Polo, who describes it as a place known for its hospitality and where it is good to live. In 1473 *Qomul* was annexed by the sultanate of *Turfan*. In the late 16th century, *Qomul* town and region came under the control of the Dzungars, a western

Mongolian people who conquered Central Asia and gave their name to Dzungaria and the Dzungarian Gate, at present the northern part of the Singkiang Uyghur Autonomous Region. In 1696 the Chinese Ch'ing emperor defeated the Dzungar chief Dga'-Idan. After the death of the latter's grandson Dga'-Idan Cereng in 1745, internal Dzungarian strife led to their complete destruction in the war against China (1755-8), during which the Chinese used *Qomul* as a base. After the fall of the Dzungars, the Muslims of the Tarim Basin staged an independence movement, but by 1760 this was suppressed by the Ch'ing, who established control over the Basin by granting official status to the former rulers of its oasis states. In the 18th century, China's boundaries reached as far as Lake *Balkhash* [*q.v.*] and parts of the *Kazakh* steppe. During the great Muslim rebellion of 1862-78 under Ma Hua-lung [*q.v.*], *Qomul* was badly damaged. It was visited by Col. Mark Bell in 1886, by A.H. von Le Coq in 1904 and by Cable and French in 1940. Von Le Coq describes the riches of the palace of the Muslim *khān* of *Qomul*: Chinese and *Bukhārā* carpets, porcelain, *Khotan* [*q.v.*] jade-carvings, silk embroideries, a cuckoo-clock and even French champagnes and Russian liqueurs. In 1932, after an abortive uprising, the town suffered terribly at the hands of the Chinese. Its population in 2003 is estimated at ca. 118,000.

**KONKAN**, the coastal region of the western Deccan or Peninsular India lying roughly between Thālnēr and Bombay in the north and Goa in the south, i.e. between latitudes 19° 30' and 15° 30' N., and extending for some 560 km/350 miles. It has been known under this name in both mediaeval Islamic and modern times. Within British India, it was formerly in the Bombay Presidency, later Province, and is now in Maharashtra State of the Indian Union. It comprises a highly-forested, low-lying plain between the Arabian Sea and the inland mountain barrier of the Western Ghats.

In mediaeval Islamic times, the *Tughlukids* in the 14th century and then the *Bahmanids* [*q.v.*] in the course of the 15th century, endeavoured without much success to extend their authority from the Deccan plateau down to the ocean, until in 876/1472 the general Maḥmūd Gāwān [*q.v.*] finally established *Bahmanid* control over the *Konkan* strip. *Konkan* was subsequently divided between the *Nizām Shāhīs* of *Aḥmadnagar* [*q.v.*] (the northern part) and the 'Adil *Shāhīs* of *Bīdjarpur* [*q.v.*] (the more southern part) in the 16th and early 17th centuries, then divided between the *Mughals* and the 'Adil *Shāhī* sultans before the latter succumbed to the advance of the *Mughal Awrangzīb* [*q.v.*] in 1097/1686. By the 18th century, *Konkan* was in the hands of the *Śivādji* and the *Marāthās* [*q.v.*], but after the peace settlements of

1816-17 with Britain at the end of the Marāthā Wars, the region was in 1818 incorporated into the Bombay Presidency. The local language, Konkani, is a dialect of Marāthī containing Dravidian elements probably borrowed from Kanarese.

**KÖSZEG**, German Güns, a small Hungarian town near the Austrian border with a mediaeval castle which was sieged and symbolically taken by the Ottomans in 1532.

In the first decades of his reign, mainly under the influence of the Grand Vizier Ibrāhīm Pasha, Süleymān the Magnificent cherished world-conquering ambitions. To achieve this goal, he intended, among other things, to defeat the Austrian Habsburgs by occupying their capital. After the unsuccessful 1529 campaign, he undertook another military operation in 1532 with the aim of marching against Vienna.

The Ottoman army proceeded slowly, holding sophisticated parades to imitate Charles V's shows of power and wealth. This time they followed a lesser known route, along which the castle of Köszeg was situated that did not seem to constitute a major obstacle. However, the garrison of approximately 1,000, mostly local peasants inexperienced in warfare, commanded by Miklós Jurisics (Nikola Jurišić), a Croatian landlord and the envoy of the Emperor Ferdinand I to Istanbul in 1529 and 1530, withstood the battle between 10 and 30 August. After long negotiations, the defenders surrendered, stipulating that, though Ottoman standards would be hoisted on the walls, none of their contingents would be stationed within the fort. One reason for procrastination was that the Ottomans wanted to avoid a pitched battle with the main forces of the Empire; similarly, the Habsburg side was reluctant to force a decisive clash.

For his valour, Jurisics was nominated royal councillor and received Köszeg as his hereditary property.

**KU'AYŪI**, a South Arabian tribal group and sultanate, the latter eventually becoming part of the Eastern Aden Protectorate prior to the departure of the British from South Arabia in 1967. The full area of the sultanate was the whole of the coastal plain between the Wāḥidī [q.v.] in the west and Mahra in the east, the mountainous region north up to Wādī Ḥaḍramawt [see ḤAḌRAMAWT], the western end of the Wādī and some tribal lands north of the Wādī. One should add the area of the Wādīs Daw'an (sometime spelt Daw'an in the Arabic sources) and 'Amd. The major towns of the sultanate were: al-Mukallā, the capital, and al-Shihr [q.v.] (both ports on the Indian Ocean), Ḡhayl Bā Wazīr on the southern coastal plain, and Shibām [q.v.] and al-Kaṭn in the Wādī itself (Government of Bombay, *Account*, 119).

It was the Kathīrī [q.v.] Badr b. 'Abd Allāh b.

'Umar Ibn Abī Ṭuwayrīk about the year 1270/1853 who began to bring in tribal mercenaries of Yāfi' [q.v.] from their lands in the west, as he strove to expand his territories in Ḥaḍramawt. Thereafter, there was a constant flow of Yāfi' immigration into the area (al-Shāṭirī, *Adwār*, ii, 401). The Ku'ayūi were a tribal group (*baṭn*) of Yāfi' and they first settled in Wādī 'Amd where 'Umar b. 'Awaḍ al-Ku'ayūi, the founder of the dynasty, was born. In about 1246/1830, he went for the first time to Ḥaydarābād in South India where the *Nizām* employed Ḥaḍramīs and South Arabians as mercenary soldiers. 'Umar did return to Ḥaḍramawt, but he died in India in 1282/1865 and was succeeded by his son, 'Awaḍ b. 'Umar, as *ḡama'dār* (*jemadar* in the British sources). 'Umar's three sons, Ṣalāh (called Barak Jung in India), 'Awaḍ and 'Abd Allāh, in particular, built fortunes in India and Arabia and had much influence on the later development of the dynasty.

During the 1280s/1860s and 1290s/1870s, full-scale wars were fought for control of Ḥaḍramawt between the Kathīrī and the Ku'ayūi (Government of Bombay, *Account*, 125; al-Shāṭirī, *Adwār*, ii, 405; Gavin, *Aden*, 160-62; Burrowes, *Dictionary*, 290-1; Dresch, *Yemen*, 21). In 1283/1866, the ports of al-Mukallā and al-Shihr were both controlled by Yāfi', and when the latter called for help, Ṣalāh and 'Abd Allāh sent funds from India and both Yāfi' and Indian troops were despatched to the area. In the following year, both ports were taken by the Ku'ayūi, and the British became involved directly in the inter-dynasty struggles. The British, also fearing Turkish encroachment in the area, became apprehensive. In the confused situation, British policy was to cut off supplies and monies from India (Gavin, *Aden*, 162-8). In 1298/1881, they sanctioned Ku'ayūi control of the southern coast and in 1299/1882 a treaty was drawn up between the two, the latter agreeing to accept British advice in exchange for an annual sum of 360 Maria Theresa dollars (Gavin, *Aden*, 171-2; for the text of the treaty, Government of Bombay, *Account*, 169-70).

In 1307/1888 a full protectorate treaty was signed between the Ku'ayūi and the British, one of a number of such treaties. The British government agreed "to extend to Mokalla and Shehr and their dependencies which are under their authority and jurisdiction the gracious favour and protection of Her Majesty the Queen-Empress". In return, the Ku'ayūi agreed "to refrain from entering into any correspondence, agreement or treaty with any foreign nation or power except with the knowledge and sanction of the British Government . . ." (Government of Bombay, *Account*, 186-7 for the full text). The Ku'ayūi were in control of Shibām and the western end of Wādī Ḥaḍramawt, as well as the coastal region in the south, and were able to deny the ports to the Kathīrī. A generally cordial relationship developed between the British and the Ku'ayūi (*ibid.*, 145; Gavin, *Aden*, 172-3; Ingrams, *Arabia*, 10).

In 1320/1902 the title of *jemadar* was finally abolished and 'Awaḍ b. 'Umar became Ku'ayūi *sultān*. He died in India about 1325-7/1907-9 and was succeeded by his son Ḡhālīb who himself died in 1340/1921. Ḡhālīb was followed as *sultān* by his brother 'Umar, who died in 1354/1935. Ṣāliḥ b. Ḡhālīb became *sultān* in 1354/1935 and died in 1375/1955. 'Awaḍ b. Ṣāliḥ reigned from that date until his death in 1386/1966 and 'Awaḍ's son, Ḡhālīb, was the last Ku'ayūi *sultān* until the withdrawal of the British from the area about a year later (al-Shāṭirī, *Adwār*, ii, 407-8).

The year 1933 and the visit to Ḥaḍramawt of the

Political Resident in Aden, Sir Bernard Reilly, marks the beginning of the widespread development of the two sultanates, the Ḳu'ayṭī and the Kathīrī, the peace which was negotiated among the tribes and the much closer involvement in their affairs by the British government, manifest in the establishment of an Eastern Aden Protectorate (EAP), quite separate from the Western Aden Protectorate (WAP). The peace, widely known as "Ingrams Peace" after its architect, Harold Ingrams, was finally brought about in 1355/1937 and was to last for three years. In 1937 also, an advisory treaty was signed between the Ḳu'ayṭī and the British in which an adviser was to be appointed, Ingrams himself (Smith, "Ingrams Peace", 6-7, 21; for the text of the advisory treaty, see Ingrams, *Records*, ix, 236-7).

The Ḳu'ayṭī, along with the Kathīrī, never entered the Federation which was formed and fostered by the British in the WAP. At the time of the withdrawal of the British in 1967, the Ḳu'ayṭī sultanate became a part of the People's Democratic Republic of Yemen. In 1990, with the unity of north and south Yemen, the whole of what had been the EAP became a part of the Yemen Republic [see AL-YAMAN. 3 (b)] with its capital at Ṣan'ā'.

**KŪČŪK 'ALĪ OGHULLARĪ**, a line of Turkmen *derebeys* [*q.v.*] or local lords who controlled the region round Payās [*q.v.*], which was strategically situated near the head of the Gulf of Alexandria (and now in the modern Turkish *il* or province of Hatay), and, for a while, Adana in Cilicia [*q.v.*] for almost a century.

The founder, **Ḳhalīl Bey Kūčūk 'Alī Oghlu**, appears ca. 1770 as a bandit chief based on Payās, preying on shipping (including the ships of European powers) in the Gulf and on the land traffic which had to pass through the narrow gap between the Gāvur Dağı mountains and the sea, levying dues on the Pilgrimage caravans from Anatolia to Syria and the *Ḥiḍjāz*, and even in 1801 capturing and imprisoning for ransom the Dutch consul-general in Aleppo. The efforts of the Porte in Istanbul at humbling him all failed, and it was obliged to come to an accommodation with him and accord to him the dignity of a *paṣha* of three *tugs*.

When Kūčūk 'Alī died in 1807, his equally rapacious son Dede Bey succeeded him, continuing to make a living by preying on shipping in the Gulf. An expedition sent against him under a rival *derebey*, Čapan Oghlu Amīn Paṣha of Yozgat, failed to dislodge him, but in 1818 the governor of Adana managed to capture him, and he was sent to Istanbul and executed.

His young son Mustuk (apparently a hypocoristic form from Muṣṭafā; to be written as Muṣṭuḳ?) took refuge

in Mar'ash for nine years, out of the reach of the governors of Adana, but returned to Payās in 1827. During the 1830s he supported the Ottomans' enemy, Ibrāhīm Paṣha, son of Muḥammad 'Alī [*q.v.*], but rallied to the Sultans after the withdrawal of the Egyptian forces in 1840. William Burckhardt Barker, son of a British consul in the Levant, praises Mustuk for his polished manners and generous nature, a sharp contrast to his forebears, and Mustuk did try to discourage brigandage in his region. But the long-term policy of the Sultans at this time was the reduction and ending of the power of all *derebeys*. Mustuk fought off an attack by the governor of Adana in 1844, and it was not until 1863 that the then governor in Adana secured his capture. He was exiled, but the Payās region continued to be disturbed for another two years through the activity of two of his sons.

*Bibliography:* Barker's account of the family is the main Western source; see his *Lares and penates: or, Cilicia and its governors*, ed. W.F. Ainsworth, London 1853, 73 ff. Of modern studies, see A.G. Gould, *Lords or bandits? The derebeys of Cilicia*, in *IJMES*, vii (1976), 487-90; C.E. Bosworth, *William Burckhardt Baker's picture of Arabia in the early 19th century*, forthcoming in *Graeco-Arabica*, ix (2003), with further references; and the *Bibl.* to *DEREBEY*. (C.E. BOSWORTH)

**KUFR** [see **KĀFĪR**].

**AL-KŪHĪ** or **AL-KŪHĪ**, **ABŪ SAHL WAYḌJĀN b. Rustam**, mathematician and astronomer who was originally from Ṭabaristān.

He worked in the second half of the 4th/10th century under the *Būyid amīrs* 'Aḍud al-Dawla and **Sharaf al-Dawla** [*q.v.*] and collaborated with the chief scholars of the time, notably **Abu 'l-Wafā'** al-Būzadjānī, al-Sidjzī, al-Ṣāghānī and 'Abd al-Raḥmān al-Ṣūfī. Under the latter's direction, al-Kūhī took part in observation of the winter and summer solstices at **Shīrāz** (15 December 969 and 16 June 970), by means of a meridian circle 1.4 m in diameter having gradations of 5 in 5'. Subsequently, he built at **Baghdād** an observatory equipped with instruments made after his own devising (a spherical segment with a diameter of ca. 13.5 m) and made observations of the entry of the Sun into the signs of Cancer and Libra on 16 June and 18 September 988. A certain **Abu 'l-Ḥasan al-Maghribī** (sc. 'Alī b. Abi 'l-Riḍjāl; cf. H. Suter, *Mathematiker*, no. 219) took part in these latter observations. At this time, urged on by his patron **Sharaf al-Dawla**, who wished to emulate the achievements of the caliph al-Ma'mūn, he seems to have devoted himself enthusiastically to astronomy.

However, the greater—and best—part of his work was in the domain of mathematics and especially geometry. The number of his works here has increased over the years to the figure of 28 (Sezgin). One may mention his *Risāla fi 'l-birkār al-tāmm* (cf. Fr. Woepke, *Trois traités arabes sur le compas parfait*, in *NEMBN*, xxii/1 [1874], 1-21, 68-111, 145-75) and treatises on the construction of the heptagon (see Y. Dold-Samplonius, *Die Konstruktion des regelmäßigen Siebenecks*, in *Janus*, 1/4 [1963], 227-49) and of the pentagon. He also wrote on the trisection of the angle (see A. Sayılı, *Al-Kūhī's trisection of the angle*, in *Actes du X<sup>e</sup> Congrès internat. d'Histoire des sciences*, i, Ithaca 1962, 545-6) and on the measurement of paraboloids (ed. **Haydarābād** 1947, Ger. tr. Suter, *Die Abhandlungen Thābit b. Kurras und Abū Sahl al-Kūhīs über die Ausmessung der Parabolöide*, in *SBPMS Erl.*, xlviii-xlix [1916-17], 182-227). Others of al-Kūhī's works have titles analogous to those of certain treatises of Archimedes—of whom he was a good

continuator—considered as apocryphal (e.g. *Marākiz al-dawā'ir al-mutamāssa; al-Masā'il al-handasiyya; K. al-Ma'khūdhāh*), or else are commentaries on Euclid or determinations of the value of  $\pi$ . The treatises on astronomical topics are much less numerous: on the construction of the astrolabe and of verticals (*dawā'ir al-sumūt*) on the tympanum of this last, preserved by Abū Naṣr Maṣṣūr b. 'Irāk, al-Bīrūnī's master (cf. J. Samsó, *Estudios sobre Abū Naṣr...*, Barcelona 1969, 63-4); on the determination of the *ķibla* [*q.v.*]; on the position of the Earth and the planets; etc. He was also the author of a *riṣāla* on kinetics (Eng. tr. Sayılı, *A short article... on the possibility of infinite motion in finite time*, in *Actes du VIII<sup>e</sup> Congrès internat. d'Histoire des sciences*, Florence 1956, 248-9).

**ĶULUZ**, the Ottoman Turkish name for the Greek town of Vólos, a port on the northern shore of the Pagasetic Gulf or Gulf of Vólos in east-central Thessaly [see TESALYA] (lat. 39° 22' N., long. 22° 57' E.). The name probably stems from Slavonic *golosŭ* "seat of administration" and may be associated with the Slav presence in the area during middle Byzantine times.

Situated on the site of ancient Iolcos, the area received in ca. 1277 refugees from the Byzantine capital Constantinople who opposed the emperor Michael VIII Palaeologus's attempts at church union with the West, and in the late Byzantine period Vólos was known as a relatively new settlement. Together with neighbouring Demetrias (2 km to the south-west of modern Vólos), which had remained in Catalan hands until ca. 1381, Vólos experienced two Ottoman conquests, firstly between 1393 and 1397/796-800 and then ca. 805/1403, and passed definitively into Turkish hands ca. 826/1423. The conquerors strengthened the fortifications of the castle there in order to fend off an impending Venetian attack, and an Ottoman governor and garrison were installed, together with fresh Muslim settlers from Anatolia, whilst the local Christians moved to the slopes of Mt. Pélion to the north (refs. in A. Savvides, in *Thessalikó Hemerológio*, xxviii [1995], 51-2, 59-60).

In the early Ottoman period, the region of the Vólos fortress (but not Demetrias) is mentioned in the surviving testaments of the Turkish governors of Thessaly Turakhān Bey [*q.v.*] (850/1446), 'Ömer Bey (889/1484) and Hasan Bey (937/1531), whilst it was also described in Pīrī Re'īs's [*q.v.*] *Kitāb-i Bahriyye*. The first settlements outside the fortress grew up in the late 16th-early 17th centuries, a growth which stimulated local commerce and the transit trade. This was helped by a famed local fair held twice a week and the first works along the shore at the fortress beach, later to become Vólos's commodious port. In 1665 the fortress was attacked by Francesco Morosini and a Venetian force (P. Coronelli, *Memorie storio-geografiche...*, Venice 1692, 229), but soon recaptured and reformed by the Ottomans.

During the Greek Revolt of the early 19th cen-

tury, the rebel Greeks of Pélion failed in May 1821 to capture the strongly-held fortress, although on 8 April 1827 the British naval commander and Philhellene Frank Abney Hastings seized five Turkish vessels in Vólos harbour and forced the Ottoman garrison temporarily to evacuate the fortress (see Tsopotós, *History*, 202 ff.). However, the region remained under Turkish rule till 1881 when, following the Berlin Conference, it passed between 2 and 22 November to the Kingdom of Greece and Turkish forces left the town (the citadel was unfortunately demolished a few years later). It was in this last phase of Ottoman rule that the initial settlements of the modern town of Vólos were established (1833-50), with consulates and commercial installations set up by Greeks, Austrians, British, French and Italians between 1838 and 1870 (see *ibid.*, 240 ff., 250 ff.).

Modern Vólos is now a major commercial and industrial centre (population in 1981: 70,000; in 2003: 83,600) and is the chief-lieu of the prefecture of Magnesia.

(A. SAVVIDES)

**AL-ĶUMMĪ**, ḤASAN B. MUḤAMMAD b. ḤASAN, the author of a local history of the town of Ķum [*q.v.*] in northern Persia, fl. in the 4th/10th century. He is said to have compiled his history originally in Arabic at the instigation of his brother, Abu 'l-Ķāsim 'Alī, governor of Ķum for the Būyids, aiming to gather together and record all the traditions about the arrival of the Arabs in Ķum and the town's subsequent history. He dedicated the book to the famous vizier, the Šāhib Ibn 'Abbād [see IBN 'ABBĀD]. The Arabic original has not survived, but a Persian translation was made by one Ḥasan [b. 'Alī] b. Ḥasan b. 'Abd al-Malik Ķummī in 806/1403-4, though this seems to contain much less material than the original Arabic text did (ed. Djalāl al-Dīn Tīhrānī, Tehran 1313/1934).

**Bibliography:** Storey, i, 348-9; Storey-Bregel, ii, 1008-9; A.K.S. Lambton, *An account of the Tārikhi Ķumm*, in *BSOAS*, xii (1947-8), 586-96. (ED.)

**KÜRUS** (present-day *Shaykh Ķhuruz*), the Classical Cyrrhus, capital of the Cyrrhescia, a stronghold in the north of modern Syria on the Sabun-suyu, a right-bank affluent of the Nahr 'Afrīn.

As a Seleucid colony, it took the name of a place in Macedonia and remained a stronghold under the Romans. Three ancient bridges, still visible, allowed crossing of the Sabun-suyu and the 'Afrīn. Archaeological researches have revealed several monuments, including an amphitheatre. In the necropolis to the southeast of the town is an ancient tomb which mediaeval Islamic tradition attributed to Uriah the Hittite and which includes a cenotaph of Mamlūk times.

Ķürus enjoyed a fresh lease of life under the emperor Justinian I, who rebuilt its fortifications. The Muslims took it in 16/637, and later considered it as one of the marches of the empire, guarding the Antioch and Aleppo roads. Its military role thereafter declined. At the end of the 11th century it came under the

domination of the Armenian Bagrat (Pakrad), brother of Gogh Vasil, before being taken by the Franks ca. 1114-15, who included it within the County of Edessa. It became the seat of a Latin bishopric, and had also a Jacobite one till at least 1042.

It was taken and destroyed by Nūr al-Dīn b. Zangī in 1150, but ca. 1165-6 ceded to the Armenian prince Mleh. In the 7th/13th century, Kürus, coming within the territories of Aleppo, was ruinous but still gave its name to a district whose agricultural revenues formed an *iktā'* [q.v.] supporting 40 cavalymen.

**KUWAYK**, NAHR, the name given by the Arabs to the ancient Chalos river in northern Syria. This stream, whose valley makes a shallow notch in the plateau of the Aleppo region, rises at the foot of the last outliers of the Taurus, to the east of al-Rāwandān [q.v.] in present-day Turkey. Fed by various springs, notably in the 'Azāz region, it skirts Aleppo to the west, and to the south of this city receives the waters of the Blessed Spring (al-'Ayn al-Mubāraka). After a course of some 110 km/70 miles, it peters out in the vicinity of Kinnasrīn [q.v.] in a swampy depression called al-Matkh.

This river, with an average flow of waters which is very feeble, enabled several mills up stream and below stream of Aleppo to turn, and it irrigated gardens to the north and west of the capital. Occasionally there were significant floodings from melting snows or violent rains, but it dried up in summer through absence of rainfall and because the villagers upstream used the little water which it carried for irrigating their fields.

In the mid-4th/10th century, the Ḥamdānid Sayf al-Dawla [q.v.] diverted the river so that it might flow through the palace he had had built in one of the western suburbs of Aleppo. At the beginning of the 8th/14th century, a canal was dug to carry part of the waters of the Sādjūr into the Kuwayk and thereby increase the latter's flow, but these works were

destroyed by an earthquake in 1544, restored in 1644, but definitively abandoned in 1723.

**KUZMĀN**, BANŪ, a family of literary men of al-Andalus and connected with the city of Cordova. The name Kuzmān (Span. *Guzmán*), a personal name of Germanic origin suggests an Iberian or Romance origin. As well as the most famous member of the family, the author of *ṣaḍāhs* Ibn Kuzmān [q.v.], there are four other interesting members.

1. Abu 'l-Aṣṣbagh 'Isā b. 'Abd al-Malik, poet and littérateur (4th/10th century), appointed by al-Manṣūr Ibn Abī 'Āmir [q.v.] tutor of the young Hishām II al-Mu'ayyad [q.v.] proclaimed caliph in Cordova in 366/976.

2. Abū Bakr Muḥammad b. 'Abd al-Malik b. 'Ubayd Allāh (d. 508/1114), called al-Akbar "the eldest" in order to distinguish him from his nephew Ibn Kuzmān al-Aṣḡar "the youngest" [q.v.], a famous poet, and secretary to the vizier of the Afṣidid prince Abū Ḥafṣ 'Umar al-Mutawakkil [q.v.] of Badajoz, a colleague of Ibn 'Abdūn [q.v.] and of Abū Bakr Ibn al-Kabṭūrnuh [see KABṬŪRNUH, BANU 'L-, in Suppl.]. After the advent of the Almoravids, nothing more is known of him.

3. Abū Marwān 'Abd al-Raḥmān (479-593/1086 or 1087-1169), son of 2., a famous *faḳīh* and jurist, and one of the last traditionists of al-Andalus. He functioned as a *ḳādī*.

4. Abu 'l-Ḥusayn 'Ubayd Allāh (ca. 518-93/ca. 1124 to 1196-7), son of 3., poet, jurist and *ḳādī* in various districts of the province of Cordova.

Other possible members of the family are mentioned in Lévi-Provençal's article, see *Bibl.*

(I. FERRANDO)

## L

**LAFZ** (A.), lit. "to spit out" (see *WbKAS*, letter L, ii/2, 989).

1. In grammar.

Here it denotes primarily the actual expression of a sound or series of sounds, hence "articulation" and, more broadly, the resulting "linguistic form". It has

always been distinct from *ṣawt* "[individual] sound" (cf. Troupeau, *ṣ-w-t*, and see Bakalla, 39 ff. and 49 ff., for its use in Ibn Ḍjinnī (d. 392/1002 [q.v.]), which provides the base for the modern Arabic terms for phonetics, *ilm al-aṣwāt*, and phonology, *ilm waḳā'if al-aṣwāt* (and note also the neologism *ṣawṭiyya* [q.v.] for

the collective description of Arabic sounds). *Lafz* occurs mostly in morphological and syntactic contexts, but always indicates an actual acoustic event or a real utterance, usually at the word or sentence level, and thus often contrasts with implicit or semantic features of speech.

Definitions of speech using the term *lafz* may specify that it excludes elements which are not in the Arabic phoneme inventory [cf. ḤURŪF AL-HIḤĀ], as well as non-linguistic modes of communication such as gestures and context of situation and even writing, *khaff* [q.v.], when necessary; cf. Bakalla, 69. It was also established very early (Sībawayhi, *Kitāb*, ch. 4) that the lexical relationship between form (*lafz*) and meaning (*ma'nā* [q.v.]) was of three kinds, viz. (1) identity of form with difference of meaning (homonymy), e.g. *wadjada* "to find" and "to feel passion", (2) difference of form with identity of meaning (synonymy), e.g. *dhahaba* and *intalaka* "to go away", and (3) difference of both form and meaning, e.g. *dhahaba* "to go away" and *djalasa* "to sit".

In morphological contexts, *lafz* will typically contrast with *ma'nā*, i.e. opposing the phonological to the semantic properties of an element. For example, a distinction is made between absolute objects (*maf'ul muṭlak*) which are composed of the same radicals as their operating verb and are thus termed (*lafzī* "formal" (e.g. *djalastu djuḷūs* "I sat right down") and those which are derived from a synonym of their operating verb and are thus termed *ma'nawī* "semantic" (e.g. *djalastu ku'ūd* "I sat down with a squatting action").

At the syntactical level, the opposition is usually between the formal realisation (*lafzī*) versus the implied, *mukaddar* [see TAKDİR, where *lafzī* is translated "literal"], i.e. the surface realisation is contrasted with some equivalent word or words assumed to underlie the forms actually expressed. This is not to be confused with modern notions of deep and surface structure, since the underlying forms are invariably stated as verbal paraphrases of the surface realisations and the question of transformation therefore does not arise. In this connection, it is worth mentioning that there are other, similar oppositions recognised by the grammarians, notably the explicit (*zāhir*) versus the suppressed (*muḍmar*), for the contrast between overt and implicit elements generally, and the visible (*bāriẓ*) versus the concealed (*muṣṭatir*), for the pronouns in particular, to which must be added elision (*hadhf*) and the restoration of elided elements in the shape of "additions", *zayādāt*, all of which point to a complex understanding of the relationship between the outward verbal features of speech and its inner contents. Understandably, the scrutiny of what was sometimes called the *kalām lafzī* "the formal utterance" in the light of its internal implications, the *kalām naḥsī* "mental or spiritual utterance", became a dominant pre-occupation of the sciences of rhetoric, exegesis, law and theology.

(M.G. CARTER)

## 2. In theology.

Here it refers to the pronunciation of the Ḳur'ān. The term was introduced by Husayn b. 'Alī al-Karābīsī (d. 245/859 or 248/862 [q.v.]), a disciple of al-Shāfi'ī who, in theology, shared the position of Ibn Kullāb [q.v. in Suppl.]. Reacting against the Mu'tazilī doctrine of *khalk al-Ḳur'ān*, the latter had distinguished between *kalām Allāh*, God's speech which is eternal, and *ḳirā'a*, the recitation of the Ḳur'ān which occurs in time. Al-Karābīsī replaced *ḳirā'a* by *lafz* (or *nuḳk*) which was broader and meant any quoting of the Ḳur'ān, including beyond formal recitation. During the later phase of the *miḥna* [q.v.], his doctrine spread widely, to the Dījazira (Mawṣil, Niṣībīn and Tarsūs) and possibly even to Damascus, through Hishām b. 'Ammār al-Sulamī (d. 245/859), who served as *khafīf* at the Umayyad Mosque. In Baghdād, however, al-Karābīsī encountered heavy opposition from Ibn Ḥanbal and his adherents, who denounced his approach as Dījahmism, i.e. they equated it with the belief in the createdness of the Word of God, or at least banished any mention of it. In Persia, the situation was quite different. Ḥanbalī radicalism came under attack by al-Bukhārī (in his *K. Khalk al-q'āl*) and Ibn Ḳutayba (in his *Ikhṭilāf fi 'l-lafz*) who both virtually shared al-Karābīsī's opinion without explicitly referring to him. The so-called *Fikh akbar II* names the createdness of *lafz* as part of the creed. Theologians like Makhūl al-Nasaḥī and al-Ghazālī adhered to it, as did even Ḥanbalīs like Ibn 'Aḳīl or Abū Ya'la Ibn al-Farrā'. This broad acceptance of the general idea was counterbalanced by an avoidance of the term *lafz* as such; al-Karābīsī's authorship was forgotten.

**LAHN** (A.). In music. This is one of the basic terms of secular music in Islamic times, used in Arabic and Persian [see MŪSĪQĪ]. In its early terminological sense, *lahn* (pl. *luḥūn*, rarely *alḥān*) denoted a musical mode, comparable to the later terms *naghma* (pl. *anḡhām*) and *makām* [q.v.]. It was a loan from the Byzantine Greek concept of *echos*, adopted probably in Umayyad Syria. A *Kitāb al-Luḥūn al-thamāniya* ("Book on the modal system called *oktōechos*"), wrongly attributed to Ptolemy, was known to Ibn al-Kalbī [q.v.], according to a quotation in Ibn 'Abd Rabbih's *al-ʿIkd al-farīd*, Cairo 1949, vi, 27. Al-Kindī [q.v.] equated *lahn* with *tanīn* (= Greek *tónos*) in the same sense of musical mode. In its more general and more common meaning *lahn* (pl. *alḥān*, *luḥūn*) stands for melody. Here it corresponds to the Greek term *mélōs*. The notion of music (*mūṣīqī*) was therefore defined either as the "science of the modes" (*ʿilm al-luḥūn*) or as "composition of melodies" (*ta'līf al-alḥān*). In the latter sense, the term was used and defined by many writers on music theory from al-Kindī to al-Lādhikī

(see titles below). Al-Fārābī devoted several chapters of his *Kitāb al-Mūsīkī al-kabīr* to an exhaustive treatment of melodies. "Reciting the Qur'ān with secular melodies" (*kirā'a [q.v.] bi 'l-alhān*) was one of the crucial points in the discussion on decent music in Islamic society. The notion of *lahn* (melody) has survived the centuries, as have its derivatives *lahhana* ("to chant; to set to music"), *talhīn* ("chanting; composition"), *mulahhīn* ("composer") and *mulahhan* ("set to music").

*Bibliography*: 1. Sources. Z. (E. NEUBAUER)

**LĀLĀ**, LALA (P.), a term found amongst the Turkmen dynasties of Persia and, especially, amongst the Safawids, with the meaning of tutor, specifically, tutor of royal princes, passing also to the Ottoman Turks.

Under the Aḳ Koyunlu [q.v.], both *atabeg* [see ATABAK] and *lālā* are found, but after the advent of the Safawids (sc. after 907/1501), the latter term becomes more common, with the Arabic term *mu'allim* "instructor" also found. Such persons were already exalted figures in the state. The *lālā* of Shāh Ismā'īl I's second son Sām Mīrzā was the *ishūk-ākāsī* [q.v.] or Grand Marshal of the great *dīwān*, Durmish Khān Shāmlū, whilst the *mu'allim* of the first son, and succeeding ruler, Ṭahmāsp (I) Mīrzā, was a member of the religious classes, Mawlānā Nizām al-Dīn Ahmad Ṭabastī (R.M. Savory, *The principal offices of the Safawid state during the reign of Ismā'īl I (907-30/1501-24)*, in *BSOAS*, xxiii [1960], 98; idem, *The principal offices of the Safawid state during the reign of Ṭahmāsp I (930-84/1524-76)*, in *ibid.*, xxiv [1961], 125). In the later Safawid period, we hear also of *lālas* for the young eunuch pages of the royal court, the *ghulāmān-i khāssa*, such as the (non-eunuch) Muḥibb 'Alī Khān, whose importance was such that he was in 1029/1620 commissioned by Shāh 'Abbās I to examine the possibility of diverting the headwaters of the Kārūn river [q.v.] in the Zagros mountains into the Zāyanda-rūd and the Isfāhān plain. The tutor of Ṭahmāsp Mīrzā

(the future Ṭahmāsp II, 1135-45/1722-32) when he was made *walī 'ahd* or heir to the throne, Muḥammad Ākā, head of the royal *ghulāms*, was, on the other hand, obviously a eunuch himself (*Tadhkirat al-mulūk, a manual of Safawid administration* (circa 1137/1725), tr. V. Minorsky, London 1943, 56 n. 3, 57).

The title *lālā* passed, through Persian cultural influence, to the Ottoman Turks, amongst whom it was used for tutors attached to young princes, both at court and when, usually at the age of fourteen or fifteen, they were assigned provincial government (see İ.H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, Istanbul 1941, 291-2; idem, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 124-5; Pakalın, ii, 354; A.D. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, 18, 117). Again as in Persia, such tutors were prestigious figures, and could become senior *uezirs* or leading commanders like Lala Muḥṣafā Paḥṣā (d. 988/1580), tutor to the future Selīm II [see MUḤṢAFĀ PAḤṢĀ, LALA].

It also made its way to the Muslim India of the Mughals, and in British Indian times, acquired a wider meaning of "child's tutor" in general and also, in northern India, became the title of a clerk or secretary in the local, vernacular languages (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian words and phrases* London 1903, 501-2).

*Bibliography*: Given in the article.

(C.E. BOSWORTH)

**LĀSHĪN**, MAḤMŪD ṬĀHIR (1894-1954), Egyptian writer of novels and short stories.

While neither the most famous nor the most productive of a group of Egyptian writers that came to prominence during the 1920s as the *Ḍjamā'at al-madrasa al-hadītha* ("The new school group"), Lāshīn was undoubtedly one of the first to display genuine mastery of the short story genre. Born into a family of Turko-Circassian origins, he studied engineering and then served in the Department of Public Works. While other colleagues in the group, such as Mahmūd Taymūr (1894-1973) and Yahyā Ḥaḳḳī (1905-93), went on to illustrious careers in Egyptian literary life, Lāshīn appears to have become disillusioned with the reception of his work and published little after 1940. As critics have begun to appreciate the importance of his place in the development of modern Egyptian fiction, his relative obscurity among members of succeeding generations is being replaced by a deeper understanding of the extent of his achievement.

Lāshīn's family background allowed him to serve as a host for the early gatherings of the *Ḍjamā'at al-madrasa al-hadītha*. Already fascinated by the potential of the short story genre, the group soon became deeply influenced by the Russian school of writers, including Gogol, Turgenev, Chekov, and Dostoevsky. Lāshīn was writing stories as early as 1921, but it was the foundation in 1925 of the literary weekly *al-Fadīr* that afforded an outlet for his creativity. His first published collection, *Sukhrīyyat al-nāy*, appeared in 1926, and he followed it with a second one, *Yuhkā anna*, in 1929; a third, *al-Nikāb al-tā'ir*, was published in 1940.

Like the short stories of his contemporaries, Lāshīn's examples focus on the environment with which he was most familiar, that of the urban middle class. Eschewing the more idealised and homiletic tone of his predecessors, he manages to create a convincing social reality through his gloomy portraits of the lives and struggles of various professional types—lawyers, merchants, and civil servants—utilising the short story genre to provide glimpses into both their public careers and family tensions. By contrast, *Hadīth al-karya*

("Tale of the village") is set in the countryside; in an accomplished manner it explores the tension between rural and urban values that is such a frequent theme of modern Arabic fiction.

Lāshīn's novel, *Hawwā' bi-lā Ādam* ("Eve without Adam", 1934), is also a major contribution to the development of that genre in the Egyptian context. While its date of publication places it within a decade during which most of Egypt's prominent littérateurs made initial attempts at penning novels (among them Tawfīq al-Ḥakīm, Ibrāhīm 'Abd al-Kādir al-Māzinī, 'Abbās Maḥmūd al-'Akkād and Maḥmūd Taymūr), Lāshīn's work stands out both for the characteristically subtle way in which he portrays the tensions involved when a female tutor falls in love with her much younger charge and for the fact that the very fictionality of his narrative stands in marked contrast to the apparently autobiographical contexts of most of the efforts of his contemporaries. Like its author, however, *Hawwā' bi-lā Ādam* has, at least until recently, resided in an unmerited obscurity.

*Bibliography*: 1. Translations. *Eve without Adam*, tr. Saad El-Gabalawy, Fredericton, New Brunswick 1986; *Village small talk*, tr. Sabry Hafez, London 1993, in *The genesis of Arabic narrative discourse* (see 2. below).

**LEWNĪ**, Ottoman miniature painter, born ca. 1680, died 1145/1732. Lewnī, meaning "colourful", and "varied", was the pseudonym used by the artist, whose real name was 'Abd ūl-Djēlil Ālebi. He was the most influential figure of early 18th-century Ottoman miniature painting, active during the reigns of Muṣṭafā II and Aḥmed III [q.v.]. He came to Istanbul from Edirne after 1707. Since his name does not appear in the records of court artists, the *ehl-i hīref*, of this period it is thought that he either held a higher position at the imperial court or worked freelance. Lewnī was not only a painter but also a folk poet whose compositions have a close affinity to

*dīwān* literature [see 'OTHMĀNLĪ. III. Literature]. His poetry treated the themes of love, heroism and war, and his admonitory epic poem consisting of proverbs inspired other folk poets.

The unsigned engravings portraying Ottoman sultans that illustrate Demetrius Kantemir's [see KANTEMİR, DEMETRIUS, in Suppl.] *Ottoman history* are thought to be based on early works by Lewnī. His series of Ottoman sultan portraits (Topkapı Palace Museum A 3109) display an innovative style characterised by an informal approach to his models, natural facial expression, and the use of colour shading and chiaroscuro to lend volume to the figures. Lewnī may have trained under the celebrated late 17th-century portraitist Muṣawwīr Ḥüseyn.

Another of Lewnī's major works is the series of miniatures illustrating the *Ṣunāme-i Wehbī*, an account of the festivities for the circumcision of the sons of Aḥmed III in 1720 (Topkapı Palace Museum A 3593). These miniatures depict trade guild parades and public entertainments in a consistent narrative style, and the figures are portrayed with a vigorous sense of movement and suggestion of depth. An album containing forty-two full-length portraits signed by Lewnī magnificently reflects the atmosphere of the time (Topkapı Palace Museum H 2164). These portraits of men and women largely symbolise aspects of life during the so-called Tulip Era [see LĀLE DEVRİ] and were probably intended to illustrate the protagonists in contemporary stories.

At a time when Western influence was beginning to make itself felt, Lewnī masterfully rejuvenated Ottoman pictorial art without any loss of its essential character, and his work is regarded as a turning point in both style and approach.

## M

### MĀ'. 10. Irrigation in Transoxania.

The rivers of Inner Asia, extending from Kh<sup>w</sup>ārazm in the west through Transoxania to eastern Turkistān (the later Sinkiang) and northwards to the Semireçye, have all been extensively used for irrigation purposes in the lands along those rivers and in oasis centres, providing a possibility for agriculture in favoured spots which were not too open to attack from the steppe nomads or more northerly forest peoples. Hence, as elsewhere in the Old World, the maintenance of irrigation works, surface canals and *kāriṣ* or subterranean

channels (these last to be found as far east as the Tarim basin and the fringes of China proper; see KANĀT) depended on injections of capital from strong local rulers, on the mass mobilisation of labour for construction and maintenance work, and on vigorous defence policies to protect the settled lands. Such river systems as those of the Oxus, Zarafshān and Syr Darya to the west of the Tien Shan mountains, and those of the Tarim river and its tributaries coming down from the Kun-Lun mountains, to the east of the Tien Shan, must have had irrigation works long

antdating the coming of Islam, even where specific information is lacking and their existence can only be inferred from the sparse archaeological investigations in such regions.

Thus ground surveys and the results of aerial photography have enabled scholars like the late S.P. Tolstov to show how irrigation in Kh<sup>h</sup>ārazm depended on a complex system of canals and channels from the lower Syr Darya and extending westwards towards the Caspian (these last, along the old channel of the Uzboi [see ĀMŪ DARYĀ], were investigated in an expedition of 1947; see Tolstov, *Auf den Spuren der altchoresmischen Kultur*, East Berlin 1953, 318 ff.).

The irrigation systems of what was the pre-Islamic Iranian region of Sogdia [see AL-SUGHĎ] are especially well known from the mediaeval Arabic and Persian geographers and local historians and were the subject of a special monograph by W. Barthold (*Kistori oroshē niya Turkestana*, St. Petersburg 1914, repr. in his *Sochineniya*, iii, Moscow 1965, 99-233). The river which flowed through the heart of Sogdia, the Nahr al-Sughd or Zarafshān [q.v.], watered an extensive agricultural region in which were located the great cities of Bukhārā and Samarqand [q.v.] and many significant smaller urban centres; under Islam, the zenith of their prosperity was reached under the local dynasty of the Sāmānids [q.v.] (3rd-4th/9th-10th centuries). The left bank tributaries of the Zarafshān coming down from the Buttāmān mountains (in what is now northern Tajikistan and the eastern part of the Kashkadar'inskaya oblast of Uzbekistan) were fed by large quantities of melted snow in spring and early summer. There were along them diversionary dams which divided up the river flows and led them into irrigation channels, called from later mediaeval Islamic times onwards by the term used in Turkish *arīk/arīgh* (but probably of non-Turkish origin, G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, Wiesbaden 1965-83, ii, 52-3 no. 469; Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 214). A dam constructed four *farsakhs* from Samarqand gave its name to the locality Waragh<sup>s</sup>ar, lit. "head of the dam". The irrigation waters from there were regulated by an official resident in Samarqand who had a staff of subordinates responsible for the upkeep of the banks of the channels, etc., whilst the inhabitants of Waragh<sup>s</sup>ar itself were exempt from paying *kharādī* in return for maintenance work on the dam (Ibn Ḥawqal, ed. Kramers, ii, 496-7, tr. Kramers and Wiet, ii, 475-6; Le Strange, *The lands of the Eastern Caliphate*, 465-6). The largest channels in the region were navigable, but probably for rafts rather than for boats, and timber was floated down along them to Samarqand. Within the city itself, water was brought into the *shahristān* or inner city along a channel which crossed the defensive ditch formed by excavating material for the walls, hence the channel was carried on an aqueduct into the *shahristān* at the *ra's al-tāk* "head of the arch". Alongside the channel, the properties were constituted as *aukāf* for its upkeep, and the local community of Zoroastrians were free of the *ḡizya* or poll-tax in return for maintaining the channel in good repair (Ibn Ḥawqal, ii, 492-3, tr. ii, 473).

Such constructions and arrangements in Sogdia were undoubtedly of pre-Islamic origin. An early Arab governor of Khurāsān, Hishām's nominee Asad b. 'Abd Allāh al-Kasrī, in 117/735 tried to deprive the inhabitants of Samarqand of water by blocking the channel at Waragh<sup>s</sup>ar and diverting it from the city, at a time when Sogdia had thrown off short-lived Arab

control and temporarily recovered its independence under the local king Ghūrak, and had now to be reconquered by the Arabs (al-Ṭabarī, ii, 1586; H.A.R. Gibb, *The Arab conquests in Central Asia*, London 1923, 78-80). The dam at Waragh<sup>s</sup>ar was obviously an ancient work. Further information on the irrigation system of Samarqand, this time in the Karakhānid period, is given by the local historian Abū Ḥafṣ 'Umar al-Nasafī (early 6th/12th century) in his *Kitāb al-Kand fī ta'rīkh Samarqand*; he enumerates the various *arīks* and gives the total area of irrigated land (Barthold, *Turkestan down to the Mongol invasion*, London 1968, 89, and on the irrigation system at Samarqand in general, *ibid.*, 82-92).

The Arab geographers likewise give detailed information on the situation at Bukhārā, at the western end of the Zarafshān basin, and this can be supplemented by items from the local historian Narshakhī [q.v.]. According to the latter, the main irrigation channel through the city was known as the *rūd-i zar* "golden, or gold-bearing river" (*Tārīkh-i Bukhārā*, tr. R.N. Frye, *The history of Bukhara*, Cambridge, Mass. 1954, 31-2). Al-Muqaddasī, 331-2, and Ibn Ḥawqal, ii, 484-7, tr. ii, 465-7, describe how locks and sluices along the *arīks* through the city controlled the water flow at times of the river's spate and inundation; see also Barthold, *op. cit.*, 103-6.

There was a continuously-cultivated strip of agricultural land along the left bank of the Ōxus from Āmul [q.v.] to Kh<sup>h</sup>ārazm, with *arīks* led off the main channel of the river, some big enough for boats to sail on, until the extensive network of canals in Kh<sup>h</sup>ārazm itself was reached (see above). Irrigation canals in the Syr Darya basin began in the Farghāna [q.v.] valley, into which the river's most voluminous source, the Nahr Dīdghil (probably the modern Naryn), began; then as now, the Farghāna valley was a land of intense cultivation, and the towns there, such as Akhsikath and Khudjand [q.v.], derived their water supplies from conduits leading off the irrigation canals (see Le Strange, *op. cit.*, 477 ff.). Further down the Syr Darya basin, irrigation channels were a feature of such provinces as Shāsh [see TASHIKENT], Ilāk and Isfīdjāb [q.v. in Suppl.] until Sawrān and the frontier with the Oghuz steppes were reached.

The Murghāb river in northern Khurāsān (now mainly in Turkmenistan) had numerous canals and dams along its course, controlling the waters which came down from melted snows in the Paropamisus mountains of northern Afghānistān. The situation there has been mentioned in section 6. above, at Vol. V, 868b, but one should add here that we possess especially valuable information for the very complex irrigation system in the Marw oasis from some of the Arab geographers and from the section on the terminology of the *diwān al-mā'* in al-Kh<sup>h</sup>ārazmī's concise encyclopaedia of the technical terms of the various sciences, the *Mafātīh al-ūlūm*, composed in the later Sāmānid period by an author closely connected with the Sāmānid bureaucracy in Bukhārā; part of this last author's information on irrigation terminology deals specifically with conditions at Marw (see C.E. Bosworth, *Abū 'Abdallāh al-Khūwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii [1969], 151-8). Ibn Ḥawqal, ii, 436, tr. ii, 421-2, characterises the *mutawallī* or *mukasīm al-mā'* at Marw as a high-ranking *amīr* who had under him over 10,000 men, each with a specific task to perform, for keeping the irrigation system in repair. Al-Muqaddasī, 330-1, mentions that the *amīr*'s staff included guards (*hurās*) to keep watch over the canal banks and 4,000 divers

(*ghawwāsūn*) who watched the channels night and day and had to be ready to turn out for running repairs in all weather conditions; the allocation of water to its various users was determined by a special measure or gauge (*mikyās*).

For all these hydraulic systems, the devastations of the Mongols must have had an adverse effect, although agriculture gradually revived and the systems were brought back into repair and use. Tīmūr took steps at restoration of the Sogdian irrigation system, especially when he made Samarqand his capital. Under the succeeding lines of Özbeg Turkish *khāns* in Transoxania and *Kh*ārazm, internal prosperity continued to rest substantially on an agriculture supported by centrally-organised irrigation systems. Hence every canal and rural community dependent on it had its *mīrāb*, the official in charge of the construction and upkeep of the dams and channels. Some of these were comparatively humble local functionaries, but the vital importance of the irrigation systems for maintaining the economic health of *Kh*ārazm, in later times the *khānate* of *Kh*īwa [*q.v.*] was ruled by the 'Arabshāhid ruler Abu 'l-Ghāzī Bahādūr *Khān* (r. 1054-74/1644-63 [*q.v.*]), who introduced various administrative reforms, including the appointment of four *mīrābs* as members of his central council of ministers or 'amaldārs. The historian of the dynasty, Shīr Muḥammad Mu'nis (1192-1244/1778-1829 [*q.v.*]), held the hereditary post of *mīrāb*, in succession to his deceased elder brother, until his death, and his *History* shows that he was indeed personally concerned with the practical affairs involved; his nephew and continuator Muḥammad Riḍā Āgāhī [*q.v.* in Suppl.], likewise functioned as a *mīrāb* (Yu. Bregel [tr.], *Firdaws al-iqbāl. History of Khorezm*, Leiden 1999, pp. xviii-xix, xxi). Some of the highest personages in the state gave personal attention to these matters. Mu'nis describes how the *amīr* 'Awaḍ Biy Ināk in 1216/1802 supervised the dredging of the *Kh*īwanik canal (the term for such operations being *kāzū*, apparently from *kazmak* "to dig") the actual work being done by corvée labour (*hashar*, *bigār*); and the *Khān* himself, Muḥammad Raḥīm, came personally in 1225/1810 for the re-opening of the head of this canal (Bregel, *op. cit.*, 162-3, 299).

**MĀ' AL-WARD**, rose water (sometimes also found in the single word form *al-māward*, which suggests that among doctors and apothecaries, this commodity was perceived as something very specific), an essential preparation in Arab pharmacology.

Use of rose water is to be seen in the context of the knowledge professed by the Arabs of the medicinal and cosmetic properties of the rose and, clearly, their mastery of the technique of distillation. While the treatises evoke numerous varieties of rose, the generic term for which is *ward* (a word originally denoting, in classical Arabic, any flower of shrub or of tree) or indeed the Persian *gul*, they are not immune from ambiguity. Thus the red rose is sometimes called *ward aḥmar*, sometimes *hawḍjam*, a term reserved by some for the damask rose. The varieties most frequently attested are three in number, if the wild rose is excluded (*nasrīn*: *Rosa canina*); white rose (*Rosa alba*: *ward abyad*, *ward shūr*); five-leaf rose (*Rosa centifolia*: *hawḍjam*); damask rose (*Rosa damascena*: *ward dīūrī*, *ward gūr*, *ward baladī*, *ward shāmī*). Rose water was extracted from the petals of the last-named, pale red in colour and

flowering from the spring to the end of summer. It may be noted that the rose was among the ingredients of various other concoctions such as rose honey (*djulan d'jubin*) or julep (*djūlab*).

Rose water was thus obtained by the distillation of the damask rose (*ward dīūrī*, the *nisba* referring to the town of Dīūr in the south-west of Persia [see FĪRŪZĀBĀD], a technique described in detail by al-Nuwayrī (*Nihāyat*, xii, 123, 126-8), with reference to several recipes, on the basis of his usual source, namely the *Kitāb al-'Arūs* of al-Tamīmī. But, contrary to what might be supposed, the majority of recipes for rose water blended this flower with other medicinal herbs such as aloes, saffron, musk, camphor or even cloves. This essence could be obtained from the petals (*warak*) of the fresh flower (*ward tarī*) or of the dried flower (*ward yābis*), when they had been ground and set to macerate in the cucurbit (*kar'a*, i.e. lower part of the alembic; then, by means of the alembic (*al-anbīk* [*q.v.*]), here the coil) and its heating, the rose water was collected by distillation (*taḥṭīr*). The procedure of sublimation (rudimentary distillation, *taṣ'īd*) was also in use, according to al-Nuwayrī.

As regards the medicinal properties, the sources attest that distilled rose water was used, internally or externally, in the treatment of migraine, nausea and anxiety, but, especially, in eye-washes, to combat ophthalmia (Maimonides, *Sharḥ*, 59; Ibn Sīnā, *Kānūn*, i, 299-300). Mediaeval treatises on pharmacology and of ophthalmic medicine lay particular stress on the salutary properties of rose water as a wash for the treatment of numerous conditions of the eye, as well as for their prevention (*yamna' kurūh al-'ayn*, writes Dāwūd al-Antākī, *Tadhkira*, i, 339). The emollient and stabilising properties of rose water, often combined, in this case, with egg white, were appreciated after operations for cataract (Ibn Qassum al-Ghāfīkī, *Kūtib al-Murshīd*, 154; Hunayn b. Ishāk, *K. al-'Ashr makālāt fi 'l-'ayn*, 158, 160). Use of this essence as an eye-wash is still common today and traditionally-inclined doctors readily prescribe it (H. Ducros, *Droguier*, 66-7; G. Honda, *Herb drugs*, 19, 90; J. Bellakhdar, *Médecine traditionnelle*, 302). Besides the purely medical use of this commodity, a number of texts refer to its benefits in the sphere of cosmetics and aesthetics, especially as a deodorant and as a cooling agent.

**MADĪNA** (A.), urbanism, the structure and planning of the Arab town and city.

This can be reconstructed as an historical reality from a vast body of literature, including chronicles and archival documents. It embodies enlightened ideas which seem to be commented on, as it were, by the remains of all the great Arab cities that can still be seen. The concept of a Muslim “city” was formulated chiefly by French orientalis (on this subject see R.S. Humphreys, *Islamic history: a framework for inquiry*, Princeton 1991, 228) between 1920 and 1950; in particular see G. and W. Marçais, J. Sauvaget and J. Weulersse. However, the most accomplished expression of this concept can be attributed to G. von

Grunebaum in *The structure of the Muslim town*, in *The American Anthropologist*, lvii [1955].

It would be unnecessarily tedious to trace in detail the causes and conditions underlying the development of this concept (see J. Abu-Lughod, *The Islamic city*, in *IJMES*, xix [1987]; A. Raymond, *Islamic city. Arab city: orientalist myths and recent views*, in *BJMES*, xxi/1 [1994]). The importance accorded to it derived almost exclusively from religious factors, for Islam was assumed to underlie any form appearing in the Muslim domain.

The conception of a Muslim town *ne varietur*, scarcely affected by vicissitudes in the long history of Islam, was broadly extrapolated from Maghribī and Syrian examples. Furthermore it was supposed to be independent of the extremely diverse geographical conditions evident in the immense expanse of Muslim territory. It is altogether a very negative conception. The Muslim town, a structure devoid of any logical order, is said to have replaced the ancient organisation and model of regularity: it was irregular; its streets were winding cul-de-sacs; it was a maze, a labyrinth (R. Le Tourneau, *Les villes musulmanes de l’Afrique du Nord*, Algiers 1957); it was a dilapidated version of the ancient town; it had neither its own institutions nor administration (different, of course, not only from the cities of the ancient world but also from western mediaeval cities, which were endowed with communal institutions); and it had no legal existence. Thus Aleppo was like “a negation of urban order”, a place where the influence of Islam had been “essentially negative”; the town had become “an inconsistent and inorganic collection of districts” (for these remarks see Sauvaget, *Alep*, 247-8). Weulersse describes such an internal dislocation in Antioch: the city is an amalgam of religious and national communities, a foreign body and a parasite in a country that it was exploiting (Weulersse, *Paysans de Syrie*, Paris 1946).

In the absence of any real precise information on Muslim town planning in any of the basic texts (the *Kur’ān*, *sunna* or *fikh* [*q.v.*]), it is not surprising that the positive characteristics retained by such a “non-city” were reckoned to be few in number and, moreover, barely significant. It was inhabited by Muslims; as the seat of Muslim institutions (*kāḍī* [*q.v.*], *muḥtasib* [see **ḤISBA**]), it comprised a Friday mosque, normally located at its centre; it had a market (*sūq* [*q.v.*]), which was situated near the mosque and organised according to a strict professional specialisation; it was provided with public baths; and it was generally surrounded by ramparts. It is interesting to note that Arab researchers who are interested in the problem have generally adopted such a negative vision.

No further time will be wasted on the conditions under which a revision of this concept took place (the end of the colonial era, a more reasonable appreciation of the Arab cultural context and the “Turkish” period, and the discovery of Ottoman sources). A certain number of orientalis’ pre-suppositions have been submitted to an excruciating revision, and a better acquaintance with later ancient cities has tempered any illusion about their supposed perfection (H. Kennedy, *From Polis to Madina*, in *Past and Present* [1985]). It was recognised that the variety of historical conditions should be taken into account (J.-Cl. Garcin, *Habitat médiéval et histoire urbaine*, in *Palais et maisons du Caire*, i, Paris 1982), as also the diversity of geographical and cultural conditions prevailing in the Muslim world (O. Grabar, *Reflections on the study of Islamic art*, in *Muqamas*, i [1983]). Attention was drawn to the fact that the absence of administration in the Muslim town was not as absolute as had been

suggested (see, for example, the role played by communities, *tawā'if*, in the conduct of urban affairs). It was suggested that Muslim law and its interpreters were not silent on the subject of the town (see the early remarks of R. Brunschvig, in *Urbanisme médiéval et droit musulman*, in *REI*, xv [1947]), which find an echo in the works of B. Johansen, *The claims of men and the claims of God*, in *Pluriformiteit en verdeling van de macht in het midden-oosten*, MOI publ. 4, Nijmegen 1980). It was admitted that the religious egalitarianism that characterised the *umma* did not preclude strong differentiation on socio-economic grounds, and traces of this could be found in urban organisation.

By concentrating on the modern, historically coherent period and by staying within the limits of the Arabo-Mediterranean region, which is both homogeneous and clearly identifiable within the Ottoman domain, it is possible to define the major principles of the structure of traditional Arab towns at the beginning of the 19th century, just at the time when modernisation was beginning to alter their characteristics irretrievably (see Raymond, *La structure spatiale de la ville*, in M. Naciri and Raymond (eds.), *Sciences sociales et phénomènes urbains dans le monde arabe*, Casablanca 1997).

Through a study of the structure of the "traditional" Arab town we are able to demonstrate the existence of a coherent urban system. The fundamental characteristic of this system was a marked separation between the central "public" zone, where the principal economic, religious and cultural activities were developed, and the "private" zone, which was chiefly devoted to residence. This separation becomes apparent when a study is made of the localisation of urban functions. It is equally visible on street plans, where the relatively broad and regular road network of the centre is contrasted with the maze of narrow, irregular streets which had been seen to be a general feature of these towns; about 50% of the total length of the streets is represented by cul-de-sacs. This distinction has been recognised at length by jurists of the Hanafī school (B. Johansen).

The central region encloses the great markets (*sūks*), which are generally very specialised and assigned particular locations, and also the caravanserais, *funduqs*, *khāns* and *wakālas*, according to the region and the period. It is here that big international business and wholesale trade took place and the centre of it was often the *ḳaysāriyya/bedestān*, devoted to the luxury trade (as in Fez or Cairo). This zone is assembled around the great university mosques (such as the *Ḳarawīyyīn*, the *Zaytūna*, al-Azhar and the Umayyad mosque), which are the centres of religious and cultural activities.

The surface area of this zone varies according to the importance of the towns and the extent of their commercial activity; it is about six hectares in Tunis, twelve in Aleppo and sixty in Cairo. The characteristics of the zone are so strongly marked that it sometimes has a particular name, such as "Mdineh" in Aleppo. Normally one or more main streets cross it, depending on the scale of traffic, which at that period consisted exclusively of transport on the backs of animals. At the beginning of the 19th century, 6 m represented an optimal breadth, according to the opinion of the Egyptian 'ulamā'. Some of these streets date back to ancient times, such as the "Street called Straight" in Damascus and the main street in Aleppo; others have been traced back to the Arab foundation (such as the *Ḳaṣaba* in Cairo). This zone is generally very stable, probably because it has a very strong

structure and because it is closely linked with the principal mosque. In modern times there is only one case of a change of location known, at Mawṣil (D. Khouri, *Mosul, 1540-1834*, Cambridge 1997).

The areas spreading outside and around this central zone are chiefly devoted to housing, and from Morocco to Afghānistān these are organised into a system of neighbourhoods; in the Maghrib they are called *hawma*, in Egypt *hāra* and in the Near and Middle East *maḥalla*. They have a very consistent structure: there is one entrance point, which can be shut by a gate, and if necessary guarded; one main street, on to which alleys and cul-de-sacs are grafted. There are no specialised markets in these districts, only the *sūwaykas*, which have been analysed by Sauvaget and where the many activities necessary to daily existence take place. The life of the district is that of a community that is quite closed in upon itself; it is open only toward the centre, where the local inhabitants undertake their activities and towards which the network of roads leads in a hierarchically organised scheme (N. Messiri, *The concept of the Hara*, in *AI*, xv [1979]); this consideration, as well as the concern for security, justifies the statistical importance of the cul-de-sacs in this area. There does not seem to be any rule about homogeneity according to the origin or activity of the inhabitants, except in those cases where a district was inhabited by a community of a distinct religious or ethnic minority.

These general characteristics lead to a structure which may be described as doubly concentric, an arrangement such as is well known in the field of economic activities. Big international businesses and the main activities of craftsmen are located in the central regions, in the area near to the large mosque; nearby can be found in particular the markets for precious metals (*sāgha*) and the money changers (as noted by L. Massignon, *Enquête sur les corporations d'artisans*, in *RAM*, lviii [1924]). In Cairo the 62 caravanserais where the coffee trade took place were located in the area near the *Ḳaṣaba*. In Tunis, Damascus and Aleppo, the *sūks* for cloth and spices occupy a prominent place in the area immediately surrounding the mosque. From the centre outwards, activities spread over an increasingly great distance as their order of importance diminished, and also according to the growing inconvenience of particular trades. There could be found on the periphery of the town those domestic activities that needed space (such as the straw workers); those linked to the countryside (grain markets in the large squares, *raḥba*, 'arṣa and livestock markets); those that were embarrassing and polluting (ovens of all sorts, abattoirs, tanneries). The moving of such trades to a more remote location could, moreover, be an indication of urban development, as was the case for the transfer of the tanneries in Aleppo (1570), Cairo (1600) and Tunis (1770) (see Raymond, *Le déplacement des tanneries*, in *REMM*, lv-lvi [1990]).

By contrast, the orientalist vision of a fundamentally egalitarian, Muslim society was a factor in imposing a scheme according to which the rich and poor lived together in the same urban space, using a unique type of habitat qualified as "Muslim", although the house with a central patio may be found in Classical Antiquity, also, an idea strongly expressed by A. Abdel Nour, *Introduction à l'histoire urbaine de la Syrie ottomane*, Beirut 1982. Reality is quite different and corresponds logically to a strongly unequal socio-economic structure. Studies on this subject carried out in Cairo (Raymond, *Artisans et commerçants*, Damascus 1974),

Damascus (C. Establet and J.-P. Pascual, *Familles et fortunes à Damas*, Damascus 1994) and Algiers (T. Shuval, *La ville d'Alger*, Paris 1998) have shown a remarkable inequality in the range of wealth, insofar this can be measured through the successions registered in the courts: fortunes are in a proportion of 1 : 10,000 in Cairo and 1 : 3,000 in Damascus around 1700 (Establet, Pascual and Raymond, *La mesure de l'inégalité sociale dans la société ottomane*, in *JESHO*, xxxvii [1994]). It is therefore not surprising in these conditions that in the large Arab towns the population would be distributed according to a rather rigorous "classification": the comfortable residences occupied the zone near the centre (where the *'ulamā'* preferably lived near to the mosque and traders near the *sūks*); then there were the middle-class areas with increasingly poor living conditions, until one reached the often wretched housing for the common people on the periphery and in the suburbs. This roughly concentric arrangement can be clearly deduced from studies on Tunis (J. Revault, *Palais et demeures à Tunis*, Paris 1967-78), Cairo (N. Hanna, *Habiter au Caire*, Cairo 1991) and Aleppo (J.-Cl. David, *Alep, dégradation et tentatives actuelles de réadaptation*, in *BEO*, xxviii [1975]).

However, the central patio house only appears to be "unitary", and great differences evidently exist with regard to dimensions, whether there are one or more storeys, interior amenities and decoration between houses with courtyards of the rich, middle-class and poor (for Tunis, see G. Cladel and P. Revault, *Medina, approche typologique*, Tunis 1970). Moreover, examples of "atypical" houses are plentiful. There is the collective accommodation of the caravanserai type, the collective accommodation of the *rab'* type found in Cairo, vertical accommodation (Rosetta, Yemen), middle-class accommodation without a patio, poor community accommodation of the *hawsh* type, and cellular accommodation; mediaeval examples of this have been studied by Scanlon and Kubiak in their excavations of Fustāṭ.

Naturally, no existing town corresponds to this model of a round town, arranged in concentric rings around the centre, with its economic and residential activities classified according to a decreasing order of importance. There are a number of factors (natural, historical, economic and social) that explain the irregularities that are noted. The decentring of al-Ḳāhira, in the northeast quarter of ancient Cairo, is justified by natural considerations such as the presence of the Muḳaṭṭam Hills, which prohibited expansion towards the east; also by historical reasons, such as the construction of the citadel by Ṣalāḥ al-Dīn [q.v.], which favoured expansion towards the south, and the custom of dumping the rubbish from Cairo into the region today called "The Tells", which has restricted any expansion towards the northeast.

A similar analysis could be applied to Tunis, where the geography of the site dictates that expansion should develop only towards the north and the south, since expansion to the east and west is prevented by the two lagoons (*sabkha*). It could be applied also to Aleppo, where for a long time the presence of the river Kuwayḳ has hindered any development of the city towards the west and the existence of cemeteries prevented expansion to the north and south. Mawṣil had the appearance of a round town until economic reasons, like the special attraction of the markets because of the commercial potential of the river Tigris, and probably also political reasons (the research into the proximity of the citadel) brought about the displacement of the centre towards the river, far from the great

mosque. On the other hand, the locations of the districts for the minorities and for the élite followed a particular logic, which often led to their remoteness from the centre.

There is indeed good reason for emphasising the importance of the segregative factors in the way the "traditional" town is organised. The inegalitarian nature of Muslim society explains this discrimination by the standard of wealth and the difference in living conditions between the centre and the periphery. In Cairo, however, collective rented accommodation, the *rab'* [q.v.], allowed the middle classes to reside near the centre (Raymond, *Le rab', un habitat collectif au Caire*, in *MUSJ*, 1 [1948]). Districts for the élite were often located on the periphery, where the powerful could find the space they needed for their houses and a certain isolation from the rest of the population. The vigour with which the "national" and/or religious Muslim minority communities regrouped depended on the degree of their differences with regard to the rest of the population: in Cairo, the Maghribīs and the Syrians regrouped less than the Turks; a Kurdish district had been in existence for a very long time in Damascus; while in Antioch, the Alawites were at one and the same time very much regrouped and pushed far from the centre. The non-Muslim minority communities (the People of the Book subject to the status of *dhimmi*, "protected") were generally subjected from the point of view of space to strict segregation, expressing in terms of spatial location the discriminations and disabilities imposed upon them, despite the remarkable tolerance which these communities enjoyed under the Ottomans.

There were in all of the large towns Christian and Jewish districts, the location of which varied according to local conditions. The Jews of Tunis lived in a district (*al-hāra*) situated out of the way; those in Cairo were very close to the centre. The relative dispersion of the Copts in Cairo bore witness to the tolerance from which they benefited, but their districts were in the main situated to the west of Ḳhalīdj, in a region that was occupied by Muslims only at a fairly late date. The evolution of the Christian district of Aleppo is significant from this point of view. There, from the end of the 16th century, the community experienced a remarkable development, and this expansion was marked by an eastwards advance of the Christians in the northern suburb of the town which was progressively occupied by them. The gradual retreat of the Muslims towards the east, a community that was none the less dominant, certainly tends to confirm that the religious groups preferred, for reasons of convenience, a segregated, collective life rather than a confessional mix, even though such a mix could exist in limited zones (Raymond, *Une communauté en expansion. Les chrétiens d'Alep*, in *La ville arabe*, Aleppo, Damascus 1998).

The traditional Arab cities were therefore strongly structured, an observation that seems self-evident, for one can hardly imagine how an anarchical town without an administration would have been able to continue in existence and even experience a strong expansion in modern times. Investigation into the constitutive elements of this specific urban system, the identification of the para-administrative structures which allowed the conduct of urban affairs, and the recognition of the major role played by the *waḳfs* [q.v.] in urban organisation and development (R. Deguilhem [ed.], *Le waḳf dans l'espace islamique*, Damascus 1995) all lead to more positive conclusions than a discreditable comparison with other urban systems which were judged to have been more perfected.

However, an investigation such as this can be complete only when more can be learned about the origins of this urban system. Research on pre-Islamic towns in the Yemen (J.-F. Breton, *Le site et la ville de Shabwa*, in *Syria*, lxxviii [1991]) and in Arabia (A.T. al-Anṣārī, *Qaryat al-Fāw*, London 1981) have brought important insights in this field. There is also a need for better information on the time of transition between the ancient period and the beginnings of the Muslim era (see the traces of Umayyad town planning discovered in the ancient sites of Palmyra and Beit Shean) and on the period of the foundation (for Fuṣṭāṭ, see R.P. Gayraud, *Iṣṭabl 'Antar*, in *AI*, xxv [1991]).

The other crucial question is that of knowing to what extent the data on urban structure suggested by the study of the sources and the examinations of the remnants of ancient towns are equally valid for the "classical" Arab town, which we know from texts but which has to be the subject of reconstruction on the ground, since the urban tissue which subsists in the "madīnas" of Arab towns dates only from the modern Ottoman period.

**MADĪNAT AL-NUHĀS**, "The city of brass," a story within the *Thousand and one nights* [see ALF LAYLA WA-LAYLA].

This story, that found its way, somewhat variably, into the 19th-century editions of the *Nights* (on the 18th-century manuscripts in which it appears, see the excellent discussion by D. Pinault, *Story-telling techniques in the Arabian Nights*, Leiden 1992, 150-80), is the most elaborate narrative about a city of copper, brass or bronze (on the proper meanings of *nuhās* and *sufr*, and their indiscriminate use in non-scientific discourse, see M. Aga-Oglu, *A brief note on Islamic terminology for bronze and brass*, in *JAOs*, lxiv [1944], 218-23). Fabulous reports about such a place, set in remote reaches of the Maghrib or al-Andalus, appear already in the 3rd/9th century. In Ibn Ḥabīb's (d. 238/853 [q.v.]) *Kitāb al-Ta'rikh* (ed. J. Aguadé, Madrid 1991, 144-5; authentic in the editor's view), Mūsā b. Nuṣayr's [q.v.] adventures include finding jars in which Solomon imprisoned rebellious demons, and a copper fortress (*madīna 'alayhā ḥisn min nuhās*) inhabited by *djinn*, which renders those who enter it unaware of their condition. Al-Mas'ūdī tells us (*Murūj*, i, 369 = ed. Pellat, i, 195-6, § 409) that beyond al-Sūs al-aḳṣā (southern Morocco) one comes to the River of Sand, then to the Black Castle, and at length to the sandy desert in which the City of Brass (*nuhās*) and Domes of Lead are found. He also refers to a book in wide circulation dealing with the wondrous things that Mūsā b. Nuṣayr saw there. In another place (iv, 95 = § 1423) he refers to the same city (here as *madīnat al-sufr wa-kubbat al-raṣās*), and says that those who flung themselves from the walls tasted (so they report) the pleasures of this world and the next. The *Mukhtaṣar* of Ibn al-Faḳīh's [q.v.] *Kitāb al-Buldān* is in several respects close to the *Nights* story, although the city is called al-Baht and no mention of metallic walls is made. After travelling through the "deserts of al-Andalus" Mūsā finds a city without an entrance, grim with brilliant battlements. Those who scale the walls laugh uncontrollably, and hurl themselves to their deaths below. (Mad laughter leading to death is the effect of the *bahṭ* stone, cf. al-Birūnī, *K. al-Djāmahir fī ma'rifaṭ al-djāwāhīr*, Ḥaydarābād 1355, 101.) A memento mori inscription (of which there are many in the *Nights* tale) refers to the mortality of Solomon, mightiest of kings. Mūsā renounces entering the City and moves on to "the lake". This lake is visited by al-Khadir [q.v.] once a year. Mūsā's divers recover a bronze (*sufr*) jar, from which, when opened, a brazen man

escapes with the cry "O Prophet, I will not relapse!" Later it is explained that such bottles hold the rebellious *djinn* imprisoned by Solomon. The *Nights* story adds further Solomonic motifs to the journey and the City itself (cf. A. Hamori, *The art of medieval Arabic literature*, Princeton 1974, 149-53), as well as some other new details. The essential innovation is that in the *Nights*, Mūsā ultimately enters the City, to find it full of dead people who look deceptively alive. One of the leaders of the expedition, Tālib b. Sahl, is killed by robots when he tries to despoil the dead queen of her jewels.

The motifs in these narratives have their now inextricably tangled roots in Islamic (and Jewish) legends about Solomon, the Alexander Romance, Iranian legend, and, of course, in marvelling at ancient structures laid in massive desolation. Indeed, the sources show disagreement as to whether the builder of the City was Alexander or Solomon. Brazen or iron walls and palaces are a feature of many texts from Antiquity, and often occur in Iranian legend and poetry (cf. M. Barry, *Le Pavillon des sept princesses*, Paris 2000, 680-4, on Niẓāmī's *Tale of the red pavilion*). The principal source of the malefic City of Brass may well be the Iranian legend of the Brazen Hold, a subterranean (but brilliant) place of evil in the Avesta (cf. J. Darmesteter, *Le Zend-Avesta*, repr. Paris 1960, i, 111), which surfaces as the evil Ardjāsp's redoubt in the *Shāh-nāma* (ed. Mohl, iv, 493 and index). The Solomonic motifs became easily associated because of the Qur'ānic reference (XXXIV, 12-13) to the 'ayn al-kuṭr, mostly understood as a fountain of copper or brass, that God made to flow for Solomon, and to the *djinn* that built him palaces and statues. The journey to the ends of the world, cautionary inscriptions, automata and the overall memento mori mood are characteristic of all recensions of the Alexander Romance. In addition, as Ch. Genequand has pointed out (*Autour de la ville de bronze: d'Alexandre à Salomon*, in *Arabica*, xxxix [1992], 328-30), in his section on the Maghrib Ibn al-Fakīh relates, before describing the City of Baht, versions of such details of the Alexander Romance as the River of Sand (which appears in some recensions) and Alexander's conversation with the gymnosophists (who are here an *umma* of the Banū Isrā'īl). Genequand suggests that Ibn al-Fakīh's mysterious lake (in the *Nights*, the sea of Karkar) associated with al-Khaḍīr derives directly from the Water of Life episode in the Alexander Romance via the traditional association of al-Khaḍīr with Qur'an, XVIII, 61-5 (cf. also Pinault, 180-6); and that the City of Brass itself derives from an episode in a late Byzantine recension (dated by its editor to the early 8th century A.D.) in which the gymnosophists' women live on an island surrounded by a brilliant brazen wall which no man can penetrate and live. The Water of Life episode is, indeed, likely to have been a major contributor to the shaping of the story. Whether the same is true of the women's island is harder to say, since this episode is itself an adaptation of the Amazons' self-segregation in the older recensions, and may have been elaborated under oriental influence.

Some commentators have considered the *Nights* story a clumsy grab-bag of motifs. At a minimum, one must agree with those who see in it a *zuhdī* homily (e.g. Pinault, 231-39). It has been suggested (Barry, 167-8, and Hamori, *loc. cit.*) that, in view of the mystical symbolism often attributed to various episodes in the Solomon legend, to dead bodies only seemingly alive, to spiritual famine, to al-Khaḍīr, etc., an interpretation of the *Nights* story that assumes such symbolism

to have been intended makes sense of some otherwise unmotivated details and offers the most coherent reading. It may be more prudent to say that, whatever the various narrators had in mind, in ages of deep popular Šūfism, such symbolic understanding would have been part of the reception of the story.

AL-MADJĀDHĪB, a leading "holy family" among the Sudanese *Djā'aliyyūn* [*q.v.*]. Their ancestors emerged in the 16th century as a family of religious specialists (*fuqara*, sg. *fakī*) in the area of al-Dāmar. In 1117/1705-6, Muḥammad al-Madjdūb ("the Enraptured"), the first of the family to bear this epithet, may have participated in the first revolt of the northern Sudanese provinces against their Fundj [*q.v.*] overlords. Under his son, Fakī Ḥamad wad al-Madjdūb (1105-90/1694-1776), the family strengthened its position by accumulating private land titles and engaging in long-distance trade. Well trained in Mālikī law, Ḥamad adopted the *Shādhiliyya tariqa*. He and his sons—known since ca. 1800 as *awlād wad al-Madjdūb* or *al-Madjdūb*—taught Qur'an and *fikh*, provided medical services, and mediated between peasants and nomads. Both their fame as scholars and their political importance grew rapidly. They maintained contact with al-Azhar, and their schools were of regional significance. The Turco-Egyptian conquest (1821-3) and economic hardship during the 19th century dispersed the Madjdūb. Some returned to al-Dāmar; others remained in the Ethiopian borderlands or founded settlements in al-Ḳaḍārif, the *Djazīra* and the western Sudan.

Most important religiously was Ḥamad's grandson, Muḥammad Madjdūb (b. 1210/1795-6, d. 1247/1831). After spending eight years in the *Hidjāz* where he was influenced by Aḥmad b. Idrīs [*q.v.*], he moved to Sawākīn in 1829 to propagate his *tariqa*. A prolific writer, Madjdūb did much to spread Islamic knowledge beyond the confines of the urban scholar-jurists. His nephew and *khalīfa* al-Tāhīr Madjdūb (1248-1307/1832-90) gained many followers in the eastern Sudan. In 1883 he joined the Mahdī [see AL-MAHDĪYYA], and his influence among the eastern tribes was an important factor in their rallying behind the Mahdist cause. Al-Tāhīr's son "al-Shaykh" b. al-Tāhīr Madjdūb (ca. 1860-1930) served as commander in the Mahdist army and was later venerated for his piety, poetry and learning. His successors moved the centre of the eastern Madjdūb to Erkowit.

In 20th-century al-Dāmar, the heritage of *Shaykh* Muḥammad Madjdūb was promoted by Madjdūb *Djalāl* al-Dīn (1305-96/1888-96). Although efforts to create a centralised *Tariqa Madjdūbiyya* failed, the *Shaykh* gradually displaced the clan ancestor, Fakī Ḥamad, as focal point of communal identification. A domed tomb was erected over his grave in 1996.

*Bibliography*: Muḥammad al-Tāhīr Madjdūb, *al-Wasīla ilā al-maṭlūb fī ba'd mā ishtahara min manāḳib wa-kawāmat waḥ Allāh al-Shaykh al-Madjdūb*, Cairo 1914; *Madjmū'at al-Madjdūb*, Cairo 1941; A. Hofheinz, *Internalising Islam. Shaykh Muḥammad Madjdūb, scrip-*

tural Islam and local context in the early nineteenth-century Sudan, dr. philos. thesis, Univ. of Bergen 1996, unpubl., and the sources given there.

AL-MADJĪDHŪBIYYA [see AL-MADJĀDHĪB].

**MADURA, MADURĀ'Ī**, in mediaeval Islamic times a town, now the city of Madurai, in South India. It lies on the Vaidai river in lat. 9° 55' N., long. 78° 07' E. in the region known to the mediaeval Muslims as Ma'bar and to later European traders as Coromandel. For the historical geography and Islamic history of this coastal province, roughly extending from Cape Comorin northwards to Madras, see MA'BAR.

In 734/1334 Sharif Djalāl al-Dīn Aḥsan [q.v.], governor for the Dihlī Sultan Muḥammad b. Tughluq [q.v.], renounced his allegiance, and he and some seven of his successors ruled over a short-lived Muslim sultanate before it was overwhelmed in ca. 779/1377 by the rising Hindu power of Viḍḍayanagara [q.v.], (see on the Madura sultanate, H.K. Sherwani and P.M. Joshi (eds.), *History of medieval Deccan (1295-1724)*, Ḥaydarābād 1973, i, 57-75; C.E. Bosworth, *The New Islamic dynasties*, Edinburgh 1996, 318 no. 166; and for numismatics, E. Hultzsch, *The coinage of the Sultans of Madura*, in *JRAS* [1909], 667-83). Thereafter, Madura remained under Hindu control till the early 18th century, when the Nawwābs of Arcot [q.v.] or Arkāt extended their power over it, provoking Marāthā [q.v.] intervention and then that of the British in favour of the Nawwābs. In 1801 the administration of the Madura region passed to the British East India Company as part of a treaty with the Nawwāb of Arcot, and then in 1855, to complete British control.

The modern city of Madurai, a municipality since 1866, is the chef-lieu of a District of the same name in the Indian Union State of Tamil Nadu; in 1971 it had a population of 548,000, and in 2003 its population totalled 959,200.

**MAFRAK**, lit. "place of separation, junction", a settlement, now a town, in the northeastern part of the Hashemite Kingdom of Jordan [see URDUNN]. It lies in lat. 32° 20' N., long. 36° 12' E. at an elevation of 600 m/1,960 feet in an arid area whose average rainfall is 150 mm per annum. The region lacks running water, hence local people have always depended on pools and reservoirs for water, and the settlement grew up near the "white pool" (*al-ghadīr al-abyad*).
