Archaeological investigations nevertheless show that the area was once well populated, and a large number of what were Greek Orthodox churches and their mosaics have been found; the Roman emperor Trajan in A.D. 108 had built a road passing south of the site of Mafrak. In Umayyad times, there may have been a *bādiya* [q.v. in Suppl.] there. The place had a certain importance in Islamic times from its position on the caravan and Pilgrimage route from Damascus to the Ḥiḍjāz, and the sources explain its name by saying some pilgrims used to separate there from the main road and go their own way, or that friends from Damascus used to accompany pilgrims southwards but return home from Mafrak. But the place only assumed real importance when the Ḥiḍjāz railway [q.v.] was built and a station opened there. After the Italian occupation of Libya, Libyan refugees, described as Maghāriba, settled there, and the city still

has a quarter bearing their name. After 1918, it became an Arab Legion base. Economically, the place received an impetus in 1931 when the Iraq Petroleum Company established itself there, built an aircraft landing-ground and brought in labourers to construct a road to Baghdād and pipe lines and generators. A pipe line brought crude oil from Iraq via Mafrak to Haifa and the Mediterranean coast. The population further expanded with the settlement of Bedouin tribesmen, and the discovery of underground water supplies made a growth of industry as well as of population possible. In 1985 the region was promoted administratively from being a *mutasarrifiyya* to being a *muḥāfazā* or province. In 1994 the Āl al-Bayt University was established in the town's suburbs, bringing further expansion and development, and in 2003 the town had an estimated population of 67,400.

**MAḤAMMAD B. AḤMAD B. 'Abd Allāh AL-HUḌĪĠĪ** al-Sūsī al-Djāzūlī (1118-89/1706-75), Moroccan scholar and ascetic.

After a classic-type education in his native region of the Sūs, he left on the Pilgrimage in 1152/1739, en route following the courses of famous teachers, notably at Cairo; he gives details of these stays in his unpublished *Rihla ḥiḍjāziyya*. On his return to Morocco, he spent the remainder of his life in his *zāwiya* [q.v.] of Wādī Īsī in the Sūs.

His main work, the *Manākib* or *Tabaqāt al-Huḍīġī* (2 vols. Casablanca 1936-9) groups together alphabetically the names of personalities who lived essentially in the 11th-12th/17th-18th centuries. These comprise above all the scholars and mystics of the Sūs, but also persons from the rest of Morocco, though only rarely from neighbouring lands. The work contains important notices on persons otherwise unknown, increasing its value for the historian. Al-Huḍīġī also compiled several commentaries on manuals of *ḥadīth* and *fikh*, on poetry and on grammar; an important number of responsa; and a larger-scale *maḍmū'a* in which he mentions his masters, in the Maghrib and the Mashriq, the licenses to teach which he himself received and which he issued to others, and a few other sparse personal details. Apart from the *Manākib* mentioned above, the ensemble of his works, comprising some 20 titles, remains still unpublished. Al-Huḍīġī's intellectual progeny were numerous in the Sūs, but his fame as a Ṣūfī was equally great amongst his compatriots, with his asceticism and scrupulous orthodoxy impressing his contemporaries; numerous miracles and acts of intercession were attributed to him.

*Bibliography*: Ziriklī, *A'lām*<sup>2</sup>, vi, 15; Muḥammad Mukhtār al-Sūsī, *al-Ma'sūl*, Casablanca 1960, xi, 302-25; idem, *Sūs al-'ālima*, Casablanca n.d., 193 (lists his works). For references to the mss. of his works, see M. Manūnī, *al-Maṣādir al-'arabiyya li 'l-ta'rikh al-Maghrib*, Rabat 1404/1983, i, 222-3, 229-30. (P. LORY and M. ZEKRI)

**AL-MAHDĪ LI-DĪN ALLĀH, AL-ḤUSAYN**, Yamanī Zaydī Imām.

He was born in 378/988-9 as one of the younger sons of Imām al-Manṣūr bi'llāh [q.v.] al-Kāsim b. 'Alī al-Iyānī. In Ṣafār 401/September-October 1010 he proclaimed his imāmate at Kā'a in al-Bawn and gained the support of tribes of Ḥimyar, Hamdān and

the Maghārib region. He faced the opposition of the Ḥusaynī 'Alid Muḥammad b. al-Ḳāsim al-Zaydī, based in Ḍhamār, and of the descendants of Yahyā al-Hādī, the founder of the Zaydī imamate in Yaman, whose stronghold was in Ṣa'da. In 402/1011-12 he gained control of Ṣan'a' from Muḥammad al-Zaydī and installed his elder brother Ḍja'far as governor there. In the following year, al-Zaydī re-entered Ṣan'a' and destroyed the houses of some of al-Mahdī's partisans. Al-Mahdī defeated and killed him in al-Haḳl. He also thwarted the efforts of Muḥammad al-Zaydī's son Zayd, who received financial backing from the Ziyādīd ruler of Zabīd, to avenge his father's death. Next, al-Mahdī seized Ṣa'da, where Yūsuf b. Yahyā b. Aḥmad al-Nāṣir, the claimant to the imamate there, had died, and destroyed some houses of his opponents. Because of his severity in punishing dissent, however, he soon lost most of his tribal support. He suffered a serious defeat by the Hamdānī chief Aḥmad b. Ḳays b. al-Ḍaḥḥāk near Ḍhībīn and was forced to seek refuge in the Ḍjawf. When he returned with some hundred horsemen to recover al-Bawn, he was killed fighting fiercely by the Hamdān at Ḍhū 'Arār near Rayda on 4 Ṣafar 404/15 August 1013.

Al-Mahdī's death was at first denied by his brother Ḍja'far, who thus became the founder of the Ḥusayniyya sect which expected his return as the Mahdī. The activity of the sect reached its peak during the successful resistance of Ḍja'far's sons al-Ṣharīf al-Fāḍil al-Ḳāsim (d. 468/1075) and Ḍhu 'l-Ṣharafayn Muḥammad (d. 478/1085) in Ṣhahāra against the Ṣulayḥīd rule. It survived until the 9th/15th century.

Al-Mahdī had himself claimed to be the Mahdī whose advent was predicted by the Prophet. In the quarrels with his opponents, who impugned his scholarship, he is said to have made extravagant claims of being more learned than all former Imāms and more excellent even than Muḥammad. He denounced his critics with coarse abuse and curses. After repudiating one of his wives, he prevented a suitor from marrying her, relying on the Ḳur'ānic prohibition (xxxiii, 53) for anyone to marry a wife of the Prophet after him. Because of such conduct, his imamate was widely denied by Zaydīs, apart from the Ḥusayniyya, during the two centuries following his death, and aspersions were cast on his sanity. Later, he was, however, generally recognised as an Imām on a par with others, and the accusations made against him by his opponents were considered as unfounded polemics. The Sayyid Ḥumaydān b. al-Ḳāsim (7th/13th century) composed a treatise defending his record.

Al-Mahdī is said to have left as many as 73 works, including a Ḳur'ān commentary. Only a few succinct treatises and pamphlets are extant, and it has been suggested that his writings may have been purged by his supporters. In religious law and theology he explicitly backed the authority of the Imāms al-Ḳāsim b. Ibrāhīm and Yahyā al-Hādī. He did not recognise the Caspian Zaydī Imāms and ignored their teaching.

**MĀHIR, 'ALĪ**, Egyptian jurist and politician. Born on 9 November 1881 in Cairo, the son of Muḥammad Māhir Pasha, he was educated at the Khedivial Secondary School and the School of Law. 'Alī Māhir held several posts in the Egyptian court system in the years before and during World War I, and briefly served as Dean of the School of Law (1923-4).

He began his active political career during the Revolution of 1919 as one of the organisers of civil servant petitions and protest. Made a member of the Wafd [*q.v.*] in November 1919, Māhir broke with the movement in March 1922, gravitating thereafter into the orbit of the Egyptian Palace. In 1922-3 he served on the commission which drafted the Egyptian Constitution of 1923. He sat briefly in the Chamber of Deputies (1925-6) and was a member of the Senate from 1930 to 1952. He held several ministerial posts in non-Wafdist governments in the 1920s and early 1930s.

Māhir's influence in Egyptian politics was greatest in the later 1930s, when as Royal Chamberlain he helped articulate the strategy of consolidating royal autocracy around the person of the young King Farūḳ [*q.v.* in Suppl.]. Māhir twice served as Prime Minister at the close of the interwar era (January-May 1936 and August 1939-June 1940). He was forced out of office by the British in June 1940 because of presumed pro-Axis sentiments and was under house arrest from April 1942 until October 1944. He again headed a pro-Palace government in January-March 1952, after the king's dismissal of a Wafdist ministry. Partially because of his non-party status, Māhir was selected to serve as Prime Minister immediately after the military coup of July 1952. He was dismissed in September 1952 because of his opposition to agrarian reform, and died in Geneva on 24 August 1960.

*Bibliography:* A brief political biography is that of Rashwān Maḥmūd Ḍjād Allāh, *'Alī Māhir*, Cairo 1987. His political approach is discussed in C. Tripp, *Alī Mahir and the politics of the Egyptian army, 1936-1942*, in idem (ed.), *Contemporary Egypt: through Egyptian eyes*, London 1993, 45-71. For his 1952 ministry, see J. Gordon, *Nasser's blessed movement. Egypt's Free Officers and the July Revolution*, New York 1992.

#### MAḤKAMA.

##### 4. xi. Algeria

When the French began their occupation of Algeria in 1830 there existed multiple legal traditions. The predominant Islamic tradition was the Mālikī one which had taken root in North Africa a thousand years earlier.

In the 10th/16th century, Algeria's Ottoman rulers had introduced the Ḥanafī tradition, which prevailed in the heartland of the empire. The Turkish military elite, and their offspring from marriages with local women, the *Kulughlīs* [see *KUL-OGHLU*], tended to follow the Ḥanafī tradition. Appeals, and particularly difficult cases, might be referred to a *majlis* or council of legal scholars.

In areas beyond firm Ottoman control, local traditions persisted. In the Mzāb [*q.v.*] oasis, some 500 km/250 miles south of Algiers, the Ibādī legal tradition [see *IBĀDIYYA*] was applied. Immigrant Mzābī merchants in cities along the coast applied this tradition in their own internal matters. In the densely populated, Tamazight-speaking Kabylia mountains, just to the south-east of Algiers, local customary law was applied.

Under French colonial rule, the mix of different

legal traditions was maintained, but Islamic and customary jurisdictions were gradually subordinated to the French courts. Areas of critical concern to the French, penal and commercial law, were annexed outright to the jurisdiction of French courts. Starting in the 1850s, the French sought to introduce their own principles of uniformity and hierarchy to the Muslim court system. In 1854, they instituted a standard, four-member *madjlis* as the court of appeal for all Islamic legal matters. The measure aroused opposition from settlers, and in some regions ran counter to traditions of negotiation over the size and composition of the *madjlis*. The *madjlis* was dismantled temporarily in 1859, revived in 1866, and permanently abolished in 1873, leaving French courts as the sole appeal jurisdiction.

In the 1850s and 1860s, the French promoted the reform of Islamic law by establishing a council of Muslim jurists to support change in areas of family law that either ran against humanitarian standards (the marriage of girls before they were capable of bearing children), or that seemed to run counter to scientific reason (the "sleeping baby" doctrine which held that a woman, abandoned for up to five years by her husband, might still produce his legitimate offspring). But as an autonomous institution at the national level, the council aroused the ire of French jurists and settlers and was soon dismantled. The French introduced an examination system for the selection of judicial personnel, and eventually required that all those entering the judiciary be graduates of one of three government-run provincial *madrāsas*.

The most prominent urban Muslim spokesmen of this period were associated with the judicial system. These include al-Makkī Ibn Bādīs, long-time *kādi* of Constantine, and a forceful defender of the autonomy of the Muslim courts in the 1860s, and 'Abd al-Ḳādir al-Madjdjāwī, who made his career as a teacher in the law schools of Constantine and Algiers. Al-Madjdjāwī was one of the first exponents of Islamic modernism in Algeria.

Though penal matters were early on entrusted to the French courts, colonial authorities concluded that they were not adequate to the task of maintaining order and that a more expeditious and severe form of justice was required. Thus was born in the 1870s the Code de l'Indigénat, a penal code administered by local French authorities. It focused on punishing the least hint of rebellious attitude on the part of Algerian Muslim subjects and on suppressing any action that might be construed as a threat to French economic interests. It was this aspect of French judicial policy, not only oppressive but also humiliating, that drew the most fire from the emerging nationalist movement starting in the 1920s.

In the early 20th century, Algeria-based French jurists with knowledge of Islamic law sought to produce a code of Islamic family law, known after its principal author as the Code Morand. Though the proposed code was published, it was never given official status. This was the result of opposition from powerful rural Muslim leaders, on whom the French leaned more and more for political support in the 1920s.

While the Muslim courts and law schools produced some outstanding figures in the period from the 1850s to 1914, they fell into eclipse after that time. With their jurisdiction restricted, the Muslim courts offered little prospect of reward for ambitious young men. Thus Malek Bennabi entered the court system in the mid-1920s but soon became disaffected. By 1930 he was studying at a technical school in Paris, launch-

ing what would be a career as one of Algeria's most original and prolific Islamic thinkers.

The turmoil of war in 1940-43 weakened French domination of Algeria. Two courses of action were possible for the French. One was to address Muslim grievances, including eliminating the Code de l'Indigénat. The other was severe repression, including the use of arbitrary detention, torture and execution. The period from 1943 to 1954 was one of competition between these tendencies. After the outbreak of revolution in November 1954, the repressive impulse quickly got the upper hand. It was this flouting of civilised legal standards, dramatically revealed by such incidents as the 1961 trial of Djamilia Boupacha, that decisively eroded the French public's will to hold onto Algeria. But this severe repression also contributed to the development of a culture of extra-legal violence in Algeria that would dramatically resurface in the 1990s.

With independence in 1962, the new Algerian government's immediate concern was to restructure the court system so that it reflected the values of national unity and socialism. Toward this end, all Islamic and customary jurisdictions were absorbed into a unified national court system easily accessible to all citizens.

The next task was codification of law, beginning with the Penal Code, issued in 1966. An Economic Offences Ordinance, eventually incorporated into the code, upheld the socialist ideal of workers' participation and provided severe penalties to managers of state-run enterprises who let their own interests come before selfless dedication to the state. It also provided for the monopoly of the state in control of foreign trade and arranging contracts for the services of foreign enterprises. The notion that private individuals might serve as intermediaries was anathema in the socialist doctrines that guided these policies.

Even in areas where Islamic law might have appeared to have a clear-cut application, it was subordinated to the practical economic interests of the state, especially when they coincided with popular habit. Thus gambling on the state-run football pool was declared legal, while betting privately on horse races in France was not. Algerians were allowed to consume beer and wine produced by state-run enterprises. By the mid-1970s, the sale of alcohol was restricted by local authorities in those areas where there was strong public opposition.

Algeria had been independent for nearly a decade when the government finally began to deal with legal issues that were mainly cultural in character. As part of a larger campaign of Arabisation [see TA'RĪB] launched by the Boumédiène régime in 1971, it was declared that court proceedings should be conducted in Arabic which, in practice, meant Algerian colloquial Arabic. By this time, the first law students whose training had been in Arabic graduated from the law school in Algiers. But as in many areas of the Algerian system, those with fluency in French, who tended to come from more affluent urban families, continued to have better opportunities. The question of opportunities in the court system for those proficient only in Arabic remained a smouldering issue that erupted in protests on Algerian campuses in 1976 in Constantine, and in 1980 in Algiers. The latter protests helped to launch an organised Islamist movement in Algeria, and resulted in President Chadeli's seeking to accommodate Arabic student grievances by intensifying the Arabisation of the judicial system.

This point also marks a change in orientation toward the task of codifying family law. Throughout the mid-1970s, the ideology of Algeria had been one of Islamic

socialism, in which the interests of the state were paramount. Islam was given a place of honour, but this was still one subordinate to the state. This ideology was embedded in the National Charter, endorsed in a referendum in 1976. On family matters and the rights of women, the Charter pointed in a progressive direction, endorsing the principle of gender equality.

By the time intensive discussions of a family law code got under way in the early 1980s, the socialist emphasis of the charter was under attack from the emerging Islamist movement. But the debates were also shaped by economic questions, such as the acute shortage of urban housing—which made it costly to ensure the rights of a divorced wife—and the rapid growth in population. The Family Law Code finally passed in 1984 was a mix of conservative interpretations of Islamic law and the priorities of an embattled bureaucratic state facing the challenge of rapid population growth and high unemployment. Women were not protected against being married without their own freely-given consent, nor against being left economically helpless following divorce, nor against their husband deciding unilaterally to bring another wife into the household. Yet at the same time, in an effort to stem rapid population growth, the Code raised the minimum age of marriage to eighteen for women and twenty-one for men.

The late 1980s, rather like the 1940s, saw a relaxation of controls on political expression and the media. An important development in the legal realm was the founding of the Ligue Algérienne des Droits de l'Homme, founded in 1985 and given legal recognition in 1987. With the suppression of the Islamist opposition starting in 1992, many controls were restored and there was a resurgence of extra-legal violence on the part of both Islamic rebels and government forces. In dealing with the challenge of establishing clearly who was responsible for given violent incidents, the courts have often proved ineffective. Yet the glimmer of hope that they may occasionally rise to this challenge has sustained a small, dedicated group of Algerian human rights lawyers.

#### 4. xii. Tunisia

In the mid-19th century, Tunisia had a pluralist legal system. Although the respective spheres of competence and the various interrelations of the system's components were far from being clearly and strictly defined, the broad lines of its structures can be delineated as follows. There was a religious legal sphere covering matters of personal status and, in most cases, civil law, sc. a *sharī* jurisdiction for the Muslims (that of *kādīs*, *Mālikī* or *Ḥanafī* according to the defendant's rite, sitting as sole judges, plus *maǧālis*, plural jurisdictions made up of *kādīs* and *muffīs*) and a rabbinical jurisdiction for the Jews. Alongside these was a jurisdiction of the central administration and its

local agents, the *kā'ids* [q.v.], who heard matters involving penal law and, in part, civil law. At the head of this structure was the Bey, the supreme authority according to the double principle of a delegated justice and one held in reserve. Disputes involving the representatives and subjects of foreign powers were the province of the consular courts [see *IMṬIVĀZĀT*].

In 1857 the Fundamental Pact (*aḥd al-amān*), which proclaimed the equality of all subjects before the law, began a slow process of legal reform. Hence in 1861 there were promulgated at the same time a Constitution and a code of criminal and customary law (*kānūn al-dīnāyāt wa 'l-ahkām al-urfīyya*). The Constitution set up a hierarchic schema of new tribunals which were to be created within the entirety of the Regency. A tribunal for commercial cases organised under a code of commercial law had to be set up. However, although this last was actually promulgated on 1 April 1864, it could not be put into effect because of the outbreak of the rebellion in that year, which brought in its train the abrogation of the Constitution and the code of criminal and customary law. The idea of legal reform and codification was taken up again in the 1870s under the reformist Prime Minister *Khayr al-Dīn* (1822-90 [q.v.]), but without his efforts being fully accomplished.

In short, the modifications in the legal system attempted before the installation of the Protectorate were either of short duration or only touching upon the formal aspects of the existing legal jurisdictions. There was on one hand a reorganisation of the *sharī* jurisdiction at Tunis in 1856 and then in the interior of the Regency in 1876. Also, there were measures undertaken, notably between 1870 and 1873, to define more clearly the jurisdictions reserved to the central administration and its local representatives.

The installation of the French Protectorate in 1881 was to bring profound changes in the Tunisian legal system. By the Convention of La Marsa (1883), the Tunisian state undertook to "proceed to administrative, judicial and financial reforms as judged useful by the French government". In practice, French control over the beylical state was to be assured by the bias of the Resident-General as well as by the presence of French officials at all levels of the administration.

In the first place, following the doctrine of "double sovereignty", the protecting power undertook to install for its own nationals a French legal structure (law of 18 April 1883), comprising justices of the peace and courts of first instance; not till 1941 was an appeal court created. Furthermore, the French legal system thus installed was to replace, until 1884, the various consular jurisdictions of the European Powers. With the land law of 1885 there was set up a mixed court for land questions, an original jurisdiction (inspired by the Australian model) aimed at promoting the registration of land and buildings. This court, made up of a French president, with one-half French judges and the other half Tunisian judges, was at the same time to reduce the sphere of the *sharī* courts to embrace merely cases involving non-registered landed property.

Regarding the reform of justice dependent on the authority of the Tunisian state, apart from the regulation of the jurisdiction dependent on the central administration (the so-called *Ouzara* = *Wuzarā'*), whose competence was extended beyond the criminal law to all civil and commercial cases between Tunisians (except for personal status and matters connected with it), this was not really tackled till 1896, when an office

for judicial affairs (*idārat al-umūr al-ʿadliyya*) was set up. At the same time regional courts of common law were created with an organisation modelled on that of the French courts of first instance. If the magistrates were Tunisians, they had nevertheless to be “assisted” from 1906 by “government commissioners” (French officials knowing Arabic). In 1921 a Commission of Pleas playing the role of an appeal court, as well as a Supreme Appeal Court and a criminal division with jurisdiction over the whole land, were installed at the side of the court of *Ouzara* in Tunis. Also in 1921 a real Ministry of Justice was created and the principle of delegated justice came formally to replace that of justice held by the Bey. Only the right of pardon was henceforth reserved to him. The year 1938 was marked by the multiplying of courts in the various counties of the land, with a wide sphere of competence largely replacing that of the *kāʾids*. From 1896, a commission was set up to prepare codifications based at one and the same time on French and on Muslim law and which were intended to become the laws applicable by the courts of common law. Codes of obligations and contracts (1906), of civil procedure (1910), of criminal law (1913), as well as for criminal procedure (1921) were successively promulgated. In certain spheres of economic life, French laws became directly applicable.

It was only much later that the *sharʿi* courts were remodelled. However, because of the reforms already in operation, their spheres of competence became reduced to cases of personal status and inheritance and also to those concerning family or private habous or *hubus* [see *WAKF*. II. 3] and landed property which had not been registered. It was not till 1948 that a code of “procédure charaïque” governing the organisation and exact competence of these courts was set up. They then consisted of two *kādīs* and of two courts (*maḥālis*) (for each of the two law schools, Ḥanafī and Mālikī) sitting in Tunis, with similar jurisdictions (with one or more judges) in the interior of the country where, however, the Ḥanafī law school was not represented. The demands by certain reformist circles seeking a more radical reform of the *mahākim sharʿiyya*, as well as of the education system of the Zaytūna [*q.v.*], which trained future personnel for the legal system, were hardly taken into account by the Protectorate authorities.

A few months after the proclamation of independence in March 1956, the new Tunisian state issued a series of decrees aimed at reorganising and unifying the legal system. The jurisdiction of the *sharʿi* courts was transferred to the courts of common law and their members integrated within the framework of the state magistrature. In May 1956, the French commissioners attached to the Tunisian courts were relieved of their functions, and in March 1957 the Franco-Tunisian Legal Convention ended the French courts. In September 1957 it was the turn of the Rabbinical court to be suppressed.

After the installation of the republican régime in July 1957, Tunisia in 1959 acquired a Constitution which, in section IV devoted to legal powers, proclaimed notably the independence of judges and laid down that they should be appointed by presidential decree on the proposal of the Higher Council for Judges. The formal functioning of this unified and centralised legal system was embodied in Law no. 67-29 of 14 July 1967 concerning judicial organisation, the Higher Council for Judges and the position of the judiciary. This law fixed the Tunisian judicial hierarchy as follows: county courts, courts of first instance,

a court for land questions, appeal courts and a supreme appeal court based at Tunis. Furthermore, alongside a High Court for cases of high treason, the 1959 Constitution equally made provision for an administrative court; this was effectively set up in 1974 and considerably reorganised in 1996.

In regard to the law applied by its courts, the Tunisian state undertook, from the time of independence onwards, to set up a new structure of national codifications. From among the legal texts dating from the colonial period, only the codes for obligations and contracts and the criminal code remained essentially in force. It is appropriate to mention that although the first article of the 1959 Tunisian Constitution made Islam the state religion, Islamic law does not appear amongst the formal sources of Tunisian law. Regarding the code of personal status, largely drawn from Islamic law, the legislating power showed a remarkable will for innovation, notably in abolishing polygamy, introducing judicial divorce and authorising adoption. However, an analysis of judicial practice in Tunisia has been able to show that there is a tendency amongst judges to refer, in certain cases, to non-codified Islamic law.

(BETTINA DENNERLEIN and L. ROGLER)

##### 5. The Indo-Pakistan subcontinent

After a century and a half of trade, the last few decades of which were characterised by increasing involvement in political intrigue and military adventurism—inspired initially by rivalry with European competitors (most particularly the French, with whom England was twice at war in the mid-18th century)—the East India Company emerged as a major political and military power in the subcontinent in the context of the disintegration of the Mughal empire into a collection of feuding regional powers. After the battle of Buxar (1764), which pitted the Company troops against the remnants of the Mughal army, the Company was in a position to conclude a treaty (*farman* [*q.v.*]) with the titular head of the Mughal empire, Shāh ʿĀlam II [*q.v.*], who in 1765 ceded to the Company in perpetuity the *diwāni* (civil and revenue administration) of three eastern provinces—Bengal, Bihar and Orissa—in exchange for an annual tribute of £260,000 (payment of which only continued until 1773). The Company thus became ruler of lands and peoples, ostensibly in the name of the emperor.

The modern period of judicial administration in South Asia commenced with the establishment by

Warren Hastings (Governor of Bengal, 1772-3; Governor-General of India, 1773-85) of courts serving the indigenous population of these three provinces; and the virtually simultaneous establishment by the Crown of a Supreme Court in Calcutta. Hastings' courts in the *mofussil* (the territory outside the seat of the Presidency, Ar. *mufaṣṣal* [q.v. in Suppl.] "separated") were creations of the East India Company. Hastings' plan—frequently revised during his own term, further modified by Lord Cornwallis (Governor-General, 1786-93), and cast by the latter in the Code of 1793—set the pattern for judicial administration in the territories subsequently acquired. Hastings proceeded to establish a *Dīwānī 'Adālat* (civil court) and a *Faujdārī 'Adālat* (criminal court) in each revenue district or Collectorate (the number of these courts was subsequently increased and their geographical jurisdiction decreased; courts subordinate to the *Dīwānī 'Adālat* were also subsequently established). The Collector himself initially presided over the civil court; later judges were appointed from among the Company's covenanted civil servants. Indian Law Officers (Hindu *pundits* and Muslim *mawlawīs*) were appointed to each *Dīwānī 'Adālat* to expound the Hindu or Muslim law applicable to the case. The District *Kāḍī* and *Muḥṭī* presided over the *Faujdārī 'Adālat*, in which Muslim criminal law continued to be administered. Appeals from the *Dīwānī 'Adālat*s lay to the *Ṣadr Dīwānī 'Adālat* (chief civil court, initially comprised of the Governor-General and members of his Council), and, after 1781, to the King in Council. Appeals from the *Faujdārī 'Adālat* lay to the *Ṣadr Nizāmat 'Adālat*, initially headed by an appointee of the Nizām.

The early bifurcation between civil and criminal jurisdiction derived from the terms of the 1765 grant, under which criminal jurisdiction remained with the representative of the Mughal emperor. In 1790 criminal justice was (unilaterally) brought under the direct control of the Company; the *Faujdārī 'Adālat*s were abolished and replaced by criminal courts, headed by covenanted servants of the Company, assisted by *kāḍīs* and *muḥṭīs*. Although some of the rules of Muslim criminal law and evidence were gradually modified by government regulations, it was not until the Penal Code of 1860, the Code of Criminal Procedure, 1861, and the Evidence Act, 1872, that Muslim law in these respects was completely superseded. After 1790 the *Ṣadr Nizāmat 'Adālat* was comprised of the Governor-General and members of his Council, assisted by the Chief *Kāḍī* and two *muḥṭīs*. In 1801 the Governor-General and his Council members were relieved of judicial responsibilities in both *Ṣadr 'Adālat*s: the two appellate courts were united in a single *Ṣadr 'Adālat* with civil and criminal sides, presided over by judges appointed from the ranks of the Company's covenanted servants.

In the Company settlements themselves, there had been courts established by royal charter since the Mayors' Courts of 1727. (Prior to this, what justice there was in the Company towns and factories was a very rough and ready, and often brutal, affair.) The Mayor's Court was a civil court of record, with compulsory jurisdiction only over Europeans to whom they applied English law; final appeal lay to the King in Council. (Although not compulsorily subject to the court, indigenous inhabitants might agree to such disposal of the dispute, in which case it would be adjudicated according to English law.) The Mayor's Court in Calcutta (the English town that had grown up around the Company's factory) was replaced by a Supreme Court, established by Royal Charter (1774)

and Act of Parliament (1773, as amended in 1781 and 1784). The Supreme Court (after its jurisdiction had been more carefully defined by the latter acts) possessed civil jurisdiction over all British-born subjects and their descendants resident in the Bengal Presidency, and all persons residing in Calcutta, including its Indian inhabitants.

In Madras and Bombay, the Mayors' Courts were superseded in 1798 by Recorders' Courts, which possessed powers similar to those of the Supreme Court in Calcutta (and were subject to similar restrictions). The Recorder's Courts were upgraded to Supreme Courts in 1802 (Madras) and 1824 (Bombay). As these two Presidencies acquired *mofussil* territories—Bombay following the third Marāṭhā War (1818) [see MARĀṬHĀS]; Madras with the annexation of approximately half of Mysore after the defeat of Tipū Sultān [q.v.] in 1799, followed by the annexation of the Carnatic—the establishment of *mofussil* courts in these territories followed the pattern of Hastings' plan as refined and codified by Cornwallis in 1793.

Bombay was in many ways unique. The island was ceded to the Crown by the Portuguese in 1661 and leased to the Company in 1668 on payment of £10 a year; the rights of the Company over Bombay thus derived from the British Crown, not from the Mughal sovereign, or regional potentate, or military conquest. Further, the island of Bombay had, previous to being handed over to the English, been under Portuguese rule for over a century, and the territory conquered in 1818, was taken over not from Muslim but from Hindu rule; consequently, Muslim law did not enjoy in Bombay the pre-eminence that it did in Bengal and Madras. The Bombay *'Adālat* system underwent several changes and refinements until 1827, when all previous Regulations were repealed and replaced with a series of Regulations which came to be termed the Elphinstone Code. One of the interesting things contained in Elphinstone's Regulations was a Criminal Code for the Presidency, which was only superseded by the Indian Penal Code of 1860.

The dual system of courts—Royal Courts, whose judges were appointed by the Crown, in the Presidency headquarters (Calcutta, Bombay and Madras); and Company Courts, created by the East India Company and staffed by its officers, in the *mofussil*—persisted until, in the aftermath of the 1857-8 uprising, the Crown assumed all rights that the East India Company had acquired and exercised on Indian soil. One consequence was the integration of the Company and Crown courts and rationalisation of the judicial structure. In each presidency, the *Ṣadr* (appellate) Company Court was amalgamated with the Supreme Court to constitute a High Court.

Significantly, under the British—Company and Crown—there were not in South Asia separate religious courts for the religiously-derived personal laws; personal law of both Muslims and Hindus was administered as an integral part of their civil jurisdiction by both the *mofussil* civil courts and the Supreme Courts and, subsequently, the High Courts. Whether the litigation came before the Supreme Courts or the Company *mofussil* courts, the indigenous peoples of South Asia were guaranteed the application of their own system of personal law in a wide variety of civil matters. The phraseology of Hastings' formulation of 1772 and the Regulation of 1780 preserved to Muslims in the *mofussil* "the laws of the Koran" when the litigation concerned "inheritance, marriage, caste, and other religious usages and institutions". (The wording used in the Act defining the jurisdiction of the

Supreme Court was different but of similar import.) A Regulation of 1781 added "succession" to the topics concerning which the *mofussil* courts were to apply the personal law. The Regulation further provided that in the absence of statutory law, and in situations not covered by the earlier Regulation, the *mofussil* courts were to have recourse to "justice, equity and good conscience", with the result that the personal (Hindu or Muslim) law was often applied in matters other than those specifically enumerated. In essence, "justice, equity and good conscience" was used in numerous situations to render applicable the relevant personal law as the "proper law" of the contract or transaction; reference was to the law which the parties could be presumed to have expected would apply to the transaction. On the other hand, statutes took precedence over, and could and did oust, Muslim law. By the end of the 19th century, applicability of Muslim law was confined essentially to family law, inheritance and certain transfers of property. Even in these areas, the secular law made inroads; e.g. a Muslim father could be compelled by the magistrate to maintain his illegitimate child (a provision repealed in Pakistan in 1981); the apostate from Islam [see MURTADD] was not deprived of his share as an heir intestate (a provision repealed in West Pakistan in 1963).

Because the company officials appointed to judicial duties in the *mofussil* courts (and the barrister-judges of the Supreme Court) were not, at least initially, knowledgeable in the indigenous legal lore, Muslim Law Officers (*mawlawis*) and Hindu Law Officers (*pundits*) were appointed to every civil court, original and appellate. These officers functioned, not as judges, but as resource personnel, to whom specific questions of law might be referred by the judge during the course of the proceedings before him. In order to displace the monopoly of specialised knowledge possessed by the Law Officers, work was undertaken to make authoritative source material directly available to lawyers and judges in English. The first Muslim text thus treated was the *Hidāya*, a 12th-century text by Burhān al-Dīn al-Marghinānī [q.v.], translated by Charles Hamilton in 1791. This was followed in 1792 by William Jones' translation of the *Sirāḍjīyya*, together with an abstract of the *Sharīfīyya*; and by Neil Baillie's volumes on *Moohummadan law of inheritance* (1832) and *Moohummadan law of sale* (1850), the former an abridgement of the *Sirāḍjīyya* and *Sharīfīyya*, and the latter based on relevant chapters of the *Fatāwā-i-'Ālamgīrī* [see AL-FATĀWĀ AL-'ĀLAMGĪRĪYYA]. In 1865 appeared Neil Baillie's translation and abridgement of those portions of the *Fatāwā-i-'Ālamgīrī* likely to be relevant to litigation in India. This was followed in 1874 by Baillie's translation of the major Iḥnā Ash'arī Shī'ī text, the *Sharā'ī' al-Islām*. A collection of the questions submitted to Muslim Law Officers by judges of the Company Courts, together with their responses, was published by William Macnaghten in 1825 as the second part of his *Principles and precedents of Moohummadan law*. And toward the end of the century, Mahomed Yusoof, in his Tagore Law Lectures, 1891-2, translated the portions of the *Fatāwā-i-Kāḍī Khān* [see KĀḌĪ KHĀN] dealing with marriage and divorce. It was not until 1914 that E.C. Howard's English translation of the Shāfī'ī text *Minhaj et-talibin*, prepared for administrators and judges in Southeast Asia, became available. Textbooks and compilations by Indian scholars and scholars of Indian law also appeared. Ameer Ali's two volume work was first published in 1880 and 1884; Roland Knyvet Wilson's *Introduction and Digest* in 1894 and 1895, respectively. The first edition of

Dinshah Fardunji Mulla's *Principles of Muhammadan law* was dated 1906; the first edition of Tyabji's learned tome, 1913. Meanwhile, systematic reporting of legal decisions of the High Courts, Judicial Commissioners' Courts and Chief Courts began in 1876 (under a statute of the previous year). The availability of published decisions enhanced the role of judicial precedent: a decision on a point of law by the Privy Council was binding on all British Indian Courts; and a decision of the High Court was binding on the subordinate Presidency Courts.

As part of the judicial reorganisation in the 1860s, the posts of Hindu and Muslim Law Officers were abolished; judges themselves, assisted by the lawyers appearing before them, were deemed capable of dealing with questions of Muslim and Hindu law, which continued to be dealt with as integral components of the civil jurisdiction. By the turn of the 20th century, virtually every superior provincial court of a province with a significant Muslim population had a Muslim among its sitting judges; the first two such High Court appointments were those of Justice Mahmood (son of Sir Syed Ahmed Khan [see AHMAD KHAN]) to the Allahabad High Court in 1887, and Ameer Ali [see AMĪR 'ALĪ], appointed to the Calcutta High Court in 1890. From 1909 a series of distinguished Indian jurists sat on the Judicial Committee of the Privy Council (the ultimate court of appeal prior to independence and the establishment of national Supreme Courts); Ameer Ali, the first (and the only Muslim) Indian Privy Councillor, served from 1909 until his death in 1928.

Extremely significant is the fact that to this date Muslim law remains virtually entirely uncodified; this contrasts not only with the massive codification of Hindu law undertaken by India in the first decade of Independence, but also with the general trend in the Muslim world. (Major exceptions are the Dissolution of Muslim Marriages Act, 1939; the Pakistan Muslim Family Laws Ordinance, 1961; and the Indian Muslim Women [Protection of Rights on Divorce] Act, 1986.) Being uncodified, Muslim law is amenable to interpretation and/or reinterpretation by the court. This occurred during the British period, as in decisions holding that the post-pubescent Shāfī'ī girl could not be contracted in marriage without her permission; and that the pre-pubescent Hanafi girl contracted in marriage as a minor by a guardian other than father or paternal grandfather could extra-judicially renounce the marriage on attainment of puberty. (Incidentally, it was Ameer Ali who had proposed, in his *Mahomedan law*, the interpretation of Shāfī'ī and Mālikī law that was adopted by the courts in the former instance; and it was the same individual, in his capacity of judge of the Calcutta High Court, who delivered the decision establishing the point in the latter instance.) In the first decades of Independence, the new State of Pakistan appeared committed to a policy of *idjtiḥād*, as exemplified by the dramatic decisions, endorsed by the Supreme Court of Pakistan, holding that, within the Hanafi *madhhab*, wives are legally entitled to recover arrears of maintenance (1972); and that a Muslim woman is entitled to a judicial dissolution of her marriage (in spite of her husband's objection) merely on the ground that she finds the situation intolerable, provided that she is willing to return or forego her *mahr* [q.v.] and other "benefits" she may have received from her husband (1967).

Although the documents of the late 18th century reflect an assumption that "the laws of the Koran" constitute a single entity to which all Muslims owe

allegiance, Muslim law is not a unified entity even at the textual level. The overwhelming proportion of South Asian Muslims are Ḥanafī Sunnīs, but on the southwestern coast of the subcontinent another Sunnī school, the Shāfi'ī, is locally significant. More important in British India was Shī'ism (brought to the subcontinent by the Persians), which had a considerable following, particularly in Oudh (annexed by the British in 1856 [see AWADH]). In spite of fact that since the mid-18th century the Nawāb Wazīr of Oudh had been a Shī'ī, Sunnī law, as the law of the Mughal empire, applied in the territory until 1847, when (three decades after the Oudh dynasty had assumed the title of "King," and nine years prior to the annexation of Oudh by the British) a Shī'ī *muftī* was appointed, and (Iṭhnā 'Asharī) Shī'ī law began to be applied to Shī'īs within the kingdom. Ironically, Shī'ī law was recognised by the Privy Council as the law applicable to Shī'īs in British India six years before it was recognised by the indigenous government of the Oudh Kingdom; and by the Bengal *Sadr 'Adālat* more than three decades before the matter reached the Privy Council. However, given the numerical prominence of the Ḥanafīs, the assumption of the South Asian courts is that a person, if a Muslim, is a Ḥanafī Sunnī; consequently, the term "Muslim law" or "Islamic law" as used in judicial decisions is usually synonymous with "Ḥanafī Sunnī law". The burden is on the person claiming to be a follower of another Muslim school or sect to plead and establish this fact. Similarly, once it is established that a party is a Shī'ī, the assumption is that he is a member of the major sect, Iṭhnā 'Asharī. Information on the law of the minority Shī'ī sect, the Ismā'īlīs, is much less readily available, although a significant difference that was of some importance during the British period (and overlooked by the Privy Council in an 1890 case) is that the Ismā'īlīs do not discriminate against the childless widow in matters of inheritance in the same way that Iṭhnā 'Asharīs do. It was not until 1969 that Professor A.A.A. Fyzee published his *Compendium of Fatimid law*. The terms "Shī'ī" and "Shī'ī law" as used in South Asian judicial decisions are synonymous with "Iṭhnā 'Asharī" and "Iṭhnā 'Asharī law".

Textual Muslim law, of course, does not recognise customs in derogation of the law; but rural agrarian communities, particularly in North India, did. Customary law, applicable to Muslim (and Hindu) agrarian families in vast regions of the north-west (particularly the Punjab, the heartland of customary law and a province which was under Sikh, not Muslim, rule before conquered by the British in 1849) was essentially a retention and continuation of their pre-existing practices in "secular" matters, particularly succession and dealings with property, by converts to Islam (and their descendants); even those Muslim tribes—e.g. Pathans—who claimed to be descended from Muslim invaders had long ago fallen into line with the local practices. At the same time, these local practices were not consistent with Hindu law (and may well have predated the formal statement of Mitakshara Hindu law). Most of these people never had observed or been subject to Muslim law (or orthodox Hindu law), knew little if anything about it, were quite happy with the way things had always been managed in regard to succession and property and saw no reason to change—at least until well into the 20th century, when religious revivalists and political leaders trying to define a Muslim constituency and organise a Muslim political movement attempted to

convince them to change, and eventually legislation in the new Muslim state forced them to submit to a new legal order.

Also problematic were communities whose ancestors had converted from Hinduism to Islam but retained many of their Hindu practices. Both Hinduism and Islam purport to govern more than an individual's religious devotion; both lay down rules concerning marriage, divorce, and other domestic concerns, as well as more "secular" matters, most importantly dealings with property and inter-generational transmission of property. Individuals and communities who converted to the faith of Islam from Hinduism not infrequently continued Hindu patterns of property holding and transmission: matters which may have struck them as having little to do with religious profession, and matters which the ancient practice managed entirely to their satisfaction. Such a course was undoubtedly facilitated by the fact that Ṣūfīs, who were responsible for much conversion to Islam in South Asia, were not particularly concerned with mundane things like worldly property and its inter-generational transmission. Prominent examples of groups which adopted Islam as a religion but continued their former Hindu practices were two commercial groups from western India, the Khōḍjās and the Menons; both were judicially held amenable to Hindu law in regard to matters of inheritance in the mid-19th century. Further, an individual family (perhaps connected with or seeking favour from the Mughal court) might convert for political reasons, while at the same time continuing their previous practices concerning property dealing and succession. Other individuals or groups, most prominently exemplified by the Hindustani Kayasthas, who performed important roles in the Mughal administration, adopted many outward Muslim observances and customs (e.g. of dress, language, literature, and even burial) without converting; they remained Hindus by religion and followed Hindu law (although depreciated by their co-religionists as "half-Mussalmans").

Distinct both from those subject to agrarian custom in North India and from groups or families who converted from Hinduism without changing their practices (particularly concerning inheritance and property dealings) to conform to Muslim law were those aristocratic Muslim landowning families who, although unambiguously subject to Muslim law, observed "family customs" designed to keep the landed estate intact and/or control its devolution (e.g. primogeniture, exclusion of female heirs, appointment of an heir).

As the importance of "custom"—or behaviour and practices inconsistent with the religious affiliation of the parties—become more apparent, it was explicitly recognised in statutes governing the subsequently established courts, and in practice by all the courts. The burden of proving a custom in derogation of the (otherwise applicable) personal law was on the person pleading custom. To be accepted as a rule of law, a custom had to be ancient, certain, reasonable, and neither repugnant to morality or public policy nor contrary to any statutory law. It was usually sufficient to establish that the custom had been regularly and consistently observed in the family, tribe or locality for at least fifty years. Once judicially recognised, custom could not be altered by anything short of legislation.

One of the indirect (and doubtless unintended) effects of British policy in India was that anomalous communities and families became more aware of and conscious of their status and often moved to identify

more closely with one or other orthodox tradition. The pressure to identify with one of the two great communities became more intense with the advent of rudimentary democratic institutions and the prospect of eventual self-government in which numbers would count. Both sides launched missionary activities; in addition to seeking fresh converts, the Muslim *tabligh* movement [see *TABLIGHĪ DJAMĀ'AT*] attempted to complete the conversion process in the case of anomalous communities and to induce groups following practices and customs inconsistent with the true faith to renounce such customs; the Hindu *shuddi* movement (launched by the reformist Arya Samaj) sought to "reclaim" descendants of former converts to Islam to the true faith of their more ancient ancestors.

In 1937, Muslim political leaders managed to secure enactment of the Muslim Personal Law (Shariat) Application Act, which substituted Muslim law as the rule of decision in preference to custom previously applicable, either by virtue of regulations specifically recognising custom and usage as the governing rule, or by virtue of the "justice, equity, and good conscience" clause. At the same time, the terms of this very statute demonstrate the importance of custom to a particular class of Muslims: the Muslim families of northern India holding large estates and frequently claiming aristocratic descent, whose support was essential to the Muslim League, insisted on being able to retain the control of the inter-generation transmission of family property—a right which "family custom" often guaranteed and Muslim law largely negated. It was at the insistence of this particular class that the Shariat Application Act, 1937, did not compulsorily cover either adoption (i.e. appointment of an heir) or testamentary disposition of property. By a fortuitous circumstance, however, the rural landlords were totally exempt from the terms of the Act as far as their agricultural land was concerned. The Government of India Act, 1935, had come into effect before the Bill which became the Act of 1937 was actually passed. Under the scheme of the Government of India Act, succession to agricultural land was a topic exclusively within the legislative competence of the provinces and the Central Legislature could not deal with it. (The 1937 statute did, of course, cover non-agriculture property and e.g. brought the urban property of the *Khōdjas* and *Menons* under the rule of Muslim law, as far as intestate succession was concerned.)

(West) Pakistan acted shortly after independence totally to negate custom as a rule of law applicable to Muslims, affirming in its stead Muslim law (of the appropriate sect). Several Indian states have passed supplementary legislation amending the 1937 Act to cover succession to agricultural land. The scope for the application of rules of custom to Muslims has considerably decreased in South Asia and has been totally ousted in Pakistan.

The new States of the subcontinent inherited, and very largely retained, the judicial structure as developed during the British period (with obvious exceptions; e.g. the ultimate court of appeal is no longer the Privy Council and High Court judges are not appointed by London), as well as procedural law and the major statutes enacted during the previous era. In every province a High Court sits at the apex of a hierarchy of subordinate civil and criminal courts, with ultimate appeal to the national Supreme Court. The most important post-Independence administrative development in regard to disputes to which Muslim law is applicable has been the introduction in each of the three countries of South Asia of special Family

Courts with exclusive jurisdiction in regard to certain areas of matrimonial and family litigation. Pakistan took the lead with the (West Pakistan) Family Courts Act, 1964; India followed two decades later, 1984; and Bangladesh in 1985. Simplified and less formal procedures, designed to expedite the litigation, govern proceedings in the Family Courts, particularly in Pakistan and Bangladesh; and the rigorous requirements of the Evidence Act, 1908, have been mitigated in family litigation in India and Bangladesh. Although the Bangladesh statute itself declared all *Munshif's* Courts (civil courts subordinate to the District Court) to be Family Courts and all *Munshifs* to be Family Court Judges, and Pakistan had within two years appointed judges to function as Family Courts throughout the country, the Indian legislation only mandated Family Courts for urban areas of population one million or more, and implementation has proceeded slowly.

In Pakistan, General Zia-ul-Haq [see *ZIYA' AL-HAQK*], having seized power in July 1977 with the promise of elections within 90 days, justified holding power for eleven years (until his mysterious death in 1988) in the name of "Islamisation". His patronage of the Islamists—to whom he increasingly looked as providing some sort of "constituency" and creating the appearance of at least some popular support for his government, and whom he brought into a political prominence they had not previously enjoyed—received a tremendous international boast with the Soviet invasion of Afghanistan (1979) and United States' support of the "*mujahideen*" opposition. Money and arms poured into the region; thousands of *madrasas*, many of them training schools for Islamic warriors, sprang up in Pakistan. The Russians withdrew a decade later; the U.S. lost interest; and Afghanistan descended into civil war, which Pakistan thought it could control to its advantage.

The Zia era left his successors with a heady legacy, including the continuing fall-out of involvement in Afghanistan in the form of weapons, drugs, refugees and Islamic militants. Institutionally, the Zia legacy is represented by the Shariat Courts, created in 1978. These special courts possess jurisdiction to examine the Islamic vires of "any law", and if such law is found contrary to the "Injunctions of Islam, as laid down in the Holy Quran and the Sunnah of the Holy Prophet," to strike it from the statute book. Most recently this jurisdiction has been exercised (23 December 1999) to order that interest in all forms be abolished in Pakistan by June 2001; and (5 January 2000) to strike down many of the reforms achieved four decades previously by the Muslim Family Laws Ordinance 1961. (The Shariat Bench of the Supreme Court, affirming the 1991 decision of the Federal Shariat Court on *ribā*, set 30 June 2001 as the deadline for the conversion to a *ribā*-free system. On 15 June 2001, the same court extended the deadline by twelve months. The decision of the Federal Shariat Court on the various provisions of the Muslim Family Laws Ordinance has been stayed pending an appeal to the Shariat Bench of the Supreme Court, which may not be heard for some time, and which will probably not fully endorse the position of the Federal Shariat Court. For a concise introduction to and assessment of the *ribā* decision, see the booklet *Moving toward an Islamic financial regime in Pakistan* by P. Hassan and A. Azfar, available at [www.law.harvard.edu/programs/ilsp/publications.html](http://www.law.harvard.edu/programs/ilsp/publications.html).) In terms of substantive law, Zia's program of "Islamisation" resulted in the promulgation in 1979 of the four *hudūd* ordinances (includ-

ing the draconian *Zinā* Ordinance), introducing into Pakistan law the criminal offences (illicit intercourse, false imputation of unchastity, theft and consumption of alcohol), together with their respective punishments, defined in the *shari'a*; imposition (1980) of *zakāt* and *ushr* levies; promulgation (1982) of a blasphemy ordinance (defining an offence which carries a mandatory death sentence); repeal (1981) of the provision of the Criminal Procedure Code granting the illegitimate child a right to maintenance from his/her putative father; and the provisions in Pakistan's new Evidence Order (1984) which reintroduced the two-year period of gestation recognised by classical Ḥanafī jurists and devalued the evidence of women.

Other dimensions of the Zia legacy are the enhanced politicisation of Islam and a dramatic increase in sectarian violence, between one sect or community of Islam and another, as well as between Islamists and non-Muslims (including Ahmadīs, who were constitutionally defined as non-Muslims by Zulfikar Ali Bhutto's government in 1974). Religion is opportunistically invoked by each of the major parties; implementation of the *Shari'a* is held forth as a panacea for the serious problems facing the country, and not merely by the Islamic parties on the fringe of electoral politics. The 15th Constitutional Amendment Bill, as projected by Nawaz Sharif during his second (and abruptly terminated) tenure as Prime Minister (1997-9), would have somehow ushered in an era of communal peace and social justice; ended corruption, maladministration, police excesses, judicial delays and economic problems, and would have created an "Islamic welfare state". Significantly watered down before being passed by the National Assembly (in which the Prime Minister had a comfortable and tame majority), the Bill declared the "Holy Quran and Sunnah of the Holy Prophet" to be the supreme law of Pakistan, above the Constitution itself and beyond the reach of judicial decrees, and it obliged the federal government "to take steps to enforce the Shariah, to establish *salat*, to administer *zakat*, to promote *amr bil maroof* and *nahi anil munkar* (to prescribe what is right and to forbid what is wrong), to eradicate corruption at all levels and to provide substantial socio-economic justice in accordance with the principles of Islam, as laid down in the Holy Quran and Sunnah." An unambiguous commitment to theocracy—but with all the relevant terms left undefined. The urban industrialist, the Prime Minister elected with a "heavy mandate" (because of low voter turnout as disillusioned Pakistan Peoples' Party cadres stayed at home) appropriated a page out of Zia's handbook in an attempt to consolidate power absolutely in his hands, without comprehending that it was a Pandora's box which he proposed to open. The Bill was pending before the Senate (where the Prime Minister had not yet mustered the requisite votes) at the time of the military take-over.

On 12 October 1999—after an eleven-year post-Zia interregnum, which had seen four civilian governments elected, and three of them prematurely (and constitutionally) removed—General Pervez Musharraf removed the fourth in a bloodless coup. The General appears to be following the same path as his predecessor, General Zia-ul-Haq. Banning political activities has created a vacuum which the Islamists (who have consistently failed dismally in electoral contests) are anxious to fill. At the same time, many of the announced intentions of General Musharraf (who initially expressed his admiration for Kemal Atatürk)—de-weaponising society, modernising the curriculum in

*madrasas*, amending the blasphemy law, restoring the joint electorate and improving the human rights record—have floundered in the face of opposition from Islamists, and sectarian violence continues unabated.

In India, although the first decade of Independence saw the massive reform and codification of Hindu family law, nothing at all has been done in terms of reforming Muslim law and improving the position of Indian Muslim women. Pakistan's Ordinance of 1961—which, *inter alia*, requires that prior permission should be obtained for a polygamous marriage; renders all *talāk* pronouncements (even the triple pronouncement) revocable; and denies legal effectiveness to any *talāk* until a period of three months had passed following notification of the *talāk* to a local official, who is to use the intervening time to attempt reconciliation—had no echoes in the neighbour to the south. The Congress party, which ruled India without interruption for its first thirty years (including seventeen years under Jawaharlal Nehru and eleven years under his daughter Indira Gandhi), was committed to secularism and democracy but was also pleased to have the Muslim "vote bank" securely on its side. When Mrs. Gandhi was assassinated in 1984, the Congress mantle passed to her son Rajiv Gandhi. It was on his watch (1986) that the (misnamed) Muslim Women (Protection of Rights on Divorce) Act was rushed through Parliament, over objections of his own Congress parliamentarians and by virtue of a three-line whip. The Act of 1986 reversed the (1985) *Shah Bano* judgment and deprived destitute divorced Muslim women (simply on the basis of their religious identity) of the minimal succour that section 125 of the (secular) Criminal Procedure Code, 1974, afforded to all such women. A harsh blow was struck against secularism (and against women). The dynastic link was broken with Rajiv's assassination in 1991 and—ruderless, faction-ridden, and tainted with scandal—the Congress party lost much of its appeal. The gathering clouds of Hindu activism, demanding an end to a policy of appeasement of minorities and emphatic affirmation of the Hindu-ness of India, broke over the North India city of Ayodhya when in 1992 the 16th-century Babri mosque was destroyed by a mob of Hindu militants, setting off a wave of Hindu-Muslim violence across the country. The Bhartiya Janata Party (BJP), with its "Hinduvta" (Hindu-ness) philosophy and agenda, rose to prominence on the rubble of the Babri mosque and emerged as the largest parliamentary party in the national elections of 1996, 1998, and again in 1999. A centre-left coalition (the United Front) managed to bring down the BJP government after only thirteen days in office in 1996, but itself fell seventeen months later. The BJP is the dominant member of the coalition (National Democratic Alliance) which has governed India since 1998. Although the exigencies of coalition require some dilution of the Hinduvta program, India under the BJP (1998 to the present) has seen a disconcerting amount of rhetoric and violence directed against religious minorities, Muslim and Christian.

In both countries, pseudo-revisionist historiography has subjected the discipline of scholarship to the service of cultural myth-making and political indoctrination.

*Bibliography*: 1. Works that are essentially translations of texts and of importance to the South Asian courts as repositories of the classical law. *The Hedaya*, tr. C. Hamilton, London 1791, 4 vols.; N.B.E. Baillie, *Mooḥammadan*

law of inheritance according to Aboo Huneefa and his followers (abridgement of the *Siradjyya* and *Sharifyya*), 1832; idem, *Moohummadan law of sale*, (tr. of relevant chapters of the *Fatawā-i-Ālamgīrī*), 1850; idem, *A digest of Moohummadan law. Part first: The doctrines of the Hanefea code of jurisprudence* (tr. and abridgement of those portions of the *Fatawā-i-Ālamgīrī* likely to be relevant to litigation in India), 1865, <sup>2</sup>London 1875 (Reprints of the 2nd ed. are available, but must be used with caution. E.g., when the Premier Book House (Lahore) reprinted Baillie's Part I (the Hanafi *Fatawā-i-Ālamgīrī* and Part II (the Ithnā 'Asharī *Sharā'ī al-Islām*), pages from one were intermixed with the other, see e.g. pp. 73-80 of the 1974 reprint of Baillie I; these pages are from the Baillie II and represent Ithnā 'Asharī, not Hanafi, law); A. Rumsey, *Al-Sirajyyah on the Mahomedan law of inheritance* (repr. of Sir William Jones' 1792 translation of the *Siradjyya* and *Sharifyya*, with notes), Calcutta 1869, <sup>2</sup>1890; *The Hedaya*, tr. Charles Hamilton; ed. Standish Grady, 1870. (More convenient than the 1791 edition because comprising only one volume; reduction largely achieved by tighter, smaller print and the elimination of wide page margins, etc.; however, a few discussions have been omitted, including slavery (irrelevant in British India after slavery had been abolished in 1843) and much criminal law (irrelevant in British India after the Penal Code of 1860), but also including apostasy.) Reprints of this edition are readily available but must be used with caution; typographical errors in these reprints include not only numerous (and usually obvious) misspellings of individual words but also the occasional (and not always obvious) omission of a few lines, giving those lines remaining a totally different (and erroneous) meaning. Curiously, the same errors appear in the various reprints, regardless of date and publisher.; N.B.E. Baillie, *A digest of Moohummadan law. Part second: The doctrines of the Imameea Code of jurisprudence* (tr. essentially of major Ithnā 'Asharī text, the *Sharā'ī al-Islām*), 1874, <sup>2</sup>London 1887 (Reprints available, but see the entry under "Baillie 1865" for a word of caution.); Mahomed Yusoo Khan Bahadur, *Fatawa-i-Kazee Khan* (tr. of portions dealing with marriage and divorce), 1891-2, 3 vols. (Reprint, in which the first two volumes appear as volume I and volume 3 appears as volume 2, available.); E.C. Howard, *Minhaj et talibin. A manual of Muhammadan law according to the school of Shafii*, tr. into English from the French ed. by L.W.C. Van den Berg, London 1914; A.A.A. Fyzee, *Compendium of Fatimid law*, Simla 1969. (This text, edited by Fyzee in 2 vols., was published in Arabic in Cairo in 1951 and 1961.)

#### 7. Singapore, Malaysia and Brunei

These three states share a common history of British colonial control. Colonial legal policy was founded on the principle that English law was the law of general application to all subjects. However, where the "religions, manners and customs" of the subject populations were concerned, an exception might be made consonant with (English notions of) "equity, justice and good conscience". This principle was established in 1781 in India and carried through into the Malayan possessions. The results for Islam was the development of a hybrid "Anglo-Muhammadan" law which had and still has family law and trusts as its area of jurisdiction. It was not until after the Second World War, and approaching independence, that any real effort was made to establish a separate Islamic court system. Prior to this time, the *syariah* (*sharī'a* [q.v.]) or the English law version of *syariah* was a matter for the general courts. The colonial policy legacy remains important both for substantive law and for the structure of the contemporary *mahkama* in each of the three states.

##### i. Singapore

The first religious court (Syariah Court) was formally established in 1957 under the Muslims Ordinance of that year. At this time, Singapore was still a Crown Colony and the main motive for the court's foundation was to attempt control over the very high divorce rates among Singaporean Muslims. For this reason, its jurisdiction was restricted to marriage, divorce, nullity of marriage, judicial separation, division of property on divorce, and maintenance. While the basic causes of action in these matters remain as in the *syariah*, the particular form in which they are put in the statute is derived from English law. The *syariah* has been reformulated. Further provisions in the statute reinforce this position. The language of the court could be English, professional advocates might appear, the laws on evidence were English, powers to compel attendance were the same as those applicable in the secular Magistrates Court, precedent was wholly English and the qualifications and appointment of judges was established by the Governor. Appeals lay to an Appeals Board over which the Governor exercised a general power of revision. Most important, the Ordinance did not exclude the overriding jurisdiction of the secular High Court. In a series of cases from the late 1950s, the High Court did not hesitate to overturn or amend Syariah Court decisions. There were severe criticisms of Syariah

Court procedure, lack of record keeping and misunderstanding of the rules of evidence. While justified, such criticisms could also be seen as somewhat unfair given that the *kādīs* were not formally trained in English law.

The Ordinance was replaced in 1966 by the Administration of Muslim Law Act which repeats and elaborates the 1957 Ordinance. The same subjects on family law are included and the 1966 Act, with later amendments, remains the law for Muslims in Singapore today. However, Singapore also has the "Women's Charter" of 1961. This is an Act intended to set out the law for marriage, divorce, guardianship and maintenance. It is essentially a copy of English matrimonial laws of the late 1950s, and thus does not sit all that well with the version of *syariah* which the Syariah Court in Singapore is supposed to administer. By copying an English statute, the government of Singapore had also imported all other English legislation on family laws, for example, the laws on maintenance, guardianship, matrimonial property and so on. The Syariah Court has been placed in an impossible position. On the one hand, it is constrained by statute, and on the other it is obliged to apply "Islamic" law. It is the definition of "Islamic" law which is the difficulty. It now means four things. (a) The Anglo-Muhammadan laws derived from British Indian precedent and elaborated in the colonial period. Textbooks of these laws remain authorities for the secular courts. (b) The classical textbooks of the *Shāfi'ī* school which are the primary reference for the Singaporean *kādī*. (c) The regulations made under the 1966 Act which are binding on the *kādī*. (d) The decisions of the *kādī* reported and followed by later *kādīs*—that is, a precedent. It is this last (d) which is likely to determine the future of the Syariah Court. While the *kādīs* derive their decisions from the classical texts (see (a) above), they also follow the earlier *kādīs* in an organised way through law reporting and analysis of the earlier judgements. In short, there is now a Muslim internal reformulation of *syariah* within the Syariah Court. While the substance of a rule may be *fikh*, the legal reasoning as to what it means and its application is English. This should occasion little surprise. Most if not all members of the Appeal Board have an English or English-derived legal education. For them, recourse to a precedent is perfectly normal. The fact that the structure and precedent of the court is English-derived merely reinforces this position. In extreme cases, the *syariah* presence is confined to quotations from the *Qur'ān*, not infrequently irrelevant. The result is an eclecticism of source of law in both the court and at the Appeal Board level. For example, a survey of recent Appeal Board decisions (1988-95) has shown recourse to (i) English principles of statutory interpretation, (ii) Anglo-Muhammadan rules from British India, (iii) citation from the *Qur'ān*, (iv) administrative rules on registration of marriage and divorce, and (v) earlier Syariah Court precedent. There is nothing from *fikh* as such; the whole complex is English. Even the *sūras* cited are not decisive but seem to be put in so as to provide "Islamic" colouring to a method of reasoning which is wholly outside the canons of Muslim jurisprudence. This is not to say that *fikh* does not play a part, at least at the lower level. It does, but increasingly now in a secularised form. At the Appeal Board level, however, the secularised form is dominant.

This state of affairs should come as no surprise. The intention of the Singaporean legislation was and is to control the family law of Muslims. This means

that it has to approximate the secular family laws as closely as possible, consonant with the religion of Islam. The colonial legislation showed how this could be done. The Syariah Court, therefore, is limited in its function and jurisdiction and is ultimately answerable to the Supreme Court of Singapore which will apply an Anglo-Syariah law.

## ii. Malaysia

This state [see MALAYSIA] is a Federation and under the Constitution (1957 and amendments), Islam is a state matter, not a federal matter. The result is that each of the states in the Federation has its own "Islamic" (or "Muslim") law legislation. However, the Malaysian Constitution also says (Art. 3) that "Islam is the religion of the Federation". Unlike Singapore, therefore, Islam has a constitutional presence at both the federal and state level in Malaysia and this has important implications for both the structure and jurisdiction of the Syariah Courts.

(a) A note of caution is necessary about structure. While all the states of the Federation have a Syariah Court with the same general structure, this does not mean that the courts have precisely the same jurisdiction. Details vary from state to state. To be fully informed, one must therefore reach each state enactment. The following description is taken from the Federal Territory Administration of Islamic Law Act, 1993, something of an exemplar Act for Malaysian Islam. Part IV (§§ 40-57) establishes a three-tier system, consisting of Syariah Subordinate Court, High Court and Appeal Court. The Appeal Court is headed by the Chief Syariah Judge who must be a citizen and who has had ten years Syariah Court experience, or "is a person learned in Islamic law". This last qualification is undefined. A quorum for the court is the Chief Judge plus two judges drawn from a panel of seven judges. Decision is by a majority and the Appeal Court is the final court in matters of family law, *wakf* [q.v.], offences against religion, inheritance and *bayt al-māl*. The Syariah Subordinate Court has a limited jurisdiction in the same matters. Appeals go to the Syariah High Court and, finally, to the Appeal Court, which also exercises a general supervisory jurisdiction over the lower courts. The Act also provides for the appointment of *syariah* prosecutors. Persons in proceedings in the Syariah courts may be represented by a *Pergumal Syarie*, an advocate who has a sufficient degree of Islamic knowledge and who is admitted to practice in the Syariah courts. The procedure in all the courts is based on the secular model. It is government policy to standardise the Syariah court system nationwide on the Federal Territory model, but there is still some way to go at the moment.

(b) Islamic jurisdiction. The jurisdiction of the state Syariah Courts is as set out in their respective enactments. From the 1950s it has become increasingly elaborated to the extent that there is now a comprehensive jurisdiction which coexists with the secular court system (High Courts and Court of Appeal [formerly Federal Court]). Concurrent jurisdictions always raise the issue of which is superior, or more exactly, which forum decides the issue. The question only really arose in the 1950s and was not definitively decided in Malaysia until 1988. Before that date, it was the secular courts which had overriding jurisdiction because these courts derived from the Federal Constitution and not, as did the Syariah courts, from state legislation. This was always a matter of resentment in Syariah court circles, and in 1988 a new article, 121 (1A), was introduced into the Federal Constitution; which reads: "The courts referred to [the

secular courts] shall have no jurisdiction in respect of any matters within the jurisdiction of the Syariah courts."

However, this does not really solve the issue; it merely puts it back one stage. It is still the secular courts, here the Court of Appeal of Malaysia, which actually decides whether a course of action is "within the jurisdiction of the Syariah Courts". There are a number of reported cases (1990s; see *Bibl.*) which demonstrate this; the Syariah courts have an inferior jurisdiction and have no power to determine the limits of that jurisdiction. It is the secular courts that interpret the Constitution just as they are the heirs to Anglo-Muhammadan jurisprudence.

Given the structure of the Syariah courts and the issue of jurisdiction, it is not surprising that the judgements in the courts show an increasing degree of secularisation of *fikh*. This has taken place in the area of family law, and the decisions are a case study of the fate of the *syariah* in the contemporary nation state. Fundamental to this is the fate of the classical text books themselves and here one can discern a consistent pattern from the late 1980s. Passages are cited as *hukum syariah* and then interpreted with reference to Malaysian legislation and, in some cases, Malay custom (*adat*) as to land. The Arabic texts (standard books and *hadīth* collections) get quite new meanings which derive from *adat*, from legislation, and from earlier Syariah court precedents. These new meanings are now what *fikh* means; thus the Arabic sources are beginning to be interpreted and distinguished on the basis of English-derived principles.

A second feature of the contemporary Syariah courts is the recourse to "modernist" legal reasoning with occasional but important recourse to Middle East authorities. Thus, from the late 1970s we find references to Syed Sabiq (his *Fikh al-Sunna*) and Ibn Qudāma (the latter's discussion of Abū Dāwūd).

These two trends seem now to be almost irreversible. The only surprising feature is the depth of penetration of secular (English) legal reasoning into the substantive *fikh* rules. There seem to be three reasons for this.

First, while it is true that the *syariah* in its "pure" form (*fikh* and *hadīth*) is now commonly cited, it is also true that the form of judicial records is in judicial precedent. Given that this is the form of the law, it is inevitable that the technical rules of English law will apply, and the result will be an Anglo-Syariah. Such has, of course, occurred before in British India and pre-independence British Malaya. The only difference in the present case is the greater quality of *fikh* in the *kādīs* jurisdiction. Even here, however, a lot of repetition appears. In short, the precedent law is decisive.

Second, the members of the Appeal Board are, almost without exception, trained in English and English-Malay universities and practice at the secular Bar or the judiciary. This, apart from being Muslim, is their primary qualification. When this is combined with the precedent form, it is not surprising that an increasingly secular form of judicial reasoning is apparent. This is not to say that judgements are "un-Islamic". Such would not be true in the substance (result) of a decision. It is certainly arguable, however, in terms of legal reasoning.

Third, the prevailing political climate for Islam in Malaysia is dictated by the Federal Government. It is one which encourages progress, "modernisation", "development" and the like. Whatever the rhetoric, Islam is controlled in all its aspects so far as possi-

ble. The religion must accommodate itself to the state and not the other way around. The same principle applies to *kādī* jurisdiction, and an increasing secularisation of Islam through administration and through the Syariah courts now seems inevitable.

### iii. Brunei

The state of Brunei [*q.v.* in Suppl.] (independent in 1984) describes itself as a "Malay-Islamic-Sultanate" (*Melayu-Islam-Beraja*). The Sultan is Head of State and Head of Government; he is also the Head of the Religion of Islam which is thus entrenched in the Constitution. Prior to 1955, the laws as to Syariah courts were minimal, though a basic Kadi Court did exist. In 1955 Brunei adopted the Religious Council and Kadis Court Act which was based on the then Kelantan (Malaysia) Enactment. The Brunei Act has been amended and the current version is now cap. 77 of the Revised Laws (1984) with some later amendments.

The Act establishes a Court of Chief Kadi in the capital and subordinate Kadi Courts in outlying districts. The extent of jurisdiction is determined by the Sultan but is in fact specified in detail in the Act. These include family law, *wakf* and, in criminal matters, offences against religion. The latter include gambling, consumption of alcohol, sex outside marriage, preaching Islam without permission and the unlawful construction of mosques. Appeals are dealt with in the Chief Kadi's Court and above that by the Judicial Committee, which consists of the State Mufti and two other members appointed by the Sultan. This Committee also has authority to write an opinion on any question of Muslim law for a non-Islamic court if requested. Ultimate authority, however, still lies with the Sultan who, as Head of the Religious Council (one of the Councils of State), makes the final decision.

The language of the Courts is Malay and records are kept in Malay. Advocates may not appear if an appearance is "contrary to the provisions of Muslim law" but may be permitted at the discretion of the Court. Procedure is based on secular court procedure. So far as evidence is concerned, Muslim law is followed only with respect to witnesses. All other matters of evidence are governed by English law as adopted in Brunei. The Courts may summon non-Muslims to give evidence. Matters of arrest and search in relation to criminal activity, especially breach of the peace, are governed by the secular criminal proceedings in the Kadis Court. The execution of judgements is likewise governed by the Subordinate Courts Act. Generally, in civil matters the practice and procedure of the Magistrates Courts is followed in the Kadis Courts.

In essence, the Brunei Act repeats the Malaysian and Singaporean provisions. This is true for judicial process. However, it is important to realise that the constitutional position of Islam in Brunei and the position of the Sultan provides a unique context for the operation of the Kadi Courts. Unfortunately data on their actual working are not as yet available.

*Bibliography:* 1. Basic sources. These are the respective editions of the laws of each state. For Malaysia, there are variations from state to state. A useful overview, which notes the variations, is D. Horowitz, *The Quran and the Common Law*, in *American Journal of Comparative Law*, xlii (1994), 233-93. The other basic sources for Singapore and Malaysia are the *Malayan Law Journal* and *Current Law Journal*, both in English with Malay summaries and the *Jermal Hukum* in Malay. There are no reports for Brunei.

2. General accounts. M.B. Hooker, *Islamic law in South-East Asia*, Singapore 1974, chs. 2 and 4; idem, *Qadī jurisdiction in contemporary Malaysia and Singapore*, in M.A. Wu (ed.), *Public law in contemporary Malaysia*, Kuala Lumpur 1999, 57-75. The doyen of Islamic Studies in Malaysia was the late Professor Ahmad Ibrahim. His *Islamic law in Malaya*, Kuala Lumpur 1965, though now out of date, was an important work. In the 1970-1990s, he published important papers in *Journal of Malaysian Comparative Law* and in the *Annual Survey of Malaysian Law*. (M.B. HOOKER)

**MAI**, the official title of the Sayfuwa rulers of Kanem [q.v.], later Bornū [q.v.], an African kingdom situated in the area of Lake Chad. Arab geographers (al-Ya'kūbī, al-Muhallabī) depicted the ruler of pre-Islamic Kanem as a divine king. Although the rise to power of an Islamic line of rulers in the second half of the 11th century resulted in a number of radical changes in the political structure, some basic elements of divine kingship continued to shape the royal institution during the period of the Sayfuwa. Among the features of divine kingship which resisted the secularising tendencies of Islam were the seclusion of the king, shown by his concealment in a pavilion behind a silk curtain; the prevailing influence of women of the royal family in court life (queen-mother, principal queen and princesses); and the notion of a legendary protectress of the king during his youth (Aīsa Kili Ngirmaramma). Traditions associate the latter with the upbringing of the greatest rulers of Kanem-Bornū: Dūnama Dibalemi (1203-48), 'Alī Gadjī (1455-87) and Idrīs Amsāmi (1564-96). The court ceremonies and institutions derived from divine kingship were abolished by *shaykh* al-Amīn al-Kānīmī, who founded a new dynasty in Bornū in the first half of the 19th century. By adopting the Arabo-Islamic *shaykh* as a royal title instead of the earlier *mai*, he gave expression to his more strictly Islamic preferences.

*Bibliography*: D. Lange, *Le dīwān des sultans du [Kānem-] Bornū*, Wiesbaden 1977; idem, *Das Amt der Königinmutter im Tschadseegebiet*, in *Paideuma*, xxxvi (1990), 139-56. (D. LANGE)

**MAI TATSINE** (d. 1980), a nickname given to Muḥammadu Marwa, a *mallam*, or Muslim religious leader in Kano, Nigeria, whose followers were involved in violent clashes from 18 to 28 December 1980. Over 4,000 people died in these disturbances.

He came from the region of Marwa in northern Cameroon, from a group classified as Kirdi. These are hill dwellers and followers of traditional religions, while the Muslim Fulani dominate the plains. Famine drove the young Mai Tatsine out of the hills, along with many fellow Kirdi, in the 1930s. In the city of Marwa he took up Islam.

He came to Kano in 1945 and began a career as a *mallam*. His teaching was evidently inflammatory for in 1962 he was jailed by Kano's chief Muslim judge for the offence of *shatima*, or verbal abuse. Following his sentence, Emir Sanusi deported him to Cameroon.

Such traditional forms of control were weakened following the abolition of the emirs' judicial authority in 1966. Mai Tatsine was able to return to Kano and establish a popular following by the late 1970s. The disturbances began when the police were overwhelmed by sect members in a confrontation near the emir's palace on December 18. Fighting continued for ten days until the Nigerian army finally dislodged the 'Yan Tatsine from their stronghold in a neighbourhood just outside the old walled city. Mai Tatsine was killed at this time. The sect survived and

was involved in clashes in Maiduguri and Kaduna in following years.

The sect bears some resemblance to the Ḥamālīyya [q.v.], an offshoot of the Tīdjāniyya [q.v.] that began in Mauritania in the 1920s. Both movements emphasised living as a separate community which regarded other Muslims as impure. Many of its followers were recent immigrants to Kano, drawn by the city's oil boom driven expansion, but it also had followers in rural areas.

A search for perspective*, in *MW*, lxxv (1985), 69-84; P. Lubeck, *Islam and urban labour in Northern Nigeria. The making of a Muslim working class*, Cambridge 1987. (A. CHRISTELOW)

**MAKĀSHID AL-SHARĪʿA** (A.), literally, "the aims or purposes of the law".

The term is used in works of legal theory (*uṣūl al-fikh* [q.v.]) and refers to the idea that God's law, the *Sharīʿa* [q.v.], is a system which encompasses aims or purposes. If the system is correctly implemented, these aims will be achieved. From such a perspective, the *Sharīʿa* is not merely a collection of inscrutable rulings. One who claims that the *Sharīʿa* has *makāshid* is, therefore, making a statement concerning the rational nature of the *Sharīʿa*: that God intends to bring about a certain state of affairs by instituting particular laws. Most Sunnī legal theorists subscribe to the view that the *Sharīʿa* has aims, and principal amongst these is the promotion of the "benefit for the believers" (*maṣāliḥ al-'ibād*). As al-Shāṭibī (d. 790/1388), probably the most sophisticated of the classical exponents of the doctrine of *makāshid al-sharīʿa*, states, "the laws were instituted only for the benefit of the believers in this world and the next" (*Muwāfaqāt*, ii, 2). The laws themselves are only the means of achieving God's aims and intentions. They hold no intrinsic value, and if, on occasions, the strict application of the law compromises the aims of the *Sharīʿa*, then for some supporters of the doctrine of *makāshid*, the law can be set aside or modified so that God's intentions might be fulfilled. This possibility has made an appeal to *makāshid al-sharīʿa* particularly popular amongst modern legal reformers in the Muslim world, as it enables them to alter some long-held elements of the law which they consider to be impracticable in a contemporary setting.

The doctrine of *makāshid al-sharīʿa* has its roots in early Muslim attempts to rationalise both theology and law. In terms of theology, the ideas of the Mu'tazila [q.v.] undoubtedly influenced the emergence of the *makāshid* doctrine. The Mu'tazilī doctrine that God's decrees are subject to, rather than the origin of, the ideas of good and evil (*al-taḥṣīn wa 'l-takḥīr* [q.v.]) ultimately resulted in an assertion that God is best compelled to act in the interests (perhaps the best interests) of humankind. His law must be of benefit to his creation, for if it was not, his qualities of justice and goodness would be compromised.

In legal works, a bundle of related doctrines can be seen as precursors to al-Shāṭibī's elaboration. The development of *ḥiyās* [q.v.] as a legal tool provided the impetus for the doctrine of *makāshid al-sharīʿa*; for, if rulings known to be true in one situation can be transferred to novel situations, then the law must, in some sense, be coherent. If it is coherent, then it must express the will of the Lawgiver. It is this underlying assumption (that the intentions of the Lawgiver could be known) that was so vehemently rejected by the Zāhirī Ibn Ḥazm (d. 456/1064 [q.v.]).

The Shāfi'ī jurist Abū Hamīd al-Ghazālī (d. 505/1111 [q.v.]), on the other hand, asserted that one way in which the *ratio* ('illa [q.v.]) of a ruling might be known is by comparing the candidate for the role of 'illa with the general aim (*maḳṣūd*) of the law to "promote benefit and reduce harm". This means of identifying or verifying the 'illa (known as *munāsaba*) rested upon the idea that the aims of the law were discernible (through reason or revelation).

The Ḥanbalī Najm al-Dīn al-Ṭufī (716/1316 [q.v.]) went further than this, arguing that all rules derived from analogy (bar not open to rational scrutiny such as the ritual *'ibādāt*) are susceptible to change and development if the aims of the Lawgiver are not fulfilled. Discussion over the legitimacy of *istihsān* and *istiṣlāh* amongst Ḥanafīs and Mālikīs also rested on an acceptance that there were overall "aims" in the *Sharī'a*. *Istihsān* [q.v.], originally used as an accusation of arbitrary preference, was rationalised by Ḥanafīs such as al-Sarakhsī (d. 483/1090 [q.v.]) to refer to the rejection of the strict application of *ḳiyās* in favour of a ruling which better promotes the benefits of the believers (*maṣāliḥ al-'ibād*).

*Istiṣlāh* [q.v.] was discussed extensively by Mālikīs, in part because Mālik himself is reported to have advocated it; it refers to a jurist's ruling which has no precedent in the revelatory texts, and is based on the calculation of some benefit (*maṣlaḥa mursala*) [see MAṢLAḤA] to the individual or communities concerned. Mālikīs, such as al-Ḳarāfi (d. 684/1285 [see SHIHĀB AL-DĪN AL-ḲARĀFĪ]), recognised the theologically problematic nature of basing a ruling not on textual support but on a benefit perceived by a jurist. It is perhaps unsurprising then, given the Mālikī history of discussions of *istiṣlāh*, that the greatest exponent of *maḳāsid al-sharī'a* should come from the Mālikī school, sc. Abū Ishāq al-Shāṭibī [q.v.], the 8th/14th-century Granadan jurist. Al-Shāṭibī, in his *Muwāfaḳāt*, takes the analysis of "benefits" accruing from the institution of the *Sharī'a* used by previous jurists in relation to *ḳiyās*, *istihsān* and *istiṣlāh*, and declares, uncompromisingly, that the whole *Sharī'a* exists to promote the welfare of the believers. The benefits which are promoted and preserved when the *Sharī'a* is instituted are of three basic types. There are those elements which are necessary (*darūra* [q.v.]) for human existence to prosper (there are, al-Shāṭibī argues, five of these: the preservation of life, property, progeny, mind and religion); there are those which are needed (*ḥāḍja*) in order to make obedience to the *Sharī'a* less demanding; and there are those which, whilst not necessary or needed, improve (*tahsīniyya*) the benefits already enjoyed by the believers. Each ruling in the *Sharī'a* can be said to benefit the believers in one of these three areas. For example, it is necessary (*darūra*) to human existence to preserve life, and God has instituted (in the *Sharī'a*) rules concerning punishment and compensation for murder. In order to make the *Sharī'a* easier to follow (*ḥāḍja*), the law permits sick people to miss prayer. Finally, the benefits to the believers are improved (*tahsīniyya*) by supererogatory manumission, though community welfare would be maintained if this act was not performed.

Al-Shāṭibī's schema, which was innovative within the deeply conservative tradition of Sunnī *uṣūl al-fiqh*, undoubtedly influenced subsequent writings, but it is in the modern period that these ideas have been developed and enhanced, and a genre of *maḳāsid* writing can be said to have emerged. In particular, North African (Mālikī) jurists, such as Muḥammad Ṭāhir b. 'Ashūr (d. 1973) and 'Allāl al-Fāsī (d. 1973), com-

posed works devoted to *maḳāsid al-sharī'a* which draw heavily on al-Ṭufī and al-Shāṭibī. Ibn 'Ashūr, for example, adds equality and freedom to al-Shāṭibī's list of the five elements necessary for human existence to prosper. The modern emergence of a theology reminiscent of Mu'tazilī doctrine has enabled jurists to consider the *Sharī'a* as more adaptable to change and distinguish between the unchanging aims of the law and mutable particular regulations.

**MAḲBARA.** 4. In Iran.

Islamic cemeteries in Iran, Transoxania and Afghanistan were generally located, in accordance with the practices of Zoroastrian, Christian or Jewish communities, *extra muros* of existing settlements and along main roads exiting from the city gates (al-Muḳaddasī, 438; al-Iṣfahānī, *Aghānī*<sup>3</sup>, xix, 114 (for Iṣfahān, see Ibn al-Athīr, ed. Beirut, xi, 28; Harāt: T. Allen, *A catalogue of the toponyms and monuments of Timurid Herat*, Cambridge 1981, 165; Ravy: Ḥ. Karīmān, *Rāyy-i bāstān*, Tehran 1345 A.S.H., i, 366-479; C. Adle, *Constructions funéraires à Rey circa X<sup>e</sup>-XII<sup>e</sup> siècle, in Akten des 8. Internationalen Kongresses für iranische Kunst und Archäologie*, Berlin 1979, 511-12; Samarḳand: N.B. Nemceva, *Etappen der Herausbildung der Ensembles Shah-i Sūnda in Samarḳand*, in *ZA*, N.S. xii [1978], 51-68). Al-Muḳaddasī, however, remarks on the noteworthy exception of Tustar where the cemetery was established on higher ground within the city because of frequent river floods (*ibid.*, 409). For a mediaeval visitor, the sight of cemeteries evoked feelings of sadness and a sense of disorientation (Abū Shāma, *Tarāḍim riḍāl al-ḳarn al-sādis wa-'l-sābi'*, ed. M.Z. al-Kawthārī, Beirut 1974, 16). Nevertheless, tombs were often located as close as possible to the roads in the hope that compassionate passers-by would stop to offer prayers (Sibt Ibn al-Djawzī, *Mir'at al-zamān*, Ḥaydarābād 1951, viii, 442). Not wanting to be constantly reminded of the inevitability of death, the Būyid 'Aduḍ al-Dawla issued orders to enclose cemeteries with high walls (Djuzḍjānī, *Ṭabakāt-i Nāsirī*, ed. 'Abd al-Ḥayy Ḥabībī, Kābul 1342/1963, 223). Visits to grave sites in Hamadhān or Shirāz included not only recitations of the *Kur'ān* but also offerings of food and drink (*zalla wa nawāla*) for the dead (Rāwandī, *Rāḥat al-sudūr*, ed. M. Iqbal, London 1921, 300; Ibn Baṭṭūṭa, *Rihla*, Beirut 1968, 209-10).

When Muslims lived with the indigenous population of Iran immediately after the conquest, they used existing pre-Islamic cemeteries and seem soon to have adopted local funerary customs. Muslim burials on

Tepe no. 2 at Bayram 'Alī near Marw make use of earlier structures, so-called *navāvīs* (M.E. Masson, *Materiali po arkeologii Merva*, in *Trudi YuTAKE*, xiv [1969], 7-12; O.V. Obel'čenko, *Nekropol' drevnego Merva*, in *ibid.*, 95-9). Burials in ossuaries and jars are mixed with regular Muslim graves in a 7th-10th century cemetery outside Tarāz near Dzhambul (Kazakhstan) (L.I. Rempel', *Nekropol' drevnego Taraza*, in *Kratkie Soobščeniya Instituta Material'noy Kul'tury*, lxxix [1957], 102). The best-known site for these hybrid practices, however, is the "Monumental Cemetery" (Site O) in Sirāf [q.v.], situated on a spur of land overlooking the city's west end, that also had its own funerary mosque (D. Whitehouse, *Excavations in Siraf*, in *Iran*, xii [1974], 23-30). Dating back to the pre-Islamic period, the 100 × 150 m cemetery was dominated by a group of about forty monumental tombs (5 × 5 m to 9.5 × 10 m), built between the 9th and the 10th centuries, with graves grouped around them. Most appear to have been used for the collective disposal of the dead, who were buried inside without coffins and without separating the corpses according to gender. Most bodies were aligned in an orthodox manner north-south, with their heads turned towards the west, i.e. Mecca. The deceased, who appear to have been members of the wealthier society of Sirāf, were buried with rings, beads, bracelets and ceramic jugs (*ibid.*, 25). Similar cemeteries are known from literary sources to have existed in Paykand, modern Karakul in Turkmenistan (anon., *Hudūd al-'ālam*, tr. Minorsky<sup>2</sup>, 113) and Yazd (Dja'farī, *Ta'riḫ-i Yazd*, ed. I. Afshār, Tehran 1337 A.S.H./1958, 130).

Cemeteries *intra muros* were often established in ruins or in buildings that were partially torn down for that purpose (Whitehouse, *ibid.*, 9; A. McNicoll, *Site G. Islamic Cemetery*, in McNicoll and W. Ball (eds.), *Excavations at Kandahar 1974 and 1975*, Oxford 1996, 214, 234-6), while growing settlements were laid out around pre-existing cemeteries, respecting and carefully enclosing the tombs (Whitehouse, *ibid.*, 12).

Local pre-Islamic cemeteries continued in use, but cemeteries also opened up in greater Iran around tombs ascribed to legendary *shuhadā'* of the Muslim conquest of Iran (Yāḳūt, iv, 418; E. Cohn-Wiener, *A Turanic monument of the twelfth century A.D.*, in *Ars Islamica*, vi [1939], 88-91); to saints (A.S. Melikian-Chirvani, *Remarques préliminaires sur une mausolée ghaznévide*, in *Arts Asiatiques*, xvii, 59-60) or to former rulers (Cohn-Wiener, *Die Ruinen der Seldschukenstadt von Merw und das Mausoleum Sultan Sandschars*, in *Festschrift F. Sarre*, Leipzig 1925, 116).

Only scarce documentation exists on remnants of some nomadic cemeteries in the Atrak valley in north-eastern Iran and in southwestern Iran dating from the 17th to the 19th centuries. The Turcoman Göklen tribe possessed a common burial ground 60 km/40 miles north of Džurdžān, scattered over hills, slopes, and plateaux of the Gökcheh mountain, to which the deceased were brought often from far away, after a preliminary burial for some time in the area around seasonal camps (D. Stronach, *Standing stones in the Atrak region. The Ḥālat Nabī cemetery*, in *Iran*, xix [1981], 147-51). In contrast to this, cemeteries of the Lur nomads in Luristan were established along the annual tribal migratory routes and may coincide with old camp sites. Tombs in these cemeteries were marked by pictorial stelae with gender-specific images and inscriptions (I.D. Mortensen, *Women after death. Aspects of a study on Iranian nomadic cemeteries*, in B. Utas [ed.], *Women in Islamic societies*, London 1983, 26-47; idem, *Nomadic cemeteries and tombstones from Luristan, Iran*, in J.-L. Bacqué-

Grammont and A. Tibet [eds.], *Cimetières et traditions funéraires dans le monde islamique*, Ankara 1996, ii, 175-83).

In contemporary Iran, modern and efficiently-administered cemeteries have been established, often at some distance from major cities and pilgrimage centres, as more orderly alternatives to older, more scattered burial places. Between the 1970s and late 1980s, the city of Mashhad inaugurated the cemeteries of Bihisht-i Riḍā and Džawād-i A'imma 20 miles southwest of the city in the vicinity of an old cemetery named after the tomb of the 9th century Imāmzāda *Kh*"ādja Abu 'l-Salt. Simultaneously, modern extensions to the Tīmūrid shrine of Imām 'Alī al-Riḍā now include underground burial vaults, named al-Ḳuds and Mashhad-i Džumhūrī, for civilians and soldiers killed during the Revolution and the Iran-'Irāk War.

Used as a burial ground since the 1950s and opened officially in 1970, the sprawling Bihisht-i Zahra' cemetery (Paradise of [Fā'ima] the Radiant) south of Tehran along the highway to Kum is today the city's main cemetery. During the late 1970s and early 1980s, Bihisht-i Zahra' gained the reputation as a national symbol of the Revolution, as many of those killed during demonstrations against the Shāh or in post-Revolutionary factional fighting were buried there as martyrs. During the eight years of war with 'Irāk, a vast, separate section was added for soldiers killed in action, whose tombs are typically surmounted by cases that exhibit a portrait photo of the deceased and Islamic and Revolutionary paraphernalia. The impressive visual expression of Bihisht-i Zahra' as a cemetery dedicated to the commemoration of martyrs, a fountain that spouts red water, has been copied throughout Iran (Hamid Algar, art. *Behes't-e Zahra'*, in *Elr*, iv, 108-9; D. Hiro, *Iran under the Ayatollas*, London 1985, 77).

*Bibliography:* Given in the article, but on the graveyards where British travellers, traders, missionaries, etc., were buried, see Sir Denis Wright, *Burials and memorials of the British in Persia, in Iran*, xxxvi (1998), 165-73, and *further notes and photographs*, in *ibid.*, xxx (1999), 173-4, xxxix (2001), 293-8. **MAKTŪBĀT** (A.), literally "letters", a term used especially in Muslim India for the epistles of Ṣūfī leaders.

Apart from epistolary collections of political and literary significance (like *I'djāz-i Khusrāwī*, *Mukātabāt-i Rashīdī*, *Riḳāḍ al-Inshā'*, *Inshā'-i Abu 'l-Fadl*), there are collections of letters written by mystic teachers to their disciples. This epistolary literature, which throws valuable light on the mystic ideology and institutions of the period, may broadly be classified under four categories: (i) sundry correspondence limited mostly to one or two letters dealing with some religious problem, e.g. letters attributed to Shaykh 'Abd al-Ḳādir Gilānī, *Kh*"ādja Kuṭb al-Dīn Bakhtiyār Kākī, Shaykh Farīd Gandj-i Shakar, Shaykh Niẓām al-Dīn Awliyā' and others; (ii) collections of letters in the nature of mystic lucubrations without any indication of the addressees, e.g. letters of 'Ayn al-Ḳudāt Hamadānī, Ḳāḍī Ḥamīd al-Dīn Nāgawrī and Sayyid 'Alī Hamadānī; (iii) collections of letters bearing on mystical or religious themes addressed to disciples to resolve their difficulties, e.g. the letters of the Imām al-Ḡhazālī, Sanā'ī, Rifā'ī, Yahyā Manērī, Bū 'Alī Ḳalandar, Ashraf Džahāngīr Simnānī, Gīsū Darāz, Nūr Kuṭb-i 'Ālam, Dja'far Makki, Shaykh 'Abd al-Ḳuddūs, Shaykh 'Abd al-Ḥaḳḳ Muhaddith, Shāh Muḥibb Allāh of Allāhābād

and others; and (iv) collections of letters having the consistent exposition of a specific ideological position and controlling the organisational direction and ideological drift of the disciples. The Naqshbandī saints, particularly from the time of Shaykh Ahmad Sirhindī, used letters as a regular channel for the communication of their trends of thought. His successors, Kh<sup>w</sup>ādja Muḥammad Ma'sūm, Muḥammad Naqshband-i Thānī, Kh<sup>w</sup>ādja Sayf al-Dīn, Mīrzā Mazhar Džān-i Džānān, Shaykh Muḥammad Sa'īd, Shāh Ghulām 'Alī, Shāh Ahmad Sa'īd, 'Abd al-Ra'ūf and others, wrote large number of letters which are a veritable source for the study of Naqshbandī thought and its reaction to different socio-religious situations. The thought of the *silsila* was so consolidated on their basis that, during the last three hundred years, the Naqshbandīs have drawn spiritual guidance from these letters.

Taken as a whole, the Suhrawardī, the Kādirī and the Shaṭṭarī saints do not seem to have adopted correspondence as a regular means of communicating their ideology. Except for the *Maktūbāt-i Kādī Shaṭṭar* (ms. in Manēr Khānakāh) no saint of these orders seems to have left any significant collection of letters. The Naqshbandīs, the Firdawsīs and the Čishtīs made use of this medium effectively. In Naqshbandī discipline, the *maktūbāt* of Shaykh Ahmad Sirhindī [q.v.] and his descendants assumed the same significance which *maǧfūzāt* [q.v. in Suppl.] like *Fawā'id al-fitād* and *Khayr al-maǧfāts* assumed in the Čishtī *silsila*. Shaykh Nizām al-Dīn Awliyā' used to write letters on a large scale (Shaykh Mubārak Gopamawī had collected his hundred letters—*Siyar al-awliyā'*, Dihlī 1302, 310—and Amīr Khusraw also received a large number of letters which he had buried with him [ibid., 302-3], but these were of personal nature and were not collected in any compendium. Among the Čishtī saints, the most effective collections of *maktūbāt* are those of Nūr Kuṭb-i 'Ālam, 'Abd al-Kuddūs Gangōhī and Shāh Kalīm Allāh of Dihlī. The last-mentioned saint controlled and guided the Čishtī organisation in the Deccan through correspondence, at a time when Awrangzīb [q.v.] was showing his definite preference for the Naqshbandī order. Perhaps Shāh Kalīm Allāh was influenced by the practice of his contemporary Naqshbandī saints in giving importance to correspondence in organising the affairs of the *silsila* and in controlling its ideological slant.

Among the Firdawsīs, the letters of Shaykh Sharaf al-Dīn Yahyā succeeded in boosting the mystics' morale after their setback at the hands of Muḥammad b. Tughluk [q.v.].

The available *maktūb* literature throws light on the thought and activities, as also the problems and preferences, of the saints of different periods and different orders. Though some of the letters of the Imām al-Ghazālī are addressed to *wazirs* and government officials, they help us in assessing the position of religion in the administration of those days. His communications to the *kādīs*, the jurists and theologians throw light on the nature of the religious problems and tensions of the period and have a sermonising tone. The letters of Sanā'ī, only seventeen in number, help us in understanding the mental climate of the late Ghaznawid period as much as his mystical poetry. The letters of Nūr Kuṭb-i 'Ālam throw light on the socio-political crisis in Bengal in the 8th/14th century. The letters of Shaykh Sharaf al-Dīn Yahyā reveal the anxiety of the Firdawsī saint to salvage mystic institutions from ruin. The *Maktūbāt* of Shaykh 'Abd al-Kuddūs of Gangōhī [see GANGŌHĪ, in Suppl.] bring into focus the atmosphere immediately preceding the

rise of the Bhakti movement. The letters of Shaykh Ahmad Sirhindī provide material for the study of reactions against Akbar's religious experiments. So also the letters of 'Abd al-Hakk Muḥaddith reveal the anxiety of Muslim minds at the anarchy prevailing in Muslim religious life. The letters of Shāh Muhibb Allāh, particularly those addressed to Dārā Shukōh [q.v.], show his anxiety to retrieve pantheistic thought from condemnation and conflict. When read with the letters of Kh<sup>w</sup>ādja Ma'sūm and other Naqshbandī saints, they reveal the nature of conflict in mystical thought at this time. Kh<sup>w</sup>ādja Ma'sūm's letters highlight the atmosphere of religious revival that took place during the time of Awrangzīb. The letters of Shāh Walī Allāh [q.v.] illuminate his efforts to bridge the gulf between the devotees of *waḥdat al-wuǧūd* and its critics on one side and his political activities, involving correspondence with Ahmad Shāh Abdālī, Muḥammad Shāh and Nadjīb al-Dawla [q.v.], on the other. The letters of Mīrzā Mazhar show significant religious trends of the period which led to his declaration of *Vedas* as a revealed book and his according the status of *Ahl-i Kūtāb* to the Hindus.

For a study of the actual application of mystic ideology to concrete socio-religious situations, the importance of *Maktūbāt* literature cannot be over-emphasised.

(K.A. NIZAMI)

**MALA'** (A.), lit. a "group (of people)", or a "host", or a "crowd", like *djāmā'a*, *kaum* [q.v.], *nafar*, *raḥt*, and more generally, "the public", and hence, *fi mala'*, *fi 'l-mala'* "publicly" (e.g. al-Bukhārī, *Ṣaḥīḥ*, 9 vols., Cairo 1958, ix, 148 = *kitāb* 97, *bāb* 15). The word also denotes decisions taken as a result of collective consultation, as in the phrase 'an [ghayrī] mala'<sup>m</sup> minnā "[not] [as a result of our consultation]" (Aḥmad b. Ḥanbal, *Musnad*, 6 vols., Cairo 1313/1895, repr. Beirut n.d., i, 463). Since collective decisions are usually taken by the leaders of the group, *al-mala'* very often denotes the notables and leaders of the community (*wudjūh*, *ashraf*, *ru'asā'*) (e.g. Ibn Hishām, *al-Sīra al-nabawiyya*, ed. Muṣṭafā al-Sakkā *et alii*, 4 vols., repr. Beirut 1971, ii, 297-8; Lane, s.v.).

#### 1. In the Qur'ān.

In II, 246 the *mala'* of the Children of Israel demands that a king be raised up for them by their prophet. The word is explained here in the sense of *al-kaum* "the people" (e.g. Ibn al-Djawzī, *Zād al-masīr fi 'ilm al-tafsīr*, 9 vols., Beirut 1984, i, 291-2 [from al-Farrāḥī]); al-Kurṭubī, *al-Djāmī' li-ahkām al-Kur'ān*, 20 vols., Cairo 1967, iii, 243), although others perceived it in the sense of "the notables" (e.g. al-Zadīdjādī, *Ma'ānī 'l-Kur'ān wa-ṣ'ābuhū*, ed. 'Abd al-Djalīl Shalabī, 5 vols., Beirut 1988, i, 325).

In most of its Qur'ānic occurrences the word *mala'* stands indeed for the notables of a given group, and they often represent the royal council, like that of the Queen of Sheba (XXVII, 29, 32), and of King Solomon (XXVII, 38). The *mala'* in the Qur'ān is often involved in the persecution of the messengers of God, as with the royal *mala'* of the Pharaoh. It denounces Moses as a sorcerer (VII, 109; XXVI, 34), incites the Pharaoh against him (VII, 127), and plots to kill him (XXVIII, 20). Other prophets who were persecuted by the *mala'* of their own peoples were Noah (VII, 60; XI, 27, 38; XXIII, 24), Hūd (VII, 66; XXIII, 33) Šālīḥ (VII, 75), and Shu'ayb (VII, 88, 90). In one instance, the contemporary *mala'* of Muḥammad's own people is mentioned as leading the opposition against him (XXXVIII, 6).

In two places the Qur'ān mentions the "upper" *mala'* (*al-mala' al-a'lā*). In XXXVII, 8, it is stated that the rebellious devils may not listen to the upper *mala'*, and in XXXVIII, 69, the Prophet declares that he has no knowledge of what the members of the upper *mala'* are disputing about. In Qur'ānic exegesis, it is held that the upper *mala'* are the angels who have thus been named because they dwell in heaven, which differentiates them from the earthly *mala'*, i.e. the human beings (e.g. al-Kurṭubī, *Ahkām al-Kur'ān*, xv, 65). According to this perception, *al-mala' al-a'lā* denotes "the heavenly host" [see MALĀ'ĪKA]. On the other hand, *al-mala' al-a'lā* of Qur'ān XXXVIII, 69, was also explained as though standing for the Quraysh (al-Kurṭubī, *op. cit.*, xv, 226-7), which sets the term in an earthly context, meaning "the supreme council" (see below).

As a heavenly group consisting of angels, *al-mala' al-a'lā* is considered superior to the earthly one which consists of the sons of Adam (*ibid.*, i, 289). This is indicated in a tradition of the Prophet stating that whenever a believer mentions God's name in public (*fi mala'<sup>m</sup>*), God mentions his name in a better public (e.g. Aḥmad b. Ḥanbal, *Musnad*, ii, 251). A *mala'* of angels met the Prophet on his nocturnal journey to heaven (*ibid.*, i, 354), and in fact every human soul is about to pass by a *mala'* of angels at the time of death (*ibid.*, iv, 287).

Closely associated with *al-mala' al-a'lā* in its heavenly significance is the expression *al-rafiḥ al-a'lā* (the "upper company", cf. Qur'ān IV, 69). It appears in a widely current tradition in which the Prophet, on his death-bed, asks God to place him with *al-rafiḥ al-a'lā*, and these constitute his last words (e.g. al-Bukhārī, *Ṣaḥīḥ*, vi, 18-19 = *kitāb* 64, *bāb* 84). According to one of the interpretations, this expression stands for angels belonging to *al-mala' al-a'lā* (al-Ḳastallānī, *Iṣḥād al-sārī li-sharḥ Ṣaḥīḥ al-Bukhārī*, 10 vols., Cairo 1305/1887, viii, 358).

#### 2. In early Tradition.

In accounts containing episodes from Muḥammad's life, the *mala'* of Quraysh [q.v.] is often mentioned, and the context indicates that it consists of Meccan notables. In most cases, this *mala'* is involved in acts of persecution perpetrated against Muḥammad. In a typical episode, it is related that the *mala'* of Quraysh once told Muḥammad that they were ready to embrace Islam provided he turned away believers of the lower classes (Aḥmad b. Ḥanbal, *Musnad*, i, 420). The episode is usually recorded in the commentaries on Qur'ān VI, 52, in which the Prophet is instructed not to reject those who call upon their Lord in the morning and in the evening. Occasionally, the *mala'* of the Meccans is said to have convened in the Ḥiḍjr (a sacred enclosure and a meeting place near the Ka'ba [q.v.]) to discuss how to treat Muḥammad (*ibid.*, i, 303), and they are also said to have interrogated Muḥammad, offering him medical treatment to cure his supposed madness (al-Kurṭubī, *Ahkām al-Kur'ān*, xv, 338). In another instance, specific names of the hostile *mala'* of Quraysh are enumerated, in a tradition in which Muḥammad prays to God to punish them for having thrown a camel's placenta on him when he was prostrating during prayer. This was done to invalidate his prayer by causing him physical impurity (al-Bukhārī, *Ṣaḥīḥ*, iv, 127 = *kitāb* 58, *bāb* 21, v, 57 = *kitāb* 63, *bāb* 29).

According to modern scholars, the word *mala'* became a fixed term denoting the elected "senate" of the tribe of Quraysh in pre-Islamic Mecca (e.g. W. Montgomery Watt, *Muhammad at Mecca*, Oxford 1953, 8. See also MAKKA. 1). It was described as "a kind of urban equivalent of the tribal *majlis* [see MAJLIS. 1], consisting of notables and family chiefs elected by assent to their wealth and standing" (B. Lewis, *The Arabs in history*, repr. London 1985, 31). However, there is no evidence that a process of election to the *mala'* ever took place in pre-Islamic Mecca. That *mala'* essentially denoted no more than an occasional group of notables is evident from the fact that it is also used with reference to a group of Quraysh acting in Medina after the Ḥiḍjra (e.g. al-Bukhārī, *Ṣaḥīḥ*, ii, 133 = *kitāb* 24, *bāb* 4; Aḥmad b. Ḥanbal, *Musnad*, v, 160).

The *mala'*, i.e. the notables, of the Arab tribes of Medina (of the Banu 'l-Nadīdjār), are also mentioned in the sources, and they are described as being in contact with Muḥammad upon his arrival in Medina (al-Bukhārī, *Ṣaḥīḥ*, v, 86 = *kitāb* 63, *bāb* 46). A more

typical form of a consultative body in Islamic times was, perhaps, the *shūrā* [q.v.].

### MALAWI, Muslims in.

#### *Historical background.*

Islam is not a recent phenomenon in the interior East African state of Malawi (the former British protectorate of Nyasaland), since traders from Arabia, the Persian Gulf, India and Indonesia had dealings with the East African Coast since time immemorial and Islam was carried into the interior by such traders. The name Malawi was first used by the Portuguese to denote a variety of distinct ethnic groups. Amongst these, the Marawi established a hegemony over a considerable area, including the Makua on the coast around Mozambique [q.v.]. The penetration of Islam took place from two directions, i.e. along the Rovuma after the Portuguese occupation of Kilwa [q.v.] in 1505, and from Angoche, which, although it declined after 1530, remained an important centre for the spread of Muslim-Swahili influence into the interior.

The political turbulence on the northern parts of the East African coast during the 16th century did not affect the coastal region of the Mozambique channel. This comparatively peaceful area became conducive to new economic developments, particularly that of ship building at Mozambique and the local production of textiles which had implications for the influence of Islam in Malawi, the one enabling the building of boats to ply on Lake Nyasa, the other as gifts to or for the purchase of slaves, ivory and other goods from the local rulers. In the wake of ever-widening commercial enterprises between the coast and the interior from the end of the 16th century onwards, the Makua and Yao [q.v.] were the main traders, although agents from the coast had already settled in the interior at this time.

During the early part of the 18th century, the struggle between the Portuguese and the 'Umānis on the one hand, and the 'Umānis and the local population on the other, undermined the place of Islam along the coast and along the trade routes. Mozambique displaced Kilwa as the main centre of relations with Malawi. During the early 1750s, the Portuguese were making common cause with the *shuyūkh* of Sanculo and Quitangonha against the Makua, penetrating deep into Makua country. At around this time also, Indian trading interests on the coast, centred on Mozambique, began to penetrate inland; thus in 1727 the Viceroy granted a special license to a number of wealthy Indian Muslims that allowed them to trade with the Makua.

The next development of Islam in Malawi is connected with Sayyid Sa'īd of the Bū Sa'īd [q.v.] dynasty of 'Umān (1806-56), who established himself as ruler of the coast in the early part of the 19th century and encouraged trade with the interior by establishing "forts" on the Kilwa-Lake Nyasa route. By 1861 Muslims had settled at the southern end of Lake Malawi and were operating west of the lake in 1863. In the 1870s Islamic influence could be seen in that petty chiefs were being addressed as *hakimu*. The first Yao chief to adopt Islam around 1870 was one Makanjila II Banali, who employed a Qur'ān teacher, and children were taught to read the Qur'ān and to write Swahili in Arabic script. Chief Mataka I Nyambi of Mwembe dressed like an Arab and built his houses in rectangular form representing a clear coastal influence.

The caravans from the coast usually had with them

what has been termed "Muslim teachers", who taught the Qur'ān, instructing people in Islamic beliefs and practices and encouraging literacy in Arabic and Swahili in Arabic script. They are said to have disseminated commentaries and other literature dealing with the observance of customs connected with marriage, eating and drinking, the mode of killing animals, the efficacy of charms and the making of medicines, and encouraged the building of mosques. They also became involved in the training of young men, particularly the sons and nephews of the chiefs, as *walimu* on religious scholars. Some of them were sent to the coast for further training. Through such teachers, Swahili became the language predominantly spoken by Muslims in Malawi. Another spin-off of this work has been the number of Malawi Muslims acting as *imāms* and *muezzins* in South African mosques.

The anti-slavery campaign from 1873 onwards led to a revival of Islam, since Muslim slave traders who were suffering an economic recession, were as a consequence determined to extend their moral and religious influence. There was a growing self-consciousness and reaction to the colonial and mission presence.

When the British protectorate was established in 1889, the Muslim presence in Malawi can be said to have been represented by such chiefs as Mlozi, a half-caste Arab at the north end of the lake; by Salīm b. 'Abd Allāh in the central region, where Nkota Kota had become an important centre; by Makanjila, who was established on the east side of the lake, where in 1891 an Arab said to have come from Aden originally owned a house at Saidi Mwazungu's town in the southern part of Makanjila's country; and by Mponda at the south end of the lake, where there were twelve *madāris* each with its own *musallimu*.

The Islamic renaissance in Malawi in the early part of the 20th century was linked to the Maji-Maji disturbances in German East Africa in 1905-6. The so-called "Meccan Letter" purportedly sent by the head of the Uwaisiyya [q.v.] *ṭarīqa* in Mecca giving instructions to the faithful to prepare for the final apocalyptic battle, played its part in the unrest in Muslim circles in Malawi in 1908. Rumours among the Yao were claiming that the Arabs would come and kill Europeans and Africans alike who refused to accept the Muslim faith. In Malawi, this was intensified by the appearance over Mua of Halley's Comet in 1910. The hostilities in East Africa connected with the First World War also played their part in deepening the commitment to Islam in Malawi. Letters from the German officer Count Falkenstein to Mwalimu Issa Chikoka at Losewa indicated to him that the Ottoman caliph, Sultan Meḥmed V (1909-18), was the enemy of the British, and called on Mwalimu Issa to lead a *jihād* against the British during Ramaḍān. The growth of Islam was also encouraged by the recruitment of Muslims for the Nyasaland Police and the King's African Rifles. The general impact of these trends can partly be seen in the establishment of a Muslim boarding school for boys at Malindi and the proliferation of mosques from 1911 onwards.

During the early years of the Protectorate, Qur'ān schools offered the only education acceptable to Muslims. In 1918, the Governor recommended the establishment of Muslim schools in parallel to those run by various Christian mission societies. This development was encouraged by the Phelps-Stokes Commission and Ormsby-Gore reports of 1925 and led to the opening of a Muslim school in Liwonde

in 1930. From 1946 Muslims were able to establish their own schools. Independence in 1964 brought major changes in the educational system. Islamic literature in English, particularly from South Africa, became more readily available. This and closer links with Muslims and Muslim institutions in East Africa and the wider Muslim world brought about a deeper awareness of the requirements of the faith. By the late 1950s, some Malawi Muslims were able to attend the teachers' college in Zanzibar.

*The nature of Islam.*

The Muslim community in Malawi is not homogeneous. The differences are not only ethnic but also due to membership of various *tunuk*. Nearly all people in the Kawinga, Liwonde, Jalasi and Nyambi chiefdoms are Muslims, and a group in the Jalasi chieftainship has been known as *twaliki* (Ar. *ṭarīka*). They represent the Kādīriyya order. The *twaliki* believe that their devotions should be accompanied by loud singing and chanting of Arabic texts and by vigorous dancing. Another group, the *sukutis*, centred around the Kawinga and Liwonde chieftainships, advocate a more orthodox type of Muslim devotion in which a quiet and restrained manner is emphasised (Ar. *sukūt* "quietness, silence"). The *sukutis* represent the stricter orthodoxy of the Shādhiliyya order. They are also known as *ahl al-sunna*. These differences undoubtedly reflect the variations in Muslim mystical practice involving both *dhikr ḡalī*, audible remembrance of God, and *dhikr khafī*, silent remembrance. Beside these differences regarding audible and silent *dhikr*, the *sukutis* also differ from other groups in their funeral practices, such as eating food before a funeral, singing and dancing and carrying flags on such occasions, as well as the propriety of dancing at the annual visits (*ziyala*, Ar. *ziyāra* [q.v.]) to the graves. They also differ regarding the legality of eating hippopotamus meat, the building of new mosques where there already are other mosques, and special prayers. The *ziyala* are also connected with the commemoration of the Prophet's birthday (Swa. *maulidi*) on 12 Rabi' I, which takes the form of feasting, *sikiri* (Ar. *dhikr*) and exhortations. The term *ziyala* is also used for the celebration of the anniversary of the founder of the *ṭarīka*. The Kādīriyya order, which was predominant until the 1930s, celebrates the birthday of the Prophet, the two main festivals and some other occasions, with sumptuous feasting and night-long *sikiri*, sometimes referred to as *zikara* and *bayan* (*ahd*), sc. an oath of loyalty to the *shaykh*.

Muslims of Indian origin fall into various categories. The Sunnis among them follow the Hanafi *madhhab*, whereas the African Sunni Muslims follow the Shāfi'i school. Among the Indian Muslims, there are also a number of Shī'a belonging to the Twelve, and the Khodja Isma'īlī and Bohorā traditions. The majority of these arrived as traders from 1928 onwards, and some of them set up large commercial establishments.

The only ordinance in Malawi that directly concerns Muslim marriage (*nikāh* [q.v.]) is the Asiatics (Marriage, Divorce and Succession) Ordinance of 1929. Its wording allows for the application of the different systems of law followed by the various sects (*ḡirak*) and law schools (*madhāhib*). It also includes any local variants that may become customary. Another particularity regarding marriage appears in the Marriage Ordinance of 1903 which, contrary to the *Shari'a*, allows a Christian man to marry a Muslim girl. When it comes to a Muslim wife's rights in a marriage, particularly in relation to divorce, she has almost identical rights to those of her husband.

The month of fasting, has been observed for many years in Malawi. In 1889-90 Mponda II insisted on a proper observation of Ramaḍān, although it seems that the appropriate *ṭarāwīh* prayers were not observed. Muslims speak of *kumanga namasani* "binding on Ramaḍān", and though proud to observe the restrictions, many seem to *kumasula namasani* "to loosen the bonds of Ramaḍān" before the end of the month of fasting. The fast reaches its climax in the *ʿId al-Fiṭr* (*Bayram*) referred to as *Idi Balak* (Ar. *baraka*). The *ʿId al-Adhā* (*Kurbān*), the feast of sacrifice, is known as *Idi Bakali*, a name adopted from the Indian sub-continent, where it is known as *Bakara ʿId* (Ar. *baḡara* "cow", hence "the cow festival") an indication of an early Indian influence on Islam in Malawi, but also a local emphasis and appreciation of the significance of the festival. *Zakāt* is acknowledged, but is not strictly observed except in connection with the *ʿId al-Fiṭr*.

Noon prayers on Fridays, known locally as *juma* prayers are held at a central place, originally at the village of the main chief. Women join in the *juma* prayer, usually in a separate section of the mosque. Muslim headmen wear scarlet headbands around their white skullcaps known as *mzuli*. This may reflect the practice among Muslim scholars, who wear different colours to signify their status or the religious order to which they belong.

A number of traditional ceremonies have survived and have been given orthodox Islamic names. Thus the term *sadaka* in Malawi has nothing to do with alms but refers to a funeral feast. It is associated with a special dance, known among the Yao as *cindimba* and is connected with the brewing of a special beer. It has been partially Islamised through the *sikiri* (*dhikr*), which is now perceived purely as a dance. The *akika* (Ar. *ʿakīka*) ceremony is observed in some areas.

When a Muslim dies, the *shaykh* is invited to bless the body and delivers an oration. The body is prepared for burial by having a hole cut in the neck and the intestines squeezed empty. It is then wrapped in long lengths of white cloth and taken to the graveyard on a stretcher, usually the bed on which the person died turned up-side down. The prayers and oblations (*ukana wacisoka*) offered to ancestral spirits at the root (*lipaka*) of a shrine tree has also taken on an Islamic air. It is explained by the more zealous Muslims as the gift of food to passers-by in order that God may forgive and bless the spirit of one's ancestors. Magical charms and talismans proliferated in the pre-Independence years. One of these was the *kinsi* (amulet; Swa. *hirizi* < Ar. *hirz*). Another is the charm called *alibadiri* consisting of Qur'anic verses wrapped in leather.

*Muslim organisations.*

Formal organisations are a fairly recent phenomenon in Malawi, although the Muslim Association of Malawi (MAM) was founded in the 1940s by Asian Muslims. There have been associations concerned with the provision of *madrasa* education. The *walimu* as well as the heads of the *tunuk* owing allegiance to their *shaykh*, *murshid* or *pīr* also have their "informal" organisations, some of which co-operate over *ʿid* celebrations. Some organisations, however, are supra-national, such as the *Tablighi Djamā'at* [q.v.]. Muslims of Asian origin group together according to their particular trading or geographical background such as the Sunni Memon, Punjabi, Surti and Khatri groups and the various Shī'a communities. They make substantial contributions to the building of local mosques and Qur'an schools. Mosques and *madāris* are often named after the person who organised and contributed to their

construction. There are no *awḳāf* [see *waḳf*] but trusts for mosques are registered under the Trustee Incorporation Act, and properties vested in Trustees and Office Bearers of the Associations. The socio-economic conditions of Muslims in Malawi have on the whole not enabled them to undertake the obligation of the Pilgrimage, and there has been no organisation looking after the welfare and travel arrangements for the pilgrims until recently. In 1981, 22 Malawians performed the Pilgrimage, and since then the number has grown.

Muslims expressed an interest in better educational facilities within the context of the Protectorate as early as 1916. A Department of Education was set up in 1926, but not until 1928 were three government schools established to cater primarily for Muslim children; these had to be closed after a few years due to lack of children and parental support. The following year an education ordinance was passed opening the schools to all regardless of religious affiliation. By 1962 there were, however, 29 schools under Muslim administration and owned by the Muslim community, seven of these grant aided. Today, all schools in the country are under government control through the Ministry of Education, both with respect to policy and standards. Muslim teachers instruct Muslim pupils in the basics of Islam at the times set aside in the timetable for Religious Education. The government has also encouraged schooling in predominantly Muslim areas through support for the building of classrooms and teacher accommodation. Contemporary-style education is pursued in the mornings in schools managed by Muslims. In the afternoon they become *madāris*, where Kur'ān, *ḥadīth*, *fiqh* and *luḡa* are taught; but Arabic is not taught. The Yao use their own language, including a fair amount of Swahili expressions; the reformists use Chewa or English, the two official languages of Malawi, employing some Arabic greetings and formulae. The Muslim Students' Association founded in 1982, which represents the reform movement and opposes the *turuk*, and is supported by donations from Saudi Arabia and Kuwait, produced a syllabus in Islamic education for Muslims in primary and secondary schools in 1987. In 1988 Muslims were able to establish the first Islamic institute of higher learning, the Islamic Centre. Some young people have had the opportunity to study at Arabic institutions abroad. Contacts with the Muslim Youth Movement in South Africa from 1977 onwards led to the holding of the Southern Africa Islamic Youth Conference in Blantyre in 1981, and this met again in Malawi in 1987 when the Islamic Medical Assembly, a branch of the Muslim Association of Malawi, was formed. The Muslim Association of Malawi with its headquarters in Blantyre evolved out of a central Board for Muslim Education which was set up in the 1950s to co-ordinate the work and represent the interests of the Muslim community as a whole. The Association has received financial help from Kuwait in the form of a financial director as well as teachers from various parts of the Muslim world. Through its representations, time has been allocated on Radio Malawi for programmes on Islam in Chichewa. The organisation has also enabled women to hold regular conferences since 1982.

Local publications are limited. Some Muslims read the *Muslim digest* and *al-Kalam* published in South Africa. A pamphlet entitled *Tarīḡu 'l-salat* in Chichewa has been widely distributed. Publications by the International Islamic Federation of Student Organisations with its headquarters in Kuwait, and the writings of

Abū 'l-A'la Mawḏūdī of Pakistan are also to be found.

The only outside links Muslims in Malawi had for long were with Muslims and Islamic institutions on the East African coast. Particularly important were the contacts with the late Shaykh Abdullah Saleh al-Farsy (d. 1982), Chief *Ḳāḍī* of Zanzibar and later of Kenya. Through the migrant labour force, contacts were also established with various organisations in South Africa that more recently have sought to help Muslims face the growing challenge presented by the socio-economic situation in Malawi. Contacts with the wider Muslim world began with a visit from representatives of the *Dār al-Ifḷā'* from Saudi Arabia in 1965. The African Muslims Committee, a charitable organisation based in Kuwait, has made considerable contributions to the Blantyre Islamic Mission which was founded in 1982 and has organised youth camps. The election and re-election of Bakili Mulunzi as president of Malawi in 1994 and 1999, reflects the degree Muslims have come to play in the country, and will strengthen and enhance the community's position.

(S. VON SICARD)

**MALFŪZĀT** (A.), literally "utterances", in Šūfi parlance denotes the conversations of a mystic teacher.

Though some compilations of Šūfi utterances were made earlier in other lands, e.g. the *Hālāt wa-sukhanān-i Shaykh Abū Sa'īd* (Rieu, i, 342b ii) and *Asrār al-tawhīd* (ed. Aḥmad Bahmanyār, Tehran 1934) [see ABŪ SA'ĪD B. ABĪ 'L-KHAYR], it was Ḥasan Sidjzī of Dihlī who gave it a definite literary form. In 707/1307 he decided to write a summary of what he heard from his spiritual mentor, Shaykh Niẓām al-Dīn Awliyā' [q.v.], and completed it under the rubric, *Fawā'id al-fu'ād* (Lucknow 1302). It marked the beginning of a new type of mystical literature, known as *malfūzāt* (sing. *malfūz*). A few years later, in 711/1312, Sultān Bahā' al-Dīn Walad [q.v.], son of the famous Mawlānā Djalāl al-Dīn Rūmī [q.v.], completed a record of his father's utterances under the title *Fihī-ma-fihī* (ed. 'Abd al-Mādjīd, A'zamgarh 1928). But Bahā' al-Dīn prepared this record on the basis of memory, some 39 years after the death of his father, without reference to dates on which specific discussions took place. Ḥasan Sidjzī gave dates of every discourse and referred to the queries and quests of the audience. Bahā' al-Dīn perhaps aimed at providing a philosophic basis for the *mathnawī*; Ḥasan presented through the conversations of his *Shaykh* the accumulated wisdom of the mystical creed with reference to specific problems of the people. Ḥasan's example inspired saints of different mystical orders, and a considerable *malfūz* literature appeared in India from Učch to Manēr and from Dihlī to Deogīr.

The new genre of mystical literature developed mainly in India, but some collections of Šūfi utterances were prepared elsewhere also, e.g. the *Nūr al-'ulūm*, utterances of Shaykh Abū 'l-Ḥasan Khirkānī (ed. E. Berthels, Leningrad 1929), *Malfūzāt-i Naḍīm al-Dīn Kubrā* (ms. As. Soc. of Bengal 1250-3), *Mastūrāt* (discourses of Sayyid 'Alī Hamadānī, ms. I.O. 1850) and *Anīs al-tālibīn* (conversations of Kh'ādja Bahā' al-Dīn Naqshband, Lahore 1323).

Several disciples of Shaykh Niẓām al-Dīn Awliyā' emulated Ḥasan in compiling conversations of the *Shaykh*, e.g. *Anwār al-maḍjālīs*, *Tuḥfat al-abrār wa-karāmāt al-akhyār*, *Hasrat-nāma* and *Durar-i niẓāmī*. Except the last one (ms. Buhār 183 and Salārđjang Museum, Ḥaydarābād) all are no longer extant. Conversations of Shaykh Burhān al-Dīn Ḡharīb, a *khalīfa* of Shaykh Niẓām al-Dīn Awliyā', were compiled in the Deccan under the titles *Aḥsan al-aḳwāl* (ms. 'Uṭhmāniyya, Ḥaydarābād 478 and 1479), *Nafā'is al-anfās* (ms. Nadwat al-'Ulamā', Lucknow), *Shamā'īl al-aḳīyā* (lith. Ḥaydarābād 1347), etc. In Dihlī, Ḥamīd Kalandar compiled his *Khayr al-maḍjālīs* (ed. K.A. Nizami, 'Alīgarh 1959), which contains conversations of Shaykh Naṣīr al-Dīn Čirāgh, chief *khalīfa* of Shaykh Niẓām al-Dīn Awliyā'. In Nāgawr [q.v.] the conversations of Shaykh Ḥamīd al-Dīn Šūfi Nāgawrī were compiled in *Surūr al-sudūr* (ms. Habīb Gandj, 'Alīgarh). The Firdawsī saints produced *Ma'dīn al-ma'ānī* (2 vols. lith. Bihār 1301-3/1884-6). *Mukhlkh al-ma'ānī* (lith. Agra 1321/1903-4), *Rāḥat al-kulūb* (lith. Agra) and a few other works containing the conversations of Shaykh

Šaraf al-Dīn Ḥayyā Manērī. Several saints of the Suhrawardī *silsila* produced conversations of their spiritual teachers. The conversations of Sayyid Djalāl al-Dīn Bukhārī were compiled under the titles *Strādī al-hidāya* (ed. Kaḍī Saḍḍjād Ḥusayn, Dihlī 1983), *Ḍjāmī' al-'ulūm* (ed. Kaḍī Saḍḍjād Ḥusayn, Dihlī 1982), etc. Even the utterances of a *maḍjāhūb* of 'Alā' al-Dīn Khaldjī's period, Kh'ādja Karak of Kara, were collected in *Asrār al-maḥdūmīn* (lith. Faṭḥpur-Haswa 1893).

The production of *malfūz* literature in India during the 8th/14th century synchronised with Shaykh Niẓām al-Dīn Awliyā's decision to convert the mystical movement—hitherto confined to individual spiritual salvation—into a movement for mass spiritual culture (*Siyar al-awliyā'*, Dihlī, 346-7). This led to proliferation of *khānkhāhs* [q.v.] in South Asia and the adoption of local dialects for the communication of ideas (see 'Abd al-Ḥakk, *The Sufis' work in the early development of Urdu language*, Awrangābād 1933). The *malfūz* literature differed from literature produced earlier in the form of mystical treatises which dealt with mystical thought or mystical litanies and lucubrations. The *malfūz* literature was intelligible to people at all levels and had a space-time context. Since the discussions contained in *malfūzāt* took place before people belonging to different sections of society and referred to specific problems (see *Khayr al-maḍjālīs*, 83, 185, 240, etc.; *Ma'dīn al-ma'ānī*, 3), this literature has assumed great historiographical significance. It acts as a corrective to the impressions created by the court chroniclers who, nurtured as they were in Persian traditions, restricted the conspectus of history to courts and camps. This literature views the historical landscape from a different angle and fills a gap in historical knowledge by providing a glimpse into the life of the common man, his problems, his hopes and fears. For example, the economic worries of the masses during the time of Firūz Šāh Tughluq, and the efforts of the Šūfis to reorient mystical thought to meet the situation created by the ideology of Ibn Taymiyya [q.v.], can be read in the *Khayr al-maḍjālīs*.

*Malfūz* literature continued to be produced in India all through the centuries. The conversations of Shaykh Aḥmad Maghribī of Khattū (*Tuḥfat al-maḍjālīs*, I.O. Persian Collection DP 979) give an insight into the economic and cultural efforts that preceded the foundation of the city of Aḥmadābād. The utterances of Gīsū Darāz [q.v.], *Djāwāmī' al-kalīm* (ed. Ḥamīd Šiddīkī, Kānpūr 1356/1933-8), give a lively picture of mystical activity in the South.

Widespread interest in *malfūz* literature encouraged the production of some apocryphal collections, e.g. *Anīs al-arwāḥ* (lith. Dihlī 1312), *Dalīl al-'arīfīn* (lith. Lucknow 1311/1893-4), *Fawā'id al-sālikīn* (lith. Lucknow 1311/1893-4), *Asrār al-awliyā'* (lith. Kānpūr 1890), *Rāḥat al-kulūb* (lith. Lucknow 1311/1893-4), *Rāḥat al-muḥibbīn* (ms. personal collection), *Afdal al-fawā'id* (lith. Dihlī 1304/1886-7), *Miftāḥ al-'ashīkīn* (lith. Dihlī 1309/1891-2), etc. Critical scholarship has rejected this literature as spurious. The use of the term *malfūzāt* for the apocryphal memoirs of Tīmūr is the solitary example of the application of the term to political literature.

The *malfūz* literature produced during the 9th/15th and 10th/16th centuries contains valuable information about the social, religious and literary activities of the people in the period preceding and following the foundation of the Mughal Empire. Particular reference may be made to the *Anwār al-'uyūn*, conversations of Shaykh Aḥmad 'Abd al-Ḥakk (lith. 'Alīgarh 1905), *Latā'if-i Kudrūsī*, conversations of Shaykh 'Abd

al-Kuḍdūs Gangohī [q.v. in Suppl.] (lith. Dihlī 1311/1893-4), *Kalimāt-i tayyibāt*, conversations of Kh<sup>ra</sup>ādja Bākī billāh (lith. Dihlī 1332/1914) and *Malfūzāt-i Shāh Minā* (Hardoi n.d.).

In the subsequent centuries appeared the conversations of Shaykh Muḥammad Āshūrī (*Maḍjālis al-ḥasanīyya*, ms. 'Aligarh), Shāh Kalīm Allāh Shāhjahānābādī (*Maḍjālis-i kalīmī*, lith. Ḥaydarābād 1328/1910), Shāh 'Abd al-Razzāk (*Malfūzāt*, lith. Firūzpur 1303/1885-6), Shaykh Burhān Shāhī (*Thamarāt al-ḥayāt*, ms. As. Soc. of Bengal 448), Shaykh 'Isā of Burhānpūr (*Malfūzāt*, ms. As. Soc. of Bengal 462), 'Abd al-Rahmān of Lucknow (*Anwār al-Rahmān*, lith. Lucknow 1287/1870-1), and Shāh 'Abd al-'Azīz of Dihlī (*Malfūzāt-i 'Azīzī*, lith. Meerut 1314/1896-7). This literature supplies background information about the intellectual and social crisis in a period of transition. For example, the *Anwār al-Rahmān* throws invaluable light on the decadent culture of Awadh [q.v.], and the utterances of Shāh 'Abd al-'Azīz reveal reaction and response to Western culture. In *Nāfi' al-sālikīn* (conversations of Shāh Sulaymān of Taunsa, Lahore 1285) the socio-religious scenario of the Panjāb before 1857 is seen in all its details.

In the early decades of the 20th century, Mawlānā Aṣhrāf 'Alī of Thana Bhawan made effective use of the *malfūz* medium in propagating his teachings, but his orations are more in the nature of *mawā'iz* (sermons) than *malfūz* (table talk). In short, no study of Ṣūfism as a popular movement in India is possible without an intensive and critical use of the *malfūz* literature.

*Bibliography*: Important *malfūzāt* collections are cited above. For assessment, see K.A. Nizami, *On history and historians of medieval India*, Dihlī 1988, ch. "Historical significance of the Malfuz literature", 163-97; idem, *The Ahsan al-Aqwal—a fourteenth-century Malfuz*, in *Jnal. Pak. Hist. (K.A. NIZAMI)

**MALKOČ-OGHULLARĪ**, a line of Ottoman raiders from Bosnia who were active from the late 14th to the 17th centuries.

The origin of the name Malkoč is unclear. The suggestions that it derived from the Greek Markos or Serbian Marković are not satisfactory. The Malkoč-oghullarī were probably Christian converts to Islam. A Malkoč is apparently first mentioned in the *Short chronicle of Ioannina* (ca. 1400) in connection with a war between two Epirot lords, perhaps in 1388-9. Murād I supposedly sent Malkoč from Thessaloniki/Selānik [q.v.] to help one of them, in the event, successfully. The first Ottoman chronicler to mention the name, Neshrī (d. before 1520), seemingly refers to the same person as commander of 1,000 archers on the right wing of the Ottoman army at the Battle of Kosovo [see KOŠOWA] (June 1389). He may also have participated in the Battle of Nicopolis (1395). Later, Malkoč appears as the commander (*beg*) of Siwās. He was captured by Tīmūr in 1402 but was subsequently sent as a messenger to Bāyezīd I.

The family held lands in northern Bosnia at the time of Mehemmed II (second reign, 1451-81). They

were given land there as march *begs*. The most renowned member of the line was Bālī Beg Malkoč-oghlu, who in 1444 fought the Hungarians under John Hunyadi outside Varna but fled the field. In 1462, he commanded the right wing of the army of Mehemmed II against Vlad Tepesh in Wallachia, and during the next decade was the provincial military chief (*sandjak beg*) of Smederovo in Serbia, burning the Croatian city of Varaždin in 1474. In 1475-6, he was the *sandjak beg* of Bosnia, and in 1478, he led 3,000 raiders (*akindjī* [q.v.]) before Scutari/Ishkodra [q.v., in Suppl.] in Albania. The following year he led another large force of raiders into Hungary and Transylvania. He became the governor of Silistria in the 1490s, raiding Aḳ Kırmān in 1496 and in 1498 twice raiding Poland and threatening Krakow. He had three sons, two of whom were killed at Čaldırān [q.v.] in 1514, whilst the third became *sandjak beg* of Kilia near the mouth of the Danube.

Subsequently, in the early 16th century, we hear of Kara 'Othmān Beg Malkoč-oghlu as a leading landholder in Bosnia. The last known member of the dynasty was Yawuz 'Alī Pasha, governor of Egypt, who became Grand Vizier in 1603 and died the following year at Belgrade. After this, the family seems to have lost its power and influence.

## MAMLŪKS.

### (iii) ART AND ARCHITECTURE

#### (a) Architecture

Within the history of Islamic art, the architecture of the Mamlūk period (648-922/1250-1517) occupies an intermediary position between what might be termed the early period predating the Mongol invasion and the later imperial arts of the Tīmūrīds, Ṣafawīds, Ottomans and Mughals. Unlike its Tīmūrīd counterpart, with which it is partly contemporary, Mamlūk architecture did not substantially impact on the later history of Islamic art once Egypt and Syria had become provinces of the Ottoman Empire. It lingered on in a reduced scale in Ottoman Egypt, until it was revived in modern times as a manifestation of a national style of mosque architecture.

Apart from the prestige accruing from their victories over the Mongols and the Crusaders, the Mamlūks were celebrated as guardians and patrons of orthodox Islam, an image they fostered by sponsoring religious foundations and creating centres of scholarship and Ṣūfī activities and other philanthropic institutions. The sheer number of mosques, *madrasas* and *khānkhāhs* which they established in Cairo proved without parallel in the Muslim world at the time, and is even believed to have exceeded the genuine requirements of the population. All the while remaining careful to cultivate the exclusive character of their ruling aristocracy, one based on their military slave origins, the Mamlūks directed their patronage at the man in the street. Instead of promoting an inward-looking

court life, their chief concern was to obtain the enduring support of the religious establishment. The Mamlūk sultans ruled their capital in a very direct manner, involving themselves closely in the minutiae of religious and social policy. Sultans and *amīrs* themselves inspected monuments during the construction phase and, as supreme overseers of the *awḳāf*, ensured the maintenance of the buildings of their predecessors.

Mamlūk patronage was essentially religious, and one of its most significant aspects lay in the architecture and in the decorative arts which it helped to foster. Moreover, urban development was a major concern of the Mamlūks and the motivation behind the intensive building activity for which they became responsible in Cairo. Since sultans and *amīrs* incorporated their own lavish mausoleums within religious foundations, thereby setting up memorials for themselves in their capital, Cairo as a whole soon became an vast arena for Mamlūk art patronage. Most of the Mamlūk architectural legacy in Cairo was created by such sultans and *amīrs*, and only to a lesser extent by local dignitaries.

Although the Mamlūks ruled over a territory including Egypt, Greater Syria and the Ḥiǧǧāz, Mamlūk architectural identity is mainly discernible in Cairo. Even more decidedly than under other Islamic régimes, the metropolitan style of religious architecture rarely re-occurs outside the capital. The rulers' direct involvement in the building activity of the province of Egypt was confined to infrastructures, fortifications and commercial buildings, leaving the foundation of mosques and colleges to the governors and the local notables. The scarcity of significant royal mosques in the provinces accounts for a discrepancy in religious architectural style between the capital and the outlying regions. Religious architecture in Syria and the Ḥiǧǧāz kept faith on the whole with the predominant regional building tradition, as was the case of the Egyptian province itself, where the cities of Kūš and Alexandria, in spite of their economic importance, retained a provincial type of architecture. Occasional mutual influences between Cairo and Syria were confined to decoration or individual elements that did not involve the architecture generally. The builders who erected the imperial mosques in Cairo were rarely employed beyond the confines of the capital. The exception confirming this rule is that of a late-9th/15th century initiative by Sultan Kāyitbāy, who is reported by chroniclers to have sent entire teams of craftsmen from Cairo to Jerusalem, Mecca and Medina. These reports themselves attest the singularity of this initiative. Indeed, *wakf* descriptions of his *madrasas* in Jerusalem and Medina, as well as the remnants of his *madrasa* in Jerusalem, confirm that such patronage remained exceptional.

Moreover, the enormous quantitative discrepancy between Mamlūk architecture in Cairo and in Syrian cities, as well as the supremacy of the metropolitan religious foundations which functioned as the intellectual centres of the Mamlūk state, contributed to the stylistic singularity of Cairene Mamlūk architecture. With a few exceptions, such as the buildings of Tankiz al-Nāsīrī in Jerusalem (Burgoyne 1987, 223-48), urban schemes do not seem to have been a major concern of Mamlūk patrons in Syrian cities.

The evolution of Mamlūk architecture in Cairo shows an increasing tendency to adapt and adjust the layout of the buildings to the urban environment rather than to impose a large-scale or symmetrical architecture on the city. The portal, minaret and mausoleum dome were assigned a location that best

responded to the specific aesthetic needs of the site rather than being forced to conform to a preconceived canon. A major factor in the architectural design was the founder's mausoleum dome, which was assured maximum visibility both through its position in the building and an increasingly lofty exterior transitional zone between the drum and dome (Kessler 1972; L. Ali Ibrahim 1975; and see KUBBA). This increased visibility required the builder to adjust both layout and architecture to the site. The patrons' challenge was to balance the status-enhancing placement of the mausoleum to the street with a juxtaposition with the mosque sanctuary. If the latter requirement could not be ensured because of the location, the preference was to place the mausoleum on the street side. In the city centre, royal foundations built round a courtyard were preferably located to the west side of the street so that the south-east, Mecca-oriented sanctuary could be on the street side. This allowed the mausoleum to lie adjacent to the sanctuary and overlook the street at the same time. Like their mosques, Mamlūk *madrasas* and *khānḳāhs* were built along the axis of the orientation towards Mecca, as were the mausoleums which, with rare exceptions, included a *mihṛāb* (Kessler 1984). Owing to the aforementioned constraints, it often transpired that the orientation of the mosque's *mihṛāb* diverged from that of the mausoleum. Unlike in Syria, the minaret in Cairo was to be found not only in Friday mosques but in *madrasas*, *khānḳāhs* and minor oratories as well.

This interaction with the urban fabric, together with the pre-eminence of the metropolitan religious institutions housing Mamlūk mausoleums, created an architecture exclusively suited to Cairo. Furthermore, the overriding focus of Mamlūk monumental patronage in Cairo was in fact a response to the historical situation. It should be remembered that the history of Mamlūk Cairo begins at the same time as the fall of Baghdad from where Baybars transferred the 'Abbāsīd caliphate to his own capital [see MAMLŪKS. i. History], a symbolic gesture that designated Cairo as Baghdad's successor. Already the possessor of a long undisturbed metropolitan tradition, unrivalled at that time by any other city in Egypt or in Syria, the Egyptian capital was the natural candidate to perpetuate Baghdad's glorious history.

Like any other architecture, that of the Mamlūks was based on that of its predecessors; and as such it inherited architectural devices and decorative techniques from the Fāṭimid and Ayyūbid periods. Far more monuments were erected than during the Ayyūbid era, however, and over a much longer period of time. Already al-Zāhir Baybars waived the Shāfi'ī rule applied by his predecessors which allowed only one Friday mosque to each agglomeration. Moreover, the inclusion of Syria and territories as far north as Cilicia, the migration of craftsmen escaping the Mongol invasions and others who came from al-Andalus, as well as the contacts with the Il-Khānids and with Christian kingdoms, introduced international features into the arts of the 7th-8th/13th-14th centuries.

#### A. Religious architecture in Cairo

##### (i) *The Bahṛī period*

From *Shadjar al-Durr* to al-Zāhir Baybars. The first building that can be securely attributed to the Mamlūk era is the funerary *madrasa* of Shadjar al-Durr [q.v.], the widow of the last Ayyūbid sultan al-Šāliḥ Naǧm al-Dīn Ayyūb, of which only the mausoleum is today extant. It was built in 648/1250 in the cemetery of Sayyida Nafisa north of Fuṣṭāṭ [q.v.] as part of a complex that included a palace, a *hammām* and gardens.

In the same year, the short-lived sultana also added a mausoleum to her husband's *madrasa* in the heart of the Fāṭimid al-Ḳāhira, thus bringing to the city a tradition of princely funerary architecture which subsequently became a significant feature of Mamlūk Cairo (Creswell 1959, ii, 135f.-6; Behrens-Abouseif 1983). The profile of the mausoleum dome and its stucco decoration remain faithful to the tradition of the Ayyūbid period.

The *madrasa* of al-Mu'izz Aybak, *Shadjar* al-Durr's second husband and her successor on the Mamlūk throne, was built in 654/1256-7 in the commercial centre of Fustāt (al-Maḳrīzī, *Sulūk*, iv, 302); it seems to have been part of an urban project which integrated pre-existing commercial structures. As it is not included in al-Maḳrīzī's *Khūṭa*, it must have disappeared with the decline of Fustāt as al-Ḳāhira took over as Egypt's definitive capital during the 8th/14th century. It was the first and, indeed, only royal Mamlūk foundation within the city of Fustāt.

Sultan al-Zāhir Baybars I's [q.v.] first religious foundation—a *madrasa* next to that of his master al-Ṣāliḥ Naḍīm al-Dīn—was built in al-Ḳāhira in 660-2/1262-3. The building itself, which was demolished in the last century, is reported to have consisted of four *iwāns* built around a courtyard to accommodate the four *madhhabs* of Islamic law. It possessed no mausoleum. Nineteenth-century drawings and paintings convey some idea of the former exterior. The portal formed the shape of a semi-dome on *muḳarnas*, a pattern already applied in Ayyūbid Syrian architecture but the earliest of its kind to be documented in Cairo, a distinction that applies equally to the four-*iwān* plan. (Creswell 1959, ii, 142ff.)

When al-Zāhir Baybars built his monumental mosque on the site of his polo-ground in the northern outskirts of Ḥusayniyya (665-7/1266-9), it was the first Friday mosque to be founded in the Egyptian capital for some 150 years. The mosque, with its pointed arches and monumental entryways, contains references to the Fāṭimid mosque of al-Ḥākim. The major innovation and the most spectacular feature of the building was the size of the wooden dome over the *mihrāb*, which covers the *maḳṣūra* of nine bays and is borne by piers. The space between the courtyard and the domed zone is furthermore emphasised by a transept running perpendicular to the arcades of the sanctuary. Creswell maintains that the dome was influenced by the Artuqid mosque of Mayyāfariḳīn [q.v.] built in the 6th/12th century. The building materials for Baybars' mosque had been seized as spolia from Crusader monuments during Baybars' triumphal campaign in Yaffa. The mosque was already falling into ruin during the mediaeval period (Creswell, 1950, ii, 155ff.; Bloom 1982). Baybars also founded in 671/1273 another monumental Friday mosque at *Manṣhā'* at al-Maharānī, between al-Ḳāhira and Fustāt, of which no trace exists today (Ibn Duḳmāk, iv, 119.). Baybars' reign produced a significant number of other secular and religious buildings in Egypt and Syria (Meinecke, ii, 6-51).

From al-Manṣūr *Ḳalāwūn* to al-Ashraf *Ḳhalīl*. The buildings of al-Manṣūr *Ḳalāwūn* [q.v.], his wife Fāṭima *Ḳhātūn* and his son al-Ashraf *Ḳhalīl* [q.v.], cannot be connected directly to those of their predecessors, neither do they seem to have had a marked impact on their successors'. *Ḳalāwūn* was the first Mamlūk sultan to build a religious complex with his own mausoleum in the city centre. The complex (683-4/1284-5) which included a *madrasa*, a mausoleum and a great hospital, displays many unprecedented features: the

verticality of the façade and its decoration, the plan of the mausoleum centred on an octagonal domed baldachin, the basilical plan of the prayer *iwān*. Most remarkable is the treatment of the façade with pointed-arch recessed panels which include the windows, the upper ones forming a triple composition consisting of a pair of arched openings surmounted by a bull's eye. This treatment recalls the architecture of Norman Sicily, the façade of the *Ḳalāwūn* complex in fact exhibiting a striking resemblance to the original frontage of the Cathedral of Palermo. The marble mosaics decorating the opulent interior are once again closely related to those of Norman Sicily and southern Italy (Creswell 1959, ii, 190ff.; Meinecke 1971; Behrens-Abouseif 1995, *Sicily*). The adjustment of the *Ḳalāwūn* complex façade to the alignment of the streets—so deviating from the Mecca-oriented axis within—is a device of urban aesthetics created in the Fāṭimid period and faithfully maintained under the Mamlūks. The complex was erected on the street side to the west, with a passage between the mausoleum and the *madrasa* leading to the hospital. The massive masonry minaret stands at the northern edge of the complex, juxtaposing harmoniously with the mausoleum dome. The *madrasa* is built around a courtyard with two unequal axial *iwāns* and two lateral recesses between which the multi-storied dwelling units were located.

The mausoleum is one of the most lavishly decorated monuments of mediaeval Cairo, displaying the entire repertoire of techniques of that time: carved and painted wood, stucco, inlaid and carved marble as well as, in the *mihrāb*, conch-glass mosaic. The hospital, no longer extant, was not visible from the street; it is described in its *wakf* deed as a lavish construction built in two perpendicular axes around a courtyard (see Herz's plan, in Creswell 1959, ii, 207). The plan of the mausoleum and the massive shape of the minaret of *Ḳalāwūn* remained unique in Cairene architecture.

In the cemetery of Sayyida Nafīsa are the remains of a funerary *madrasa* attributed to Fāṭima *Ḳhātūn* (682-3/1283-4), a wife of *Ḳalāwūn*. Today only the funerary chamber with the gateway and the first storey of the rectangular minaret are extant. A photograph published by E. Diez (*Kunst der islamischen Völker*, Munich 1915) shows that this *madrasa* had arched recesses with the same triple-window composition that occurs on *Ḳalāwūn*'s façade. Next to it, *Ḳalāwūn*'s son, al-Ashraf *Ḳhalīl*, a ruler who left no architectural work in the city centre, built his own funerary *madrasa* of which only the mausoleum is extant (687/1288). The three domes of *Ḳalāwūn*, his wife and his son *Ḳhalīl*, have in common a high octagonal drum with windows set in recessed arches, and an oval profile, whereas the interior treatment of the transitional zones is different in each case (Creswell 1959, ii, 180-1, 214-15; Meinecke 1992, i, 42ff.).

*Al-Nāṣir Muḥammad and his immediate successors.* Al-Nāṣir Muḥammad b. *Ḳalāwūn* [q.v.] was the greatest builder of the Bahrī Mamlūk sultans. His long reign (693-741/1293-1341), interrupted by two interim periods (694-8/1294-99 and 708/1309) coincided with a period of relative peace and prosperity which was also the most fruitful for architectural achievement. Al-Nāṣir encouraged his *amirs* to build mosques and palaces not only in the city itself but also in the outskirts on new land added to Cairo by the receding of the course of the Nile. Al-Nāṣir's second reign was already displaying the versatility characteristic of the architecture of the 8th/14th century (Meinecke-Berg 1977; J.A. Williams 1984; al-Harithy 2000).

In 703/1304, al-Nāṣir Muḥammad completed the *madrasa* next to his father's during the first interval of his reign by Sultan Lādīn [g.v.]. The construction possesses a narrow façade whose total width in the upper reaches was occupied by the minaret and the mausoleum dome. The dome, which like the top part of the minaret is no longer extant, has an octagonal drum similar to that of the previous Kalāwīnids. The *madrasa* is built with four axial *iwāns* with multi-storied living quarters between them. The Gothic portal is a spoil from a church in Palestine (Creswell 1959, ii, 234ff.; Meinecke 1992, i, 49).

Once the mausoleum dome became an integral part of the façade design, the evolution of urban religious and/or funerary architecture during the 8th/14th century stimulated the builders to display their versatility in the individual treatment of the minarets and the mausoleum domes, and most of all to create a consistently harmonious composition incorporating these two elements. At the funerary foundations of Salār and Sanđjar (703/1303-4), which could have been a *madrasa* or a *khānqāh*, the minaret is juxtaposed with a pair of unequal-sized mausoleum domes that formed a singular silhouette when viewed from the street. Here the mausoleums are Mecca-oriented, but, exceptionally, not the *madrasa/khānqāh*.

At the *khānqāh* of Baybars II al-Djashankīr (706-9/1306-10), too, the funerary dome adjoins the minaret harmoniously, leaving the prayer hall on the other side of the courtyard because of the placement of the four-*iwān khānqāh* on the eastern side of the street. The mausoleum chamber, richly decorated in marble mosaic, contrasts with the rather plain interior of the Šūfī institution. In addition to the living units overlooking the courtyard, there was a separate dwelling compound (Fernandes 1983).

The funerary *madrasa* of Sunḡur al-Sa'ādī (715-21/1315-21), of which only the façade with the mausoleum and the minaret remain extant, presents further variation on the shape of minaret and dome. The rectangular brick shaft is particularly slender and has lavish *muqarnas*, while the dome, whose drum is decorated with stucco bands around the windows, stands on an elliptic base (Creswell 1959, ii, 267f.-8; M. 'Abd al-Raḡmān Fahmī 1970). The small funerary mosque of Ayduḡur al-Bahlawān (747/1346), with one of the earliest masonry domes, is of the same composition.

Neither of the two major monuments of al-Nāṣir Muḥammad survives, sc. a great *khānqāh* planned with his mausoleum at Siryākūs (a village to the north of Cairo) and his great mosque in the southern outskirts of al-Qāhira to the north of Fuṣṭāṭ (J.A. Williams 1984). However, his mosque at the Citadel completed in 735/1335 attests to artistic achievement under his patronage. The dome of its *makṣūra*, which is similar to but of lesser proportions than that of Baybars, was revetted in green tiles. Similarly, two unusual masonry minarets, one flanking the main entrance and another at the south-eastern corner, have a ceramic tilework mosaic in the Il-Khānīd style decorating their upper part, which must have been the work of the Tabrīzī craftsmen reported to have come to Cairo at that time and to have been involved in the decoration of the no longer-extant mosque of Ḳawsūn. Except for the use of ceramic on the dome and the minarets, the exterior is plain, in marked contrast to contemporary urban mosques.

Subsequent examples demonstrate that, due to urban constraints, the hypostyle courtyard mosque could no longer be accommodated within the city without sacrificing its symmetry. The Friday mosque of the *amīr*

Almās al-Nāṣirī (729/1328-9), which also included the founder's mausoleum, has an irregular configuration (Karīm 2000). The Friday mosque of Altinbughā al-Māridānī (739-40/1339-40), which in principle follows the plan of al-Nāṣir's mosque in the Citadel with three axial entrances and a large dome above the *mīhrāb*, has a corner of its sanctuary cut off to follow a bend of the street. At the mosque of Āḡsunḡur (747-8/1346-7), the façade is not parallel to the *kibla* wall but instead projects with the minaret out into the street. The minaret, originally with four instead of the usual three stories, could thus announce the mosque from an even greater distance (Behrens-Abouseif 1985, *Minarets*, 92-3). The heavily damaged interior of the mosque is characterised by cross-vaulted bays carried by piers, indicating Syrian influence (Meinecke 1973).

The funerary mosque (750/1349) of the *amīr* Shayḡḡū is also laid out according to an irregular plan. Together with Shayḡḡū's great *khānqāh* built six years later across the street (757/1355), it forms an urban composition embracing the Ṣalība street with two symmetrical minarets and two similar portals. The *khānqāh* has only the sanctuary with the *riwāk* or hypostyle plan, with living units on the three other sides of the courtyard. The enormous dwelling compound behind the prayer hall is the only one of its kind extant in Cairo. The use of the hypostyle sanctuary of traditional mosques in a *khānqāh* had occurred already at the foundation of the *amīr* Ḳawsūn (736/1335), built in the cemetery to the southeast of the Citadel. Today, only a stone minaret and a mausoleum dome stand. A reconstruction, however, shows that it had a double mausoleum on each side of the hypostyle sanctuary with the dwelling units most likely occupying the other sides of the court (Alī Ibrahim 1974).

The idea of building a religious complex on both sides of a street had been applied previously by the *Amīr* Baṣṭāk (736/1336) with a *khānqāh* connected to a mosque with a bridge; only a monumental minaret is extant.

*The late Kalāwīnīd period.* Despite the political decline under the sons of al-Nāṣir Muḥammad and the devastation brought about by the Black Death (749/1348), the second half of the 8th/14th century was very productive and creative in terms of an architecture that continued to integrate exotic foreign patterns.

The *madrasa* of Ṣarḡitmiṣḡ (757/1356) displays the unusual combination of a four-*iwān* plan with a dome over the main *iwān*. The mausoleum dome projects boldly onto the street across the courtyard. The two domes are unexpected on the Cairene skyline; bulbous and with a high drum, their profile recalls Tīmūrīd architecture, which, however, they pre-date. The mausoleum dome has a double shell, while that of the prayer hall was rebuilt with only one. Similarly recalling Tīmūrīd dome profiles are the two ribbed onion-shaped masonry domes of the anonymous mausoleum known as Sulṭāniyya, which also have a double shell. The building has been assigned to the 750-60s/1350-60s. Despite the similarities, a direct influence from Samarḡand can be excluded on chronological grounds, but a common Iranian prototype from Western Persia or 'Irāḡ must surely have influenced the Samarḡand and the Cairo domes (Meinecke 1976).

It is paradoxical that the mosque of Sultan Hasan, the most monumental of Mamlūk mosques and even of all mediaeval mosques at that time, was founded in the decade following the depredations of the Black Death. Although it took from 757/1356 to 764/1362

to build, its decoration was never completed. The funerary complex which includes a *madrasa* for the four *madhhabs* is the first Mamlūk teaching institution to be at the same time a Friday mosque, a combination that was subsequently adopted in all princely foundations. The complex stands beneath the Citadel, where it dominated an open square with the hippodrome, plainly visible from the palaces of the sultans at the Citadel. It is the only Mamlūk mosque to present a mausoleum behind the prayer hall that occupies the same width. The original dome, which collapsed in the 18th century, was described by an eyewitness as bulbous; it might have been similar to the wooden dome of the ablution fountain in the courtyard that has a rounded profile and no drum, or to the domes of Şarhitmiş and the Sulţāniyya mausoleum that possess a high drum, the latter with a pointed profile. Only one original minaret is extant, that flanking the mausoleum at the eastern corner. At ca. 80 m it was the tallest of its time, though the other one was replaced by a smaller structure in the Ottoman period. The placement of a dome between two minarets created a new perspective on the Cairo skyline (Kessler 2000). Two more minarets were planned at the entrance, according to al-Makrīzī, and as the buttresses themselves show; one was built and collapsed shortly afterwards so that the ambitious project of four minarets had to be abandoned. Like the design of the portal itself, the pair of minarets betray an Anatolian Saldjūk influence, albeit more than a century after the end of the Rūm Saldjūk period (Rogers 1972). The vestibule is roofed by a masonry dome flanked by three half-domes suggesting Byzantine inspiration, while remnants of glazed tile decoration in the lunettes of the mausoleum windows show the continuity of the Tabrīzī workshop. All the three-storey living units are arranged so as to overlook the street on the northern and southern façades of the complex. The interior has four gigantic vaulted *iwāns* around the courtyard, the sanctuary being the largest vault in the mediaeval Muslim world. The four sections of the *madrasa*, which are accessible from the corners of the courtyard have an analogous layout, with their cells overlooking the street on two sides. Although craftsmen from different parts of the Muslim world are reported to have worked at this monument, it is in essence and spirit a Mamlūk building.

The architecture of the Bahrī Mamlūks maintained an experimental and innovative character till the end of this period. Dome profiles, minarets and portals were not fully standardised; instead a variety of forms coexisted. The classical hypostyle courtyard mosque or *riwāk* mosque was gradually replaced by the more flexible *iwān* plan. This type of plan, whose exterior was not reflected in its interior of four unequal *iwāns* built around a courtyard, could better accommodate irregularities in the plot. Since Sultan Ḥasan the *madrasas* and *khānkhāhs* of the subsequent sultans and *amīrs* functioned as Friday mosques as well. Beside the rectangular-octagonal-cylindrical minaret (Salār and Sandjar, Baybars al-Djashankīr, Sunkur al-Saʿdī, Kaṣṣūn) built in brick or masonry or in both materials with a ribbed domed pavilion (a disposition the Mamlūks inherited from their predecessors), the Bahrī period created a new, more slender type with a stone shaft, either octagonal (Māridānī) or cylindrical (Aḩsunkur, al-Nāşīr Muḩammad at the Citadel), and surmounted by an eight-sided pavilion crowned with a bulb on *muḩarnas*. Before masonry domes made an appearance in the mid-8th/14th century, Mamlūk domes were built either of brick or plastered wood.

Two types of profiles were used for the domes, one that curves from the base (Baybars al-Djashankīr, Sunkur al-Saʿdī) with a plain surface, and another that starts straight and curves at about one-third up the elevation. The second shape was used for ribbed and for carved masonry domes and is the characteristic form of later funerary architecture. During the Bahrī period, initial experiments with masonry domes were undertaken. At first ribbed like their brick predecessors, they later appeared in other varieties. With the dome of Tankizbughā (769/1359), its surface carved with alternating concave-convex ribs, and that of Ildjāy al-Yūsufī (774/1373), carved with twisted ribs, Mamlūk dome builders opened up a new era in the design of masonry domes (Kessler 1976). For the transitional zones of brick or wooden domes, squinches and pendentives were used. The squinches were structured into niches with several tiers resembling a large *muḩarnas*. The pendentives of the domes of al-Nāşīr's mosque at the Citadel and of Sultan ḩasan are made of wood. Stone domes were built mostly with angular pendentives carved with *muḩarnas*. Bahrī Mamlūk decorators used largely stucco decoration on minarets and dome exteriors and in interiors, along with polychrome marble.

(ii) *The Circassian period*

*Early Circassian (784/1382 to the mid-9th/15th century).*

Notwithstanding economic decline and monetary instability, the sultans and *amīrs* of this period continued to build religious foundations on a large scale. The Circassian period sets out with the reign of Sultan Barkūk (784-91/1382-89 [q.v.]), whose funerary religious complex in the heart of the city does not make use of any novelties. Its sanctuary, however, has a tripartite basilical composition with a wooden flat ceiling. The funerary *khānkhāh* of his son Farādī (801-15/1399-1412 [q.v.]) is the first to be built by a sultan in the northern cemetery and its layout takes full advantage of the available space, deploying perfect symmetry with a double mausoleum and a double minaret. Its zigzag carved stone domes are the largest built by the Mamlūks, with a diameter of over 14 m. It is built on the hypostyle courtyard plan with piers supporting domical bays. Living units occupying two storeys were placed along the lateral arcades of the courtyard (Lamei Mostafa 1968).

Sultan al-Muʿayyad Şhaykh's [q.v.] monumental, multifunctional complex of *madrasa-khānkhāh*-mosque (821/1418) possesses a similar layout to that of Farādī. This mosque became a Cairo landmark because of its twin minarets erected on top of the Fāţimid towers of the Bāb Zuwayla, which bear the only builder's signature to be found in Mamlūk architecture. The mosque also had a third minaret at the northeastern entrance.

The reign of Barsbāy (825-41/1422-38 [q.v.]) introduced masonry domes with carved star patterns. His funerary *khānkhāh* (835/1432) in the northern cemetery includes three star-carved mausoleum domes which exemplify the progress made in dealing with the difficult task of adapting a geometrical symmetrical design to a domical surface (Kessler 1976). The unique architecture of this *khānkhāh* demonstrates that the cemetery at that time had become an urban environment necessitating other than purely symmetrical layouts. Instead of being built around an inner courtyard, the elements of the complex are juxtaposed along the road. The mosque has a lateral format with the mausoleum chamber juxtaposed to it, occupying the same width and similarly overlooking the road. Further south is the *khānkhāh* proper with the living quarters. Other

structures were built on the opposite side of the road, including a one-dome *zāwiya*.

*Late Circassian (mid-9th/15th century to 923/1517).*

Although the hypostyle courtyard mosque never totally disappeared, in the 9th/15th century, Friday mosques were increasingly built without an open courtyard (e.g. those of Īnāl, Kāyitbāy and Kānṣawh al-Ġhawrī), adopting instead the plan of the *kā'a* or reception hall current in Cairene residential architecture since pre-Mamlūk times. Already, the 8th/14th century had produced small covered mosques with an irregular plan which included *iwāns* around a covered courtyard, the adoption of the *kā'a*, however, allowed the building of small covered mosques of a standard configuration. A major factor in the disappearance of the courtyard is the fusion of the functions of the *khānḳāh* with the *madrasa* and the Friday mosque; at the same time the abandonment of the original residential function of the *madrasa* and the *khānḳāh* rendered the cells around the courtyard superfluous (Behrens-Abouseif 1985).

The funerary mosque of Kīdīmas al-Ishākī (885-6/1480-1) is a genuine jewel of late Mamlūk architecture. It is remarkable not only for the refinement of its interior and innovative exterior decoration, but most of all for its almost triangular plan inserted between three streets, displaying an ingenious adaptation to the urban setting.

The reign of Kāyitbāy (827-901/1468-96 [see KĀ'IT BĀY] stimulated and refined architectural decoration, ushering in novel designs and techniques in both carving and marble inlay. The façade of his free-standing *sabīl-maktab* (879/1474) on Ṣalība Street and that of the mosque of Kīdīmas al-Ishākī present polychrome marble inlay of unprecedented intricacy.

During the 9th/15th century, domed *zāwiyyas* and mosques were built. The earliest known belong to Barsbāy's funerary complex, two others were founded by Yaṣḥbak min Mahdī, the Great *Dawādār*, in the northern outskirts; the larger one, known as *Kubbat al-Fadāwiyya* (884-6/1479-81) was lavishly decorated with stucco, an unexpected choice at this period. Their architecture differs from that of funerary domes, built in brick and on squinches, the exterior being plain and lacking the conventional transitional zone (Behrens-Abouseif 1981, 1982, 1983).

The reign of Sultan Kānṣawh al-Ġhawrī [q.v.] heralded a new era in the concept of architecture, with an emphasis on monumentality rather than minute decoration, at the same time bringing a new taste for ceramic revetment. At the Sultan's funerary complex (915/1501), the dome and the upper storey of the minaret were once entirely covered with lapis-blue tiles. This period also brought about an important change in the shape of minarets; the double bulb at the top was a new device and was used twice in combination with an entirely rectangular shaft at the two mosques of Kānībāy (908/1503, 911/1506), and once in combination with a faceted shaft at al-Ġhawrī's tall minaret at the Azhar mosque. Al-Ġhawrī's rectangular minaret at his own funerary mosque had four bulbs at the top. Kānībāy's funerary mosque (903/1503) beneath the Citadel unfolds a façade with an unusual broad format, inspired by its location overlooking the *maydān* from an elevated ground.

Kānṣawh al-Ġhawrī managed to acquire a plot in the very centre of the city which allowed him to construct his foundation on both sides of the street, an unprecedented layout which may be considered as the peak of the urbanistic approach of Mamlūk religious architecture. The mosque and the minaret on the

west side of the street face a monumental mausoleum, as deep as the *ḵibla iwān*, situated on the other side of the street and attached to a *khānḳāh* without dwellings and a *sabīl-maktab* projecting with three façades on to the street. A wooden roof covered the street, which widened to the north into a small piazza with booths and shops (Behrens-Abouseif 2002).

Although its layout is comparable to that of Kāyitbāy, the large funerary *khānḳāh* of the *amīr* Kurkūmās in the northern cemetery (911-13/1506-7) differs by its substantial proportions that make it one of the most monumental constructions in all Mamlūk architecture.

In the Circassian period, the harmonious juxtaposition of minaret and mausoleum dome continues to characterise the silhouette of funerary foundations. The increasing number of foundations of sultans and *amīrs* in the northern cemetery led to the urbanisation of its architecture that adopted the same street-oriented aesthetic criteria as in the city centre. This period maintained the tradition established in the late 8th/14th century of attaching to the religious foundation a *sabīl-maktab*, a structure consisting in a combination of fountain house with a primary school; the double structure was placed at a corner with the *sabīl* at ground level surmounted by the *maktab*. During the reign of Kāyitbāy, free-standing *sabīl-maktab*s were built, a tradition which was taken over in the Ottoman period. The reign of Kāyitbāy produced the domed *sabīl* recalling funerary architecture, such as the *sabīl* of Ya'kūb Shāh al-Mihmandār (901/1495-6) in Cairo and that of Kāyitbāy in the *haram* of Jerusalem.

In the late Mamlūk period, the forms of portals, minarets, and domes were standardised, displaying a variety in their carved decoration, however, and reaching the peak of refinement at Sultan Kāyitbāy's mausoleum (877-9/1472-4).

Stucco decoration disappears from late Mamlūk architecture except for a short-lived revival in the reign of Kāyitbāy, namely at the Dome of Yaṣḥbak, albeit in a very different style. Stone-carving is more extensively used than in the past, and now adorns also *mihṛāb* conchs. Groin vaults become fashionable in the late 9th/15th and early 10th/16th century, also characterising portal vaults.

**B. Residential and domestic architecture in Cairo**

Mamlūk residential architecture [see KĀ'A; RAB'] is less well preserved than religious (see Gracín *et al.* 1982). Half-a-dozen *kā'as* and the vestiges of four monumental palaces, those of Ālīn Āk, Kāwṣūn, Baṣṭāk and Tāz, date from the Bahrī period. These great princely residences were continuously restored and remodelled, making it difficult to assess their original form. Our knowledge of the different types of residential architecture has to rely on the enormous resources of *wakf* documents.

The courtyard of Cairene residences, to which the main entrance leads, is generally surrounded by stables and service rooms. Cairene residential architecture was not "inward-facing" in the sense that it overlooked the courtyard and remained blind to the street. The courtyard was not the centre of the house, as in Syrian or North African constructions, but simply a semi-private space. There was a general preference for giving the main rooms a view over the street or the available scenery, depending on the site. There could be more than one courtyard according to the size of the *dār*, and in large mansions a courtyard could fulfil the function of a garden.

The main reception hall or *kā'a* lay on the first floor, occupying the height of several storeys where

the smaller units or apartments (*riwāk* [q.v.]) were located. In the 9th/15th century, the *mak'ad* becomes a salient feature of residential architecture. It is a loggia facing north and overlooking the courtyard on the first storey. Its origin seems to be associated with the architecture of 8th/14th century princely stables. The 9th/15th century presents another category of residences of less monumental, middle-size type of dwellings, such as the house of Zaynab *Khātūn*.

The palaces of the Citadel, which had undergone continuous restoration and refurbishment work by all Mamlūk sultans, are no longer extant. The most remarkable were the *iwān kabīr* and the *kaṣr* built by al-Nāṣir Muḥammad and maintained by all subsequent sultans (see Garcin *et alii* 1982, 41ff.; Behrens-Abouseif 1985; Rabbat 1995). The first was a basilical construction of gigantic dimensions employing Pharaonic columns. It had a ceramic green dome, as did the Sultan's mosque nearby.

As is to be expected, the decorative repertoire of residential architecture did not differ particularly from that of religious monuments. The royal palaces of the early Bahrī period, however, did make use of murals depicting figures.

### C. Religious architecture in Syria

As mentioned above, Mamlūk architecture of Greater Syria, including Palestine, followed regional schools autonomous from the capital, hence need to be dealt with separately. (The following brief summary is based on Meinecke for Aleppo and Damascus and Burgoyne for Jerusalem.) Whereas Cairene builders emphasised the verticality of their monuments with recessed panels around the windows, their Damascene colleagues stressed the horizontal configuration of their buildings with striped (*ablak*) masonry as the essential exterior ornamental device. The use of recesses remained exceptional. In Damascus, the *madrasa* with the mausoleum of al-Zāhir Baybars built by his son Baraka *Khān* (676-8/1277-9) continues Ayyūbid traditions, with its four unequal-sized halls overlooking a courtyard; the prayer hall is connected to the domed funerary chamber. It is entirely decorated in glass mosaic, emulating the mosaics of the Great Mosque of Damascus (Meinecke 1992, i, 37-8). More characteristic, however, was a type of funerary foundations without a courtyard featuring two equal domes placed symmetrically on either side of the entrance, one of them with a *mihrāb* to be used as a gathering and prayer hall, the other for funerary purposes. The *madrasa* of Fāridūn al-ʿAdjamī (744/1343-4), that recalls Cairene architecture with its four *iwāns* around a courtyard, was a special case. In the 9th/15th century, *madrasas* with two axial *iwāns* across a courtyard were constructed; plain Syrian *madrasas*, unlike the Cairene, were mostly built without a minaret, and Syrian minarets themselves were essentially rectangular with a sole balcony. Whereas octagonal shafts were also built throughout the Mamlūk period in Aleppo, in Damascus they appear only in the 9th/15th century. The Syrian dome profile remained close to the pattern established under the Ayyūbids, being rounded and occasionally ribbed.

In Aleppo, the plan of the hypostyle *riwāk* mosque built on piers supporting cross-vaulted bays, with or without courtyard, prevailed. The *madrasas*, built around a courtyard, have a lateral sanctuary roofed by a series of domes; cells and rooms of various sizes occupy the three other sides.

The holy city of Jerusalem enjoyed the most intensive Mamlūk patronage in Syria. Although no new Friday mosque was founded in this period, beside the

one already existing at the Citadel, Mamlūk *amīrs* surrounded the Haram on three sides with *madrasas*, *khānkāhs* or *ribāts*, or multifunctional institutions, most of them with mausoleums, usually domed, attached to them (Burgoyne 1987). The mausoleums attached to buildings around the *haram* were always placed on the *haram* side. There was no standard plan, most religious foundations possessing a covered courtyard surrounded by a varying number of *iwāns* and rooms. The complex of the mighty governor of Syria Tankiz (729/1328-9) had a four-*iwān* *madrasa* with a vaulted courtyard. It is the most important Mamlūk foundation in Jerusalem, since it served urban needs with two *ḥammāms*, a dwelling complex and a covered market called *sūk al-kaṭṭānīn*. The only *madrasa* built by a Mamlūk sultan is the *Ashrafiyya* started by Sultan *Khushkadam* [q.v.] and rebuilt under the auspices of *Qāyitbāy* by Cairene craftsmen, hence its metropolitan style (Walls 1990).

In Jerusalem, unlike in other Syrian cities, minarets were attached to *madrasas* and *khānkāhs*; six extant ones are attributed to the Mamlūk period.

The city of Tripoli has a number of well preserved handsome Mamlūk monuments founded after Sultan *Ḳalāwūn* liberated it from the Crusaders in 688/1289. Throughout the following century, the city witnessed an intense building activity (Salam-Liebig 1983). Al-*Ashraf Khālif*, the son of *Ḳalāwūn*, founded the Great Mosque which was completed by his successor al-Nāṣir Muḥammad in 714/1314-15. The architecture of the city is characterised by its masonry domes and vaulted spaces. In mosques and *madrasas* the larger dome is often not the one over the *mihrāb*, but the central dome that covers the courtyard space (*Djāmi'* of Ṭaynāl, 1336; *Madrasa* of al-Burtāsī, 1320s). The portals display half-domes on elaborate *mukarnas* combined with carvings and *ablak* masonry. Syrian *madrasas*, unlike those in Cairo, often lack living units.

An interesting feature of Mamlūk religious architecture in Syria is the carving of foundation deeds (*wakfiyya*) on the external wall of the monument.

*Bibliography*: 1. Source material. For the study of Mamlūk architecture, beside the monuments themselves and their epigraphy (see van Berchem), an important number of *wakf* documents are of prime importance to the study of the buildings in their original form and function as well as their urban context. The significance of al-Maḳrīzī's *Khīṭāṭ* does not need to be emphasised, as well as Ibn *Dukmāk's* *K. al-Intisār li-waṣīṭat 'ikd al-amṣār*, *Bulāk* 1314/1896-7; see S. Denoix, *Décrire le Caire. Fustāt-Miṣr d'après Ibn Duqmāq et Maqrīzī*, *Cairo* 1992. Moreover, al-Maḳrīzī's *Sulūk* and all other Mamlūk chronicles and biographical encyclopaedias include valuable if scattered information on Mamlūk building activities. *Ewliyā Celebi's* *Siyāhatnāmesi*, x, *Istanbul* 1938, which gives a description of Cairo and its monuments in the 11th/17th century in the tradition of al-Maḳrīzī's *Khīṭāṭ*, includes a valuable account. The *Khīṭāṭ al-tawfiḳiyya* of 'Alī Mubārak (1888) continues, in the tradition of al-Maḳrīzī, the enumeration and description of Cairo's monuments down to his own time, often including information from *wakf* documents.

A comprehensive collection of plans of Mamlūk monuments in Egypt and Syria is to be found in the first volume of Meinecke's *Mamlukische Architekturstudien* (1992); the second volume lists all monuments known from the sources or from physical evidence to have been constructed in the Mamlūk period.

(b) *The decorative arts*

Mamlük art was less centralised than the other late imperial arts of the Muslim world as far as the decorative arts were concerned, a phenomenon due mainly to the absence of an equivalent of the Timūrid *kitābkhāna* or the Ottoman *nakkāshkhāna*. These royal workshops were in the first place set up to serve the arts of the book and thereby to fulfil the requirements of dynastic bibliophile patrons. While creating a repertory of designs for the illustration and illumination of books, they were involved in, and inspired, other media as well, the result being an interdisciplinary princely style. The Mamlük rulers were not renowned as great book-lovers; the libraries which they sponsored were primarily part and parcel of their religious foundations in the city. However, in the Bahrī period some crafts such as metalwork, glass and sgraffito ware advertised the aesthetic of titular epigraphy as the major decorative motif in art objects. Once the preponderance of titular epigraphy was no longer a characteristic feature of Mamlük objects, i.e. by the end of the Bahrī period, the decorative arts began to show different approaches to decoration across crafts as well as within the same craft.

#### A. Metalwork

The first period of Mamlük metalwork continues the tradition established under the Ayyūbids. Zodiac and courtly themes (hunting and musicians) combined with animal friezes, along with epigraphic, geometric and floral designs, to decorate vessels in the second half of the 7th/13th century. At the same time, one final flowering of figural compositions rendered in an unprecedented monumental style and with great individuality occur shortly before figural themes were to disappear altogether from metalwork at the beginning of the 8th/14th century. This is apparent on the two vessels signed by Ibn al-Zayn, the so-called Bapüstère de St Louis and the Vasselot bowl, both in the Louvre.

Mamlük metalware is also strongly indebted to the Mawṣil tradition of silver inlay, as indicated by the large number of craftsmen signatures with the *nisba* of *al-mawṣilī* inscribed on objects until the mid-8th/14th century. Craftsmen from Mawṣil are believed to have migrated to the Mamlük lands in order to escape the Mongol invasion. The continuity of *mawṣilī* signatures over a century after the end of the tradition in Mawṣil itself is a remarkable feature. During the first three quarters of the 8th/14th century, corresponding to the reign of al-Nāṣir Muḥammad and his sons, the Mamlüks produced a large number of exquisite brass objects with silver inlay decoration (and sometimes also with gold) with monumental epigraphic bands in *thuluth* script as main theme, delineating royal or

princely titles combined with blazons. During this period chinoiserie floral patterns were integrated into the Mamlük floral repertoire, along with the occasional Chinese dragon or bird motif. Among the objects produced were candlesticks, incense-burners, Qur'anic boxes with Qur'anic inscriptions, trays and tray bases, pen-boxes, ewers, bowls and basins. The shapes tended to vary little; Islamic metalworkers in general were more interested in surfaces than in creating new forms.

The Mamlüks also produced various types of suspended lighting implements unparalleled in the Muslim world, most of which are in the Islamic Museum in Cairo. There is a group of large open-work polycandelons (*tannūrs*) in cast bronze. Among them those bearing names of Amīr Kaḥṣūn, Sultan Ḥasan and Sultan Kaḥṣawh al-Ghawrī are remarkable. There are also polycandelons of pierced sheet-brass from the 9th/15th century. Composite lamps made of sheet-brass consisted of a tray, into which the glass lamps were inserted, surmounted by a spherical shade. The shade is densely pierced so as to form a translucent background against which inscriptions naming a sultan or an *amīr* stand out. Another group of lamps made of pierced sheet-brass was made in the shape of a truncated hexagonal pyramid, the base being the tray; it was produced throughout the entire Mamlük period. Some metal lamps are signed but none has the Qur'anic Verse of the Light which is so current on glass mosque lamps.

Very few metal art objects are known to have been produced between the last quarter of the 8th/14th century and the late 860-early 870s/1460s. With the revival of the production of metalware, a variety of new and disparate styles appear, without the monumental titular inscriptions characteristic of their Bahrī predecessors. One group consists of dishes, bowls, basins, and lunch boxes made of tinned copper, and engraved with a series of interlocking bands forming cartouches and medallions filled with alternating inscriptions, knotted motifs and tight scrolls; the inscriptions are mostly benedictory verses, though princely names occasionally occur. This group, which lacks the calligraphic aesthetics of the earlier period, is indebted to Western Persian metalwork.

Another group consists of bowls with a rounded profile; their surface is plain except for a triple engraved band near the rim with inscriptions of a somewhat vernacular style with poetry and homilies. This group, too, harks back to some very similar Persian prototypes from 8th/14th century Shīrāz.

A group of spherical hand-warmers, lidded bowls and ewers with predominantly knotted and braided motives are attributed to late Mamlük Syria. Some of the vessels combine a Mamlük decoration with a European vessel, which indicate that objects were sent from Europe, mainly Italy, so as to be decorated in Egypt or Syria.

The group formerly known as Veneto-Saracenic and wrongly attributed to a Muslim workshop in Venice, has been now convincingly attributed to a late Mamlük production (J. Allan 1986). The group differs strongly from mainstream Mamlük metalware; their decoration is minutely engraved with unmatched refinement, recalling some Timūrid jugs, with new forms of scrolls and floral patterns against which silver-inlaid curved lines interlock to form neo-arabesques or lobed cartouches. The most famous of these vessels, many of which seem to possess European bodies, are signed by Mu'allim Mahmūd al-Kurdī, one of about half-a-dozen identified craftsmen.

There is also a group of high-quality, luxurious basins with shallow faceted forms mentioning the name of Sultan Kayitbāy. The facets and the relief patterns also point to Persian influence. A magnificent piece in Istanbul is inlaid with silver and gold.

#### B. Ceramics

Mamlük pottery can be divided into seven decorative and technical categories: sgraffito, slip-painted, underglaze-painted, overglaze-painted lustre, celadon imitations, unglazed moulded and unglazed painted ware.

The Mamlüks both imported and also imitated China celadon ware, and it is this imitation product, comprising a buff body with copper or red glaze in Chinese-inspired forms, that forms the largest group of wares unearthed at Fustāt. Sgraffito forms the most characteristic group of Mamlük pottery. It is made of a coarse red clay, the design being scratched through the slip to reveal red lines from underneath a brownish or green glaze. The forms are related to those of metalwork, as is the decoration, which consists essentially of titular epigraphy with benedictions and blazons, which date them to the first half of the 8th/14th century. Some of these objects were made for the

kitchen, as is attested by an inscription on a bowl in the al-Şabāh Collection in Kuwait. Another type of coarse red bodied vessels show a white slip painted in brown, green or yellow.

Underglaze-painted ware constitutes a very different case. Produced in Egypt and Syria in large quantities, this group is rarely inscribed. Syrian ware is supposed to possess a firmer and finer body with a sharper executed design, and some pieces are made of red earthenware. The vessels (jars, albarelli, bowls, dishes, and goblets) have a porous greyish white frit body covered with a white slip painted in blue, black, green and turquoise under a transparent glaze. Their designs are mostly geometric, dishes and bowls displaying an interior radiating motif centred at the bottom of the vessel. The geometric design is filled in with floral motifs and sometimes adorned with calligraphic decoration. They can easily be, and are sometimes, confused with Persian Sulţānabād ware. They also include representations of animals (birds, rabbits, fish and horses), and fragments with figural representations were also found. As mentioned above, craftsmen from Fabrīz worked in 8th/14th century Cairo in the production of ceramic for architectural decoration.

In the 9th/15th century, a new style of underglaze-painted ceramic was developed, imitating the Chinese Ming blue-and-white wares imported in large quantities to the Mamlük lands. The vessels of this period very often bear craftsmen's signatures, which show that the same workshop could turn out a variety of styles. Some *nishas* of craftsmen (*al-hurmuzī*, *al-tawriẓī*) point to a Persian connection. In the early 9th/15th century, ceramic revetment was used in Syria and in Egypt in the form of underglaze-painted tiles decorated similarly to contemporary vessels. The Mosque of Ghars al-Dīn al-Tawriẓī in Damascus (826/1424) contains a tile-clad *mihṙāb* signed by Ghaybī al-Tawriẓī, who also produced vessels and tiles in Cairo. Epigraphic blazons of supreme workmanship, inscribed with the name of Sultan Kayitbāy set in a tympanum with blue-and-white floral decoration patterns, used to decorate a building of this sultan. The drum of al-Ghawri's mausoleum dome, itself once covered with blue tiles, also presents a blue-black and white underglaze-painted inscription along its drum (Prost 1916, 11ff.). The mausoleum of the *amīr* Sulayman dated 951/1544 is adorned with a similar inscription on its drum; the tympanums of its exterior door and windows include ceramic tiles with underglaze painted epigraphic and floral patterns.

Although lustre-painted ware is generally attributed to Syria, wasters found at Fustāt confirm the existence of Egyptian production (A. Yusuf 2000). Mamlük lustre-painted ware which was exported to Europe is characterised by its beautiful golden lustre in blue, turquoise and brownish red.

#### C. Glass

Like metalwork, Mamlük enamelled and gilded glass continued the tradition of the Ayyūbids, using the same techniques and forms. After the craft reached its apogee, the production eventually came abruptly to an end in the late 8th/14th century. Although scholars have assigned the production of enamelled and gilded glass to Syria, where the technique was born, more recent research attributes a more preponderant role in this craft to Egypt, in light of the fact that the bulk of the consumption was there and that most of the objects concerned have been found in that region (Scanlon 1998). Timūr's sack of Damascus in 803/1401 is usually considered the reason for the abrupt end of this craft in Syria. However, Alexandria could have been another centre of production; a *wakf* document of Sultan al-Nāṣir Muḥammad (published by Muḥammad Amin in his edition of Ibn Ḥabīb's *Tadhkirat al-nabih*, ii, Cairo 1982, 432) refers to a glass factory in Alexandria belonging to the Sultan's *wakf* for his religious complex at Siryākūs. Unfortunately, it does not specify what kind of glass was produced there. The sack of Alexandria by Pierre de Lusignan of Cyprus in 1365 had a catastrophic effect on its economy. It may have had repercussions on its glass production and explain the fact that the few objects known to have been produced in the 770s/1370s show a marked decline in the quality and extent of enamelled decoration. Certain objects, such as beakers made for export, are not documented after the 770s/1370s. A short revival took place under Sultan Barkūk, to whom about forty enamelled and gilded lamps are attributed. One should

not exclude the presence of more than one centre of production. An enamelled lamp mentioning the name of Sultan Kayitbāy (Wiet 1937), entirely different in style and techniques, testifies to endeavours during the artistic revival that took place under the auspices of this sultan.

Mamlük glassmakers used a variety of shapes, sometimes in highly unusual large sizes, such as mosque lamps, goblets, bowls, flasks, bottles and vases, some of which are reminiscent of metalware. The glass was white or tinted, and never of perfect clarity. An outstanding group of enamelled and gilded vessels was those made of deep-blue glass, such as the famous Cavour vase (Newby 1998). The colours of the enamel—blue, red, yellow, green, brown, white and black—were applied as a vitreous paste, along with the gold, which fused with the surface upon firing.

As in metalwork, figural representations on secular objects were used until the 8th/14th century when they were replaced by epigraphy and blazons. The patterns, drawn with hair-thin lines, are extremely intricate. The mosque lamps made for Cairene religious buildings are among the most spectacular specimens of Mamluk glass; they bear a verse from the Sūra of Light (xxiv, 35) around the neck; whenever a patron's name is inscribed, it appears on the belly.

The Mamlüks also produced marvered and colourless vessels, as well as other types, moulded and/or with applied threads. Mamlük glass was widely exported to all of Europe and to China.

(DORIS BEHRENS-ABOUSEIF)

#### D. Arts of the book

Although little remains from the previous Fātimid and Ayyūbid periods, for the Mamlüks we have a wealth of material, both religious and secular, indicative of extensive book production and patronage. In fact, Mamlük book production is comparable in volume and quality with that of major contemporary centres such as Il-Khānīd Tabrīz and Timūrid Harāt. Many illustrated and illuminated examples survive, and we also have several original bindings.

(i) *Ḳurʿāns*

Despite the evident connections between *Ḳurʿāns* and secular books in terms of illumination and binding, for the sake of clarity they are best approached separately. As James (1992, 150) has pointed out, the particularly fine and grand *Ḳurʿāns* that survive, the best dating from the 14th century and the first decade of the 15th, were made under the patronage of a sultan who then endowed them as *wakf* to a particular religious foundation or mosque, where they were generally reserved for ceremonial use. They are mostly in single volume form; few multi-volume *Ḳurʿāns* withstood the intensive everyday use to which they were generally exposed.

One of the earliest outstanding Mamlūk *Ḳurʿāns* that we possess is, however, in seven volumes (London, B.L., Add. 22,406-22,413). It dates from 705/1305-6 (Lings and Safadi 1976, nos. 66-9, James 1988, no. 1) and was copied for Sultan Baybars by Ibn al-Wāḥid, an outstanding calligrapher of the early 8th/14th century (al-Ṣafadī, *Wāfi*, no. 1104, and Ibn Ḥajar al-ʿAskalānī, *al-Durar al-Kāmina*, Ḥaydarābād 1348-50/1929-32, no. 3740). The illumination was the work of three artists, Muḥammad b. Muḥādīr, the famous Muḥammad b. Abī Bakr, known as Ṣandal, who lived in Cairo at the beginning of the 8th/14th century; and his pupil Ayduḡḥdī b. ʿAbd Allāh al-Badrī, through whom Ṣandal's style maintained its influence until the 1330s. (see James 1988, ch. 3 for other works by these illuminators and for a discussion of the question of Il-Khānīd influence; for Ṣandal, see Ṣafadī, no. 4843). Although there are evident differences between their individual styles, the general consistency of design indicates that one artist, almost certainly Ṣandal, had overall control. As is general in Mamlūk *Ḳurʿāns*, the illumination is concentrated in the frontispieces, opening pages of text and the final colophon page. Marginal ornaments in the main body of the text consist of the words *khamsa* and *ʿashara* in gold Kufic over a piece of arabesque scroll. But one may also argue that illumination is projected onto the text itself, for in contrast to the normal use of *nashkḥ* in this period, its large *ḥulūḥ* unusually written in gold letters outlined in black, makes it visually special and rich.

Another *Ḳurʿān* signed by Ṣandal as the illuminator (Dublin, Chester Beatty Library, Is 1479; see Arberry 1967, no. 59; James 1980, no. 25; James 1988, no. 3), and datable to between 704-10/1305-10, has a similar type of illumination, but with the striking addition of the use of relief. On the two carpet-like opening pages, the geometric figures of the decoration are given an impression of three-dimensionality by the fact that alternating pentagons are in relief. The equally innovatory carpet-like design consists of a central block with a geometrical formation interrupted by borders surrounded on three sides by a thick band, from which protrude thin spikes almost like the fringes of a carpet.

It also occurs in combination with relief in other examples such as that dated 735/1334 and copied in Cairo by Ahmad al-Mutaʿabbib (Cairo, Dār al-Kutub, *Ḳurʿān* ms. 81; see Atīl 1981, no. 3, also James 1988, nos. 15-18). Both scribe and illuminator, he was responsible for a new type of *Ḳurʿān*, introduced by ca. 720/1320, which is characterised by a larger format with illumination of high quality, and in which the preferred script is *muhakkak*.

From the 1330s to the 1360s, Damascus, too, was an important centre of manuscript production (for a discussion of illustrated secular manuscripts from

Damascus, see below). It seems, moreover, to have been stylistically innovative, and a distinctive feature in *Ḳurʿāns* of this period that may have originated there (James 1992, 172-5) is the star polygon style, where the page is dominated by a large central starburst made up of symmetrically enmeshed small polygons. One such *Ḳurʿān* (London, Khalili Collection, Qur807; see James 1992, no. 43), datable to ca. 730-40/1330-40, has a colophon (fol. 296b) stating that the scribe worked on it in the Umayyad Mosque, and there is a stylistically related Arabic translation of the Four Gospels, copied in 741/1340 for a Damascene cleric (Cairo, Coptic Museum, Ms. 90; see Simaika Pasha 1939, pls. XVIII-XX). Like several other Christian manuscripts of the period, it was illuminated in the manner of contemporary Islamic manuscripts, so that it also has other features in common with the Khalili *Ḳurʿān*, and there are another two such manuscripts with similar illumination that are also known to have been produced in Damascus, one, a Gospel in Arabic, now in Istanbul (Topkapı Sarayı Library, Ahmet III, 3519; see Leroy 1967), the other, the Epistles and Acts of the Apostles in Arabic, in St. Petersburg (Academy of Sciences, D-228; see Khalidov, in Petrosyan (ed.) 1994, no. 23). The latter was commissioned by a certain "Jakomo", thought to have been an Italian Consul to Syria, and was copied by the monk Thomas (*Tūmā al-mutarahhib*), known as Ibn al-Ṣafī, in 742/1341 (for a list of eight manuscripts with some evidence of provenance from Damascus, see Contadini 1995, n. 8). To be noted also, from the 8th/14th century, is the diffusion of Mamlūk styles of illumination and binding from Damascus to Anatolia (see Tanındı 1991 and 2000).

There are also some superbly illuminated later *Ḳurʿāns* in the star polygon style from Cairo, datable to the reign of Sultan Shaḥbān II (r. 764-78/1363-76). During the latter part of his reign, however, between 770/1369 and 778/1376, an entirely new style of painting was introduced in Cairo by Ibrāhīm al-ʿAmīdī. Its most important departure was the abandonment of the preceding norm of infinite recursivity in geometric patterning, so that there could now be large blocks incorporating irregular figures. But he was also innovative with regard both to his subtle use of colour reversal and to the wider range of his palette, which was much more like that of ʿIrāq and Persia in the first half of the 8th/14th century (Cairo, Dār al-Kutub, *Ḳurʿān* mss. 9, 10 and 15; see James 1988, nos. 31, 32, 34 and 35). This style was to be followed until the early 9th/15th century.

(ii) *Secular manuscripts*

Abundant evidence for the arts of the book is also provided by the numerous illustrated and/or illuminated secular manuscripts that survive. They represent various literary genres, some continuing earlier traditions, as, for example, scientific manuscripts and the great literary cycles of the *Maḳāmāt* and *Kalīla wa-Dimna*, others reflecting the particular interests of certain strata of Mamlūk society, as witnessed, for example, by the revival of the Furūsiyya [*q.v.*] genre.

The illustrated manuscripts show a variety of pictorial sources. Several contain what may be termed "classical" elements that link them to 7th/13th century styles as exhibited, for example, in the Syro-ʿIrāqī al-Ḥarīrī *Maḳāmāt* in the Bibliothèque Nationale (Arabe 6094) dated 619/1222, and thus ultimately to Byzantine models of portraying the human figure and dress. Although incomplete, the al-Ḥarīrī *Maḳāmāt* in the British Library (Add. 7293), dated Rabīʿ II 723/April 1323 allows us to see the prolongation of

this style into the Mamlūk period. (For both manuscripts see Grabar 1984, no. 2, pp. 8-9 and no. 9, pp. 14-15 respectively.)

Equally noteworthy is their frequent combination with elements of Saldjūk origin which provide links with North Džazīran 7th/13th-century manuscripts. They affect especially the human face, which is typically round, with narrow eyes, small mouth, straight, small nose and long hair, often with a curl in front of the ear (for lists of manuscripts with "classical" and Saldjūk influences, see Contadini 1988-9, nn. 29, 40). An early Mamlūk example showing strong Saldjūk influence is the Ibn Buṭlān *Risālat Da'wat al-atibbā'* in the Ambrosiana Library in Milan (Ms. A. 125 Inf.) dated Djumādā I 672/December 1273 (see Mihriz 1961; also Löfgren and Traini 1975, vol. i, no. LXX, col. pls. I-VI).

The pictorial repertoire also includes features of Il-Khānid origin as, for example, in a particularly striking early 8th/14th-century al-Ḳazwīnī *'Adjā'ib al-makhlūkāt*, where they are combined in a masterly fashion with "classical" elements (see Carboni and Contadini 1990; for Mamlūk/Il-Khānid relationships, see Rogers 1972). But it is essentially the integration of "classical" and Saldjūk features that characterises Mamlūk style, whereas the Il-Khānid element, consisting of landscape features such as large lotus flowers, recessed planes to provide depth, and the use of free brush strokes (e.g. for leaves), normally affected specific features without resulting in a similar stylistic fusion.

There were doubtless several centres of production of illustrated manuscripts, but very few colophons identify a place. However, we can at least be certain about Damascus and Cairo. Damascus again comes to the fore at the beginning of the 8th/14th century, as demonstrated by a *Makāmāt* in the British Library (Or. 9718), which contains the name of the scribe and illuminator (fol. 53a), Ghāzī b. 'Abd al-Rahmān al-Dimashkī, who lived and worked there and died in 709/1310 (see Mayer 1942; Grabar 1984, no. 7, p. 13. For al-Dimashkī, see Ibn Ḥadjar al-'Askalānī 1929-32, vol. ii, p. 134).

A provenance from Damascus can also be argued for a further four illustrated manuscripts dated between 734/1334 and 755/1354 on the basis of stylistic affinity, allied to documentary evidence concerning the compiler of one of them, the Ibn Bakhtīshū' *Kitāb Manāfi' al-hayawān* in San Lorenzo del Escorial dated 755/1354 (Ar. 898; see Contadini 1988-9, with bibl.). Their illustrations have very similar characteristics, not all, however, shared by other Mamlūk manuscripts, such as the solid gold background of their miniatures and the frame consisting of one or more blue lines with decorative additions. At the same time, they conform to Mamlūk norms by containing pronounced Saldjūk features and, if in differing degrees, Il-Khānid ones. Further, the illumination in all four is very similar, when not identical, to that of the Khalīlī Ḳur'ān and the two Christian manuscripts mentioned above which also come from Damascus. This style of illumination will survive in Damascus until well into the 9th/15th century, as demonstrated by a copy of *Fākihāt al-khulafā' wa-mufākahāt al-zurafā'* (St. Petersburg, Academy of Sciences, C-651; see Khalidov, in Petrosyan (ed.) 1994, no. 32) by the Damascene Abu 'l-'Abbās Ahmad b. Muḥammad b. 'Arabshāh, copied by Ism'īl b. 'Abd al-Rahmān al-Iṣfahānī in Rabī' I 852/June 1448 under the author's supervision.

For Cairo, on the other hand, we lack direct evidence for production, although it is generally thought that those manuscripts that have a more "classical",

conservative style might have been produced there rather than in the more innovative Damascus.

The little that survives of late Mamlūk painting exhibits a rather striking stylistic blend which also absorbs Djalayirid, Turkmen and Ottoman influences, especially with regard to the depiction of landscape and costume. Representative examples are the late 8th/14th-century *Kashf al-asrār* by Ibn Ghānim al-Makḍisī (Istanbul, Süleymaniye Library, Kara Ismail 565; see Ettinghausen 1962, pp. 158-9), the mid-9th/15th-century *Kitāb al-zardāka* (Istanbul, University Library, inv. no. 4689; see Bittar 1996, 158), the *Iskandar-nāma* of Aḥmadī datable to 872/1467-8 (Istanbul, Univ. Library, T6044; see Atıl 1984) and the early 10th/16th-century *Shāh-nāma* (Istanbul, Topkapı Sarayı Library, Hazine 1519; see Zajaczkowski 1965 and Atasoy 1966-8) made for Sultan Ḳānsawh al-Ghawrī (r. 906-22/1501-16).

### (iii) Bindings

Numerous Mamlūk bindings have survived, consisting predominantly of leather with blind tooling, although often features are highlighted in gold.

There are resemblances between Mamlūk and Ottoman bindings of the 8th/14th and early 9th/15th centuries (Raby and Tamnūdi 1993, 7-11 and ch. 1), while at the same time 8th/14th-century examples may resemble contemporary Persian bindings, as is shown by two Ḳur'āns in the Chester Beatty Library in Dublin, one (of ca. 746/1345, Is 1465, see James 1980, no. 33) made in Cairo, the other (dated 738/1338, Is 1470, see James 1980, no. 49) in Marāgha. Both have bindings in light brown leather with a pointed star in the centre of an empty field with a scalloped decoration at its outer border, the whole decorated with blind tooling. In other examples, the central ornament is an oval medallion, and in either case related designs appear in the four corners of the field.

This type of composition was to remain important, but more examples survive of a second type in which the whole field is covered. There are examples with arabesque or floral designs, but more frequently we find strapwork forming polygonal compartments which often contained tooled knotwork motifs, with the strapwork sometimes radiating out from a central star which echoes the star polygon style of illumination.

Bindings were sometimes lined with silk, but more often the doublers were decorated with block-pressed leather. During the period of Sultan Ḳāyitbāy (r. 872-901/1468-96), we witness an age of experimentation which includes the use of filigree for both inner and, especially, outer covers. This seems to reflect influence from Persia, where, in the 9th/15th century, filigree was already the norm. The use of filigree, together with other Mamlūk features of layout of design, were in turn to influence Italian bookbinders of the late 15th century (Hobson 1989, ch. 3).

## (iv) NUMISMATICS

While the coinage of the Mamlüks was manufactured from the usual metals: gold, silver and copper, with the traditional Islamic denominational names: dīnār, dirham and *ḡals* [q.w.], it belonged to a distinctive currency family of its own which underwent a process of evolution unlike that of any other coinage series. Its 267-year history can be divided into three distinct periods that overlap one another to a greater or lesser extent.

The first period was little more than a continuation of the late Ayyūbid style of gold dīnārs and silver dirhams as struck by al-Šālih Ayyūb. The field legends on the dīnārs were in circular fields with a single prominent marginal inscription, while those on the dirhams were in a square field with the remaining texts in the four marginal segments. This "pseudo-Ayyūbid" coinage was issued between 648 and 658/1250-60, from the accession of Šadjar al-Durr until that of al-Zāhir Baybars. While the weights of the dīnār and the dirham were not consistent enough for payments to be made by tail, individual pieces roughly approximated the weight of the coinage dīnār/*mithkāl*, 4.25 gr, and the canonical dirham, 2.97 gr.

The second coinage type was initiated by al-Zāhir Baybars, the real founder of the Bahri Mamlük state. While the legends on his dīnārs continued to be placed in a circle within a surrounding marginal legend, their calligraphy was carried out in a thinner and more refined *nashkī* script than that previously used. At the same time that the dies became wider in diameter, the flans upon which there were struck became thinner and more irregular in shape, so that large portions of the marginal legends are usually missing from the struck coins. Because these legends carried the mint and date formula, it is often difficult to place and date early Bahri Mamlük dīnārs. With the passage of time, marginal legends became smaller and less legible until they shrank away altogether and their inscriptions were incorporated into the field legends. The Bahri Mamlük dirham lost its original square in circle design and became a simple field legend inscribed in a circle with the mint and date around the edge in discontinuous words.

The Bahri Mamlük-style dīnār was struck from 658/1260 until 830/1427 and the dirham from 658 until the early 800s/1400s. Both coins were beset by

highly irregular weights and careless manufacture. The gold is usually regarded as no more than stamped ingots of totally random weights. The purity of the metal, however, was guaranteed by the sultan's stamp which ensured the high standard of its fineness as a trade commodity. The dirham, while less irregular in weight, was a shabby simulacrum of the attractive coinages of the preceding centuries. It was manufactured from silver approximately two-thirds fine then often struck cold on irregular flans. The variety usually regarded as a full dirham weighed around three grams, but there was a second type, regarded as a fractional dirham, whose flans were cut from bars with a chisel and then stamped with dies twice or more the size of the flans so that only one or two words of the legends were visible on their surface. Another method of manufacturing flans for fractional dirhams was to pour the molten metal over a cone of charcoal immersed in a bowl of water. The splattered droplets of base silver would then be stamped and placed in circulation.

Since Mamlūk gold had virtually ceased to be used in regular trade and silver was too rare to be a reliable standard of exchange, the Bahrī Mamlūk state was forced to rely on the copper *ḡals* as its principal coinage metal. Copper was struck from the reign of Baybars onwards, initially with random weights and designs, but later, during the second reign of al-Nāṣir Ḥasan in 759/1358, the *ḡals* took on the status of an official coinage metal as the copper or trade dirham, probably due to the economic hardship caused by the Black Death in Egypt in the previous decade. As a result, enormous quantities were put into circulation, a perfect illustration of Gresham's Law, because silver became virtually unobtainable. Although these *ḡalūs* "dirhams" were theoretically struck at the familiar weight of one *mithkāl* apiece, their metallic value was purely nominal. The mints were therefore under no compulsion to maintain their theoretical weight or to put any concerted effort into maintaining the quality of their manufacture. Thus it was that by the turn of the 8th/14th century the commercial classes of Egypt and Syria had lost all trust in their native currency and had turned, for lack of better, to the use of foreign coins.

In the second half of the 7th/13th century, the trading states of Italy were able to introduce and maintain stable gold coinages which became the standard commercial currencies of the Mediterranean and beyond. The first of these were the Florentine and Genoese florins which appeared in 1252 (A.H. 650), followed by the Venetian ducat in 1284 (A.H. 683). All three weighed slightly over 3.50 gr, with roughly the same diameter, and were thus easily exchanged against one another. The plentiful supply of these coins and their dependable value, much like the use of the U.S. dollar in financially-troubled countries today, made them the currency of choice in Levantine trade.

The pressure for currency reform grew to the point where the Burdjī Mamlūk ruler Faraj made a second attempt at reform in 810, although al-Maḡrīzī records 811, introducing the new sequin, ducat or florin-style Nāṣirī dīnār. These coins, weighing 3.50 gr, were the Islamic equivalent of the Venetian ducat and were intended to supplant it in local trade. They, too, were issued concurrently with the ingot-style dīnārs between 810 and 815 in the name of al-Nāṣir Faraj, the ephemeral ruler, the caliph al-Musta'īn in 815 and al-Mu'ayyad Ṣhaykh in 815 and 816.

The rulers and the mints were clearly in a quandary over how they could keep the Mamlūk gold coinage both Islamic in character and competitive in value with the ducat and could restore the silver dirham in its weight and alloy to become a reliable coinage for daily purposes. The silver reform began in 815/1412 and continued for at least the next seven years. The new coinage was struck on the dirham standard weighing 2.70 gr, with a half of 1.35 gr and a quarter of 0.67 gr. It imitated a well-known Ayyūbid design used on the Damascus coinage of al-'Adīl Abū Bakr I, a by-word for excellence from the distant past. Then, in about 820, al-Mu'ayyad Ṣhaykh followed up his reform silver with another attempt at a *mithkāl*-weight gold coinage. Two dīnārs are known dated 821 and 823 and a single half-dīnār from 823. This attempt at reform apparently went unnoticed by contemporary historians. Al-Mu'ayyad Ṣhaykh was succeeded after his death in 824/1421 by three ephemeral rulers until al-Aṣḥraf Barsbāy came to the throne in 825/1422. No gold of his is published dated between 825 and 829. The last ingot-style dīnārs to be recorded are rare issues of his dated 829 and 830. The former year, however, witnessed the re-introduction of the 3.50 gr ducat-style coinage, a reform which brought the Mamlūk lands into what became in effect an eastern Mediterranean monetary union. The new Mamlūk dīnār, as struck by al-Aṣḥraf Barsbāy, was known colloquially as the *aṣḥrafi*, a name which followed it wherever the denomination went, to the Aḡ Ḳoynlū, 'Oḥmānlīs and Ṣafawids in the East and to the Maḡhrībī states in North Africa.

Because the new coin was of reasonably standard weight and alloy, prices could be established by numbers of actual coins rather than by weight of metal. In this connection, it is interesting to note that many Umayyad and 'Abbāsīd dīnārs originally struck on the monetary *mithkāl* standard have been found clipped down to the weight of the *aṣḥrafi* in order to enable them to pass current in trade. This convenience was also available to those who paid in silver, the most popular coin being the half-dirham or *mu'ayyidī*, later known as the *medīn*, a denomination which, like the *aṣḥrafi*, remained in use in 'Oḥmānlīs lands until the early decades of the 12th/19th century.

The legends on the Mamlūk coinage are divided into the religious and the secular. The religious are drawn from the Holy Ḳur'ān, the principal text being the declaration of faith, or *kalīma*: "There is no god but God" followed by the Divine Commission "Muḥammad is the Messenger of God", sūra XLVIII, 29, and then the words of prophetic witness in whole or in part: "He sent him with the guidance and [the] faith of the truth, so that he may proclaim it above every faith even if the polytheists dislike (it)", IX, 33 or LXI, 9. This text is frequently supplemented by a phrase from III, 122, which, because of its regular use, could be characterised as the Mamlūk "symbol" or motto: "For victory comes but from God". Occasionally another phrase from XI, 88, was used: "And my success [in my task] can only come from

the religious and the secular. The religious are drawn from the Holy Ḳur'ān, the principal text being the declaration of faith, or *kalīma*: "There is no god but God" followed by the Divine Commission "Muḥammad is the Messenger of God", sūra XLVIII, 29, and then the words of prophetic witness in whole or in part: "He sent him with the guidance and [the] faith of the truth, so that he may proclaim it above every faith even if the polytheists dislike (it)", IX, 33 or LXI, 9. This text is frequently supplemented by a phrase from III, 122, which, because of its regular use, could be characterised as the Mamlūk "symbol" or motto: "For victory comes but from God". Occasionally another phrase from XI, 88, was used: "And my success [in my task] can only come from

God". While the *kalima* is only found on the obverse, the supplementary phrases appear above either the obverse or reverse fields, or on both.

The reverses on the gold and silver coinage carry the royal protocol. In the first Bahrī Mamlūk period, the ruler was simply entitled *Malik*, or in the exceptional case of *Shadjar al-Durr*, *Malikat al-Muslimin*. This was usually followed by a *lakab*, e.g. Nūr al-Dīn, the ruler's name and that of his father, if of royal parentage. Rulers also placed the name of their spiritual overlord, the 'Abbāsīd caliph al-Musta'šim bi'llāh, on the obverse field, but after his overthrow in 656/1258 his name was removed from the legends.

The establishment of the 'Abbāsīd caliphate in Cairo by al-Zāhir Baybārs in 659/1261 reinforced the legitimacy of the Mamlūk state by relocating and naturalising the font of honour in the Islamic world and making the caliph an officer in the Mamlūk court. The first caliph, al-Mustanšir, repaid the offer of refuge by granting Baybārs the double title of *al-Sultān al-Malik* and the honorific *Kāsim Amīr al-Mu'minin* "Partner of the Prince of the Believers". After al-Mustanšir's early death, Baybārs briefly recognised his successor al-Hakīm on the Syrian coinage, but thereafter the caliph's name was omitted. The title *Kāsim Amīr al-Mu'minin* was also included in the royal protocols of *Qalāwūn*, *Kitbughā*, Baybārs II and the early coinage of Muḥammad I after which it, too, ceased to be used.

The early Bahrī rulers of non-regal parentage proclaimed themselves as former royal Mamlūks, Baybārs and *Qalāwūn* used the *nisba* of *al-Šāliḥī* (after al-Šāliḥ Ayyūb) on their coins, while *Kitbughā*, *Lādjin* and Baybārs II placed *al-Manšūrī* (after al-Manšūr *Qalāwūn*) on theirs. The use of the *nisba* was discontinued on the accession of al-Nāšir Muḥammad I b. *Qalāwūn* because all subsequent Bahrī rulers were either his sons, grandsons or great-grandsons. Thus the protocol of the penultimate Bahrī ruler reads: *al-Sultān al-Malik al-Manšūr 'Alā' al-Dunyā wa 'l-Dīn 'Alī b. al-Malik al-Ashraf Ša'bān b. Husayn b. Muḥammad 'azza našruhu*. The succeeding Burdjī Mamlūk rulers included their royal paternity wherever possible, but as the great majority succeeded through the consensus of the *amīrs* or by *coup d'état*, the inclusion of a *kunya* in the royal protocol was used as a substitute for royal paternity. Thus: *al-Sultān al-Malik al-Ashraf Abu 'l-Naṣr Barsbāy 'azza našruhu* or *al-Sultān al-Malik Abū Sa'īd Khushkadam 'azza našruhu*. Note that the protocol is followed by the pious invocation *'azza našruhu* "may his victory be glorious" or, occasionally, *khallada Allāh mulkahu*—"may God perpetuate his kingly rule". Many other Islamic dynasties made free use of these invocations to honour their rulers.

The Mamlūks operated mints in both their Egyptian and Syrian possessions. Cairo, *al-Kāhira*, struck coin for all rulers except for a few rebels or usurpers whose power base lay in Syria. Its principal responsibility was to coin gold and silver, while copper production only became important during the silver shortage from 759 to the end of Barkūk's first reign in 791. The second Egyptian mint was Alexandria, *al-Iskandariyya*, which mainly struck gold between 650 and 693 and then again from 752 until 824. During the latter period it also participated in the ruinous production of copper dirhams.

The main Syrian mint (the second in the state) was located in Damascus, *Dimashk*. As might be expected, its silver and copper is very well known because silver was the more popular coinage metal in Syria, although gold is frequently found. The next in impor-

tance is Aleppo, *Halab*, well known for its silver and copper, with occasional gold issues. The other Syrian mints are *Hamā*, *Hamāt*, Tripoli, *Tarābulus*, and the recently identified Latakia, *al-Lādhiqiyya*. The first two produced sporadic issues of silver, but more often copper, while the third is known from only two silver pieces struck in the name of Muḥammad I.

All mints were occasionally given the epithet *al-mahrūsa* "the guarded", while *thaghr* "frontier port" is sometimes found on gold from Alexandria. Aleppo is also known as *Madīnat Halab* on some of its ingot-sized gold. Because of defects in the manufacturing process: off-centre striking, weak strikes, dies too large for the flans, plus the inevitable wear and tear of heavy circulation, a very large proportion of Mamlūk coins are difficult to attribute precisely and often many specimens are needed from various sources to make out the details of an individual issue.

While many of the Mamlūk sultans were no more than ephemeral rulers whose presence made little or no impact on the state other than having their names recited in the *khutba* and inscribed on their *sikka*, certain powerful rulers were acknowledged as overlords on the coinage of neighbouring states. Steven Album has recorded these issues as follows: Bahrī Mamlūks, al-Nāšir Muḥammad I: Beys of Hāmīd, Antalya; local beys, 'Alā'iyya (Alanya), Silifke and Bazardjik; Eretnid, *Ḳayşariyya* and other very rare Anatolian types; al-Nāšir Ḥasan: Artukid, Āmid (Diyārbakr); al-Ashraf Ša'bān II: Karamānid, Konya and Burdjī Mamlūks: al-Zāhir Barkūk: Artukid, Āmid, Mārdīn; al-Ashraf Barsbāy, Karamānid, al-'Alā'i, Konya, Lāraṇda, Beys of Alanya, 'Alā'iyya and other rare Anatolian types, al-Ashraf Aynāl, Malkiṣh Kurds, Āmīshkezek and al-Zāhir *Khushkadam*, Aḳ *Ḳoyunlu*, Arzindjan and Āmid. These issues should be regarded as evidence of political submission for local use rather than as tribute payments to be sent to Cairo. One well-known flow of tribute, however, is recorded from the reign of al-Nāšir Muḥammad I. In 722-3/1322-3 the Mamlūks captured Sīs [q.v.], the capital of Cilician Armenia, seized its treasury and then imposed an annual tribute of 1,200,000 trams which was collected for many years thereafter. Balog observes that this treasure served to succour the chronically deficient Mamlūk silver currency. Part was probably melted down and restruck, part put into circulation directly (made possible because the Mamlūk dirham had no fixed weight standard itself) and part overstruck by dies bearing al-Nāšir Muḥammad's name. Examples of these overstruck trams of Oshin (1308-20) and Levon IV (1320-42) are regularly found in silver hoards of the period.

The calligraphy and ornamentation seen on Mamlūk coins vary in quality from the superb *dīnārs* of al-Ashraf *Khalīl* to the crude late Bahrī *dīnārs* of al-Kāhira and al-Iskandariyya. The die-sinkers generally employed various styles of *nashqī* script ranging from the well executed and highly legible to the hastily inscribed, virtually scribbled. For the later Bahrī period it is easy to distinguish at a glance which coins came from Egyptian mints and which from Syria. The latter show the die-sinkers to be genuinely artistic craftsmen, while those of Egypt had only mediocre abilities. This disparity in calligraphic standards tended to disappear during the Burdjī period so that it is often difficult to tell the difference between Egyptian and Syrian issues. It is interesting to note that on the half-dirhams issued by the later Burdjī rulers from the mint of Halab the *kalima* is inscribed in Turkoman Kufic. Turkish influence is also evident in the style of the many small knots of felicity, scrolls and flowerets

that ornament the dies alongside seemingly random diacritical points and monumental *shaddas* over the word Allāh.

Much has been made by numismatists of the "heraldry" [see RANK] found on Mamlūk coins. However, heraldry in the European sense is totally foreign to Arab Islamic culture, although Turkish tribal *tamghas*, part of the folk culture of Central Asia, made their artistic influence and utility felt at a time when most people were illiterate. Traditionally, representations of animate objects on Islamic coins had been banned from the gold and silver coinage and restricted to the copper *fals*. The first major exception to this was when Ghīyāth al-Dīn Kaykhusraw II, the Saljuq Sultan of Rūm, placed the lion and sun, depicting the "sun in Leo", on the silver dirhams he had struck in Konya and Siwās between 638 and 641/1240-4. While this depiction of royal power was hastily removed after his defeat by the Mongols, it may have been the precedent seized upon by al-Zāhir Baybars when he placed his badge of a prowling lion or leopard on his gold, silver and copper coinage. His son al-Sa'īd Baraka Khān continued to use it during his brief reign, 676-8/1277-9, but after that the placing of all such devices on the gold and silver coinage was discontinued. Moreover, none was used on the long series of copper "dirhams" struck in Egypt in the second half of the 8th/14th century. A rich variety of animate and inanimate designs, the choice of which was probably left to the local die-sinker, were placed on the copper *fulūs* struck for local use to make it impossible for silver-washed copper to pass as silver dirhams. This anti-counterfeiting measure was also used by many other dynasties, including that of the 'Othmānīs. While many designs may be associated with an individual Mamlūk ruler, and may also have been employed on metalwork made for his use, the *fulūs* were generally too insignificant for any consistency to be applied to their designs.

In conclusion, the evidence furnished by the Mamlūk coinage may be said to provide an accurate reflection of the political and economic challenges faced by late mediaeval Egypt and Syria during the time of the Black Death, uncertain political leadership and the growing European economic influence in the eastern Mediterranean world.

*Bibliography:* Mamlūk numismatics has been well served by the masterly study by P. Balog, *The coinage of the Mamlūk Sultans of Egypt and Syria*, ANS Numismatic Studies no. 12, New York 1964, with exhaustive source notes and supplemented by many additional articles by him and others since then. For a valuable modern summary, see the section *Mamlūk* in S. Album's *Checklist of Islamic coins*, Santa Rosa, Calif. 1998, 51-5. (R. DARLEY-DORAN)

**MANSHŪRĀT** (A.), the term for the letters, *responsa* and edicts of Muḥammad (Aḥmad) b. 'Abd Allāh (d. 1885), the Sudanese Mahdī [see AL-MAHDIYYA]. These individual documents were transcribed by his followers in numerous manuscript collections, three of which are described in P.M. Holt, *Three Mahdist letter-books*, in *BSOAS*, xviii [1956], 227-38. An authorised text was lithographed in Omdurman (Umm Durmān) during the Mahdiyya in four volumes: the first consists of general and doctrinal pieces, including Muḥammad Aḥmad's justification of his claim to be the Mahdī; the second (*al-inḍharāt*) contains his letters and proclamations summoning various individuals and groups to join the Mahdiyya (cf. Holt, *The Sudanese Mahdia and the outside world*, in *BSOAS*, xxi [1958], 276-90); the third (*al-ahkām*) gives his rulings on matters

of law and custom; the fourth (*al-khutab*) comprises his sermons. Photographic reproductions of these volumes were published in Khartoum in 1963 under the auspices of the Sudanese Ministry of the Interior. The editor (not there named) was Dr. Muḥammad Ibrāhīm Abū Salm, who has also produced an invaluable guide to the documents and their sources as *al-Murshid ilā wathā'iq al-Mahdī*, Khartoum 1969, and a selection of these and later Mahdist documents in *Manshūrāt al-Mahdiyya*, n.p. [Beirut] 1969. He has now published a complete edition of the Mahdī's writings, *al-Āḥār al-kāmila li 'l-Imām al-Mahdī*, 7 vols. Khartoum 1990-4.

*Bibliography:* Given in the article.

#### AL-MAR'Ā.

##### 6. In Southeast Asia.

The Muslim peoples of Southeast Asia are found in the modern nation-states of Indonesia, Malaysia (and in these two states they comprise the majority), Thailand (in the five southern provinces, culturally very close to the neighbouring region of the northern Malay Peninsula) and in the Philippines (Mindanao). Islamisation of these populations has been ongoing since the 15th century and continues in the 21st century (total population conservatively estimated at 220 million). Travellers to the region from the earliest times have remarked on the prominence of women in commerce, agriculture and spiritual life. Bilateral kinship systems are still the norm for most societies in the region, with some notable exceptions such as the matrilineal Minangkabau of West Sumatra, also found throughout Indonesia and in Negeri Sembilan on the Malay Peninsula. Although Islam assumes a patrilineal descent system, the traditionally high status of women in Southeast Asian societies means that women continue to play a public role in many areas of social and, especially, economic life, which contrasts with the situation in many other Muslim cultures. In some cases, this has also led to local and particular interpretations and applications of the *Shari'ā*, especially in matters of inheritance.

Before the 20th century, the traditional power structure of the region was based on small fiefdoms led by charismatic rulers and local chiefs. The fiefdoms in turn were oriented towards centres of influence (e.g. Sriwijaya, Melaka, Mahapahit, Aceh and Ayuthia), which shaped the cultural and religious forms of their satellites. The élites followed the prevailing aesthetic and religious fashions while the populace maintained older traditions. Thus, when Islam was accepted by the leaders of centres of power such as Melaka and Aceh, it was added to a spiritual armoury already consisting of a broad mix of animist and ancestor cults, and also of Hindu and Buddhist beliefs, in all of which women played important roles. There was an eclectic expression of Islam with a special appreciation of Sūfism and less concern with scriptural prescription. In this context, the traditional role of women as important figures in spiritual matters continued. This came under threat, however, in the early and mid-19th century when Southeast Asian pilgrims were influenced by Wahhābī concerns and attempted to institute "reforms" in their local areas (see b, below).

##### (a) Status of women before the 19th century

The status of women was such that at the courts of the Muslim kingdoms of Aceh (northern Sumatra) and Patani (now in southern Thailand), four queens ruled for extended periods during the 17th century. Female rule in Aceh ended late in the 17th century when court 'ulamā' obtained a *fatwā* from Mecca stating that women could not be rulers. It has been usual

to regard the period of female rule as indicating a weakened monarchy vis-à-vis male chiefs. However, because it seems that the queens served as mediators and successfully intervened in disputes between chiefs, there are also grounds for arguing that the style of female rule provided an alternative model of kingship in which leadership was less important than the ability to maintain harmony. In both Aceh and Patani, the period of female rule was characterised by commercial prosperity and an increase in revenues from foreign trade; this has been attributed to the cooperation rather than rivalry between the queen and local merchants. This alternative model of female rule did not develop, and in the latter part of the 17th century the queens were followed by males. It was not until recent times that the issue of a woman as head of state again became a possibility with the success of Megawati Sukarnoputri as a political leader (see d, below).

In Java there are no records of female rulers, but several Sultans maintained large corps of women trained to bear arms and serve as palace bodyguards and sentries. More important was the contribution of women intellectuals in advice to rulers (as in India). For example, in the early 18th century, the grandmother of a teenage ruler of the Central Javanese kingdom of Mataram prepared three impressive texts for the guidance of the young sultan. Known as Ratu Pakubuwana (died 1732), she is celebrated for her Muslim piety and knowledge of Sūfism. Her manuscripts retell stories of the great Muslim warriors and heroes to emphasise the benefits of becoming a pious and ascetic Sūfī ruler. In the mid-18th century, there are references to other aristocratic Javanese women composing manuscripts also inspired by Islamic literature. Women of the court, in both Java and the Malay areas of the archipelago, were actively engaged in writing and collecting manuscripts from at least this period until the demise of the courts in the early 20th century.

Records from this period indicate that non-élite women (rather than men) organised domestic commercial activity, such as the buying and selling of local produce in the markets, with men dominating transactions with foreigners. However, it is clear that some élite women used their own wealth to provide the capital for overseas trade conducted on their behalf by men.

(b) *Status of women in the 19th century*

As with the earlier period, the historical record is incomplete and focussed on élite rather than non-élite women. However, it is possible to gain an impression of their status from descriptions of several notable women. In the early 19th century, for example, in the Malay-Bugis kingdom of Lingga-Riau (which encompassed Johor, Pahang and Singapore), one of the Sultan's wives was given an island, its appanages and revenues to remain in her family in perpetuity. In the mid-1820s, this woman was able to supply the capital for her brother to undertake a trading voyage to raise money for the *Hadjj*. It was not apparently the custom at this time for women to cover their heads in public but, by the 1850s, the male rulers of this kingdom, influenced by their visits to Mecca, encouraged women to wear a veil when in public. This concern that women cover their heads was accompanied by similar requirements for men to dress modestly, and was a trend apparent also in other areas of Muslim Southeast Asia where returning pilgrims spread Wahhābī teachings.

If the élite women of this Riau-Lingga kingdom

are in any way representative of the position of women in other Malay courts (and there is no reason not to extrapolate from their experience), then it is clear that they had the opportunity to learn to read and write and that they maintained their own collections of manuscripts and, later, of lithographed and printed works. One member of a leading Bugis-Malay family, Raja Aisyiyah Sulaiman (ca. 1870-1925), for example, began writing verse and prose in her teenage years and continued after marriage. She was one of at least six other women writers from the Lingga-Riau region who were composing a variety of works in the last quarter of the 19th century. Their writings indicate that they were well versed in the basic tenets of Islam and that they were concerned to apply Muslim teachings in their daily lives and to influence others to do the same, especially when raising children. Of particular interest is a compendium of charms beneficial for marital relations composed in 1908, just five years before the Dutch abolished the Riau-Lingga kingdom. Its author was a commoner, known as Khadjiah Terong (1885-1955), who incorporated Kūr'ānic verses into the charms in a manner which indicates her familiarity with and knowledge of more than just the basic tenets of Islam (see Mukherjee, in *Empowered women*, 1997). Khadjiah's charms are designed to provide satisfaction and pleasure for both husband and wife, so ensuring that each is content in the marriage. The didactic writings of the women of Riau-Lingga may be described as forerunners of the "Guides for women" (*Panduan wanita*) which became popular in the 1980s and are still being produced and are selling well in Muslim bookshops in Indonesia and Malaysia.

Élite women were tutored in their own residences and were almost self-sufficient within their domains, although if they chose to travel (usually by sea) they were free to do so if accompanied by appropriate attendants or their husband. Non-élite women did not have the same degree of leisure nor the means to travel. Their access to intensive education, under the guidance of expert teachers, was also restricted, but the large number of local Kūr'ān schools in southern Thailand, the northern Malay Peninsula and Java and Madura (late 19th century Dutch figures estimated there were 15,000 of these schools with about 230,000 pupils) suggest that girls as well as boys attended for basic religious instruction.

(c) *Status of women in the 20th century*

At the turn of the century, resistance to direct colonial rule was prolonged and violent in some areas. In this context, there are several notable examples of women joining or leading men in holy wars. In the late 19th century resistance to the Dutch control of Aceh (northern Sumatra), an area renowned for its devotion to Islam, a widow, Cut Nyak Dien, took over the leadership of a band of guerrilla fighters after her husband was killed by the Dutch in 1899. She continued to resist until captured in 1905. She died in exile in 1906 and is now an Indonesian national hero, whose struggle for Islam and her homeland has been celebrated in a very popular 1980s Indonesian film.

The adoption of new technologies such as printing, and improved communications, enabled greater contact between the heartlands of Islam and Southeast Asia. Of particular significance to women was the spread of modernist teachings, especially those of Muḥammad 'Abduh [*q.v.*], which were disseminated in a weekly publication, *al-Imām* (published in Singapore, 1906-8), which was clearly inspired by

Cairo's *al-Manār*. Widely read all over the Indonesian archipelago and through the Malay Peninsula, *al-Imām*'s articles urged Muslims in the region to improve their knowledge of Islam and to pay greater attention to education. To this end, *al-Imām* encouraged the establishment of new schools (*madrasah*) based on Egyptian models where Islamic doctrine, Arabic, English, and secular subjects such as mathematics and geography, were taught to both girls and boys. It was considered especially important that young women receive a "modern" education (including secular knowledge as well as religion), because as future mothers they bore the prime responsibility for the "correct" upbringing of the next generation.

In 1913 a number of co-educational schools offering both religious and secular subjects were established in Java by the *Jam'iyat al-Islah wa 'l-Irshad*, an organisation led by the reformist Sudanese teacher, *Shaykh* Ahmad Surkati, while in 1915 the progressive co-educational Diniyah Schools were opened in the Minangkabau region of West Sumatra. By 1922 there were 15 Diniyah schools in West Sumatra which attracted young women from as far afield as the Malay Peninsula and Java. Graduates spread the message of responsible but active engagement in social life through their work as teachers and journalists and as modern-minded mothers. Further impetus for the education of women came from the writings of Sayyid *Shaykh* b. Ahmad al-Hādī (1867-1934), a *Shari'ah* lawyer, religious teacher, author and successful publisher who settled finally in Penang. He was an enthusiastic supporter of the ideas of Muhammad 'Abduh and Rashīd Riḍā [q.v.] and translated many of their writings into Malay for publication in *al-Imām*. He went on to use fiction to promote progressive interpretations of Islam, and in 1925 and 1926 published the two-volume best-seller *Faridah Hanom*. The eponymous heroine is an aristocratic Muslim woman living in Cairo, educated in both Islam and western teachings, and an admirer of 'Abduh, who is written into the text. The popularity of the books, which were reprinted innumerable times up to the 1970s, ensured that the heroine's message of applying God's gift of intelligence to the understanding of Islamic teachings, linked with a dedication to improving contemporary social conditions, had wide exposure. The story of *Faridah Hanom* ends with a description of how the heroine uses her wealth to found schools for young women, and notes that from these schools came women who went on to lead the struggle for women's emancipation, citing real women such as Hudā *Shā'rāwī* [q.v. in Suppl.], who founded *L'Union Féministe Égyptienne*. Sayyid *Shaykh* al-Hādī invested the profits from the success of this book in his printing business, and from it funded the publication of works of non-fiction. One of these, *Kitab Alam Perempuan* ("The world of women"), 1930, continued the themes of *Faridah Hanom* and argued forcefully that the most pressing matter for Muslims was the education of women so that the whole community would benefit.

In peninsular Malaya, Hajjah Zainon Suleiman (1903-1989) responded to Sayyid *Shaykh*'s calls and worked actively for the education of Malay women. She was supervisor of one of the leading girls' schools for nearly 20 years and in 1930 founded the first Malay women's association, the Johor Women Teacher's Union, and a magazine for its members. The magazine, *Bulan Melayu*, became an influential publication for women and provided a forum for women writers to express their views on contemporary issues. Ibu Zain (as she was known) was an important advocate

for the rights of Malay women within Islam in terms reminiscent of the heroine of *Faridah Hanom*. She was an influential figure in Malaya, and in the early 1950s led the women's wing of the UMNO (United Malays National Organisation).

The main Islamic women's organisations in Malaysia have been established since Independence in 1957, and almost all are subsections of a parent body which is male-dominated. The women's wing of PAS (*Partai Islam Se Malaysia* [q.v.]) for example, was founded in 1958, and although extremely active in educating women, its members cannot be elected to the central board of PAS. There are at least four other Muslim women's organisations in Malaysia, each of which is engaged in welfare work among Muslim women, including marriage counselling, assistance for domestic violence victims and fund raising for charities. The most recently formed group, *Puteri Islam* (Sisters in Islam), was officially established in 1991 by a small group of professional women (lawyers and academics) to re-examine the sources of Islam for a better understanding of women's status in Islam. Through high-profile activities in the press and media and through seminars and workshops, members of Sisters in Islam have had considerable impact on the public perception of women's status in Malaysia. Their interpretations of the *Qur'an* and *Hadīth* have aroused critical reactions from conservative religious scholars, and the resulting public debates have highlighted issues such as the role of Islamic law in a modern nation state.

In Indonesia (then the Netherlands East Indies) one of the earliest Islamic women's organisations, *Aisyiyah*, was established in 1917 by members of *Muhammadiyah*, a reformist movement which began in Java in 1912 and spread quite rapidly through the Indies. By 1938, *Aisyiyah* had set up over 1,700 schools (from primary to secondary levels) as well as teacher training colleges, health centres and orphanages. Members were encouraged to guide other women in their Islamic duties and to spread knowledge of Islam to diverse classes of women so as to increase their awareness of religious duties, rights and responsibilities.

The *Muslimat Nahdatul Ulama*, the women's branch of *Nahdatul Ulama*, the second Islamic mass movement in Indonesia (with a current following of over 30 million), was established in 1946. Like *Aisyiyah*, its members have been working to improve education and health care for women and they helped establish the "Advisory Council for Marriage and Divorce" (*Badan Penasehat Perkawinan dan Penyelesaian Perceraian*) which assists women who have to take marital disputes to court. Although the *Nahdatul Ulama* movement has been characterised as less progressive than *Muhammadiyah*, during the 1980s, under the leadership of Abdurrahman Wahid, greater attention was given to social issues, including the status of women. One illustration is the work of the Association for Social and Pesantren Development (*Perhimpunan Pengembangan Pesantren dan Masyarakat*) whose work includes a successful education program for traditional religious teachers (both men and women) about women's reproductive rights.

In Indonesia, Malaysia, Singapore, the Philippines and Thailand, the post-colonial state has accommodated the *Shari'ah* but restricted its formal application to matters of personal law [see *SHAR'Ā*. In South-East Asia]. The issue of polygamy has highlighted the differences between modernising and conservative elements in Southeast Asian Muslim communities, and has focussed on the absolute difference between revealed and secular authority. One example is the 1974 Indonesian Marriage Law, which was introduced in

response to continued pressure from women's organisations and was to provide some security for women, particularly regarding divorce and polygamy. It was perceived by some Muslims as a strategy for secular (state) authority to displace Islamic jurisdiction and was fiercely opposed. The state was forced to enact an amended statute permitting polygamous marriages and unilateral divorce, with *Shari'a* courts retaining authority to make judgements in these areas (see Butt 1999). However, the jurisdiction of *Shari'a* courts has been steadily eroded by the Indonesian government, so that although polygamy has not officially been forbidden, it is extremely difficult to practise.

In Malaysia, the Federal Government introduced the Islamic Family Law Act in 1984 and set minimum ages for marriage and restrictions on polygamy and divorce. Although similar laws were enacted in each of the constituent states of Malaysia by 1991, Islamic authorities at the local levels have tried to undermine some of its provisions, particularly those concerning polygamy. When this occurs, and aggrieved women bring it to the attention of national activist groups (such as Sisters in Islam), there is widespread public debate and increasing pressure on traditional religious teachers to adapt to contemporary conditions.

In matters of inheritance, Muslims theoretically follow the *Shari'a* but detailed interviews with women in Indonesia and Malaysia indicate that many parents circumvent the provision of greater portions for male heirs by distributing some property to female heirs before death. This has been seen as maintaining the parity of sons and daughters as expressed in traditional (pre-Islamic) kinship systems.

(d) *Status of women in the 21st century*

The rise of the middle classes in the Muslim populations of Southeast Asia, with an increase in higher education and greater participation in the global cash economy, has caused some women in this group to seek to reaffirm their identity as Muslims. Participating fully in the public life of their nations, many of these women wish to understand Islam better and follow programmes to achieve this. It has also been noted that women as well as men are joining the new *Sūfi* groups which are being established in big cities to cater for those who seek to deepen their personal experience of Islam. Others are founding or playing leading roles in Muslim non-governmental organisations devoted to the needs of women, which have grown in numbers since the economic crisis affected Southeast Asia in the late 1990s.

The most visible statement about identity is obviously that of style of dress. A growing number of women in the region choose to fully cover their hair and to wear distinctively Muslim fashions, which has led to a new fashion industry. Only a small minority in the region choose to adopt a full body covering (including face) of black, and those who do are often subjected to critical comment and accused of being overly influenced by foreign Muslim (Middle-Eastern) traditions. The majority who adopt non-western dress do so to emphasise that they wish to identify themselves as followers of Islam. This is not necessarily linked with a desire to return to conservative religious practices. Many of the tertiary-educated women in Indonesia and Malaysia who fully cover their hair do so to show they are part of an international sisterhood of modern-minded (rather than tradition-bound) women. In nations where Muslims are in a minority, such as the Philippines and southern Thailand, many young Muslim women have adopted

Islamic dress to indicate their resistance to the prevailing national political culture.

The improved economic conditions in both Indonesia and Malaysia since the 1970s have given large numbers of women access to tertiary education and the qualifications to enter public life. While Muslim women were represented in all areas of business, government administration and society in Indonesia and Malaysia, they were not elected as leaders of major political movements. This changed in the 1990s when Megawati Sukarnoputri headed a populist mass movement in Indonesia and in 1998, after her husband's arrest, Dr Wan Azizah Wan Ismail led the National Justice Party in Malaysia. The Indonesian general elections of 1999 delivered a huge vote to Megawati's party but in the political bargaining which followed she was defeated for the presidency by Abdul Rahman Wahid and had to accept the post of Vice-President. The possibility that Megawati might become President of Indonesia aroused heated debate in Indonesia with ordinary Muslim men and women unable to follow the complex legal reasoning based on the classical texts of Islam which some Indonesian scholars put forward. In 2001, Abdul Rahman Wahid lost the confidence of the Indonesian parliament and Megawati replaced him becoming the fifth president of the Republic of Indonesia. Political expediency overwhelmed the objections of a minority of *ulamā'*.

The debate over female leadership, however, is a useful point on which to conclude this survey of Muslim women in Southeast Asia because it exemplifies some of the features of Islam which are characteristic of the region. First, that it is not unusual for women to play prominent roles in public life; second, that women's leadership is seen as being distinctively different in style from that of males; third, that the religious arguments concerning the permissibility of a female head of state have revealed the division between traditional (conservative) approaches to Islamic law and more modern (liberal) interpretations; and finally, that specialist knowledge of Islam throughout Southeast Asia is still dominated by men.

**MĀRID** (A.), rebel or revolutionary, someone practising *murūd* or *tamarūd*, resistance to the established order, from the root *m-r-d* "to be refractory or rebellious".

The word *mārid* is strongly polysemantic; it includes both the idea of audacity and revolt, and also extreme pride and insolence (*al-ʿāfī al-ṣhadīd*, according to LA). Also present in the root is the idea of youth, with *amrad* meaning "young, beardless youth" (see Ibn al-ʿAdīm, *Zubda*, ed. S. Dahhān, Damascus 1951, i, 260, concerning beardless *ghilmān*), concomitant with the idea of a leafless tree (*ṣhadjara mardā*), and sometimes with that of a young slave boy, the equivalent of *ghulām* [q.v.], with, additionally, the connotations of violence, insolence, rebelliousness and, equally, of pederasty and homosexuality, as frequently found amongst young soldiers.

It should be noted that the central meaning of man's revolt is semantically associated with that of the rebellion of djinn and demons (*shayāṭīn*), as LA directly indicates. It follows that, in classical Arabic, the term *mārid* has negative connotations and that, in the unconscious collective mind, it goes back to the revolt of Iblīs against God and refers likewise to that of a member of the community against the ruling power, considered as a fatal source of trouble and instability. In Modern Standard Arabic it retains these two concepts, since it means, first, rebel, insurgent, refractory person, and second, demon or evil-working spirit. Other roots are more frequently used by mediaeval Arab historians to describe rebellion. Thus *shaghāba* "to wander away from the road, excite people against each other, kick up a row", and *ʿasā* "to rebel (to be connected with *ʿasā* "to strike with a stick"), go against other people", whence *al-ʿĀsī* "the rebel", the name given to the Orontes river which flows from south to north, contrary to the rest of the rivers of western Asia (see al-Muḥaddasī, 32 l. 12, *ʿasā* and *ashghab*). Likewise, *thāra* "to raise dust by galloping through the sands like a bull, to assault", whence *thāʾir* "rebel" and *thawra* [q.v.] "revolution"; and *kalaba* "to overturn, be reversed", whence *inkilāb*, used in the 20th century for a *coup d'état* fomented by a small number of individuals, often military men. Only the verb *fatana* "to prove, test, trouble" refers to an activity more intellectual than physical, sc. *fitna* [q.v.], in origin a division voluntarily brought about within a homogenous group, which could be paralleled semantically with the Greek origin of the word for "devil", *diabolos*, "the divider", whence *fātān* (pl. *futtān*), intensive form *fattān*, meaning as much

"seducer" as "agitator". The decision to go out from (*kharaḍja*) the ranks of ʿAlī's army, taken at Siffin [q.v.] by his most fervent followers when he agreed to the arbitration, has given rise to the epithet *khārīḍī*, denoting a member of the sectarian group arising on this occasion [see KHĀRIDĪTES] but, equally, a rebel in general, without any religious connotation (see Ibn al-Kalānisi, *Ḍhayl Taʾrikh Dimashk*, ed. H. Amedroz, Beirut 1908, 87 l. 16).

Every aggressive action (*thawra*, *fitna*, *inkilāb*, *tamarūd*) against the established social and institutional order involves both a political and religious aspect. The rebel is thus a doubly emblematic figure, condemned for breaking the consensual conformism of society and sometimes for a dangerous attachment to the purity of practice of the Islamic law and cult, but also admired for his devotion to the cause which he defends and for his physical courage, notable at the time of his public punishment after being defeated—this being generally the case—and condemned by the ruling power.

The Sunnis, from the time of the establishment of the ʿAbbāsids to the 1970s (the execution in jail of the Sayyid Ḳuṭb [q.v.] by ʿAbd al-Nāṣir [q.v. in Suppl.] was to give rise to the first, Sunnī Islamic doctrine justifying the use of violence and killing, not only against a power which was self-styled Muslim and Sunnī but not respecting the Islamic law, but also against every individual, Sunnī Muslim or of any belief or absence of belief, of either sex, child and adult, not joining in the revolt), were considering that challenging the ruling sovereign Muslim power, whether just or unjust, legitimate or having seized power for itself, was risking committing an offence against Islam and that a vacuum of power was worse than a corrupt ruling power [see AL-MĀWARDĪ; IBN TAYMIYYA].

In practice the *hijra* of A.D. 622 enabled the Prophet Muḥammad to institutionalise Islam by creating at Yathrib/Medina the *umma* [q.v.], a society which involved personal commitment to the revealed Law, a concept opposed to those of *nasab* and *nisba* [q.v.v.] acquired at birth by the newly-born, and by founding the tribal confederation at Mecca. At Medina, the individual was integrated of his own free will into the community of believers, in which was built up around the collective faith in the Qurʾānic revelation a solidarity between each believer, male or female, slave or free, Arab or black, or convert from other faiths. The survival of Islam required the strengthening of this bond which a common religion established between each believer. Qurʾān, III, 98/103, expresses this command: "Hold fast to the rope (or bond) of God and do not become divided into various groups; remember God's goodness to you when you were enemies; He established concord in your hearts" (see also IV, 63-4/60-1).

The fragility of the *umma* at the outset led to condemnation of any rebel who put in jeopardy the unity of Islam by disobedience, provocation or revolt. In appealing to ancient family, tribal, ethnic or territorial solidarities, the rebel thereby pushed the community back to the chaotic time of the *Djāhiliyya* [q.v.]. This is why, when Muḥammad died and the tribes thought themselves freed from this voluntary solidarity which they had entered with the person of the Prophet, Abū Bakr suppressed the *rida* [q.v. in Suppl.]; from this time onwards, the Median concept of voluntary adhesion to Islam only functioned in that unique instance. The new convert, like all Muslims, including the child born of a Muslim father, saw himself constrained—before his birth, as at Mecca—and

until his death, by his *nasab* of “Muslim” to profess Islam as long as he lived.

The traditional history of the first century of Islam is marked by a series of violent episodes, extending from the *ridā* in Abū Bakr’s time to the murder of ‘Uthmān, then the *fitna* in which ‘Alī and Mu‘āwīya were opposed to each other and, finally, the intertribal conflicts under the Umayyads. For a symbolic interpretation of these stories at a later period, see J.-Cl. Garcin, *États, sociétés et cultures du Monde musulman médiéval*, i-ii, Paris 2000, index.

A typology of revolts in Sunnī Islam has so far not been attempted, according to our knowledge. Leaving aside purely Shī‘ī and Khārījite movements, one may put forward a very general classification of revolts within the Sunnī milieu.

In the first Islamic century, apart from revolts regarding the legitimacy of the caliph, there is a recurrent motif of disorder, the relative opportunities offered to the Qurashīs or to Arabs from other tribal groupings, Ḳaysī or Yamānī, or even to the *mawālī*, to take over the functions of state. Certain groups wished to speed up the integration of the converts whilst others, on the contrary, wished to reserve the prestigious and financially rewarding posts for the Meccan aristocracy or the Arabs.

The revolts on the part of non-Muslims, Berbers, Copts, Christians of Lebanon or Armenians rarely marked a refusal to accept the installation of a Muslim state. A close examination shows that the motive here was, rather, revulsion against an oppressive tax system than against the political pre-eminence of Islam.

Over the succeeding centuries, revolts display most often a Shī‘ī or Khārījite motivation and in fact gather up violent recrudescences of pre-Islamic identities of ethnically homogenous groups in isolated regions, away from the prosperity of the great cities and the main commercial routes. It may then happen that other ethnic groups of the neighbourhood, without specific connections with the originally rebellious group but equally oppressed and adversely affected by the exercise of an arbitrary and corrupt power, join in the revolt. In any case, revolts against excessive tax burdens continue to break out regularly up to the Mamlūk period and beyond (see Tsugitaka Sato, *State and rural society in medieval Islam*, Leiden 1997, 162-7) in all the agricultural regions of the East. These rebellious groups were subject to exactions of the central exchequer, of urban landowners and, later on, of the owners of *iktā‘*s, at levels leaving no possibility of profit for the peasants or money for investment in increased productivity and therefore a rise in social status. The revolt of the Zandj [q.v.] or Zunūdj in lower ‘Irāk is another example of rural protest, that of agricultural labourers, in this case, black and impoverished, against the avidity of the city dwellers.

Amongst other causes of outbreaks, one should mention the grave disorders, in particular during the 2nd-4th/8th-10th centuries, amongst the Arab tribes (Ibn ‘Asākir, *Ta’rīkh madīnat Dimashk* [‘Āšim-‘Āyidh], Damascus 1977, Abu ‘l-Haydhām al-Murrī, 393-418), and then those, more serious still, launched by the Bedouin tribes against the towns of lower ‘Irāk. In these they were protesting against the marginalisation which they considered was the policy of the town dwellers towards them. Whence the success among them of Ḳarmaṭī [q.v.] propaganda, which thus caught up for Ismā‘īlism the social and economic protest of peasants against the dues and taxes levied on them from the cities and that of Bedouin in revulsion against the spectacle of luxurious *ḥadjjī* caravans whilst they

themselves were suffering from thirst and starvation. In the 5th/11th century, the nomads ceased for a while their intertribal fighting and came together—Arab Bedouin, Kurdish and Berber nomads—to attack the sedentary lands, from the Dījazīra in northeastern Syria to Ifrīqiya (see Th. Bianquis, *Damas et Syrie sous la domination fātimide*, Damascus 1989, ii, 415-65).

In the 5th-6th/10th-11th centuries, there were uprisings in the Maghrib and al-Andalus, those of the Almoravids [see AL-MURĀBĪṬŪN] and Almohads [see AL-MUWAḤḤIDŪN], launched from the austere and ascetic south against a corrupt and luxurious north and aiming at bringing régimes considered as lax back to the strict way of the Islamic law.

For the urban revolts, which have been well studied, see AHDĀTH; ‘AYYĀR; SAFFĀRIDS; ZU‘ĀR; etc.

*Bibliography*: See, in addition to the articles cited above, various contributions in M.A. al-Bakhtī and R. Schick (eds.), *Bilād al-Shām during the Abbasid period. Procs. of the Fifth International Conference on the History of Bilād al-Shām, 1410/1990*, ‘Ammān 1991. M. Chokr, *Zandaqa et zindīqs in Islam, au second siècle de l’hégire*, Damascus 1993, has clearly shown how the ‘Abbāsīd ruling power marshalled moral, political and sexual arguments in order to condemn every attempt at rebellion against the dynasty’s official moral basis. See also the good bibl. in M. Bonner, *Aristocratic violence and holy war*, New Haven 1996. (TH. BIANQUIS)

**MARKIYŪNIYYA**, the Arabic name for the Marcionites, an important non-monotheistic tendency in early Christianity. Marcion (Μαρκίων; Ar. Markiyūn) was a native of Sinope [see SĪNŪB] on the Black Sea who arrived in Rome in A.D. 138 (or somewhat later) and taught among the Christian community in the imperial capital. Marcion’s doctrine was that the god described in the Old Testament (the creator, or just god) is different from the god described in the New Testament (the stranger, or good god), the father of Christ, and that men’s souls, like their bodies, were made by and belonged to the creator, but that the stranger purchased these souls from their maker by sacrificing his own son to the other god. The later Marcionites elaborated this into various theological systems. One school taught four primal principles (the good god, the just god, matter, evil), another taught three principles (identifying evil with matter), but the “Neo-Marcionite” school (described most clearly in the second book of the *Dialogue of Adamantius* falsely attributed to Origen) equated the creator with the principle of evil and also maintained (against Marcion, but in broad agreement with the Manichaeans and Gnostics) that the good god sent his pneuma into the world already at the moment of creation and that it remained entrapped in the material world until it was set free by Christ.

The evidence for the survival of Marcionite communities in the mediaeval Near East is meagre, but not entirely negligible. The Christian writer Thomas of Margā (*Book of governors*, Syriac text, ed. Budge, London 1893, 261) reports that in the last decade of the 8th century A.D. the metropolitan of Gēlān and Daylam, Shuḥālīshō, travelled into the remote parts of his see, preaching “among the pagans, Marcionites and Manichaeans”. Also, the Muslim bibliographer Ibn al-Nadīm, writing towards the end of the 4th/10th century, even claims that Marcionites are “numerous in Khurāsān” and that there “they practice openly, like the Manichaeans” (*Fihrist*, ed. Taḍjaddud, 402; for the Manichaeans in Khurāsān, see ZINDĪK). Elsewhere,

Ibn al-Nadīm quotes a reliable informant (*ḥiḳka*) who had seen Marcionite books and who reported that their script resembled that of the Manichaeans (*ibid.*, 19). These “numerous” Marcionites in *Khurāsān* do not seem to be mentioned in any other source.

Muslim writers on alien religions offer some data about the beliefs of the Marcionites. Some of this is manifestly taken from the standard Christian sources, e.g. when al-Mas‘ūdī (*Tanbih*, 127) states, accurately enough, that the Marcionites taught “two principles, good and evil, and justice (read *al-‘adl* with Ms. L) is a third (principle) between the two”; these three are clearly the good god, evil matter, and the just god. Ibn al-Malāḥimī (*al-Mu‘tamad*, 586-9) has two conflicting accounts of the doctrines of the Marcionites. The second of these is credited explicitly to Abū ‘Isā al-Warrāḳ, whose version was evidently used (directly or indirectly) by most of the other Muslim theologians who mention Marcionites (see Vajda’s article, in *Bibl.*). This version claims that Marcion taught two polar principles, “light and darkness”, plus a “third essence” who “mixed the light and darkness and mingled them by way of creating a balance between them”. But this is pure fantasy, extrapolated from some vague notion that Marcionism is like Manichaeism, but with three rather than two principles.

The first account cited by Ibn al-Malāḥimī (possibly also from al-Warrāḳ, though this is not indicated unambiguously in the text) is totally different. This version is cited, much more briefly, also by ‘Abd al-Djabbār (*al-Mughnī*, v, 17-18; however, the translation in Vajda, *op. cit.*, 123-4, is incorrect) and by al-Shāhrestānī (*al-Milal wa ‘l-nihal*, ed. Badrān, 643-5), who combines it, in a confused fashion, with the above-mentioned spurious account by al-Warrāḳ. What we have here is an essentially accurate account of the “Neo-Marcionite” doctrine: the primal beings here are God, the Devil (i.e. the demonised creator in Neo-Marcionism) and an “intermediate being” (evidently the divine pneuma). The Devil attacks and oppresses the intermediate, mixes himself with it and builds this world from that mixture. The stars and planets are the Devil’s spirits, with which he rules the world. Animals and plants are likewise the creation of the Devil, and it is he who sends the false prophets and antagonistic religions. But the “highest one” (i.e. the good god) takes pity on the intermediate and sends his son Jesus into the world to liberate him from bondage. Ibn al-Malāḥimī says further that the Marcionites do not kill any being, are celibate, avoid “fatty meats” (*al-zuhūmāt*, presumably meaning that they did eat fish) and alcoholic drinks, and pray and fast all the time. The text contains also a very interesting Marcionite polemic against the adherents of the doctrine of the eternity of the world (*ahl al-dahr*), the monists (*muwāḥhidūn*) and the dualists (*aṣḥāb al-‘ithnāyn*, evidently Manichaeans). The passage contains much plausible information that is not found in other ancient or mediaeval accounts of Marcionism. It is therefore possible that it refers to the actual beliefs of a Neo-Marcionite community in the Islamic world, presumably in *Khurāsān*.

*Bibliography:* The basic work on Marcionism is still A. von Harnack, *Marcion: das Evangelium vom fremden Gott*, Leipzig 1921. For a different perspective, see F. de Blois, *Dualism in Iranian and Christian traditions*, in *JRAS* (2000), 1-19 (esp. 7-14). Most of the Arabic testimonia are collected and translated in G. Vajda, *Le témoignage d’al-Māturīdī sur la doctrine des Manichéens, des Dayṣānites et des Marcionites*, in *Arabica*, xiii (1966), 1-38, with the “Note annexe”,

113-28, repr. in his *Études de théologie et de philosophie arabo-islamiques à l’époque classique*, London 1986. Add to these Ibn al-Malāḥimī, *al-Mu‘tamad fī usūl al-dīn*, ed. M. McDermott and W. Madelung, London 1991, 586-9; the relevant section is partially tr. in W. Madelung, *Abū ‘Isā al-Warrāḳ über die Bardesaniten, Marcioniten und Kantäer*, in *Studien zur Geschichte und Kultur des vorderen Orients* (Festschrift B. Spuler), Leiden 1981, 210-24. For the Syriac sources, see J.-M. Fiey, *Les Marcionites dans les textes historiques de l’église de Perse*, in *Le Muséon*, lxxxiii (1970), 183-8. (F.C. DE BLOIS)

**MARTABA** (A., pl. *marātib*), a term with a variety of meanings: class, rank, degree assigned by etiquette, rank, hierarchy, arrangement of places in an audience, a sofa, an upholstered piece of furniture.

The term presents an intriguing question in the domain of manners and etiquette. In pre-Islamic Arabic and the language of the very early Muslim generations, there was no well-developed conceptual vocabulary of ranks and categories, especially those perceived by the ruling class; there was a lack of terms dealing with the “distance” between the sovereign and his entourage, as well as among the different classes of courtiers. Therefore the writer and translator Ibn al-Muḳaffā‘ (d. ca. 139/756 [q.v.]) invented terms, adopted Persian images and improved existing vocables, such as *rubā* and *manzila* and others, for the purpose of indicating social standing and rank, both in his translations from Pahlavi Persian and in his original works, in which one can discern a measure of continuity with certain Sāsānid values which pre-date the Islamic period. One should remember, as background, that the Sāsānid sovereigns divided their population into a number of categories (A. Christensen, *L’empire des Sassanides*, 19ff., 93ff.; idem, *L’Iran sous les Sassanides*, 97ff., relying on Ps.-Djāḥīz, al-Mas‘ūdī, al-Tha‘ālibī and other sources); neither the subjects of despised trades belonging to the lower ones, nor their descendants, would ever be permitted to serve at the royal court (Ps.-Djāḥīz, *K. al-Tāḍj*, [1914], 23-27; concerning the authorship and date of the latter source, see G. Schoeler, in *ZDMG*, cxxx [1980], 217-25, and *VOHD*, B/2, Wiesbaden 1990, 156-9; R. Brunschvig, in *Stud. Isl.* xvi [1962], 49 n. 1, hesitated to accept some details in this information reported by later Muslim historiographers). Thus the *Shu‘ūbiyya* [q.v.], a cultural movement that stressed the contribution of the non-Arabic heritage (and often minimised the importance of certain Arab traditions that can be traced back to the culture of the desert), took great pride in the fact that the Persian kings (I. Goldziher, *Muslim Studies*, Eng. tr. i, 156-9 and n. 2 of 158, relying on al-Djāḥīz and al-Mas‘ūdī; namely, the “previous kings” as quoted from al-Mas‘ūdī) encouraged *al-‘ilm bi ‘l-marātib*, as opposed to the pre-Islamic Arab tribal life, described by this movement in its own biased judgment. The purpose of such boasting about this Persian distinction between social classes was to emphasise the fact that the early Arabs lived a life of uncontrolledness and of apparent anarchy, and that therefore it was the Persians to whom one had to turn in order to learn the concepts of government and etiquette (Sadan, *An admirable and ridiculous hero. Some notes on the Bedouin*, in *Poetics Today*, x [1989], 474, 487ff., with references to Goldziher, Gibb, al-Dūrī, al-Layḥī, Monroe, Talfāh and others). In Muslim society, in particular that of the ‘Abbāsīd empire, the term *marātib* was used mainly in connection with court etiquette. Hārūn al-Raṣhīd (d. 193/809 [q.v.]) even divided his court singers into

three *marātib*; in this case, the categories reflect not only the quality of the singing but also friendship, sympathy and taste for various singing abilities (al-Rakīk al-Kayrawānī, *Kuṭb al-sūrūr*, B.N. Paris ms. 3302, fol. 162b; not identical to the part edited by al-Djundī; see also al-Shayzarī, *al-Manhaḍj al-maslūk*, Zarkā', Jordan 1987, 464-6, 578-9).

When approaching the ruler, one was expected to stop at a distance determined by one's *martaba*, and there await for a sign (the verb is *awma'a*, *ashāra*, to notify by a gesture) from the sovereign, permitting him to sit down. The participants at the ruler's audience were expected not to behave in a manner unfitting to their rank. The boon-companion, *naḍīm* [q.v.], had the most difficult task of deciding when an audience with the ruler was public or official and when it was a private party (which included drinking as well) in which the rules of etiquette (*ādāb*) were not to be strictly applied, although even then one was supposed to try not to exceed one's *manzila* or *martaba* (*ibid.* and al-Ḥuzūlī, *Ma'ālī' al-budūr*, Cairo 2000, 165) and the minimal rules implied by it. The *hādīb*, who was the palace chamberlain and responsible for the system of granting and refusing entrance to the palace, also had the job of ascertaining that everyone sat according to the *marātib* (al-Djāhīz, *al-Hidāb*, in *Rasā'il*, Cairo 1964-5, ii, 39).

Exceptionally, some people may in fact have wished to sit with those of a lower rank, since the people attending the audience with the sovereign sat in a circle (*maḍlīs*, *ḥalka*), and those who were near him were higher in rank but could not always see him, while those who were farther away could see him well and might in fact have been sitting just opposite him. We rarely find a courtier or a guest who would prefer to sit opposite, out of modesty, or in order to see more clearly his host (al-Rāghīb al-Iṣbahānī, *Muḥāḍarāt al-udabā'*, ii, 706, describes the exception; al-Makrīzī, *Khīṭat*, e.g. i, 386-7, 389, whereas i, 390, mentions the term *martaba*, describes the rule: no courtier would yield his place to an inferior person; i, 443, presents, however, the irregular behaviour of a courtier who "used to take a seat at the edge of the circle of guests [during the royal meal], in order to see the caliph better and not according to the rank this courtier deserved"). It is in fact well known that the Fāṭimids were particularly insistent on maintaining the appropriate distance between the ruler and the other ranks: at festivals only representatives of the four Islamic schools of law were permitted to come into the presence of the caliph and greet him. In fact, they only came up to the threshold of the hall or pavilion in which the caliph was at the time, and usually it was only the caliph's secretary who responded by uttering a greeting formula in the ruler's name, and not the caliph in person. However, it must be emphasised that M. Canard's comparison (see *Bibl.*) of the etiquette of the Fāṭimid and Byzantine courts was written at a time when important sources for the ceremonial customs of the 'Abbāsīd court had not yet been published (especially al-Ṣābī's *Rusūm dār al-khūlāfa*, see D. Sourdel, in *Bibl.*). To the Fāṭimid court, it was obviously more important to vie with the 'Abbāsīd than with the Byzantine court, but the cross-cultural study which Canard undertook is still of value. It thus turns out that various courts, and some later sultans, would occasionally increase or decrease the distance between the ruler and his courtiers, for reasons of religious simplicity.

At times, the differences have a geographical char-

acter. In the northeastern parts of the Muslim empire, one can find, here and there, that facet of the Persian heritage that elevated the king almost beyond the human pale, much more so than at the centre of the empire, at the 'Abbāsīd court. Thus, for example, in *Kh"ārazm* (Sadān, *Ādāb, règles de conduite* [see *Bibl.*], 293-5), a certain person would not dare put a spoon (made of precious metal) in a dish into which the sovereign had also put his spoon, because of the reverence in which the latter was held. But in *Baghdād*, the 'Abbāsīd caliphs knew that it was unseemly for the ruler to wash his hands before the meal in the company of his friends and courtiers; rather, this should be done in a separate room only in the company of someone of the same rank, such as a brother or parent. It is, however, well known that this was not always adhered to; even from the way this rule is formulated by the author (Ps.-Djāhīz, *K. al-Tādj*, 17) who commends this behaviour, it is clear that while this was proper for sovereigns, based probably on the code of behaviour at the court of the Sāsānids and the division of their society into classes, sadly it was not fully respected, as it should have been, in his days. Perhaps this indicates that the 'Abbāsīds did not blindly imitate the Sāsānid manners but only followed them up to a certain point.

Since the concept of rank also determined the seating order, it should come as no surprise that the word *martaba* ended up designating a cushion, a kind of low and soft seat. The reason for this is that cushions were the normal seats used at meetings (only the ruler himself would occasionally sit on a genuine throne, and the vizier would at times sit on a simpler chair, *kursī*). One finds this kind of *martaba* cushion in texts close to the spoken language, such as stories of the *Arabian nights* variety and, even more so, in documents from the Cairo Geniza (in the dowry lists of young brides, see Sadān, *Martaba*, in *Bibl.*). It would appear that these mattress-seats were arranged by day for sitting (on the arrangement of cushions in book shops and reading rooms, see also idem, *Mobilier*, in *Bibl.*; idem, *Nouveaux matériaux*, in *REI*, xlv [1977], 51ff.) and by night for sleeping, a quite economical and efficient system for the common people.

AL-MA'RUF WA 'L-MUNKAR [see AL-NAHY 'AN AL-MUNKAR, in *Suppl.*].

**MA'RUF BALKHI**, Abū 'Abd Allāh Muḥammad b. Ḥasan, early poet in New Persian, of whom almost nothing is known but who must have flourished in the middle decades of the 4th/10th century, since odd verses of his survive that were allegedly dedicated to the Sāmānid Amir 'Abd al-Malik (I) b. Nūḥ (I) (343-50/954-61), and he may have been at the court of the Ṣaffārid ruler of Sistān, *Khālaf* b. Aḥmad (352-93/963-1003). Fragments amounting to some 45 verses, mainly love poetry and satires, have been collected by G. Lazard, *Les premiers poètes persans (IX-X siècles)*, Tehran-Paris 1964, i, 31, tr. 129-33, Persian text ii, 132-8.

*Bibliography:* See also Browne, *LHP*, i, 463; Dhabīḥ Allāh Safā, *Tārīkh-i adabiyāt dar Irān*, <sup>2</sup>Tehran 1335/1956, i, 422-3; F. de Blois, *Persian literature, a bio-bibliographical survey*, v, London 1997, 191. (C.E. BOSWORTH)

**MĀRŪNIYYA**, MAWĀRIINA (Syriac *Mārīnāyā*, presumed derivative from the personal name *Mārūn*, diminutive of *mār* "lord"), the Arabic name of the Syrian Christian sect of the Maronites, which first entered into union with the Roman Catholic Church in ca. A.D. 1180.

According to al-Mas'ūdī (d. 345/956), the sect first emerged into existence as a Monothelite Christian communion during the reign of the Roman emperor Maurice (582-602), its Monothelite origin (contested by Maronite historians since the late 15th century) being also affirmed by al-Kādī 'Abd al-Djabbār (d. 415/1024) and the Crusader historian William of Tyre (d. 1185). The first known base of the community was the monastic establishment of Dayr Mārūn (or Dār Mārūn), on the Orontes river, east of the town of Ḥamā, which had already fallen to ruins by al-Mas'ūdī's time. This establishment allegedly carried the name of the Syrian hermit Mārō (Arabic Mārūn) of Cyrrus (d. 433), who is claimed by the Maronite church as its patron, although he is also revered by the Syrian Melchite (Chalcedonian Orthodox) church as a saint.

While the Maronites have traditionally used Syriac for their liturgy, they appear to have been Arab rather than Aramaeo-Arab in ethnic origin; their ecclesiastical and secular literature, as known directly or from reference from as early as the 10th century A.D., is entirely in Arabic. Their ethnic difference from other Syrian Christians, who were mainly Aramaean or Aramaeo-Arab, might explain in part why they came to be organised as a separate church. The claim of the community to be descended from the Mardaites [see *DJARĀDJĪMA*], first advanced by the Patriarch Iṣṭifān al-Duwayhī (1668-1704 [q.v.]), is historically incredible.

The Maronites signalled their break from the Syrian Melchite see of Antioch when they began electing patriarchs of their own in ca. 685. In that same year, the conclusion of a peace accord between the Byzantine emperor Justinian II and the Umayyad caliph 'Abd al-Malik b. Marwān seems to have enabled the Byzantines to regain control over the affairs of the Antiochene see. The Monothelite doctrine having been condemned by the Sixth Ecumenical Council (680) as a pernicious heresy, Justinian II, it appears, was bent on eradicating what remained of it in Syria.

According to Maronite tradition, the first Maronite Patriarch, Yuḥannā Mārūn, had barely assumed office when Byzantine persecution forced him to flee the Orontes valley and seek refuge in the rugged reaches of the northern Lebanon, where the Maronite patriarchate has remained ever since. When the Byzantines reoccupied Antioch and the adjacent parts of northern Syria, starting from 969, the Christian population of the Orontes valley was still largely, if not entirely, Maronite. This Byzantine reoccupation, however, was to last until ca. 1070, by which time the Maronites of the Orontes valley had been mostly, if not entirely, replaced by Melchites, presumably as a result of Byzantine persecution; the only notable Maronite community outside Mount Lebanon survived in the city of Aleppo, which the Byzantines had failed to occupy.

When the Crusader forces, having seized Antioch (1098), proceeded to advance southwards to Jerusalem in 1099, Maronite warriors met them outside Tripoli to offer their service as guides and auxiliaries. The

first contacts between the Maronite patriarchate and the Roman Catholic Church followed, ending more than four centuries of Maronite ecclesiastical isolation. It was not before ca. 1180, however, that a body of leading Maronite clerics, meeting with the Latin Patriarch of Antioch, formally agreed to unite with the Roman Catholic Church and abandon the Monothelite doctrine in favour of Roman orthodoxy. To cement this union, Pope Innocent III (1198-1216), invited the Maronite Patriarch Jeremiah of 'Amshūt (Irmīyā al-'Amshūtī) to Rome in 1215, ostensibly to participate in the Lateran Council of that year.

Meanwhile, a split had occurred in the Maronite church, in the course of which the party opposed to the union waged armed attacks against those in its favour. This split reached its climax in 1282-3, when, for a brief while, each side had its own Patriarch. Shortly after, however, the Mamlūks of Egypt, who were already in occupation of the Syrian interior, put an end to the Crusader County of Tripoli (1289); then Acre was conquered (1291) and the last Crusaders expelled from Syria (1291). Finding itself once more in isolation, the Maronite church was able to regain its unity under Patriarchs favouring the union with Rome. However, Maronite relations with the Papacy remained casual, because of the difficulty of maintaining regular contact between the two sides once the Crusaders had gone.

The Maronites suffered sporadic persecution under the rule of the Bahrī Mamlūks (1291-1382), at which time some Maronites emigrated from Mount Lebanon to live under Crusader protection in Cyprus, where a few thousand Maronites remain to this day. With the replacement of the Bahrī by the Burdjī Mamlūk régime, the fortunes of the community took a turn for the better. Starting from the reign of Barkūk (1382-9, 1390-9 [q.v.]), the first of the Burdjī sultans, special favours were accorded to the Maronite *mukaddamūn* (sing. *mukaddam* "chief") of the district of Djubbāt Bsharrī (the mountain hinterland of Tripoli), enabling them to manage the affairs of their district much as they pleased. Subsequently, in 1444, the seat of the Maronite patriarchate, which had never been fixed before, was established in the monastery of Kānnūbīn, in Djubbāt Bsharrī, where it remained until the 19th century.

The interest of the Roman Papacy in the Maronite Church had meanwhile been heightened following the failure of the Council of Florence (1439-44) to end the schism between the Roman Catholic and Byzantine Orthodox communions. Unable to attend this council in person, the Maronite Patriarch John of Jaj (Yuḥannā al-Djādī) had sent a Franciscan missionary to represent him there, with a message indicating his fervent commitment to Roman Catholicism and requesting papal confirmation of his patriarchal title. (Since then, all Maronite Patriarchs, though elected by bishops of their own church, have been confirmed in office by the Popes; by implication, they came to derive their Apostolic authority from the Roman See.) Subsequently, the Franciscan mission in the Holy Land (Terra Sancta), which had an important base in Beirut, was entrusted with the maintenance of Maronite relations with Rome; and, starting from 1456, the Popes began to address the heads of the Maronite Church as Patriarchs of Antioch (a title which they might have traditionally claimed). Following the Catholic Counter-Reformation, the Capuchin and Jesuit fathers were charged by the Roman see to replace the Franciscans as religious mentors to the Maronites.

In 1585, Pope Gregory XIII (1572-85) established the Maronite College (*Collegium Maronitarum*) in Rome to train aspirants to Maronite church office in Roman Catholic orthodoxy and church discipline; and starting from 1608, graduates of this institution began to occupy the Maronite patriarchal see. By then, the first major reform of the Maronite Church had been undertaken, under Jesuit sponsorship, by the Synod of Ḳannūbīn (1596). Maronite church practice was brought closer to the Roman Catholic norm by the Synod of Luwayza (1736) (the trend has been continuing ever since). Meanwhile, the first Maronite monastic order following the Roman Catholic model had been chartered by Iṣṭifān al-Duwayḥī. Since the Second Vatican Council (1962), the Maronite liturgy has been largely Arabised.

Starting from the early 17th century, the Maronites of the northern Lebanon entered into close political association with their Druze neighbours in the southern parts. A large-scale migration of Maronites to the Druze country followed, continuing through the 18th century to the early 19th, whereby the Maronites, in time, came to form the majority of the population of the Druze districts. Having the advantage over the Druze in numbers, and backed by the Roman Catholic European powers, especially by France, the Maronites began to entertain ambitions of dominating the whole of Mount Lebanon, thereby challenging Druze leaderships in their own home districts. Intermittent clashes between the two sides, starting from 1840, culminated in a massacre of Maronites and other Christians of the Druze regions in 1860, in which an estimated 15,000 were killed or died of destitution, and about 100,000 were left homeless. Intervention by the European powers, spearheaded by France, restored peace to the mountains, and in 1861, the Ottoman government was prevailed upon to grant Mount Lebanon the privileged status of a *mutasarrifiyya* administered by an Ottoman Catholic Christian *mutasarrif* or governor, who was appointed directly by the central government in Istanbul and assisted by a locally-elected administrative council. The decades that followed witnessed an Arabic literary revival in Beirut and Mount Lebanon, in which Maronite participation was particularly prominent.

Following the First World War, France, in 1920, was accorded the mandate over the territory of present-day Syria and Lebanon. The French thereupon expanded the territory of the Lebanese *mutasarrifiyya*, largely in response to Maronite ambitions, to form the State of Greater Lebanon, which became the Lebanese Republic in 1926, with the Maronites politically at the helm. In Lebanon, the Presidency of the Republic, the Army Command and a number of other key positions continue to be the preserve of the Maronites.

Since the 1880s, increasing numbers of Maronites have emigrated from Lebanon to North and South America, Australia, and other parts of the world. The community in Lebanon is estimated today at one million out of a total Lebanese population of about five million, the estimate of the Maronite population outside Lebanon being at least double that number.

## MASHHAD.

### 2. History and development since 1914.

In the course of the 20th century, Mashhad has become a regional metropolis (2,155,700 inhabitants in 2004), the capital of the vast province of Ḳhurāsān, and well integrated into the economic and public life of Iran. At the same time, it has kept its character as a goal of pilgrimage, dominated by the strength of the economic and political authority of the Āstānā-yi ḳuds-i riḳawī, the administration of the Shrine *wakf*, probably the most important in the Muslim world.

In 1914, despite its religious importance, Mashhad was a marginal town in regard to the rest of the country. The population of some 70,000 was ethnically very diverse, with Azeris, Hazāras, Bukhāris, Marwīs, Berberīs, Afghāns, and several thousand Jews who had been forcibly converted to Islam, called *Djadīd al-Islām* (Patai). About a hundred Europeans, mostly Russians, and as many again Indian subjects of the British crown, lived near their respective consulates. Trade with Russia was twice as important as that with Tehran, since the only modern road was that connecting Mashhad with 'Ashkābād, opened in 1892 (Bharier, 14). Like most of the towns of Iran, it kept its traditional character for the first decades of the 20th century. The only modern street, lit by electricity since 1902, was the Bālā *khayābān* leading from the entrance of the town on the western side to the Shrine and to the modest pilgrims' bazaar, since Mashhad never had a proper bazaar and the shops, just as the 37 caravanserais housing pilgrims, were dispersed throughout the town.

Riḳā Shāh [*q.v.*] and the Pahlavī dynasty showed a great interest in Mashhad and the Shrine of the Imām Riḳā. The ruler personally assumed the office of *mutawallī* of the Āstānā-yi ḳuds, and members of the royal family regularly made the pilgrimage to the town, where a palace was built at Bāk-i Malikābād; trusted servants were appointed as governors of Ḳhurāsān and executive directors of the Shrine. A new town was laid out, with rectilinear streets, houses in the Russian style with two storeys and large windows; and businesses and offices were developed to the west of the holy city, which kept its houses of sun-dried brick, its alleys and the *musāfir-khānas* or hostels and the caravanserais for pilgrims. In 1935 Mashhad was linked with Tehran by a modern road, an aerial connection in 1928 (regular service in 1946), an oil pipeline in 1955 and a railway in 1957 (Bharier). At the end of the 1960s, there was a fresh wave of expansion. The Firdawsī University was opened in 1966, modern hospitals, amongst the best in Iran, were built, food and textile (carpets) industries were developed, whilst sources of natural gas at Sarakhs enabled the burgeoning city to be supplied with gas. An urban plan was successfully put into operation, since over half of the built-up area and 80% of the land available for building belonged to the Shrine. A French study centre, the SCET Iran, was given the task of making an inventory of the Shrine's possessions and of modernising its administration in order to increase its revenues (Hakami, Hourcade). To the west, at Abkūh, vast hotels for students, troops and officials of the Shrine were constructed. To the east, urbanisation swallowed up the small towns of Gulshahr, Sakūmān and Turuḳ, but was limited by the extensive agricultural holdings of the Shrine and by military lands.

After the oil boom of 1974, Muḥammad Riḳā

Shāh [q.v.] decided to make Mashhad the most important and most modern pilgrimage centre of the Muslim world. Under the direction of the governor, M. Waliyān, the reconstruction of the old town began in 1973 with the destruction of the bazaar, caravanserais, and traditional-type hotels near the Shrine and the avenue (*falaka*) which surrounded it. The only part left standing was a section of the carpet bazaar. The Bāzār-i Riḍā, a simple, modern gallery meant for the pilgrims' purchases, was opened in 1977 near the Ḥaram, whilst workshops and other commercial activities were dispersed to the town's periphery. From now on isolated in a vast open space, the Shrine was renovated and developed on a grandiose scale, making the Imām Riḍā's tomb the greatest religious architectural complex in the world, still in the course of construction in 2002 (library extension, schools, a new cemetery in the underground vaults, new courts and spaces for welcoming pilgrims). This policy of increased prestige was actively followed by the Islamic Republic, under the direction of the *āyatullah* Wā'izī Tabasi, the new *mutawallī* of the Shrine and no longer governor of the province. The city continued to expand towards the southwest along the Wakīlābād Avenue (new university campus, high-class residences) and, above all, to the northwest (agricultural lands towards the Kūcān road, where mass housing and industrial zones reach as far as the ancient Tūs, where Firdawsī's tomb is to be found).

From 1956 to 1996, Mashhad has had the greatest population growth (5.3% per annum) of the great cities of Iran, after Tehran itself. This development became very rapid after 1979 because of the influx of Afghān refugees in a new quarter to the northeast of the city. This new Afghān quarter evokes the traditional relations of Mashhad with the Harāt region and Central Asia, reinforced by the re-opening of the frontier with Turkmenistan in 1991 at Badjirān and, above all, after the opening on 15 May 1996 of the new railway linking Mashhad, via Sarakhs, with the rail network of the former USSR. This opening towards the east of a town and a region long isolated from Tehran takes place, however, hand-in-hand with the strengthening of political, administrative and economic relations with the capital. The revolt of 1921 by Col. Muḥammad Taqī Khān Pisyān was one of the last manifestations of former isolation. Consequently, the population of Mashhad has participated actively in the crises and the political and social debates in Iran: the riots of 1963 against the White Revolution, and active participation in the Islamic Revolution (the thinker 'Alī Shari'atī was a professor at the University of Mashhad, and Sayyid 'Alī Khaminai, who in 1989 became the Spiritual Guide of the Islamic Republic, was one of the most active of the local religious leaders).

As the second city of Iran in terms of population since 1975, Mashhad, now a modern city, remains the regional capital of eastern Iran, even though the province of Khurāsān, of which it is the capital, has been since 2002 divided into three different provinces. The passage through it of over ten million pilgrims each year accentuates more than ever before the religious identity and the economic activity of this regional metropolis, which now has the second-most important airport in Iran and the most important hotel complex (more than 25,000 beds in hotels and, above all, *musāfir-khānas*), well ahead of Isfahān.

(B. HOURCADE)

3. The Shrine, and Mashhad as a centre of Shī'ī learning and piety.

The location in Mashhad of the Shrine of the eighth Imām 'Alī al-Riḍā [q.v.] has made Mashhad into the leading place of pilgrimage within Persia, the process whereby its veneration developed being accentuated by the fact that, for some four centuries, with one break of a few decades, the Shī'ī shrines of 'Irāk were in the hands of the Sunnī Ottoman Turks, the powerful enemies and rivals of the Ṣafawids and their successors [see further, 'ATABĀT, in Suppl.]. Shī'ī 'ulamā' place Mashhad as the seventh of the great sanctuaries of the Muslim world, after Mecca, Medina, and the four specifically Shī'ī 'atabāt in 'Irāk, al-Nadja, Karbalā', Samarrā' and Kāzīmayn [q.v.] (see P.M. Sykes, *The glory of the Shia world*, London 1910, p. xiii), but some Shī'ī 'ulamā' would rank it next after Karbalā' (see G.N. Curzon, *Persia and the Persian question*, London 1892, i, 150 n. 2).

The Ḥaram containing the Shrine seems to be essentially the creation of the last six or seven centuries, its development receiving a powerful impetus when the Ṣafawids turned Persia into a Shī'ī state in the 10th/16th century. Previously, it had been easier for non-Muslims to visit the Shrine, since the Spanish ambassador Clavijo, en route for Timūr's court at Samarḳand, was able in 1404 to visit it. Thereafter, it was not till the first half of the 19th century that the British traveller J.B. Fraser was able, by dint of a feigned conversion to Islam, to enter the Shrine in 1822 long enough to make a drawing of the courtyard there (see Fatema Soudavar Farmanfarmaian, *James Baillie Fraser in Mashhad, or, the Pilgrimage of a nineteenth century Scotsman to the Shrine of the Imām Riḍā, in Iran*, *JBIPS*, xxxiv [1996], 101-15). Various other European travellers followed in the later 19th century (details in Curzon, *op. cit.*, i, 148 n. 1).

But the rise of the Mashhad shrine began well before the advent of the Ṣafawids, and especially after the sack of nearby Tūs by the Tīmūrid prince Mīrān Shāh b. Timūr in 791/1389 dealt Tūs a death-blow and brought the Sanābad shrine into prominence as the nucleus of the later Mashhad [see TŪS]. Already,

Ibn Baṭṭūta had gone on from Tūs to "the town of Mashhad al-Riḍā", which he describes as large and flourishing (*Riḥla*, iii, 77-8, Eng. tr. Gibb, iii, 582), and Tīmūrid rulers such as Shāh Rukh and his wife Djawhar-Shādh were great benefactors in the first half of the 9th/15th century; but members of the new dynasty of the Ṣafawids vied with each other in enriching and enlarging the Shrine. Shāh Tahmāsp I erected a minaret covered with gold in the northern part of the *Ṣahn-i kuhna* which, with the *Ṣahn-i naw*, bounds the Shrine on its northern and eastern sides, and he adorned the dome of the tomb with sheets of gold and put a golden pillar on top of it (this was to be carried off by the Shībānids when in 997/1589 they invaded Khurāsān and sacked Mashhad). 'Abbās I laid out the main thoroughfare of the city, the *Khiyābān*, running from northwest to southeast and dividing the city into two roughly equal halves; the Shrine area divided this street into an upper (*bālā*) and a lower (*pā'īn*) part. 'Abbās II devoted his attention mainly to the decoration of the *Ṣahn-i kuhna*. Ṣafī II, the later Sulaymān I, restored the dome of the Imām's tomb. But there were benefactions during these times from outside potentates also, not only from the South Indian Shī'ī Kuṭb-Shāhī ruler Sulṭān-Kuṭb al-Mulk in 918/1512 but also by the Sunni Mughal emperor Akbar, who made a pilgrimage to Mashhad in 1003/1595. Although likewise a Sunni, Nādir Shāh Afshar was the greatest benefactor of the city and the Shrine in the 12th/18th century, devoting a great part of the plunder brought back from India to their embellishment. Before his accession to the throne, he had in 1142/1730 built a minaret covered with gold in the upper part of the *Ṣahn-i kuhna* as a counterpart to that of Tahmāsp I on the north side of this. He now thoroughly restored the southern half of the *Ṣahn*, and decorated the southern gateway richly and covered it with sheets of gold, so that it acquired the historic name of "Nādir's Golden Gate"; in the centre of this court he placed his famous octagonal marble "water house", the *sakkā-khāna-yi nādirī*. The Kādjār Shāhs, from Fath 'Alī to Nāsir al-Dīn, likewise cherished the Shrine, despite the frequency with which the city of Mashhad was involved in rebellions against the central government at various points in the 19th century.

The Shrine area forms the so-called *Bast*, thus designated from the rights of asylum and sanctuary traditionally operating there for e.g. debtors, and, for a limited period, criminals (see Curzon, *op. cit.*, i, 155, and *BAST*). Nādir's Golden Gateway leads southwards to the area of the Imām's shrine itself and its ancillary buildings, what is strictly speaking the *Haram-i mukaddas*. The almost square shrine has the actual tomb in its northeastern corner. Shāh 'Abbās I provided the tomb with a gold covering, and he also covered the dome, 20 m/65 feet high, with gilded copper sheets. Notable also here is the *Dār al-siyāda* hall built by Djawhar Shādh, a *Dār al-huffāz*, and the fine mosque bearing Djawhar Shādh's name, regarded by many authorities as the most attractive building in the sacred area (see illustr. in Sykes, *op. cit.*, at 263). There are also teeming bazaars, caravanserais, baths, etc. in the *Haram*, the property of the Shrine, but the Shrine also in pre-modern times held *aukāf* [see *WAKF*] all over Persia, and especially, in other parts of Khurāsān, contributing to the income of the Shrine and its upkeep. This last varied according to economic prosperity and peaceful or otherwise conditions in the land; information given to Curzon at the end of the 19th century put the Shrine revenues

at 60,000 *tūmāns*, equivalent at that time to £17,000 sterling per annum (*op. cit.*, i, 162-3).

The Shrine was administered by a lay *Mutawallī-bāshī*, from the later 19th century onwards until Pahlavī times as an office held by the governor-general of Khurāsān, previous times having been often characterised by disputes between the Shrine administrator and the representatives of the central government; at the time of Curzon's visit, the *Mutawallī-bāshī* was Nāsir al-Dīn Shāh's brother Muḥammad Takī Mirzā, Rukn al-Dawla (replaced in 1891 by a former governor of Fārs). The office was a lucrative one, since the administrator normally drew 10% of the Shrine's revenues. Beneath him was a large staff of lower *mutawallīs*, *muḍjtahids* [q.v.] and *mullās*, some enjoying hereditary appointments.

Pilgrimage to the shrine of the Imām began at an early date. European travellers and visitors in the 19th century endeavoured to estimate their annual numbers: Ferrier (1845) gave 50,000; Khanikoff (1858) and Eastwick (1862), over 50,000; C.E. Yate (in the 1890s), 30,000. These numbers tended to rise at the times of special festivals such as the anniversary of 'Alī al-Riḍā's death and during Muḥarram. The rites of pilgrimage involved a triple circumambulation or *ṭawāf* and the three-fold cursing of the Imām's enemies, and especially of the caliphs Hārūn al-Rashīd and al-Ma'mūn. The pilgrims enjoyed a support system of food kitchens and accommodation for three nights, and a pilgrim who had performed all the rites in the prescribed fashion was entitled to call himself a *Mashhadī*.

As with the lands adjacent to al-Nadjaḥ and Karbalā', the holiness of the Shrine and its environs made it very attractive for burials, and several large cemeteries lay round it, such as the *Maḳbara-yi kaṭl-gāh* ("killing ground cemetery") to its north. Since there was so much demand for places—not merely from Persians but also from Shī'īs from the Indian subcontinent, Afghānistān and Central Asia—the same ground had to be used over and over again for burials. The fees for such burials—graves with proximity to the Shrine itself being the most expensive—brought in a not inconsiderable revenue to the Shrine. See also *MAḲBARA*, 4, in *Suppl.*

As well as a centre for piety and pilgrimage, Mashhad was an educational centre, with a considerable number of *madrasas*, whose number in the first decade or so of the 20th century approached twenty, the oldest still standing being the *Dūdār* one, founded by Shāh Rukh in 823/1420, the majority of them, however, dating from the later Ṣafawid period. From an architectural and artistic point of view, the Madrasa of Mir Dja'far, built and endowed by the founder in 1059/1650, is regarded as especially fine. These colleges attracted students from Persia itself and also from the Shī'ī communities of India; Sykes in 1910 put the number of students at that time at 1,200 (*The glory of the Shia world*, 267-8), many of whom at this time went on subsequently for further study at al-Nadjaḥ.

For the Shrine, its administration and development in the 20th century, see 2. above.

*Bibliography:* Given in the article, and see that in the *ET* art. *Meshhed*. (M. STRECK\*)

**MASHSHĀ'YYA** (*mashshā'ūn*, *mashshā'īyyūn*, *mushāt*), the Peripatetic or Aristotelian school of Greek philosophy and its Arabic-Islamic followers.

The Arabic term is a translation of the Greek *peripatētikoi*, the school of Aristotle, who is reported to

have taught whilst "perambulating" (Greek, *peripatein*) with his students. While in the Greek sources the designation is restricted to Aristotle's personal disciples, the Arabic equivalent is used for the Hellenistic tradition of his philosophy in general. As a term of doxography, it occurs in the *Fihrist* of Ibn al-Nadīm (247, 16), and in the 5th/11th century *Siwān al-hikma* (from the school of Abū Sulaymān al-Sijistānī), where the term is explained historically. According to this, following the precept of Plato to train both body and soul, "Aristotle and Xenocrates used to teach philosophy to their pupils while walking to and fro", and so they were called the Peripatetics of the Academy (*al-mushāt al-akādhimīyyūn*, 41, § 709); similarly al-Kiṣṣī, *Ta'riḫ al-hukamā'*, 26, in a classification of the various ways to designate schools of philosophy where both Platonists and Aristotelians are subsumed under this name; and likewise in al-Shahrestānī (*Milal*, 253, 296).

In the introduction to his work on the philosophy of the "Easterners" (*al-mashrikīyyūn*), Ibn Sīnā, while acknowledging the merit of Aristotle, blames those who "are infatuated with the Peripatetics (*al-Mashshā'ūn*) and who think that no one else was ever guided by God" (see Gutas, *Avicenna*, 45), announcing the evolution of his philosophy beyond the basis laid by Aristotle, who was henceforth called the First Teacher (*al-mu'allim al-awwal*; see e.g. Ibn Sīnā, *al-Shifā'*, *al-Ilāhiyyāt*, ed. Anawati et al., 392). The term "Peripatetics" is now used in explicit delimitation or criticism of Aristotle and his commentators (such as Alexander of Aphrodisias) against Ibn Sīnā's own doctrine (see Naṣīr al-Dīn al-Tūsī, *Sharḥ al-Ishārāt wa 'l-tanbihāt*, Tehran 1959, 21982, ii, 416, l. 10; iii, 174, l. 5, etc.) or other schools of thought.

In the subsequent development, however, it was the philosophy of Ibn Sīnā and his extensive following which, again from another standpoint, was designated as *mashshā'īyya*. It was not his principal critic al-Ghazālī, but Ibn Rushd [q.v.] in his *Tahāfut al-Tahāfut* (ed. Bouyges, 178, l. 6), who pointed out mā 'itaraḍa bihi Abū Ḥamid 'alā 'l-mashshā'īn—using "Peripatetics" synonymously with *al-falāsifa* (*ibid.*, l. 8; and see ed. Bouyges, index, 605, § 139). Shihāb al-Dīn Yahyā al-Suhrawardī, in his turn, designates Avicennan concepts and doctrines as those of the *mashshā'īn* (*Opera*, ii, 13 and *passim*) in contrast to his own mystical philosophy. It is this general use of the term which appears in later doxography, blurring the difference between the Aristotelian and Platonic schools of Greek philosophy vis-à-vis the following of *ishrāqī* mysticism [see *ISHRĀQ*; *ISHRĀQIYYŪN*]. In this sense, the 10th/16th century Iranian philosopher Ṣadr al-Dīn al-Shīrāzī [q.v.] is praised by his biographer for uniting *al-mashshā'īyya*, *al-ishrāqīyya* and Islam (Muḥsin al-Amīn, *A'yān al-Shī'a*, Damascus and Beirut 1953-63, ix, 325).

**MAṬAR**, ILYĀS DĪB (1857-1910), Syro-Lebanese historian, medical doctor, pharmacist, lawyer and teacher. He was born into an Arab Orthodox middle-class family in the town of Ḥāshbayyā, in present-day south Lebanon. The Druze-Maronite civil war, which erupted in 1860 and spread from Mount

Lebanon to other parts of Syria, forced his family to move to the safety of the city of Beirut. His father, who was a prosperous merchant and a local notable of his community, managed to escape what became known as "The massacre of Ḥāshbayyā" under the protection of the prominent Druze leader, Sa'īd Ḍjunbulāt.

Ilyās Maṭar received his primary education at his confession's school, Les Trois Docteurs. He then entered the Catholic Patriarchal School, where he learned Arabic, French, Greek and other subjects. His studies widened in scope when he enrolled at the newly-established Syrian Protestant College (SPC), later renamed the American University in Beirut. There he studied chemistry, botany and pharmacy. During those formative years he was taught by a number of competent teachers, whose names were to become associated with the emergence of "the modern Arab renaissance" [see NAḤDA] in the 19th century. These included Salīm Taqlā (1849-92), founder of the celebrated Egyptian newspaper *al-Ahrām*; Naṣīf al-Yāzidī (1800-71), the accomplished Arabic scholar; and his fellow-townsmen Fāris Nimr (1856-1952 [q.v.]) who taught Maṭar chemistry.

It seems that it was upon Nimr's suggestion that Maṭar decided to write a general history of his country, Syria. This was published in 1874 under the title, *al-Ukūd al-durrīyya fī ta'riḫ al-mamlaka al-sūriyya*. It constituted the first historical work written on Syria as a well-defined entity by a native Arab historian. Its importance lies in the manner it deals with Maṭar's country as one single cultural and territorial unit. Thus Syria ceases to be a collection of Ottoman administrative units, and becomes a fatherland (*waṭan*) extending from the Taurus mountains in the north and the Sinai Peninsula in the south, and from the Euphrates in the east and the Mediterranean in the west. This fatherland is then shown to be endowed with an Arab national identity and an inherent capacity to acquire the new achievements of European civilisation. However, Syrian patriotism figures in this respect as an integral part of the wider movement of Ottomanism.

Maṭar's book is dedicated to the well-known Ottoman historian Aḥmed Ḍjewdet Paṣha (1822-95 [q.v.]), whom he met during his visit to Istanbul in 1874. This visit was undertaken in order to obtain his degree in pharmacy and secure the authorisation of the Ottoman Ministry of Education to publish his history. After this date, Maṭar became Ḍjewdet's protégé, acting as his son's tutor, assistant and adviser. It was also upon Ḍjewdet's encouragement that Maṭar qualified as a medical doctor and became a practising lawyer. He taught both medicine and law in Istanbul, while co-editing at the same time a legal journal, *al-Hukūk*.

Maṭar is credited with the authorship of over thirty books, both in Arabic and Ottoman Turkish. Apart from his pioneering historical text, his output includes works on a wide variety of subjects, such as jurisprudence, public health and education.

Owing to his affliction with a fatal disease, he returned to Beirut in 1909. He died the following year (March 1910) and was buried in his family's cemetery.

(YOUSSEF M. CHOUERI)

**MATARAM**, the name of an area in central Java where two kingdoms have developed.

1. The first kingdom bearing this name was founded by Sanjaya, who is recorded to have erected a *linga* in "Kunjarakunya". The inscription commemorating this event, written in Sanskrit in A.D. 732, was found in a Shaivite sanctuary at Changgal. Some time later, the Mahayana-Buddhist Shailendra appear as dominating dynasty of Mataram, and Sanjaya's successors submitted to them. The Shailendras probably came to central Java after the fall of the empire of Funan, centred in the south of present-day Kampuchea, after A.D. 627, continuing their royal titulature as "rulers of the mountains". They became famous for erecting the most outstanding Buddhist monuments such as the Borobudur, Mendut, Pawon, and others. After 832, however, their power declined, and thus the Shaivite dynastic line which had withdrawn to east Java returned to the centre. Obviously, both dynastic lines were linked together by intermarriage, and this paved the way for Mataram to reach the peak of its power, including the incorporation of most of central and east Java and parts of Bali into its territory. King Balitung (898-910) was the first king to use the name of "Mataram" in his inscriptions, and his successor Daksa (910-19?) is credited with the erection of the monumental Lara Djonggrang complex near Prambanan, consisting of 190 temples, the main one being dedicated to Shiva. King Sindok (929-47), however, moved the capital to the upper valley of the Brantas river in east Java, thus founding a new dynasty and ending the history of this first kingdom of Mataram.

2. The Islamic kingdom of Mataram was founded by the Panembahan Senopati Ingalaga (d. 1601). His father, Kyai Gedhe Pamanahan, is famed for his killing Arya Penangsang of Jipang, the powerful and frightening enemy of Adivijaya (Jaka Tingkir), ruler of the second Islamic (Shi'ī) kingdom of Java, Pajang (r. 1549-87). As a reward, he was given the central area of the ancient kingdom of Mataram where he founded the Kota Gedhe, later under his son to become the capital. After his death in 1584, his son was awarded the title of Senopati ("general") by the king, but Senopati soon fought against Demak and other principalities and eventually even attacked the king's troops. After the king's death, he rejected Pajang's supremacy, and he added to his magic powers through meditation and asceticism and a visit to the divine Queen of the Southern Sea, Nyai Lara Kidul, thus underlining the central cosmic position of his capital—and himself as ruler—between the volcano Mount Merapi to the north and the Sea in the south. With the support of two from among the "nine holy men" (*wali songo*) who are said to have brought Islam to the interior of Java, Sunan Giri and Sunan Kali Jaga, he made Islam the religion of his kingdom, which by now included most of the interior of central and east Java, but not the important sea ports on the north coast, from Surabaya in the east to Cirebon (Cheribon) and Banten in the west. Senopati's grandson Agung (r. 1613-46), the greatest ruler and warrior king of the dynasty, which now, according to the panegyric chronicle of Mataram *Babad Tanah Jawi*, claimed dynastic descent from the ruling family of Majapahit, the last Hindu kingdom in Java (until 1527), took the title of *susuhunan* in 1624, and in 1641 the title of *sultān* was added, legitimised by a special delegation from Mecca. He succeeded in subduing the northern seaports; even Surabaya surrendered in 1626, while its dependency Sukadana in southwestern Kalimantan had already been captured earlier. Even Palembang [*q.v.*] was captured after 1636.

Thus Mataram developed as a maritime power as well. An attack on Batavia, then the stronghold of the Dutch *Vereenigde Oostindische Compagnie* (VOC) ended with a defeat. On his death, within the island of Java only Batavia and the sultanate of Banten, to the west of Batavia, refused to acknowledge Mataram's suzerainty. His wars had entailed an enormous loss of human lives and destruction of agriculture. Court literature, however, developed and presented a combination of Šūfī tradition and traditional Javanese cosmological mythology. His successor, his son Susuhunan Amengku Rat I (r. 1646-77) turned away from professing Islam, starting his increasingly tyrannical reign of continuous warfare and killing with the murder of about 6,000 Islamic teachers together with their families. Rebellions flared up, the biggest one led by Raden Trunajaya (1649-80) from Madura, who was also supported by many religious (Islamic) teachers who encouraged him to fight against the cruel king and his ally, the "Christian" VOC. The popular hope for the imminent arrival of a Messianic *ratu adil* ("just king") spread widely. The *susuhunan's* son Amengku Rat II (r. 1677-1703) defeated his father's enemies and personally stabbed Trunajaya to death, but his throne, in the meantime, was occupied by his brother Pangeran Puger. Therefore the king established a new court in Kartasura, to the east of Kota Gedhe (Yogyakarta).

Madura and east Java remained, however, centres of rebellion. Under Amengku Rat III (r. 1703-8, d. in exile in Colombo in 1734), the son of his predecessor, the disintegration of Mataram took on a serious form, partly because of the insurgence of Surapati (d. 1706), a former Balinese slave and military trainee of the VOC who had established himself in Pasuruan and extended his territory to Madiun, partly because of the First Javanese War of Succession (1704-8) which broke out when the VOC recognised Pangeran Puger as Susuhunan Pakubuwana I (r. 1704-19). When he died and his son followed him as Amengku Rat IV (r. 1719-26), the Second Javanese War of Succession began (1719-23), involving the VOC even more in Javanese dynastic affairs. His death by poison brought his son Pakubuwana II (r. 1726-49) to the throne. Changing alliances, among others with the Chinese who had fled the massacre in Batavia in 1740, against the Dutch who, on their part, were allied for some time with Pangeran Cakraningrat IV of western Madura, or with the Dutch against other enemies, and continuous court intrigues weakened the position of the *susuhunan* continuously. The court, which in 1746 had been moved to the new capital Surakarta [*q.v.*], rose again in rebellion when the *susuhunan* agreed in a unilateral decision to the demand of the VOC to cede the ports on the north coast to Dutch administration. Thus began the Third Javanese War of Succession (1746-57), led by the rebellious brother of Pakubuwana II, Pangeran Mangkubumi, who, in his headquarters in Yogya, was declared Susuhunan Pakubuwana in 1749 (r. 1749-92); in 1755 he adopted the title Sultan—for the first time after Sultan Agung—Hamengkubuwana (I) which has been maintained until the present Sultan Hamengkubuwana X (since 1986), and made Yogyakarta [*q.v.* in Suppl.] his capital. Before his death, Pakubuwana II, however, had transferred sovereignty over his kingdom to the VOC, who agreed that the crown prince should become Pakubuwana III (r. 1749-88). This initiated the partition of Mataram into two major principalities, Surakarta and Yogyakarta.

The last major rebel in the court of Surakarta,

Pakubuwana III's cousin Mas Said, surrendered in 1757, and henceforth ruled, as Pangeran Adipati Mangkunegara I (r. 1757-95), over an area taken from Surakarta and inhabited by 4,000 households. During the temporary British occupation of the Dutch possessions (1811-16), the brother of Hamengkubuwana III (r. 1810-11; 1812-14), Natakusuma, was rewarded by the British with an appanage of 4,000 households and the title Pangeran Pakualam I (r. 1813-29), playing now a similar role in Yogyakarta territory as the Mangkunegara in Surakarta territory.

Ever-increasing colonial exploitation caused a general social and economic decline, and general unrest was growing. Hamengkubuwana's eldest son, Pangeran Dipanegara (1785-1855), avoiding the court and studying Islamic textbooks and Javanese wisdom with Islamic teachers, associated himself more and more with popular discontent, until finally the last great war in colonial times in Java, the Java War (1825-30), broke out. At its end, half of the population of Yogyakarta had died, and Dipanegara was exiled, first to Menado and then to Makassar.

From the two major and two minor principalities in the territory of Mataram, only the sultanate of Yogyakarta in the heartland of Mataram could maintain some limited degree of self-government, due to the merits of the late Sultan Hamengkubuwana IX (r. 1939-86) during the early years of independent Indonesia and his co-operation with the Pakualam VIII in modernising the administration of his territory, which is acknowledged in the Republic as the Daerah Istimewa Yogyakarta ("special district of Yogyakarta"), Sultan Hamengkubuwana X (1986-) being again its governor (since 1999).

## MATBA'A.

### 6. EARLY ARABIC PRESSES IN THE NETHERLANDS AND ENGLAND

The principal centre of Arabic printing in Protestant Europe was originally Leiden, where the scholar-printer Franciscus Raphelengius cut an Arabic fount and printed specimens in his *Specimen characterum Arabicorum officinae Plantiniana Raphelengii* (1595). The characters were modelled on the Medicean fount but were of inferior elegance. After being used for the posthumous

printing of his Arabic-Latin lexicon (1613) and other works, the Raphelengian equipment was bought by the pioneer English Arabist William Bedwell (1563-1632), who left it to the University of Cambridge, intending that it should be used to print his own Arabic-Latin lexicon. His wishes remained unfulfilled, and no use seems to have been made of the fount since the earliest extant Arabic printing at Cambridge (1688) differs from the Raphelengian type. In the meantime, the great Arabist Thomas van Erpe (Erpenius), Professor of Arabic at Leiden (1612-24), had established his own press there, from which he published his own works. The Medicean Press again provided the model for the typeface. About this time oriental (and specifically Arabic) studies were encouraged at Oxford by Archbishop William Laud as chancellor of the university (1630-41). Laud established the chair of Arabic for Edward Pococke in 1636, and in the following year his agent bought printing equipment for Arabic and other oriental types from stock in Leiden. This provided the fount for *inter alia* Pococke's *Specimen historiae Arabum* (1648, 1650), and it continued to be used into the eighteenth century. A third Arabic fount was that used in London for the printing of the Polyglot Bible of 1653-57 and its great supplementary work, the *Lexicon Heptaglotton* of Edmund Castell, Professor of Arabic at Cambridge. Unlike the Raphelengian and Oxford founts, this was modelled on the characters of the Savarian Press, which had been set up by Savary de Brèves, the French ambassador at Rome (1608-14), when the Medicean Press there went out of production. Savary brought the press back to France, where it was acquired by the Imprimerie Royale and used in the production of the Parisian Polyglot (1645).

## MATBAKH

### 3. In Persia.

The Persian word for kitchen, *āshpazkhāna*, was not in general used before the 19th century, though the terms *āsh* "soup" and *āshpaz* "cook" do occur in earlier texts. Before the Kādjār period, the Arabic *matbakh* was the common term for kitchen (Elahi, 790-91, with description of Persian kitchen).

A tradition with a long history, Persian cuisine ranks, with that of the French and the Chinese, as one of the great cuisines of the world. Its origins and influences are to be sought in the East, and more specifically in Transoxania. The traditional use of wheat as a staple and the basis of vegetable soups (*āsh*), the mixing of meat and fruit in dishes, the use of various types of yoghurt (*mast* and *kashk*) and other dairy products, and ways of preparing meat, all point to Central Asian origins. Conversely, olives and olive oil, so abundant in the Mediterranean and Ottoman Turkish cuisine, are virtually absent in Persian cooking (except in the Caspian provinces); Persians traditionally cooked with animal fat (except for Jews, who used sesame oil). The important place of rice in Persian cooking similarly suggests Asian origins, in this case Southeast Asia and India (Bazin and Bromberger, 148; Fragner 1994a, 54-5).

Legend ascribes the art of cooking to Ahriman (the Zoroastrian spirit of evil) who is said to have taught

a mythical King Zahāk to prepare the flesh of animals (Firdawsī, *Shāh-nāma*, 1988, i, 48-51, cited in Ghanoonparvar, 191). It is mainly Greek texts that offer some information on royal banquets, but otherwise we know little about food and ways of preparing it during the Achaemenid period, though borrowings from Lydia and Assyria seem plausible (Schmitt; Gunter, 13-21). The situation for the Sāsānid period is a little better, with information and recipes being available on the high cuisine of the court, including ingredients such as various types of hot and cold meat, stuffed vine leaves and sweet date purée (Amuzgar; Gunter, 44). The first five centuries of Islamic rule are again rather poorly documented. The available information, mostly from Muslim travellers and the occasional literary source, points to a heavy reliance on bread and cereals, an important role for (roasted) meat, including game, especially for nomads and soldiers, and the use of condiments such as pickled vegetables (*turshī*), sour grapes (*ghūra*), dried lemons and walnuts, which would remain essential to Persian cooking (Kasā'ī). It is only in the Mongol period that the current Persian cuisine became heavily influenced by Eastern traditions and took its current shape. Rashīd al-Dīn, who first entered Mongol employ as a head cook in the household of the *khān* and who later employed a Chinese cook in his own household, may have been instrumental in the transmission of Chinese cuisine to Iran (Allsen, 73-4).

The first period for which we have abundant information on eating and cooking practices is that of the Sāfawids. European observers were struck at the frugality of eating habits. Chardin, iv, 28-9, 47, was among those who noted how Persians skipped breakfast except for a cup of coffee and only ate two proper meals a day. Food was cooked in earthenware or copper pots coated with tin (Olearius, 595). In areas where wood was scarce, such as the central plateau, cooked food was eaten at most only once a day, in the late afternoon, and instead of cooking, people in urban areas would get their pilaw and the ingredients for their soups from the ubiquitous cookshops. During other meals, bread and cheese were the main ingredients (Chardin, iv, 57; Tavernier, i, 545, 712). Meat included mutton and goat. Chicken and pigeon were also part of the menu of those who could afford it. Beef was rarely eaten. Chardin's observation, iv, 48-9, that beef, tough and dry, was only eaten by the poor in winter is echoed for the 19th century by Polak, i, 112, and Wills, 299. Even today, Persians do not favour beef, except those living in the Caspian provinces (Bromberger 1994, 191). Nor did game enjoy much popular appeal in Sāfawid times, despite the enthusiasm for hunting on the part of the élite, in part because of the difficulty of abiding by ritual slaughter, in part because of its taste (Otter, i, 207). Game was often given as a present to Christians, who loved it as well as dark meat and fish. Turkey flesh seems to have caught on very slowly after its introduction from the New World via Europe (Tavernier, i, 712). Olearius, 596, claimed in the 1630s that turkey was not among the birds eaten, though under Shāh 'Abbās I a Venetian merchant had once brought a few to Iṣfahān. A generation later, Tavernier wrote that the Armenians had brought turkeys and ways of raising them to Persia, adding that the meat was only for the court (i, 712). Some sources claim that horseflesh was the most esteemed type of meat (*Chronicle*, i, 155). The predilection for horseflesh at the court of Timūr (Clavijo, 106, 224) and the fact that the *Mihmān-nāma-i Bukhārā*, 318, calls it the most

delicious meat, point to a Central Asian origin of the taste. Polak, i, 115, suggested regional variation by saying that Persians did not eat horseflesh with the exception of the people from Shīrwān and the Özbegs, who considered it a delicacy. Fish, not an ingredient of the nomadic diet, was naturally mostly confined to the Caspian coast and the Persian Gulf littoral, though trout from the Caspian region was also served at royal banquets (Tavernier, i, 545).

The information that has come to us from Sāfawid times mostly concerns the food of the rich and eating practices at the royal court, as described by Western visitors who enjoyed the hospitality of the *shāh* and administrative officials. They offer information on the royal kitchen as well as on the types of food consumed at the court.

The royal kitchen prepared food only once a day for the royal household but twice a day for the *shāh* himself and his direct entourage. The daily food outlay for the *shāh* amounted to two sheep, four lambs, and thirty chickens for his midday meal and half as much for his supper, not counting small poultry, game and fish (Chardin, v, 350-1).

The royal kitchen was supervised by the *tūshmāl-bāshī*, an official who was subordinate to the *nāzir al-buyūtā*, the steward of the royal household. The *tūshmāl-bāshī* was responsible for the quantity and quality of the meat served at the court, preceded the procession of the meat dishes all the way from the kitchen to the royal quarters, and also acted as the royal taster (the *mihtar* "chamberlain" would taste all royal food a second time) (Minorsky, 137; Olearius, 672; Richard, ii, 15, 274; Chardin, v, 349-50, 378; Kaempfer, 279-80). Another important official was the *sufra'ī-bāshī*, who was in charge of arranging the floor cloth (*sufra*) on which food was consumed (Olearius, 672; Richard, ii, 15, 274; Chardin, v, 351). Other officials working in the royal food and drink department were the *kaṣṣāb'ī-bāshī* or *sallākh'ī-bāshī* "the butcher", the *hawādjār-bāshī*, who supervised the poultry yard and the scullery, the *sabz'ī-bāshī*, who was responsible for green salads, the *tursh'ī-bāshī*, who supervised the preparation of pickled vegetables, the *halwā'ī-bāshī*, or confectioner, the *sharbat'ī-bāshī*, or supervisor of the sherbets and syrups, the *ābdār-bāshī*, who was in charge of drinks, and the *kaḥwā'ī-bāshī*, who headed the department of coffee making (Afshar, 1991, 409-11; Minorsky, 67, 94, 97, 98; Chardin, v, 352-53).

Meat was often eaten in the form of kababs, which Fryer, iii, 146, described as "roastmeat on skewers, cut in little round pieces no bigger than a sixpence, and ginger and garlic put between each". The same author, i, 147, notes that it was most often made into a pilaw, "their standing dish".

Rice had become an important ingredient in élite cookery after the Mongol domination of the country, gradually edging out pasta and groats (*bulghur*) (Fragner 1987, 789). Though it is not clear whether rice was grown in Persia before the advent of Islam, it has been part of the Persian diet since Sāsānid times (Balland and Bromberger, 148; Bazargan, 161). At least since early Sāfawid times, Persians have eaten rice in various ways, either as chilaw or as pilaw. Unlike the situation in parts of China and India, where rice is a staple and a basic nutrient, in Persia rice has always been a prestige food and a luxury item not eaten by the poor on a regular basis. Its preparation has always been accordingly complex and time-consuming. Cooking is the same, involving a laborious process of soaking and steaming, resulting

in rice that does not stick together, but the main difference is that chilaw consists of rice and clarified butter and sumac, which, served with kabab, a raw onion or herbs, has become in modern times a favourite restaurant meal. Pilaw, on the other hand, is rice mixed with a variety of ingredients (for cooking and types of pilaws, see Balland and Bromberger, 154; and Bazargan, 161). Fryer, iii, 147, describes the making of pilaw as follows: "To make pullow, the meat is first boiled to rags, and the broth or liquor being strained, it is left to drain, while they boil the rice in the same; which being tender, and the aqueous parts evaporating, the juice and gravy incorporates with the rice, which is boiled almost dry; then they put the meat again with spice, and at last as much butter as is necessary, so that it becomes not too greasy or offensive, either to the sight or taste; and it is then boiled enough when it is fir to be made into gobbets, not slabby, but each corn of rice is swelled and filled, not burst into pulp." Rice with lamb was the most common form of pilaw, but it was also prepared in numerous other ways, with spinach or cabbage, with roasted or boiled meat, with almonds and raisins, with onion and garlic, and it was served in various colours, depending on the condiment, which could be currant, pomegranate or saffron (Olearius, 595-6; Kaempfer, 278). Chardin, iii, 185-6, noted five or six different pilaws during a meal served by Shāh Sulaymān for a Russian envoy, with garlic crust, lamb, chicken, eggs stuffed with meat, and with fish. He also gave more than twenty as the total number of pilaw varieties (iv, 54). Twenty-five kinds of pilaw are mentioned in a Persian source from the Ṣafawid period (Thābitiyyān, 371; see Afshār 1378, 98).

Then as now, meals were consumed synchronically; unlike French cuisine, there was no time sequence to the order of eating the food and courses are not divided (Spooner, 253; Chehabi, 47). Kaempfer, 278, describing a royal banquet, noted, however, that confection and sweetmeats tended to precede the main course (see also *Lettres édifiantes et curieuses*, 115). All Europeans commented on the silence observed during meals, their short duration, and the fact that nothing was drunk until afterwards. They also noted that no silverware was used, except for a large wooden spoon that was used for eating soup and drinking the various juices that were served as part of the meal (Della Valle, i, 641; Olearius, 596; Kaempfer, 281; *Lettres édifiantes et curieuses*, 119). While ordinary Persians ate from porcelain or earthenware, at the court gold dishes were abundantly used as well (Herbert, 262; Kaempfer, 262; Kroell, 30). Kaempfer, 153, estimated the total value of the royal dishware at 10 million gold ducats. *Āđđār* and *turshī* (pickled vegetables) served as condiments (Kaempfer, 278). Kaempfer, 262, describes the desserts served on the occasion of an audience: candied fruit, fresh fruit, various kinds of cake and sweetmeats. Jam, *murabba'*, was very popular and came in many varieties (Afshār 1991, 417). Sugar was used in great quantities in the ubiquitous confectionery. According to De Bruyn, the Dutch East India Company annually brought 12,000 packs at 150 pounds each to Iṣfahān (De Bruyn, 178).

Common people ordinarily consumed bread, vegetables and fruit. Bread has always been the staple for the overwhelming majority of the population, and its central role in the diet is reflected in popular expressions and folklore (Kasā'i, 112). The Caspian region, where bread has been spurned as unhealthy until modern times, is an exception (Orsolle, 171).

Types of bread used in Ṣafawid times were remarkably similar to the ones eaten today; such as *lawash*, thin unleavened bread that doubled as a spoon and a napkin, and *sangak*, long bread baked on pebbles (Chardin, iv, 50; Olearius, 596). Herbert noted how dates preserved in syrup mixed with buttermilk was seen as a precious food. He called the cheese dry, blue and hard, as being worst on the Gulf coast and best in Māzandarān (Herbert, 260, 262). Butter came from the tails of sheep. Nothing like restaurants existed. However, given the prohibitive cost of burning wood, many people ate at the ubiquitous public food stalls, *dukkān-i ṭabbākhī*, where simple hot rice dishes were prepared (Iskandar Beg Munshī, 188; Chardin, iv, 57).

Persia had since early mediaeval times been a crossroads for vegetables and fruits, serving as a source of diffusion or an east-west conduit for such plants and crops as sugar cane, lemons and sour oranges, spinach and eggplant (Watson, 26, 44-5, 62, 71). In the Ṣafawid period, the movement was generally in the opposite direction. Europeans introduced parsley, asparagus, artichokes and cauliflower into Persia, and these were cultivated in the vegetable gardens of Shīrāz and Iṣfahān (Ange de St. Joseph, 102-3; Tavernier, i, 422).

The first cookbooks—as opposed to texts in which food is described for its medicinal use—also date back to the Ṣafawid period (see Afshār 1360). Of the two that have come down to us, one, called *Kāmāma dar bāb-i ṭabbākhī wa ṣan'at-i ān*, dates from the time of Shāh Ismā'īl I (early 16th century) and was written as a gift to a nobleman. The second, *Maddat al-hayāt. Risāla dar 'ilm-i ṭabbākhī*, was probably written for Shāh 'Abbās by his chief cook, Nūr Allāh, who may have been a descendant of Muḥammad 'Alī Bāwarcī, and was perhaps even commissioned by the ruler. It is likely that both were composed for colleagues in the profession rather than as collections of recipes to serve as guidelines for the cooking of common people (Fragner 1984, 329; German tr. of the pilaw dishes in Nūr Allāh's *Maddat al-hayāt*, in *ibid.*, 343-60). For the Kāđđār period, we have the informative *Sufra-i a'īma*, a compendium of cooking and eating practices written for Nāšir al-Dīn Shāh's personal physician, the Frenchman Tholozan, by the royal cook.

The menu in Kāđđār times does not seem to have differed greatly from that in the Ṣafawid period. Persian sources as well as foreign observers still note the bread and the cheese, the chilaw and pilaw, the *āsh* and the *āb-i gushī*, the various legumes, such as beans, cucumbers, aubergines (egg plant), in addition to carrots, turnips, radishes and cabbages, as well as condiments in the form of *turshī*, and the prodigious quantities of fruit (Wills, 170-1; Nādir Mīrżā, 307-10, and see the references to food in Bašīr al-Mulk, *Rūznāma*, introd. by Afshār, pp. XL-LII). Confectionery, too, continued to be an indispensable part of the Persian diet (Wilson, 249-50). A new feature was that food items originating in the New World, such as tomatoes and potatoes, began to make modest inroads into the country's kitchens. Potatoes, which were apparently introduced into Persia in the 18th century, were long called *ālū-yi Malkūm* "plums of Malcolm", after the British envoy Sir John Malcolm, who is commonly but probably erroneously thought to have brought potatoes to Persia (Pūr-i Dāwūd, *Humazd-nāma*, 176; Binning, ii, 87-8). Though potatoes were cultivated in Persia, Muslim Persians in the early 19th century did not particularly care for them, and they mostly served the Armenian population and European residents

(Binning, *loc. cit.*; Polak, *Persien*, 132; Wills, 170). This changed during the famine of 1861-2, when potatoes suddenly became popular as a substitute for scarce cereals (de Gobineau, 170). Strawberries, too, were gradually coming into cultivation in the late 19th century (Wills, 170, 300). Turkey at that point had become slightly more common, as had small game such as quail, partridge and pheasant, though these still only appeared on the tables of the rich (Polak, i, 113-21; Lycklama a Nijeholt, ii, 242; Bleibtreu, 70). The Caspian provinces continued to stand out for their different diet, including rice and the consumption of garlic, which was thought to neutralise the humid air (Fraser 1826, 16). Public cookshops, known from the Safawid period, continued to exist all over Kādjār Persia (Binning, ii, 62), yet the first places resembling real restaurants only opened their doors at the turn of the 20th century. Mostly patterned after Russian and Caucasian examples, with terraces and gardens, they first appeared in Tehran (I'timād al-Salṭana, *Āhīl sāl*, 153; Fragner 1987, 790).

Rich and poor naturally continued to eat differently both with regard to table manners as to ingredients. Beginning with the court, members of the élite began to adopt western cutlery in the late Kādjār period, and the habit of sitting around a table on chairs was introduced in the early 20th century as well (Chehabi, 55-6). The rich used imported sugar while the poor made do with syrup and honey (Polak, ii, 154). The rich consumed different kinds of pilaw and *khūrish*, stews, with lamb meat, fowl or fish. The middling classes did not ordinarily eat pilaw and *khūrish* more than once or twice a week, but mostly had to satisfy themselves with *āb-i gūšt* (a stew on the basis of mutton stock, which seems to have become the staple of the poor in the course of the 19th century; see *Elr* art. *Ab-gūšt*). The poor ate mostly bread (and in times of scarcity, even acorn bread; A. Wilson, 63), cheese and fruit, could afford *āb-i gūšt* only occasionally, and in the winter months rarely were in a position to eat any meat. They served pilaw and *khūrish* only during holidays and festivals. All ate large quantities of fruit, which was cheap (Dārābī, 247-8; Polak, i, 121; Kučānī, 18; Mustawfī, i, 284). Fish was a staple in the Caspian provinces, and dried and salted fish was also consumed inland. Fresh-water fish was little esteemed. On the Persian Gulf coast, prawn, *mīgū*, was eaten fresh, as it still is today; it was transported inland in dried form (Wills, 298).

Even today, chicken and turkey connote the food of the rich, while bread and cheese stand for the fare of simple folk. Bread continues to be the staple of the peasants and the urban poor in the arid and semi-arid interior, while rice is consumed by everyone in areas where it is cultivated, especially along the Caspian Sea. Elsewhere, rice is often still a luxury food, eaten on special occasions and offered to guests (Bazin, 245; Bazin and Bromberger, 154). With rising living standards, rice has become more common. Meat, formerly a food reserved for special occasion, has become much more standard as well, and traditionally vegetarian dishes such as *khūrish* are now often served with meat (Khosrowkhavar, 149). Beef has made inroads, necessitating its importation in large quantities and at great cost (Brun and Dumont, 14). The inhabitants of the Caspian provinces, and especially Gilān, still enjoy a different diet. They eat rice, mostly in the form of *katih*, quickly prepared rice with clarified butter, with every meal, and as recently as the 1970s rice constituted from 45% to 65% of the daily diet of males in central Gilān. They also like

beef, and bread used to be unknown or at least spurned by them until quite recently (Bromberger 1994, 187, 189, 191).

The growing Western influence in the second half of the 20th century has led to the introduction of a number of new foods, most of them pale renderings of originally Western food. Often consumed as tokens of modernity, these include sausages, *kalbas*—until the Islamic Revolution prepared with pork—hamburgers and pizzas. During the reign of Muḥammad Riḍā Shāh Pahlavī, Iranians also took to eating frozen meat imported from Australia and New Zealand, and processed "Danish" cheese. The American-style "fast-food" restaurant, serving sandwiches, pizzas, hamburgers, and fried chicken, made its appearance in the late 1960s, followed by a variety of ethnic restaurants in the next decade. Soft drinks began to replace traditional juice beverages in the same period. The period following the Islamic Revolution did not fundamentally change this process. Hamburgers, pizza and hot dogs are now consumed by people from all classes in restaurants and pizzerias that imitate Western models. A new development is the appearance of self-styled "traditional" (*sumnāī*) restaurants and coffee-houses where waiters in "authentically Iranian" dress serve the customers (Chehabi, 59-60).

Other changes have occurred as well. Many traditional dishes, time-consuming to make, are no longer prepared on a regular basis (Khosrowkhavar, 149-52), and traditional cookbooks, a few of which are known from the Kādjār period, were replaced in the 20th century by modern ones, the use of which remains unclear in a country where most women still learn the art of cooking from their mothers and grandmothers (Fragner 1984, 333; a list of modern cookbooks appears in *ibid.*, 332).

## MAWĀKIB.

### 6. IN THE MAMLŪK SULTANATE

In the early Mamlūk sultanate, *mawkib* designates specifically the royal ride which formed an item in the sultan's installation ceremonies. The term is explicitly used by Ibn Taghrībirdī (*Nudjūm*, vii, 41) on the accession of al-Manšūr 'Alī b. Aybak: "He rode on Thursday, 2 Rabī' II [655/19 April 1257] with the insignia of the sultanate from the Citadel to Ḳubbat al-Naṣr in an awe-inspiring procession (*mawkib hā'il*). Then he returned and entered Cairo by Bāb al-Naṣr. The *amīrs* dismounted and marched before him. . . Then al-Manšūr went up to the Citadel and took his seat in the palace of the sultanate." On the insignia of the sultanate (*shī'ār al-saltāna*), see al-Ḳāḷkashandī, *Ṣubḥ*, iv, 6-9. Similar accounts in more or less detail, and not always using the term *mawkib*, are given in connection with the accession of several sultans down to al-Nāṣir Muḥammad b. Ḳalāwūn in 693/1294 (cf. *Nudjūm*, viii, 47). Ibn 'Abd al-Zāhir gives an interesting account of the royal ride of al-Sa'īd Baraka Ḳhān, when appointed joint sultan with his father, al-Zāhir Baybars, on 13 Shawwāl 662/8 August 1264: "He [Baybars] caused his son, al-Malik al-Sa'īd, to ride with the insignia of the sultanate. He himself went forth in the procession (*rikāb*), and going on foot carried the *ghāshīya* [q.v.; cf. P.M. Holt, *The position and power of the Mamlūk sultan*, in *BSOAS*, xxxviii (1975), 242-3] before him. The *amīrs* took it, . . . and the sultan returned to his royal residence, while the kings, the *amīrs* and everybody continued in attendance on him (sc. Baraka Ḳhān) up to Bāb al-Naṣr. They entered Cairo, which had been magnificently decorated, on foot bearing the *ghāshīya*. The *amīrs* busied themselves with the raising of the [royal] parasols (?). He passed through the city with his *atābak*, the *Amīr* 'Izz al-Dīn al-Hillī, riding at his side. Robes of satin, watered silk and so forth were spread before him until he returned to his Citadel" (*al-Rawḍ al-zāhir*, ed. Ḳhuwaytīr, 204). After the time of al-Nāṣir Muḥammad, the procession through Cairo seems to have been discontinued, its place being taken by a short ride within the precincts of the Citadel to the throne-room, as described by al-Maḳrīzī (*Ḳhiṭat*, ii, 209): "It was also customary when one of the descendants of al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn succeeded to the kingdom, that on his accession the *amīrs* would attend at his residence in the Citadel. He would be invested with the caliphal robe with a green robe (*faradjīyya*) beneath it and a round black turban, girt with the golden Arab sword, and mounted on the royal steed (*jaras*

A cookshop at the turn of the 20th century. Source: Kashkūl (Tehran), 1st year, no. 31, p. 2, Saturday, 13 Dhu 'l-Hidjja 1325/18, January 1908

*al-nauba*). He would proceed with the *amīrs* in front and the *ghāshīya* before him, while the *djāwāshīyya* chanted and the royal flutes played, surrounded by the halberdiers, until he had crossed from Bāb al-Nuḥās to the entrance of the great hall. Then he would dismount from the steed, go up to the throne and take his seat upon it." In this period, *mawkib* acquired the secondary meaning of "a session of the royal court", e.g. Ibn Taghrībirdī, *Nudjūm*, x, 61, of al-Nāṣir Aḥmad b. al-Nāṣir Muḥammad in 742/1342: "The sultan held another court (*mawkib ākhar*), and bestowed robes on all the *amīrs*, . . . and he went down in a great procession (*mawkib azīm*) with those *amīrs* who were in his company."

The term *mawkib* was also used for other state appearances of the sultan in which there was a processional element, such as his attendance at congregational prayer on Fridays and the two Feasts, at polo in al-Maydān al-Akbar, at the cutting of the dam, and on royal progresses. Al-Kalkāshandī (*Subh*, iv, 46-9) does not use the term consistently on each of these occasions, but it appears to apply to all of them. Uniquely Egyptian were the proceedings at the cutting of the dam at the height of the Nile-flood in Cairo. The sultan, when notified by the master of the Nilometer [see *مقياس*] that the flood was at its height, rode at once in modest state (without full insignia and with a reduced escort) to the Nilometer, where he held a banquet for the *amīrs* and Mamlūks. A vessel of saffron was given to the master of the Nilometer, who swam across the well and perfumed the column and then the sides of the well. The sultan's barge was brought alongside, and the sultan swam in the river, surrounded by the barges of the *amīrs*. Followed by the boats of spectators, the *amīrs'* barges and the sultan's great barge entered the mouth of the canal of Cairo, with the craft manoeuvring and cannons firing. The sultan sailed in his small barge to the dam, which was cut in his presence, and he then rode back to the Citadel.

(P. M. HOLT)

**MAWĀKIF** (A.), a term of Ṣūfī mysticism, referring to the intermediate moment between two "spiritual stations" (*maqām*), represented as a halting (*wakfa*) and described as a state of stupor and of the loss of reference points acquired since the preceding stage. The *mawākif* is a dynamic psychological state, in which the connection between the mystic and God becomes overturned, and sometimes suspended (annihilation in God, the so-called *fanā'* [see *بأفان* 'WAFANĀ']). The best example of the course of such an experience is given in the work of al-Niffarī (d. ca. 366/976-7 [q.v.]), his *K. al-Mawākif wa 'l-mukhātabāt*, ed. and Eng. tr. A.J. Arberry, London 1935, Fr. tr. M. Kābbal, *Le Livre des stations*, Paris 1989; see also P. Nwyia, *Textes inédits de Niffarī*, in *Trois oeuvres inédites de mystiques musulmans*, Beirut 1973; idem, *Exégèse coranique et langage mystique*, Beirut 1970, 348-407. The term continued to be employed in classical Ṣūfism (e.g. by Ibn al-'Arabī, *Futūḥāt*, Cairo 1329/1911, 392-3, who refers explicitly to al-Niffarī).

*Bibliography*: Given in the article.

### MAWLID.

#### 3. In the Maghrib.

Unlike the use of the term *mawlid* in other regions, e.g. in Egypt and the Sudan, where it also includes the celebration of the birthdays of various saints (see I., in Vol. VI, 895), in the Maghrib the term *mawlid* is restricted to the birthday of the Prophet Muhammad.

In this part of the world, alongside the 'īd al-ṣīṭr and the 'īd al-adḥā' [q.v.], the *mawlid* is among the most important festivals of the year.

The oldest known *mawlid* celebrations in the Maghrib were held in Sabta [q.v.]. This festival was introduced into this city by an 'ālim named Abu 'l-'Abbās al-'Azafī (d. 633/1236 [q.v.]) in order to call a halt to the participation of the people in Christian festivals and to strengthen the Muslim identity of Sabta in a period of Christian successes during the Reconquista, both at land and at sea.

After his son Abu 'l-Ḳāsim al-'Azafī had seized power in Sabta in 647/1250, he officially introduced the *mawlid* and propagated the festival throughout the rest of the Maghrib. Through this celebration of the *mawlid*, Abu 'l-Ḳāsim al-'Azafī was able to display his religious enthusiasm, and as the result of his largesse during the festivities he increased his popularity with the people. Moreover, during the *mawlid* celebration the hierarchical relationships among the various groups within the realm were confirmed and the loyalty to the ruler expressed in specially-composed poems.

Since then, in a similar way the celebration of the *mawlid* has always played a role at an official level in legitimising the power of various dynasties which have ruled over parts of the Maghrib: the Hafṣids (Eastern Maghrib); the 'Abd al-Wādīds (Central Maghrib); and the Marinīds, the Waṭṭāsids, the Sa'īdids and the 'Alawīs (Morocco) [q.v.]. Today, the celebration of the *mawlid* plays a role in the consolidation of the power of the 'Alawid king of Morocco, who traces his descent, together with the concomitant prestige, to the Prophet Muḥammad himself.

In addition to the state-sponsored celebrations at the courts and elsewhere, the *mawlid* always has been and still is immensely popular among the people, not only among the Arabicised sections of the population but also among the Berbers. The way in which the popular *mawlid* is celebrated displays an enormous variety, both in duration and in ritual, changing from one place to the other. Common elements in all celebrations are the taking of a holiday, the cheerful atmosphere, illuminated parades on the eve of the *mawlid*, festive meals, sweets, special dress, the exchange of gifts, music, dance and, under the influence of Ṣūfī brotherhoods, visits to shrines of saints and singing of mystical chants.

At times, these popular celebrations have given, and still give, rise to protests by the 'ulamā', who do not consider these permissible from the point of view of the religious law because of the nature of the activities which take place during the celebrations, many of which are regarded as unlawful. The oldest discussions about this originate from the time of Abu 'l-'Abbās al-'Azafī, but the debate reappears with regular intervals. In the first decades of the 20th century, under the influence of Salafī ideas from Egypt [see SALAF. I], there were various attempts to exclude certain practices from the *mawlid* celebration. In very recent times, inspired by Wahhābī ideas, the *mawlid* has again come under severe criticism. Despite these protests against the celebration of the festival, as a major manifestation of popular religion, the *mawlid* is as vital as ever.

### MAWSŪ'A.

#### 3. In Turkish.

The fascination which the Ottomans entertained for compendia of facts and the ordering of knowledge can be traced to their origins outside Anatolia. Although not strictly speaking an encyclopaedic work, the *Diwān lughāt al-turk* written by Maḥmūd al-Kāshgharī in the second half of the 5th/11th century and providing a dictionary in Arabic or early Turkish, partakes also of the nature of a thesaurus, with information on the early Turks, including their onomastic, their folklore, proverbs, poetry, etc. [see *AL-KĀSHGHARĪ*].

As one would expect, the earliest examples of encyclopaedias in the Ottoman world were written in Arabic. It is clear that these types of encyclopaedic reference works were very closely modelled on existing Arabic language reference works on specialised subjects, biography and bibliography. The first phase in the emergence of the Ottoman encyclopaedia is represented by the work of translating encyclopaedic works from Arabic into Turkish, this being an important step in the development of reference tools for the use of Ottoman scholars.

As early as the reign of Meḥmed I (816-24/1413-21), the first translations of encyclopaedic works appeared. In this period, Rukn al-Dīn Aḥmed made a translation of al-Kazwīnī's *ʿAǧāʾib al-makhlūkāt* from Arabic into Turkish and presented it to the Sultan. It is most likely that the concept of the earth as an orb was introduced into Turkish scientific literature by this work. Meḥmed b. Süleymān made a Turkish translation of al-Damīrī's zoological encyclopaedia, the *Hayāt al-hayawān*, which listed the names of existing and, in some cases, fictitious animals, and subjects related to them. Aḥmad al-Miṣrī's *al-Kānūn fi 'l-dunyā* was translated into Turkish by Kaḍīr Abd al-Raḥmān in 983/1575. This work dealt with a variety of topics such as geography, astronomy, medicine, history, anecdotes, and signs and symbols.

The first original encyclopaedic works in the Ottoman empire can be dated to the 9th/15th century. These examples are mainly divided into two categories: general and specialised ones. The *Enmūzedj al-ʿulūm* was prepared by Mollā Fenārī [see *FENĀRĪ-ZADE*]. He classified subjects under one hundred headings which were termed "the sciences" (*ʿulūm*). He mainly used Fakḥr al-Dīn al-Rāzī's *Hadāʾik al-awwār*, adding forty more subject headings to it. It has been alleged that the author of this work was not Molla Fenārī but his son, Meḥmed Shāh Čelebi. This claim, advanced most prominently by Adnan Adivar in his *Osmanlı Türklerinde ilim*, is not however supported with evidence.

A distinguished and gifted scholar in the 10th/16th century was Aḥmed ʿIṣām al-Dīn (901-68/1495-1561), who came from the scholarly family of the Taṣḥköprüzādes [q.v.]. Taṣḥköprüzāde's work, the *Miftāḥ al-saʿāda wa-miṣbāḥ al-siyāda*, mainly discusses the virtues of teaching and learning. The first introduction explains the virtue of science while the second and the third discuss the obligations of students and teachers, respectively. After these introductory

chapters, he classifies the sciences (*ʿulūm*) ontologically. The author not only gave the definitions of the sciences but also noted the names of the scholars who had worked on these subjects and their books, making his work an inventory of scholarly life and books taught in Istanbul in the 10th/16th century. Because of the popularity of this work his son, Taṣḥköprüzāde Kemāl al-Dīn Meḥmed, made a Turkish translation of it which is known as the *Mawḍūʿat al-ʿulūm*. Another important work by Taṣḥköprüzāde is a biographical account of the Ottoman empire, a typical example of the Turkish *tedkīre* tradition [see *TADHKIRA*. 3]. His *al-Shakāʾik al-nuʿmāniyya* contains biographical information on the *ʿulemā* and *ṣuleḥā* of the Ottoman empire, and it was arranged according to the reigns of the Sultans, comprising in total the biographies of 150 *shaykhs* and 371 scholars. Several translations of this work were also made into Turkish in the same century. There are also compilations of this work prepared in the same format. Another distinguished example of the bibliographic compendium is Ḥādjdjī Khalīfa's (Kātib Čelebi) *Kashf al-zunūn*. He started compiling it in 1042/1633 and took about twenty years to complete it. It contains bibliographic information on ca. 14,500 books and biographical information on ca. 10,000 authors.

Erzurūmī Ibrāhīm Haḳḳī's *Maʾrifet-nāme* is the last example of the classical encyclopaedic works, reflecting the author's interest in Islamic mysticism. The work consists of selected topics chosen from arithmetic, geometry, astronomy, mineralogy, botany, zoology, anatomy, geography and physics.

After promising beginnings in compiling compendia of knowledge, the movement seems to have petered out, perhaps a victim of its own success; it was perhaps felt that there was no need to be filled by expanding or adding to these compendia. It is thus not surprising that the next stage of Ottoman compilation of encyclopaedias should be the introduction of European-styled encyclopaedias which surveyed European science. The first of these were introduced during the *Tanzīmāt* [q.v.] period in the mid-19th century. Titles of these works reflect the lexicographic approach and understanding of their compilers, so that the word (*kāmūs*) "dictionary" was generally used in their titles. The first examples, are unfortunately incomplete. The first encyclopaedic work was planned by ʿAlī Şuʿāwī [q.v.] who escaped to France in 1867 because of his opposition to the ruling régime in the Ottoman empire. He attempted to publish this first encyclopaedic work as an appendix to his newspaper *ʿUlūm* in 1870. Entitled *Kāmūs al-ʿulūm wa 'l-meʿārif*, it was published in fascicles and only five of these appeared, since it fell victim to the siege of Paris by the Prussian Army. In this encyclopaedia subjects were arranged in alphabetical order, contained illustrations, and each fascicle comprised sixteen pages. Other major, equally incomplete, attempts are, in chronological order: *Kaṭre* by Aḥmed Nāẓim and Meḥmed Rūshdī, both of them officers in the Ottoman Army, in 1888, of which only one sample fascicle appeared; *Makḥẓen al-ʿulūm*, another general subject encyclopaedia, by Meḥmed Ṭāhīr and Serkis Orpilyan, of which only one volume appeared in 1890; and a specialised subject encyclopaedia on mathematics and astronomy, the *Kāmūs-i riyādiyyāt*, prepared by Şāliḥ Dheḳī (Zekī), a mathematician, in 1897, of which again only one volume appeared.

The *Muḥīṭ al-maʾārif* was prepared by Emr Allāh Efendī, who was the first philosophy lecturer at the Dār al-Fünūn in Istanbul, in 1900. Only one volume

appeared, but it had importance as the first comprehensive general encyclopaedic work in Turkish, and its title was subsequently adopted as the Ottoman term for a general encyclopaedia. After Emr Allāh Efendī's appointment as the Minister of Education, a commission was set up under his chairmanship and consisting of 132 specialists. The aim was the preparation of his encyclopaedic work for the second time in 1910. The title of this new encyclopaedia accordingly became *Yeñi muhîl al-ma'ârif*, but this attempt was also short-lived, and only one volume appeared.

The first complete work in the genre was, in fact, the *Lughat-i târîkhîyye ve djoghrafîyye* "Historical and geographical dictionary", prepared by Yaghlikdjizâde Ahmed Rif'at in seven volumes in 1882-3. Although its title suggests that it was limited to historical and geographical matters, it in reality covered subjects such as new inventions, machinery, as well as the natural sciences physics, chemistry and botany.

The *Kâmûs al-'alâm* of the linguist Shems el-Dîn Sâmi [q.v.] was compiled between 1888-98 as a historical and geographical encyclopaedic dictionary in six volumes. Sâmi relied on oriental and western sources for his work, and it remains a valuable reference source for historical research today, since the work contains not only historical and geographical terms and words used in the Ottoman language but also biographies of historical personalities and their works as well as the names, histories, and ethnic complexion of locations within the empire. It was issued fortnightly in fascicles, and its publication was completed in eleven years.

A similar work, the *Memâlik-i 'oḥmâniyye'nin târîkhî ve djoghrafîyâ lughatî* "Dictionary of the history and geography of the Ottoman Empire", was prepared by 'Alî Djewâd, and published in 1893-9 in four volumes. It comprised two sections, the first, in three volumes, was devoted to the natural, historical, and economic aspects of the Ottoman provinces and their localities, while the second section, the fourth volume, contained biographical information on Ottoman statesmen and poets.

All these efforts were personal and self-motivated, and no financial or academic support was provided from any public or private institution. Within the same period, another initiative directed by a commission was launched in 1913 under 'Alî Reshâd, 'Alî Şeydî, Mehmed 'Izzet and L. Feuillet, the *Muşavver dâ'iret al-ma'ârif* "Illustrated circle of knowledge", but only two volumes were issued 1913-17. The harsh social, economic and political conditions of the last decades of the Ottoman empire were certainly a contributing factor to the lack of success in completing these potentially promising works in the 19th and early 20th centuries.

Two notable biographical works appeared, however, towards the end of the 19th and the beginning of the 20th centuries. A national biography, the *Sidjill-i 'Oḥmânî* "Ottoman register", was prepared by Mehmed Thüreyyâ [q.v.] in four volumes and published in 1890-4; it contained approximately 20,000 biographies of civil servants and statesmen. A bio-bibliographical compendium of Ottoman writers began to appear in 1914, *Oḥmânîlî mü'ellifleri* "Ottoman authors", compiled by Bursalî Mehmed Tâhir; it listed 1,600 books and gave the biographies of their authors. Its aim was to record the scientific and literary taste of the Ottomans for the new generation, and its subsequent was that it became one of the main sources for encyclopaedias published later.

After the establishment of the Republic in 1923,

the government encouraged the publication of new books, especially for children, to alleviate the problem of illiteracy. The French word for encyclopaedia was used for the first time in Turkish as *ansiklopedi* with the publication of the *Çocuk ansiklopedisi* "Children's encyclopaedia" in 1927. Four volumes appeared up to 1928, and after the change of alphabet in November 1928 the publication of this work was suspended until 1937. This encyclopaedia has a significance in Turkish encyclopaedic publication, being the last work begun in Arabic script before the change of alphabet, the first encyclopaedic work completely in the Latin script being that prepared on the initiative of a daily newspaper, *Cumhuriyet*, and published between 1932-6 in ten volumes. This publication was based on *Compton's pictured encyclopaedia* and *American educator*, and additional entries related to Turkey were written by specialists.

Several special-subject encyclopaedias have appeared in the Republican period. One of the most important of these is Reşad Ekrem Kocu's *İstanbul Ansiklopedisi*, which began in 1946 and ceased publication in 1975 on the death of the author. The significance of this incomplete work in eleven volumes is that the historian Kocu prepared it single-handed as a work limited to the city of Istanbul. Given the supreme importance of Constantinople/Istanbul in the history of the eastern Mediterranean world, further encyclopaedic works were prepared upon the death of Kocu. The *İstanbul kültür ve sanat ansiklopedisi* "Encyclopaedia of the culture and art of Istanbul" was prepared by specialists and published by a daily newspaper, *Tercüman*, in 1982; unfortunately, it was never completed. The other encyclopaedia, *Dünden bugüne İstanbul ansiklopedisi* "Encyclopaedia of Istanbul from yesterday till today", was published by the Ministry of Culture and the Historical Foundation in eight volumes in 1993-4; although not as detailed as Kocu's work, it gives general information on almost every subject in 10,000 articles.

From the 1940s onward, the Ministry of National Education (*Maarif Vekaleti*) decided to initiate the publication of encyclopaedic works as well as its publications and translations of classical works. The first was the *İslam Ansiklopedisi* begun in 1940. A committee was set up, and the encyclopaedia was based on the original *Encyclopaedia of Islam* published in Leiden in 1913-36 [see MAWSŪ'A. 4]. However, amendments were carried out and in some cases, expansions were made in articles which were only briefly covered in the Leiden edition. The work was completed in 1988 in thirteen volumes, of which two volumes have two parts.

Meanwhile, a decision was made by the same Ministry to prepare a general, national encyclopaedia in 1943. The first four volumes were issued under the title of *İnönü ansiklopedisi*, the name of the President of Turkey at the time [see İSMET İNÖNÜ, in Suppl.], altered to *Türk ansiklopedisi* in 1951. The encyclopaedia consists of thirty-three volumes, and publication was completed in 1986. This work has a significant place in the history of official publications in the Turkish Republic. Since it was published over a span of forty-three years, it reflects the political approaches and the use of Turkish language by the various governments in power through the period, and it further illustrates how the publications of government agencies can be affected by the political ideology of these governments. The Ministry of National Education also commissioned Celal Esat Arseven and Mehmed Zeki Pakalın in 1943 and in 1946, respectively, to publish

the *Sanat ansiklopedisi* "Encyclopaedia of the Arts" in five volumes and *Osmanlı tarih deyimleri ve terimleri sözlüğü* "Dictionary of Historical Phrases and Terms" in three volumes.

From that period until the 1960s, no new projects for a general encyclopaedia were initiated with the exception of the *Hayat ansiklopedisi* "Encyclopedia of life," begun by a private publisher in 1961 and by 1963 completed in six volumes. In a very short period, 100,000 copies were sold, indicating the need for a general encyclopaedia by an increasingly literate society.

The *Meydan Larousse büyük lügat ve ansiklopedi* is the largest Turkish encyclopaedic work initiated by a private publisher, with publication beginning in 1969. It is an encyclopaedia as well as a dictionary, being a translation of the *Grand Larousse encyclopédique* published in 1960-4 in ten volumes. Some subjects and entries related solely to French language and culture were omitted, and subjects related to Turkish and Islamic culture inserted. The encyclopaedia was issued in fascicles and was completed in 1973 in twelve volumes, with two supplementary volumes issued in 1974 and 1985, respectively. The publication of *Meydan Larousse* was a turning-point in the history of commercial publication of encyclopaedias in Turkey, and a result of the enthusiasm with which the *Meydan Larousse* was greeted by the public, other publishers have seen the commercial opportunities offered by publishing encyclopaedias.

Hence during these years, a handful of publishers began to specialise in such reference works. The major publishers today are Anadolu Yayıncılık, Gelişim, Görsel and İletişim, who publish not only general encyclopaedic works but also encyclopaedias on specialised subjects, such as *Yurt ansiklopedisi* "Encyclopedia of the Homeland", which gives information on the history, economic and social conditions of the cities of Turkey in alphabetical order; *Türk ve dünya ünlüleri ansiklopedisi*, a biographical reference source; *Gelişim genel kültür ansiklopedisi*, a general encyclopaedia; *Anadolu uygarlıklar ansiklopedisi*, an encyclopaedic publication on Anatolian civilisations; and *Cumhuriyet dönemi Türkiye ansiklopedisi*, which covers the development of various fields in the Republican period such as the constitution, archaeology, the press, energy, mining, librarianship, etc. *Ana Britannica ansiklopedisi* is a translation and adaptation of the *Encyclopaedia Britannica*, published in 1988 by Anadolu Yayıncılık. The publisher has also published yearbooks in order to update the necessary information. The second Turkish edition was initiated in 2000 and it is still in progress. Finally, *Türkiye diyanet vakfı islam ansiklopedisi*, an *Encyclopedia of Islam*, is being prepared and financially supported by the Turkish Religious Foundation. The publication started in 1988 and twenty-two volumes, covering the letters A-İ, have already appeared. The encyclopaedia contains not only subjects related to Islam but also wider aspects relating to the Islamic community throughout the world. Most of the Islamic subjects are very detailed, and the articles have comprehensive bibliographies.

5. In Urdu.

Here there does not seem to be any significant tradition of any antiquity, leaving aside modern Urdu translations of such reference works as *Chamber's Encyclopaedia*, the *Encyclopaedia Britannica* and, of course,

the Urdu *Encyclopaedia of Islam*, which draws on material from the Western *Encyclopaedia of Islam*, published in Leiden.

**MEHMET TÂHIR, BURSALÎ** (1861-1925), Ottoman biographer and bibliographer.

Mehmed Tâhir was born in Bursa in northwestern Turkey on 22 November 1861, the son of Rif'at Bey, clerk to the city council, and grandson of Üsküdarlı Seyyid Mehmed Tâhir Pasha, formerly a commander in sultan 'Abd ül-Medjîd's imperial guard. He studied at the Bursa military academy from 1875 and at the élite Harbiyye (War) academy in İstanbul from 1880. Graduating in 1883 he spent the next twenty years teaching geography, history and rhetoric at military schools in Manâsîr (and one year in Üsküb) in Macedonia, as part of the Ottoman Third Army. In 1904 he became director of the military high school in Selânik (Salonica). Whilst at the Harbiyye academy he had become a member of the Melâmî order of dervishes, by whom he was profoundly influenced in his teaching, publications and political outlook. In Manâsîr he first conceived the notion of collecting bio-bibliographical data on poets and learned men, and in 1897 published his first work *Türkler'in 'ulûm ve fînûna kırdemelleri* "The Turkish contribution to arts and sciences" (İstanbul 1314). In 1316/1899 he also published a full-length biographical study of the Arab mystic Ibn al-'Arabî.

Mehmed Tâhir was dismissed from his teaching post in December 1906 for his Süfî involvement and his membership of the Ottoman Freedom Society ('*Othmânî hüriyyet cem'iyeti*). From 1908 to 1911 he served as deputy for Bursa in the first representative assembly of the Second Constitutional period, and subsequently served in the Ministry of Charitable Endowments (*Ezokâf nezâreti*) on a committee to inspect the holdings of institutional libraries. In 1915 he became director of the Topkapı Sarayı library. The date of Mehmed Tâhir's death is uncertain, but was probably 1925. He was buried in İstanbul.

Mehmed Tâhir's principal work is '*Othmânî mü'ellifleri*', a three-volume bio-bibliographical compendium published between 1915 and 1924, listing 1691 Ottoman authors and their works. Despite many lacunae and acknowledged errors, '*Othmânî mü'ellifleri*' was unique in its comprehensive scope and immediately became a standard reference work. Aside from the works already mentioned, Mehmed Tâhir also compiled over twenty lesser biographical works, either of particular individuals (e.g. Kâtib Çelebi) or of groups of Ottoman *shaykhs* and *ulemâ*.

*Bibliography:* For a full bibliography, see the detailed article by Ömer Faruk Akün, in *Türkiye Diyanet Vakfı İslam Ansiklopedisi*, vi (1992), 452-61, on which the above is based.

(CHRISTINE WOODHEAD)

**MEZISTRE, MIZISTRE**, the Turkish name for Greek Mystras, Latin Mistra, a famous Byzantine necropolis on a hill slope west of modern Sparta in Laconia in the Peloponnese [see MORA], which was a major centre of late mediaeval Greek civilisation and capital of the "Despotate of the Morea" till the Ottoman conquest. It has numerous Byzantine and Frankish monuments from the 13th-15th centuries, and was immortalised, albeit anachronistically, in Goethe's *Faust*. The name has been connected with the shape of the cone-shaped hill on which it stands.

The Frankish castle of 1249 was built by William II de Villehardouin of the Achaia Principality, but passed to the Byzantines in 1262. The ravages of Franks and Turkmens from Western Anatolia (see

details in A. Savvides, *The origins and rôle of the Turkophone mercenaries in the Morea in the course of the Byzantine-Frankish war of 1263-4* [in Greek], in *Acts of the 4th Intern. Congr. of Peloponnesian Studies*, i, Athens 1992, 165-88) later compelled the local people to seek refuge in the citadel so that it developed into a fortified town. The 14th and early 15th centuries were, culturally, a Golden Age for Mistra, and notable for the humanist Plethon (d. 1452), whose connections with Islam are noteworthy; he was influenced, whilst in Edirne, by a Jewish scholar, Elissaeus, who initiated him into Zoroastrianism, Averroean Aristotelianism and Jewish mysticism of the Kabbalistic tradition. Plethon had connections with such more enlightened Muslim elements as the Akhîs [q.v.] and followers of the religio-social leader Badr al-Dîn Kâdî Samawna [q.v.] (see F. Taeschner, *Plethon, ein Vermittler zwischen Morgenland und Abendland in Beginn der Renaissance*, in *Byz.-Neugriechische Jb.*, viii [1930], 100ff.).

The earliest recorded battle of the Despot of Mistra against the Turks, sc. Turkmens arriving across the Aegean with a fleet, is variously placed in 1357-64. Subsequent Ottoman incursions were led by Ewrenos Beg [q.v.] in the late 1380s and 1390s, and by Turakhan [q.v.] in 1423, who reached the outskirts of Mistra (witnessed personally by Plethon). By 1446 the Despot Constantine Palaeologus had to acknowledge Ottoman suzerainty, and in spring 1460 Mehmed II decided to annex the Despotate, and Demetrios surrendered to him. An Albanian convert, Hamza Zenevisti, was made the first governor of Ottoman Mezistre (see von Hammer, *GÖR*, ii, 379, iii, 9ff., 54ff.; F. Babinger, *Mahomet le Conquérant et son temps*, Paris 1954, 102ff., 210ff.; Savvides, *Notes on the Turkish raids in the Mystras area from c. 1360 to the Ottoman conquest of 1460*, in *Epeteris Etairias Byzantinon Spoudon*, xlviii [1990-1], 45-51).

Under the first *Tourkokratia*, Mezistre was the favoured residence of the *sandjak bey* of Morea till the conquest of Nauplion (Anabolu) in 1540. It enjoyed relative tranquillity, with its architecture and urban topography largely unchanged except for the addition of a few mosques. The commerce of its bazaars and its local Jewish community were important, and Western travellers, from Coronelli (1681) onwards, describe the August 'market fairs' (*emporopanevris*). The population ca. 1583-5 appears to have been, from the evidence of the Ottoman registers, 1,000 Christian families and 199 Jewish ones (see M.T. Gökbilgin, *Kanunî sultan Süleyman devri başlarında Rumeli eyaleti hivaları*, in *Belleten*, xx [1956], 281), whilst Kâtib Çelebi lists for the late 17th century ca. 15,000 inhabitants (von Hammer, *Rumeli und Bosna. Geogr. Beschreibung von ... Hadschi Chalfa*, Vienna 1812, 117-18).

The Venetian Francesco Morosini captured Mezistre in August 1687, and the Venetians then made it the capital of their *territorium* of *Braccio di Maina*, second only in importance to the province of Laconia's capital of Monemvasia [see *MENEKSHIE*]; yet their rule was rigorous and accordingly unpopular with the Greek inhabitants. Now, in the Venetian and second Turkish periods, the population of the town rose considerably and seems, from the travellers' accounts, to have reached 40-45,000. The Venetians abandoned Mistra in 1715 in face of a powerful approaching Turkish army, and Ottoman rule was re-established. But in the course of the Russo-Turkish war of 1768-74 and the Greek revolt of 1770 [see *MORA*, 2.], the Greeks, aided by the Russian fleet of the Orloffs, took the fortress of Mezistre and started a merciless slaughter of the small Turco-Albanian garrison, which was only

saved through the intercession of the local metropolitan. But in autumn 1770 a Turco-Albanian force returned and sacked and burnt much of the town, not sparing even the metropolitan who had intervened to save their compatriots. From now onwards there began a gradual deserting of the fortress towards the lower slopes, which would eventually lead to the foundation of modern Mystras. With the outbreak of the Greek Revolt (1821), Mezistre surrendered to the powerful local Mainote clans of Mavromichales and Giatrakos and the Turkish garrison was allowed to flee to Tripolitza, but it was once again plundered and burned by Ibrâhîm Pasha's army in 1825, as vividly described by C. Swan in his *Voyages in the Eastern Mediterranean*, London 1826. These ravages signalled the town's abandonment, since—except for a few families—the exasperated inhabitants descended to the settlement of Neo-Mystras and thence to modern Sparta, inaugurated in 1834 by a decree of King Otto I and built by 1837-8.

**MIHMĀN** (مهمان), literally "guest", the equivalent of Ar. *ḡayf* [*q.v.* for this sense]. The Persian word occurs in various compounds, such as *mihmāndār* and *mihmān-khāna*. In Šafawid Persia, the *mihmāndārs* were officials appointed to receive and to provide hospitality for guests, including foreign ambassadors and envoys, with a court head official, the *mihmāndār-bāšī*, superintending these lesser persons. In Kādjar times, the *mihmāndārs* seem to have been appointed *ad hoc*. See the references to the accounts of European travellers in Šafawid Persia (Chardin, Kaempfer, Sanson) in the anonymous *Tadhkirat al-mulūk*, ed. and tr. V. Minorsky, London 1943, comm. 110 n. 2.

The institution of the *mihmān-khāna* in its more modern form goes back to Nāšir al-Dīn Shāh Kādjar after his first visit to Europe in 1873 (cf. Sir Denis Wright, *The Persians amongst the English*, London 1985, 135). He had the laudable intention of providing rest houses along the routes to the capital Tehran, from such entry points to his kingdom as Enzeli on the Caspian coast, which would provide travellers with something better than the traditional caravanserais or *khāns* [*q.v.*] and the *čapar-khānas* (see a description of these last in *Khurāsān* given by the Hon. G.N. Curzon, *Persia and the Persian question*, London 1892, i, 249 ff., and cf. the remarks on the *čapar* system in general in *Murray's handbook for travellers in Asia Minor, Transcaucasia, Persia, etc.*, London 1895, 285-6) and which would possess in some degree the amenities of a western-type hotel. Western travellers in Persia during the later 19th century found the concept good, but its execution left much to be desired. E.G. Browne commented that the *mihmān-khāna* "has all the worse defects of a European hotel without its luxury"; he contrasted the insolence and rapacity of the servants there with the hospitality he had received in humble peasant homes, and the "new-fangled and extortionate" nature of the new buildings with the "venerable and commodious caravansaray" (*A year amongst the Persians*, London 1893, 85-8, 177-8). It was not until after the First World War that European-type hotels began to spread from the capital Tehran into the provinces.

MĪRĀDJ.

6. In Persian literature.

The ascension of the Prophet of Islam is, for Persian literature, an account, *kiṣṣa-i mi'rādī*, one drawn from a long tradition, *ḥadīth-i mi'rādī* and an account that takes an autonomous form, *mi'rādī-nāma*. This account thus has a history. The progressive organisation of the narrative elements constituting the whole is derived from the world to which the text belongs. The world of Persian literature cannot be detached from its Muslim context (Kur'ān, tradition and exegesis) nor from its original milieu (Iranian and, furthermore, millennial).

The celestial journey was a familiar theme throughout the Near Eastern world. Having exclusive regard to the Iranian cultural domain, Zarathustra, according to the *Avesta*, had asked for immortality and this was granted: he did not die but departed, alive and intact, into the beyond through "assumption" (*ašhi-*; Kellens 1999). From this point onward, according to another source, he spent ten years "in the best existence", guided by Vohū Manō "while maintaining contact with Ahura Mazda". Then, strengthened, he descended again to join his kinsmen (Molé 1967). As for the soul of the virtuous deceased, the *Avesta*

describes the four stages through which it passes, guided by the same benevolent genie, before reaching the throne of Ahura Mazda (Duchesne-Guillemain 1962). The tale in Middle Persian of the magian Ardā Vīrāz, who used methods of a shamanic nature to make a journey to Heaven, was well known in its time. The magian visited Heaven and Hell, bringing back valuable advice for his community in the practice of the cult (Gignoux 1984). Also celebrated was the visit of the angel which began the prophetic vocation of the founder of Manicheism (Ibn al-Nadīm, *al-Fihrist*, tr. B. Dodge, ii, 774-5). As regards the Iranian calendar from the start of the Islamic era, al-Bīrūnī (*al-Āthār*, 216) relates that on Nawrūz [*q.v.*], the festival of the first day of the year, the ascension to Heaven of the great king of ancient times, Djamshīd, was celebrated. On his throne and in a kind of apotheosis, he went there to defeat death and the demons.

When Persian prose emerged, in the 4th/10th century, Kur'ānic exegesis had already travelled a considerable distance in constructing the account of the ascension of the Prophet. It was also at this time that the commemoration of this ascension began, in Jerusalem [see AL-ḲUḌS, at Vol. V, 323]. The original translation into Persian of the commentary on the Kur'ān (*al-Tafsīr*) by al-Ṭabarī, on the initiative of the Sāmānid Maṣū' b. Nuḥ (d. 365/975 [*q.v.*]), is one of the greatest monuments of this early prose. Gathered here is the best of what exegesis had hitherto elaborated, on the basis of *ḥadīths* which focused the reading of notable passages of the Kur'ān on the "night journey" (*isrā'*) (Kur'ān, XVII, 1) and on the two visions of the Prophet (Kur'ān, LIII, 1-18 and LXXXI, 19-25). It may be noted that the *mi'rādī* is involved here three times. The account is first developed broadly at the end of the commentary on Sūra II (Persian *Tafsīr*, i, 182-98), while with Sūra XVII, that of the "night journey", the commentary offers at the end of the sūra only a summary (Persian *Tafsīr*, iv, 909-18). Through this style of repetition it can be understood what at that time constituted the nucleus of the story of the ascension. On arriving in the Seventh Heaven, Gabriel invites the Prophet to speak before God. The dialogue is contained in the verses 285-6 which conclude Sūra II. Then, for greater precision, Gabriel will say, in the account which follows Sūra XVII, that the object of the journey is "that you address your prayers to God" (Persian *Tafsīr*, iv, 910). Thus at its birth, Persian prose was located at the end of a process of exegesis which had made from Kur'ānic verses which did not require it, an account of the ascent to Heaven, of dialogue with God and of redescend, which had long been part of the religious and cultural ambience of the Near East.

But for a third time, at the end of the translation of Sūra LIII (Persian *Tafsīr*, vii, 1766-8) there is a further instance of *mi'rādī*. At Medina, the text relates, Arabs were competing at archery. The Prophet was then transported to Heaven, after which God told him that he had been closer to Him "than the distance of two bow-shots". This was the interpretation of the two well-known Kur'ānic verses LIII, 8-9. Secondly, where the Kur'ān says, "And he revealed to his servant what he revealed. His heart has not belied what he saw" (Persian *Tafsīr*, Sūra LIII, 10-11), the commentator has written: "The heart of the Prophet saw God more clearly than we see with the eyes in our heads, and it was not a deceitful vision" (vii, 1769). These few phrases were to be decisive in the development of Persian *mi'rādī*, focusing the interest of the story on the great proximity between the

Prophet and God, and on the vision of the heart. Bringing these elements together was all that remained to be accomplished.

The 5th/11th century saw a capital development in the story of the *mīrādī* narrative in Persian. Attributed to Ibn Sīnā (370-427/980-1037 [q.v.]) is a "Book of the Ladder" (*mīrādī-nāma*), consisting of a brief but substantial account of an ascension, drawn from tradition and accompanied by a long commentary. The account is composed of forty short pieces, a sort of *vade-mecum*, a *ḥihl sukhān* offered for meditation. Each piece receives a commentary in the typical style of Ibn Sīnā, with his angelology and his descriptive cosmology. The totality is known through several manuscripts, from the 6th/12th to the 8th/14th centuries. Naḍīb Māyil-i Hirawī was the discoverer of the manuscript which enabled him to prepare a critical edition (*Mīrādī-nāma*, 1365/1986). The author of the text has reduced the narration to the essentials, copious as it is with the authors of the *Tafsīr*. His commentary interprets the ascension as a journey of the soul of the Prophet towards Primary Intelligence. Henry Corbin (1954, 1999) has rightly added his interpretation of the text to that of the three visionary accounts of Ibn Sīnā.

Ibn Sīnā's illustrious contemporary, al-Kuṣṣhayrī (376-465/986-1072 [q.v.]), likewise a Khurāsānian, was of a totally different background: Aṣḥ'arī, Shāfi'ī and a master of *ḥadīth* and of Sūfism. Shocked by those sceptical of the physical reality of the *mīrādī*, he undertook to establish, point by point, proof of the veracity of the events of the ascension of the Prophet. From a meticulous examination of all the *ḥadīths* worthy of belief, he drew up a work in Arabic that concluded specifically that the Prophet "rose to Heaven with his body" (*K. al-Mīrādī*, 65). Thus, two lines were drawn, between which numerous options were available: that of Ibn Sīnā, proponent of a journey of the spirit, and that of al-Kuṣṣhayrī, an authority on Sunnism (Fouchécour 1996).

The 5th/11th and 6th/12th centuries constitute a decisive period of evolution of the *mīrādī* story in Persian literature. In prose, the account of the ascension was developed within commentaries on the Qur'ān. Alongside them and in the Ḥallāḍjīan tradition, works of spirituality dealt with the ascension of the Prophet as a prototype of the journey of the purified soul. Finally, poetry was directed towards an account of celebration of the event, which the *mīrādī* was for the believer, and quickly blended, in its lyrical mode, with the spiritual mainstream.

The first commentary on the Qur'ān that went beyond the sole concern of translation into Persian was that of Shāhfūr-i Isfarā'īnī, the *Tādī al-tawāḍjīm fī tafsīr al-Qur'ān li 'l-a'ādījīm*, composed between 430/1038 and 460/1067. This jurist, expert in *ḥadīth* and a committed Aṣḥ'arī, used a style decidedly representative of Khurāsānian prose, close to the spoken language, pleasant and persuasive. His account of the *mīrādī* (*Tādī al-tawāḍjīm*, iii, 1229-51) is distinguished from that of al-Ṭabarī in several ways. It is not written in the same cosmic perspective, with the scholar making use of contemporary knowledge regarding the skies, the stars and planets. It is intentionally reduced to that which gives guidance in faith and which changes the proportions given to the sections of the account. The march from Mecca to Jerusalem has the nature of an important initiatory test; the approach to the Throne of God takes on the grandeur of court ceremonial. But the basis of the dialogue between God and the Prophet remains that which is said in

Qur'ān, II, 285-6. Several of its original elements are not retained, but the account of Shāhfūr has left its mark on the story of the *mīrādī*.

Another Khurāsānian, Abū Bakr 'Atīk b. Muḥammad al-Harawī al-Sūrābādī, dedicated his *Tafsīr* to the Salḍjūk Alp Arslan [q.v.], who reigned from 455/1063 to 465/1072. He composed his account of the *mīrādī* in the same spirit as Shāhfūr, in a limpid Persian prose. His version was powerfully coherent and appropriate for various audiences, especially no doubt the community of preachers. In particular, they could find there two major affirmations: the importance of the Prophet's function as a mediator on behalf of his community, and the essential role of Gabriel as a guide on the celestial journey. On the other hand, the account is so well proportioned in its sections that it seems suitable for public reading, with the audience reciting the numerous Qur'ānic verses inserted in the text.

A little younger than al-Sūrābādī, an important translator of the Qur'ān from Transoxiana deserves mention. This is Abū Haṣṣ Naḍīm al-Dīn 'Umar b. Muḥammad al-Nasafī (462-538/1069-1143 [see AL-NASAFĪ. III]). He used rhymed prose in his translation and showed himself an expert in the Persian literature of his time. His translation of Qur'ān, XVII, 1, for example, is already a form of commentary; he interprets Qur'ān, LIII, 8-9, as denoting the proximity of Gabriel with the Prophet. A brief account of the *mīrādī* follows Qur'ān, LIII, 8-11 (*Tafsīr*, ii, 998-9), a short and powerful text which lends itself to serious consideration.

In the first half of the following century, Rashīd al-Dīn Abū 'l-Faḍl Aḥmad al-Maybudī was the author of a large commentary on the Qur'ān, begun in 520/1126. He was not a Khurāsānian, but he revived a composition of al-Anṣārī (the eminent Šūfī master of Harāt, d. 481/1089 [see AL-ANṢĀRĪ AL-HARAWĪ]) which he called *pīr-i tarīkat*. His account of the *mīrādī* was, understandably, inspired by Sūfism, which was a novelty. He developed this story in its place, at the beginning of Sūra XVII (*Tafsīr*, 478-500). It is not certain that he knew al-Sūrābādī's account; he places objections to the miracle of ascension and the responses at the start of the text, or changes the dispositions of the inhabitants of the Heavens. His true originality is his way of addressing "the station of proximity" (*makām-i kūba*), describing in technical terms known in Sūfism the ecstasy of the Prophet before God.

Henceforward, no reader of the Qur'ān could miss the account of the *mīrādī* nor ignore its implications regarding the personality of the Prophet and Islam, the ultimate destiny of men and their spiritual path. In his turn, a Shī'ī of Rayy, Abū 'l-Futūḥ al-Rāzī, preacher and jurist, composed a major commentary on the Qur'ān, completed shortly before his death (552/1157). He took such care in the writing of his account of the Prophet's ascension to the point of turning it into a major classic, with the quality of his Persian and the organisation of the story (*Rawd al-ḍjīmān*, vi, 254-73), establishing the essentials for future generations.

But before him, Sanā'ī [q.v.] had for the first time introduced the theme of the *mīrādī* into Persian poetry. He gave to the beautiful *mathnawī* which he composed at 33 years of age in 506/1112 (if he was born in 473/1080) the title of "Journey of the devotees towards the Place of Return" (*sayr al-ṣībād ilā 'l-ma'ād*), intentionally combining in this title two words taken from Qur'ān, XVII, 1, and from Qur'ān, XXVIII, 85, thus indicating that this journey is a *mīrādī* (de Bruijn

1997), conceived in effect, in his description, as an ascension of the Šafī'. In his major work the *Ḥadīkat al-hakīkat*, incomplete at the time of his death (525/1131), he inaugurated the practice of eulogising the Prophet of Islam, giving special prominence to his night journey. The account is brief (*Ḥadīkat*, 195-6), but it suffices to show how the Prophet has transcended everything which was traditionally related of this journey. The direct influence of the *Sawānih* of Aḥmad al-Ḡhazālī (d. 520/1126) on Sanā'ī is very probable (Pürdjawādī 1378/1999). A source for these two mystics was, it may be recalled, ch. ii of the *Tawāsīn* of al-Hallādjī (Massignon, *Passion*, iii, 311-15). But Huḍjwīrī (d. ca. 465/1072 [q.v.]), after his masters, was also an inspiration due to the magisterial fashion in which he addressed *mī'rādjī* in general (*Kashf al-mahdīūb*, 306-7) and the Prophet's *mī'rādjī* in particular (*op. cit.*, 364, 389).

Thus, in the space of a century, the story of the *mī'rādjī* of the Prophet was to be imposed on several essential registers of Persian literature. In poetry especially, the two major authors who drew inspiration from Sanā'ī, sc. Aṭṭār and Nizāmī [q.v.], were intent on glorifying this ascent at the outset of their works. An example that can be given is the splendid text of the *Ilāhī-nāma* "The divine book" (*bayts* 256-413, pp. 11-17; tr. J.A. Boyle, 12-19) composed before 586/1190. It takes considerable liberties in relation to the prose texts. The Prophet decides to ascend to the Heavens, and the reader witnesses a lengthy homage paid to him by all the previous prophets; the reader subsequently witnesses the meeting of the stars with him, and then the mystical transformation of the Chosen One is described at length, summarised at the end in the image of the arrow which struck the letter *m* from the name of Aḥmad, to give Aḥad, the image of unification. Nizāmī, in his turn, composed five accounts of ascension as introductions to his five *mathnavīs*. The most successful was the one that he wrote, some years after 'Aṭṭār, for the *Haft paykar* "The seven princesses" (ed. *Tharwatīyān* 1998, 64-8), which shows excellent knowledge of the traditional tale and an incomparable spiritual and poetic sense (Fouchécour 1989).

The many Persian poets who were inspired, over the course of several centuries, by the *Pandī gandī*, the "Five treasures" of Nizāmī, composed accounts of the *mī'rādjī* in their turn. But with the 6th/12th century, the genre had matured and was growing stale. On the other hand, the perception of the *mī'rādjī* of the Prophet "as a prototype of the experience of the mystic rising from Heaven to Heaven in his lifetime" (Corbin, *En Islam iranien*, iii, 1972, 346) formed the basis of numerous treatises on the fringes of literature and the science of religions. On these fringes, there remains a vast area of study which has been little explored, concerning the themes essential to the *mī'rādjī*, such as the Opening of the Chest, the Celestial Mount, the Night of the Rescript (*shab-i barāt*), the Angel-Holy Spirit, the Tree of the Frontier, the Sails of Light, the shape of the Stars, the dwellings of Paradise, etc. And if "the nocturnal ascension is the nucleus of the religious vocation of Muḥammad" (Massignon), the account of it cannot be irrelevant to the essentials of Islam.

**MĪRZĀ SHAFĪ' MĀZANDARĀNĪ** (1159-1234/1744-1819) or Mīrzā Muḥammad Shafī' Bandpī'ī Māzandarānī, prime minister during the rule of Fath 'Alī Shāh Ḳādjār [q.v.].

He began his career as a statesman at the court of Āghā Muḥammad Ḳhān [q.v.], the founder of the Ḳādjār [q.v.] dynasty, who promoted Mīrzā Shafī' to the rank of minister. After the murder of Āghā Muḥammad Ḳhān in 1797, Mīrzā Shafī' continued in office at the court of the successor, Fath 'Alī Shāh, by whom in 1801 he was appointed prime minister. Mīrzā Shafī's term of office coincided with Persia's being drawn into the strands of European diplomacy. In 1804, in an effort to reassert its former authority in Georgia and consequently to impede further Russian advances southwards, Persia entered into a war with Russia, which was finally concluded with the signing of the peace treaty of Gulistān [q.v.] in 1813. During the war, Mīrzā Shafī' attempted to make an alliance with France. He persuaded Fath 'Alī Shāh to despatch an envoy to the court of Napoleon Bonaparte in order to negotiate this. Accordingly, the Franco-Persian Treaty of Finkenstein was signed in 1807. However, the French soon ignored the treaty by reaching an agreement with the Russians at Tilsit in the same year, leaving Mīrzā Shafī' politically disillusioned. Much of his period of office was spent in military engagements and diplomatic negotiations. He died at Ḳazwīn in 1234/1819 and was survived by one daughter.

**MİRZĀ SHAFĪ' WĀDIH TABRİZĪ** (b. 1794 Gandja, d. 1852 Tbilisi). Azerbaijani poet.

Born into a family from Tabrīz, at ten years old he lost his father, who was a stonemason, but with the assistance of his relatives he attended a traditional school where he learned literary Persian as well as Arabic. His knowledge of Persian literature introduced him to the works of renowned Persian poets such as Ḥāfiz and Nizāmī. Because of his anti-clerical views, he was expelled from school and began to earn his living both as an accountant and a teacher in calligraphy. His position as accountant brought him the title of Mīrzā. As a teacher of calligraphy, he taught the young Mīrzā Fath 'Alī Ākhūndzāda [q.v.] and persuaded him to end his religious studies. In 1840, the persecutions that he endured from local clerics compelled him to leave Gandja and settle in Tbilisi. There, Ākhūndzāda assisted him in securing a teaching position in Persian and Azeri Turkish languages. In Tbilisi he published the first Azeri Turkish language guidebook, *Kitāb-i turkī*, and formed a cultural society known as *Diwān-i hikmat*, where learned figures of the city occasionally gathered to debate literary, philosophical and social themes. Amongst those who attended these conventions was Friedrich Bodenstedt (1819-92), a German traveller who was interested in oriental studies. While following Mīrzā Shafī's courses on Persian and Azeri Turkish, Bodenstedt collected the original manuscripts of Mīrzā Shafī's poems, both in Persian and in Azeri Turkish. Returning to Germany in 1846, Bodenstedt translated these verses into German and published them in Berlin. The eventual translation of this book into almost all European languages soon made Mīrzā Shafī a renowned Azerbaijani poet outside the Caucasus. In 1846 Mīrzā Shafī left Tbilisi for Gandja and continued his teaching career. But ca. 1850 he returned to Tbilisi and taught in a local *Gymnasium* until his death.

Little remains of Mīrzā Shafī's works, and it was not until the Soviet period that four of his *ghazals* and a few lines of his poems in Persian and Azeri Turkish were found and published. The German translation of his poetry has been surrounded by some controversy. While some scholars recognise Mīrzā Shafī as a lyricist with an inclination towards oriental mysticism, others claim that Mīrzā Shafī's understanding of poetry did not go beyond the common knowledge of the learned in the East. Bodenstedt himself was not consistent in his appreciation of Mīrzā Shafī's literary status. While in his earlier writings he had acknowledged Mīrzā Shafī as the original poet of the German translations, he later decreased Mīrzā Shafī's role to being merely that of a source of inspiration for his own poetry.

## MIŞR.

C. 2. vi. The city from 1798 till the present day.

The history of Cairo over the 19th and 20th centuries is primarily one of status: from being the important capital of an Ottoman province, it became the capital of independent Egypt. During the two centuries under consideration, the city experienced first of all a long period of stagnation; then, from the early 1870s, a strong political will brought an unprecedented development which pointed the way to the modern city. Some years later, the financial situation of Egypt put a brake on urban growth, which then entered upon a period of slow consolidation until the end of the First World War. The years 1920-50 are marked by a new departure, whose determinants are not so much political as migratory. After independence, and up to the end of the 1970s, Cairo became the city of superlatives, with municipal services expanding in all spheres. Then, the slowing down of the migratory movement, whose effects were felt from the beginning of the 1980s, allowed the municipal authorities to resume their policies. Hence the last two decades of the 20th century were devoted to replacing equipment and public services. At the end of the century, Cairo stretched out at the same time into the desert zones and also into the agricultural lands along the outskirts as far as some 30 km/18 miles from its historic core. The city's history during these two centuries is also one of the progressive slipping away of its centre. At the present time, the places making up the centre are spread out around several focuses without nevertheless the older centres, the ancient city as much as the quarters developed at the end of the 19th century, being abandoned.

*A difficult start, 1800-68*. In 1798 General Bonaparte established his headquarters at Cairo, at a time when the city had 263,000 inhabitants. The French plans for the improvement of the road system were ambitious, but the results were scanty. The re-establishment of Ottoman authority a few years later was unfavourable for the city, whose population declined. However, Cairo experienced some changes which were to be determining factors for later works. At the outset, the governor of Egypt Muḥammad 'Alī Pasha [q.v.] embarked upon the first act of the discontinuous development of the urban agglomeration: the building of a palace some 12 km/7 miles north of the city. Nearer to the centre, the strengthening of the embankments for containing the floodwaters of the Nile allowed the laying out of vast gardens and the construction of palaces between the fringes of the old structure of the city and the river banks. In regard to urban administration, Muḥammad 'Alī took up again the structures of power from the previous century but put in place a new dividing out of the administrative which served as the base for the geographical extension of local public services. Heavy industry, whose development the Pasha embarked upon vigorously, was

concentrated above all on Būlāk [*q.v.*], where several factories for metalworking, printing and spinning were set up at this time.

In the mid-19th century, ‘Abbās Pasha, governor of Egypt 1848-54, developed—around important barracks, a palace and a school—a new quarter to the north of the city, sc. ‘Abbāsiyya. The first constructions for piping water began during this period but it was long before results were seen. Finally, in the framework of an agreement with the British, a railway was built between Alexandria and Suez via Cairo, with the Cairo railway station opening in 1856. At this time, the city's population was almost the same as it was a half-century previously.

*A flipp to urbanisation, 1868-75.* The succession of Ismā‘īl Pasha [*q.v.*] at the beginning of the 1860s formed a turning-point. Taking as a pretext the need to receive fittingly European dignitaries for the opening of the Suez Canal at the end of 1869, he developed an immense project of extending the city westwards. Paris was the model, but Ismā‘īl retained only the general picture of the French model rather than the exact procedure; nevertheless, the permanent markets and properties strongly resisted the project. In order to promote the new quarters, the Khedive had several public buildings erected there and enormous buildings to be let out in flats, and he gave other stretches of land gratis to those who contracted to build there quickly. After several checks, the beginning of the 1870s was marked by a resumption of works. At that time, Ismā‘īl opened up for urban development the zones farthest away from the centre as far as the left bank of the Nile, and he founded the spa town of Hulwān [*q.v.*] some 30 km/18 miles to the south. More than 200 ha (the equivalent of one-fifth of the urbanised zone by ca. 1865) were offered to the land market over a few years. This development was interrupted as rapidly as it had been started up; in the mid-1870s, Egypt's bankruptcy dealt a brutal blow to the works. During this time, Cairo became the place of privileged exile for Syro-Lebanese intellectuals who formed the nucleus of the *Nahḍa* [*q.v.*] or Arab cultural awakening and who contributed considerably to the development of cultural life and the formation of the first press devoted to conveying opinion. It was also a high-point of the national movement whose activities were to lead to the British occupation of the country at the end of 1882.

*Slowing down and consolidation, 1875-1918.* This period was first of all one devoted to the servicing of the public debt. The greater part of resources was pledged to developing agricultural production for export. Cairo was in practice left to its own devices by the administration. After fifteen years of consolidating the quarters founded by Ismā‘īl, new works were begun. But the municipal services were now deprived of all means of state intervention; urban development was left to the initiative of private companies, utilising capital which for the most part emanated from outside the country. It was above all in the sphere of transport that these companies provided for the city's future. The first suburban railway dates from 1888, whilst the tramway system dates from a decade later. At this time, Cairo comprised 570,000 persons on the right bank of the Nile. In the wake of this process and the intense speculation which followed, numerous quarters were founded. In 1906, a Belgian tramway company obtained an authorisation to create a new city, in the desert a few kilometres to the northeast; Heliopolis (‘Ayn Shams [*q.v.*]) was thus born. But not all private capital was invested in land speculation.

Industrial production also enjoyed a substantial development; this brought about the impoverishment of an important part of the population which was regrouped in a very dense and crowded precarious habitat, in quarters sometimes established in insalubrious areas. Two worlds and two cities were now established cheek-by-jowl, often in close proximity.

*The period of growth, 1918-50.* After the First World War, the slowing down of agricultural development and improvements in public health brought about an excess of population in the countryside, causing an acceleration of migration to the great cities. Cairo now became a great safety-valve for this rural population growth, with its population jumping from 791,000 in 1917 to 2,320,00 in 1947. During these thirty years, the city went through numerous changes. The construction sector, private as well as public, was very dynamic. The campus of the University at Djiza (Gizeh), the building for the Mixed Courts, the Parliament building, etc., all date from this period. Intervention by the public authorities in matters of urban development is less conclusive. Despite the first general development plan dating from the later 1920s, the works undertaken were largely those done from necessity. They affected mainly the structure of the old city, and if the public road system was improved, this was more a response to traffic problems than a project looking to the future. At the end of the 1940s, the first social housing appeared in Cairo. The period was also marked by a strong patriotic feeling expressed, in particular, in an abundant artistic and cultural production. Its exportation to the lands of both the Maghrib and the Mashriḳ made Cairo the cultural capital of the Arab world.

*The period of bursting activity, 1950-80.* After the Free Officers' *coup d'état* of July 1952, the rulers of Egypt adopted new approaches for the development of Cairo. Great projects multiplied, including expressways along the banks of the Nile, additional bridges, etc. The first master plan for the Cairo agglomeration, prepared in 1956, was soon out of date: the population predicted for the year 2000—5.5 millions—was reached before the end of the 1960s. However, on the basis of this plan, the state built large quantities of low-cost housing. But the problem of the living environment was not thereby solved, and it led to an intolerable increased density of the old quarters, whose service infrastructure was now revealed as inadequate. From 1950 onwards, the city spread out in all directions, but above all on the left bank, which now saw an unprecedented development. It became covered with new, planned quarters, with a fairly low density, of thousands of villas and small dwellings. The city also developed in favour of the dividing-out of agricultural lands on the outskirts near to the developing urban area, pushing into zones not prepared for building by the city authorities. In order to frustrate these further extensions, in the mid-1970s there were plans for creating several new towns in the desert regions. But the actual start on this work was long delayed, and the sector not subject to planning continued to swallow up the greater part of the urban expansion.

*The period of overflowing development, 1980-2000.* At the beginning of the 1980s, demographers predicted the worst possible catastrophes for Cairo. The publication of the 1986 census put a stop to these suggestions; it showed that the population growth was less and less the result of migration. This change gave rise to a lowering of the density of the ancient urban structure which, as a counterpart, became increasingly occupied by the sector of semi-artisanal production.

It also provided an adequate respite for the public services, allowing the preparation of a new master plan at the beginning of the 1980s and the inauguration of several great projects of re-developing public services; the city became an immense construction site. Between Cairo and Alexandria, the first new town, Madīnat al-Sādāt, saw the light. These constructions, large enough to accommodate three government ministries, were never to be occupied.

Despite the state's almost total withdrawal from the sphere of housing, the construction sector remains dynamic. Although the critical situation is obvious, with half the population of the agglomeration living in poverty in 1986, there has been a massive surge of house building for the middle classes. Areas of empty housing units, the result of pure speculation activities, reached several hundred thousands of units by the mid-1990s.

At the turn of the millennium, the urban agglomeration held ca. 12 million persons. The plan for establishing new towns has been scaled down, the results of these being much inferior to what was envisaged. The idea of balancing living units and industrial or artisanal units in these places is one check to their growth; they function at the price of the daily movement across the city of thousands of employees. If, with regard to population, Cairo is far behind the greatest cities of the world (fifteenth in 1990), it is one of the most dense, with ca. 250 persons per hectare. As a reaction to the inconveniences brought into being by this situation, a new form of development in the desert zone—houses or small properties grouped in an enclosure—appeared towards the end of the 1990s. It has caused a very rapid growth in the surface area of the agglomeration. In favour of these extensions, the groups of population become more homogeneous, but the distances between those living in security and the rest continue to deepen.

D. 8. The British occupation and the Egyptian parliamentary monarchy, 1882-1952.

Great Britain's post-1882 occupation of Egypt was

a classic case of indirect colonial domination. Formally, Egypt remained a province of the Ottoman Empire ruled by a Khedive [see *KHĪDĪW*] selected from the family of Muḥammad 'Alī (Muḥammad Tawfīk 1882-92; his son 'Abbās Ḥilmī II [q.v.] 1892-1914). A bureaucratic apparatus staffed overwhelmingly by Egyptians and members of the polyglot élite that had emerged over the course of the 19th century administered the day-to-day affairs of the country. They did so, however, under British supervision and in accord with British directives. A British military garrison was the ultimate guarantor of British control. The key British official in Egypt was its Consul-General. British policy and the course of Egyptian development were shaped particularly by the first Consul-General Sir Evelyn Baring, later Lord Cromer (1883-1907); Cromer's successors Sir Eldon Gorst (1907-11) and Sir Herbert Kitchener (1911-14) had shorter tenures and less impact. At lower levels, British advisers were gradually appointed to different Egyptian ministries and British nationals employed in the Khedivial bureaucracy.

Under this "veiled protectorate" from 1882 to 1914, Egypt experienced considerable economic growth but little structural change. Financial stabilisation, agricultural expansion and the maintenance of security were the main concerns of Egypt's British overlords. Egypt's financial situation was stabilised through the reduction of government expenditures and a new international agreement for debt repayment; the construction of new irrigation works contributed to a doubling of the total value of Egypt's agricultural output between 1886-7 and 1912-13; and the rough edges of Khedivial administration were smoothed under British supervision (e.g. the abolition of compulsory peasant labour on public works projects). On the other hand, little was done to encourage the development of an industrial base under the British. Egypt's social structure changed little between 1882 and 1914. The landed élite which had emerged earlier in the century consolidated its position and expanded its holdings after 1882, and the European/Levantine population which had become prominent in trade and banking under Muḥammad 'Alī's successors continued to dominate the commercial and financial sectors of the economy.

Under the compliant Khedive Muḥammad Tawfīk, there was little overt opposition to British domination. 'Abbās Ḥilmī II was more assertive, providing financial support for opposition newspapers and encouraging the formation of nationalist secret societies among Egyptian youth. Nationalist sentiment and activism became more pronounced in the decade prior to World War I. The catalyst was the Dinshāway incident of 1906, when an altercation between a hunting party of British soldiers and Egyptian peasants near the Delta village of Dinshāway resulted in one soldier dying and led to the arrest, trial by military tribunal, and subsequent execution, imprisonment, and public whipping of the peasants involved. Dinshāway is credited with galvanising Egyptian opposition to the British occupation. Several political parties were formed in 1907, the most important being the firmly anti-occupation *al-Hizb al-waṭanī* led by the lawyer Muṣṭafā Kāmil [q.v.] and the more gradualist *Hizb al-umma*, whose chief spokesman was the journalist Aḥmad Luṭfī al-Sayyid [see *LUTFĪ AL-SAYYID*]. Despite a higher level of Egyptian opposition to occupation thereafter, Great Britain's position in Egypt was not significantly eroded before 1914.

Major change occurred during and after World War I. The entry of the Ottoman Empire into the

war in late 1914 had immediate repercussions for Egypt. In December 1914 Great Britain severed the Ottoman connection by declaring a British Protectorate over Egypt. Simultaneously, it deposed the pro-Ottoman Khedive 'Abbās Ḥilmī II, appointing his uncle Ḥusayn Kāmil [q.v.] as titular ruler with the new title of Sultan. The latter was succeeded by his brother Aḥmad Fu'ād [see FU'AD AL-AWWAL] in 1917.

The war itself generated massive pressures as well as new expectations within Egypt. Forced sales of grain and animals to British forces operating in the area; the use of Egyptian labourers to construct military facilities; wartime inflation; the behaviour of British and Imperial troops temporarily garrisoned in the country; not least Allied rhetoric pledging self-determination for subjugated peoples after the war: all these contributed to Egyptian discontent with the new Protectorate. On 13 November 1918 a delegation of Egyptian notables led by the lawyer-judge Sa'd Zaghlūl [q.v.] visited the High Commissioner, Sir Reginald Wingate, to request Egyptian representation at the Paris Peace Conference. Over the winter of 1918-19 Zaghlūl and associates organised a broadly-based nationalist front, the Wafd [q.v.] or "delegation", committed to working for Egyptian independence. When in March 1919 the British arrested Zaghlūl and two of his colleagues, Egypt exploded in protest. Daily demonstrations and work stoppages brought normal life to a standstill in Egyptian cities; the countryside witnessed attacks on British personnel and communications facilities.

The Revolution of 1919 set in motion a process of political change which eventually brought Egypt formal independence. The turbulence of 1919 inaugurated three years of negotiations between the British government and different Egyptian notables (sometimes the Wafd, sometimes ministers supported by the Sultan, Fu'ād) aimed at defining a new Anglo-Egyptian relationship. After three years of futile discussions, in February 1922 the British issued a unilateral declaration of Egyptian independence. It was ringed with qualifiers, however, the British reserving the four areas, those of Imperial communications, the defence of Egypt, the status of foreign minorities and the Sudan, as matters of British concern. But at last Egypt had independence—of a sort.

From 1922 to 1952, Egypt was a technically independent parliamentary monarchy. Sultan Fu'ād became King Fu'ād in 1922 and reigned until his death in 1936; he was succeeded by his son Fārūḡ [q.v. in Suppl.] from 1936 to 1952. A constitution establishing a parliamentary system of government, but reserving significant powers for the monarch, was drafted in 1923. An electoral law of the same year provided for a Chamber of Deputies elected by male suffrage and a partially-elected, partially-appointed Chamber of Notables. Egypt's first parliamentary elections in December 1923-January 1924 saw the Wafd emerge triumphant.

The dynamics of the parliamentary monarchy have often been described as a triangular struggle among the King, the British and the Wafd. The Wafd, the nation's premier popular movement at least through the interwar period, won every relatively free parliamentary election yet held ministerial office for only somewhat over eight of the 28-plus years from 1924 to 1952. Egypt was more often governed by "minority" parties of non-Wafdists or Wafdist dissidents ruling with the covert or overt backing of the King. British influence rested primarily on the continued presence of British troops in Egypt, and was exer-

cised through the British High Commissioner (from 1936, the British Ambassador) meeting regularly with Egyptian Prime Ministers and rendering advice which the latter disregarded at the risk of incurring British opposition to their continued tenure in office. From its inception, the Egyptian parliamentary order was a flawed system characterised by the domination of politics by an élite, electoral corruption and frequent turnover in office, and—at least until after World War II—by a neglect of socio-economic adjustment or reform on the part of the country's politically dominant upper class. On the other hand, the period of the parliamentary monarchy was also one of political pluralism, of considerable freedom of expression, and of cultural efflorescence, as a galaxy of prominent intellectuals engaged in spirited debate on the relative merits of Egypt's inherited Arabo-Islamic culture versus patterns of social and political life modelled on those of the West.

The shortcomings of the parliamentary monarchy became more pronounced over time. The 1920s were years of economic prosperity and relative political optimism. The 1930s were a darker era marked by economic depression and extended periods of more overt royal autocracy. A Wafdist interlude in office in 1936-7 witnessed the main political development of the decade, the conclusion of the Anglo-Egyptian Treaty of Alliance in 1936 which regularised but did not totally eliminate the British military presence in Egypt. The years of the Second World War from 1939 to 1945 saw more overt British interference in the country's political life. Of particular importance was the "incident" of 4 February 1942, when British tanks surrounded the Egyptian Palace and threatened King Fārūḡ with forced abdication unless he complied with a British ultimatum to install the by-then more pro-British Wafd in office. The incident served to discredit both the Wafd, now seen as willing to accept British support in its quest for public office, and the King who had bowed to British power. The postwar years were ones of great political turmoil. Labour troubles and peasant unrest perturbed urban and rural Egypt respectively; anti-British demonstrations and agitation over the Arab-Jewish clash in neighbouring Palestine added to the turbulence of the later 1940s; deep-seated animosity between the supporters of rival political tendencies produced a wave of political violence, including the assassination of two prime ministers and of the charismatic leader of the anti-parliamentary Muslim Brotherhood (*al-Ikhwān al-Muslimūn* [q.v.]), Ḥasan al-Bannā' [q.v.], between 1945 and 1949; and in late 1951 to early 1952, the Wafd, once again in office, terminated the Anglo-Egyptian Treaty of Alliance and mounted a guerrilla campaign to pressure the British out of their remaining military base in the Suez Canal zone. The culmination of postwar unrest came on "Black Saturday", 26 January 1952, when huge crowds, angered by a British massacre of Egyptian police in the city of Ismā'īliyya on the previous day, surged through Cairo, and organised bands of incendiaries undertook the systematic torching of commercial, primarily Western-owned, establishments in the city. The conventional narrative of 20th-century Egyptian history portrays the parliamentary monarchy as politically discredited and morally exhausted by 1952.

D. 9. Republican Egypt 1952 to the present. On 22-3 July 1952, a military coup effectively brought the era of the parliamentary monarchy to an end. The seizure of power was carried out by a clandestine movement within the army, the "Free Officers" (*al-dubbāt al-ahīrān*); the key figure in the movement was Colonel Djamāl 'Abd al-Nāṣir [*q.v.* in Suppl.]. From July 1952 onwards, executive decisions were made by a committee of leading Free Officers, the Revolutionary Command Council (RCC).

A new political order emerged only gradually. On 26 July 1952 the sybaritic King Fāriḳ [*q.v.* in Suppl.] was hustled into exile. At first a civilian ministry held formal power. By September, General Muḥammad Nadjīb [*q.v.*], an associate but not a core member of the Free Officers, was appointed Prime Minister.

Existing political parties were banned in January 1953. On 18 June 1953 the monarchy was formally abolished and Egypt declared a Republic; Muḥammad Nadjīb became its first president. The crucial phase in the consolidation of the military régime came in early 1954, when President Nadjīb, supported by remnants of the old political order, mounted a challenge to continued RCC rule. In a month-long crisis marked by street clashes between partisans of the two camps, 'Abd al-Nāṣir and the RCC outmanoeuvred Nadjīb and his supporters. By the end of 1954, after an abortive assassination attempt on 'Abd al-Nāṣir by members of the Muslim Brotherhood (*al-Ikhwān al-Muṣlimūn* [*q.v.*]) provided the occasion for a crack-down on the Brotherhood, the military group reigned supreme in Egypt. A new constitution promulgated in January 1956 established a presidential form of government for Egypt. The constitution was ratified by popular referendum in June 1956; at the same time, Djamāl 'Abd al-Nāṣir's nomination as President was also overwhelmingly approved.

There was occasional formal but little substantive change in Egypt's political structure from 1956 to 1970. 'Abd al-Nāṣir remained President until his death in September 1970. The unexpected union of Egypt and Syria in the United Arab Republic (UAR) in early 1958 necessitated a new provisional constitution and the expansion of the National Assembly to include Syrian representatives; but real authority remained in the hands of 'Abd al-Nāṣir. Syria's secession from the UAR in September 1961 prompted further adjustments. A Charter of National Action of 1962 now specified a socialist agenda for the United Arab Republic, as Egypt continued to be known until 1971. Another provisional constitution was promulgated in 1964, to remain in effect until 1971.

The years from 1952 to 1970 witnessed major changes in Egypt's economic policy, social structure, and international orientation. A policy of agrarian reform was inaugurated in 1952 and extended thereafter. By 1970, something over 800,000 *faddāns* of agricultural land, roughly one-eighth of the cultivated area, had been taken from large landlords and redistributed to some 340,000 peasant families. The foreign interests which had controlled much of the commercial sector of the economy were abruptly dispossessed as a consequence of the international crises of the later 1950s, their holdings now coming under state ownership. The heights of the domestically-owned urban economy also came under state control in the early 1960s, when Arab Socialism became the slogan of the UAR and the government nationalised much domestically-owned business and industry. The resulting economic structure was one of a privately-owned but state-directed agricultural sector and a huge state-owned public sector controlling most large-scale enterprises in the commercial and industrial sectors of the urban economy.

The social policies of the 'Abd al-Nāṣir years were distinctly populist. The new revolutionary régime made major efforts to bring the benefits of modernity to the mass of Egyptians. Educational facilities were rapidly expanded; health care was extended to the countryside through a network of rural health clinics; new laws relating to hours of work, minimum pay, and social security entitlements attempted to improve the standard of living of Egypt's labouring population.

Externally, the 'Abd al-Nāṣir years witnessed dramatic shifts. A negotiated Anglo-Egyptian agreement of 1954 arranged for the withdrawal of the last British troops from Egyptian soil in 1956. The mid-1950s

witnessed major transformations in Egypt's international position. Egypt broke with the Western powers and turned to the Soviet bloc for military and economic assistance; simultaneously, it assumed a leadership role in both the Arab nationalist movement and the Afro-Asian bloc of non-aligned nations. Successful resistance to armed attack by Israel, Great Britain, and France in the Suez Crisis of late 1956 consolidated Ḍjamāl 'Abd al-Nāşir's position as a major figure in world affairs. Thereafter he was unquestionably the leading personality in inter-Arab politics (leading to Syria's request for unity with Egypt in the UAR in 1958), as well as one of the most influential spokesmen in African and non-aligned politics. 'Abd al-Nāşir's regional dominance and international prominence eroded over the course of the 1960s. Syria's secession from the UAR in 1961 was a huge setback; inconclusive involvement in a prolonged civil war in Yemen from 1962 onwards drained the resources and prestige of the UAR; military defeat by Israel and the loss of the Sinai Peninsula in June 1967 irreparably damaged 'Abd al-Nāşir's aura as an Arab champion. Suffering from an unresolved military confrontation with Israel and a stagnant economy, the later 1960s were difficult years for Egypt/the UAR. The massive outpouring of Egyptian grief upon his death in September 1970 notwithstanding, Ḍjamāl 'Abd al-Nāşir left a difficult legacy for his successor.

The Vice-President Anwar al-Sādāt [*q.v.*] assumed the presidency of the UAR upon 'Abd al-Nāşir's death. A popular referendum in October 1970 ratified Sādāt's accession. A veteran member of the Free Officers movement, at first Sādāt governed under 'Abd al-Nāşir's shadow. Rivalry with other members of 'Abd al-Nāşir's entourage and public discontent with the ongoing situation of no war—no peace with Israel marked the early 1970s. Sādāt consolidated his personal position only in October 1973, when a combined Egyptian-Syrian attack upon Israeli positions in the territories Israel had occupied in June 1967 created a new strategic situation in the region. From late 1973 onwards Sādāt was his own man, free to move Egypt in new directions.

He did so with a vengeance. Change was most pronounced in international relations. Sādāt signalled part of his orientation in 1971, when a new constitution changed the country's name from the United Arab Republic to the Arab Republic of Egypt. Over the course of the 1970s Egypt exchanged its reliance on the Soviet Union for material assistance and diplomatic support from the United States; abandoned the Nāşirist commitment to Arab nationalism; and by 1979 made formal peace with Israel, in the process obtaining the return of the Sinai Peninsula to Egyptian control.

Shifts from the prevailing domestic patterns of the 'Abd al-Nāşir years were less sweeping but nonetheless appreciable. In the mid-1970s Sādāt presided over a limited liberalisation of Egypt's political system, dismantling part of the Nāşirist security apparatus and allowing a degree of political pluralism including a greater measure of press freedom and the formation of opposition political parties. The scope for political expression became constricted again in the later 1970s, when growing criticism of his policies led to less tolerance by the regime of opposition voices and groups.

This political liberalisation was part of a more general "Opening" (*al-iftitāh*) of Egypt under Sādāt; an opening to Western investment and expertise, to oil country investment, and to the previously-marginalised private sector of the economy. In the mid-1970s, the

formally socialist orientation of the 1960s was jettisoned as new legislation gave incentives to foreign investors and to greater scope to private capital. Socially, the era of the Opening was one of an accentuation of class cleavages between Egypt's more affluent upper and middle classes, who were the main beneficiaries of the country's more open economic system, and the mass of Egyptians suffering from accelerating inflation and a decline in social benefits. This deepening social schism forms part of the context for the growth of Islamist activism and militancy in Egypt over the 1970s, a phenomenon which eventually cost Sādāt his life.

On 6 October 1981 Anwar al-Sādāt was assassinated by a group of Islamist militants. The Vice-President Ḥuşnī Mubārak ascended to the presidency. A referendum in October 1981 ratified his accession; subsequent referenda in 1987, 1993, and 1999 extended Mubārak's term in office.

By and large, the hallmark of the Mubārak presidency has been continuity. Under Mubārak, Egypt has maintained its generally pro-Western stance, its strategic alliance with and material reliance upon the United States, and its peace with Israel. Sādāt's economic approach has also been echoed by Mubārak. The main features of the Opening remained in effect through the 1980s and accelerated in the 1990s as Egypt, under pressure from its international supporters and the IMF, moved more decisively towards a free-market economy. The early 1990s witnessed further measures of economic liberalisation in the line with IMF strictures (e.g. the elimination of many currency controls; accelerated deregulation; and a reduction in state subsidies), whilst the later 1990s saw a concerted effort to privatise public sector enterprises. The results have been mixed. Egypt's macro-economic performance over the 1990s was a robust one. The country's debt burden was reduced to manageable levels; inflation was largely tamed; the rate of economic growth improved over that of the 1980s. The micro performance was more troubling. The rate of unemployment remained high; wages formed a decreasing share of GDP; and the reduction of state subsidies effected particularly the standard of living of poorer Egyptians.

A more relaxed political atmosphere prevailed in Mubārak's early years in power. The scope for political expression decreased thereafter. Greater political protest and violence in the later 1980s in turn led to more governmental repression of opposition voices and groups. Faced with a low-level Islamist insurgency in Egypt's sprawling shanty-towns and in the economically depressed countryside of Upper Egypt in the early and mid-1990s, the government asserted greater and greater control over political opinion and activism. Emergency laws first enacted in 1981 were renewed through the decade; Islamist violence was met with massive state repression and the brutalisation of families and communities suspected of harbouring militants; non-violent critics of the régime have been subjected to government harassment and muzzling; and the parliamentary elections of 1990 were boycotted by opposition groups in protest against electoral restrictions, and those of 1995 were marked by the systematic repression of the opposition as well as by unprecedented electoral violence and blatant fraud. Egypt at the close of the 1990s may have turned an economic corner, at least in terms of national economic indicators if not of popular well-being; its political situation, on the other hand, appeared to be one of increasing governmental authoritarianism and the

progressive alienation of its leadership from the bulk of the population.

**MIZĀDJ** (A., pl. *amzīdjā*), lit. "mixture", a basic term of mediaeval Islamic medicine, to be translated as "temperament, balance of elements within the body".

One has to go back to the fundamental features of human physiology as conceived by the Arabic physicians, although one cannot speak of a unified body of knowledge here, since the concepts can vary perceptibly from one medical expert to another. The great sources of Islamic medicine systematically devote a chapter to the *mizādj*, e.g. 'Alī b. al-'Abbās [q.v.] *al-Madjūsī's K. al-Malakī*, Abū Sahl al-Masīhī's [q.v.] *K. al-M'ā fi 'l-ṭibb* and Ibn Sīnā's [q.v.] *al-Kānūn fi 'l-ṭibb*. As well as being part of physiology, the *mizādj* is directly involved in certain processes of morbidity. The physicians, like the philosophers, thought that the human body (like every other body in the world) was composed of four simple, homogeneous elements (*arkān, ustukūṣāt*): earth, water, air and fire. This doctrine is already central for 'Alī b. Rabban al-Tabarī [q.v.], author in the 3rd/9th century of the *Firdaws al-ḥikma*.

With these elements were associated specific qualities: cold, dryness, humidity and heat. Thus these four primordial elements go to make up all living beings according to proportions which vary from one being to another. Their interaction, their connections in more or less equal measure, the effects of their interpenetration on the economy of the human body and the individual's general state are consequently called *mizādj*, a term corresponding to the *krasis* of the Ancient Greek physicians. A man's *mizādj* will depend on the balance between the different elements and their qualities. Hence he will be balanced (*mu'tadil*) when those are present in the organism in proportions corresponding to the norm, and from this, they are guarantors of an individual's health. He will be considered in a state of disequilibrium (*khāriḍj 'an al-ṭidāl*, Grk. *dyskrasis*) and, as a result, liable to some pathological occurrence, when a certain quality (cold, heat, etc.) or a certain element (watery, fiery, etc.) is in excess of or is below the norm.

Hence the great physicians pay great attention to the necessity of keeping the *mizādj* of their patients in equilibrium, since all "disequilibrium" was, in their eyes, the source of illness. Thus they recommend moderation in all things (food, drink, sleeping, sexual relations, etc.) in order to avoid *dyskrasis*. One says that a certain patient's temperament is hot if the fiery element predominates in him. Amongst certain physicians, such as Ibn Sīnā, this theory of temperament reached a high degree of elaboration, since, as well as taking into account internal aspects like the balance proper to each man (a kind of ideal balance) and to each vital organ (the heart, necessarily hot since it is the seat of vital heat, the brain, the liver, etc.), this physician-philosopher brought in external factors such as climate, the people to whom the individual belongs, age and sex (thus man is hotter and drier than woman). Thus, concerning the proper temperament for each age of one's life (*mizādj al-asnān*), the physicians considered that the "capital" of inner

heat (*ḥarāra gharīziyya*) which a man has at birth, goes on decreasing when that person reaches the end of his life. They considered as proof of this the cold that old persons feel and that the physician can observe at the time of palpation, not to mention the coldness of a corpse after death. The corollary of the *mizādj* is the theory of humours, which the Greek and then the Arabic physicians developed. Even today, such ideas remain strongly connected in the popular imagination, since we speak of a person having a sanguine, a hot, a phlegmatic or a choleric temperament.

(a) The early period. For this, see **MOZAMBIQUE**, in Vol. VII.

(b) The 19th and earlier 20th centuries.

The 19th century was for Islam a period of revival and *qīhād* aided by the opening up of shipping across the Indian Ocean and the trade routes into Central Africa. Already at the beginning of the 19th century it was estimated that there were 15,000 Muslims in the Cape Delgado region and some 20,000 in the coastal hinterland of Mozambique Island. According to oral tradition, one Musa Momadi from Angoche, as a young man accompanied a relative who was a *sharīf* and a *ḥādījī* on an extended *dā'wa* expedition into the interior. His relative was concerned with converting the people he came across, including the Yao [*q.v.*] who by this time had migrated as far as the Shire valley. In light of this sort of occurrence, it is not surprising to find the governor of Mozambique commenting on the extraordinary advance and infiltration of Islam in the interior in 1852. On Musa's return in the mid-1850s the records indicate that he led the defence of Angoche. By 1877 he controlled an area which covered most of the coast from Mozambique Island to Licungo River and stretching 100 miles inland. His successors repulsed Portuguese attacks until 1910. As in other parts of the coast, the diffusion was primarily undertaken by people of mixed Arab and African blood. It was Portuguese policy to supply *mestizos* and *wajoge* with goods so as to procure slaves. This came to an end with the anti-slavery proclamation of 26 May 1877. The successful penetration is indicated by the fact that by the 1870s, women in their mid-twenties are recorded as having Muslim names. In addition to the Makua, the Yao and the Machemba had accepted Islam. In the interior beyond Mogabo, the Mualia chief and elders observed the Islamic practices, as did Mtarika, Cuirassio and minor chiefs like Cattur in the Luambala valley. To the north of them, Mataka represented an important centre of Islam. The Arab chief of Matibane was licensed to deal in slaves by the ex-governor Vasco Guedes de Carvalho e Menezes. Tavares, writ-

ing to the Overseas Ministry in Lisbon on 8 November 1862, mentions that the slave trade is in the hands of Arabs whose religion permits them to buy slaves. Likewise, Andrade Corvo writing to the Duke of Saldanha, the Portuguese Minister in London, on 11 March 1876 comments that, "It is easy for the Muslims to make religious proselytes among the finest and most energetic of the aboriginal races and in this way they get active and not very scrupulous agents to provide them with slaves." Chief Matapwiri living near Kalanji was reported as selling slaves in 1886. Indian Muslims played their part, particularly in Angoche, where a Swahili dynasty was in power well into the 20th century. The slavers in this region were primarily from Surat in western India, supplying the Persian and Arab markets. At this stage, Islamic doctrine was not observed in a pure form but was mixed with local traditions. It would seem that by the 1880s most major Yao chiefs had embraced Islam. Their settlements were centres for the spreading of Islam through Ḳur'ān schools. Coutinho records meeting Yao caravan leaders at Quelimane who claimed to be Muslims and who carried the Ḳur'ān carefully wrapped in a fold of their clothes. Coastal Muslims, however, ridiculed the Yaos who claimed to be Muslims, saying that they were *mushrikūn*. The growing Muslim presence is documented in a report from 1893 which shows that Muslims were active along the Licungo River and Maganja de Costa north of Quelimane. The reasons for the growing Islamisation were varied and complex, but had to do with closer associations with Muslim trading partners on the coast, and the increased prestige of Islam through the influence of the Bū Sa'īd [*q.v.*] dynasty and its representatives along the coast. The South African influence on the development during the latter part of the 19th century can be seen in the establishment of a *madrasa* in Lourenço Marques by Abū Bakr Effendī (d. 1880), a Kurdish scholar sent to the Cape in 1862.

At the beginning of the 20th century there were 15 mosques and 10 Ḳur'ān schools in the Angoche region. All the *monhes* were said to be able to write their own language in Arabic script. The Portuguese, in seeking to subdue the north, considered that Muslims and local Africans were making common cause and sacked Angoche in 1903. In spite of Portuguese efforts, Muslim communities with a Ḳur'ān school were a growing force in the hinterland in 1905. Islam was spread by Muslim traders, as well as *walimu*, *shurafā'* with their religio-magical knowledge and *mafundi* (artisans) using a hut, a veranda or the shade of a tree to teach the children.

The *turuk* [see ṬARĪḲA] in any organised form did not appear in Mozambique until the end of the 19th century. By that time both the Ḳādiriyya and the Shādhiliyya [*q.v.*] were established on Mozambique Island. The latter was established by students who went to a school in Kilwa founded by Ḥusayn b. Maḥmūd, himself a *khālifa* of a Ḥadramī *sharīf*. In 1896 a member of the Yashrutiyya [*q.v.*] settled in Mozambique. The Ḳādiriyya seems to have been established by 'Alī Msemakweli, a Yao who was a *khālifa* of Ḥusayn b. 'Abd Allāh al-Mu'īn. He spread the order to northern Mozambique from Kilwa [*q.v.*]. The Ḳādiriyya Sadate, a branch of the Uwaysiyya [*q.v.*], was established in Mozambique in 1904 by 'Īsā b. Aḥmad from Zanzibar. When 'Īsā b. Aḥmad returned to Zanzibar in 1925 he handed over the leadership to a local Muslim by the name of Momade Arune (Muḥammad Hārūn). A sub-branch of the *ṭarīka* was founded in Angoche at this time. After Momade

Arune's death in 1929 the *ṭarīka* was split by leadership rivalries leading in 1934 to the formation of the Kādīriyya Baghdādī branch, and further splits followed over the next decades. Developments which facilitated the growth of Islam during the second decade of the 20th century included the construction of the railroad from Lumbo, on the mainland opposite Mozambique Island, which began in 1913; the advance of Indian Muslim merchants beyond the coast; and towards the end of World War I, the presence of a considerable number of Muslims in the British forces engaged in the war in German East Africa with Von Lettow-Vorbeck's forces. As a result, the *ṭuruk* established branches in the principal settlements such as Nampula and Cabo Delgado. Mosques were constructed for the men and *zawāyā* (enclosed spaces) for women. As in the rest of the East African coast, Muslims from different parts of the Muslim world arrived bringing a variety of cultural and sectarian backgrounds. This has had its repercussions into the present, so that Muslims in different parts of Mozambique have tended to be and are isolated from one another.

Indian Muslims had their own mosques which were well built and ornate. They had cemeteries for their own exclusive use and brought and supported their own *imāms* from India. They observed the ordinances of the *Qurʾān* and the *Shariʿa* strictly. They avoided what was *harām*, fulfilled the requirements of ablutions and frequented the mosque assiduously. The African and *mestizo* Muslims had their own mosques which were like thatched huts, hence indistinguishable from other huts. Their observance of Islam was less rigorous. Their attendances at mosques were less frequent and their prayers and recitations less perfect because of their ignorance of Arabic and the absence of any of the required texts. All male Muslims, whether Indian or African, practiced circumcision. They wore the *malaiá*, also referred to as *cabaia*, and the *cofio* or a turban.

The statistics available indicate that there were around 66,000 Muslims in Mozambique in the mid-1950s. By then it was estimated that there were 1,956 Orientals and 15,188 Indians. At the end of the 20th century, estimates of Muslims in Mozambique vary between 10 and 16% in a population of 19 millions. Muslims in Mozambique consist of *monthes*, those from the Indian sub-continent, as well as *moors* who have an Arab or Turkish origin, and the Swahili. They looked to Zanzibar as the centre of Sunnī Islam and source of Islamic publications; they viewed the Bū Saʿīdī Sultan as their protector, remembering his name during Friday *khutba*, even though he was theologically an Ibādī. The leader of the Kādīriyya Sadate between 1929 and 1963 referred to himself as the Sultan's representative to Mozambique.

Historically, Islamic revivalist movements have opposed colonial rule in northern Mozambique. In the 1920s, some Muslim leaders protested against the abuses of forced labour, low wages and land appropriation in the Quelimane area. From the 1930s onwards, Muslim Africans and various Indians organised themselves into interest groups which carried out political action under the cover of social, mutual aid, cultural and athletic activities. The situation became even more acute from 1942, when Mozambique became *Portugal Ultramar*. Forced labour, arbitrary taxation, the obligation to plant cash crops and the lack of social improvement, produced a serious discontent among the Africans which led to the awakening of a national consciousness.

By the 1960s, the isolation of Muslims in Mozambique was breaking down. Muslims were seeking education in Tanzania and Arabia. Islamic publications from Cairo and Mumbai were available and Muslims were keen to acquire literacy in Arabic. People were listening to Cairo radio and were becoming aware of their religious roots. Arab and Islamic records and tapes from Egypt were circulating. African nationalism, linked to Arab anti-Portuguese propaganda, was gaining ground among the Muslims. It seems possible that clandestine Islamic associations were being established as early as the 1950s.

Given the total absence of liberty to form political organisations under the Portuguese, African Mozambicans living abroad in Tanzania, Zimbabwe and Malawi came together in a common front and formed the Frente de Libertação de Moçambique (FRELIMO) in 1962. An armed struggle began in 1964, but not until after the 1974 coup d'état in Portugal did Mozambique gain its independence (1975). During this period, a colonial policy was designed to win the support of the Muslim community against the forces of FRELIMO, which the colonial authorities thought had alienated the Muslims because of its Marxist tendencies. The policy was to work through the Muslim religious leadership, i.e. the *ṭuruk*, which they considered a conservative, local force against more radical, internationally organised expressions of Islam bent on political subversion. The Portuguese authorities, capitalising on the new situation that arose after the abolition of the Sultanate of Zanzibar in 1963, utilised the new links between the Muslim leadership in Northern Mozambique with the Comoros and invited the Mufti there to settle disputes between the *ṭuruk*. They also embarked on publishing an official, Portuguese-language version of abstracts of al-Bukhārī's *Ṣaḥīḥ*. In view of the fact that the liberation struggle was predominantly centred on the north, it is not surprising that the Muslims of Indian origin who lived in the southern part of the colony and adhered to the Hanafī legal tradition, with their orientation to Durban and Karachi, did not play an important role.

Nevertheless, the Muslim presence and growing Islamic influence can be seen by the fact that FRELIMO's representative in Cairo was a Muslim by the name of Shaffrudīn Muhammad Khan, and an office was also opened in Algiers. Islam's influence received a boost when various Arab countries offered to train the "freedom fighters", and some 130 of them were sent to Algeria. FRELIMO established international relations with the Arab League and the Organisation of the Islamic Conference. There is no mention in FRELIMO's educational programme of *Qurʾān* schools, but traditional institutions like the *poro/sande* institutions were acknowledged, and it is possible that, to some extent, Muslim influence may have been spread through these. The Indian Muslim communities which represent non-Sunnī groups such as the *Iṭhnāʿ Asharī*, *Ismāʿīlī* *Khodjas* and *Bohorās* ran small-scale commercial ventures, bush trading centres and small shops in towns. As closed communities, they had hardly any contact with Africans, Europeans or other Indian groups. Some Asian students attended universities or professional courses at technical schools in Portugal.

(c) Independence and after.

After independence in 1975, the Muslim leadership which had co-operated with the colonial authorities was discredited. Some Muslim associations were banned in 1976, while those which had had restrictions

imposed on them during the colonial period gained some freedom; but the civil war which erupted soon after independence and lasted until 1992 between FRELIMO as a Marxist-Leninist party and the Resistência Nacional Moçambicana (RENAMO), which sought to bring democracy to Mozambique, did not serve the Muslims well. By 1980 Mozambican Muslim students in exile in Dar es Salaam denounced the repression of Islam by the new government. Until 1982 the régime showed hostility to organised religion in general. There was considerable harassment of Muslims, including throwing pigs into mosques. Virtually all religious communities lost property through nationalisation. Religious associations were forbidden and attempts made to prevent religious activities anywhere but in mosques. Attitudes began to change after the establishment of RENAMO. FRELIMO found that its treatment of Muslims provided reasons for both Saudi Arabi and Umān to send supplies to RENAMO. South Africa and the Comoro Islands also served as conduits for supplying RENAMO in 1983-9. That situation made any allies, including the religious communities, acceptable. Thus in 1983 FRELIMO officially recognised the new national Council of Muslims Mozambique (CISLAMU). There seems to have been an enthusiastic attitude to religion in RENAMO circles. Their bases exhibited this in the form of mosques and churches. With the accession of Chissano in 1987, FRELIMO began a gradual restoration of social legitimacy to religious bodies of all kinds. In that year, Mozambique hosted the fifth Southern Africa Islamic Youth Conference. By mid-1988, confiscated properties were being returned. The situation improved further when article 19 of the 1975 constitution was changed in 1990 to state that "The state shall respect the activities of religious denominations in order to promote a climate of social understanding and tolerance and to strengthen national unity."

The elections of 1994 returned FRELIMO to power. In further attempts to gain the support of Muslims, FRELIMO recognised the Islamic holy days of 'Īd al-Adhā and 'Īd al-Fitr as national holidays in 1996. But in the 1999 elections it is revealing that, out of FRELIMO's 133 deputies, only one seems to be a Muslim, whereas out of RENAMO's 117, 12 were Muslims.

By the end of the 1990s, Mozambique had become a member of the Organisation of the Islamic Conference (OIC), thus securing economic benefits. Tensions between the Šūfi leaders of the majority of Muslims in the north and the more radical reformers based in the south have led the former to split off from CISLAMU to form the Congrés Islâmico.

VON SIGARD)

**MU'ĀHID** (A.), literally, "one who enters into a covenant or agreement ('ahd) with someone", applied in mediaeval Islamic times to those "People of the Book" who submitted to the Arab conquerors of the Middle East on condition of an 'ahd or of *dhimma* [q.v.] "protection". See for these *mu'āhidūn*, AHL AL-KITĀB, AMĀN, and in the context of al-Andalus, MOZARABS.

**MUDJİR AL-DĪN BAYLAĀNĪ**, a Persian poet of the second half of the 6th/12th century. He was, as his *nisba* indicates, a native of BaylaĀn [q.v.], in Transcaucasia, a compatriot and contemporary of the celebrated *Khākānī* [q.v.]. Mudjīr's *diwān* contains a few poems to the *Sharwān-shāh* Manūčīr II (d. not long after 555/1160-1), which must belong to the earliest part of his career, but the majority of his odes are addressed to the Atabegs Nušrat al-Dīn *Djāhān-pahlawān* b. İldügüz (571-82/1175-86) and his successor Kizil Arslan (d. 587/1191) and to the Saldjūkid Arslan b. Toghril (556-71/1161-76), nominally the master, but in fact the puppet of *Djāhān-pahlawān*. Takī Kāshī [see TAKĪ AL-DĪN] puts his death in the year 594/1197-8, which (for once) must be roughly correct.

In his famous ode in praise of the town of İsfahān, *Khākānī* speaks of how an "accursed demon" (*dēw-i*

*rađīm*) had mocked that city and how the Iṣfahānīs had in some way held *Khākānī* responsible for the attack, an accusation which he rejects energetically. The commentators identified this “demon” with *Khākānī*’s supposed pupil *Mudjīr* (*rađīm* being an anagram for the latter’s name) and there is in fact a *rubāʿī* in *Mudjīr*’s *diwān* poking fun at the people of Iṣfahān. Abu ʿl-Rađjā *Ḳummī* (*Taʿrīkh al-Wuzarāʿ*, ed. M.T. Dānīsh-pazhūh, Tehran 1985, 200-1), a nearly contemporary source, cites one verse from this quatrain and then a verse with which the “people of Iṣfahān” replied to *Mudjīr*’s attack (and which in later sources is ascribed to Sharaf al-Dīn *Shufurwa*, see *shufurwa*). The story is expanded by later authors, some of whom claim that *Mudjīr* composed the quatrain when the Atabeg sent him to that town as a tax-collector and that he was subsequently murdered in a bath-house by the local mob. But this is perhaps merely a fanciful elaboration.

*Mudjīr*’s *diwān* contains several highly artificial poems (e.g. one in which he uses only the letters that do not take diacritical points) and a fair number in Arabic or with alternating Arabic and Persian verses. A critical edition was prepared by M. Ābādī, Tehran 1358 *sh.*/1979.

AL-MUFADDAL B. SALAMA B. ʿĀṢIM (with the erroneous *nisba* “al-Dabbīr” since Ibn *Khallikān* [*q.v.*]) al-*Kūfī*, Abū Ṭālib (d. after 290/903), transmitter of historical materials (*akhbār*) with wide interests and a philological-lexicographical background.

With this approach (*Yāqūt*, *Udabāʿ*, vii, 170), he differed (a) from his father *Salama* (d. after 270/883; Ibn al-*Ḍjazari*, i, 311), a disciple and copyist (*warrāk*) of al-Farrāʿ [*q.v.*], the great authority of the *Kūfan* school of philologists, and (b) from his son Abu ʿl-Tayyib Muḥammad al-Baghdādī (d. 308/920; *Kahhāla*, xii, 43-4), a strict jurist of the *Shāfiʿī* school in Baghdād (Ibn *Khallikān*, tr. de Slane, ii, 610-11). The three represent one of the early scholarly dynasties in Irāk [see AL-YAZĪDĪ]. Apart from his father, the following philologists are mentioned among his teachers: Ibn al-Aʿrābī, Ibn al-Sikkī, *Thaʿlab*, and—last but not least—the *adīb* ʿUmar b. *Shabba* [*q.v.*]; among his students al-*Ṣūlī* [*q.v.*] is the best known. Al-Mufaḍḍal was also highly regarded as a calligrapher by the bibliophile and sponsor of poets and literati, al-Faṭḥ b. *Khākān* [*q.v.*], and after the latter’s murder (247/861) together with the caliph al-Mutawakkil, no less so by the vizier *Ismāʿīl* b. *Bulbul* [*q.v.*]. Neither of these two men was an Arab by descent. In the multicultural society of their time, they were probably receptive, besides the Arabic-Islamic tradition, not only to pre-Islamic Arabic transmissions (the “War of *Dāhīs* and al-*Ghābrāʿ*”; *Fākhīr*, no. 442/360), but also to Christian, Jewish, Persian (see below) and Central Asian reports [see *AFSHĪN*].

Of al-Mufaḍḍal’s œuvre, listed by the bio-bibliographers, little has been preserved or become known through quotations in the works of others. For an overview, see *Sezgin*, viii, 139-41, vii, 350, ix, 139-40. His best-known work is his much-used, unsystematic collection of proverbs (*amṭhāl*) and set turns of speech (*muḥāwarāt*, see *MATHAL*.1.i), containing 521 items:

(1) *al-Fākhīr* (for partial prints and the two editions, see *MATHAL*.1.iii.4). The peculiarity of *al-Fākhīr* is the

fact that, in addition to 200 proverbs, all of which can be found in the better-known, extensive collection of al-Maydānī [see *MATHAL*.1.iii.12], it contains 321 turns of phrases (*muḥāwarāt*), such as greeting formulas, benedictions, curses, animal calls (no. 441) and similar things, not a few of them connected with the *awāʿil* [*q.v.*] angle. The same phrases can be found in Abū Bakr Ibn al-Anbārī’s (d. 328/940) *al-Zāhir fī kalimāt al-nās*, also in Abū Hilāl al-ʿAskarī’s (d. after 395/1005) *Ḍamharat al-amṭhāl* and in the large dictionaries, e.g. in the *Lisān al-ʿArab* of Ibn Manẓūr (d. 711/1311). The transmission of *al-Fākhīr* can in part be traced back to Ibn al-Anbārī as well; he seems to have recognised that al-Mufaḍḍal had entered new “lexical” territory, which was then the motive for his composing the more comprehensive *al-Zāhir* [see *MATHAL*.1.iii.5]. Al-Mufaḍḍal was less of a philologist than a collector and an entertainer at court and in the city of Baghdād. Pointers towards this include his critique (cf. *Fihrist*, 43, 62, 63, 74, 82) of the *Kūbāb al-ʿAyn* of the great al-*Khālif* b. Ahmad, bearing the title: *al-Radd* (var. *al-Istidrāk*) ʿala ʿl-*Khālif*... fī *K. al-ʿAyn wa-islāh mā fīhī min al-ghalaṭ wa ʿl-taḥḥīf*, which evidently did not convince the philologists and lexicologists, who felt called upon to contradict him, even in later centuries (for relevant passages, see *Sezgin*, viii, 140). Al-Mufaḍḍal had a preference in his work for what was novel, strange and contemporary. This can be seen in his renditions of the aetiological stories that go with the *amṭhāl*/*muḥāwarāt*: the clever Jew (no. 223), the loyal Jew (no. 482), the Seven Sleepers (no. 239), the Christian martyr (no. 517), and others, see *MATHAL*.1.ii.7, and W. Ebermann, *Bericht über arabische Studien in Russland während der Jahre 1914-1920*, in *Islamica*, iii [1927], 229-64 (see secs. V. “Christlich-arabisches”, 248-51, and VI. “Jüdisch-arabische Literatur”, 251-4). On the whole complex, see R. Sellheim, *Die klassisch-arabischen Sprichwörtersammlungen, insbesondere die des Abū ʿUbad*, The Hague 1954, 114-21; Ar. tr. rev. and enlarged, *al-Amṭhāl al-ʿarabiyya al-kaḍīma*, tr. R. ʿAbd al-Tawwāb, Beirut 1391/1971, repr. <sup>1</sup>1408/1987, 167-75; *Oriens*, xxxii [1990], 472-5.

(2) *al-Malahī* [*q.v.*], on musical instruments, a treatise on the justification for playing music, which al-Mufaḍḍal was the first (?) to compose; ed. J. Robson, *Ancient Arabic musical instruments in the handwriting of Yāqūt al-Mustaʿsimī, A.D. 1298*, text in facs. and tr. with notes, including notes on instruments by H.G. Farmer, Glasgow 1938 (Collection of Oriental Writers on Music, iv), repr. in ʿAbbās al-ʿAzzāwī, *al-Mūsīqī al-ʿarabiyya*, Baghdād 1370/1951, 74-89; Farmer, *Islam*, Leipzig [1966], 8, 24, 26 (*Musikgeschichte in Bildern*, ed. H. Besseler and M. Schneider, Band 3, Lieferung 2), cf. E. Neubauer in *Oriens*, xxi-xxii [1968-9 (1971)], 418-31; A. Shiloah, *The theory of music in Arabic writings (c. 900-1900). Descriptive catalogue of manuscripts in libraries of Europe and the U.S.A.*, Munich 1979, 282-3 (Répertoire international des sources musicales = RISM B, x), cf. E. Neubauer in *ZGAIW*, i [1984], 290-6.

(3) *Mukhtasar al-Mudhakkar wa ʿl-muʿannath*; no such grammatical opuscle on the masculine and the feminine is mentioned in the list of works drawn up by the bio-bibliographers. It is inspired by the work of the same name by al-Farrāʿ. As the technical term *mukhtasar* “abridgement”, indicates, it might possibly be lecture notes [see *MATHAL*.1.iii]. Whether they should be traced back to al-Mufaḍḍal or whether a later anonymous is behind it will probably never be known. R. ʿAbd al-Tawwāb edited it in *RIMA*, xvii [1971], 277-346, with an introduction on the life and works of al-Mufaḍḍal.

**MUFAṢṢAL** (A., lit. "separated", "hived off"), in Indo-Muslim pronunciation *mufasssīl*, whence the British Indian conventional form *Mofussil*, an informal term of British Indian administrative usage, attested in British usage from the later 18th century but probably going back to Mughal official usage. It denoted the provinces, the rural districts and stations, as opposed to the administrative headquarters of a Presidency, District or region, the *sadr* (in the Anglo-Indian usage of the Bengal Presidency, the *Sudder*); hence going into the *Mofussil* could mean something like going into the field, or into the bush or backwoods.

*Bibliography*: Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian words and phrases*, London 1903, 570, 862. (Ed.)

**MUFETTISH** (T.), the Ottoman Turkish form of Ar. *mufattish*, lit. "one who searches out, enquires into something". In the Ottoman legal system of the 12th/18th century, below the Great Mollās [see MOLLĀ] there was a layer of five judges called *müfettiş*, whose duties were to oversee and enquire into the conducting of the Imperial *evkāf* or pious foundations [see WAKF], three of them being resident in Istanbul and one each in Edirne and Bursa (see Gibb and Bowen, ii, 92). In the 19th century, and with the coming of the *Tanzīmāt* [q.v.] reforms, *müfettiş* was the designation for the overseers and inspectors of various new administrative mechanisms now set in motion within the empire. In modern Turkish, *müfettiş* remains a standard word for "inspector".

**MUGHALMĀRĪ** [see TUKARŌṬ].

**MUḤALLIL** (A.), literally, "someone who makes a thing legal, legaliser, legitimator", the figure who, in classical Islamic law acts as something like a dummy or a "man of straw", in order to authenticate or make permissible some legal process otherwise of doubtful legality or in fact prohibited. It thus forms part of the mechanisms and procedures subsumed under *hiyal*, legal devices, often

used for evading the spirit of the law whilst technically satisfying its letter [see HĪLA].

Thus the *muhallil* is found in gambling, racing for stakes, e.g. with horses or pigeons, and archery contests being a participant who does not contribute to the stakes; see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 53, 98-106, and KIMĀR, at Vol. V, 109a. But *muhallil* is also found in marriage and divorce law, as the person instructed, usually for payment, to marry a woman who has been three times divorced and cannot therefore remarry her original husband until a fourth, dummy marriage has been gone through and duly consummated. After this *taḥlil* she can legally remarry her old husband. Such an intervention was generally allowed by the Ḥanafīs but disputed by the Mālikīs and Shāfi'īs, whilst the Hanbalī Ibn Taymiyya denounced it as illegal in a treatise of his on divorce (cf. Brockelmann, II<sup>2</sup>, 127, S II, 124) [see TALĀK I. 7.].

The person acting as a *muhallil* in marriage and divorce is not surprisingly a figure of contempt and obloquy in Islamic literature.

(C.E. BOSWORTH)

**MUḤAMMAD III B. ḤASAN**, 'ALĀ' AL-DĪN, Nizārī Ismā'īlī *imām* and the penultimate lord of Alamūt, who was made famous in mediaeval Europe by Marco Polo as the "old man" Aloadin. The only son of Djālāl al-Dīn Ḥasan (r. 607-18/1210-21), he succeeded his father, at the age of nine, in Ramaḍān 618/November 1221. The vizier previously appointed by Djālāl al-Dīn Ḥasan acted for some time as the effective ruler of the Nizārī state, also generally retaining the then ongoing Nizārī policies of rapprochement with the 'Abbāsids and Sunnī Islam. However, the observance of the Sunnī *shar'a*, imposed earlier, was gradually relaxed in the Nizārī communities of Persia and Syria.

Politically, Muḥammad III's long reign was a very turbulent period for the Persian world, which now experienced a forestate of the Mongol menace. However, the Nizārī leadership initially seems to have reached an understanding with the Mongols, who did not attack the Nizārī towns and fortresses of Persia for some time. Djūzjdjānī, the Ghūrīd historian and official who visited Kūhistān on diplomatic missions on several occasions during 621-3/1224-6, relates how the *muhṭashams* or the Nizārī chiefs in Kūhistān shared the stability and prosperity of their community with an increasing number of refugees, including many Sunnī scholars of Kḥurāsān, who fled before the invading Mongols and found asylum among the Nizārīs. Meanwhile, the Nizārīs extended their territories in Persia in the early years of Muḥammad III's reign. They seized Dāmghān and acquired or recaptured fortresses in Kūmis, Ṭārum and elsewhere, also extending their influence to Sistān. In the wake of the Mongol invasions, relations between Alamūt and the Kḥārazmians, who had replaced the Saldjūks as the Nizārīs' foremost enemy, were characterised by warfare and diplomacy until Djālāl al-Dīn Mangubirtī, the last Kḥārazm-Shāh, was defeated by the Mongols in 628/1231. The shifting Nizārī-Kḥārazmian relations have been vividly recorded by al-Nasawī, Sultan Djālāl al-Dīn's secretary and chronicler, who was on one occasion dispatched as an

ambassador to Alamūt where he conducted diplomatic negotiations with Muḥammad III on behalf of the **Kh**ārazm-Shāh. In Muḥammad III's time, relations between Alamūt and the neighbouring Caspian provinces deteriorated. On the other hand, peace was finally established between the Nizārīs and their perennial enemy, the people of Kaẓwīn. Muḥammad III had personally developed a close association with a Šūfī *shaykh* of Kaẓwīn, **Dj**amāl al-Dīn Gīlī (d. 651/1253), and regularly sent him an annual grant of 500 dīnārs. It seems that it was also in Muḥammad III's time that the Nizārī Ismā'īlī *da'wa* was introduced to the Indian subcontinent by *dā'īs* dispatched originally to Sind.

Nizārī fortunes in Persia were rapidly reversed after the collapse of the **Kh**ārazmian empire. The Nizārīs now directly confronted their most dangerous enemy, the Mongols, who were then making new efforts to conquer all of Persia. Following his abortive effort, in collaboration with the 'Abbāsids, in 635/1238 to forge an alliance with the kings of France and England against the Mongols, Muḥammad III made one last peace overture to the new Great **Kh**ān Güyük in 644/1246. However, the Nizārī emissaries to Mongolia were dismissed with contempt by Güyük. Henceforth, Mongol-Nizārī relations deteriorated beyond repair. By 651/1253, under Güyük's successor Möngke [*q.v.*], the Mongols had destroyed numerous Nizārī towns and strongholds in Kuḥistān and Kūmis. As the Mongols were incessantly conducting military campaigns against the Nizārī territories in Persia, 'Alā' al-Dīn Muḥammad III was found murdered in Shīrkūh, near Alamūt, under obscure circumstances, on 29 Shawwāl 653/1 December 1255. He was succeeded by his eldest son Rukn al-Dīn **Kh**urshāh [*q.v.*], who would rule for exactly one year as the last lord of Alamūt.

Muḥammad III's reign was also a period of intense intellectual activity in the Nizārī Ismā'īlī community. In particular, Nizārī leadership at this time made a sustained effort to explain the various religious policies of the lords of Alamūt, since Ḥasan-i Šabbāh's time, within a coherent theological framework. The intellectual life of the Nizārī community was now particularly invigorated by the influx of outside scholars, non-Ismā'īlī Muslims, who availed themselves of the Nizārī libraries and patronage of learning. Foremost among such outside scholars was Našīr al-Dīn al-Ṭūsī [*q.v.*], who spent some three decades in the Nizārī fortresses of Kuḥistān, and later at Alamūt where he enjoyed the patronage of Muḥammad III and his successor until the collapse of the Nizārī state in 654/1256. Al-Ṭūsī made important contributions to the Nizārī thought of his time, and it is primarily through his Ismā'īlī works, including especially his *Rawdat al-taslim* (ed. and tr. W. Ivanow, Leiden 1950), that modern scholars have come to possess an understanding of the Nizārī Ismā'īlī teachings during the final decades of the Alamūt period.

**MUHAMMAD B. 'ABD ALLĀH, called IBN SHĀBĪB**, Abū Bakr, Baṣran theologian who lived in the first half of the 3rd/9th century. He is possibly identical with **Sh**abīb al-Baṣrī, "one of the best-known ascetics of his community and among the leading sages of his period" whom the Jewish *mutakallīm* Dāwūd b. Marwān al-Muḥammiš reports defeating in a debate in Damascus. He was influenced by the **Mur**djī'ī Abū **Sh**amir al-Ḥanaṭī and his school, but he studied with al-Nazzām [*q.v.*] and is therefore frequently called a Mu'tazilī. Al-Māturīdī extensively quotes a book of his, apparently the *K. al-Tawhīd*, in which Ibn **Sh**abīb described and refuted the doctrines of dualists, Christians and Ṣābians, of Aristotle and others who believed in the eternity of the world, of Indian sensualists (Sumanīyya [*q.v.*]) and the sceptics (Sūfistā'īyya). In these polemics, especially those against the dualists, he followed al-Nazzām but frequently refined the arguments. The *kādi* 'Abd al-Djabbār still found his book "excellent". Ibn **Sh**abīb's **Mur**djī'ī leanings are apparent in a treatise on *indjā'* which was refuted by **Dj**a'far b. Mubashshīr [*q.v.*], and another on the *wa'id* (i.e. threat of eternal damnation), for which he was attacked by the Mu'tazilī Abū **Dj**a'far al-Iskāfī [*q.v.*]. He did not accept the *manzila bayn al-manzilatayn* [*q.v.*] although he used the term *fāsiḥ*, for he believed that the mortal sinner remained a believer. In his definition of belief he omitted works, something which a Mu'tazilī would have never done, and based his definition on the intellect and will. In his view, Muslims could hope not to be punished eternally. The passages of the **Qur**'ān that speak of God's threat (*wa'id*) in this respect are, he said, not clear enough. With this, he took up an old hermeneutical argument which the **Mur**djī'a had carried into *uṣūl al-fikh*; it had been developed by Muways b. 'Imrān [*q.v.*] and discussed by Abu 'l-Hudhayl and al-Nazzām.

(J. VAN ESS)

**MUHAMMAD B. 'ABD AL-KARĪM AL-KHĀṬĀBĪ** (ca. 1880-1963), Moroccan activist and leader in the Rif War.

Ibn 'Abd al-Karīm was born in the 1880s into the large Berber tribe (*kabila*) Banū Waryāghal in the Moroccan Rif [*q.v.*], son of a *kādī* who had close relations with the Spanish in Melilla [*q.v.*] and Alhucemas Island. He studied at the Ḥarawiyyīn in Fās [*q.v.*], and was influenced by the Salafīyya [*q.v.*] movement. From 1907 he worked in Melilla as a teacher, military interpreter, journalist and *kādī*. After the Moroccan Protectorate was established in 1912, he opposed French colonialism and during the First World War was briefly arrested by the Spanish for supposed German sympathies. In 1919, an inchoate movement emerged among the Banū Waryāghal to resist the Spanish occupation, and Ibn 'Abd al-Karīm returned to reorganise it on a more stable basis by imposing the *Shari'a* and establishing a European-style military force.

After a rising against the Spanish in July 1921, he founded a government based on principles of modernisation and Salafī reform. In February 1923 various Rif tribes gave him *bay'as* as *imām*; he sometimes called himself *amīr al-mu'minīn* [*q.v.*], more to signify the religious nature of his movement than to claim universal leadership. His forces defeated the Spanish in 1924 and invaded the French Zone in 1925. After a joint invasion of the Rif in the autumn of 1925, Spanish and French armies crushed his state in May 1926.

Ibn 'Abd al-Karīm was exiled to Réunion until, in 1947, he escaped in Egypt on his way to France. He became the titular leader of the umbrella Committee for the Liberation of North Africa. After Moroccan independence (1956) he refused to return, saying that the American bases prevented Morocco from being truly independent. He died in Cairo in 1963.

**MUḤAMMAD B. 'ARAFĀ** (d. 1976), ephemeral Sultan of Morocco 1953-5.

Muḥammad b. 'Arafa was the product of the Franco-Moroccan crisis of the early 1950s when sultan Muḥammad b. Yūsuf (after 1956, Muḥammad V) (d. 1961) defied the Protectorate authorities and openly supported the nationalists' demand for independence. In March 1952 the sultan addressed a letter to the President of the French Republic demanding the abrogation of the protectorate treaty of 1912. The French not only rejected the sultan's demand but started contemplating plans for his removal. A scheme for a dynastic change by which the Idrisid 'Abd al-Ḥayy al-Kattānī would be made sultan was quickly abandoned in favour of a more realistic alternative, that of finding a candidate for the throne from within the 'Alawid house.

The idea of a new 'Alawid sultan who would be more co-operative, if not in effect a French puppet, was judged to be more acceptable in view of the wide popularity that had built up round the 'Alawid dynasty since the early 1930s. Upon the instructions of Augustin Guillaume, the French Resident General, Thāmī al-Glāwī, pasha of Marrakesh, and 'Abd al-Ḥayy al-Kattānī toured the country to gather signatures for a petition demanding the removal of the sultan Muḥammad V. The new candidate for the throne was found in the person of Muḥammad b. 'Arafa, a retiring per-

son from the 'Alawid family. On 20 August 1953 the legal sultan was deposed and sent into exile in the French colony of Madagascar.

The enthronement of the new sultan was immediately met by a sweeping wave of opposition to the French policy. Ibn 'Arafa was dismissed by the overwhelming majority of the Moroccan people as "the sultan of the French" and they therefore refused to give him allegiance. Mosque *imāms* abstained from mentioning his name in the Friday sermon, and when they did this under French pressure, people simply deserted the mosques. His proclamation had for its immediate consequences the radicalisation of the nationalist movement and the outbreak of armed resistance to the French in many parts of the country. After two attempts on the sultan's life and the deterioration of security throughout the country, the French realised the seriousness of the situation. Internationally, the French action had been widely condemned, particularly by Spain which, as a co-partner in the protectorate system, felt deeply offended by the French unilateral move. The Spanish authorities maintained allegiance to Muḥammad V, and at the United Nations the French government had also to face wide hostility to its Moroccan policy from the Arab and the Afro-Asian bloc.

For the Moroccan nationalist movement led by the Istiklāl party [see HIZB. i, at Vol. III, 525], the return of the deposed sultan and the removal of Ibn 'Arafa became the most pressing demands and a rallying cry for all political tendencies. When the French finally decided to allow Ibn Yūsuf to return from exile, they had, in fact, accepted the principle of Morocco's independence. Ibn 'Arafa announced his abdication on 1 October 1955, and on 2 March 1956 the protectorate régime formally came to an end. Muḥammad b. 'Arafa went into exile in France and died at Nice on 18 July 1976.

(MOHAMED EL MANSOUR)

**MUḤAMMAD B. ISMĀ'ĪL AL-MAYMŪN**, the seventh *imām* of the Ismā'īliyya [*q.v.*].

The eldest son of Ismā'īl b. Dja'far al-Ṣādiq, Muḥammad was born around 120/738; and on the death of his grandfather, the *imām* Dja'far al-Ṣādiq, in 148/765 he was recognised as *imām* by a faction of the Imāmī Shī'īs, who were later designated as the Mubārakiyya. These Shī'īs, comprising one of the earliest Ismā'īlī groups, affirmed the death of Muḥammad's father Ismā'īl in the lifetime of the *imām* al-Ṣādiq. They further held that al-Ṣādiq had personally designated his grandson Muḥammad on Ismā'īl's death. Muḥammad b. Ismā'īl carried the epithet of al-Maymūn, the "fortunate one", and his followers were also originally referred to as the Maymūniyya, another designation of the nascent Ismā'īliyya. Soon after 149/766, Muḥammad b. Ismā'īl permanently left Medina, the residence of the 'Alids, for the east and went into hiding; hence his additional epithet of al-Maktūm, the "hidden one". Subsequently, he maintained his contacts with the Mubārakiyya (Maymūniyya), centred in Kūfa. Muḥammad b. Ismā'īl evidently spent his final years in Khūzistān, where he had some following, and died not long after 179/795-6 in the reign of the caliph Hārūn al-Rashīd.

Until the schism of 286/899 in the early Ismā'īlī

movement, the bulk of the Ismā'īliyya acknowledged Muḥammad b. Ismā'īl as their seventh and final *imām*; and as such, they denied his death and awaited his imminent return as the Mahdī or Kā'im. In accordance with their cyclical view of the religious history of mankind, the early Ismā'īlīs also believed that Muḥammad b. Ismā'īl was the seventh and final speaker (*nāṭik*); on his reappearance, he would initiate the final era or *dawr* [q.v.], fully revealing to all mankind the hitherto hidden esoteric truths (*ḥakā'ik*) of all the preceding revelations. Muḥammad b. Ismā'īl would rule the world in justice during that eschatological age of pure spiritual knowledge before the physical world ended; he was thus considered as the *Kā'im al-kiyāma*. These beliefs were retained by the Ḳarmāṭīs [q.v.] who, in 286/899, split away from those Ismā'īlīs who acknowledged continuity in the Ismā'īlī *imāmate* and allowed for more than one heptad of *imāms* in the era of Islam. The latter, the Fāṭimid Ismā'īlīs, denied the Mahdīship of Muḥammad b. Ismā'īl; for them, the final age was gradually postponed indefinitely into the future and Muḥammad b. Ismā'īl himself was no longer expected to return as the Mahdī.

(F. DAFTARY)

**MUḤAMMAD B. SAYF AL-DĪN, IBN AYDAMIR**, compiler of a large anthology of Arabic poetry, d. 710/1310.

Born in Baghdād in 639/1240, he served the last 'Abbāsīd caliph as a youth. Trained both in the chivalrous and humanist disciplines, he was appointed to various civil offices by the Mongol Hülegü and his successors. Biographers mention that he wrote some good poetry and epistles. Ibn Aydamir (which is how he writes his own name, not Ibn Aydamur) died in Radjab 710/November-December 1310, some five

years after completing his great anthology *al-Durr al-farīd*, of which an almost complete, beautifully written, autograph has been preserved and published in a facsimile edition. After an extensive introduction on stylistics and literary criticism, the main part of the work lists single lines of poetry, mostly of the gnomic and quotable kind. They are arranged strictly alphabetically, not according to rhyme-word, but, unusually and usefully, by their beginnings. The core of the book contains some 18,000 lines, a very large number, which is, however, easily outnumbered by the lines provided by the compiler in the margin, often giving the context or parallels of quoted lines. Biographical notes and philological commentary are also included. The poets date from all periods, many of them well known but also including lesser-known or obscure poets.

**MUḤAMMAD B. SHIHĀB** [see AL-ZUHRI].

**MUḤAMMAD 'ABD ALLĀH, SHAYKH** (d. 1965), pioneer in the education of Muslim women in the Indian subcontinent.

He was born on 21 June 1874, in a Kashmīrī Sāsān (Hindu) Brahman family in the village of Bhān Tani (district of Punch in Kashmīr valley). Being a Hindu at birth, he was named Thākur Dās. His father, Mehta Gormukh Singh, was a local landlord. According to the traditions of his Kashmīrī Brahman family, his basic education in Persian was initiated under the tutorship of Ḳādī Ḳuṭb al-Dīn Kashmīrī. Later, he was admitted to the *maktab* of Miḡān Nizām al-Dīn Wazīr; there he was taught the *Shāh-nāma*, *Sikandar-nāma*, and *Yūsuf u Ẓulaykha*, among other Persian books. Here also he began learning Sanskrit. While still in his early teens, he studied *ṭibb-i yūnānī* (the Greek medical system) under the guidance of Mawlawī Nūr al-Dīn. Having been encouraged by both these scholars, he was sent to Djammū to continue his studies in the English system. In Djammū he remained under the guardianship of Mawlawī Nūr al-Dīn. In 1890, at the age of 16, he attended, in his company, the annual session of the Muhammadan Educational Conference at Lahore, where he enthusiastically listened to the speeches of Sir Sayyid Aḥmad Khān [q.v.] and other functionaries, being so inspired by these speeches that during the session he embraced Islam.

In 1891 he traveled to 'Aligarh with an introduction from Mawlawī Nūr al-Dīn addressed to Sir Sayyid, seeking admission to the Anglo-Muhammadan Oriental College (which later became Aligarh Muslim University). While filling in his admission form he, for the first time, wrote his Muslim name, Muḥammad 'Abd Allāh, by which he was to be known all his remaining life. (It is not known when and how he acquired the title *Shaykh*.) While still an undergraduate student, he was privileged to have close acquaintance with Sir

Sayyid, under whose personal attention 'Abd Allāh learnt writing for newspapers on various educational and social themes. It was, he stated, Sir Sayyid's guidance which inspired him actively to participate in the community's welfare work.

After graduation with a law degree and at the expressed desire of Sir Sayyid, 'Abd Allāh settled down in 'Aligarh and began his career as a lawyer. In 1902 he was married to Wahīd D̲jāhān Begam (from an established Muslim family of D̲ihlī), with whom he had four daughters and a son.

A few of his childhood experiences of witnessing cruelty and injustice to women left deep impressions on him which were to lead him later in life to a whole-hearted involvement in social welfare work for women, especially in education. He intensely believed that, with education, women's lot could alone be improved. With the then existing atmosphere in 'Aligarh, he became more and more concerned with the education of Muslim women.

During the 1896 session of the Muhammad Educational Conference, a section was established for women's education; but because of Sir Sayyid's involvement in other tasks, no practical steps were taken to attain any specific objectives toward education of Muslim women. In the 1902 session of the Conference, held at D̲ihlī, Shaykh Muhammad 'Abd Allāh, together with several of his friends, proposed to revive the section on women's education, which was enthusiastically approved: thereafter year after year he kept on propagating the necessity of providing adequate education to Muslim women in India. For this purpose he began publishing a monthly periodical *Khātūn*, the first issue of which came out in 1904 and continued to be published for the next ten years. Also in the year 1904 he was permitted by the Conference session at Lucknow to open a normal (up to eighth grade) school for Muslim girls at 'Aligarh. After three years of hard work he succeeded in establishing the proposed normal school. The modest beginning of this school in 1907 in 'Aligarh attracted the attention of the government of the United Provinces (now known as Uttar Pradesh), which granted a sufficient sum for the purpose of buying land and constructing building for the school in 1908. The school at that initial stage had no boarding facilities for girls from outside the town. The increasing popularity of this pioneer institution for Muslim girls' education throughout the subcontinent meant that there was a need of residential facilities for girls from other nearby areas who wanted to join. In 1911 help came again from the U.P. government; Lady Porter, wife of the Lieutenant-Governor of the United Provinces, laid the foundation stone of the hostel adjacent to the school building. The school which had a modest beginning in 1907 had grown by 1936 into a renowned degree college leading up to B.A. classes. In that year it was affiliated to the Aligarh Muslim University.

Until 1947, education in all classes of the college and its affiliated primary and secondary schools was conducted under the strict rules of Islamic seclusion. The hostel followed also tradition both in observing *parda* and in religious obligations. In 1947, however, after the independence of the country and promulgation of a secular constitution, the basic structure of Islamic-oriented Western education remained untouched in all the affiliated institutions of the Muslim University (Muslim Girls' College included), but seclusion of women students and obligatory religious observances were eliminated.

The attachment of Shaykh Muhammad 'Abd Allāh to the Muslim Girls' College was so deep that he built

his spacious residential house close to the buildings of the College, and from the 1940s onwards, donated a large part of this house as the hostel for postgraduate girl students. His strong attachment to the girls' education and welfare was reciprocated by the affectionate title of "Pāpā Miyān" with which he came to be known in 'Aligarh.

In recognition of his pioneer work for Muslim women's education the British Government awarded him the title of "Khān Bahādur", and Aligarh Muslim University honoured him with the award of honorary degree of Doctor of Laws. Towards the end of his life, in 1964 the post-Independence national government of India expressed its appreciation for his services by awarding him the title "Padam Bhūshan". He died on 9 April 1965 at the age of 91, and was buried in the garden of his residential house, adjacent to the buildings of the Muslim Girls' College.

**MUHAMMAD ḤĀKIM MĪRZĀ**, Mughal prince and half-brother of the emperor Akbar [q.v.], b. 960/1553, d. 993/1585.

In 973/1566 he was governor of Kābul and eastern Afghānistān for Akbar, but when temporarily forced out of his capital by the Tīmūrids of Badakhshān, he retreated towards India, where a group of dissident Ōzbeq nobles proclaimed him emperor at D̲jāwpūr and incited him to invade India. He besieged Lahore with his forces, but had to retreat to Kābul. For over a decade, he posed a threat on Akbar's northwestern frontier, offering a legitimate alternative to Akbar's rule. A fresh revolt of Mughal and Afghān nobles broke out in 987-8/1579-80, in the wake of Akbar's *maḥdar* or decree proclaiming himself supreme arbiter of religious affairs and claiming authority as caliph, and Muḥammad Ḥākim was again proclaimed counter-emperor. Akbar sent his chief minister Tōdar Mal [q.v.] to suppress the rebels in Bihār, and himself marched against Kābul, entering the town in Rād̲jāb 989/December 1581. He pardoned Muḥammad Ḥākim and reinstated him, but it was not until Muḥammad Ḥākim's death in Shā'bān 993/August 1585 that all threats from Kābul were ended and the region brought under direct imperial rule.

**MUHAMMAD ŠĀLIḤ KAŅBŌ LĀHAWRĪ**, Indo-Muslim historian and stylist whose exact dates of both birth and death are unknown but who flourished in the 11th/17th century under the Mughal emperors Shāh D̲jāhān and Awrangzīb [q.v.]. He may have been the younger brother of the historian and littérateur 'Ināyat Allāh KaŅbŌ (d. 1082/1671 [q.v.]), if Muḥammad Šāliḥ's reference to this last person, his master and patron, as *bīrādar-i kalān* "elder brother" is to be taken literally.

Virtually nothing is known of his life, but he was

a government official in Lahore, where his tomb still exists and where in 1079/1668-9 he had built a small mosque. He is famed for his detailed history of Shāh Djahān and his reign, the *ʿAmal-i Ṣāliḥ*, completed in 1070/1659-60, but with later additions (many mss.; ed. Ghulām Yazdānī, Bibl. Indica, 3 vols. Calcutta 1912-39), and also an *inshāʿ* collection, the *Bahār-i sukhān*, still in manuscript.

*Bibliography*: Storey, i, 579-81, 1317.

**MUḤAMMAD ʿUṬHMĀN DJĀLĀL** (1829-16 January 1909, thus in Brockelmann, S II, 725), Egyptian translator and adapter of European drama into Arabic.

He played a crucial role in the transfer of the cultural milieu of European dramatic forms into an indigenous Egyptian language and format. After a traditional secondary education, he was sent to Rifāʿa al-Taḥṭāwī's [see RIFĀʿA BEY AL-TAḤṬĀWĪ] famous translation school, the *Madrasat al-alsun*, and became thereafter one of the foremost of its graduate translators from French to Arabic (both literary and colloquial). Alongside his achievements as a translator he also had a civil service career, firstly in the Khedive's office, then as a judge in the Mixed Courts, and later as a government minister. Various dates are given for his death, ranging from 1894 to 1909 (cf. Brockelmann, II<sup>2</sup>, 627-8, S II, 725).

Moving from the practicalities of administrative manuals to the more complex stylistic issues of literary genres, Djālāl began his literary translation career with the *Fables* of La Fontaine, which he rendered into Arabic verse and published in 1858 (*al-Uyūn al-yawākiẓ fi ʿl-amthāl wa ʿl-mawāʿiẓ*). In 1872 he issued his famous translation of Bernardin de St. Pierre's *Paul et Virginie* (as *al-Amānī wa ʿl-minna fi ḥadīthi Kabūl wa-Ward Djamā*), using the lofty style of *sadjʿ* (rhyming prose) and "arabising" and "islamicising" many of the discourse elements of the original French text. He thereafter turned his attention to the dramatic genre, translating four comedies of Molière into colloquial Arabic poetry (using the form of *radjāz*) and once again cleverly transferring the cultural context from a European to an Egyptian milieu. The four plays in question (published as a group in 1889) were: *Tartuffe* (*al-Shaykh Matlūf*), *Les femmes savantes* (*al-Nisāʿ al-ʿālimāt*), *L'école des maris* (*Madrasat al-azwāḡ*), and *L'école des femmes* (*Madrasat al-zawḡiāt*).

From comedy, he moved on to the French tragedians, translating (once more into colloquial Cairene dialect) a set of plays by Racine and Corneille: *Esther*, *Iphigénie*, and *Alexandre le Grand* by the former (as *al-Riwāyāt al-mufīda fi ʿilm al-tarāḡīda*), and *El Cid* by the latter. His one excursion into dramatic writing on his own part, *al-Khaddāmīn wa ʿl-mukhaddimīn* ("Servants and agents", 1904), was, like his translated plays, composed in colloquial verse.

In the lengthy and complex process of indigenising imported literary genres during the 19th century, Djālāl's role as a translator was a central one. That the translated versions of European works that he produced were successfully assimilated into Egyptian society can be convincingly demonstrated by the fact that *al-Shaykh Matlūf*, his Egyptianised *Tartuffe* and most masterful adaptation, has been revived on the Cairo stage in recent times (e.g. 1963, 1971) to tremendous popular acclaim.

**MUḤAMMAD ZAMĀN MĪRZĀ**, perennially rebellious Mughal prince and brother-in-law of the emperor Humāyūn [q.v.].

On Humāyūn's accession in 937/1530, he allied with Bahādur Shāh of Guḡjarāt, provoking an invasion by Humāyūn of Guḡjarāt via Mālwā. Muhammad Zamān was pardoned, but in 941/1534 rebelled again, this time in Bihār, but had to escape to Guḡjarāt once more. This provoked a full-scale invasion and occupation of Guḡjarāt by the Mughal emperor (941-2/1535-6). Muḥammad Zamān escaped; he tried to claim the throne of Guḡjarāt for himself on Bahādur Shāh's death in 943/1537 but failed in the attempt, submitting at last to Humāyūn.

**MUḤDATHŪN** (A.), "the Moderns", i.e., in classical Arabic literary history, those poets that came after the ancient poets (called *kudamāʿ*; *mutaḡad-dimūn* or *awāʿil*) of the pre-Islamic and early Islamic periods. The term is first applied to some poets "of the two dynasties" (*mukhaddamū ʿl-dawlatayn*), who flourished in the middle and second half of the 2nd/8th century [see MUKHADRAM]. No formal end of the period of the *Muḥdathūn* movement is recognised, but mostly the term applies to poets of the first few centuries of the ʿAbbāsīd period. For poets from later times, one finds occasionally the term still used, or, more commonly, expressions such as *ahl al-ʿaṣr* and *muʿāṣirūn* "contemporary [poets]".

Critics were aware of the differences between the poetry of the pre-Islamic (*djāhili*) poets and that of their successors, the *mukhaddamūn* (straddling the *Djāhiliyya* and Islam), the *Islāmiyyūn* and the Umayyad poets. However, the changes in style, themes and motifs that arose from the mid-2nd/8th century—in the wake of the fundamental social and intellectual changes that took place in that period (such as the role of the *muwālī* [see MAWLĀ] and the impact of Greek and Persian civilisation)—were considered so fundamental that the dichotomy between "old" (*kadīm*) and "modern" is dominant in traditional literary criticism. The distinction is important, too, in Arabic linguistics, since there was a general consensus among the grammarians and lexicographers that only early (pre-*muhdath*) poetry could serve as attestation for the codification of the "pure" (*fuṣḥā*) language; as Ibn Djinnī, quoted by Ibn Rashīk (*ʿUmḍa*, Cairo 1953, ii, 236), put it: "Modern poets [he uses the term *muwal-ladūn*, on which see below] may be cited as authorities (*yustashhadu bihim*) on motifs (*maʿānī*), just as ancient poets may be cited as authorities on words (or expressions,

*alfāz*). Even though many grammarians appreciated the poetry of the *Muḥdathūn* for its literary qualities, it is likely that the term originally had pejorative connotations, just as a bad word could be described as “modern, not cutting” (*muḥdath ghayr sārim*, *Ḍjarīr*, in *Naḳāʿid*, ed. A.A. Bevan, Leiden 1905-12, 413). Well before the period of the *Muḥdathūn*, the poet Umayya b. Abī ‘A’idh (*fl.* 80/700) praises his own verse as “unlike the patchwork of the *muḥdathūn*” (*Aghānī*<sup>2</sup>, xxiv, 6).

Resistance to the poetry of “moderns” had various grounds: its language, diction, style, contents, or even (though rarely) the fact that some prominent poets were not only non-nomads but also non-Arabs, witness the telling anecdote about *Bashshār* b. *Burd* [*q.v.*], often called “the father of the moderns”, related in *Aghānī*<sup>2</sup>, iii, 166. It took some time for the *Muḥdathūn* to be recognised by critics and anthologists. The *Ṭabakāt fuhūl al-shu‘arā’* (“*The classes of the master poets*”) by Ibn Sallām al-*Ḍjumaḥī* (d. 231/845 [*q.v.*]) ignores them, as does, for instance, *Ḳudāma* b. *Ḍja’far*’s [*q.v.*] *Naḳd al-shīr*. Abū *Tammām* (d. 231/846 [*q.v.*]), himself one of the greatest and most controversial of the “moderns”, included only a few fragments that could be called *muḥdath* poetry in his influential anthology *al-Ḥamāsa* (his less famous anthology *al-Wahshīyyāt*, on the other hand, has poems by *Bashshār*, Abū *Nuwās*, Abū ‘*l-‘Atāhiya*, Muṭī’ b. *Iyās*, Muslim b. al-*Walīd*, *Dī‘bil* [*q.v.*] and other *Muḥdathūn*).

The recognition and esteem that many *Muḥdathūn* received in their lifetimes from patrons and other admirers is reflected in numerous reports and not long after in anthological and critical works, too. A contemporary of Abū *Tammām*, the poet *Dī‘bil* (d. 246/860), compiled a (partly preserved) book on poets in which the *Muḥdathūn* are included; some later anthologies, such as Ibn al-*Mu‘tazz*’s [*q.v.*] *Ṭabakāt al-shu‘arā’*, are wholly devoted to the *Muḥdathūn*. This work opens with Ibn *Harma* (d. ca. 170/786 [*q.v.*]), who is more often considered “the last of the ancients” (al-*Aṣma‘ī*, quoted at 20, and cf. *Aghānī*<sup>2</sup>, iv, 373) or “in the rearward of poets” (*min sākat al-shu‘arā’*, Ibn *Ḳutayba*, *Shīr*, 473). Still quoted by linguists, but already indulging in very “modern” techniques such as writing a long poem without diacritical dots (*Aghānī*<sup>2</sup>, iv, 378-9), Ibn *Harma* is a borderline case, like e.g. Ibn *Mayyāda* and *Marwān* b. Abī *Hafṣa* [*q.v.*]. Even *Bashshār*, “father of the Moderns”, is sometimes called “the last (*khātimat*) of the (ancient) poets” (*Aghānī*<sup>2</sup>, iii, 143, 148, 150). It is rather surprising that *Bashshār*’s coeval, the caliph al-*Walīd* b. *Yazīd* (d. 126/744 [*q.v.*]), in spite of his innovative poetry, is never counted among the *Muḥdathūn*, presumably because he did not live to reach the ‘*Abbāsīd* period.

As Ibn *Ḳutayba* said, “God did not restrict knowledge, poetry and eloquence to one period . . . ; *Ḍjarīr*, al-*Farazdaq*, al-*Aḳḥṭal* and other [pre-*muḥdath* poets] were once regarded as ‘moderns’” (*Shīr*, 5). Of course, the distinction between *kaḍīm* and *muḥdath* is not merely a matter of chronology. The former is associated, or even equated, with the poetry of the ‘*Arab*, the nomadic or semi-nomadic Bedouin, and the latter with the poetry of sedentary poets who were often non-Arab, like *Bashshār*, or of mixed descent (*muwallad*). Indeed, the term *muwalladūn* is sometimes used as a synonym of *muḥdathūn*, at other times for those poets who follow that school [see *MUWALLAD*. 2. In Arabic language and literature]. Al-*Ḍjāḥīz* wrote (*Hayawān*, iv, 130), “The ‘*Arab* and *A‘rāb*, both the nomadic and sedentary *Arabs* (*al-badw wa ‘l-ḥaḍar min sā‘ir al-‘arab*), are generally better poets than those poets who live in

towns and villages and are not of pure Arab stock among the new generation (*min al-muwallada wa ‘l-nābila*).” Confusingly, the term *muwallad* has occasionally been used for poets of pure Arab descent, even from the Umayyad period, such as ‘*Umar* b. Abī *Rabī‘a*, al-*Kumayt* b. *Zayd* and al-*Tirmīmah* [*q.v.*] (al-*Sidjīstānī*-al-*Aṣma‘ī*, *Fuḥūlat al-shu‘arā’*, Cairo 1991, 124, 132, and cf. Ibn *Rashīk*, *Umda*, i, 90), presumably because they were not true nomads, some of them, such as al-*Kumayt*, having learned and taught grammar (al-*Marzubānī*, *al-Muwashshah*, Cairo 1965, 302, 326-7).

It is a commonplace of traditional criticism to contrast the “purity” and solidity of the old style with the refinement and rhetoricisation of the new. The old poet built a house, the modern poet embellished and decorated it (e.g. *Umda*, i, 92); the former is like a singer singing fine melodies with a coarse voice, the latter sings inferior melodies with a sweet voice (Ibn *Wakī‘*, quoted in *Umda*, i, 92). Modern verse is like a fragrant herb that smells deliciously but briefly, early poetry is like musk or ambergris, increasing in fragrance the more one rubs it (Ibn al-*A‘rābī*, quoted in al-*Marzubānī*, *al-Muwashshah*, 384). The *Muḥdathūn* are credited with introducing *badī‘* [*q.v.*] consciously, a term referring to various rhetorical and poetic artifices and embellishments. “Muslim b. al-*Walīd* was the first to use *badī‘* on a large scale, after *Bashshār* had first used it . . . ; then came Abū *Tammām*, who used it excessively and immoderately” (quoted by Ibn al-*Mu‘tazz*, *Ṭabakāt*, 235). Obviously, the contrast between old and new has been exaggerated and simplified: by no means all early poetry is stylistically rough and unadorned, some of it, notably Umayyad *raḍjaz* [*q.v.*], is highly rhetoricised. Conversely, much of “modern” poetry is unadorned and highly accessible, and its image is to some extent distorted because in literary criticism and theory it was mainly the rhetorical and embellished style that received attention. However, on the whole it is true that the most characteristic innovation of the *Muḥdathūn* lies precisely in the development of refined rhetorical techniques, a novel use of metaphor (cf. the distinction between the “old” and the “new” metaphor as pointed out by W. Heinrichs, *The hand of the Northwind*, Wiesbaden 1977), and of increasingly complex imagery and “conceits”, on which see e.g. B. Reinert, *Der Concetto-Stil in den islamischen Literaturen*, in Heinrichs (ed.), *Neues Handbuch der Literaturwissenschaft. V. Orientalisches Mittelalter*, Wiesbaden 1990, 366-408.

It is difficult to generalise about “modern poetry”, extremely varied as it is. Much of the ancient, Bedouin vocabulary and diction is abandoned, yet the so-called neo-classicist style of Abū *Tammām* and others indulges, at least in their formal *kaṣīdas* and other set-pieces, in archaic words and expressions. There were some prosodical innovations: a few new metres were created and truncated forms of existing metres became popular, yet all the old metres survived. Many oddities of grammar and prosody that were condoned in old and Bedouin poetry as poetic licences (*ḍarūrāt*) were deemed faults in new or urban poetry (e.g. Ibn *Rashīk*, *Umda*, ii, 269; Ibn *Ḍjinnī*, *Ḳhaṣā‘is*, Cairo 1952, i, 323ff.).

The ‘*Abbāsīd* critics themselves were aware that the originality and novelty of “modern” poetry were not as great as was sometimes claimed. Ibn al-*Mu‘tazz* [*q.v.*] wrote his seminal treatise on rhetorical figures and tropes, *K. al-Badī‘*, in order to demonstrate that these figures and tropes can be found already in early poetry and prose (*Ḳur‘ān* and *Ḥadīth*); thus he provided

a legitimisation of *badīʿ* while at the same time condemning some of its excesses, notably Abū Tammām's idiosyncratic techniques of metaphor, antithesis and paronomasia. The two brothers called al-Khālīdiyyān [q.v.], in their *K. al-Ashbāh wa 'l-naẓā'ir*, traced many motifs and themes occurring in modern poetry to their early predecessors, in order to prove the superiority of the latter; it was written in response to those who preferred the moderns.

The poetry of the *Muḥdathūn* certainly was not, and could not have been, a wholly new start. The early poets were canonised by consensus and could not be ignored by the later ones. Modern poets had to choose between slavishly imitating them, which became increasingly archaic and inappropriate for urban poets, or reacting against them (e.g. by means of parody and in the "anti-*naṣīb*" theme, common in Abū Nuwās [see *NAṢĪB*. d. 'Abbāsīd period]), or by transforming the early themes and motifs, by blending or subtly changing them, while transforming diction and style by means of rhetorical refinement. An important characteristic of modern poetry is the pervading presence of shorter and monothematic poems, with themes that in early poetry usually formed part of the polythematic ode or *qaṣīda* [q.v.]: the *khamriyya* [q.v.] or bacchic poem, the *tardiyya* [q.v.] or hunting poem, the *zuhdiyya* [q.v.] or ascetic, anti-worldly poem, the "floral" poem (called *nauriyya* [q.v.], *zahriyya*, *rawdiyya* or *rabīʿiyya*), the epideictic epigram (*wasf*), the gnomic epigram (*ḥikma*), the obscene or scatological poem (*muḍūn* [q.v.]) and several others. Here, too, there are precedents in early poetry, although it is not always possible to determine whether an early short poem was conceived as an independent epigram or is a fragment of an incompletely transmitted poem.

In any case, the *qaṣīda* retained its position as the most prestigious form. As before, one was not considered a great poet unless one could boast of the production of a substantial number of odes. It has been argued (M.M. Badawi, *From primary to secondary Qaṣīdas*, in *JAL*, xi [1980], 1-31 and see his chapter *Abbasid poetry and its antecedents*, in J. Ashtiany et al. (eds.), *CHAL*, *Abbasid belles-lettres*, Cambridge 1990, 146-66) that the coming of Islam brought about a more radical change in poetry than the *muḥdath* "revolution", a change seen in the shift from the tribal and ritualistic *qaṣīda* to the mostly panegyric ode modelled on the old type but being more strictly literary, and in the shift from oral to literate transmission. Important developments, too, took place in love-poetry in pre-*muḥdath* times (see *CHAZAL*. i. In Arabic poetry, and several more recent articles by Renate Jacobi and others). It is true that most of the changes of the period of the first *Muḥdathūn* were prepared by the early Islamic and Umayyad poets, yet on the whole the traditional distinction between them and the newer school is justified and the original contributions of such innovators as *Bashshār*, Abū Nuwās, Abū l-'Atāhiya, Abū Tammām and Ibn al-Rūmī cannot be denied. The new sensibility has been linked with the "discovery" of the individual, as a result of social and political changes, such as the dwindling of the old aristocracy, the individualistic egalitarianism espoused by Islam, and high social mobility (see Th. Bauer, *Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts*, Wiesbaden 1998).

Among the characteristics of the *qaṣīda* among the *Muḥdathūn* is a greater concern for coherence and unity, or at least an avoidance of abrupt transitions. Even though such thematic jumps, such as from *naṣīb* to the panegyric section, are still found, most poets

devoted care to some kind of connecting motif (*takhalluṣ* [q.v.]). And whereas many early poems seem to end more or less fortuitously, often in mid-air as it were, the *Muḥdathūn* often conclude with a proper peroration, ending with topics appropriate to an envoi, such as a dedicatory passage or a blessing.

After the first few generations of *Muḥdathūn* poetry had become so artful, its techniques had developed to such an extent that it seemed to the following generations that it was difficult to come up with novel things: the poet and critic Ibn Ṭabāṭabā (d. 322/934), in his *'Yār al-shīr* (Riyāḍ 1985, 13) speaks of the "trial" (*miḥna*) of the poets in his days who try to please exacting patrons by means of their rhetorical subtleties and witticisms, while abandoning the truthfulness allegedly found in early poetry.

If there ever was a true *querelle des anciens et modernes* in Arabic literary history, it was mostly fought in moderate terms, the majority of critics professing their respect for the ancients, even though many pointed out the superior techniques of the moderns. Thus al-Ḥātimī (d. 388/998) notes that the latter excelled in *takhalluṣ* "because of the bright minds and subtle thoughts", surpassing the primitive methods of pre-Islamic and early Islamic poets (*Ḥiḍyat al-muḥādara*, Baghdād 1979, 215-16). Ḍiḡā' al-Dīn Ibn al-Aḥḍir (d. 637/1239 [q.v.]) calls Abū Tammām, al-Buḥturī and al-Mutanabbī "the al-Lāt, al-'Uzzā and Manāt [q.v.] of poetry" (*al-Maḥal al-sā'ir*, Cairo 1962, iii, 226) and pronounces them superior to all others, ancient and modern (iii, 274). The Andalusian anthologist Ibn Bassām (d. 543/1147 [q.v.]), explaining why he only includes recent poets, speaks scathingly of ancient poetry (*al-Dhakhira*, Beirut 1978-9, i/1, 13-14): "Everything that is recited over and over again is boring; the ear rejects 'O abode of Mayya . . .'; he goes on to quote irreverently the opening words of several of the *Mu'allakāt* [q.v.], perhaps the most "canonical" of all Arabic poems. At the other extreme stands e.g. Ibn Khaldūn [q.v.], arch-conservative for once, who quotes with apparent approval the opinion that the rhymes of al-Mutanabbī and al-Ma'arrī [q.v.] cannot be considered true poetry, because they did not follow (ancient) Arab poetical methods (*al-Muḥaddima*, Cairo 1962, 1296, tr. F. Rosenthal, Princeton 1967, iii, 382). However, in the controversies such as arose on account of the style and motifs of Abū Tammām or al-Mutanabbī, it is usually not a matter of old vs. new.

**MUḤIBB AL-DĪN AL-KHAṬĪB**, Sunnī Arab journalist, publisher and editor, an influential figure of the *Salafiyya* [q.v.] as well as of Arab nationalism [see KAẄMIYYA. 1] in the 20th century (1886-1969). He was born in July 1886 in Damascus. Already in his youth his worldview was influenced by a number of Salafī thinkers such as Ṭāhīr al-Djazaʾīrī (d. 1920), and also by the writings of various Arab proto-nationalists, including al-Kawākibī [q.v.]. The gist of his views, which he advocated until the end of his life, can be described as a peculiar blend of Salafī and Arab nationalist positions (see Hurvitz, in *Bibl.*).

As a student of law in Istanbul (1905-7), and until the end of World War I, he was involved in the activities of a number of Arab secret societies such as *al-Nahḍa al-ʿArabiyya* and *al-ʿArabiyya al-Fatāḥ* (for details, see his own account in *al-Khaṭīb, ḥayātuhu bi-kalāmihī*; also Burdj, *Muḥibb al-Dīn al-Khaṭīb*; Tauber, *The emergence*; idem, *The Arab movements*, in *Bibl.*).

From 1916 onwards, he served the “Arab Revolt”, first as a member of the editorial staff of *al-Kibla* in Mecca, and later (summer 1919 to summer 1920) as chief editor of the Hāshimite official newspaper in Damascus, *al-ʿAshima*. However, a few days after the battle of Maysalūn (24 July 1920 [q.v.]) and the subsequent French occupation of Damascus, he left Syria for Egypt.

Having finally settled in Cairo, Muḥibb al-Dīn al-Khaṭīb in the following years rose to some prominence, in Egypt and far beyond, as owner of a printing press, a bookshop and a publishing house serving the causes of *ʿurūba* [q.v.] and Sunnī Islam, called *al-Maḥbaʾa al-Salafiyya wa-Maktabatuhā*. Further more, he gained recognition as founder and main author of two important journals, *al-Zahrāʾ* (1924-9) and *al-Faḥ* (1926-48), and also as editor of mediaeval as well as modern Arabic texts.

Even before the fall of the Hāshimite rule in the Hijāz (1925), he had declared his support for Ibn Suʿūd [see ʿABD AL-ʿAZĪZ, in Suppl.] and subsequently became an eloquent defender of Saudi-Wahhābī politics and religious practice [see WAHHĀBIYYA. 2]. In this connection, he came forward as one of the most influential Sunnī polemicists in modern times against the Shīʿa in general and their role in Islamic history in particular. As a result, he opposed all attempts at an ecumenical rapprochement between the two sides [see TAḤRĪB]. Even as chief editor of *Maḍjallat al-Azhar* (1952-9) he maintained this view (see Brunner, esp. 193-208). He is also remembered as one of the modern authors who tried to restore the image of the Umayyads in the mind of the Sunnī Arab public (Ende, 91-110). He died in Cairo on 30 December 1969.

(W. ENDE)

**MUʿINSIZ** (A., T.), from Ar. *muʿīn* “supporter, helper” and Tkish. *siz* “without”, a term connected with the introduction of the conscription system into the Ottoman Empire in the 19th century to indicate someone who has nobody to look after his family and other dependants if he is drafted, i.e. is a breadwinner. The decision as to who was regarded as sole breadwinner in a family depended on the age, sex and physical and mental condition of those left behind and on their degree of kinship to the potential *muʿinsiz*. *Muʿinsiz* were exempted from regular military service, but served as reservists: as *redif* and *mustahfiz* [see RADIF]. Once one was registered as a regular soldier, becoming a *muʿinsiz* was rarely possible, even if personal circumstances had changed.

Although *muʿinsiz*, as reservists, had only limited military obligations in times of peace, during times of mobilisation and war they were called up to the colours. In such cases, their families were left without breadwinners. To prevent these soldiers from worrying about their families and to obviate subsequent problems with morale and even desertion, the Ottoman state provided a separation allowance, the *Muʿinsiz ʿĀile Maʿāshī*. First applied during the Crimean War, the allowance and the terms under which it was assigned remained rather vague until the second decade of the 20th century. The First World War forced the Ottoman authorities to become more specific. Articles 49-55 of the *Mükellefiyyet-i ʿAskariyye Kānūn-u Müvakkafī* of May 1914 and its revised version of July-August 1915 dealt with the separation allowance. A bill for a separate, thirty-one article law on the allowance was discussed in the *Shūrā-yi Dewlet* [see ʿABD AL-ʿAZĪZ; DÜSTÜR. ii. TURKEY] in October 1915, but did not reach the *Meclīs-i Wükela* (Council of Ministers) and the Parliament until the end of 1918.

Military conscription in the Middle East and Central Asia, 1775-1925*, London and New York 1999, 95-110; Zürcher, *The Ottoman conscription system in theory and practice*, in *ibid.*, 79-94.

(NICOLE A.N.M. VAN OS)

**MUKAWWIYÄT** (A.), a medical term, originally denoting stimulants but gradually taking on the meaning of aphrodisiacs—probably as a form of euphemism—a meaning which it has retained into the present day. It will be noted, however, that in the *Kānūn fi ʿl-tibb* of Ibn Sīnā [q.v.] the term *muḥawwī* is already in recurrent use in the section devoted to impotence (ii, 539-41). This is explained by the fact that aphrodisiacs were intended to restore to the deficient man all his vigour and all his strength and to excite his sexual desire (or that of the woman, evoked

in some texts, although it is the male to whom most attention is given), whence this blurring of meanings. Mediaeval Arabic medical texts used, for these preparations, numerous words and expressions: *mun'iz*, *muhayyidj* li 'l-*shahwa*, *muhayyidj* li 'l-*bāh*, *ashyā' tukawwī 'alā 'l-djīmā'* and *al-mufdadāt al-bāhiyya*. All these names refer to the notion of stimulating erection, exciting carnal desire and facilitating the sexual act.

In a society where virility remained a major factor, where guaranteeing the succession was an imperative for princes and where the presence of numerous concubines was still an element of social prestige in *khāssa* circles—not to mention Kur'ānic verses calling for the "ploughing" of wives—it was to be expected that physicians should take an interest in aphrodisiacs and that texts of erotology as a literary genre should proliferate. Thus it is worth noting the significant fact that the last recipe given in the famous formulaire of al-Kōhēn al-ʿAṭṭār is that of an aphrodisiac (*ma'djūn al-sakankūr*, in *Minhādj*, 169). This medical literature should be considered in association with the related tradition of works of erotology (*kutub al-bāh*), the existence of which is noted, from the 4th/10th century onward, by Ibn al-Nadīm in a section of his *Fihrist* entitled *Asmā' al-kutub al-mu'allafa fi 'l-bāh al-fārisi wa 'l-hindi wa 'l-rūmi wa 'l-arabi* (436). He clearly points out the suggestive function of these works (*alā ʿarīk al-hadīth al-mushabbih*), most of which are undoubtedly of Indian origin. Consequently, there existed a science associated with sexuality, linking empirical observations, theoretical material inspired by the predominant medical doctrines, and psychological considerations. It is thus that the *Shaykh* al-Nafzāwī refers to six causes of sexual desire: intensity of desire, abundance of sperm, encounter with desirable individuals, physical beauty [of the object of desire], fortifying nourishment and petting. He supplements this list with reference to eight factors predisposing the male to coitus (*tukawwī 'alā 'l-djīmā'*): good health, absence of anxieties, happiness, relaxation, good diet, material well-being, variation of position and changing of partners (*al-Rawḍ al-ʿātir*, 143). Sexual problems described by doctors therefore included, besides physical malfunctions, inhibitions and psychological neuroses. Obviously, the form of treatment depended on the precise definitions of these psychosomatic disorders. Medical treatises also describe impotence (*ʿadǰ, nuksān al-bāh*) and functional problems related to erection (*intishār, infāz*), generally known by the term *istirkhā'* *al-kadīb*, paralysis, slackening of the penis—but also female frigidity and anorgasm, which seem to be indicated by the expressions *bad al-raḥim* or *ṣalābat al-raḥim*, respectively: drying up of the uterus, sclerosis of its tissues (*Kānūn*, ii, 536-9).

The therapies applied in the treatment of these disorders thus rely on a wide variety of remedies ranging from potions to massages, ointments to auto-suggestion. Medications may be either simple or compound. Looking first at what could accurately be called auto-suggestion: for the physician, this consists, in recommending that his patient read pornographic works on the multiple positions and forms of intercourse (*al-kutub al-muṣannaḥa fi aḥwāl al-djīmā' wa-ashkālīhi*) or even listen to erotic anecdotes (*akhbār al-mudjāmiʿin*). As regards aphrodisiac products as such, these are for the most part warming and stimulating items such as ginger, cinnamon, sandalwood, musk, camphor and asafoetida, combined with honey which remains a sovereign remedy. Types of compound aphrodisiacs are confections (*ma'djūn*) and electuaries (*djauārshin*) which the invalid takes daily; oils (*duhn*)

and pomades (*marham*), prescribed for external use and applied to the vagina, the penis, the pelvic region and the loins; and douches for female use (*huḵna tukawwī 'l-mar'a li 'l-djīmā', Akrabādḥin al-Kalānīsī*, 144).

One of the ingredients most often cited is the Egyptian skink (*sakankūr, Scincus officinarum*), a variety of lizard which when dried and salted was credited—and is credited still in the traditional pharmacopoeia—with remarkable aphrodisiac qualities (*Minhādj*, 169), to such an extent that Dāwūd al-Anṭākī warns that this remedy can lead to death from excess of erection (*Tadhkira*, 194). The success of this animal seems to be explained by its phallic appearance, just as today, for the same reasons, the horn of the rhinoceros is credited, in Chinese medicine, with highly aphrodisiac qualities. This form of mind projection featured, in one manner or another, in the choice of certain other components utilised in the preparation of aphrodisiacs: bull's penis, "fox's testicles" (*khūṣā al-tha'lab*, Satyrion, *Orchis hircina* L.) and testicles of the cock or the ram. It should be noted that, in traditional Arab medicine, use is still made, according to the theory of affinities, of the pulverised testicles of calf or bull, as well as the officinal skink (*Bellakhdar*, 98). In conclusion, account should be taken of the extent to which, in the mediaeval Arab medical tradition, coitus is seen as an activity particularly beneficial to man on the psychological and physiological level, and the degree of importance attached by physicians to the physiological aspect.

*Bibliography*: Dāwūd al-Anṭākī, *Tadhkira uli 'l-albāb*, Beirut n.d.; Kōhēn al-ʿAṭṭār, *Minhādj al-dukkān wa-dustūr al-ʿayān*, Cairo 1870; Ibn Sīmā, *al-Kānūn fi 'l-ṭibb*, 3 vols. Cairo 1877, repr. Beirut n.d.; G.H. Bousquet, *L'éthique sexuelle de l'Islam*, Paris 1966; J. Bellakhdar, *Médecine traditionnelle et toxicologie ouest-saharienne. Contribution à l'étude de la pharmacopée marocaine*, Rabat 1978; Ibn al-Nadīm, *Fihrist*, Beirut 1978; Badr al-Dīn al-Qalānīsī, *Akrabādḥin*, ed. Z. al-Bābā, Aleppo 1983; B. Musallam, *Sex and society in Islam*, London 1983; F. Sanagustin, *Note sur un recueil ancien de recettes médicinales*, in *BEO*, xxxvi (1984), 163-200; A. Bouhdiba, *La sexualité en Islam*, Paris 1986; Shihāb al-Dīn al-Tifāshī, *Nuzhat al-albāb fīmā lā yūḡad fi kitāb*, London 1992; al-Shaykh al-Nafzāwī, *al-Rawḍ al-ʿātir fi nuzhat al-khātīr*, London 1993. It should furthermore be noted that there is an abundant literature dealing with magical procedures for curing impotence (magical formulas, amulets and clay tablets), or guiding the choice of seasons and festive days for the sexual act (astro-nomical and agro-meteorological calendars).

(F. SANAGUSTIN)

**MŪSĀ AL-ṢADR**, SAYYID, Imāmī Shīʿī cleric and political leader in Lebanon (1928-78?). Born in ʿKum [q.v.] into a family of religious scholars with roots in southern Lebanon and ʿIrāq, he studied in the *madāris* of his home town and at the University of Tehran where he read (secular) law.

From 1954 to 1959, he pursued his studies in Najaf [q.v.], his principal teachers being Sayyid Muḥsin al-Ḥakīm (d. 1970) and Sayyid Abu 'l-Kāsim al-Khūʿī (d. 1992). From Najaf he began establishing personal contacts with the Lebanese branch of his family, and in particular with his uncle, the influential scholar Sayyid ʿAbd al-Ḥusayn Shāraf al-Dīn [q.v.]. Before the latter's death on 30 December 1957, he had apparently expressed the wish that Mūsā al-Ṣadr should succeed him as leader of the Imāmī Shīʿī community of Tyre [see ʿŪR].

In late 1959, Sayyid Mūsā al-Ṣadr took up residence

in Tyre. In the following years he gained influence both locally and further afield as teacher and preacher and also as a spokesman (called Imām) for the Shī'īs of Lebanon [see also MUFĀWĀLĪ], who felt socially and politically neglected by the government in Beirut. In the face of considerable resistance on the part of the old feudal leadership as well as from certain members of the Shī'ī clergy, he finally succeeded in setting up a Higher Shī'ite Council (*al-Madjlīs al-Islāmī al-Shī'ī al-A'lā*) by resolution of the National Assembly in December 1967. In May 1969 Mūsā al-Ṣadr was elected president of this council, the first body to represent the Shī'a of Lebanon.

In March 1974 he launched a mass movement called *Harakat al-mahrūmīn*, which was soon known to have formed a military wing called *Afwāḍj al-muḳāwama al-lubnāniyya* (AMAL). In late August 1978, more than three years after the outbreak of the civil war in Lebanon, Mūsā al-Ṣadr suddenly disappeared while on a visit to Libya. The circumstances of this affair remain mysterious, but after a few years he was presumed dead even by the majority of his followers. Both AMAL and its rival, *Ḥizb Allāh*, claim to be the heirs to his spiritual and political legacy.

Halawī, *A Lebanon defied. Musa al-Sadr and the Shī'a community*, Boulder, Col. 1992; A.W. Samii, *The Shah's Lebanon policy. The role of SAVAK*, in *MES*, xxxiii (1997), 66-91. (W. ENDE)

**MUSĀBAKA** (A., pl. *musābakāt*) "race, competition, contest"; *musābaka tilāwat al-Ḳur'ān* is thus a "contest in the recitation of the Ḳur'ān". Such contests are held in many contemporary Muslim countries and contexts, such as Saudi Arabia, Egypt, Indonesia and North America. International competitions are held periodically in Mecca and in Kuala Lumpur, Malaysia.

There is a national level recitation competition held every two years in Indonesia. It is popularly known as "MTQ" (for *musābakah tilāwatil ḳur'ān*). Local, regional and provincial eliminations determine the selection of the final contestants, who represent all of Indonesia's

provinces in a colourful and festive complex of events lasting about ten days. The Indonesian approach to the Ḳur'ān recitation *musābaka* conceives it to be a "national discipline" that affords Indonesia's Muslims a chance to strengthen their religious life while enhancing their pride as citizens of the Republic. Although recitation is at the core of the event, there are also Ḳur'ānic quiz shows for youth, who appear on provincial teams; an elaborate *da'wa* (Islamic "missions") exhibit with displays of publications and programmes; a parade through the streets of the host city; colourful opening and closing ceremonies with processions, special music, dance and recitation; and Islamic fashion shows. There is considerable national media coverage, as the MTQ is attended by the president, government ministers, the diplomatic corps, and distinguished Muslim leaders from Indonesia and abroad. Each MTQ is held in a different city, thus producing something like a royal progress about the country over the years.

Although recitation is governed by long-established *ādāb*, as far as the conduct of particular *musābakāt* is concerned, one needs to refer to specific cases. For example, the state television service in Surabaya, East Java, has sponsored a provincial *musābaka* that features groups of timed recitation selections (a standard procedure) interspersed with popular musical interludes performed by Muslim "seminarians" on guitars and other instruments (cf. Roman Catholic "rock" masses). In the Indonesian national-level tournament, the reciters are divided into categories of boys, girls, women, men and handicapped (usually blind). There are separate categories for those who read the Ḳur'ānic passages from a *muṣḥaf* and those who recite from memory. Judges evaluate the performances according to established criteria in *ādāb* (deportment, etiquette), *taḍwīd* (technical rules and procedures of recitation), and *naghāmāt* (musical modes and melodies). Prizes and trophies are awarded to winning individuals and provincial teams, whose return home is marked by special festivities.

*Bibliography*: There is not much scholarly literature on Ḳur'ānic recitation competitions, although specific events are covered in the popular media. For Indonesia, see Khadijatus Shalihah, *Perkembangan seni baca al-Qur'an dan Qiraat Tujuh di Indonesia* ("Developments in the art of reading the Ḳur'ān and the Seven Readings in Indonesia"), Jakarta 1983, 84-97; a more popular descriptive article is F.M. Denny, *The Great Indonesian Qur'an-chanting tournament*, in *The World and I* (June 1986), 216-23, based on field work. The *musābaka* idea is motivated largely by a concern for maintaining and strengthening Ḳur'ānic literacy, especially in non-Arabic speaking countries. For ways in which Indonesians approach this, see Denny, *Qur'an recitation training in Indonesia: a survey of contexts and handbooks*, in A. Rippin (ed.), *Approaches to the history of the interpretation of the Qur'an*, Oxford 1988, 288-306. (F.M. DENNY)

**MUSĀFIR** (A.), literally, "traveller". For the genre of travel account literature, see RIḤLA. For the rest houses and caravanserais set up for travellers, see KHĀN, MANZIL, and MIHMĀN, in Suppl. For the commercial caravans of which travellers also usually formed part, see KĀRWĀN. For the Pilgrimage caravans, see HADJ. iii and AMĪR AL-HADJ. For the highways along which travellers passed, see SHĀRĪ'.

## NADIRA.

2. In Swahili literature.

The word *nādīra* is not well known in Swahili except in scholarly circles. The Swahili word *ngano* (common also in other Bantu languages) is in use for all invented tales including fables, as opposed to *hadīthi*, which originally referred to Islamic legends about the Prophet Muḥammad and the characters he used to discuss with the *Ṣaḥāba*, while seated in the mosque at Medina after prayers. Today, such *hadīthi* contain some of the most fantastic adventure tales, including the exploits of 'Alī against the *ǧinn* and *ḡayāḡīn*. Next to Arabian tales, such as Maǧnūn and Laylā, there are tales of Persian origin circulating on the Swahili coast, such as those of Sendibada (= Sindbād) or Farhād and Shīrīn. India is richly represented as a supplier of motifs for the Swahili storytellers. Fables from the *Pančatantra*, such as that of the monkey and the crocodile (who has become a shark in the Swahili version) are well known in Swahili, although they may have come via the Persian version of this work, the *Anwār-i Suhaylī*. Curiously, the Arabian version, *Kālīla wa-Dimna* [q.v.], is not known in Swahili. Some tales even go back to Sanskrit literature, such as the Tale of the Three Magic Objects from the *Veṭālapan-cavimśatikā*, or the Tale of Moses (i.e. the Prophet Mūsā) and the two Angels, ultimately based on the Sanskrit *Kathāsaritsāgara*.

Swahili scholars are very well read in Arabic traditional literature, especially the *Kiṣas al-anbiyā'* [q.v.], Creation and cosmology (*ibḏā' wa-'ilm al-samawāt*), the *Sira*, *Mawlūd*, *Mī'rāǧ*, and the fabulous tales of al-Iskandar and Nabī Sulaymān.

Finally, there is the vast African heritage of narration, which includes fables for children including the Aesop-type tales, as well as bloodcurdling stories about ghosts and monsters of every description; purely African, fresh original, well-structured tales of wonders.

AL-NADJĀSHĪ, Ḳaṣb b. 'Amr al-Hārithī, Arab poet of the 1st/7th century, probably called by this epithet because of his dark skin inherited from his Ethiopian mother, d. 49/669.

Born in Nadjirān, he and his clan became converts to Islam at Medina in 10/632. His bellicose nature led him to compose virulent satires against 'Abd al-Raḥmān b. Hassān b. Thābit, who replied with the aid of his father. On the advice of al-Ḥuṭay'a and Hassān [q.v.], the caliph 'Umar had al-Nadjāshī imprisoned for his invectives against the B. 'Adjilān and their poet Ibn Muḡbil [q.v.]. At the battle of Siffin, he joined 'Alī and exchanged verses of a politico-religious nature with Mu'āwiya's poets, notably Ka'b b. Dju'ayl. However, he left 'Alī's side after the latter had him flogged for drinking wine during Ramaḡān, and he went over to Mu'āwiya's army, eventually dying at Lahǧj in Yemen.

Al-Nadjāshī's poetic œuvre does not seem to have been gathered together in a *ḡwān* by the early philologists, although Ibn al-Nadīm, *Fihrist*, ed. Cairo, 157, mentions a *kitāb al-Nadjāshī* attributed to al-Madā'ini. Modern authors, such as Schultess, Cheikho and al-Nu'aymī have endeavoured to piece together his surviving verses, and T. al-'Ashshāsh, S. Ghurāb and S. Bakkārī have tried to reconstitute the *ḡwān*, based on some 50 sources, in *Annales de l'Université de Tunis*, xxi (1982), 105-201, comprising 333 verses in 64 pieces of unequal length from one to 43 verses. His themes are the usual main poetic ones: satire, praise, *fakhr*, elegy and erotic poetry, with his poetry reflecting the main phases of his life and times. Following al-'Amīlī, *A'yān al-Shī'a*, xliii, 368-9, he may be considered as one of the main pro-'Alid poets of the period before 50/670, with his eulogies of 'Alī and his supporters and insults against Mu'āwiya and his partisans at the time of Siffin forming over half of his surviving verses.

(TAÏEB EL ACHÈCHE)

NADJĪB KHĀN (see NADJĪB AL-DAWLĀ).

NAFAQA (A.), in Islamic law, maintenance, i.e. of the necessities of life, consisting of food, clothing and shelter. The obligation to provide for a person's maintenance arises from kinship, ownership and marriage.

*Kinship*

Fathers are obliged to provide for their children, unless the latter have sufficient property to support themselves. The obligation lasts with regard to boys until puberty, and regarding girls, until they marry, and their marriage is consummated. After puberty, boys are entitled to maintenance from their fathers if they are physically or mentally unfit to support themselves and their fathers have sufficient means. According to all schools of jurisprudence, children

with sufficient means must support their parents if they are indigent. The Shāfi'is and Imāmi Shī'is hold that this obligation exists with regard to all ascendants. The Ḥanafis extend it to all blood relatives within the forbidden degrees (*dhawū raḥim mahram*).

#### Ownership

The owner of a slave has the duty to maintain him or her. If he fails to do so, the judge may sell the slave without the master's consent.

#### Marriage

The husband's duty to maintain his wife is regarded as a consideration for her being under her husband's control (*mahbūsa*). As a consequence, her right to maintenance arises only after the consummation of her marriage, when cohabitation begins, and does not depend on her indigence. According to most schools, the level of maintenance depends on the status of both spouses. A wife is always entitled to be housed alone, preferably at some distance from her co-wives, and not to be forced to share her accommodation with her husband's relatives. If it is in accordance with the status of both spouses, the wife must be provided with a domestic servant.

The wife's right to maintenance ends with the termination of the marriage by her husband's decease or by repudiation. Since marriage persists after a revocable repudiation (*talāk [q.v.] radfī*) until the expiry of the waiting period (*'idda [q.v.]*), the wife is entitled to maintenance during this period. Although after an irrevocable (*ḥā'in*) repudiation the marriage comes immediately to an end, the husband must provide for his former wife during the ensuing waiting period if she is pregnant. If she is not, opinions vary.

The husband's obligation is suspended if his wife is disobedient (*nāshiza*). This is the case if she refuses to move to the marital home or leaves it without her husband's consent or a lawful reason. Her right to maintenance, however, is not affected if her behaviour is justified, e.g. if the home provided by her husband does not meet the legal requirements (*maskan sharī*) or if he has exceeded the bounds of proper marital chastisement. All schools but the Ḥanafis (who argue that such circumstances are practically impossible to prove) regard the wife's refusal to have sexual intercourse with her husband as disobedience entailing the suspension of maintenance.

Whereas most schools regard maintenance as an ordinary debt whose arrears are due and payable, the Ḥanafī view is different: if the husband for whatever reason does not provide maintenance, his obligation expires after one month, unless the amount of maintenance has been specified by agreement between the spouses or by judicial decree. All schools except the Ḥanafis and the Shī'is regard the husband's failure to provide maintenance as a ground for divorce for the wife. Since the Ḥanafī doctrine on these two issues was prejudicial to women, the views of the other schools have now been introduced by legislation in many Ḥanafī countries.

For *nafaka* in the sense of expenditure, see RIZK. 3.

**AL-NAHY 'AN AL-MUNKAR** (A.), "forbidding wrong", in full *al-amr bi 'l-ma'rūf wa 'l-nahy 'an al-munkar*, "commanding right and forbidding wrong". The term is used to refer to the exercise of legitimate authority, either by holders of public office or by individual Muslims who are legally competent (*mukallaf*), with the purpose of encouraging or enforcing adherence to the requirements of the *Shari'a*. This article deals mainly with the duty of individual Muslims in this regard; technically, this is usually considered to be a collective obligation (*farḍ kifāya*) [see FARD].

#### 1. Terminology.

The term is taken from the Qur'ān, where forbidding wrong is generally held to be imposed as a duty in III, 104: "Let there be one community of you, calling to good, and commanding right and forbidding wrong; those are the prosperers." Other verses making clear reference to forbidding wrong are III, 110, 114; VII, 157; IX, 71, 112; XXII, 41; XXXI, 17. However, there is little indication in the Qur'ān of the concrete character of the duty.

The most-cited Sunnī tradition uses a somewhat different wording. In the frame-story, a man reproves the Umayyad governor of Medina (the future caliph Marwān I [q.v.]) for infringing the *sunna* in the course of leading a ritual prayer. The Companion Abū Sa'īd al-Khudrī (d. 74/693) approves the man's action, and quotes the Prophet as saying: "Whoever of you sees a wrong (*munkar*), let him put it right (*fa-l-yughayyir-hu*) with his hand; if he cannot, then with his tongue; if he cannot, then with [or in] his heart" (Muslim, *Saḥīḥ*, ed. M.F. 'Abd al-Bāqī, Cairo 1955-6, 69, no. 49). From this tradition is derived the term *taghyīr al-munkar* "righting wrong", while a variant text supports the term *inkār al-munkar* "manifesting disapproval of wrong".

The Muslim scholars take it for granted that *al-nahy 'an al-munkar*, *taghyīr al-munkar* and *inkār al-munkar* all refer to the same duty. They occasionally make distinctions between *al-amr bi 'l-ma'rūf* and *al-nahy 'an al-munkar*, but normally assume that a single duty is involved. Al-Ghazālī (d. 505/1111 [q.v.]), devised a new terminology for the duty of individuals based on the root *ḥ-s-b*; thus the duty itself is *ḥisba*, one who performs it is *muḥtasib*, etc. (*ḥiyā' ulūm al-dīn*, Cairo 1967-8, ii, 398). Hereafter the duty is referred to in this article as "forbidding wrong".

#### 2. Forbidding wrong by holders of public office.

The sources speak of the exercise of authority by the legitimate ruler of the community as forbidding wrong. This usage is especially common in Imāmi, Zaydī and Ibadī texts, where forbidding wrong is closely linked to the imāmate (e.g. 'Alī b. Ibrāhīm al-Kummī, *Tafsīr*, ed. T.M. al-Djazā'irī, Najaf 1386-7/1966-8, i, 306; 'Alī b. Muḥammad al-'Alawī, *Sīrat al-Hādī ilā 'l-Haqq Yahyā ibn al-Husayn*, ed. S. Zakkār, Beirut 1972, 29; al-Bisyawī, *Djāmī'*, Ruwī 1984, iv, 192). But such language is also found in Sunnī sources (e.g. al-Mas'ūdī, *Murūjī*, §3,111, on the caliph al-Muhtadī [q.v.]). Holders of subordinate offices may also be described as forbidding wrong, especially the officially-appointed *muḥtasib* (e.g. al-Māwardī, *al-Aḥkām al-sultāniyya*, ed. A.M. al-Baghḍādī, Kuwait 1989, 315) [see ḤISBA]. Despite the fact that such diction is widespread, it is not usually an object of scholastic reflection. Where scholars writing on the role of the *muḥtasib* pause to analyse the duty of forbidding wrong, they

tend to borrow what they say from discussions of the duty of the individual (as in the chapter on the *muhtasib* in *Khundjī, Sulūk al-mulūk*, ed. M.ʿA. Muwāhhid, Tehran 1362 *shamsī*/1983, 175-99, which includes much material going back to al-Ghazālī). Opinion is divided on the question whether the state should have a monopoly of the use of violence in forbidding wrong.

3. Forbidding wrong by individuals in principle.

There is an extensive scholastic literature on this subject. Much material may be found in sources of the following types: Kurʿān commentaries under the relevant Kurʿānic verses; commentaries on Prophetic traditions under the relevant traditions; the handbooks of doctrine (*uṣūl al-dīn*) of some but not all theological schools; works on substantive law among the Imāmīs, Zaydīs and Ibādīs (but not the Sunnīs); and occasional monographs devoted to forbidding wrong. In terms of wealth of concrete detail, the richest body of material on the duty is a collection of responsa of Aḥmad b. Ḥanbal (d. 241/855 [q.v.]) (Abū Bakr al-Khallāl, *al-Amr bi 'l-ma'rūf wa 'l-nahy 'an al-munkar*, ed. ʿA.A. ʿAṭā, Cairo 1975). In conceptual terms, the most sophisticated discussions stem from the Muʿtazila [q.v.] and their Zaydī and Imāmī heirs; by contrast, the Ashʿariyya and Māturīdiyya [q.v.] have less to say. By far the most influential account of the duty is the substantial and very clear analysis that al-Ghazālī included in his *Ihyāʾ* (ii, 391-455, forming the ninth book of the second quarter, *nubʿ*, of the work). The influence of this treatment extended to all Sunnī schools, and also to the Imāmīs, Zaydīs and Ibādīs.

The central theme in formal discussions of the duty is often the set of conditions under which someone is obligated to confront a wrong. In the account of the Zaydī Muʿtazilī Mānkdim (d. 425/1034), a pupil of the Shāfiʿī Muʿtazilī ʿAbd al-Djabbār b. Aḥmad al-Hamadhānī (d. 415/1025 [q.v.]), these conditions are in outline as follows: (1) knowledge of law: the prospective performer of the duty must know that what he forbids is indeed wrong; (2) knowledge of fact: he must know, or have good reason to believe, that the wrong in question is in the making (*hādīr*); (3) absence of worse side-effects: he must know that his action will not lead to a greater evil; (4) efficacy: he must know, or have good reason to believe, that his speaking out will be efficacious; (5) absence of danger: he must know, or have good reason to believe, that his action will not lead to harm to his person or property (Mānkdim, *Taʿlīk Sharḥ al-Uṣūl al-khamsa*, edited by ʿA. Uṭmān as the *Sharḥ al-Uṣūl al-khamsa* of ʿAbd al-Djabbār b. Aḥmad, Cairo 1965, 142-3). Other scholars are likely to discuss these issues in somewhat different ways, and to disagree on details. Occasionally a scholar will reject a condition outright, but this is rare; a case in point is the Shāfiʿī al-Nawawī (d. 676/1277), who holds the uncommon view that one should proceed irrespective of the prospects of success, thus rejecting the fourth condition (cf. *Sharḥ Saḥīḥ Muslim*, Beirut 1987, i, 382); he is followed in this by a good number of later Shāfiʿīs and some non-Shāfiʿīs.

The means by which the duty is to be performed are generally presented in an escalatory sequence (e.g. Mānkdim, *Taʿlīk*, 144, 744-5; al-Ghazālī, *Ihyāʾ*, ii, 420-5; contrast the wording of the Prophetic tradition cited above). Thus one should speak politely to the offender before rebuking him harshly, and only proceed to physical action if words are of no avail. The major disagreement concerns the use of violence in forbidding wrong: can it be used by individuals, and if so,

can it reach the point of recourse to arms? The use of arms finds favour among the Muʿtazilīs, Zaydīs and Ibādīs, and is sanctioned by some Sunnīs; but many Sunnīs reject it, as do the Imāmīs.

This is not the only issue on which tension arises between more activist and more quietist approaches to forbidding wrong. Thus there is a major disagreement in connection with the fifth condition. While it is generally accepted that danger voids the obligation (at least if the degree of prospective harm is significant), it is disputed whether, or in what circumstances, it may still be virtuous to proceed. Thus according to Mānkdim, such action would be virtuous only if it secured the greater glory of the faith (*ʿiẓāz al-dīn*, see *Taʿlīk*, 143), whereas the Hanafī Muʿtazilī Abu 'l-Ḥusayn al-Baṣrī (d. 436/1044 [q.v. in Suppl.]), likewise a pupil of ʿAbd al-Djabbār, held that no such distinction could be made, the greater glory of the faith being at issue in all such cases (cf. al-Ḥimmaṣī, *al-Munkidh min al-taklīd*, *Ḥumm* 1412-14/1991-4, ii, 219). By contrast, Imāmī authorities condemn such action (e.g. Murtaḍā, *Dhakhīra*, ed. A. al-Ḥusaynī, *Ḥumm* 1411/1990-1, 557-8).

A closely related question is whether it is virtuous to rebuke rulers harshly for their misdeeds. Al-Ghazālī, representing a widespread view, was strongly in favour of this, and included in his discussion of the duty a substantial number of relevant anecdotes (*Ihyāʾ*, ii, 437-55). Ibn Ḥanbal, by contrast, discouraged such activity (Ibn Abī Yaʿlā, *Ṭabaḳāt al-Ḥanābila*, ed. M.H. al-Fikī, Cairo 1952, i, 47), and the Ḥanbalī Ibn al-Djawzī (d. 597/1201) followed suit in his recension of al-Ghazālī's *Ihyāʾ* (see Aḥmad b. Kudāma al-Maḳdisī, *Mukhtasar Minhāj al-kāsīdīn*, Damascus 1389, 130). Likewise Muḥsin al-Fayḍ (d. 1091/1680), in his Imāmī recension of the *Ihyāʾ*, disallows rudeness to rulers, and impugns the motives of the heroes of al-Ghazālī's anecdotes (*al-Maḥādīja al-bayḍāʾ fī tahdhīb al-Ihyāʾ*, ed. ʿA.A. al-Ghaffārī, Tehran 1339-42 *shamsī*/1960-3, iv, 112-13).

A final question of this kind, for those who accept recourse to arms, is whether forbidding wrong can take the form of rebellion against unjust rule. Such rebellion is usually condemned among the Sunnīs, although Ibn Ḥazm (d. 456/1064) is a striking exception (*Fīṣal*, Cairo 1317-21, iv, 175-6). Thus Abū Ḥanīfa (d. 150/767-8) is quoted as rejecting rebellion on the ground that its costs would exceed its benefits (Abū Ḥanīfa, *al-Fīkh al-abṣaṭ*, ed. M.Z. al-Kawtharī, Cairo 1368, 44). But rebellion under the aegis of forbidding wrong finds approval among, for example, the Ibādīs (cf. P. Crone and F. Zimmermann, *The epistle of Sālim ibn Dhakwān*, Oxford 2001, 140, §127 of the Arabic text), here continuing a Khārijite tradition, and the Zaydīs (e.g. Muḥammad b. Sulaymān al-Kūfī, *Muntakhab*, *Ṣanʿāʾ* 1993, 14).

One major concern (on which the systematic discussions in Muʿtazilī and related sources are surprisingly silent) is privacy: how far do its requirements override the duty of forbidding wrong? The basic idea is that for forbidding wrong to be in place, the wrong must in some way be public knowledge; a hidden sin, according to a Prophetic tradition, harms only the sinner (Ibn Abī 'l-Dunyā, *Uḳūbat*, ed. M.K.R. Yūsuf, Beirut 1996, 43, no. 40). Moreover, steps that would make hidden wrongs manifest are strongly discouraged. The Kurʿānic prohibition of spying (XLIX, 12) is widely quoted (e.g. Abū Yaʿlā Ibn al-Farrāʾ, *al-Muʿtamad fī uṣūl al-dīn*, ed. W.Z. Haddad, Beirut 1974, §355), as are versions of a Prophetic tradition that makes it a duty not to disclose shameful aspects of

the lives of outwardly respectable Muslims (also quoted by Abū Ya'la; cf. Muslim, *Ṣaḥīḥ*, 1996, no. 2,580). The problematic cases arise in the grey area between public and private. Thus if one passes someone in the street who has a suspicious bulge under his cloak—suggesting that he is carrying a bottle of alcoholic liquor or a musical instrument—should one confront him (cf. Abū Ya'la Ibn al-Farrā', *al-Ahkām al-sultāniyya*, ed. M.H. al-Fikī, Cairo 1966, 296-7)?

4. Forbidding wrong by individuals in practice.

Some of the more concrete prescriptive literature also sheds light on the practice of the duty. Thus the responsa of Ibn Ḥanbal illustrate the kinds of wrong regularly confronted by individual Muslims in 3rd/9th century Baghdad. The most frequent are making music and drinking alcoholic liquor, followed by sexual misconduct (cf. al-Khallāl, *al-Amr bi 'l-ma'rūf*, no. 57); a variety of other wrongs appear from time to time, such as faulty prayer, chess-playing and the display of images. The mix seems to have been much the same at other times and places.

Biographical and historical sources preserve a considerable amount of scattered anecdotal material regarding the actual performance of the duty. On the whole, this material is richer for the earlier centuries of Islam than for later periods.

One respect in which the anecdotal material differs significantly from the prescriptive material is that it is much less ambivalent about confrontations involving danger. Thus many approving stories are told of pious Muslims who rebuked unjust rulers without regard for the consequences. An example is the reproof administered by Shu'ayb b. Ḥarb (d. 196/811-12) to the caliph Hārūn al-Rashīd [*q.v.*] on the road to Mecca, in which he addressed the caliph by name; he was released when he pointed out that he did the same to God (al-Khaṭīb al-Baghdādī, *Tārīkh Baghdād*, Cairo 1931, ix, 239-40). At the same time, historical sources provide numerous examples of rebels who invoked forbidding wrong (see e.g. Ibn Ḥayyān, *Muktābis*, ed. M.M. Antuña, Paris 1937, 133, on the Andalusī rebel Ibn al-Kiṭṭ [*q.v.*] in 288/901).

While the anecdotal material normally takes the side of those who perform the duty, it also brings out the fact that they were often regarded by others as pious busybodies; thus when Abū 'l-Husayn al-Nūrī (d. 295/907-8) [see AL-NŪRĪ] concerns himself with a cargo of wine belonging to the caliph, the boatman calls him a "meddlesome Süfi" (*ṣūfī kathīr al-fudūl*) (al-Dhahabī, *Siyar a'lām al-nubalā'*, ed. S. al-Arna'ūṭ *et al.*, Beirut 1981-8, xiv, 76).

5. Modern developments.

Discussion of forbidding wrong has played a significant part in the modern history of Islamic thought and practice, with Imāmī scholars tending to be more innovative than Sunnī ones.

One question that has naturally received increased attention is the role of women in forbidding wrong. In pre-modern times, a few authorities explicitly included women from performing the duty, a few (notably al-Ghazālī and some Ibādīs) explicitly included them, but most said nothing either way (for al-Ghazālī's view, see *Ihyā'*, ii, 398). Modern authors, by contrast, often include women, even if they limit their role (e.g. Khālīd b. 'Uthmān al-Sabt, *al-Amr bi 'l-ma'rūf wa 'l-nahy 'an al-munkar*, London 1995, 171-2, a conservative Sunnī view; Ahmad Ṭayyibī Shabistārī, *Taqīyya; amr bah ma'rūf wa nahy az munkar*, Tehran 1350 *shamsī*/1971, 208, a radical Imāmī view).

There has been a widespread trend towards greater

political activism, most consistently among the Imāmīs.

Thus the view that it is wrong to proceed in the face of danger was qualified or rejected not just by Khumaynī (d. 1409/1989 [*q.v.* in Suppl.]) (*Tahrīr al-wasīla*, Beirut 1981, i, 472-6), but by numerous scholars of his and later generations. On the Sunnī side, one example among many of a strongly activist figure is the Algerian 'Alī b. Ḥādjīd; thus in a talk distributed on cassettes, he quotes with enthusiasm a passage in which al-Ghazālī sanctioned the recruitment of armed bands in the cause of forbidding wrong (*Ihyā'*, ii, 425). But more quietist trends are also at work. Thus in Egypt, Ḥasan al-Bannā (d. 1368/1949) [see AL-BANNA'] was against forbidding wrong "with the band" ('Abd al-Khabīr al-Khūlī, *Kā'id al-dā'wa al-Islāmiyya Ḥasan al-Bannā*, Cairo 1952, 73), and Sayyid Kuṭb (d. 1386/1966 [*q.v.*]) considered the duty to be in abeyance in the absence of an Islamic state (*Fī zilāl al-Kur'ān*, Beirut 1973-4, 949). Khālīd al-Sabt, a mainstream Su'ūdī scholar, does not share such views, but bypasses the more subversive statements of al-Ghazālī (*al-Amr bi 'l-ma'rūf*, 316ff.).

There has also been an unprecedented emphasis on the desirability of achieving greater organisation for the purpose of forbidding wrong (see e.g. Muhammad Ahmad al-Rāshīd, *al-Muntalāk*, Beirut 1976, 146-54, for a Sunnī view, and Ḥusayn al-Nūrī al-Hamadānī, *al-Amr bi 'l-ma'rūf wa 'l-nahy 'an al-munkar*, Tehran 1990, 65, for an Imāmī view). In some Islamic countries, this has led to the creation of new organs of the state entrusted with the performance of the duty (but not to the revival of the traditional office of the official *muhtasib*). Thus in Su'ūdī Arabia, a system of "committees (*ḥay'āt*) for commanding right and forbidding wrong" emerged in the aftermath of the Su'ūdī conquest of the Ḥijāz in 1343-4/1924-5, initially as a device to contain the zeal of the Wahhābī Ikhwān [*q.v.*] against the misdeeds of the Ḥijāzīs and pilgrims (cf. Ḥāfiẓ Wahba, *Djazīrat al-'Arab fī 'l-kam al-'ishrīn*, Cairo 1961, 309-12). In Iran, following the Islamic Revolution of 1399/1979, a plurality of organs of the state acquired responsibility for forbidding wrong; and in Afghānistān, a single organisation was established to discharge the duty after the Ṭālibān conquered Kābul in 1417/1996.

*Bibliography:* See also *Elr*, art. "Amr be ma'rūf" (W. Madelung); M. Cook, *Commanding right and forbidding wrong in Islamic thought*, Cambridge 2000 (with extensive bibl.). Many of the works cited in the article contain substantial treatments of forbidding wrong, notably those of al-Khallāl, Mānkdm and al-Ghazālī. (M. COOK)

**NAQD** (A.), "[literary] criticism", in modern Arabic, *al-naqd al-adabī*, in mediaeval times most commonly used in the construct *naqd al-shī'r* "criticism of poetry". The critic is *nāqid* (pl. *nūqqād* or *naqada*) or, more rarely, *nakkād*; the form VIII verbal noun *intikād* is a synonym of *naqd*. The term originated in the figurative use (*maḍjāz*) of *naqd* in the sense of "assaying (coins) and separating the good from the bad" (for the *maḍjāz* character, see al-Zamakhsarī, *Asās al-balāgha*, Beirut n.d., col. 469c, and for an extended analogy between assayer and critic, see al-Tawhīdī, *al-Mukābasāt*, Cairo 1347/1929, 170). Outside the field of literary criticism the term is also used in *ḥadīth* criticism (al-Tahānawī, *Kashshāf*, ed. A. Sprenger, Calcutta 1862, 1381, s.v. *intikād*); here, too, the analogy of the assayer is invoked (see Ibn Abī Ḥātim al-Rāzī, *Uḥāl al-ḥadīth*, Cairo 1343/1924-5, i, 9).

*Naqd al-shī'r* became the designation of a systematic discipline probably through the book of this title

written by ʔudāma b. ʔjaʔfar (d. ca. 337/948 [q.v.], and see below) in the first half of the 4th/10th century. The title should probably still be understood in the original metaphorical sense, "The Assaying of Poetry". Since ʔudāma is very much aware of his innovative approach, the era preceding him may be called the pre-systematic period. This does not imply that all works after him were systematic, only that a standard had been set.

*Pre-systematic literary criticism*

Most of the material for this period is found in books on poets, such as Ibn Sallām al-ʔjūmahī (d. 231-2/845-6 [q.v.], *Ṭabakāt fuḥūl al-ḥuʔarāʔ*; Ibn ʔutayba (d. 276/889 [q.v.]), *ʔ. al-Ḥiʔr wa ʔ-ḥuʔarāʔ*; and above all Abu ʔ-Faradʔ al-ʔḥbahānī (d. 356/967 [q.v.]), *ʔ. al-Aghānī*, but also in *adab* encyclopaedias, such as Ibn ʔutayba, *ʔyūn al-akhbār*, and Ibn ʔabd Rabbih (d. 328/940 [q.v.]), *al-ʔkd al-farīd*. In addition, there are works of a directly pertinent nature, namely al-ʔjāhīz (d. 255/868-9 [q.v.]), *ʔ. al-Bayān wa ʔ-tabyīn*; and al-Marzubānī (d. 384/994 [q.v.]), *ʔ. al-Muwashshah fī maʔakhīdh al-ʔulamāʔ al-ʔ-ḥuʔarāʔ*. Information about the earliest phase of this period, up to the times of the great transmitters (*ruwāt*, sing. *rāwīya*) like Hammād al-Rāwīya (d. 155-6/772-3 [q.v.]) and ʔhalaf al-Aḥmar (d. ca. 180/796 [q.v.]) is anecdotal and mostly legendary. However, given the high degree of sophistication of even the earliest poetry, it is highly likely that there existed some implied rules of critical appreciation and at least a rudimentary technical vocabulary for discussions among the experts, i.e. poets and transmitters. There is some likelihood that the terms for rhyme mistakes (*ʔyūb al-kāfiya*, or simply *ʔyūb al-ḥiʔ*) go back to pre-Islamic times. Al-Akhfash al-Awsaʔ (d. 215/830 or 221/836 [q.v.]) points out that the *ʔarab* defined these terms only very loosely (*ʔawāfī*, 43, 55, 67, 68), and early literary theorists such as Thaʔlab (d. 291/904 [q.v.]) (*ʔawāʔid*, 67-70) and ʔudāma (*Naqd*, 108-11) include these mistakes in their works, although they normally abstain from all prosodical technicalities. Both facts suggest that this terminology was not of recent vintage. It is also quite likely that some of the terms that, later on, make up the varied taxonomy of plagiarism go back to the early days of Arabic poetry. This would in particular refer to *ighāra* (lit. "raiding"), the rather archaic procedure of a famous poet forcing a less famous one to give up a flawless line, because the more famous poet has a greater right to it. Finally, there are also a few glimpses of critical vocabulary in the poetry itself. The Umayyad poet ʔAdī b. al-Rīkāʔ (d. ca. 100/720), e.g., mentions that in careful revision of his poem at night he "straightens out" what is "crooked" in his poems (see *ʔiwān ḥiʔr ʔ. b. al-R. ʔan... Thaʔlab*, ed. Nūrī Hammūdī al-ʔaysī and Ḥātim Ṣāliḥ al-ʔāmin, Baghdad 1407/1987, 88-90, and cf. M. Gaudefroy-Demombynes, *Ibn ʔutayba—Introduction*, 16-17, and notes 61-2, and al-ʔmidī, *Muwāzana*, iii, 702-4, also for other early poets commenting on their poetry). As for rules of critical appreciation, the anecdotal material offers evaluative pronouncements on poets and their poems that may sometimes allow us to extract such rules. These aesthetic judgements may be classified as follows:

(a) Opinions expressed by means of an elative, either in general terms (*man aḥḥaru ʔ-nāsi* [or: *al-ʔarabi*]?) *fulān* hīna yakūlu... "Who is the best poet of all [or: of the Arabs]? So-and-so, where he says... [followed by a line]" or with reference to a specific theme or motif (*amdahu/ahjā/ansabu/afkharu bayt*) *kālat-hu ʔ-ʔarabu*... "The best panegyric/satirical/amorous/self-glo-

rifying line the Arabs have spoken is..." [followed by a line]. A characteristic feature of this type of criticism is that even in the former case the decision is based on a single, allegedly incomparable line. A similar mode of presentation is used by the early philologist Abū ʔamr b. al-ʔAlāʔ (d. 144/771 or 147/774 [q.v.]) to express his high opinion of the poet ʔjarīr (d. 111/729 [q.v.]) by dividing poetry into four themes (*ifkḥār, madīh, hidjāʔ, nasīb*) and quoting one line in each category to prove that ʔjarīr is the best poet (ʔAbd al-ʔarīm al-Nahshālī, *Mumtāʔ*, 475-6). This one-line approach remains popular in later times.

(b) Opinions on the œuvre of certain poets expressed in similes and metaphors. Thus Hammād al-Rāwīya on the poetry of ʔumar b. Abī Rabīʔa (d. 93/712 or 103/721): "That's shelled pistachios!" or ʔjarīr on a poem by the same poet: "That is poetry of the Tihāma (i.e. the hot coastal strip where ʔumar's hometown Mecca is situated), which feels the cold, when it comes into the Nadjd (i.e. the central highlands)" (*Aghānī*<sup>2</sup>, i, 75 and 81).

(c) The "psycho-literary" approach, i.e. the correlation of emotions and genres of poetry. E.g. Arṭāt b. Suhayya, asked by caliph ʔAbd al-Malik whether he could compose and recite some poetry on the spot, answered: "I am not drinking wine (*lā aḥrabu*), I am not in an excited mood (*lā aḥrabu*), and I am not angry (*lā aghḥabu*); poetry happens only due to one of these three" (see Gaudefroy-Demombynes, *op. cit.*, 18).

(d) Sayings that define basic terms of the literary art, such as *balāgha, faḥāha*, and *bayān*. These belong in the present context only inasmuch as they are normative, as they often are. They are often attributed to "a Bedouin" but also to a "Greek", "Indian", or "Persian" (see a collection, including later definitions, in al-Ḥuḥrī, *ʔahr al-ādāb*, 116-18). Combinations of these types also occur; e.g. (a) and (d) put together result in sayings like "the best verse is one whose beginning makes one anticipate its end."

Most of the critical terms and ideas mentioned so far refer to the homogeneous "timeless" body of ancient Arabic poetry, which means that the notion of literary history is absent from them. When this body was not allowed to fade into oblivion, as had been the fate of Arabic poetry in the centuries before our earliest specimens, but was collected into a corpus of "classical" models, a historical dimension was introduced and things gradually began to change also for criticism. The Umayyad poet al-Farazdaq (d. ca. 112/730 [q.v.]) devotes one of his poems to an enumeration of his literary forebears, twenty in all. To characterise his relationship to them, he uses the expressions *wahaba ʔ-ḥaḥāʔida li... idh maḥaw* "[they] gave the poems to me, when they passed away" and *warithu* "I inherited" (three times). He even mentions a book that he has of the poetry of the pre-Islamic poet Bishr b. Abī ʔhāzim [q.v.] (cf. *ʔiwān al-Farazdaq*, ed. ʔAlī ʔhārīs, Beirut 1416/1996, 435-6 [rhyme *-ahu*]). Obviously, we are watching here the beginning of a conscious literary history, and this in more than one respect. Literary criticism would now have to take into account questions like imitation, plagiarism and deviation from the norm as embodied in the corpus.

*Naqd as critical assessment of the genuineness of ancient poetry*

The situation became even more complex in early ʔAbbāsīd times, when, on the one hand, the philologists began the codification of early literature and, on the other, a new "school" of poetry started to gain popularity, that of the "Moderns" [see MUḤDAṬḤUN,

in Suppl.]. The most serious problem confronting the philologists, given the fluid state of transmission of the ancient texts, was the question “genuine (*ṣaḥīḥ*) or spurious?” If they assumed the latter, the spuriousness was due either to false attribution of an existing piece of poetry (*manḥūl*) or to outright forgery (*maṣnūʿ*, *mawḍūʿ*, *muṣṭaʿal*). That this distinction was not lost on them is shown by the strange title of the second part of Abu ʿl-Ḥasan al-Ṭūsī’s redaction of the *Dīwān* of Imruʿ al-Ḳays: *al-ṣaḥīḥ al-kadīm al-manḥūl*, literally “the falsely attributed old genuine (part)”, i.e. that part of the collection that is not included in the transmission of al-Ṭūsī’s main authority, al-Mufaḍḍal al-Ḍabbī (d. after 163/780 [q.v.]), but which other transmitters attribute to Imruʿ al-Ḳays. Ibn Sallām al-Ḍjumaḥī, who discusses these matters at the beginning of his book on the classes of poets, accuses the great transmitter Ḥammād al-Rāwīya of habitually and intentionally misattributing poetry (*wa-kāna yanḥalu ṣiʿra ʿl-raḍḍūli ḡayrahū wa-yanḥaluhū ḡayra ṣiʿriḥ* [Ṭabaḳāt, 48]). What is worse, he also accuses him of adding to the poems he transmits (*wa-yazīdu fi ʿl-aṣḥār* [ibid.]). But, as he states in another place (Ṭabaḳāt, 46-7), it is not only transmitters who are guilty of forgeries but also those tribes who in early Islamic times found themselves without an impressive poetic heritage and wanted to amend the situation. Ibn Sallām’s passage is of sufficient interest to warrant translation in full: “When the Arabs [after the conquests] returned to the transmission of poetry and the narration of their battles and glorious deeds, some tribes found the poetry of their poets and the current narration of their battles to be scant. And there were people whose battles and poems were [in fact] few. So they wanted to catch up with those who did have battles and poems and [to do so] they composed poems attributing them to their poets (*kālū ʿalā alsinatī ṣiʿarāʾihim*). Afterwards there came the transmitters and added to the poems that had been composed. To the experts (*ahl al-ʿilm*) the additions of the transmitters and what they have forged (i.e. separately, without adding it to an existing poem?) pose no problem, nor does what the *muwallads* [q.v.] have forged. However, [the experts] have been confounded, if a man from among the desert dwellers and belonging to the progeny of poets, or even a man who does not belong to their progeny, composes [spurious] poems. That can be somewhat difficult.” This is followed by a story relating how a grandson of the poet Mutammim b. Nuwayra extended the latter’s *dīwān* imitating his style (*yaḥtadhī ʿalā kalāmih*). The kind of critique that is necessary to recognise spurious poetry cannot, in Ibn Sallām’s opinion, clearly be expressed in words (Ṭabaḳāt, 5-7, with parallels from other crafts and arts); it is a matter of intuition comparable to the art of physiognomy, and the famous transmitter Ḳhalaf al-Aḥmar is called “the best physiognomist of all, when it comes to a line of poetry” (*kāna aḡṣa ʿl-nāsi bi-bayti ṣiʿr* [Ṭabaḳāt, 23]). There is a famous anecdote, probably first attested by Ibn Sallām (Ṭabaḳāt, 7), which compares this ability with that of the money-changer who recognises a bad coin: “Someone said to Ḳhalaf: ‘If I hear a poem that I deem good, I do not care what you and your ilk say about it.’ He replied: ‘If you accept a dirham and consider it good and the money-changer tells you it is bad, does your good opinion of it help you at all?’” It seems evident, from this and the other references mentioned above, that the metaphorical application to poetry of the term *naqd* originated in the context of distinguishing genuine from spurious, rather than good from bad poetry, although the dividing line

between the two pairs can be rather fuzzy. (It should be mentioned *en passant* that, along with misattribution, scholarly forgery and tribal forgery, Ibn Sallām recognises also a fourth category of spurious poetry [Ṭabaḳāt, 7-8]: poems that are invented and attributed to legendary figures of the past; Ibn Sallām takes Ibn Ishāḳ [q.v.] severely to task for including such material in his *Sira* and refuses to call it *ṣiʿr*, since it is only “words put together and held together by rhymes” [*kalām<sup>m</sup> muʿallaḡ<sup>m</sup> maʿkūḍ<sup>m</sup> bi-ḳawāf<sup>m</sup>*].)

#### Criticism of poetry among the philologists

At the same time, *naqd* in the sense of literary criticism is represented by various approaches. The philologists who felt responsible for the integrity of ancient poetry also paid some attention to the question of its aesthetic quality. The evidence for this is partly implicit in the selections they made to produce the famous anthologies such as the *Muʿallaḳāt*, the *Mufaḍḍaliyyāt* [q.v.] and the *Aṣmaʿiyyāt* [see AL-AṢMAʿĪ]. Most of the explicit evidence is anecdotal and in the form described above, but gradually certain critical yardsticks start being developed. Most of the early works on poetry and poets (*al-ṣiʿr wa ʿl-ṣiʿarāʾ*) and similar titles, mainly known from Ibn al-Nadīm’s *Fihrist* are unfortunately lost. The first extant *kitāb al-ṣiʿr wa ʿl-ṣiʿarāʾ*, that of Ibn Ḳutayba, contains a remarkable introduction that delineates a number of basic critical ideas: (1) Poetry consist of wording (*lafz*) and meaning (*maʿnā*), both or either of which may be good or bad. (2) Poets are either “natural” (*maḥbūʿ* “poète de génie”) or “painstaking” (*mutakallif* “poète d’étude”), for the French renditions, see M. Gaudfroy-Demombynes, *op. cit.*, 15; the latter spend much time polishing their poems, a fact that shows in the final outcome. (3) In a passage much quoted in Western studies, he describes—and prescribes—the “movements” of the ancient ode (having in mind, however, the tripartite structure characteristic of the Umayyad rather than the pre-Islamic *ḳaṣīda* and describing it as a quadripartite sequence of themes: 1. sorrow at the vestiges of the encampment; 2. memory of the former beloved; 3. camel ride through the desert; and 4. praise of the addressee); he also disallows replacing the desert ambience by a sedentary one (no ruined buildings instead of the remnants of the encampment, no roses and myrtles for the thorny shrubs of the desert). On the other hand, he includes poets up to the early decades of the 8th century in his book and emphasises that the birthdate of a poet should not be held against him, as some of the philologists who considered only ancient poetry to be true poetry were inclined to do. Since Ibn Ḳutayba is not explicit about any awareness of the “Moderns” and their *badīʿ*, he may have considered the existing poetry as one homogeneous corpus, in which case every poet would be competing with all poets present and past. However, he may also have considered only the “official” *ḳaṣīda* immutable and sacrosanct, while the new genres were outside the realm of true *ṣiʿr*.

The philological approach to poetics has produced at least two books that are first attempts at systematisation, one before and one after Ibn Ḳutayba. The former is the *Fuḥūlat al-ṣiʿarāʾ* of al-Aṣmaʿī (d. 213/828, other dates are also given [q.v.]), or rather of his student, Abū Ḥātim al-Sidjīstānī (d. 255/869 [q.v.]), who recorded al-Aṣmaʿī’s utterances, often in answer to his questions. This is a critical attempt to evaluate the production of the ancient poets in order to see who would deserve the predicate *fahl*, lit. “stallion”. The exact semantic range of this term does not clearly emerge from al-Aṣmaʿī’s pronouncements. But

the profile of the *fahl* contains certain traits that are not in doubt: he must have a prolific output and cannot be a *mukill*; he may not compose only short poems; his descriptions (*na'ī*) must stand out; he must be free of plagiarisms (*sarikāh*); he must not be a "righteous" man (*sāliḥ*), which *ipso facto* means that he must be pre-Islamic or, at least, have a *djāhili* bent (for a full list and discussion thereof, see Wen-Chin Ouyang, *Literary criticism*, 180-1). Due to the fact that al-Aṣma'ī had, above all, pre-Islamic poetry in mind, his approach was not very influential (except on his student Ibn Sallām al-Djūmahī, see above); the importance of *Fuḥūlat al-shu'arā'* resides in its being the first attempt on the part of a philologist to go beyond his usual concerns of a grammatical and lexical nature and enter the realm of criticism.

The other work of the philologist as critic is *Tha'lab's Kawā'id al-shi'r*. The attribution of this work to Tha'lab is not entirely certain, but there is no proof that it is not by him. The focus of this little book is radically different from al-Aṣma'ī's. It deals mostly with single lines of poetry, categorising them according to types of utterances, thematic content, embellishments (but Tha'lab has no term for figures of speech) and, finally, structure (the best line being one in which the two hemistichs are meaningful on their own). This "atomistic" approach proved to be preponderant throughout the history of *naqd al-shi'r*.

*The real founders of naqd: the secretaries*

In an often quoted passage, al-Djāhiz describes his search for true experts on poetry: "I searched for expertise in poetry (*ilm al-shi'r*) in al-Aṣma'ī, but I found him only good at the rare words in it. Then I betook myself to al-Akhfash, but I found him expert only in its grammar. Then I turned to Abū 'Ubayda, but I found that he transmitted only [poetry] connected with historical reports or tied in with the battle-days [of the tribes] and genealogies. I did not gain what I wanted except from the men of letters among the secretaries (*udabā' al-kuttāb*), such as al-Hasan b. Wahb and 'Abd al-Malik al-Zayyāt."

This statement in a way delineates the future of *naqd al-shi'r*, in the further development of which the state secretaries clearly had the lion's share. This is easy to understand: The secretaries, especially those charged with writing official epistles, had a pressing professional need to refine and ornament their language and to develop critical acumen in this respect. They were in constant contact with poetry and poets, as the latter flocked to the seats of power to find sympathetic sponsors (caliphs, viziers, governors, etc.) who would enable them to live as professional poets. At some point there existed at the caliphal court an "Office of Poetry" (*Diwān al-Shi'r*), in which the incoming praise poetry was screened by *kuttāb* to see if it was worthy of the recipient. This distribution of power between poets and secretaries is a far cry from the ancient situation, where the poet had greater prestige than the producer of ornate prose, the tribal orator (*khātib*), and where, according to al-Djāhiz (*Bayān*, i, 45-52), the talent for each art was clearly assigned: poetry and oratory were rarely combined in one person. In 'Abbāsīd society a radical change can be discerned. The secretaries not infrequently also composed poetry, though mainly in the private and intimate genres of love and wine poetry and the like, and not in the public and official genres of the professional poets, such as praise, congratulation, and condolence. When their official epistles began being collected, roughly from the 4th/10th century onward, it was not uncommon that a secretary's production was rep-

resented by two *diwāns*, one dedicated to epistles and the other to poems. In this context the procedure of *hall al-manzūm*, "dissolving the versified" (i.e. turning poetry into prose), became rather popular, especially with the secretaries who used it to add elegant conceits and allusions to their ornate epistles (on the theory and techniques of *hall*, see A. Sanni in *Bibl.*).

The close symbiosis between secretaries and poets was fertile ground for the development of literary criticism. We have a fair number of reports about gatherings in which questions of poetry and poetics were discussed, and we have some of the literature that sprang from these discussions. As already indicated, the book that made the term *naqd al-shi'r* current was written by Ḳudāma b. Dja'far. He was a middle-level administrator in the caliphal chanceries, originally Christian and with a known interest in Greek philosophy, especially logic. This clearly had its effect on the very systematic presentation in his book: a definition of poetry ("metred rhymed speech referring to a meaning" [*Naqd*, 2]) yields the four elements "metre rhyme, wording, meaning," which are then evaluated in isolation and in combination with each other (he finds that only the combinations wording/meaning, wording/metre, meaning/metre and meaning/rhyme are meaningful subjects for evaluation [*Naqd*, 9]). In accordance with this, the book falls into two major parts, one on *nu'ūl* "good qualities", the other on *'yūb* "bad qualities". It is worth noting that the vast majority of Ḳudāma's examples are from early poetry, although there is a sprinkling of "modern" poets as well, up to Abū Tammām (d. ca. 232/845 [g.v.]). The difference between "Ancients" and "Moderns" is, of course, known to him (*Naqd*, 17, l. 7), but it does not inform the structure of his book.

His contemporary Ibn Ṭabātabā (d. 322/934) produced an entirely different book in his *'yār al-shi'r*. "The criterion of poetry". Unfortunately, the little we know about his life does not tell us if he was a secretary in his hometown of Iṣfahān, but he certainly was a respectable poet. His book does not show a systematic arrangement; it is more like a collection of loosely connected but highly perceptive essays. He is almost painfully aware of the burden of tradition that the "Moderns" feel *vis-à-vis* the "Ancients". All the good things have already been said. However, there is an additional consideration, which makes the situation bearable: The Ancients aimed at the truth in their poems (except for approved hyperbole), while the Moderns (he says: "the poets of our time") meet approval only when they have to offer something subtle, novel, eloquent, witty, or elegant, without paying attention to the realities/truths (*haḳā'ik*) that might correspond to their words. As a result the latter's productions were "artificial" (*mutakallaf*), not springing from sound talent (*ghayr sādir 'an ṭab' ṣāliḥ*) (*'Yār*, 13). This is an admirable diagnosis of literary mannerism, in that (a) the poetic language moves away from reality, turning to inbreeding and the construction of ever more intricate conceits, (b) the craving of the public for innovation puts pressure on the poet to oblige and, consequently, (c) the poetry becomes ever more "artificial". Though this can only be considered a strong tendency, not a necessity, it is noteworthy that, in the section on poems that are without "artificiality" and prose-like in their easy flow, Ibn Ṭabātabā quotes twenty-four examples, twenty-two of which are "ancient". Of the remaining two, one is by 'Abd al-Malik al-Hārithī, who is said by Ibn al-Mu'tazz (d. 296/908 [g.v.]) to be a poet in the Bedouin vein, while the other is the well-known *muhdath* Marwān b.

Abī Ḥafṣa (d. ca. 182/797 [q.v.]), who was rather conservative in his poetic ways (*Ṭabaḳāt*, 276-80). In another passage he indicates the way out for "modern" poets: he should take (*akhḏh, isti'āra*) a poetic idea from a predecessor and improve on it (interestingly, he does not use the term *ṣarīḥa*, as others often do) (*Ḥyār*, 123, 126).

However different Ḳudāma and Ibn Ṭabāṭabā may be in their presentations, they resemble each other in their basic goal: to identify the good and the bad in poetry, whether it reside in wording, meaning, rhyme or metre. Both have a preference for longish quotations to make their point (Ibn Ṭabāṭabā more so than Ḳudāma), an unusual phenomenon in the literature of *naḳd al-shi'r*. This is tied in with the question: do both works belong to the same "genre" of meta-discourse, i.e. do they give rules on how to compose poetry (a "poetics" in the strict sense) or on how to evaluate it (a theory of criticism)? Ibn Ṭabāṭabā uses language that tells the would-be poet what to do, while Ḳudāma does not.

Ibn Ṭabāṭabā is said to have greatly admired the poetry of Ibn al-Mu'tazz, an admiration that was reciprocated (Yākūt, *Iṣṣḥād*, ed. Rifā'i, xvii, 144-5), although Ibn Ṭabāṭabā is not included in the latter's *Ṭabaḳāt al-shu'arā' al-muḥḏathīn*. Ibn al-Mu'tazz was indeed a poet of the first magnitude but, as a member of the caliphal house, he was also in constant contact with high-level secretaries and was himself an accomplished prose stylist (see e.g. his *Fuṣūl al-tamāthīl fī tabāshīr al-surūr*, ed. Džürdj Kanāzi' and Fahd Abū Ḳhadra, Damascus 1410/1989, and his *Kitāb al-Adāb*, ed. Šabīḥ Radīf, Bagħdād 1392/1972). He wrote the third important early work in the area of *naḳd al-shi'r*, the *Kitāb al-Badi'*, "The Book of the Novelty". The term *badi'* "novel, original" was already current at the time as a somewhat fuzzy technical term denoting the distinguishing trait of "modern" poetising. The transmitters of ancient poetry allegedly did not know this term (and, presumably, what it stood for); only the "modern" poets and critics did. Since some of the transmitters were also "modern" poets, this can only be a rule of thumb. Definitions are not offered in the literature preceding Ibn al-Mu'tazz. But wherever the term is applied to a line of poetry that is actually quoted, it invariably refers to what might be called the "loan metaphor", i.e. the type of metaphor, for which the term *isti'āra* "borrowing" was originally coined (example: "claws of death", where the "claws" are taken from a "predator" and given "on loan" to "death") (cf. W. Heinrichs, *Isti'ārah and Badi' and their terminological relationship in early Arabic literary criticism*, in *ẒGAIW*, i [1984], 180-211). While the ancient poets generated these metaphors on the basis of an analogy, comparing e.g. the inevitability of death with the relentlessness of the predator's attack, the "modern" poets often used a different generating mechanism: They started from an existing metaphor and, on the level of the analogue, moved to an adjacent element, which then became a "claws"-type metaphor. E.g. from the verb metaphor "drink" in "to make s.o. drink blame" (i.e. "make him swallow it") the adjacent element "water" is extracted, which forms the new genitive metaphor "the water of blame". The critics, though not aware of any differences in the generating mechanisms between "Ancients" and "Moderns", realised that many of the loan metaphors of the "Moderns" were surprising, farfetched, and at times outright abstruse, and they labelled them *badi'*, the "novelty". Since *badi'* is derived from the same root as *bād'a* "religious innovation", it has a possible

negative odour and was indeed abhorred by some more conservative critics. This is where Ibn al-Mu'tazz entered the picture. Being himself a "modern" poet and faced with *badi'* rejectionists, he declared the main objective of his book to be the proof that *badi'* was not "novel" at all, but occurred in all ancient text genres: Ḳur'ān, Ḥadīth, gnomic sayings and poetry. He thus attempted to legitimise the "novelty" by pointing to respectable precedents. The only "novelty" in "modern" poetry (and other genres), as he remarks, is the unbridled proliferation of this phenomenon, especially in the poetry of Abū Tammām, who was the focal point of much critical attention, pro and con. One has to be aware, though, that in Ibn al-Mu'tazz the term *badi'* has a more comprehensive meaning: according to the author it comprises the following five figures of speech: (1) loan metaphor (*isti'āra*); (2) paronomasia (*taḏjīn*); (3) antithesis (*muṭābaḳa*); (4) echoing the rhyme at the beginning of the line (*radd a'djāz al-kalām 'alā mā taḳaddamahā*); and (5) theologism (*madḥhab kalāmī*, referring to imitations of the convoluted thinking and style of the dialectic theologians). He admits, however, his uncertainty as to whether all of these five subcategories really should be subsumed under *badi'* or whether additional figures of speech should be included, and he leaves that decision to the reader. In order not to be accused of being ignorant of other ornaments of speech, he later added an appendix of twelve figures which he called *maḥāsin* "beauties". The vagueness of his *badi'* concept makes it difficult to identify the criterion that separates the *badi'* figures from the *maḥāsin*. However, the loan metaphor is clearly of central importance in the book: (1) When *badi'* is exemplified at the beginning of the work, it is loan metaphors that are used as examples, without any warning that *badi'* might be something quite different. (2) The loan metaphor takes first place. (3) Most intriguingly, the other *badi'* figures, which are all characterised by repetition, are not seldom combined with a loan metaphor, the latter forming one of the terms of the repetition. This may lead one to believe that the other figures were first drawn into the *badi'* orbit due to cases that contained loan metaphors; subsequently, the term was extended also to non-metaphoric examples. Ibn al-Mu'tazz's uncertainty may reflect the vagaries of this intermediary stage.

The *Kitāb al-Badi'*, originally composed as a legitimisation of the "novel" features of "modern" poetry, effectively launched the term *badi'* as a collective noun referring to "rhetorical figures", which found its scholastic culmination in the discipline called *ilm al-badi'*, as finally established as part of the "science of eloquence" (*ilm al-balāgha*) by al-Ḳhaṭīb al-Ḳazwīnī (d. 739/1338 [q.v.]). The distinction between *badi'* and *maḥāsin* was not continued after Ibn al-Mu'tazz.

#### *The controversy around Abū Tammām*

One of the triggers for the composition of the *Kitāb al-Badi'* had been the controversy around the poet Abū Tammām, who was considered an addict of *badi'* and the prototype of the *ṣarī'a* poet (*maṣnū'*), who uses rhetorical figures to add a new point or even a new level to a line of poetry. Ibn al-Mu'tazz himself wrote a short treatise on the merits and defects of Abū Tammām's poetry (*Risāla fī maḥāsin shi'r Abī Tammām wa-masāwīhi*, preserved by al-Marzubānī, *al-Muwashshah*, 277ff.), in which he mostly critiques single lines and mentions several times that he is not the first to voice that particular criticism. But the first large-scale critical appraisal is that of al-Ḥasan b. Bishr al-Āmidī (d. 371/981), which contrasts the "artful" (*maṣnū'*) Abū

Tammām with his counterpart (and disciple!), the “natural” (*maṭbūʿ*) poet al-Buḥturī (d. 284/897 [q.v.]); the fitting title of the book is “The weighing of the poetry of Abū Tammām and al-Buḥturī” (*al-Muwāzana bayn shiʿr Abī Tammām wa ʿl-Buḥturī*, see *Bibl.*). Al-Āmidī was a secretary, both in Baṣra and Baghdad, and he was also an accomplished poet and a trained grammarian (Yāqūt, *Irshād*, ed. Rifāʿī, viii, 75-93). This was clearly a good basis for his main claim to fame, his works on literary criticism. One might say that he established the field as a field, because he subjected a number of the existing *nakd* works to a critical review. Unfortunately, we have only the titles of these works: “Mistakes to be found in the ‘Criterion of Poetry’ by Ibn Ṭabātabā” (*K. Mā fi ʿIyār al-shiʿr li-(I)bn Ṭabātabā min al-khaṭaʾ*), “Disclosure of the error of Kudāma b. Djaʿfar in his ‘Assaying of Poetry,’” (*K. Tabayīn ghalat Kudāma. b. Djaʿfar fi Kitāb Nakd al-shiʿr*), and “Refutation of Ibn ʿAmmār in his faulting of Abū Tammām” (*K. al-Radd ʿalā Ibn ʿAmmār fīmā khaṭṭaʾa fihī Abū Tammām*) (for the last mentioned, Abu ʿl-ʿAbbās Aḥmad b. ʿUbayd Allāh Ibn ʿAmmār al-Thakafī [d. ca. 314/926], see Yāqūt, *Irshād*, ed. Rifāʿī, iii, 232-42).

In addition, he wrote the following works in the critical genre, of which again we have only the evocative titles (omitting the ubiquitous *Kitāb*):

“Unstringing the strung” (*Nathr al-manzūm*), i.e. turning poetry into prose, see above;

“That the ideas of two poets do not agree by chance” (*Fi anna ʿl-shāʿirayn lā yattaḥḥiqū khawātiruhumā*); the phenomenon negated here by al-Āmidī is also known as *tawārud al-khātīrayn* and is one of the ways to explain identical or similar lines, short of plagiarism;

“The difference between the individual and the shared with regard to the motifs of poetry” (*Fark mā bayn al-khāṣṣ wa ʿl-muṣhtarak min maʿāni al-shiʿr*), the distinction between attributable motifs and those in the public domain, an important issue in the discussion of plagiarism [see SARIKA, in Suppl.];

“Preference of the poetry of Imruʿ al-Qays over [that of the other] pre-Islamic poets” (*Tafḍīl shiʿr Imrūʿ al-Qays ʿalā ʿl-Djāhūliyyīn*); and “The motifs in the poetry of al-Buḥturī” (*Maʿāni shiʿr al-Buḥturī*).

His main preserved work, the “Weighing”, is the first serious attempt at applied criticism. Before entering into the actual comparison between the two poets, al-Āmidī collects and discusses what the adherents of either poet have already amassed in the way of critical opinions. But he first takes the opportunity to characterise the two poets as the two opposites on the *maṣnūʿ-maṭbūʿ* scale: al-Buḥturī is Bedouinic in his poetry, natural, in accordance with the “ancients”; he does not leave the well-known “mainstay of poetry” (*ʿamūd al-shiʿr*); he shuns knotted syntax and forced expressions and uncouth words. Abū Tammām, on the other hand, is strenuously affectatious, a master of conceits who forces words and meanings, and his poetry does not resemble the poems of the “Ancients”. Interestingly, he also describes the typical adherents of the two poets. In al-Buḥturī’s case they are: the secretaries, the Bedouins, the “natural” poets, and the people of eloquence, while Abū Tammām has attracted the “people who are after conceits” (*ahl al-maʿāni*), the mannerist poets (*al-shiʿarāʾ aṣḥāb al-sanʿa*), and those who incline to sophistication and speech philosophical (*al-tadkīk wa-falsafī al-kalām*) (*Muwāzana*, i, 6). Al-Āmidī also remarks that the admirers of Abū Tammām allege that he invented a new style of poeising, but the followers of al-Buḥturī deny this saying that he followed the model of Muslim b. al-Walīd and pushed

it to an extreme, and that even Muslim did not invent this style but found the *badīʿ* phenomena scattered in the old poetry and sought them out consciously in his own poetry (on Muslim’s role in this respect, see W. Heinrichs, *Muslim b. al-Walīd und Badīʿ*, in Heinrichs and G. Schoeler (eds.), *Festschrift Ewald Wagner zum 65. Geburtstag*, Band 2: *Studien zur arabischen Dichtung*, Beirut and Stuttgart 1994, 211-45). In this context, he makes use of Ibn al-Muʿtazz’s permission to restrict the *badīʿ* phenomena by limiting them to three: loan-metaphor, antithesis and paronomasia (*istiʿāra, ṭibāk, taḍjīs* [q.v.]) (*Muwāzana*, i, 14). This testifies to his experience as a poet and critic, as these three figures of speech are clearly the most pervasive and popular in *muhdath* poetry.

The overall structure of al-Āmidī’s work is as follows. First, a literary debate between the follower (*ṣāhib*) of Abū Tammām and that of al-Buḥturī, both anonymous (*Muwāzana*, i, 8-53); second, a collection of defects of either poet, including plagiarisms, defects in meaning, ugly loan metaphors, paronomasias and antitheses (only with Abū Tammām!), and metrical irregularities (*Muwāzana*, i, 54-388); third, the actual weighing of verses of the two poets against each other, arranged according to the themes and motifs that are usually taken up in the “official” long poem, the *kaṣīda* [q.v.]. Al-Āmidī promises, and tries hard, to be objective in his evaluation, but cannot really hide his preference for the “natural” style of al-Buḥturī.

#### *The controversy around al-Mutanabbī*

The next great literary controversy was sparked by the poetic oeuvre of al-Mutanabbī (d. 354/955 [q.v.]). Unlike the literary fights about Abū Tammām that were fought posthumously, much of the new debate happened already during al-Mutanabbī’s lifetime. Since he was on all accounts a difficult person, he made enemies easily, and the writings attacking him seem to be full of personal animus, which tends to cloud any valid points they might try to make. Al-Ṣāhib Ibn ʿAbbād (d. 385/995 [q.v.]), vizier to two Buyid princes, poet and man of letters, sponsor of scholars and poets, had early on invited al-Mutanabbī to join him, but had not even received a reply (al-Thaʿālibī, *Yatīma*, ed. ʿAbd al-Hamīd, i, 138). His “Treatise on revealing the blemishes and defects of the poetry of al-Mutanabbī” (*Risāla fi ʿl-Kashf ʿan masāwī shiʿr al-Mutanabbī wa-ʿuyūbihī*) was, consequently, “written in a bitter spirit” and raised some eyebrows (Ouyang, *Literary criticism*, 150). It was clearly vengeful nit-picking, considering the fact that Ibn ʿAbbād later wrote a little collection with the title “Current proverb[ial] lines from the poetry of al-Mutanabbī” (*al-Amḥāl al-sāʿira min shiʿr al-Mutanabbī*, ed. Muḥammad Ḥasan Āl Yāsīn, *Nafāʾis al-makḥḥūtāt*, iv, Baghdad 1385/1965, 21-78) and used “prosified” versions (*ḥall*) of al-Mutanabbī’s poetic lines in his ornate epistles (al-Thaʿālibī, *Yatīma*, ed. ʿAbd al-Hamīd, i, 139-42). He was thus fully aware of the qualities of al-Mutanabbī’s poetry. Similarly, when al-Mutanabbī came to Baghdad, he snubbed the Būyid vizier al-Muhallabī [q.v.] by failing to address a praise poem to him (alleging that he praised only kings), whereupon al-Muhallabī urged the literary critic al-Ḥātimī (d. 388/998 [q.v. in Suppl.]) to engage al-Mutanabbī in a polemical debate concerning the latter’s poetry. Al-Ḥātimī subsequently wrote this up under the title “The scalp-cleaving treatise concerning the plagiarisms of Abu ʿl-Tayyib al-Mutanabbī and his corrupt poetry” (*al-Risāla al-mūdiḥa fi dhikr sarikāt Abī ʿl-Tayyib al-Mutanabbī wa-sākiṭ shiʿrihī*). Although the bias is tangible and al-Mutanabbī appears obtuse and apologetic,

the treatise does contain a number of interesting discussions of critical topics on the part of al-Ḥatīmī. He was after all the author of a general book on poetics, the "Ornament of apt quotation, on the craft of poetry" (*Ḥilyat al-muḥādara fī šin'at al-šīr*). This work is mainly compilatory but brings a number of different angles to bear on literary criticism: figures of speech, best verses on specific themes and topics, a large section on plagiarism and related topics, and—for the first time in *nakd*—a treatment of *maḍjāz* in poetry; the latter is, however, not very successful, as al-Ḥatīmī uses the term in its wide application as we know it from Ibn Ḳutayba, and not in the later sense of "figurative speech", which 'Abd al-Ḳāhir al-Ḍjurdjānī (see below) introduced into the literary field (cf. Heinrichs, *Contacts between scriptural hermeneutics and literary theory in Islam. The case of Majāz*, in *ZGAW*, vii [1991-2], 253-84). Another attack on al-Mutanabbī was launched by the Egyptian poet Ibn Wakī' al-Tinnīsī (d. 393/1003) in his "Dealing fairly with the lifter and the lifted, regarding the divulgence of the plagiarisms of Abu 'l-Ḥayyib al-Mutanabbī" (*al-Munṣif li 'l-sārīk wa 'l-masrūk fī iẓhār sarīkāt Abi 'l-Ḥayyib al-Mutannabī*). In an introductory section he discusses the figures of speech, basing himself on Ibn al-Mu'tazz, Ḳudāma, and (without naming him) al-Ḥatīmī.

The author who tried to right the wrongs committed against al-Mutanabbī was al-Ḳāḍī al-Ḍjurdjānī (d. 392/1002) in his "Mediation between al-Mutanabbī and his adversaries" (*al-Wasāta bayn al-Mutanabbī wa-kḥusūmih*). The author belonged to the entourage of Ibn 'Abbād for a while and was later appointed chief *Kāḍī* of al-Rayy; he was also a recognised poet. His book is the apex of applied literary criticism: fair to the poet, cognisant of the existing critical literature and interested in the general problems of literary evaluation (as witnessed by a fifty-page introduction, before the *Wasāta* actually begins).

Alongside the books and treatises written about, and often against, al-Mutanabbī, there are also the commentaries on his *Diwān* to consider, as they do at times go beyond the mere explanation of a line and offer evaluative comments. Moreover there is some disagreement among the commentators, which also may have critical implications. The earliest commentaries, the two written by al-Mutanabbī's friend, the grammarian Ibn Ḍjinnī (d. 392/1002 [q.v.]), contain a number of interpretations and justifications that were considered incorrect by other critics, such as al-Wahīd (Abū Ṭalīb Sa'd b. Muḥammad al-Azdī al-Baghḍādī, d. 385/995), Abu 'l-Faḍl al-'Arūḍī (d. 416/1025) and Ibn Fūradja (Muḥammad b. Aḥmad, d. after 437/1045) (on critics of Ibn Ḍjinnī, and especially al-Wahīd, see I. 'Abbās, *Ta'riḫh*, 279-85; for examples see also Heinrichs, *Obscurity in Classical Arabic poetry*, in *Mediaevalia*, xix [1996, for 1993], 239-59). They sometimes attacked Ibn Ḍjinnī rather violently, and often not without reason: he was after all, in spite of his enthusiasm for al-Mutanabbī, a grammarian and expert on ancient poetry. One of Ibn Fūradja's "counter-commentaries" has been published (see *Bibl.*). He is also quoted about one hundred times in the commentary of al-Wahīdī (d. 468/1075), often together with al-'Arūḍī and here and there with other scholars, offering fascinating insights into their interpretive and critical activities.

The debate about al-Mutanabbī did not entirely cease after this first flurry of activity in the 4th/10th and 5th/11th centuries. Even much later, books were still composed about him, but they tend to be derivative, such as Yūsuf al-Bad'ī (d. 1073/1662), *al-Ṣubḥ*

*al-munabbī 'an ḥaythūyyat al-Mutanabbī*, ed. Muṣṭafā al-Sakkā *et alii*, Cairo 1963. A notable exception is the critical comparison between al-Mutanabbī and Abū Tammām by the Andalusian author Ibn Labbāl (Abu 'l-Ḥasan 'Alī b. Aḥmad al-Šarīshī, d. 582/1186), *Rawḍat al-adīb fī 'l-taḍḍīl bayna 'l-Mutanabbī wa-Ḥabīb*, ed. M. Ibn Šarīfa in idem, *Abū Tammām wa-Abu 'l-Ḥayyib fī adab al-Maghāriba*, Beirut 1986, 197-222.

Further systematical research: *al-Kḥafāḍjī and 'Abd al-Ḳāhir al-Ḍjurdjānī*

Later poets do not appear to have become the focus of critical attention on such a grand scale. But one unique work should at least be mentioned here: a rather original literary-critical treatment of the poetry of Imru' al-Ḳays by Naḍjm al-Dīn al-Tūfī (d. 716/1316 [q.v.]) with the title "Tables laden with date-curd, on the finer points of Imru' al-Ḳays" (*Maḥā'id al-ḥays fī faḥā'id Imr' al-Ḳays*, ed. Muṣṭafā 'Ulayyān, 'Ammān 1414/1994). However, in general, the *nakd* literature returned to general treatments of the whole field. A transitional figure in this respect is the famous poet and sceptic, Abu 'l-'Alā' al-Ma'arri (d. 449/1058 [q.v.]), who was also an expert philologist and an ardent admirer of al-Mutanabbī. He composed two commentaries on the latter's *Diwān* (see *Bibl. for Mu'ḍjiz Ahmad; al-Lāmī al-'Azīzī* is in ms. Istanbul, Süleymaniye, Hamidiye 1148, for the Arabic text and translation of its introduction, see P. Smoor, *Kings and Bedouins in the palace of Aleppo as reflected in Ma'arri's works*, Manchester 1985, 223-4). His other works are strewn with a number of critical ideas (see 'Abbās, *Ta'riḫh*, 379-91), but he apparently did not treat this topic systematically in a separate book. However, his student Ibn Sinān al-Kḥafāḍjī (d. 466/1074) did so in his *Sirr al-faṣāḥa* (see *Bibl.*), in which Abu 'l-'Alā' is quoted quite frequently. Ibn Sinān wrote poetry, but he was probably first and foremost a statesman (not a successful one, since as governor of the fort of 'Azāz he paid with his life for his temerity in seceding from his Mirdāsīd overlord in Aleppo). He says quite clearly that the discourse of the scribe is much more important than that of the poet (*Sirr*, 280): Poetry is a superfluity that can be dispensed with" (*al-šī'rū faḍl<sup>m</sup> yustaghna 'anhu*). His book is thus more generally *nakd al-kalām*. His approach is very systematic, starting with sounds and letters—unlike others he is aware of the difference between the two—and going on to words (*alfāz*) in isolation and in combination, this being the domain of *faṣāḥa*, and finally discussing meanings (*ma'ānī*) as expressed in those words, in isolation and in combination; this is the domain of *balāgha*. A certain similarity to Ḳudāma is unmistakable; he also explicitly quotes him. Among later critics, it is characteristically the scribe Ḍiyā' al-Dīn Ibn al-Aṭḥīr (d. 637/1239 [see *IBN AL-AṬḤĪR*]), who has a predilection for him. Ibn Sinān's *kātib* attitude also emerges from his anti-mannerist insistence on clarity and avoidance of forced style (*Sirr*, 282, final advice at the end of the book).

The same attitude can also be found already earlier in al-Marzūḳī's (d. 421/1030 [q.v.]) important introduction to his commentary on the *Hamāsa* of Abū Tammām. One of the topics discussed there is the notion of *'amūd al-šī'r* "the mainstay of poetry". Taking this term from al-'Amīdī and al-Ḳāḍī al-Ḍjurdjānī, who used to characterise the ancient poets and the "natural" ones among the "modern" poets as following the *'amūd al-šī'r*, al-Marzūḳī draws up a list of qualities that defines the notion, seven in all, namely, elevated appropriate meaning, firm wording, accurate description, apposite simile, coherence and

choice of pleasant metre, affinity between donor and receptor of a metaphor, and close fit between wording and meaning. This is a veritable manifesto of anti-mannerist poetising; it clearly tries to curb the more outrageous innovations of the "Moderns".

A contemporary of al-Khafādī in the Eastern Islamic world was the greatest genius of Arabic literary theory, 'Abd al-Kāhir al-Djurdjānī (d. 471/1078 or 474/1081 [q.v. in Suppl.]). He was a grammarian and minor poet, but not a scribe. He never travelled *fi talab al-ilm* and had few teachers of whom we know; al-Kādi al-Djurdjānī (see above) was apparently one of them. His two critical works, *Asrār al-balāgha* "The mysteries of eloquence", and *Dalā'il al-ʿdāz* "The signs of the [Kur'ān's] inimitability", do overlap to some extent, but the former deals with poetic discourse while the latter focuses on Kur'ānic discourse. Both are highly original and proved to be historically most important. The *Asrār* concentrate on imagery, i.e. the essence and the function of simile, simile-based metaphor, analogy and analogy-based metaphor. Al-Djurdjānī was the first, and in a way maybe the last, to identify a major constituent of *muhdathūn* poetic language, the *takhyīl* [q.v.], "phantastic re-interpretation of facts", in the guise of mock aetiologies, mock analogies and a number of other techniques, often based on metaphors taken literally. This allowed him to distinguish between "rational" (*ʿakli*) and "phantasmagorical" (*takhyīlī*) motifs and to sing the praises of the latter as nothing less than verbal alchemy; he still supports, nonetheless, the greater "ethical" value of the "rational" motifs, since *takhyīl* entails a poetic lie (and thus does not occur in the Kur'ān). While this work should thus clearly be reckoned a part of the *nakd al-shi'r* enterprise (this judgement is corroborated by the many perceptive interpretations of poetic prooftexts included in it), his book on the inimitability of the Kur'ān, though replete with valuable observations on poetry, focuses on *nazm* [q.v., section 2, in Suppl.], "syntactic ordering to achieve a certain meaning." *Nazm* is the only criterion by which the *ʿdāz* can be proven, since it applies to every text, and thus to every *āya*, while other textual phenomena that might be evaluated, as e.g. metaphors, occur only sporadically. Even metaphor itself is constituted by *nazm*, i.e. the context determines the metaphoricalness of the expression at hand.

#### *The influence of the Kur'ānic discourse*

Despite the overlap between the two books of al-Djurdjānī, the *Dalā'il* belongs to a different strand of tradition. The Kur'ānic discourse of the *Dalā'il* had, of course, its forerunners, which need not detain us here, except inasmuch as they may have had an influence on *nakd al-shi'r*. There are, actually, at least two Kur'ānic discourses that have some bearing on *nakd al-shi'r*. One appears as part of the works on legal theory; it often forms a section called *bayān* ("clarity") and deals with linguistic questions of hermeneutics, such as literal (*ḥakika*) vs. figurative language (*maḍīz*). There is, however, comparatively little overlap between the *bayān* of the legal scholars and the *bayān* [q.v.] of the rhetoricians. More important is the other Kur'ānic discourse, that of the *ʿdāz* [q.v.]. And here it is, in particular, one strand in the discussion of the inimitability of the Kur'ān, namely, the proof of the stylistic unsurpassedness of the revealed text, where contacts with *nakd* arose. The central term, with many of the authors in this field, is *nazm*, the "ordering" of meanings and words into larger units. However, this had little impact on *nakd*. Strangely, the scholar who did not make use of the *nazm* notion had the

most influence on the field of *nakd*: al-Rummānī (d. 384/994 [q.v.]). His little treatise, "Notes on the inimitability of the Kur'ān" (*al-Nukat fi ʿdāz al-Kur'ān*), based on the central notion of *balāgha*, "eloquence", divides this notion into ten parts, a number of which are very pertinent also for evaluations of poetry: brevity (*ʿdāz*), simile (*tashbih*), substitution metaphor (*isti'āra*) and emphasis (*mubālagha*). Al-Rummānī was used extensively, but without acknowledgment, by Abū Hilāl al-ʿAskarī (d. after 400/1010 [q.v.]) in his *K. al-Šimʿatayn*. This book might be called the first encyclopaedia of literary theory, as it is a compilation, though not devoid of original ideas, from most of the earlier literature on rhetoric (*khataba*), *nakd al-shi'r* and *ʿdāz*. Since these different strands of literary theory at times used the same term in different meanings (e.g. *isti'āra* as "loan metaphor" in *nakd*, "substitution metaphor" or even "figurative speech in general" in Kur'ānic discourse), certain contradictions in the materials collected by Abū Hilāl remain. This lack of homogeneity also besets other authors, such as Ibn Rashīk (d. 456/1063 or 463/1071 [q.v.]), who quote al-Rummānī. It was 'Abd al-Kāhir al-Djurdjānī who in his two books (see above) cleaned up the terminological mess resulting from the confluence of the poetic and the Kur'ānic discourses. But before him there was one more interesting interface between the discourses, in al-Bakillānī's (d. 403/1013 [q.v.]) *ʿdāz al-Kur'ān*. Three parts of this book are especially pertinent here (these parts were translated by G.E. von Grunebaum, *Tenth-century document*): (a) an extensive section on *badī'* "rhetorical figures", which, however, according to him are not relevant for proving the *ʿdāz*, since they are attainable by man through training and experience; (b) a critique of the *Mu'allafa* of Imru' al-Kays [q.v.]; and (c) a critique of a famous *lamiyya* of al-Buhturī (*Ahḥ bi-dhālikumu 'l-khayālī 'l-mukbilī*, see al-Buhturī, *Dīwān*, ed. al-Ṣayrafi, 1741-52). Al-Bakillānī is fairly well read in the relevant literature, quoting Kudāma, Abū Hilāl al-ʿAskarī and al-Rummānī (the last one anonymously). His analyses of the two poems are, of course, intended to show their deficiency against the background of the inimitable divine style. Subsequent literary criticism was not influenced by them.

#### *The Muslim West*

At about the same time, there was a flourishing of poetry and literary criticism in Zīrid Kayrawān, which may also be considered the beginning of serious critical activities in the Muslim West. Much Eastern material was made accessible by the excellent anthologies of al-Ḥuṣrī (d. 413/1022 [q.v.]), in particular his "Flowers of maxims and fruits of keen minds" (*Ẓahr al-ādāb wa-ḥamar al-albāb*, ed. 'Alī Muḥammad al-Bidjāwī, Cairo 1372/1953) and "Collection of jewels among jocosities and rarities" (*Djam' al-ḥawāhir fi 'l-mulaḥ wa 'l-nawādir*, ed. al-Bidjāwī, Cairo 1372/1953). Both of them contain many passages in which the author either reports or presents critical viewpoints. Al-Ḥuṣrī was the mentor of Ibn Rashīk (d. 456/1064 or 463/1071 [q.v.]) and Ibn Sharaf al-Kayrawānī (d. 460/1067 [q.v.]), both eminent poets and critics, and fierce competitors for most of their lives. Ibn Rashīk's main work, "The pillar, on the beauties, etiquette, and critique of poetry" (*al-ʿUmda fi maḥāsin al-shi'r wa-ādābih wa-nakdih*) is a comprehensive handbook on poetry that includes discussions of the major critical issues, such as wording and meaning (*lafz wa-ma'nā*), natural and "artificial" poetry (*maṭbū' wa-maṣnū'*) and plagiarism (*sarka, akhdh*). His slim volume "Gold filings, on the criticism of the poems of the Arabs" (*Kurādat al-dhahab fi nakd ash'ar al-arab*) gives the impression of

a collection of notes on various topics of literary criticism, including very subtle instances of intertextuality (see especially the chapter on *tafīk*, *Kurāda*, 95-106, "piecing together" a line of poetry from two or more existing lines, a method skilfully used by Abu 'l-'Alā' al-Ma'arri). Ibn Rashīk's rival, Ibn Sharaf, is less well known, due to the loss of most of his writings; his evaluation of earlier poets is preserved in a short work, probably fragmentary, with the title "Questions of [literary] criticism" (*Masā'il al-intikād*, or more fully, as in the colophon, *al-makāma al-ma'rūfa bi-Masā'il al-intikād*). The rather aphoristic critique of a large number of poets is followed by a second part in which general guidelines for the critic are developed, in part on the basis of a critical, and moralistic, reading of verses from the *Mu'allaka* and other poems by Imru' al-Qays [q.v.]. Particularly noteworthy is the literary genre of the *makāma* [q.v.] that Ibn Sharaf has chosen for his presentation: he attributes the critical opinions in his work to one Abu 'l-Rayyān and he says unmistakably in his introduction that he "invented" (*ikhṭalaktu*) the narratives included in his work.

At about the same time, al-Andalus also entered the scene with important contributions (disregarding here the works that introduced Eastern transmissions and ideas into al-Andalus, like the *adab* encyclopaedia "The unique necklace", *al-ʿIkd al-farīd* of Ibn 'Abd Rabbih [d. 328/940 (q.v.)] and the "Dictations", *al-Amālī*, of al-Kālī [d. 356/967 (q.v.)]). The eminent poet Ibn Shuhayd (d. 426/1035 [q.v.]), needled by adverse criticism of his poetry, wrote an imaginative and imaginary report, full of wit and haughtiness, about his visit to the country of the jinn and his discussions with the familiar spirits of famous poets and prose writers, with literary critics among the jinn, and, finally, with two animals, a mule and a goose, who turn out to be the familiar spirits of two contemporaries. Much of the story revolves around the question of talent and training as prerequisites for successful poetic activity; the translator, James Monroe (see *Bibl.*), discovered a Neo-Platonic blueprint underlying the author's theory of "creativity".

Ibn Shuhayd's friend, Ibn Ḥazm (d. 456/1064 [q.v.]), should briefly be mentioned here, because his logical work "Bringing close to the definition of logic" (*al-Takrīb ilā ḥadd al-manṭiq*) leads over to the philosophical poetics in the next paragraph, although it is still very much "Arabic" in its contents. Two ideas stand out in his presentation. One is the notion that the essence of poetry is that it consists of false statements. This is not a new statement, being both part of the Greek tradition known to the Arab world (see below on Ibn al-Bannā') as well as the indigenous one, where the adage *aḥsanu* (var. *khayru*) 'l-*shī'ri akḥabuh* "the best poetry is the most untruthful one" is often quoted. However, the exclusivist view maintained by Ibn Ḥazm is rare (in the various non-formal definitions of prose and poetry, see Heinrichs, *Dichtersche Rede*). The other unusual notion is his tripartite typology of poets: to the usual types characterised by *tab'* "natural talent" or *sinā'a* "artfulness" he adds a third one, distinguished by *barā'a* "virtuosity". From his description this type appears like a synthesis of *tab'* and *sinā'a*; *barā'a* is the ability to make intricate conceits appear natural (on this and related topics, see G. Schoeler, *Einige Grundprobleme der autochthonen und der aristotelischen arabischen Literaturtheorie* [AKM, Band xli, 4], Wiesbaden 1975, 33-56, and his additions in *ZDMG*, cxvii [1976], \*79\*).

*Philosophical poetics and the Maghribī "school"*

A short aside on philosophical, or logical, poetics

is appropriate here. Aristotle's *Rhetoric* and *Poetics* were translated from Syriac into Arabic. The former exists in a *naql kadīm*, an "old" pre-Hunayn translation, the latter in the translation of Abū Bishr Mattā (d. 328/940 [see MATTĀ b. YŪNUS]) and, in the commentaries, also in a revision by Abū Bishr's disciple Yahyā b. 'Adī (d. 363/974 [q.v.]). These translations remained for a very long time the domain of the logicians, because since the days of the Neo-Platonic Alexandrian commentators the *Rhetoric* and the *Poetics* had become part of the *Organon*, the logical writings of Aristotle. We have summaries and commentaries on these two books by a number of important philosophers, al-Fārābī, Ibn Sīnā and Ibn Ruṣhd [q.v.] among them, and many short characterisations of them in general exposés of logic. The basic notions of Arabic logical poetics are *takhyīl* "image-creation in the listener's mind" and *muhākāt* "image-creation from reality", the latter going back to the Aristotelian *mimesis* but here reinterpreted as "imagery" (for further details, see TAKHYŪL). Probably due to the compartmentalisation of knowledge into Arabic and Ancient disciplines, the indigenous theorists of poetry did not show any interest in the logical approach, except in the Muslim West. While in the East Ḍiyā' al-Dīn Ibn al-Aṭhīr, in a well-known passage of his *al-Mathal al-sā'ir* (ed. al-Ḥūfī and Ṭabāna, Cairo 379-81/1959-62, ii, 5-6), is the only indigenous theorist to take notice of the philosophers, by rejecting and scorning Ibn Sīnā's "Greek" poetics, in the Maghrib there are several authors who, in one way or another, make use of the basic terms and ideas of this unusual branch of logic. The first among these seems to have been Ibn 'Amīra (d. 656/1258 or 658/1260 [q.v.]), who wrote his *al-Tanbīhāt 'alā mā fi 'l-Tibyān min al-tanwīhāt* as a critique of a work by Ibn al-Zamlakānī (d. 651/1253) (see *al-Tibyān in Bibl.*). The polemical format of this work precludes a systematic introduction of technical terms; but the central terms of philosophical poetics, *takhyīl*, *muhākāt* and *akhyisa shū'riyya*, are employed (see *Tanbīhāt*, 125, 134 and 135, respectively), and *muhākāt* is used in the sense of "imaging" by means of similes or metaphors.

The most important among "philosophising" critics is Ḥāzīm al-Qarṭājīnī (d. 684/1285 [q.v.]), who used the two basic notions of the logical approach, *takhyīl* and *muhākāt* (the latter further reinterpreted as "image-creation by both descriptive and figurative processes"), in order to give a foundation to the hitherto more analytical and taxonomic indigenous approaches in the theory of poetry (for the details of his theory, see *Minḥādīj*, 62-129, translated in W. Heinrichs, *Arabische Dichtung und griechische Poetik*, 173-262).

His younger contemporary al-Sidjilmāsi (d. after 704/1304 [q.v.]), in his "Novel method in classifying the modes of figures of speech" (*al-Manza' al-badī' fī tadjīnis asālib al-badī'*), like Ḥāzīm quotes al-Fārābī and Ibn Sīnā verbatim but understands *takhyīl* in the narrower sense of "imagery", including *tashbīh* "simile", *isti'āra* "loan metaphor", *mumāḥala* "analogy" and *madjāz* (see *Manza'*, 218-61, 406-7; note that *takhyīl* here is used as a synonym of *muhākāt*, due to a *pars pro toto* application of either term for the entire activity of the poet of shaping images from reality and creating corresponding images in the minds of the listeners). It is noteworthy that *madjāz* in al-Sidjilmāsi equals the Ḍurdjānian *takhyīl* (see above) (on this strange use of the term, see Su'ād al-Māni', *Mafhūm muṣṭalah 'al-madjāz* 'inda 'l-Sidjilmāsi fī 'alākātihī bi-muṣṭalah 'al-takhyīl', in *Abḥāth al-Yarmūk*, xvii [1420/1999], 89-137).

The last of the "philosophising" Maghribī critics, who is known to us through his own work, is Ibn al-Bannā' (d. 721/1321 [q.v.]); there are a few others, about whose views we know little (see M. Ibn Sharīfa, *Muqaddima* to Ibn 'Amīra, *Tanbihāt*, 32). Ibn al-Bannā' gives a short overview on the various truth values of the logical disciplines (*burhān*, *ajdal*, *khaṭāba*, *shī'r*, *mughālaṭa*) and defines poetry as "address by means of false, image-evoking (*mukhayyila*) statements based on image-making (*muhākāt*), which result in the excitement (*istifzāz*) [of the listener] by those fancies (*tawahhumāt*)" (see *Rawd*, 81, and cf. 103). By stressing the falseness of the poetic statements he diverges from Ḥāzīm and al-Siḡilmāsī, who declare "true" and "false" as immaterial in poetry; Ibn al-Bannā' resumes another tradition, which also has Greek roots and later Arab adherents (see above).

Much of the literature devoted to the criticism of poetry ultimately feeds into scholastic rhetoric (*ilm al-balāgha*), on which see BALĀGHA, BAYĀN, AL-MA'ĀNĪ WA-L-BAYĀN, AL-SAKKĀKĪ and AL-KHAṬĪB AL-KAZWĪNĪ. But the main goal of rhetoric is as a tool to understand the *istifzāz al-Kur'ān* [q.v.]. The whole literature based on the third chapter of al-Sakkākī's *Miftāḥ al-'ulūm* will thus not be treated here. The same is also true for most of the later works outside the al-Sakkākī tradition.

#### The main topics of naḳd

The historical outline presented so far should be complemented by a short topical outline of the basic themes of *naḳd al-shī'r*. (1) *Poetry vs. prose*. The most popular definition of poetry is the formal one proposed by Ḳudāma, *Naḳd*, 2: *kaḵḵawm mawzūm mukaffā' yadullu 'alā ma'nā'* "metrical rhymed utterance indicating a meaning". This would include didactic versification [see NAẒM] and thus cannot be considered satisfactory. Some authors have, therefore, tried to establish an essential difference between poetry and prose (cf. Heinrichs, *Dichterische Rede*). Three approaches can be distinguished:

(a) The first is based on the idea that reality can be expressed in different ways. Al-Zandjānī (d. 650/1262 [q.v. in Suppl.]) in his "Yardstick for students of the disciplines concerning poems" (*Mi'yār al-nuẓẓār fī 'ulūm al-aḡḡār*) uses the threefold system of denotation (*dalāla*), i.e. *muṭābaka* ("congruence", "house" denotes a house), *taḍammun* ("implication", "house" denotes a ceiling) and *iltizām* ("concomitance", "ceiling" denotes a wall) and says that *muṭābaka* is the "original denotation" (*dalāla waḍ'īyya*) and is used in the rational sciences ('ulūm 'akliyya), while *taḍammun* and *iltizām* are "rational denotations" (*dalālatān 'akliyyatān*), i.e. one has to think about their meaning) (*Mi'yār*, ed. al-Aḡḡar, 5-7). Of these, *iltizām* is the kind of denotation that matters in "eloquence" (*balāgha*), because the "concomitants" (*lawāzim*) are numerous and there are many ways, good and bad, in which a certain idea can be conveyed. Two points need emphasis here. (i) Although his book is devoted to poetry, in this passage he speaks about "eloquence", which, of course, extends to ornate prose as well; and (ii) the opposite of eloquent speech is scientific texts. Al-Zandjānī's approach may thus be somewhat askew when it comes to defining poetry. (As an aside, one might mention that al-Sakkākī uses the same theory of denotation but applies it only to imagery, *bayān*, see *Miftāḥ al-'ulūm*, ed. Na'im Zarzur, Beirut 1403/1983, 329-30.) There is a certain similarity between al-Zandjānī and Ḥāzīm al-Ḳartādjānī in this respect. The latter defines poetry, with the help of terms from the Aristotelian-Fārābīan tradition, as a speech that

"imitates" (*muhākāt*) the object by describing its accidents and then "generates representational images" (*takhyīl*) of the object in the mind of the listener/reader. Scientific propositions, on the other hand, consist in naming the essence of things and creating understanding (*ifhām*) (*Minhādj*, 98-9, 118-20). Again we have a dichotomy of poetic and scientific speech.

(b) The second attempt at defining poetry is based on the idea of "untruth" (*kaḍhib*). The adage *aḡḡḡḡ ḡ-shī'rī akḍhabuh* "the best poetry is the most untruthful one", sometimes said to be of Greek origin, has been interpreted as referring to (overblown) hyperbole (*ghulūw*) (Ḳudāma, *Naḳd*, 24-7) and to al-Djurdjānī's "phantastic re-interpretation" (*takhyīl*, see above), thus to "distortions" of reality (or of the mirror quality of language) in the course of increasing mannerism. Most critics did not conclude that all poetry was untrue, but at least two explicitly did so: the philologist Ibn Fāris (d. 395/1004 [q.v.]) in *al-Sāhibī fī fikh al-luḡha* (ed. al-Sayyid Aḡmad Ṣaḡr, Cairo 1977, 466) and Ibn Ḥazm (see above).

(c) The third approach contrasts the "obscurity" (*ghumūd*) of poetry with the "clarity" (*wuḍūḡ*) of literary prose. This was done by the *kātib* Ibrāhīm b. Ḥilāl al-Ṣābī (d. 384/994) in an epistle, in which he says that, due to the shortness and rigidity of the verse and the constraints of rhyme and metre, poems could not avoid being "obscure" (A. Arazi, *Une épître d'Ibrāhīm b. Ḥilāl al-Ṣābī sur les genres littéraires*, in M. Sharon (ed.), *Studies in Islamic history and civilization in honour of Professor David Ayalon*, Jerusalem and Leiden 1986). Later critics have usually not agreed, saying that the *balāgha* of both poetry and ornate prose required clarity (cf., e.g., Cantarino, *Poetics*, 195).

Since the middle 'Abbāsīd period, when the idea had taken hold that the *qaṣīda* and the *risāla* were identical but for formal differences, the terminology of the poetry-critics was to a large extent applied to ornate prose as well. But there are also some relatively early sets of terms that were developed by the state scribes for the description of the epistolary style. Ḳudāma b. Dja'far, in the introduction to his work on synonymous words and phrases, "Gems of words" (*Djawāhir al-alfāz*, 3-8), lists and exemplifies fourteen features that make for the highest degree of eloquence (*balāgha*) in ornate prose. His fellow-*kātib* al-Ḳh'ārazmī (2nd half of 4th/10th cent. [q.v.]), in his "Keys of the sciences" (*Mafāṭīḥ al-'ulūm*), has a chapter on "the conventions of the epistolographers" (*muwāḍa'āt kutūb al-rasā'il*), which clearly harks back to Ḳudāma's list but also goes beyond it by adding a paragraph on defects (*Mafāṭīḥ*, 72-8). Al-Ḳh'ārazmī is particularly instructive, because his encyclopaedia also contains a chapter on *naḳd al-shī'r* (*Mafāṭīḥ*, 94-7); a comparison of the two lists shows surprisingly little overlap in terminology and only slightly more when the figures themselves are considered. A third list was compiled later by al-Yazdādī (dates unknown) in the introduction to his "Perfection of eloquence" (*Kamāl al-balāgha*, 19-32), a selection of epistles by Ḳābūs b. Wushmḡn (d. 403/1012 [q.v.]). The author says that he isolated, from the epistles themselves, such figures as Ḳudāma had not yet identified (*Kamāl*, 19); it is likely but not certain that he is referring to *Djawāhir al-alfāz* rather than to *Naḳd al-shī'r*. All of this shows that, before the final confluence of terminologies, we have to assume separate traditions of poetic, rhetorical (epistolary) and Ḳur'ānic (see above) technical vocabulary.

For a critique of a piece of eloquent prose—not a very common event—one may point to al-Ḳāḍī 'Iyāḍ's (d. 544/1150 [see 'IYĀḌ]) exhaustive interpretation of

the *ḥadīth Umm Zayr* (on this text, see F. Rosenthal, *Muslim social values and literary criticism—reflections on the Ḥadīth of Umm Zayr*, in *Oriens*, xxxiv [1994], 31-56). This includes a chapter on *bayān* that deals with the literary aspects of the *ḥadīth (Bugḥyat al-rā'id li-mā tadammannahū ḥadīth Umm Zayr min al-fawā'id)*, ed. Ṣalāh al-Dīn b. Aḥmad al-Idlibī *et alii*, al-Muḥammadiyya 1395/1975, 186-214).

(2) *Truth vs. falsehood*. Ibn Rashīk states that most of poetry is *wasf* "description" (*Umda*, ii, 294), thus true. As mentioned, some critics have maintained the opposite (Ibn Ḥazm, Ibn Fāris, see above); this has to be seen against the background of the mannerist trends in "modern" poetry—with their irreal hyperboles (*ghulūw*), substratum-less metaphors (*isti'āra [takhyīliyya]*), and phantastic re-interpretations (*takhyīl* of al-Djurdjānī). Critics often became a little nervous when confronted with "falsehoods" (*kadhīb*) of this type, but the poets were not deterred. The idea of poetry being *per se* "untrue" is also highlighted by Abu 'l-'Alā' al-Ma'arrī's assertion that the sceptical poetry in his *Luzūmiyyāt* is not poetry, because it is true (ed., 'A. Zand, Cairo 1891, 9, 42).

Explicit fiction is not of common occurrence in Arabic literature, and certainly not in poetry. There are, it is true, cases like the versification, in couplets, of *Katīla wa-Dimna* and similar fictional works by Abān al-Lāhīkī (d. ca. 200/815 [q.v.]); but these would presumably be regarded as *naẓm* rather than poetry. However, the often stereotypical adventures that a poet, or his persona, would describe were, of course, known not to be the historical truth, but this kind of non-explicit fiction, because it could not be recognised from the poem itself, elicited little interest on the part of the critics. It is only Ḥāzīm al-Karṭādjānī who paid some attention to the notion of "fiction" (*ikhtilāk*, as he calls it) and who distinguished the type of fiction just mentioned from the one that is plainly fictional on the surface (e.g. the talking animals in *Katīla wa-Dimna*) by calling the former "possibility-fiction" (*ikhtilāk imkānī*) and the latter "impossibility-fiction" (*ikhtilāk imtinā'ī*) (*Minhādīj*, 76-9).

(3) *The unit within the poem*. A large amount of poetic criticism is directed to the single line. This "molecular" approach is driven to the extreme by Tha'lab, who considers lines with semantically independent hemistichs the best of all. Several critics do quote larger passages (e.g. Ibn Ṭabātabā), but they do not normally discuss the structure of larger entities. An exception is the analysis of transitions from one theme to the next in the polythematic *kaṣīda (takḥalluṣ)*. Al-Ḥātimī uses the image of the human body in order to stress the overall "organic" unity of the poem (see in general G.J.H. van Gelder, *Beyond the line. Classical Arabic literary critics on the coherence and unity of the poem*, Leiden 1982; the passage in question is translated and discussed at 82-3). But for a thorough discussion of "passages" (*fusūl*, sing. *faṣl*) as building-blocks within a poem, one has again to turn to Ḥāzīm al-Karṭādjānī (see van Gelder, 171-90).

(4) *Wording (lafz) vs. meaning (ma'nā)*. This dichotomy is basic to all disciplines dealing with language. It was, e.g., used by the logicians in their dispute with the grammarians in the 4th/10th century, when they alleged that their domain was the *ma'anī*, while the grammarians dealt with the *alfāz*. This oversimplification did not go down well with the grammarians, who rightly claimed that they dealt with semantic matters as well. Among the earlier critics, the most commonly encountered attitude is that the *lafz* is the object of the poet's artistic endeavour, the "form" that

he tries to achieve, while the *ma'nā* is the material that he works on. Poetry is thus a *ṣinā'a*, a "craft" like that of the carpenter, weaver or goldsmith, and indeed the poet's craft is often compared to these professions and many of the terms denoting figures of speech are taken in the way of metaphors from these other crafts. However, wording and meaning cannot easily be separated: if one wants to talk about the wording without any reference to the meaning, the topic becomes restricted to euphony, stylistic acceptability of words (cf. *WAḤSHĪT*), and grammatical features (everything covered by the term *faṣāḥa [q.v.]*). In most discussions of the critics *lafz* is used in the sense of a "particular expression" of a general idea (*ma'nā*); it thus clearly partakes in the *ma'nā* side of language. The term *ma'nā* itself acquires several meanings:

(a) the meaning of a specific verse (especially when it is difficult to gauge)—this is dealt with in early philological *ma'anī* works, such as al-Uṣṣnāndānī (d. 256/870), *Ma'anī al-shi'r* (ed. 'Izz al-Dīn al-Tanūkhī, Damascus 1969);

(b) the motif expressed in a line, i.e. a popular poetic commonplace; these were collected, together with their most famous realisations, in motif catalogues, such as Ibn Kutayba, *K. al-Ma'anī al-kabīr* (Ḥaydarābād, Deccan 1949), Abū Hilāl al-'Askarī, *Diwān al-ma'anī* (Cairo 1352 [1933-34]), al-Rāghib al-Isfahānī (d. 502/1108 [q.v.]), *Maḍmū'a al-balāgha* (ed. 'Umar 'Abd al-Rahmān al-Sarīṣī, 2 vols., 'Ammān 1406/1986) and the anonymous *Maḍmū'at al-ma'anī* (ed. 'Abd al-Salām Ḥārūr, Beirut 1992), as well as in catalogues of similes, such as Ibn Abī 'Awn, *K. al-Tashbihāt* (ed. 'Abdul Mu'īd Khān, London 1950) and Ibn al-Kattānī, *K. al-Tashbihāt min asḥār ahl al-Andalus* (ed. Iḥsān 'Abbās, Beirut 1967); and

(c) the specific meaning, which results from the application of rhetoric and imagery to a known motif, thereby refashioning it as a conceit (*conceit*)—these are the *ma'anī* that the admirers of Abū Tammām, al-Āmidī's *ahl al-ma'anī* (see above), cherish and which Ibn Rashīk calls the *ma'anī al-ṣan'a* (*Umda*, i, 133). An example would be Abū Tammām's notorious line: *lā tashkīnī mā'a 'l-malāmi fa-innani 'ṣabīḥ kad-i 'sta'dhabtu mā'a bukā'ī* "Do not pour for me the water of blame, for I am a man in love, I have come to find the water of my weeping sweet" (*Diwān*, ed. Muḥammad 'Abduh 'Azzām, 4 vols. Cairo 1964-5, i, 22). Here the simple idea "Do not blame me, for I am in love and like weeping" has been transformed into a conceit, by "applying" to it (i) a loan metaphor ("the water of blame") and (ii) a *muḥābala* (the contrast of the two waters). It is clear from these literarily ever more meaningful uses of the term *ma'nā* that *ma'nā* and *lafz* become inextricably bound together; this *ma'nā-lafz* conglomerate came especially to the fore in discussions of the historical development of motifs, i.e. discussions of borrowings, imitations, and plagiarisms. 'Abd al-Kāhīr al-Djurdjānī realised the inefficiency of the rigid dichotomy "wording/meaning" and introduced the term *ṣūra* "form, structure" which he puts in the middle between the *lafz* as "linguistic material" (*adḡrās al-ḥurūf* "the sounds of the letters") and the *ma'nā* as "thematic material" (*gharad* "intention"); one could say that the *ṣūra* forms both the linguistic and the thematic material and thus creates a structured *lafz* and a structured *ma'nā* that are completely congruent.

(5) *Originality vs. plagiarism*. On the whole gamut of possibilities between *ikhtirā'* "original invention" and *ṣarīka* crude "plagiarism", see SARIKA, in Suppl.

*Influence on other literatures*

Arabic literary criticism and poetics have had an

influence on two linguistic-cultural domains outside of it. One is Persian literary theory. The first work in this field was Rādūyānī's [q.v.] "Interpreter of eloquence" (*Tarjūmān al-balāgha*, ed. Ahmed Ateş, Istanbul 1949), written between 482/1089 and 507/1114 (see also Ateş, *Tarjūmān al-Balāgha, das früheste neupersische Werk über rhetorische Figuren*, in *Oriens*, i [1948], 45-62). This work is based on an Arabic precursor, namely al-Marghīnānī's (middle of the 5th/11th century) "Beauties in poetry and prose" (*al-Mahāsīn fi 'l-nazm wa 'l-naṭh*, ed. van Gelder, *Two Arabic treatises on stylistics*, Istanbul 1987, 66-110).

The other cultural domain open to Arabic influence was the Jewish community, primarily in al-Andalus but also elsewhere, who had adopted Arabic prosody, or an adaptation thereof, for the composition of Hebrew poetry. This drew their attention also to the critical literature of the Arabs; this in turn confronted them with the notion of *īdāj al-ku'ān* and motivated them to discover rhetorical and figurative use of language in their own Scripture. The most important author here is Moṣhe b. 'Ezra (d. after 529/1135), who wrote two relevant works in Judaeo-Arabic: the *K. al-Muḥādara wa 'l-muḥākara* (ed. [in Hebrew script] and tr. into Hebrew by A.S. Halkin, Jerusalem 1975, ed. [in Arabic script] and tr. into Spanish by Montserrat Abramalhan Mas, 2 vols. Madrid 1985-6), dealing mainly with poetry, and the *Maḳālat al-Hadīka fi ma'nā 'l-madāj wa 'l-ḥakīka*, ed. and tr. (into Hebrew) by P. Fenton (Jerusalem, forthcoming), see also Fenton, *Philosophie et exégèse dans le Jardin de la métaphore de Moïse Ibn 'Ezra* (Leiden 1997), with the main focus on scriptural issues. Recently, extant fragments of another Judaeo-Arabic work on poetics (including prosody), this time by a man from the East, have been published: J. Yahalom (ed. and tr. into Hebrew), *Perākīm be-tōnat ha-shīr le-Efāzār ben Ya'aqōv ha-Bavli, Judaeo-Arabic poetics. Fragments of a lost treatise by Elazar ben Jacob of Baghdad* (Jerusalem 2001). Some early copies of this work and of Moṣhe b. 'Ezra's *K. al-Muḥādara* seem to have been written in Arabic script, as can be seen from mistakes attributable to misreadings of Arabic letters. This may point to some amount of give-and-take between Muslim and Jewish critics.

On the poetics of mediaeval dialect poetry, see ZADJAL (toward the end).

**Bibliography:** 1. General overviews. The most satisfactory is Iḥsān 'Abbās, *Ta'riḫ al-nakd al-adabī 'inda 'l-'Arab. Nakd al-shīr min al-ḥam al-thānī hattā 'l-karn al-thāmin al-hidjiri*, 2nd enlarged and corrected ed. 'Ammān 1993 (Beirut 1971). An earlier attempt, still useful in parts but dealing only with the early period is Amjad Trabulsi, *La critique poétique des Arabes jusqu'au V<sup>e</sup> siècle de l'Hégire (XI<sup>e</sup> siècle de J.C.)*, Damascus 1956. A combination of primary poetics, abstracted from the poetry itself, and *nakd al-shīr*, is Jamel Eddine Bencheikh, *Poétique arabe*, Paris 1989 (1975). The professionalisation of *nakd* is described in Wen-Chin Ouyang, *Literary criticism in mediaeval Arabic-Islamic culture. The making of a tradition*, Edinburgh 1997. Specifically for Muslim Spain, see Muḥammad Riḍwān al-Dāya, *Ta'riḫ al-nakd al-adabī fi 'l-Andalus*, Beirut 1388/1968. For an anthology of translated texts plus substantial introductions, see V. Cantarino, *Arabic poetics in the Golden Age*, Leiden 1975. Short presentations: W. Heinrichs, *Poetik, Rhetorik, Literaturkritik, Metrik und Reimlehre*, in *Gap*, ii, 177-207; K. Abu Deeb, *Literary criticism*, in *CHALABL*, 339-87.

2. Studies dealing with more than one

author. S.A. Bonebakker, *Aspects of the history of literary rhetoric and poetics in Arabic literature*, in *Viator*, i (1970), 75-95; W. Heinrichs, *Literary theory: the problem of its efficiency*, in G.E. von Gruneborn (ed.), *Arabic poetry: theory and development, Third Levi Della Vida Biennial Conference*, Wiesbaden 1973, 19-69; idem, *The Hand of the Northwind. Opinions on metaphor and the early meaning of Ist'āra in Arabic poetics*, Wiesbaden 1977 (AKM, Bd. XLIV, 2); idem, *Klassisch-arabische Theorien dichterischer Rede*, in H. Preissler and Heidi Stein (eds.), *Annäherungen an das Fremde. XXVI. Deutscher Orientalistentag vom 25. bis 29.9.1995 in Leipzig* (ZDMG, Supplement 11, Stuttgart 1998), 199-208; G.J. van Gelder, *Beyond the line. Classical Arabic literary critics on the coherence and unity of the poem*, Leiden 1982; Mansour Ajami, *The Alchemy of glory. The dialectic of truthfulness and untruthfulness in medieval Arabic literary criticism*, Washington, DC 1988; Dījābir 'Uṣfūr, *Maḡtūm al-shīr, dirāsa fi 'l-tawāth al-nakdī*, 'Nicosia 1990 (on Ibn Ṭabāṭabā, Kudāma and Ḥāzim al-Karṭādjannī); Sasson Somekh (ed.), *Studies in medieval Arabic and Hebrew poetics*, in *IOS*, xi (1991); Amidu Sanni, *The Arabic theory of prosification and versification: on ḥall and nazm in Arabic theoretical discourse*, Beirut and Stuttgart 1998.

3. Editions and studies on individual authors. (The list contains a few additional authors not mentioned in the text.) Mediaeval lists of relevant literature are given by Ibn Abi 'l-Iṣṣā', *Tahrīr al-tahbīr fi san'at al-shīr wa-naṭh wa-bayān 'īdāj al-ku'ān*, ed. Hifnī Muḥammad Ṣharaf, Cairo 1963 [in the introduction], and by Saḡf al-Dīn al-Hillī, *al-Natā'idj al-ilāhiyya fi sharḥ al-kāfiya al-bad'iyya*, ed. Nasīb Nashāwī, Damascus 1402/1982 [in the appendix]. A veritable encyclopaedia-cum-anthology of poetic figures is: Ibn Ma'sūm [d. 1117/1705], *Anwār al-rabī' fi anwār al-badī'*, 7 vols., ed. Shākir Hādī Shukr, Naḡjaf 1968.) al-Akhfash al-Awsaṭ, Sa'īd b. Ma'sada, *K. al-Ḳawā'if*, ed. 'Izzat Hasan, Damascus 1390/1970; Aṣma'ī and Abū Ḥātim al-Sidjīstānī, *Su'ālāt Abī Ḥātim al-Sidjīstānī li 'l-Aṣma'ī wa-radduhū 'alayhi—Fuḥūlat al-shu'arā'*, ed. Muḥammad 'Awda Salāma Abū Dījārī, Cairo 1414/1994; Ibn Ḳutayba, *K. al-Shīr wa 'l-shu'arā'*, *Muḳaddima*, ed. Gaudefroy-Demombynes, as *Ibn Qutayba, Introduction au Livre de la poésie et des poètes*, Paris 1947; Tha'lab, *Ḳawā'id al-shīr*, ed. Ramaḡān 'Abd al-Tawwāb, Cairo 1966; Ibn al-Mu'tazz, *K. al-Badī'*, ed. I. Kratchkovsky, London 1935; M. Canard, *Deux chapitres inédits de l'œuvre de Kratchkovsky sur Ibn al-Mu'tazz*, in *AIEO*, xx (1962), 21-111; S.A. Bonebakker, *Ibn al-Mu'tazz and Kitāb al-Badī'*, in *CHALABL*, 388-411; Ibn Ṭabāṭabā, *K. Iyār al-shīr*, ed. 'Abd al-'Azīz b. Nāṣir al-Mānī, Riyād 1405/1985; Kudāma b. Dījā'far, *K. Nakd al-shīr*, ed. S.A. Bonebakker, Leiden 1956; idem, *Ḍawā'hir al-alfāz*, ed. Muḥammad Muḥyī 'l-Dīn 'Abd al-Ḥamīd, Cairo 1932, repr. Beirut 1399/1979; Marzubānī, *al-Muwāshshah fi ma'ākhidh al-'ulamā' 'alā 'l-shu'arā'*, ed. Muḥibb al-Dīn al-Ḳhaṭīb, Cairo 1385; Iṣḡāḳ b. Ibrāhīm Ibn Wahb al-Kātib, *al-Buḥān fi wudū'ih al-bayān*, ed. Aḡmad Maṭlūb and Ḳhadīdja al-Ḥadīthī, Baghdād 1387/1967; Ḳh'ā-rāzmī, Abū 'Abdallāh Muḥammad b. Aḡmad, *Mafātiḥ al-'ulūm*, ed. G. van Vloten, Leiden 1895, repr. Leiden 1968; Amīdī, *al-Muwāzana bayn shīr Abī Tammām wa 'l-Buḥturī*, vols. i-ii, ed. al-Sayyid Ahmad Ṣakr, Cairo 1380-4/1961-5, vol. iii, ed. 'Abd Allāh Ḥamīd Muḥārib, Cairo 1410/1990; Rummānī, *al-Nukat fi 'īdāj al-ku'ān*, ed. Muḥammad Ḳhalaf Allāh and Muḥammad Zaḡhlūl Salām, in *Thalāth rasā'il fi 'īdāj al-ku'ān*, Cairo

n.d.; Hātīmī, *al-Risāla al-mūdiha fi dhikr sarikāt Abi 'l-Tayyib al-Mutanabbī wa-sākit shī'rih*, ed. Muḥammad Yūsuf Naḍīm, Beirut 1385/1965 (cf. (W.P. HEINRICHS)

## NAKL.

1. In the central Islamic lands and North Africa. Add to the articles mentioned there the following article.

In the caliphal lands.

The emergence of Islam is known to have coincided with the disappearance of wheeled carts or wagons [see *'adjalā*] in many parts of the Middle East, although the extinction of such transport cannot be conclusively proved. In fact, wheeled vehicles were in existence in the Middle East for many centuries after the rise of Islam, although they were rarely used.

The wheel was replaced by the camel in the Middle East during the era of the caliphates. Camels [see *IBL*] were a means of everyday transport which was eminently suitable for long-distance overland journey across deserts and valleys in Arabia, Syria, Egypt or North Africa, or Anatolia or in Central Asia along the Silk Road, being used for transport of goods or passengers or pilgrims in large caravans. Caravan trade and caravan cities existed in the Middle East since the pre-Islamic period, when the Arabs of Mecca used to go on seasonal caravan journeys for commerce to Yemen in the winter and to Syria in the summer (cf.

Qur'an, CVI, 1-2). The nomadic peoples of Arabia, Syria and Persia were the camel-breeders who appreciated the value of their animals as the "ships of the land" (*al-sufin al-barrīyā*); they knew that the skins of their animals provided them with water-bags (*kirab*) and that the animals' meat was a source of protein, and they could sell them in exchange for gold (cf. al-Tha'ālībī, *Thimār al-kulūb*, 284). At the beginning of Islam in the 7th century A.D. many individuals owned camels which they could use as a means of transport or as a source of milk or as a commodity for trade, but by the 8th century A.D., cameleers or professional camel-drivers emerged as a group of transport workers who used to hire out the camel(s) to travellers or traders (al-Wohaibī, *The northern Hijaz*, 393). The cameleers (see *ḌAMMĀL*, in Suppl.) contributed much to the transport of pilgrims from all parts of the Middle East to Mecca and Medina. The Egyptian and North African pilgrims as well as traders started their caravan journey from Fuṣṭāṭ (Old Cairo) through Kulzum to A'ila ('Aḳaba) and Yanbu', thence to Mecca or Medina. The Anatolian and Syrian pilgrims assembled at Damascus and travelled through 'Ammān and Tabūk to Medina and Mecca. Similarly, the pilgrims from Persia, Central Asia and 'Irāk started their journey from Baghdād and travelled through Kūfa and the Arabian desert to Mecca or Medina, or they took the alternative route from Baghdād to Wāsiṭ, Baṣra, the Arabian desert and Mecca. Arab settlements grew up along the pilgrim routes and there were brisk seasonal trade during the pilgrimage season. Caravanserais were built throughout the Middle East to cater for travellers and traders and their mounts. Camels and horses were also used to transport arms and warriors to the battle front during the early Islamic conquests and the Umayyad period.

Among other means of transport, donkeys were the most popular among the tribesmen and the peasantry. Mules (Ar. *baghl* [q.v.], pl. *bighāl*) were also used as a means of transport especially in the hilly or mountainous terrains of Syria, Anatolia and Persia. Muleteers (Ar. *mukārī* [q.v.], *baghhāl*, or *hammāra*) emerged as a distinct group of transport workers during the 'Abbāsīd period (A.D. 750-1258). They could transport merchants or ordinary travellers from Baghdād along the Khurāsān trunk road to Nishāpūr or beyond (cf. al-Kazwīnī, *Athār al-bilād*, 224-5) or transport pilgrims in a caravan of 50 donkeys from Kūfa to Mecca (al-Djāhīz, *K. al-Bukhālā'*, 18). Mules were not popular animals in mediaeval Arab society, and al-Djāhīz wrote a treatise on mules entitled *Kutāb al-Bighāl*. He voiced the public opinion of his time when he recorded the popular argument against the mules by saying that the Prophets rode on camels and donkeys but never on mules (cf. *Rasā'il al-Djāhīz*, ii, 326), but he refuted the popular prejudice against them by citing the evidence that the Prophet Muḥammad rode on a mule, as did the early caliphs like 'Uthmān and 'Alī and the Umayyad caliph Hishām b. 'Abd al-Malik. Moreover, al-Djāhīz cited the fact that pilgrims from Syria went from Damascus to Mecca in a caravan of sixty mules during the reign of caliph 'Abd al-Malik (cf. *Kutāb al-Bighāl*, 231).

The horse was a means of speedy transport which was owned mainly by the wealthy, for the price of an Arabian horse with a pedigree was very high. This last was also introduced into eastern Turkey and Persia as a means of transport. Horses were used for postal service by the Umayyad and 'Abbāsīd caliphs for the dispatch of royal mail and military intelligence from various provinces to the capital city [see BARĪD]. The

'Abbāsīd and Fātimīd caliphs had stables full of horses ready as mounts kept near the royal palaces for riding by the caliphs and their family members, as well as by top officials both civilian and military (cf. Hilāl al-Šābī', *Rusūm dār al-khilāfa*, 22-3).

The price of owning a pack and riding animal during the era of the 'Abbāsīd caliphs was not, however, totally beyond the means of the common folk, but the maintenance of an animal involved extra expense. The income of a muleteer or a donkey-driver was meagre, but a cameleer (*djammāl*) or a boatman (*mallaḥ*) had an adequate income by hiring out camels or boats for transporting goods or passengers. A camel was sold for 2 or 3 dīnārs in Baṣra during the 4th/10th century (al-Tanūkhī, *Nishwār*, i, 89). The price of a donkey in Khurāsān was usually 5 dirhams, but it could go up to 50 dirhams or more in a year of scarcity during the 'Abbāsīd period (Yāqūt, *Mu'djam*, iii, 412). The price of a horse in Kh'ārazm was an extraordinarily low cost of 4 dīnārs during the 14th century (Ibn Baṭṭūta, *Travels*, tr. Gibb, 167).

Inland transport in the Middle East also made use of boats and small ships in the navigable rivers like the Tigris, the Euphrates and the Orontes, part of the Kārūn river in Persia and the Nile in Egypt. The city of Baghdād was founded by the 'Abbāsīd caliph al-Manšūr in 145/762 on the banks of the Tigris river *inter alia* to facilitate inland transport from Baghdād upstream to Mawṣil, Diyār Rabī'a, etc., and downstream to the cities of Wāsiṭ, Baṣra and onwards to the Persian Gulf waters. There were many boats [see SAFĪNA] in the Baṭā'ih [q.v.] (swamps) of the lower 'Irāk. A port was built at Sāmarrā' on the Tigris by al-Wāṭḥik. The Shaṭṭ al-'Arab [q.v.] was very suitable for navigation by ships. The Euphrates river and the Shaṭṭ al-Gharrāf were also navigable, and goods could be transported from Diyār Mudar and al-Raḳqa to Baghdād through the Nahr al-Malik canal (cf. Ya'kūbī, *Buldān*, 234). There were thirty thousand river craft plying in the waters of the Tigris river to transport passengers or cargo during the 3rd/9th century (Ibn al-Djawzī, *Manāḳib*, 24; Shābushṭī, *Diyārāt*, 158). The *muhtasib* [see ḤISBA] supervised the transportation work by the boatmen so that the boats or ships were not overloaded, endangering the lives of the passengers by drowning or loss of cargo in mid-river. Similarly, the Nile was a busy highway of boat traffic for the people of Fuṣṭāṭ on the bank of the river.

The 5th/11th century Persian traveller Nāṣir-i Khusrāw, travelled across the mediaeval Middle East by means of all available transport, including camels, horses, donkeys, boats and ships. While visiting the cities of Fuṣṭāṭ and Cairo (ca. 439/1047), he observed that traders rode on saddled donkeys. Everyday 50,000 beasts of burden were ready for hire. He saw that soldiers and militiamen rode on horses, while peasants, merchants and craftsmen were transported by donkeys (*Safar-nāma*, tr. 55).

On the whole, riding and pack animals such as donkeys, mules, camels and horses were the primary means of transport in the pre-industrial society of the Middle East during the Umayyad, 'Abbāsīd and Mamlūk periods, while horse- or camel-drawn wagons were hardly seen in the streets prior to the 13th-14th century A.D. Boats and coracles, and a kind of catamaran (Ar. *zaww/zawdī*), played a limited role in the inland transport network in the countries of the Middle East during the periods of the caliphates. The absence of wheeled vehicles on the streets had an impact on town planning in the Middle East, whose towns had consequently narrow streets and cul-de-sacs.

AL-NA'L AL-SHARĪF, NA'L RASŪL ALLĀH (A.), the sandal of the Prophet Muḥammad.

Sandals belong to the pre-Islamic Arabian clothing (see LIBĀS. 1), and are considered one of the features distinguishing Arabs from non-Arabs ('*adjam*). The scholar Mālik b. Anas (d. 180/796 [q.v.]) reportedly declared that only Arabs used to wear turbans and sandals (Ibn Abī Zayd, *al-Djāmi' fī 'l-sunan wa 'l-ādāb wa 'l-maghāzī wa 'l-tārīkh*, Tunis 1982, 228). The Prophet himself reportedly advised the believers to wear sandals as well as boots to distinguish themselves from the People of the Book who only wore boots (Aḥmad b. Ḥanbal, *Musnad*, 6 vols., Cairo 1313/1895, repr. Beirut n.d., v, 264). Muslim tradition turned the sandals into a component of the legacy of Abraham and Ishmael, the prototypes of Arabian monotheism. In a letter of the caliph 'Umar b. al-Khaṭṭāb [q.v.], the believers are requested to adhere to the clothes of their father Ismā'īl and to wear sandals instead of boots (Ibn Hibbān, *al-Iḥsān fī takrīb Saḥīḥ Ibn Hibbān, tarīḥ 'Alā' al-Dīn al-Fārisī*, ed. Shu'ayb al-Arna'ūt, 16 vols., Beirut 1988, xii, no. 5454). Abraham, says a SHĪ'Ī tradition, was the first to wear sandals (al-Kulīnī, *al-Uṣūl wa 'l-furū' min al-Kāfi*, ed. 'Alī Akbar al-Ghifārī, 8 vols., Beirut 1980, vi, 462). Wearing sandals is especially recommended during the pilgrimage to Mecca, which is the main centre of Abrahamite rites [see ҺIRĀM].

The Prophet Muḥammad is regarded as the ultimate model of Arab piety, and sandals feature as an essential element in his descriptions as a messenger of God. Already Jesus is said to have announced the emergence of the Arabian prophet, whom he described as wearing sandals among other things (al-Bayhaqī,

*Dalā'il al-nubuwwa*, ed. 'Abd al-Mu'tī Kal'adjī, 7 vols., Beirut 1988, i, 378). Muḥammad himself is said to have stated that God instructed him to wear sandals and a seal (al-Ṭabarānī, *al-Mu'djam al-saḥīḥ*, ed. 'Abd al-Raḥmān Muḥammad 'Uṭhmān, 2 vols., Cairo 1981-3, i, 166).

Islamic tradition provides detailed descriptions of the Prophet's sandals. According to most of the earliest traditions, each sandal had two leather thongs (*kibāl*, *zimām*, *shīs*'), which passed between the toes and were attached to the sole. The other end of the pair of thongs passed through two loops ("ears") to which were also attached the two arms of the *shirāk*, i.e. the folded strap that passed behind the wearer's ankle. In some versions, the sandal is said to have had a "heel" in the Yemeni style, i.e. a wide strap that embraced the wearer's heel. At the forepart of each sandal there was an extension shaped like a tongue (*mulassan*), and the middle part of the sole was narrow, with hollows (*kḥayrān*') cut on each side. The sole consisted of two layers sewed or patched together (*makhṣūfa*). It was made of tanned hide of oxen (Ibn Sa'd, *Ṭabakāt*, 8 vols., Beirut 1960, i, 478-82; Abu 'l-Shaykh, *Akhlāk al-nabī*, ed. 'Iṣām al-Dīn Sayyid 'Abd al-Nabī, Cairo 1993, 142-7; al-Zurkānī, *Sharḥ al-mawāhib al-laduniyya li 'l-Ḳaṣṭallānī*, Cairo 1911, repr. Beirut 1973, v, 44-52; al-Shāmī, *Subul al-hudā wa 'l-rashād fī sirat khayr al-'ibād*, ed. Muṣṭafā 'Abd al-Wāḥid, 11 vols., Cairo 1990, vii, 499-507). The colour of Muḥammad's sandal, according to the usual reports, was yellow (al-Zurkānī, *op. cit.*, v, 46; al-Makḳarī, *Wasf nū'āl al-nabī (s) al-musammā bi-faḥ al-mutā'āl fī madḥ al-nū'āl*, ed. 'Alī 'Abd al-Wahhāb and 'Abd al-Mun'im Farajī Darwīsh, Cairo 1997, 141-3).

A two-thong sandal remained a common fashion among pious believers, although it was sometimes regarded as extravagant (Ibn Ḥaḍjar al-'Asḳalānī, *al-Maṭālib al-'āliya bi-zawā'id al-masānīd al-ḥamāniya*, ed. Ḥabīb al-Raḥmān al-A'zamī, 4 vols., Beirut, 1987, ii, no. 2231). Such sandals were said to have been worn by the Righteous Caliphs Abū Bakr and 'Umar [q.v.]. Only the third caliph, 'Uṭhmān b. 'Affān [q.v.], reportedly began to wear sandals in which the two thongs were tied together and attached to a single strap passing between the toes (al-Tirmidhī, *al-Ṣamā'il al-muḥammadiyya* (with commentary of Ibrāhīm al-Bādjūrī), Cairo 1925, 70; al-Ṭabarānī, *op. cit.*, i, 92; al-Zurkānī, *op. cit.*, v, 45).

Sometimes the sole of Muḥammad's sandal was said to have consisted of only one layer, not two, and this was said to have been the style that the Arabs considered superior to the style of kings (al-Makḳarī, 89).

The fashion of cutting hollows on both sides of the middle part of the sole was preserved mainly among SHĪ'Īs, to whom soles without hollows represented a deplorable deviation from the Prophetic model (al-Kulīnī, vi, 463). Moreover, sandals without such hollows were considered Jewish by style (al-Ṭabrisī, *Makārim al-akhlāk*, ed. Muḥammad al-Ḥusayn al-'Alamī, Beirut 1972, p. 123; al-Kulīnī, vi, 463-4). The habit of tying the *shirāk* of the sandal (and not simply folding it through the loop, as was reported concerning Muḥammad's sandal) was considered among SHĪ'Īs as a fashion set by Satan (al-Ṭabrisī, 123).

The supposedly original sandal or sandals of the Prophet were preserved by believers of later generations. Beginning with the generation of the Companions, the most prevalent is the tradition about the Baṣran Anas b. Mālik [q.v.], who is said to have exhibited to the believers the sandal with its two thongs (e.g. Ibn Sa'd, i, 478; Abu 'l-Shaykh, *Akhlāk al-nabī*, no. 390).

He was reportedly the official keeper of Muḥammad's sandals (Ibn Sa'd, i, 482), but according to other traditions, the Kūfan Companion 'Abd Allāh b. Mas'ūd [see IBN MAS'ŪD, 'ABD ALLĀH] was in charge of them (e.g. al-Bukhārī, *Ṣaḥīḥ*, 9 vols., Cairo 1958, v, 31, 35 [kūf 62, bāb 20, 27]).

'Alī's son, Muḥammad b. al-Hanafīyya [q.v.] was also able to show the relic (Ibn Sa'd, i, 478). The Meccan Hishām b. 'Urwa (d. 146/763) claimed that he had seen the sandal and gave its description (Ibn Sa'd, i, 478).

As for the later history of the sandals, some reports relate that the descendants of the Syrian Companion Shaddād b. Aws (d. 46/683), who lived in Jerusalem, preserved them. He reportedly left them to his son Muḥammad, but the latter's sister got hold of one of them. This was passed on to her children. When the 'Abbāsīd caliph al-Mahdī visited Jerusalem, the sandal held by the sister's descendants was presented to him for a handsome reward. He summoned her brother Muḥammad b. Shaddād, by then a sick old man, and requested the other sandal, but Muḥammad refused to part with it and the caliph consented (Ibn Manẓūr, *Mukhtaṣar Ta'riḫ Dimashk li-Ibn 'Asākir*, 29 vols., Damascus 1984-8, x, 278-9). A sandal of the Prophet was also claimed to have been in the possession of Ismā'il b. Ibrāhīm al-Makhzūmī who obtained it from his grandmother Umm Kulthūm, the daughter of Abū Bakr. She had received it from her sister 'Ā'isha (al-Maḥḥārī, 175-6).

The last station of the "original" sandal seems to have been the Aṣhrafī *madrasa* at Damascus. It was placed there by the Ayyūbid of Egypt al-Malik al-Aṣhraf b. al-'Ādil, who had confiscated it in 625/1228 from the last descendant of the Companion Sulaymān Abū 'l-Ḥadīd, whose descendants claimed to have held it for centuries. Another sandal of the Prophet was kept elsewhere in Damascus, and during Timūr Lang's take-over of Damascus in 803/1400, both relics disappeared (Ibn Ḥaǧǧar al-'Asḥalānī, *al-Isāba*, ed. 'Alī Muḥammad al-Bidjāwī, 8 vols., Cairo 1970, iii, 173; Sibṭ Ibn al-'Adjamī, *Nūr al-nibrās 'alā sīrat Ibn Sayyid al-Nās*, ms. B.L. Or. 8276, fol. 316b; al-Maḥḥārī, 513-24; Goldziher, *Muhammedanische Studien*, ii, 363-4).

The Prophet's sandals served as a model according to which shoemakers designed sandals for pious believers. A sandal of the Prophet, as seen at the house of Fāṭima, daughter of 'Ubayd Allāh b. 'Abbās, was copied by a shoemaker who applied its two-thong style to sandals ordered by the eminent Baṣran scholar 'Abd Allāh b. 'Awn (d. 150/767). However, when the latter came to collect them, he found that Ibn Sīrīn (d. 110/728 [q.v.]) had already bought the sandals for himself (Ibn Ḥaǧǧar, *Maʿālib*, ii, no. 2232; cf. Ibn Sa'd, i, 479).

Drawings (*mithāl*, *timḥāl*) representing the supposedly original sandal were in circulation among scholars, especially in the Maghrib, where access to the sandal itself was more difficult than in the Mashrik (al-Maḥḥārī, 167-8). Such representations were also used by shoemakers for sandals ordered by pious believers (al-Ṭabrisī, 122; al-Maḥḥārī, 175-6). The representations became an object of veneration in their own right and were believed to provide one with safety in journeys, victory in battles, etc. Therapeutic powers were attributed to them and they were often hung up in houses for protection against the evil eye (al-Zurkānī, v, 48; al-Maḥḥārī, 469-70; Goldziher, *op. cit.*, ii, 363). Some samples of them can be seen in al-Maḥḥārī's *Fath al-muta'āl fi madh al-n'āl*, where numerous *kaṣidas* in praise of them are also recorded.

Closely associated with the veneration of the Prophet's sandals is that of his footprints [see KĀDAM SHARĪF].

(U. RUBIN)

AL-NAMIR B. KĀSIT, BANŪ, a tribe of the Rabī'a b. Nizār group [see RABĪ'A AND MUḌAR; NIZĀR B. MA'ADD]. It must be noted that not every Namarī mentioned in the sources belonged to the Namir b. Kāsit, since tribal groups called al-Namir were also found among the Azd, the Kuḍā'a and the Iyād. The fortunes of the Namir were closely linked to those of their relatives, the Taghlib [q.v.]. When the Taghlib migrated to the eastern part of the D̲jazīra [q.v.] or the Diyār Rabī'a [q.v.] in the second half of the 6th century A.D., they were joined by part of the Namir. However, there were still Namarīs in Arabia after that time, more specifically in Yamāma and Baḥrayn. Some tribe members settled in al-Andalus. Most Namarīs remained Christian for at least two centuries after the advent of Islam.

The semi-legendary leader of the Namir, 'Amir al-Ḍahyān, would sit in judgement in the early part of the forenoon, hence his nickname al-Ḍahyān, or "the one exposing himself to the sun". Ibn al-Kalbī reported that the leadership of the Rabī'a shifted among the Rabī'a tribes. Leadership meant command in the battlefield, arbitration, the right to appoint the banner-carrier and entitlement to one-fourth of the spoils. When the leadership of the Rabī'a reached the Namir, it was held by 'Amir al-Ḍahyān. After a long term in this role he was killed by a man of the 'Abd al-Kays [q.v.]. Having received half the ransom for him, the Namir murdered the 'Abd al-Kays hostages whom they held as a guarantee for the delivery of the other half. In the internecine war that followed, the Namir joined forces with the rest of the Rabī'a against the 'Abd al-Kays. Ibn al-Kalbī's account is quoted in a small genealogical treatise, *al-Iḥbāḥ 'alā kabā'il al-nuwāt*, by Ibn 'Abd al-Barr [q.v.], himself a Namarī. Namarī partisanship on Ibn 'Abd al-Barr's part is evident with regard to the origin of the Prophet's Companion Ṣuḥayb b. Sinān, the most important individual in the genealogy of the Namir. Ṣuḥayb's affiliation to the Namir, disputed by some, was for Ibn 'Abd al-Barr beyond doubt, and in his Companion dictionary he emphasised that there was no dispute over it. But the claim that Ṣuḥayb was of Arab stock stands in sharp contrast to a famous saying attributed to Muḥammad, namely, that he himself was the first Arab to enter Paradise, while Ṣuḥayb was the first Byzantine, Salmān al-Fārisī the first Persian and Bilāl b. Rabāḥ the first Ethiopian.

While Ṣuḥayb is invariably mentioned in the genealogies of the Namir, Ḥumrān b. Abān, a prominent figure in early Islamic history, is only mentioned in some. Ḥumrān, who was captured during the conquests in 'Ayn al-Tamr [q.v.], is supposed to have been Ṣuḥayb's relative. But it is doubtful that Ḥumrān, said to have been of Jewish origin, was an Arab, since the claim of Arab descent originated with his offspring (*wa 'dda'a wulduhu fi 'l-Namir b. Kāsit*). Family sources were likewise behind the claim that Ṣuḥayb was an Arab.

The Namir boasted of a pre-Islamic link with the Quraysh: the mother of the Prophet's uncle, al-'Abbās b. 'Abd al-Muṭṭalib [q.v.], was one of them. She is supposed to have been the first Arab woman to provide a covering for the Ka'ba, following a vow she made when little al-'Abbās went lost.

Before Islam the Namir (like the Taghlib) were

within the sphere of influence of the Sāsānids and the Lakhmids [q.v.] of al-Hīra. Mā' al-Samā', the mother of the Lakhmid king al-Mundhir III (ca. 505-54), who was of the Namir, was taken captive in a raid carried out by al-Mundhir's father; the fact that al-Mundhir had a half-brother among the Namir did not go unmentioned by the genealogists. One of the Arab units that fought on the Sāsānid side in the battle of Dhū Kār (ca. 605) included warriors from the Taghlib and the Namir. In the *ridda* [q.v.], there were Namarīs among the troops who came from the D̲jazīra with Saḍjāh [q.v.], the false prophetess of the Tamīm [q.v.]. A whole subdivision of the Namir, the Aws Manāt b. al-Namir b. Kāsīt, was wiped out (*ubūrū*) during the *ridda* by Khalīd b. al-Walīd. In 'Ayn al-Tamr during the conquests a Namarī led a large force made of Christians from the Namir, the Taghlib, the Iyād and others, which was defeated by Khālīd. Later during the conquests Christians of the Namir fought alongside al-Muthannā b. Hārīṭha against the Sāsānids in the battle of al-Buwayb (near al-Hīra).

Some Namarīs who converted to Islam during the conquests settled in Kūfa together with members of the Taghlib and the Iyād. Members of these very tribes who fought as Sāsānid auxiliaries at Takrīt are said to have handed the town over to the Muslim besiegers. In the battle of Šifīn [q.v.], there were Namarīs on both sides, probably because the D̲jazīra which was their homeland was divided at that time between 'Alī and Mu'āwīya. The old association between the Taghlib and the Namir was still in place during the rebellion of 'Abd Allāh b. al-Zubayr, when both tribes fought several battles in the D̲jazīra against the Kays 'Aylān [q.v.]

**NANDANA**, the name of a hilly tract and a fortress of mediaeval India and Indo-Muslim times. It lies in a fold of the Salt Range, to the north of the Jhelum river in northern Panḍjāb, and the place is still marked by ruins of a fortress and a Hindu temple near the modern Čao Saydān Shāh (lat. 32° 43' N., long. 73° 17' E.), in the Jhelum District of the Panḍjāb province of Pakistan.

The place is mentioned in early mediaeval Indo-Muslim history. In 404-5/1013-14 Maḥmūd of Ghazna [q.v.] attacked the Hindūshāhīs [q.v.] of northwestern India and marched against the Rādījā Triločanapāla's son Bhīmapāla, besieging him in the fortress of Nandana and capturing an immense booty there (al-'Utbi, *al-Ta'rīkh al-Yamīnī*, with comm. of al-Manīnī, ii, 146-

53 (calling the place Nardīn); Gardīzī, *Ẓayn al-akhbār*, ed. Nāzīm, 72; M. Nāzīm, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 93, 91-3). Thereafter, the Ghaznawids tried to retain control of Nandana as a *thaghr* or entry point into the plains of northwestern India, as Abu 'l-Faḍl Bayhaḳī, *Tārīkh-i Mas'ūdi*, ed. Ghānī and Fayyād, 149, describes it.

In the early 7th/13th century, the fortress of Nandana, in what was then in Islamic sources called the D̲jūd hills, was held by a former commander of the Ghūrīds, Ḳamar al-Dīn Karmānī (in the surmise of Boyle, to be equated with Nāšir al-Dīn Ḳubāča, the ruler in Multān and Sind). Čingiz Khān, in his pursuit of the Kh'ārazm Shāh D̲jalāl al-Dīn Mingburnu, sent an army under Törbey Tokshin which sacked Nandana in 618/1221, and then went on to attack Multān (D̲jūzd̲jānī, *Tabakāt-i Nāširī*, tr. Raverty, i, 534-5; D̲juwaynī-Boyle, i, 141-2). Nandana was later temporarily captured by the Dihlī Sultan Ilutmiṣh [q.v.], whose son and eventual successor Maḥmūd Shāh in 644-5/1247 ravaged the region in revenge for the local Rāna having guided a Mongol raid (D̲jūzd̲jānī, i, 677-9). It does not, however, seem thereafter to have played a significant role in history.

(C.E. BOSWORTH)

**NATHR** (A.), prose. The word is a noun denoting activity, derived from a verb meaning "to disperse, disseminate"; its opposite is *naẓm*, from a verb meaning "to join, set out in order", which is used to designate poetry. For Arab theorists, prose can be distinguished from poetry as the genre of literature which is not subjected to the order and constraints imposed by rhyme and metre. Such a formal definition is due to the fact that the prose they made the object of their attention was either the artistic prose of chancery documents, *nasā'il* (pl. of *risāla* [q.v.]), or the prose of the addresses or sermons, *khutab* (pl. of *khutba* [q.v.]). Whatever level of literary elaboration or rhetorical device required, they are all the same for the genres of prose and poetry, and are collectively referred to under the general term *balāgha* [q.v.].

In a striking manner, this fact is shown, *inter alia*, by the procedures known as *hall al-manẓūm* and *naẓm al-manḥūr*, setting a passage of prose into verse or verse into prose, in which the *ma'nā* [q.v.], the image of an idea expressed in the smallest unit of discourse, whether verse or colon, is launched in poetry or prose respectively. This procedure has been discussed since the 4th/10th century and was presented as a subtle form of plagiarism by theorists like Abū Hilāl al-'Askarī (d. 395/1005) in his *K. al-Šina'tayn*, ed. 'A.M. Bidjāwī and A. Ibrāhīm, Cairo 1957, 198. The author al-Tha'ālibī (d. 429/1037), one of whose works was *Nathr al-naẓm wa-hall al-'akd*, and later on Diyā' al-Dīn Ibn al-Aṭhīr (d. 637/1239) in his *al-Maṭhal al-sā'ir*, ed. A. al-Hūfī and B. Ṭabāna, 4 vols., Cairo 1959, i, 126-7, considered that rendering a verse into prose in a *risāla* was a way of achieving a higher level of literary expression. However, the formal point of view, which presumes a substantial literary equivalence between poetry and prose, did not exhaust the attention of the theorists to this problem. For example, they would raise the question of the superiority of one of the genres over the other, often basing their judgement more on sociological than on literary considerations; such considerations were the function of the chancery clerk or secretary (*kātib* [q.v.], *mutarassil*) and the poet, or the importance of the subjects they

were dealing with, or the attitude adopted by the two genres towards religion and morals. Some authors (e.g. Ibn Khaldūn, *Muḳaddima*, *faṣl* 46), moreover, note that the essence of poetry does not reside in prosodic form but in the images that are expressed by this form.

The thinking of the Arab theorists developed from the 3rd/9th century onwards and was stimulated first of all by poetry. There is a detailed stylistic study of these ideas and of the scholars involved in Z. al-R. az-Zu'bi, *Das Verhältnis von Poesie und Prosa in der arabischen Literaturtheorie des Mittelalters*, Berlin 1987, and the bibliography cited there; to this should be added A. Arazi, *Une épître d'Ibrāhīm b. Hilāl al-Ṣābī sur les genres littéraires*, in *Studies in Islamic history and civilization in honour of Professor David Ayalon*, ed. M. Sharon, Jerusalem-Leiden 1986, 473-505; also in M. Darabseh, *Die Kritik der Prosa bei den Arabern*, Berlin 1990, which is less careful and less original than the first work; see also Z. al-Zu'bi, *Ibrāhīm b. Hilāl al-Ṣābī*, *Risāla fi 'l-farḳ bayn al-mutarassil wa 'l-shā'ir*, in *Abḥāth Yamuk*, xi (1993), 129-65; A. Sanni, *The Arabic theory of prosification and versification*, Beirut 1998; see also surr.

#### *The origins of prose*

We can find examples of prose dating from the pre-Islamic period, such as proverbs (*mathal* [q.v.]), the prophesies of soothsayers (*sadq*' [q.v.] *al-kuhhān*) and sermons. Many formal characteristics of these documents, of which the authenticity in the literal meaning of that word can, of course, be debated, are the same as those of poetry: conciseness, allusive language and independent, paratactic clauses. These oral examples of prose can be connected with the remnants of prose of the same genre from the time of the Prophet and the very beginning of Islam. It was the arrival of Islam that saw one of the ancient literary genres, the *kuḥūba*, the address or sermon, acquire new traits and gradually gain great popularity; for the importance of the orator in the pre-Islamic period see further ḫaṭīb.

While from the point of view of style these documents maintain the solidity and simplicity of pre-Islamic prose, far removed from the embellishments which these genres would later present, one is no longer faced with detached aphorisms (as in the case of the famous sermons of Ḳuss b. Sā'ida [q.v.] of the Iyād, al-Djāhīz, *Bayān*, i, 308-9), but with contents that need to be communicated and thus articulated in a logical manner, the contents being of a religious nature as well as pertinent to the organisation of the new community. The new conditions were not without consequences on the level to which the prose could be elaborated. Similarly, the collections of *ḥadīth* [q.v.] take the form of short disjointed statements, often in the form of direct speech, and only a small number of fragments composed in literary prose remain from this period (cf. W. Fischer, *Ein Stück vorklassischer, arabischer Kunstprosa in der Umm Ma'bad Legende*, in *Festschrift W. Eilers*, Wiesbaden 1967, 318-27; he points out the similarities in this text with poetry).

Among the examples of prose from this period, the letters as well as other documents emanating from the Prophet and the first caliphs should be included. These documents from older sources have been collected by M. Hamidullah in *Documents sur la diplomatie musulmane à l'époque du Prophète et des Khalifes Orthodoxes*, Paris 1935; also an Arabic edition, *Maḏjmu'at al-wathā'iq al-siyāsiyya fi 'l-aḥd al-nabawī wa 'l-ḫilāfa al-rāshida*, Cairo 1941.

The problem of their authenticity has been, of course, raised and the criterion most often used is that of linguistic usage (*op. cit.*, 4-5, in the French edition; B. Reichel-Baumgartner, *Parameter des Idiolekt*

*des Propheten Muhammad auf Grundlage des Saḥīḥ von al-Buḥārī*, in *WZKM*, lxxviii [1988], 121-59). Problems of authenticity as well as of the transmission of ancient texts are examined by G.H.A. Juynboll, *On the origin of Arabic prose: reflections on authenticity*, in *Studies on the first century of Islamic society*, Carbondale, Ill. 1982; and R.B. Serjeant, *The Caliph 'Umar's letters to Abū Mūsā al-Ash'arī and Mu'āwiya*, in *JSS*, xxix [1984], 65-79.

#### *The influence of the Qur'an on the evolution of prose*

Without any doubt, the Qur'an is the primary example of a complex text in Arab literature that has not been composed in verse. The language that is used is one elaborated as a poetic koine, the only one capable of communicating such a message. In form, especially in the more ancient sūras, it is close to poetic style. In the Muslim tradition, however, Scripture is distinguished from poetry as it is from prose, for literary as well as religious reasons; the deliberations of Muslim scholars about the form of the sacred text have taken on the form of the dogma of *ʿidjāz* [q.v.], the "stylistic uniqueness" of the Qur'an.

Classical texts on poetry use the same criteria for analysis in order to show that the divide between the Qur'an and literary discourse was uncrossable (see e.g. *Fijāz al-Kur'an* of al-Bākillānī, d. 403/1013 [q.v.]; G.E. von Grunbaum, *A tenth-century document of Arabic literary theory and criticism*, Chicago 1950). On the other hand there are some treatises drawn up to show that the decorative style of poetry could be found also in the Qur'an (Ibn Abi 'l-Iṣba', d. 654/1256, *Badī' al-Kur'an*, ed. H. Ṣhāraf, Cairo 1957). In short, the Qur'an plays an integral part in Arabic literary discourse, but it reaches a certain level of style which removes it far away from any other type of this discourse. In modern times, one typical example of this attitude is that of Tāhā Ḥusayn, who does not look at the Qur'an when dealing with poetry and prose, for "it is neither poetry nor prose" (*Min ḥadīth al-shi'r wa 'l-nathr*, Cairo 1936, 25).

It can therefore be concluded that, although the influence of the Qur'an on the evolution of Arabic prose is immense from the point of view of religious content, the political and cultural effect its message has brought with it, and the status that has been imparted to the language in which it was transmitted, its influence on style is much more subtle to define. Treatises such as *Ḥusn al-tawassul ilā sinā'at al-tarassul* of Shihāb al-Dīn al-Ḥalabī (d. 725/1325), ed. A. Yūsuf, Baghdād 1980, insist that the strongest way for an argument to be confirmed is that citations from the Qur'an must be inserted into a letter or into an official document, on condition that neither form nor basis is modified (72-3). Perhaps the earliest evidence for this exhortation to the *kātib*, secretary, to get to know and use quotations from the Qur'an as part of his professional training dates from the *Risālat al-'Adhūrā'* of Ibrāhīm al-Shaybānī (d. 298/910), ed. Z. Mubārak, Cairo 1931, under the name of Ibn al-Mudabbirī, 7; see Sanni, *op. cit.*, 6).

There is a more liberal attitude towards the text of the Qur'an when it is approached from the viewpoint of *mu'ārada* [q.v.], "the fact of wishing to equal it". From the point of view of literary sentiment, and disregarding religious aspects, one could say that *mu'ārada* is to the Qur'an what *sariḳa* is to poetry: there exists a threshold of literary propriety beyond which one should not tread without incurring blame, to be respected even more in the case of the Qur'an. As stated by W. Marçais, "from very early on it appeared futile and even sacrilegious to want

to imitate it" (see *Les origines de la prose littéraire arabe*, in *Rev. Afr.*, lxxviii [1927], 15-28).

But at the outset, literary prose shows evidence of a different attitude. Systematic studies conducted by W. al-Kādi show that two prose writers adopted a more liberal attitude to the sacred text (*Biṣṭr b. Abī Kubār al-Balawī, namūdhajj al-nathr al-fannī al-mubakkir fi 'l-Yaman*, Beirut 1985 [a *kātib* from Yemen who was alive up to the end of the 2nd/8th century, and whom the author considered an intermediary between 'Abd al-Ḥamīd and al-Djāhīz in the history of Arabic prose]; eadem, *The impact of the Qur'an on the epistolography of 'Abd al-Ḥamīd*, in G.R. Hawting and A.A. Shareef [eds.], *Approaches to the Qur'an*, London and New York 1993, 285-313). Passages from the Qur'an could be paraphrased to adapt them to the new syntax, and paraphrases and citations could even be combined; a quotation could be extended with phrases composed in the same rhythm.

On the other hand theorists recommended to the prose writers the *ikhtās* of the Qur'an, inserting a passage which is not an explicit quotation (for this see for example the presentation of Ibn al-Aṭhīr, *al-Mathal al-sā'ir*, i, 44). It is widely used as a literary device by *kuttāb* and orators; al-Tha'ālibī devotes a work to this, *al-Iktās min al-Kur'an al-karīm*, ed. I.M. al-Ṣaffār, Baghdād 1975, see Sanni, *op. cit.*, 5-7; the work has recently been described by Cl. Gilliot in *Arabica*, xlvii (2000), 488-500. Of course, in contrast to poetry, the insertion of a fragment from the Qur'an could be identified immediately (*Husn al-tawassul*, 323) and within these limits did not appear to be taken as a tentative *mu'arafa*. Other studies, such as those undertaken by W. al-Kādi, are very much a desideratum; cf. recently K. Zakharia, *Les références coraniques dans les Maqāmāt d'al-Ḥarīrī*, in *Arabica*, xxxiv [1987], 275-86; U. Marzolph, *The Quran and jocular literature*, in *Arabica*, xlvii [2000], 478-87.

#### Classical prose

The turbulent times of the Umayyad period found expression in the art of oratory. As it developed in this period, it represents the transition from oral to written Arabic prose. Al-Djāhīz (*K. al-Bayān wa 'l-tabyīn*) classified *khuṭba* alongside poetry and noted the use of *saḍī'* as characteristic. A recent study has investigated the harangues that are to be found in this work and has uncovered a technique not only in the especially careful structure but also in the presence of recurring phraseology which the author is able to assemble at will; see M.-H. Avril, *Rhétorique et huṭba dans le Kitāb al-bayān wa-l-tabyīn de Ḡāhīz*, thesis, Université de Lumière-Lyon II 1994, 369; also I. Ḥawī, *Fann al-khiṭāba wa-tatawuwuruh 'ind al-'arab*, Beirut n.d.

However, Arabic prose of the classical period acquires its character from the written genre of the *risāla* as found in the Umayyad *kātib* 'Abd al-Ḥamīd (d. 123/750 [q.v.]) and his contemporary Ibn al-Muḳaffā' (d. 139/756 [q.v.]) (see J.D. Latham, *Ibn al-Muḳaffā' and early Abbasid prose*, in *Camb. hist. of Ar. lit., Abbasid belles-lettres*, Cambridge 1990, 48-77); it is versatile with an ease of expression, rich in rhythmic balance in the phrases used and in the parallelism. The latter characteristic in particular was not typical of ancient Arabic prose; instead it preferred a more concise style, like poetry (M. Kurd 'Alī, *Umarā' al-bayān*, Cairo 1937, 18-19, 21; A. al-Maḳḍisī, *Tatawuwur al-asālib al-nathriyya fi 'l-adab al-'arabī*, Beirut 1960, 151; I. 'Abbās, *'Abd al-Ḥamīd b. Yahyā al-kātib wa-mā tabaḥḩā min rasā'ilih wa-rasā'il Ṣālim Abī 'l-'Alā'*, 'Ammān 1988, 145, who quotes the opinions of ancient writers on the style of 'Abd al-Ḥamīd).

There is some discussion about whether these characteristics came into Arabic prose under the influence of Persian or Greek, because the master of 'Abd al-Ḥamīd, Ṣālim Abī 'l-'Alā', *kātib* of the Umayyad caliph Hishām, composed his epistles, probably intended for the same caliph, from a Greek original (Latham, *The beginnings of Arabic prose literature*, in *CHAL. Arabic literature to the end of the Umayyad period*, Cambridge 1983, 154-64; 'Abbās, *op. cit.*, 141).

What one can say is that this prose was born in the atmosphere and under the influence of the chanceries, which were permeated with a Sāsānid ambience, particularly from the 'Abbāsīd period onwards. As they combined together, the influence of the intellectual customs of these environments and the activity of philologists concerned with the Arabic language produced this marvellous tool. Without contravening the rules or the spirit of the the Arabic language, it was used to express ethical thoughts, dialectic procedures, and philosophical and scientific ideas, none of which had been familiar in the circumstances in which this language first appeared. There are two particular areas in which the influence of non-Arab but Islamicised intellectual circles can be traced in particular: the dialectic and rhetorical procedures of the Mu'tazila [q.v.], and the moral and intellectual values upheld by the secretarial class. Ibn Ḳutayba (d. 276/889 [q.v.]) deplored the fact that the *kuttāb* of his time allowed themselves to be dazzled by a pompous-looking empty science, which took them away from the solid items of knowledge they required in their position and from the knowledge of the traditional sciences: "Right there we have the whole history of *kalām* and Mu'tazilism" (G. Lecomte, *L'introduction du Kitāb adab al-kātib d'Ibn Qutayba*, in *Mélanges L. Massignon*, Damascus 1956-7, iii, 55).

It was in this period and in this atmosphere that such major questions stopped being treated in verse (H.A.R. Gibb, *The social significance of the shu'ūbiya*, in *Studia orientalia Ioanni Pedersen, dicata*, Copenhagen 1953, 105-14). It was because of the role played by the *kuttāb*, the literary training demanded by their function and the intellectual climate created under their influence, that works appeared which claimed a position of superiority for prose above that of poetry, as we have seen earlier (e.g. Z. al-Zu'ubī; Ibrāhīm b. Hilāl al-Ṣābi, *Risāla fi 'l-Farḩ bayn al-mutarasīl wa 'l-shā'ir*, 143-4; or the introduction to the work already mentioned of al-Tha'ālibī, *Nathr al-nazm*).

At the beginning of the 'Abbāsīd period, a high peak in style was reached here by al-Djāhīz [q.v.], who had an inestimable influence on later Arabic prose and who contributed to the enunciation of a technical terminology for the *balāgha*. Al-Djāhīz was a Mu'tazilī, and his belief can be seen in the dialectical skill of which he seeks to give proof in a number of his treatises, where he expounds arguments to praise and to condemn the same thing or the same idea (I. Geries, *Un genre littéraire arabe: al-Maḩāsīn wa-l-Masāwī*, Paris 1977). But Al-Djāhīz was not the first, for there is preserved a fragment from Sahl b. Ḩārūn (d. 215/830 [q.v.]) in which he argues for glass to be given pre-eminence over gold (Ibn Nubāta, *Sarḩ al-'uyun, sharḩ risālat Ibn Ḓaydūn*, Cairo 1957, 139).

Besides this, 'Abd al-Ḥamīd, in his epistle addressed to the *kuttāb*, lists among the qualities necessary for the accomplishment of their duties a knowledge of ancient poetry, including its vocabulary and its themes; he himself proved his ability in a *risāla* describing a hunting expedition which has echoes of pre-Islamic verse on the same theme; more details on 'Abd al-

Hamīd are to be found in e.g. H. Schönig, *Das Sendschreiben des 'Abd al-Hamīd b. Yahyā* (gest. 132/750) *an den Kronprinzen 'Abdallah b. Marwān II*, Stuttgart 1985; and al-Kāḍī, *Early Islamic state letters: the question of authenticity*, in A. Cameron and L.I. Conrad (eds.), *The Byzantine and early Islamic Near East*, i, Princeton 1992, 215-75, which examines the transmission of these epistles.

*The later development of prose*

The way style evolved is the most obvious feature in the history of this prose, especially from the formal point of view in the use of richer and more laboured ornamentation (*badī'* [q.v.]) and *saḍf*. Such a style figures primarily but not exclusively in documents emanating from the *kuttāb*, and it has been studied because, as has been seen, what interested the theorists was the *kitāba* (the prose of the literary secretaries [q.v.]). The fragments we have of Sahl b. Hārūn already display a style involving rhythmic scansion in short phrases; here the thought is developed in two or more colons, which has the double effect of the extension of the main idea and the musical quality of the form.

At the end of the 2nd/8th century, the chancery documents coming from the Barmakids [see AL-BARĀMIKA] are composed as *saḍf* (*Bayān*, 3,215). The same is true for 'Amr b. Mas'ada, in the period of al-Ma'mūn, who belonged to an originally Turkish family known by the eponym Sūl; another member of this family was Ibrahim b. al-'Abbās al-Sūlī, the *kātib* of al-Mutawakkil (see AL-ŠULĪ, ABŪ BAKR; ŠH. Ḍayf, *al-Fann wa-madhahibuh fi 'l-nathr al-'arabī*, Cairo 1960, 197-9; M. Kurd 'Alī, *Umarā'*, 191-217).

After the time of al-Muḥtadir (d. 320/932) there was a general use of *saḍf*, as can be seen from the documents from this period transmitted by Hilāl b. al-Muḥassin al-Šabī (d. 448/1055), *Tuḥfat al-umarā' fi ta'rīkh al-uuzarā'*, Cairo 1958. There is a balance of rhythmic phrases and rhymes which is developed by accumulation and synonyms; it is permeated with stylistic figures (in particular, paranomasia and antithesis) which contribute to the overall sonority of the phrases. This rich and subtle use of words, polishing every detail before they become complicated and turgid, was much appreciated, not only because they were a proof of the dexterity and hence the value of the *kātib*, but also because they reduced once again the distance between poetry and prose. The *rasā'il* of the three famous *kuttāb* of the Būyids, Ibn al-'Amīd (d. 360/970 [q.v.], al-Šāhib Ibn 'Abbād (d. 385/995 [q.v.]) and Abū Ishāq al-Šabī (d. 384/994 [see ŠABĪ]) all share this style, in which a rhythmic symmetry of phraseology is accompanied by figurative language, which is compared to embroidery and drawing by Ḍayf (*op. cit.*, 209-10); he defines it as poetry in the form of prose (216) with the same qualities of lightness and elegance.

Incidentally, part of the *ikhwāniyya* letters exchanged between Abū Ishāq al-Šabī and al-Šarīf al-Raḍī (ed. M.Y. Naḍīm, Kuwait 1961) was composed in verse. But al-Tawḥīdī (*al-Imtā' wa 'l-mu'ānasa*, i, 64) considered the prose of Ibn 'Abbād somewhat stiff in his choice of words (perhaps because of his preference for words with velar consonants) and complicated by the inclusion of numerous parenthetical phrases, attentive to form even to the detriment of the meaning. There is another bitter critique from a literary point of view of the *kuttāb* which is found in the work of an unknown author from the 4th/10th century (see J. Sadan, *La littérature vue par un administrateur frustré*, in *SI*, lxxi [1990], 29-36).

The principal sources for literary prose up to this

period are: al-Djāhīz, *al-Bayān wa 'l-tabyīn*; al-Tha'alībī, *Yatīmat al-dahr*; Yāqūt, *Muḍjam al-udabā'*; the collections of the epistles and of the other works of al-Šāhib Ibn 'Abbād and of Abū Ishāq al-Šabī have been published; apparently for those of Ibn al-'Amīd, despite his fame, all we have is what has been mentioned in works cited here and in other encyclopaedias of *adab*. More modern collections include A.Z. Šafwat, *Djamharat khatib al-'arab fi 'usūr al-'arabiyya al-tāhira*, i-iii, Cairo 1933, and *Djamharat rasā'il al-'arab*, i-iv, Cairo 1937; Kurd 'Alī, *Rasā'il al-bulaghā'*, Cairo 1946. A state-of-the-art report on the general themes and the principal authors can be found in the recently-published *CHAL. 'Abbasid belles-lettres*.

Literary prose from a non-scribal environment has retained something of this style: a diffuse tendency towards parallelism, the construction of a phrase through which variations of the same idea are expressed by using a structure of parallel segments; these can repeat the idea by using synonyms or by expressing its antithesis or by making it more complete and more precise (A.F.L. Beeston, *The role of parallelism in Arabic prose*, in *CHAL. Literature to the end of the Umayyad period*, 180-5).

In each segment the syntactic structure is the same, as also to a certain degree is the morphological structure, by the selection of the patterns of nouns and verbs. This confers on the phrase its typical rhythm, without any insistence on assonance or rhyme. Beeston (*op. cit.*, 185) underlines the difference between this elaborated style and the simplicity of the primitive *saḍf*. Al-Djāhīz makes very moderate use of the style; his arguments are developed in a full and diffuse manner; sometimes he uses the same syntactic device but without seeking any symmetry. In those parts of his work which are not a collection of *akḥbār*, Ibn Kutayba likes to make use of the style here described, in the well-constructed introduction to *Adab al-kātib*, for example; some elegant examples of this style are to be found in Abū Ḥayyān al-Tawḥīdī (d. 414/1023 [q.v.]), or Ibn Ḥazm (d. 456/1064 [q.v.]) from al-Andalus.

Frequently, different registers of style can be found in the same author; e.g. Ibn al-Muḥaffa' uses a simple and uncontrived style in *Katīla wa-Dimna* [q.v.], in contradistinction to the laboured style which he adopts for his original work and which was to influence later prose. Miskawayh (d. 421/1030 [q.v.]) has a sober, concise style of prose in his *Taḍjārīb al-umam*, but more expansive in *al-Hawamīl wa 'l-šawāmiḥ*.

Prose which does not keep to the rules of *saḍf* is called *al-nathr al-mursal*, and it is in this style that the majority of works in classical prose have been written; in them the use of *saḍf* and the other stylistic conventions, if they exist at all, is often restricted to the author's opening prologue. Such is the case in e.g. Abu 'l-Faraj al-Iṣfahānī (d. 363/972-3 [q.v.]), *Kitāb al-Aghānī*, where the introduction explains the purpose of the book without any literary embellishment; or Abū Ḍja'far al-Ṭabarī (d. 310/923 [q.v.]), *Ta'rīkh al-Rusul wa 'l-mulūk*, who commences his book with a praise to God in *saḍf*.

Prose that relates a series of events, which is strictly concerned with facts, whether they be historical or scientific, and that uses in general short, juxtaposed phrases must be distinguished from prose whose purpose is argument or exhortation. This latter type of prose, whether or not it uses parallelism, displays a syntax consisting of complex phrases and a number of parentheses. A remarkable example of such prose is the style of the famous writer of verse 'Abd al-Kāhīr al-Djurdjānī (d. 471/1078 [q.v. in Suppl.]).

Evidently there was a technical vocabulary for each science (see e.g. L. Massignon, *Essai sur l'origine du lexique technique de la mystique musulmane*, Paris 1959; C.E. Bosworth, *Abū 'Abdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xiii [1969], 113-64; A.M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938). There also existed stylistic conventions of form, like the fictitious dialogue, through which argument in theological texts was conducted; the earliest examples of this technique seem to date from the a period before the Mu'tazila, and have been investigated by J. van Ess, *Disputationspraxis in der islamischen Theologie*, in *REI*, xlv [1977]; idem, *Early development of kalām*, in *Studies on the first century*, 109-23; idem, *The logical structure of Islamic theology*, in von Grunebaum (ed.), *Logic in classical Islamic culture*, Wiesbaden 1970, 21-50. In this last study, the author makes a close investigation of the method and the terminology in the theological argumentation based on Aristotelian logic, and he shows how al-Ghazālī, once he had adopted this method as the only one capable of demonstrating religious truth, in order to get it accepted preserved the terminology of *uṣūl al-fikh* [q.v.]. This manner of argumentation goes beyond the field of theology and was followed, for example, in the grammar of 'Alī b. 'Isā al-Rummānī (d. 384/994 [q.v.]) in his commentary on the *Kūlāb* of Sibawayh (M. al-Mubārak, *al-Rummānī al-naḥwī fī daw' sharḥih li-Kūlāb Sibawayh*, Damascus 1963). For the characteristics of the prose of the Ṣūfī, which often appears in the form of exhortation and advice addressed to a disciple, see the remarks of al-Ḳāḍī in her introduction to *al-Ishārāt al-ilāhiyya* of al-Tawḥīdī, Beirut 1973.

There is a classification of *Schriftum* in Arabic to be found in M. Shakh'a, *Manāḥij al-ta'tij 'ind al-'ulamā' al-'arab*, Beirut 1973; see also now the organisation in *CHAL. Religion, learning and science in the 'Abbasid period*, Cambridge 1990.

#### *The development of decorative style*

This technical refinement of style which was shown by the *kuttāb* of the 4th/10th century evolved during the course of the following century into a quest for effects, turning it into more and more complicated prose. Not only could the rhyme of the *saḍī'* comprise two or more consonants, but the style decorates itself with archaic lexemes from ancient poetry, with historical allusions, with word-plays based on double meanings of technical grammatical, metrical and philosophical terms. This style goes beyond the administrative sphere and extends its influence also to literary works, such as first of all the *makāma* [q.v.] or the *Risāla Hazīyya* of Ibn Zaydūn (d. 463/1070 [q.v.]); also to historical works, such as 'Abd al-Djabbār al-'Utbi (d. ca. 427/1036 [q.v.]), *al-Kūlāb al-Yamīnī*, see C.E. Bosworth, *Early sources for the history of the first four Ghaznavid sultans (977-1041)*, in *IQ*, vii [1963], 3-22, or 'Imrād al-Dīn al-Iṣfahānī (d. 597/1201), *kātib* of Ṣalāh al-Dīn (for the differences in style of these historians see F. Gabrieli, *Storici arabi delle crociate*, Turin 1969; D.S. Margoliouth, *Lectures on Arabic historians*, Calcutta 1930). By contrast, al-Bīrūnī (d. 440/1048 [q.v.]) used *saḍī'* when he wrote the introduction to his *al-Āthār al-bākiyya*, ed. C. Sachau, Leipzig 1878, dedicated to Ḳābūs b. Wushmagīr (d. 403/1013 [q.v.]), the *amīr* of the Ziyārid dynasty, famous for his immoderate use of stylistic techniques. His *rasā'il* have been collected by 'A. al-Yazdādī, *Kamāl al-balāgha*, Cairo 1341/1922-3 (see Dayf, *op. cit.*, 255-9), but al-Bīrūnī's style is sober and tight in the introduction to the book *Fī taḥkīk mā li 'l-Hind min makūla*, ed. Sachau,

London 1887, and elegant in the description of the customs of the Indians.

The most remarkable representative of this ornate style is Abu 'l-'Alā' al-Ma'arrī (d. 443/1058 [q.v.]), whose prose was made deliberately obscure by the use of words that are not only rare but even obsolete, and by a profusion of erudite allusions to the world of ancient Arabia, including proverbs and the names of stars, wells and idols. Al-Ma'arrī has even provided a commentary to accompany his prose; 'A. 'Abd al-Rahmān (Bint al-Shāṭi'), *al-Ghufṛān li-Abi 'l-'Alā' al-Ma'arrī*, Cairo 1962, picks out examples of divergence from normal syntax into which the complications of his *saḍī'* have led al-Ma'arrī; she lists those ancient critics who recognised a heaviness in that style, despite the prestige it enjoyed, and she analyses the use of different registers in the work.

For the history of prose works after the 6th/12th century, see *CHAL. 'Abbasid belles-lettres*, in which the prose from the different areas (Yemen, Egypt) is discussed; see also *ibid.*, *Religion, learning and science*; and see further *INSHĀ'*; *MADRASA*; *NAḤḌA*; *TA'RĪKH*; *'ULAMĀ'*.

#### *Prose genres*

As well as the *risāla*, there were other literary genres recognised by the ancient theorists, especially the *makāma*, the *khuṭba*, the *ḥikāya* [q.v.] and the *ḳiṣṣa* [q.v.]. In addition there were also "genres" that were less well recognised by those theorists but that form a part of *adab* and to which modern research devotes particular attention. They are designated by names such as *nawādir*, *mulaḥ*, *aḥbār*, and *ḥikam* (see Sadan, *Death of a princess: episodes of the Barmakid legend in its late evolution*, in S. Leder (ed.), *Story-telling in the framework of non-fictional Arabic literature*, Wiesbaden 1998, 131, and *HIKĀYA*).

The *khabar* in particular, whether it derives from a work of history or of *adab*, presents itself as the report, seen from the outside, of a real event. A very valuable set of studies being undertaken now has produced an analysis of these stories from the standpoint of narrative structure. The results that have so far appeared tend on the one hand to bridge the gap between the "lack of fiction", which one can see in classical Arabic literature, and modern literary fiction, and on the other hand to examine the forms of awareness that the "reporter" of a *khabar* could have in composing in reality a work of literature. Further studies include those to be found in Leder, *op. cit.*; see Sh. Ayyād, *Fann al-khabar fī turāthimā al-ḳiṣṣa*, in *Fuṣūl*, ii (1982), 11-18; Leder, *Features of the novel in early historiography*, in *Oriens*, xxxii (1990), 72-96; idem, *The literary use of the Khabar: a basic form of historical writing*, in Cameron and Conrad (eds.), *op. cit.*, 277-315; H. Kilpatrick, *Context and the enhancement of the meaning of aḥbār in the Kitāb al-aḡānī*, in *Arabica*, xxxviii (1991), 351-68; eadem, *Aḥbār manzūma. The romance of Qays and Lubnā in the Aḡānī*, in *Festschrift E. Wagner*, 2 vols. Beirut 1994, 350-61.

Studies on the evolution of prose from the point of view of language are rare, but one may refer to some studies about an author's use of language, such as Schönig, *op. cit.*; or F. al-Djāmī'ī al-Habbābī, *Lughat Abi 'l-'Alā' al-Ma'arrī fī Risālat al-ghufṛān*, Cairo n.d.; or the works on syntax based on texts, such as Y. Peled, *Conditional structures in Classical Arabic*, Wiesbaden 1992; also the contributions in the *Beiträge zur Lexicographie des klassischen Arabisch*, in *Bayerische Akademie der Wissenschaften, phil. hist. Klasse* (1979).

(LIDIA BETTINI)

**NĀY** (p., in Tkish., *ney*), a rim-blown flute made of reed (*arundo donax* L.). The name, meaning basically “reed”, is known from Pahlavi, in which it was a loanword from Aramaic *qn*’ (cf. Assyrian *qanū*, *qanū’u*, Hebr. *qnh*). However in early Arabic sources, such as the *Kitāb al-Aghānī*, the term *nāy* most probably denoted not a flute but a double-reed woodwind instrument of the *mizmār* [q.v.] family. The *mizmār*, because of its colour, was also called *nāy siyāh* “black *nāy*” in contrast to the *nāy safīd* “white *nāy*”, i.e. the flute.

The rim-blown flute has been known since the 3rd millennium B.C. in Ancient Egypt as well as in Mesopotamia. For Ancient Egypt, written and iconographic testimonies of flute players are frequent. While the Sumerian flutes found at Ur are metal fragments, the Egyptian ones are of reed. The ancient Egyptian flutes that are preserved in the Egyptian Museum of Cairo were played and recorded by Maḥmūd ‘Iffat in 1991. Some of them produced a pentatonic scale, others a heptatonic one.

After its peak in Antiquity, the rim-blown flute survived as a folk instrument until Šūfī movements in Islam gave it a new and prominent place in religious music (see below). The folk flutes do not conform to the norms of the classical instrument. They may be made of wood, reed or metal and have many local names, as e.g. the Palestinian and Syrian *shabbāba*, the ‘Irāqī *blūr*, the Turkish *kaval*, the Egyptian *kawala* and *salāmīyya*, the Algerian *gašba* or the Ethiopian *washint*.

The *nāy/ney* is cut out of one naturally grown piece of reed of 15 to 25 mm diameter. Each end lies between two nodes; the whole instrument has 8 nodes and 9 internodes (persian *nāy*: 6 nodes/7 internodes). The *nāy* is held obliquely. It is blown upon the rim, which is the edge of the uppermost internode (*khazna*). Persian players place the rim between their teeth (“Išfahān technique”); the rim of Persian instruments is often set in a metal ring. The Turkish *ney*, from Ottoman times onwards, has a mouthpiece (*bašpare*) made of wood, ivory, gold or—in modern times—synthetic materials. The *nāy/ney* has 6 (Persian *nāy*: 5) fingerholes and one thumbhole.

The *nāy/ney* fits particularly well with oriental modes (*makāmāt* [see MAKĀM]), because its basic fingering includes the typical three-quarter-tone intervals. A set (*takm*) of 7 to 12 instruments of different length allows to transpose the *makāmāt* to nearly every note. Arabic *nāys* are named after their fundamental note, given by opening the last hole. A standard Arabic (Egyptian)

Turkish *ney*, Arabic and Persian *nāy* (from above)

*takm* consists of: *nāy Rāst* (C, length approximately 680 mm; the exact length depends on the width of the reed), *nāy Dūkāh* (D, 600 mm), *nāy Būsātk* (E, 540 mm), *nāy Čehārkāh* (F, 510 mm), *nāy Nawā* (G, 445 mm), *nāy Husaynī* (A, 405 mm) and *nāy Adjām* (B<sup>b</sup>, 375 mm). Higher, lower or “half-tone” *nāys* as e.g. *Dūkāh nisf* (D<sup>b</sup>, 665 mm), are seldom in use. Turkish *neys* are longer and lower; the third step gives a higher *sikāh* (three-quarter-tone) than the Arabic *nāy*. The Turkish set (*takm*) consists of: *Bolahenk ney* (length approximately 1040 mm); *Daḥūd ney* (910 mm); *Šah ney* (858 mm); *Mansur ney* (806 mm), *Kiz ney* (702 mm), *Müstahzen* (598 mm) and *Süpürde* (572 mm). For high levels, there are “half” (*nısfıye*) instruments, e.g. *Kiz nisfıye* (350 mm). The Persian *nāys* vary from 400 to 800 mm in length.

Impressed by the modern European flute, several attempts have been made to technically improve and modernise the *nāy*. Until now, none of these attempts has been widely accepted. The simplicity of its construction and the naturalness of its sound are still essential for the instrument, which demands high skill of its players and plays an important role even in modern music.

The *nāy* has been the favoured wind instrument of art and court music from around the 8th/14th century onwards. As a court music instrument, the *nāy* is frequently represented in Persian miniature paintings. It is played solo or in mixed ensembles, but normally not with other *nāys*. Turkish ensembles, however, sometimes have many *neys* playing together. The dances of the Mevlevi dervishes, for example, are accompanied by drums and *neys* only. When playing with a singer, the *nāy* is especially used for short melodic formulas (*lāzıma*, pl. *lawāzım*) and improvisations (*taḥsīm*, pl. *taḥāsım*).

The sound of the *nāy* is regarded as particularly similar to the human voice. According to a legend in the *Mazhar al-‘adjā’ib*, ascribed to Farīd al-Dīn ‘Aḥḡār (ca. 513-618/1119-1221 [q.v.]), the *nāy* voices the Prophet’s secret revelations which no other human being has ever heard. Before this, ‘Alī had told the secrets to a well at the edge of which reeds grew.

In Šūfī music, the *nāy* is the most prominent melodic instrument of all. The Šūfīs hear the sound of the *nāy* as the crying of the reed after it is cut. It is like the crying of the soul because of its separation from God. The famous *Mathnawī* of Djalāl al-Dīn Rūmī (604-72/1207-73 [q.v.]) opens with a dramatic articulation of this symbolic meaning of the *nāy*.

(CLAUDIA OTT)

### NAZM.

1. In metrical speech. Literally meaning "stringing (pearls, beads, etc.)", in early 'Abbāsīd times *nazm* acquired the meaning of "versifying", "versification", and became almost synonymous with "poetry", *shīr* [q.v.], especially when contrasted with prose, *nathr*, literally "scattering". The comparison of a poem to a necklace, or verses to pearls, is apt in view of the relative independence of the individual verses, held together on the string of the uniform metre and rhyme. The image has pre-'Abbāsīd origins, and although the noun *nazm* was not used in the sense of "verse" until later (and *Qudāma b. Dja'far* [q.v.] still does not do so in his poetics), at least the related verb had already been used, when the 1st/7th century poet al-Nadījāshī said *Sa-anzimu min hurri 'l-kalāmi kašīdātan* "I shall string/compose an ode of noble speech" (al-Ḥātimī, *Hīyat al-muhādara*, Baghdad 1979, i, 426). Yet Abū Nuwās [q.v.] could still speak, in an ode addressed to al-Amīn, of "my scattering (*nathrī*) pearls on you" (*Dīwān*, ed. Wagner, i, 241). The many discussions on the relative merits of prose and poetry regularly employ the terms *nazm* and *nathr* (on this debate, see e.g. Ziyad al-Zu'bi, *Das Verhältnis von Poesie und Prosa in der arabischen Literatur-theorie des Mittelalters*, Berlin 1987). Not rarely, however, a distinction is made between *shīr* as "true" poetry and *nazm* as merely versifying, i.e. either prosodically correct but unintentionally bad poetry, or didactic verse (see e.g. Iṣḥāq b. Ibrāhīm b. Wahb, *al-Burhān*, Cairo 1969, 130; Ibn Khaldūn, *The Muqaddimah*, tr. F. Rosenthal, Princeton 1967, iii, 381-2).

(G.J.H. VAN GELDER)

2. In *Qur'ānic* studies. Here, the "arrangement of pearls on a string" is used metaphorically to indicate "ordering of words-cum-meanings", i.e. "composition" (note that *ta'līf* is sometimes used synonymously with *nazm*), or, more freely, the "style" of the *Qur'ān*. In this sense it is closely connected with the discussions of the dogma of *ʿiḍāz al-Kur'ān* [q.v.]; more particularly, it is evidently the backbone of the conception of *ʿiḍāz* as "stylistic inimitability" of the *Qur'ān*.

The first known work devoted to this notion is the *K. fi 'l-ihṭidjādī li-nazm al-Kur'ān wa-salāmātihī min al-zyāda wa 'l-nuḡṣān* of al-Djāhīz (d. 255/868-9 [q.v.]), which is unfortunately lost (Ch. Pellat's reference in *Nouvel essai d'inventaire de l'œuvre Ḡāhizienne*, in *Arabica*, xxxi [1984], 117ff., no. 191, to a ms. copy of this work preserved in the Escorial library is erroneous, see J. van Ess, *Theologie*, vi, 314). The work is usually cited with the brief title *Nazm al-Kur'ān*. Al-Khayyāṭ describes it as follows: "No book is known concerning the argument for the well-orderedness (*nazm*) and the wondrous composition of the *Qur'ān*, and that it is proof for the prophethood of Muḥammad—God bless him—, except the book of al-Djāhīz" (*al-Intisār*, ed. A.N. Nader [Beirut 1957], 111). This description contains all the elements of the *ʿiḍāz* concept, as generally adopted later. Al-Djāhīz radically breaks with the *ṣarfā* notion of his teacher al-Nazzām [q.v.], who did not believe that the composition of the *Qur'ān*

was stylistically unattainable and who thought that Muḥammad's pagan contemporaries, challenged to produce something like a *sūra*, were "turned away" by God from carrying out this task.

Claude Audebert has compiled a list of works on *nazm* up to the time of al-Khaṭṭābī, eight in all (*al-Ḥaṭṭābī*, 58-61). The most explicit title—and mostly we have but titles—is the one given to the Mu'tazilī al-Wāsiṭī's (d. 306/918 or 307/919) book: *K. ʿiḍāz al-Kur'ān fī nazmihī wa-ta'līfih* (*ibid.*, 59). It states the connection between *ʿiḍāz* and *nazm* and the near-synonymy of *nazm* and *ta'līf*. It is remarkable that the authors of these works are partly *mutakallimūn* and partly traditionalists.

Al-Khaṭṭābī (d. 386/996 or 388/998 [q.v.]), in his treatise *Bayān ʿiḍāz al-Kur'ān*, postulates a triad of elements that make up "speech" (*kalām*), namely, *lafẓun hāmīlun wa-mānan bhī kā'imun wa-ribāʿun lahumā nāzīm* "words as carriers, meaning subsisting in them, and a connection that orders both of them" (ed. M. Khalaf Allāh and M.Z. Salām, 24 l. 11; tr. Audebert, *al-Ḥaṭṭābī*, 120, cf. also 87). The third element is usually called *nazm*; al-Khaṭṭābī not infrequently also uses the plural *naẓm* to refer to the syntactic-stylistic "structures" or "molds" (this plural is not in the dictionaries). In all three elements the *Qur'ān* is the superior text, as the continuation of the quoted passage says. The workings of *nazm* are several times metaphorically characterised (the various "types of ordering" [*rusūm al-nazm*] are a "bridle on the words and a rein on the meanings" [*liḥjām al-alfāz wa-zimām al-māʿānī*]; cf. ed., 33; tr. 128), but not defined and explicitly discussed. A large part of al-Khaṭṭābī's *Bayān* is devoted to linguistic-stylistic criticisms (i.e. criticisms of the *nazm*) of *Qur'ānic* passages by others, followed by the author's refutation (*al-Ḥaṭṭābī*, 97-102).

Al-Bākillānī (d. 403/1013 [q.v.]), in his *ʿiḍāz al-Kur'ān*, lists the excellent *nazm* of the *Qur'ān* as the third reason for its inimitability (after [1] prophesying passages, and [2] the illiteracy of the Prophet, which proves Divine instruction about creation, etc.). He enumerates ten aspects of this *nazm*: (1) The *Qur'ān* is *sui generis* as a literary genre (35). (2) The Arabs had not produced any eloquent text of such enormous length (36). (3) The *Qur'ān* is homogeneously eloquent in all its subgenres (*wajūh*), such as narratives, admonitions, argumentations, etc., whereas a poet may excel in panegyrics but not in invective, or vice versa (36-8). (4) The smooth transition from one topic to the next in the *Qur'ān* is unrivalled (38). (5) Not only man is unable to produce anything similar to it, but so are the *jinn* (38-41). (6) All stylistic and rhetorical possibilities occur in the *Qur'ān* (42). (7) Expressing new ideas, rather than well-worn ones, with beautiful words is the highest level of language mastery (*barāʿa*); this the *Qur'ān* does when it speaks about legal and religious matters (42). (8) When a *Qur'ānic* phrase is quoted, it stands out in its new textual surrounding through its beauty (42-4). (9) The "mysterious letters" at the beginning of twenty-eight *sūras* show an amazingly regular selection of phonemes, when measured against the various groups of phonemes that the grammarians have established (44-6). (10) The style of the *Qur'ān* is easy though impossible to imitate (*karībān ilā 'l-afḥāmī yubādīru mā'nāhu 'l-lafẓa ilā 'l-kalb . . . wa-huwa mā'a dhālika muntānī'u 'l-maṭlab*); it is equally distant from lexical uncouthness (*wahshī*) and unusualness (*gharīb*) [q.v.], on the one hand, and from affected artfulness (*al-ṣan'a al-mutakkallaḡa*), on the other (46).

The list clearly shows that al-Bākillānī is not interested in the micro-analysis of what constitutes *nazm*,

nor does he establish, as al-Khaṭṭābī does, the strict correlation between *nazm* and the two other elements of speech, “words” and “meaning”. He focuses more on the overall linguistic-literary quality of the Qurʾānic text.

ʿAbd al-Kāhīr al-Djurdjānī (d. 471/1078 or 474/1081 [q.v. in Suppl.]), in his *Dalāʾil al-ʾiḏjāz* (“Proofs for the Inimitability”), comes again closer to al-Khaṭṭābī, who may be called his precursor in matters of *nazm*. But al-Djurdjānī surpasses him by far. Over hundreds of pages he subjects Qurʾānic phrases, or syntactic phenomena in general, to the most painstaking semantic analysis and thus manages to fill the notion of *nazm* with real content. He defines it as *tawakkhkhī maʾānī ʾl-nahw* (“minding the meanings of syntactic relations”). The syntactic-semantic phenomena discussed include *inter alia*: word order (*taḳḏīm wa-taʾkhhīr*), ellipsis (*hadhf*), syndetic and asyndetic coordination (*waṣl wa-faṣl*), and the various functions of the sentence-initial particle *inna* (see also Weisweiler, in *Bibl.*)

The “ordering” (*nazm*) creates a specific shape/form (*sūra*) for a general *gharad* (“intention”) in the mind and, parallel to it, in the language; the meaning (*maʾnā*) and the expression/wording (*lafz*) of a proposition (*kalām*) thus become mirror images. The inherited but, according to al-Djurdjānī, misunderstood dichotomy *lafz-maʾnā* is thus reinterpreted: the wording (*lafz*) is no longer a “garment” for a “naked” *maʾnā*. The two are inseparable, no “meaning” can be expressed by two “wordings” equally well; the two “wordings” would express two different “meanings”.

K. Abu Deeb (*Poetic imagery*, 24-64) and, more recently, N. Kermani (*Gott ist schön*, 253-84, esp. 264, and n. 144) have argued that, with many of his deep-cutting analyses, al-Djurdjānī is a precursor of modern semanticists or even on a par with them. As a whole, his book is indeed highly original but not very well arranged. Fakhīr al-Dīn al-Rāzī (d. 606/1209 [q.v.]) and al-Sakkākī (d. 626/1229 [q.v.]) later turned his ideas into a textbook format, thus creating the discipline called *ʾilm al-maʾānī* (i.e. *maʾānī ʾl-nahw*) [see MAʾĀNĪ WA-BAYĀN].

All authors so far discussed restrict the notion of *nazm* to single Qurʾānic or poetic phrases (lines, verses). Ibn Rashīk (d. 456/1063 or 463/1071 [q.v.]), in his handbook on poetry, includes a chapter on *nazm*, in which this notion has at times a wider compass, referring as it does to the cohesion of consecutive lines (*ʾUmda*, i, 258-63). A similar approach to structures within a *sūra* can sometimes be found in books on the Qurʾān. Al-Khaṭṭābī al-Iskāfī (d. 421/1030), in his exegetical work *Durrat al-tanzīl wa-ghurrat al-taʾwīl fī bayān al-āyāt al-mutaṣhābihāt fī Kitāb Allāh al-ʾazīz* (Beirut 1995), several times tries to do just that: a “knitting of part to part”, as Hamori calls it (*Iskāfī*, 40-2). Some scholars seem to have gone even further and asked about the meaning of the place, within the Qurʾān, of individual *sūras*. Al-Zarkashī (d. 794/1392 [q.v.]) mentions one Abū Bakr al-Nīsābūrī, who “whenever the Koran was read to him, used to ask: Why is this verse put next to that one? For what reason does this *sūra* stand next to that one?” (G.J. van Gelder, *Beyond the line*, Leiden 1982, 100; the author suggests that we are possibly dealing here with Abu ʾl-Kāsim [?] al-Ḥasan b. Muḥammad al-Nīsābūrī, who wrote a *Kitāb al-Tanzīl wa-tarīḫih*, see n. 214). However, al-Zarkashī also mentions that this subject did not attract much attention (*al-Burhān fī ʾulūm al-Kurʾān*, ed. M.A. Ibrāhīm, Cairo 1972, i, 36).

In the modern period this has changed. In the

Indian subcontinent we find Ḥamīd al-Dīn ʿAbd al-Ḥamīd Farāhī (d. 1349/1930) and his disciple Amīn Aḥsan Iṣlāhī (d. 1997) upholding the idea of the coherence (*nazm*) of the Qurʾān on all levels (see M. Mir, *Coherence*, in *Bibl.*). The main motivation behind this seems to be traditional Orientalist criticism of the Qurʾān that stressed its structural incoherence on all levels. It should be noted that in more modern Western literary approaches the perceived “incoherence” is considered to be rather one of the strengths of the Holy Book (see Kermani, *Gott ist schön*, 281).

(W.P. HEINRICHS)

NISSİM B. YA'KÜB, IBN SHĀHĪN, outstanding leader and rabbi of North Africa and, Judaeo-Arabic author.

He was born ca. 300/990, and studied under his father and R. Ḥushiel, who emigrated from Italy and settled in al-Ḳayrawān [q.v.]. Like his father, Nissīm was head of the Academy there and the representative of the Academies of Sura and Pumbedita near Baghdād. He was famous as a scholar and enjoyed much glory, but the last period of his life was a sad time for him. His son died at an early age and his daughter was unhappily married to a son of Samuel ha-Nagid of the Banu ʾl-Naghalla, who served the Zīrids [q.v.] of Gharnāta. Nissīm visited Granada and taught there. Of importance during his time was the disturbed political situation in North Africa, since the local Zīrid dynasty there was in conflict with the Fāṭimids, and when the Bedouin of the Banū Hilāl [q.v.] and the Sulaym attacked Ifrīkiya, and the Zīrid ruler had to leave al-Ḳayrawān in 449/1057 and take refuge in al-Mahdiyya, Rabbi Nissīm fled to Sūsa [q.v.], where he died in 454/1062 after a serious illness.

The language of his important Judaeo-Arabic literary work, the *Kitāb al-Faraḏj baʿd al-shīda* (“Relief after hardship”), is one of the best examples of a Middle Arabic text that at times follows the rules of Classical Arabic, but at other times is influenced by the practice of Arabic dialects, with many hyper-corrections. The contents of the text, which was more widely known in its early Hebrew translation called *Hibbur yafeh me-ha-yeshuʾah* (“A beautiful collection about relief”, printed at Ferrara 1557), go back to the same

genre as practiced by al-Madā'inī (d. 225/840), Ibn Abi 'l-Dunyā (d. 281/894) and al-Muḥassin al-Tanūkhī (d. 384/994), and have a religious, perhaps Jewish, origin. Nissīm Ibn Shāhīn's stories do not have a secular character like most of al-Tanūkhī's stories, but are embedded in a religious context. Some stories such as "The perfidious wife" and "The story of Kidōr" found their way into other mediaeval bellestric collections.

(A. SCHIPPERS)

**NIZĀM 'ASKARĪ** (A.), military organisation, the system of military rule in modern Islamic lands (for a consideration of military organisation before ca. 1900, see **DIJAYSĪH**; **ḤARB**; **ISTĪRĀD**).

1. In the modern Arab world
2. In modern Iran
3. In the late Ottoman Empire and the Turkish Republic
4. In Pakistan

1. In the modern Arab world.

The frequent appearance of military régimes in the Arab sector of the Muslim world during the second part of the 20th century owes less to a tradition of interaction between military conquest and the diffusion of Islam than to the heritage of the style of power exercised by the Ottoman Sultans [see **'OTHMĀNLĪ**. I.]. It is explained both by the game of the European imperialisms and the influence of the Kemālist model in the region since 1921. Colonial domination depended on the separation between an allogenic military organisation and local society. It took the form of political régimes (mandates, protectorates or direct colonisation) in which the military played a dominant role through the actual or potential use of brute force (D.A. Rustow, to S.N. Fischer 1963, 3). While the officer corps of the colonial army was European, there was a preference for recruiting the troops from among the ethnic and religious communities. Senior officers often exercised civil functions, such as that of the High Commissioner of the French Mandate in Syria and in Lebanon (1920-43), the British High Commissioner in Palestine (1920-46) or in 'Irāk (1920-32) [see **MANDATES**]. Furthermore, the period of colonial domination was marked by the two World Wars which justified exceptional forms of government. It came to an end after sometimes prolonged and violent confrontation: in particular, the conflict in Palestine from 1936 onwards, the Algerian war (1954-62), and numerous suppressions of uprisings, as in Egypt by Great Britain in 1919 and 1924, in Syria by France in 1919, 1924-6 and 1945; and in 'Irāk by Great Britain, in 1921 and 1941.

After independence, the incidence of military régimes in the Arab region can be correlated to the frequency and the intensity of inter-state conflicts, through the implementation of preparations for war by senior officers with the object of imposing constitutional forms, social control and economic priorities, which justified and prolonged their domination: Israeli-Arab wars (1948-9, 1956, 1967, 1973, 1982), the Yemeni con-

flict from 1960-7, the Algerian-Moroccan war in the Sahara in 1963, then the war of the eastern Sahara from 1975 onwards, the Iran-'Irāk war from 1980 to 1988, and the Gulf War of 1990-1. The regional and ethnic tensions within young states with fragile national identities also favoured the seizure of power by the military, as in 'Irāk at the time of the 1958 revolution or in Sūdān from 1958 onwards. The principal motivating force was dissatisfaction with the poor economic performance of the civilian régimes.

After the Arab countries had gained their independence, the army became in the space of one or two decades the primary institution in terms of numbers—up to 30% of the workforce of certain countries—and of its budget, which often exceeded that of education, but also through the central place that it occupied in executive power. It permeated all the fields of political activity including the parties, exercised a tight control over the population using the force authorised by emergency laws and with recourse to the *mukhābarāt*, the intelligence and police services. Arab republics and monarchies were thus transformed into "military societies" (Abdelmalek 1962).

The analysis of Arab military régimes has given rise to three distinct interpretations of their nature and their effect on the state and the society of the countries concerned. The first credited the dominant participation of officers in the government with the qualities of order, efficiency and honesty as well as technical and organisational capacities. The army was seen as the best agency for the purpose of ensuring the development of the country, educating society and being the bearer of modern values and practices, since the generation of officers trained since independence belonged to a "new middle class" with modernising tendencies (Halpern 1962, 278); their nationalist sensibility, whether Arab (*kaumī*) or patriotic (*waṭanī*), manifested through various anti-colonial and revolutionary ideologies, gave them the legitimacy to impose on society a modernisation "from above" (industrialisation, agrarian reform) inspired by the Kemālist model (Allush 1968).

After the Arab defeat of 1967 and in view of the poor economic performance of Egypt and of Syria under military rule, then that of Algeria in the 1980s, a second analysis has prevailed. It described *nizām 'askarī* as "praetorian", and considered the army an agency for the maintenance of order in the service of an authoritarian and barely representative political power, pursuing its corporatist interests rather than a social project (Perlmutter 1974).

Until the turn of the 1990s, oil revenues and the priority given to the war effort assured the perpetuation of the *nizām 'askarī*. Subsequently, Arab armies had a tendency to return to their military function while a number of officers became economic entrepreneurs benefiting from the *infīṭāḥ*. The *nizām 'askarī* progressively gave way to civilian governments, still under military control. A third analysis then placed the accent on the simultaneously policing and predatory nature of these régimes (R. Owen, *State, power and politics in the making of the modern Middle East*, London 1992).

(a) *Egypt*

Although it was not historically the first, the prototype of *nizām 'askarī* in the Arab regions of the Muslim world in the 20th century is that of the *dubbāt al-ahrār*, the Free Officers who on 23 July 1952 overthrew the Egyptian dynasty which had itself been founded by an officer of the Ottoman army, Muḥammad 'Alī [q.v.]. This group of some three hun-

dred officers (T. Aclimandos, *Les militaires égyptiens. Esprit de corps et révolution, in Peuples méditerranéens/Méditerranéan Peoples*, xli-xlii [1988], 87-104), graduates of the Military Academy after 1936 (the date of its opening to indigenous Egyptians), had particularly resented the indifference of the monarchical régime during the Palestine war of 1948-9. Their nine leaders, constituted into a *Madjlis kiyādat al-thawra* (Revolutionary Command Council), installed military personnel in the higher ranks of the executive on a permanent basis. Originally, the RCC united personalities of diverse tendencies, Miṣr al-Fatāt, al-Ikhwān al-Muslimūn [q.v.] and Communists, who held in common the nationalist and socialist objectives summarised in the *Falsafat al-thawra* of Djamāl 'Abd al-Nāṣir [q.v. in Suppl.]. In the competition for power, the leftists of the RCC led by Yūsuf al-Ṣiddīq, and the liberals led by Khālīd Muhyī 'l-Dīn, were ousted in March 1953 and March 1954 respectively. The rupture with the Muslim Brotherhood took place on 12 January 1954. Whether socialistic pan-Arabist as in the 1960s, or patriotic liberal as in the 1980s, Egyptian power henceforward depended on the alliance between the military institution and the bureaucracy of state.

The executive was the prerogative of generals: presidency of the Republic was taken by Muḥammad Najīb, on 18 June 1952, and after his ousting on 14 November 1954, by Nāṣir until his death on 28 September 1970, by Anwar al-Sādāt (assassinated 5 October 1981) and by Ḥusnī Mubārak, who began his fourth presidential period of power on 26 September 1999. In the government, one-fifth of the ministerial posts (in particular Defence, Military Production and the Interior) were occupied by senior officers under Nāṣir, and 7.5% under Sādāt (M. Cooper, *The demilitarization of the Egyptian cabinet, in IJMES*, xiv [1982], 209). More than 80% of the posts of provincial governors belonged to them. Of the five categories "allied to the régime"—workers, peasants, intellectuals, nationalist capitalists and army—only the latter was authorised to organise itself, whereas the political parties were abolished on 16 January 1953 and replaced by a single party. After the defeat of 1967 and until the expulsion of the Soviet advisers in July 1972, a policy of raising the standard of recruitment and of strategic co-operation with the USSR made the institution the best endowed financially and the most advanced in technological terms in the country (with the acquisition of the Mig-27), barely troubled by internal conspiracies in October 1972, April 1974 (attempted uprising at the Military Academy by the radical Islamist movement *al-Takfīr wa 'l-Hiǧra* [q.v.] and October 1981 (assassination of Sādāt during a military parade).

According to the National Charter (*al-Mithāk al-waǧānī*) of 1962, the Egyptian military régime presented itself initially as revolutionary. It initiated economic and social reforms—the first agrarian reforms in September 1952 limiting property to 300 acres per family, Egyptianisation of British and French assets (nationalisation of the Suez Canal, 26 July 1956), nationalisation of heavy industry and textiles—and launched major works of infrastructure such as the Aswan Dam. However, the failures of economic policies combined with demographic growth of more than 3.5% per annum, and costly military defeats in Yemen and in the war of June 1967, impelled military leaders, in the second half of the decade of the 1970s, towards a liberalisation that opened the way for substantial investment by the military institution and by senior officers individually in the private sector. While

the army was less visible on the political plane, its armaments enterprises such as the Arab Organisation for Industrialisation (*al-Hay'a al-'Arabiyya li 'l-Taṣnī'*), founded in 1975 as a joint venture with Saudi Arabia, Qatar and the United Arab Emirates, and becoming exclusively Egyptian after the Camp David Accords with Israel (1978), exported more than a billion dollars worth of arms per year in the 1980s. Under the cover of ensuring security of food supplies (*al-amm al-ghidhā'ī*), the army also penetrated the civilian production sector, where it benefited from exemptions and privileges (Sadowski 1993).

The perpetuation of *nizām 'askarī* went in tandem with a progressive sidelining of members of the Revolutionary Command Council by Nāṣir, who cultivated the image of a populist leader with no time for intermediary institutions and procedures. It was accentuated by Sādāt to the benefit of the Arab Socialist Union (*al-Ittihad al-'arabī al-ishtirākī*), the single party from 1961 to 1977, to which military personnel were not permitted to belong (J. Waterbury, *The Egypt of Nasser and Sadat: the political economy of two régimes*, Princeton 1983). It was accelerated following the adoption of the Constitution of 11 September 1971 authorising multi-partyism, while, in the context of the peace process with Israel, from October 1975 to March 1979 (the Washington Treaty), the army benefited by military assistance from the United States worth 1.3 billion dollars per year. In principle, the army did not control the political parties, legalised from June 1977 onwards. In practice, it drew inspiration from the Turkish model, constituting itself as informal guardian of the state and master of society, leading police operations at the time of the hunger riots in January 1977, and the uprising of the Interior Security Forces in 1986. From the 1990s onward, the Egyptian *nizām 'askarī* became a security régime whose principal enemy was the Islamist movement and its extremist groups, both of these violently repressed.

#### (b) Syria

The developments of political life in the part of the Ottoman Bilād al-Shām, which became Syria under French Mandate on 28 April 1920, hardly predisposed this country to a military régime. The civil, economic and religious élites were firmly based there and were dynamic, whilst the army numbered fewer than 5,000 men at Independence, recruited among the ethnic and religious minorities, and staffed by French officers (N. Bou-Nacklie, *The Special Troops: religious and ethnic recruitment, 1916-1946, in IJMES*, xxv [1993], 649-60). However, thirteen coups d'état followed the independence of the country and, after the seizure of power by Colonel Ḥusnī al-Za'īm [q.v.] on 30 March 1949, the army remained a dominant political actor, except during the period of the United Arab Republic (1 February 1958-28 September 1961).

The first three military régimes in Syria were the result of an *inkilāb*, an uprising of officers discontented with the political direction of the country, in particular the treatment reserved for the armed forces and the circumstances of the defeat in Palestine. The Colonels Ḥusnī al-Za'īm, Sāmī al-Hinnāwī (14 August-19 December 1949) and Adīb al-Shīshaklī (exiled 25 February 1954) were motivated more by personal ambition than by a political project. Like Za'īm, Shīshaklī launched important constitutional reforms (5 September 1950 and 10 July 1953), including the reform of penal, civil and commercial codes as well as a first agrarian reform (30 July 1952). He granted the right to vote to literate women, and abolished the special treatment of Bedouin and the system of *awākāf*

[see WAKF]. The accession of Za'īm to the presidency of the Republic on 25 June 1949, and that of Shīshaklī on 10 July 1953, marked the apogee of authoritarian régimes characterised by the banning of political parties (replaced by Shīshaklī with the *darakat al-tahrīr al-'arabī* on 25 August 1952), censorship of the press and tight control of public life by an oppressive police force. The *nizām 'askarī* was characterised also by a Syrian patriotism bordering on chauvinism in reaction to the "struggle for Syria"—real or imagined threats posed to the independence of the country by neighbouring states.

Returning to the shadows, the Syrian army nevertheless did not cease from intervention in the political arena during the parliamentary period of 1954-8. Fourteen senior officers made their way to Cairo on 12 January 1958 to demand from Marshal 'Amr and from Nāsir the creation of the United Arab Republic. The army subsequently gave its support to the parliamentary restoration of September 1961, implemented under the leadership of Colonel 'Abd al-Karīm Naṣlawī, who intervened again to "rectify" the policy directions of the government in March 1962 (M. Colombe, *La République arabe syrienne à la lumière du coup d'état du 28 mars 1962, in Orient, 1st trim. [1962]*).

The type of *nizām 'askarī* which came into effect following the coup of Colonel Ziyād Hararī on 8 March 1963 was simultaneously both specific to Syria and also evolutionary. Between 1963 and 1970 it was possible to speak of an army-party symbiosis (I. Rabinovich, *Syria under the Ba'th 1963-66: the army-party symbiosis*, Jerusalem 1972). It was not only a military Committee of between four and fourteen members set up in Cairo ca. 1959 (*al-laḡna al-'askariyya*; see M. al-Razzāz, *al-Tadrība al-murra*, Beirut 1967, 88) which played a clandestine role throughout this period, but in the Regional Command (*al-kiyāda al-kuṭriyya*), senior officers constituted 34.5% of members from September 1963 to February 1966, then 25% until November 1970 (H. Batatu, *Syria's peasantry, the descendants of its lesser rural notables, and their politics*, Princeton 1999, 165, 167). In this group, with its majority consisting of natives of the peripheral regions of the country, the revolutionary tendency and the representation of minority communities gradually gained the upper hand, ending with the installation of a clandestine dictatorship under Colonel Ṣalāh Ḍjadīd, assistant general secretary of the Ba'th Party from the time of the disbandment of the civil wing of the Party on 23 February 1966. Nationalisations in industry and commerce (1965), international isolation and provocations on the Israeli front, favouring popular war, characterised revolutionary Syria under this régime weakened by the disaster of the war of June 1967.

Excluding his rivals by a display of force within the Regional Command of the Ba'th Party on 13 November 1970, General Hāfiẓ al-Asad turned the Syrian military régime in the direction of a more liberal economy through two *infītāhs*, in 1971-4 and then from 1986 onwards. The legislative elections of 1990, and Law 10 of 1991 on investments, marked the entry of a new entrepreneurial bourgeoisie into the coalition of power and the increased participation of senior officers in the world of business. But this economic liberalisation was not accompanied by political liberation, despite the creation of a Progressive National Front of six parties, including the Communist Party and the Arab Socialist Union around the Ba'th (7 March 1972). The Constitution of 12 March 1973 installed a presidential régime. The state of emergency declared in 1963 remained in force. The army has

maintained tight control of local life and internal security through its networks of *mukhābarāt*, and in 1978-81 there was a massive crackdown on Islamists (H.G. Lohmeyer, *Opposition und Widerstand in Syrien*, Hamburg 1995, 204-336). Finally, to succeed his father as Head of State on 17 July 2000, Baṣhshār al-Asad was obliged to re-invent himself in some haste as a military figure.

(c) 'Irāk

The modern 'Irākī state, where the élites surrounding King Fayṣal (Ḍja'far al-'Askarī, Yāsīn al-Hāshimī, Ḍjamīl al-Midfā'ī and Nūrī al-Sa'īd) were in the main former officers of the Ottoman army, was born in the violent suppression of the anti-British uprising in November 1920 (P.-J. Luizard, *La formation d'Irak contemporain*, Paris 1991). Even though 'Irāk [q.v.] has not lived continuously under *nizām 'askarī*, the army has remained the primary political force in the country, appointing and deposing governments, and controlling ethnic and social groups through violence (H. Batatu, *The old social classes and the revolutionary movements of Iraq*, Princeton 1978, 319-61). The suppression of the Assyrian revolt in June 1933, then that of the tribal uprisings in 1935-6 under the command of General Bakr Ṣidkī gave the latter the incentive to launch the first coup d'état inspired by Kemālism of the modern Arab world on 29 October 1936. His assassination on 11 August 1937 at the instigation of four nationalist officers ("the Gold Square"), led by Ṣalāh al-Dīn Ṣabbāgh, was the prelude to the seizure of power by them and the inauguration of a régime independent of the British, of which the public figurehead was Rashīd 'Alī al-Ghaylānī (5 April-9 October 1941). From the creation of the state until the fall of the monarchy on 14 July 1958, the dominant personality of authority remained that of General Nūrī al-Sa'īd who had been prime minister for a total of 11 years and 9 months. While the monarchy neglected the institutionalisation of the state and the development of the country, governments supported by the army maintained order through repression.

After the revolution of July 1958 and the fall of the monarchy, General 'Abd al-Karīm Kāsim [q.v.] quickly ousted the nine members of the Commanding Council of Free Officers, in particular Colonel 'Abd al-Salām 'Arīf, to impose himself as single leader (*al-za'īm* [q.v.] *al-awḥad*). His first government (27 July 1958) comprised five military figures out of sixteen members (Batatu 1978, 812) and the second (10 February 1959), six out of fourteen (Batatu 1978, 843). He authorised political parties, promulgated agrarian reforms (30 September 1958), inaugurated a state planification scheme (1959), partially nationalised the Iraq Petroleum Company (1961) and adopted measures to assist the disadvantaged urban classes. The régime of Kāsim was destabilised and its military character reinforced by confrontations between Communist and Nationalist Arabs in Mawṣil and Kīrkūk (March-July 1959) and by the revival of the Kurdish revolt (September 1961). The military coup of 8 February 1963 perpetrated by Nāṣirist and Ba'thist officers led to a repetition of the same scenario: 'Abd al-Salām 'Arīf ousted the National Council of the Revolution and dismantled the Ba'thist National Guard to take for himself presidency of the Republic and supreme command of the armed forces (18 November 1963). He imposed the Arab Socialist Union as the sole party on 14 July 1964. Under the régime of his brother, Colonel 'Abd al-Rahmān 'Arīf (13 April 1966-17 July 1968) a series of military governments ensued, their domination dependent on the use of force and the maintenance of martial law, while nationalised institu-

tions were placed under the supervision of retired officers (M. Khadduri, *Republican Iraq: a study in Iraqi politics since the revolution of 1958*, London 1969, 280-9).

After the two coups which ensured the accession of the Ba'ṯh Party to power (17 and 30 July 1968), the Revolutionary Command Council (R.C.C.), composed of five officers and led by General Ḥasan al-Bakr, carried out purges in the army to turn it into a *djaysh al-'akā'idī*, an instrument of the Party alongside the militia, *djaysh al-sha'b*, under the direction of the Military Bureau. The admission of ten civilians to the R.C.C. in November 1969 did nothing to alleviate the security-orientated character of the régime, which became a dictatorship after the accession of the (self-proclaimed) "General" Ṣaddām Ḥusayn, to the presidency of the R.C.C. and supreme authority over the state and the armed forces in July 1979. The state of civil war against the Kurds and the Shi'īs, and external war against Iran (1980-88) and then against Kuwait and the international coalition (1990-1), favoured a privatisation of public wealth which worked in particular to the benefit of military cadres (Isam al-Khafaji, *War as a vehicle for the rise and demise of a state-controlled society. The case of Ba'ṯhist Iraq*, in Heydemann 2000, 272-5).

#### (d) Sudan

The "Free Officers" of Sudan [q.v.] who organised the overthrow of civil power two years after the independence of the country (1958) were strongly influenced by their Egyptian alter ego. The junta led by General Ibrāhīm 'Abbūd until 1964 included radical officers close to the Sudanese Communist Party; in 1964 the rift between 'Abbūd and this powerful ally brought to an end the first Sudanese *nizām 'askarī*. After half a decade of civilian government, General Ḍja'fār al-Numayrī in his turn imposed fifteen years of military dictatorship after a brief attempt at co-operating with civilians in the context of the Commanding Council of the Revolution, dissolved in October 1971. The Communist opposition was firmly suppressed on 22 July 1971 and the Arab Socialist Union became the sole authorised party, while the ministries of Defense, the Interior, Foreign Affairs, Information and Culture (*al-Irshād al-waṭanī*) remained in the hands of the military. Numayrī's régime formally recognised the right of the southern provinces to autonomy on 9 June 1969 and imposed radical nationalisation measures (Sequestration Act, May 1970). The second Sudanese civil war, provoked by the Islamising decrees of September 1983, accelerated the downfall of Numayrī in 1985, introducing a brief period of pluralism. The coalition between military figures and Islamists which characterised military régimes in Sudan returned to power following the coup d'état of General 'Umar al-Baṣhīr on 30 June 1989. The National Salvation Revolutionary Command Council was based on a single party, the National Congress of Ḥasan al-Turābī. He imposed strict application of the *Shari'a*, banned parties and independent syndicates, organised popular local Islamist committees, and the Popular Defense Forces, an Islamist militia waging war against civilians in the south. Under pressure from humanitarian organisations and oil companies whose revenues were financing the war in the south, military leaders distanced themselves from the Islamists from 1997 onward. Baṣhīr re-established the state of emergency in 1998 to implement the institutional changes demanded for the survival of the régime and, on 12 December 1999, he suspended the parliament which was dominated by the Islamists of Turābī, arrested in February 2001.

#### (e) Yemen

The influence of the Egyptian Free Officers was felt as far away as Yemen [see AL-YAMAN] where a group of Nāṣirist officers led by Colonel 'Abd Allāh Sallāl proclaimed the United Arab Republic on 26 September 1962 and received reinforcements of 26,000 Egyptian soldiers commanded by Marshal 'Abd al-Hakīm 'Amr—a contingent doubled over the next four years for the purpose of fighting a destructive Saudi-Egyptian war which lasted until the decision to withdraw, taken by Nāṣir at the Khartūm Summit in November 1967. Significant efforts in the fields of education and health were made by the new régime, which was characterised by the imposition of a heavy bureaucracy before its demise on 14 June 1970.

Military leaders, populists and developmentalists returned to the forefront of the stage with Colonel Ibrāhīm al-Ṣamadī (June 1974), and Colonel Aḥmad al-Ghāshimī (11 October 1977), both of them assassinated, then Colonel 'Alī 'Abd Allāh Khalīl, on 24 June 1978. The latter gradually handed over government to civilians (adoption of a constitution in October 1980, first legislative elections in July 1985) and guided the process of reunification with the Democratic and Popular Republic of Yemen: a constitutional reform in September 1994 legalising political pluralism, exclusion of armed forces from membership of parties (F. Ḍjallūl, *Al-Yaman: al-ṯawarātān al-ḍjumhūriyatān, al-waḥda, 1962-94*, Beirut 1999, 272-97). As Marshal and President of the Republic of Yemen since 24 May 1990, Khalīl continues to control the state, supported by the Supreme Council of National Defense and by members of his entourage, occupying key posts in the security and armed forces.

## 2. In modern Iran.

The period of military rule in Iran may be said to have been inaugurated by the coup d'état of 21 February 1921, and to have endured until the overthrow of Pahlavi rule in 1979. However, although the régime that resulted from the coup of 1921, and the Pahlavi state itself, was based on the army, there was no direct military rule, nor was there a military dictatorship in the straightforward sense.

The Pahlavi régime was one that owed its existence to military coups, in 1921 and in 1953, both Riḍā Shāh and his son, Muḥammad Riḍā Shāh [*q.v.*], having been brought to power by the army. The army played a key role in the construction of the Pahlavi state, dominating both urban and rural opposition, and till 1979 remained, together with the various security forces, the main institution sustaining the régime internally.

Although the military occupied a pivotal position in Pahlavi Iran, it remained subordinate to the rule of the shahs. Both Riḍā Shāh and Muḥammad Riḍā Shāh were successful in dominating the military and in developing a monarchical system of government quite different from that found in conventional military régimes. Riḍā Shāh originally rose to power as an army officer, but in transforming his personal ascendancy into the form of a monarchy he distanced himself from other senior commanders and made a challenge from any one of them more difficult. Riḍā Shāh having established the dynasty, his son succeeded him and increased further the distance between the military and the throne, making it difficult for any army officer to challenge his authority without undermining the very structure of the régime (F. Halliday, *Iran, dictatorship and development*, London 1979, 51-2). Yet although both Pahlavi rulers secured and maintained their theoretical and actual control of the army, each also essentially relied on it to guarantee their régime.

In 1921 Riḍā Shāh arrived at the centre of political power using as an instrument a small Cossack force. He immediately embarked on the task of constructing a strong, modern, national army, organised and equipped on European lines, and based his rise to supremacy on the support of this army (Bākīr Aḳallī, *Riḍā Shāh wa Kūshūn-i muttahiḍ-i Shahl, 1300-1320*, Tehran 1377). He reorganised the system of military education inside Iran and began sending officers to France for training. He began a massive programme of arms purchases in Europe, including large numbers of tanks and aircraft. In 1925 he forced a conscription bill through the Maḍjlis and the army mushroomed, rising from 42,000 men in 1930 to 127,000 men in 1941, with a total mobilisable force of 400,000. In the early 1920s, the army already accounted for approximately 40% of budget expenditure; between 1930 and 1941 spending on the army nearly quadrupled, and massive sums from oil revenues were allocated directly for weapons purchases.

Riḍā Shāh used this army to form a centralised state in Iran for the first time in the modern period. However, in the years 1921-5, although the army became dominant, it co-existed with a number of other political players and institutions. The cabinet was largely civilian in character, the constitution, although increasingly disregarded in practice, was not suspended, political parties functioned, elections were held, the Maḍjlis passed legislation, and the Kāḍjār shah remained nominally commander-in-chief of the army.

Although the military did not rule directly in the

early Pahlavi period, Riḍā Shāh used the army both to intervene directly in the political process and also to manipulate, in a more subtle way, the political life of the country. His direct intervention began, of course, with the coup d'état itself, and continued with episodes such as the repeated cowering of the Maḍjlis by the threat of armed force, in 1922 and, more seriously, after the failure of the republican movement in 1924. As well as openly intimidating the Maḍjlis at certain key moments, the military, with its increasing control over elections, had by 1926 fatally compromised the independence of that body. The army also sponsored and orchestrated political movements and prepared the ground for constitutional change. Furthermore, Riḍā Shāh, having come to dominate the cabinet, reducing it largely to an appendage to his own position, systematically promoted the military at the expense of the civil authorities throughout the country. In fact, the army came to dominate the civil authorities throughout Iran, sometimes via the establishment of formal military government, sometimes through informal and unregulated mechanisms of pressure and control. Each military conquest of a recalcitrant area or population was invariably accompanied by the establishment of military government and there was considerable pressure from within the army to ensure that control, once established, remained in its own hands. Military government was especially important as a tool of tribal subjugation and control, army officers regularly replacing deposed tribal chiefs. Even when a provincial civil régime was officially in existence, the local military authorities encroached upon its sphere, appropriating its authority and many of its functions. The declaration of martial law and the establishment of military government was a frequent occurrence in both the capital and the provinces and gave the military authorities an opportunity to tighten their control over all aspects of civilian life, especially political dissent. The two periods of martial law in the capital, 1921-2 and 1924-6, were crucial to Riḍā Shāh's rise to supreme power. The role of the army was also positively enhanced by its transformation into a focus of nationalism and a pioneer of social progress, military personnel leading the way in clothing reform, the abolition of titles, rudimentary town planning, linguistic reform, etc. (Stephanie Cronin, *The army and the creation of the Pahlavi state in Iran, 1910-1926*, London and New York 1997, 182-221).

In the early Pahlavi period, the new Iranian army, although of questionable conventional military capability, was extremely successful in advancing the political ambitions of its chief and in safeguarding and extending his power. By far the most important function of the new army was to ensure the survival of the régime or, more narrowly interpreted, of Riḍā Shāh's personal position. This involved, first, the army's establishment of internal security throughout the country, and, second, the military authorities' enforcement of the subordination of all civilian political elements to their own dominance.

In making himself monarch, Riḍā Shāh profoundly altered the balance between the military and the centre of power. However, by 1926 the relationship between state and society in Iran had already been radically transformed, with the new, centralised army playing a crucial role. Furthermore the weight of the army vis-à-vis civil state institutions, the government, the Maḍjlis, provincial civil governors, etc. had increased in a dramatic and wholly novel way. Although in becoming Shāh, Riḍā Shāh transformed what had been an incipient military dictatorship into a dynastic

despotism, nonetheless the régime over which he presided was firmly marked by its military origins and continued to exhibit many features typical of military rule. Although institutions such as the *Madjlis* and a civilian government would continue to exist, their role was, after 1926, purely decorative and ornamental. Independent political activity would not resume until after the abdication of the *Shāh* in 1941.

Riḍā *Shāh* had risen to power as a career officer and he remained, even after ascending the throne, deeply involved in the day-to-day running of the army. His son, however, although he had attended Tehran military academy and frequently appeared on official occasions in military uniform, in reality lacked the connection with the army and with the upper echelons of the officer corps that his father had possessed.

In the 1940s the new *Shāh*, checked by a variety of social and political forces, was not able to utilise the army as his father had done. Between 1941 and 1953 the army receded into the background, reemerging only after the coup which overthrew Muṣaddik [q.v.]. Immediately after the coup, the *Shāh* placed its leaders in key positions. General Faḍl Allāh Zāhidī became prime minister, General Taymūr Bakhtiyār military governor of Tehran and General 'Abd Allāh Hidāyat chief of the general staff. But, most importantly, the *Shāh* also began to work towards restoring monarchical control of the army, and in 1955 dismissed Zāhidī, who left the country. The *Shāh* then began the serious rebuilding of the army while, at the same time, with the reorganisation and reinforcement of the gendarmerie and the police, the army's overt role in maintaining public order was reduced (M.J. Sheikh-ol-Islami, in *Elr*, art. *Army*. V. *Pahlavi period*, at ii, 510). From 1963 to 1978, the army remained garrisoned near towns and was sent into tribal areas on a number of small-scale campaigns. But the régime only resorted once to military force to crush urban civil unrest, sc. in June 1963 in Tehran and a number of other towns.

Although its public order duties were reduced, during the 1960s and 1970s the army became increasingly prominent in national life through its involvement in projects initiated under the White Revolution. Many high school and college conscripts served in the Literacy Corps, the Health Corps, and the Construction and Agricultural Development Corps, with such duties as building roads, schools, improving preventive medicine and teaching rudimentary reading and writing. In addition to these activities, which were largely carried out in rural areas, the military performed a host of other functions. In the administration of justice, the military courts had authority over a wide range of offences, including treason, armed robbery, hoarding, profiteering and trafficking in narcotics. The judgements were swift and the penalties harsh (Sheikh-ol-Islami, *loc. cit.*). The army gathered political intelligence and cooperated with SAVAK, the state security agency. Indeed, many of the SAVAK senior personnel came from the army. Many army officers also served in the Imperial Inspectorate, investigating inefficiency and corruption in the civil bureaucracy.

Although Riḍā *Shāh* had always used the army as a bulwark of his régime, he had been equally careful to prevent either military factions, or individual senior officers, from engaging in independent political activity or developing political ambitions of their own. During the 1930s, he had harboured a particular fear or assassination, believing that, were he to die while the Crown Prince was still young, the new dynasty would be threatened either from an overt

challenge from the army or covertly, through the establishment of a regency exercised by one or more of the most powerful generals (Cronin, *The politics of radicalism within the Iranian army: the Jahansuz group of 1939*, in *Iranian Studies*, xxxii/1 [1999], 5-25). Muḥammad Riḍā *Shāh*, like his father, also feared the consequences of the military's involvement in politics. During the 1940s, while the new *shah* remained weak, the army became deeply politicised, visible political factions emerged, and certain generals began to establish their own followings (Halliday, *op. cit.*, 67). After 1953, however, and particularly after 1955, the *Shāh* worked consistently to depoliticise the army and to isolate the most powerful senior officers.

Muḥammad Riḍā *Shāh* employed various mechanisms to control his officer corps. The armed forces were highly compartmentalised. The chief of staff had little authority over the other chiefs, who all reported to the *Shāh* directly (W. Sullivan, *Mission to Iran*, New York 1981, 74-5). Each branch was literally headed by the *Shāh* and without the *Shāh*, the armed forces as a whole were structurally immobilised. The three services were not in fact allowed to communicate except via the *Shāh*'s own staff. No general could visit Tehran or meet with another general without the *Shāh*'s specific permission. The *Shāh* was reported to check all promotions above the rank of major, and personally vetted all entrants in the air force training school. He frequently moved senior commanders to ensure that they did not form power bases and used a personal secret police, the Imperial Organisation, as well as conventional military intelligence, to carry out surveillance of the officer corps. Occasionally, he purged officers suspected of disloyalty under the guise of waging anti-corruption campaigns (Halliday, *op. cit.*, 68-9).

As the political crisis of 1978 unfolded, the *Shāh* again fell back on the army, employing martial law and military government in the capital and a number of provincial cities. By the autumn, a number of generals were advocating direct military intervention. However, the army did not act, the *Shāh*'s system of personal control still paralysing the high command, and the *Shāh* himself apparently feared that a military coup might prove to be simply another way of terminating his reign (Sepehr Zabih, *The Iranian military in revolution and war*, London and New York 1988, 13). By early 1979, after the *Shāh*'s departure, the army was palpably disintegrating. Ten days after Āyatallāh Kḥumaynī's return, the Supreme Council of the Armed Forces issued the Declaration of Neutrality of the Armed Forces concerning the conflict between Kḥumaynī and Dr *Shāhpūr Bakhtiyār*'s government (Zabih, 78).

3. In the late Ottoman Empire and the Turkish Republic.

Although the ruling élite in the pre-*Tanzimāt* Ottoman Empire was referred to as military ('*askerī*'), it was in fact composed of both civilian and military elements. In the classical Ottoman Empire, this élite had three major branches: the *seyfiyye* (men of the sword), the '*ilmīyye* [q.v.] (i.e. the '*ulamā*') and the *kalemīyye*, later referred to as *mülkiyye* (men of the pen, bureaucrats). In their explanations based on the idea of "circle of justice", the political thinkers of the classical Ottoman state likewise underscored the importance of statesmen and men of the sword, attributing

the utmost importance to these two categories for the survival of the state ('Alî Kînalizâde, *Akhlâk-î 'Alâ'î*, iii, Bülâk 1833, 49; Na'îmâ, *Târîkh*, Istanbul 1281/1866 i, 40). Despite the existence of these distinct categories within the ruling élite, and the various special rights of the military class (e.g. the *Yeñüeri Aghası* and the Grand Admiral could judge certain cases between Janissaries or members of the Arsenal and could pronounce verdicts, see *Tewkîrî 'Abd ul-Rahmân Pasha kânûnâmesi*, in '*Osmanlı kânûnâmeleri*, in *Millî Tettebbu'lar Meclmû'ası*, i/3 [1915], 524-5, 536-7), the boundaries between these two branches were somewhat fluid, more than so in a modern state.

For example, many Grand Admirals later became Grand Viziers (in 1037/1628 the *Yeñüeri Aghası Khosrew Pasha* became Grand Vizier); local governors enjoyed decision-making authority on military matters in their domains; and duties such as law enforcement and fire fighting were generally viewed as the military's responsibility (in Istanbul, Janissaries carried out these duties). Since the military played the most important role in succession and dethronement, it is difficult to speak of a civilian administration free of military intervention in the pre-reform Ottoman Empire. Nevertheless, while the power of the military fluctuated over this long period, it was always at the centre of policy and decision-making.

Late 18th and early 19th century Ottoman attempts at modernisation and Westernisation [see NIZÂM-İ DJEDİD] had two important effects on the role of the military. First, since the reforms aimed at imitating superior Western military organisation and techniques, the Ottoman military was the first institution to be thus affected, and the process confirmed its clear superiority in relation to the other branches of the ruling class. Second, the eventual reorganisation of the entire state bureaucracy transformed the three branches of the old administration into more distinct entities. The destruction of the Janissaries in 1826 and their replacement with *Nizâmîyye* troops resulted in the establishment of the *Bâb-î Ser'askerî* (Office of the Commander of the Land Forces). The *Ser'asker* became the commander of all Ottoman land troops, and the old Ottoman practice of despatching the Grand Vizier to campaign with the title *Serdâr-î Ekrem* was abandoned. In 1836 a *Dâr-î Shûrâ-yî 'Askerî* (Military Council), similar to the *Dâr-î Shûrâ-yî Bâb-î 'Alî*, was charged with oversight of the military affairs of the empire. Other than a *muffî* and a representative of the *mülkiyye*, all members of this body were officers. Although the new military establishment initially inherited the Janissaries' duty of law enforcement in the capital, this was transferred to the *Dabtiyye Nezâreti* (Police Ministry) when it was established in 1845. In the state bureaucracy the title *Ser'asker* became the highest military rank, being on the same level as the Grand Vizier and the *Sheykh ül-Islâm*. In 1843 the army was reorganised on the model of the French and Prussian armies. Commanders of the armies were now appointed by the *Ser'asker* and responsible to him. With the increasing distinction between the various branches of the Ottoman administration, the division of power between the military and civilian elements came to be formally regulated. The most important document showing the clear separation of military establishment from other branches of the state was the *Idâre-i 'Orfiyye Karâmâmesi* (Martial Law Regulations) enacted by imperial decree on 24 September 1877 (*Düstûr*, 1st Series, iv, Istanbul 1295/1878, 71-2).

The third article of these regulations clearly distinguishes between the civilian and military adminis-

trations. Even after these formal arrangements, however, the military continued to enjoy a substantial role in the civil administration by the standards of a modern state. For instance, until the end of the empire, the Minister of War and the Minister of the Navy, who were both officers, and until 1908 the *Tophâne Müshiri* (Marshal of the Imperial Arsenal of Ordinance), served as members of the *Hey'et-i Wükela'* (Council of Ministers), and participated directly in decision-making on non-military matters. Although there were exceptions, it remained a common practice until the end of the empire to appoint a military commander to a remote province or sub-province, such as 'Asîr or North African Tripoli, in the dual role of governor and commander. As in earlier times, during this late period many military figures, such as Ahmed *Djawâd Pasha*, Mahmûd *Shewkat Pasha Ghâzî* Ahmed *Mukhtâr Pasha* and Ahmed 'Izzet Pasha [*q.v.*], served as Grand Vizier.

During the pre-*Tanzîmât* era, the military element also played the leading role in major political events, often leading to drastic changes in the political shape of the empire. Thus the military element played a very important role in the deposition of 'Abd ül-'Azîz in 1876. The 1908 revolution was initiated by a para-military committee, the Committee of Union and Progress [see İTTİHÂD WE TERAQÎ DJEM'İYYETİ] and various army units in Macedonia. The 1909 counter-revolution [see İTTİHÂD-İ MUHAMMEDÎ DJEM'İYYETİ] was carried out by troops led by *alaylîs* (officers who had not attended military colleges); the military rebellion led by the *Khalâskârân Dâbiñân* ("Saviour Officers") in Macedonia and Albania in 1912 paved the way for the forming of the first government opposing the Committee of Union and Progress Committee since 1908. Finally, the Committee regained power in January 1913 through the Sublime Porte Raid led by Enver Bey (Pasha) and other military leaders who were members of it.

Although 'Abd ül-Hamîd II had kept the military establishment under strict control until the Young Turk Revolution of 1908, from this date onwards the military gained ground in the administration of the empire, though most of its power did not stem from legal adjustments but rather from the fact that many important figures within the Committee were officers. With the establishment of the authoritarian rule of the Committee in June 1913, the military share in the administration of the empire increased further, despite a temporary law of 11 October 1912 barring officers from participating in any political activity (*Düstûr*, 2nd Series, iv, 650-1). (Another temporary law, issued on the same day, disqualified military personnel from voting (*ibid.*, 651-2); because of this, Ottoman and, later, Turkish officers did not vote in elections until 1961.) A para-military intelligence service called the Special Organisation acted under the command of Enver Pasha, reporting directly to him and working almost independently of the civilian administration. Yet despite the growing military grip on the administration, and despite the fact that martial law was in effect in the Ottoman capital during most of the decade from 1908 to 1918, no fully military régime was ever established in the Ottoman Empire.

The Ottoman military establishment led the Turkish resistance against the peace terms imposed upon the Ottoman government, and organised the armed struggle against the invasion of the Turkish heartland. Many leaders of the *Anadolu ve Rûmeli Müdâfa'a-î Hukûk Djem'iyyeti*, and later of the Ankara government, were

military figures including Muştafâ Kemâl (Atatürk [*q.v.*]). The latter led the armies and the Turkish (Grand) National Assembly while he was the speaker of this assembly, controlling all three branches of power. Despite this fact, the movement never turned into a fully military one.

Following the success of the Turkish War of Independence in 1922 and the establishment of the Turkish Republic in 1923, Muştafâ Kemâl instituted one of the most important principles of the new régime, according to which the army should play no part in politics. A law of 29 December 1923 required all army officers to resign from active duty if they wished to run for parliament. A law of 3 March 1924, abolished the Ministry of War and established the Office of the Commander-in-Chief, attached to the Ministry of Defence. Under the command of Marshal Fewzî Çakmak [see ÇAKMAK, MUSTAFA FEVZÎ], who held the position from 1921 to 1944, the Turkish army remained loyal to the new republican régime, many founders of which were former military leaders, and to its principles. Even after Çakmak's retirement, the military did not show any interest in politics until the end of the single-party system in 1946. The first free elections in 1950 and the victory of the opposition caused many military leaders to rethink their role in Turkish politics and to reassess the loyalty of the political leaders to the tenets of the republican régime. Increasing political tension, clashes between law enforcement personnel and college students, and the Democrat Party government's strong measures against the opposition prompted a group of officers to form a revolutionary organisation and initiate a coup on 27 May 1960. This coup was not staged within the chain of command. In fact, the Commander-in-Chief and many high-ranking officers who had remained loyal to the Democrat Party government were arrested and expelled from the army. In a similar fashion, the Chamber of Deputies was dissolved, and the president, prime minister, cabinet members and leading figures of the Democrat Party were arrested and later tried by a special court. The leaders of the coup based their action on the 34th article of the Armed Forces Regulations, which charges the military with "defending and protecting the Turkish Republic and Turkish homeland". A special committee of law professors issued a document the day after the coup legitimising the revolutionary officers' action. Under the direction of General Cemal Gürsel, the Commander of the Land Forces and the highest-ranking officer to join the revolutionaries, an executive committee of thirty-six officers of various ranks, named the National Union Committee, was formed and assumed the power of issuing laws on 12 June 1960. Despite the formation of a government composed of civil and military leaders under Gürsel, the National Union Committee remained the most powerful institution in the country. On 13 November, a schism within the National Union Committee resulted in the elimination of fourteen of its members who had been promoting the idea of a prolonged military régime and more active participation in government. On 13 December, the committee issued a law for the establishment of a constitutional assembly; this would be composed of the members of the National Union Committee and of an Assembly of Representatives, members of which would be elected by various institutions, such as political parties, provincial administrations, the legal bars, and press and guild organisations. The new assembly was convened on 6 January 1961 and worked until 4 September. In the

meantime, a new constitution was ratified by a referendum of 9 July. This constitution broadened individual liberties, and at the same time limited the power of the government. This was done by establishing new legal and bureaucratic bodies such as the Constitutional Court and the National Security Council, and by granting autonomy to various institutions such as the universities and the Turkish Radio administration. New elections for the Chamber of Deputies and the newly-established Senate were held on 15 October 1961, and the members of the National Union Committee became "natural" members of the Senate for life. As one of its last decisive actions, the National Union Committee discussed the death sentences pronounced by the special court against the leaders of the Democrat Party on 15 September 1961. By a vote of 13 to 9, the committee approved four death sentences out of sixteen, and three former ministers were hanged on 16 September 1961. The next day, Adnan Menderes [*q.v.*], former prime minister, was executed.

Despite the new elections and the formation of a new civilian government, the military continued to make its power felt in political life for two more years. New revolutionary organisations within the army attempted to dissolve the parliament even before its opening. Despite the agreement of right-wing parties on Ali Fuad Başgîl as the next president, under heavy military pressure the deputies and senators elected the leader of the coup, Gürsel, to this post, and the military played a significant role in the formation of a new government under İsmet İnönü [*q.v.* in Suppl.]. On two occasions, 22 February 1962, and 21 May 1963, a group of officers led by Colonel Talât Aydemir attempted to stage a coup to establish a military régime. Both attempts were foiled by Prime Minister İnönü with the support of loyal forces. Following the first attempt, the leaders of the venture were only forced to retire; their second attempt led to the trial and hanging of Col. Talât Aydemir and Lt.-Col. Fethi Gürcan.

Military intervention in politics gradually receded after the second coup attempt in 1963, and normal political activity resumed. But in 1971, the military was prompted to intervene by increasing left-wing activity, and tension between the right-wing Justice Party government and civil-military bureaucratic institutions. There had been various military groups promoting the idea of the establishment of a military régime. One of these groups was also supported by renowned left-wing intellectuals, and promoted the idea of a régime of the Arab Ba'ṯh type; it attempted a stillborn coup on 9 March 1971. Three days later, on 12 March, the military establishment presented an ultimatum to the President and the Speakers of the Chamber of Deputies and the Senate, accusing the Parliament and the government of not adhering to the Kemālist reforms, causing social and economic disorder and inviting anarchy. The military commanders threatened the Parliament and the government that they would take power unless a new Kemālist government was immediately established. Süleyman Demirel, the prime minister, tendered his resignation, and a new non-party government was established with the approval of the military. Up to the elections held on 14 October 1973, civilian governments under military control administered Turkey and made radical changes in the constitution, limiting many of the liberties granted in 1961. During this period, the major socialist party in Turkey, the Turkish Labour Party, was dissolved, along with the National

Order Party, the major Islamist one; new state courts with extraordinary powers were established, and many left-wing and Islamist politicians and activists were tried.

Following the 1973 elections, the army returned to its barracks and normal political activity resumed until 12 September 1980. However, increasing clashes between left-wing and right-wing groups, which resulted in the killing of approximately 5,000 people between 1977 and 1980, once again prompted the military to intervene. This time, a régime under a National Security Council composed of General Kenan Evren, Commander-in-Chief; three generals in command of the Land, Air and Gendarmerie forces; and the Admiral in charge of the Navy, ruled the country with the help of a government under former Admiral Bülend Ulusu, and a "House of Representatives" virtually hand-picked by the National Security Council; this continued until elections were held on 6 November 1983. In the meantime, thousands of left-wing and right-wing activists were arrested and tried, and all political parties were dissolved, their leaders being arrested or sent to military bases. A provisional article (no. 4) of the new constitution banned leaders of what had been the governing party and the major opposition party in the legislature at the time of the coup from any political activity for ten years, and deputies and senators belonging to these parties were excluded for five years. The 1982 constitution, which created a hybrid system of government involving the president and parliament and which pruned the liberties granted by the former constitution, was put into effect through a referendum. In accordance with a provisional article of the constitution, its ratification also conferred the presidency on the leader of the coup. General Kenan Evren, and made the other members of the National Security Council members of the Presidential Council for seven years. This constitution also remodelled the National Security Council by giving a 5 to 4 majority for the military members of this ten-person body under an impartial president (Article 118).

The importance of the National Security Council function in policy-making after 1983, and especially after 1996, and its role in imposing terms on a government led by the Islamist Prime Minister Necmettin Erbakan on 28 February 1997, have generally been interpreted as to mark a new period of military dominance in Turkish politics.

#### 4. In Pakistan.

The pre-eminence of the Pakistani military within the country's political set-up, either through direct coups or by simply controlling the economic and external policies, has led to a growing academic debate on several inter-related issues. On the one hand, one notices an unbroken continuity of the British imperial tradition, as is evident through the recruitment, training and other organisational matters, while, simultaneously, the armed forces have taken upon themselves an extra-professional role justified in the name of national interests and ideology. Within the armed forces, it is the army, and not the navy or air force, which has frequently assumed such a flagship role. To its admirers, the army is the only stable institution that can keep the pluralistic country together, whereas to its detractors, the army is in league with secret agencies and a *de facto* state within a state. Certainly, the army is the steel frame of the country's administration, and its leadership reflects a nation-

wide representation whereas the lower echelons—*jawans*—are mainly recruited from the Northwestern Punjab and eastern districts of the Frontier Province (NWFP).

The Pakistani armed forces have retained the regimental character, with the gradual addition of newer and diverse corps and training facilities. The introduction of aircraft, gunships, tanks, mountain regiments, missiles and nuclear capabilities has collectively turned the Pakistani armed forces into a complex and quite a significant establishment. For decades, Pakistan's top military leadership has maintained close professional contacts with its U.S. and British counterparts, and while benefiting from huge budgetary allocations, they have established themselves as the most important politico-economic pressure group. Pakistan has been spending most of its revenues and foreign loans on the upkeep of a half-million strong military establishment, several cantonments and bases, besides a huge recurring expense on pensions, semi-private foundations and infrastructures to look after the welfare of the serving or retired officials.

Due to Pakistan's strategic and equally difficult location with a hostile neighbour separating the erstwhile two wings, and because of disputes such as that over Kashmir, her security perceptions have always centred around a "credible level and proportion of deterrence" to an Indian threat. In the 1950s and during the 1980s, the alliances with the United States led to a major inflow of military aid, which further strengthened the defence establishment. Growing intolerant of the political processes and, especially, of the criticism from the eastern wing, the generals decided to take over the country's leadership in 1958. Earlier on, their influence on national policies had been indirect; now they directly controlled the domestic and foreign policies. The first martial law led by General Ayub Khan was initially well received, but subsequently led to greater socio-ideological cleavages. A mass movement to dislodge General Khan led to the imposition of another martial law under General Yahya Khan, who promised unfettered elections in the country. However, following the split vote between East and West Pakistan in 1970, the junta refused to transfer power to the elected majority party—the Awami League of Shaikh Mujibur Rahman—and, instead unleashed a massive military operation in East Pakistan. The local insurgency, aided by India, resulted in the surrender of Pakistani troops at Dhaka in December 1971, and Bangladesh became an independent state. In the 1970s, Zulfikar Ali Bhutto, the elected Prime Minister, tried to reinvigorate the Pakistani military establishment, in addition to sponsoring Pakistan's nuclear programme. Despite his deep desire to rein in the generals, he was finally overthrown by General Zia-ul-Haq [see ZIYĀ' AL-HAKK] in July 1977, who then ruled the country for the next eleven years. His death in an air crash led to the re-emergence of party-based politics, but the vital decisions were still being made by the Chief of Army Staff. The elected politicians Benazir Bhutto and Nawaz Sharif, in their own ways, tried to minimise the armed forces' interventionism, but to no avail. On 12 October 1999, Sharif was overthrown in another military coup, which brought in General Pervez Musharraf as the new Chief Executive. The new military rule stopped short of calling itself martial law, though Musharraf elevated himself to the presidency in July 2001. The relationship with India has remained very tense, and the Western countries also initially shunned the new military régime until the United States acquired vital Pakistani support and

bases against Osama bin Laden and his Al-Qaeda organisation in Afghanistan.

Pakistan's army has not only ruled the country for almost three decades but it has also decided on vital policy matters. The development of the nuclear programme, support for specific groups in Afghanistan, the nature and extent of relationship with India, and active assistance for Kashmiris in their war against India, have all figured quite significantly in the recent past. The army has been engaged in the formulation and suspension of Pakistani constitutions, and has occasionally engaged itself in the formation and dissolution of numerous political alliances. Its various professional, political and other civilian roles make it the most crucial actor in the running of the country, whilst the security agencies such as the Military Intelligence (MI) and the Inter-Services Intelligence (ISI) implement such policies. The senior officials make up an élite class in which ethnic loyalties are considered unimportant. General Musharraf would like to revert to the old modernist postulation of the Ayub Khan-Yahya Khan era, i.e. away from Zia's Islamisation, but, given the conservative nature of khaki bureaucracy, the army may never undertake such radical steps. The relationship with India; the fragile nature of the country's economy, with defence accounting for a huge expenditure; the role in creating or denting political processes; and the extra-professionalism required, especially since the fall of Dhaka, are some of the main areas of debate and contestation amongst the supporters and the critics of the military élite. The army, through its information efforts, has been able to convince many Pakistanis in the upper Indus region of its own invincibility and its professional credentials, whereas lower Pakistan remains highly critical of the military's dictatorial role.

(İFTIKHAR H. MALİK)

AL-NUBĀHĪ (or, more probably, AL-BUNNĀHĪ, see M. Bencherifa, *al-Bunnāhī lā al-Nubāhī*, in *Académie. Revue de l'Académie du Royaume du Maroc*, xiii [1998], 71-89), Abu 'l-Ḥasan 'Alī b. 'Abd Allāh al-Djudhamī, equally known as IBN AL-ḤASAN, Andalusī jurist, *adīb* and historian of the period of the Naṣrids [q.v.], born at Malaga in 713/1313 and died, probably at Granada, after 798/1389-90.

He was *kādī al-djāmā'a* [q.v.] during almost the whole reign of the Naṣrid sultan Muḥammad V. His name often appears linked with that of Lisān al-Dīn Ibn al-Khaṭīb [q.v.], with whom he had a relationship that passed from friendship and collaboration to enmity. This is why Ibn al-Khaṭīb presents an image of al-Bunnāhī in his later works (*ʿĀmāl al-aʿlām*, ed. Lévi-Provençal, Beirut 1956, 78-80; *al-Kaṭība al-kāmīna*, ed. Iḥsān 'Abbās, 146) completely opposite to what he had given in the biography consecrated to him in *Iḥāta*, iv, 88-100. Ibn al-Khaṭīb wrote, moreover, two opuscula bringing together anecdotes in which the personality of the *kādī* Ibn al-Ḥasan is presented as one of ridicule, the *Tanbih al-sāhī 'alā ṭuruf al-Bunnāhī* and *Khaṭ' al-rasan fi 'l-ta'rif bi-ahwāl Ibn al-Ḥasan*.

As well as being a composer of epistles, poetry and other texts which the sources have preserved on account of their quality, he also wrote: 1. *al-Marḳaba* (var. *al-mirḳāt*) *al-ulyā fi man yastahīk* (var. *fi masā'il*) *al-kadā' wa 'l-fuyā*, ed. Lévi-Provençal, *Histoire des juges d'Andalousie*, Cairo 1948 (an edition which attracted important critical observations, e.g. by H. Zayyāt, in *al-Mashriq*, xlii [1948], 461-74, and was revised by A. Cuellas in his 1983 Univ. of Granada diss., unpubl.), 2. *Nuzhat al-baṣā'ir wa 'l-absār* (mss. Escorial 1653 and Bibl. Générale de Rabat 198 Kāf), commentary on a *makāma* by the same author *al-Iklīl fi tafīl al-nakhīl*, also called *al-makāma al-nakhīliyya*. Some extracts from it were published by Müller in his *Beiträge*, i, 101-60, and 3. *Dhayl* (var. *tadhīl*) *Ta'rīkh Mālaka*, now lost, probably a continuation of Ibn 'Askar's history [see MĀLAKA].

## O

OIRATS, OYRAT [see KALMUK; WĀFIDIYYA].

ÖREN KAL'Ē, in Russian Orenkale, a site in the southern part of the modern Azerbaijan Republic, in the mediaeval Islamic province of Arrān [q.v.]. It lies in lat. 39° 50' N., long. 47° 30' E. above the confluence of the Kur and Araxes rivers, close to an ancient canal, the Gyaur Arkh [see MŪKĀN, at Vol. VII, 498b]. The site marks the mediaeval Islamic

town of Baylaḳān [q.v.] conclusively established by the discovery of wasters of spheroconic vessels, stamped with the inscription *'amal Faḍlūn bi 'l-Baylaḳān*, in the course of excavations which began there in 1953 as part of a planned archaeological survey of the region above the confluence of the two rivers mentioned above. This last was, however, abandoned in 1959, and after the death of the director, A.A. Yessen, in

1963, the Ören Kal'e excavations were abandoned also. Vol. II of the report (see *Bibl.*) is mostly devoted to sites in the surrounding area; a projected Vol. III on work at Ören Kal'e in 1956-8 evidently never appeared. The excavation material is now in the reserves of the State Historical Museum at Bākū.

More contentious is the site's identification with the Late Antique fortress of P'aytakaran, for the earliest remains at Ören Kal'e, as attested by a copper coin of the Byzantine Emperor Anastasius (A.D. 491-518), are 6th century. But the only possible site for P'aytakaran lies close to the modern village of Tazakend some 8 km/5 miles to the south-east, where Late Antique stone column bases for a palace or temple, together with a small hoard of denarii of Augustus, but no mediaeval glazed pottery, were brought to light. Ören Kal'e was therefore a new foundation, connected with the Sāsānid Emperor Kawādī I (A.D. 488-531) and his fortifying of the Kur-Araxes steppes, though P'aytakaran continues to figure in the Armenian historians' accounts of Heraclius's campaign in Atropatene.

Under the Umayyads, Baylaḳān was an important city of the province of Arminiya [q.v.] and was a notorious centre of Khārījism, which persisted there until the mid-9th century. The local Shaddādid rulers passed under the control of the Great Salḳjūks ca. 1050 and, subsequently, of the Salḳjūks of 'Irāk, under the immediate administration of the Ildegizid Atabegs of Aḏharbāydjān [see ILDEŪZIDS]. Though sacked by the Mongols late in 1221, it had recovered sufficiently for Djalāl al-Dīn Kh'ārazmshāh to install his harem and his treasury there in 1230. Under the Īl-Khānids it slowly declined, but was then rebuilt by Tīmūr in 1403, evidently to serve as his base in Transcaucasia. This long and varied history notwithstanding, the coin-finds were predominantly Ildegizid, especially of the last atabeg, Muẓaffar al-Dīn Ozbeg.

The town at Ören Kal'e was a square walled enceinte, with round towers at the corners and semi-circular towers between and a main gate on the south-west. The original walls, probably originally 6th-7th century, were of mud brick with a mud cladding. Later repairs were of mud brick with a fired brick revetment, but by the 12th century they had been abandoned. In the eastern corner was a smaller enceinte, 1,525 m<sup>2</sup>, also walled: its dimensions are extraordinarily close to those given by Sharaf al-Dīn 'Alī Yazdī in his account of Tīmūr's restoration of the town. Excavations here brought to light a large bath, probably early 12th century in date, built on several levels, with walls of decoratively coursed fired brick, an entrance with terra cotta revetment plaques and a stalactite canopy, and one section with remains of wall-painting and carved or moulded plaster. Following its ruin, perhaps in an earthquake, it was intensively colonised, yielding abundant remains of both glazed and unglazed pottery.

Ören Kal'e was one of a group of Transcaucasian potteries active in the pre-Mongol period—Gandja, Ḳabāla, Bākū, Dwīn and especially Mingēcāwr, though none of the material from this last has been published. As at these sites, the 12th-13th century material from Ören Kal'e, both in quantity and quality, is much more impressive than that from earlier periods. A trial excavation in the potters' quarter outside the walls to the south-west of the town brought four kilns to light, one of them containing spheroconic vessels. Unglazed 12th-13th century pottery included cooking pots, some decorated with spots of turquoise glaze; lavishly decorated storage jars, with barbotine

stamped or incised ornament, sometimes with craftsmen's signatures; jugs and bowls, often with moulded decoration; and spheroconic vessels, with a characteristically yellowish-grey body and engraved, stamped or applied decoration. Of particular importance was a group of red-bodied storage vessels, perhaps wine jars with archaising friezes of horned animals, birds and fishes, and even crosses, recalling the impressions of cylinder-seals and, like these, applied with a cylinder. Such wares, with local peculiarities, are also known from Ānī, Gandja, Dwīn, Garnī and Mingēcāwr.

The earlier locally manufactured glazed wares were mostly varieties of polychrome-stained splash- and drip-wares, characteristic of 'Abbāsīd Mesopotamia and Persia, though one fragment with a mounted huntsman was an imitation of opaque-glazed figural wares with polychrome decoration characteristic of the production of 10th-century Nīshāpūr. In the 12th-13th centuries the pottery seems to show a change also in orientation, to the Caucasus, Anatolia and northern Syria, with many versions of polychrome-stained sgraffiato and champlévé wares. Particularly noteworthy are champlévé wares, one signed 'amal *Khattāb*, with bold strapwork and panels of delicate scrolling arabesque, deriving from fine engraved Khurāsānī metalwork of ca. 1200; and a group of figural sgraffiato with animals clambering in foliage, so-called "Aghkand" wares, which are, however, known from many sites, including Dmanisi and Urbnsi in Georgia. As at Gandja, these may have been imports.

One important group of glazed wares, virtually exclusive to Baylaḳān, is red-bodied and underglaze-decorated, heavily potted but with exceptionally fine decoration scratched in a black manganese slip. They may be local versions of silicon-enriched 12th-century Kāshān "frit" wares painted in black slip under a colourless or a turquoise glaze, but here their repertoire makes use of Persian verse inscriptions, comparable in choice and execution to those on pre-Mongol Kāshān lustre wares, and elaborate knot patterns on grounds of fine scrolls. Several pieces were also signed 'amal *Khattāb*. Among signatures on other pottery types from Ören Kal'e, the most interesting is from an unglazed storage jar, with a distich incised in a fair hand and a signature, 'amal *Ibn 'Alī b. 'Azīzī al-fakḳhār* ("the potter"). Its phraseology is clear, if difficult to parallel, but errors in the transcription of the distich suggest that the signature, too, may contain mistakes.

Kiln furniture was abundant, including cockspurs, though most of the pottery recorded was fired without them. Most of the later glazed wares bore stamped designs on their bases, though, oddly, these were absent from the more highly decorated pieces and practically none of them are inscriptions. Similar stamps on wares of different groups show that the potters, like the decorator *Khattāb*, did not specialise; they could have been bank marks, to identify the work of a craftsman in a large workshop who was paid by the piece.

Imported wares included silicon-enriched lustre pottery (but not tiles) of most of the documented late 12th- to early 13th-century Kāshān types. Some of them, however, are characteristic of the 1260s-1270s, suggesting that the site may have continued to flourish under the Īl-Khānids and that the types of pottery discussed above may therefore have later termini than the Mongol invasion of 1221. Other Kāshān products, notably *mīnā'ī* and underglaze wares, do not seem to have been recorded.

**ÖZAL**, TURGUT, modern Turkish statesman (1927-93). He was born in 1927 in the province of Malatya in south-eastern Turkey. After graduating as an electrical engineer in 1950, he served in a number of important technical and economic posts between 1967 and 1980, initiating a programme of liberalising economic reforms in January 1980. Following the coup d'état led by General Kenan Evren on 12 September of that year, Özal continued these policies as Deputy Prime Minister, but he was forced to resign in July 1982 after a banking scandal. During the transition back to civilian rule in 1983, Özal established the Motherland Party, which won a comfortable majority in the general elections of November 1983. He

thus became Prime Minister in the following month, increasing his party's majority in the next elections, held in November 1987. As premier, his main achievement was to free the economy from government constraints, producing high economic growth and an impressive increase in foreign trade; his main failures were the continuation of high inflation, and increasing allegations of corruption and disunity in his government during the late 1980s. When General Evren retired from the presidency in October 1989, Özal was elected to succeed him; however, his party lost its parliamentary majority in the general elections of October 1991, thus reducing his real political power. As President, Özal played a major role in foreign policy determination, controversially directing Turkey's support for the coalition powers in the Gulf crisis of 1990-1. His sudden death from a heart attack in April 1993 removed a towering figure in Turkish politics, distinguished by his attachment to economic and political liberalism, as well as the integration of moderate Islam into the country's political life.

## P

**PASHTO** [see AFGHĀN. ii].

**PĪRPAŪTHĪ** (from Pers. *pīr* + *panth* "way of the spiritual master"), the name given in what is now Western India and in Pakistan to Hindus who follow Muslim *pīrs*, whether living or dead, these being generally Šūfīs or Ismā'īlīs. To be precise, the term Pīrpanth is applied more strictly to two specific groups: (1) the disciples of Imām Shāh [q.v.], a dissident Ismā'īlī who was one of the sons of the Ismā'īlī *pīr* Ḥasan Kabīr al-Dīn, whose tomb is situated near Aḥmadābād [q.v.] in Guḍjarāt; and (2) more rarely, to the Hindu disciples of Šūfī masters, Muslims or occasionally Hindus, originating from Sindh, Panḍjāb or Rādžāsthān, such as Rāmdēv Pīr (or Rāmā Pīr), Pithoro Pīr, Pātho Pīr, etc., with whom we are not concerned here.

The existence of the Pīrpanthīs attests the importance of interpenetration of Islam and Hinduism in this part of the subcontinent. Rather than speaking of syncretism, it would be more sensible to speak of a charismatic consensus at which these sects arrived. Sprung from the Mathīa Kanbī caste of agricultural labourers, the Pīrpanthīs were also known by the name of Momnaḥs (or Mōmnaḥs). Established within Guḍjarāt [q.v.] proper, but spilling out into Khāndesh and Kačč [q.v.], they are divided into several sub-sects according to whether they venerate Imām Shāh himself or one of his descendants or representatives. In the period from the late 19th century onwards, when confessional allegiances crystallised, fundamentalist Hindu organisations like the Āryā Samāḍj convinced a great number of them to revert to "orthodox" Hinduism. They generally assumed the name of Patēl, and continued to venerate Imām Shāh, whom they

considered as the *guru* who spoke in the name of the tenth *avatār* of Viṣṇu, Niklanki.

*Bibliography:* In addition to the *Bibls.* given for IMĀM SHĀH and SATHPANTHĪS, see J.M. Campbell (ed.), *Gazetteer of the Bombay Presidency*, ix/2, *Gujarat population: Musalmans and Parsis*, Bombay 1899; W. Ivanow, *The sect of Imam Shah in Gujerat*, in *Jnal. Des communautés d'Asie du sud entre islamisation et indianisation*, Turnhout 1998; Dominique-Sila Khan and Zawahir Moir, *Coexistence and communalism in the shrine of Pirana in Gujarat*, in *South Asia*, xxii, Special issue (1999), 133-54.

(M. BOIVIN)

**PRESTER JOHN**, the name of a mysterious potentate, said to be a Nestorian Christian and inimical to Islam, whom the Christians of medieval Europe placed beyond the Islamic lands in Inner or Far Asia.

The name Presbyter Johannes first occurs in the chronicle, called *Historia de duabus civitatibus*, of the German prelate Otto, Bishop of Freising, in which he describes, on the authority of a meeting in 1145 with the Latin Bishop Hugh of Djabala (= ancient Byblos, in Lebanon), how Prester John was a monarch, of the lineage of the Magi of the Gospels, living in the Far East (*in extremo oriente*) beyond Persia and Armenia. He had attacked the *Samiardi* brothers, kings of the Persians and Medes, had defeated them and had advanced to the Tigris in the hope of aiding the Church in Jerusalem, but had then been forced to

turn back. The passage seems almost certainly to contain an allusion to the defeat of the Saldjūk sultan Sandjar [*q.v.*] (= the kings *Samiardos/Samiardos*, here made plural) and his Karakhanid allies by the Western Liao, known to the Muslims as the Kara Khitay [*q.v.*] at the battle of the Kaṭwān Steppe in Transoxania in 536/1141 (the remainder of Otto's story about Prester John's advance across Persia into Mesopotamia being unhistorical).

However, this does not necessarily mean that the later, elaborate stories of Prester John, which contained connections with the Indian Ocean coastlands and, above all, with Ethiopia, all had their origins in this battle. It is not impossible that stories of Prester John were known before the news of Sandjar's defeat percolated through to the Crusader principalities in the Levant, providing a convenient peg on which to hang the stories. In the opinion of the late Prof. C.F. Beckingham, such stories were probably connected with the legend of the shrine of St. Thomas in South India (modern Kerala) and the existence of an ancient Christian community there; but the intricacies of the later history of Prester John do not concern us here. It should be noted, however, that the assertion of B. Spuler in his article *GÜRKHĀN* at Vol. II, 1143b, that *Johannes* stems from the title *Gürkhān* (itself almost certainly Turkish in origin, according to G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iii, Wiesbaden 1967, no. 1672) seems most unlikely.

*Bibliography:* The bibl. on this enigmatic figure is large, ranging from the pioneer work of F. Zarncke, *Der Priester Johannes*, in *Abh. Königl. Sächsischen Gesell. der Wiss.*, phil.-hist. Cl., vii-viii (1879-83), to C.F. Beckingham's *Prester John, the Mongols and the Ten Lost Tribes*, London 1995. A succinct and stimulating study is this same author's *The achievements of Prester John*, Inaugural Lecture, SOAS, London 1966. Most recently, see E. Ciurtin, *La mythologie asiatique et la légende africaine du Prêtre Jean*, in *Archaeus. Études d'Histoire des Religions*, v/3-4 (Bucarest 2001), 5-21. (C.E. BOSWORTH)

**PUASA**, the Indonesian term for the month of fasting, Ramaḍān [*q.v.*].

During Ramaḍān in Indonesia all levels of local, indigenous and normative interpretations of Islam converge. On the national level, the country converts

into a large Kur'ān school with religious programmes dominating the news media, mobile Kur'ān schools, Kur'ān clinics and Kur'ān reciting marathons. In the month prior to Ramaḍān, many areas will hold "praise rallies" in order to prepare spiritually for Ramaḍān. These are nightly events of Ṣūfī-type *dhikr* that rotate from house to house.

Simultaneously, reaching back to the pre-Islamic, Hindu-Buddhist elements of Javanese culture, there is great stress on rituals surrounding the graves of ancestors. These take place in the weekend prior to the beginning of the fast and at the end. In certain areas, e.g. in Java, the so-called "Kraton culture" of the sultan's palace performs rituals that are entirely non-Islamic. For instance, after the 'Īd prayers a grand parade called *Gerebeg* is held in front of the Kraton with as its centre piece a magical "mount of blessing" that conveys some of the sultan's mystical power.

Attitudes toward the practice of fasting are influenced by Javanese ascetic practices that are followed for a variety of reasons year round. As a result of this, children as young as four years old start to practice abstinence for Ramaḍān. In general, the fast is broken in restrained manner with many Muslims limiting their first meal to a small snack and a glass of sweet juice.

Although Ramaḍān is a time of promoting unity among Muslims, differences between Reformist and Traditionalist Muslims are played out with fervour. This starts with the issue of identifying when the fast begins and ends, and is visible during Ramaḍān in different practices concerning the *tarāwīḥ* prayers and the 'Īd al-Fiṭr gatherings.

Celebrations for the 'Īd last up to one month, and serve to renew harmony and unity. People travel all over the country (*mudik*) in order to visit relatives and to ask forgiveness for wrongs committed during the past year. Neighbourhoods, businesses and schools organise special *halal bi 'l-halal* parties.

*Bibliography:* There are innumerable numbers of books about *puasa* in the Indonesian language. Many leading preachers and scholars of Islam have published their Ramaḍān sermons and reflections, such as Hamka, *Puasa tarawih dan Idul Fitri*, Jakarta 1995; M. Ouraish Shihab, *Sahur bersama*, Bandung 1997. (NELLY VAN DOORN-HARDER)

## R

**RADJA' B. HAYWA** b. *Khanzal* al-Kindī, Abu 'l-Miḳdām or Abū Naṣr (full *nasab* in Gottschalk, 331, from Ibn 'Asākīr), a rather mysterious *mawla* or client who seems to have been influential as a religious and political adviser at the courts of the early Marwānid caliphs, from 'Abd al-Malik to 'Umar b. 'Abd al-'Aziz. His birth date is unknown, but he died in 112/730, probably around the age of seventy.

According to one account, Radjā's family stemmed from Maysān in Lower 'Irāk, hence from the local Nabaṭ or Aramaeans, where the bond of *walā'* with the Arab tribe of Kinda [*q.v.*] must have been made, the Kinda being especially strong in Kūfa. The family moved westwards to the Palestine-Transjordan area,

where again there were many Kindīs in such districts as the Balḳā' [*q.v.*], providing strong military support for the Umayyads. It is likely that Radjā himself was from that area, from Baysān in the Jordan valley, as the *nisbas* sometimes applied to him, "al-Filastīnī" and "al-Urdunnī", would imply. He appears, together with Yāzid b. Sallām, a *mawla* of the caliph 'Abd al-Malik and a native of Jerusalem, as being involved in the construction of the Dome of the Rock [see *KUBBAT AL-ṢAKHRA*], probably as financial controller (Mudjīr al-Dīn al-'Ulaymī, *al-Uns al-djātil*, Cairo 1283/1866-7, i, 241-2 = 'Ammān 1973, i, 272-4), and he was also employed by al-Hadjdjadī b. Yūsuf [*q.v.*] on a diplomatic mission to conciliate the Ḳaysī Arab tribes of northern Syria under their leader Zufar b. al-Hārith al-Kilābī.

Radjā' was further famed for his piety and knowledge of the religious sciences, and was high in the counsels of 'Abd al-Malik and his son al-Wālid (I), accompanying the latter on his Pilgrimage of 90/709 or 91/710, when he first came into contact with the caliph's cousin 'Umar b. 'Abd al-'Azīz, governor of Medina, a relationship to be of significance later. During the short caliphate of Sulaymān b. 'Abd al-Malik (96-9/715-17 [q.v.]), Radjā' appears as both an executive official and a spiritual adviser to the ruler and then to his successor 'Umar (II) b. 'Abd al-'Azīz; some sources make him head of Sulaymān's *diwān al-ḫātām* or chancery. He clearly lent his religious backing to the caliphs, and his role thus marks a stage in the acceptance of *mawālī* in the sphere of legal and religious authority hitherto jealously guarded by the Arabs (cf. the role, parallel in many ways, of al-Ḥasan al-Baṣrī [q.v.]); one may also view it as an aspect of the increasing concern of the Umayyads with the religious and spiritual aspects of their authority.

The historical sources make Radjā's great moment the events at Sulaymān's death in Ṣafar 99/September 717. It had been 'Abd al-Malik's intention that his sons by free wives should succeed him, and there were still four of these eligible at Sulaymān's death. Yet a temporary re-routing of the succession was now achieved, to the collateral branch of 'Abd al-Malik's brother 'Abd al-'Azīz (in fact, it had been the wish of the founder of the Marwānid line, Marwān (I) b. al-Hakam [q.v.], that 'Abd al-'Azīz should follow 'Abd al-Malik in the caliphate).

What happened when Sulaymān was on his deathbed at Dābīk [q.v.], north of Aleppo, is related in detail by al-Wākidī, preserved by Ibn Sa'd, *Ṭabaqāt*, v, 246-9, and al-Tabarī, ii, 1341-5, tr. in Bosworth, 52-9, and D.S. Powers (tr.), *The History of al-Tabarī*, xxiv, *The empire in transition*, Albany 1989 (with an *isnād* going back to Radjā'), with a few additional details in al-Dhahabī. According to these accounts, Radjā' was able to persuade Sulaymān to set aside his own children and half-brothers in favour of 'Umar b. 'Abd al-'Azīz, and secured adhesion to this arrangement by the device of requiring allegiance to the person named in a sealed 'ahd of Sulaymān. However, since much of the information on this episode goes back, directly or indirectly, to *riwāyas* stemming from Radjā' himself, it has been suggested that he may have exaggerated his personal share in events (see Eisener, *Zwischen Faktum und Fiktion*, 222ff., and idem, art. SULAYMĀN B. 'ABD AL-MALIK, at Vol. IX, 322a).

During 'Umar's brief ensuing period of power (to Radjab 101/February 720), Radjā' may have been an adviser of the caliph, but specific detail is lacking; one would like to know whether, for instance, he had any part in 'Umar's administrative and financial measures, including his famous "rescript". He apparently spent the last decade of his life in retirement, and died, in unknown circumstances, in 112/730, according to Ibn al-Athīr, ed. Beirut, v, 172, at Ḳussīn near Kūfa.

**Bibliography:** 1. Sources. There are brief entries on Radjā' in e.g. Ibn Sa'd, vii/2, 161-2; Khalīfa b. Ḳhayyāt, *Ṭabaqāt*, ed. Zakkār, Damascus 1966, ii, 773 no. 2924; Ibn Ḳutayba, *Ma'ārif*, ed. 'Ukkāshā, 472-3; and a slightly longer one in Ibn Ḳhallikān, ed. Abbās, ii, 301-3, tr. de Slane, i, 526-7. For a full list of the sources mentioning him, see Gottschalk, 329-31. According to Eisener, 222 n. 290, the information in Ibn 'Asākīr on Radjā' stems from Ibn Sa'd.

**RĀDJASTHĀN**, a historic region of the western part of the Indian subcontinent, and now the name of a province in the Indian Union. It is bounded by the Pakistan provinces of Sind and Panḍjāb on the west and northwest, and by the Indian states of Panḍjāb, Haryana and Uttar Pradesh on the northeast, Madhya Pradesh on the east, southeast and south, and Guḍjarāt on the south. With an area of 342,267 km<sup>2</sup>/132,149 sq. miles, it is the second largest state in the Indian Union (after Madhya Pradesh), but because of its climate and habitat, has a less dense population than any other state. The population (1986 estimate) was 37,000,000. The state capital is at Jaipur, formerly the centre of a princely state [see JAIPUR], and the state is divided into 26 Districts.

#### 1. Geography and habitat.

The topography of Rādjasthān is dominated by the range of Aravalli Hills, which run in a transverse fashion across the state from northeast to southwest, culminating in Mount Abu (1,722 m/5,650 feet) at the southwestern end and ending just over the border of Guḍjarāt State. The three-fifths of the state lying to the northwest are largely sandy, with the Great Indian or Thar Desert in the far west but with more fertile and habitable lands as one goes eastwards. The two-fifths lying to the southeast of the Aravalli Hills are diversified in character and more fertile, with the Districts of Kota and Bundi forming a tableland. In the south is the hilly tract of Mēwār [q.v.], centred on Udaipur [see UDAYPUR]. On the state's northeastern edge, the plains around Bharatpur form part of the Jumna/Yamunā basin. The only large perennial river is the Chambal, which flows northeastwards into the Jumna.

Rādjasthān is predominantly an agricultural and pastoralist state. Despite a low and erratic rainfall, with a subsequent need for irrigation, nearly all types of crops are grown, including various cereals, rice and vegetables. Despite the arid or semi-arid nature of more than half the state's area, there is a large livestock population in comparison with the rest of India, including camels and draught animals, and Rādjasthān is the largest produce of wool in the Union.

#### 2. Ethnology.

There are aboriginal tribes in various parts of the state, especially to the east and south of the Aravalli Hills, including Bhīls, and various tribes of Rāḍjipūt stock, such as the Mē'ōs [q.v.], a part of whom was nominally converted to Islam in the 8th/14th century. Rāḍjipūts form the most significant element in Rādjasthān and have dominated its political and cultural history, even though, at present, Rāḍjipūts form only a small proportion of the total population, with many more Rāḍjipūts outside the state in the Panḍjāb, Uttar Pradesh, Bihar, Madhya Pradesh, etc. The princely states of Rādjasthān were almost all ruled by Hindu Rāḍjipūt princes, with the exceptions of Muslim Tonk [q.v.] in the east of the state whose founder

was a Pāthān chief, and the D̥jāt [q.v.] states of Dholpur and Bharatpūr in the northeast. The Rād̥jpūts claim to be the descendants of the Kshatriyas of Vedic times, and take great pride in their ancestry and their warlike traditions (Skr. *rād̥japutra* "king's son"). But such claims are based on fictitious genealogies, and the Rād̥jpūts must be of very diverse ethnic origins, with some remains of the old Kshatriyas but with many later admixtures of invading peoples who became Hinduised, with new families recognised as Rād̥jpūt. The term Rād̥jpūt is, accordingly, not of racial significance but denotes a tribe, clan or warlike class whose members claimed aristocratic rank. At present, some 10% of the population of Rād̥jasthān State is Muslim.

### 3. Languages and literature.

The dialects of Rād̥jasthān belong to the Western Hindī group of New Indo-Aryan, with the Aravalli Hills marking the main internal divide between the north-western and the south-eastern dialects. Predictably closer in many respects to Brajbhāṣā (and to standard Hindī), the main south-eastern dialects are D̥jajpūrī (D̥hūndhārī) and its southern neighbours Mēwārī and Hārawī, in turn flanked to the east by Mēwārī and to the south by Mālwī. Possibly also reflected in the Romani of the European gypsies, earlier migrations from this region are certainly responsible for the close resemblances between south-eastern Rād̥jasthānī and the speech of several nomadic groups, including Lamānī in central India and the Godjīrī (Gudjārī) spoken by the Muslim Gudjar herdsmen of Kashmir and the adjacent areas of northern Pakistān. The Mārwarī dialects spoken in the desert areas of north-western Rād̥jasthān are collectively distinguished by such features as the distinction of implosives from explosives in the voiced series *g d d b* or the retention of an organic passive in *-id̥j-*, both with close parallels in Sindhī [q.v.] and Sirāikī [see LAHNDĀ], as well as individual shibboleths like the possessive marker *rā*.

Following a period of several centuries during which Old Gudjarātī (confusingly termed "Old Western Rād̥jasthānī" by Tessitori) was the common literary language of both Gudjarāt and Rād̥jasthān, Old Mārwarī emerged as an independent literary language around the middle of the 15th century, when it is attested in the semi-popular poetic treatments of romantic themes found in the *Viśaladevarāsa* and the *Dhola-Mārū rā dūhā*. In the hands of the Chāraṇs, the hereditary bards of the ruling Rād̥jpūts [q.v.], Old Mārwarī was developed as a specialised literary medium for heroic poetry with the incorporation of numerous Sanskritisms and special poetic forms. This bardic language is known as Dīngal, as opposed to "Pīngal", the literary Brajbhāṣā cultivated for other types of poetry in the period down until the later 19th century when both were replaced as literary standards by modern Hindī.

In its celebration of the chivalric ideals of the Rād̥jpūts and of their resistance to the Muslims, the heroic literature of Rād̥jasthān is of very great cultural importance. It finds its first classic statement in

the Old Gudjarātī *Kānhadadē-prabandha* (1456) by Padmanābh, which celebrates the victories achieved over the Dihli Sultan 'Alā' al-Dīn Khaldjī [q.v.] and his generals by Kānhadadēv, the Rād̥jpūt ruler of D̥jalōr, until his final defeat (dated ca. 1312) is followed by his queens performing collective ritual self-immolation (*d̥jauhar*). In addition to panegyrics and elegies (*marṣiyā*), Dīngal literature includes many similar treatments of such historical episodes, beginning with the mixed prose-verse *Achal Khūchī rī vachānkā* based on the resistance mounted by its eponymous Rād̥jpūt hero to the invasion in 1423 of Sultan Hūshang Ghūrī of Māndū [q.v.]. For stylistic as well as linguistic reasons, however, Dīngal literature has attracted less interest from modern scholars than the more approachable prose chronicles of the Rād̥jpūt states dating from the early 17th century which were written in Middle Mārwarī, and whose most celebrated exemplar is the *Khyāt* by Nayāṣī, minister to D̥jaswant Singh of Mārwarī (d. 1670).

### 4. History.

Archaeological researches in western Rād̥jasthān show that people were living there in the 3rd and 2nd millennia B.C. who were close to the Harappan and post-Harappan cultures of the Indus valley. Late rulers of the whole or parts of the state included the Bactrian Greeks, Sakas, Guptas, and White Huns, until from the 7th century A.D. onwards, various Rād̥jpūt dynasties arose, including the Gurdjara-Pratīhāras, who fended off the Arab colonists in Sind; but for the most part, these Rād̥jpūt princely lines were involved in internecine warfare, which was to facilitate Muslim probes into the region. The last of the Čāhamāna or Čawhān line, Prīthvīrād̥ja III, was defeated and killed by the Ghūrīd sultan Mu'izz al-Dīn Muḥammad b. Sām [q.v.] in the second battle of Tarā'in in 588/1192. The capital Ad̥jmēr [q.v.] was briefly restored by the Ghūrīd to Prīthvīrād̥ja's young son after the latter had accepted the Sultan's suzerainty over his lands. Only the strategic fortress of Ranthambhor in eastern Rād̥jasthān was occupied permanently, with a garrison under Kiwām al-Mulk

Rukn al-Dīn Hamza. In 591/1195 the Rādjipūts rebelled against Muslim control under the leadership of the chiefs Hariṛādja and Djaṛāṛī who occupied Adjmēr [q.v.], threatened Ranthambhōr and fomented dissension in the region towards Dihlī, where Kuṭb al-Dīn Aybak [q.v.] resided as Mu'izz al-Dīn's viceroy. Aybak restored the situation and regained Adjmēr. Nāgawr [q.v.] in the region of Djoḍhpūr [q.v.] seems to have been occupied at this time. Thangar, capital of the territory of Bayānā in this eastern part, was besieged and captured by Mu'izz al-Dīn in 592/1196 and then entrusted to Malik Bahā' al-Dīn Toḡhril, who later transferred his capital to a newly-founded town, Sulṭānkōf, that later became known, from the name of the province, as Bayānā. Thus with the exception of the chief of Djalōr in western Rādjasthān, most of the region had been nominally at least subdued. In the last years of the 6th/12th century, Kh'ādja Mu'īn al-Dīn Hasan Sidjī (d. 633/1236 [see *Āshrafī*]), founder of what was to become one of the most influential Sūfī orders in India, the *Āshīyā* [q.v.], came to reside at the Cāhamāna capital Adjmēr, and his shrine there later became one of the most celebrated shrines, for both Muslims and Hindus, in the subcontinent. His disciple Shaykh Hamīd al-Dīn Suwalī Nāgawrī (d. 673/1274) was sent by Mu'īn al-Dīn to Nāgawr, which likewise became an important *Āshīyā* shrine.

The relaxation of power in the Dihlī Sultanate [q.v.] on the death in 633/1236 of Ilutmiṣh [q.v.] gave an opportunity for the Rādjipūt princes to reassert their power. A revolt in eastern Rādjasthān forced his daughter Sultan Raḍīyya [q.v.] to withdraw the Muslim garrison from Ranthambhōr, and except for the districts around Adjmēr and Nāgawr, the whole region reverted to Rādjipūt rule, allowing powerful lines like those of Ranthambhōr and Āṭōr to come into existence; for the rest of the century no Muslim ruler was able to contemplate a reconquest. This only came in the reign of 'Alā' al-Dīn Muḥammad Khaldjī (695-715/1296-1316), who aimed to secure at least eastern Rādjasthān in order to open a line of communication towards Mālwa and Guḍjarāt, which he coveted. An army was sent in 700/1301 to besiege the powerful and prestigious ruler of Ranthambhōr, Rā'ī Hammīr Dēva, a descendant of Prīthvīrādja III. This attempt failed ignominiously, and only after the Sultan had to come from Dihlī in person with reinforcements did Ranthambhōr fall after a year's struggle. It was then placed under the general Ulugh Khān, and in 701/1302 the Sultan invested the fortress of Āṭōr, then ruled by another noted prince, Ratnasimha of the Guhila clan of Mēwār and the grandson of Djaṛāṛī, and captured it in the next year, annexing the territory of Āṭōr to the Dihlī Sultanate and placing it under the governorship of the crown prince, Kḥiḍr Khān. Thereafter, the chiefs of smaller principalities either submitted or were overthrown by military force. Thus in 711/1311 the commander Malik Kamāl al-Dīn Gurg defeated Rā'ī Karan Dēva and seized his principality of Djalōr, and after this, lesser chiefs in Djaṣalmer, etc. likewise submitted and acknowledged Khaldjī suzerainty.

Thus throughout the 8th/14th century, Rādjasthān was controlled by the Dihlī Sultans and their governors from such centres as Adjmēr, Ranthambhōr, Nāgawr and Djalōr. However, the invasion of northern India and sack of Dihlī by Tīmūr [q.v.] in 801/1398 eventually led to the end of the Tughluk Sultans and heralded a period of weakness for the Sultanate, with various Muslim powers arising in the provinces.

It was also the opportunity for a re-assertion of power by the Rādjipūt chiefs, with the Rānā of Āṭōr organising a confederacy of chiefs and with the Rādjipūts of Mēwār driving the Muslims from Adjmēr, held by them till 859/1455 when the Sultan of Mālwa recaptured, with the rulers of Mālwa now holding it for almost eighty years. It was also an opportunity for Sultan Muzaḥḥār Shāh (I) of Guḍjarāt [q.v.], now independent of Dihlī, to send his younger brother Shams al-Dīn Khān Dandānī against Nāgawr, at which his descendants established a local dynasty that endured till Dawlat Khān Nāgawrī was killed ca. 932/1525-6 by Rā'ī Māldēva of Djoḍhpūr. Djalōr was ruled by a Nuhanī Afghan chief and his descendants until it was conquered by Māldēva after 932/1526, but the latter's power was then overthrown by the Dihlī Sultan Shīr Shāh Sūr (r. 947-52/1540-5 [q.v.]), who also attacked the Rādjā of Djoḍhpūr in his principality of Mārwar in 949/1542-3. Previous to this, Mēwār had been built up into one of the most powerful principalities of northern India under its energetic ruler Rānā Sangrām Singh or Sāngā (r. 1509-28), who led successful campaigns against the Sultans of Mālwa and Guḍjarāt. He went on to acquire imperial ambitions, defeating the Dihlī Sultan Ibrāhīm Lōdī [see *Lōdīs*] in 929/1523 and made overtures to the Mughal adventurer Bābur [q.v.] for a concerted attack on the Lōdīs. He soon realised, however, that Bābur would be a powerful rival for power and turned against him; but in 933/1527 Bābur secured a decisive victory over Sāngā at Khānu'ā. This was a turning point in the history of northern India, for after this the Rādjipūt princes remained essentially on the defensive in their territories against the rising power of the Sūrs and then the Mughals.

Shīr Shāh Sūr's biographer 'Abbās Sarwānī mentions the territories acquired by him in Rādjasthān as the *mulk-i Nāgawr u Adjmēr u Djoḍhpūr*, and he also speaks of the desert regions of the west as the *zamin-i rīgīstān*. Shīr Shāh now divided up the whole region into extensive *sarkārs* [q.v. in Suppl.], each under a *ḥawḍjār* with his commander Khawāṣṣ Khān as *amīn* or overall governor. The emperor Akbar's policy in Rādjasthān was based on conquest and conciliation. The captures of Āṭōr and Ranthambhōr made him master of the greater part of the region, with the exception of Mēwār, not completely subdued until Djaḥāngīr's reign, when Rānā Amar Singh submitted at Udaypūr in 1023/1614. The emperor took Rādjipūt wives, and both his son Djaḥāngīr and the latter's son Shāh Djaḥān were born of Rādjipūt mothers. Rādjipūt troops, typically dismounting from their small horses to fight, formed contingents in the Mughal army under Akbar. Rādjasthān was organised into the *ṣūba* [q.v.] of Adjmēr under a *ṣūbadār* [q.v.], with seven component *sarkārs*: Adjmēr, Āṭōr, Ranthambhōr, Sirohī, Nāgawr, Djoḍhpūr and Bikāner. The districts of Alwār and Bharatpūr, which are now within modern Rādjasthān State, were included in the *ṣūba* of Āgra.

The reversing of Akbar's conciliatory policies under Awrangzīb [q.v.] left the emperor faced with such powerful enemies as the Rādjipūts in northern India and the Marāṭhās [q.v.] in the northwestern Deccan. The new policy of militant Muslim orthodoxy affected the emperor's relationship with the Rādjipūt nobility, who formed a highly influential element in the Mughal state apparatus; the highest-ranked noble in the empire was Mīrzā Raḍjā Djaṣ Singh Kaḥwaha of Djaṣpūr, and in 1090/1679 all Rādjipūts in the state service were excused the newly-imposed *ḥiḍya*, though the mass of Rādjipūt subjects were not. Nevertheless, the

role of the Rādjput nobles now began to be curtailed by what seems to have been a deliberate policy on Awrangzīb's part. His attempt to interfere in the succession to the throne in Mārṡāf and to impose a Rādjput candidate of his choice there led to a major Rādjput revolt in 1089-90/1679-80 at Mārṡāf and then Mēwār. Since the Rādjputs had no field artillery, the Mughal army suppressed this, and occupied Udaypūr, but guerilla warfare against the Mughals continued for a generation in the hills.

Bharatpūr was taken over by a Djāt chief on Awrangzīb's death and the Rādjputs were able to retake Adjimēr in 1133/1721; but internal dissensions prevented the Rādjputs from making headway against the Marāthās, within whose confederation they now came. Adjimēr was captured in 1169/1756; the power of the Rādjput chiefs reduced to a low ebb, and the land suffered from Pindārī and Pathān plundering and oppressive levies. It may be noted that it is in the 18th century that the term Rādjputāna is found, so that a historian like Khāfi Khān uses the expressions *mulk-i Rādjputān* and also *Rādjputiyya*; it was essentially under British paramountcy in the 19th century that the designation Rādjputāna became usual.

With the defeat of the Marāthās by British forces in 1817-18, before the end of 1818, the group of principalities and chiefdoms which came to comprise the British Indian province of Rādjputāna had been taken under British protection. Their borders were now precisely delimited, with the whole of the province comprising these native states (totalling eighteen princely states and two chiefdoms) except for the small enclave of Adjimēr-Mēwāfa which was a directly-ruled British Indian province. The chief commissioner of this last was also the political officer there, styled agent to the governor-general, for the Government of India, and there with various residents and political agents accredited to the native states. The outbreak of the Sepoy Mutiny in 1857 found Rādjputāna devoid of British troops; there were local disturbances, but the native princes, whose positions were often threatened, managed to restore order. The administrative system outlined above lasted until Partition and Indian independence in 1947; during the previous century or so, the province had, from its particular political constitution, remained largely outside the nationalist and westernising currents that affected other parts of the subcontinent. During the civil strife that raged around Partition, many Muslims were driven out of the Hindu princely states of Alwār and Bharatpūr. When the Indian Union was established, the central government in 1956 set up a Boundary Commission for the re-organisation of states on a linguistic basis. A recommendation, implemented in 1958, was that Alwār and Bharatpūr should be included in the new state of Rādjasthān, though linguistically they do not form part of it.

**RĀFĪ** AL-DARADJĀT b. Rāfi' al-Sha'n b. Shāh 'Ālam I, Shāms al-Dīn, great-grandson of the great Mughal emperor Awrangzīb [q.v.] and one of the ephemeral emperors in the last decades of independent Mughal rule, reigning for some four months in the spring of 1131/1719.

After Awrangzīb's death in 1118/1707, the main power in the empire was that of the Bārha Sayyids [q.v. in Suppl.], who in 1124/1712 raised to the throne Farrukh-siyar b. 'Azīm al-Sha'n Muḡammad 'Azīm [q.v.] but deposed him in Rabī' II 1131/February 1719 and substituted for him Rāfi' al-Daradjāt; but in June, the latter died of tuberculosis, to be succeeded by yet another puppet of the Bārha Sayyids, Shāh Djahān II b. Rāfi' al-Sha'n.

*Bibliography:* See that to FARRUKH-SIYAR, and add J.F. Richards, *The Mughal empire*, Cambridge 1993, 272. For chronology, see C.E. Bosworth, *The New Islamic dynasties*, Edinburgh 1996, 331 no. 175. (C.E. BOSWORTH)

**AL-RAMLĪ**, MUḡAMMAD B. AḡMAD ABŪ BAKR IBN AL-NĀBULUSĪ, a traditionist originally from Nābulus [q.v.] who was the *ra'īs* of Ramla and who used often to make retreat with his disciples in the *Akuwākh* Bāniyās ("the huts of Bāniyās") at the foot of Mt. Hermon in the Syrian Djawlān.

He publicly opposed the Fāṡimid occupation of Syria. Taken from Damascus and sent in a cage to Egypt, on the orders of the caliph al-Mu'izz [q.v.] he was flayed alive in 363/973 at the Manẓar, the belvedere on the road connecting Fustāt with Cairo (the relevant Arabic texts and details of his biography and of the numerous famous *muhaddīth*s and historians whom he taught or frequented are to be found in Th. Bianquis, *Ibn al-Nābulusī, un martyr sunnite au IV<sup>e</sup> s. de l'hégire*, in *AI*, xii [1974], 45-66; idem, *'Abd al-Ghanī b. Sa'īd, un savant sunnite au service des Fāṡimides*, in *Actes du XXI<sup>e</sup> Congrès international des orientalistes*, Paris 1975, i, 39-47).

He exercised a more important influence on the historians of Damascus and Baghdād who tended towards the *ahl al-hadīth* than on those of Ash'arī ten-

dencies, so that Ibn al-'Asākir does not seem to hold many of his disciples in very high regard. One should mention in regard to him a curious *ḥadīth* which he transmitted and which after his death extended the mission of guiding the consciences of the Sunnī community entrusted collectively to the 'ulamā'. His Sunnī disciples, gathered together at the Akuwākh Bāniyās, lived a life close to nature which is described by al-Muḥaddasī (160, 188, tr. Miquel, 176, 238); these persons were mainly refugees from Tarsūs expelled by the Byzantines. The *nisba* of al-Ballūfī borne by their head Abū Ishāḥ seems to go back, not to their eating acorns but to a distant remembrance of Andalusī origins. After the Revolt of the Suburb at Cordova, these forebears had reached Alexandria, then Crete, then Tarsūs, and finally had sought refuge in Syria.

What made Ibn al-Nābulusī famous was the *fatwā* which he gave in reply to a question whether priority be given to the war against the Byzantines, who were regularly ravaging northern Syria, or to resistance against the Fātimid army which, it was true, could protect the province against Byzantine raids. He said, "If I had ten arrows, I would loose nine of them against the descendants of 'Ubayd Allāh (sc. the Fātimids) and one against the Byzantines." He justified his attitude thus: "In fact, the Byzantines are People of the Book, whereas the former are impious associators of others with God... enemies of all the prophets and all the scriptures that God has sent" (Kādī 'Abd al-Djabbār, *Tathbīt*, ed. 'A. al-K. 'Uthmān, Beirut 1970, ii, 608). According to Ibn al-Djawzī (*Muntazam*, Haydarābād 1375, vii, 82), he is even reported to have altered his reply when interrogated in Egypt, asserting that not merely nine arrows but also the tenth arrow should be launched against the Fātimids because they had improperly claimed for themselves the divine light. The later sources expatiate on his sufferings, which lasted for three days. The expressions attributed to the sufferer, about to be flayed alive, by a pitying Jew stem from the Šūfī vocabulary. Al-Dhahabī mentions that there was, at this same time as Ibn al-Nābulusī, another Sunnī who offered resistance, Abū 'l-Faradj al-Tarsūsī, who was subjected to humiliations in the Aḫṣā Mosque by the Fātimids' Maghribī soldiery, and he records for the year 364/974 the punishment, likewise at Jerusalem, of Abū 'l-Kāsim al-Wāsiṭī, who had his tongue cut out. Having been miraculously restored by the Prophet Muḥammad, al-Wāsiṭī climbed the minaret in order publicly to proclaim his Sunnī faith, and was then crucified, remaining on the cross for three days. His "corpse" was thrown down in a street, where some pious persons took it in order to wash it, but then discovered that he was still alive. Abū Bakr gave back to him his tongue, which had been cut out a second time and he climbed up to proclaim his faith from the top of a minaret. Tired of all this, the governor contented himself with expelling him from the city. References to Christ's life and crucifixion are frequent in the Ḥanbalī milieu of Palestine; accordingly, one finds an ascetic walking on the Lake of Tiberias. Ibn 'Asākir does not hide his ironic scepticism when he mentions such occurrences among the literalists, whom he despised and cordially hated, considering them to be liars who exploited the populace's credulity. It is furthermore known that militant Ḥanbalī Sunnism remained alive in Palestine up to the time of the Crusades (see H. Laoust, *Le précis de droit d'Ibn Qudāma*, Beirut 1950, introd.).

(TH. BIANQUIS)

**RAMY AL-DJIMĀR** (A.), literally, "the throwing of pebbles", a practice which probably goes back to early Arabia and whose most celebrated survival is in the ritual throwing of stones in the valley of Minā by the pilgrims returning from 'Arafāt in the course of the Meccan Pilgrimage [see AL-DJAMRA; ḤADĪḌ. iii. c]. In Fahd's view, the rite does not seem to have had any divinatory significance, but among suggestions regarding its origins is the one that it could have been a gesture of solidarity with a dead person, on whose tomb stones are placed. See the discussion in T. Fahd, *La divination arabe*, Leiden 1966, 188ff.

*Bibliography:* Given in the article. (ED.)

**RA'Y** (A.), a verbal noun of *ra'ā*, the common Arabic verb for seeing with the eye, has among its various closely related meanings that of opinion (i.e. a seeing of the heart) on questions of Islamic law not within the literal scope of the revealed texts (*naṣṣ*) of the Qur'an or *ḥadīth*. Although sometimes used for an opinion on a specific question of law (for which *ḥawl* is most common), *ra'y* is more often used for the body of such opinions held by a particular jurist (i.e. the *ra'y* of Abū Ḥanīfa) and for the reasoning used to derive such opinions. It is also found in the sense of the intellectual faculties that underlie such legal reasoning. Discrimination among these and other possible meanings of the term is not always easy (cf. Ch. Pellat, *Ibn al-Muqaffā' (mort vers 140/757), "conseiller" du calife*, Paris 1976, 82) and *ra'y* never achieved the status of a fully technical legal term. Although the legal usage of *ra'y* is the most important historically, *ra'y* was also used for adherence to a body of theological doctrine (i.e. *ra'y al-Djahmiyya*), and its narrowest recorded sense appears to be that of adherence to the doctrine of the Khārijīs (on the use of *ra'y* for the holding of specific theological dogmas, such as freewill, see al-Sharīf al-Murtaḍā, *al-Dhari'a ilā usūl al-sharī'a*, ed. Abū 'l-Kāsim Gurdjī, Tehran 1376/1956, ii, 673, where, however, the examples are all of the verb *ra'ā* and the context is polemical). In all of the above senses, the singular *ra'y* is far more common than the plural *arā'*.

As a process of deriving law *ra'y* does not constitute any single method of reasoning but can be used of such methods as *kiyās*, *istihsān*, and *istiṣlāh* [q.v.], severally or together, although its use specifically in relation to *kiyās* is the most frequent (e.g. *yaḳīsūna bi-ra'yihim*). Consequently, identifying the precise forms of reasoning labelled as *ra'y* by one or another early jurist or school of jurists requires specific examination of their legal arguments (J. Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 98-132, 269-328, still of fundamental importance). Insofar as *ra'y* does not include the process of authenticating *ḥadīth* or interpreting texts, it constitutes only part of the scope of *idjtihād* [q.v.] as generally understood, although the expression *idjtihād al-ra'y* (the exercise of *ra'y*) figures prominently in the *ḥadīth* (e.g. the *ḥadīth* of Mu'adh b. Djabal, on which see al-Mubārakfurī, *Tuhfat al-ahwadhī*, Beirut 1422/2001, iv, 637-9) and in the polemics concerning *ra'y*.

There is general agreement among both Sunnī and Shī'ī writers that there was some recourse to *ra'y* on the part of certain Companions (*ṣaḥāba* [q.v.]) of the Prophet, including such leading figures as Abū Bakr and 'Umar, and then on the part of their Successors (*ṭābī'ūn*) (Ibn 'Abd al-Barr, *Djāmi' bayān al-'ilm wa-fadlīhi*, ed. al-Zuhayrī, al-Dammām 1414/1994, ii, 858-9). This early *ra'y* was accorded some measure of authority, at least by the mainstream of Muslims, and

was transmitted by scholars together with Prophetic *ḥadīth*. This early *ra'y* is preserved in such collections as *al-Muṣannaf* of 'Abd al-Razzāk al-Ṣan'ānī (d. 211/826) and *al-Muṣannaf* of Ibn Abī Ṣhayba (d. 235/849) [q.v.].

A critical development in the history of Islamic law occurred during the late Umayyad and early 'Abbāsīd periods with a dramatic growth in the scope and intensity of *ra'y* (cf. Ibn Taymiyya, *Maḍmū'at al-fatāwā*, ed. al-Djazzār and al-Bāz, al-Riyād 1419/1998, xx, 175 which names Rabī'a wa-Ibn Hurmuz (so read) [in Medina], 'Uṭmān al-Battī (so read) in Baṣra, and Abū Ḥanīfa as the leading figures at the beginning of the 'Abbāsīd dynasty, cf. I. Goldziher, *Muslim studies*, tr. C.R. Barber and S.M. Stern, London 1971, 78-85 [on foreign influence], 201-2). The proponents of this new version of *ra'y* became known as the *ahl* or *aṣḥāb al-ra'y* [q.v.]. The *ahl al-ra'y* were met with opposition from a number of quarters: the scholars of tradition (the *ahl* or *aṣḥāb al-ḥadīth*) (Ibn Kutayba, *K. Mukhtalif al-ḥadīth*, Cairo 1326, 62-71; Ṣhāh Walī Allāh al-Dihlawī, *Hudūd al-Allāh al-bāliḡha*, ed. Ḍamīriyya, al-Riyād 1420/1999, i, 455-62 [explaining the dispute]), certain Mu'tazilī theologians, and large segments of the Shī'ī community. Although opposition to *ra'y* in these various groups was in its origin based on different considerations, anti-*ra'y* arguments developed by one group could come to be adopted by the others (Ibn Ma'sūm, *al-Daradī'at al-rafi'a*, Naḍjaf 1382/1962, 26). The Mu'tazilī opponents of *ra'y* were particularly influential in propagating an epistemologically sophisticated anti-*ra'y* position that came to influence the opposition among the traditionists and Shī'īs.

The opposition to *ra'y* from among the traditionists is extensively preserved in *ḥadīth* collections, above all that of al-Dārimī (d. 255/868), the writings of Ibn Hazm (d. 456/1064), Ibn 'Abd al-Barr (d. 463/1070), and Ibn Ḳayyim al-Djawiyya (d. 751/1350) [q.v.], and traditionist biographical works such as that of al-Fasawī, *K. al-Ma'rifā wa'l-ta'rīkh*, (ed. Akram Diyā' al-'Umārī, Baghdad 1394/1973). This material provides far richer historical resources for tracing the details of the development of the new *ra'y* movement than do the more dogmatic Mu'tazilī and Shī'ī anti-*ra'y* sources. The *ahl al-ra'y* were regarded by their traditionist opponents as undermining the authority of the *sunna* that the traditionists had dedicated their lives to preserving. Familiarity with the *sunna* (which included knowledge of the *ra'y* of the first generations) was sometimes labelled *real knowledge* (*'ilm*) in contrast to subjective legal opinion (*ra'y*, *ẓann*). The *ahl al-ra'y* were set on a course of expanding Islamic law far beyond the resources of the traditionists and to this extent were inevitably led to expose the contradictions and limitations of the traditionist approach.

Although the traditionist anti-*ra'y* sources do point to the subjectivity and instability of the results of the new *ra'y* and to the many instances where the *ra'y* of the jurists was in contradiction to well-established *sunna*, their most frequent complaint concerns the relentless questioning on the most abstruse possible legal cases that was characteristic of the new *ra'y*. The anti-*ra'y* sources condemn the difficult questions (*mu'dīlat*, *ughlūtāt*) of the *ahl al-ra'y*, the relentlessness with which they were pursued (*taṣḥūd*), and the unwarranted speculative character of the answers these questions evoked (*takalluf*, *tanatū'*). Numerous anti-*ra'y* statements single out for criticism the annoying and virtually inescapable formula of eliciting a legal opinion (*ara'ayta*) (on the form and syntax of this expression, found in the Kur'ān and *ḥadīth*, see H.L.

Fleischer, *Kleinere Schriften*, Leipzig 1885-8, i, 481-7; G. Bergsträsser, *Vereinigungs- und Fragepartikeln*, Leipzig 1914, 93). The *ahl al-ra'y* are the *aṣḥāb ara'ayta* (al-Dārimī, *al-Sunan*, ed. Dahmān, Beirut n.d., i, 66). The expression is characteristic of certain genres of early legal literature from *ra'y* circles and sometimes appears in these works with unremitting frequency (e.g. al-Ṣhaybānī, *K. al-Makḥarīj fi'l-ḥiyāl*, ed. J. Schacht, Leipzig 1930). It was also employed to introduce an objection in debate (cf. Schacht, *Origins*, 120). The importance of this veritable flood of questions to the development of the Islamic law cannot be overstated. It was the questions that generated the growing scope of legal discussion (*ta'lid al-sū'āl*, in Ibn Abī Zayd al-Ḳayrawānī, *al-Nawādir wa'l-ziyādāt*, ed. 'Abd al-Fattāh Ḥulw, Beirut 1999, i, 9) and led directly to the production of the large legal treatises that remain standard to this day (cf. the account of the Mālikī classic *al-Mudawwana* in Ibn Ḳhaldūn, *al-Muqaddima*, ed. al-Sa'id al-Mandūh, Beirut 1414/1993, ii, 133; Ibn Taymiyya, *Maḍmū'at al-fatāwā*, xx, 180).

At the forefront of this new style of legal learning founded in posing questions were the 'Irāqī jurists headed by Abū Ḥanīfa. The questions posed by these jurists were often unabashedly hypothetical and among the jibes directed at Abū Ḥanīfa was that he was among the most knowledgeable about what has not occurred but among the most ignorant about what has occurred. The posing of such hypothetical questions enabled the jurists to gauge the extent to which they could found the law on general principles, and in fact the efforts of the *ahl al-ra'y* to render the law systematic are noted, sometimes critically (Ibn Abī Ḥātim, *Ādāb al-Shāfi'i wa-manāḳibuhu*, ed. 'Abd al-Khālik, Cairo 1372/1952, 171).

The *ahl al-ra'y* were able to gain substantial successes in their competition with the *ahl al-ḥadīth* and to attract talented students of *ḥadīth* to their camp (Ibn Sa'd, vi, 270; Zufar b. al-Hudhayl). In such cases the sources speak of *ra'y* gaining mastery of the individual, and his eventual identification with *ra'y*. The most obvious examples of such an identification are the Medinan Rabī'a Ibn Farrūkh (d. 136/753), known as Rabī'at al-Ra'y and the Baṣran Ḥanafī Hilāl b. Yaḥyā (d. 245/859), known as Hilāl al-Ra'y. Often, however, *ra'y* was adopted but not in its most aggressive form, and the line dividing the *ahl al-ra'y* and *ahl al-ḥadīth* could not always be clearly drawn. Many writers, for example, include Mālik with the *ahl al-ḥadīth*, others with the *ahl al-ra'y* (Ibn Kutayba, *al-Ma'ārif*, ed. 'Ukasha, Cairo n.d., 498). Moderate forms of *ra'y* balanced by traditions were able to make some inroads among the *ahl al-ḥadīth*.

There is universal agreement on applying the label *ahl al-ra'y* to Abū Ḥanīfa and his followers in 'Irāk, and Abū Ḥanīfa was the favoured target of the barbs of the traditionists, who sometimes portrayed him in satanic terms (there is an extensive collection of such denigrating remarks in al-Khaṭīb al-Baghdādī, *Ta'rīkh Madīnat al-Salām*, ed. Bashshār 'Awwād Ma'rūf, Beirut 1422/2001, xv, 543-86). The many instances in which Abū Ḥanīfa was regarded as having contracted the *sunna* were collected (see Ibn Abī Ṣhayba, *al-Kūtab al-muṣannaf*, Bombay 1403/1983, xiv, 148-282). Even Abū Ḥanīfa, however, did not lack entirely for admirers among the *ahl al-ḥadīth*, and one of these, 'Abd Allāh Ibn al-Mubārak (d. 181/797 [q.v.]), approved of *ra'y* for the purpose of interpreting *ḥadīth*.

Al-Shāfi'i was regarded by some leading representatives of the *ahl al-ḥadīth* as having supported their cause with arguments that the *ahl al-ra'y* could not

dismiss, and Aḥmad b. Ḥanbal not only encouraged traditionists to study al-Shāfi'ī's *al-Risāla* (Ibn Abī Ḥātim, 61-3) but himself made a careful study of al-Shāfi'ī's legal works and was thus exposed to a moderate version of *ra'y*. The very development of the discipline of legal theory (*uṣūl al-fikh* [q.v.]) ushered in by al-Shāfi'ī's *al-Risāla* led to increased scrutiny of the epistemological foundations of the various methods of legal reasoning falling within *ra'y* and to a reevaluation of *ra'y* in all its forms. The question was now raised, for example, of whether the Prophet himself had ever had recourse to *ra'y*, albeit infallibly, as suggested in the *hadīth* (Abū Dāwūd, *al-Sunan*, ed. al-Khālidi, Beirut 1416/1996, ii, 509; cf. Kur'an, IV, 105: *bi-mā arāka Allāh*, a question to which al-Shāfi'ī was unable to give a definitive answer, cf. al-Bayhaqī, *Ma'rījāt al-sunan wa 'l-āḥādīth*, ed. Aḥmad Ṣaqr, Cairo n.d., i, 7-8).

Al-Shāfi'ī himself favoured the limitation of *ra'y* to *kiyās* to the exclusion of *istiḥsān* (Schacht, *Origins*, 120-8), and others in his wake reconciled the traditions for and against *ra'y* by identifying the *ra'y* that was acceptable with *ra'y* that was grounded in the revealed texts, that is, *kiyās*. Nonetheless the Ḥanafīs and Mālikīs continued to support a broader notion of *ra'y* and interpret the condemnation of *ra'y* in the *hadīth* to refer to *ra'y* in the sense of theological heresy (Ibn 'Abd al-Barr, *Ḍjāmī' bayān*, ii, 1052-4) or to offer accounts of *istiḥsān*, for example, that brought it within the scope of *kiyās*.

More radical forms of legal theory emerged, however, which imposed a standard of certainty for Islamic law in all its elements. Among the proponents of this elevated standard was the Baṣran Mu'tazilī al-Nazzām (d. between 220/835 and 230/845 [q.v.]) whose attack on probable reasoning in all forms including *kiyās* did not spare the Companions who resorted to *ra'y* (van Ess, *Das Kitāb an-Nakṭ des Nazzām und seine Rezeption im Kitāb al-Futūḥ des Gāhiz*, Göttingen 1972). Among the Baghdadī Mu'tazilīs who took a similar position was Ḍja'far b. al-Mubashshir (d. 234/848-9), who unlike al-Nazzām sought to justify recourse to *ra'y* on the part of the Companions by way of compromise of a dispute or theoretical inquiry without practical consequences ('Abd al-Ḍjabbār al-Hamadḥānī, *al-Mughnī*, ed. Amīn al-Khūlī, Cairo 1962, xvii, 298).

The Zāhirī school of law, inaugurated by Dāwūd b. 'Alī al-Iṣfahānī (d. 270/834 [see DĀWŪD B. KHĀLAF]) came from the ranks of the *ahl al-ḥadīth*, and Dāwūd, like Aḥmad b. Ḥanbal, was a fervent admirer of al-Shāfi'ī (I. Goldziher, *The Zāhirīs*, tr. W. Behn, Leiden 1971). Dāwūd's son Muḥammad (d. 297/910) impelled the Zāhirīs in a more independent direction and was unsparing in his critique of al-Shāfi'ī (D. Stewart, *Muḥammad b. Dā'ūd al-Zāhirī's manual of jurisprudence*: al-Wuṣūl ilā ma'rīfat al-uṣūl, in B.G. Weiss, *Studies in Islamic legal theory*, Leiden 2002, 129-30). Each in somewhat different fashion propounded a version of Islamic law that excluded all forms of probable reasoning and both were in a position to draw upon their Mu'tazilī contemporaries (cf. al-Sarakhsī, *Uṣūl al-fikh*, ed. Abu 'l-Wafā' al-Afghānī, Cairo 1372, ii, 119). In the apparent absence of surviving writings by these early Zāhirīs, it is the extensive works of the Andalusī Zāhirī Ibn Ḥazm [q.v.] that shed light on the Zāhirī contribution to the anti-*ra'y* movement and exhibit the lingering influence of the Mu'tazilī theorists. According to Ibn Ḥazm, *ra'y* was already a feature of the period of the Companions before the appearance of analogy in the following generation (*Mulakhkḥas ibtāl al-kiyās wa 'l-ra'y wa 'l-istiḥsān wa 'l-taklīd wa 'l-ta'tīl*, ed. Sa'īd

al-Afghānī, Beirut 1379/1969, 4-5). He understands *ra'y* to involve the enunciation of legal opinion on the basis of sheer expediency and he regards the process as equivalent to *istiḥsān*, and *istinbāl* (derivation) (*al-Ihkām fi uṣūl al-ahkām*, ed. Aḥmad Muḥammad Shākir, Cairo 1347, vi, 16). He vigorously rejects the effort on the part of the jurists of his day to identify *kiyās* as a form of *ra'y*, in fact as identical to acceptable *ra'y*. There is no acceptable form of *ra'y*. The Companions' recourse to *ra'y* was misconceived, but in their case never amounted to an endorsement of *ra'y* as a method of deriving law because they did not, as did the later proponents of *ra'y*, regard their *ra'y* as God's law (*ḥukm*). They saw it rather as providing a rule they individually might follow out of pious precaution, or they offered their *ra'y* by way of compromise to settle a dispute. Insofar as any sound Prophetic traditions mandate recourse to *idjtiḥād al-ra'y*, what must be meant is exhaustive seeking for the applicable revealed texts.

Opposition to the movement of *ahl al-ra'y* was also found among the Twelver and Ismā'īlī Shī'īs, and resort to *ra'y* (also *irtiyā'*), *kiyās*, and *idjtiḥād* is condemned in numerous Shī'ī *hadīth*, sometimes in terms familiar from the Sunnī *hadīth*. Prominent in this connection are the *hadīth* going back to the Imām Ḍja'far al-Ṣādiq, who is portrayed as meeting with Abū Ḥanīfa, whose pretensions to legal understanding he quickly shows to be groundless (i.e. al-Madjlīsī, *Bihār al-anwār*, Tehran n.d., ii, 291-6, cf. Kaḍī al-Nu'mān, *Da'ā'im al-Islām*, ed. Fayḍī, Cairo 1379/1960, ii, 266). Of particular interest is a purported letter from Ḍja'far to the proponents of *ra'y* and *kiyās* in which the Imām argues that if resort to *ra'y* were permitted, there would have been no point in God's sending of the prophets. He could have left humans to direct their own affairs (al-Barqī, *al-Mahāsīn*, ed. Mahdī al-Raḍjā'ī, Kum 1413, i, 331-2). The same Imām is also found warning his followers against turning to *ra'y* when they are unable to find answers to their questions in the revealed texts, an injunction that is not always followed (Hossein Modarressi Ṭabātabā'ī, *An introduction to Shī'ī law*, London 1984, 30-1).

The anti-*ra'y* position was defended in the dogmatic writings of the Ismā'īlī Kaḍī al-Nu'mān [q.v.] b. Muḥammad (d. 363/974), whose polemics against *ra'y* were bolstered by arguments from Muḥammad b. Dāwūd al-Zāhirī (*K. Iḥkām fi uṣūl al-madhāhib*, ed. S.T. Lokhandwalla, Simla 1972, 202). A line of Twelver Shī'ī scholars, al-Shaykh al-Mufīd (d. 413/1002) and his students al-Sharīf al-Murtaḍā (d. 436/1044) and Muḥammad b. al-Ḥasan al-Tūsī (d. 460/1067) [q.v.], writing under Mu'tazilī influence, maintained their community's rejection of *ra'y*. Even after the 7th/13th century when Twelver Shī'ī jurists came to recognise the validity of *idjtiḥād*, they continued to exclude *ra'y* and *kiyās* from their sources of law.

The competition between the proponents of *ra'y* and their various opponents ended in a clear victory for the *ahl al-ra'y*. Islamic law as it can be found in the enormous literature of the Sunnī schools is largely the product of *ra'y*; the books of *fikh* are the books of *ra'y*. It was this version of Sunnī law that formed a model for the elaboration of law in other circles, even those opposed to *ra'y*. In this sense al-Shāfi'ī was fully justified when he stated that "all are dependent on the 'Irāqīs in *fikh*" (Ibn Abī Ḥātim, 210, var. "in *ra'y*"). At another level, however, the deep division within Sunnism between *ahl al-ra'y* and *ahl al-ḥadīth* was never entirely bridged but continued to manifest itself to one degree or another within the

Sunnī schools of law (al-Khaṭṭābī, *Ma'ālim al-sunan*, ed. Muḥammad Rāghib al-Ṭabbākh, Aleppo 1351/1932, i, 2-8 [on reconciling *ahl al-ḥadīth* and *ahl al-ra'y*]). Not only an Ibn Taymiyya (d. 728/1327 [q.v.]) (*Maḍmū'at al-fatāwā*, xix, 151) could take offence at the statement of the Shāfi'ī Ash'arī al-Djuwaynī (d. 478/1085) that nine-tenths of the law depended on pure *ra'y* (*ra'y mahd*) (al-Burhān, ed. 'Abd al-'Azīm al-Dīb, Cairo 1400, ii, 768). *Ra'y* was never entirely reputable as a source of law, and many centuries after the Central Asian Ḥanafī Abu 'l-Yusr al-Bazdawī (d. 493/1100) claimed that far from *aṣḥāb al-ra'y* being a label of opprobrium (reading *subba*) for the Ḥanafīs as some thought—it was in fact “one of the most beautiful names as indicating their special connection with knowledge of the heart” (*Kitāb fihī ma'rifaṭ al-ḥudjādī al-shar'iyya*, ed. M. Bernard and E. Chaumont, Cairo 2003, 4)—Ḥanafīs and their allies felt called upon to address the label (Murtaḍā al-Zabīdī [d. 1205/1790], *K. 'Ukūd al-djawāhir al-munifa*, ed. al-Albānī, Beirut 1406/1985, i, 25; Ibn Ḥadjār al-Haytamī, *al-Khayrāt al-hisān*, ed. al-Barnī, Beirut n.d., 62-3).

A small but significant remnant of the *ahl al-ḥadīth* movement continued to take its inspiration from the anti-*ra'y* polemics of the early *ahl al-ḥadīth*, which remained accessible to them primarily through the writings of Ibn 'Abd al-Barr and Ibn Ḳayyim al-Djauziyya. The latter in his *Flām al-muwakkī'in 'an rabb al-'ālamīn* (ed. Muḥammad Muḥyī al-Dīn 'Abd al-Ḥamīd, Cairo 1374/1955, i, 67-85) had, in addition to citing a wealth of material on the *ra'y* debate, established an elaborate categorisation of *ra'y* under three headings: valid (*ṣaḥīḥ*, *mahmūd*), invalid (*bāṭil*, *madhmūm*), and dubious (*mawḍū'*, *ishtihāb*). Ibn al-Ḳayyim is true to the early *ahl al-ḥadīth* in recognising the authority of the *ra'y* of the Companions but also admits the validity of *ḳiyās* in the absence of other sources. His dubious *ra'y* is *ra'y* employed under exigent circumstances when all else fails. It is not meant to establish a generally binding norm from which further rules can be derived, although in fact later jurists have developed this form of *ra'y* at the expense of the revealed texts and statements of early authorities (*al-nusūṣ wa 'l-āthār*). Those inspired by the writings of Ibn al-Ḳayyim shared his sense that much of the law of the schools was pure *ra'y* with very little in the way of textual support of any kind and thus of no authority. In their opposition to *taklīd* [q.v.] of such mere fallible opinions, they looked to the abolition of the existing schools. Among such jurists are Ṣāliḥ al-Fullānī (d. 1218/1803), Muḥammad b. 'Alī al-Shawkānī (d. 1250/1834 [q.v.]) and Aḥmad b. Idrīs (d. 1253/1837 [q.v.]) (B. Radtke et al., *The exoteric Aḥmad b. Idrīs*, Leiden 2000, including an edition and translation of his *Risālat al-radd 'alā ahl al-ra'y*).

The arguments of these and other anti-*ra'y* writers were promoted during the twentieth-century reform movement inaugurated by Muḥammad 'Abduh (d. 1905 [q.v.]) and continued by his disciple Muḥammad Raṣḥīd Riḍā (d. 1935 [q.v.]). This movement has been quite successful in its intended goal of divesting the law of the schools of its aura of sanctity and revealing it as the body of *ra'y* that it is. It has, however, not put in its place a law that would have pleased the *ahl al-ḥadīth* but has inclined rather toward an eclecticism open to a wider body of *ra'y* than ever before (see the instructive preface of Riḍā to Ibn Ḳudāmā, *al-Mughnī*, Medina n.d., i, 21-8).

To a certain extent related to the great debate over *ra'y* in law is the prohibition reported in the *ḥadīth*

of interpreting the Ḳur'ān according to *ra'y* (*al-tafsīr bi 'l-ra'y*) (Ibn Taymiyya, *Muḳaddima fi uṣūl al-tafsīr*, ed. Zarzūr, Kuwait 1392/1972, 105-13; I. Goldziher, *Die Richtungen der islamischen Koranlegung*, Leiden 1920, 61-2, 84), a prohibition frequently cited in the anti-*ra'y* material discussed above. Although the vast literature of Ḳur'anic commentary does contain works in which the interpretations given are entirely or largely in the form of transmitted explanations from the Prophet and his early followers, the prohibition did not prevent the rapid growth of exegetical works along more independent lines. In some cases this was justified by distinguishing between *tafsīr*, which depends on eyewitness knowledge of the circumstances surrounding the Ḳur'anic revelations and was thus limited to the Companions, and *ta'wīl*, which, disclaiming knowledge of the real meaning of the Ḳur'ān, simply explores possible meanings of the Ḳur'anic wording. This was the solution of the theologian al-Māturīdī (d. 333/944 [q.v.]) (*K. Ta'wīlāt ahl al-sunna*, ed. Muḥammad Mustafīd al-Rahmān, Baghdād 1404/1987, i, 5-6). More commonly, the *ra'y* in the prohibition was understood to refer to theological heresy or subjective inclination, and interpretations not offered in defence of heretical doctrines or prompted by unlearned instinct without a basis in language or logic were deemed not to violate the prohibition (Ibn al-'Arabī, *Kānūn al-ta'wīl*, ed. Muḥammad al-Sulaymānī, Beirut 1990, 366-8; Ibn Aṭīyya, *al-Muharrar al-waḍḍī'ī*, Beirut 1423/2003, 27; Muḥammad 'Abd al-'Azīm al-Zurkānī, *Manāḥil al-'irfān fi 'ulūm al-Kur'ān*, Cairo n.d., ii, 49-69 [defending *tafsīr bi 'l-ra'y*]; Muḥammad Ḥamad Zaḡhlūl, *al-Tafsīr bi 'l-ra'y ka-wā'iduhu wa-dawābituhu wa-ā'lāmuhu*, Damascus 1420/1999).

## RIBĀ.

B. In modern commercial usage.

In the modern period, debates on *ribā* among Muslims followed the pre-modern conceptions and arguments developed in *fikh*. With the introduction of interest-based banks into Muslim lands, debate on the permissibility or otherwise of interest began, which intensified from the 1940s in the context of the emergence of the global Islamic neo-revivalist movements.

These movements such as the Muslim Brotherhood [see *AL-IḤWĀN AL-MUSLIMŪN*] of Egypt and *Djamā'at Islāmī* of Pakistan and those influenced by their ideological frameworks called for the transformation of the existing political, legal, social and economic institutions of Muslim societies to ones more in line with "Islamic" norms and principles. One such institution that was targeted for transformation was what they considered to be *ribā* (that is, interest)-based banking and finance in Muslim societies.

*Ribā* in its *fikhī* sense is associated with a range of contracts, from loans (*kaṛḍ*) to debts (*dayn*) to sales (*bayʿ*). However, in the mid-to late-20th century, in the Islamic finance literature, *ribā* came to be discussed mainly in the context of interest in financial transactions, and interpreted as interest. This close association between *ribā* and interest is generally accepted today among many Muslims. In his discussion on *ribā*, Khurshid Ahmad, a prominent advocate of Islamic finance in Pakistan, emphasised how *ribā* is to be understood today, and argued that Islam forbids "any premium or excess, small, moderate or large, contractually agreed upon at the time of lending money or loanable funds". (Ahmad, *Elimination of Ribā*, 42). However, for some Muslims, *ribā* should not be interpreted simply as interest. For them, only some forms of interest may be *ribā*, and not others.

Muḥammad 'Abduh (d. 1905) and Rashīd Riḍā (d. 1935) [*q.v.*] were among the first to address the question of interest on deposits. While uncomfortable with the idea, they were prepared to concede it if a *muḍāraba* (commenda [*q.v.*]) scheme could be devised to legitimise the interest (Mallat, *The debate on Ribā*, 74). The Egyptian authority on Islamic law, 'Abd al-Razzāk Sanhūrī (d. 1971), saw compound interest as the main intent of the *Qur'ān*'s prohibition of *ribā*. Interest on capital, in his view, could be justified on the basis of "need" (*ḥāḍja*), but to prevent misuse and exploitation the state should limit interest rates and control methods of payment (*Maṣādir al-ḥaḳḳ*, iii, 241-4). The contemporary Syrian thinker Doualībī argued that the *Qur'ān* prohibited interest on "consumption loans" specifically, presumably because of its concern for people who may have borrowed just to meet their basic needs. Following this line of thinking, some have argued that there is no *ribā* in interest paid or received by corporate bodies such as companies and governments, and others that Islam prohibits "usury" not "interest". There is also the idea that *ribā* should be equated with real interest, not nominal interest. Several scholars of the mid- to late-20th century also interpreted *ribā* from a "moral" perspective, away from the literalism that dominates much of the thinking on *ribā*. Muḥammad Asad (d. 1992), a modernist commentator on the *Qur'ān*, maintained that *ribā* involved "an exploitation of the economically weak by the strong and resourceful" (*The message*, 633). Fazlur Rahman (d. 1988), the Pakistani-American academic, argued that the *raison d'être* of the prohibition of *ribā* was injustice (*zulm*), as was stated in the *Qur'ān* (II, 279), and that "well-meaning Muslims with very virtuous consciences sincerely believe that the *Qur'ān* has banned all bank interest for all times in woeful disregard of what *ribā* was historically, why the *Qur'ān* denounced it as a gross and cruel form of exploitation and banned it" (*Islam: challenges*, 326).

Despite the appeal of these views, the neo-revivalists and their followers and sympathisers, who increasingly represent mainstream Muslim opinion today, have continued to reject any reinterpretation of *ribā* to accommodate bank interest. Mawḍūdī (d. 1979), the founder

of *Djamā'at Islāmī* of Pakistan, for example, asserted that there was no question that *ribā* was interest. The Council of Islamic Ideology of Pakistan (*Consolidated recommendations*, 7), which in the 1980s developed a blueprint for the transformation of the Pakistani financial system into an Islamic one, claimed that there was "complete unanimity among all schools of thought in Islam that the term *ribā* stands for interest in all its types and forms".

In the 1970s, the oil-producing Gulf states found themselves with massive cash surpluses to invest, which shifted the debate on *ribā* from the theoretical to the practical. One of the strategies adopted by these states was to develop financial institutions on an interest-free (that is, *ribā*-free, or Islamic) basis. Examples include the Islamic Development Bank based in Saudi Arabia, the Faisal Islamic Banks based in the Middle East, Kuwait Finance House and the Dubai Islamic Bank. *Shari'a* advisers guided the design of contracts and products and the drawing up of principles for productive ventures, in which capital could be combined with the skill of entrepreneurs to lead to socially beneficial incremental returns. The system created is understood in Islamic finance today as Profit and Loss Sharing (PLS), in which both provider and user of the funds share in the outcome of the venture, be it positive or negative, and no interest is paid or received (Saeed, *Islamic banking*, 51-75). Contracts developed cover *muḍāraba* (commenda), *mushāraka* (partnership), *idjāra* (leasing), *istisnā'* (manufacturing or "made-to-order") and *murābaha* (mark-up finance based on sale of goods). Driven by these new strategies, Islamic banking and finance grew strongly in the 1980s and 1990s.

With the 21st century, the role of Islamic (that is, *ribā*-free) financial institutions in Muslim communities has become even more significant, with institutions ranging from village banks to major international development banks, to insurance (*takāful*) companies, to investment funds—all in competition with conventional interest-based institutions but often in co-operation with them as well. Several Muslim majority states such as Malaysia, Kuwait and Egypt, for instance, have dual banking and finance systems (one based on interest, the other based on Islamic principles). Even interest-based banks (including major international banks) now offer Islamic products or Islamic windows to their Muslim clientele, and to interested non-Muslims.

The drive to develop modern, *ribā*-free banking, finance and insurance was accompanied by some serious difficulties and also pragmatic shifts in the understanding of *ribā*. Because of competition, Islamic financial institutions felt they had to provide their Muslim clients with "competitive" products, which at times meant interest-based products under different contractual arrangements and labels. These pragmatic adjustments tended to make the Islamic finance, at times, less distinguishable from interest-based finance in the eyes of their critics. What follows are some examples where critics argue that there are pragmatic shifts in the understanding of *ribā* by the proponents of Islamic finance.

First, Islamic bankers and their *Shari'a* advisers came to see *ribā*, interpreted as interest, as a *legal* rather than an *economic* concept. For them, *ribā* occurred mainly in the context of contractual obligations on borrowers to pay an *increase* in a loan transaction (Nienhaus, *Islamic economics*, 44). Islamic law prohibited any positive return to the provider of capital in a purely financial transaction, such as where an entrepreneur

received funds from a bank for utilisation at the entrepreneur's discretion. This was governed by the requirements of the contract of loan (*kaṛḍ*). If the contract changed, e.g. from loan to sale (*bayʿ*), a return, even if in reality it might appear little different from fixed interest, was permissible. An example of this is the mark-up in *murābaha*, which from a legal point of view is not a purely financial transaction and therefore a positive return (= mark-up) is considered permissible.

Second, practical realities also meant that Islamic banks needed to compensate themselves if customers defaulted on contractual obligations, for example by failing to pay a debt on time. Thus, in such cases, a "fine" (compensation equivalent to the "opportunity cost" of the capital) became the practice, not without criticism, however. On the other hand, there are depositors who do not want to put their funds at risk in a PLS account but prefer to keep them in a non-PLS account to avoid any risk, primarily for safe-keeping purposes. While such depositors are not entitled to any profits, in practice in order to retain these deposits, Islamic banks have begun to offer "rewards" to such depositors saying that as long as no contractual obligations were involved, they had the discretion to offer incentives (Saeed, *Islamic banking*, 112).

Third, a question currently being debated is whether "profit" can be pre-determined in PLS contracts. In Islamic law, as well as in the literature on Islamic finance, the concept of legitimate profit is closely associated with the uncertainty of a positive return in a PLS venture or a sale transaction. One view, albeit a minority one, is that there is nothing wrong in determining profit in advance as long as this is done by the two parties by choice and consent. While this position is not accepted in the mainstream Islamic finance, it is possible that this position may become more acceptable at least in practice as more emphasis is put on developing investment products with less risk and more predictable returns.

Fourth, a further question is whether it is permissible to invest in a business which engages in an activity prohibited by Islamic law, for instance, in interest-based dealings. Since most publicly-listed companies in developed countries rely heavily on interest-based finance, paying and receiving of interest is normal. This is problematic from an Islamic finance perspective even if the businesses produce *halāl* (permissible) goods or services. The debate has produced two camps, one declaring that investment in such companies is unambiguously prohibited and unlawful for Muslims according to *fiqh*. In the other camp, the proponents of permissibility, relying on concepts such as "necessity", "public interest", "general need", and analogy (*kiyās*), have attempted to find a legal justification, a pragmatic position that recognises that such investment is a modern global phenomenon and difficult for Muslims to avoid. The pragmatists have accepted permissibility of investment in such companies with certain conditions and introduced concepts such as "cleansing" of investment profit from prohibited elements, i.e. the estimated interest component of the company.

Many Muslims who are interested in genuine *ribā*-free finance argue that these pragmatic adjustments have largely rendered Islamic banking and finance over to an interest-based system except in name. The trend to develop more and more products that are similar to those offered by the interest-based system would only blur any distinction that may exist between the Islamic and interest-based systems. Despite these

reservations, "Islamic" banking and finance appear to be becoming increasingly acceptable among Muslims and their use consistently increasing, however pragmatic it may be.

AL-RIDDA (A.), lit: "apostasy", the name given in Islamic historiography to the series of battles against tribes, both nomadic and sedentary, which began shortly before the death of the Prophet Muḥammad and continued throughout Abū Bakr's [q.v.] caliphate.

In many cases the term *ridda* is, however, a misnomer since numerous tribes and communities had had no contact whatsoever with the Muslim state or had no formal agreements with it. Several tribes were led by chieftains who posed as prophets. These were 'Abhala al-'Anṣī, pejoratively nicknamed al-Aswad [q.v.] or the black one (also *Dhu 'l-Khūmār* or the veiled one) in the Yemen, Maslama or Muṣaylima [q.v.] (the small or wretched Maslama) of the Hanīfa b. Luḍjaym [q.v.] in Yamāma, Talḥa or Tulayḥa [q.v.] (the small Talḥa) of the Asad [q.v.] and Saḍjāh [q.v.] of the Tamīm [q.v.]—both of them in Naǧd— and *Dhu 'l-Tādī* Laḳrī b. Mālik of the Azd [q.v.] in 'Umān. Most of the tribes which prior to the *ridda* had been under Medinan domination merely refused to go on paying taxes, while stating their readiness to continue practicing Islam. Had it not been for Muḥammad's premature death, Islam would have gained a better foothold in tribal Arabia through his effective tactics. He would give a tribal representative—sometimes it was a tribesman who came on his own initiative—authority over both the Muslims and pagans in his tribe and instruct him to "fight against those who turn away with those who come forward". Consequently, in many tribes the Muslims and pagans neutralised each other. Among the Madhḥijj [q.v.], for example, Farwa b. Musayk, the Prophet's representative to the Murād [q.v.], the Zubayd and the rest of Madhḥijj, was confronted by a frustrated rival, 'Amr b. Ma'dikarib [q.v.] al-Zubaydī. When Muḥammad died, the latter rebelled. There were Muslim enclaves in many tribes, and consequently the Prophet and Abū Bakr could confront

the rebels "by means of messengers and letters". Many Muslims were killed by the rebels and the Muslim representatives were driven out.

The reconstruction of the course of events beyond the general outline is complicated by the many contradictory accounts which are often of apologetic or polemical nature. Obviously, this problematic chapter of tribal history was of acute importance for the tribal informants who preserved the accounts for posterity, often improving the place in history of a tribal leader, rehabilitating an individual or a tribal group and vilifying an opponent.

When Abū Bakr ascended the throne, he defied threats from several nomadic tribes to attack Medina by dispatching to Syria an expedition force under Usāma b. Zayd. Some must have considered this move reckless, hence the claim that it was in fulfillment of a wish made by the dying Prophet. Yet the threat posed by the nomads must not be exaggerated. First, a nomadic takeover of a settlement was most unusual, although the risk of a raid for plunder was no doubt real. Second, the tribes living in the immediate vicinity of Medina remained unwavering. They included, among others, the *Ashdjā'* or part of them, the *Aslam*, the *Dhuhayna* [see *كُوَيْدَا*] and the *Muzayna* [q.v.]. These tribes were not major players in Arabian politics, but their combined military weight should not be underestimated. They provided Medina with an inner circle of defence, continuing their pre-Islamic links with its tribes. Indeed, Abū Bakr managed to organise the Muslim army in *Dhu 'l-Qaṣṣa* and send *Khālid b. al-Walīd* [q.v.] of the *Kurashī* clan of *Makhzūm* [q.v.] to *Naǧd* even before Usāma b. Zayd's return.

Yet on the whole the situation looked bleak. The sedentary false prophet Musaylima and the nomadic one *Tulayḥa* were amassing power. The latter was also followed by the *Ṭayyi'* [q.v.]. Most of the *Ghatafān* [q.v.] apostatised, as did parts of the *Sulaym* [q.v.], while the *Hawāzin* remained undecided with the exception of the *Thakīf* who remained steadfast. Also, the *ʿAdjuz/Aḡāz Hawāzin* "the rear part of the *Hawāzin*", that is, the *Naṣr b. Mu'āwiya*, *Djusham b. Mu'āwiya* and *Sa'd b. Bakr*, did not rebel, and the same is true of *Djadīlat* *Qays*, that is, the *Fahm* and *ʿAdwān* tribes.

The only battle which preceded the return of Usāma's force took place east of Medina against tribes of the *Ghatafān* group, namely, the *'Abs* and *Dhubyān* (more precisely, the former and the *Murra* subdivision of the latter). Following their defeat, the *'Abs* and *Dhubyān* killed the Muslims living in their midst, and their example was followed by other tribes. *Tulayḥa al-Asadī* lost the battle of *Buzākha* [q.v.], having been deserted by his non-*Asadī* allies. First the *Ṭayyi'* left unimpeded, having created the impression that their own tribe was threatened by the Muslims (whom they subsequently joined). Then the *Ghatafān* under *ʿUyayna b. Ḥiṣn* [q.v.] of the *Fazāra* [q.v.] defected.

The most important events of the *rida* involved the *Tamīm*, the largest nomadic tribe in Arabia, and the sedentary *Ḥanīfa* who lived in *Yamāma*. Many of the *Tamīm* (perhaps even most of them) yielded to Muslim control during *Muḥammad's* lifetime. For example, the *Sa'd b. Zayd Manāt*, the most numerous subdivision of the *Tamīm*, had two tax-collectors appointed by *Muḥammad*: *al-Zibriḳān b. Badr* [q.v.] and *Qays b. ʿAṣim* [q.v.]. Typically, the latter was waiting to see what the former would do with the camels which he had collected for Medina, in order to do the opposite. Indeed, *Tamīm's* subdivisions, not to mention the *Tamīm* as a whole, did not form a unified group and the same could be said of every

single tribe, be it nomadic or sedentary. Two events dominate the accounts on the *rida* of the *Tamīm*. First, the affair of the false prophetess *Saǧǧāh*, above all her infamous encounter with *Musaylima*. Now *Musaylima* required of his men strict asceticism, and the obscene descriptions of his meeting with *Saǧǧāh* were probably meant to call his ascetic image into question. Second, the killing of *Mālik b. Nuwayra* [q.v.] and the ensuing criticism concerning *Khālid b. al-Walīd's* conduct.

The sedentary *Ḥanīfa* who were unified (with the exception of the *Suhaym* subdivision) under *Musaylima* were Medina's staunchest enemies. After an initial defeat, the Muslims pushed the *Ḥanāfis* to "the orchard of death" (*ḥadīkat al-mawt*) in *'Akraḇā* [q.v.], not far from *Musaylima's* home town *al-Haddār* (modern *al-Hudaydīr*). The historical traditions of the *Kuraysh* and the *Anṣār* preserved lists of the members of these groups who were killed in the battlefield, but one looks in vain for the names of the many nomads who died there. The fortresses of the *Ḥanīfa* remained intact and the *Ḥanāfi Muǧdǧǧā'a b. Murāra* who had been taken captive at an earlier stage in the fighting and negotiated with *Khālid* on behalf of the *Ḥanīfa* tricked the latter by disguising the children, women and old people who remained in the fortresses as men, thus improving the terms of his tribe's capitulation. But the ruse may have been invented in order to protect *Khālid's* policy because the negotiated treaty—fortified by his marriage to *Muǧdǧǧā'a's* daughter—caused the Muslims great losses.

The story of *al-Aswad* in the Yemen which is full of intrigue involves a struggle between the Persian *Abnā'* [see *AL-ABNĀ'* (II)] and several Arab tribes for the control of *Ṣan'ā'* and the rest of the Yemen. During this power struggle Medina remained in the background; when the *Abnā'* managed to regain control of *Ṣan'ā'*, *Abū Bakr* recognised them, precisely as the Prophet had done in his time. The *Abnā'* were then challenged by *Qays b. al-Makshūh al-Murādī* who took *Ṣan'ā'*, but they managed to drive him out shortly afterwards.

The road to the Yemen was secured by a Muslim expedition force which brought the rebellious *'Amr b. Ma'dīkarib* and *Qays b. al-Makshūh* back to the Muslim camp, and the Yemen as a whole could now be pacified. Then the Muslims turned to deal with the rebellion in *Ḥaḍramawt*. Here the dominant tribe *Kinda* [q.v.] yielded to superior forces, one under *al-Muhāǧǧir b. Abī Umayya* (of the *Makhzūm*) arriving from the Yemen, and another under *'Ikrima b. Abī Djahl* (also of the *Makhzūm*) arriving from the land of *Mahra* [q.v.]. The kingly family from the prestigious subdivision of *Kinda*, *'Amr b. Mu'āwiya*, was destroyed in a surprise night attack. Members from this subdivision and from the *Hārith b. Mu'āwiya* subdivision later surrendered in *al-Nuǧǧayr* [q.v.]. Following the war against the *Kinda*, *al-Ash'arh* [q.v.] b. *Qays* of the *Hārith* subdivision rose to prominence. This shift in the leadership was atypical, since tribal leaderships usually survived the *rida*. For example, *ʿUyayna b. Ḥiṣn* is said to have been the only Arab who received one *mirbā'* or a quarter of the captured booty in the *Djāhiliyya* and one *ḥums* or a fifth of the booty in Islam.

The war in *Ḥaḍramawt* was preceded by fighting in the southeastern corner of Arabia where *Dhu 'l-Tāǧǧ Laḳīḥ b. Mālik al-Azdī* pushed the sons of the *Djulanḍā* [q.v.], and see *AZD* and *ṢUHĀR*] who were *Abū Bakr's* allies to the mountains and to the seaside of *Ṣuḥār*. Tribal forces sent by Medina to aid

its allies besieged Laḳīṭ in Dabā and were joined by other tribal forces under 'Ikrima b. Abī Djaḥl. The Muslims were also supported by troops from the Nāḏjiya [cf. AL-KHARRĪT] and the 'Abd al-Ḳays [q.v.].

'Ikrima continued his march to the land of Mahra with his tribal units (a subdivision of the Azd called Rāsib and the Sa'd b. Zayd Manāt of Tamīm are specifically mentioned). Among the Mahra there was internal strife, and the weaker party allied itself with the Muslims (in other words, it converted to Islam). After the stronger party was subdued, the leader of the weaker one brought to Medina one fifth of the spoils. When 'Ikrima continued his march to Ḥadramawt, his army also included warriors from the Mahra.

Shortly after the Prophet's demise, his governor in Baḥrayn, al-Mundhīr b. Sāwā [q.v.] of the Tamīm, also died. The Ḳays b. Tha'labā of the Bakr b. Wā'il [q.v.] "and the whole of the Rabī'a" rebelled under al-Ḥuṭam, who was one of the Ḳays, while al-Djārūd of the 'Abd al-Ḳays, among others, was steadfastly loyal to Islam. A client of the Ḳuraysh, al-'Alā' b. al-Ḥaḍramī, who had replaced al-Mundhīr as governor of Baḥrayn fought against the rebels with the Arabs and Persians who joined him. Among others he was supported by a large force of the Tamīm. Al-Ḥuṭam controlled al-Ḳaṭīf [q.v.], Ḥaḍjar [see AL-ḤASĀ], Dārīn (modern Tārūt) and al-Khaṭīf [q.v.], while the Muslims had been besieged in their stronghold, Djuwāthā, until they were rescued by al-'Alā'. The rebels were defeated on the mainland and fled to the island of Dārīn which the Muslims took after having miraculously crossed the sea.

The *ridda* can be seen as a prelude to the wider conquests. The Ḳurayshī generals gained precious experience in mobilising large multi-tribal armies over long distances. They benefited from the close acquaintance of the Ḳuraysh with tribal politics throughout Arabia.

A crucial role was played by Khālīd b. al-Walīd whose mother was a nomad. Indeed, the Bedouin way of life was not alien to him: he is said to have consumed a lizard, while Muḥammad who was watching loathed it. Already in the conquest of Mecca (8/630), Khālīd was leading a troop of nomads (referred to as *muhājirāt al-arab*), and in the battle of Ḥunayn [q.v.] shortly afterwards he led the nomadic Sulaym at the vanguard of the Muslim army.

The *ridda* changed for ever the relationship between the central government and the strong tribes of Arabia. The latter were trying to abolish whatever ascendancy the Muslim state had achieved during the lifetime of Muḥammad, but were overpowered by large expedition forces mobilised by able Muslim generals. The battlefield successes of the Muslims secured for them the cooperation of tribes living between Medina and the territories of the rebellious tribes. Medina re-established its prestige and dealt the severest forms of punishment to those who had killed Muslims earlier in the fighting.

New realities were created on the ground. Khālīd's treaty with the Ḥanifa prescribed that he receive one orchard and one field of his choice in every village included in the treaty. The villages in the Yamāma area which were not included in the treaty bore the full consequences of the defeat. The inhabitants of the Mar'āt village were enslaved and a tribal group of the Tamīm, the Imru' l-Ḳays b. Zayd Manāt b. Tamīm, settled there. Musaylima's home town of al-Haddār was not part of the treaty. Khālīd enslaved its people and settled there the Banu l-A'raḍj, i.e., the Banu l-Ḥārith b. Ka'b b. Sa'd b. Zayd Manāt b. Tamīm. These changes demonstrate how local

groups of the Tamīm benefited from their co-operation with Khālīd in Yamāma. Other villages not included in the treaty were al-Suyūh, al-Ḍayḳ, al-'Ariḳa, al-Ghabrā', Fayshān, al-Ḳurayya (one of the central villages of Yamāma), al-Ḳaṣabāt, al-Ḳaltayni, al-Kirs, Maḳhrafa and al-Maṣānī'. In addition, the al-Maḍjāza village was inhabited by the Hizzān of the 'Anaza [q.v.] and by people of mixed descent (*akhlāt min al-nās*), including *muwālī* of the Ḳuraysh and others who settled there after the *ridda*, since it had not been included in Khālīd's treaty.

The new balance of power between the central government and the tribes is reflected in the takeover by the state of tribal protected grazing grounds [see ḤIMĀ]. The thousands of camels and other beasts taken as booty in the last years of Muḥammad's life, in addition to those collected from the nomads in taxes, needed large grazing grounds. In addition, several influential Ḳurayshīs, such as the future caliph 'Uṭmān b. 'Affān and also al-Zubayr b. al-'Awwām and 'Abd al-Raḥmān b. 'Awf, were competing with the state because they were themselves owners of large herds. 'Abd al-Raḥmān left to his inheritors 1,000 camels, in addition to 3,000 ewes and 100 horses. The ewes and the horses were grazing in al-Naḳī' [see AL-'AḲĪḲ] (often written erroneously al-Baḳī'). It was Muḥammad who declared the Naḳī', some 120 km/75 miles south of Medina a state *ḥimā* "for the horses of the Muslims", probably at the expense of the Sulaym, and put in charge of it a member of the Muzayna. Moreover, Muḥammad reportedly abolished the tribal grazing grounds by declaring that the only legitimate *ḥimā* belonged to God and His messenger, in other words to the state. Previously, the tribes feared the takeover of their land and water resources by other tribes, but now the powerful state and certain individuals coveted the same resources. The size of the state *ḥimās* grew constantly under the caliphs. A telling example of this is linked to the above-mentioned battle against the 'Abs and Ḍhubayān which took place in al-Abrāḳ in the area of al-Rabadḥa [q.v.] some 200 km/125 miles east of Medina. Abū Bakr actually conquered Ḍhubayān's territory (*ghalaba banī Ḍhubayān 'alā l-bilād*) and expelled (*adlā*) its owners. He made al-Abrāḳ a *ḥimā* for the horses of the Muslims (in other words, he made it state property) and permitted everybody to graze in the rest of al-Rabadḥa at the expense of the Tha'labā b. Sa'd b. Ḍhubayān. Later he declared the whole of al-Rabadḥa *ḥimā* for the camels collected as taxes (*sadaḳāt al-muslimīn*). One report attributes the expulsion of the Tha'labā from al-Rabadḥa to 'Umar b. al-Khaṭṭāb, while another has it that the state *ḥimā* in al-Rabadḥa was created by Muḥammad, in which case Abū Bakr was merely reestablishing state authority there.

**RIMĀYA** [see **KAWS**].

**ROHTAK**, the name of a region and a town of northwestern India, now in the Hariyana State of the Indian Union.

The region is not mentioned in the earliest Indo-Muslim sources, but from the Sultanate period onwards, its history was often linked with that of nearby Dīhlī, to its southeast. In the 18th century, it was fought over by commanders of the moribund Mughals and the militant Sikhs [q.v.]; for its history in general, see HARIYĀNĀ. In early British Indian times, till 1832, it was administered by a Political Agent under the Resident in Dīhlī. During the Sepoy Mutiny of 1857-8, the whole of the Rohtak region fell into rebel hands. In contemporary Hariyana State, as in post-Mutiny British India, Rohtak forms an administrative District.

The town of Rohtak (lat. 28° 54' N., long. 76° 35' E.) lies 72 km/44 miles to the northwest of Dīhlī; in British Indian times, Hindus and Muslims were fairly evenly balanced within its population, with a small preponderance of Hindus, a situation altered by the bloody aftermath of Partition in 1947.

**AL-RU'AYNĪ**, ABŪ DJĀ'FAR AḤMAD al-GHARNĀFĪ (or al-Ilbīrī) al-Mālikī, d. 779/1377, Andalusī scholar, author of *al-Hulla al-siyarā*<sup>2</sup>, a voluminous commentary on the *Badi'yya* (a poem praising the Prophet Muḥammad while illustrating the *badi'* [q.v.]) of his companion, Ibn Djabīr (d. 780/1378-9). The *Badi'yya* itself and important grammatical and lexicographical sections of the book have been published by 'Alī Abū Zayd, Beirut 1405/1985, but numerous historical and geographical data, poetry, as well as a wealth of information in the domain of *adab* [q.v.] in the widest sense of the term remain unpublished, even though quotations from al-Ru'aynī's book appear in acknowledged and unacknowledged borrowings, e.g. by al-Tanāsī. Al-Ru'aynī also wrote a commentary on a similar poem by Ibn Djabīr consisting of *tawriyyas* [q.v.] on the sūras of the Qur'ān.

Both scholars began their careers in Spain and both were pupils of 'Alī b. 'Umar al-Ḳidjāfī (d. 730/1329), a scholar of *fiqh*, Qur'ān, grammar and philology, who lived in Granada. They left Spain together in 738/1337 on a pilgrimage having become, in the words of Lisān al-Dīn Ibn al-Ḳhaṭīb, "like two souls in one body" and, Ibn Djabīr being blind, they were also known as "the blind and the seeing". They lived in Egypt (where they attended the lectures of Abū Ḥayyān al-Gharnāfī), Damascus, where they arrived in 741/1340-1, and Aleppo in 743/1342-3, before settling finally in al-Bīra.

Ibn Ḥadjjar, *Durar*, iii, 300, claims that Ibn Djabīr in composing his *Badi'yya* was inspired by a similar work by Ṣalfī al-Dīn al-Hillī (d. 749, 750, or 752).

Ibn Ma'sūm in his *Anwār al-rabī'* (ed. Sh. H. Shukr, Nadjaf 1388/1968, i, 31-2) holds that the first *Badi'yya* was composed by one [Abu 'l-Hasan] 'Alī b. 'Uṭhmān al-Irbilī al-Ṣūfī. The classical division between *ma'ānī*, *bayān* and *badi'* [q.v.] by Djalāl al-Dīn al-Ḳazwīnī (d. 739/1338) and Badr al-Dīn Ibn Mālik (d. 686/1287) in relation to the *Tirāz* as analysed by Soudan, 93-7, and Bonebakker cannot be discussed here. To illustrate the individual chapters of his friend's *Badi'yya*, al-Ru'aynī uses examples in prose and poetry that are not limited to the Muslim West. Of special interest are the examples composed by Ibn Djabīr and al-Ru'aynī themselves. Though in some moving verses they express nostalgia, there is, so far, no indication that the two authors after settling in al-Bīra ever returned temporarily to Spain (which would explain the *nisba* al-Ilbīrī used by al-Ṣafādī, d. 764/1363). According to a report by Sibṭ Ibn al-'Adjamī quoted in Ibn Ḥadjjar's *Durar*, their friendship ended when Ibn Djabīr married, though Ibn Djabīr composed a *marḥūma* on al-Ru'aynī when he died.

**RŪḤ ALLĀH** [see **NAFS**. I. B.].

**RUKHĀM** (A.), in modern Arabic usage, the usual word for marble in general, whereas *marmar*, which clearly derives from the Greek *marmor*, usually refers to white marble or alabaster. Historically, however, *rukhām* and *marmar* were often used interchangeably to refer to a wide variety of hard stones, including marble, granite and diorite. Where the two terms were distinguished, it usually had to do with colour: *marmar* was white, whereas *rukhām* could assume various shades and hues.

Geographically, the use of marble in the Islamic world was largely restricted to those regions whose predominant building material was stone rather than brick or adobe. Generally speaking, places to the west and northwest of the Euphrates river—including Anatolia, Greater Syria, and Egypt, in addition to the Iberian peninsula and the Indian subcontinent—used stone and marble in their architectural monuments. Elsewhere, brick with a stucco or tile revetment predominated.

Marble in the Islamic world was obtained from two main sources: ancient buildings and quarries. Interestingly, the use of salvaged marble far outweighed that of freshly-quarried marble, which was only quarried by the later Islamic dynasties, especially the Ottomans and the Mughals. Exceptions did exist, such as the robust marble capitals in Madīnat al-Zahrā' in 4th/10th century al-Andalus and the exquisite columns and capitals in the Alhambra Palace in the 8th/14th one. But on the whole, marble in early and mediæval Islamic monuments was taken from ancient, Christian, or even earlier Islamic buildings.

Historically, the use of marble in Islamic architec-

ture may be divided into three characteristic phases: Late Antique and early Islamic (7th-10th centuries A.D.), mediaeval (11th-15th centuries) and pre-modern (10th-18th centuries). In the first period, which is dominated by Umayyad architecture, the use of marble shows direct continuities with Late Antique practice. Thus multi-coloured marble and granite columns and heavy marble architraves and arches are used in the Dome of the Rock in Jerusalem and the Great Mosque of Damascus. Perhaps more interesting is the continued use in both of these structures of split or quartered marble, whereby the distinctive pattern in a sheet of marble is displayed in mirror image along one or two axes. Equally impressive is openwork marble, which is used in the Great Mosque of Damascus as a series of window grilles, which most likely also existed at the Dome of the Rock (K.A.C. Creswell, *A short account of early Muslim architecture*, revised and supplemented by J.W. Allan, Cairo 1989).

With the exception of an outstanding series of Ghaznawid marble dadoes and cenotaphs dating to the 5th-6th/11th-12th centuries, the architectural use of marble goes into an extended decline after the Umayyads. But marble ornament and stone architecture undergo an important revival in the 6th/12th century, a revival centred in Aleppo during the time of the Ayyūbids. Polychrome marble ornament in the form of large interlaces around *mīhrābs*, *iwāns* and portals, and geometric patterns in pavements, soften and enliven an otherwise austere architectural style (Yasser Tabbaa, *Constructions of power and piety in medieval Aleppo*, Pittsburgh 1997).

These ornamental forms are transmitted in the 7th-8th/13th-14th centuries to the rest of Syria, as well as to Palestine, Egypt and Anatolia. Until the end of the 7th/13th century, marble revetments maintain their formal and stylistic affinities with Aleppo, as exemplified by the robust designs at the mausoleum of al-Zāhir Baybars al-Bunduqdārī (constructed 675-80/1277-81) in Damascus and the portal to the complex of Ḳalāwūn in Cairo (684/1285). But an increasingly intricate ornamental style develops in the next century, lasting with few changes till the end of the Mamlūk period and beyond. Applied internally to *mīhrābs* and fountains, and externally to portals and window frames, this miniature style of polychrome marble inlay becomes a hallmark feature of Mamlūk architecture [see MAMLŪKS. 2. Art and Architecture, in Suppl.].

Although this Mamlūk ornamental style continued in Egypt and Syria under the Ottomans, it was largely shunned by classical Ottoman architecture, whose monuments demonstrated a marked preference for large stretches of lightly ornamented marble revetment. This return to an earlier style of marble decoration may have been motivated by the greater availability of marble, or perhaps by the emulation of nearby Byzantine structures.

In India, marble was rather sparingly used in Dihlī Sultanate architecture, often as a highlight to the predominant red sandstone. This attractive juxtaposition continues in early Mughal mosques and mausoleums, reaching an apogee in the tomb of Humāyūn at Dihlī. At first, white marble was reserved for saints' tombs, such as the spectacular tomb in Fathpūr Sikrī [q.v.] of Shaykh Salīm Ġishtī (1573-7), which also boasts some of the earliest and finest openwork marble screens, commonly known as *falī*. But by the 11th/17th century, various monuments were being sheathed in white marble inlaid with polychrome stones, including the Mosque of Iʿmād al-Dawla (1031-6/1622-7), and the Tādj Maḥall (1041-53/1632-43 [q.v.]), both at Āgra [q.v.] (Ebba Koch, *Mughal architecture*, Munich 1991).

Michell (ed.), *Architecture of the Islamic world, its history and social meaning*, New York 1978, 119-43; Luciana and T. Mannoni, *Marble, the history of a culture*, New York 1985. (YASSER TABBAA)

**RŪSHANĪ, DEDE ʿUMAR**, Turkish adherent of the Ṣūfī order of the Ḳhalwatiyya [q.v.] and poet in both Persian and Turkish. He was born at an unspecified date at Güzel Hişār in Aydīn, western Anatolia, being connected maternally with the ruling family of the Aydīn Oghullarī [see AYDĪNOĞULLU], and died at Tabrīz in Ādharbāyḍjān in 892/1487.

Dede ʿUmar was the *khālifa* of Sayyid Yaḥyā Shīrwānī, the *pīr-i ḥānī* or second founder of the Ḳhalwatī order, and as head of the Rūshanī branch of the order engaged in missionary work in northern Ādharbāyḍjān. He came to enjoy the patronage of the Aḳ Ḳoyunlu ruler Uzun Ḥasan [q.v.], whose wife built a *zāwiya* for him in the capital Tabrīz, and he lived there up to his death, being buried in the *zāwiya*. His *murīds* included the Turkish mystical poet from Diyārbakr, Ibrāhīm Gulshanī (d. 940/1533-4 [q.v.]), who founded his own order of the Gulshaniyya, and the Azeri Turk Muḥammad Demirdāsh Muḥammadī (d. 929/1524), founder of the Cairo order of the Demirdashīyya [q.v. in Suppl.]. Dede ʿUmar's *diwān* included three Persian *mathnawīs*, in one of which, the *Nāyname*, the influence of Djalāl al-Dīn Rūmī [q.v.] is especially clear, and poems in Turkish; one volume of the *diwān* has been published as *Āḥār-i ʿishk* (Istanbul 1315/1897-8).

(C.E. BOSWORTH)

## S

**ṢABYĀ** (Sabaya on Philby's map), a town in the Tihāmat ʿAsīr [see TIHĀMA; ʿASĪR and map] in south-western Saudi Arabia, at about 30 km/21

miles inland north-east of the port of Dījayzān [q.v.]. In 1339/1920 Sayyid Muḥammad al-Idrīsī (see below) concluded a treaty with Ibn Suʿūd [see ʿABD AL-ʿAZĪZ

ĀL SU'ŪD, in Suppl.], but after his death in 1340/1922-3 internal dissensions among the Idrīsiyya led to a Su'ūdī protectorate. The Imām of Yemen maintained a claim to the Idrīsid territories, but the Treaty of al-Tā'if (1353/1934) determined that they belong to Saudi Arabia, including Şabyā [see 'AŞĪR]. The town lies in what is called the central part of al-Mikhhlāf al-Yamanī, a district which includes all the Tihāmat from al-Shuḡayḡ in the north to Wādī 'Ayn in the south. The central part extends from Umm al-Khashhab to just south of Abū 'Arīsh [q.v.]. Being traversed by the wādīs Baysh, Şabyā, Damad and Djayzān, the region is among the most densely populated of the Tihāmat 'Asīr. At the beginning of the 20th century, the largest part of the population was of Sudanese origin. They were partly unemancipated slaves but chiefly freedmen, the other inhabitants being *mutawallids* or Sudanese with an Arab strain, Arabs of pure blood, *sayyids* and *sharīfs* [q.v.] (Cornwallis, 39-40).

In the 4th/10th century Şabyā, and a number of other places and wādīs, was ruled by the *Hakamiyyūn*, i.e. the Banū Ḥakam b. Sa'd al-'Ashīra of the Kaḥtān [q.v.], with the Banū 'Abd al-Djadd as the ruling family (al-Hamdānī, 120.5). In the 7th/13th century, Şabyā was one of the urban settlements (*kurā*) of 'Ushar, which was part of Yemen (Yākūt, iii, 367, 979, v, 23). The town does not seem to have played any role in early and mediaeval Islam. As in Kūnfulḡha, Abhā and Bīsha [q.v.], neighbouring tribes used to collect in Şabyā for a four-months' truce during the date season. In the 10th/16th century, it was one of the seats of the Sulaymānīs [q.v.], who are still to be found in the frontier districts between Saudi Arabia and Yemen [see KHAMIS MUSHAYT; MAKRAMIDS].

In 1215/1800 Şabyā was drawn into Arabian politics when an inhabitant brought the Wahnābīs [q.v.] into the Tihāma (Serjeant and Lewcock, 87a), and even more so when Ahmad b. Idrīs (d. 1253/1837 [q.v.]), the Moroccan *sharīf* and Ṣūfī who had preached in a school in Mecca, sought refuge in Şabyā in 1243/1827-8 from persecution for heresy by the Meccan *ulamā*. In the Holy City he had admitted into the circle of his disciples the Algerian Ṣūfī Muḥammad b. 'Alī al-Sanūsī, the founder of the Sanūsīyya [q.v.]. Around 1250/1834-5 Şabyā became the centre of the Sanūsīyya and the capital of an Idrīsī semi-religious, semi-military state centred in al-Mikhhlāf al-Yamanī with Djayzān and Midi (lat. 16° 18' N.) as its main ports. The ancestor of the Idrīsīs in 'Asīr (see the family tree in Philby, 473) is Idrīs b. 'Abd Allāh b. al-Ḥasan b. al-Ḥasan b. 'Alī [see IDRIS I] who, after the battle of Fakhkh [q.v.] in 169/786, fled via Egypt to the Maghrib where he founded the dynasty of the Idrīsids [q.v.]. Ahmad's great-grandson Sayyid Muḥammad b. 'Alī b. Muḥammad b. Ahmad, born in Şabyā in 1293/1876, by 1328/1910 had reduced Turkish power in 'Asīr with the support of the Italians, but had failed to hold Abhā against the *sharīf* of Mecca. Sayyid Muḥammad died in 1341/1922 and was buried in the cemetery that lies in the northern outskirts of Şabyā on the main road to Mecca. In 1344/1925-6 his son 'Alī signed a treaty with the British resident in Aden against the Turks. He was supported by Ibn Su'ūd, but fiercely opposed by the Imām of Yemen. The Imām had at first concluded with 'Alī a defensive alliance against the Turks, but in the end he sided with his former enemy. In 1345/1926-7 'Alī was forced to submit to Saudi Arabia [see AHMAD B. IDRIS; ṬARĪKA. 3]. As followers of the Sanūsīyya, the tribes around Şabyā are Shāfi'ī, with no sympathy lost for

the Zaydiyya [q.v.]. The Idrīsīs used to levy taxes on grain and animals, collected primarily by the *shaykhs* of the tribes, except the pro-Turkish ones, but also through travelling inspectors. The proceeds were sent to Şabyā. Some tribes refused to be regarded as taxpayers, but sent the Idrīsī rulers presents and helped them in war. Philby mentions the presses for the extraction of oil from sesame [see SIMSIM] and remarks that the town spread over a considerable area, including Şabyā al-Baliyya and Bayt al-Sayyid, the original palace from which Şabyā al-Djadīda grew up. In Philby's days the population of the Şabyā area was estimated locally at some 25,000 souls.

SA'ĪD, ATABEG OF FĀRS [see SALGHURIDS].

SA'ĪD AL-DĪN [see KHODJA EFENDI].

SADŌZAYS [see AFGHANISTĀN. v. 3. A].

[AL-]SAHLA, literally, "level, smooth place". There must have been several places in the Arabic lands named after this obvious topographical feature. Yākūt, *Buldān*, ed. Beirut, iii, 290-1, mentions a village in Bahrayn and a *masjid* of that name in Kūfa (perhaps the mosque also known as the Zāfir one or that of 'Abd al-Qays, cf. Hichem Djait, *Al-Kūfa, naissance de la ville islamique*, Paris 1986, 298).

*Bibliography*: Given in the article. (ED.)

SA'ĪD B. DJUBAYR b. Hishām, an early Kūfan scholar of renown in the fields of Qur'ān recitation and exegesis, jurisprudence and *hadīth*. He was a *maulā* of the Banū Wāliba b. al-Hārith, a branch of the Banū Asad b. Kḥuzayma. If the biographical traditions which say that he studied with Ibn 'Abbās and Ibn 'Umar are reliable, then he brought early Meccan and Median scholarship to Kūfa. There he had a circle of students but also held government positions. He functioned as secretary for two of the *kādīs* of Kūfa. When al-Ḥadjdjādī, the Umayyad governor of 'Irāk, sent 'Abd al-Rahmān b. al-Ash'ath with an army to Sīstān, he put Sa'īd in charge of the troops' stipends. During the revolt of Ibn al-Ash'ath against al-Ḥadjdjādī (81-2/700-1), in which Sa'īd b. Djubayr participated, he was for a time in charge of levying the *zakāt* and the *uṣūr* [q.v.] in Kūfa. In this revolt he was one of the active leaders of the *kurā*, the group of religious scholars and their followers, who joined the revolt of 'Irāk's *ashraf* against the Umayyads [see AL-KURRA] and, more recent, R. Sayed, *Die Revolte des Ibn al-A'saf und die Koranleser*, Freiburg i.Br. 1977). After the revolt had failed, Sa'īd fled first to Iṣfahān and later to Mecca where he taught for some years. In 94 or 95 (711 or 712), more than a decade after the revolt, he was arrested by Khālīd b. 'Abd Allāh al-Kaṣrī [q.v.], then governor of Mecca, and sent to al-Ḥadjdjādī at Wāsiṭ, who had him beheaded. Sa'īd was then 49 or 57 years old. Some legends became woven around his capture, his examination by al-Ḥadjdjādī and his execution. They underline Sa'īd's piety and condemn al-Ḥadjdjādī's death sentence. Whether Sa'īd belonged to the Kūfan Murdijī'a [q.v.] or not is a controversial issue. A few traditions say that he had good relations with and sympathy for members of the 'Alid family.

Sa'īd's teachings in the fields of *fikh* and *tafsīr* were much sought after during the 2nd/8th century and played an important role in the development of *fikh* before the advent of the classical schools. Many traditions of his teachings have been collected in the two *Muṣannaḥs* of 'Abd al-Razzāk and of Ibn Abī Shayba, as well as in 'Abd al-Razzāk's and al-Ṭabarī's *Tafsīrs*. Ibn al-Nadīm mentions the existence of a *Kitāb Tafsīr Sa'īd b. Ḍjubayr* (*Fihrist*, 34), but it is not clear whether this had been compiled by Sa'īd himself or a later scholar. An investigation of the traditions going back to Sa'īd b. Ḍjubayr in 'Abd al-Razzāk's *Muṣannaḥ* and *Tafsīr* shows that they were collected already during the first half of the 2nd century by scholars such as Sufyān al-Ṭhawrī (d. 161/778), Ma'mar b. Rāshid (d. 153/770) and Ibn Ḍjuraydj (d. 150/767). The legal traditions that they transmit from him via their informants reflect in most cases (ca. 75%) Sa'īd's own opinions (*ra'y*), more rarely traditions going back to Companions (ca. 17%) or to the Prophet (8%). Most of his Companion traditions give the legal opinion of Ibn 'Abbās (70%) and Ibn 'Umar (20%), and most of his traditions from the Prophet (70%) lack any *isnād*, i.e. they are *mursal*. These peculiarities of Sa'īd's scholarship correspond to what is known from his Meccan contemporary 'Aṭā' b. Abī Rabāḥ (d. 115/733), who was a pupil of Ibn 'Abbās as well (see H. Motzki, *The origins of Islamic jurisprudence*, Leiden 2001, ch. III.B). In the exegetical traditions transmitted from Sa'īd by the early collectors mentioned above, and compiled in 'Abd al-Razzāk's *Tafsīr*, the peculiarities are similar. Ibn 'Abbās's opinion, however, is somewhat more strongly represented (ca. 40%) in comparison to Sa'īd's own exegesis (56%).

In 'Abd al-Razzāk's *Muṣannaḥ* and *Tafsīr*, most of the material transmitted from Sa'īd by the three early collectors seems really to go back to him. However, some traditions of Sa'īd b. Ḍjubayr transmitted by other informants of 'Abd al-Razzāk and going back exclusively to Ibn 'Abbās may be suspected of being falsely ascribed to Sa'īd. More Ibn 'Abbās exegetical traditions allegedly going back to Sa'īd may be found in al-Ṭabarī's *Tafsīr* (see H. Berg, *The development of exegesis in early Islam*, Richmond, Surrey 2000, ch. 5).

**Bibliography:** Information on Sa'īd b. Ḍjubayr can be found in many biographical compilations. In the following only the sources with the most detailed information are given. **SĀKIYA** [see *MĀ'*, 3].

**AL-SĀKIYA AL-ḤAMRA'**, conventionally Seguiat el Hamra, a region of the Western Sahara, situated in southwestern Morocco in lat. 27° N.

It is made up of low plateaux, dominated by rocky hamadas, sprinkled with numerous surface dayas and incised with the hydrographical network system of the Wādī al-Sākiya al-Ḥamrā' ("the red watercourse"), which runs westwards and includes long alluvial ribbons. At the Atlantic littoral, the end of its course is marked by vertical, abrupt cliffs, worn down by the general presence of the cold current of the Canaries, causing a misty haze almost permanently over the desert. But the aridness is attenuated by hardly visible forms of precipitation: condensation at night on the soil and the vegetation allows a well-spread carpet of vegetation (argan trees, euphorbias and groundsel), a carpet which becomes more narrowed towards the interior, with streaks of greenery and acacias, etc. along the wadis.

These austere conditions, together with the complete absence of any non-saline surface water, explain the almost total absence of oases. These lands have been used over the ages as pasture lands for herds of dromedaries and goats owned by the Reguibat and Tekna nomads. The bottoms of the wadis allow the occasional cultivation there of cereals.

Al-Sākiya al-Ḥamrā' has for long been a corridor of passage, in the context of trans-Saharan trade, between the southern Moroccan fringes and the trading posts of the Sahel. In the 15th and 16th centuries, it was a hive of maraboutic activity, a seed-bed of local saints, who would often depart along the roads leading eastwards to Mecca and establish themselves in some place along one of these axes (the Algerian countryside or the villages of Fezzan). The influence of these pious figures was such that, in this region, even today whole tribes consider themselves as their descendants.

It is partly within this context that one should mention the role of an exceptional figure of the 19th century, a religious reformer and political leader who took over control of the destiny of al-Sākiya al-Ḥamrā', sc. *Shaykh* Mā' al-'Aynayn [q.v.]. Born in 1839, he studied in Tindūf and Chinguetti/*Shinkīt* [q.v.], created his own dervish order, the 'Ayniyya, wrote several books, established links with the sultans of Morocco, fought against the French activities to the north and the south, and in 1898 founded the town of Šmāra, on the edge of the Wādī al-Sākiya al-Ḥamrā', with its *kašaba*, mosque, *zāwiya* and a library of 500 manuscripts.

But the feeble state of the sultanate of Morocco brought with it an end to the Shaykh's dreams. In 1913, a corps of French troops bombarded the town of Šmāra. Established on the coast, the Spanish gradually penetrated into the interior, and in 1930 founded Laayoune. From that time onwards, al-Sākiya al-Ḥamrā' became the official name of one of the two colonies comprising the Spanish Sahara, the other being Rio de Oro (Wādī al-Dhahab).

In 1975, after the episode of the "Green March", reaching as far as Tarfaya, Spain evacuated the territories, and the Moroccan army and administration henceforth controlled their destinies. But they became the region for a political and military contest between Morocco and the Polisarios, a contest which the United Nations is still trying to resolve.

In the last 25 years, the Moroccan state has created a network of paved roads, built various installations and has begun exploiting the great deposits of phos-

phates at Boucraa. Since the coast is full of fish, thanks to the Canaries current, fishing has become extensive and is an important activity through the creation of the ports of Tarfaya, Port Laayoune and Boudjour. The capital of al-Sāḳiya al-Ḥamrā' and the whole of the Western Sahara, Laayoune, has today 150,000 inhabitants, with another 35,000 at Šmara.

**ŠAKK** (A.), pl. *šakāk*, a technical term of early Islamic financial, commercial and legal usage, appearing in Persian, through a standard sound change, as *šak*, meaning "document, contract of sale, etc.", which has been suggested—for want of any other etymology—as the origin of Eng. "cheque", Fr. "chèque," Ger. "Scheck," see E. Littmann, *Morgenländische Wörter im Deutschen*, 2Tübingen 1924.

The term's range of applications is wide, see Lane, *Lexicon*, 1709. In legal contexts, it has a similar meaning to *sidjill* [see **SIDJILL** 1.], sc. a signed and sealed record of a judge's decision. In financial contexts, it often means "a written order for payment of a salary, allowance, pension, etc.," "a financial draft or assignment". Thus in *Ḳudāma* b. *Dja'far's* [q.v.] section on the 'Abbāsīd *diwān* of military affairs contained in his *Kitāb al-Ḳharājī* (early 4th/10th century), a soldier displays at the pay session a certificate of assignment of pay (*sakk*) from the *diwān* (W. Hoenerbach, *Zur Heeresverwaltung der Abbāsiden. Studie über Abulfarāḡ Qudāma: Diwān al-ḡaiš*, in *Isl.*, xxix [1950], 281). See for further references on the term's usage in mediaeval Islam, C.E. Bosworth, *Abū 'Abdallāh al-Ḳharrāzī on the technical terms of the secretary's art. A contribution to the administrative history of mediaeval Islam*, in *JESHO*, xii (1969), 125-6.

*Bibliography:* Given in the article.

(C.E. BOSWORTH)

**ŠALĀT-I MA'KŪSA** (A., P.), literally, "the act of Muslim worship performed upside-down", one of the extreme ascetic practices found among extravagant members of the dervish orders,

such as in mediaeval Muslim India among the *Čishtiyya* [q.v.], where it formed part of the forty days' retreat or seclusion (*khālwa*, *arba'tiyya*, *cilla*) undertaken to heighten spiritual awareness [see **KHALWA**]. This practice was one of those done in tortured or difficult circumstances, in this case hanging on the end of a rope over the mouth of a well; see **ČISHTIYYA**, at Vol. II, 55b, and **HIND. v. Islam**, at Vol. III, 432b. (Ed.)

**SALLĀM AL-TARDJUMĀN**, early traveller in Central Asia, who has left an account of his alleged journey to the barrier of *Yādjudj wa-Mādjūdj* [q.v.].

In 227/842 the caliph al-Wāthiq (r. 227-32/842-7 [q.v.]) reportedly saw in a dream that *Dhu 'l-Ḳarnayn's* barrier had been breached. Sallām al-Tardjumān ("the interpreter"), "who spoke thirty languages" and who, according to Ibn Rusta, 149, used to translate Turkish documents for the caliph, received the order to make inquiries about the barrier and to report about it. The account of his journey is given by Ibn *Ḳhurrādādhbih* (d. between 272/885 and 300/912 [q.v.], Ar. text in *BGA*, vi, 162-70; Eng. tr. Wilson, *The Wall*, 582-7; Fr. tr. Barbier de Meynard, *Le livre des routes*, 124-31 and Miquel, *Géographie*, ii, 498-507; Dutch tr. De Goeje, *De muur*, 104-9). He writes that Sallām told him the story of his journey and afterwards dictated to him the account he had drawn up for the caliph.

The dream is perhaps to be explained in relation to unrest caused by the Turks in Central Asia, e.g. by the movements of the *Ḳirghīz* [q.v.] around Lake Baykal in 226-7/841. Another reason for the mission may have been al-Wāthiq's wish to put an end to what Barbier de Meynard (*op. cit.*, 23) calls "ridiculous interpretations" current about "the people of the Cave" (*Ḳur'ān*, XVIII, 9-26; see **AŠḤĀB AL-ḲAHF**) and about *Yādjudj* and *Mādjūdj* with whom the Turks were identified. Ibn *Ḳhurrādādhbih*, 106-7, relates that al-Wāthiq already had sent the famous mathematician and astronomer Abū *Dja'far* Muḥammad b. Mūsā al-*Ḳh'arāzī* (d. 232/847 [q.v.]) to the land of *Rūm* in order to investigate the story of the men of *raḳīm* [see **AŠḤĀB AL-ḲAHF**]. As Sallām would do later, al-*Ḳh'arāzī* informed Ibn *Ḳhurrādādhbih* personally

about his journey. Al-Muḳaddasī, 362, relates that al-Wāṭḥik had sent the same al-Kh<sup>w</sup>ārazmī to the Tarkhān [q.v.], the king of the Khazar.

Sallām's journey, which probably brought him to the Tarim Basin, took two years and four months. Leaving Sāmarrā' in the summer of 227/842, he first travelled north to Tiflis, where he handed al-Wāṭḥik's letter to Ishāk b. Ismā'īl, the governor of Armenia [see AL-KABK; KARŞ; AL-KURD]. The journey then went on to "the lord of al-Sarīr", the present-day Avaristān, a district in the middle Kōy-su valley in southern Dāghistān [q.v.], then ruled by a Christian prince who bore the title of Filān-Shāh. Sallām went on to the king of the Alans [see AL-LĀN], an Iranian people in the northern Caucasus, who held the Bāb al-Lān [q.v.] or Darial Pass, known to classical authors as "the Caspian Gates". Sallām does not mention the Bāb al-Abwāb [q.v.] near Derbend, the real Caspian Gate. Via the Filān-Shāh, he went on to the Tarkhān of the Khazar, who resided at Atil [q.v.] near modern Astrakhan [q.v.]. While travelling back and forth in the Caucasus, Sallām must have convinced himself that Dhu 'l-Ḳarnayn's barrier was not to be looked for in those regions. From Atil he probably travelled in an easterly direction to İkkū, which is identical with modern Ha-mi in Sinkiang (lat. 42° 47' N., long. 93° 32' E.). With Tiflis, this is the only town mentioned in Ibn Khurradādhbih's text. De Goeje (164 n. g; cf. 126 n. 4 and *De muur*, 109) remarks that the vocalisation of İkkū is a conjecture, but his identifying this town with Igu seems quite plausible. During the T'ang dynasty (618-907), and thus at the time of Sallām's arrival, Ha-mi was known as *I-chou*, which then was under the rule of the Uyghurs (cf. *Encyclopaedia Britannica*, s.v. *Ha-mi*; see also KUMUL, in Suppl.). If Sallām indeed came to this town (see below), he may have travelled north of the Aral Sea. Al-Idrīsī, who used the now lost work of al-Djayhānī [q.v. in Suppl.], adds (*Opus geographicum*, 935) that Sallām travelled for twenty-seven days along the borders of the land of the Bashdjirt (Bashkurt) [q.v.], a Turkish people living in the southern Ural. He may have crossed the Dzungarian Basin and passed the Gate of that name in the northern spur of the T'ien Shan mountain system, on the border of modern Kazakhstān and China. But "the black, stinking land" (*ard sawdā' muntinat al-rā'ihā*) which he mentions (Ibn Khurradādhbih, 163) may also point to the neighbourhood of Lake Balkhash [q.v.], the evil smell being perhaps caused by asafœtida (De Goeje, *De muur*, 110). Sallām may then have followed the Ili river [q.v.] upstream. The "ruined towns" (*mudun kharāb*) which he then reached are perhaps the ruins of Pei-ting (or Chin-man), the site of the ancient capital of the region. He may then have passed modern Urumchi, Guchen and Barkul (see map). If he took the southern route via Turfan, he may have seen the ruins of Yar-khoto, the capital of the Turfan region in Han times (206 B.C.-A.D. 220) (see Stein, *On ancient tracks*, 270; von Le Coq, *Auf Hellas' Spuren*, 41, 69ff.). The inhabitants told him that their towns had been destroyed by Yādūdj and Mādūdj, perhaps a reference to the Kīrghiz invasions of 841, which had put an end to Uyghur rule north of the Great Wall of China. Sallām then came to "fortifications" (*husūn*) in the neighbourhood of the barrier, where he met Muslims who spoke Arabic and Persian, who read the Ḳur'ān, and had Ḳur'ān schools and mosques, but did not know what the term *amīr al-mu'minīn* meant. These Muslims were probably merchants who had settled in an outpost far outside the world of Islam. The religion of the Prophet came to

the Farḡhana [q.v.] valley, and to the western part of the Tarim Basin [q.v.] only around 225/840 under the Sāmānid governor Nūh b. Asad (d. 227/841-2) [see SĀMĀNIDS]. In Sallām's days the eastern part of the Basin, i.e. the Turfan region, was inhabited by the Adhkash Turks (see al-Kāshgharī, *Dirwān lughāt al-turk*, tr. Dankoff and Kelly, i, 89; cf. Ibn Khurradādhbih, 31). İkkū, Sallām relates, lay at a three days' distance from the barrier and had farmed fields and mills inside its walls, which had a circumference of ten *farsakhs*, while its iron gates were let down at night. Sallām also says that Dhu 'l-Ḳarnayn had pitched camp here. The fortifications on the road from İkkū to the barrier, i.e. on the northern branch of the famous Silk Route, were perhaps the watch-towers along the westward extension of the Great Wall of China built during the Han period (see Stein, *On ancient tracks*, ch. X; Hermann, *Atlas*, map 24). It may have been one of these impressive towers, fully 4.5 m at the base and standing to a height of over 9 metres (illustration no. 73), which inspired Sallām for his fantastic description of Dhu 'l-Ḳarnayn's barrier (see the drawing in Miquel, *Géographie*, ii, 505). This inspiration, based on the Ḳur'ān, was perhaps influenced by the descriptions of Alexander's Gate, found e.g. in the Syriac Alexander Song of Jacob of Sarūdj (see Reimink, *Das Syrische Alexanderlied*, 19) and the early Islamic poets.

According to Sallām, the barrier was a double-winged iron gate, 27 m high, over which was an iron lintel, ca. 64 m long and 3 m wide, on top of which was a wall of bricks, made of iron and brass. The barrier filled the gap between "the two mountains" (cf. Ḳur'ān, XVIII, 93, 96). Nearby, Sallām found two enormous fortresses, in one of which were the iron cauldrons and ladles used to form the bricks. Relics of them were stuck together with rust. The governor of the fortresses rode out every Monday and Thursday (according to al-Idrīsī, every Friday). One of his men knocked on the lock of the barrier and heard a noise as from a wasps' nest. He was then assured that Yādūdj and Mādūdj had done no harm to the barrier, since they realised that it was under constant guard. The governor assured Sallām that the only damage the barrier had suffered was a crack as thin as a thread. Sallām scraped half a dirham of iron dust from the crack to show to al-Wāṭḥik. The people of the fortresses told him that they once had seen some individuals of Yādūdj and Mādūdj on the top of the mountain, their size being one span and a half. A "dark wind" had blown them back. On top of the right wing was an inscription in iron letters "in the primordial language" (*al-lisān al-awwal*), namely, Ḳur'ān, XVIII, 98: "But when the promise of my Lord shall come to pass, He will flatten it; and the promise of my Lord is true."

On his return journey, Sallām may have travelled to Lop Nor, from where he went to Nishāpūr via Tārāz, Isfīdjāb and Balkh [q.v.], having lost 36 men and 177 mules. Via al-Rayy he returned to Sāmarrā', where he was well received by the caliph, to whom he showed the iron dust taken from Dhu 'l-Ḳarnayn's barrier.

Ibn Khurradādhbih's text of Sallām's report was taken up over the next four or so centuries by Ibn al-Faḳīh, Ibn Faḍlān, Ibn Rusta, al-Muḳaddasī, al-Bīrūnī, al-Idrīsī, Ibn al-Djawzī and al-Nuwayrī [q.v.]. Numerous other authors dealt with Yādūdj and Mādūdj but did not mention Sallām's journey. Ibn Rusta, 149, Sallām's and Ibn Khurradādhbih's contemporary, gives Sallām's report only to show how

confused (*takhlīf*) and exaggerated (*tazayyud*) it is. Al-Bīrūnī (*al-Āṭḥār*, 41) doubts Sallām's credibility because he cannot believe that there were Muslims who spoke Arabic and Persian but did not know about the caliph. Neither is there unanimity among the Western scholars who have dealt with Sallām's report. For Barbier de Meynard (*op. cit.*, 23), Sallām's journey at least had "a beginning", and he states that he does not see in it, as Sprenger did, an "impudent mystification". De Goeje does not leave any doubt about his view: "We have found the origin of the legend about the wall of Gog and Magog, as it appears in Pseudo-Callisthenes and the Qur'ān, in the Great Chinese Wall with the Jade Gate [*Yü-mönn*], and we have restored Sallām's travel account as the report of a real journey" (*De muur*, 116). Anderson (*Alexander's gate*, 95) argues that Sallām certainly did not go to the Chinese Wall. For Wilson (*The Wall*, 611), Sallām's story is nothing but a legend, while Miller (*Mappae arabicae*, iv, 93-5) holds that the place described by Sallām is the breach in the Altai mountains made by the river Irṭīsh [*q.v.* in Suppl.]. Miquel finds in the account a "côtoiemnt d'un certain vraisemblable avec un légendaire certain" and adds "on mesure, à cet exemple, la place du merveilleux (*ağīb*) dans le goût du temps: il va jusqu'à se superposer chez un calife, aux nécessités de l'information objective" (*Géographie*, ii, 503).

Yet, there is some reason to support the view that Sallām did travel as far as Ha-mi. The data he gives about the Caucasus can be checked successfully in the sources available. Those for the journey from there to Īkku/Ha-mi are vague, it is true, the identification of landscapes, ruined towns and fortified places being speculative yet not absurd. Sallām did reach Ha-mi, since his Īkku is identical with this Chinese town [see KUMUL, in Suppl.]. It is thus quite likely that he saw the Jade Gate and the western extension of the Great Wall. His description of the town seems to be confirmed by Chinese publications (e.g. Luo Zhewen, *The Great Wall*, 7, 41), and his remark that the function of governor was hereditary agrees with later information by Abu 'l-Ġhāzī [*q.v.*], according to whom some Turkish families had been charged by the Kitai [see KARA-KHITĀY] to guard, in return for payment, certain sections of the Great Wall. These Turks were called Ōngüt ("wall") and their function was hereditary (cf. *Histoire des Mongols*, tr. Desmaisons, 47; Grousset, *L'Empire*, 287). The reports of Sven Hedin, Sir Aurel Stein, Albert von Le Coq *et alii* (see Hopkirk, *Foreign devils*, 243-5) seem to justify the view that Sallām did indeed travel to the eastern part of the Tarim Basin and saw part of the—by then already ruined—western extension of the Great Wall of China and at least one of its gates.

(E. VAN DONZEL)

**SALMĀN AL-FĀRISĪ** or SALMĀN PĀK, a semi-legendary figure of early Islam, Companion of the Prophet and the person regarded in later tradition as the proto-convert to Islam from the Persian nation.

According to one tradition, the most complete version of which goes back to Muḥammad b. Iṣḥāq, he was the son of a *dihkān* of the Persian village of Dījāy (or Dījāyān; cf. Yāqūt, ii, 170) near Iṣfahān. According to other stories, he belonged to the vicinity of Rām-hurmuz and his Persian name was Māhbēh (Māyēh) or Rūzbēh (cf. Justi, *Iran. Namenbuch*, 217, 277). Attracted by Christianity while still a boy, he left his father's house to follow a Christian monk and, having changed his teachers several times, arrived in Syria; from there he went right down to the Wādī 'l-Ḳurā in western Arabia seeking the Prophet who was to restore the religion of Ibrāhīm, the imminence of whose coming had been predicted to him by his last teacher on his deathbed. Betrayed by Kalbī Bedouin, who were acting as his guides through the desert, and sold as a slave to a Jew, he had occasion to go to Yathrib where, soon after his arrival, the *hidjra* of Muḥammad took place. Recognising in the latter the marks of the prophet which the monk had described to him, Salmān became a Muslim and purchased his liberty from his Jewish master, after being miraculously aided by Muḥammad himself to raise the sum necessary to pay his ransom.

The name of Salmān is associated with the siege of Medina by the Meccans, for it was he who on this occasion advised the digging of the ditch (*ḳhandak*) by means of which the Muslims defended themselves from the enemy. But, as Horowitz (see *Bibl.*) has shown, the earliest accounts of the *yawm al-ḳhandak* make no mention of Salmān's intervention, the story of which was probably invented in order to attribute to a Persian the introduction of a system of defence the name of which is of Persian origin. The other references to the career of Salmān (his part in the conquest of 'Irāk and of Fārs, his governorship of al-Madā'in, etc.) are equally devoid of authority and almost all date from the historian Sayf b. 'Umar, the bias of whose work is well known. Indeed, the fame

Chinese Turkestan and adjacent parts of Central Asia and Kansu. Source: Sir Aurel Stein, *On ancient Central Asian tracks. Brief narrative of three expeditions in innermost Asia and northwestern China*, London 1933, repr. New York 1971, p. 342.

Ruin of ancient Chinese fort marking the position of the "Jade Gate", seen from the northeast. Source: Sir Aurel Stein, *On ancient Central Asian tracks. Brief narrative of three expeditions in innermost Asia and northwestern China*, London 1933, repr. New York 1971, p. 180.

of Salmān is almost entirely due to his Persian nationality: he is the prototype of the converted Persians, who played such a part in the development of Islam; as such, he has become the national hero of Muslim Persia and one of the favourite personages of the *Shu'ūbiyya* [q.v.] (see Goldziher, *Muh. Studien*, i, 117, 136, 153, 212). What explains the majority of the traditions relative to Salmān is the fact that the Prophet foretells to him that the Persians will form the better part of the Muslim community; he declares him a member of his own family (*ahl al-bayt*), etc. In reality, the historical personality of Salmān is of the vaguest, and it is with difficulty that one can even admit that his legend is based on the actual fact of the conversion of a Medinan slave of Persian origin.

The figure of Salmān has had an extraordinary development. Not only does he appear as one of the founders of Ṣūfism along with the *Aṣḥāb al-Suffā* (*K. al-Luma'*, ed. Nicholson, 134-5) but the alleged site of his tomb very early became a centre of worship (at latest in 4th/10th century) (cf. al-Ya'qūbī, *Buldān*, 321); it is still pointed out in the vicinity of the ancient al-Madā'in, at the place called after him Salmān Pāk ("Salmān the Pure") near the former Asbāndūr suburb. His sepulchral mosque, which was seen in its older form by Pietro della Valle in 1617, was renovated by Sultan Murād IV [q.v.] and further restored in 1322/1904-5 (Herzfeld-Sarre, *Archäol. Reise im Euphrates- und Tigrisgebiet*, ii, 262, n. 1). It is the object of numerous pilgrimages, especially on the part of Shī'īs, who do not fail to visit it when returning from Karbalā'. Other traditions locate the tomb of Salmān in the vicinity of Iṣfahān, where there is evidence of his cult in the 7th/13th century (Yāqūt, ii, 170), and elsewhere, e.g. Lydda.

Salmān plays a remarkable part in the development of the *futuwa* [q.v.] and the workmen's corporations. He is venerated as a patron of barbers, whence comes the tradition, unknown in ancient collections of traditions, which makes him the Prophet's barber. He is also one of the principal links in the mystic chain (*silsila*) in various dervish orders.

Among the extremist Shī'ī sects, he is placed immediately after 'Alī in the series of divine emanations. The Nuṣayriyya [q.v.] make him the third member of the trinity formed by the three mystic letters 'Ayn ('Alī), M (Muḥammad) and S (Salmān), of which he forms the gate (*bāb*) (cf. R. Dussaud, *Histoire et religion des Nusairis*, Paris 1900, 62).

The death of Salmān is placed in 35/655-6 or 36/656-7, a statement which has no value except to indicate that the historical tradition has no note of his activity after the accession of 'Alī (end of 35/656). Like many other individuals, said to have embraced Islam after long experiences of other religions, he is credited with an extraordinary longevity: 200, 300, 350 and even 553 years (Goldziher, *Abhandl. zur arab. Philologie*, ii, p. LXXVI).

(G. LEVI DELLA VIDA\*)

**SAMAW'AL B. YAḤYĀ AL-MAGHRIBĪ, ABŪ NAṢR** (?520-70/?1126-75), prominent physician and mathematician who lived and practiced among the notables of Syria, 'Irāk, Kurdistān and Aḏhar-bāydjān. Born and raised as a Jew, he gives an account of his conversion to Islam, including a brief autobiography, in an appendix attached to the second edition of his anti-Jewish polemic, *Iḥām al-yahūd* ("Silencing the Jews"). His father, Yehūdāh Ibn Abūn, was a rabbi and poet from Fās whose family came from al-Andalus. Also known as Abu 'l-Bakā' Yahyā b. 'Abbās al-Maghribī, the father moved to Baghdād and married a literate and educated woman of a noble Jewish family named Hannah bt. Iṣḥāk b. Ibrāhīm al-Baṣrī al-Lawī (the Levite).

According to Samaw'al's autobiographical chapter, he began his studies like other Jewish boys with Hebrew writing, and the study of Torah and its commentaries. By the age of thirteen, however, the age marking adult maturity and ritual responsibility in Jewish law, his father moved him out of the traditional religious curriculum because of his perspicacity and introduced him to the study of mathematics and medicine. He excelled in these fields and wrote a number of works, most of which no longer survive. His only extant medical work, the *Nuḥat al-aṣḥāb*, centres around diseases and syndromes associated with sexual dysfunction, and it includes a collection of erotic stories and descriptions of being in love without recognising it. His most important scientific work is his book on algebra, *al-Bāhīr*, written when he was nineteen. He set out to provide the same kind of systematisation for algebra that al-Karādjī did for geometry in his work, *al-Baḏ'*. He is the first Arab algebraist to undertake the study of relative numbers.

His early studies were taken under Abu 'l-Barakāt Ḥibat Allāh b. 'Alī, another Jew who is said to have become Muslim, though late in life. Samaw'al is associated with yet another learned Jewish convert to Islam, Isaac the son of the famous biblical exegete, grammarian and philosopher, Abraham ben Ezra.

In al-Samaw'al's time, the science of medicine was closely associated with rationalistic philosophy. It has been suggested recently that the aforementioned conversions may have been "provisional". For example, Samaw'al's polemic against Judaism expresses a philosophical relativism that may have been influenced by or associated with the Nizārī Isma'īlī *kiyāma* (resurrection/resurgence) centred around Alamūt, a contemporary movement that transcended the normative boundaries of religion and law in the lands of Syria and Persia (S. Wasserstrom, following S. Stroumsa, J. Kraemer and H. Lazarus-Yafeh). If so, then Samaw'al's anti-Jewish *Iḥām* may have been a safe way of criticising doctrinal thinking in general.

It has also been suggested that Samaw'al's conversion was a result of exactly the process about which Moses Maimonides later cautioned in his *Commentary on the Mishna*, that Jews should avoid the study of history because in the Islamic world such study was overwhelmingly anchored in Islamic perspectives and world views and would therefore encourage apostasy from Judaism. Samaw'al's conversion may have been a response to the difficult Jewish problem of accepting the negation of exile while accepting the need for infinite patience for a vague messianic redemption. Such a delicate balance of thought was difficult to

sustain when confronted by the this-worldly reality of contemporary Muslim history, which fulfilled the Jewish longing for a polity, or *dawla*, a central concept in Samaw'al's polemical attack against Judaism (Husain).

Unlike his father, whose *kunya* Abu 'l-Bakā' suggests longevity, Samaw'al died in 570/1175 at a relatively young age (Ibn Abī Uṣaybi'a, *Uyūn al-anbā'*).

(R. FIRESTONE)

**SANAD** (A.), pl. *asnād*, lit. "support, stay, rest", but in Islamic administrative usage coming to mean an administrative, financial or legal document on which reliance can formally be placed (*masnūd*), hence an authenticated document. From the same root *s-n-d* is derived the technical term of Islamic tradition, *isnād* [q.v. and HADĪTH], literally "the act of making something rest upon something else".

The Turkish form of *sanad*, i.e. *sened*, was used in Ottoman practice for a document with e.g. a seal attached, thereby authenticating it and supporting it with official proof; see Pakalın, iii, 173-4. In Indo-Muslim usage, *sanad* was used for government and similar decrees, hence the definition in J.T. Platts, *A dictionary of Urdu, Classical Hindī, and English*, London 1911, 682: "ordinance, mandate, decree, grant, certificate, etc."

*Bibliography*: Given in the article.

(C.E. BOSWORTH)

**ṢARF** (A.), the Islamic legal term for exchanges of gold for gold, silver for silver, and gold and silver for each other. Although *ṣarf* in this sense appears in the *hadīth*, it is generally regarded as a term of art without prescriptive significance (Ibn al-'Arabī, *Kitāb al-Kabas*, ed. Walad Karīm, Beirut 1992, ii, 822-3; al-Subkī, *Takmilat al-maḥmū'*, Cairo n.d., x, 99; but see Ibn al-Murtaḍā, *al-Bahr al-zakḥkhār*, Beirut 1409/1988, iii, 386). According to another well-established usage (al-Ba'īfī, *al-Muḥlī'*, Beirut 1401/1981, 239; al-'Aynī, *Umdat al-kārīn*, Beirut n.d., x, 293), followed by Mālikī jurists, *ṣarf* applies to exchanges of gold and silver, while exchanges (by weight) of gold for gold or silver for silver are termed *murātala*. Further variations in usage can be found (*Sharḥ al-Khīrshī 'alā mukḥṭaṣar Sīdī Kḥalīl*, Beirut n.d., v, 36 [including *fulūs*]; al-Subkī, x, 149 [*ṣarf* vs. *muṣārafa*]). In addition, *ṣarf* is commonly used in the sense of the rate of exchange of gold for silver, and is sometimes used for the money-changer's commission (S.D. Goitein, *A Mediterranean society*, Berkeley etc. 1967, i, 239-40) as well as for money in general (Dozy, *Supplément*, i, 829). It has been suggested that the sense of money-changing for the Arabic word *ṣarf* developed under Aramaic influence (S. Fraenkel, *Die*

*aramäischen Fremdwörter im Arabischen*, Leiden 1886, 182-6). For a fanciful etymology from the clink (*ṣarf*) of the metals as they are being weighed, see e.g. al-Bahūtī, *Kashshāf al-kinā'*, ed. Hilāl, al-Riyād n.d.

*Ṣarf* transactions are subject to particular stringencies. The parties, having entered into the contract, are required to take delivery before they separate. In addition, where the exchange is of gold for gold or silver for silver, the quantities on each side must be equivalent in weight. The rate of exchange of gold for silver, on the other hand, may be determined by the parties as they see fit, and even unascertained quantities (*djuẓāf*) of these metals may be exchanged (cf. Mālik, *al-Muwatta'*, ed. 'Abd al-Bākī, Cairo n.d., 393 [except coins]; al-Bādī, *al-Muntakā*, Cairo 1332/1914 iv, 277-8, cf. al-Shaybānī, *K. al-Hudūdīya*, ed. al-Kilānī, Ḥaydarābād 1387/1968, ii, 571-2). The regulation of exchanges of gold and silver was introduced in the year 7/628 in the course of the division of the spoils of the conquest of Khaybar [q.v.] (Caetani, *Annali*, ii/1, 38-9). The legal rules governing these exchanges derive from the prohibition of *ribā* [q.v.] as expounded in the *hadīth*, general principles of contract law, and certain monetary conceptions.

The validity of *ṣarf* contracts requires that performance on both sides be due at once (*munāḍjaza*, *ḥulūl*); neither party may be granted a term in which to make delivery, which would constitute *ribā al-nasā'*. In fact, virtually all jurists require that delivery on both sides (*taḳābud*) take place during the contractual session (*maḍjlis*) (but see al-Suyūrī, *al-Tanḳīḥ al-rā'ī*, ed. al-Kūhkamārī, Qumm 1404/1985, ii, 97; al-Ṣadr, *al-Bank al-lā-ribawī fi 'l-Islām*, al-Kuwayt n.d., 147-8), which may, however, be protracted. To the extent otherwise available, the parties have the benefit of the right to rescind the executory contract while in their session (*khīyār al-maḍjlis*). The Mālikīs are stricter in this regard, insisting on prompt, if not immediate, mutual delivery, even a short delay making the exchange reprehensible (*makrūh*) (al-Ḥaṭṭāb, *Mawāhib al-djāhil*, Tarābulus, Libya n.d., iii, 302-3, cf. Ibn Ḥazm, *al-Muḥallā*, ed. Shākir, Beirut n.d., viii, 493). Thus while others prohibit the parties from reserving to themselves a right of rescission (*khīyār al-ṣarf*), Mālikī jurists go further and exclude delivery by assignment (*hawāla*) and the giving of either personal or real security for delivery, all of which are deemed repugnant to the required promptness of performance (Ibn Djuẓayy, *Kawānīn al-ahkām al-sharīyya*, Cairo 1975, 262-3; Ibn Djalāb, *al-Taḥfī'*, ed. al-Dahmānī, Beirut 1408/1987, ii, 154, cf. the Ḥanafī al-Anḳirāwī, *Fatāwā*, Būlāk 1281/1864-5, i, 303). For the same reason, according to the Mālikīs, the *ṣarf* transaction is invalid if both parties borrow the gold or silver in order to make delivery (*al-ṣarf 'alā al-dhīmma*) (Saḥnūn, *al-Mudawwana*, Cairo 1323/1905, repr. Beirut n.d., iii, 396; al-Dardīr, *al-Sharḥ al-ṣaghīr*, ed. Waṣfī, Cairo 1972, iii, 50 gloss).

There is disagreement as to whether the requirement of mutual delivery is satisfied by a set-off of debts (*taṭārūḥ al-dāmayn*). The Mālikīs regard the set-off as a valid *ṣarf* if both debts are presently due, the Ḥanafīs and Zaydīs as being valid whether or not due. The Shāfī'īs and Ḥanbalīs, on the other hand, do not consider such a transaction a valid *ṣarf* (Ibn Ruṣḥd, *Bidāyat al-muḍjṭahid*, Cairo n.d., ii, 174; Ibn Qudāma, *al-Mughnī*, ed. al-Turkī and al-Ḥulw, Cairo 1408/1989, vi, 106; al-Subkī, x, 101; Ibn al-Murtaḍā, iii, 389).

Where there has been only part performance of the contract the Mālikīs treat the entire contract as

void (*al-Mudawwana*, iii, 392; Ibn 'Abd al-Barr, *al-Kāfi*, ed. al-Mūrītānī, al-Riyāḍ 1400/1980-1, ii, 634, cf. *al-Muntakā*, iv, 264). The other schools, following the principle of the severability of contracts (*tafrīk al-ṣafka*), uphold the *ṣarf* to the extent it has been executed (al-Nawawī, *al-Madjmū'*, Cairo n.d., ix, 461, cf. al-Šhāfi'ī, *al-Umm*, Cairo n.d., iii, 26; al-Mardāwī, *al-Insāf*, ed. al-Fikī, Beirut n.d., v, 45; al-Suyūrī, ii, 98; Ibn al-Murtaḍā, iii, 387-8). Some jurists hold the view that the parties' failure to take delivery under the *ṣarf* contract not only voids the contract but amounts to a sin, unless they take the trouble to repudiate the contract before separating (*al-Madjmū'*, ix, 460-1, cf. al-Bahrānī, *al-Ḥadā'ik al-nādira*, ed. al-İrawānī, Beirut 1405/1985, xix, 277).

The requirement that mutual delivery take place upon contracting makes it possible for either party to prevent the enforcement of an executory *ṣarf* contract by terminating the contractual session without taking delivery (*al-Muntakā*, iv, 264, cf. al-Shaybānī, *al-Amālī*, Haydarābād 1360, 15-16). Furthermore, given the widespread circulation of different mintages and substandard coins in the mediaeval period, the jurists had to determine how far subsequent adjustments in the interest of a dissatisfied party were consistent with the rule of mutual delivery (e.g. *Mawāhib al-djā'il*, iv, 322-6; al-Mardāwī, v, 45-9).

The prohibition of *ribā* requires that exchanges of gold for gold or silver for silver involve equal quantities of the metals, any inequality constituting *ribā al-faḍl*, although some early authorities, most notably Ibn 'Abbās (d. 68/687), are reported to have rejected the doctrine of *ribā al-faḍl*, at least for a time (e.g. al-Ṭahāwī, *Šarḥ ma'ānī al-āthār*, ed. al-Nadjdjār, Cairo n.d., iv, 63-71, al-Subkī, x, 23-5), and thus to have permitted the exchange of unequal quantities of gold for gold and silver for silver—such unequal exchanges being termed *ṣarf* in the *hadīth* (al-Nasafī, *Ṭalibat al-ṭalaba*, Beirut n.d., 114; al-Nawawī, *Šarḥ ṣaḥīḥ Muslim*, Cairo n.d., xi, 23-4), a sense familiar to early lexicography, see Ibn Sida, *al-Mukḥṣṣas*, Beirut n.d., xii, 30 (quoting al-Khalīl b. Aḥmad [q.]). The requirement of strict equality (*tasāwīf*) applies to all such exchanges, whatever the form of the metals, whether raw ore (*ṭibr*), ingots (*nukra*, *sabika*), coins (*maḍrūb*) or manufactured articles (*maṣūgh*, *maṣnū'*, *ḥaly*), with the equality to be measured by weight (*wasn*), as in the time of the Prophet, without regard to the market value (*ḵima*) of the objects (e.g. al-Bahūtī, iii, 262-3). The reasonableness and hence the validity of an exchange of exactly similar coins have been questioned (Ibn Nuḍjāy, *al-Bahr al-rā'ik*, ed. Cairo, vi, 193, cf. N.J. Coulson, *A history of Islamic law*, Edinburgh 1964, 42).

While campaigning in Syria, Mu'āwiya (d. 60/680) reportedly exchanged manufactured articles taken as booty for their value in the same metal, for which he was rebuked by other Companions, including the Caliph 'Umar (al-Zurkānī, *Šarḥ al-Muwatta'*, Beirut n.d., iii, 278-9; *al-Muntakā*, iv, 261-2), and this practice is said to have continued in Syria until 'Umar b. 'Abd al-'Aziz (d. 101/720) put an end to it (al-Subkī, x, 79). Nonetheless, the opinion that the value added by labour should be reflected in the rate of exchange continued to find support. This teaching is attributed to Dāwūd al-Zāhiri (d. 270/884) (al-Shaṭṭī, *Risāla fī maṣā'il al-imām Dāwūd al-Zāhiri*, Damascus 1330, 21, cf. *al-Muḥallā*, viii, 493), and it is reported of both al-Šhāfi'ī (Ibn al-Murtaḍā, iii, 387, cf. al-Shayzarī, *Nihāyat al-rutba fī ṭalab al-ḥisba*, ed. al-'Arīnī, Beirut 1969, 75) and Aḥmad b. Ḥanbal (Ibn Ḳudāma,

vi, 60) that they prohibited equal exchanges by weight of whole for broken coins because of the discrepancy in value. The most prominent later proponent of this doctrine was the Ḥanbalī Ibn Taymiyya (d. 728/1328), according to whom manufactured articles of gold or silver are outside the scope of the law of *ṣarf*, which is intended to promote monetary stability (al-Ba'li, *al-Ikhtiyārāt al-fikhiyya*, ed. al-Fikī, Cairo n.d., 127; Ibn Ḳayyim al-Djawziyya, *Ilām al-muwakkīn*, ed. Sa'd, Cairo 1388/1968, ii, 154-63; al-Ḥaymī, *al-Rawḍ al-naḍir*, Beirut n.d., iii, 229-31; Ibn al-Ālūsī, *Djalā' al-'aynayn*, Cairo 1400/1980, 628-44).

The attribution to Mālik of the view that coinage might be exchanged for its value in the same metal was vigorously denied by his followers (Ibn Ḳudāma, vi, 60; al-Subkī, x, 79-83, cf. J. Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 67). Many Mālikīs did, however, support the opinion expressed by Mālik that a traveller in dire need of coins might pay for them with the same metal in such a quantity as to cover the cost of minting (*al-Kabas*, ii, 822, cf. al-Khirshī, v, 43 [no longer applicable according to Aṣḥab, d. 204/819]; *al-Muntakā*, iv, 259; al-Mawwāk, *al-Tādj wa 'l-ikhtilāf*, on the margin of *Mawāhib al-djā'il*, iv, 318 [only if life is in jeopardy]). Furthermore, the Mālikīs permit the exchange of up to six pieces of gold or silver currency passing by tale for an equal number of pieces made of the same metal even when the latter are up to one-sixth greater in weight. Such an exchange, termed *mubādala*, must be in the nature of an accommodation (*ma'rūf*) to the party with the underweight (*nākis*) coins, and, according to some, must be expressly characterised by the parties as a *mubādala*, not a sale (*al-Muntakā*, iv, 259-60; al-Tasūlī, *al-Bahḍa ṣarḥ al-tuḥfa*, Cairo, 1370/1951, ii, 27-9).

A further set of problems is posed when one or more objects, termed *damīma* by Twelver Šhī'īs (al-Šahīd al-Awwal, *al-Lum'a al-dimashkiyya*, ed. Kalāntar, Kumm 1396/1976, iii, 441) and *djārīya* by Zaydīs (al-Šan'ānī, *Minḥat al-ghaffār*, Šan'ā' 1405/1985, iii, 1388), including objects subject to the laws of *ribā*, are introduced into the exchange of the same metals, for example one dirham and a measure of dates as consideration for two dirhams (*mas'alat mudd 'adjuwa*) (al-Muzanī, *al-Mukḥṭasar*, on the margin of *al-Umm*, ii, 145; Ibn Ḳudāma, vi, 92-4; Ibn Raḍjāb, *al-Kawā'id*, ed. Sa'd, Cairo 1392/1972, 267-70; *al-Muḥallā*, viii, 494-6). The Ḥanafīs, Twelver Šhī'īs and Zaydīs recognise the validity of such a transaction, by analysing it as a *ṣarf* of one dirham for another and a sale of the dates for the other dirham. The *ṣarf* contract meets the test for equality. Such transactions are valid when the gold or silver on the one side exceeds that on the other, so that the excess can be referred to the added object (*ṭarīk al-ṭibār*) (Ibn al-Murtaḍā, iii, 338-40). The Mālikīs, Šhāfi'īs and Ḥanbalīs, on the other hand, regard this transaction as invalid, seeing in it the sale of a combination of things, with unascertained value, for two dirhams (cf. *Kitāb al-Ḥudūdja*, ii, 574-5; al-Ṭahāwī, iv, 72-3 [critical]). More pertinently perhaps, such a sale can be used to circumvent the prohibition of *ribā al-faḍl*, since an object of merely nominal value can be introduced to validate what is essentially an unequal *ṣarf* contract, and so should be prohibited as a preventive measure (*sadd al-dhārā'ī*) (cf. *al-Muwatta'*, 395; *al-Muntakā*, iv, 277). To obviate this result, some jurists, including the Zaydī Imām al-Ḥādī (d. 298/911) (*Kitāb al-Aḥkām*, Šan'ā' 1410/1990, ii, 73; al-Ḳāsim b. Muḥammad, *al-Fiṣḥam bi-ḥabl Allāh al-matīn*, ed. al-Faḍlī, Šan'ā' 1404/1984, iv, 109) and,

reportedly, Sufyān al-Thawrī (d. 161/778) (al-Mawwāk, iv, 301), insisted that the object introduced should correspond in value to the excess (*fadl*) on the other side, and the Ḥanafī al-Shaybānī is supposed to have regarded an unequal exchange of this sort as valid but reprehensible (*makrūh*) (Ibn al-Humām, *Fath al-kadīr*, repr. Kuwait n.d., vi, 271-2, cf. al-Nāṣir al-Utrūsh [d. 304/917], in R.B. Serjeant [ed.], *A Zaidī manual of Ḥisbah of the 3rd century (H)*, in *RSO*, xxviii [1957], 24 [better to exchange for the other metal]).

On the ground of hardship (*darūra*), however, the Mālikīs permit the giving of up to one-half of a dirham as change in a sale with a purchase price of no more than a dirham, the exchange of currency being deemed ancillary to the sale (*al-radd 'alā* or *fi 'l-dirham*) (al-Mawwāk, iv, 301; *Mawāhib al-djā'il*, iv, 318-21), whereas the Ḥanbalīs validate similar transactions by analysing them as made up of two distinct contracts, *şarf* and sale (al-Bahūī, iii, 260-1).

The exchange of a dirham and a dīnār for a dirham and a dīnār (al-Khīrshī, v, 36-7 gloss) is also invalid according to the Mālikīs, Shāfi'īs and Ḥanbalīs, not to speak of the exchange of two dirhams and a dīnār for one dirham and two dīnārs. The Ḥanafīs, Twelver Shī'īs and Zaydīs uphold the validity of these transactions, in the latter case by referring the silver coins on each side to the gold on the other, so that there is no requirement of equality (on the use of this principle as an evasive device, cf. al-Ābī, *Kashf al-rumūz*, Kumm 1408/1989, i, 500-1).

The Mālikīs' aversion to mixed transactions goes beyond that of the Shāfi'īs and Ḥanbalīs, for they prohibit an exchange in which, for example, gold and another object is traded for silver, thus constituting a combination of *şarf*, in the Mālikī sense, and an ordinary sale (*al-şarf wa 'l-bay'*) (al-Mudawwana, iii, 410), the incidents of which are deemed incompatible (al-Khīrshī, v, 40-1, cf. Ibn Rushd, *Fatāwā*, ed. al-Talīfī, Beirut 1407/1987, i, 210; *Bidāyat al-mudjtahid*, ii, 175 [approving Ashhab's rejection of this doctrine]; al-Baghawī, *Sharh al-sunna*, ed. al-Arnā'ūt, Beirut 1403/1983, viii, 67 [no basis for it]). Here, too, however, the Mālikīs recognise exceptions on the ground of hardship for transactions with a purchase price of no more than one dīnār and transactions, however large, in which the *şarf* component involves the exchange of less than one dīnār for dirhams. In either of these cases, where no more than two dirhams are due as change for a payment in dīnārs, the *şarf* is treated as ancillary to the sale, and delivery of the coins need not take place at the time of the contract (*Hāshiyat al-Dasūki 'alā al-şarh al-kabīr*, Cairo n.d., iii, 32-3).

The problems posed by the sale of objects with gold or silver ornamentation and by debased gold and silver coins are dealt with according to the rules for mixed transactions (but see Ibn Rushd, *Fatāwā*, i, 572; idem, *al-Bayān wa 'l-tahṣīl*, ed. A'rāb, Beirut 1404/1984, vii, 30 [coins]). Where, however, the gold or silver ornamentation is in the form of a thin veneer that cannot be salvaged as saleable metal, the rules of *şarf* are deemed inapplicable (Ibn Kūdāma, vi, 96; al-Dardīr, iii, 61-2; so also for coins, al-Kāsānī, *Badā'ī 'al-şanā'ī*, Cairo n.d., vii, 3137; al-'Abbādī, *al-Djawhara al-nayyira*, Istanbul n.d., i, 272; Ibn al-Şalāh, *Fatāwā wa-masā'il*, ed. al-Ḳal'ādī, Beirut 1406/1985, ii, 578; Ibn al-Ukhuwwa, *Kitāb Ma'ālim al-Ḳurba*, ed. Sha'bān and Muṭī'ī, Cairo 1976, 124-5), so that, for example, a house with a gilded roof can be sold for gold although the gold in the roof exceeds the purchase price (*al-Fatāwā al-hindiyya*, Beirut n.d., iii, 224). Where, on the other hand, the gold or silver in the article

or coin can be detached or melted down, the Mālikīs, Shāfi'īs and Ḥanbalīs, following their rules for mixed transactions and the precedent found in the *hadīth* (*Sharh Ṣaḥīḥ Muslim*, xi, 17-19; al-Taḥāwī, iv, 71-5, cf. al-Tilimsānī, *Miftāḥ al-uwṣūl*, ed. Kummī, Cairo n.d., 62-3), do not permit a sale for the same precious metal as in the ornament or coin. The metal must be detached and sold separately according to the rules of *şarf*. These stringencies, except according to the Mālikīs, do not apply when an article with gold ornamentation or a debased gold coin is sold for silver or *vice versa*; the Mālikīs do, however, make an exception when the ornamentation does not exceed one-third of the value (or weight, according to others) of the object (al-Muwatta', 394; al-Dasūki, iii, 40, cf. Ibn Rushd, *al-Bayān wa 'l-tahṣīl*, ed. Ḥabābī, Beirut 1404/1984, vi, 439-40 [gold and silver combined]). Furthermore, when the gold or silver is so affixed as to be detachable only with loss of value, the Mālikīs apply the one-third rule to exchanges for the same metal, and there is no restriction on exchanges for the other metal (Ibn Djuṣayy, 264-5).

The Ḥanafīs, Twelver Shī'īs and Zaydīs permit exchanges of objects with gold or silver ornamentation or debased coins for a greater quantity of the same precious metal, although for the Ḥanafīs, coins which are predominantly gold or silver are deemed equivalent to coins of pure metal. Where such objects or coins are exchanged for each other, the jurists of these schools cross-reference the precious metal on each side to the other component (cf. *al-Muḥallā*, viii, 498-501). For the purpose of upholding its validity, the transaction is analysed as consisting of two ordinary sales. The *şarf* requirement of mutual delivery, however, continues to apply (*Fath al-kadīr*, vi, 275). This analysis would permit the unequal exchange of debased coins for each other, a consequence that the Central Asian Ḥanafīs, from fear that it would open the door to *ribā*, are reported to have refused to draw with respect to the greatly debased silver coins that served as their primary currency (*Fath al-kadīr*, vi, 275, cf. Ḳāḍikhān, *Fatāwā*, on the margin of *al-Fatāwā al-hindiyya*, ii, 252; Dāwūd b. Yūsuf al-Khaṭīb, *al-Fatāwā al-ghiyāthiyya*, Būlak 1323, 141-2; on *ghitriḥ* dirhams, see al-Kirmīlī, *al-Nukūd al-'arabiyya*, Beirut n.d., 150-1).

The extension of the law of *şarf* to copper coins functioning as currency (*al-fulūs al-rā'idja* or *al-nāfika*) is most strongly represented among the Mālikīs (*Mudawwana*, viii, 395-6), although there is also some support for this view in the Ḥanbalī (al-Mardāwī, v, 15), Shāfi'ī (al-Zabīdī, *Ithāf al-sāda al-muttaḳin*, Beirut n.d., v, 447), Ḥanafī (al-Shaybānī, cf. A.L. Udovitch, *Partnership and profit in medieval Islam*, Princeton, 1970, 52-5) and Zaydī (Ibn al-Murtaḍā; iii, 391) schools. There is disagreement among modern writers as to the applicability of the rules of *şarf* to transactions in paper currency (al-Rūḥānī, *al-Masā'il al-mustahdalha*, Kumm 1385/1965, 33 [no]; al-Şadr, *al-Bank al-lā-ribawī fi 'l-Islām*, 149-52 [depends on the nature of the currency]; al-Uṭmānī, *Takmilat fath al-mulḥim*, Karachi 1407/1988, i, 589-90 [yes]; *Ḳarārāt wa-tawṣiyāt Maḍjima' al-Fiḫh al-Islāmī al-munbathīk min Munazzamat al-Mu'tamar al-Islāmī*, Damascus 1418/1998, 40 [yes]; see also *Maḍjallat Maḍjima' al-Fiḫh al-Islāmī*, iii [1408/1987], 1721-1965 cf. *ibid.*, v/3 [1409/1988], 1609-2261; and Bu 'l-Shīnkīṭī, *al-Ḳawl al-musaddad fi hukm zakāt al-awrāk*, n.p. [Beirut] 1420/1999).

The restrictiveness of the laws of *şarf* engendered evasive devices, *hiyal* [q.v.], sometimes included as part of the exposition of the subject, even when labelled reprehensible (e.g. al-Nawawī, *Rawḍat al-tālibīn*, ed.

'Abd al-Mawđūd and Mu'awwad, Beirut 1412/1992, iii, 44-5). Additional pressure for such devices came from the practice of some Muslim governments of minting debased silver coins and then imposing an exchange rate that inevitably involved a violation of the law of *şarf*. One expedient was to construe these exchanges as transactions by mutual delivery (*mu'atāt*), not *şarf* contracts, and thus not subject to the *şarf* restrictions (*al-Fiṣām*, iv, 108-9; al-'Amilī, *Kūāb al-Matāđūr min miṣṭāh al-karāma*, Cairo n.d., 7, 159, cf. *al-Bahr al-rā'ik*, vi, 192). Shāfi'īs are reported to have upheld unequal exchanges as reciprocal gifts (al-Dardīr, iii, 57 gloss, cf. *Rawdat al-tālibin*, iii, 45), while Mālikīs validated small-scale unequal exchanges by appealing to the notion of hardship (al-Dasūki, iii, 35). Others insisted that the parties employ the device suggested in the *hadīth* of an intervening sale of one of the currencies for goods followed by a resale of the goods for the other currency (al-Shawkānī, quoted in Şiddīk Ḥasan Khān, *al-Rawda al-nadiyya*, Cairo n.d., ii, 116-18), although regular resort to this device was controversial (al-Subkī, x, 136, cf. *al-Muḥallā*, viii, 512-13). Against the inconvenience of this cumbersome practice, the Yemenī al-Makḥālī (d. 1108/1696) argued for an analysis according to which the parties were granting each other a license (*ibāha*) in the exchanged coins, thus effectively freeing all except professional money-changers from the restrictions of the law of *şarf* (*al-Abḥāth al-musaddada*, ed. al-Iryānī, Şan'ā 1403/1982, 286-7, 390-1, and *Minhat al-ghaffār*, iii, 1389).

The complexity of the law of *şarf* made it difficult for those engaged in frequent exchanges to avoid violating the prohibition of *ribā*, which put the profession of money-changing (*şarāf*, *şayraf*, *şayrafī*, *muşarrafī*) in a bad light (al-Bayān wa 'l-taḥṣīl, vi, 448 [better to exchange with merchants], cf. al-Dasūki, iii, 43 gloss), but this did not mean that its exercise by non-Muslims was encouraged (*al-Mudawwana*, viii, 403; Ibn 'Abd al-Ra'ūf, in N. Ziadeh, *al-Ḥisba wa 'l-muḥtasib fi 'l-Islām*, Beirut 1963, 141, cf. Goitein, i, 229-30). The condemnation of money-changers is particularly connected with the name of al-Ḥasan al-Başrī (d. 110/728 [q.v.]) (Ibn Ruşd, *al-Mukaddamāt al-mumahhadāt*, ed. A'rāb, Beirut 1408/1988, ii, 14), whose disapproval, according to a Shī'ī tradition, was countered by the Imām Dja'far al-Şādīk (d. 148/765 [q.v.]), when he noted that the *Aṣḥāb al-Kaḥf* [q.v.] of Kūrān, XVIII, were money-changers (al-Tūsī, *al-Tahdhīb*, ed. al-Kḥarsān, Tehran 1390/1970, vi, 363; cf. al-Turayḥī, *Madjma' al-bahrayn*, Beirut 1985, v, 79-80), but this did not prevent Twelver Shī'ī jurists from including money-changing among the reprehensible professions (*al-Lum'a al-dimashkiyya*, iii, 218). Instructing money-changers in the rules of *şarf* and supervision of their transactions were among the duties of the *muḥtasib* [see ḤISBA] (*Ma'ālim al-kurba*, 227; al-Shayzarī, 74). For more information on the money-changer, see ŞARRĀF, in Suppl.

With the rise of Islamic banking in recent decades, there has been renewed interest in such old questions related to *şarf* such as the permissibility of non-binding agreements for future exchanges of currency at fixed rates (al-Bāz, *Aḥkām şarf al-nuḥūd wa 'l-'umulāt fi 'l-fikh al-islāmī*, 'Ammān 1419/1999, 109-31). New questions have also arisen, such as the possibility of satisfying the requirement of delivery of the currency during the contractual session by issuance of a cheque, a practice recognised as valid by the Islamic Law Academy (Madjma' al-Fikh al-Islāmī) of the Muslim World League (Rābiṭat al-'Ālam al-Islāmī) in 1409/1989, at the same time that it approved of delivery by entry of a record in the books of the bank ('A.A.

al-Sālūs, *Mawsū'at al-kaḍāyā al-fikhiyya al-mu'āsira wa 'l-iktisād al-islāmī*, Bilbīr [Egypt] 1423/2003, 630-1), and the same position was adopted by the Islamic Law Academy of the Organisation of the Islamic Conference (Munazzamat al-Mu'tamar al-Islāmī) in 1410/1990 (*Ḳarārāt wa-tawṣiyāt Madjma' al-Fikh al-Islāmī*, 113-4; also in *Madjallat Madjma' al-Fikh al-Islāmī*, vi/1, [1410/1990], 771-2). To the extent that delivery of currencies is accomplished in accord with contemporary international banking usages, mutual delivery satisfying the law of *şarf* may extend over several days (Yūsuf al-Ḳaraḍāwī, *Fatāwā mu'āsira*, Beirut 1421/2000, ii, 462-4).

(A. Zysow)

**SARİK**, the name of a Türkmen [q.v.] tribe in Central Asia. Ethnonyms derived from colour-names are frequent in Turkic languages. Çağatay and Uzbek have *sarik*, *sariḳ* "yellow, yellowish, pale, blonde" where other historical and modern Turkic languages have *sariy* or *sari* (Laude-Cirtautas, 64-8). The genealogy of the Sarīk is connected to the Salur [q.v.] tribal group, including the Salur proper, the Ersari, Teke and Yomut. In his work on the historical legends of the Türkmen, the *Şadđara-yi Tarākima*, Abu 'l-Ghāzī Bahādur Khān of Kḥiwa [q.v.] links the descent of the Sarīk and the Teke to Toyt Tutmaz of the Salur (ed. Kargı Ölmez, fol. 102a, ll. 4-5). The Salur are linked to Oghurdjik Alp, a descendant of the eponymous progenitor of the Türkmen, Oghuz Khān. Drawing on Sarīk historical legends, Dshikijew connects the Sarīk to various groups of Tatars and other peoples of Central Asia, but his arguments lack convincing support. No historical details about the habitat and history of the Sarīk before the 16th century are available, except that since the Mongol period, they must have lived—along with other Türkmen tribes—between the Mangışlak [q.v.] peninsula and the Balkhān [q.v.] mountains. According to Abu 'l-Ghāzī Bahādur Khān (references in Bregel 1981), in the 16th century, the Teke, Yomut and Sarīk together paid a tax of 8,000 sheep to their Uzbek overlord, about half of what larger tribes like the Čowdur or Ersari paid at the time, or one-quarter of the tax of the Salur tribe proper. In the first Soviet census (1926), the Sarīk numbered 34,000 or 4% of the whole number of Türkmen (Bregel 1981, 13ff.). Sarīk were also to be found in Tadjikistān, Afghānistān and Iran, but at the end of the 20th century, reliable figures are not available.

In the 17th century, the Salur confederation broke up and the Salur and Ersari left western Turkmenistan. Their place was taken by three junior tribes, the Teke, Yomut and Sarīk (Bregel 1981, 18). In the 18th cen-

tury, the Sariġ nomadised between **Kh**ārazm and the Marw oasis. Around 1800, they gradually became the dominant Türkmen tribal grouping among the population in and around the oasis, engaging in agriculture as well as in nomadic pastoralism (Wood 1998, 6-7, 70-5). Wood (1998) investigated the history of the Sariġ of Marw (a large part of the Sariġ tribal group) drawing on Western—including Russian—travel and political literature as well as on Persian, Bukhāran and, in particular, Khīwan sources such as the chronicles of the court historian Āghāhī. By 1822, Khīwa succeeded in supplanting Bukhāran rule in the Marw area, keeping it until 1842 as an outpost in its frequent campaigns against Persia. At that time, the Sariġ began a prolonged struggle for independence from Khīwa which ended in 1855, both sides exhausted from the annual campaigns. The period of relative stability had proved profitable for the agriculture and caravan trade of the Sariġs, while the Khīwan khān had been able to draw revenues from them and use them as auxiliaries and border patrols. From 1857, under Persian pressure, the numerically superior Teke of Sarakhs moved into the Marw oasis and forced out the Sariġs who, replacing the Salur of Yolotan and Pandjdiġ [q.v.] on the middle course of the Murghāb river, remained there into the 20th century.

*Bibliography:* This article owes much to W.A. Wood, *The Sariġ Turkmens of Merv and the khanate of Khīva in the early nineteenth century*, unpubl. diss., Bloomington, Ind. 1998 (with extensive bibl.); Ebulgazi Bahadır Han, *Şecere-i Terākime (Türkmenlerin soykütüğü)*, ed., tr. and notes Z. Kargı Ölmez, Ankara 1996. The chronicle of Mu'nīs and Āghāhī, *Firdaus al-iġbāl*, ed. and tr. Y. Bregel, Leiden 1988, 1998, regularly mentions the Sariġs; for excerpts from Āghāhī's further chronicles, see A.K. Borovkov, A.A. Romaskevič and P.P. Ivanov, *Materiali po istorii turkmen i khivinskii istočniki*, Moscow and Leningrad 1938. See further Bregel, *Nomadic and sedentary elements among the Turkmens*, in *CAJ*, xxv (1981), 3-37; A. Dshikijew, *Das turkmenische Volk im Mittelalter*, Berlin 1994, 252-62; I. Laude-Cirtautas, *Der Gebrauch der Farbbezeichnungen in den Türkdiaketen*, Wiesbaden 1961.

(BARBARA KELLNER-HEINKELE)

## SARIKA.

In literary criticism, "plagiarism".

Although the term *sarika* is used, no "theft" in the legal sense of the word is implied, as Islamic law does not recognise intellectual property. A modern booklet on intellectual theft stresses the moral turpitude involved, but does not invoke any *Shari'a* norms or punishments ('Abd al-Mannān, *al-Sarikāt al-'ilmiyya*). The victim of plagiarism could only have recourse to public opinion or approach a man of power (*isti'dā'*) to redress the situation.

Literary theft occurred and was discussed predominantly, though not exclusively, in the field of poetry.

The term *sarika* does cover "plagiarism" in the strict sense of the word, i.e. appropriation of someone else's line or poem. But of greater importance and interest is its wider application, where it indicates any kind of "borrowing" and "developing" of an existing motif. As such it should be treated in the larger context of intertextuality, alongside other phenomena such as quotation (*taḍmīn*) and allusion (*taḥmīh*). Since the term came to cover both acceptable and unacceptable borrowings, qualifications like *sarika ḥasana* "good theft" and *sarika maḥmūda* "laudable theft" were introduced to characterise cases considered successful by the critics. Or else the inappropriate paradoxical term was

avoided altogether and substituted by a neutral one, *akhdh* "taking".

### True plagiarism

Already pre-Islamic poets mention literary theft as a known phenomenon by stressing that they do not have to rely on it. This is, of course, meaningful only on the background of a literary culture, in which poems are attributable to individual poets and the latter take pride in their craft. Alongside the general notion of "theft", the term *intihāl* "ascribing (verses) to oneself" is specifically used here. As later handbooks make clear, this means claiming other poets' verses as one's own without further ado (the obvious danger of anachronism involved in relying on these handbooks cannot be addressed here). It is difficult to judge the truth in the cases adduced by the later critics; one would need to ascertain if (a) they may not constitute quotations or formulae (see Bauer, in *Bibl.*) or (b) the victim of the plagiarism might not be an invention produced by intertribal hostilities.

While the idea of intellectual property seems to have been well developed, there is one strange phenomenon that in a way runs counter to this notion, to wit, the behaviour of some famous poets called *ighāra*, lit. "raiding". This occurs only between contemporaries and describes a situation in which a minor poet composes an outstanding line and is then forced by a major poet to relinquish it to him, on the pretext that he, the major poet, should have composed it. The victim, under threat of a stinging invective, would more often than not comply. Most notorious in this respect was the Umayyad poet al-Farazdaq [q.v.].

In the literate society of 'Abbāsīd times and later, outright plagiarism took the form of inserting extraneous material, often whole poems, into one's own *diwān*. The term often used for this is *muṣāḥala* (see e.g. al-Tha'ālibī, *Yatīma*, ii, 119, 5), a post-classical word possibly derived from *shlt*, a variant—by metathesis—of *lsh* "robber" (see Lane, *s-l-ḥ*). For an interesting plagiarism feud, see AL-SARĪ AL-RAFFĀ'. Even contemporary authorities admitted that it was very difficult to establish the truth in the case of poems recurring in various *diwāns*. Al-Tha'ālibī, quoting two poems that he found both in a collection of al-Sarī al-Raffā's poetry in the latter's own handwriting as well as in the *diwān* of the Khālidī brothers in the hand of Abū 'Uḥmān al-Khālidī, admits: "I do not know if I should attribute this situation to a confluence of minds (*tawārud [al-khāṭirayn]*) or to plagiary (*muṣāḥala*) (*Yatīma*, ii, 110, 5). The first possibility flows from the Muslim virtue of *ḥusn al-zann* which enjoins people always to think best about others. But with poems consisting of five lines each, the idea of *tawārud* strains credulity (while, with one or two lines, it would not be impossible in an environment of mannerist poetising). Another way of explaining duplication of poems is, of course, uncertainty of attribution on the part of redactors.

### Borrowing

While crude plagiary may have exercised the literary public, a situation of truly literary interest arose only with the introduction of skillful changes into the borrowed verse. Critical literature developed along two lines: (1) general classifications and taxonomies of *sarika*, and (2) the collection and—to a lesser extent—critical evaluation of the *sarikāt* of individual poets.

#### (1) Classifications

The *sarika* classifications are contained in a number of books on literary theory, sometimes also in the introductions to *sarika* collections of individual poets. They tend to be highly inhomogeneous in the early

literature. The earliest example is al-Ĥatīmī (d. 388/998 [q.v.]) in his *Ĥilyat al-muḥādāra fī sināʿat al-shiʿr* (see *Bibl.*). His terminology seems to be tentative, partly based on earlier traditions that he quotes with their chains of authorities, but without establishing a clear system. As a consequence, there is much overlap between the terms and a certain opacity prevails (see S.A. Bonebakker's painstaking articles on al-Ĥatīmī in the *Bibl.*). Ibn Rashīk (d. 456/1063 or later [q.v.]) is aware of this inadequacy of al-Ĥatīmī's taxonomy, but he quotes him extensively all the same, with certain alterations and re-interpretations (see von Grunebaum, *Concept*, 238-40; note that the author did not yet have the text of al-Ĥatīmī's *Ĥilya*).

Ibn Wakīʿ al-Tinnīsī (d. 393/1003) and Abū Hilāl al-ʿAskarī (d. 395/1005 [q.v.]) introduced the idea that one had to distinguish between good and bad "plagiarist". The former did so in the introduction to his attack on al-Mutanabbī (*Munajif*, 9-21, 22-39), the latter in the first encyclopaedic work on literary theory, the "Book of the Two Arts" (*Sināʿatayn*, 196-237, cf. Kanazi, *Studies*, 112-22). This approach takes into account the fact that mannerist poetry is in constant intertextual dialogue with past poetry (on the term "mannerism" in this context, see S. Sperl, *Mannerism in Arabic poetry*, Cambridge 1989); as a result, borrowing motifs and developing and improving them becomes a way of life.

Ibn Abī Ṭāhir Ṭayfur (d. 280/893 [q.v.]) expressed this idea as follows: "The discourse of the Arabs hangs together, the later instances taking from the former. The original and newly invented of it (*al-mubtadaʿ minhu wa ʿl-mukhtara*) is rare, if you go through it and check it. Even the cautious and watchful man, who is gifted in eloquence and poetry, whether ancient or modern, will not be safe that his discourse take [something] from the discourse of someone else, even if he does his utmost in being cautious. . . . How much more so with the affected constructor of conceits (*al-mutakallif al-mutaʿannif*) who is intentionally seeking for them" (*apud* al-Ĥatīmī, *Ĥilya*, ii, 28). The last sentence is the description of the mannerist poet, who cannot but have recourse to the existing poetry.

After a number of further attempts to instil some order into the traditionally transmitted terms, the taxonomy of plagiarism became homogenised and solidified in the scholastic *ʿilm al-balāgha* "science of eloquence" [see BALĀĠHA], starting with al-Khaṭīb al-Kazwīnī (d. 739/1338 [q.v.]), in his *Talkhīs al-Miftāḥ*.

From the various endeavours of the theorists, some common notions emerge:

(a) The focus of the discussion is overwhelmingly the single line, which is, of course, the most common approach in literary criticism and theory.

(b) There is discussion about what is, and what is not, subject to a verdict of plagiarism. Universally-known or well-worn motifs are in the public domain. Newly-invented motifs that are attributable to individual poets form the other extreme. These are rare and, according to Ḥāzīm al-Kartādjānī, "infertile", because later poets would hardly dare to take them up again (*al-maʿānī ʿl-ʿukm*, see *Minhādī*, 194, 14). Of greatest interest is the group of motifs in between the two extremes, those that have been treated, developed and improved upon (or, possibly, ruined) by a series of poets. Here a charge of plagiarism can only be avoided if the later poet introduces changes that confer a certain novelty on the borrowed motif. There are various ways of doing this: (1) by changing the context, by (a) inserting the motif into a different genre (e.g. from praise into love poetry), or (b) combining it with

another motif of the same kind (see below); or (2) by changing the wording. If, by doing the latter, he improves on the rendition of the motif or adds a rhetorical twist to it, he can lay greater claim to it than the original poet. According to Ḥāzīm, there are four relationships between a poet and his motif: "invention" (*ikhṭirāʿ*), "greater claim" (*istiḥkāk*), "partnership" (*sharika*, which is either "equal participation" [*ishtirāk*], when there is no quality difference between the earlier and later poet, or "falling short" [*inḥitāf*], if the later poet is not up to par), and finally "plagiarism" (*sarika*) (*Minhādī*, 192-4).

(c) Part of the taxonomy of plagiarism is based on the *lafz-maʿnā* dichotomy: does the alleged plagiariser take only the motif or also its wording? Taking both with only minimal changes of the wording is the worst kind of *sarika*.

(d) Plagiarism can only take place if the later poet consciously borrows from the earlier. Otherwise, identical or similar lines of poetry are due to a "confluence of two minds" (*tawārad al-khātirayn*): the two poets found the line independently of each other (see above).

(e) An identical line could also be explained as a quotation (*taḍmīn*, lit. "incorporation"). If it is not a very well-known line, the poet has to mark it as a quotation in order that it not be taken as a plagiarism.

#### (2) Critical assessment of individual poets

The other branch of literature devoted to *sarika* consists of collections of plagiarisms of individual poets, either in separate works or forming part of critical studies dealing with one or more poets. The most famous "modern" poets have all been made targets of such critiques: Abū Nuwās, Abū Tammām and especially al-Mutanabbī (at least six separate books have come down to us). There is usually very little in the way of naming and discussing their cases; the critics rather confine themselves instead to adducing the original (mostly by a "modern" poet) and the alleged plagiarism. They usually have a lenient approach, including many "laudable plagiarisms". They often manage to find several originals, either because the "plagiariser" has effected a combination of two "stolen" motifs or because there is some doubt as to the correct pedigree (the "originals" are sometimes not quite relevant, belonging, as it were, to a larger halo of motifs circling the motif in question). One is thus at times presented with little family trees of a motif (probably never more than four or five stages). This makes these works valuable for historical, systematic and critical research into the imbrication of motifs—molecular investigations, as it were, into the overlap of consecutive versions of the motif—, which in turn would lead, more importantly, to insights into the general tendencies governing such developments within a mannerist tradition of poetry.

The most sophisticated cases are those in which the "plagiariser" welds two different motifs together. An example would be the following (from al-ʿAmīdī, *Ibāna*, 31-2; the author starts with the pedigree verses and ends with the "plagiarising" verses by al-Mutanabbī):

- al-Buḥturī: *Malaʿta aḥshāʿa ʿl-ʿadūwi balābilan  
fa-ʿradda yaḥsudu fika man lam yaḥsudu*  
al-ʿAbartāʿī: *Kaṭṭaʿa aḥshāʿa ḥāsidihi wa-lam  
yaḥṭub [s.l.] ghalīlu ʿl-ḥashā mina ʿl-  
hasadi*  
al-Mutanabbī: *Kaṭṭaʿahum ḥasadan arāhum mā bihim  
fa-taḥaṭṭaʿu ḥasadan li-man lā yaḥsudu*

Here we have two motifs and their confluence in al-Mutanabbī: Motif no. 1: People envy [in you] some-

one who does not have envy [because you are the best anyway, or because envy is an evil character trait that you do not have]; motif no. 2: The praised one tears the entrails of the envious to shreds.

(a) al-Buḥturī: The first motif is there in the second hemistich without further ado. The second motif is lacking, but note that the entrails appear as a seat of emotion in the first hemistich.

(b) al-ʿAbartāʾī: The second motif appears in the first hemistich without further ado. The second hemistich is an elaboration on it (again with *ḥashā*).

(c) al-Mutanabbī: The entrails are gone, but the tearing apart is still there. Motif no. 2 is in the first hemistich (with an addition, namely, that this envy shows the envious what [evil] is in them). Motif no. 2 recurs in the second hemistich, inextricably bound together with motif no. 1.

Al-Mutanabbī achieves a logical confluence of the two motifs, and in addition a pleasant balance between the two hemistichs: root *q-t-ʿ* followed by *ḥasadan*, followed by a contrast between “them” and “him”.

This technique of knitting together two independent motifs seems to be subsumed under the term *taḥfīk*. Ibn Rashīk deals with it in one chapter of his *Kurādat al-dḥahab* (ed. Mūsā, 95-106). He says that al-Mutanabbī and Abu ʿAlāʾ al-Maʿarrī are the outstanding masters of this procedure. (Note that al-Thaʿālibī’s use of *taḥfīk* in his *K. al-Tawfīk li ʿl-taḥfīk*, ed. Hilāl Nāḍīr and Zuhayr Zāhid, Beirut 1417/1996, seems to differ from Ibn Rashīk’s, coming closer to *murāʾāt al-naẓīr* “harmony of images”.)

**Bibliography:** 1. Important texts. (a) Taxonomies: Hātīmī, *Hilyat al-muḥādara fi šināʾat al-shiʿr*, ed. Djaʿfar al-Kattānī [on title-page: “al-Kitānī”], 2 vols. Baghdād 1979, ii, 28-98 (unreliable edition); selection by Mazhar Rašīd al-Hidjīdī [?], *Min Hilyat al-muḥādara*, 2 pts. Damascus 2000, 323-81 (attempts to correct the edition, but is not itself a critical ed.); substantial quotations also in Muḥammad Ibn Sayf al-Dīn Aʿydamir (d. 710/1310), *al-Durr al-farīd wa-bayt al-qaṣīd. The priceless pearl, a poetic verse*, facs. ed. F. Sezgin, in collaboration with M. Amawī, A. Jokhosha and E. Neubauer, 5 vols., Frankfurt am Main 1988-9, i, 116-55 (see also G.J. van Gelder, *Arabic poetics and stylistics according to the introduction of al-Durr al-Farīd by Muḥammad Ibn Aʿydamir (d. 710/1310)*, in *ZDMG*, cxlvi (1996), 381-414, a short section on the plagiary chapter, 409-12); Abū Hilāl al-ʿAskarī, *Kitāb al-Šināʾatayn al-kitāba wa ʿl-shiʿr*, ed. ʿA.M. al-Bidjāwī and M.A.F. Ibrāhīm, 2nd ed. Cairo n.d. [1971], 200-37; Ibn Rashīk, *al-ʿUmda fi maḥāsīn al-shiʿr wa-ādābīh*, ed. M.ʿA.A. ʿAṭā, 2 vols., Beirut 1422/2001, ii, 216-30; idem, *Kurādat al-dḥahab fi naḥd ashʿār al-ʿArab*, ed. M. Mūsā, Beirut 1991 (other ed. Chedli Benyahya [al-Šhādhilī Bū Yahyā], Tunis 1972); ʿAbd al-Kāhīr al-Djurdjānī, *K. Asrār al-balāgha*, ed. H. Ritter, Istanbul 1954, paragr. 20, Ger. tr. idem, *Geheimnisse der Wortkunst*, Wiesbaden 1969, paragr. 20; al-Muzaffar al-Ḥusaynī (d. 656/1258), *Nadrat al-ighrīd fi nusrat al-kaṛīd*, ed. Nuḥā ʿArīf al-Ḥasan, Damascus 1396/1976, 203-26; Ḥāzīm al-Karṭādjānī, *Minḥādī al-bulaghā ʿwa-sirādī al-udabāʾ*, ed. Muḥammad al-Ḥabīb Ibn al-Khūdjā [Belkhdja], Tunis 1966, 192-6. (b) Studies of individual poets: Muhallil b. Yamūt b. al-Muzarraʿ (d. after 334/946), *Sarikāt Abī Nuwās*, ed. M.M. Haddāra, Cairo 1958; ʿAmīdī (d. 371/981), *al-Muwāzana bayn shiʿr Abī Tammām wa ʿl-Buḥturī*, ed. al-Sayyid Aḥmad Ṣaqr, 2 vols. Cairo 1380-[4]/1961-5 (*sarikāt Abī Tammām*, i, 55-129; *sarikāt al-Buḥturī*, i, 292-350); al-Šāḥib Ibn ʿAbbād (d. 385/

995), *al-Risāla fi ʿl-kaṣṣa ʿan masāwīʿ al-Mutanabbī*, in ʿAmīdī, *Ibāna*, 219-50; Hātīmī, *al-Risāla al-mūdiha fi dhikr sariḳāt Abi ʿl-Tayyib al-Mutanabbī wa-sāḳit shiʿrih*, ed. M.Y. Najm, Beirut 1965 (cf. also S.A. Bonebakker, *Hātīmī and his encounter with Mutanabbī: a biographical sketch*, Amsterdam etc. 1984 [Verhandlungen der Koninklijke Nederlandse Akademie van Wetenschappen, Afd. Letterkunde, nieuwe reeks, cxvii]); al-Kāḍī al-Djurdjānī (d. 392/1001), *al-Wasāta bayn al-Mutanabbī wa-khuṣūmih*, ed. M.A.-F. Ibrāhīm and ʿA.M. al-Bidjāwī, 3rd ed., Cairo n.d., 183-411; Ibn Wakīʿ al-Tinnīsī, *Kitāb al-Munṣif li ʿl-sāriḳ wa ʿl-masrūk minhu*, ed. ʿU.Kh. ibn Idrīs, Bīghāzī 1994 (other eds.: *al-Munṣif fi ʿl-dalālat ʿalā sariḳāt al-Mutanabbī*, ed. H. Zayn al-Dīn ʿAbd al-Maṣḥadānī, Beirut 1414/1993; *al-Munṣif fi naḥd al-shiʿr wa-bywān sariḳāt al-Mutanabbī wa-mushkil shiʿrih*, ed. Riḍwān al-Dāya, i, Damascus n.d. [preface dated 1401/1981]; *K. al-Munṣif li ʿl-sāriḳ wa ʿl-masrūk minhu fi ighār sariḳāt Abi ʿl-Tayyib al-Mutanabbī*, ed. Muḥ. Yūsuf Naḍīm, 2 vols. Beirut 1412/1992 [Kuwait 1404/1984] [the theoretical part is on pp. 9-38]); Thaʿālibī (d. 429/1038), *Yatimat al-dahr fi maḥāsīn ahl al-ʿasr*, ed. M. Muḥyī ʿl-Dīn ʿAbd al-Ḥamīd, 4 vols., 2nd ed. Cairo n.d. (finished 1377/1958) (contains substantial sections on *sariḳāt* of the various poets treated in this anthology); al-ʿAmīdī (d. 433/1041), *al-Ibāna ʿan sariḳāt al-Mutanabbī*, ed. I. al-Dasūḳī al-Bisāṭī, Cairo 1961; Ibn Bassām al-Shantarīnī (d. 543/1147), *Sariḳāt al-Mutanabbī wa-mushkil maʾānih*, ed. M. al-Tāhir ibn ʿAshūr, [Tūnis] 1970 (the material in the section *Sariḳāt ukhrā nusibat ilā ʿl-Mutanabbī*, ed. I. al-Dasūḳī, in al-ʿAmīdī, *Ibāna*, 199-217, seems to be mostly taken from Ibn Bassām, though not in the same sequence); on the later scholastic system see A.F.M. von Mehren, *Die Rhetorik der Araber*, Copenhagen and Vienna 1853, repr. Hildesheim and New York 1970, 147-54 (also containing the Ar. text of al-Khaṭīb al-Ḳazwīnī, *Talkhīṣ al-Miftāḥ*, Ar. pag. 94-104, and of al-Suyūṭī’s versification *ʿUḳūd al-djūmān*, 133-8).

2. Studies. G.E. von Grunebaum, *The concept of plagiarism in Arabic theory*, in *JNES*, iii (1944), 234-53, rev. Ger. version *Der Begriff des Plagiats in der arabischen Kritik*, in idem, *Kritik und Dichtkunst*, Wiesbaden 1955, 101-29; ʿAlī ʿAbd al-Razzāḳ al-Sāmarrāʾī, *al-Sariḳāt al-adabiyya fi shiʿr al-Mutanabbī*, Baghdād n.d. [1969]; Muḥammad Muṣṭafā Haddāra, *Mushkilat al-sariḳāt fi ʿl-naḥd al-ʿarabī*, ʿBeirut 1395/1975; Badawī Ṭabāna, *al-Sariḳāt al-adabiyya, dirāsa fi ibtikār al-ʿmāl al-adabiyya wa-taḳlīdihā*, ʿBeirut 1394/1974; W.P. (W.P. HEINRICHS)

**SARKĀR** (P.), lit. "head [of] affairs", a term used in Mughal Indian administration and also in the succeeding British Indian domination of the subcontinent.

1. In the structure of Mughal provincial government, as elaborated under the Emperor Akbar [q.v.] in 989/1580, there was a hierarchy of the *šūba* [q.v.] or province, under the *sūbadār* [q.v.] (also called *šāhāsālār*, *nāzīm* and *šāhib-i šūba*); the *sarkār*, or district, under the *faẓẓdār* [q.v.], who combined both administrative and military functions, corresponding to the two separate officials of British India, the District Magistrate and the Superintendent of Police; and the *pargana* [q.v.] or *mahall*, i.e. subdistrict, headed by various officials with specific functions, such as the *kādī* for the administration of justice and the *kānūngo* and *ẓawdharī* concerned with revenue collection. Thus in Akbar's time, Abu 'l-Faḍl 'Allāmī enumerated within the province of Awadh [q.v.] (Oudh) 5 *sarkārs* and 38 *parganas* [see PARGANA and MUGHALS. 3].

2. As a term in the historical geography of more recent India, *sarkār* appears Anglicised as "the [Northern] Circars", specifically for the coastal territory north of Madras and the Coromandel Coast in peninsular South India, in part to the south of the delta of the Godāvārī river but mostly to its north (hence now in the northeasternmost tip of Andhra Pradesh State in the Indian Union). This territory was ceded to the British East Indian Company in 1765 by the Mughal ruler in Dīhlī, Shāh 'Ālam II, but claimed by the Nizām of Ḥaydarābād, leading to a treaty of 1766 whereby the Nizām gave up his claim in return for the provision of a force of British troops to be at his disposal [see further, ḤAYDARĀBĀD, at Vol. III, 320b-322a].

3. In informal Anglo-Indian usage, the *Sarkār* (local pronunciation, *Sirkār*, often written "Sircar") meant the state or the government, and this continued to be the usage all through British Indian times. It may be noted that the term now popularly and almost ubiquitously used to denote the British domination in India, its government and administration, sc. "the Raj" (in Hindi and the modern Indo-Aryan languages, *rājī* is a regular derivative of *rāḍjya* "kingship, rule", cognate with *rāḍjā* "ruler"), is a neologism of the post-1947 period, probably from the later 1950s, when what had been "the Raj" had in fact for several years ceased to be.

*Bibliography:* See the *Bibls.* to the various administrative terms of Mughal provincial administration cited above, and also Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, London 1903, 222, 754, 840-1; P. Saran, *The provincial government of the Mughals*, Allahabad 1941; S.R. Sharma, *Mughal government and administration*, Bombay 1951; information from Prof. Christopher Shackle. (C.E. BOSWORTH)

**ŠARRĀF** (A.), lit. "money-changer", such persons often functioning as bankers in pre-modern Islam.

In *fikh* [q.v.], *šarf* is a contract of sale (*bay'* [q.v.]). It applies to currency exchange, originally of gold (*dīnārs*) to silver (*dirhams*) and vice-versa. The *Ḥadīth* provides basic rules for currency exchange, such as that the transaction should be on the spot (*yad<sup>am</sup> bi-yad*) [see RIBĀ]. Among the famous *hadīths* relating to

*šarf* is "Gold for silver is *ribā* except hand-to-hand" (Mālik, *Muwatta'*, *šarf*).

Money-changing was an activity apparently engaged in by the earliest Muslims. This was related to their involvement in trade, including by the Prophet himself [see TĀDĪR; TIDJĀRA]. However, several *hadīths* warn of the dangers of *ribā* in currency exchange if parties do not follow the rules of *šarf*. Thus money-changing as a profession was not held in high esteem by the *fuḳahā'*. The popular view was that non-Muslims (particularly Jews and Christians) were better suited to it than Muslims, who were constrained by the prohibition on *ribā* (for money-changing and banking in the mediaeval Arab world, see DĪAHBĀDH, and ŠARF, in Suppl.).

In the Ottoman Empire, *šarrāfs* were more than money-changers; they were also moneylenders and brokers, and pawnbrokers. In time, many *šarrāfs* became large financiers with well-recognised international connections, and played a significant role in the economy and politics of the empire. They were based mainly in the capital, Istanbul, but also operated in provincial capitals. Greeks, Jews, Armenians and Muslims were involved in the profession.

With the Ottoman conquest of Constantinople in 857/1453, the Italian predominance in finance in that city ended, to be replaced by that of Ottoman non-Muslim subjects, particularly Greeks. Mehemmed II (r. 848-50/1444-6 and 855-86/1451-81) favoured Greeks who played an active role in Ottoman finance, taxation through tax-farming (e.g. administration of customs zones and mines) and politics during his reign. From the mid-10th/16th century, Jewish bankers (*šarrāfs*) and tax-farmers challenged Greek dominance in both finance and long-distance trade. Because of the activities of the Inquisition in Catholic countries in that century, under the protection of the Ottoman Sultans, several wealthy Marrano Jewish families came to settle in Istanbul. Many were to be involved in large-scale banking operations, international trade, and investment in tax farms. Financial expertise and close links to the Sultan and ruling élite gave them considerable power. Well-known Jewish names of this period include Dona Gracia Mendes, Don Joseph Nasi and Alvaro Mendes. Later, the role of the Jews declined, and Armenians became prominent as *šarrāfs*, with some of their members rising to prominence; for example, Muṣṭafā III (1171-87/1757-74) appointed a member of the Armenian Duzuoglu family as manager of the imperial mint. The ability of the Duzuoglu family to mobilise credit for the state, domestically and abroad, enabled them to retain control of the day-to-day activities of the mint until the 1820s (Pamuk, *Monetary history*, 202).

Until the 10th/16th century especially, the *šarrāfs* functioned in a context of expanding trade both within and without the empire. Facilitated by networks, their business was enhanced by increased credit or bartering as a result of the limited supply of gold and silver coins. They used several financial instruments, e.g. the *hawala* (Ar. *hawāla* [q.v.]) was "an assignation of a fund from a distant source of revenue by a written order. It was used in both state and private finances to avoid the dangers and delays inherent in the transport of cash" (Inalcik and Quataert, *An economic and social history*, 208). Letters of credit were also widely used, particularly from the mid-11th/17th century, by merchants and for government payment. The increase in trade also meant more opportunities for currency exchange, which was abetted by the problem of a universally acceptable currency, the fluctu-

ations in the purity of the coinage and currency values.

From the 11th/17th to the 19th centuries, the state continued to need and encourage the activities of the *şarrāfs*, tax-farming being one. Until the late 10th/16th century, the empire's financial situation had been strong, with the major part of taxation being collected locally and mostly in kind by the *sipahīs* under the *fīmār* system. These funds were used locally. The *fīmār* system then began to be abandoned in favour of tax-farming [see MÜLTEZİM], and tax units (*mukāta's*) began to be auctioned off at Istanbul. *Şarrāfs* based on Istanbul were thus able to purchase tax-farming privileges or to lend money to purchasers. *Şarrāfs* also became direct lenders to the treasury and were considered the most dependable source of liquid funds. As the empire sank further into fiscal decline after the 1760s, it relied on the *şarrāfs* to use their connections with European organisations to arrange short-term direct loans to the state. The *şarrāfs* also became personal financiers to the sultans and many leading Ottoman bureaucrats. It is estimated that, e.g. in 1860, the short-term debts of various government offices to private banking firms (*şarrāfs*) alone amounted to 250 million francs (Kasaba, *The Ottoman empire*, 80). By the mid-19th century, the power of *şarrāfs* as well as of tax-farmers and merchants equalled and perhaps surpassed the power of the bureaucratic élite.

Not all *şarrāfs* prospered. Of the hundreds, especially in the capital, who combined petty exchange with other small-scale money lending, relatively few became extremely rich, particularly through their dealings with the central or provincial authorities. Towards the end of the 11th/17th century, the *şarrāfs* of Istanbul organised around a guild and began to move their business to the Istanbul suburb of Galata [see GALATA, in Suppl.], later to be known as "Galata bankers". Consolidation was also taking place. For instance, in the early 1840s, eighty members of the guild of *şarrāfs* were accredited by the government; by the mid-1850s, the number was down to 18. The *şarrāf* families included the Baltazzišs, the Rallis, Zarafis, the Rodocnachis and Duzuoğlus. These families played prominent roles in most of the major private and public banks that were established in the second half of the 19th century, starting with the Istanbul Bankası (Bank of Istanbul) in 1845 (Kasaba, *The Ottoman empire*, 76).

The stereotypical view of *şarrāfs* is that they were on the whole non-Muslims. However, Muslims appear to have been involved in all aspects of *şarrāf* business, including tax-farming, currency exchange, money lending and international trade. A sample of 534 tax farms in the 10th/16th and 11th/17th centuries shows that around 60% of tax farmers were Muslims (Cizakca, *Comparative evolution*, 154-7). Research into the 10th/16th and 11th/17th century court records of specific regions (primarily Anatolia) of the Ottoman Empire also challenges the view that Muslims were not involved in money-lending or in the traditionally problematic area of interest. While there is debate among historians as to any marked difference between the Arab and "Turkish" parts of the Empire in regard to the acceptability of lending at interest, there is evidence that such transactions were carried out by Muslims in Anatolia on a relatively large scale, and that the practice was supported by the highest religious authorities of the time and approved by the *kādīs* (judges) who were responsible for implementing the *Şharī'a* and *kānūn*. The best-known example was the cash *wakf* controversy and the associated charging of lending. Many of the *fatwās* of the time, even by the *Şeykh al-Islām*

and other religious authorities, declared the permissibility not only of the cash *wakf* but also of interest charged on loans advanced therefrom (see Mandaville, *Usurious piety*). However, towards the end of the 19th century, the Muslim role in *şarrāf* business was radically curtailed by the increasing importance of non-Muslim *şarrāf* families and the emergence of banks, established largely by Europeans and by Armenian and Greek *şarrāfs*.

**SĀṬĪ' AL-ḤUŞRĪ**, Ottoman official, educator, Arab Minister and theorist of Arab nationalism, d. 1968.

He was born in Şan'a, Yemen in 1880 to an Arab family of Aleppo. Both his father and mother were of prominent Aleppine mercantile families. His father, Muḥammad Hilāl al-Ḥuşrī (b. 1840), served as an Ottoman judge after his graduation from al-Azhar University, becoming at the time of his son's birth Director of the Court of Criminal Appeals in the Yemeni capital. Owing to the pattern of his father's shifting appointments in accordance with Ottoman practice, Sāṭī' accompanied his family to a number of countries. Receiving his early education at home, Sāṭī' learnt Ottoman Turkish, Arabic and French. At the age of thirteen, he began his formal education at the College of Mülkiyye Mektebi in Istanbul, studying mathematics, history, botany, French and chemistry. Graduating with distinction in 1900, he chose to serve as a natural science teacher in a secondary school in the Balkans. During this period, he began to develop a lifelong interest in the question of nationalism and the rights of national communities. Shortly before the eruption of the Young Turk revolution in 1908, he came into contact with members of the Committee of Union and Progress [see İTTİHĀD VE TERAKKĪ DĖEM'İYETİ]. He also assumed in the same period the post of district governor in Kosovo and Florina.

After the revolution, al-Ḥuşrī returned to Istanbul with the determination to propagate and implement his belief in a modern education system, coupled with his desire to articulate a secular notion of Ottomanism. This he did by founding new journals, publishing new school textbooks on various scientific subjects and taking part in public debates relating to contemporary issues. Furthermore, between 1909 and 1912 he assumed the directorship of the Teachers' Training College in Istanbul, restructuring and modernising in the process its entire curricula and management. He also visited a number of European countries to acquaint himself with the latest methods of pedagogy. By the end of his directorship, al-Ḥuşrī had become one of the most influential educators throughout the Ottoman Empire.

His most distinctive intellectual contribution in the Ottoman period of his life was five lectures he delivered

in Istanbul in 1913 on the significance of patriotism. In those lectures, entitled *Vatan için*, he called for building a new Ottoman community based on the idea of the fatherland as an object of love. Moreover, these lectures were to form the basis of his Arab nationalist theory in the wake of his decision to leave the Ottoman capital in 1918 and join the newly formed government of Amīr Fayṣal in Damascus.

In his Arab phase, al-Ḥuṣrī resumed his interrupted career by acting as Director General of Education, and then Minister of Education in the Syrian government until its liquidation by the French in 1920. After a short sojourn in Italy and Egypt, he once again joined Fayṣal, the new king of British-mandated 'Irāk, and became Director General of Education from 1923 to 1927. He used this opportunity to create a new system of instruction geared towards the inculcation of Arab nationalism, coupled with his insistence on high standards and rigorous methods of promotions. Meeting resistance or obstruction in the course of his duties, he resigned his post and devoted himself to lecturing at the Teachers' College and publishing a new journal on education. In 1935 he assumed the deanship of the Law College and was appointed Director of Antiquities between 1936 and 1941. Following the second British occupation of 'Irāk in 1941, al-Ḥuṣrī was, along with other non-'Irākī Arab nationalists, deported to Syria and stripped of his 'Irākī citizenship. In 1944 he was invited by the Syrian government to modernise and overhaul its system of education. The foundation of the Arab League in 1945 afforded al-Ḥuṣrī the opportunity to develop its cultural and educational policies. After acting as a cultural adviser, he was appointed the first director of its Institute of Higher Arab Studies in 1953. After his retirement in 1957, al-Ḥuṣrī wrote and published a number of studies on pan-Arabist subjects, including his memoirs, which dealt with his 'Irākī period. He died in 1968.

**SATR** (ا.), "concealment", a term used in a variety of senses particularly by the Ismā'īliyya [*q.v.*] The Ismā'īlis originally used it in reference to a period in their early history, called *dawr al-satr*, stretching from soon after the death of *imām* Dja'far al-Šādiḳ in 148/765 to the establishment of the Fātimid state in 297/909. The Ismā'īlī *imām*, recognised as the *kā'im* or *mahdī* by the majority of the early Ismā'īlis, was hidden (*mastūr*) during this period of concealment; in his absence, he was represented by *ḥudūdjas* (see Dja'far b. Maṣṣūr al-Yaman, *Kitāb al-Kaṣf*, ed. R. Strothmann, London 1952, 98-9; al-Šahraṣṭānī, 146). Later, the Ismā'īlis of the Fātimid period, who allowed for continuity in their imāmate, recognised a series of three such "hidden *imāms*" (*al-ā'imma al-mastūrūn*) between Muḥammad b. Ismā'īl b. Dja'far, their seventh *imām*, and 'Abd Allāh al-Mahdī, founder of the Fātimid dynasty (see H.F. al-Hamdani, *On the genealogy of Fatimid caliphs*, Cairo 1958, text 11-14).

In the aftermath of the Nizārī-Musta'li schism of 487/1094 in Ismā'īlism, the early Nizārī Ismā'īlis experienced another period of *satr*, when their *imāms*, descendants of Nizār b. al-Mustaṣir (d. 488/1095

[*q.v.*]), remained hidden for several decades. The inaccessible Nizārī *imāms* were now once again represented by *ḥudūdjas*, starting with Hasan-i Šabbāḥ [*q.v.*], who also ruled over the Nizārī state from Alamūt [*q.v.*]. The period of *satr* in early Nizārī history ended with the declaration of the *ḳiyāma* at Alamūt in 559/1164 and the resulting open emergence of the Nizārī imāmate. Subsequently, the term *satr* acquired a new meaning for the Nizārīs. As explained by Naṣīr al-Dīn al-Ṭūsī, the Nizārīs had by the late Alamūt period formulated what may be called a new doctrine of *satr*. In this context, *satr* no longer referred to the physical concealment of the *imāms*; instead, it referred to a time when spiritual reality or religious truths (*ḥakā'ik*) were hidden in the *bāṭin* of religion, requiring the observance of *taḳīyya* in any necessary form, including the adoption of the Sunnī *Šarī'a* as demanded earlier by the sixth lord of Alamūt, Djalāl al-Dīn Ḥasan (607-18/1210-21).

The Musta'li Ismā'īlis, who survived only in the Ṭayyibī form after the downfall of the Fātimid dynasty, have experienced a period of *satr*, in the original Ismā'īlī sense of the term, since their twentieth *imām*, al-Amīr bi-Aḥkām Allāh [*q.v.*], was murdered in 524/1130. It is the belief of the Ṭayyibī Ismā'īlis that all their *imāms*, starting with al-Amīr's son al-Ṭayyib who disappeared in infancy, have remained hidden to the present day. In their absence, *dā'īs muṭlaqs*, or supreme *dā'īs*, have led the affairs of the Ṭayyibiyya [*q.v.*].

*Satr* found expression also in the Ismā'īlīs' cyclical conception of religious history of humankind. The Ismā'īlis believed from early on that this hierohistory was comprised of seven eras or *dawrs*, all except the last one being eras of *satr*, because the inner, immutable truths of religions or the *ḥakā'ik* remained undisclosed. In this scheme, only in the seventh and final eschatological era initiated by the *kā'im* before the end of the physical world, would the *ḥakā'ik* be fully revealed to humankind. This final age, designated as the *dawr al-kaṣf* or the era of manifestation, would be an age of pure spiritual knowledge when there would no longer be any distinction between the *zāhir* and *bāṭin* dimensions of religion, and between religious laws and their inner meanings. On the basis of astronomical calculations, the Ṭayyibīs of Yaman introduced further innovations into this cyclical scheme. They conceived of a grand aeon (*kawr al-āzam*) composed of countless cycles, each one divided into seven eras. This grand aeon would progress through successive cycles of concealment (*satr*) and manifestation (*kaṣf*), and it would be finally concluded by the Great Resurrection (*ḳiyāmat al-ḳiyāmāt*) proclaimed by the final *kā'im*.

**SAWLADJĀN** (A.), said to be an Arabised form of Pers. *čawgān* "polo stick" [see ČAWGĀN]. The intrusive *l* makes this difficult, but D.N. MacKenzie, *A concise dictionary of Pahlavi*, London 1971, 22, has \**caw(l)agān* ("of doubtful transcription"). At all events, the curve of a polo stick makes it a suitable figurative expression, either as a simile [see TAŠHBĪH] or as a metaphor [see ISTĪ'ĀRA], in classical Arabic, Persian and Turkish literatures, for the curving eyebrows and locks or tresses of hair of a beautiful girl; see Annemarie Schimmel, *The two-colored brocade. The imagery of Persian poetry*, Chapel Hill N.C. and London 1992, 284-5.

**SEGBÂN** (T., from Pers. *segbân* "servant in charge of dogs, or keeper of the sultan's hounds"). In Ottoman Turkish, it was often spelled *sekbân*, and also written as *segmen* or *seymen*, following popular pronunciation), a term of Ottoman palace and military organisation.

In the Ottoman Empire, the term had three general uses which evolved over time: first used for the guardians of the sultan's hunting dogs, it was then applied to members of various salaried infantry units within the Janissaries, surviving until the corps itself was abolished in 1826, and finally, as the name of groups of infantry auxiliaries or militias. Officially prohibited as a military term in the latter use at the beginning of the 18th century, it was briefly revived again in the 19th. In present-day provincial Turkish, *segmen* refers to an armed ceremonial escort in national dress.

The first use of the term *segbân* occurs in a *wakf* deed of the late 8th/14th century. Hunting and dogs were an integral part of the early Ottoman court, especially that of Bāyezīd I [q.v.], who is credited with greatly expanding the number of *segbāns*. Servants for the hunting parties were probably recruited from war captives or as part of the military levy (*deuſhīme* [q.v.]). Early records indicate that villagers sought protection from recruitment, or from other obligations to *segbāns*, indicating the burden which hunting could impose on the populace. Murād I [q.v.] explicitly recognised the service of his *segbāns* and falconers in his will, emancipating them at his death. *Segbāns* figure prominently in Ottoman miniature painting. Süleymān I [q.v.] himself was portrayed as a great hunter, and surrounded by dogs and their keepers (see 'OTHMĀNLĪ. viii. Painting, Pl. X, for an example).

In the 9th/15th century, the evolution of courtly retinue to fighting units became more marked, and it is at this point that *segbāns* became part of the Janissaries. In 855/1451, Meĥemmed II added 7,000 *segbāns* to the Janissaries, with a separate commander, the *segbân bāſhî*, who joined the ranks of the high officials of the empire (Chalcondyles, ed. Bonn 1848, bk. vii, 377). Other officers of the *segbāns* included a *kethüdâ* and a *kâûb*. After the middle of the 10th/16th century, the *segbân bāſhî* was subordinated to second-in-command after the *agha*, and generally remained in Istanbul when the *agha* left on campaign. The *segbāns* formed the 65th *orta* of the Janissaries, and were divided into two sections: a small cavalry *orta* of 40-70 men, most of whom were sons of Janissary officers, and 34 *bölüks* (companies of infantry), known as the *segbân bölükleri*. Hunting traditions survived in the

33rd *bölük*, called the *awđî* (hunter) *bölük*, which accompanied the sultan on hunting parties but not on campaign; sons of Janissaries and statesmen alike made up its rolls.

A second general use of the term was for provincial auxiliary mercenary or militia troops, like the *lewend* [q.v.], who served the official appointees to the provinces, the *paſhas*, *mîr-i mîrāns*, *beglerbegi* or *sanđjak begleri* [q.v.]. Initially the entourage of the governor (*paſha*), his private retinue and army (*kaĥî halkî*), *segbân* also came to be applied to troops called to campaign, and paid out of the central treasury (*mîrî segbāns*, *mîrî lewend*). Provincial officials were the recruiters of the *segbân-lewend* style of troops, and by the end of the 18th century, they were each required to mobilise 1,000-2,000 cavalry or infantry for campaigns. The essential characteristic of such auxiliaries was that they carried firearms, were recruited for short periods, and were drawn from the countryside, often from among the landless and lawless [see BĀRŪD. iv]. Their first significant appearance in that military capacity was during the Ottoman-Habsburg War of 1593-1606, when a few hundred were noted among the troops in Hungary. They were organised as other Ottoman troops, into companies or standards (*bayrak*), the latter generally numbering 50 or 100 men. Their use was increased in the latter 11th/17th century, as both Janissary and *sîpāhîs* [q.v.] proved inadequate for facing the better-armed Habsburgs.

The demobilisation of such troops led to countryside unrest, as they often stayed together as armed bands, and participated in uprisings such as the *Djelaî* rebellions [see DJALĀLĪ, in Suppl.] or revolts of their provincial masters. The central government endeavoured unsuccessfully to eliminate the designation *segbân* around 1700, but military necessity dictated its continuance, although the term *mîrî lewend* was the preferred usage for such troops by the mid-18th century.

Such mercenary or militia troops could be found in all the territories of the empire, as armies of provincial officials, as the fighting units described above, or as guards of towns, where they were often in conflict with local Janissaries. They included Christian recruits, Serbians and Croats, especially in the Principalities, where they were called *seymen*, and could be found in the fighting forces of Moldavia and Wallachia well into the 18th century. In general, however, Muslims were the primary recruits, and Albanians and Bosnians the most prized for their military prowess.

The term *segbân* was revived in military usage in 1808, when Muſtafâ Paſha Bayrakdâr [q.v.] tried to continue the reforms of Selim III [q.v.] by renaming the detested *nizâm-î djedîd* [q.v.] troops *segbân-î djedîd*, and incorporating them as the eighth *ođjak* of the Janissaries. The new troops allied with the Janissaries, however, and were instrumental in Muſtafâ's own downfall that same year. The term *segbân* disappeared when Maĥmûd II [q.v.] eliminated the corps in 1826.

(VIRGINIA H. AKSAN)

**SEMENDIRE**, the Ottoman Turkish form of the Serbian town of Smederovo, older form Semendria. Lying on the Danube downstream from Belgrade [*q.v.*] (lat. 44° 40' N., long. 20° 56' E.), it was in pre-modern times a fortified town and, under the Ottomans, the chief-lieu of a *sandjak* of the same name. Since the break-up of Yugoslavia, it has come within the Serbian Republic.

A first conquest under Murād II (842/1438) did not lead to permanent incorporation into the Ottoman Empire, since due to the crisis of 847-8/1444 the sultan thought it necessary to preserve the Serbian despotate as a buffer state between his own lands and those of the king of Hungary (Halil İnalcık and Mevlut Oğuz (eds.), *Gazavât-i Sultan Murād b. Mehmed Han, İzadi ve Vama savaşları (1443-1444) üzerinde anonim Gazavâtname*, Ankara 1978, 31-5, 102-3). According to Theodore Spandunes, it was George Kantakuzenos, surnamed Sachatai, a brother of the Byzantine princess Irene, consort of the Despot of Serbia George Branković, who came from the Morea to Serbia and built the fortified town of Smederovo. In 858/1454, this was one of the major centres of the Serbian despotate, with fortifications solid enough to withstand an Ottoman attack. In 860-1/1456 a Hungarian attempt to take the town was also beaten back by the same George Kantakuzenos (Th. Spandunes, *On the origin of the Ottoman Emperors*, tr. and ed. D. Nicol, Cambridge 1997, 29, 35; *Memoiren eines Janitscharen oder Türkische Chronik*, tr. Renate Lachmann, with comm. by eadem, C.-P. Haase and G. Prinzing, Graz 1975, 117, 210, this being the text supposedly written by Constantine of Ostrovica, an ex-Janissary or Janissary auxiliary; Th. Stavridis, *The Sultan of Vezirs: the life and times of the Ottoman Grand Vezir Mahmud Pasha Angelović (1453-1474)*, Leiden 2001, 82-95).

After the death of George Branković and that of his son Lazar two years later, Smederovo was inherited by the latter's son-in-law, the Bosnian king Stepan Tomasević, who in 863-4/1459 surrendered the city to Mahmūd Pasha, then *beylerbeyi* of Rumeli. Born a member of the Byzantino-Serbian aristocratic family of the Angelović, Mahmūd Pasha had been commissioned to take over the region in the name of Sultan Mehmed II. Pope Pius II viewed the Ottoman conquest of the Serbian despotate and the concomitant acquisition of Smederovo as a calamity all but equivalent to the end of the Byzantine Empire. Most possessions of the Serbian despotate within the kingdom of Hungary were confiscated by the local ruler as a measure of retaliation for the surrender of Smederovo (F. Babinger, *Mehmed der Eroberer und seine Zeit. Weltentstürmer einer Zeitenwende*, Munich 1953, 174-5).

These events had been preceded, in 862/early 1458, by an attempt on the part of Michael Angelović, Mahmūd Pasha's (probably elder) brother, a member of the regency council that took over after the death of Lazar, to make himself despot with the backing of the Ottoman sultan and take power in Smederovo. He had gained the support of Serbian nobles who

were worried about a possible subjection to the Pope, in case the Hungarian party should gain the upper hand. However, the takeover failed, and Michael Angelović was arrested by members of the pro-Hungarian party in the regency council and sent to Dubrovnik, where—probably at Hungarian behest—he was held captive by a local patrician (C. Jireček, *Geschichte der Serben*, Gotha 1918, ii, 207-15). If this version of events is the true one, Michael Angelović thus cannot have negotiated the surrender of Smederovo to his brother on the Ottoman side (Stavridis, *op. cit.*, 102; most Ottoman chronicles, however, take the agreement between brothers for granted; see for example *‘Ashikpaşahzâde târiki*, ed. ‘Ali Bey, Istanbul 1332/1914, 152. On a divergent version of these campaigns, compare *The History of Mehmed the Conqueror by Tursun Beg*, comments and tr. by Halil İnalcık and R. Murphey, Minneapolis and Chicago 1978, 40-5; Tursun Beg claims that the outer fortress of Smederovo was conquered by force of arms, and only the inner citadel ultimately surrendered). Subsequently, King Matthias Corvinus of Hungary made various projects for a conquest of the fortress, now known in Ottoman as Semendire, but none of these led to any concrete results (Babinger, *op. cit.*, 385).

Within the Ottoman realm, the Semendire area became a *sandjak* and was divided up into *timârs* and *z‘âmets* [*q.vv.*], itself forming part of the *beylerbeylik* of Rumeli; in the early 10th/16th century, Belgrade was part of this *sandjak*, albeit producing far less revenue than the Semendire area (M. Tayyib Gökbilgin, *Kanuni Sultan Süleyman devri başlarında Rumeli eyaleti, livaları, şehir ve kasabaları*, in *Belleten*, xx [1956], 252-7). After the conquest of Hungary, Semendire was transferred to the newly formed *vilâyet* of Buda. In addition to the cavalry supplied by *timârs* and *z‘âmets*, the local Eflâk (Vlach) were accorded tax remissions in return for military services (N. Beldiceanu and Irène Beldiceanu-Steinherr, *Quatre actes de Mehmed II concernant les Valaques des Balkans slaves*, in Beldiceanu, *Le monde ottoman des Balkans (1420-1566): institutions, société, économie*, London 1976, no. III; on Vlach-related issues in the reign of Bâyezîd II, see *Osmanlılarda divân-bürokrasi-aklam, II. Bâyezîd dönemine ait 906/1501 tarihli ahkâm defteri*, ed. by İlhan Şahin and Feridun Emecen, Istanbul 1994, nos. 208, 209).

Entries in the 10th/16th-century *Mühimme defterleri* reflected the position of Semendire as a military base during the wars of Süleymân the Magnificent against the Habsburgs: its governor was called upon to purchase timber for bridge-building, see to the construction of boats to be used on the Danube and organise supplies of flour and barley for the needs of the army. The town also possessed a cannon-foundry (*topkhâne*). A text from 951-2/1544-6 refers to the fact that much of the town had been destroyed by fire, and enjoined the *kādî* to make sure that the new houses were not built so close to the walls as to endanger their military function (Hacı Osman Yıldırım *ed. alii* [eds.], 7. *numaralı mühimme defteri 975-976/1567-69*, 5 vols. Ankara 1997, i, 273. For one of the oldest extant *Mühimme* registers, see Halil Sahillioğlu [ed.], *Topkapı Sarayı arşivi H. 951-952 tarihli ve E-12321 numaralı mühimme defteri*, Istanbul 2002, 24-5, 192-3, 219, 306; for a selection of relevant texts from this register in French tr., see Mihnea Berindei and G. Veinstein, *L'Empire ottoman et les pays roumains 1544-1545*, Paris and Cambridge, Mass. 1987, 8-9, 14-15, 18-19, 29, 40-3, 46, 65-6, 69-70).

Economic life was based on agriculture, stock-raising

ing and fishing; Semendire functioned as a small-scale market for rural produce, while crafts seem to have been of limited importance and many townsmen cultivated fields and gardens (B. McGowan, *Food supply and taxation on the Middle Danube (1568-79)*, in *Archivum Ottomanicum*, i [1969], 139-96; Mihnea Berindei, Annie Berthier, Marielle Martin and G. Veinstein, *Code de lois de Murād III concernant la province de Smederovo*, in *Südost Forschungen*, xxxi [1972], 140-63). Timber was brought in from the surrounding forests, while imports from further afield included metals, Asian spices and also slaves; the Danube seems to have functioned as a barrier at which internal customs could be conveniently collected.

After the peace of Zsitvatorok (1015/1606 [q.v.]) had ended the Long War between Habsburgs and Ottomans, the embassy of Adam Freiherr von Herberstein was, on its return from Istanbul (1016-18/1608-9), permitted to view the fortifications of Semendire (M. Brandstetter, *Itinerarium oder Raisbeschreibung*, in K. Nehring, *Adam Freiherr zu Herbersteins Gesandtschaftsreise nach Konstantinopel: ein Beitrag zum Frieden von Zsitvatorok (1606)*, Munich 1983, 174-5). This permission may have been granted because Ottoman military men regarded the fortifications as obsolescent: Brandstetter described a once powerful stronghold that he did not, however, consider very suitable for contemporary warfare. Roofs and floors had been neglected, while heavy artillery could only be placed in the towers and on the bare ground; but the fortress did suffice to control traffic on the Danube. Brandstetter also noted the existence of an inner citadel protected by its own water-filled ditch and five towers, as well as the presence of a garrison commander, but he made no reference to a civilian population.

An 11th/17th-century description from an Ottoman perspective is owed to Ewliyā Ćelebi, who visited Semendire as a participant in several Balkan campaigns (*Ewliyā Ćelebi Seyahatnâmesi. Topkapı Sarayı Bağdat 307 yazmasının transkripsiyonu-dizini*, v, ed. Yücel Dağlı, Seyit Ali Kahraman and İbrahim Sezgin, Istanbul 2001, 316-17). Ewliyā relates a set of partly counterfactual traditions concerning the Ottoman acquisition of the town, seventeen years before Constantinople, possibly an allusion to the ephemeral conquest under Murād II. These stories are, however, important because they possibly circulated among the local military men and show the "ideological" importance of Semendire even at this date. Other conquest traditions involve a marital union between Sultan Bāyezīd I Yıldırım and a daughter of the Serbian despot which resulted in the conclusion of peace between the two states—this was possibly a reminiscence of the marriage of the Serbian princess Mara to Murād II. These stories also include an account of military conquest on the part of Mehmed II and a subsequent return of the town to the unbelievers in exchange for the liberation of the commander Balı Bey, who had been taken prisoner in battle. After his return, Balı Bey supposedly attacked and took Semendire, so that he was regarded as its second conqueror, his memory perpetuated by a *zâviye* slightly to the west of the town. This latter story probably refers to one of the first *sandjak beyis* of the province, Balı Bey Malçoğhlu, who became famous for his two campaigns against Poland and other feats of derring-do (Babinger, *Beiträge zur Geschichte des Geschlechtes der Malçoğhulus*, repr. in *Aufsätze und Abhandlungen zur Geschichte Südosteuropas und der Levante*, i, Munich 1962, 355-70; and see MALÇOÇ-OĞHULLARI, in Suppl.).

As in the late 10th/16th century, Semendire in Ewliyā's time was a centre of the homonymous *sandjak*, famous on account of the numerous soldiers domiciled in this place ('Ayn-ı 'Alī Efendi, *Ķawānīn-i āl-i 'Othmān der khūlāsa-i medāmīn-i defter-i diwān*, preface by Gökbilgin, Istanbul 1979, 17; compare also the description by Kātib Ćelebi, *Rumeli und Bosna*, tr. J. von Hammer, Vienna 1812). The fortress supposedly consisted of an inner and an outer section, with a circumference of 4,000 paces and four gates, protected by the Danube on three sides and in addition by 36 towers. Apart from the garrison officers, the urban elite consisted of the *kādī*, the *shēhir ketkhudāsī* and the teachers in two local *medreses*, while four Friday mosques, one of them bearing the name of Mehmed the Conqueror, were available for worship. There was a settlement outside of the walls (*avarosh*) that supposedly contained 3,000 houses and 300 shops, accessible by wooden bridges crossing the river or else the water-filled ditch that made the fortress into a virtual island. Due to the marshy ground, few buildings were of stone, roofs were often covered in wooden shingles and even the streets were paved with boards. Although Ewliyā claims that an abundance of goods was available in the two local *khāns* and elsewhere, the lack of a covered market probably indicates that this was not a town noted for its commerce (on the limited economic activity of the entire area, see McGowan, *The Middle Danube cul de sac*, in Huri İslamoğlu-Inan (ed.), *The Ottoman Empire and the world-economy*, Paris and Cambridge 1987, 170-7).

In the Ottoman-Habsburg war of 1094-1111/1683-99, Semendire shared the fate of nearby Belgrade: it was first taken by the Habsburgs and then re-conquered by the Ottomans. The Orthodox bishop moved to Belgrade in 1140-1/1728; this was probably a sign of the town's declining relative importance (Adolph Kunike [ed.], *Zwey hundert vier und sechzig Donau-Ansichten nach dem Laufe des Donaustromes*, comments by Georg C.B. Rummy, Vienna 1826, repr. Munich n.d.; non-paginated brochure appended to the lithographs). Nevertheless, in the early 13th/19th century, Semendire formed one of the centres of a Serbian movement for autonomy; in 1219-20/1805 local troops in rebellion against the Ottoman central government took the town, before moving on to Belgrade (J. Stoye, *Marsigli's Europe, 1630-1730: the life and times of Luigi Ferdinando Marsigli, soldier and virtuoso*, New Haven 1994, 57, 74-5, 78, 95, 109; Barbara Jelavich, *History of the Balkans, i, Eighteenth and nineteenth centuries*, Cambridge 1983, 91, 198).

Documenting the physical shape of the town at the beginning of that century, there survive two remarkable lithographs published in 1241-2/1826 (Kunike *op. cit.*, nos. 180, 181). These show that the town preserved quite a few of the characteristics described one and a half centuries earlier by Ewliyā Ćelebi. While according to Rummy's comments, the fortress lay partially in ruins, this is not apparent from the images, which show a wall surmounted by towers of different shapes and sizes and protected by a palisade. The town proper was located not on the peninsula/island but on the river banks, and there was a Muslim section surmounted by many minarets, more than the four existing in Ewliyā's time. Semendire possessed a sizeable Christian quarter as well, for there was also a church with a high steeple, rather Central European in character. Roofs and walls made for shingles still formed a notable feature of the local architecture, and the Austrian commentator remarked that the town had "a handsome appearance".

(SURAIYA FAROQHI)

**SHĀH DAGH**, a peak of the southeasternmost tip of the Caucasus range (4,253 m/13,951 feet high), the mountainous region which in mediaeval Islamic times separated the districts of *Ḳubba* from *Shamākha* [see *ḲUBBA*]. It now lies in the northeasternmost part of the Azerbaijan Republic.

**SHĀHBANDAR** (p.), lit. "harbourmaster", an official of the ports in *Šafawid Persia* and one also known on other shores of the Indian Ocean.

A lack of information from before the advent of the European maritime companies notwithstanding, it is likely the office of *shāhbandar* first appeared in Persia, and from there spread throughout the Indian Ocean basin. The precise status of the *shāhbandar* remains unclear for the early period. Moreland concluded that, while elsewhere around the Indian Ocean the term had a wide range of meaning in the 10th/16th century, in *Hurmuz* [q.v.] it clearly referred to the harbourmaster. He documents a *shāhbandar* in that port for 1521, and for 1584 the Portuguese sources identify a person with the title of *goarda mor da praya*, chief warden of the beach and customs house. The Portuguese sources also mention an official called *juiz da alfandega*, judge of the tollhouse. Already at that time the function had a political dimension as well, for at some point in the early 10th/16th century, the vizier of *Hurmuz* combined his position as governor of the port with that of head of customs.

Most of the subsequent information on the *shāhbandar* concerns the position in *Bandar 'Abbās* [q.v.] after the arrival in the Persian Gulf of the English and Dutch East India Companies in the early 17th century, and is a function of the documents generated by their agents. In the Persian sources the *shāhbandar* appears as the *dābit-i wudūth wa khurūdj*, commander of imports and exports, but he is rarely mentioned, reflecting the fact that, although the Persian Gulf trade was important to the state and the official served the central administration, the region itself was not at the centre of official attention.

The *shāhbandar* wielded considerable power in the port. He administered the payment of tolls on incoming and outgoing goods, which generally amounted to 10% *ad valorem* for both. In order to secure smooth relations, merchants were forced periodically to hand him gifts, which was really a form of taxation. Thus the Dutch and the English typically paid the *shāhbandar* of *Bandar 'Abbās* 50 *tūmāns* annually, but in 1654 we hear of local merchants being forced to pay a sum of 1,000 *tūmāns*, and in 1661 the resident Indian merchant community was made to pay a similar amount. *Shāhbanders* were also wont to make private deals with brokers, who bribed them to let goods pass. *Shāhbanders* had their own agents in other Persian Gulf ports and India and elsewhere in Persia who tried to entice merchants to patronise *Bandar 'Abbās*. There are also reports of the *shāhbandar* of *Bandar 'Abbās* terrorising the local merchants and interfering with their trade, demanding the choicest wares available at below market prices and refusing to give a transport license when they demurred.

While sharing many of his responsibilities and traits with *shāhbanders* in other parts of Asia, the *shāhbandar* in Persia resembles the ones in India and South East India more than his colleagues in the Ottoman Empire. Whereas in a place like Aleppo the *shāhbandar* was

chosen from among the wealthy local merchants, and was sometimes a Jew or an Armenian, in 11th/17th-century Persia he was invariably a political official with a fixed salary, who was sent down by the central government with the task of collecting customs revenue for the *shāh*. At the end of his term in office he had to account for his dealings and submit his financial report to the crown's financial council. The fact that in the late 1620s *Mulāyim Beg* was simultaneously the *shāh's* commercial factor and *shāhbandar* of *Bandar 'Abbās* suggests this strong nexus between politics and commerce. The reports of the maritime companies also make clear that the *shāhbandar* was a shadowing official, sent down to supervise and report on the *khān* of the town. As this surveillance was mutual, it often led to rivalry and even violent confrontations between the retinue of both officials. As was the case for most positions in *Šafawid Persia*, the post of *shāhbandar* tended to be hereditary, yet no single family managed to establish a hold over it for any length of time. For most of the 1650s, *Muḥammad Beg*, who later became Grand Vizier, and his family furnished a series of *shāhbanders*, beginning with *Muḥammad Beg* himself. Of Armenian descent, he was a *ghulām* [q.v.], one of the many originally Christian slaves from the Caucasus region who attained high political positions in *Šafawid Persia*. Georgian *ghulāms*, who by the 11th/17th century had taken over most of the administration in the country, infiltrated the position as well. In 1669 it was reported that the new *shāhbandar* was a Georgian *ghulām*.

Several changes occurred in this same period. Until 1656 the port of *Kung* fell under the jurisdiction of *Lār* [see *LĀR, LĀRISTĀN*]. When *'Avāḍ Beg* left his post as *khān* of *Lār*, a separate governor-cum-*shāhbandar* was appointed for *Kung*, apparently in order to improve the central government's control over its revenues. A similar motivation underlay the changes effected in the smaller ports of the Persian Gulf, which until the second half of the 11th/17th century did not have a customs house and therefore no *shāhbandar*. As this prompted those merchants keen to evade tolls and harassment in *Bandar 'Abbās* to turn to those ports, the *Šafawid* government in the mid-1660s conducted an investigation and decided to establish a customs house in *Bandar Rīg*. *Būshīhr* [q.v.], which was of minor importance, had a *shāhbandar*, too, at this point. Smaller ports must have remained under the jurisdiction of local *shuykh*s.

In a more structural change, the position of *shāhbandar* of *Bandar 'Abbās* began to be farmed out in this period. Until the reign of *Shāh Sulaymān* (1077-1105/1666-94), each individual port had its own customs official and the office of *shāhbandar* had rotated on an annual basis. Mismanagement, corruption and the attendant dwindling income from customs in the early 1670s prompted the *Šafawid* government to consolidate the customs administration by bringing it under the control of one official, who now farmed the post for six to eight years at a fixed salary and a stipulated revenue of 24,000 *tūmāns*. (Chardin claims that the change came in 1674, but it is more likely that it was part of a series of reforms effected by the Grand Vizier *Shaykh 'Alī Khān* in 1671-2.) The term of a given official might be prolonged after expiration. Thus in 1684, *Mirzā Murtaḍā*, having served one term, received the post for seven more years. He was also reinstated as *shāhbandar* of *Kung*. Various other sources report that, ten years later, the *shāhbandar* of *Kung* acted both as customs official and as *dārūgha* [q.v.], or mayor of the town, and that he

farmed the customs of Kung, Bandar 'Abbās and Bandar Rīg, for an annual sum of 20,000 *tūmāns*.

Būshīr in the mid-12th/18th century offers an example of an Armenian *shāhbandar*—as opposed to a *ghulām* who had been made to convert to Islam. This person, named Kh<sup>h</sup>adjia Mellelsk, was a subordinate of the *shāhbandar* of Bandar 'Abbās. In 1748 the town's governor, Shaykh Nāsīr, usurped the position. This may have set a precedent, for in the 19th century the head of customs in Būshīr appears to have been the port's *khān* or *kalantar* [q.v.] or mayor, rather than a *shāhbandar*. Beginning in ca. 1850, when the port's trade began to flourish, customs were collected by a private functionary called the *hammālbāshī*. In Bandar 'Abbās the term *shāhbandar* long remained in use, but here, too, it was the *hammālbāshī* who in the 19th century collected customs fees. In the smaller ports, tribal chiefs or government officials called *dābīs* were usually the ones to manage the port's customs. Having become obsolete for the port towns of Persia, the term *shāhbandar* was now used for the official who represented the interests of the Turkish merchants operating within Persia.

### SHĀ'IR.

1. B. From the 'Abbāsīd period to the *Nahḍa*.

Poetic communication is part of a larger system of social communication governed by a particular set of rules and carried out by participants who are more or less aware of the value and meaning of these rules. The role of the poet is only one of several roles which are mutually co-formative. Any discussion of one of these social roles must therefore take into account the other roles. S.J. Schmidt (1992) described four action roles which are used below to inform the discussion of *shā'ir*.

(a) *Production*. In the period between 750 and 1850, poetry was composed by a very different range of people from all walks of society in the Arab speaking world. Among the producers of poetry we find caliphs and craftsmen, secretaries and slaves, religious scholars and rogues, members of noble Arab tribes or people of non-Arab descent, rich and poor, famous and infamous. Of the three main panegyrist of the 3rd/9th century, Abū Tammām (d. ca. 231/845 [q.v.]) was of Christian descent (and embarrassed by this fact), and had to earn his living as a weaver's assistant and a water carrier in his early years; Ibn al-Rūmī (d. 283/896 [q.v.]) was of Christian (Byzantine) descent as well (and proud of it), whereas al-Buhtūrī (d. 284/897 [q.v.]) was of pure Arab stock and grew up in a tribal milieu.

There was no uniform group of poets, nor was being a poet considered a specific profession with an established and definitive course of study or a canon of specific knowledge to be learned. Instead, everybody who had learned to compose poetry that met with common approval was called *shā'ir*. Professional poets during the 'Abbāsīd period were primarily court poets who were financially dependent on the favour of a patron. In later periods, poets most typically came from the ranks of the '*ulamā'*'. During the whole of the period in question, however, it was taken for granted that every educated person had the ability to take part in poetic communication, at least in the role of a receptive listener/reader. Therefore, poetry composed by professional poets forms only one segment of the poetry composed, esteemed and transmitted. Even those poets who can be considered professional poets often played more than the role of producer of poetry and engaged in processing literature as anthologists, critics, or philologists. Given this multi-layered situation, the role of poets and poetry in Arabic-Islamic society can be appreciated properly only if the whole of the system of poetic communication is taken into account. This is even more important given that poetic communication played an incomparably much higher role in pre-modern Arabic societies than in modern societies.

(b) *Mediation*. The oral recitation of a poem by its producer has always been considered the basic means by which poetry was made accessible to others. Professional singers were not only important but often even famous transmitters of poetry from the latter

Umayyad period onwards, not only in courtly arenas but also in other well-to-do households. Written transmission in the form of letters or books also played an increasingly important role. The output of individual poets was often collected in the form of a *diwān*, frequently by those other than the original poets themselves. For example, it was Abū Bakr al-Šūlī (d. ca. 335/947 [q.v.]) who collected the *diwāns* of Abū Nuwās, Abū Tammām, Ibn al-Rūmī and others. Of enormous importance for the transmission of poetry were anthologies [see *MUKHTARĀT*] and other works of *adab*. Both linguistic and historiographical works as well as collections of biographies contain a great deal of poetry. Religious texts of an edifying nature and Sūfī works are hardly to be found without poetry. After the rise of the *madrasa* [q.v.], the formal parameters of poetry (metre, rhyme) and peculiarities of literary language [see *AL-MA'ĀNĪ WA 'L-BAYĀN*] would become part of the propaedeutic discipline of *adab* (in this case meaning the whole of linguistic disciplines). Poetry itself, however, was not a regular subject in the curriculum. Only the most famous works, such as the *Diwān* of al-Mutanabbī and the *Maḳāmāt* of al-Ḥarīrī, were taught within an academic framework. Story-tellers and preachers [see *ḲĀSṢ*] included poems in their speeches and thus contributed to their own popularity among the masses. As a whole, the process by which poetry was imparted has not yet been studied adequately.

(c) *Reception*. Poetry was an everyday commodity. A poet could "réciter une *qaṣīda* à son entourage, à ses amis, à des confères. Qu'il aille dans les souks de la ville, parcourt ses rues, fréquente les cabarets de ses faubourgs et leurs jardins, descende son fleuve, ses canaux ou se poste sur l'un des ponts . . . ou sous les arcades de mosquées, dans le demeure d'un bourgeois ou d'un prince, partout . . . il peut déclamer sans étonner, parler d'amour sans surprendre, pleurer de douleur sans choquer" (Bencheikh, 38). Poetry was an effective system of communication in which a substantial part of the population took part and by which the emotional and affective requirements of the people were met. People listened to poetry for its social, emotional, and intellectual effect [see *ṬARĀB; TA'ADJUB*], and it was considered the poet's task to convey information and to stir emotions, curiosity and interest rather than to express his own feelings. Modern modes of reception, influenced by the cult of the poet as a genius who is expected to be more in touch with deeper feelings and thoughts than other people, and the individualistic notion of poetry as a means to express one's very own and specific emotions, have often led to misconceptions about pre-modern Arabic poetry. Whereas modern and individualistic conceptions of poetry have fostered an acceleration of literary change, they have also led to an increasing social marginalisation of poetic communication. By contrast, although the pre-modern understanding of poetry as a social activity resulted in a greater stability of literary forms and content, it nonetheless allowed poetry to remain effective and meaningful for a wide range of people over the whole period considered here and thus allowed a greater sector of the population to participate in elaborate artistic activities.

(d) *Processing*. The Arabic pre-Islamic literary and cultural heritage forms, next to Islam itself, one of the two foundations of Arabic-Islamic culture. The collection of and commentary on pre- and early Islamic poetry therefore was one of the primary activities in the first centuries of Islamic scholarship. The disci-

plines of grammar and lexicography owed their development more to the need to comment upon ancient Arabic poetry than upon the normative texts of Islam. This creation of a consciousness of poetry was one of the prerequisites for the rise of the scientific study of contemporary poetry and of literary criticism by the 3rd/9th century. These disciplines cannot be dealt with here (see the overview by Ūyang), but it should be remarked that, during the 'Abbāsīd period, literary history and criticism was a discourse clearly separated from the production of poetry itself, notwithstanding the exertion of mutual influence. Among the major poets, only Ibn al-Mu'tazz and Ibn Rashīq were famed theorists as well. The Mamlūk period, in which the merger of a secular and religious discourse had already been perfected, witnessed the complete synthesis of poetic production, on the one hand, and literary theory and rhetorics on the other in the form of the *badī'iyya* commentaries by Ṣafī al-Dīn al-Hillī (d. probably 749/1348 [q.v.]) and Ibn Hidjdja al-Ḥamawī (d. 837/1434 [q.v.]), among others.

Other important forms by which literature was processed are various forms of intertextuality such as the *mu'arāḍa* or the *takhmīṣ* [q.v.], in which a poet transforms a given poem into a new work of literature following special rules. These techniques should be understood within the framework of similar forms of appropriation-cum-transformation of the scholarly, cultural and literary heritage of Islamic culture, such as the commentary (*sharḥ* [q.v.]) or the abbreviation (*mukhtaṣar* [q.v.]).

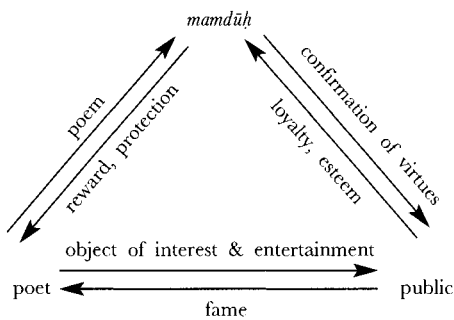

Four important social environments provided a framework for educated poetic communication between the Umayyad and the modern period.

#### i. *The Court*

Throughout the entirety of the 'Abbāsīd period, the courts of the caliph(s), provincial rulers, governors and the court-like households of viziers, generals, and other high officials served as centres of literary activity of preeminent importance. Two kinds of literary activities should be distinguished here: first, the recitation of panegyric poems as part of the official representation of the ruler; and second, poetry as part of court entertainment.

Panegyric poems [see *MADĪH*] formed the most important political discourse throughout a great deal of Islamic history. In panegyric poems, the subject personage was described as an embodiment of royal virtue, above all in terms of military prowess and generosity. The recollection of these virtues simultaneously confirmed and reinforced them, for society as well as for the ruler himself, and by confirming the ruler's ideal fulfillment of these normative values, the poems contributed to his legitimisation. Further, they served to spread the news of important events (such as battles won), and helped to memorialise them and to locate them and their protagonists within a broader historical context.

To understand the mechanism of the panegyric poem, it is important to bear in mind that the patron, to whom the poem is addressed (the *mamdūh*), is not identical with the intended public of the poem. Of course, panegyric poems could fulfil their political and social role only if a general interest in them was granted. Therefore, the dichotomy of the poet and the *mamdūh*, which appears in the texts themselves, should be expanded to a triangle with the "public" as third participant. Each of the three participants in this form of communication acted in a mutually informative give and take. This triadic interplay can be generally schematized as follows:

Given the first-rank importance of the panegyric-political discourse as a means of representation and legitimisation, even rulers who had no feeling for poetry could hardly afford not to patronise poets. On the other hand, many rulers and princes pursued an intense interest in poetry, had expert knowledge at their disposal, and often composed poetry themselves. Just to mention a few, the caliph Hārūn al-Rashīd (d. 193/809; his sister the princess ‘Ulayya bt. al-Mahdī (d. 210/825); the prince Ibn al-Mu‘tazz (d. 296/908), one of the greatest men of letters of the ‘Abbāsīd period; the caliph al-Rādī bi ‘llāh (d. 392/940); the Hamdānīd Sayf al-Dawla (d. 356/967); and the Ayyūbid Abu ‘l-Fidā’ (d. 732/1331) [q.v.] and other members of this dynasty. In such cases, where the *mamduh* assumed both the role of the patron as well as the role of the public, poets had to accommodate their poems not only to general panegyric standards but also to the personal taste of the patron. To mention two examples: al-Buḥturī replaced the traditional *nasīb* [q.v.] with all its intertextual strands with the more modern genre of *ghazal* [q.v.] in order to meet the taste of al-Mutawakkil, who had less literary training than his predecessors. Ibn Nubāta al-Miṣrī (d. 750/1349 [q.v.]) faced the opposite problem after the death of Abu ‘l-Fidā’ and tried to win the favour of his pious and ascetic successor by replacing the *nasīb* of his panegyric odes with ascetic poetry.

Panegyric poets hoped for an immediate reward for any given poem, which often reached rather exorbitant sums of money. Considering the fact that generosity was one of the main virtues praised in the panegyric odes and that the poet offered himself as a first object for the demonstration of this generosity, the exchange of poem for reward assumed the character of a ritual exchange. If successful, poets could even hope for a permanent patronage of the ruler, thus being spared having to wander from patron to patron. Al-Mutanabbī, the pre-eminent panegyric poet of the times, spent several years in search of a permanent patron, eulogising Bedouin chiefs and second-rank provincial dignitaries until he found the favour of Sayf al-Dawla, at whose court he spent nine untroubled years, only to start the search anew after an intrigue by his fellow-poets forced him to flee Sayf al-Dawla’s court. In addition to material gains, success at a court could also provide for a broader fame of a poet due to the public nature of his task as a panegyrist. In any case, gaining the favour of patrons through panegyric poetry was nearly the only way to make a living as a professional poet during the ‘Abbāsīd period. Poets who did not have an administrative or scholarly position as a starting-point therefore had to earn their living as a copyist or craftsman, or with similar jobs until they gained enough fame

to be able to live as a full-time poet. Competition for a position as court poet must have been rather rigorous. Therefore, it is small wonder that the relations between the poets enjoying the favour of a certain patron is often characterised by envy, polemics and intrigues. The relations between al-Mutanabbī, Abū Firās and the Khālīdī brothers offer a good example. Dependent as poets were on the favour of their patron, they were not completely powerless in turn. If they felt that they were treated unjustly, they had the possibility of taking revenge by composing satires (*hiǧā’* [q.v.]), and the satires of a famous poet could prove to be a sharp weapon indeed. Again, al-Mutanabbī—an extraordinary self-confident poet—provides us with examples in his invectives against the Ikhshīd ruler Kāfūr [q.v.]. Many poets, however, experienced feelings of humiliation when forced to “beg” for monetary reward for their poems, as is repeatedly told in their biographies.

The circumstances under which courtly panegyric poetry was performed have been only little studied so far. Obviously, panegyric poems were often performed as part of public ceremonies, during a *maǧlis* or a banquet. The poems that were recited may have been pre-selected by court officials (al-Ḳifī, *Inbāh*, iv, 149). How these poems became known by a broader public has not yet been explored in detail. The poets themselves, philologists, compilers of anthologies and literary critics may have participated as mediators in this process. In the end, however, this process must have been rather effective, since in most books on literary criticism, panegyric poetry is given privileged interest, and anthologies and chronicles overflow with quotations of eulogies. Since without the participation of the recipients, the process of panegyric communication must have been ineffective as a whole, the study of this part must be considered a major desideratum.

In addition to the ritual and public performance of panegyric poetry, courtly life offered a great many other opportunities for poetry making. Hunting excursions provided an opportunity for the recitation of hunting poetry (*ṭarǧīyya* [q.v.]); banquets and musical gatherings gave rise to the presentation of wine poetry [see KHAMRIYYA], love poetry and other genres. On these occasions, the ruler was accompanied by his *nudamā’* “boon-companions” (sing. *naḍīm* [q.v.]), a group of talented people from various fields. Even the office of the *naḍīm* was institutionalised at the ‘Abbāsīd court. Poetry played a prominent role in the gatherings of the ruler and his *nudamā’*, and was practiced not only by professional poets but also by *nudamā’* with other professions. And poetry itself, both ancient and contemporary, was often the subject of conversation in the *maǧlis*. It must be stressed that the kind of poetry recited and sung in these courtly environments was not fundamentally different from that practised outside the court in urban milieux. Therefore, a common term like “courtly love” characterising the relations between lover and beloved in a current type of love poetry (*ghazal*, *nasīb*) is misleading, since love poetry sung at caliphal banquets in no way differed from the poetry that was popular in other social environments. Instead, it was rather the ideals, ethical models, and literary tastes of the *udabā’* and *kuttāb* which dominated at the courts [see ZARF]. *Nudamā’* circles also existed in the households of viziers and high-ranking *kuttāb*, and the same people practised their poetic skill in circles of philologists and *udabā’* as well as in their role as *naḍīm* at the court.

In the period after the fall of the ‘Abbāsīds and

Ayyūbids, the importance of the court for Arab literary culture decreased considerably. Though panegyric poems in the Arabic language were still composed about Mamlūk and Ottoman sultans (and poets duly rewarded for them), the Mamlūk and Ottoman courts no longer offered the resources for a vivid literary culture in Arabic language. One of the main reasons for this development is, of course, the fact that rulers of these dynasties often had only limited (if any) command of the Arabic language. But it should also be borne in mind that, whereas in the 'Abbāsīd period political authorities were part of the culture of the civilian non-religious élite of the *kuttāb* and were eager to see their legitimisation expressed in the medium of poetry common to both, the post-'Abbāsīd period witnessed the merger of a religious and non-religious élite, which now formed a counterpart to the military élite which no longer shared this culture. Rather than poetry, Mamlūks instead patronised architecture to an hitherto unprecedented extent.

### ii. The *kuttāb*

At least in the 3rd and 4th/9th and 10th centuries, the class of the secretaries (*kuttāb*, sing. *kātib* [q.v.]), which formed a rather homogenous group with a distinct group consciousness, had no lesser influence on the shaping of Islamic culture than the group of religious scholars. This is especially true in the field of literature. The *kuttāb* were the bearers and main exponents of the culture of *adab* [q.v.], which meant not only producing a certain type of literature but also adhering to an ideal of education, knowledge, manners and conduct, which became manifest in the literature called *adab*. Of course, not every *adīb* was a *kātib*, but the *kuttāb* serve as its most typical embodiment.

For the *kuttāb*, poetry had a multitude of functions. Some of them, to mention a few, are as following:

(a) Perfection in artistic prose and poetry was a prerequisite for other responsibilities. These included drafting and writing official letters and administrative correspondence in which they showed their mastery of linguistic correctness and stylistic sophistication.

(b) *Kuttāb* were expected to be able to compose poetry. In this context, it seems plausible that the first dictionary that was arranged according to rhyme consonants and rhyme schemes, the *Kiṭāb al-Taḥfīya* by al-Bandanīdjī (d. 284/897; Sezgin, *GAS*, viii, 170-1) was in all probability addressed to the *kuttāb* who needed to find rhyme words for their poetic compositions.

(c) Poetry formed part of the encyclopaedic knowledge *kuttāb* were supposed to have.

(d) Genres like love and wine poetry, besides being entertaining and emotionally affective at an individual level, were especially suitable for not only expressing the refined *Weltanschauung* of this group [see ZARĪF] but also for displaying their literary taste.

(e) Literature of the *adab* type in prose and poetry was part of the *kuttāb*'s life-style and its practice served to strengthen their group identity.

Some of the *kātib* poets typical of the 3rd/9th and 4th/10th centuries were: al-'Utībī (d. 228/852-3), Ibn al-Zayyāt (d. 233/847), the *ghazal* poet Khālid b. Yazīd al-Kātib (d. ca. 262/876), al-Nāshī' al-Akbar (d. 293/906), Ibn Bassām (d. 303-4/914-15), Abū Ishāq al-Šābi' (d. 384/994), Ibn 'Abbād (d. 385/995) [q.v.], and Ibrāhīm al-Sūlī (d. 243/857). The influence of the *kuttāb*, however, went far beyond their activity as poets: more importantly, they shaped the culture of *adab*, which proved equally dominant in courtly milieux as well as in the urban middle class in general. A sharp distinction between the court and the *kuttāb* cannot be drawn in any event, since *kuttāb* were

themselves part of the courts. Many of them participated in the composition of panegyric poetry and fulfilled the duty of *nadīm*. Many officials had risen to positions in which they acted as patrons for poets themselves.

### iii. The 'ulamā'

Islamic normative texts (the Qur'ān, esp. XXVI, 224-7; *Hadīth*, see Bonebakker) display an ambiguous stance towards poetry which resulted in different interpretations, ranging from outright prohibition of many of its forms to a mild disapproval of the more entertaining and morally dubious genres like wine poetry and satire. Thus, in the first centuries, 'ulamā' rarely felt encouraged to take part in a form of communication that was dominated by the secular élite. Yet religious scholars required knowledge of pre- and early Islamic poetry in order to be able to comment upon Qur'ān and *Hadīth*, and some of them composed at least poetry of the *zuhdiyya* [q.v.] genre, as the collection of poetry ascribed to al-Shāfi'ī (d. 204/820 [q.v.]) demonstrates. Due to its emotional effectiveness, poetry of the *zuhdiyya* genre, as well as love poetry was used in sermons. However, scholars were rarely proficient poets, and in his collection of the biographies of linguistic scholars, al-Kifīī repeatedly speaks with derision of grammarians and other scholars who "composed verses of the kind of the poetry of grammarians (*nūḥāt*)/scholars ('ulamā'") (al-Kifīī, *Inbāh*, iii, 219, 263, 267, 288, 343, iv, 165). Nevertheless, from the latter 'Abbāsīd period onwards, there is an increase in the number of 'ulamā' who were composing poetry in different genres. A few *kādīs* and *muḥaddithūn* are already mentioned in al-Tha'ālibī's [q.v.] anthology titled *Yāfimat al-dahr*, which contains poetry from the second half of the 4th/10th century. By the time of 'Imād al-Dīn al-Isfahānī's [q.v.] anthology, the *Khawādat al-ḥaṣr*, which covers poets from the 6th/12th century, the number of 'ulamā' composing poetry and the quality of their poems had obviously increased considerably. Here, in this period of transition, we can witness the gradual merger between the *adab*-oriented culture of the *kuttāb* and the *sumna*-oriented culture of the 'ulamā' (Bauer, *Raffinement*; Homerin, *Preaching poetry*). From the Saljūq period onwards, the *kuttāb* gradually ceased to be a distinct social group with their own cultural values. Instead, the duties of the *kātib* came to be fulfilled by people who had received the training of a religious scholar. The result, as it becomes very obvious during the Mamlūk period, was a rather homogeneous group of 'ulamā' who had become the bearers of Islamic religious as well as secular culture. Remarkably, this development did not prove detrimental to literary culture. Instead, the process of "ulamā'isation of *adab*" was counterbalanced by a process of "adabisation of the 'ulamā'", who in the meantime had made the *adab* discourse of the *kuttāb* their own. Though the political relevance of poetry decreased, its relevance for the civil élite increased, so that one can speak of a process of privatisation of poetry. Poetry became a pre-eminent medium of communication between 'ulamā', and this medium included panegyric poetry, which now became addressed from one 'ālim to the other rather than to rulers and military leaders. For the 'ulamā', it would become more and more important to be able to take part in this form of poetic communication. Consequently, the poetry of the Mamlūk period grew more personal and more interested in private matters. The merger of the secular and religious élite into a new group which shared to a considerable extent the values and ideas of the old religious élite, but which also had appro-

prised the literary culture of the old secular élite, led to an unprecedented rise of religious poetry. Since also the boundaries between high and popular culture became blurred, the percentage of the population taking part in a rather homogeneous literary culture became larger than ever. The Mamlūk period, therefore, may have been the period which displayed the broadest literary culture in Arab history.

The Ottoman period has not been studied well enough to allow a more detailed assessment. At least, it is beyond doubt that the 'ulamā' still played the most important role in poetry. Arabic poetry at this time may have witnessed a decrease in its local importance, but at the same time could expand its geographical range due to the increasingly global and cosmopolitan character of the 'ulamā'. Texts displaying a very similar literary taste were composed in Sub-Saharan Africa as well as in the Indian subcontinent. Locally, Šūfī circles seem to have developed into one of the main centres of the production of poetry.

#### iv. Urban milieux

A study of the involvement of different social environments of the urban middle classes in the poetic discourse has not yet been carried out. However, it is clear from countless hints in the sources that poetry in the standard language and the established genres was esteemed and even produced among craftsmen, merchants, and in similar milieux. The site of Abū Nuwās's (d. ca. 196/813 [q.v.]) wine poems is not only the courtly banquet but also the tavern. Another and rather different urban milieu was that of the *zurafā'*, in which the poems of al-'Abbās b. al-Aḥnaf [q.v.] are set. Several little-known poets mentioned in Ibn al-Mu'tazz's *Ṭabaqāt al-šū'arā'* bear names pointing to crafts, and even professional poets like Abū Tammām had to earn their living by manual work before they were famous enough to live from their poetry. In any case, social boundaries were not as strict as in Europe, and people of low descent and non-privileged social positions were not in principle excluded from taking part in high culture.

In the 4th/10th century we find a baker (al-Khabbāz al-Baladī, see Sezgin, *GAS*, ii, 625-6), a fruit-seller (al-Wa'wā' [q.v.]), and a darter (al-Sarī al-Raffā' [q.v.]) among the well-known poets of the age. Another poet, al-Khubzā'aruzzī [q.v.], was a baker of rice bread in Bašra and became famous as a *ghazal* poet. Young men from all over the town used to visit his shop in the hope of becoming the object of one of his love poems. By quoting poems by al-Aḥnaf al-'Ukbarī, al-Tha'ālibī (*Yatīma*, ii, 122-4) allows a glimpse of the poetry of the vagabonds [see *SĀSĀN*, *BANŪ*]. These poets owe their lasting fame to the fact that representatives of high culture took an interest in their productions, but they may also be taken as evidence of the kind of interest in poetry that cut across different levels of society.

Sources are much more copious for the Mamlūk period, during which a convergence between high and popular culture is attested. The most representative figures of popular poetry (in standard Arabic, as well as in dialect), appealing to 'ulamā' and people of the street alike, were Ibrāhīm al-Mi'mār for the 7th/13th and Ibn Sūdūn for the 8th/14th century. These and quite a few of other similar, often illiterate figures represent a "missing link" between modern forms of popular literature and time-honoured forms, themes, and motives, and thus point to the fact that Arabic literary culture was not the exclusive prerequisite of a small élitarian group, but was, at least in its fun-

damental parameters, ideas and way of achieving emotional effects, shared by a broad sector of the population.

During the Mamlūk and Ottoman periods, religious poetry was extremely popular in all urban environments. Šūfī poetry, prayers [see *WIRD*] and poems in praise of the prophet [see *MAWLIDIYYA*] were composed and recited among adherents of the Šūfī orders [see *ṬARĪKA* and *TAŠAWWUF*], which were deeply rooted in the middle classes.

During all periods, different forms of folk poetry co-existed alongside poetry which was eventually written down. In many environments, both written and oral forms of poetry influenced each other, and sometimes it is not easy to draw a clear boundary between them. Other forms of poetry transmitted only orally existed without being noticed by the educated. So, for example, Bedouin poets continued to compose poetry in a style reminiscent of pre-Islamic poetry throughout the centuries. This can be deduced by the existence of the so-called *nabaī* poetry [q.v.] which has been recorded from the 19th century onwards and is still practised in the Arabian peninsula even today. For further information about the complex of folk poetry, see *SHĀ'IR*. 1. E. The folk poet in Arab society, at Vol. IX, 233b.

*Bibliography*: Only a small selection of relevant sources and studies can be noted here. In principle, all *diwāns*, anthologies, and biographical dictionaries are fruitful sources of relevant information. (T. BAUER)

**SHAKHAB**, (BATTLE OF) [see MARDI AL-SUFFAR].

**SHĀLĪSH**, also written **DJĀLĪSH**, a term referring to either the vanguard of an army or a flag raised to signal the announcement of a campaign. The word is of Turkish origin, derived from *Čalış*, meaning "battle" or "conflict" (see G. Doerfer, *Türkische und mongolische Elemente in Neupersischen*, Wiesbaden 1963-75, iii, 32). It appears in Persian during the late Saldjūk era (Rāwandī, *Rāhat al-sudūr*, ed. M. Iqbāl, GMS, NS, 2, London 1921, 347), with the meaning of "battle"; in Arabic, it is found in works of the Ayyūbid and Mamlūk times (see below). It is unclear whether it entered Arabic via the Persian or was adopted in the former language directly from Turkish military men.

1. In the sense of advance troops of a rather general nature, the term is found in the description of the battle of Hiṭṭin [q.v.] in 584/1187, where we find *ḡālīshīyya* (Bahā' al-Dīn Ibn Shaddād, *Nawādir al-sultāniyya*, Cairo n.d., 61 = tr. D.S. Richards, *The rare and excellent history of Saladin*, Aldershot 2001, 73; Ibn al-Aṭhīr, *Kāmil*, Beirut 1987, xi, 146). In the early Mamlūk period, it is used on the one hand as a synonym for *ṭalī'a*, advanced scouts or vanguard, as at the battle of 'Ayn **Djālūt** [q.v.] in 658/1260 (cf. Ibn al-Dawādārī, *Kanz al-durar*, viii, ed. U. Haarmann, Freiburg-Cairo 1971, 49, with al-Makrīzī, *Sulūk*, Cairo 1934-73, i, 430). On the other hand, in the battle of Hims [q.v.] in 680/1281, *ḡālīsh* is used in the sense of *muḡaddama*, i.e. the large forward division of the Mamlūk army (Baybars al-Manṣūrī, *Zubda*, ed. Richards, Beirut 1998, 197). The term was not only applied to the Mamlūk army; in 699/1299, the *ḡālīsh* of the Il-Khān Ghāzān [q.v.] passed by Ḥalab on the way south (al-Makrīzī, *Sulūk*, i, 885); the exact intention, i.e. whether it was a small reconnaissance unit or a large advance division, is unclear from the context.

2. In the sense of a flag raised above the *ṭablkhāna* [q.v.], see D. Ayalon, art. **HAB**, iii, above, Vol. III, at 184. Ibn **Khaldūn** (*Muḡaddama*, ed. Muṣṭafā Muḡammad, Cairo n.d. = tr. Rosenthal, ii, 52), writes that in the Mamlūk state (*dawlat al-turk*), a large flag (*rāya*) surmounted by a big tuft of hair (probably of a horse) was called a *shālīsh*, and that it was a sign of the sultan. It would seem that the use of the word for the flag used to declare preparations for a campaign was secondary to the meaning given above, sc. the advance force or vanguard. The sense of flag was derived perhaps from the advance force which may have carried it.

*Bibliography*: Besides the sources and studies given above, see E. Quatremère, *Histoire des sultans mamlouks de l'Égypte*, Paris 1837-45, i/1, 225-7 (with numerous examples from the Ayyūbid and Mamlūk sources giving both contemporary meanings); Dozy, *Supplément*, i, 168.

(R. AMITAI)

**SHAMIR** (also al-Shamir, commonly **Shimr**) v. **DHI 'L-DJAWSHAN** Abu 'l-Sābigha, often portrayed as one of the killers of al-Ḥusayn b. 'Alī [q.v.]. Shamir's father, **Shurabbīl** (or **Aws**) b. **Qurṭ** (various forms of the name are given), was a Companion of the Prophet who settled in al-Kūfa.

Shamir fought at **Siffin** [q.v.] on 'Alī's side, receiving a sword wound to his face (al-Minkarī, *Wak'at*

*Siffin*, ed. 'A. Hārūn, Cairo 1401/1981, 268; al-Ṭabarī, i, 3305). Subsequently he changed sides and became a supporter of the Umayyads. In 51/671 he testified against **Ḥudjr** b. 'Adī [q.v.] (*ibid.*, ii, 133); nine years later, 'Ubayd Allāh b. **Ziyād** [q.v.] recruited him and other tribal notables to quell the revolt of Muslim b. 'Aḳīl [q.v.]. When al-Ḥusayn was intercepted at Karbalā', he appealed in vain to Shamir and others to let him go to the caliph Yazīd (*ibid.*, ii, 285). Shamir prevailed upon Ibn Ziyād to adopt an uncompromising attitude towards al-Ḥusayn; Ibn Ziyād thereupon gave him a letter ordering 'Umar b. Sa'd to kill al-Ḥusayn should he refuse to submit to Ibn Ziyād's authority, and warning 'Umar that if he failed to obey this order he would be replaced as commander by Shamir (*ibid.*, ii, 315-6). 'Umar reluctantly obeyed and put Shamir in charge of the foot-soldiers (al-Balāḡhurī, iii, 391; al-Ṭabarī, ii, 317). On 9 Muḡarram 61/9 October 680, as 'Umar was making final preparations to do battle with al-Ḥusayn, Shamir offered a safe-conduct to three (or four) sons of 'Alī by Umm al-Banīn bt. Hizām, who belonged to Shamir's tribe, the Banū Kīlāb; the sons rejected the offer, insisting that al-Ḥusayn, too, should be granted safe-conduct (al-Balāḡhurī, iii, 391; Ibn A'tham, iii, 105; cf. al-Ṭabarī, ii, 316-7).

The next morning—the Day of 'Āshūrā'—'Umar put Shamir in command of the army's left wing (*ibid.*, ii, 326). Shamir intended to burn down al-Ḥusayn's tent with the women and children inside, but was shamed into withdrawing (*ibid.*, ii, 346-7) and acceded to al-Ḥusayn's request to spare them (al-Balāḡhurī, iii, 407; al-Ṭabarī, ii, 362). Shamir's role in the death of al-Ḥusayn is disputed in the sources. While some accounts merely refer to his participation in the battle (e.g. Ibn 'Asākir, xxiii, 186), he is more usually said to have instigated the final assault, while yet other reports explicitly mention him as having killed al-Ḥusayn (al-Wāḳidī, in al-Balāḡhurī, iii, 418; al-Iṣfahānī, 119; Ibn Ḥazm, *Djāmharat ansāb al-'arab*, ed. 'A. Hārūn, Cairo 1382/1962, 287), as having decapitated his corpse (al-Ṣafādī, xii, 425, xvi, 180), or both (al-Maḡjīlī, xlv, 56; cf. al-Ṭabrisī, 250). This conflicts with reports that it was Sinān b. Anas al-Nakha'ī who killed al-Ḥusayn and decapitated his body (Abū Mikhnaf, in al-Ṭabarī, ii, 366), or that Sinān killed him and **Khawālī** b. Yazīd al-Aṣbaḡī cut off his head (al-Balāḡhurī, iii, 418; cf. Ibn 'Abd al-Barr, i, 393). In the *ta'ziya* [q.v.] passion plays, Shamir is habitually presented as al-Ḥusayn's killer (Chelkowski, 15, 106, 110, 146-7, 159, 165; Ayoub, 127) and as more evil even than Sinān (Virolleaud, 94-5; Chelkowski, 160).

After the battle, Shamir was about to kill al-Ḥusayn's son 'Alī [see ZAYN AL-'ĀBIDĪN], but was prevented from doing so (Ibn Sa'd, i, 480). Shamir led the Hawāzin, who formed one of the contingents that brought the heads of the fallen warriors to Ibn Ziyād (al-Ṭabarī, ii, 386; Ibn Tāwūs, 85); later he accompanied the survivors to Damascus (al-Ṭabarī, ii, 375). An address is preserved in which he recounts to Yazīd the events of Karbalā' (al-Dīnawarī, 260-1, cited in D.M. Donaldson, *The Shi'ite religion*, London 1933, 102-3; this same address, however, is also ascribed to Zahr b. **Ḳays** al-Dju'fī: see al-Ṭabarī, ii, 374-5). Back in al-Kūfa, Shamir is said to have repented of his actions, explaining that he had been duty-bound to obey Ibn Ziyād (al-Dhahabī, *Mizān al-'iḡdāl*, ed. 'A. Mu'awwad and 'A. 'Abd al-Mawḡūd, Beirut 1416/1995, iii, 385; cf. Ibn Sa'd, i, 499; Ibn 'Asākir, xxiii, 189).

In 66/686 Shamir was among the **Kūfan aṣhrāf** who rose against al-Mukhtār [q.v.]. After they had

been defeated at **Djabbānat al-Sabī'** (in al-Kūfa), al-Mukhtār sent his slave Zirbī in pursuit of **Shamir**, but **Shamir** attacked and killed him (al-Balādhuri, vi, 407; al-Ṭabarī, ii, 661). Unlike many of the defeated leaders, **Shamir** did not flee to al-Baṣra, but went to Sādama/Sātidamā (apparently between al-Kūfa and al-Baṣra) (al-Dīnawarī, 302; al-Ṭabarī, ii, 662) and then encamped by the village of al-Kaltāniyya (or al-Kalbāniyya) (*ibid.*, ii, 662; Ibn 'Asākir, xxiii, 191). From there he sent a letter to Muṣ'ab b. al-Zubayr [q.v.] in al-Baṣra. The letter was intercepted by one of Abū 'Amra's men [see KAYSĀN], and its carrier revealed **Shamir's** hiding-place, to which cavalymen were dispatched. **Shamir**, realising that he was surrounded, tried to fight his way out but was killed by one of the attackers (al-Balādhuri, vi, 407; al-Ṭabarī, ii, 663). According to one report, Abū 'Amra sent the badly wounded **Shamir** al-Mukhtār, who killed him (al-Maḍlīsī, xiv, 338). Elsewhere **Shamir** is said to have been killed at al-Madhār (on the Tigris) and his head brought to al-Mukhtār, who sent it on to Muḥammad Ibn al-Ḥanafiyya [q.v.] in Medina (al-Dīnawarī, 305).

**Shamir's** grandson al-Ṣumayl b. Hātim [q.v.] played a prominent role in al-Andalus before the establishment there of the Umayyad dynasty.

**AL-SHARAF**, more exactly **Sharaf Ḥadījūr** or **Sharaf Ḥadījda**, the mediaeval name of a mountainous

region of northern Yemen, some 100-120 km/62-75 miles northwest of Ṣan'ā', today called **al-Sharafān/al-Sharafayn**. The extended forms of the name are to distinguish it from several homonymous **al-Sharafs**, **Ḥadījūr** being a tribal name and **Ḥadījda** a nearby town. The form **al-Sharaf** survives today only in the toponym **Kuḥlān al-Sharaf**, a local town (lat. 16° 02' N. and long. 43° 28' E.) and its district. The dual form appears already in Ayyūbid times, when **al-Sharaf** al-Asfal and **al-Sharaf** al-A'lā are distinguished (see e.g. G.R. Smith, *The Ayyūbids and early Rasūlids in the Yemen*, London 1974-8).

The chain of the **Djibāl al-Sharafayn** reaches an altitude of 2,180 m/7,150 feet, forming an arc overlooking the coastal **Tihāma**. The massif gives its name to a *kaḍā'*, with the chef-lieu of al-Mahābīsha in the province (*muḥāfazza*) of **Ḥadījda**. In the early 1980s, the population of the region was ca. 220,000, these being **Zaydīs**, with the **Banu 'l-Sharafi**, 'Alid descendants of the founder of the **Zaydī** dynasty of Yemen, being the most important lineage there.

**Al-Sharaf** al-A'lā denotes the northern part of **al-Sharafān**, whereas **al-Sharaf** al-Asfal denotes the slightly lower, more southern region, although it seems that in the time of al-Ḥamdānī (4th/10th century), the former denoted another region, that of **Sharaf Akyān** or **Shībām Akyān** (modern **Shībām Kawkabān**), to the southeast (ed. Müller, 107 ll. 17-18, 135 l. 8). The name of **al-Sharafān** appears very often in the Yemeni chronicles.

In fact, there are numerous **al-Sharafs** in Yemen, reflecting the term's basic meaning of "eminence, height", hence it is not surprising that **Yāḳūt** had difficulty distinguishing various homonyms (see **Ismā'īl al-Akwa'**, *al-Buldān al-yamāniyya 'ind Yāḳūt al-Ḥamawī*, Kuwait 1405/1985, 155).

**Al-Sharaf** does not appear in pre-Islamic inscriptions, but **Ḥadījūr** is attested once as *Hgr Lmd* (Ja 616/25) for a small tribe belonging to the **Dawāt** federation confronting the Sabaean king **Nasha'karib Yuha'min Yuharhib** ca. A.D. 260-270 (A. Jamme, *Sabaean inscriptions from Mahram Bilqīs (Mārīb)*, Baltimore 1962, 113-17).

*Bibliography*: Given in the article. See also R.T.O. Wilson, *Gazetteer of historical North-West Yemen in the Islamic period to 1650*, Hildesheim, etc. 1989. (CH. ROBIN and AHMAD AL-GHUMARI)

**AL-SHARAF**, the modern **Aljarafe**, an *iklīm* or county situated within the *kūra* or province of **Ishbiliyya/Seville** in the **Gharb** of mediaeval **al-Andalus**. The extent of this *iklīm* varies: in **al-Rāzī**, 7,000 km<sup>2</sup> and in **al-Iḍrīsī**, 1,650 km<sup>2</sup>. Beginning from the neighbourhood of **Seville**, it stretched to the limit of the *kūra* of **Labla** in the **Gudiamar** or **Tinto** river valleys.

The Arabic sources describe the richness of its olive trees and the quality of their oil. The **Sevillans** sold this, after keeping it for two years, not only within the Iberian peninsula but also as far as the **Far Maghrib**, **Egypt** and the **Atlantic** regions of **Christian Europe**; this was an exceptional case of a specialised culture oriented towards distant markets. The most important writers of agronomy in **al-Andalus** practiced their skills in **al-Sharaf**, including **Ibn Ḥadījḍādī** (5th/11th century), **Abu 'l-Khayr** (5th-6th/11th-12th centuries) and **Ibn al-'Awwām** (6th-7th/12th-13th centuries).

Within the *kūra* of **Ishbiliyya**, the link between political authority and the great landowners is clear. The **Banu 'l-Ḥadījḍādī** and the **Banū Khaldūn** owned the greater part of the land—according to the Arabic sources, as the result of a marriage between an Arab

chief of the conquest period and Sara the Visigoth—and these two families long governed Seville.

The enemies of the Sevillans on various occasions launched raids which ravaged the *iklīm* of al-Sharaf, e.g. the Berbers, during the early part of the *fitna*, Alfonso VI during the reign of al-Mu'tamid Ibn 'Abbād [q.v.] and the Portuguese during the Almohad period.

The *iklīm* was very densely populated in Hispano-Roman and Islamic times, with al-Idrīsī mentioning a figure of over 800 *kuwar* or villages. In regard to demography, two periods should be distinguished. During the pre-Almohad period (i.e. from the Arab conquest to the second half of the 6th/12th century), al-Sharaf formed, as from Hispano-Roman times onwards, a very populous region with many small villages spread along the watercourses which crossed the region (the Majalberaque and the Repudio). The two *hişns* at that time were Kawra (Coria del Rio) and Hişn al-Ḳaṣr (Aznalcázar). The function of both was to guard lines of communication, that of the Guadalquivir in the first case, and the Guadiamar in the second, as well as the east-west land routes.

In Almohad times (second half of the 6th/12th century to the mid-7th/13th one), there was a change. The Almohads built two new fortified points, *Shaluḳa* (Sanlúcar la Mayor) after 1189 to defend this region against Portuguese attacks; and Hişn al-Farādī (San Juan de Aznalfarache) in 1195 as a garrison for the troops of the ruler Abū Yūsuf Ya'qūb and to control access to Seville across the Guadalquivir, becoming a royal residence during that caliph's time. The population of the region continued to be densely spread. The territorial limits of the *huṣūn* can be reconstructed thanks to Christian documentation from the post-conquest period. Thus in regard to Hişn al-Farādī, its territory covered 227.6 km<sup>2</sup> and included 69 *karvas*, whose acreage for olive and fig cultivation is equally known. Cuatrovitas (Bollulos de la Mitación) is a remarkable instance; a minaret and many surface archaeological traces, from the Almohad period, can be found.

Of the Andalusī fortifications of al-Sharaf, there are important remains at Sanlúcar la Mayor and San Juan de Aznalfarache. Coria has disappeared, and one can only see the *tell* on which the fortress was situated, and at Aznalcázar there are just some traces of the walls and of the town gate.

(M. VALOR and J. RAMÍREZ)

**SHA'RĀNIYYA**, a mystical brotherhood (*ṭarīqa* [q.v.]) whose eponymous master was the Ṣūfī 'Abd al-Wahhāb b. Aḥmad al-Sha'rānī (d. 973/1565 [q.v.]).

The Sha'rāniyya cannot be defined as the branch of an older, original *ṭarīqa*, since al-Sha'rānī had several masters, notably those stemming from the Suhrawardiyya [q.v.] and Aḥmadiyya; he was, moreover, himself affiliated to twenty-six orders in order to pile up *baraka* [q.v.]. Although he was considerably influenced by the Shādhilīyya [q.v.] and although his successors retained clear links with the later manifestation of that order, nothing authorises us to class the Sha'rāniyya amongst the Egyptian Shādhilī groups (see J.S. Trimmingham, *The Sufi orders in Islam*, Oxford 1971, 279).

Starting from the *zāwiya* that had been built for al-Sha'rānī at the Bāb Sha'rīyya in Cairo, the order

was handed down from father to son. Hereditary transmission of the function of *shaykh* was in fact dominant during the Ottoman period. None of the master's successors possessed his spiritual charisma; they were content to manage the order amongst rich notables and to keep up good relations with the ruling classes. Through the prestige of their ancestor, they nevertheless retained an initiatory role until the opening of the 19th century. The historian al-Djābartī [q.v.] mentions several *shaykhs* of the order, his own contemporaries, at the end of the 18th century (*Adjā'ib al-āthār fi tarāḍīm wa 'l-akhbār*, Cairo 1870, i, 364, ii, 213), and Lane makes a brief mention of them (*The manners and customs of the modern Egyptians*, ch. X "Superstitions").

The Sha'rāniyya seem to have lost their identity during the course of the 19th century, since 'Alī Bāshā Mubārak, our main source for Egyptian Ṣūfism in the later 19th century, does not cite any Ṣūfī order bearing that name in his *al-Khiṭaṭ al-tawfiḳiyya al-djādīda li-Miṣr al-Kāhira*, Cairo 1887-9). Another indication of its disappearance at this time is that the Shādhilī *shaykh* and author Muḥammad b. Khalīl al-Kāwukdī (d. 1305/1888) was the disciple of an 'Abd al-Wahhāb al-Sha'rānī, who initiated him into the path of his illustrious and homonymous ancestor, but this 'Abd al-Wahhāb seems to have grown up amongst the Shādhilīyya rather than the Sha'rāniyya (M. Winter, *Society and religion in early Ottoman Egypt. Studies in the writings of 'Abd al-Wahhāb al-Sha'rānī*, New Brunswick, N.J. 1982, 70). However, the anniversary of al-Sha'rānī's birth (*mawlid*) continued into the 20th century (*ibid.*, 85 n. 111).

(E. GEOFFROY)

**AL-SHARTŪNĪ**, SA'ĪD b. 'ABD ALLĀH b. MĪKHĀ'IL b. ILYĀS b. YŪSUF AL-KHŪRĪ (1849-1912), linguist and literary figure of the Arab literary Renaissance (*nahḍa* [q.v.]) in the 19th and early 20th centuries, and a good example of the prominent group of vocational intellectuals of this period. Born in Shartūn in Lebanon, he studied under American missionaries before devoting himself to a lifetime of scholarly activities. He taught in Damascus and in the Jesuit schools of Beirut and Cairo, and also worked for many years as a proof reader of Jesuit publications whilst carrying out his intellectual pursuits. Like a number of his contemporaries, he worked for many years as a newspaper editor and contributed articles to respected journals, mainly on linguistic issues. His eclectic interests are reflected further in his involvement in the publication of a number of works on Maronite history. Although most sources concur on the years of his birth and death, variant dates given for the former include 1848 or even 1847, and for the latter as early as 1907.

His principal scholarly interests lay in the fields of *inshā'* [q.v.]: "[the art of] composition, style" through which he is generally held to have been a major influence on a new generation of "stylists"; grammar; and lexicography. Some sources maintain that his most enduring contribution to the Arabic linguistic heritage is his dictionary entitled *Akrab al-mawāriḍ fi fuṣḥ al-'arabiyya wa 'l-shawāriḍ* (Beirut 1992, 2 vols., based on ed. Beirut 1889-91, 2 vols., with a supplement in 1893). In this work he sets out to demonstrate the original purity of the Arabic language which, he argues, was being eroded, particularly as a result of the growing influence of foreign languages on Arabic. This was a common, if ultimately unachievable, goal of some scholars of the language at that time who worked

assiduously to prevent it from further degeneration, thus underlining the status of the Arabic language as a form of nationalistic expression. In his dictionary, al-Shartūnī scrutinised closely the content of previous lexicographical works based on the classical sources, claiming that the editors had made errors in their transmission of material from the original manuscripts. In both these regards his scholastic approach to scholarship was no different from the techniques of many of his contemporaries and pre-modern scholars. This work was heavily influenced by the famous dictionary *Muḥīṭ al-muḥīṭ* compiled by his friend Butrus al-Bustānī [q.v.]; e.g. in the simplified presentation of the root entries and the attempts to extract the increasing number of colloquialisms infiltrating the written language. The close friendship between al-Bustānī and al-Shartūnī also manifested itself in the various scholarly and personal disputes that arose between the so-called conservative group of scholars which included al-Shartūnī, al-Bustānī and al-Yāzīdī [q.v.], and the reformists such as al-Shidyāk [q.v.]. Al-Shartūnī also produced an edition of a pre-modern lexicographical work by Saʿīd b. Aws Abū Zayd al-Anṣārī (d. 3rd/9th century), *al-Nawādir fi ʿl-luḡa* (Beirut 1967, repr. with indexes of Beirut 1894 ed.) and a dictionary arranged according to semantic categories entitled *Nad̄dat al-yarāʿ fi ʿl-luḡa* (Beirut 1905, vol. i only). His legacy of stylistic works is contained in three principal publications, two on *inshāʿ* and one on oratory. The pedagogical intent of these works is unequivocal. His *K. al-Muʿīn fi sināʿat al-inshāʿ* (Beirut 1899) is a practical manual for school pupils in which he addresses various aspects of style and composition through a series of chapters in which pupils are required to identify superfluous sentences in a passage or explain underlined words or phrases, for instance. He also gives the outline of a number of scenarios of a practical or moral nature about which the student must write a piece of composition or construct a letter. His other major work on *inshāʿ*, *al-Shihāb al-thāqīb fi sināʿat al-kātib* (Beirut 1884), is an extensive collection of model letters on informal and formal subjects in a very similar style to that of many of the works from the pre-modern epistolary genre. His manual on oratory style entitled *al-Ḥuṣn al-raṭīb fi fann al-khaṭīb* (Beirut 1908) prescribes the rhetorical, stylistic and structural components of an oration based mainly on the principles of those of the pre-modern period. An interesting feature is the description of metalinguistic elements such as the recommended tone of voice, body language and standing position of the orator. He wrote a more general work on eloquence and style entitled *Maṭālīʿ al-aḍwāʿ fi manāhid̄ al-kuttāb wa ʿl-shuʿarāʿ* (Beirut 1908), using the question-and-answer technique throughout the book. In the introduction, he states that he wrote it mainly as a reaction to the growing negative influence of foreign languages on Arabic, and out of a desire to clarify and simplify the fundamentals of eloquence and good style. His main work on poetry and prose entitled *Hadāʾiḳ al-manḥūr wa ʿl-manẓūm* was published in Beirut in 1902. On grammar he also wrote works of a practical nature, such as his unpublished eight-volume work for teachers and students on morphology and syntax, and a gloss on Germānūs Farḥāt's [q.v.] *Baḥṭh al-maṭālīb*. But his best known published grammatical tract is his *al-Sahm al-sāʾib fi takhṭīʿat ḡhunyāt al-tālīb* (Beirut 1874). This work is a strident refutation of much of al-Shidyāk's *Ḡhunyāt al-tālīb* in which al-Shartūnī employs the polemical technique of some of the grammarians from the pre-modern period.

(A.J. GULLY)

**SHATM** (A.), an act of insult, vilification, defamation, abuse, or revilement. Other words derived from the Arabic root *sh-t-m* denote mutual vilification (*mushātama*, *tashātum*), a person who vilifies (*shātim*, *shattāma*) or who is vilified (*mashūtum*, *shatīm*) and are often treated as synonymous with corresponding forms of the root *s-b-b* (Lane, iv, 1503).

*Shatm* and *sabb* as phenomena of ordinary interpersonal relations are described in works of different literary genres. When directed against God, the prophet Muḥammad, other Qurʾānic prophets, Muḥammad's Companions, historical personalities or objects venerated by the Muslim community or by different groups within this community, *shatm* is considered as an act of blasphemy and unbelief (*kufr*) which may entail legal prosecution. Other terms that are used less frequently in order to describe particular acts of blasphemy and that can be treated as synonymous with *shatm* in a broader sense are *laʿn* (cursing, malediction), *taʿn* (accusing, attacking), *īḏhāʿ* (harming, hurting), or the verb *nāla* with the preposition *min* (to do harm to somebody, to defame).

As a punishable act, religiously motivated insult is a subject of Islamic legal literature. However, there is no occurrence of the term *shatm* or other words that are derived from the root *sh-t-m* in the primary material source of Islamic jurisprudence (*fiḳh*), i.e. the Qurʾān. The act of insult is described in the Holy Book by a word derived from the root *s-b-b* in one verse, namely, sūra VI, 108: *wa-lā taṣubbū al-lad̄hīna yadʿūna min dūmī Allāhi fa-yasubbū Allāha ʿadw<sup>m</sup> bi-ḡayri ʿilm<sup>m</sup>* "abuse not those to whom they pray, apart from God, or they will abuse God in revenge without knowledge". Here, the Muslims are told not to abuse the idols that are venerated by the polytheists. Further, it is implied that those who insult God in this manner are acting out of ignorance. In IX, 12, the verb *taʿana* describes revilement of the Muslim faith as an act of the polytheists, and the Muslims are urged to fight their, i.e. the polytheists', leaders. The six canonical *ḥadīth* collections refer to offences of insult and blasphemy described as *shatm* or *sabb* on several occasions. An episode contained in a *ḥadīth* collection that does not belong to the canonical books but is regarded as the literary foundation of one of the Sunnī *mad̄habs* sc. Ibn Ḥanbal's (d. 241/855) *Musnad* (Cairo 1913, ii, 436), reports a case in which Abū Bakr, the first caliph and one of Muḥammad's close Companions (*ṣaḥāba*), is insulted by an unidentified person in the presence of the Prophet. Abū Bakr is surprised by the Prophet's behaviour, since Muḥammad fails to defend him against the stranger's abuse and, at one point, appears to be amazed and smiles without any discernible reason. When Abū Bakr begins to return

the abuse, Muḥammad becomes angry and, eventually, springs to his feet. After the dispute has finished, Abū Bakr asks Muḥammad why he did not support him, but instead became angry when he, Abū Bakr, attempted to defend himself. Muḥammad replies that an angel had been with Abū Bakr replying in the latter's place. But when Abū Bakr returned some of the abominable words to his adversary the devil entered the scene and he, Muḥammad, was unable to remain in a place where the devil is present. This episode from Ibn Ḥanbal's *Musnad*, like other similar passages in the canonical *ḥadīth* collections, suggests that the vilification of the Prophet or his Companions was considered intolerable and therefore forbidden by some of the religious scholars at the time when the respective *ḥadīth* books were compiled. This impression is corroborated by a report describing possible legal consequences of insulting the Prophet Muḥammad (*sabb al-rasūl*) in the 2nd/8th century. According to this report, a certain Muḥammad b. Sa'īd b. Ḥassān al-Urdunnī was executed in 153/770, in all probability because he had supplemented the *ḥadīth* "I am the seal of the prophets; there will not be any Prophet after me" with the phrase "if God does not intend otherwise"—an addition that, apparently, was considered blasphemous by the scholarly and political authorities at that time (J. van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, Berlin 1991, i, 136-7). However, the extent to which these *ḥadīths* reflect theological disputes about the role of the Prophet and his Companions in the first two centuries of Islam still remains to be analysed in depth.

In any case, early legal literature confirms the assumption that blasphemy against the Prophet Muḥammad was regarded an intolerable act in the 2nd/8th century. The chapter on *al-muḥāraba* of 'Abd Allāh b. Wahb's (d. 197/812) *Muwatta'* contains a paragraph on the blasphemer in which the one who insults (*sabb*) the Prophet Muḥammad is threatened with the death penalty. Ibn Wahb states that Mālik b. Anas (d. 179/795) held the opinion that a blasphemer against Muḥammad, be he Christian or Muslim, must not be granted repentance. In the same passage, the caliph 'Umar b. 'Abd al-'Azīz (r. 101-4/717-20) is reported as having stated that the vilification of Muḥammad, but not of any other person, is to be punished (M. Muranyi, *'Abd Allāh b. Wahb (125/743-197/812). Leben und Werk. Al-Muwatta'. Kitāb al-muḥāraba*, Wiesbaden 1992, 287-8). However, a 3rd/9th-century legal manual, the *Uṭbiyya* by the Mālikī *faḳīh* Muḥammad al-'Uṭbī (d. 255/869 [q.v.]), mentions blasphemy against Muḥammad's Companions as a punishable act (*al-'Uṭbiyya*, printed with Ibn Ruṣḥd, *al-Bayān wa 'l-taḥṣīl*, Beirut 1986, xvi, 420). Also, an opinion ascribed to the Ḥanafī legist al-Ṭaḥāwī (d. 321/933 [q.v.]) suggests that hatred of the Companions (*bughd al-ṣahāba*) indicates unbelief (al-Subkī, *al-Fatāwā*, Beirut n.d., ii, 590).

It has been observed that blasphemy against God, the Prophet Muḥammad, and his Companions, when committed by a Muslim, was discussed by the legal scholars in the context of apostasy (*riḍḍa*) and unbelief (*kufri*), that is, of two matters that were regarded to warrant capital punishment under certain circumstances. However, in the relevant chapters of the formative texts of the *madhḥabs*, insulting the Prophet or the *ṣahāba* is not mentioned among the punishable acts that constitute *riḍḍa* or *kufri*. Neither in Mālik's *Muwatta'*, nor in Sahnūn's (d. 240/854) *Mudawwana*, nor in al-Shāfi'ī's (d. 204/820) *al-Umm*, nor in al-Shaybānī's (189/805) *Kitāb al-Asl*, is *sabb al-rasūl* or

*sabb al-ṣahāba* listed as an offence tantamount to *riḍḍa*. However, from information on legal practice in the 3rd/9th century it may be inferred that the opinion that *sabb al-ṣahāba* must entail certain legal consequences was held by particular functionaries. A biographical note on al-Ḥārith b. Miskīn, a Mālikī jurist who took over the judgeship of Egypt in 237/854, informs us that during his tenure capital punishment (*ḥadd*) was enforced against a person who had insulted Muḥammad's wife 'Ā'isha (al-Kindī, *The governors and judges of Egypt or Kitāb el 'Umarā' (el Wulāh wa Kitāb el Qudāh of el Kindī)*, ed. R. Guest, Leiden 1912, 469-70). The awareness of insulting the Prophet or his Companions as an offence for which a penalty must be established by the law appears to have become stronger about the end of the 3rd/9th and the beginning of the 4th/10th centuries. While al-Muzanī (d. 264/878), like his master al-Shāfi'ī, does not mention the blasphemer against God, His Prophet, or the Prophet's Companions among those who apostatise from Islam (*muṭādd*), his fellow Shāfi'ī, Ibn al-Mundhīr (d. 318/930) briefly discusses insult against the Prophet Muḥammad in the chapter on the apostate in his book on consensus, *idjma'*. The Muslim scholars, Ibn al-Mundhīr states, are in agreement that the one who insults the Prophet should be put to death (*al-Idjma'*, ed. Fu'ād 'Abd al-Mu'min Aḥmad, Qatar 1402/1982, 122). A later work of the Shāfi'ī *madhḥab*, al-Nawawī's (d. 676/1276) *Minḥādī al-tālibīn*, counts the blasphemer against any Prophet (not only Muḥammad) among the apostates (ed. L.W.C. van den Berg, Batavia 1889-91, iii, 205). Yet al-Nawawī, like some of his later commentators, does not discuss insulting Muḥammad's Companions in the chapter on *riḍḍa*. However, the 11th/17th-century *faḳīh* Shihāb al-Dīn al-Kalyūbī (d. 1069/1658) again explicitly includes insulting the Prophet's Companions in the chapter on *riḍḍa*. Shams al-Dīn al-Ramlī (d. 1004/1596) underscores the fact that a person who claims that there are prophets after Muḥammad is classified as *kāfir* (*Nihāyat al-muḥtādī ilā ma'rifat al-Minhādī*, Cairo 1938, vii, 395). But whereas the Shāfi'ī *faḳīh* al-Shīrbīnī (977/1570) counts those who brand the *ṣahāba* as infidels among the unbelievers (*Mughnī al-muḥtādī*, Cairo 1933, ii, 125), al-Ramlī does not mention blasphemy against the *ṣahāba* among acts that constitute *kufri*. Again, al-Ramlī's 11th/17th-century commentator, Nūr al-Dīn al-Shabrāmālīsī (d. 1096/1685), treats blasphemy against the Companions as an act of *kufri*.

Altogether it may be said that, at the latest since the 7th/13th century, insult against the Prophet(s) is often mentioned among the acts that constitute *kufri* in the chapters on apostasy (*riḍḍa*) of the Shāfi'ī manuals of positive law (*furu'*). Insult against the *ṣahāba*, however, is mentioned only occasionally and apparently only in manuals written from the 11th/17th century onwards in the chapters on *riḍḍa*. However, the veneration of the *ṣahāba* and the inadmissibility of insulting them had become a salient point of *idjma'* among Sunnī jurists by the 8th/14th century. As the majority of the legal manuals quoted above contain a paragraph that declares that the one who violates the consensus of the Muslim community (*idjma' al-umma*) is a *kāfir*, the charge of unbelief can be extended to include those who insult the Prophet's Companions. A reading of historiographical works suggests that this conclusion had an impact also on the relation between Sunnī and Shī'ī Muslims. For example, Ibn Kathīr (d. 774/1373) reports in his *al-Bidāya wa 'l-nihāya* (Beirut 1977, xiv, 250) the case of a Shī'ī Muslim from the town of Hilla, who in Damascus in 755/1354

insulted some of the Prophet's closest companions like Abū Bakr, 'Umar b. al-Khaṭṭāb, and 'Uthmān b. 'Affān as violators of the rights of the Prophet's descendants. When he refused to revoke his blasphemous attacks against these *ṣahāba*, his case was presented to the chief judges of the four Sunnī *madhabs* in the *Dār al-sāda*. As a result of this session, the blasphemer was sentenced to death by the Mālikī deputy chief judge (*al-nā'ib al-mālikī*) and executed immediately after judgement had been issued. His body was burnt by the plebs of Damascus who later walked through the city showing his head and exclaiming that this would be the punishment of the one who abuses the Companions of the Prophet. A closer look at the religio-political situation of 8th/14th-century Egypt and Syria suggests that insult against the Prophet's Companions or even against the Prophet Muḥammad himself, on the part of some Shī'īs, or accusations brought forward by the Sunnīs against alleged Shī'ī blasphemers, are an expression of the strong Shī'ī-Sunnī hostilities at that time.

The offence of insult against the Prophet and his Companions continues to be an issue of legal debate and political discourse in Islamic societies until the present time. The controversy on Salman Rushdie's novel *The Satanic verses* has been the most prominent among a number of cases in which Islamic communities and their leaders have reacted to acts that were conceived of as an insult against Muḥammad and other venerated personalities. As has been shown, the legal foundations for this reaction date back to the 2nd/8th century.

**SHĪR**.

5. In Malay and in Indonesian.

In line with their strong preference for theology and Šūfī mysticism over literature and philology, the interest of the Muslims of the Malay-Indonesian world in Arabo-Persian *shīr* has been predominantly drawn by religious poetry as found in the Arabic *kaṣīda* and its derivative verse forms. It was initially mainly in the north Sumatran kingdom of Aceh [see **ATJEH**]—in the early 17th century the dominant power in the region around the Straits of Malacca and an important centre of Islamic learning—that this religious poetry was closely studied (Braginsky 1996, 372-3) and

it was there that most local forms of Islamic poetry were developed under its influence, subsequently to spread among the Muslim communities of the Archipelago.

A case in point is the genre of Malay poetry, called *nazam* (from the Arabic synonym for *shīr*, *nazm*). It consists of a long sequence of couplets (*bayt* [q.v.]) comprising two hemistiches, each usually numbering from nine or ten up to twelve syllables, that rhyme with each other on one of the following patterns: (a) *aa, bb, cc...*; (b), *aa, aa, aa...*; (c) *aa, ba, ca...* Couplets rhyming *ab, ab* are rare. The oldest specimens of *nazam*, teaching good rulership, are found in the *Mirror for Princes*, *Tādj al-salāṭīn* (1012/1603-4) by the Acehnese 'ālim Bukhārī al-Djāwharī (Braginsky 2000, 183-209). Some of these (pattern [a]) are modelled on the Persian *mathnawī* [q.v.], while others (pattern [b]) resemble the poetry of Arabic versified treatises of scholarly or religious content (*urđjūza* [see **RADJAZ**]), whereas still others (pattern [c]) imitate the Arabic *kaṣīda* or *ghazal* [q.v.] with its monorhyme (Braginsky 1996, 377-80).

Malay *nazam*, containing religious teachings, praise of the Prophet and suchlike, have subsequently continued to be written. In Malaysia and Indonesia they are sung (*nashīd* [q.v.]) as a monotone or with varied melodies on a variety of occasions, alongside *kaṣīdas* in Arabic: in religious schools as a means of memorising the basic tenets of Islam; at weddings; after the completion of studies of the Qur'ān [see **MAWLID**]; at Mawlūd celebrations, etc. Arabo-Malay or purely Malay *nazam* are also sung at *berdikār* gatherings (Malay, from Arabic *dhikr* [q.v.]) to various melodies and rhythms, accompanied by instrumental music and bodily movements (Harun Mat Piah 1989, 282-309).

In 18th and 19th century Aceh, a genre of Acehnese literature called *nalām* was practised, which, like the Malay *nazam*, was probably also created using partly Arabic *urđjūza*, partly *kaṣīda* as a model. Although the *nalām*'s verse line seems to be patterned on the Arabic *radjāz* and *ṭawīl* [q.v.] metres, it has remained closely tied to indigenous conventions. According to the demands of its metre (*sanja*, from Arabic *saḍj'* [q.v.]), it usually comprises two hemistiches and numbers sixteen metric units of one to three syllables each, the latter being arranged to form eight feet of a sort. The fourth foot, that is, the last foot of the first hemistich, is connected by a compulsory internal rhyme to the sixth foot, that is, the second foot of the second hemistich, while all lines have an external monorhyme represented by words ending with the vowel *a*. Thus the *rajat* (from the Arabic *radjāz*) metre of the *nalām* is an eight-foot modification of the *sanja* metre and its *ṭawī* (from the Arabic *ṭawīl*) metre, one with nine feet (Snouck Hurgronje, ii, 1906, 73-8; Djajadiningrat, ii, 1934, 279, 462, 664, 988).

The most important new genre of poetry to emerge in the early 17th century Malay literature is the *syair* (in the Malay version of the Arabic script, Jawi, this word is usually written *shī-y-ṣ-r* but sometimes *sh-ṣ-r*). The *syair* consists of a chain of quatrains, each of them with monorhyme of the type *aaaa, bbbb, cccc...* The metre of its lines, which tend to comprise four full words of a length of two to three syllables including their bound morphemes, is based on a relative tendency towards isosyllabism. Each line may contain between nine to twelve syllables, a ten-syllable line being the dominant tendency, and is divided by a caesura into two roughly equal hemistiches that tend to form complete syntactic units (Braginsky 1998, 225-6). The following sample is from the poetry of the

Acehnese Sūfi mystic Ḥamza Faṣṣūrī [q.v.] (active ca. 1600), who is now generally accepted to have created the genre: "Baḥr al-Ḥaḥḥḥ terlalu dalam / ombaknya menjadi 'alam / asalnya tiada bersiang malam / di laut itu 'alam nin karam // Dengarkan hai anak dagang / lautnya tiada bersurut pasang / muaranya tiada bersawang-sawang / banyakkah orang sana terkarang" (Drewes and Brakel 1986, 134) ("The Sea of the Truth is immensely deep, / The world has sprung from Its waves, / Its beginning is foreign to day and to night, / And the world will sink again in that Sea. / /Hear ye, oh wanderer, / There is neither ebb nor flow in that Sea, / You won't see the sky in the mouth of Its rivers, / There many sailors have been stranded on the reefs.")

There are different opinions on the origin of the *syair* (Teeuw 1966; Al-Attas 1968; Sweeney 1971). According to the argument of Braginsky (1996, 383-7), if it is correct to read a corrupt passage describing the *syair* in Ḥamza Faṣṣūrī's treatise *Asār al-'arīfīn* ("Secret of the Gnostics") (Doorenbos 1933, 120-1) as saying that in each of its *bayts* four *saḍī'* are used, this indicates that Ḥamza may well in part have modelled it on a variety of *kaṣīda* or *ghazal*, widespread in Persian, Ottoman and Urdu Sūfi poetry, which is called *musammaṭ* [q.v.] or *shī'r-i musaḍḍijā'* in Persian poetics (Tabrizī 1959, 128). Because in the classical *musammaṭ*, as written, for instance, by 'Irākī and Djamī [q.v.], a *bayt* is divided into four lines with *saḍī'* placed at the end of the first three lines and a monorhyme (*kāfiya* [q.v.]) in the fourth, Ḥamza here probably meant to say that, differing from the classical *musammaṭ*, he had made use of one and the same *saḍī'* in all four lines, doing away with the final monorhyme, a feature that was hard to assimilate in Malay literature. A poem of this type was written by the 11th century Persian poet Manūcihrī [q.v.] (Browne, *LHP*, ii, 42). Perhaps because the four-line *musammaṭ* was known as *murabba'* ("four-fold"), Ḥamza's followers called his poems *rubā'* (with the same meaning). Consisting of a chain of between thirteen to twenty stanzas and ending with mentioning his name, Ḥamza's *syairs* resemble the *ghazal* "with *saḍī'*", with its chain of between four and fifteen stanzas, which since the time of 'Attār (d. ca 627/1230 [q.v.]) ends with the writer's *takhalluṣ* [q.v.] or pen-name.

Ḥamza's *syairs* lack any traces of Arabo-Persian metrics (*arūd* [q.v.]). They manifest their relation to indigenous Malay poetry, *inter alia* in the use of a specific "interrupted" or "assonanced" rhyme (see the italicised rhyme words in the sample above) and the similarity to the "tirade poem", a verse form widely used in popular poetry of the Archipelago. Like in Old French and Turkic epic "tirades" or in the *saḍī'* of the Kur'ān, the individual verse lines in Malay-Indonesian "tirade poems" are united, by continuous rhyme or assonances, into groups of varying lengths. Therefore Ḥamza's *syair bayts* may be viewed as a regularisation of the loosely structured "tirade poems" into a chain of quatrains, each having its own continuous rhyme, through adopting features of *ghazal* with the non-classical *shī'r-i musaḍḍijā'* (Braginsky 1998, 229-31).

After Ḥamza Faṣṣūrī and his followers, such as Ḥasan Faṣṣūrī and 'Abd al-Djamāl, had in the 17th century popularised the *syair* as an instrument for Sūfi homiletics and allegory, it spread rapidly through the Archipelago wherever Malay literature was produced. Developing into a poem that could attain a length of thousands of quatrains, by the late 18th and the early 19th centuries it had become a verse form covering

a wide range of topics, as can be gleaned from the catalogues of the collections of Malay manuscripts (Chambert-Loir and Oman Fathurahman 1999). It could now teach Islamic dogma, instruct the reader about how to perform his prayers or admonish him of the terrors that could await him in the grave. It could tell of the lives of Muslim prophets, of historical events such as wars with the Dutch, of fictional loves between princes and princesses in the days of yore or, in parodied romance, between animals or flowers, and it could aim the barb of satire at historical or political events in allegorical animal fables (Braginsky, 1998, 236; Harun Mat Piah 1989, 243-66; Koster 1997).

In the transition of Malay literature to modernity that began to manifest itself in the major colonial cities of the Archipelago between 1850 and 1870, concomitant with the rise of the printing press and the newspaper, the *syair* was enthusiastically taken up by non-Muslim writers as well (ethnic Chinese and Eurasians) and was published in profuse numbers, in lithographs, printed booklets and newspapers. At the same time, it underwent yet another widening of its thematic scope, treating, for instance, sensational events, as it adapted itself to its urban milieu and usage (Harun Mat Piah 1989, 262-4; Lombard-Salmon 1977, *passim*; Salmon 1981, 25-6 and *passim*; Proudfoot 1993).

In the love stories in the early novels of Modern Indonesian and Malay literature written around 1920, *syairs* were inserted at moments of climax, and both literatures used them for lyric (sometimes nationalistic) poetry, in Indonesia until about 1930 and in Malaya until about 1950 (Harun Mat Piah 1989, 260-1; Johan Jaafar *et al.* 1992, i, 67-83, ii, 58-60; Teeuw 1967, 49-51). In the modern poetry of the Malay-Indonesian world, except that of the Sultanate of Brunei (Harun Mat Piah 1989, 258), there is now no longer any place for the *syair*, but its place as an Islamic genre of poetry is still acknowledged; among the Malays, *syairs* continue to be performed at important religious feasts and events in the Islamic lifecycle alongside *kaṣīdas* in Arabic and *nazam* (Harun Mat Piah 1989, 266-82).

On Java's northern coast and in east Java, in particular in Ponorogo which is well known for its religious schools, a form of Islamic poetry is found called *singir* or *geguritan*, treating themes similar to those of religious *syairs*. To what extent this genre can be related to Arabo-Persian *shī'r* is still an open question. Like the *syair*, it consists of verse lines of between eight to ten syllables in length. These may be grouped into rhyming couplets or, as in the *syair*, into quatrains, but may also be arranged into groups of variable lengths as in "tirade poems". The *singir* is performed by singers to the accompaniment of musical instruments (*angklung, terbang*) (Darnawi 1964, 53-4; Pigeaud 1938, 304, 321).

**SHŪRĀ-YI DEWLET** [see MADJLIS AL-SHŪRĀ].

**SĪBA**, BİLĀD AL-, a term borrowed from local speech by the French colonial authorities to designate the absence of control by the Sultan of Morocco over a considerable part of his territory at the end of the 19th century. It presupposes a congenital disorder threatening the existence of the "auspicious empire". The origins of the term go back to explorers like Charles de Foucauld, academic professors like Alfred Le Chatelier and Augustin Bernard, and military men like Lyautey, eager to conquer Morocco from the contiguous French territory of Algeria. It forms the concept behind the Comité du Maroc, a lobby operating at a level below the decision makers in Paris with the idea of extending French power over the land, given shape in the Protectorate of 30 March 1912. These experts put together an imagery based on a dichotomy between the Bilād al-siba and the Bilād al-makhzan [see MAKHZAN]. The former was a land outside the authority of the Sultan, hence free from taxes and conscription, whose people lived in an insolent, free fashion impervious to all outside influences. The latter was the land over which government authority levied taxes in an iniquitous fashion and recruited tribal militias, driving rural society into a state of non-submission, *siba*.

Colonial terminology equated the antagonistic dichotomy of the two terms with a semi-racial cleavage, setting the autochthonous Berbers against the Arab invaders, who imposed themselves on a refractory indigenous element. The Berbers lived under customary law, *ʿurf*, whilst the Arabs were subject to the *Shariʿa*, an expression of Muslim theocracy and a pliant system under the Sultans' despotism which the Berbers continuously rejected. It was postulated that the Berbers were spirits basically inspired by laicity under their Islamic coating and that they had attained a form of republican local democracy in their strongholds of mountain towns and regions. This vision of

Morocco gave further life to the Kabyle myth so active in the constituting of French Algeria and converged on a policy of separating the Berbers, the "good savages", in their mountain retreats, from the Arabic-speaking peoples of the plains and the great Muslim cities, as illustrated in the famous Berber *dahir* of 1930 [see ZAHĪR], which did much to crystallise national sentiment in Morocco.

The Bilād al-siba rightly appeared to post-colonial Moroccan historians as a fantastic intellectual construction meant exclusively to bolster the Berber policy of the French Protectorate. However, the term appears, if only rarely, in the correspondence of the Makhzan in the 19th century, for stigmatising local tribal groups hostile to all the local authorities (*kaʿid*, *muqaddim*, *zāwiya* and *kabir* over tribal sections) who tended to interpose themselves between the Makhzan and the segmentary base of society. In fact, the term Bilād al-siba is an ancient one going back to early times, and its usage, current in al-Andalus from the 11th century onwards, became generalised in the vocabulary of Maghribī *ʿulamāʾ* from the 15th century onwards for condemning the backward rural areas living in a state close to *qjāhiliyya* since they ignored injunctions of the *Shariʿa* and transgressed the prescriptions of *fiqh*.

These Maghribī scholars were correctly following the original sense of the term *sāʿiba*, one which denoted, within a semantic and spatial complex, successively: a beast brought out of the herd for offering to the gods of ancient Arabia; a freed slave, but one foot-loose and without a patron in early Islam; by extension, a woman left to herself, a rebel or a prostitute; the breaking of allegiance to a sovereign and, from that time onwards, the territory where this dissidence was rife, when the term passed from the East to the West via al-Andalus. *Bilād sāʿiba* appears, probably for the first time, in a commentary of Mālikī law on Sahnūn's *Mudawwana* by Abū ʿImrān al-Fāsī (d. 430/1039), a scholar of Moroccan origin settled in Kayrawān.

The Term Bilād al-siba was never, however, used by those Maghribīs to whom it applied. Most of these were vacillating and uncontrolled subjects. They were vacillating because they oscillated between rallying to the sovereign and rejecting the central power's local agents, between being dogs and wolves, when they could not be sheepdogs, to use Ernest Gellner's metaphor. They were uncontrolled, as the maxim in the Tunisian Djerīd says, *lā hayy, lā rayy*. They feared subjection to the central power which would entail their being shorn like sheep by its local agents. This is why, except for some islands in the mountains and along the Sub-Saharan fringes, the Bilād al-siba never corresponded to a fixed territorial entity which could raise up a lasting counter-force able to divide up the area over which three powers claimed control since the 16th century. In a certain way, the Bilād al-siba was everywhere, as appeared from the difficulty of travelling without a safe-conduct negotiated with the tribal peoples. It insinuated itself over almost all the territory through the institution of the *maḥalla* [q.v.], a splendour which inspired local riches but also redistributed them, in such a way that all the prince's subjects were in a relationship, more or less asymmetrical according to place and time, with the sovereign and his local representatives. In practice, when it became a concrete entity, the Bilād al-siba was sought after for bringing to heel the Bilād al-makhzan. Some rebellious tribes acted as guard dogs over the tribes which had submitted, showing how far they were

integrated in a unified system personified by a Bey in the Ottoman Maghrib, and by the Sultan, the Commander of the Faithful, in Morocco.

### SĪHĀFA.

#### 4. Persia.

During the century and a half of its existence, the Iranian press has experienced several periods of expansion and contraction. From 1851 to 1880 the press had only a limited audience, as it was meant only for civil servants. In all, some seven newspapers (*rūznāma-hā*) were published. From 1880 to 1906, the press began publishing for all Persians, although few could afford a newspaper. By the end of the century almost forty newspapers and journals had been published. From 1906 to 1925 the number of newspapers grew enormously and editors were able to influence the course of events in the country. During the period 1925-41, the press was reduced to an instrument in the hands of a strong authoritarian state. The period 1941-53 marked the country's return to a free and expanding press. From 1953 to 1977 the press was basically muzzled; after 1965 it became a cheerleader for the régime. From 1978 to the present the press experienced, first, four years of freedom, followed by the severest censorship it had ever known. Since 1998, however, the press has become more expansive and is trying to become a free agent of change.

The first Persian newspaper, *Akhbār-i Wakāyī*, was published in Muḥarram 1253/April-May 1837 in Tehran (*JRAS*, v [1839], 355-71), but it lasted less than two years. It was only in February 1851 that a new government weekly newspaper, *Wakāyī-i Ittīfākīyya*, was published. The stated purpose of the newspaper was to explain government activities. By royal order, all leading government bureaucrats had to subscribe to the newspapers. From 1871, the press was under the control of the newly-created Ministry of the Press with its censorship office. The rationale for censorship was published in issue 522 (22 December 1863) of the government newspaper *Dawlat-i Āliya-yi Irān*, sc. to bar publications harmful to infants and contrary to religion. The text was addressed not to readers but to listeners, which confirms what Eichwald noted in 1826, sc. that literature or news was read out loudly for the entire community (E. Eichwald, *Reise auf dem Caspischen Meere und in den Caucasus unternommen in den Jahren 1825-1826*, 2 vols., Stuttgart und Tübingen 1834, i, 384). Given the very low level of literacy (about 5%), this is understandable, and confirms that the actual readership of the newspapers was much larger than the number of subscribers. The "journalists" were civil servants reporting on non-

controversial and approved events (government, religion, foreign, literature, science). After 1880, political reformists started to publish newspapers but to avoid the censors they printed their papers outside Iran. Once published, they smuggled them into Iran. These newspapers published abroad had an enormous influence inside Iran and on the reformist movement.

After 1896 censorship was reduced, although the restrictive press rules (to inhibit things harmful to morality and the state) were repeated in 1901, when the government at the same time banned the importation of all Persian newspapers published abroad. With the establishment of the constitutional government in 1906 [see *DUSTŪR*. iv. Iran] the press was basically free (art. 20 of the 1906 Constitution). In 1907, there were some 84 newspapers, whereas only 40 in all had been published prior to that date. During this period of intermittent press freedom in Iran (1896-1925), political activity merged with journalistic vocation. The various interest groups, which soon developed into parties, defined a number of emerging social themes and political ideas, which they explained and propagated in the editorials of various journals. Thus the often fiery editorial page of most journals became the main battleground for the opposing schools of thought. With the suppression of parliament in 1908, Muḥammad 'Alī Shāh [*q.v.*] also suppressed the press, and its leading members were imprisoned and some executed. After the overthrow of the Shāh in 1909, the press started a new life. This period was the coming of age of the press, and representatives from left and right of the spectrum were to be found. Until the First World War, a total of 371 newspapers and journals were published. During the First World War the Allies often suppressed the press, because of its wide use of slander and invective. After 1918, the press resurged, but in the early 1920s, government pressure on the media intensified. Riḍā Khān, the Minister of War, had a journalist flogged, while the outspoken poet-journalist 'Ishkī [*q.v.* in Suppl.] was killed in 1924, allegedly by the authorities. One year later, the Pahlavī régime was established, which did not allow any discussion of political subjects, and certainly not criticism of government. The number of newspapers dropped from 150 to 50 between 1925 and 1941. They served to propagate the government's programmes and were censored by the Department of Press and Propaganda prior to publication.

After the fall of Riḍā Shāh [*q.v.*] (1941), the press was controlled by the Allies (1941-6) and by martial law (1941-8), although there was considerable freedom of expression. The Allies, as well as national interest groups, wanted certain positions taken, and thus editorials were again mostly marked by their extremely partisan tones and aggressive styles. Most newspapers were small, limited in circulation, and short-lived. The journalist (*rūznāma-nivīs*, *rūznāma-nigār*) was usually both editor and publisher. The topics were mainly analysis and criticism of personalities in public life, and discussion of contemporary social-economic-political problems. Although nobody wanted censorship or banning of newspapers, both methods were used, for the new 1941 Press Law could not rein in excessive vituperation in the press. However, suppressed papers would often immediately reappear under the name of a legally-licensed other periodical. Attempts to bring about a more responsible press failed, because often financing of papers was provided to attack certain political issues (blackmail of politicians; subsidies from foreign powers). The strongest group was the pro-Soviet Tudeh (*Tūda*) press that formed the Freedom

Front in 1943. There also was a pro-British, nationalist coalition of papers, and some independents. The suppression of separatist movements in Ādharbāyḍjān and Kurdistān in 1946 led to a clamp-down on the local language press. This had a negative impact on the journalistic role of Tabrīz that had been in the forefront from the beginning.

In the first few years after the fall of Muṣaddīk's [q.v.] government (1953), which had widespread press support, press restrictions were mainly imposed through the application of martial law. Later, the responsibility for enforcing censorship was divided between the Ministry of Information and the Ministry of Culture, together with the newly-founded security agency, SAVAK. The usual grounds for suspension were: slander of the monarchy, or of relations of Iran with friendly countries, and inflammatory articles against the government or religion. These were incorporated into the 1955 Press Law. In this period of extended press censorship and government control, the tone and style of editorial writing underwent considerable change towards blandness and conformity to what was tolerated, and often government-designed norms of political, cultural and social expression. In March 1963, the Press Law was amended. It formulated the criteria for persons who could obtain a license to publish and it limited the number of periodicals; the grounds for suppressing newspapers remained the same.

Most papers had serious financial difficulties due to low circulation, except for a few large ones. In 1963, *Kāyhān* and *Iṭtilā'āt* accounted for 65% of newspaper circulation. Five magazines accounted for more than 50% of total magazine circulation. Because of financial pressure (rising cost, falling revenues, competition from radio and TV), newspapers accepted government-written articles. Consequently, the quality of the newspapers was bad, in part because there was a shortage of staff, which was lowly paid. Papers used "scissor editors" to cut articles from other newspapers. Also, they used translators to translate foreign articles, so that there was often more news on foreign countries than on Iran. Specialised publications, such as literary and humorous ones, also depended much on donations and government articles to survive. Hence papers improved their appearance rather than their substance. This in turn led to loss of readership, due to mistrust of government propaganda, irrelevance of foreign news, and the ignoring of what most concerned people's daily lives. The two major dailies, along with some quality periodicals, created and supported a class of professional journalists who challenged the government by focusing on failures and shortcomings in regard to what government had promised to deliver. In response to criticism from the government to encourage better reporting and tell the "truth", the papers reacted by telling the government, as the major newsmakers, to provide more, better, and timely information, to allow better and freer contacts with government agencies, and to respect the letter and spirit of the Press Law.

After the fall of the Pahlavī régime in 1979, more than two hundred periodicals were published whose variety and number were unprecedented in the modern history of Iran. Press freedom was, however, short-lived. Soon the country's ruling clergy ordered the closure of more than twenty publications, and more followed later, despite the 1985 Press Law that banned censorship. Art. 4 defined the press limits, including, slander of the Leader and *'ulamā'*, inflammatory articles against the government or religion, and reporting on classified information on the military and

parliament. Only two unions are officially recognised, the Islamic Society of Journalists and the Professional Society of Journalists, belonging to hardliners and the Islamic reformist factions respectively. The Iranian press under President Kḥātāmī (since 1997) is freer than it has been in many years and political journalism is flourishing. The struggle between the conservatives and those who favour greater press freedom has become a major issue in Iran, resulting in banning of newspapers and jailing of journalists. Following the 1999 student uprising, parliament passed new laws banning any publication other than those specifically sanctioned, holding the licensee, editors, writers and even typists directly responsible for any unauthorised article or publication.

From 1956, a School of Journalism offered a four-year B.A. course. In 1960, an advanced course was added. There were 137 graduates in 1969, when Tehran University announced that it would close the school. The two major dailies also offered courses on journalism in the 1960s. The major papers also started to hire more qualified, academically trained staff. Although the Universities again offer Journalism as a subject for study, its effect is minimal. Since 1966, about 900 people have graduated from journalism courses in Iranian universities, of whom 93% are not working for the press. Although 68% of current journalists have a university education, only 4.6% have received academic education in communications.

5. Turkey.

(a) Up to ca. 1960 [see *ḌARĪDA*. iii].

(b) Since the 1960s.

*The 1960s*

The military take-over of 27 May 1960 put an end to the period when freedom of the press had been seriously threatened in Turkey due to the increasingly repressive policy of the *Demokrat Parti* [q.v.] (DP). For the most part the Turkish press welcomed the *coup* and the resultant "Government of National Unity" (*Millî Birlik Hükümeti*). The Constitution of 1961 (articles 22-7) guaranteed freedom of the press, and laws restricting it were abolished. A new press law assured

the rights of journalists in their working place, much to the chagrin of certain newspaper barons. The restrictive Penal Code remained in force. The "Press Advertising Organisation" (*Basın İlan Kurumu*) was established in 1961 for the purpose of an impartial distribution of advertisements from public institutions and organisations. The Turkish press decided to institute a system of self-control: a code of press ethics (*Basın ahlak yasası*) was signed by all major newspapers.

The principal successor to the DP, the "Justice Party" (*Adalet Partisi*: AP), which won the general elections of 1965 and remained in power until the *muhtıra* of 1971 (see below), remained tolerant towards the press. The leftist press, often supporting the newly-founded "Labour Party of Turkey" (*Türkiye İşçi Partisi*; TİP), flourished during the 1960s in a hitherto unknown way: the weekly *Yön* (1961-7) founded by Doğan Avcıoğlu (1926-83), was one of the most discussed periodicals in Turkey for a while. It was followed by *Ant* (1967-71), and *Devrim* (1969-71) (see on these J.M. Landau, *Radical politics in modern Turkey*, Leiden 1974, 49-87). Among the newly-founded papers of the 1960s, the *Yeni Gazete* (1964-71) was the first daily paper printed in the offset technique. Another new type of paper for Turkey was the tabloid (*bulvar gazetesi*) *Günaydın*, founded in November 1968 by Haldun Simavi. Among its editorialists (*köşe yazarları*) was Aziz Nesin (1916-95) who also edited its weekly humoristic supplement *Ustura*. The rise of the conservative-nationalist paper *Tercüman* (founded in 1955) also began after 1961. *Hürriyet* [see *ĐARİDA*. iii] was the first newspaper whose circulation exceeded one million in the middle of the 1960s (Gevgilli, *Türkiye basını*, 225). Television was introduced in Turkey in 1968, but there was only one black-and-white channel until the mid-1980s.

#### The 1970s

Increasing violence in the country brought about a second military intervention, through the memorandum (*muhtıra*) issued by the armed forces on 12 March 1971. Martial law was proclaimed in eleven provinces. This intervention did not abolish the parliament, but governments of that period exerted pressure, especially on the leftist press. Journalists were arrested, papers banned and publications forbidden. The 1973 elections paved the way for a return to parliamentary democracy. The work of journalists was then, however, seriously disturbed by something like a civil war which ravaged the country. Numerous journalists, both rightists and leftists, became victims of attempts on their lives. A climax was reached with the assassination of Abdi İpekçi (1929-79), editor of *Milliyet* [see *ĐARİDA*. iii] by Mehmed Ali Ağça (who later attempted to kill Pope John Paul).

Social and political polarisation was also reflected in the media. Apart from the conservative papers *Tercüman*, *Son Havadis*, *Hakikat* (founded in 1970, it changed its name to *Türkiye* in 1971), and *Güneş* (founded in 1975), there were left-wing periodicals like the dailies *Yeni Ortam* (1972-6; close to the *Devrimci İşçiler Sendikaları Konfederasyonu* [DİSK]) and *Politika* (1975-7), whose director Ali İhsan Özgür was assassinated in 1978. A paper close to the AP was *Yeni Aya* (founded in 1970). The Islamist *Millî Selâmet Partisi* (MSP) had the support of the *Millî Gazete* (founded in 1973). The ideas of the neo-fascist *Millî Hareket Partisi* (MHP) were voiced by *Hergün*, *Millet* (1975-86) and *Ortadoğu* (1972), whose director İhsan Darendelioğlu was assassinated in 1979. Several old-established newspapers ceased publication in the 1970s: the mouthpiece of the CHP, *Ulus* (1934; founded in 1920 in

Ankara as *Hâkimiyet-i millîyye*), ended its existence in July 1971, *Vatan* (1923 [see *ĐARİDA*. iii]), whose orientation had changed several times since 1950, in 1978. Important news magazines of the 1970s were *Yankı* (founded 1971 by the correspondent of *Time*, Mehmet Ali Kışlalı), *7 Gün* and *Toplum*. *Gargır*, founded in 1972, was to become, after *Krokodil* and *Mad*, the third largest satirical paper in the world.

#### The 1980s

After the third intervention of the military on 12 September 1980 (12 Eylül), all political parties were banned. Printing houses of newspapers were closed down, and four papers (the leftist papers *Demokrat*, *Politika*, *Aydınlık* and *Hergün*, the organ of the MHP) were banned immediately after the *coup*. Between 12 September 1980 and 12 March 1984 publication of eight national papers was suspended seventeen times, for 195 days. In total, 181 journalists and writers were arrested and 82 of them sentenced during the same period (details in *Basın '80-84*, 197-230).

The influence of the military decreased after the general elections of 1983 were won by Turgut Özal's "Motherland Party" (*Anavatan Partisi*; ANAP) with a clear majority. This victory inaugurated a new period of economic liberalisation. The Turkish press had a share in the relatively rapid re-democratisation of the régime and became a significant factor in politics. Most papers were eventually fiercely opposed to the ANAP governments. In the late 1980s, Prime Minister Özal used the control of paper supplies against the hostile press. The freedom of the press continued to be restricted on the basis of the restrictive Constitution passed in 1982 (esp. articles 22, 24-30), the Press Law, the "Law on Harmful Publications", and the Penal Code (esp. articles 312 and 158). A series of government regulations in the spring of 1990 and later the "Law on Terrorism" also brought censorship to the press. In 1984, the "Kurdistan Workers' Party" (PKK), founded in 1978, had started its first action.

A number of papers was founded in the 1980s among which *Dünya* (1981), *Sabah* (1985), *Zaman* (1986; see below) are still published today (2003). The circulation of *Sabah*, founded by the dynamic Dinç Bilgin (b. 1940), publisher of the Izmir-based *Yeni Asır*, exceeded that of *Hürriyet* in 1987. *Akşam*, by then the oldest newspaper of Turkey (founded in 1918 [see *ĐARİDA*. iii]), ceased publication in 1982, *Yeni İstanbul* (founded 1949) in 1986, and *Son Havadis* in 1988. In the second half of the 1980s most papers adopted the editorial system (computer system, first used by *Yeni Asır*). The tabloid *Güneş* (1982-91) gave new impetus to give-away and lottery campaigns in the Turkish press which only *Cumhuriyet* refused to join. There was an explosion of weekly and monthly magazines in the 1980s, including cultural reviews of superior quality. *2000'e Doğru* (1986) was one of the best-known news magazines. A Turkish version of *Playboy* came on the market in 1985. The world of the press was shaken by the Asil Nadir affair in 1989. This Cypriot business man had acquired, thanks to his contacts with government circles, the tabloids *Günaydın* and *Tan*, as well as several magazines, including the news magazine *Nokta* (founded in 1983 with the French *Le Point* as a model).

Most papers had left at that period the Avenue of the Sublime Porte (*Bâbüalî Caddesi*) in Istanbul, the Turkish Fleet Street. In 1988 a Press Museum (*Basın Müzesi*) was opened in the same area thanks to the Newspapersmen's Association (*Gazeteciler Cemiyeti*).

#### The 1990s and beyond

The downfall of the ANAP government in 1991

has been in part attributed to the mobilisation of public opinion by the press. Tansu Çiller became the first female prime minister in 1993. The end of Kemalism seemed to have arrived with the general elections of December 1995 when Necmettin Erbakan's Islamist "Welfare Party" (*Refah Partisi*; RP) obtained 21% of the votes. A coalition government, the first Islamist-led government in Republican Turkey, was formed in July 1996. But once more, the military started to play a more active role. An ultimatum issued by the generals in February 1997 to restrict the influence of Islamists compelled the prime minister Erbakan to resign. His downfall was speeded by a sustained campaign in some sections of the press. Subsequently, the country was governed by various coalition governments formed by Kemalist and nationalist leaders. The PKK-led Kurdish insurgency came to an end after the capture of Abdullah Öcalan in Kenya in 1999. The country was shaken by a severe economic crisis in 2001. In November 2002, Recep Tayyip Erdoğan won the general election with his moderate Islamist "Justice and Development Party" (*Adalet ve Kalkınma Partisi*; AKP).

These developments were also reflected in the Turkish press at the turn of the 21st century with the rise of a "Kurdish" press and a growing importance of Islamic and Islamist papers (see below). Violence against journalists continued in the 1990s. *Cumhuriyet* lost seven of its writers through attacks, the most prominent victim being Uğur Mumcu (1942-93), known for his investigative journalism, who was killed by a car bomb in 1993.

Concentration and monopolisation (*tekelleşme*) became one of the major problems faced by the Turkish press. There was also serious concern about the media moguls', journalists' and columnists' increasingly close relations with the political establishment. Most national newspapers belonged (in 2003) to three important press groups which also controlled the country's largest private TV channels. Traditional ownership had almost disappeared from the media market. *Cumhuriyet* remained the only independent paper. Twelve papers, including the mass circulation papers *Hürriyet*, *Milliyet* and *Radikal* (founded in 1996 and considered by some as the most "Western" paper), and the sports paper *Fanatik*, belong to Aydın Doğan's *Doğan Media Group*. It is said to control nearly 40% of the country's advertising revenues and 80% of distribution (2003). The *Sabah* group plunged into crisis when its head Dinç Bilgin was jailed in 2001. Thanks to its promotional activities, the paper *Sabah* had reached a circulation of 1.5 million in October 1992. A law (*promosyon yasası*) eventually prohibited in 1997 *promosyon*s except those of cultural value. *Tercüman* ceased publication in 1994, but two papers bearing the same name re-emerged after 2000. The leading news magazines in the 1990s were *Aktüel* (circulation: 40,000), *Tempo* (28,000), *Aksiyon* (18,000) and *Nokta* (3,000).

#### The "Kurdish" press

The 1990s also saw the emergence of a new type of papers focussing on Kurdish issues which appeared in Istanbul and Ankara, usually in Turkish. All of them were accused of being close to the PKK. The first of them, *Özgür Gündem*, founded in 1992 and banned by the Ankara State Security Court (DGM) in 1994, lost seven of its writers and correspondents and thirteen vendors to killings. It was followed by *Özgür Ülke* (1994-5), whose premises in Istanbul were the target of a devastating bomb attack in December 1994. *Yeni Politika* (13 April-16 August 1995) was one of the most often censored papers in Turkey. Its suc-

cessors (*Demokrasi*, *Ülkede Gündem*, *Özgür Bakış*, 2000'de *Yeni Gündem*) had a similar fate, and functioned usually in a most precarious situation. *Yeniden Özgür Gündem* (founded in September 2002) had a circulation of ca. 10,000 in November 2003. In the 1990s, many Kurdish weekly or monthly magazines also began to appear, including local papers. The Kurdish language paper *Rojname* was soon banned after its first publication in December 1991. In the same year, the prohibition of Kurdish publications had been removed. There is now (2003) a Kurdish-language literary magazine, *Azadiya Welat*, published in Istanbul. However, most papers destined for Kurds from Turkey are published in Western countries known for their large Kurdish immigrant population (e.g. Sweden, etc.). The paper *Özgür Politika* is published in Europe. Kurdish satellite TV and numerous internet sites have created what has been called a "virtual Kurdistan".

#### Islamic and Islamist press

The spectacular rise of the Islamic and Islamist press dates from the 1980s. Prior to 1980, its percentage in terms of newspapers and periodicals was 7%, in 1993 it had reached 47% (G. Seufert, *Politischer Islam in der Türkei*, Istanbul 1997, 392n.). Many periodicals (including newspapers like *Yeni Asya*, *Türkiye*, *Milli Gazete*) have been associated with religious orders and groups in the Muslim world, the *Naqshbandî* dervish order and its branches [see *NAKŞİBANDIYYA*] being particularly influential. *Yeni Şafak* (founded in 1995) was financed by a pious industrialist. The paper *Zaman* (see above), organ of the group around Fethullah Gülen of the *Nurcus* [see *NURCULUK*], is now (2003) among the top five national daily newspapers in Turkey, with an average circulation of 300,000. It boasts of having been the first Turkish daily newspaper to appear on-line (since 1995). It has bureaux and correspondents in many countries all over the world. It has special international editions for twelve foreign countries, those for the new Turkish Caucasian and Central Asian republics being printed in their own alphabets and languages. *Zaman* also owns the weekly news magazine *Aksiyon*, a children's monthly, a news agency, and the private TV channel *Samanyolu*.

Islamist reviews and magazines include weeklies, numerous monthly magazines (*Sözün*, Izmir, published by the *Türkiye Öğretmenler Vakfı*, founded in 1978), and publications for women: *Kadın ve Aile* (founded 1985) was the largest Muslim women's magazine, reputed to have sold 60,000. It was closely associated with that branch of the *Naqshbandî* order whose major mouthpiece is the magazine *İslâm* (circulation 100,000). *Bizim Aile* (published since 1988) is a spin-off of the magazine *Köprü*, published since 1977 and representing the views of a section of the *Nurcu* order.

#### Local newspapers

National newspapers based in Istanbul account for about 90% of total circulation. But there have been registered up to 745 local newspapers published in Turkey, almost half of them being dailies. The circulation figures vary according to the economic development of the region. *Yeni Asır*, published in Izmir (founded in 1924; its predecessor, *Asır*, was founded in Ottoman Salonika in 1895), remains the biggest newspaper with a regional character (circulation 43,000 in November 2003). The local press has been trying to renew itself technologically in recent years and many papers are produced by printing houses with offset printing facilities.

#### Turkish papers published in Europe

The first Turkish papers printed in Europe were *Akşam* and *Hürriyet* (Munich 1969). They were followed

by *Tercüman* (1970), *Milliyet* (1972) and the *Millî Gazete* (1973). In the 1980s appeared *Türkiye* (1987), in the 1990s *Zaman* (1990), the weeklies *Cumhuriyet-Hafta* (1993) and *Dünya-Hafta* (1995), *Özgür Politika* (1995), *Sabah* (1996), *Emek* (leftist; 1996), and *Ortaođu* (1996). *Hürriyet*, *Milliyet*, *Fanatik* and *Hafta Sonu*, all belonging to the Dođan Group, had a circulation of 189,000 (of which *Hürriyet* alone comprised 84,000), i.e. 80% of the Turkish newspapers sold in Europe.

#### The minority press

The decline of the Greek community in Istanbul from the 1960s onwards was also reflected in the Greek minority papers. *Eleutherê Phônê* and *Empros*, which figure among the signatories of the *Basın ahlâk yasası*, disappeared in 1965. Two Greek dailies still appear in Istanbul for a community of 2,000-3,000 souls: *Απογευματινή/Απογευματινή* (founded in 1925), which until the death of its founder, Gr. Yaverides, in the 1970s, used to employ some ten journalists; and *Ηχώ/İho* (1977), initially a weekly, which became a daily in 1979 (circulation: about 800 copies).

The Armenian press (for a population estimated at 60,000) counted some ten titles in 2001, including the bulletin of the Saint Saviour (*Sırp Pırgıç* [Սուրբ Փրկիչ]) Hospital (a monthly founded in 1949), *Kulis* (a literary and artistic bi-monthly founded in 1946 by Agop Ayvaz) ceased publication in 1996. There are two daily papers: *Jamanak* [Հանդուսուտ] (founded in 1908, the oldest daily published in Turkey). Its circulation has decreased during the last years, from 15,000 to 1,500. Another daily, *Marnara* (Մարմարա; founded in 1940) has been directed by Robert Haddeler, a writer and critic. It is also published in Armenian but since 2001 it has contained a Turkish supplement. The weekly *Agos* [Աղոս] was founded in 1996; it is published mainly in Turkish (circulation some 5,000). Two journalists of this paper were tried in 1999 because of an article on the *Varlık Vergisi* of 1942.

The once flourishing Jewish press in Judaeo-Spanish and French is now limited to the weekly *Şalom* (founded in 1947). It is, however, published in Turkish, with a few articles written in Judaeo-Spanish. The last Jewish French language daily, the *Journal d'Orient* (founded in 1917 by Albert Carasso), disappeared in 1971.

Whereas attempts to revive the French language press proved little successful, there is one English-language daily paper, *Turkish Daily News* (founded in 1961) published in Ankara. *Dünya* has an English-language daily news page; *Zaman* also has an English on-line edition.

#### Conclusion

The Turkish printed press has made considerable progress during the last two decades of the 20th century which have witnessed the industrialisation of the media. The number of newspapers with an average daily circulation over 10,000 was 11 in 1983, 14 in 1990 and 32 in 1997. According to August 2003 figures, the average total daily sales of 35 major daily papers was about 4 million. Some 25 of them had their own website in 2004, including several regional papers. The number of magazines has increased with extraordinary speed. Its total number, which was 20 in 1990, reached 110 in 1999 (total circulation around 2,300,000). They include magazines with foreign brand names like *Marie Claire*, *Cosmopolitan*, *Harper's Bazaar*, *Esquire*, *Votre Beauté*, or *National Geographic*. As far as printing techniques are concerned, the Turkish press has attained in most domains European standards.

But some basic issues remain: press readership is still far from assuming European proportions. According

to official sources (*Facts about Turkey*, 412), the average number of newspapers sold to 1,000 persons is 58 (cf. Germany: 314). The habit of reading newspapers regularly has remained the privilege of a relatively small group, around 15% of the population (estimated at 67 million in 2000). The visual media have emerged as the most influential institution shaping public opinion. The number of private TV channels has exceeded twenty within a few years.

In spite of numerous amendments to the restrictive Constitution (the last ones in February 2003), press freedom in Turkey remains limited by various laws and a frequently restrictive interpretation of press freedom and freedom of expression by the judiciary. There is no functioning journalist's trade union. Journalists continue to be arrested and sentenced to prison terms. Leftist, Islamist and pro-Kurdish media are the primary targets. For many modern Turkish writers and intellectuals, criminal prosecution has been an indispensable part of their *curriculum vitae*. But even members of the mainstream media occasionally face legal action, although these papers usually practice a sort of self-censorship and avoid sensitive issues such as criticising the military and high-level corruption.

**SILÂH** (A.), masc. and fem. noun according to the lexicographers, standard pl. *asliha*, with *suluḥ*, *sulḥān* and *silāhāt* also found in the lexica, the general term in Arabic for both offensive weapons and protective armour and equipment. This collective sense of the word is also often included in the general term 'udda, literally "equipment, gear, tackle". The sense of "weapon" has clearly no connection with that of the common Arabic verb *salaha* "to defecate". Attestations of any parallel form of *silāh* are weak in Old South Arabian. One can only cite Biblical Hebrew *šelah*, of obscure meaning in general but with the meaning of "javelin" or "some sort of weapon that can be carried and thrown" in such contexts as

II Chron. xxiii. 10, Joel ii. 8, etc., and as a possible parallel, despite the phonetic problems, Akk. *šēlu* "to sharpen weapons", *šēliātu* "dagger blade" (*CAD*, Letter Š, ii, 275).

### 1. The pre-Islamic period.

The weapons of the pre-Islamic Arabs were essentially the bow, the sword and the spear or lance. Our knowledge of these weapons of theirs is almost entirely a bookish one, and it was from the evidence of pre-Islamic poetry that F.W. Schwarzlose compiled his *Die Waffen der alten Araber aus ihren Dichtern dargestellt* (Leipzig 1886, repr. Hildesheim 1982), a work concerned primarily with the nomenclature of weapons and their component parts.

Fighting was a prominent aspect of desert life, in which tribes often competed over pasture grounds, sought to drive off opponents' herds or were involved in protracted vendettas entailed by the unwritten laws of revenge, retaliation and the exacting of compensation for losses to the tribe's fighting strength [see *DIYA*; *ḲIṢĀS*; *THA'R*]. Hence a rich vocabulary evolved for weapons and armour, often descriptive, by metonymy, of some special characteristic ("shining", "incisive") or of some origin, real or supposed ("Indian", "Yemeni", "*Ḳhattī*"). This vocabulary naturally attracted the philologists of Islamic times, concerned to elucidate the names of weapons, armour and their synonyms in early poetry. Whence the composition of works with titles like *Kitāb al-Silāh*, such titles being attributed to the Baṣran scholar al-Nadr b. Ṣhumayl (d. 204/820), al-Aṣma'ī, Ibn Durayd [*q.v.*] and Ṣhamir b. Ḥamdawayh (d. 255/869) (see Schwarzlose, 11 n. 1). Few of these works have survived (Sezgin, *GAS*, viii, 257, lists a fragmentarily surviving *K. al-Silāh* by a disciple of al-Aṣma'ī's), but lexicographical and philological studies like al-Tha'ālibī's *Fih̄ al-luḡa* and Ibn Siduh's *Mukhaṣṣaṣ* are rich sources of information on the nomenclature of weapons and their component parts. It is highly improbable that any of these works gave any actual descriptions of weapons or their use—the authors were literary men, who probably never wielded a weapon in anger in their lives, and not practical warriors—and on these points we have virtually no information. It is not till later mediaeval times that practical treatises on the art of war and the use of weapons are known (see below, 2.; *FURŪSĪYYA*; *ḤARB*. 1.). The only direct, contemporary source which might conceivably give us some idea of pre-Islamic weapons lies in possible representations in petroglyphs and similar drawings. There are quite a lot of depictions of warriors wielding lances and bows, and possibly swords, on horseback and on foot, in the Thamudic and Safaitic materials, cf. also the frontispiece photograph of a rock graffito showing an archer, and the drawing of a South Arabian spear, of uncertain age, at p. 65 of R.B. Serjeant, *South Arabian hunt*, London 1976.

The weapon most frequently mentioned in the ancient literary sources is the sword (*saif*), for which special works by the philologists are recorded, e.g. Abū 'Ubayda's *Kitāb al-Sayf* and a work by Abū Ḥātim al-Sidjīstānī, a *Kitāb al-Suyūf wa 'l-rimāh* (Schwarzlose, 124 n. 1). These must have been stabbing swords for close, hand-to-hand fighting rather than cavalry swords. There emerges that swords of Indian steel (*hindī*, *muḥammad*) were particularly prized; whether the Hind envisaged here relates to the Indian subcontinent or to lands beyond in Southeast Asia, such as Malaya or Sumatra, is unclear, but any such weapons were presumably imported via the Persian Gulf ports. Nearer home, the ancient Arabs prized blades forged

by the smiths of Syria, e.g. of Boṣrā [*q.v.*] (see below), a land which had access to supplies of iron ore and to wooded terrains for the production of charcoal. On the other hand, it is unlikely that "Yemeni" swords were actually made in Yemen; more probably, blades or complete swords were imported from lands further east to the ports of Hadramawt and Yemen, thus acquiring this territorial name. See in general on swords of this period, Schwarzlose, 124-209.

The spear or lance (*rumh*, *'anaza*, *kanāt*, the latter term, originally "bamboo, reed shaft" being used by synecdoche for the whole weapon) was, it seems, included in the work by Abū Ḥātim al-Sidjīstānī on swords and spears mentioned above (see also Schwarzlose, 210 n. 1). It was used as a thrusting weapon in close fighting, but spears which could be thrown at the enemy like javelins (*nayzak* < Pers. *nīza*, *miṭrad*, *harba*) are also mentioned, and the designation *miṭrad* indicates that such throwing weapons could be used for hunting as well as war. Spears with a bamboo or strong reed shaft (*kanāt*) are often described as *khattī*, from al-*Ḳhattī* [*q.v.*] in Baḥrayn or Hadjar, where a certain Samhar is said to have been an expert fashioner of spears, whence *samharī* ones. Whether these shafts were made from the stems of the vegetation growing along the Gulf shores, or were imported from further east, as the term *kanāt al-Hind* implies, is unclear. Various trees are also mentioned as providing wood for spear shafts, such as the *washūdj* or ash (?). Spears had a head (*snān*) and a tapered iron butt at their lower end which could be stuck into the ground when the weapon was not being carried (*zudjāj*). See, in general, Schwarzlose, 210-45.

The bow and arrow were used by the ancient Arabs, and the sources distinguish "Arab" from "Persian" bows. See further *ḲAWS*, and Schwarzlose, 246-319.

As well as all these offensive weapons, there are frequent mentions of protective body armour in the shape of coats of mail (*dir'* or *sard*, *zarad*, *muzarrad* < Pers. *zard*, traceable back, according to Fraenkel, *Die aramäischen Fremdwörter im arabischen*, 241-2, to a Persian form preceding MP *zrēh* with a final *d*, Avestan *zrādāhā*; *sard* appears in Kur'ān, XXXIV, 10/11, in a passage concerning King David's skill as a maker of closely-woven mail, cf. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 169). The manufacture of chain armoured coats must have been basically in the settled fringes around the Arabian peninsula, as the Persian origin of some of its nomenclature shows. Also, Boṣrā in the Ḥawrān region of southern Syria was in Byzantine times a noted centre for the forging of weapons and the making of armour, and the Byzantine authorities tried on occasion to stop the export of these to the nomads. In *awā'il* [*q.v.*] lore, the original making of mailed coats is attributed to King David (or, as some Arab commentators on ancient poetry averred, to a celebrated Jewish (?) smith called Dāwūd or to his son, but the identification of the inventor of mailed coats with the Biblical David was already made in pre-Islamic times [see *DĀWŪD*?]). This skill was also attributed to the Tubba' kings of Yemen. See, in general, Schwarzlose, 322-49. Mailed coats were accounted valuable in desert fighting, and it was weapons and coats of mail which the poet and prince of Kinda, Imru' al-Ḳays, allegedly entrusted to the Jewish Arab poet and lord of Taymā' al-Samaw'al b. 'Adiyā' [*q.v.*] and which the latter refused to give up to the Ḡhassānid king al-Ḥārith b. *Dj*abala.

Iron helmets were termed *bayda*, from their resemblance in shape to an ostrich egg, see Schwarzlose, 349-51, and also *khūḍha* < Pers. *khūd*. Although not

mentioned extensively in poetry, which prefers to extol fearless warriors who scorned to protect themselves in battle behind shields, the pre-Islamic Arabs do seem to have employed shields on such occasions (*turs*, *djinnā*, *midjann*, *daraka*). Such shields were probably made of hide (as is specifically said of the *daraka*) stretched over a wooden frame, enough to deflect the indifferent weapons of the nomads. See Schwarzlose, 351-6.

*Bibliography*: Given in the article.

(C.E. BOSWORTH)

## 2. The Islamic period.

The military technologies of Arabia at the time of the Prophet Muḥammad remain little known, but they were still clearly under strong influence from neighbouring technologically advanced neighbours such as the Byzantine Empire, Sāsānid Persia and India via maritime trade contacts. Not surprisingly, early Byzantine styles dominated in the north and west, Persian in the east and, to a less certain extent, Indian in southern Arabia. Swords and spears remained the favoured weapons, while archery played a minor role and only amongst foot soldiers. Most armour was of mail although leather defences were also widespread, much of this latter probably being manufactured in Yemen (see 1. above). Similarly, the people of prosperous but strife-torn trading regions such as the Ḥidjāz appear to have been relatively rich in weaponry.

With the rapid Muslim Arab conquest of vast regions from Central Asia and India to Spain and the Atlantic Ocean, other military techniques began to appear in the arms and armour of Muslim armies during the 8th and 9th centuries. After the establishment of an Islamic "empire", such armies became largely territorial which further encouraged the development of regional styles. Thus Central Asian Turkish military techniques had their first impact in 8th to 9th-century Transoxania and what is now eastern Persia, while Sāsānid Persian military styles remained dominant in western Persia and eastern parts of the Arab world until the 9th-10th centuries. Early Byzantine military styles survived in areas like eastern Anatolia well into the 10th century, and in Syria and Egypt well into the 12th century. Yet the situation was less clear in North Africa and the Iberian peninsula. Here pre-Islamic military techniques had generally been more primitive than those of the conquering Muslim Arabs, despite a residual early Byzantine military heritage.

This is not to say that the Muslim Arabs merely adopted the military styles of those whom they conquered. Nevertheless, the Muslim Arabs' contribution to the development of a specifically Islamic military tradition, and to the history of military technology as a whole, was primarily to open up a vast area to differing military influences. Thus Persian influence was eventually felt in North Africa, Byzantine technology reached Iberia and, above all, the Turkish Central Asian military tradition spread throughout the Middle East. Such Turkish influence also served as a channel whereby Chinese military techniques spread westward and may even have reached the Iberian peninsula, though in a very diluted form.

A truly Islamic tradition of arms, armour and their associated tactics developed rapidly, yet this was neither uniform nor monolithic. Large variations could always be seen between different regions resulting both from local traditions or conditions, and from the recruitment of troops from specific geographical zones which had their own distinctive styles.

In general, however, it could be said that Persian and Turkish influences were the most powerful, whereas

those of the Byzantine or Mediterranean countries were of secondary importance, at least after the first century of Islamic history. Such a pattern persisted until early modern times as peoples and dynasties of essentially Turkish origin rose to political dominance in most of the militarily significant Islamic countries. Only in the late 18th and 19th centuries, with the rise of European military power and its accompanying colonialism, did indigenous or Turkish military practice rapidly give way to a widespread adoption of European weaponry and of the tactics associated with such modern technologies.

### *Weapons*

For Islamic bows and archery, see *KAWS*; for fire-arms, see *BĀRŪD*; for siege weaponry, see *ḤIṢĀR*; and see also *ḌĀYṢĪL*.

Since ancient and pre-Islamic times the long bamboo-hafted spear or *rumḥ* had been regarded as a typically Arab weapon. It was used on foot, on horseback and when riding camels. In the early Islamic centuries the Arabs were also renowned for their use of a relatively short sword (*saḥf*). This was probably a broad-bladed weapon reflecting Roman and Byzantine infantry traditions rather than the cavalry traditions of Persia, where long-bladed slashing swords had been widespread for some centuries. Whereas the typical Arab *rumḥ* spear remained in use until modern times, the Arabs' short *saḥf* was soon replaced by longer-bladed weapons suitable for mounted combat, though these were still largely known as *suḥf*. Only in southern and eastern Arabia (Yemen, Ḥaḍramawt and 'Umān), and in a few other isolated parts of the Arabian peninsula, did short swords persist along with a tradition of infantry-dominated warfare.

Long, single-edged cavalry swords were already characteristic of Turco-Mongol Central Asia and had appeared in Persia and the Byzantine Empire shortly before the Islamic conquests of the 7th and 8th centuries. Thereafter, they became increasingly popular throughout most of the Islamic world, becoming the dominant cavalry sword by the 15th century although the single-edged sword or sabre never entirely replaced the double-edged weapon. The curved or true sabre spread from Turkish Central Asia into Islamic Persia by the 11th century, or perhaps slightly earlier. Thereafter, in a great variety of forms, it spread throughout most of the Islamic world reaching Granada, the last bastion of Andalusian Islam, by the 15th century. Heavier straight and double-edged weapons were, nevertheless, still used in many parts of the Islamic world in the 19th century, particularly in Islamic sub-Saharan Africa.

Smaller weapons, including those which fell between the categories of sword and dagger, were similarly used in most areas at most times. Here there may have been a greater degree of similarity across the Islamic world, perhaps because a particular type or shape of personal weapon was often worn as a mark of religious or cultural identity. The most obvious example was a heavy dagger or short stabbing sword widely known as a *khandjār* (for variations on this and other weapons terminology, see the *Glossary* below). Although the development of the *khandjār* drew on many regional traditions and evolved into various shapes of dagger in different parts of the Islamic world, the basic weapon again appears to have been of eastern Iranian or Turkish origin. Other sometimes highly distinctive styles of dagger were limited to smaller areas, generally on the fringes of the Islamic world such as Morocco, the Caucasus and the East Indies. In the latter region, the double-edged *kēris*

dagger or short sword was retained from pre-Islamic times and continued to have an almost magical and pagan significance amongst a population sometimes only superficially converted to Islam.

Other weapons where a distinctly Islamic style developed were war-axes and maces. The latter were occasionally described as a "friendly" weapons, suitable for use during conflicts with fellow-Muslims as a lighter mace, when skilfully used, could incapacitate without killing a foe. Both also involved a large and complex terminology which distinguished between sometimes minor varieties of weapon but which nevertheless remains in part obscure. This terminology, along with surviving weapons and abundant pictorial representations, show that axes ranged from those with large "half-moon" to narrow spiked blades, while maces varied considerably in weight, shape of head, length of haft or handle and in the material from which they were made.

The javelin was widely used during the early period (7th-13th centuries), particularly by Arab and Persian troops, and remained in use by cavalry in most Islamic countries at least until the 15th century, certainly long after the javelin had been abandoned in western Europe. This probably reflected the more mobile and more disciplined character of Islamic armies during the mediaeval period, at least when compared to their European rivals, as well as the lighter styles of armour associated with Islamic tactics. The fact that such an apparently simple weapon as a javelin came in a large variety of sizes, weights and types of blade, along with an equally complex terminology, further illustrates the importance of the javelin in the hands of both foot soldiers and horsemen. It is also worth noting that cavalry training exercises or "games" involving the javelin were not only developed within the Islamic world but were copied by neighbours ranging from Spaniards and Ethiopians to Armenians [see *ḌJERĪD* and *FURŪSĪYYA*].

#### Armour

Islamic armies have been widely regarded as lightly armoured when compared to their Western European rivals, but this is a misleading over-simplification. The amount of armour available to early mediaeval European forces such as those of the Crusaders has been exaggerated, while that available to Islamic armies from the time of the first conquests onwards has generally been underestimated. Nevertheless, there were wide variations between regions resulting from the differing availability of iron and of wealth to pay for the manufacture or importation of expensive military equipment.

Four types of body armour dominated throughout Islamic military history. These were mail (inter-linked metal rings, usually of iron); lamellar (small scales of iron, bronze, hardened leather or other rigid materials laced to each other but not to a flexible fabric or leather backing); so-called soft-armour of felt, quilted material or flexible buff leather; and a distinctive later form known as mail-and-plate armour. A fifth system of construction has only recently been recognised on the basis of archaeological finds rather than obscure textual references and barely decipherable artistic representations. This is a form of flexible protection consisting of partial hoops of hardened or apparently reconstituted leather which may have been of Central Asian or even Chinese derivation. Hardened and apparently reconstituted leather was also used in the construction of helmets, as shown in written sources such as *Marḏī* or *Murḏā* b. 'Alī al-Ṭarsūsī [see *AT-ṬARSŪSĪ*] (*Tabṣīrat arbāb al-lubāb*, ed. and tr. Cl. Cahen,

*Un traité d'armurerie composé pour Saladin*, in *BEO*, xii [1948], 103-63), and confirmed by recent though as yet unpublished archaeological finds in Syria. Carbon dating tests on wood and sinew amongst these finds have produced an optimum date at the end of the 12th century, while tests on the leather have produced an optimum date of A.D. 1220. It is however, worth noting that a leather helmet or reinforced hat amongst these Syrian finds incorporates small piece of wood; supposedly "wooden" helmets have been mentioned in previously inexplicable texts.

Full plate armour consisting of large shaped pieces of iron buckled or rivetted together, of the type known in western Europe from the 14th century to early modern times, remained rare though not entirely unknown in the Islamic world. Where they seem to have been occasionally used, as in al-Andalus, southern India and the Philippines, they almost invariably reflected direct Western European military influence.

The body-covering mail hauberk (coat or tunic-like protective garment) generally known as the *dir*, and the coif (hood) known as the *mighfar*, were by far the most common form of metallic protection throughout the Mediterranean lands, the Middle East and Persia at the time of the Prophet Muḥammad. It subsequently evolved into a greater variety of forms than was seen elsewhere, ranging from ordinary hauberks, given names describing their overall size or shape, to the *kazāghand* which had its own integral padded lining and a decorative outer layer of cloth.

Only in eastern Persia, Afghanistan and Transoxania was lamellar armour common, although it was used in the late Roman Middle East and Sāsānid Persia during earlier centuries and remained known if only occasionally worn. The period from the 8th to 14th centuries saw such lamellar armour spread westwards in the Islamic world along with other essentially Turkish Central Asian military styles. As a result, the lamellar *ḏjauṣṣhan* became widespread throughout most Islamic countries (with the possible exception of North Africa and the Iberian peninsula) by the 12th century, and even in the Islamic West, lamellar was known if not popular. Nor was mail armour abandoned in favour of such lamellar protections. Instead, the two were often worn together, usually with the lamellar *ḏjauṣṣhan* on top, until the development of mail-and-plate protections combining the advantages of both forms made it unnecessary to wear two armours at once.

Such mail-and-plate armour appeared in a variety of forms and used varied terminology, some of it stemming from earlier and different usage. In the Ottoman Empire, however, such the new style of body protection was often called a *korazin*, from the common European term cuirass and its various Balkan dialect forms. In this mail-and-plate armour, pieces of iron plate of varied shapes and sizes designed to protect different parts of the body were linked by pieces of mail of varying widths depending on the degree of flexibility required. It was an essentially Islamic technological development, perhaps first appearing in 'Irāk or western Persia in the 14th century, from where it spread to become the most typical 15th to 18th-century form of Islamic armour for both men and horses. As such it was characteristic of the late Mamlūk, Ottoman, later Persian and Indo-Muslim states.

So-called soft armours were widespread in early Islamic centuries and seem to have remained popular until the early 14th century, thereafter largely being relegated to the hottest regions such as India and Sudan. These should not, however, be seen only as

a cheap alternative to metallic armour. Rather, they were a light, effective and easily-made protection suitable for the highly mobile cavalry-dominated warfare which characterised Islamic military history. Soft armour could also be combined with other forms of protection. In particular, it was worn beneath or combined with mail protections. Soft armours were also suitable in the hot climates characteristic of some Islamic countries and survived throughout the 19th century in the sub-Saharan Sudan.

The history of Islamic helmets differed from that of Europe, generally reflecting a preference for good visibility and mobility at the cost of less protection. Little is yet known about helmets in the early Islamic period (7th to 9th centuries), but in general they seem to have continued previous Romano-Byzantine and Persian shapes and forms of construction, most of which were based on two pieces joined along a central comb. Unfortunately, the terminology, though varied, cannot usually be identified with one specific form of helmet. In fact, it seems that the naming of helmets, though not entirely interchangeable, was generally unspecific (see the *Glossary* below).

Central Asian types of pointed and segmented helmet were already spreading into the Middle East and eastern Europe before the coming of Islam. Thereafter, such helmets, in which iron segments were rivetted either to each other or to an iron frame, spread throughout the Islamic countries. Meanwhile, advances in metallurgy within Islam during the 8th to 11th centuries, and perhaps even earlier, led to the production of one-piece iron helmets in relatively large numbers long before such defences appeared in Europe or even the Byzantine Empire. By and large, this one-piece form was known as the *bayḍa*. Helmets were an obvious and popular object on which wealth or prestige could be demonstrated, as a result of which most of the techniques of inlay and surface decoration found in other forms of Islamic metalwork also came to be seen on helmets. Meanwhile, lighter helmets made of leather and, apparently, a form of reconstituted hardened leather were also used in most regions.

Facial and neck protection was provided by mail coifs (hoods) and mail or lamellar aventails (veil-like skirts hanging from the rim of a helmet). Only rarely were rigid metallic face-guards or hinged visors seen on Islamic helmets. Nevertheless, they did appear in Central Asia and Persia during the 12th to 14th centuries and, in a very different form, in the Iberian peninsula around the same period. These exceptions probably reflected special military circumstances, such as an enhanced threat from horse-archery composite bows in the east and from a greater use of hand-held crossbows in Iberia. Elsewhere, flexible mail or lamellar head and neck protections, often pulled across the face to leave only small apertures for the eyes, were considered an adequate defence.

Shields of wood, hardened leather, wickerwork and, in later centuries, of iron were all used by Muslim warriors. Most were round and relatively small, being suitable for light cavalry warfare. Yet there were plenty of other variations. Tall, kite-shaped shields for infantry use were used in the Middle East during the 11th to 13th centuries. These included the flat-based *ḡjanū-wiyya* whose name might indicate that it was initially imported from Genoa, since identical flat-based infantry shields or mantlets were also characteristic of Italy though not of other parts of western Europe at this time. Large shields which were apparently mantlets (shields that could be rested on the ground), made of woven reeds, were probably widespread in Arabia

at the time of the Prophet and appear to have continued in use, at least in 'Irāq, until at least the 9th century.

Large and flexible shields made from various animal hides were used in the Sahara, North Africa, Egypt and the Iberian peninsula during the mediaeval period and subsequently developed into the smaller but characteristic kidney-shaped "Moorish" *adarga* of 14th to 17th-century Spain and Portugal (this name stemming from the Ar. *daraka* meaning a small shield, usually of leather). Shields of purely European form were also used by Muslim Andalusian soldiers during periods when western European military fashions dominated, most obviously in the 13th century.

Meanwhile, the typical Turkish *kalkan* shield was constructed from a spiral of cane bound together with cotton or silk thread. This formed an exceptionally light and effective cavalry shield in which the threads gave almost unlimited scope for colour and decoration. Iron shields were known by the 12th century, the earliest known example being of segmented construction, but they only became more widespread and of one-piece construction in the 16th and 17th centuries. These later metal shields had developed in response to guns, as they had in Europe, and were as rapidly abandoned when advances in firearms rendered them redundant.

Armour of a rigid or semi-rigid type for the limbs was used in several Islamic countries long before it became more than a localised novelty in mediaeval Europe. This almost certainly resulted from the importance of close-combat cavalry warfare with swords. Nevertheless, Islamic warriors never took limb defences to the extremes seen in later mediaeval and early modern Europe. Early Islamic arm protections such as the *bāzūband*, *kaff* and *sā'id* (7th to 14th centuries), though never very widespread, followed in the Byzantine and Turco-Persian traditions. The latter consisted of segmented vambraces for the lower arms, probably of iron or bronze but perhaps also of hardened leather, while the upper arms were protected by the sleeves of a mail hauberk or by flaps of lamellar armour attached to the body of a lamellar cuirass. A style of long-hemmed, half-sleeved lamellar cuirass became more widespread after the Mongol invasions of the 13th century but was rarely seen west of Persia. A rigid tube-like iron vambrace for the lower arms, known in Turkish as the *kolçak* or *kulluk*, appeared in the second half of the 13th or early 14th century and was almost certainly of Sino-Mongol origin. Thereafter it remained popular in Central Asia, Persia, Turkey and Mamlūk Egypt.

Leg protections of similar construction to arm defences were known in pre-Islamic Transoxania but seem to have declined in popularity after the coming of Islam. Mail leg protections appeared in Islamic and Byzantine sources in the 11th century, slightly before they did so in western Europe. These and other forms, included those of mail-and-plate construction, reappeared in later years being known as *bulduk*, *dizček*, *kalsāt zarad*, *rānāt ḡadīd* and *sāk al-mūza*. Nevertheless, such items of armour were generally reserved for a small élite of heavily-armoured cavalry.

#### *Horse-armour*

It has often been assumed that horse-armour was rare or even unknown in the early Islamic period because it is virtually unknown in art before the 14th century. Documentary sources, however, make it clear that various forms of horse-armour were widespread. The most popular type appears to have been of quilted or padded construction; this being reflected in the

most common Arabic term for horse-armour, *ūḍḍīfāf*. Before the late 13th century, references to horse-armours of scale, lamellar or mail are rare, though they can be found.

In most parts of the world, and during most periods, horse-armour was primarily a defence against arrows or other such missiles. Even in these circumstances it was more effective against long-range harassment than close-range shooting. This was clearly true in the Islamic world where, even in the later period (15th to 17th centuries) light horse-armours of quilted, leather, lamellar, mail or mail-and-plate construction were relatively widespread, whereas plated iron horse-armour was virtually unknown. Generally speaking, the construction of horse-armour reflected that used for the rider's own armour, though there tended to be a certain time lag between the introduction of new styles for the rider and for his horse. Thus a rider might wear a mail-and-plate cuirass while riding a horse still protected by hardened leather lamellae.

The chamfron or armour for the animal's head was also used, being known as a *burkuʿ*, *kashka*, *sarī* and probably *ūshṭaniyya*; the variety of terms indicates that this form of protection was more widespread than is sometimes thought. This was probably of hardened leather until plated metal forms, along with fully lamellar horse-armours, became common in the 14th century. Nevertheless, there is some evidence that rigid metal chamfrons were known in Egypt and neighbouring Islamic territories some centuries earlier and that these were almost certainly descended from Roman forms of horse-armour.

A few surviving head protections for camels date from the Ottoman period but these are likely to have been for parade rather than war use. Much elephant-armour was, however, used in war. Naturally, it was most highly developed in Islamic India although war-elephants continued to be used elsewhere in the eastern parts of the Muslim world, as they had been in the pre-Islamic period [see FIL. 2. As beasts of war]. Little is known about such early Islamic elephant-armour, although enormous circular shields to protect the animal's vulnerable ears do appear in art sources from the 12th or 13th centuries.

#### Terminology

The terminology of Islamic arms and armour is huge and embraces several languages with the same terms, or minor variations on such terms, being used within several languages. Many other terms are merely descriptive or poetic. The following list includes only the most important.

#### GLOSSARY

*ʿabbāsī*: curved sword, Mughal India  
*absad*: cheek-piece of helmet, Mughal India  
*abṣar*: leather shield (Ar. and Pers.)  
*adaqa*: small shield or parrying device, Mughal India (from Ar. *daraka*; Indo-Pers.)  
*ʿadī*: helmet, probably of riveted plates (Ar.)  
*afaru*: sabre (Berber)  
*afru*: knife, Algeria (Berber)  
*afru ghanim*: lit. "rose petal"; dagger, Morocco (Berber)  
*aghastī*: baton or staff, equivalent of Ar. *ʿasā* (Kīpčak Tk.)  
*ʿāʾid*: central part or grip of spear-shaft (Ar.)  
*ʿalāka*: connections of a *ḍjawshan* cuirass (Ar.)  
*alla*: long spear or javelin with a large blade (Ar.)  
*ʿamūd*: heavy form of mace, probably with flanged head (Ar.)  
*anābīb*: spaces between knots of a bamboo spear-shaft (Ar.)

*ʿanaza*: short spear or staff weapon with a large elongated blade (Ar.)  
*ʿanāza*: short infantry spear, Mughal India (Indo-Pers.)  
*anf*: nasal of helmet (Ar.)  
*ʿarād*: blade of large-bladed spear (Ar.)  
*ʿard*: flat surface of sword-blade (Ar.)  
*artak-i kājim*: horse-armour, Mughal India (Indo-Pers.)  
*ʿasā*: club, cudgel, iron staff or light form of mace (Ar.)  
*ashād*: possibly the cheek-pieces of a helmet (Ar.)  
*ashūk*: helmet, equivalent of Ar. *khūda* (Kīpčak Tk.)  
*aṣl*: shaft of spear (Ar.)  
*asm*: staff weapon in which the blade is longer than the haft (Ar.)  
*ʿayna*: individual lamellae or pieces of a lamellar cuirass (Ar.)  
*ʿayr*: central ridge of a spear-blade (Ar.)  
*badan*: short hauberk or shirt of mail, sometimes sleeveless (Ar.)  
*baghltāk*: horse-armour, usually quilted (Pers.)  
*bakhta-kalaghī*, *bagta-kalagi*: feathered helmet crest or plume, Mughal India  
*bakhtar-zillu*: scale or scale-lined armour of Mongol origin, Mughal India  
*ballam*: broad-bladed short spear, Mughal India  
*balṭa*: war-axe (Kīpčak Tk. and Ar.)  
*baltū*: war-axe, Mughal India  
*band-mawḍjī*: "watering" pattern on sword-blade (Indo-Pers.)  
*bank*: dagger with extravagantly curved blade (Hindi)  
*barāchā*: spear all of metal, Mughal India  
*barāsim*: horse-armour or caparison (Ar.)  
*barḥamb*: crupper, piece of horse-armour covering the rump or tail (see also *pār dum*) (Ar.-Pers.)  
*bargustuwān*, *barkustuwān*: horse-armour, also elephant armour (Pers.)  
*bayd*: type of sword-blade (Ar.)  
*bayda*: helmet, probably of one-piece construction (Ar.)  
*bāzūband*: vambrace, lower arm protection (Pers.)  
*bekter*: cuirass, usually lamellar (Mongol)  
*bhala*, *bhallā*: spear or cavalry javelin (Indo-Pers.)  
*bhanḍju*, *bhanḍjī*: armour with throat-guard, Mughal India  
*bhudjī*: combined axe and dagger, Mughal India  
*bīchak*: knife (Kīpčak Tk.)  
*bīchāk*: single-edged dagger, Mughal India  
*bīrmāhan*, *bīrmān*: Indian sword-blade (Pers.)  
*bitḥawa*: dagger with looped guard on the grip, southern India  
*bozdaghan*: type of mace, lit. "grey falcon" (Tk.)  
*budluk*: thigh defences (Tk.)  
*bughlutāk*: quilted soft armour (Pers.)  
*bukhtar*: body armour of Mongol origin, Mughal India  
*burkuʿ*, pl. *barāki*: chamfron (lit. "veil"; Ar.)  
*čahār āʾīna*, *čhār āʾīna*: lit. "four mirrors"; body armour basically consisting of four linked plates (Pers.)  
*čakar*: throwing disc (Indo-Pers.)  
*čakh*: sheath or scabbard (Pers.)  
*čakhī*: infantry mantlet (Indo-Pers.)  
*čamčāk*: cavalry axe, Mughal India  
*čaray*: single-edge sword or large dagger with a reinforced back, known in Europe as a "Khyber knife", Mughal India (see also *salawar* and *čhura*)  
*čashmak*: face-covering aventail of helmet (Pers.)  
*čhura*: single-edge sword or large dagger with a reinforced back, known in Europe as a "Khyber knife", Mughal India (see also *salawar* and *čaray*)  
*ččak*: helmet with a neck-guard, pendant ear-pieces and a sliding nasal (Tk.)  
*čilamum*: dagger, Mughal India  
*čirwā*: small shield, Mughal India

*čūb*: staff or club, or shaft of spear or mace (Pers.)  
*čūbhā-i āhan*: probably long form of infantry mace (Pers.)  
*čūkal*: mail hauberk (Tk.)  
*čūkmar*, *šukmar*: mace (Kīpčak Tk.)  
*čumuk*, *šumuk*: mace (Kīpčak Tk.)  
*dabbūs*, *dabbūs*: general term for mace (Ar.)  
*dabīra*: rear part of a helmet, neck-guard or aventail (Ar.)  
*dahra*: curved dagger (Pers.)  
*daraqa*: small shield, usually of leather but sometimes of other materials (Ar.)  
*dās*: agricultural implement sometimes used as a weapon (Pers.)  
*dashna*, *dashan*: large dagger (Pers.)  
*dast*: edge of sword-blade (Pers.)  
*dastānā*: vambrace, Mughal India  
*dauwār*: javelin with a long socket to the blade, like Roman *pilum* or Frankish *angon* (Ar.)  
*deste-čūb*: mace (Tk. from Pers.)  
*dhal*: shield, Mughal India  
*dhal-baftā*: shield of folded silk, Mughal India  
*dhu'āba*: decorative tassels on spear or sword, also wrist-strap of sword (Ar.)  
*dhubba*: point or top part of sword (Ar.)  
*dhūp*: straight sword with enclosed basket-hilt, Mughal India  
*dīr*: mail hauberk (Ar.)  
*dizčək*: thigh and knee defences (Ott. Tk.)  
*džaba*: fabric-covered mail hauberk; also quilted soft-armour or incorporating such a soft-armour (see also *džubba*; Tk.)  
*džafn*: scabbard (Ar.)  
*džaghnul*: axe with narrow blade shaped like a bird's beak, Mughal India  
*džah*: throwing disc (Indo-Pers.)  
*džāk*: form of mace (Pers.)  
*džamadhar*: broad thrusting dagger with a horizontal grip, Mughal India  
*džanūwīyya*: kite-shaped infantry shield with flattened base (perhaps originally "from Genoa"; Ar.)  
*džarid*: light cavalry javelin (Ar. "palm branch stripped of its leaves")  
*džawb*: shield or mantlet of wood and leather, or perhaps of leather-bound cane (Ar.)  
*džawšhan*: lamellar or laminated cuirass (Ar. and Pers.)  
*džībā*: quilted soft armour, Mughal India (see also *džubba*)  
*džināw*: style of dagger, Algeria, lit. "Genoese" (Ar.)  
*džirāb*: cover for scabbard and perhaps also sword (Ar.)  
*džūr*: Indian dagger (Ar.)  
*džūwarak*: unclear form of Indian armour (Pers.)  
*džubba*: large form of quilted soft armour, sometimes incorporating a layer of mail (Ar. and Pers.)  
*džunna*: shield, normally wood (Ar.)  
*dodhūrā*: double-edged short-sword or dagger, Mughal India  
*du-sanga*: spear or pike with two-pronged blade (Indo-Pers.)  
*dubulghā*: domed helmet without ear-pieces, Mughal India  
*dumchī*: crupper, armour for rump of horse, Mughal India  
*dūrbāsh*: infantry spear with a doubled-point, later perhaps an infantry axe with half-moon blade (Pers.)  
*dushnī*: small dagger (see *dashna*; Ar.)  
*falākhan*: sling (Pers.)  
*faṭīr*: rivets of mail links (Ar.)  
*firind*: "watering" pattern on damascene sword-blade (Ar.)  
*fukra*: groove down sword-blade (Ar.)

*furandžīyya*, *furaydžīyya*: infantry spear or staff weapon, possibly with European-style flanges or "wings" below the blade (Ar.)  
*gandja*: quillons of Malayan *kēris* dagger (Malay)  
*gara*: knot or lacing or armour (Pers.)  
*gardanī*: gauntlet, Mughal India  
*gārwa*, *gārwa*: quilted leather soft-armour, or a form of quilted shield or mantlet (Pers.)  
*ghilāf*: scabbard, sheath or container for armour (Ar.)  
*ghilāla*: rivets in construction or armour or weapons (Ar.)  
*ghimd*: scabbard (Ar.)  
*ghirār*: edges of sword-blade (Ar.)  
*ghughwāh*: mail hauberk with integral coif, Mughal India  
*gīrah kuša*: hooked spear (Indo-Pers.)  
*gīrbān*: aventail, gorget or tippet (Pers.)  
*gudhār*: infantry javelin or staff-weapon (Pers.)  
*gundar*: javelin (Tk.)  
*gūpāl*: form of mace (Pers.)  
*guṭī kard*: small thrusting knife with integral gauntlet, Mughal India  
*gurz*: mace, probably asymmetrical, animal-headed form (Pers.)  
*gustuwān*: horse-armour (see *bagustuwān*; Pers.)  
*habīka*: coif or more likely aventail (Ar.)  
*hadd*: point or perhaps edge of sword-blade (Ar.)  
*hadjaf*: shield, usually leather, of Africa and Andalus (Ar.)  
*hadjārat al-yad*: hand-thrown stone (Ar.)  
*halqa*: ring, either as part of a mail hauberk or for other purposes (Ar.)  
*hamila*, *himāla*: baldric, or attachment points on scabbard for a baldric or sword-belt (Ar.)  
*handjer*: dagger (see *khandjar*; Ott. Turk.)  
*harba*: large-bladed infantry spear or staff-weapon (Ar.)  
*harf*: edge of sword-blade (Ar.)  
*harri*: Indian dagger (Ar.)  
*hasiw*: padded garment or soft armour (Ar.)  
*hilya*: decorative elements on scabbard and sword (Ar.)  
*hirāwa*: thick haft of a staff weapon or spear (Ar.)  
*husām*: edges of sword-blade (Andalusian Ar.)  
*kabastin*: ball and chain (Urdu)  
*kabāda*: grip or hilt of sword (Pers.)  
*kabī'a*: pommel of sword-hilt (Ar.)  
*kabūra*: heavy form of cuirass (Ar. prob. from Pers.)  
*kadd*: sword-blade (Ar.)  
*kaddara*: straight two-edged sword (Pers.)  
*kādjam*, *kādīm*, *kađīm*: horse armour of mail (Pers.)  
*kaff*: gauntlet or extension to a vambrace; also perhaps an upper arm defence attached to body armour (Ar.)  
*kāfir-kūbat*: form of mace (Ar.)  
*kahzana*: thick haft of spear or staff weapon (Ar.)  
*kā'im*: hilt of sword (Ar.)  
*kala'*: form of straight broad sword-blade (Ar.)  
*kalāchūr*, *kalādžūr*, *kalđūr*: curved sword or early form of sabre (poss. from Turk. *kilic*; Pers. and Ar.)  
*kalaghī*: helmet-crest, Mughal India  
*kalb*: ring on scabbard to attached baldric or straps to belt (Ar.)  
*kalb*: centre of shield, over the grip (Ar.)  
*kalkan*: spiral cane shield bound with silk or cotton (Turk.)  
*kalsāt zarad*: mail chausses (Ar.)  
*kamand*: lasso (Pers.)  
*kamarband*: waist and abdomen protecting armour or the central part of a *džawšhan* cuirass (Pers.)  
*kanāt*: long spear (Ar.)  
*kambūsh*: caparison or horse-cloth (Ar.)  
*kantha-šubha*: gorget for neck and throat, Mughal India

*kantup*: one-piece helmet, Mughal India  
*karācūl*: sword associated with Central Asian Turks, probably a corruption of *kalātūr* (Indo-Pers.)  
*kārd*: knife or small dagger (Pers.)  
*karkal*: quilted soft armour or arming coat, later incorporating iron scales or plates (Ar.)  
*kartal*: Indian curved sword or dagger (Ar.)  
*karūd*: straight-bladed narrow-bladed dagger, Mughal India  
*kārwa*: leather mantlet padded with cotton (see also *gārwa*; Indo-Pers.)  
*kashka*, *kashkā*: chamfron or the front part of horse-armour, Mughal India  
*kaskara*: Sudanese straight double-edged sword  
*katāra*: Indian sword or large dagger (Pers.)  
*kaṭir*: rivet-heads of a mail hauberk (Ar.)  
*kaunas*: point or decorated summit of helmet (Ar.)  
*kazāghand*, *kazhāgand*, *kazhāgan*, *kāzighand*: fabric-covered mail hauberk with integral padded lining (Ar. and Pers.)  
*kažākanđ*: fabric-covered, mail-lined and padded armour (see also *kazāghand*; Pers.)  
*kažākanda*: (Tk. from Pers.; see *kažākanđ*)  
*kēris*, *kris*: Malay & Indonesian dagger of varied form, usually with its blade expanding towards the grip and with a slightly angled grip (Malay)  
*kēris suluk*: large form of *kēris* for cutting rather than thrusting (Malay)  
*kaḥfātān*: padded soft armour in the same shape as the similarly named garment (Pers.)  
*khālal*: lining of fur or skin inside scabbard (Ar.)  
*khānār*: large dagger (see *khānjar*; Tk.)  
*khānāda*, *khānda*: broad straight-bladed sword (Indo-Pers.)  
*khānđjar*: large dagger (Pers. and Ar.)  
*khāpwā*: double-curved dagger, Mughal India  
*khārātagīn*: unclear form of infantry armour also protecting the legs (Pers.)  
*khātāngku dehel*: padded or felt soft armour, later also lined with scales or plates (Mongol)  
*khātīl*: longest form of Arab spear (Ar.)  
*khaydā'a*: heavy form of helmet, possibly local form of the European Great Helm (Andalusian Ar.)  
*khēndjer*: large dagger (from Ar. *khānđjar*, Berber)  
*khīra*: small round shield, Mughal India  
*khīrs*: short infantry spear (Andalusian Ar.)  
*khīsh*: javelin (Ar. and Pers.)  
*khūd*, *khūd*, *khūdh*, *khūdhā*: helmet, usually of segmented construction; can also be made of hardened leather segments (Pers. and Ar.)  
*khūdāshīkan*: mace, lit. "helmet breaker" (Pers.)  
*khumm ghīshān*: false sleeve protecting the upper arm (Ar.)  
*khurz*: mace (see *gurz*; Ar.)  
*khuyagh*: lamellar cuirass (Mongol)  
*kilič*: sword, usually a curved sabre (Tk.)  
*kan*: scabbard (Tk.)  
*kindjal*: broad double-edged dagger, originally from Caucasus  
*kirāb*: sheath of dagger (Ar.)  
*kolčak*: vambrace (Ott. Turk.)  
*konpal*: mace with flower-shaped head, India  
*korāz*: cuirass or mail-and-plate construction, Ottoman (Turk. from Latin)  
*kris*: (see *kēris*)  
*kubā'a*: lining or skull-cap of a helmet, or an arming cap (Ar.)  
*kūbadj*: shield-boss (Ar.)  
*kulāh*: helmet (Pers.)  
*kulāh-zīrīh*: mail coif or helmet of mail-and-plate (Pers.)  
*kulluk*: arm protection (Tk.)  
*kummiya*: sabre or curved dagger (Berber)

*kuṇṭāriyya*: relatively short cavalry spear for thrusting only (from Greek *Kōntarion*; Ar.)  
*kūpal*: mace (see *gūpāl*; Pers.)  
*kurūn*: edges of spear-blade (Ar.)  
*kurz*: mace (see *gurz*; Pers.)  
*kusha*: belt for sword and archery equipment (Tk.)  
*lakhhī*: form of mace (see *latt*; Pers.)  
*lamt*: Berber and Saharan large leather shield (Ar.)  
*latt*: mace with elongated head (Ar.)  
*liṭhām*: aventail also covering the throat, lit. "veil" (Ar.)  
*lkummiyt*: sabre or curved dagger (Berber)  
*mā'ālīk*: tassels on sword (Ar.)  
*mābid*: grip of sword-hilt, probably corruption of *mikbad* (Ar.)  
*madas*: Berber javelin (Andalusian Ar.)  
*mādī*, *mādiya*: swords (Ar.)  
*mađjinn*, *mīđann*: shield (see *đjunna*; Ar.)  
*mađya*: knife or dagger used by Europeans (Ar.)  
*maḥwar*: nail fixing blade to haft of spear (Ar.)  
*makhmūs*: short cavalry spear (Ar.)  
*makk*: short infantry spear or javelin (Pers.)  
*mamar al-watar*: horizontal lacing of a lamellar cuirass (Ar.)  
*manābidh*: individual links of a mail hauberk (Ar.)  
*manāṭīk*: sword-belt (Ar.)  
*marbū'a*: short spear (poss. from Greek *riptaria*; Ar.)  
*marđ gir*: spear with a hook beneath the blade (Indo-Pers.)  
*mašrafī*: early Arabian sword, largely in poetic usage (Ar.)  
*masrūda*, *mīsrūda*: possibly the scales of a coat-of-plates (Ar.)  
*mīghfar*: hood or coif, usually of mail, to protect the head; later sometimes referring to the mail aventail attached to a helmet (Ar.)  
*mīghfer*: helmet (Ott. Tk. from Ar.)  
*mikbad*: hilt or grip of sword (Ar.)  
*mikdab*: curved or single-edged sword (Ar.)  
*mīklā'a*: sling (Ar.)  
*mīkrā'a*: club or cudgel (Ar.)  
*mīrkiz*: foot or shoe of spear-shaft (Ar.)  
*mīrzaba*: foot or shoe of spear-shaft (Ar.)  
*mīsmār*: nail or rivet attaching hilt to tang of sword (Ar.)  
*mīssyurka*: form of helmet largely consisting of mail with a small skull-top, mostly used in the Caucasus (from Tk.)  
*mīṭrad*, *mīṭrād*: short hunting spear, javelin or staff weapon, later used as a standard (Ar.)  
*mīyān*: sheath or strap to hold mace (Pers.)  
*mīzrāk*: javelin with armour piercing blade (Ar.)  
*mudākhalā*: possibly a scale armour (Ar.)  
*mudjallīda*: protective leather costume worn by fire-troops (Ar.)  
*muhaddab*: curved or single-edged sword (Ar.)  
*murhafa*: slender sword-blade (Andalusian Ar.)  
*murrāna*: infantry spear with flexible wooden haft (Ar.)  
*mustawfiya*: long hafted mace, probably ceremonial (Ar.)  
*muza-i āhanī*: iron leg armour, Mughal India (Pers.)  
*nāčakh*: war-axe, perhaps with half-moon blade and often with a hammer at the back (Pers.)  
*nāđjagh*: war-axe (see *nāčakh*; Tk.)  
*nāđjikh*: war-axe (see *nāčakh*; Ar.)  
*nahā*: shield-boss or nails to hold grip, North Africa (Ar.)  
*na'l*, *na'la*: chape of scabbard (Ar.)  
*našt*: blade of Indian or Yemeni sword (Ar.)  
*nawk*: point of spear-blade (Pers.)  
*nayzak*: short spear with a pointed foot (Ar.)  
*nazhak*: war-axe, equivalent of Arabic *tabar* (Қіпчак Tk.)  
*nīđjād*: scabbard-mounts for rings to baldric or sword-belt (Ar.)

- nīkāb*: moveable nasal or visor of helmet (Tk. from Ar.)  
*nīm nīza*: short infantry spear, lit. "half spear" (Pers.)  
*nīmānā*: short sword or large dagger (from Persian *nīmā*; Ar.)  
*nīmshā*: Moroccan short sabre (from Persian *nīmā*; Ar.)  
*nīšāb*: grip of a dagger-hilt (Ar.)  
*nīyām*: scabbard (Pers.)  
*nīza*: spear (Pers.)  
*nīzayī mard-gīr*: spear with a curved blade or incorporating a hook, of Mongol-Chinese origin (Pers.)  
*pahīrī*: shield of cane or bamboo, Mughal India (see also *phari*)  
*pākhar*, *pākhar*: elephant armour, Mughal India  
*palārak*: sabre or large dagger of damascene steel (Pers.)  
*pār dum*: crupper, piece of horse-armour covering the rump or tail (Pers.)  
*parālak*: sword of damascene steel (from Pers. *palārak*; Tk.)  
*parand*: glittering sword-blade (Pers.)  
*parī magās*: sword, largely poetic (Pers.)  
*paywand*: fastenings of a *kamarband* cuirass or armoured girdle (Pers.)  
*pēdang*: early form of Malay sword (Malay)  
*peškāb*: slender dagger, Mughal India  
*phari*: Indian version of the Turkish *kaḷkan* spiral cane shield bound with silk or cotton  
*piāzi*: ball attached to shaft by leather strap (Urdu)  
*pīl kash*, *bīl kash*: short infantry spear or staff weapon, apparently for use against elephants (Indo-Pers.)  
*purda*: aventail, Mughal India  
*rabā'īth*: Bedouin Arab light javelins (prob. from Greek *ripharia* via Syriac; Ar.)  
*rabi'a*: local form of helmet (Andalusian Ar.)  
*rāg*, *rāk*: leg armour of mail-and-plate, Mughal India  
*rānāt hadīd*: cuisses, probably of mail (Ar.)  
*raṣā'ī*: ends of baldric, perhaps in form of knots to attach to scabbard (Ar.)  
*rīās*: entire sword-hilt (Ar.)  
*ramh*: spear or lance (Ar.)  
*ṣabarbara*: long hafted infantry staff weapon or heavy javelin (Ar.)  
*sābigh*, *sābigha*: long-hemmed, long-sleeved form of mail hauberk, also lower part or hem of a coif (Ar.)  
*sābīrīyya*: long style of mail hauberk (Ar.)  
*ṣaffa*: sword-blade from India (Ar.)  
*ṣafha*, *ṣafīha*: broad sword-blade (Ar.)  
*ṣafīha*: individual lamellae of a lamellar cuirass (Ar.)  
*sā'id*: vambrace, lower arm protection (Ar.)  
*sāk*, *sāk al-mūza*: leg protections (Ar.)  
*sakī*: "watering" pattern on damascene sword-blade (Ar.)  
*salawar*: single-edge sword or large dagger with a reinforced back, known in Europe as a "Khyber knife", Mughal India (see also *čary* and *čhura*)  
*sallārī*: quilted soft armour with short sleeves (Ar.)  
*ṣamṣām*: broad sword-blade with fuller groove or grooves (Ar.)  
*sanbuk*: edge of sword-blade (Andalusian Ar.)  
*sang*: short cavalry spear (Indo-Pers.)  
*sanglakḥ*: knobbed mace, India  
*sannāha*: body armour, Mughal India  
*sar*: collar of an armour or military garment, also part of sword blade beneath quillons, or point or summit of helmet (Pers.)  
*sār*, *sārī*: mace or club (Pers.)  
*sard*: individual ring of an armour of mail construction (Ar.)  
*sarī*: form of chamfron (Ar.)  
*sayāl*: part of sword-hilt enclosing the tang (Ar.)  
*sayf*: sword (Ar.)  
*saynthī*: javelin or short spear (Indo-Pers.)  
*sbula*: slender dagger (Berber)  
*shābh*: iron foot of spear (Ar.)  
*shāfra*: edge of sword-blade (Ar.)  
*shahadast*: early Yemeni sword, perhaps single-edged (Ar.)  
*shā'ira*: peg or rivet fastening sword-hilt to tang of blade (Ar.)  
*shālīl*: arming coat or soft armour worn beneath a mail hauberk (Ar.)  
*shamshūr*: sword (Pers.)  
*shārbān*: quillons (Ar.)  
*shārib*: locket around open end of scabbard (Ar.)  
*shashbur*, *shishpar*: flanged made (Indo-Pers.)  
*shaska*: Caucasian sabre without quillons  
*shathab*: fuller groove down sword-blade (Ar.)  
*shīl*: barbed light javelin (Indo-Pers.)  
*shīrāshāna*: helmet, Mughal India  
*shūshak*: large lute-shaped shield used in sieges (Pers.)  
*sīkh*: dagger (Ar.)  
*sikkīn*, *sikkīna*: knife or small dagger (Ar.)  
*sīlān*: tang of sword (Ar.)  
*sinān*: spear blade or point (Ar.)  
*sinḥ*: tang of sword (Ar.)  
*sīpar*: shield (Pers.)  
*sīpar-i farākh*: infantry shield or mantlet (Pers.)  
*sīrāsh*: aventail (Pers.)  
*sīrbāt*: large form of cloth-covered or lined mail hauberk with a raised collar (Ar.)  
*siyābīha*: form of cavalry war-axe made by the Armenian people of Siyāwurdiya or Sevordik' (Ar.)  
*sosum patla*: form of sword (Indo-Pers.)  
*sunbula*: form of sword (Andalusian Ar.)  
*sundang*: large sword (Malay)  
*sūngi*, *sūngū*: spear (Kīpčak Tk.)  
*sunu*: spear (Tk.)  
*suṭūn*: iron staff (Pers.)  
*ta'ālīk*: suspension straps from belt to scabbard, or perhaps tassets of a cuirass (Ar.)  
*tabar zaḡhnol*: double-headed axe or with a pointed blade on the back, India  
*tabar*: war-axe (Pers. and Ar.)  
*tabarzin*: cavalry axe; lit. "saddle-axe" (Pers. and Ar.)  
*tafrat mekkum*: small sabre or cutlass (Berber)  
*tafrut*, *tafrat*: general term for bladed weapon, Morocco, or working knife, Algeria (Berber)  
*tāk*: ring at end of baldric to attach scabbard (Ar.)  
*taḡallada*: style of carrying sword from baldric (Ar.)  
*taḡouba*: straight sword of Saharan Tuareg (Berber)  
*tāla*: shield of wood or leather, Mughal India  
*talā*: clothing covered, lined or impregnated with fire-resistant chemicals, worn by fire-troops (Ar.)  
*tālamūla*: wooden shield, Mughal India  
*ta'lib*: part of spear-shaft entering socket of blade (Ar.)  
*talwar*: form of sword (Indo-Pers.)  
*tāmīr kömlāk*: mail armour, lit. "iron clothes" (Kīpčak Tk.)  
*tannūr*, *tanūnīgh*: early form of large cuirass, possibly of scales and associated with the Sāsānid period (Pers.)  
*tanutrāna*, *tanutra*: body armour, Mughal India  
*ṭaraf*: point of spear (Ar.)  
*tarā'īk*: segments of a segmented helmet (Ar.)  
*tarangala*: axe with a spike on top and a hammer at the back, India  
*tarangar*: multi-pronged infantry spear (Indo-Pers.)  
*targ* (see *tark*; Pers.)  
*tarīk*, *tarīka*: rounded helmet, possibly fluted (Ar.)  
*tārika*: tall or kite-shaped shield with pointed base (Ar.)  
*tark*: helmet (Pers.)  
*tasbult*: dagger (Berber)  
*teber*: war-axe (Ott. Tk., see *tabar*)

*teneke*: individual lamellae of a lamellar cuirass (Tk.)  
*thafrut*: sabre, Morocco (Berber)  
*thakad*: soft armour quilted with camel hair (Ar.)  
*tha'lab*: part of spear-shaft entering socket of blade (see *ta'lib*; Ar.)  
*tiđjřaf*: horse-armour of quilted material or felt (Ar.)  
*tiřatın*: knife or small-sword (Berber)  
*tiřh*: sword-blade (Pers.)  
*tiřwā*: cavalry shield, Mughal India  
*tiř-i andžān*: light infantry javelins (Pers.)  
*tiřfił*: sheath or holder for mace (Tk.)  
*tiřha*: long-hafted battle axe or halberd (Pers. and Ar.)  
*tiřhtaniyya*: probably chamfron, armour for horse's head (Ar. from Latin)  
*tura*: wooden mantlet, Mughal India  
*turs*: shield (Ar.)  
*ukkāz*: Berber infantry mace (Ar.)  
*'urā*, pl. of *'urwa*: loops or holes in the rim of a helmet by which it is attached to an arming cap or an aventail (Ar.)  
*valahkānta*: bamboo or leather shield, Mughal India  
*varman*: mail hauberk or body armour, Mughal India  
*wadaf*: Berber sling (Ar.)  
*wahak*: lasso (Ar.)  
*yāřiri*, *yāřrūt*: slender thrusting dagger, Berber (prob. from Berber *tāřrūt*; Ar.)  
*yakbandi*: sword-belt, Mughal India  
*yataghān*, *yataghan*: reverse-curved short sword (Ott. Tk.)  
*yazanī*: early Southern Arabian spear or javelin (Ar.)  
*zaghnol*: axe with a pointed rather than curved blade, India  
*zāhika*: local form of helmet (Andalusian Ar.)  
*zarad*: mail armour in general (Ar.)  
*zaradiyya*: mail coif or helmet largely of mail construction (Pers.; see also *zardiyya*)  
*zarāřayn*: rings to attach scabbard to baldric (Ar.)  
*zardiyya*: mail hauberk or layer of mail forming part of an armour (Ar.)  
*zārik*: javelin (see *mizrāk*; Ar.)  
*zırh gömlek*: mail-and-plate cuirass (Ott. Tk.)  
*zırh*: mail hauberk or mail armour in general (Pers.)  
*zuba*: edge of sword-blade (Ar.)  
*zübīn*, *zūpīn*, *zhūpīn*: heavy javelin with a pointed foot or second blade (Pers.)  
*zudjđi*: iron foot of spear (Ar.)

1. A hardened crocodile-skin helmet with an iron lamellar neck-guard and one remaining crocodile-skin cheek-piece; said to be from Wadī Garāra east of Kalabsha in Nubia. Although this helmet is sometimes considered to be from the "Roman" era, the presence of a neck-guard made of iron lamellae over camel skin could indicate a later origin, perhaps from the 5th to 8th centuries. Until the helmet is carbon-dated, the question remains unresolved; meanwhile, the helmet itself is an interesting example of non-metallic Middle Eastern military technology. (Staatliche Museen zu Berlin, Preussischer Kulturbesitz, Antikensammlung, inv. nr. 30882, Germany)

2. A very corroded iron helmet made of two pieces joined beneath a flat comb, from Ḥadīṭha on the eastern shore of the Dead Sea, Jordan. This typical late Roman helmet is generally considered to date from the 4th or 5th centuries, though the history of Ḥadīṭha as a Romano-Byzantine military outpost could make a late 6th to mid-7th century date more likely. This helmet was also found in conjunction with a dagger or short-sword identical to one found in Pella [see FAHL] and undoubtedly dating from the mid-8th century. Comparable helmets continued in use elsewhere in the Byzantine Empire and parts of Western Europe at least until the 8th century, and are likely to have similarly continued in use in the early Islamic Middle East. (Castle Museum, Karak, Jordan)

3. An iron and bronze helmet excavated at Nineveh in northern Irāk. It is a late and undecorated version of the so-called Parthian Cap style characteristic of Sāsānid troops. The style and context suggest that this helmet dated from the very end of the Sāsānid Empire in the early 7th century, though some pictorial evidence from the first century of Islamic civilisation indicates that comparable helmets continued in use for a century after the coming of Islam. (British Museum, inv. 22497, London, England)

4. A second iron helmet found at Nineveh is in a completely different *Spangenhelm* style stemming from Central Asian military techniques. It also retains a fragment of its mail aventail. This helmet represents a major technological shift which would also be seen in much of Europe. It is again assumed to date from the very end of the Sāsānid period, but is just as likely to have been made during the first century of Islamic rule. (British Museum, inv. 22495, London, England)

5. A well-preserved iron helmet in a version of the *Spangenhelm* form of construction in which the "frame-plates" are actually broader than the "infill-plates". It probably dates from the 8th or 9th centuries and was found at Sary Oskol, near Voronezh in Russia. Yet it was probably imported from Islamic Persia or Transoxania, where identical helmets are shown on fragmentary wall-paintings dating from the 8th to 10th centuries. (State Hermitage Museum, St. Petersburg, Russia)

6. The earliest known helmet forged from a single piece of iron is this low-domed protection with a row of iron rings. These were probably the attachment for a lamellar or mail aventail rather than being the uppermost row of mail links. It was found in the

early 8th century stratum in a ruined temple at Waragh̄sar near Samarkand in Uzbekistan. Whether such advanced metallurgy originated in Transoxania, the Islamic Middle East or reflected Chinese influence remains unknown, but it is interesting to note that one contemporary Arabic chronicler differentiated between enemies "wearing round helmets" and those "wearing pointed helmets" on the north-eastern frontier of the Islamic world. (From a drawing by the archaeologist, Masud Samibayev; present whereabouts unknown)

7. A much better-known one-piece iron helmet came from Chamosen in Switzerland and dates from the 9th or 10th century. It is believed to be of Arab-Islamic origin and, beneath its purely decorative "frame-straps" and more functional brow-band, this helmet has essentially the same narrowing around its rim seen on the earlier one-piece helmet from Waragh̄sar. (Schweizerisches Landesmuseum, Zürich, Switzerland)

8. A third one-piece iron helmet was found in Tunisia. Though provisionally dated to the Ḥafṣid period (13th to 16th centuries), it has a virtually identical outline to the helmet from Chamosen. As such, it might have been made as early as the 10th century. (Museum of Islamic Studies, Raḡḡāda, Tunisia)

9. Another very distinctive form of iron helmet, of which this appears to be the only surviving example, appears in Christian Iberian art from the 12th to early 14th centuries. It is generally worn by "evil" figures which might indicate that it was originally associated with Muslim troops from al-Andalus. This style of helmet may, indeed, have originated in the Islamic south of the Iberian peninsula. (W. Scollard private coll., Los Angeles, USA)

10. This apparently unique helmet is so unusual that it might initially be dismissed as a fake, except that a very similar form of helmet is illustrated in a Moroccan manuscript dating from 621/1224. If it is genuine, then it could be a very late development of the Roman two-piece helmet seen in figure 2. (From a drawing by Dr. Michael Brett, made in the local archaeological museum at Kayrawān in the 1970s; present whereabouts unknown)

11. One of two very similar late 13th or early 14th century Turkish helmets, still with their long neck and shoulder covering mail aventails. This one has a bowl either strengthened by widely spaced "ribs" or made from plates joined by "rolled joints". The other has a one-piece bowl, though both are characterised by exceptionally deep brow-bands and decorative eyebrows. (Askeri Müzesi store, Istanbul, Turkey)

12. A simple *Spangenhelm* helmet from southern Persia. It was found with the remains of a lamellar cuirass and perhaps a lamellar aventail to be fastened to the rim of this helmet. The ring on the finial suggests that it dates from after the Mongol conquest, as this was a feature of perhaps Chinese origin which was introduced to many areas by the Mongols. The helmet probably dates from the later 13th or early 14th centuries. (After a drawing by V.V. Ovsyannikov; present whereabouts unknown)

13. A damaged but still recognisable lacquered leather or rawhide helmet, lined with small blocks of wood judging by a second fragmentary example, which came from the Euphrates region of northeastern Syria. It was decorated with black and red lacquer (shown here in black) which included a heraldic lion on one side. This heraldic cartouche, plus inscriptions on other pieces of equipment from the same location, indicates that they were of Mamlūk origin, the optimum

radiocarbon dating being A.D. 1285. (Private collection, London, England)

14. One-piece helmet with an inscription dedicated to the second Ottoman ruler Orkhan Ghāzī; mid-14th century. It is the earliest known example of the so-called "turban helmet" style which probably originated in Anatolia or western Persia and would become particularly associated with Ottoman armies of the 15th century. (Askeri Müzesi, Istanbul, Turkey)

15. A magnificent though extremely practical late 13th or early 14th century iron helmet with an original mail aventail to protect the wearer's neck and shoulders. By this period, armourers in the central Islamic lands, including Persia and the expanding Ottoman Empire, had reached their metallurgical and stylistic pinnacle. Their products were also very different to those made by European armourers to the west and Chinese armourers to the east. (State Hermitage Museum, St. Petersburg, Russia)

16. At the end of the mediæval period, a very distinctive style of helmet appeared in the Islamic Middle East, thereafter being almost universal in Persian speaking regions, Islamic India and parts of the eastern Arab world. The example shown here may be one of the earliest surviving examples since the dedicatory inscription (X) names the early 8th/14th-century Mamlūk ruler Nāşir al-Dīn Muḥammad b. Ḳalāwūn. It is, however, possible that this dedication was a later anachronism. (Musée de la Porte de Hal, Brussels)

17. As Islam spread across the Eurasian steppes, a number of very distinctive forms of helmet appeared, particularly in the western steppes where Turkish, Mongol, Persian and perhaps also Byzantine influences combined. One result was a form of tall one-piece iron helmet based upon the segmented *Spangenhelms* of earlier years, but incorporating an anthropomorphic visor which seemed to reflect European artistic values. These helmets are generally thought to date from the immediate pre-Mongol period but are more likely to stem from the late 13th-early 14th centuries A.D. This was a period of cultural transition when the western Mongol Khānate was evolving into the Islamic Golden Horde. (State Hermitage Museum, St. Petersburg, Russia)

18. This late 7th/13th or early 8th/14th-century helmet, probably from Mamlūk Egypt or Syria, has some features in common with the visored helmet from the Golden Horde while remaining very different in other respects. It is forged from one piece of iron, then richly decorated with arabesques and Arabic dedicatory inscriptions. (After a drawing by H. Russell Robinson; present whereabouts unknown)

19. Though now lacking its characteristic mail aventail and sliding nasal bar, this 8th/14th-century Persian helmet is a fine example of a form that would be used throughout most of the eastern Islamic world from the late 14th to 19th centuries. (Wawel Collection, Cracow, Poland)

20. During the 15th and 16th centuries an apparently new form of cavalry helmet came into use in Mamlūk and Ottoman armies. It proved so successful that it was adopted throughout most of Europe, spreading as far as England where it became known as the "Cromwellian pot helmet". In reality, it was of neither European nor Islamic origin but seems to have been developed by the Mongols or their successor khānates from a Chinese original. Thereafter, it was copied and developed by Mamlūk and Ottoman armourers. The crudely-constructed example shown here is one of the earliest. It was found in a Turco-Mongol grave near Plysky in the Ukraine, from

the superficially Islamised Golden Horde and dating from between 1290 and 1313. (After a drawing by M. Gorelik; present whereabouts unknown)

(D. NICOLLE)

#### AL-ŞĪN.

##### 5. Chinese Islamic literature.

Muslims settled in Kuang-chou (Canton, Khānfū [q.v.]) and possibly in Ch'ang-an (Hsi-an) and Ch'üan-chou (Zaytūn) as early as the T'ang dynasty, 2nd/8th century, thereafter also in Hang-chou (Khansā [q.v.]) and Pei-ching (Khānbalīk [q.v.]), and throughout China [see also MĪNĀ']. Extant tombstone and other inscriptions in Arabic and Chinese, however, date only from the 7th/13th and 8th/14th centuries (Ch'en Ta-sheng; Leslie, *Guide*, 28-31; *Beijing National Library list of rubbings of inscriptions*).

The most significant are three stelae in Chinese, from 749/1348 in Ting-chou, 751/1350 in Ch'üan-chou, and 751/1350 in Kuang-chou. The first two describe the supposed visit to China of Waḳḳāş (the Companion Sa'd b. Abī Waḳḳāş [q.v.], a maternal cousin of the Prophet, and a famous general) in the 1st/7th century, sent, it is suggested, as an envoy of the Prophet himself (Yang and Yü, 91-106; Devéria; Tasaka, *Waḳḳas*). One should also mention an inscription dated 770/1368, set up in Nan-ching and copied in Wu-ch'ang, supposedly written by the first Ming Emperor Tai-tsu, the *Hung-wu* Emperor (Low). Most intriguing is an undated inscription in Ch'ang-an, claiming a permit to build a mosque as early as 86/705 (Pickens).

These Chinese-style inscriptions served four main purposes: to record the history of the community; to explain Islamic ideas to the Muslims themselves and to non-Muslim Chinese; to demonstrate Confucian attitudes; and to protect the community. They are invaluable for the history of Islam in China, but of less value for the religious beliefs and practices of Chinese Muslims.

Islamic astronomy and medicine were influential in China in the Yuan and Ming dynasties. Four volumes (out of 36) of the large medical translation *Hui-hui yao-fang* are extant, preserved in the *Yung-lo ta-tien*, 811/1408.

One should note, too, the Sayyid Adjall, Muslim official of the Mongols in China, about whom much has been written [see AL-ŞĪN, at Vol. IX].

Three books written about the voyages between 808/1405 and 837/1433 to Africa and Arabia of Cheng Ho, the famous Muslim admiral of the Ming, include the *Ying-yai sheng-lan*, written by a Muslim who accompanied him, Ma Huan [q.v.], in 837/1433 (Mills).

It is only with the Ming dynasty (1389-1644), that Islamic literature in Chinese as such developed. The earliest extant full-length Islamic book written in Chinese is the *Cheng-chiao chen-ch'üan* by Wang Tai-yü, in 1052/1642. This gives a full account of the Islamic religion, with some criticism of Chu Hsi, the Sung dynasty Aquinas of Confucianism. The main aim was probably to educate Muslims living in China, who by now could be called Chinese Muslims. A large stream of Islamic books, some in Arabic, some in Arabic and Chinese, and several only in Chinese, were written soon after this, some translations, some original. Most significant are: Ma Chu, *Ch'ing-chen chih-nan* ("The compass of Islam"), in 8 volumes, 1095/1683 (Hartmann); and *Hui-hui yüan-lai* ("The origin of Islam in China"), possibly 1135/1722 (Devéria).

The peak of Islamic literature in Chinese was reached around 1704 to 1724, when Liu Chih [q.v.] (Liu Chieh-lien, Liu I-chai) wrote his three main works:

*T'ien-fang hsing-li* about Islamic philosophy; *T'ien-fang tien-li* about Islamic laws and rites (this book was reviewed by the prestigious *Ssu-ku'ü ch'üan-shu tsung-mu t'i-yao*); and *T'ien-fang chih-sheng shih-lu*, a biography of the Prophet, probably based on the *Tarjūma-yi Mawlid i-Mustafā*, a Persian translation from the Arabic work by Sa'ūd (al-Dīn Muḥammad) b. Ma'sūd b. Muḥammad al-Kāzarūnī, d. 758/1357 (a partial translation is given by Mason). Two other works by Liu are *Wu-kung shih-i* and *Chen-kung fa-wei* (Palladius).

The first two works include lists of sources with titles in transliterated Chinese, Chinese paraphrases of the title, and Arabic originals, many of which can be identified with the help of Brockelmann, Storey, etc. (Leslie and Wassel; and see also Leslie, Yang and Youssef, *Qianlong*, for other lists of Arabic and Persian Islamic works available in China). Liu was clearly influenced by the Ḥanafī school of law of the Sunnīs and by Šūfism, in particular, by the Kubrawīyya order [see KUBRĀ], and the Persian Naqshbandī Šūfī poet Ǫjāmī [q.v.].

Liu's main sources were:

1. *Tafṣīr* (*Chen-ching chu*) (one or more);
2. *Lawā'ih* (*Chen-ching chao-wei*), by Ǫjāmī, d. 898/1492;
3. *Ashī'at al-lama'at* (*Fei-yin ching* or *E-shen-eh-ting*) by Ǫjāmī;
4. *Mirsād al-'ibād* (*Kuei-chen yao-tao* or *T'ui-yüan cheng-tao*), by the Kubrawī NaǪjm al-Dīn Rāzī Dāya [q.v.], Abū Bakr Asadī, d. ca. 654/1256;
5. *Maḥṣad-i aḳṣā* (*Yen-chen-ching* or *Kuei-chen pi-yao*) probably by the Kubrawī writer 'Azīz al-Nasafī, d. 661/1263 [see KUBRĀ, at Vol. V, 301a];
6. *Mawākif* (*Ko-chih ch'üan-ching*).

Nos. 2-5 of these had already been translated into Chinese. Other translations included *Munabbihāt*; *Irshād*; *Tanbih*; *Akā'id* (by Abū Ḥafṣ al-Nasafī, d. 537/1142 [q.v.]; *Wikāya* (a commentary by Maḥmūd Burhān al-Sharī'a, 7th/13th century, to the *Hidāya* by al-Marghīnānī, d. 593/1197 [q.v.]); and the Persian *Gulistan* by Sa'dī d. 691/1292 [q.v.].

Liu's biography of the Prophet has an introduction with the main Manchu edicts concerning Islam (see also Ma Sai-pei), and two large appendices, vol. XIX being a description of Arab and other countries overseas, and vol. XX being absolutely invaluable as a source book for the history of Islam in China, with inscriptions. Liu's works clearly show an attempt to accommodate Confucianism. The writings of Confucius and Mencius are referenced, as are Confucian and Taoist terms. At this time, several Muslims were succeeding in the Confucian literati examinations and becoming scholars and officials.

The works of Wang Tai-yü and Liu Chih were original creations. In addition, over the centuries a large number of translations, some from Persian, some from Arabic, have been made, so that there is a rich variety of Islamic works available in Chinese. In the 19th century, Ma Fu-ch'ü (Ma Te-hsin) and Ma An-li continued to write significant Islamic literature in Chinese.

Other influential works are: *T'ien-fang cheng-hsüeh*, by Lan Tzu-hsi (1861), which includes a large number of fanciful biographies of Biblical and Muslim personalities; *Ch'ing-chen hsien-cheng yen-hsing hieh*, by Li Huan-i (1875), which gives short biographies of 90 Chinese Muslims; *Ch'ing-chen shih-i pu-chi*, by Tang Ch'uan-yu (1880), a valuable source book for Islam in China; and *T'ien-fang ta-hua li-shih*, by Li T'ing-hsiang (1919), a translation of the *Badā'iy al-zuhūr* (*umūr*) *fi wakā'iy al-duḥūr* (sic. This is according to the

Chinese postscript. However, the contents of the Chinese work seem to be from a different, less well-known work by the same author, sc. the *Madī al-zuhūr fi wakā'iy al-duḥūr*, by Abū 'l-Barakāt Muḥammad b. Aḥmad b. Iyās (or Ayās) Zayn (Shihāb) al-Dīn al-Nāṣirī al-Ǫjarkasī al-Ḥanafī, d. 930/1524 [see 1111 rVās].

The main works have been republished, edited by Chang Hsiu-feng and Ma Sai-pei, in 55 volumes (1987). These works are to be found also in various libraries in China, Japan, Europe and America. Key collections outside China are those of Palladius (St. Petersburg); d'Ollone (Musée Guimet, Paris); Vissière (École des Langues Orientales Vivantes, Paris); Mason (N.Y. Public Library); Toyo Bunko, Tokyo; and Tenri University, Tenri (Leslie, *Islamic literature*; idem, *Guide*, 21-5; Panskaya).

One should note also a number of extant *Chia-p'ü* (family records), notably those found by Nakada Yoshinobu in the Diet Library in Tokyo for the Mi and Sha families; and also some for the P'ü family, possibly tracing descent from P'ü Shou-Keng of the Yuan (Mongol) period.

A renaissance of Islamic literature occurred in the 1920s, with original works and translations by Wang Ching-chai, Yang Ching-hsiu and others. From this time a series of translations of the Ḳur'ān was made, including some into classical Chinese, others into modern *Kiao-yü* (Yü and Yang, 1-32), and these were used, together with Arabic and Persian works, by Islamic schools in various cities. Chinese Muslim bookshops of this time had catalogues of books in Chinese and in Arabic and Persian, most notably the Niu-chieh (Ox Street) mosque catalogue of the 1920s (extant in Tenri University Library), and dozens of Muslim journals in Chinese flourished at this time (Loewenthal).

A second renaissance occurred in the 1980s and thereafter, with hundreds of books about Chinese communities all over China and about the history of Islam in China and also many about the history and duties of the religion (Yü and Yang). Several large encyclopaedias have been written (e.g. by Ch'ü Shu-sen, 1992; Yang Hui-yün, 1993; the *Chinese Encyclopedia of Islam*, 1994), and for the first time, histories of Islam in China in Chinese (by Ch'ü Shu-sen, 1996, and by Li Hsing-hua et al., 1998) to rival Tasaka Kōdō's masterly 1964 history in Japanese. There are also invaluable bibliographical and biographical reference works by Pai Shou-i (1948 [mostly reprinted in 1982-3], and 1985, 1988, 1992, 1997); Ma En-hui (1983); Yü Chen-kuei and Yang Huai-chung (1993); Li Hsing-hua and Feng Chin-yüan, (1985); Chin I-chiu (1997); and by Leslie, Yang and Youssef (to be published by Monumenta Serica).

There are also several works written analysing the voyages of the Muslim admiral Cheng Ho to Africa and Arabia.

(D.D. LESLIE)

**SINDHĪ** [see SIND. 3.].

**SINDHU**, the Sanskrit name for the Indus river. See for this MIHRĀN, and for the lands along its course, SIND, MULTĀN, PANDJĀB and KASHMĪR.

AL-SINDĪ, ABŪ 'ALĪ, mystic of the 3rd/9th century.

He is said to have imparted to the famous Abū Yazīd al-Bisṭāmī (al-Bastāmī) (d. 261/874 [q.v.]) the doctrine of "annihilation in God" (*fanā'*; see BAĀĀ' WA-FANĀ'). Moreover, because of his *nisba* al-Sindī, he was thought to be of Indian origin, and therefore it was assumed that his views could be traced back to Indian, i.e. Hindu or Buddhist, influences. However, the basis for such an assumption as provided by the sources is very weak. In fact, hardly anything is known about Abū 'Alī al-Sindī. The *nisba* may also refer to a place in Kḥurāsān (Yākūt, *Buldān*, s.v. *Sind*). The only reference in early literature to Abū 'Alī's influence on al-Bisṭāmī is found in a saying of the latter, mentioned in Abū Naṣr al-Sarrādjī (d. 378/988 [q.v.]), *al-Luma'* (275/70.3): "I was a companion of Abū 'Alī al-Sindī. I used to give him instructions that enabled him to fulfil his religious duty. In turn, he enlightened me on the doctrine of God's uniqueness (*tawḥīd* [q.v.]) and on the mystical realities in a pure form (*ḥakā'ik širfa*)."<sup>2</sup> It is only in a later variant of this saying that the term *fanā'* is used, see Rūzbihān b. Abī Naṣr al-Baklī al-Shīrāzī (d. 606/1209 [q.v.]), *Sharḥ-i shathīyyāt* (ed. H. Corbin, 35 ll. 12-13). Moreover, Šūfī currents have tended to consider not Abū Yazīd as

the founder of the doctrine of *fanā'* but rather his contemporary Abū Sa'īd al-Kḥarrāz al-Baḡhdādī (d. 277/890-1 [q.v.]).

## ŠĪRB.

1. The Ottoman period to 1800.

A. SERBIA BEFORE THE OTTOMANS

(a) *The origins of the Serbian kingdom*. The arrival of Slavic peoples in the Balkan peninsula took place in the second half of the 6th century and the beginning of the 7th one. These peoples, later to be called "South Slavs", were grouped round three main tribes: those of the Serbs, the Croats and the Slovenes, who had occupied Pannonia towards the end of the 6th century and who had moved from there towards the Adriatic coast, slowly assimilating the various Romanised peoples of Illyria. The most numerous of these "South Slavs", the Serbs, became implanted, towards the end of the 8th century, in a territory defined by the rivers Ibar (in the east), Neretva (in the southwest), Bosna (in the west) and Sava (in the north). At that time they were organised into petty principalities, governed by *joupan*s, and when one of them secured an ascendancy over the rest, he would assume the title of great *joupan*. Under the political tutelage of Byzantium, the Serbs became Christian in ca. 874. Serbia became independent towards the mid-9th century, thanks to the first princes of Raška (Rascie), i.e. the "Old Serbia", whose capital was at that time in the town of Ras (on the Ibar, to the northeast of Skadar/Scutari/Škodër [see YENİ BĀZĀR]). Under pressure from its enemies, notably the Byzantine emperors and the Bulgarian kings, the Serbian state's centre of gravity then moved towards the Zeta (the modern Montenegro and the extreme northwest of modern Albania) and then, at the time of Stevan/Stephen Nemanja (r. ca. 1166-96) and his successors (sc. the dynasty of the Nemanjići or Nemanids, ca. 1166-1371) towards the valley of the river Morava, towards Kosovo [see KOŠOVA and PRISHTINA] and towards Macedonia [see ŪSKŪB]. In 1219, one of the sons of Stevan Nemanja, Rastko (the future great saint of the Serbian Church, under the name of St. Sava), obtained from the Patriarch at Nicea archiepiscopal consecration and the autocephalous status of the Serbian Church, an action which was going to play an important role in preserving Serbian identity during the five centuries of Ottoman domination. The mediaeval Serbian state's apogee was in 1346, under Stephen IX Uroš IV Dušan (r. 1331-55), who had himself crowned "Emperor (*tsar*) of the Serbs and Greeks" and had the *Sabor* or Assembly at Skopje set out the *Dušanov Zakonik* "Code of Dusan" (1349). The anarchy which followed his premature death at the age of 47 favoured the beginnings of Ottoman expansion in the Balkans during the next decades. (On the Nemanid tradition and the introduction of "sacral kingship" in Serbia and in general, see B.I. Bojović, *L'hagiographie dynastique et l'idéologie de l'État serbe au Moyen-Âge (XIII<sup>e</sup>-XV<sup>e</sup> siècles)*, in *Cyrrillomethodianum*, xvii-xviii [Thessalonica 1993-4], 73-92.)

(b) *The first contacts with the Ottomans*. It was in the time of Tsar Dušan that Turkish units (at that time still only mercenaries or allies of the Byzantines) inflicted their first defeats on Serbian forces: first before Stephaniana in 1344 and then near Dimetoka [q.v.] in 1352. But the real Ottoman conquest of Rumelia (this time, undertaken on their own account) began in 1354 by the seizure of the fortress of Gallipoli on

the Dardanelles [see GELIBOLU], or, to pinpoint the moment when the Serbian state felt the Ottomans pressingly, seventeen years later, in 1371, at the battle of the Maritsa [see MERIČ], in the course of which the Serbian king Vukašin Mrnjavičević (who ruled western Macedonia) and three of his sons, plus his own brother Uglješa, Despot of Serres [see SIROZ], were killed. However, this was only felt within the Serbs' collective memory as a baneful prelude to the disaster suffered by the troops of Prince Lazar (the "Tsar Lazar" in popular memory) on 15 June 1389 at the "Field of Blackbirds", the battle better known as that of Kosovo [see KOŠOWA, KOSOVO]. On the one hand, this event gave rise to the "myth of Kosovo" and, on the other hand, to a famous cycle of Serbian popular epic poetry (gathered together by Vuk Karadžić at Vienna from 1814 onwards, which was to attract very close interest from European intellectuals of the time; see, most recently, *Kosovo, six siècles de mémoires croisées*, in *Les annales de l'autre Islam*, no. 7, INALCO [Paris 2001], with further references).

#### B. SERBIA UNDER OTTOMAN DOMINATION (TO 1804)

The first four centuries of this history can be divided into three phases: (a) from the battle of Kosovo to 1552, the date when all the Serbian territories came under Ottoman control; (b) from 1552 to 1699, the date of the Treaty of Carlowitz, which marked the beginning of the Ottoman retreat in Danubian Europe after their maximal expansion in those lands; and (c) the slow but irreversible decline of Ottoman power in the Balkans up to 1804, the date of the first Serbian revolt.

(a) *The period 1389-1552.* The result of Kosovo was that Serbia became a vassal state of the Ottomans, forced to pay tribute and to furnish troops. With that said, the Serbian state did not disappear from existence after that date, but its centre of gravity moved much further north, where Serbian principalities were to subsist, for good or ill, for some 60 years. In the first place, there was that of the prince of Northern Serbia (the son of the Tsar Lazar, put to death by the Ottomans after the battle of Kosovo), the despot Stevan/Stephen Lazarević (r. 1389-1427), succeeded by his nephew George Branković (r. 1427-56), who in 1439 fixed his capital at Smederovo (at that time, on the Danube) [see SEMENDIRE, in Suppl.] and became involved in a double vassal status with the Ottomans and the kings of Hungary. Profiting from the Ottomans' difficulties in Anatolia (sc. the defeat at Ankara in 1402 at the hands of Timūr Lang [q.v.], the episode of Muṣṭafā Čelebi, Düzme [q.v.], the revolt of Sheykh Bedr al-Dīn [see BADR AL-DĪN B. KĀDĪ SAMĀWNA], etc.), the Serbian despots formed close and enduring alliances with the kings of Hungary in the hope, always to be disappointed, of "driving the Turks back to Asia". Thus in 1412, e.g., the king of Hungary Sigismund offered to cede to Stevan Lazarević the town of Belgrade as a fief, so that this last became, for the first time in its history, the capital of a Serbian prince.

But contrary to these hopes, the events of the period 1389-1552 were finally settled by the very strong and lasting implantation of Ottoman power in the Balkan peninsula (and beyond its frontiers). The main dates are: 1439, occupation of a great part of Serbia by Sultan Murād II [q.v.]; 1443, victories by Serbian and Hungarian troops; 1444, signature of the peace treaty of Edirne; 1453, fall of Constantinople; 1455, fresh Ottoman conquests in Serbia; 1458, fall of the Serbian despotate; 1459, surrender of the fortress of Smederovo; 1520, beginning of the reign, with its conquests, of

Süleymān [q.v.] the Magnificent; 1526, defeat of the Hungarians at Mohács [q.v.]; 1529, fall of Šabac and the first campaign against Vienna; 1541, fall of Buda; and 1552, fresh capture of Belgrade, which now made, from this date onwards, all Serbian territories subject to the Ottomans.

Two other topics important for this period must be touched upon here, if only briefly: the survival of the Serbian Orthodox Church (the only remaining "Serbian" institution during the centuries to come) and the situation of the Serbian people at this period.

Regarding the position of the Serbian Church, it should be noted that, in the course of raids by *akindjis* [q.v.] and in the course of the more regular military campaigns, neither monasteries nor churches were spared. Without the Church being singled out as such, its treasures were plundered, its buildings were burnt down and a certain number of priests and monks massacred or made prisoners-of-war. But this very dark picture needs also to be nuanced. The Serbian principalities lived for several decades as Ottoman vassals, guarding their internal organisation, including the Church, more or less intact. In some cases at least, one can even speak of a certain cultural florescence of the Serbian Orthodox Church, especially in the remoter regions, e.g. in Pomoravlje (sc. in the basin of the Morava river and its affluents), through the arrival of Bulgarian, Macedonian, Serbian and other monks and craftsmen fleeing from the lands invaded by the Turks. Then, little by little, once the disasters brought by the battles and the Ottoman campaigns were over, certain monasteries acquired official charters from the new authorities guaranteeing them a certain status within the Ottoman state, or at least, certain privileges. Unfortunately, we know little about the Church during this first period. But we do know that many monasteries were devastated, such as e.g. that of Visoki Dečani, that the greater part of their immense estates were confiscated and that, in the towns, certain churches (usually the finest) were transformed into mosques. Other churches suffered destruction later in order to provide materials for building various structures such as mosques, caravanserais, etc. Nevertheless, the Church did not lose all its lands, and not all monasteries—far from it—were devastated and left abandoned. Thus e.g. the monastery of Ravanica secured certain privileges from the time of the first Ottoman period onwards (that of 1439-44), and during this time, sultan Murād II awarded privileges to certain other Serbian monasteries. Some of these last were even excused payment of taxes, or else they were given the status of small *timārs* [q.v.] with the obligation to furnish one or two *djebelis* at the times of military campaigns (i.e. auxiliary troops, supplied and equipped by the beneficiaries of sources of revenue given by the state). But those mostly involved here were the monasteries in the frontier zones, or along the axes for provisioning the Ottoman army at times of campaigns (see A. Popovic, *Les rapports entre l'Islam et l'orthodoxie en Yougoslavie*, in *Aspects de l'orthodoxie. Structures et spiritualité*, Colloque de Strasbourg, septembre 1978, Paris 1981, 169-89).

As for the Serbian people, with the Ottoman conquest a more or less irreversible phenomenon is observable: the definitive division of Serbian society into three groups. First, the group that, for various reasons, became converts to Islam and thus became separated (relatively quickly, and, even, very quickly) from the "common trunk", espousing not only a new belief and ideology but also cutting themselves off, in the long term, from anything in common with their past. Then

there was the group of those who fled the lands occupied by the Ottomans (for Hungary in the first place, then for Austria, and then, much later, for Russia), certain of whose descendants were to play a great role in Serbian political and cultural life when the state was rebuilt in the 19th century. And finally, by far the most numerous, there were those who stayed behind, where they were forced to live under the new status of *dhimmīs* [see *DHIMMA* and *RA'YYA*], a way of life punctuated by long periods of submission and daily collaboration with the Ottoman authorities but also by insurrections against these authorities, providing backing for Hungarian and Austrian armies in turn, according to the different phases of the international situation, risings which were regularly bloodily suppressed. This schema repeated itself regularly throughout the four centuries of history dealt with in this article, a history that should nevertheless be considered not only by events and by political and diplomatic processes, but also by a very close examination of the extremely complex processes going on within the central Ottoman empire and within its society in general.

(b) *The period 1552-1699.* The period that followed was to be marked, for the Serbian population, by a certain number of new occurrences. The advance of Ottoman troops towards European Danubia, and the conquest of new territories, ended up by moving the "frontiers" of Serbia, as noted above, further northwards and northwestwards in relation to its original territory, that of Nemanid times. Henceforth, Serbia was to find itself, on the one hand, part of the "central provinces" of Ottoman Rumelia [see *RÜMELI*], and on the other, directly on the routes leading to the future theatre of military operations, viz. those leading to Vienna. Hence in 1557 (probably as part of the long-term plans of the Grand Vizier of Serbian origin, Mehmed Paşa Sokollu [see *SOKOLLU*]), the Porte decided to re-establish the Patriarchate of Peć. This was apparently a political act which was aimed mainly at securing peace within the central provinces of the Balkans, whilst at the same time keeping an eye on the highest levels of the revived Serbian Church, but, as G. Veinstein has noted [see *SOKOLLU*, at Vol. IX, 708b], "one may also see an additional factor at work here, a wider policy of conciliating the Serbs to make them a support of Ottoman policy in the Balkans." This restored Patriarchate of Peć covered an enormous territory (part of Macedonia and Bulgaria, Serbia, Montenegro, the Voivodina and Bosnia, plus certain parts of Croatia, Dalmatia and Hungary). But, contrary to what was envisaged, this period of collaboration between the Serbian Orthodox Church and the Ottoman power was merely a flash in the pan.

The reasons for this deterioration in relations between the Serbian Church and the Porte probably resided from the start in the ambiguity of Serbian Orthodoxy's attitude *vis-à-vis* the authorities, but the reasons must above all be found in the transformation of Ottoman society itself. The first task of the renewed Serbian Church was obviously to rally the Serbian people. It thus became not only a religious organisation but also a truly political one, becoming the focus for the feelings and aspirations of the people. The basis of such an ideology could only be a glorification of the work of St. Sava, an action that was logically based on the Nemanid tradition and, in particular, on the myth of Kosovo, and because of this, Serbian Orthodoxy was compelled sooner or later to emerge from this contradiction and to break with

the Ottomans and proclaim war against them. It was to be hastened very rapidly along this road by the great crisis of Ottoman society at the end of the 16th century, when non-Muslims were deprived of the possibility of becoming *timār*-holders, *ipso facto* throwing such persons back into the category of *re'āyā* and thereby uniting all classes of the Orthodox population against the Ottomans.

Revolts soon broke out. One of the first occurred in the Banat in 1594, when the insurgents had, it seems, banners bearing the picture of St. Sava. It was bloodily suppressed and then, on the orders of the Grand Vizier Sinān Paşa [q.v.], St. Sava's relics were brought from the monastery of Milešovo to Belgrade and publicly burnt on the Vračar hill there. The break was thus definitively made, above all in people's minds. Despite all tentative attempts and political moves to improve relations and to soothe the situation (e.g. under the Patriarch Pajsije Janjevac, between 1614 and 1647), both sides knew perfectly well what the future situation was going to be like. The deterioration rapidly accelerated. The crisis in Ottoman society led the state and its ruling classes to press down on the non-Muslim population and the Serbian Orthodox Church with increasingly heavier taxes and by all sorts of illegal abuses and practices. The churches and monasteries that were unable to satisfy these demands were sold up, bought at low prices by Muslim dignitaries and then transformed into mosques or public buildings, or even demolished for their materials to be re-used in new building works. Yet here, too, everything cannot be viewed as black and white. Thus we have cases where monasteries, under attack from Orthodox peasants coveting their lands, appealed to the Ottoman authorities. But in general, there was definitely a feeling of a certain unity between the Orthodox population and its Church and clergy, who existed within the same conditions and in an implicit connecting bond, one that was reinforced by the actions of certain Patriarchs and their being put to death by the Ottoman authorities.

The process of pressure-revolt-suppression was soon to compel the Church to seek external support: in Austria, in Italy, from the Pope, and finally, from Russia. But such support was only symbolic until the Austrian counter-offensive after the Turks' failure before Vienna in 1683. This offensive led the Christian powers far into the interior of the Ottoman lands (even the patriarchal seat, Peć, would be taken) and was to be marked by an active participation of the more energetic parts of the Serbian people, with the Patriarch Arsenije III Crnojević at their head. The Austrian troops' withdrawal had grave consequences, not only for the subsequent history of the Orthodox Church but also for the Serbian people themselves. Too compromised by these events to await the return of the Ottomans, the Patriarch in 1690 decided to lead a grand emigration of the Serbian people and their church from Kosovo to the north, beyond the Sava and Danube. The arrival of Ottoman troops brought acts of reprisal of a savagery easy to imagine, and the region of Kosovo-Metohija, the ancient centre of the Serbian state, left partly empty by its people, was gradually filled by Muslim Albanians (since a large part of the Catholic Albanians was to become rapidly Islamised), whose colonisation there was strongly supported, and extensively assisted, by the Porte.

The key dates during this century and a half are: 1557, reestablishment of the Patriarchate at Peć; 1593, Ottoman defeat before Sisak [see *SISAK*]; 1593-1606,

the "Long War" between Austria and Turkey; 1594, Serbian revolts (in the Banat and elsewhere); 1595, the public destruction of the relics of St. Sava at Belgrade; 1606, the peace treaty of Zsitvatorok [q.v.]; 1614, the Patriarch Pajsije renews the policy of compromise with the Ottoman authorities; 1683, the Ottoman check at Vienna; 1686, definitive loss of Buda; 1687, the Holy League against the Ottomans; 1688, Serbian rising and conquest of Belgrade; 1689, Austrian troops reach as far as "Old Serbia"; 1690, great Serbian emigration from Kosovo and return of the Ottomans; and 1699, the peace treaty of Carlowitz (Sremski Karlovci) [see KARLOVČA].

(c) *The period 1699-1804.* As during the preceding two periods, the 18th century was to bring the non-Muslim Serbian people a fresh lot of "vain hopes" and "bitter disillusionments". All this had its basis in the slow decline of the Ottoman empire, which did not, however, lead to its disintegration, supported as it was at that time by France, Britain and the Netherlands, who looked with a jaundiced eye on the subsequent successes of the Austrian Hapsburgs and the Russian Tsars (thus confirming the foresights of Montesquieu). On quite a different plane, the social and religious divisions between the Muslim and non-Muslim populations of Rumelia were to crystallise, impelling the non-Muslim Serbians to participate actively in fighting against the "Turks" in the course of each new war launched by Austria into their territory. But the ephemeral victories and the long-lasting defeats of the 18th century (notably from that time when the Serbian population had to suffer a long occupation by the Austrians, in 1718-39, one whose methods were no different from those of the Ottomans) made the Serbian people conscious of the political implications of their fight.

Here follows a chronology of events: the renewed Austro-Turkish war (of 1716-18) ended in practice with the greatest success the Hapsburgs had ever enjoyed since these last took possession, under the Treaty of Passarowitz/Požarevac [see PASAROFČA], of the eastern part of Sirmia (Srem); the Banat (with Temesvar), Lesser Wallachia, all the northeastern part of Serbia, including Belgrade; and the northern zone of Bosnia (along the Sava), territories they retained for some 20 years. (On the desert aspect of Serbia in 1717, with the encroachment of virgin forests with strips of cultivation abandoned for many years, with miserable, scattered village populations, see Lady Mary Stuart Wortley Montague, *Turkish letters*, London 1763, with many later editions.) The measure of disenchantment of the non-Muslim population during these years (faced with the Austrians' attitudes, their arbitrary taxes and the missionary activities of the Roman Catholic Church) can be simply measured by the numerous cases of flight by the Serbian Orthodox people back to Ottoman territory.

Then, twenty years later, a fresh Austro-Turkish war broke out (1737-9) which, after great initial successes by the Austrians and the insurgent Serbs (conquest of southwestern Serbia, with Aleksinac, Kruševac, Novi Pazar, Prishtina and Niš), ended in a terrible defeat before Grocka (not far from Belgrade), and by the Treaty of Belgrade (1739) the Hapsburgs lost all the territories captured twenty years before. Naturally, there were more waves of emigration by Serbs into southern Hungary, one of which, under the Patriarch Arsenije IV Jovanović Šakabenta, became known as "the second Serbian migration from Kosovo".

The years that followed, generally called "the thirty years of peace", were marked by the suppression in

1766 of the Patriarchate of Peć (whose increasingly frequent flirtations with the Russian Orthodox Church ended by seriously worrying the Porte, but which had already, for a fair amount of time, been in a lamentable state (see O. Zirojević, 152-5), and by attempts by Russia (from 1751-2 onwards) to attract Serbian emigrants from Hungary to settle in the Ukraine. (These events are described in a magistral fashion by M. Crnjanski [1893-1977] in his novel *Seobe* ["Migrations"], Belgrade 1929, <sup>2</sup>1962, etc., Fr. tr. Paris 1986.)

Then a third Austro-Turkish war broke out in 1788 (as a prolongation of the Russo-Turkish war that had begun the previous year), in which a large part of the Serbian population took part, notably in the famous volunteer bands of *Frajkori* (< Ger. *Freikorps*), led by their own officers. These troops, led by the famous Koča Anđelković (hence the name "Kočina Krajina"), succeeded in conquering western and northern Serbia (sc. Šumadija and the Požarevac region) and in 1789 (in collaboration with the Austrians), the city of Belgrade itself. However, two years later, in 1791, the peace treaty of Svištov [see ЗИШТОВА] deprived the insurgents of their conquests and authorised the return of the Ottomans. Finally, at the end of the 18th century, the reforms undertaken by Selim III [q.v.] provoked plots and risings of the Janissaries in various parts of Rumelia. Amongst these, more specifically, was the rising in Serbia of 1804, provoked by the excesses and violence of the Janissaries; this was genuinely a rising with a national character, affecting the greater part of the Serbian people and conducted by one of their chiefs, George Petrović, called Kara ("black") George (see R. Mantran, in idem [ed.], *Histoire de l'Empire ottoman*, 430-1). It was in these conditions that there broke out in 1804 the "First Serbian Revolt", which allowed, by successive stages and three decades later, the definitive freeing of Serbia from the Ottoman empire and the beginnings of its independence.

The key dates, which spanned a century (1699-1804), are the following: 1716, a new Austro-Turkish war; 1717, the conquest of Belgrade by Prince Eugène of Savoy's army; 1718, the peace treaty of Požarevac, with Belgrade becoming the capital of Northern Serbia under Austrian occupation; 1737-9, a new Austro-Turkish war; 1739, the peace treaty of Belgrade, by which the Ottomans re-occupied their former Serbian territories; 1739-74, the so-called "thirty years of peace"; 1766, suppression of the Patriarchate of Peć; 1768-74, Russo-Turkish war; 1774, the peace treaty of Küçük Kaynardja [q.v.]; 1788, fresh Austro-Turkish war; 1789, conquest of Belgrade by Austrian troops and Serbian insurgents; 1791, peace treaty of Svištov stipulating the return of the Ottomans in Serbia; 1792, revolt of the Janissaries of Serbia against the Porte and Selim III's reforms; 1794-7, conquest of the *pashalik* of Belgrade by the rebel *pasha* of Vidin [see ВИДИН], Paswan-oghlu [q.v.]; 1801-3, reign of terror by the four rebel Janissary chiefs, installed in Belgrade; 1804, the First Serbian Revolt led by Kara George.

In the course of this rapid survey, several important questions have remained unexplored: economic topics (agriculture, stockrearing, exploitation of mines, large-scale colonisation by the Ottoman authorities through the intermediacy of installing pastoralist nomads and "Wallachs/Vlachs"—whose name, however, poses certain problems—etc.); the formation and growth of the towns, and the town-and-country relationships (taking into account the minimal representation of Serbs in the towns and of "Turks" in the

villages); the Serbian patriarchal society and the system of *zadruga* (extended families living under the same roof); the very numerous migrations and emigrations (notably towards southern Hungary, south-western Bosnia, Southern Russia and the Croatian "Krajina"); the demographic evolution of the Serbian population; brigandage, and the question of guerilla bands against the Ottoman authorities (the *hajduks* and *uskoks*); the results of the wars and the continual devastations (shrinking of the economy from primitive agricultural methods and exhaustion of the soil); famines and epidemics (cholera and plague); the increasing authority of the Serbian Church and the crystallisation of Serbian national feeling; and cultural topics and the rule played here by Jovan Rajić (1726-1801), Zaharije Orfelin (1726-85), Dositej Obradović (1739-1811) and Vuk Stefanović Karadžić (1787-1864). These subjects can be explored through titles listed below in the *Bibl.*

**SIRR** (A.), lit. "secret", denotes in Islamic spirituality two notions, at first sight distinct but which certain adepts did not hesitate to combine (al-Djurdžani, 218; al-Tahānawī, i, 653; on the combination of the two senses, see e.g. al-Sulamī, 1953, 213, 216, 282).

1. The first notion is that of secret, mystery, arca, in the sense of a teaching, a reality or even a doctrinal point, hidden by nature or which is kept hidden from persons considered unworthy of knowing it. If there is a secret, says al-Sarrādj al-Ṭūsī (d. 378/998), probably taking up the *Shī'ī* concept of two levels of reality (Amir-Moezzi, 1997), it is because the object of knowledge sought by the individual has an obvious, exoteric (*zāhir*) aspect and a hidden, esoteric (*bāṭin*) one. The *Qur'ān*, the *Hadīth*, knowledge, Islam, etc., all have these two distinct, complementary levels. In order to attain the esoteric level, a person must so dispose his body (lit. "his members", *ḡawāriḥ*), since this level can only be reached by the "esoteric organ", sc. the heart (*kalb*). The *bāṭin* of objects of knowledge as well as the interior realities of a man are secrets that only the initiates can discover and which they must protect (al-Sarrādj, 43-4). The mass of people, prisoners of their own ignorance and blindly attached to the letter only of religion, can only become violent if the secret is revealed to them, even if only partially (Lāhidjī, 100, 498; al-Qaysarī, 41; Kādī 'Abd al-Nabī, ii, 167). Even the *Qur'ān*, in two places, authorises the faithful to dissimulate their beliefs in cases of danger (III, 28; XL, 28), whence the adage, untringly repeated in the mystical works, "the breasts of free men are repositories (lit. 'tombs') of secrets" (*ṣudūr al-aḥvār kubūr al-asrār*, see e.g. al-Tahānawī, 92).

According to the secret of Islam is *Shī'ism*, al-Kulaynī, ii, 14), this—i.e. essentially the Imāms' teachings, which has several esoteric levels, *bāṭin* and *bāṭin al-bāṭin*—contains secrets that must be protected at all costs (al-Ṣaffār, 28-9). The duty of keeping such secrets (*taḡiyya*, *kālmān*, *khāb*) is thus a canonical obligation for them (Kohlberg, 1975, 1995; Amir-Moezzi, 1992, index, s.v. *taḡiyya*).

For the *Ṣūfis* likewise, such notions as "protection of the secret" (*hiḏf al-sirr*, around which expression, above all, certain mystics combine the two senses of *sirr*), "concealing, changing the guise of something to make it appear other than it is" (*talbīs*), or further, "hiding the real nature of the particular interior state" (*ikhfā' al-hāli*), make up practices and disciplines which are particularly important (al-Suhrawardī 1983, 72; Hudjwiri, 500-1; 'Aḡfī, 89, 117; al-Shaybī, 20ff.). In the literature of mysticism, constant reference is made to the trial of al-Ḥallādj [g.v.], who was executed in 309/922 for having divulged the Secret *par excellence*, by putting forward the famous *shāh* "I am the Real" (*anā 'l-hakk*), *hakk* being a Name of God. The greatest Persian mystical poets, such as 'Aṭṭār, 'Irāqī and Hāfīz, very often allude to the "crucified one of Baghdad" (sc. al-Ḥallādj) and call the real spiritual masters "the people of the Secret" (*Khurramshāhī*, s.v. *ahl-i rāz*). This is why mystical authors, from their oldest writings onwards, devised an "allusive language" (*ishāra*), a coded form of discourse which was later to assume very numerous forms (technical vocabularies,

symbolic lexica, fables, poetic images, etc.), reflecting esoteric realities and distinguishing themselves from "literal language" (*ibāra*) which is unsuitable for exoteric topics (al-Sarrādī, 414, concerning *ramz*; al-Kalābādhi, ch. iii, 30ff.; Hudjwīrī, 480ff.; and see Amir-Moezzi 2002b).

2. The second notion is that of a "subtle organ", one of the layers of the "heart", making up the human spiritual anatomy, which may be translated by "secret, inner consciousness". It seems that, for the *Khurāsān* school of mystics, the *Malāmātiyya* [*q.v.*] comprise the progression of levels of consciousness, "organs" of invocation (*dhikr*) and vision (*mushāhada*), going through the soul (*nafs*) to the spirit (*rūh*), passing by the heart (*kalb*) and the inner consciousness (al-Tustarī, 16, 19, 34, 45, 78; al-Sulamī 1991, 16). It should be noted that al-Ḥakīm al-Tirmidhī (d. ca. 318/936 [*q.v.*]), one of the oldest of the *Khurāsānīan* theoreticians of the elements making up the "heart", seems to be the only one of them not counting the *sirr* amongst these last (*Bayān*, *passim* and esp. 427; Gobillot 1996, 197-8). Al-Kuṣhayrī (d. 465/1072 [*q.v.*]), conveying the system of the Irāqī Ṣūfīs, sets forth another progression which omits the soul, the seat of the ego, and the *sirr* is said to be the seat of vision, whilst the spirit is the seat of love (*mahabbā*) and the heart that of knowledge (*ma'arif*). Here, the inner consciousness is considered as amongst the most subtle and the noblest parts of man, as the innermost secret between the created man and God, the most interiorised part of a man's being (al-Kuṣhayrī, 45; Gobillot and Ballanfat, 175-6); it is in this context that one should probably understand the formula pronounced over a dead person: *kaddasa Allāh sirrahu al-ʿazīz* "may God sanctify his noble inner consciousness". Such great mystics as ʿAmr b. ʿUṭhmān al-Makkī (d. 291/903-4) or al-Ḥallājī seem close to this system (Massignon, i, 113, ii, 411ff.), whilst others, like al-Kharrāzī (d. 286/899 [*q.v.*]) for example, develop a much more complex spiritual anatomy, comprising instinct (*tabʿ*), soul, heart, will (*irāda*), spirit, inner consciousness and spiritual aspiration (*himma*) (Nwyia, 243-5, 272, 301).

After the attempt at a synthesis of the different systems by ʿUmar al-Suhrawardī (d. 632/1235 [*q.v.*]) (1983, 454ff., 1986, 181, 203), one often finds amongst the later mystics a sevenfold division, admittedly with other nomenclatures, to which they add new touches derived from mystical theories and practices like *dhikr* formulae corresponding to each level, interior prophology or coloured lights accompanying each layer of the "heart". We have here the theory of "subtle organs" (*laʿīfa*, pl. *laʿāʾif*, or also *tūr*, pl. *aṭwār*) especially developing from the time of Naḍīm al-Dīn Kubrā (d. 617/1220-1 [*q.v.*]) and the mystics of his school (Corbin 1971; al-Isfārāyīnī, 1986, introd., 60-2; Landolt, 287-8; Kubrā 2001, index s.v. *organe subtil*), from Ibn al-ʿArabī's followers such as Muʿayyid al-Dīn Ḍjandī or Dāwūd al-Qaysarī (Gobillot and Ballanfat, 189-90), up to the modern and even contemporary Ṣūfīs Muḥammad b. ʿAlī al-Sanūsī of Algeria (d. 1276/1879 [*q.v.*]) (105ff.) and the Kurd Muḥammad Amīn al-Nakṣhibandī (d. 1324/1914-15) (548-58). In the different progressions of the "subtle organs", *sirr* is almost always present, most often associated with the colour white. The *dhikr* corresponding to it varies greatly according to authors or mystical orders. The most often-found is: *tabʿ*, *nafs*, *kalb*, *rūh*, *sirr*, *khafī* ("what is hidden") and *akhfā* ("what is most hidden") (Kāshānī, 82ff., 101 and the editor's notes).

In *Shīʿī* mysticism, allusions of varying precision to the subtle "layers" of the "heart" and vision by

means of the heart, are found from the time of the oldest compilations of *ḥadīth* onwards (Amir-Moezzi 1992, 112ff.). However, the *Shīʿī* Ṣūfīs (Nīʿmatul-lāhiyya, *Dhahabiyya* and *Khāksar*), organised in brotherhoods from the 16th-17th centuries onwards, went on to adopt one or another of the systems used by Sunnī orders like the *Kādiriyya*, *Kubrawiyya* or *Nakṣhibandiyya* (Gramlich, ii, 207 n. 1073, 247-50; Amir-Moezzi 1992, 129ff.; idem 2002, *passim*).

**SOUTH AFRICA**, Islam in.

2. Afrikaans in Arabic script.

Arabic-Afrikaans denotes the script whereby Muslims in 19th-century South Africa rendered a creolised dialect of the Afrikaans language. A phonetically adapted Arabic script was used to write Muslim religious literature of this spoken dialect. Afrikaans itself owes its origins to these creolised varieties of the colonial dialect of Netherlandic (Cape Dutch) that was spoken among the Khoisan and slave community of the Cape. Arabic-Afrikaans is the patrimony of this distinct Cape Muslim community, whose major ancestral ties can be traced to the Malay-speaking world, from where many of them arrived after 1652.

Cape Muslims, possibly as far back as the late 18th and early 19th centuries, spoke a more distinct creole variety of Cape Dutch that was heavily affected by word borrowings from Malayu but also contained some Bughanese and Arabic words. The grammatical structure of Arabic-Afrikaans writings shows unmistakable resemblances to the grammar of what later develops into the Afrikaans language. The written script of this Cape Muslim creole Afrikaans is derived from the *Djāwī* [q.v.] script that modifies the Arabic alphabet, in order to create specific phonetic renderings unavailable in Arabic.

As a written script, Arabic-Afrikaans served as a vehicle for the transmission of a knowledge of religion in the course of educating mostly slaves and free blacks among the Muslims of the Cape ca. 1810 or thereafter. Members of this community were literate but not in the Roman script; they could read languages based on Arabic orthography and could read the *Kur'ān* for liturgical purposes.

One of the earliest Arabic-Afrikaans manuscripts can be dated back to 1840, according to Achmat Davids (d. 1998), whose seminal writings pioneered this field of study (Davids 1991, 56). Texts in circulation that were written in Arabic-Afrikaans covered subjects such as the elementary rules of Islamic law (*fiqh*), catechism and theology (*tauhid* and *ilm al-kalām*) for the instruction of adults and children. Handwritten and later printed editions known as *kopies boeke*, mnemonic texts written for the purpose of memorising religious teachings, circulated widely at the Cape and its hinterland for much of the 19th century and were still in use during the early part of the 20th century.

However, with the gradual growth of literacy in English and Afrikaans among Cape Muslims, many 'ulamā' switched to the Roman script, while continuing to write in the distinct Cape Muslim idiom of Afrikaans that is different from standard Afrikaans. Apart from literacy in the Roman script, easy access to mechanised printing facilities was the main reason for the change, since Arabic-Afrikaans texts had to be published outside South Africa.

Accredited as the first and best-known of Arabic-Afrikaans texts is the *Bayān al-dīn* "The exposition of religion" of Abu Bakr Effendi (d. 1880), a Kurdish religious scholar who was sent to the Cape by the Ottomans. His book was completed in 1869, but only published at Istanbul in 1877. In the mid-20th century Mia Brandel-Syrier translated it into English. Hans Kähler believed that the *Tuhfat al-ikhwān*, "Gifts

to friends", a manuscript written by Imām 'Abd al-Kahhār b. 'Abd al-Malik ca. 1856 could have been the earliest text, but this document, now in Germany, has not been properly verified. The Dutch orientalist Adrianus van Selms (d. 1984) believed that the earliest attempt to print Arabic-Afrikaans at the Cape could have taken place as early as 1856. Since no copy of this work remains extant, Davids doubted this claim.

Three other figures deserve mention for their prolific contribution to the genre of Arabic-Afrikaans writing. One was Shaykh 'Abd al-Raḥīm b. Muḥammad al-'Irākī (d. 1942), a native of Baṣrā who settled in the Cape around the 1880s. He quickly mastered the local patois and began writing in Arabic-Afrikaans, producing smaller tracts directed at an adult audience. Texts were also produced for the local *madrasa* education system that students attended in the afternoon after their schooling in the secular educational system. The second person was Imām 'Abd al-Raḥmān Ḳāsim Gamieldien (d. 1921), his creolised family name being possibly a corruption of *Djamil al-Dīn* or *Hāmil al-Dīn* (Davids 1991, 147), who wrote several texts for the *madrasa* curriculum. The third person was the son of Abū Bakr Effendi, sc. *Hishām Ni'mat Allāh Effendi* (d. ca. 1945), who published several Arabic-Afrikaans books in his desire to advance education among the local Muslims.

According to an inventory made by Davids, some 74 Arabic-Afrikaans publications have been identified, with the possibility of more being discovered in private collections and libraries. Further investigation of these texts should shed light on how knowledge from the metropolises of the Islamic world was transferred to marginal and smaller communities, thereby increasing local knowledge and introducing new practices.

**AL-SUFYĀNĪ**, a descendant of the Umayyad Abū Sufyān [q.v.] figuring in apocalyptic prophecies as the rival and opponent of the Mahdī [q.v.] and ultimately overcome by him.

The bulk of these prophecies dates from the 2nd/8th century. The largest collection of them was assembled by the Sunnī traditionist Nu'aym b. Ḥammād (d. 227/842) in his *Kitāb al-Fitan*. Different views have been expressed about the origins of this figure. The Zubayrid Muṣ'ab b. 'Abd Allāh (d. 236/851) claimed that *Ḳhālīd*, son of the caliph Yazīd I [see *ḲHĀLID B. YAZĪD B. MU'ĀWIYA*], had invented it out of resentment of the usurpation of his title to the caliphate by the caliph Marwān I. *Ḳhālīd* thus wanted to arouse popular hopes for a restorer of the Sufyānid branch of the house of Umayya. This view that the figure at first represented Sufyānid interests against the Marwānid caliphate was in modern times endorsed by Th. Nöldeke and Ch. Snouck Hurgronje, who held that it was later transformed by orthodox religious tradition into an Umayyad Antichrist. Following sug-

gestions by J. Wellhausen, H. Lammens questioned this view and connected the figure with the abortive anti-'Abbāsīd rising of Abū Muḥammad al-Sufyānī in Syria in 133/751. The Syrians denied his death and believed that he was hiding in the mountains of al-Ṭā'if from where he would return in triumph. Shī'ī and pro-'Abbāsīd traditionists then turned this "Syrian national hero" into a figure resembling the Daḍjdjal [q.v.]. Combining the two views, R. Hartmann argued that the Sufyānī was at first an anti-Marwānīd messianic figure which, after the overthrow of the Umayyad dynasty, was turned by Syrian advocates of an Umayyad restoration into an anti-'Abbāsīd messiah. The Syrians, Hartmann suggested, may at that time have longed for a return of the caliph Yazīd I. Only thereafter was the figure taken over by the 'Abbāsīds and their Shī'ī backers and transformed into an opponent of the Mahdī.

The image of the opposition between the Mahdī and the Sufyānī goes back to a *ḥadīth* (fully quoted in the art. AL-MAHDĪ at Vol. V, 1232a), which predicted the rise to power of a political refugee from Medina in Mecca and the subsequent rise in Syria of "a man whose maternal uncles are of Kalb", who would send an army of Kalb against the rebel in Mecca. This army, however, would be utterly defeated, and the rebel caliph in Mecca would justly rule Islam for seven or nine years. The first part of this *ḥadīth* reflected, as pointed out by D.S. Attema, the career of 'Abd Allāh b. al-Zubayr, and the prediction dates from shortly after the death of the caliph Yazīd (64/683). In the later Umayyad age, this prediction was widely spread as a prophetic *ḥadīth* by the highly regarded Baṣran traditionist Kaṭāda b. Di'āma (d. 117/735). As its contents were now projected into the apocalyptic future, the rebel caliph in Mecca came to be identified with the Mahdī and his rival, whose maternal uncles were of Kalb, with a Sufyānī opponent.

As the Mahdī in the later Umayyad age was more and more identified with a descendant of Muḥammad, the figure of his Sufyānī opponent was commonly appropriated from the originally pro-Zubayrid Kaṭāda *ḥadīth* and developed by Shī'ī and pro-'Alid Kūfan circles. The appearance of the Sufyānī was thus closely connected with the advent of the Mahdī. A Kūfan prophecy foretold that the Sufyānī and the Mahdī would come forth like two racehorses. Each one would subdue the region next to him. The Shī'ī *imām* Muḥammad al-Bākir was quoted as predicting that the Sufyānī would reign for the time of the pregnancy of a woman (*ḥaml mar'a*). The prediction of a "swallowing up (*khasf*)" of a Syrian army by the desert between Mecca and Medina, which according to the Kaṭāda *ḥadīth* was to occur under the predecessor of the Sufyānī (historically the caliph Yazīd), was now integrated into the career of the Sufyānī. Shī'īs referred to the Sufyānī also as the Son of the Liver-eating Woman (*ibn ākilat al-akbād*) after Abū Sufyān's wife Hind bt. 'Utba [q.v.], who was said to have bitten the liver of Muḥammad's uncle Ḥamza after he was killed in the battle of Uḥud. The Sufyānī, it was predicted, would first come forth in the Wādī al-Yābis near Damascus. In the later Imāmī Shī'ī standard doctrine, the appearance of the Sufyānī in the Wādī al-Yābis in the month of Ramaḍān and the *khasf* of an army sent by him in the desert are counted among the indispensable signs for the advent of the Mahdī or Kā'im [see KĀ'IM ĀL MUḤAMMAD].

There is no sound evidence for an early anti-Marwānīd expectation of a restorer of Sufyānīd rule. The apocalyptic Sufyānī figure came to Syria and

Egypt together with that of the Fāṭimīd Mahdī and represented a minority view there in the late Umayyad age. The great Berber rebellion in the Maghrib in 123/740-1 aroused fears of an invasion of Egypt and Syria, the *fitna* of the Maghrib inaugurating the end of time, and there were predictions of the appearance of the Sufyānī connected with it. In post-Umayyad Sufyānī prophecies, the coming of a rebel Berber army, often described as carrying yellow flags, became a standard element.

After the overthrow of the Umayyad caliphate by the 'Abbāsīds, the apocalyptic Sufyānī was in Syria given the role of a successful challenger of the eastern conquerors. Already during the anti-'Abbāsīd revolt of Abū Muḥammad al-Sufyānī in 133/751, word was spread by his supporters that he was "the Sufyānī who had been mentioned". The Sufyānī was now associated with a prediction that the Syrians would march against an eastern caliph in Kūfa, which would be razed to the ground "like a leather skin (*tu'raku 'ark al-adīm*)". Baghdād was soon added as a town to be destroyed by the Sufyānī, who would send his armies to the east, the Maghrib, Yemen and 'Irāk. Such anti-'Abbāsīd prophecies were first spread by pro-'Alid Syrian narrators, who invariably portrayed the Sufyānī as a ruthless forerunner of the just Fāṭimīd Mahdī to whom he would ultimately lose out. In some prophecies, the Sufyānī was described as "handing over the caliphate to the Mahdī (*yadfa' al-khilāfat* li 'l-Mahdī)". The themes of these Shī'ī prophecies were taken over and further developed by Sunnī traditionists, especially in Hims. The largest contribution was made by Arṭāt b. al-Mundhīr (d. 162-3/779-80), an ascetic worshipper highly regarded as a transmitter who produced lengthy predictions, either attributing them to Ka'b al-Aḥbār [q.v.] and his stepson Tubay' b. al-'Amīr al-Ḥimyarī or in his own name. Arṭāt's predictions turned the Sufyānī into a thoroughly repulsive and monstrous figure resembling the Daḍjdjal. Sometimes Arṭāt divided the Sufyānī into two figures. The first one, named 'Abd Allāh b. Yazīd, would be al-Azhar or al-Zuhrī b. al-Kalbiyya, the deformed Sufyānī (*al-Sufyānī al-mushawwāh*). He would take the *ḍijzya* from the Muslims, enslave their children and split open the wombs of pregnant women. After he had died from a carbuncle, another Sufyānī would come forth in the Hīdžāz. He, too, would be deformed, flat-headed, with scarred forearms and hollow eyes.

In Egypt, the apocalyptic Sufyānī figure was promoted and elaborated by 'Abd Allāh b. Lahī'a (d. 174/790 [q.v.]) in numerous traditions spuriously ascribed to early authorities including Companions and the Prophet. Although one-eyed (*a'war*) and the perpetrator of massacres of 'Abbāsīds and 'Alids, Ibn Lahī'a's Sufyānī could not compete with Arṭāt's in repulsive ugliness and bestiality nor be described as a forerunner of the Daḍjdjal.

The Umayyad rebel Abu 'l-'Amayṭar, a grandson of Kḥālīd b. Yazīd b. Mu'āwiya, who rose against the 'Abbāsīd caliphate in Damascus in 195/811, gained some support as the expected Sufyānī. Already before the eruption of the revolt, the Damascene traditionist al-Walīd b. Muslim spread the prediction that the Sufyānī would inevitably come forth even if only a single day remained of the year 195. Umayyad backers claimed that the signs for the Sufyānī mentioned in the prophecies were present in Abu 'l-'Amayṭar and that Kalb would be his supporters. A prophecy describing the reign of Hārūn al-Rashīd and the succession of his son al-Amin foretold the appearance of

the Sufyānī during the latter's reign and the collapse of the 'Abbāsīd caliphate. Abu 'l-'Amaytar, however, rejected the Sufyānī title for himself, evidently because of the negative implications in the apocalyptic tradition.

(W. MADELUNG)

AL-SUHAYLĪ, 'ABD AL-RAHMĀN b. 'ABD ALLĀH, Abu 'l-Kāsim (508-81/1114-85), Andalusī scholar of the religious sciences.

He was born either in the village of Suhayl, modern Fuengirola, or in nearby Málaga, and studied Qur'ān, *hadīth* and philology there as well as in Cordova and Granada. His most famous teacher was Ibn al-'Arabī [q.v.], under whom he studied for a while in Seville. Settled in Málaga, he led a quiet scholarly life. Since he had lost his sight at the age of seventeen, he relied for his reading and writing on, among others, Ibn Dihya [q.v.], his best-known pupil. At the Almohad court in Marrākush, where he stayed for some time, he achieved fame and wealth; he died during a visit to Morocco in 581/1185.

His fame rests on his *Rawḍ al-unuf*, a commentary on Ibn Hishām's biography of the Prophet. This contains old material which has not been preserved elsewhere, sc. *sīra* texts by al-Zuhrī, Mūsā b. 'Ukba [q.v.], Yūnus b. Bukayr and others. It also provides evidence for fragments of Ibn Ishāq in versions other than that of Ibn Hishām. The *Rawḍ* was commented upon and criticised by Mughultāy [q.v.].

SŪK.

5. In mediaeval 'Irāk.

Before the Arab conquest of 'Irāk there were markets frequented by Arabs in ancient cities, such as al-Ḥīra and al-Madā'in [q.v.]. There was also a so-called "sūk Baghdād" on the west bank of the Tigris, where a monthly market was held during the Sāsānīd period. The latter was raided by Arab troops as early as the caliphate of Abū Bakr (Le Strange, *Baghdad*, 12, 101). Following the Arab conquest of 'Irāk, the founders of the garrison towns of Baṣra and Kūfa designated an open space close to the mosque for use as a market.

In this they were emulating the Prophet Muḥammad who had designated an open space in Medina for a similar use. A distinctive method in the organisation of markets began to emerge in the new Islamic cities of Wāsiṭ, Baghdād and Sāmarrā' during the late Umayyad and early 'Abbāsīd periods. Evidence from the 'Abbāsīd period suggests that there were often a series of markets (*aswāk*) adjacent to each other and separated only by roads and streets. Outside the central market in Baghdād and Sāmarrā', other markets were created for local residents and there were also a number of smaller markets known by the diminutive *suwayka*.

Markets, according to al-Shayzarī (d. 589/1193), author of the earliest *hisba* manual, should be as spacious and wide as possible (like the Roman market), and every kind of craft or profession (*san'a*) represented in it should be allocated its own market (*sūk*). The reference to separate space for each product sold or manufactured probably implies a series of markets or a row of shops and workshops producing and selling similar goods. Thus al-Shayzarī recommends that a market should allocate space to a concentration of shops selling the same product. The shops were arranged in a linear fashion along roads, streets and lanes. The author further recommends that traders who used fire in the preparation of their products, such as bakers (*khabbāzūn*), cooks (*tabbākhūn*) and blacksmiths (*haddādūn*) should for safety reasons have their shops at some distance from others, for instance, perfumers (*'aṭṭārūn*) and cloth merchants (*bazzāzūn*). A similar market layout was endorsed by Ibn Bassām al-Muḥtasib. Other principles applied to the organisation of shops in a market took into account not topographical considerations. For instance, Ibn al-Djawzī (d. 597/1200), writing about the markets of Baghdād, noted that in the markets of al-Karkh the perfumers did not associate with traders selling noisome goods nor with sellers of fancy or of secondhand goods. People of refined culture lived in special residential areas. No working-class people lived in the Saffron Road (*darb al-zāfarān*) in Karkh; the only residents there were the cloth merchants and perfume traders (cf. *Manāḳib Baghdād*, 28). The segregation of the traders in products that smelled nice (perfumes, sweets, jewellery, silk cloth, etc.) from those dealing in smelly things, such as tanners, dyers, garbage collectors and bric-à-brac merchants, was a principle which seems to have been widely applied in laying out these markets. Such social custom, according to Massignon, was responsible for the practice of housing the markets of the jewellers (*sūk al-sāgha*) with those of the money-changers (*sūk al-sayārīf*) (*Khiṭaṭ Baghdād*, 84). Another reason for grouping the shops of jewellers and money-changers together was probably the fact that these commercial enterprises were monopolised by Jews and Christians.

Al-Shayzarī's views on the topographical organisation of markets, in which shops and workshops were grouped together for manufacturing or selling similar goods, reflect the broadly-accepted principles followed by Arab town-planners in the early Islamic period. Our knowledge of the early 'Irākī markets goes back to the 1st/7th century, when Baṣra and Kūfa were laid out using these principles, according to al-Ṭabarī.

Baṣra was founded in 16/637 on the site of the base camp established by 'Utba b. Ghazwān, whose first action was to select the site of the mosque. At the same time, Bilāl b. Abī Burda marked out a makeshift market, which was gradually expanded, thus contributing to Baṣra's success as a trading centre.

It seems that a site for the town's market was not originally allocated. The governor 'Abd Allāh b. 'Āmir later chose a particular site, which came to be known as *sūk 'Abd Allāh*. His successor Ziyād b. Abīhi encouraged the settlers to establish a permanent market. The *sūk 'Abd Allāh*, which was located within the residential quarters, proved inadequate for a rising population (cf. Najī and Ali, 298-309), and the old market was transferred to the Bilāl canal (*nahr Bilāl*). Most of the early markets of Baṣra were on designated open space, and permanent shops (*hānūt*) were not built until the 3rd/9th century.

During the 1st-2nd/7th-8th centuries Baṣra's markets selling specialised wares were located in a single space or road; for instance, the leather market (*sūk al-dabbāghīn* (lit. tanners' market), the camel market (*sūk al-ibl*), market of the straw sellers (*sūk al-tabbānīn*) and the locksmith's market (*sūk al-kaḥḥālīn*). The Mirbad [*q.v.*] market was situated at the caravan station on the edge of the desert, where town-dwellers and Bedouin gathered to sell camels and other animals and to listen to poets reciting poems and orators speaking on current affairs. By the 3rd-4th/9th-10th centuries, the great market (*sūk al-kabīr*) was located at the junction between the Ma'kil Canal and the Ibn 'Umar Canal, where a variety of products, including glassware, bottles, combs, textiles, cooked food, flour, fish, fruits and vegetables were sold. Carpenters and tailors also had their shops there. The shore market (*sūk al-kallā*) lay in the residential area along the Fayl canal. It also had a food market (*sūk al-ta'ām*), which sold flour, rice, dates, meat, vinegar and secondhand goods. In addition, there was a money-changers' market, a goldsmiths' market and a slave market (*sūk al-nakhhāsīn*).

Baṣra's trade with foreign merchants was conducted through the ancient port of al-Ubulla [*q.v.*], which was linked to the garrison city through a canal dug by Ziyād b. Abīhi (Yākūt, *Buldān*, Cairo 1906, i, 89-90). One traveller noted in 443/1051 that al-Ubulla was located to the south-west of Baṣra, and the Shaṭṭ al-'Arab [*q.v.*] lay to the east of this port, which had thriving markets, caravanserai, mosques and luxury villas. The Ubulla canal was busy with boats carrying merchandise to and from Baṣra. Nāṣir-i Khusraw visited the city in the mid-5th/11th century and found that Baṣra's markets opened for business at different times of the day. For instance, a morning market was held at *sūk al-Khuzā'a*, a mid-day one at *sūk Uthmān* and a late-afternoon one at *sūk al-kaddāhīn* (the flint-makers' market) (*Safar-nāma*, 91-5).

Kūfa, which was founded shortly after Baṣra, was a better planned town. However, al-Ṭabarī does not specify the sites of its markets. Kūfa began with an open-air market. 'Alī b. Abī Ṭālib, who moved his capital from Medina to Kūfa, is reported to have said "For the Muslims, the market is similar to the place of worship: he who arrives first can hold his seat all day until he leaves it" (al-Balādhurī, *Futūḥ*, tr. Hitti, 463-4). The same theory that a seller had a right to a space in the market was upheld by the governors al-Mughīra b. Shu'ba and Ziyād b. Abīhi, who held that a trader who sat in a specific space in a market place could claim the spot so long as he occupied it. This suggests that no permanent shops were built in the market of Kūfa during the early Umayyad period and that these were only erected during the caliphate of Hishām b. Khālīd b. 'Abd Allāh al-Kaṣrī. Endorsing al-Balādhurī's statement, al-Ya'qūbī affirms that Khālīd al-Kaṣrī built markets and constructed a room and an arch (*ṭāk*) for every trader (*K. al-Buldān*,

311). Yākūt, on the other hand, recorded that the Asad Market (*sūk Asad*) built at this time in Kūfa was the work of Asad b. 'Abd Allāh al-Kaṣrī (*Buldān*, v, 175). Setting up a temporary stall/shop in a market incurred no tax during the 1st/7th century.

According to one account, artisans and craftsmen worked in an open space near the central mosque. Al-Djāhīz recorded that much of Kūfa was in ruins in his time (*K. al-Buldān*, 500). Moreover, the cost of living was higher in Kūfa than in Baṣra. For instance, building a house in Kūfa or Baghdād cost 100,000 dirhams, whereas a similar house in Baṣra cost half as much (*ibid.*, 503-4). According to Massignon, the market in Kūfa during the 3rd-4th/9th-10th centuries, included the following craftsmen: the book and paper-sellers were sited on the *qibla* side of the city's major mosque; other crafts nearby included date-sellers (*tammārūn*), the manufacturers and sellers of soap (*aṣḥāb al-ṣābūn*) and grocers (*baḥḥālūn*). There were also carpet-sellers (*aṣḥāb al-annāt*) and cloth merchants; laundrymen (*kaṣṣārūn*) at Dār al-Walīd, butchers (*djazzārūn*) and wheat merchants (*hammātūn*); sellers of roast meat (*sawwākūn*); other merchants who were neighbours of the tradesmen were money-changers (*ṣayārifa*) and goldsmiths (*ṣayyaghūn*) (*Explication du plan de Kūfa*, in *Opera minora*, iii, 50-1). The markets of Kūfa flourished throughout the 'Abbāsid period, and after, according to Ibn Djabayr and Hamd Allāh al-Mustawfi, but details of commercial activities are lacking in most of our sources. While visiting Kūfa, the Spanish traveller Benjamin of Tudela (*ca.* 1173) reported that the Jewish population of about 70,000 had an impressive synagogue (*The world of Benjamin of Tudela*, 228). These population figures were probably exaggerated; nevertheless, they remain significant. Jews in the mediaeval Middle East were well known for their commercial activities and their craftsmanship as jewellers, and were also famed as bankers and money-changers. Their presence in large numbers in the predominantly Shī'ī city of Kūfa (only 2,000 Jews lived in Sunnī-dominated Baṣra) would tend to suggest that the former was still an important commercial centre in the late 'Abbāsid period. But when Ibn Baṭṭūṭa (*ca.* 1325-54) visited Kūfa, he found that it was merely a caravan station for pilgrims from Mawṣil and Baghdād travelling to Mecca; the commercial city had fallen into ruins as a result of attacks by Bedouin. However, he found the neighbouring Nadjaf a populous town with a thriving market, admiring the fine and clean *sūk* which he entered through the Bāb al-Ḥaḍra. He then offers details of the layout of the Nadjaf *sūk*, beginning with the food and vegetable shops, markets of the greengrocers, cooks and butchers, the fruit market, the tailors' market, followed by the covered market (*kayṣariyya*) and the perfumers' bazaar, which was close to the alleged tomb of the Imām 'Alī b. Abī Ṭālib.

Al-Wāsiṭ [*q.v.*] was founded by al-Ḥaḍjdjādī, and its markets, according to the local historian Bahṣhal (d. 292/905), were well planned. The layout of the market allotted to every trade a separate plot of land and segregated each craft or trade. Each group of tradesmen was given its own money-changer (*Tā'rikh Wāsiṭ*, 44). Iyās b. Mu'āwiya was appointed inspector of the Wāsiṭ market. A kind of toll or rent was collected from the tradesmen. The *sūk* was divided into two broad sections. On the right side of the market the shops of the food-sellers, cloth merchants, money-changers and perfume traders were located; on the left side, the greengrocers, fruit vendors (*aṣḥāb al-fākiha*) and sellers of second-hand goods (*aṣḥāb al-sūkat*)

established their shops or stalls. Day labourers (*ruzdjāriyyūn*) and craftsmen (*ṣunnā*) waited for work on a space stretching from the sandal-makers' road (*darb al-kharāzūn*) towards the Tigris river. The market was thus an elaborately laid-out affair. This main market was on the western side of the town.

In planning a circular-shaped double-walled citadel city at Baghdād, with four massive arcaded gates, the 'Abbāsīd caliph al-Manṣūr was also responsible for laying out the city's markets in the arcaded space of the four city gates, following the practice of ancient cities such as Jerusalem. However, after ten years or so, Abū Dja'far is said to have been advised by a visiting envoy, the Patricius, from Byzantium that siting markets near his palace posed danger to a ruler from foreign spies visiting the markets in the guise of traders. Shortly before the removal of the markets from the arcades (measuring 15 × 200 cubits) of the four gates, there was a riot incited by a certain Yahyā b. 'Abd Allāh, whom Abū Dja'far had appointed the city's *muhtasib*, for which Yahyā was executed. Nevertheless, the emergence of the *muhtasib* in Baghdād heralded the rise of this urban institution which regulated the ethical behaviour of traders and craftsmen in the 'Abbāsīd markets [see ḤIṢBA].

Following the riots of 157/774, the city's markets were transferred to the district of al-Karkh [q.v.] where shops and workshops were laid out on the principle of selling homogenous products in adjacent shops/stalls systematically arranged in rows of roads (*darb*, pl. *durūb*) and streets (*sikka*, pl. *sikak*). The markets of the butchers, who carried sharp tools, were allotted a space at the far end of the market. Thus according to al-Khaṭīb al-Baghdādī, al-Manṣūr instructed his officers Ibrāhīm b. Ḥubaysh al-Kūfī and Khirāsh b. al-Musayyab al-Yamanī to develop the central business district at al-Karkh on the west bank of the Tigris. Al-Manṣūr's successor al-Mahdī was later responsible for laying out the markets at the Bāb al-Ṭāḡ and Bāb al-Sha'ir on the east bank of the Tigris, around the palace of Khuld [q.v. in Suppl.], in the Ruṣāfa district, and also for establishing the west bank markets in the Ḥarbiyya quarter to the north of the Round City. This quarter was inhabited by Central Asians, who traded with Kh<sup>h</sup>ārazm and Transoxania. Both Ibn al-Fakīh and al-Ya'qūbī describe the markets of Baghdād in the later 3rd/9th century and early 4th/10th century.

The markets in east Baghdād included the *sūk Yahyā* (named after Yahyā al-Barmakī). The land on which this market stood was later awarded by al-Ma'mūn to Ṭāhīr b. al-Ḥusayn at the end of the civil war between the sons of Hārūn al-Raṣhīd (Ibn al-Fakīh, 55). During the 5th/11th century, when the Saldjūks were controlling Baghdād, there were many reports of arson in the city's markets. In 485/1092 fire raged in the markets of the goldsmiths' and of the money-changers (*sūk al-sāgha wa 'l-ṣayārīf*) resulting in great loss of life; and in 512/1118 the *sūk al-rayāhīn* (the spice market) and the market of 'Abdūn caught fire, resulting in extensive damage to property in east Baghdād, including the money-changers' shops, millers' inn, the royal mint (*dār al-darb*) and public baths, all of which were destroyed (*Khiṭaṭ Baghdād*, 56-7, 61). Ibn al-Djawzī describes the layout of east Baghdād's markets in the 6th/12th century, which contained high-rise buildings owned by rich merchants, such as the millers (*ḍakkākūn*), bakers and sellers of sweets (*halwayiyyūn*). There was also a nearby shoe-makers' market (*sūk al-asākifa*), then a market selling all kinds of birds (*sūk al-ṭayr*), one for aromatic plants/spices, and

in the vicinity of this lay the bankers' or money-changers' shops. Next came shops selling food (*sūk al-makūl*), such as those of the bakers and butchers (*kaṣṣābūn*). Alongside them there was the goldsmiths' market housed in a most splendid building. Next to it, there was a big market of booksellers and copyists (*sūk al-warrākīn*) in which scholars and poets congregated (*Manākīb Baghdād*, 26). All these markets of east Baghdād were located close to the market of al-Ruṣāfa and its congregational mosque.

There was an element of competition in the setting up of *sūks*. For instance, the *sūk al-'atāsh* (Thirst Market) formerly known as *suwaykat al-Ḥarashī* was built by Sa'īd al-Ḥarashī from al-Mahdī as a means of transferring some of the business to the east bank at the expense of al-Karkh. Among the smaller markets of east Baghdād were the *suwaykat Naṣr* (attributed to Naṣr b. Mālik), *suwaykat Khālid* (referring to Khālid b. Barmak) at the Shammāsiyya Gate, and *suwaykat al-Ḥadīdjādī* (related to al-Ḥadīdjādī b. Waṣīf, a client of al-Mahdī, and the *suwaykat Ahmad b. Abī Khālid*). Similarly, west Baghdād had, besides the great markets of al-Karkh and al-Ḥarbiyya, many other markets, including the *sūk al-Haytham* (referring to al-Haytham b. Mu'āwiya), the *sūk 'Abd al-Wahhāb* and the fruit market of *dār al-baṭṭīkh* (Ibn al-Fakīh, 45). At Kaṣr Waḍḍāh, named after the client of the caliph who was in charge of the arsenal (*ṣāhib khizānat al-silāh*), there were markets selling all kinds of goods; these included over a hundred shops selling paper and books and the shops of copyists (al-Ya'qūbī, *Buldān*, 245). These bookshops spread from the Ṭāḡ al-Harrānī to the new bridge on the Sarāt Canal, occupying both sides of the road and on the bridge itself.

Al-Ya'qūbī, 246, states that, in his time, the market of al-Karkh occupied an area two *farsakhs* in length from Kaṣr Waḍḍāh to the *sūk al-thulūtha* (Tuesday Market) and one *farsakh* from the Kaṣr 'at al-Rabī' towards the Tigris. Each trade was located in a well-known street and the shops and workshops were arranged in rows of shops. Craftsmen of one kind did not mix with another kind and were segregated from those of other markets, each market constituting a separate unit. The Ḥarb b. 'Abd Allāh Street was the largest street around which people from Balḡh, Marw, Bukhārā, Khuttal, Kābul and Kh<sup>h</sup>ārazm settled (248). In the same locality was located the *dār al-rakīk*, where slaves were bought and sold under the supervision of al-Rabī' b. Yūnus. When the Andalusian traveller Ibn Djuwayr visited Baghdād in the 6th/12th century, he found that the Ḥarbiyya markets and residential areas had declined. He also noted that the market of the hospital (*sūk al-māristān*) where physicians attended the sick every Monday and Thursday, was located at the old Baṣra Gate in west Baghdād. The shops and workshops of leather workers (*dabbāghīn*) were situated at the 'Isā Canal on the west bank of the Tigris away from the main market of al-Karkh, and not far from a rubbish dump (*kunāsa*) and an ancient graveyard (*Travels*, tr. Broadhurst, 234-5, 244). In 449/1057, a fire caused extensive damage to the food market (*sūk al-ṭa'ām*), the wood-sellers' market (*sūk al-khashshābīn*), the carpenters' market (*sūk al-nadīdjārīn*), the butchers' market (*sūk al-ḥazzārīn*), the dyers' market (*sūk al-ṣabbāghīn*) and the market of the perfumers and chemists (*sūk al-aṭṭārīn*) which were sited in adjacent buildings (*Khiṭaṭ Baghdād*, 41-3).

On the east bank, construction for the palace of al-Khuld began in 143/760 for the prince al-Mahdī, and this had its own markets: the fief of Badr al-

Waṣīf housed the *sūk al-ʿaṭāsh*; among the five streets in east Baghdad, there was a *sūk Khudayr*, where Chinese wares were sold. Rents collected from the markets during the 3rd/9th century on both banks of Baghdad, including those from the Mills of the Patricius (*arḥāʾ al-Baṭrīk*), amounted to 12 million dirhams annually. The traders in the markets of Baghdad imported goods from Central Asia and from the Far East as far as China, and al-Djāhīz in his *K. al-Tabaṣṣur bi ʿl-tiǧāra* gives a list of exotic products available in ʿIrāq's markets.

When al-Muʿtaṣim built the city of Sāmarrāʾ [q.v.], he followed the established pattern for earlier markets in Islamic cities such as Baghdad. After laying out the palace and public buildings, he marked out the site of the chief mosque and built the markets around it; the rows of shops and workshops were made spacious and every kind of product was sold in adjacent shops. In the north of Sāmarrāʾ some groups of Turkish soldiers were allotted land on which to build their houses, but the barracks of the Turks and the men of Farǧhāna were established far away from the markets so that these troops did not mix with local people and traders. Some folk were settled further north, in the area of al-Dūr, where small markets, some shops and butchers' stalls were built for the *muwalladūn*. The *kaṭīʿa* or fief of Hizām on which the slave market was situated, was near the guard headquarters and prison. Shops and rooms for housing slaves were located there, and on this main thoroughfare there were houses for the common people and markets where craft and product were sold separately. This was Sāmarrāʾ's second big market. Outside the old Sāmarrāʾ, al-Mutawakkil built a new satellite town, where all the traders of demeaning status, such as the sellers of barley beer, *harīsa* soup and wine (*aṣḥāb al-fukḳāʾ wa ʿl-harāʾ is wa ʿl-sharāb*) were isolated from the rest of the market. Market taxes and rents (*ghalla wa mustaghīllāt*) collected in Sāmarrāʾ amounted to ten million dirhams a year.

Mawṣil also had its markets, and its Wednesday (*sūk al-arbaʿāʾ*) and Sunday Markets (*sūk al-aḥad*) were well known as early as the 2nd/8th century. The local historian al-Azdī mentions others markets, including the hay market (*sūk al-ḥaṣṭīsh*) and market of sellers of saddles stuffed with straw (*sūk al-kattābīn*) and food market (363). Al-Muḳaddasī noted that Mawṣil had fine markets, which extended to the tanners' road and gypsum sellers' road (*darb al-ḥaṣṣāyīn*). In the city's square (*murabbaʿa*), near the inns, was the Wednesday Market, where farm labourers (*akara*) and harvesters (*hawāṣīd*) came from the surrounding countryside to seek temporary or seasonal work in the city. From Mawṣil's covered markets, provisions for Baghdad were transported by boats and caravans. Among other towns, al-Muḳaddasī cites Kaṣr Ibn Hubayra, which had a large concentration of weavers and Jews in a thriving market economy. At the same time, Tikrīt was a sizeable town, where a monastery provided the focal point for local Christian pilgrimage and many woollen workers settled there in order to meet the demands of the pilgrims.

(M.A.J. BEG)

**SUKARNO**, SOEKARNO, the first President of the independent Republic of Indonesia [q.v.] from 1945 to 1967 (b. 6 June 1901, d. 21 June 1970).

His father, Raden Sukemi, came from lower Javanese nobility and worked as a teacher and civil servant, while his mother originated from a Balinese *brāhmaṇa* family but was excluded after her marriage to her Muslim husband. Sukarno's name in his childhood was Kusno. Later his father renamed him Sukarno, referring to the hero Adipati Karno in the Hindu epic *Mahābhārata*. Already as a small boy, while living with his grandfather in a village, he paid more attention to *wayang* (shadow play) performances, where the stories of the *Mahābhārata* are displayed, than to his homework for school, thus acquainting himself with the ethics of the *ksatriya*, namely, fighting without compromise against evil and injustice but open to mercy and compromise in one's own quarter, and firmly believing in the victory of the righteous ones. Much of his later political vocabulary was rooted in the symbols of *wayang*.

After having finished a European primary school in Mojokerto where he also had to learn Dutch, he moved, aged 15, to Surabaya for further studies. There he stayed in the "open house" of (Hajji) Omar Said (abbrev. HOS) Tjokroaminoto, the charismatic leader of the Sarekat Islam [q.v.] (since 1912), which was the first Indonesian nationalist organisation, founded in 1911. Tjokroaminoto's strong identification with those who suffered under the colonial administration made many people think he might be the *Ratu Adil*, a just ruler expected to arrive before the end of this aeon and end the sufferings of the suppressed people. This expectation had first appeared in Java in the 17th century. Tjokroaminoto himself, however, is said to have stressed that the movement for independence did not involve establishing the rule of a *Ratu Adil*,

but of a *ratuning adil*, a realm of righteousness ruled by the people and their representatives.

During his five years in the Hogere Burger School (HBS) in Surabaya (1916-21) Sukarno became not only acquainted with the aims and targets of the Sarekat Islam (SI), but C. Hartogh, teacher of the German language at the HBS and co-founder of the "Indische Social Democratische Vereeniging" in 1914, introduced Sukarno to socialism and Marxism, warning, however, against too radical action against Western capitalism and favouring an accelerated evolution of the indigenous society and its economy. Among the Indonesian leaders of that time, a controversy between more universal, international, socialist and radical options on the one hand and visions dealing more with the "national" problems in the Dutch colony and favouring stepped-up co-operation with the government for achieving freedom on the other, led finally to a split in the Sarekat Islam. In 1921 the Communist Party (PKI) was established and communists were expelled from the SI, albeit against the will of Tjokroaminoto, who feared a decay of the Nationalist Movement, but thus urged by Hajji Agus Salim, another SI leader. It is noteworthy that the communists in their statements frequently used Islamic or Hindu terminology, particularly that of the modernist movements in both communities, Atatürk and Gandhi being among their favourites. After 1921, the SI became more receptive to the Islamic international movement (so-called Pan-Islamism [*q.v.*]).

After his successful graduation from the HBS and his marriage with a daughter of Tjokroaminoto, Sukarno moved to Bandung in 1921 and there enrolled as a student in the newly-established Technical High School, where he graduated in 1926 as a civil engineer. In Bandung, Sukarno met with more radical nationalists like Douwes Dekker and Tjipto Mangunkusumo, both co-founders of the Nationaal Indische Partij (NIP) whose leaders resided in Bandung. Deeply disappointed with the reviving colonial attitudes and measures after World War I, they refused to co-operate with the government and its institutions, including the Volksraad (consulting body). Sukarno adopted their position and thus estranged himself from Tjokroaminoto and even from his wife, whom he divorced. Thus he became what he remained: a convinced and fervent nationalist advocating religious and ethnic tolerance and equal rights for all Indonesians as internal goals, and fighting capitalism and co-operation with the unjust government as external measures. In contrast to nationalist students who had spent some time in the Netherlands and experienced there a democratic society and a well-functioning administration of the law, Sukarno, lacking such experience, viewed everything Western with deep suspicion and antipathy.

After his graduation, Sukarno dedicated his time and energies to efforts towards uniting the different anti-colonial parties and groups, all of which were pursuing quite different options. Nationalism was endangered from two sides: internationalism and regionalism. Therefore he urged the three strongest groups, namely, the Nationalists (NIP), the Islamic Nationalists (SI), and the Marxists (PKI), to find one voice in fighting against the "Kaurawas", the representatives of colonialism. All nationalists should be united in one goal: achieving *Indonesia merdeka* (an independent Indonesia). On this point Sukarno was not only an analytical thinker, but also—based on the world view of the *wayang*—a bit of a mystic: the notion of nationalism, national unity, resembles a rev-

elation (*wahy*) given by God, and to strive for it is like an act of liturgy or service (*bakti*), the work of a true *ksatriya*. The space of nationalism was as "wide as the air", a perception already present in the early Sarekat Islam, where Marxists, Christians and others were active together.

After both the failure of the new ruler in Arabia (since 1924), 'Abd al-'Aziz of the Al Su'ud, to call a conference of the Islamic world, and the founding of the Nahdatul Ulama party in early 1926 in Java, with the aim of safeguarding traditionalist Islamic teaching in the Holy Places, the SI lost interest in pan-Islamic visions. Sukarno and Tjokroaminoto became reconciled, and Hajji Agus Salim encouraged Sukarno to proceed with his plan to establish a Federation of the biggest nationalist organisations, including his own, the "Nationalist Union of Indonesia" (Perhimpunan Nasional Indonesia: PNI) founded in July 1927. Because of communist riots, the PKI had been outlawed in 1927, leaving the struggle for independence to the nationalists and the national Islamists.

Sukarno's self-confidence grew apace. Those who did not agree with his radical attitude but favoured a more consultative way to deal with the Dutch, while firmly striving also for independence, like the socialists, were not included in his front of the "Pendawas". But the colonial government's actions seemed to justify his suspicion and adversary attitude: even people ready for compromise like Tjipto Mangunkusumo, were attacked by the Dutch with false accusations and exiled.

In 1930 the outbreak of a Pacific war was expected, one which, it was hoped, would bring colonial rule in Asia to its end. In Indonesia, old prophecies related to Jayabaya, a Javanese king of the 12th century, who is said to be the source of the *Ratu Adil* expectations as well, foretold the victory of a "yellow people"; Sukarno, and with him many other people from India to China, expected the Japanese to take the leading role in this forthcoming anti-colonial revolution, remembering their victory over Russia in 1905. Combining Jayabaya with Karl Marx's prediction of the final victory of the suppressed proletariat, Sukarno firmly believed in the imminent victory of the "brown" people, or Pendawas. Although imperialistic themselves, the Japanese would at least crush the power of the U.S. and England and other colonial powers from the West and thus pave the way for final liberation. But to prevent such expectations causing unrest, on 29 December 1929 the colonial government detained all leaders of Sukarno's PNI, including himself. Although it was impossible during the subsequent trials to prove that the PNI or Sukarno himself had any concrete plans for an insurrection, he was sentenced to four years imprisonment in December 1930, thereby becoming an innocent martyr for many Indonesians. After an act of clemency by the then departing Governor-General De Graef, Sukarno was released at the end of December 1931. But both organisations led by him, the PNI and the Federation, did not survive his detention and were dissolved by the remaining leaders. This was criticised by a leader of the Perhimpunan Indonesia (PI, "Indonesian Union") in the Netherlands, Moh. Hatta, who accused Sukarno of only provoking the government and not trying to educate the people at the same time.

For Sukarno and his supporters, these events only showed how important he himself was for the independence movement. Thus the nationalists split into two groups: one gathered into the PNI Baru ("New"

PNI) around the socialist Sutan Sjahrir who, like Moh. Hatta, originated from West Sumatra, preferring incisive analyses of the political and societal situation and the functional role of organisations, and the other gathered around Sukarno in the Partindo (Partai Indonesia), which emphasised more strongly a feeling of unity that took in specific dissent. Partindo now became the platform for Sukarno's new concept of "Marhaenism", which he also called "Socio-Nationalism"; Marhaen was a common name mainly among Sundanese farmers (cf. Dahm, 110). A feeling of social responsibility would unite all Indonesians—not only the proletariat—to establish social justice in the nation. No opposition or deviation would be tolerated. The leadership of a Marhaenist party would have the right to punish anyone who disturbed the consensus by exclusion. For this attitude, Sukarno was much criticised by Sutan Sjahrir and Moh. Hatta, who urged the acceptance of democratic rules. On 1 August 1933, Sukarno was again detained and consequently exiled to the island of Flores. He terminated his membership in Partindo, which later (1936) dissolved itself. His isolation in Flores encouraged him to revive old acquaintances in the SI, which meanwhile had become Partai Sarekat Islam Indonesia (PSII), trying to harmonise Islamic internationalism with Indonesian nationalism. Friendly contact with Catholic missionaries seems to have strengthened his religious awareness. In 1938 he was transferred to Bengkulu (Bencoolen), West-Sumatra, where he became a member of the reformist Muhammadiyah social organisation. There he joined those who pleaded for a radical new interpretation of Qur'an and Sunna, one which was sometimes too rationalist for other members like Moh. Natsir, who urged obedience to tradition in matters of faith first and then revision of social rules. To justify his more radical position, Sukarno pointed to the progress Atatürk and the Kemalists had achieved in Turkey. He pleaded for a separation of state and religion, which led to another emotional controversy with Moh. Natsir in 1941.

When Japan started occupying Indonesia in 1941, Sukarno, who returned to Java in July 1942, was open for co-operation with the proviso that the Japanese should help the Indonesians to achieve their independence in accord with Jayabaya's prophecy. The foundation of the "putera" (Pusat Tenaga Rakyat, centre for people's work; *putera* means literally "son"), intended as a basis of the people's support for Japan, became Sukarno's basis of action.

The ambiguous policy of the Japanese—sometimes treating "the Southern Regions" as a colony, occasionally also promising self-government, and sometimes favouring the Islamist nationalists, while on other occasions preferring the religiously neutral nationalists—led to an estrangement between Sukarno and the Japanese government, which added to Sukarno's popularity. But after the announcement of Prime Minister Koiso on 7 September 1944 that all Indonesian peoples should be granted independence, and despite the people's continued distrust of and contempt for those who co-operated with the Japanese, Sukarno on the one hand urged support for the Japanese, who faced the advancing Allied forces, and on the other hand urged the Japanese to speed up their plans lest the Allies return to a still-occupied Indonesia and therefore re-establish colonial rule. His violent pro-Japanese agitation and loyalty to Japan, and his emotional anti-Western rhetoric, again earned him much criticism. But on 28 May 1945, the Investigating Board for Preparatory Work on Indonesian Independence (the

BPUPKI), appointed by the Japanese, started its work. On 1 June, Sukarno presented his famous concept of the Pancasila (Pantjasila, "Five Principles"), meant to become the *weltanschauliche* basis of the Indonesian Constitution to which all Indonesians could consent (Eng. tr. in Mangullang, 198ff.): Nationalism (one nation, *kebangsaan*), Internationalism or Humanity (*perikemanusiaan*), People's Rule (*kerakyatan*, always striving for consent, *mufakat*, from Ar. *muwāfaka*), Social Justice (*keadilan sosial*, originally social welfare, *kesejahteraan sosial*) and Divine Oneness (*Ketuhanan yang Maha Esa*). These could also be reduced to three: socio-nationalism, socio-democracy and Divine Oneness, or to one: *gotong royong* (the Javanese principle of mutual co-operation), as Sukarno stated. Complaints from the side of the Islamists led to a compromise on 22 June, stating the *Ketuhanan* as first principle with the addition that all Muslims are obliged to follow the *Shari'ah*; this compromise became known as the Jakarta Charter. Encouraged by the Japanese, who referred to "Asian traditions", and very much to the liking of Sukarno, it was also agreed that the independent state should resemble a presidential democracy with a parliament (Dewan Perwakilan Rakyat: DPR) only serving as a consultative body. A People's Consultative Assembly (Dewan Permusyawaratan Rakyat: MPR), consisting of the members of the DPR and other members nominated by the government or by people's organisations, meeting once every five years, was to elect the president and define the general political guidelines for the government. In the general anti-colonial mood, Sukarno and others favoured the inclusion into Indonesia Merdeka of peninsular Malay and territories on Borneo and Timor still claimed by the British and Portuguese. This proposal was rejected by the Japanese, who wanted Indonesia restricted to the former Dutch possessions. Under pressure from external and internal events, Sukarno, assisted by Moh. Hatta, declared the independence of Indonesia in the early morning of 17 August 1945.

During the following days the Preparatory Committee for Indonesian Independence, inaugurated by the Japanese on 7 August, met and passed the provisional constitution (Basic Law), with a modified Pancasila, included in the Preamble; as second principle there now stands Internationalism, with Nationalism becoming the third principle. The provision of the Jakarta Charter for the Muslims was omitted because it implied a special relation with the Muslims which would endanger the neutrality of the state in religious matters. Sukarno was elected president and Moh. Hatta his vice-president. A Central National Indonesian Committee (Komite Nasional Indonesia Pusat: KNIP) was to support the government until a parliament could be elected, and Sukarno favoured the formation of one political party only, a Partai Nasional Indonesia. In this, however, he was opposed by Sutan Sjahrir, Moh. Hatta and some of the Islamist nationalists. To avoid an open domestic crisis, Sukarno agreed to the formation of different parties and he accepted also that ministers should be accountable to the parliament or the KNIP. Thus Sukarno's short-lived presidential government came to its end, and on 14 November 1945, a parliamentary government was elected with Sutan Sjahrir as prime minister.

Sukarno's popularity increased again when he, Hatta, Sjahrir and other leaders of the young republic were detained by the Dutch, who wanted to re-establish their rule and punish at the same time those

who had collaborated with the Japanese. After the end of the Dutch police actions and acknowledgement of Indonesia's independence in late 1949, Sukarno was accepted as president, an office still to his own dislike, however, as it was hampered by the liberal constitutions that were drafted in 1949 and 1950. He met other challenges from the militant Islamists, who staged insurrections in West Java and Sulawesi, and from regionalists, who opposed the strong political and economic centralisation in Java. His international reputation increased in 1955 when, inspired by the second principle of Pancasila, he succeeded in hosting in Bandung the first conference of independent "Third World" leaders (his opening speech is in Feith and Castles, 454 ff.). During the political campaigns preceding the 1955 elections to the first parliament, and, some months later, to a Constitutional Assembly (Konstituante) to design a final constitution, Sukarno made it clear that he wanted a presidential republic based on the Pancasila, against the option of an Islamic state, and also a unitary state, against demands for more autonomy in the areas outside of Java. In opposition to Sukarno's agitation, Moh. Hatta resigned as vice-president in 1956. Anticipating a great majority of votes in favour of liberal democracy, Sukarno issued a presidential decree on 5 July 1959 dissolving the Konstituante and declaring the Basic Law of 1945 as the final constitution. Guided Democracy (*demokrasi terpimpin*) was the name of the new system, himself being the Great Leader (of the Revolution), as he explained in his independence speech on 17 August 1959, which later became known as his "Political Manifesto" (Manipol), elaborated later by "USDEK": the Basic Law of 1945, Indonesian Socialism, Guided Democracy, Guided Economy and Indonesian Identity. In 1960, Sukarno also dissolved the parliament and later in the same year he banned the modernist Islamic party Masyumi, chaired by Moh. Natsir, and the socialist Party of Sutan Sjahrir, both of whose leaders and some followers were detained.

But opposition came now also from the anti-Communist armed forces under Gen. A.H. Nasution. Sukarno tried to balance the antagonising forces by showing favour to the traditionalist Islamic party Nahdatul Ulama (NU) and the Communist Party (PKI), both of which had strong roots in Java. Under the leadership of the PNI, the old triad from the 1920s reappeared, now styled as "Nasakom": Nasionalisme, Agama (religion, represented by NU), and socialist Communism. The ideological controversies and power play among military leaders inflamed the domestic situation, some of them profiting from the Irian crisis in 1961-2 and the "confrontation" with Malaysia [*q.v.*], the new independent federation (1963) supported by the British and condemned by Sukarno. The PKI, strengthening its ties with Maoist China, increasingly dominated the streets and therefore caused an estrangement with the other allied elements in Nasakom who, on their side, approached some of the military leaders critical of Sukarno, these being mainly in the army, while most of the air force was pro-Sukarno. Anti-American and anti-Soviet agitation prepared the withdrawal of Indonesia from the UNO in early 1965, thus strengthening its alliance with Beijing and other Communist states in South and East Asia. Corruption, mismanagement and nepotism in the bureaucracy and military brought the state close to collapse. In the evening of 30 September 1965, a *coup d'état* was launched, but to this date it is not clear who were the real initiators and what were their aims. Some leading generals of the army close to Sukarno

were murdered, and the later official version under Suharto's rule laid responsibility with the Communists. Sukarno, contrary to his own perception, became a spectator to the events, and on 11 March 1966, he had to sign a letter transferring all executive power and the military command to General Suharto because of his alleged inability to maintain any longer the unity of Indonesia and its people. A few weeks later the PKI was banned, and its leaders and members and many other people killed, imprisoned or detained in camps. One year later, the new Provisional People's Consultative Assembly stripped Sukarno of the presidency and proclaimed Gen. Suharto acting president. Sukarno spent his last years virtually under house arrest in Bogor until his death. His grave in Blitar, East Java, has become a sacred shrine for many Javanese.

**SULAYMĀN B. AL-ḤAKAM b. Sulaymān AL-MUSTA'ĪN**, Umayyad caliph of al-Andalus, proclaimed at Cordova in 400/1009, died in 407/1016. The two phases of his reign are located in the period of the Andalusī *fitna* following the "Revolution of Cordova", at the time of the serious political crisis which was to lead to the demise of the Umayyad caliphate in 422/1031.

When the Cordovans put an end to the 'Amirid régime in *Ḍjumādā II-Raǧab* 399/February-March 1009, and replaced the incompetent caliph *Hishām II* with one of his cousins, *Muḥammad al-Mahdī*, the latter, on account of his political blunders, speedily aroused opposition, in particular that of the Maghribī Berber contingents of the Umayyad army, whose families had been the object of harassment on the part of the Cordovans. These soldiers, numbering several hundreds, rallied around *Sulaymān b. al-Ḥakam*, who was a great-grandson of the first caliph of Cordova, 'Abd al-Raḥmān III, and whom they put forward as a claimant to the caliphate. With him, they made their way to the frontier zone of *Medinaceli* in search of support. Confronted by the former slave governor

of this region, Wādih, they obtained the aid of the Count of Castile, Sancho Garcia, in exchange for a promise to cede frontier fortresses to him. Having defeated the forces of Wādih in Dhu 'l-Hidjdja 400/August 1010, they returned to Andalusia to march on Cordova, which they entered after overpowering the quite significant, but disparate and ineffective troops of al-Mahdī. The latter was forced to take refuge in the capital where Sulaymān was proclaimed caliph on 17 Rabī' I/9 November, with the *laqab* of al-Musta'in bi 'llāh.

Having placed himself under the protection of Wādih, who henceforward became his "strong man", al-Mahdī rallied supporters in the north and, crucially, obtained the support of Count Raymond Borrell III of Barcelona and of his brother Armengol (Ermengaud) of Urgel, in order to march in his turn against Cordova with some 40,000 men, including 9,000 Franks. The defeat of El Vacar (*'akabat al-bakar*, in Shawwāl 400/June 1010), 20 km/12 miles to the north of the capital, forced al-Musta'in to flee and enabled al-Mahdī and Wādih to enter Cordova and restore the caliphate of the former. But this success could not be consolidated, and on 6 Dhu 'l-Ḳa'da 400/21 June 1010 Sulaymān's Berbers inflicted a heavy defeat near Ronda on the forces of al-Mahdī and their Frankish allies. Henceforth, it was Sulaymān al-Musta'in and his Berbers who found themselves again in a position to lay siege to the capital, which resisted until its surrender on 26 Shawwāl 403/9 May 1013. The town was sacked by the Berbers and numerous Cordovans were killed, including probably the caliph al-Mahdī, although a rumour was later put about claiming that he had escaped.

Little is known about the second reign of the caliph al-Musta'in, which lasted three years until the insurrection against him by the Maghribī chieftain of Idrisid origin 'Alī b. Hammūd, whom he had appointed governor of Ceuta. The latter took the capital, killed al-Musta'in and obtained the *bay'a* of the Cordovans, who recognised him under the name of al-Nāṣir li-dīn Allāh (22 Muḥarram 407/1 July 1016).

Sulaymān al-Musta'in seems to have been endowed with more qualities than his rival al-Mahdī, reasonably cultivated but of irresolute character and very much dependent on the Berbers who had put him in power. A large portion of the territory of al-Andalus eluded his authority. He consolidated the local power of certain chieftains who were in process of becoming "party kings" [see MULŪK AL-ṬAWĀ'IF], such as the Tudjibid al-Mundhir b. Yaḥyā, who had lent him his support at Saragossa. In particular, he appointed his Berber supporters to command regional "fiefs" which were in fact virtually amirates, the most important being that of the Ṣanhādīrī Zīrīds of Granada which was to last until the arrival of the Almoravids.

**SULAYMĀN KHĒL**, a Pashṭūn tribe [see AFGHĀN. (i) The people].

*Ghalzay* [*q.v.*] Pashṭūns were principal actors in 18th century political and military events in Afghānistān and Persia. By 1800 a political identity had congealed around the largest *Ghalzay* tribal confederation, the Sulaymān *Khēl*, whose landholdings increased throughout eastern Afghānistān, particularly in and south of the area roughly bounded by Ghazna, Djalālabād, and Kābul [*q.v.*], during the 19th century. The largest Sulaymān *Khēl* tribe, the Ahmadzay, remain prominent in this region. The *Djabār Khēl* are the *khān khēl* of the Sulaymān *Khēl* and all eastern *Ghalzays*.

The Sulaymān *Khēl* were strongly represented in the consistent *Ghalzay* political opposition and military resistance to Durrānī [*q.v.*] government initiatives from 1747 to 1978. However, from the late 1800s onwards a small but growing number of Sulaymān *Khēl* individuals and families became dependent upon state patronage. The ethnic composition of all central governments in the increasingly Kābul-centred Afghān political environment after 1978 reflects a growing presence of *Ghalzays*. Ahmadzay Sulaymān *Khēl* visibility in post-monarchical Afghān state politics is illustrated by Dr. Nadjibullāh's tenure of office as President (1986-92).

Like all *Ghalzay*, the Sulaymān *Khēl* are notable for socio-cultural heterogeneity and vibrant commercial activity during annual nomadic migrations in and between Turkistān, *Khurāsān* and India.

(TH. MENZEL\*)

**SULTĀN 'ALĪ ŪGHLĪ** (SOLTANGALIEV), MĪR SAYYID (ca. 1885-28 January 1940), leader of the Muslim Communist movement in Russia.

Son of a *mu'allim* (teacher), in a village in the Urals, Karmaskaly (in the canton of Sterlitamak, currently the Republic of Bashkortostan), MĪr Sayyid studied in his father's *maktāb*—a reformed school where, in addition to religion and *ādāb*, reading was taught according to the "new method" (*usūl-i dīdārid*) based on phonetics introduced by the Tatar from the Crimea, Ismā'il Ghāspīrālī (Gasprinskiy, 1851-1914

[see GASPRALI (GASPRINSKI) ISMĀ'ĪL]) as well as some secular subjects such as arithmetic and the rudiments of geography and modern history. His knowledge of Russian, which he learned from his father, enabled him to study at the Tatar High School (*Tatarskaya učitel'skaya škola*) of Kazan, the only state-sponsored secondary education facility available to the Muslims of the Empire. From the mid-1890s onwards, a group of pupils formed a secret revolutionary society there, led by the writer Muḥammad 'Ayyād Ishākī (1878-1954) and influenced by Russian populism; it was to make a profound and lasting impression on the young Soltangaliev. After 1905, as an employee of the Municipal Library of Ufa, he was to participate in the *Islāhī* movement of the young Tatar intelligentsia, of which 'Ayyād Ishākī was the most prominent figure. Soltangaliev contributed, under various pseudonyms, to the leading journals of the Urals, most notably *Tūmush* ("Life"), a reformist Tatar review in which he published translations of the later works of Tolstoy. From 1911 onward he published stories and articles in the *Musul'manskaya gazeta* ("Muslim Journal") of Moscow, showing the influence of his Tatar and Russian literary models; his themes (reform of education, the status of women, the parasitism of the mullahs, the political vocation of students committed to the public good), borrowed from Russian populism, had been promulgated from Kazan since the beginning of the century by authors sympathetic to the *Islāhī* movement such as 'Ayyād Ishākī or the novelist and poet 'Abd Allāh Tuḡāy (1886-1913). During the First World War, Soltangaliev took up a teaching appointment in Baku; from there he contributed to various Russian Muslim periodicals.

*December 1917-March 1919. Revolution as an instrument of conquest of political autonomy.*

In April 1917, Soltangaliev was summoned to Moscow to direct the executive committee of the "Muslim Congress", before making his way to Kazan where he joined the "Muslim Socialist Committee". Created the 7 [19] April on the basis of Muslim workers' committees, the MSC was led by Mullā Nūr Waḥīdov (Vahitov) (1885-1918) whose project was to unite the revolutionary forces of the Tatar lands into a militarised group. The political ideas of Waḥīdov—who was to be killed in the early stages of the Civil War—constituted the basis of what would later be called "Soltangalievism"; they centred on the struggle against traditionalism, the liberation of Muslims from Russian domination and the extension of Socialism to all of Islam. However the Bolshevik *coup d'état* of 26 October [8 November] 1917, imposed Russian power in the Volga-Ural region, since Russians dominated the urban and provincial soviets of Kazan. The party of Lenin was nevertheless seen as constituting a superb school of political theory; Muslim nationalist leaders like Waḥīdov understood that by imitating him they could, perhaps, neutralise him. After all, Lenin's "April Decrees" (1917) were perceived as allowing the minorities of the former Empire to hope for a right of secession.

The leadership of the MSC (Waḥīdov, and his lieutenant Soltangaliev) sought to exploit the anarchy into which Russia had been plunged to exact concessions from the Bolshevik leaders, who needed all the support they could get. At the end of 1917, Stalin, Commissar of the People for the Nationalities, called on Soltangaliev to direct the Muslim section of his ministry. On 19 January 1918, Stalin created the "Central Commissariat for Muslim Affairs of the Russian Interior and Siberia" (*Muskom*), headed by Waḥīdov; Soltangaliev was recruited in June to take

charge of propaganda in Muslim circles. Until the offensive mounted by the White Armies on the Volga in July 1918, the regions populated by Muslims in European Russia were covered by a network of regional and local commissariats dominated by nationalist partisans, independent of the local soviets which were dominated by Russians. Controlled by the *Muskom*, these commissariats were to form the nucleus of the great "Tatar and Bashkir Republic" promised by Stalin to the Communist Muslim leaders. In a parallel development, Waḥīdov and Soltangaliev created in Moscow, on 8 March, the Muslim Socialist-Communist Party (replaced in June by the "Party of Communist (Bolshevik) Muslims of Russia").

Autonomous in its relations with the Russian CP, the new party severed links with the "bourgeois" Muslim organisations which were henceforward isolated (an example of this being the dismal episode of the short-lived "Republic of Transbulakia" in Kazan), but sought to gather Muslim revolutionaries into a united front. Waḥīdov and Soltangaliev concentrated their efforts on the training of political cadres (with the projected Muslim University of Kazan, a long-standing demand of the *Islāhī* movement), and on the mobilisation throughout the Volga-Ural region of the Muslim regiments of the Red Army. From August onward, however, these regiments were incorporated into Russian units, after the fall of Kazan into the hands of the Whites, who executed Waḥīdov. In November 1918, at the "First Congress of Communist Muslims", Soltangaliev and Ismā'īl Firdāws (1888-1937) a Tatar from the Crimea, sought confirmation of the autonomy of the Muslim Communist Party. But Stalin, intent on retaining control of the "colonial revolution", rejected this demand; the crucial moment when the Tatars could argue with the Russians over the direction of the revolutionary movement seemed to have passed. In fact, from the spring of 1919 onward, the Civil War turned on the eastern front in favour of the Bolsheviks, and in the Muslim territories reconquered by the Red Army, the civil and military apparatus installed by Waḥīdov was dismantled.

*March 1919-April 1923. Russian monolithism against Muslim polycentrism.*

From March 1919, the 8th Congress of the Russian Communist Party (in Moscow, 18-23 March) proposed the suppression of all national communist organisations. The "Bureau of Muslim Organisations"—which had replaced the Muslim Communist Party—was replaced in its turn by a "Central Bureau of Communist Organisations of the Peoples of the Orient". It was the principle of the distinctness and unity of the Muslim world, dear to the former leaders of the *Islāhī* movement, which was thus negated. The "oriental" revolution was making rapid progress, in Persia especially, where the *Djāngali* movement [*q.v.*] was supported militarily by the Bolsheviks. But the policy of the Komintern in the Middle East was also to be marked by a fundamental divergence between Russians, supporters of monolithism, and Muslims, supporters of decentralisation. At the "Congress of Oriental Peoples" in Baku, September 1920, the ideas of Soltangaliev regarding the liberation of colonial peoples were in collision with those of the Komintern, which was only interested in the East as a source of temporary assistance to the western industrial proletariat, through the weakening of colonial powers. Soltangaliev sought to bypass the obstacle of the RCP by approaching the "Organisation of Communist Youth" (*Komsonol*); between 12 and 18 September

1920 he convened in Moscow the "First Pan-Russian Conference of Communist Organisations of the Lands of the Orient" where he evoked for the first time, it seems, the notion of a "colonial Communist International", independent of the Komintern. Cast in a minority, he succeeded nevertheless in transforming the komsonols of the Muslim republics of Russia into power-bases of his movement.

In the autumn of 1920, after the victories of the Red Army on all fronts, the civil war came to an end. As the Muslim communist party no longer existed and the dream of a great Tatar and Bashkir Muslim State had been frustrated (Stalin had opted for the creation of two small and distinct republics, Tatar and Bashkir), the Muslim nationalist communists turned their efforts towards the new national republics. At the same time, they promoted their ideas externally: Soltangaliev won over an international audience at the Communist University of Workers from the East, founded in Moscow in 1921. Refusing to reject outright the Tatar heritage and the religion of Islam, he also maintained contact with the principal reformist *'ulamā*, among whom 'Alimdjān Bārūdī (*muftī* of Russia between 1917 and 1921) and Riḍā al-Dīn Faḫr al-Dīn (*muftī* from 1922 till his death in 1936), and sought to maintain their role as cultural intermediaries between the Soviet authorities and the Muslim, essentially rural, masses. Islam was presented as an oppressed religion, whose historical evolution, cherishing among its adherents a strong sense of solidarity, had to some extent resisted the anti-religious campaigns of the early Soviet period. Stalin was soon to see, in these efforts, an aspiration to found an "Islamic Communism" opposed to Marxism-Leninism.

*April 1923-November 1928. East versus West?*

In the spring of 1921, the 10th Congress of the Russian Communist Party pushed the nationalist Communist Muslims towards clandestine opposition, by denouncing "nationalist deviants". The notion of a non-Russian socialist party, mooted in the spring of 1919, was revived in November of the same year: a number of leaders, assembled in Moscow by Soltangaliev, decided to create an independent socialist Muslim party, which came into being the following year under the name of *Ittihad wa Tarakkī* ("Unity and Progress"). In parallel, from the start of the year 1921, the Tatar Republic underwent a period of intense nationalist agitation, which continued throughout the following two years. At a regional conference of the Russian CP in Kazan, March 1923, the Tatar majority went as far as to pass a motion demanding the expulsion of Russian colonists as well as a radical "nativisation" of the administrative apparatus of the republic; the Tatar communists refused, furthermore, to purge their organisation of its non-proletarian elements.

Shortly after this, in the wake of the 12th Congress of the CP, which witnessed, in April, the denunciation of "local nationalisms", Soltangaliev was arrested in Moscow on a personal order from Stalin, countersigned by the principal Bolshevik leaders. Excluded from the Russian CP, Soltangaliev, like many former *Islāhī* activists (such as Čulpān in Central Asia), seems to have been preoccupied by awareness of an insoluble conflict between East and West, and to have been convinced that the Bolshevik revolution was the most dangerous, because the most penetrating, attempt by the West to perpetuate its domination. Soltangaliev was soon at the heart of a secret organisation led by Communist Tatars and linked with various clandestine groups in European Russia, the Caucasus and

Central Asia (*Ālāsh Orda* in Kazakistan, *Millī Firka* in the Crimea, the former *Hümmet* in Azerbaidjan and *Millī Ittihad* in Uzbekistan). The political thought of Soltangaliev, from 1923 onward, is known only from the criticisms voiced by his opponents, and the "confessions" extracted in the course of his successive trials. His political programme hinged on the creation of a great Turkish national state in Russia, the "Republic of Turan", governed by a single party, but based on state capitalism and with economic independence assured by orientation towards the lands of the Far and the Middle East.

An attack on the part of the commissars of the people of the Tatar Republic led to the second arrest of Soltangaliev in November 1928, the prelude to a series of large-scale and bloody purges which were to be inflicted periodically on all the republican communist parties until 1939, not sparing the national intelligentsias. Sentenced in 1929 to ten years of hard labour as an agent of imperialism, Soltangaliev was deported to the camp of the Solovki islands on the White Sea. He took advantage of early release in 1934, only to be arrested again in 1937 and tortured, then executed 28 January 1940. On the eve of the Second World War, Soltangalievism seems to have been eradicated in Russia. In Central Asia and in the Caucasus, as the Muslim nations had made good the lack of cultural development which in the early 20th century had separated them from the Tatars, the latter had lost their status as models to be copied. Born in a land of secular confrontation between Muslims and Christians, Tatar nationalism, initially supposed to be spread beyond the zone of the Middle Volga, was ultimately to withdraw, confined to its place of origin. Soltangaliev, mythologised outside the USSR as the father of non-European, even anti-European revolution, enjoyed in Russia itself only a belated rehabilitation—today virtually limited to the territory of Tatarstan, of which he was not a native. His memory has helped the Turkish-speaking peoples of the former USSR to consider themselves protagonists in their own modern history. But the rediscovery of this history tends to relativise the role played by communist nationalists, giving more credit to the great figures of Muslim reformism. The former and the latter shared, between 1920 and the Second World War, the same conviction of a cataclysmic confrontation between Tatars and Russians, Muslims and Christians, East and West, rural and industrial worlds—a parallelism given insufficient emphasis in studies of Soltangalievism, and in studies of the Muslim reformisms, of which the *Islāhī* movement was a component.

*Bibliography:* In the absence of complete works, the most important collection of texts of Soltangaliev is the very selective anthology published by I.G. Gizzatullin and D.R. Šharafutdinov: *Mirsäet Soltangaliev, Saylanma khäzmätläär/Izbrannie trudi* ("Selected works"), Kazan 1998; however, this volume ignores the manuscript writings and correspondence of Soltangaliev (a general trait of studies of the *Islāhī* movement and of national communism, which prefer normative and programmatic publications) as well as all texts later than 1923, other than numerous transcripts of Soltangaliev's successive interrogations. Among a sparse list of monographic studies, the irreplaceable reference source remains A. Bennigsen and Chantal Lemerrier-Quelquejaj, *Sultan Galiev. Le père de la révolution tiers-mondiste*, Paris 1986, with a very thorough critical bibl., a work which, in spite of its title, establishes the most subtle distinction that has yet been drawn

between the personality of Soltangaliev and the various myths to which he gave rise; for an equally documented, but more global approach, see Azade-Ayşe Rohrich, *The Volga Tatars. A profile in national resilience*, Stanford 1986, in particular 125-56. Also available for reference, although this is essentially a work based on second-hand sources, nourished by pan-Asiatic sympathies, is the recent synthesis by Masayuki Yamauchi, *Surutangeriefu no yume to genjitsu. Shio* ("Dreams and Realities of Soltangaliev. Documents"), Tokyo 1998 (tr. into Turkish by Hironao Matsutani under the title *Sultan Galiev. Islam dünyası ve Rusya* ["Soltangaliev. The world of Islam and Russia"], Ankara 1998).

(S.A. DUDOIGNON)

**ŞUMĀDĪH**, BANŪ, Arab dynasty of al-Andalus, ruling in Almeria from 420/1038 to 484/1091, in the epoch of the "party kings" [see MULŪK AL-ṬAWĀ'IF].

The Banū Şumādīh were a branch of the powerful Arab family of the Banū Tudjīb of the Upper March (region of Saragossa). At a time when the caliphate was in disarray, a certain Muḥammad b. Aḥmad b. Şumādīh was governing Huesca, but, before 414/1023, he was expelled from there by his distant cousins of Saragossa, and took refuge in Valencia as a guest of the local sovereign, the 'Āmirid 'Abd al-'Azīz al-Manşūr, who gave two of his daughters in marriage to his two sons, Abu 'l-Aḥwas Ma'n and his brother Abū 'Utba Şumādīh. This Muḥammad b. Aḥmad died soon afterwards at sea, having set out on the Pilgrimage. After the death in 429/1038 of the former slave and *amīr* of Almeria, Zuhayr [q.v.], the inhabitants of this town placed themselves under the authority of the prince of Valencia, who seems to have sent his son-in-law Ma'n b. Şumādīh to govern Almeria, with the title of *dhu 'l-wizāratayn*. In circumstances that are unclear, and apparently with the agreement of the populace, the latter declared himself independent, thus founding a new dynasty, but not adopting a *lakab* and not striking his own coinage. Furthermore, for the years 430-5/1038-43 or 1044, there are examples extant of coins of al-Manşūr of Valencia struck at Almeria, which tends to support one of the versions supplied by the sources, according to which this independence did not involve a rift with the prince of Valencia.

In 443/1052, Abū Yaḥyā Muḥammad b. Ma'n succeeded his father, initially under the tutelage of his uncle Abū 'Utba on account of his youth. It was during his reign that the power of the Banū Şumādīh took on the "royal" forms current under the taifas: he replaced the "amiral" title of Mu'izz al-Dawla which he bore at the time of his accession to power, with the more "caliphal"-sounding one of al-Mu'taṣim bi 'llāh and al-Wāḥik bi-faḍl Allāh. He did not differ in this respect from numerous other sovereigns of taifas in the second half of the 5th/11th century. Coins on which these *lakabs* appeared were minted at Almeria. But it seems that under his reign and in his name, only dirhams of poor quality were minted at Almeria, and in limited quantities, judging by the standard and the rarity of the examples preserved in numismatic collections.

The contemporary geographer and historian al-'Udhri, a native of the region of Almeria and probably a visitor to the court of the Banū Şumādīh, gives in his *Tarīḥ al-akḥbār* a rapturous description of the splendid palace maintained by al-Mu'taṣim in the *kaṣaba* which dominates the town of Almeria. Furthermore, it is known that there existed a sub-

stantial royal entertainment complex, situated *extra muros* at the edge of the town, known as the Şumādīhiyya. Although apparently lacking serious politico-military ambitions, this prince was engaged in rivalry, sometimes armed, with his neighbours in Valencia and Granada; these limited conflicts had no effect on the apparent prosperity of a state of considerably reduced dimensions, effectively confined to the region surrounding the major port city of Almeria.

When the Almoravids disembarked in the peninsula in 479/1086, al-Mu'taṣim sent troops commanded by his son Mu'izz al-Dawla and presents to the *amīr* Yūsuf b. Tāshufīn, excusing himself, on the grounds of age, from participating in the campaign which culminated in the victory of Zallāka/Sagrajas. The following year, he was present at the siege of Aledo with troops from Almeria, and even supplied a siege-engine constructed in the form of an elephant. He died in the summer of 484/1091, just as Almoravid troops, having taken possession of Granada, were moving against Almeria; his son resisted for only a few weeks in the *kaṣaba* before leaving the city by sea to spend the rest of his life in Bougie [see BUDJĀYA], then governed by the Ḥammādid. In Ramaḍān 484/October-November 1091, the Almoravids absorbed Almeria and the taifa into their empire.

Like other courts of the taifas, that of the Banū Şumādīh was a literary centre, which seems to have maintained a certain ideal of Arabism: it was in response to a poet at the court of al-Mu'taṣim who had insisted on the Arab origins of the dynasty, that Ibn Garcia, secretary and court poet to Mudjāhid, prince of Denia, composed a *Risāla* known as the principal text of the *Shu'ūbiyya* movement in al-Andalus.

**AL-SUNĀMĪ**, 'UMAR B. MUḤAMMAD B. 'IWĀḌ, Ḥanafī scholar of mediaeval Muslim India whose importance comes from his work on *hisba* [q.v.], the *Niṣāb al-iḥtisāb*, which refers to the author's own role in this office. Judging by the number of surviving mss., some sixty, the work was highly popular in the eastern Islamic lands. Previous scholars have been uncertain about the author's origins and life (cf. e.g. Brockelmann, S II, 427). It now seems clear from internal evidence in his book that he stemmed from Sunām, a place that still exists in the modern Indian province of Panjab, to the south-west of Patiala; that he lived under the Dihlī Sultans [q.v.], in particular, in the time of Muḥammad b. Tughluq (r. 725-52/1325-51 [q.v.]); and that he died at the newly-founded

Deccan capital of the Tughluqids, Dawlatābād [*q.v.*], the ancient Dēōgīrī, around or after 743-4/1333-4.

The value of the *Nisāb* lies in the fact that it is the first known Ḥanafī text on *ḥisba*, with its practical and theoretical approaches reflecting al-Sunāmī's dual functions as a lawyer and a *muhtasib*. The author tackles the common problems facing the *muhtasib* in accordance with the Ḥanafī *madhhab*, and his insights show the importance of local Indian customs and the practices of daily life, often denounced by him as *bida'*, within the formal framework of Islamic law.

(MAWIL Y. IZZI DIEN)

**SÜRGÜN** (T., lit. "expulsion"), a term of Ottoman administrative and social policy.

It encompasses a wide range of practices employed by the Ottomans, not just to remove dissident elements from politically troubled provinces, but also more constructively to achieve vital state-defined economic and military objectives. The term is better translated as population transfer or strategic resettlement, and its purpose was fundamentally different from the purely punitive sentence of internal exile or banishment (*nefi*) temporarily imposed on individual members of the ruling élite who had incurred the sultan's disfavour. The use of *sürgün* forcibly to remove fractious elements such as uncooperative tribes or rebellious city populations from persistently troublesome areas is documented as part of the Ottomans' attempts to impose control over Anatolia, especially during the closing decades of the 8th/14th and the first part of the 9th/15th century. However, its use as a weapon for political suppression without concomitant social or economic benefits was frowned on in Muslim popular opinion (see Ibn Kēmal's remarks on the mass deportations from Lārende to Istanbul in 872/1467-8, as cited in *Bibl.*: ... *etdi, Lārende ye bir işh etti ki üzerine düşman-ı bed-kışh dakhil gelse, böyle etmezdi*). In principle, *sürgün* was designed not to punish the source area which contributed a part of its labour force as emigrants but to provide some advantage to the target area to which they were being dispatched as immigrants. It had the real potential for providing the double benefit of relieving population and land pressure in the source territory while at the same time acting as a stimulus to the growth and development of the target territory. It also facilitated the transfer of groups with essential skills to the areas where they were most needed. The underlying purpose, whether it was the repopulating of Istanbul after its capture in 856/1453 by the transfer of population groups with specific commercial and artisan skills from provincial cities in Anatolia and (after 880/1475) the

Crimea, or the settling of rural populations as agriculturalists in newly-conquered territories in Rumelia, was essentially the same: the settlement and development (*iskān ve imār*) of key strategic areas identified as either economically fragile or militarily insecure. This logic applied with particular force to the period of Ottoman territorial expansion in the Balkans lasting until the end of the 10th/16th century, but strategic resettlement of tribes and displaced peasants also formed an important dimension of Ottoman rural development initiatives in subsequent periods of territorial contraction. The creation of new settlements on the Upper Euphrates in the 1100s/1690s using tribes transferred from contiguous regions of Anatolia is just one example of the continuing use of *sürgün* in later centuries (see the study by Orhonlu cited in *Bibl.*, and, for developments in the 19th century following territorial losses in the Balkans and Russian expansion in Crimea and the Caucasus, see MUHĀDJIR. 2.)

## T

**TA'ALLUK** (A.), or more often **TA'ALLUKA**, literally "dependence, being related to, dependent on", a revenue term of late Mughal India, which meant a jurisdiction, a fiscal area from which a fixed amount of taxes was to be collected by a revenue

official called *ta'alluqdār* or *ta'alluqadār*. The word *ta'alluk* with this meaning appeared in the second half of the 11th/17th century during the reign of Awrangzīb [*q.v.*], in the context of increasing tax farming [see PARĪBA. 6. c]; it was distinguished from the older

Indo-Persian term *zamīndārī*, which included also feudal rights for the *zamīndār* [q.v.] who was in charge of it, while the *ta'alluḳdār*, originally considered as a tax farmer, was only in charge of collecting the revenue of his *ta'alluḳ*, except for a small part of it on which he had *zamīndārī* rights. For this reason, *ta'alluḳdār*s ranked lower than *zamīndār*s.

From the 18th to the 20th centuries, under the late Mughals, the successor states and colonial rule, the words *ta'alluḳ* and *ta'alluḳdār* came to mean different things according to place and time. In Northern India, the *ta'alluḳdār*s were men of substance who acquired hereditary and transferable rights on their *ta'alluḳ* and were barely distinguishable from the *zamīndār*s: in Bengal before the British conquest, working as the subordinates of powerful *zamīndār*s, they brought large tracts of land under cultivation; in Awadh [q.v.], they collected taxes over large estates and constituted a rich feudal class of landlords whose fortunes lasted up to the end of the British period. Elsewhere, the word *ta'alluḳ* meant only a fiscal jurisdiction of varying size, equivalent to a district in the state of Haydarābād [q.v.] and only to a fraction of a village in Nepal; the office of *ta'alluḳdār* as that of tax collector died out during the British period, except in Nepal where it was still common in the 1960s.

**TABANN<sup>IN</sup>** (A.), adoption. This term—*maṣdar* or verbal noun of the form V verb derived from the biliteral root *b n*, which is also the source of *ibn* ("son")—is used, just as in Western languages, in the literal sense (adoption of a child) and in the figurative sense (adoption of a doctrine, etc.). This article is concerned only with adoption in the literal sense.

Since the *Qur'ān* (XXXIII, 5, 37; two verses from the Medinan period) is clear on this point, there is no disagreement among Muslim jurists of the different schools regarding the strict prohibition of plenary adoption.

The occasion (*sabab*) of the revelation of these two verses that prohibit adoption—forbidding anyone to give his name to another who does not belong within his "natural" descent, which amounts to banning all adoptive filiation—is provided by these verses themselves. The Prophet Muḥammad, perpetuating, according to Muslim sources, a practice of pre-Islamic Arabia, the *Djāhiliyya*, had adopted one of his slaves, Zayd b. Hāritha [q.v.], offered by his wife Khadīja [q.v.]. He had emancipated Zayd (an important figure in the early years of Islam: one of the first converts to Islam, if not the first, according to al-Zuhrī, and the only person, besides the prophets, to be named in

the *Qur'ān*), and he was henceforward known without any ambiguity as "Zayd, son of Muḥammad" (Zayd b. Muḥammad), even though his ancestry was known (his father tried to buy him back, but Zayd refused to leave Muḥammad, see al-Djassās, *Ahkām al-Kur'ān*, i-iii, n.p. [Beirut], n.d., iii, 361).

Adoption as practised before the revelation of *Qur'ān*, XXXIII, 5, 37, was plenary, entailing the same legal consequences as natural filiation (the right to inherit, etc.), and more significantly, the same prohibitions applied to marriage; the verses abrogate adoptive filiation and, explicitly, the prohibitions applying to marriage which would result from it. This is a good example, according to the Hanafī al-Djassās, of abrogation of the *sunna* by the *Kur'ān* (a theoretical remark directed against al-Shāfi'ī [q.v.], who did not agree that the *Kur'ān* could abrogate the *sunna*). Muḥammad intended to marry Zaynab bt. Djahsh [q.v.], the repudiated wife of Zayd b. Hāritha, who, if plenary adoption had remained valid, would have been absolutely forbidden to him. The marriage of Muḥammad with Zaynab bt. Djahsh would not have been legally permissible without the abrogation of plenary adoption (see al-Māwardī, *al-Nukat wa 'l-uyūn. Tafṣīr al-Māwardī*, 6 vols. Beirut 1412/1992, iv, 370ff. and 405ff.).

Numerous students of Islamic Studies have seen this episode from the marital life of Muḥammad as a sign of the moral weakness of the Prophet of Islam. It is true that certain *ulamā'* of the classical epoch had difficulty hiding their embarrassment, and it is certainly no accident that Faḫr al-Dīn al-Rāzī [q.v.] undertook to show that the marital life of the Prophet was in no way governed by his carnal appetites, with his commentary on *Qur'ān*, XXXIII, 37: "Here is evidence that the marital life of the Prophet (*al-tazwīḳ min al-nabī*) did not have the purpose of satisfying the carnal appetite of the Prophet (*kaḏā' shahwat al-nabī*), but on the contrary, its purpose was to render the Law explicit though his agency." In other words, there was nothing here other than one example among others of "clarification of the Law through the agency [of the Prophet]" (*bayān al-Sharī'a bi-f'ilihī*), see al-Rāzī, *al-Tafṣīr al-kabīr aw mafātīh al-ghayb*, 32 vols. and index, Beirut 1411/1990, xxv, 184).

The prohibition of adoption under the terms of the revealed Law (*Sharī'a*) is no doubt more easily understood if it is remembered that Islam regards the "natural" nuclear family, rather than the tribe, as the basis of the community (*umma*). From this perspective, which is that of Abrahamic monotheism in general, adoption appears as a disruptive element, confusing "lineages" (*nasab*, pl. *ansāb*), or the lines of "natural" filiation which reflect the familial order as willed by the Divine Legislator (see Ps.-al-Shāfi'ī, *Ahkām al-Kur'ān*, ed. Kawtharī, 2 vols., Damascus n.d., ii, 164).

If reference is made to the "occasion" of the *Qur'ānic* prohibition of adoption—or the case of Zayd—it can well be understood why, in classical doctrines, a *de facto* distinction is imposed between, on the one hand, the child whose genealogy is known (*ma'rūf al-nasab*) and on the other, the child whose genealogy is unknown (*ma'dhūl al-nasab*), the *lakīl* [q.v.] ("foundling"), who is the object of a specific chapter in treatises of *fiqh*. In the second case, a recognition of paternity, with transference of the *nasab* (*istihāk* or *ikrār bi 'l-nasab*) by the finder of the child proves possible, under certain circumstances, and even facilitated, since Muslim jurists show themselves very flexible on this point, demanding only indications of "probability" in such recognitions and not formal proof

(see M.S. Sujimon, *The treatment of the foundling according to the Hanafīs*, in *ILS*, ix/3 [2002], 358-85). As for the possibility of passing from one known genealogy to another, it is unequivocally barred *de jure* according to all legal schools. In the Muslim legal order, the creation of a genealogy *ex nihilo* thus proves easier than a change of *nasab*.

At the present time, only one Arab Muslim country, Tunisia, has had the audacity to contravene openly the Qur'anic prohibition of plenary adoption. In 1958, the Tunisian legislature, more aware of new social realities than others, established adoptive filiation in the full sense. It seems nevertheless that in the tribunals interpretation of statutes of adoption is often restrictive and sometimes expressly infringes the terms of the legislation in force (see L. Pruvost, *Intégration familiale...*, in *Recueil d'articles offert à Maurice Bormans par ses collègues et amis*, Rome 1996, 155-80).

Modern and contemporary ethnology has shown that despite its theoretical prohibition, adoption used to be practised in numerous Muslim societies. Adoption in Islam probably constitutes one of those instances where custom, in the event more favourable to this institution, has been only very superficially Islamised.

*Bibliography*: 1. Surveys of the classical doctrine. References given in the article; the corpus of commentaries on Qur'an, XXXIII, 5, 37; and for an unusual point of view, cautiously favourable to adoption, Zamakhsharī, *al-Kashshāf 'an ḥakā'ik al-Kur'ān*, Beirut n.d. [1947] on Qur'an, XXXIII, 5. Treatises of *fikh* barely mention the question of the prohibition of adoption.

2. Studies. Few works have been devoted to adoption as such in Islam, but see nevertheless G.H. Bousquet and A. Demeerseman, *L'adoption dans la famille tunisienne*, in *R.Afr.*, cccclxxii-iii (1937), 127-59; A.R. Naqvi, *Adoption in Muslim law*, in *Islamic Studies*, xix (1980), 283-392; U. Vermeulen, *De gezagsvoorzieningen in de Islam: adoptie en hoederecht*, in *Recht van de Islam*, iv (1986), 4-17; K. Dilger, *Die Adoption im modernen Orient. (E. CHAUMONT)

**TABĪ'YYĀT** (A.), an abstract noun formed from the adjective *ṭabī'ī* "natural" (antonym, *maṣnū'*), physics, or natural sciences.

Aristotle divided the theoretical sciences into mathematics, physics and metaphysics. Islamic philosophers, starting from al-Kindī [q.v.], were familiar with this division and it forms part of the various classifications of the sciences that were drawn up by Islamic scholars, such as in the *Iḥṣā' al-'ulūm* by al-Fārābī [q.v.] and in many subsequent ones. In these classifications, physics was subdivided into parts that mostly corresponded to the Aristotelian works on natural science, including those that are now known to have originated in his school. Such a division was also maintained in the encyclopaedic works of Ibn Sīnā [q.v.] and his followers, such as Bahmanyār b. al-Marzubān, Abu 'l-Barakāt al-Baghḍādī, Fakhr al-Dīn al-Rāzī, al-Abharī and others.

For instance, the part of Ibn Sīnā's *Kūṭab al-Shifā'* that deals with *ṭabī'yyāt* contains the following eight sections: lectures on physics; the heaven and the world; generation and corruption; actions and passions; meteorological phenomena; the soul, plants; and the natures of animals. Except for the section entitled

"Actions and passions", each of these sections corresponds to a work from the Aristotelian school; in fact, the section "Actions and passions" together with the next section "Meteorological phenomena" discusses the subjects from Aristotle's *Meteorology*.

Furthermore, Islamic philosophers such as Ibn Bādīdjā and Ibn Ruṣḥd [q.v.] wrote individual commentaries on several of Aristotle's physical works.

It should be mentioned that the Islamic theologians (*mutakallimūn*) also discussed subjects that fall under *ṭabī'yyāt*, such as the structure of matter and the nature of change.

The Islamic philosophers writing on subjects of natural science remained within the framework of Aristotelian natural philosophy: they used concepts such as potentiality/actuality, matter/form, natural place and natural motion *vs.* non-natural place and forced motion; they adopted Aristotle's definition of motion; and they denied the existence of the void and conceived matter as continuous, not atomistic. However, it appears that the work of Philoponos [see YAḤYĀ AL-NAHWĪ], who opposed Aristotle in several respects, was also well studied, and that often Islamic philosophers took sides with him against Aristotle. Moreover, they often had a different way of discussing things and brought forward new arguments. A few examples follow.

In their discussion of infinity, Islamic philosophers adopted Aristotle's definition, but they used a way to prove that infinite quantities cannot actually exist, which was first propounded by Philoponos. His proof was based on the (mistaken) idea that a part of an infinite collection cannot be infinite, for if something is smaller than infinite, it must be finite. Al-Kindī and al-Ghazālī [q.v.] used this method also to prove, against Aristotle, that time cannot be infinite, but must have a beginning. Objections against this again were raised by Ibn Sīnā and Ibn Ruṣḥd. It is worth mentioning that Thābit b. Qurra [q.v.] recognised that infinite collections may have parts that are also infinite; this in fact invalidates the proofs of Philoponos and his Islamic followers.

In opposition to the Aristotelian explanation of motion, that "every body that moves is moved by another body", Islamic philosophers adopted the concept of impressed force such as conceived by Philoponos; this was further developed by Ibn Sīnā and his school, and became known as *mayl* ("inclination").

Aristotle's "law of motion", stating that the velocity of a body moving through a medium is inversely proportional to the density of that medium, was criticised by Philoponos and subsequently Ibn Bādīdj. Aristotle's law implies that motion through a void (if void existed) would occur with infinite velocity, that is, any distance would be covered in no time, and this absurd consequence was an argument for Aristotle to assert the impossibility of the void. However, Philoponos and Ibn Bādīdj stated that covering a distance always needs a finite time, even in void, if it existed, and that the effect of the presence of a medium will be that more time is needed to cover that distance.

Atomism was discussed by Ibn Sīnā in a way not found in Greek philosophy, for he wrote in opposition to the atomism of the *mutakallimūn*, who defended atomism with their own arguments.

The discussions of meteorological phenomena [see AL-ĀTHĀR AL-'ULWĪYYĀ] are mostly based on Aristotle's assumption that they are caused by the two exhalations, the dry one from the earth and the moist one from the water. However, in their explanation of some

phenomena, such as precipitation, wind, earthquakes, thunder, rainbow and the climates, al-Kindī and Ibn Sīnā do not always follow Aristotle. They show an independent way of thinking and criticise Aristotle on the basis of personal observation of these phenomena.

Much of the discussions of the above-mentioned subjects remained speculative or philosophical. The discipline that is nowadays called physics also had its scholars in the period of the flourishing of Islamic science. Statics was the subject of the *Kitāb al-Karastūn* by Thābit b. Qurra and *Kitāb Mizān al-hikma* by al-Khāzinī [q.v.]. Hydrostatics and the determination of specific weights were discussed in the same book of al-Khāzinī and by al-Bīrūnī in his *Maqāla fi nisab*. These scholars were able to execute very precise measurements of specific weights with their diverse instruments.

Although the work of Ibn al-Haytham [q.v.] on optics also contains much speculation, it stands out as one of the first examples of a systematic experimental investigation of the behaviour of light. This work was continued by Kamāl al-Dīn al-Fārisī [q.v.] who made a considerable contribution to the explanation of the rainbow by recognising that it is due to refraction of light in drops of water in a cloud [see MANĀZIR].

(P. LETTINCK)

**TA'BĪR AL-RU'YA** (A.), "the interpretation of dreams".

As well as this expression, *tafsīr al-ahlām* is employed, with *ta'bīr*, basically "the passage of one thing to another, one sense to another", hence "explanation" and *tafsīr*, lit. "commenting, explaining", from roots occurring in other Semitic languages and with the two Arabic verbal nouns found, once each, in the *Kur'ān*, at XII, 43, and XXV, 33, with *ta'wīl* [q.v.] also at XII, 44-5. In current usage, *ta'bīr* is confined to the sense of "interpretation of dreams", whilst *tafsīr* [q.v.] is used for commentaries on e.g. the Bible and the *Kur'ān*.

For the terminology of dreams and for the development of literature in Arabic on them, see RU'YA. Here, their interpretation is considered, i.e. the skill of oneirocriticism.

In origin, oneiromancy was the province of the *kāhin* [q.v.] and custodians of inspired knowledge. It depended on divination, which was both intuitive and deductive: the first when in dreams, the divinity itself or its messenger appears to announce future happenings; the second, in regard to dreams of daily life, with their own obvious interpretation. In Islam, the two methods existed, the first in regard to the great Islamic dynasties (see Fahd, *Le rêve dans la société islamique du Moyen Age*) and in apparitions in dreams of the Prophet himself to privileged or pious persons and

mystics. The second is seen in the immense oneirocritical literature in Islam (see idem, *La divination arabe*, 247-367). To these types of knowledge of the future a third may be added, incubation, in which a revealing angel is prompted to get in contact with the supernatural world and bring back knowledge of the future, a procedure already known from the Gilgamesh epic (J. Bottéro, *Les songes et leurs interprétations*, Paris 1959).

From oneiromancy, said by the Prophet to be one part of prophesy, following the Talmudic tradition (*Berakhot*, 57b, with comm. of Maimonides, *Le guide des égarés*, ii, 136), to oneirocriticism, the transition was made by two simultaneous impulses from the ancient Babylonian and Hellenistic traditions. In fact, by its symbolism and its formulation, the interpretation of dreams shows close links with the most ancient Semitic tradition, seen in Oppenheim's reconstitution of the Assyrian book of dreams and his exhaustive study of oneiromancy in the Near East. The transmission can, of course, only have been oral, as one would expect with a popular tradition.

After the 4th/10th century, under the impulsion of the Arabic translation of Artemidorus of Ephesus (2nd century A.D.), oneirocriticism borrowed from this last not only its plan and method of classification but also a considerable number of symbolic elements (see e.g. al-Dīnawarī's work). This injection of new blood led to the prodigious development of the Islamic genre of this literature (180 works listed in Fahd, *op. cit.*, 330 ff.), and the double heritage was developed and perfected through numerous generations.

The first codifier here was the Medinan Ibn al-Musayyab (*flor.* in the caliphate of the Umayyad 'Abd al-Malik (later 1st/7th century A.D.)). He left behind a list of thirteen dreams which his contemporaries had asked him to interpret, given by Ibn Sa'd, *Ṭabaqāt*, v, 91-3, tr. in Fahd, *op. cit.*, 310-11). He was followed by Ibn Sīrīn [q.v.], whose fame here has come down to us and who figures amongst the forefathers of Arabic oneirocriticism.

At this stage, Arabic skill lacked a method of classifying dreams into precise categories illustrated by clear examples showing the constant symbolism. The translator of Artemidorus, Ḥunayn b. Ishāq [q.v.], filled this gap, and it was exploited by Abū Sa'īd al-Dīnawarī in his work of 397/1006-7 dedicated to the 'Abbāsīd caliph al-Kādir (see *Bibl.*), of which over 25 mss. survive, the oldest work in the genre to have reached us integrally. This immense compilation not only contains materials on the interpretation of dreams but also on the range of man's activities, social and religious, and on his hopes and fears as experienced by a man of Baghdad society in the 4th/10th century. This work also allows us to reconstitute, *grasso modo*, the six books of the work of Artemidorus, and its classification of themes became normative in later tradition, with only slight modifications appearing.

For the Muslim oneirocritics, the interpretation of dreams was the first of the sciences, practised from the start by the prophets and messengers of God so that the greater part of their pronouncements were made by means of dreams. For Ibn Khaldūn, it is a science whose light is a reflection of prophesy, with which it is closely connected. Both involve the permanent preoccupations of the Revelation (iii, 84, Eng. tr. iii, 103, Fr. tr. ii, 118). He details the skills required for interpretation of dreams, essentially those for religious piety, including discretion and the avoidance of careless talk and divulgence of confidences.

The oneirocritic should consider all aspects of the phenomenon and give a clear, measured response.

Note must be taken of the status, age, etc. of the person involved, the conditions in which the dream has been experienced, etc. Faced with a difficulty, the oneirocritic must go back to basic principles, but if after all that, he can find no answer, he must confess this, and no-one will reproach him, since this has happened to the prophets themselves. The dreams of all classes of men must be interpreted, after a rigorous enquiry into the status, etc. of the questioner. If no progress can, however, be made, recourse must be had to one's own personal opinion. Above all, discretion is vital (al-Dīnawarī, fols. 41-3).

All the authors stress the need to have a vast knowledge of all the sciences; all branches of knowledge are useful, including mathematics, law, etymology, onomastic, literature, proverbs, the practices of the Islamic cult, etc. Nothing has changed in the ancient principles of oneirocriticism; the only differences revealed in the course of time come from the conditions of men and their preoccupations, morals and whether they prefer immediate, present gains at the expense of the Afterlife, whereas previously, religious affairs formed the main activities of men. When the Prophet's Companions dreamed of dates, they saw there the sweetness of their religion; for them, honey signified the delights gained for them from reading the *Qur'ān*, knowledge and justice (Ibn Sīrīn, *Muntakhab*, i, 21ff.).

One should say in conclusion that, despite the efforts of the oneirocritics to furnish their art with principles and techniques, they were forced to recognise that "the interpretation of dreams remains based on analogy, relationship, comparison and probability. One cannot base a course of action, nor refer to its findings, before their accomplishment in the waking state and even before proof for it is put forward" (*ibid.*, i, 4). In fact, wrote E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1909, 407, "la pluralité des méthodes, l'arbitraire avec lequel on les emploie, l'abus de symbolisme font de l'oniromancie une pure fantaisie et il n'est pas un songe qui ne puisse, au gré du devin, être interprété d'une façon favorable ou défavorable aux intérêts de son client".

Nevertheless, the severe judgements of both ancient and moderns do not reduce the considerable value of oneirocritical literature for the light it throws on psychology, sociology and mysticism. Beneath dreams, simple or incoherent, there is a complex of passions, ambitions and dynastic rivalries. Whether spontaneous or fabricated, they are the vehicles for conceptions and ideas issuing from the popular milieu, one not widely revealed in other literary genres. Since the dream forms part of the life of rich and poor alike, it forms something like a screen between the dead past and the present, which can be used to reconstruct, with great precision and realism, the social life and aspirations of any given class at any fixed time.

**TABRİZİ, DJALĀL AL-DĪN**, Abu 'l-Kāsim, a saint of the Suhrawardiyya [*q.v.*] order (date of death perhaps 642/1244; *Ḡulām Sarwar-i Lāhawrī, Khazīnat al-asfiyā'*).

Together with Bahā' al-Dīn Zakariyyā [*q.v.*], *Djalāl al-Dīn* is to be counted as the founder of the order in India (Saiyid Athar Abbas Rizvi, *A history of Sufism in India*, New Delhi 1978, i, 190). After the death of his teacher Badr al-Dīn Abū Sa'īd Tabrīzī, *Djalāl al-Dīn* went to Baghdād to join Abū Ḥafṣ 'Umar al-Suhrawardī (d. 632/1234 [*q.v.*]), the eponym of the order, as a disciple, when al-Suhrawardī was already old. *Djalāl al-Dīn* stayed with al-Suhrawardī for nearly a decade and he accompanied him on his annual pilgrimages to Mecca and Medina. In the company of Bahā' al-Dīn Zakariyyā who was to found a *khanāqāh* in Muṭṭān, *Djalāl al-Dīn* set out to travel to India (*Djāmī, Nafahāt*, 504). However, they separated on the way, a fact explained by legend as follows: *Djalāl al-Dīn* met the mystical poet 'Aṭṭār (d. 618/1221 [*q.v.*]) in Nīshāpūr and was asked by him, who in Baghdād was to be included among the mystics. Impressed by the poet's spiritual presence *Djalāl al-Dīn* is said not to have uttered the name of al-Suhrawardī (*Āḥṣī, Mir'āt al-asrār*, Staatsbibliothek zu Berlin SPK, Ms. orient. Quart. 1903, 284b). At the beginning of the 7th/13th century, during the reign of Ilṭumīsh (607-33/1210-36 [*q.v.*]), *Djalāl al-Dīn* arrived in India where he was warmly welcomed by the Sultan. The *Shaykh al-Islām* Nadjm al-Dīn, however, resented this and tried to influence the Sultan against the *Sūfī* (*Āḥṣī, loc. cit.*). An accusation was concocted and in 1228 the Sultan organised an investigation, which was presided over by Bahā' al-Dīn Zakariyyā. Though the charge was soon found to be false, *Djalāl al-Dīn* left Dihlī for Badā'ūn. There again *Djalāl al-Dīn* became friendly with the ruling classes, viz. the local administrator *Kāḍī Kamāl al-Dīn*, who enrolled his son as *Djalāl al-Dīn's* disciple.

Finally, *Djalāl al-Dīn* reached Bengal where he settled down. In recruiting followers, *Djalāl al-Dīn* converted many Hindus and Buddhists to Islam (Rizvi, ii, 398; Trimmingham, 232). In accordance with the policy of the Suhrawardī order of supporting enforced conversion, *Djalāl al-Dīn* demolished, at Devatalla in northern Bengal, a large temple that a *kāfir* (Hindu or Buddhist) had erected and constructed a monastery in its place. In the *Rihla* of Ibn Baṭṭūṭā [*q.v.*], *Djalāl al-Dīn* Tabrīzī is confused with Shāh *Djalāl* of Sylhet, one of the Bengali warrior saints (Rizvi, i, 314). In the Kāmṛūp hills of Assam *Djalāl al-Dīn* was said to have been met by the Moroccan traveller (*Rihla*, iv,

216-22) who had reached India only in 734/1333. *Djalāl al-Dīn's* sanctuary in Sylhet is still visited by the devout to this very day (Lawrence, *Notes from a distant flute*, Tehran 1978, 63). Reliable information of his successors in Bengal is not available (Rizvi, i, 202).

**TABSHĪR** (A.), lit. "proclamation, spreading of the good news", a term used in modern works for Christian proselytism in various forms and the work of missionaries (*mubashshirūn*) within the Islamic world.

The use of the word, if not the activity which it denotes, does not seem to go back beyond the end of the 19th century, being at one and the same time contemporaneous with the Arab renaissance (*Nahda* [q.v.]), European colonialism and the development of Christian missions. It seems to be a term of Christian origin, corresponding to its usage in Arabic translations of the Bible for Grk. *evangelion* "announcement of good news", as evidenced in the Protestant (London-Beirut 1831) and the Roman Catholic (Beirut 1898) translations, where in Mark, xvi, 16, we have, however, *al-nū al-bishāra* without, however, the form *tabshīr*. *Tabshīr* does not appear in such classical dictionaries as *LĀ* and *TĀ*, and *bishāra* is found for the first time in Freytag's Arabic-Latin dictionary (Halle 1830-7, i, 124) in the sense of *evangelium*, uncapitalised and without any connotation of the Gospel itself. Lane, *Lexicon*, i, 208, simply has *mubashshir* in the general sense of "one who announces good news". Buṭrus al-Bustānī in his *Muḥīṭ* (Beirut 1867, i, 95) is the first person to give a reasoned definition, citing the expression *bishārat al-indjīl*, where the origin of this neologism is explained: *idāfa bayyina li-anna al-Indjīl ma'nāhu al-bishāra bi 'l-yūnāniyya*. Curiously, and in which he is followed by the author of the dictionary *Akrab al-mawāriḍ* (1889), he mentions (96) that *al-bashīr* means, in a general way, *al-mubashshir wa 'l-djāmīl* and that it is the epithet given to St. Luke by the Christians, *laḳab Mār Lūkā 'ind al-Naṣārā*. Words from this root *b-sh-r* occur several times in the Qur'ān (ʿAbd al-Bāḳī, *Muʿjam al-mufahras*, Cairo 1378/[1945], 119-21), especially in the verbal forms *bashshara* and *abshara*, whose ambivalent sense can announce some good news but also, in menacing tones, the coming of bad news; *mubashshir* is attested in speaking, *inter alios*, of the Prophet, but not *tabshīr* in regard to him.

It is impossible to discuss here the innumerable books and articles devoted directly or indirectly to *tabshīr*; only a few representative ones, in Arabic, of the mediaeval period will be given. The enquiry ought, however, to be extended beyond the Arab to the wider Islamic world, notably to India and Indonesia.

Reading these works, one notes that, at different levels, the authors treat various aspects of the subject. Two forms of *tabshīr* are distinguished. The direct one is an effort by churches and missionaries in the strict sense, *mubashshirūn*, to announce to Muslims the Christian "good news". It involves, then, an individual or collective enterprise of the Christians, openly proclaimed. Distinguished from it is a more radical notion, sometimes confused with the first, envisaging directly "conversion" or more precisely, Christianisation, *tanṣīr*, a *maṣdar* or verbal noun of Form II from the collec-

tive designation of Christians, *al-Naṣārā* [q.v.], traditionally among the Muslims.

The *tabshīr* in these works can denote proselytisation aimed directly at Muslims but equally, and frequently, aimed at whole populations, as in Black Africa or amongst certain ethnic minorities not connected with Judaism or Islam, as in the Sudan, in Chad or in other countries of Africa and elsewhere. These Christian missionary activities, openly declared, have for the most part their origins in Western, traditionally Christian—Catholic or Protestant—countries, but do not stem, above all in the Near East, from the churches or members of the Eastern Christian churches, present in that region for two millennia. However, according to authorities consulted, certain members of these local churches may have been involved in the missionary activities, *tabshīriyya*, of missionaries of Western origin. Finally, the term "the West" embraces not only Europe, but also North America, especially the United States, even though colonisation activities in predominantly Muslim lands have never been directly launched, so these authors state, from the USA.

Alongside this direct, avowed missionary work, numerous authors devote—some more, perhaps, than others—an important place to the indirect form of *tabshīr*, one that is "hidden" or "stealthy", which, with concealed motives, uses diversionary means (cultural, charitable and political) to achieve its aims indirectly. The authors who denounce this indirect missionary work connect it to two main trends, which, they allege, are its main inspirers, viz. colonisation (*istīmār*) and orientalism (*istishrāk*).

The titles of certain works on this theme, placing *tabshīr* in direct connection with colonisation, are revelatory enough of this fact. One may cite e.g. Muṣṭafā Khālīdī and ʿUmar Farrūkh, whose work is often cited as a reference work on the topic, *al-Tabshīr wa 'l-istīmār fi 'l-bilād al-ʿarabiyya: ʿard li-djūhūd al-mubashshirīn allatī tamī ilā ikhḅā li 'l-istīmār al-gharbī* (Beirut 1953) and, more recently, ʿAbd al-Fattāh Aḥmad Abū Zāyida, *al-Tabshīr al-ṣalībī wa 'l-ghazw al-istīmārī* (Malta 1988) (see Talāl ʿAṭrī, *al-Bāʿṭha al-yasūʿiyya: muḥimmat ʿiddā al-nakhḅa al-siyāsiyya fi Lubnān*, 1987), which emphasise the school, University and charitable activities of certain religious orders, in general French- or English-speaking, practising this indirect form of *tabshīr*. Limiting ourselves to the Near East, the main University institutions envisaged are the American University of Beirut (AUB), the Jesuit Université Saint-Joseph, also at Beirut, and the American University in Cairo (AUC), the first two of which have a religious orientation and were founded in the second half of the 19th century, that of the *Nahda* and of colonisation [see ʿAṭrī].

On the same track, there is a great stress on the introduction of foreign languages, English and French, as hidden means of detaching student élites of the Near East from their own language, Arabic, and their original culture, that of the Qur'ān and Islam, and as a means of making favourable comparisons in favour of the West, especially in the domains of technical and industrial progress. Another of the means (*wasāʾil*) of this second form of *tabshīr* is the encouragement by these educational establishments of developing, on the one hand, the use of the various Arabic dialects, *al-lahadjāt al-ʿammīyya*, and on the other, the use of non-Arabic local languages, Syriac, Kurdish, Berber, Armenian, etc., in order to perpetuate divisions between the peoples of the Near East, to "divide and rule", and thereby prevent the wider diffusion of Islam. This is an argument already used, in a slightly different context, by authors of the Salafīyya [q.v.] at

the end of the 19th and beginning of the 20th centuries, admittedly without recourse to the term *tabshīr*, e.g. in the commentary of the *Manār* [see AL-MANĀR] on sūra V, 82. Also attacked are the endeavours of these establishments to promote or to favour various forms of bilingualism or trilingualism to the detriment of the one language, Arabic.

Certain authors go even further and allege that these missionary enterprises find agents (*ʿumalāʾ*) to aid them within the heart of the Arabic and Islamic worlds themselves, and they cite in particular passages from the famous work of Tāhā Husayn [q.v.], *Mustakbal al-ḥakāfa fi Miṣr*, or that of Kāsim Amīn [q.v.], *al-Marʾa al-ḡadīda* (see 'Abd al-ʿAzīm al-Murtaḏā, *al-Tabshīr al-ʿālamī dīdd al-Islām, ahdāfuhu, wasāʾiluhu, ṭuruḡuhu, muwāḏjāhatuhu*, Miṣr al-Djādīda 1992, 37 ff.).

Orientalism, *istīṣhrāk*, is often mentioned and denounced as one of the indirect means of *tabshīr*. Without always avoiding a facile juxtaposition, but with some persons recognising the positive aspects of *istīṣhrāk*, this link between the two notions brought together in this fashion often goes on to an analysis of the "religious and missionary impulse" of the orientalist's activities, *al-dāʿif al-dīnī al-tabshīrī* (see Sultān 'Abd al-Ḥamīd Šulṭān, *Min suwar al-ghazwī al-fikrī li 'l-Islām: al-tabshīr, al-istīṣhrāk al-ʿilmānīyya*, Cairo 1990, 166). The idea that *tabshīr* and *istīṣhrāk* are linked derives its origin from the fact that a certain number of orientalists, above all those who lived or published works in the Arab-Muslim lands, were indeed members of religious orders or missionary societies. Hence in a general way, some of their more critical attitudes, if not the whole body of their works, are considered to be hidden methods of sapping the foundations of the doctrines of Islam, especially by dwelling on the controversial aspects of the *Qurʾān* and the life of Muḥammad, or, on another level, by an exclusive orientation towards certain aspects of Islamic mysticism, etc. On this negative role of the orientalists, allied hand-in-hand with *tabshīr*, one may refer to the opinions of 'Abd al-Laṭīf al-Shuwayrīf, *Āṭhār al-istīṣhrāk wa-kayfa muwāḏjāhatuhu*, in *Djawhar al-Islām*, vi/1 (Tunis 1973).

One may conclude this summary sketch with some reflections. The first is that this idea of *tabshīr* and the positions taken up by those involved with it, should be placed in a much wider and more ancient context, often far from eirenic, of Islamo-Christian relations in general, and, since the end of the 19th century, of relations between Islam and the West, regarded as an emanation of and as being representative of Christianity. On the more particular level of the basic choices of the two religions regarding *tabshīr*, one may add that these two religions see themselves equally, although employing differing means, as faiths dealing with universal final ends, bearers of a message meant for men of all places and ages, a message which can bring into action an expansionist dynamism that explains, even if it does not justify, some of the methods used by the Islamic side regarding the idea of *tabshīr* studied here. Finally, let it be said that the examples discussed above and their tentative analysis do not in any way represent the positions of the most authoritative and representative of the faithful of each of the two religions.

*Bibliography:* As indicated above, this cannot be exhaustive. In addition to references given in the article, see 'Abd al-Wadūd Šhalabī, *Afīkū ayyuhā al-muslimīn ḡabl an tadfīʾū al-djīzya*, Cairo 1997; Sa'd al-Dīn al-Sayyid Šālih, *Ihdharū al-asālib al-badītha fi muwāḏjāhat al-islām*, Cairo 1998, esp. 25-109. For a global presentation of *tabshīr* in the first half of

the 20th century, which highlights its relative check in face of Islam, above all in Africa and Asia, see the art. *Tabshīr*, in Muḥammad Farīd Waḡjdī, *Dāʾirat al-maʿārif al-ḡarn al-rābīʿ ashar/al-ʿishīrīn*, 1937, i, 205-20, and see also Ḥasan Ḥanaṭī, *Mādhū ya'nī ʿilm al-istīḡhrāb*, Beirut 2000, Preface. (L. POUZET)

**TĀHIR BEG**, MEHMED, late Ottoman journalist, publisher, and owner of journals, newspapers, and a printing-house in Istanbul (1864-1912). He was one of the journalists and publishers who were supported by 'Abd al-Ḥamīd II, being awarded various medals and decorations by the Sultan.

Information about his family and education is limited. Redjāʾī-zāde Ekrem [q.v.] reports that Tāhīr Beg's mother looked after his older son. It is known that he was working as a reporter at *Therwet*, the newspaper published in Turkish by Dimitraki Nikolaidi between 1307/1891 and 1324/1908. That he was a well-known figure in the press and publishing world can be deduced from the names of the staff of his journals and newspapers, from the variety of the authors of the books he published at his printing-house, from the fact that he introduced Aḥmed Rāsim [q.v.] into journalism, and from his getting articles from Redjāʾī-zāde to publish in his journals and printing a book translated by Aḥmed Iḥsān Tokgöz [see AḤMAD IḤSĀN] at his printing-house, although he had many conflicts with both of these in later years. Thanks to his high connections, he was able to resume publishing his journal *Ma'lūmāt* very soon after it was suppressed or confiscated for various reasons.

He was notorious in the world of Turkish press and publication as the first person in the history of Turkish journalism to produce false news and then to take bribes for publishing denials of it, so that his *lakab* (*Baba Tāhīr*) is given as an example for such situations. First, abusing his proximity to the Ottoman Sultan, he supplied the latter with names to be given ranks, decorations and medals, these persons being close to him, and he published those names in his newspaper. Then he printed bogus certificates at his printing-house, employed an Italian engraver to produce spurious decorations and sold them, especially to foreigners. In addition, he printed publications opposing the Palace and then informed the Palace that the "Young Turks" were printing such journals in Egypt. In 1901, together with Dr. M. Paṣha, he denounced the journal *Therwet-i Fīnīn* [q.v.] and caused it to be suppressed for 40 days and its owner and writers to be arraigned in court. He published Redjāʾī-zāde Ekrem Beg's *Shemā* in his journal *Ma'lūmāt* without his permission.

When his offences were revealed, he was arrested, tried and in 1903 sentenced to 15 years' imprisonment. But, only after five years, benefiting from the amnesty declared after the *Meshrûtiyyet* in 1908, he returned to Istanbul. He was then kept under surveillance by the police authorities and not permitted to publish his newspaper again. Having been involved in the incident of 31 March 1325/13 April 1909, he was exiled to Tripoli, but after a while escaped from there to Naples and then to Paris. In both places he established businesses, but these failed. From the fact that A.I. Tokgöz's article on his death is dated 16 February 1912, it appears that he died at the beginning of that month in Paris.

He published five journals and newspapers: *Bahâr* (1299/1883, 19 issues, fortnightly), *Therwet* (1314-18/1898-1903, 2088 issues, daily), *İrtikâ'* (1315-19/1899-1904, 251 issues, weekly), *Ma'lûmât* (1311-18/1895-1903, journal-newspaper, 2443 issues, weekly-daily) and *Muşawwer Fenn ve Edeb* (1315-19/1899-1903, 222 issues, weekly). Initially 48 issues of the *Ma'lûmât* were published by the Artin Asadoryan Press weekly (1309-11/1894-5). *Ma'lûmât*, with its writers and contents, filled an important gap during the period when it was published. Since it attracted attention through photographs and illustrations having also French subtitles, it was also known as the *Muşawwer Ma'lûmât*. The journal was distributed throughout the Ottoman lands, Persia and Russia. It was also printed locally in Filibe [q.v.] under the title *Afâk-î Şarkîyyeden Tulû' Eden Ma'lûmât* (1314/1896). Readers' letters sent from places like Cyprus, the Mediterranean shores, the Aegean Islands, Algeria and Egypt, show the extent of the domain where it was being read. Some of its issues were in Arabic and Persian, and it had supplements on diverse themes (*Khârinlara Mahsûs Ma'lûmât*, *İläve-i Ma'lûmât*, etc.). The journals *Ma'lûmât* and *Therwet-i Fünûn* were always in a state of rivalry, but while *Therwet-i Fünûn* was the journal supporting modern literature, *Ma'lûmât* was the journal of supporters of a more moderate line (*mutawassîf*) in literature.

Apart from these, Tâhir Beg also published books at his printing-house. According to Seyfettin Özege's catalogue, 95 books were printed at the *Matbâ'a-i Tâhir Beg* between the years 1311-19/1895-1903. Among these were books printed in three languages: in Turkish-Arabic-French or in Persian-Turkish-French. Moreover, it is known that some French books were also printed by him. Some of the books have the name of the series *Ma'lûmât Kütüphanesi* or *Tâhir Beg Kütüphanesi* and the publisher's name as *Ma'lûmât ve Therwet gazeteleri şahib-i imtiyâzî es-Seyyid Mehmed Tâhir*. In the books, the name of the printing-house is given as *Matbâ'a-i Tâhir Beg*, *Tâhir Beg Matbâ'ası*, *Tâhir Beg'in 40 numaralı Matbâ'ası* and *Ma'lûmât Gazeteleri ve Tâhir Beg Matbâ'ası*. The relation with Tâhir Beg's printing-house of the 20 books that appeared in Seyfettin Özege's catalogue as having been printed at the *Ma'lûmât Matbâ'ası* between 1311-17/1894-1901, is a matter which still needs to be examined. Tâhir Beg had received the privilege of printing official documents at his printing-house during the period when the *Matbâ'a-i Âmir* was closed.

(HATİCE AYNUR)

**TAKÂLİD** (A.), pl. of the *maşdar* or verbal noun *taktîd*, the Form II verb *ka'llada* having the meaning, *inter alia*, "to mimic, imitate" (for *taktîd* in its legal and theological context, see the art. s.v.), is used in Arabic today for the ensemble of inherited folk traditions and practices, popular customs and manners, and folklore in general, although the loanword from English *folklore*, is often used, especially for the discipline and its study at large. In recent years also, the term *al-turâth al-sha'bi* "folk inheritance" is being used to denote the common Arabic heritage of popular culture.

According to the common definition of the term "folklore", it denotes the cultural popular traditions which are passed on from generation to generation and their study. Folklore may be divided into five main categories: (1) Oral traditions: folktales, legends, myths, fables, riddles, jokes; popular poems, common expressions, expletives and oaths; (2) Written materials: proverbs, amulets and talismans; (3) Traditional practices: food and drinks, clothes, embroidery, cosmetics, jewellery, household tools and furniture; popular medicine, witchcraft; customs and manners; (4) Beliefs and superstitions; and (5) Popular art: popular theatre, songs, dances, musical instruments, paintings, drawings and sculpting.

1. In the Arab world.

Although descriptions of popular traditions and customs among Arabs, mainly the Bedouin, appear already in early Arab literature, and, in particular, within travel literature, serious discussion of Arab folklore only started in the 19th century with the appearance of works such as E.W. Lane's (1801-76) *An account of the manners and customs of the modern Egyptians* (1836). However, research of this field was not very common until the second half of the 20th century. This omission is clearly illustrated by Ahmad Amîn (1878-1954) in the introduction to his *Kâmûs al-'adât wa 'l-takâlîd wa 'l-ta'âbir al-mişriyya* (Cairo 1953) in which he says: "I sincerely believe that historians have deliberately neglected popular aspects in their books of history, showing off their aristocracy, although popular literature, in many respects, is not of less importance than the literary Arabic language and literature... It is quite possible that some aristocratic scholars will look askance and be bewildered as to how an academic professor degrades himself by recording manners and popular expressions which concern the populace" (pp. II-III).

This attitude among Arab scholars towards their popular heritage in the past resembles their attitude towards the study of Arabic dialects, which also won recognition as a discipline worth investigating only during the second half of the 20th century after the appearance of works by non-Arab scholars who valued both Arab heritage and Arabic dialects and consequently published extensively on both subjects.

Oral traditions have been known for genera-

tions and in particular the art of the story-telling of folktales (*kiṣaṣ shābiyya*; in colloquial Arabic *hikāya* [q.v.] or *haddūta* (from *uhdūtha* "speech, tale"), which was usually carried out by an elder member of the family or by the local "professional" teller (*hakawātī*). The best example of such a genre is the famous *Thousand and One Nights* [see ALF LAYLA WA-LAYLA]. The genre of fables is represented by *Kalīla wa-Dimna* [q.v.] attributed to the Indian philosopher Bidpai (4th century B.C.) and rendered into Arabic by Ibn al-Mukaffa' (721-57 [q.v.]). Another genre is that of amusing anecdotes (*nawādir, mulah*), e.g. the funny stories of *Ḍjuḥā* [q.v.] (Turkish: Nāṣir al-Dīn *Khodja* [q.v.]), about whose real existence or non-existence scholars are divided. It is mainly the Bedouin and the inhabitants of rural areas around the Middle East who still continue with the long tradition of story-telling which, together with riddles (*ḥazzūrāt* or *ḥazzūr*), and jokes (*nukaḥ*), are the most common and basic forms of entertainment. Several collections have been published and new editions continue to appear, sometimes offering the reader different versions of the same story or anecdote.

Another important genre which has been very popular from old times are poems composed by professional or amateur poets to commemorate a special occasion or event, such as parties in honour of a person, weddings, eulogies or obituary speeches. Although these poems usually take the form of the Arabic *kayīda* [q.v.], which is composed in literary Arabic, some are recited in colloquial or something resembling Middle Arabic, similar to common songs which are performed on such occasions.

So far as common expressions, expletives and oaths are concerned, they are usually associated with special situations and circumstances or etiquette, such as weddings, the birth of a child, bereavement, etc., which are often connected with local customs. These are usually recorded in the various dialect dictionaries. What most of them, however, have in common is the fact that many of them contain the word *Allāh*, including the commonest expression used for encouragement and urging: *yalla* (in the name of God), and the word *walla(hi)* (by God!), used customarily to express astonishment or as an oath. Other common words used as oaths are: *wi-hyāt rabbīna* (by God), *wi 'l-nabī* (by the Prophet), *wa-hayātī/wa-hayātak* (by my/your life), *wa-hayāt rāsī/rāsak* (by my/your head), *wa-hayāt ulādī* (by my children), *wi-hyāt* or *bi-rahmat ummī/abīy* (by the memory of my mother/father), *bi-ṣharafī* (by my honour) and *ḥalaft bi 'l-talāk* (I swear I will divorce my wife). Common expressions often used are: e.g. when a person sneezes, people say to him *rahīmaka allāh* (may God have mercy upon you), or simply *l'īsh* (may you live long), and when a person leaves, others wish him *Allāh ma'ak* (may God be with you). The word *mabrūk* is the commonest wish to congratulate people on the occasion of an engagement, marriage, birth, new house, car, job, clothes, etc. Sometimes the dual, and the number one thousand are used in good or bad wishes for emphasis: *sahtēn* (bon appetit); *marḥabten* (hello); *'amayēn* ("double blindness", i.e. Hell!); *alf mabrūk* (lit. a thousand blessings, i.e. congratulations!); *alf dāhiya* ("thousand hells"). A reference to shoes, dogs and donkeys (and in some areas to a woman) is immediately followed by the speaker with the expressions *bā'īd annak* (lit. far from you) or *adǧallak* (lit. you are more respected than the object mentioned).

Written materials include proverbs (*amḥāl*) [see MATḤĀL], a genre well known in classical Arabic literature as one of the earliest and most common com-

positions in prose, even though some of them are based on Arabic poetry. The thousands of proverbs found in Arabic demonstrate the important role they play in writing and in daily discourse. Moreover, as many proverbs depict a situation or give advice or warning, it is customary among Arabic speakers or writers to use them in order to illustrate their speech/written work to draw conclusions of a comparable situation. Old collections of Arabic proverbs, such as that of al-Maydānī (d. 518/1124 [q.v.]), are constantly being reprinted while new collections of proverbs, arranged by countries, continue to appear.

Amulets and talismans (*tamā'im, rukayāt, l'āwādh, talāsim, 'azā'im, ḥuǧḡub*) are very popular, especially in rural areas [see RUKYA; TAMĪMA]. Many of these are meant to protect the bearer against the evil eye [see 'AYN], bring blessing and prosperity, speed the recovery from an illness or bring good luck in general. The most popular amulet is the one in the shape of an open hand called *khamsa*, i.e. "five", referring to the five fingers of the hand, which are meant "to stop" bad luck or envy. The amulet may be a copy of the Qur'ān, a few verses from it or brief statements such as: *'ayn al-ḥasūd lā tasūd* (May the eye of the one who envies never prevail) or *'ayn al-ḥasūd fihā 'ūd* (The eye of the one who envies will have a piece of wood in it), but may also be simple blue beads, a piece of blue cloth (since the eyes of the devil are believed to be blue), leaves or flowers of certain plants and even a pinch of salt. It is customary to give such amulets to children or hang them at home, in the car, at work and even on animals. There are also talismans which are written in a code or contain numerals and other symbols which are only known to the writer. Moreover, although the traditional rosary, commonly used by men (*misbaha*), is more associated with a ritual based on the custom of mentioning on every occasion God's Most Beautiful Names (*al-asmā' al-ḥusnā* [q.v.]), it may also be regarded as a kind of talisman.

Traditional practices vary from region to region and from one society to another. That is to say, daily practices of the urban society may differ from those of the rural one in the same way that they may be different between one Arab country and another and between sedentary and nomad society. Hence, what, for example, is generally known in the West as Oriental cuisine may have different recipes, names of ingredients and occasions for their consumption. Thus *harīsa* is the term for a dish of meat and bulgur, but in Egypt it refers to a sweet pastry made of flour, melted butter and sugar (see Wehr, under *harīsa*). Bread is called in Syro-Palestine *khubz*, whereas in Egypt it is called *'aysh* (which has the same meaning as "life"). Flesh of lamb (*khariḥ*) is usually consumed in festivals such as Ramaḍān and the two 'īds, as well as sweets (*ḥalwayyāt*) such as *kunāfa, baḳlawā, ḡhurayba* and *ma'mūl*. Sweets, mainly for children, such as *ḡhazl al-banāt* ("girls' spinning") are also popular on special occasions. Incidentally, the ingredients used for these dishes or the method of their preparation may differ from one region to another. Traditional food served in family celebrations such as weddings, birth of a child or bereavement may also vary in accordance with the local customs, except for bereavements when sweet dishes are normally avoided.

Coffee (*kahwa* [q.v.]) and tea (*ṣhāy* [see ṢAY]) are the most popular drinks all around the Middle East. Black coffee, usually with cardamon (*ḥāl*), may be served with sugar (*maḍbūḥ*) or without (*sāda*) in small cups, after being boiled a few times, first without

ugar and then with. Tea is always strong and very sweet and is usually served with mint leaves (*na'na'*). The popularity of coffee has, over the years, given rise to a whole ethos: it is offered to guests, and in addition, to mark reaching an agreement concerning engagement, transactions or settlement of feud. It is also customary to offer bitter coffee in the house of a bereaved family to people who have come to express their condolences. Several customs are current in various areas which are associated with coffee drinking, such as, shaking the cup to indicate that no more coffee is wanted or using the word *dāyman* or *al-kahwe dāyme* ("always", i.e. may coffee always be in this house) to thank the host after finishing drinking, or the word *'āmir* (lit. fully inhabited, i.e. may this house never again suffer the loss of any of its members), when finishing drinking coffee in a house of a bereaved family. The third cup of coffee, when offered to a guest, may symbolise, in some areas, a start of enmity or it may politely hint that the meeting is over and that the guest is expected to leave. Telling the fate of the drinker by a "coffee reader", who scrutinises the dregs of the coffee in the bottom of his cup, is also a very popular custom around the Middle East. Finally, drinking coffee in cafés while smoking a hookah (*arūjīla*, *nardjīla* or *shīsha*), and reading or chatting with friends is another daily popular custom for one's leisure.

Traditional Arab clothes vary: upper and middle class urban citizens are increasingly wearing western clothes, while the lower class males among the fellahin and the Bedouin usually wear the *gallabiyya*, *djilbāb*, *kuftān*, *kumbāz* (or *kumbāz*), *'abā'a* (or *'abāya*), *djubba*, *dishdāsha*; *sirwāl* (or *shirwāl*) and cover their heads with the *kūfiyya* and *'akāl*, *ṭakiyya* (cap) or *laffe* (lap kerchief). Few men wear today the *tarbūsh* (or *fez*) or *'arakiyya*, while the European *burn'ā* is hardly seen. Often a combination of the ordinary European *bantalōn* (trousers), *kamiš* (shirt) and *djakīta* (jacket) are worn, while the head is covered with a *kūfiyya* and *'akāl*. Religious leaders, orthodox people or teachers at rural schools, however, still cover their heads with a *laffe* or *'imāma* (turban). Most women who belong to the upper and middle classes normally wear European dresses (*fustān*) or suits (*takm*), while those who belong to the lower class usually wear the traditional *milāya* and cover their head with a *mindil*. In strict Muslim society, only married women cover their faces with a veil (*burkū'*, *lithām*, *ṭarha* or *yashmak*). It is worth mentioning that both sexes of the upper and middle classes often wear traditional clothes at home and on special occasions. The traditional clothes, in general, are embroidered and often made in deep colours [see further, LIBĀS].

Traditional jewellery is still worn by women, and is mainly made of gold or silver. Diamonds may be worn by women of means, while the middle and lower classes wear various precious and cheap stones. It is often customary for a woman to wear several necklaces, bracelets, earrings and rings, and Bedouin women wear in addition noserings and anklets. Many of these are made of coloured beads or old coins that are no longer in circulation. The names of women's jewellery differ from area to area. Men adorn themselves mainly with rings, gold watches and ornamented daggers, whereas some women and men, especially Bedouin, have in addition various tattoos [see WASĪM]. The most popular make-up, which is also associated with good luck and used against the evil eye, is henna [see ḤINNĀ'], used mainly by women though many men also use it. Henna constitutes part of the wedding

ceremony preparations all around the Middle East.

Traditional household tools, furniture, fixtures and fittings are still in use especially in rural regions and by the lower class. They vary from one area to another and have different names. Thus one still may find in the kitchen the traditional *hāwin* or *djurn* (mortar) used for grinding coffee and spices; *bakrajī* or *dalla* (coffee pot), *fudjān* (coffee cup) and many more articles. The same applies to traditional furniture which often has names of non-Arabic origin, e.g. *mūbiya* (furniture), *dikka* (sofa-like bench), *tāwla* (table), *burdāi* (curtain), *lamba* (lamp).

Popular medicine is still practised in rural areas and by some Bedouin tribes, and even the urban and the higher classes often resort to traditional methods for curing less complicated illnesses. Various herbs, fruit, oil and special liquids may be used as medications. Thus onion drops are still used in Egypt against trachoma and watermelon seeds are prescribed for high blood pressure. Smallpox may be treated by burning dung near the sick child. Fig juice is used against corns or calluses, while burning or cauterising the skin against pain, fear and paralysis is believed to alleviate suffering.

Witchcraft and magic are used for three main purposes: to avert the evil eye, to cure illnesses and to regain the affections of the husband. The first involves various customs such as writing on a piece of a paper the name of the person who is believed to have put the evil eye on one, then setting it on fire while pouring salt on it and reciting some formulae that basically wish the person total destruction or blindness. The second witchcraft practice mainly involves the use of talismans or "blessed" objects or plants prepared usually by older people known for their piety [see TILSAM], and the third, which is called *shabshaba*, denotes a ritual mostly current in Egypt in which a woman casts a spell by beating her genitals with a slipper while pronouncing a magic formula to jinx an inattentive husband or a female rival. (See HINDS-Badawi, under *sh.b.sh.b.*)

Customs and manners. Since the Arabs themselves often describe their society as devout, emotional and fatalist, it is not surprising that scores of customs and manners are current within the Arab world, making the discussion of even a fraction of them an impossible task within the present article. Moreover, the diversity and heterogeneity of Arab society with its long history and contacts with other cultures (e.g. Persian and Turkish) prevent any attempt at formulating a monolithic ethos.

Among the characteristics typical of the Arabs are hospitality, generosity and strong commitment to the family and tribe. Hence most of the customs and manners current among Arab society revolve around those. Moreover, the general attitude towards life and death is of resignation to fate. Hence it is customary to accept happiness and tragedy with the same dictum, expressing praise to God (*ḥamdala*) and bearing in mind that, in the case of death, the deceased will eventually reach a better world.

Many customs are mentioned in the *Hadīth* literature as practices attributed to the Prophet Muḥammad, hence are *sunan* which should obviously be adhered to by all Muslims. For example, customs concerning hygiene, such as bathing or the need to clean the teeth (*taswīk*) with a toothpick (*sawwāk* or *siwāk* [see MISWĀK]), or food. Eating "procedures" include washing the hands before and after the meal; saying the *basmala* before starting; encouraging the guest to eat more. Satiety is indicated by leaving some food on

the plate (in some communities, satiety is indicated by burping), and wishing the host that his table will always be full (*al-sufra dāyma*), or wishing the lady of the house that her hands will be protected by God (*ḥisām/yislamū* or *yəsālləm idēkī*).

Many customs recorded by classical Arabic literature not only suggest that the Arabs paid considerable attention to good manners but that some of these older customs are still current in the society. For example, the custom of holding food with the right hand and with three fingers is mentioned by Djalāl al-Dīn al-Suyūfī (d. 911/1505), who explains that using one finger in order to hold the food is abominated, two fingers show arrogance, while four fingers indicate gorging (*al-Kanz al-madfūn*, 182).

Other customs concerning etiquette are numerous. Most of them concern family life, e.g. a husband and wife may address each other in front of other people as *umm* . . . (the mother of . . .) or *abū* . . . (the father of . . .) followed by the name of the first-born, or as *ibn 'ammī* or *bint 'ammī* (my cousin). A non-member of the family must not show interest in any female. Hence, when wishing to ask about the health of any female, he should refer to *al-kaṛīma* (the respected, for the daughter of the person he speaks to); *al-wāḥida* (the one who gave birth, i.e. the mother) and *al-ahl* (the home/family, i.e. the wife). The divorce procedure [see ṬALĀḲ] includes usually the statement *anti ṭālik* (you are divorced) repeated by the husband three times in the presence of two adult witnesses. A request for a favour, within reason, must be fulfilled if the asking party grabs the hem of a person's cloak and states: *anā dakhīlak*, i.e. "I am under your protection".

Some tribal customs, such as circumcision of females [see KHAḤḤ], blood revenge [see KIṢĀṢ], killing in order to protect family or tribal honour [see ʿIRP] or "marriage of pleasure" (*nikāḥ al-mul'a* [see MUT'AL]) are still current in some places, though they are gradually declining.

Beliefs and superstitions and some customs associated with them are very common in Arab society. The most popular are a strong belief in the devil (*al-Shayṭān* [see SHAYṬĀN]), who has several names and epithets in the Qur'ān and other Muslim literature, spirits (*arwāḥ* or *ashbāḥ*) and demons (*'ifrīt*, *ghūl* or *ḡinn*) (hence an insane person is called *madḡnūn*, i.e. someone whose body has been possessed by a *ḡinn*). Since the devil and demons are mentioned in the Qur'ān, no Muslim doubts their existence. The *ḡinn* and the demons may harm but they may also protect. Thus one should please them by offering them bread when they come out at night, prowling for food (this custom is referred to in Ṭāḥā Ḥusayn's *al-Ayyām*, i, 7-8). Appeasing of the *ḡinns* in ʿIrāk, such as *lantal*, *dew* and *sīhuwa* was carried out by pouring water mixed with sugar and salt. This "ceremony" was known as *dalk*. Another custom aiming at the protection of people from the harms of the *ḡinn* involves the fastening of chicken legs and seven onions on a skewer and leaving them hung for forty days over the bed of a woman who has given birth.

The custom called *zār* [*q.v.*] (exorcism) is particularly popular in Egypt. It refers to a "ritual of sacrifices, incantations, drumming and dancing performed for the purpose of appeasing any one of a number of spirits by which a person may be believed to be possessed" (Hinds-Badawi, 363).

People, and in particular, children and the house should be protected against the evil eye. Hence after the visit of a stranger to the house it is customary to spread salt on the children. It is also customary

to say after seeing a handsome child: *mā abshā'aka* (How ugly you are!) and even nickname a girl *kabīḥa* (ugly), in order to nullify the harm of evil eye. A guest is expected to say *mā shā'a Allāh* (God willing) or *smalla 'alēh* (the name of Allah on him) when speaking of or looking at a child.

A strong belief in luck and fortune is also common. Hence the family who has suffered a disaster may resort to using amulets, pray and give money to charity and even go to live elsewhere. In some areas, the days of the week are either good or bad. Hence they may influence actions. Thus Monday, Wednesday, Thursday and Friday are regarded as "good" days while the other days are usually "bad". This division may differ from area to area. The eclipse of the sun and the moon [see KUSṬĒ] indicate bad luck. Hence it is customary that when an eclipse occurs, people pray to God to save the world. Some believe that in the case of the eclipse of the moon, it has in fact been swallowed up by a big whale or leviathan (*ḥūḥ*) and therefore people should pray to God calling on him to "let it go". Strong belief in the good luck brought by the first customer (*isṭīṭāḥ*), makes a shop-keeper do anything to persuade the first customer to buy something, even at a loss. Moreover, it is customary for a shop-keeper to open his business in the morning, reciting a short dictum consisting of four of the Most Beautiful Names of God (see above): *yā fattāḥ yā 'alīm yā razzāq yā karīm* in which he invokes God that the day will be profitable.

Many beliefs are well known from the time of the Džāhiliyya [*q.v.*], some of which are still current, e.g. the belief associated with the flight of birds, called *al-ayyuf* or *talayyur* (augury), and more specifically, the belief that certain birds may bring bad luck, such as the crow (whose sound indicates separation and enmity) and the owl (whose sound indicates desolation) [see FA'Ļ; ʿIYĀFA]. When describing al-Azhar, Ahmad Amīn recalls the existence of a small box on the right side of the big *mīhrāb* [*q.v.*] which contained a talisman against birds (31). Similarly, fear of bad luck is associated with the hyena (*dab*) which is still widespread in the region. It also appears in a number of folktales which aim at warning recalcitrant children.

Many other older beliefs are current in the area, though no one can trace back their origin. Examples include the belief that a creeping baby indicates the arrival of guests; and when someone sneezes while a name of a deceased person is mentioned, he/she will certainly come to harm unless the lobe of his/her ear is pulled, while the expression *falāt al-khēr* (favourable redemption) is normally cited.

The Arabs also believe in the magic power of dreams and have several classical works attempting to interpret them [see TA'ḤBĪR AL-RU'YA, in Suppl.]. Examples are: dreaming of a snake symbolises a long life, probably because a snake is an old symbol for cure, and also the word "snake" (*ḥayya*) shares the same root as of that for "living, life" (*ḥayy/ḥayā*); dreaming of water or oil portends imminent disaster, whereas dreaming of a donkey bodes the receipt of a present.

Customs associated with the belief in saints (*awliyā'* [see WALĪ]) are also current in the Middle East. The *walī* is usually the patron of the area whose grave is visited mainly on special dates (*mauwālid*) or in certain seasons. This usually involves rituals around the tomb in which people pray and place their requests, e.g. for a cure for an illness, for becoming pregnant, for finding a husband, etc. Among the famous saints are al-Sayyid al-Badawī and al-Sayyida Zaynab in Egypt

and al-Nabī Shu'ayb in Israel. Many other tombs of famous pious personalities which are visited regularly (*ziyāra* [q.v.]) are the tomb of the Prophet Muhammad in Medina, the tombs of the Patriarchs in Hebron and some of the prophets who are mentioned in the Qur'an, as well as other local saints (some of whom were famous Sūfis or *darwīshs*) [q.v.].

Popular art which is based on old traditions and customs may be divided into two main branches: the "performed" art, which includes popular shows, singing and dancing, and the "produced" art, which includes artifacts, embroidery and weaving and drawing and sculpting. The popular show includes the puppet show (*karagöz* [q.v.]) and performances by local artists, e.g. amateur comedians who entertain people at weddings. Acrobats (*bahlawān*), clowns (*muharrīdī*) and snake charmers (*hāwī*) are also popular, especially in North Africa. There are singers of different types of songs (e.g. the *mawwāl* [see MAWĀLIYA]), when the lyric is usually written in the local dialect. Some of the well-known singers in the last century were Umm Kulthūm [q.v.], Farīd al-Aṭraṣh and 'Abd al-Wahhāb, whose fame and popularity around the Middle East continue long after their deaths. Various types of traditional popular dancing, usually performed by men or women separately (e.g. *dabka*), exist in the area. However, the famous oriental belly-dancing performed usually by one woman (called in the past *ghāziya*, but today usually called *rakkāsa*) in nightclubs or at weddings is still very popular. Traditional musical instruments used in all these performances include string instruments such as the *rabāba* (one/two-string violin), 'ūd (lute), *kānūn* (psaltery) and *kamandja* (violin). Wind instruments include different kinds of flutes and pipes, such as the *mizmār*, *muzmār turkī*, *arghūl*, *nāy(e)*, *shabāba* and *būk*. Percussion instruments include the *daff*, *tabl*, *durbakke*, *ṭanbūr* (kinds of drums) and *ṣandj* (cymbals).

The "produced" popular art includes household articles, furniture and clothes. Among these one may find e.g. the *miṣbāh* or *kandīl* (oil or kerosene lamp), *tīsh* (basin), *ibrīk* (ewer), *suḍjīdāda* (carpet), *ṣinīyyeh* (tray), [n] *ardjīla* or *shīsha* (hookah), and clothes, as described above. In modern Egypt, a very successful industry of papyri products and other artifacts associated mainly with ancient Egypt has been flourishing for several decades.

The interest in Arab folklore is certainly growing both inside and outside the Arab world. Scores of institutes, centres and museums have been opened, making it impossible to list them. In general, one may conclude that in every Arab state there can be found at least one centre or museum of ethnography or folklore, usually called *mu'assasat* or *ma'had* or *mathaf* or *markaz al-turāth al-sha'bi* or *al-funūn al-sha'biyya*. Moreover, some countries, such as Egypt, Syria, 'Irāq, Jordan and Palestine, are particularly known for their efforts to preserve the past by encouraging research on Arab folklore. Consequently, scores of publications appear and conferences are held annually in different parts of the Middle East and North Africa. Conservation work is in progress, to which one should add the growing amount of research, based on field-work, carried out by scholars and amateurs, who have originated from minority communities previously living in Arab countries, especially Jews from Yemen, 'Irāq and North Africa and who now live in Israel.

## 2. In Persia.

The term "folklore", which has been accepted in Persian as well as in a number of other Middle Eastern languages, was first proposed by William John Thoms (1803-85). In a letter to the *Athenaeum* 22 August 1846, Thoms, writing under the pseudonym Ambrose Merton, proposed that the term "folklore" be adopted in place of the more cumbersome "Popular Antiquities", or "Popular Literature", to describe "the Lore of the People, . . . their manners, customs, observances, superstitions, ballads, proverbs, etc. of the olden time" (Dorson, 1968, I, 80-4). Thoms' suggestion gained acceptance within a year of its proposal. The term refers not only to rural but also to urban "lore" these days. However, the debate concerning the exact definition of the term "folklore" rages on. The general atmosphere of ambiguity that surrounds this word may be deduced from the decision of the editors of the standard *Dictionary of folklore, mythology, and legend* (1949) to include no less than twenty-one definitions of it (s.v. *Folklore*).

Driven by the kind of nationalist zeal that propels many Muslim scholars to coin and use native words in place of foreign vocabulary, indigenous Persian scholars have proposed a bewildering variety of terms to denote "folklore". Some of these are: *farhang-i mardum* literally "people's culture", *farhang-i āmma*, *farhang-i tūda* "culture of the masses", *aḳāyid*, *rusūm*, *bāwardāsh-t-hā-yi āmma* (or *awāmm* or *awāmmāna* or *mardum* or *tūda*) "beliefs, customs, notions of the general public (or common folk, people, masses)". Whereas the words *āmma* and *mardum* "folk", are clearly used in contrast to *khāssa* "the elite", and are more innocuous, the form *tūda* "masses" (cf. *ḥizb-i tūda* "the Communist Party") has ideological associations of a leftist nature because many of the intellectuals who began the systematic study of Persian folklore were inspired by socialist or communist ideologies. Be that as it may, of these, the term *farhang-i mardum*, a literal

Persian translation of the English "folklore", is probably the most widely accepted. However, the loan word "folklore", spelled *fulklur* in Persian, continues to be used side-by-side with it and there may even be a movement toward its adoption in specialised publications. This is signalled not only by the early uses of it, its Persian plural *fulklur-hā* and its adjectival form *fulklurī* (Katīrā'ī 1357/1978, 93, 135, 138) but also by the fact that the word *fulklur* is used interchangeably with *farhang-i mardum* in the first two issues of the *Iranian Folklore Quarterly* in Spring 2002 (i, 7-8, 9-16; ii, 43, 132).

Scholarship on Persian folklore, which is concentrated chiefly on verbal lore, may be divided into two groups. That conducted by Iranians, and that which is undertaken by Westerners. Although the Persian study of folklore is typically traced to the Ākā Djamāl-i Khānsārī's (d. ca. 1121-5/1709-13) satirical treatise on superstitions of the Iṣfahānī women, which was entitled *Kulhūm-nama* (for an edition see Katīrā'ī 1349/1970), this attribution appears unreasonable. Khānsārī intended to ridicule these women's beliefs as a way of combating superstition; he was neither trying to collect folklore nor present an accurate account of the female lore of his time. By the same token, attributing folklore collection activity to Persian novelists (e.g. Šādiq-i Čūbak, or even Djamāl-zāda), who happen to use a significant number of "folksy" expressions in their writing as a matter of style, would be stretching the point.

Although brief collections of Persian folk expressions, beliefs and especially proverbs are scattered throughout Persian and Arabic literatures, none may be called systematic until the appearance of Dihkhuda's (1297-1375/1879-1955) four-volume *Amthāl wa hikam* ("Proverbs and dicta") in (1308-11/1929-32. Dihkhuda's collection is, however, no more than an alphabetical list of literary and folk proverbs, which rarely provides contextual information. The systematic collection of Persian folklore had to await the attentions of Šādiq Hidāyat (1281-1330 *sh.*/1902-51), who, inspired by Arnold van Gennep's (1873-1957) classificatory system, published several tales, folk songs and collections of Persian folklore between the years 1310/1931 and 1324/1945 (e.g. Hidāyat 1312/1933 and 1344/1965, 447-83). Of these, the two volumes, *ūsāna* "fairytale", and *nirangistān* (a title adopted from a Middle Persian treatise on counter-magical incantations), published respectively in 1310/1931 and 1312/1933, are the most extensive. Hidāyat later published two articles on folklore and the method of its collection, the methodological aspects of which were inspired by Pierre Saintyve's (1870-1935) *Manuel de folklore* (1936). These essays later inspired the work of the most important Persian collector of folklore, Abū 'l-Kāsim Inḍjāwī (d. 1993), who in the spring of 1340/1961 began a radio programme that aimed to collect folklore data by direct appeal to its listeners, who were also provided with training as well as with supplies (e.g. paper, forms, pencils). Inḍjāwī's appeals generated an enormous public response. Soon a flood of data from his listeners began to come in, and he was thus able to amass a vast archive of Persian folklore data, some of which he published in a series called *Gandjīna-yi farhang-i mardum* ("the treasury of folklore"; see Inḍjāwī 1352 *sh.*/1973, 1352-5 *sh.*/1973-7). This massive archive, that represented some two decades of systematic collection, contained some 120,000 folklore texts, hundreds of objects, 3,000 documents of cultural history, thousands of phonograph recordings, cassettes, films, videos and over 2000

photos (Dālwand, 1377/1998, 3-4). This material was preserved in the *Markaz-i farhang-i mardum* (Folklore Centre).

Since the 1970s, folklore had enjoyed significant backing from the royal family and other wealthy organisations. During this period, folklore research was promoted and even an international congress on folklore was held in Iṣfahān in the summer of 1977 (for an excellent summary, see Marzolph, art. *Folklore studies*, in *ELr*). Folklore studies fared poorly after the Islamic Revolution of 1978-9. Folklore was viewed as promoting superstitious and even pagan beliefs, and most funding for it came to a halt. In spite of this, the Folklore Centre continued an anaemic existence until the early 1980s when Inḍjāwī's radio programme was discontinued. The discontinuation of the programme not only brought the process of collection to a virtual halt but also signalled the final fall of folklore from grace. Much of the holdings of the Persian folklore archives, especially its audio-visual collection, was unceremoniously dispersed among other centres or was sent to storage. Only some written documents, especially texts that were submitted by the public, were allowed to remain at the archives of the Folklore Centre. Moreover, the Centre was placed under the control of the Islamic Republic's broadcasting agency (*ṣadā u sīmā-yi djamhūrī-yi islāmī*).

This unfortunate situation continued until 1374/1995, when following a speech by the leader of the Islamic Republic of Iran in which dangers of assimilation into Western culture were pointed out and Iranians were called back to their native cultural values, folklore studies were revived. This new interest in folklore has led to attempts that seek to impose some order on the chaotic mass of the existing folklore data in Iran. R.S. Boggs' art. "Types and classifications" in the *Dictionary of folklore, mythology and legend* has been used as a guide in an experimental effort to classify this material (Dālwand 1377/1998). Folklore publication and research continues, and a number of important Western studies on folklore have been translated (e.g. Propp 1368 *sh.*/1989, 1371 *sh.*/1992).

The earliest European interest in Persian folklore came about as a result of the British and Russian political interests in the Persian-speaking world. Alexander Chodzko (1804-91), Valentin Zhukovski (1858-1918), D.C. Phillot (1860-1930), D.L.R. Lorimer (1876-1962), B. Nikitin (1885-1960), L.P. Elwell-Sutton (1912-84) and above all the Danish Iranist Arthur Christensen (1875-1945) and the French Persianist Henri Massé (1886-1969), made significant contributions to Persian folklore studies (see Chodzko 1842; Christensen 1918, 1958; Lorimer 1919; Massé 1938; Nikitin 1922; Pillot 1905-7; Zhukovski 1902; cf. also Radhayrapetian 1990, and Marzolph, art. *cit.* Massé drew on the resources of his Iranian connections to collect and publish the most extensive body of Persian folklore of his time. He worried about the disappearance of the rural Iranian folklore as a result of rapid modernisation (Massé 1938, i, 13). Therefore, early in the 1920s, he embarked on a research trip to Persia in order to collect Persian rural folklore. Interestingly enough, his data came almost exclusively from city dwellers. Religious and ethnic minorities such as Zoroastrians, Armenians and Jews were intentionally excluded (i, 16). In spite of his concern for the endangered rural tradition he accordingly finished by gathering one of the best existing collections of the Persian urban folklore (i, 15). The classification and arrangement of Massé's data follows that of Van Gennep. The most important contemporary western

scholar of Persian folklore is Ulrich Marzolph, who compiled the first type-index of Persian narratives (Marzolph 1984), and has contributed many important monographic studies and essays to Persian folklore; the best study in depth on the history of Persian folklore studies to date remains his discussion of the subject in *EIr*.

**TAKLA MAKAN** [see TARIM].

**TAKRĪZ** (A.), lit. "the act of praising", a minor genre of mediaeval Arabic literature which consisted of statements praising the virtues of a particular work, some composed after the death of the author of the work in question but probably for the most part composed at the time of the work's appearance with the aim of giving it a puff and thus advertising it; such statements must have been solicited by the author from obliging friends and colleagues, the more eminent the better. F. Rosenthal (see below) has felicitously compared them to mod-

ern "blurbs" of publishers to advertise their books. Ahlwardt, in his Berlin catalogue, seems to have been the first Western scholar to isolate and identify the genre as *Lobschriften*. *Takrīz*s tended to be formulaic in form and style, invariably in rhymed prose (*saḏfī* [q.v.]) and with a stock of fairly trite images for praising the recipient. See Rosenthal, *Blurbs (Taqrīz) from fourteenth-century Egypt*, in *Oriens*, xxvii-xxviii (1981), 177-96, who here translates two *takrīz*s from the Yale and Berlin mss. of a collection dating from 795/1393, by Ibn Khaldūn and Ibn Ḥadjar [q.v.] respectively, these being aimed at puffing one Ibn al-Damāmin.

*Bibliography*: Given in the article. See also A. Gacek, *The Arabic manuscript tradition. A glossary of technical terms and bibliography*, HdO, Section I, Vol. 58, Leiden 2001, 114-15. (Ed.)

**TAKWĀ** (A.), a term of Islamic religion denoting piety.

1. Etymology and range of meanings.

*Takwā* is a verbal noun from *takā* "to fear [God]", itself a secondary formation from form VIII of *w-k-y*, *ittakā* "to fear [God]" (see on this phenomenon, Wright, *Arabic grammar*, I, § 148 Rem. b). From this same secondary formation is derived the adjective *takī*, pl. *atkiyā* "pious, God-fearing", in fact a synonym of the form VIII participle *muttakī*.

Depending on context, the denotations of the term in classical Islamic religious and mystical literature include "godliness", "devoutness", "piety", "God-fearing", "pious abstinence" and "uprightness". As a social ideal, *takwā* originally connoted "dutifulness", "faithful observance", a meaning which was discarded in most later Islamic ethical thought. In the poetry of Labīd (d. 40/660), for instance, the social connotation of *takwā* as "moral behaviour" or "reverential dutifulness" with respect to one's tribe or relatives appears to have fused with the Qur'anic religious ideal of "fear of God", so that "concepts for a 'respectful relationship' between the members of a tribe and the 'reverential behavior' towards God seem even to be interchangeable and identical" (M.M. Bravmann, *The spiritual background of early Islam*, Leiden 1972, 117), but this combination of social and spiritual meanings of *takwā* is now obsolete.

The Persian dictionaries (cf. the references in Dihkhudā, *Lughāt-nāma*, s.v. *takwā*) render the word as synonymous with the Persian *tarīdan* "fear" and *par-hīzgarī* "abstinence", precisely the same connotations of *takwā* found in early Muslim mystical theology. In English, various translations which approach the Islamic spirit of *takwā* are "pious God-fearing", "God-fearing piety", "devout uprightness" and "holy fear"; William Chittick has proposed the rendition "god-wariness", a neologism which, he claims, "makes *taqwā*'s orientation toward God explicit, brings out the implication of being aware and mindful, and avoids the negative and sentimental undertones of words such as 'piety', 'dutifulness', and 'righteousness'..." (*Faith and practice of Islam. Three thirteenth century Sufi texts*, Albany 1992, 12).

In fact, *takwā* in many respects equals a particularly Protestant kind of religious notion, the spiritual significance of which is exactly conveyed by the Anglican ascetic and mystic William Law (1686-1761) in his *A serious call to a devout and holy life*, ed. P. Stanwood, London 1978, where he evokes that "true devotion" which requires that we "live as pilgrims in spiritual watching, in holy fear, and heavenly aspiring after another life" in one passage (31); and in another passage (256), insists that we "do everything in His fear and abstain from everything that is not

according to His will". As a religious concept in Islam, *taḳwā*, as will be seen below, has definite extra-Islamic resonances.

William Law's two principles of "fear of God" and "abstinence" from all ungodly affairs are found, in fact, in the earliest work in Persian on Sūfism: the *Sharḥ-i Ta'arruf* by Abū Ibrāhīm Mustamlī Bukhārā'ī (d. 434/1042-3), where *taḳwā* is described as having "two principles: fear and abstinence. Thus the devotee's attitude of *taḳwā* towards God has two senses: either fear of chastisement (*'ikāb*) or fear of separation (*firāk*)". The attitude of fear generates observance of the commandments of God, while "fear of separation" means that "the devotee is content with nothing less than God, and does not find ease in aught beside Him" (from the anonymous *Khulāsa-yi Sharḥ-i Ta'arruf*, ed. 'A. Radjā'ī, Tehran 1349 A.S.H./1970, 294, an 8th/14th-century summary of this work). In an almost identical definition by the great Kubrawī master Muḥammad Lāhīdjī (d. 912/1507) in the *Majāliḥ al-i'djāz fī sharḥ-i Gulshan-i rāz*, ed. Muḥammad Riḍā Barzgar Khāliki and 'Iffat Karbāsī, Tehran 1371 A.S.H./1992, 250 *taḳwā* is described as the "fear of God regarding the final consequences of one's affairs, or else fear of one's own passionate self (*nafs*) lest it play the brigand, casting one into the perdition of separation and being veiled from God". After over half a millennium of theosophical speculation—from Bukhārā'ī to Lāhīdjī—the two foundations of *taḳwā*: fear and abstinence, remain completely intact.

## 2. *Taḳwā* in the Qur'ān and *Hadīth*.

In general Qur'ānic usage, the moral virtue of *taḳwā* denotes piety, abstinence and God-fearing obedience, suggesting the idea of a faith animated by works, and works quickened by a genuine experience of faith; in brief, such *taḳwā* is the substance of all godliness. *Taḳwā* is one of the most frequently mentioned religious concepts in the Qur'ān, having entered into the world of Islam upon the very first appearance of the angel Gabriel to the Prophet. "Have you seen him who tries to prevent a servant when he would pray? Have you considered if such a one has any divine guidance or enjoins [others] to piety (*taḳwā*)?", Gabriel asks Muḥammad in the very early sūra, XCVI, 9-12, revealed in the cave on Mt. Ḥirā [q.v.] near Mecca. An allusion to *taḳwā* reappears in the second verse of the first sūra revealed in Medina (II), where the Qur'ān is described as "a guidance for all endowed with piety (*hud' li 'l-muttakīn*)". In XLIX, 10, the believers are described as "naught but brothers" and, in a kind of communal participation in their "pious vigilant awareness of God" (*taḳwā Allāh*), are enjoined to establish fraternal peace amongst themselves. Another verse (IX, 123), devoted to the theme of being harsh on the enemies of Islam, assures believers that "God is with the godfearing pious devotees (*ma'a 'l-muttakīn*)". This latter verse may be compared with the *hadīth* which situates *taḳwā* as the "aggregate of all good things" alongside *djihād* which is described as "the monasticism [of the Muslim]" (al-Ḳuṣhayrī, *al-Risāla*, ed. Ma'rūf Zarīf and 'Alī 'Abd al-Ḥamīd Baltandjī, Beirut 1990, 105).

Ultimately, salvation in both this world and the next is attained through *taḳwā*; with it the saints gain "their deserts and are untouched by evil and they have no grief" (XXXIX, 61; an idea also repeated in X, 62-3); while those with *taḳwā* "are driven into Paradise" (XXXIX, 73). The true mosque must also be "built upon *taḳwā*" (IX, 108-9) if it is to be consecrated (an echo of Luke, vi. 47-9?). This connotation of *taḳwā* is echoed in an early Qur'ān commentary—

by Muḳātil b. Sulaymān (d. 150/767 [q.v.])—where *taḳwā* is "considered as synonymous with *ikhhlās*, pure sincerity, [and] *ittakā* is translated as *taraka* in the sense of 'to abstain' from what is evil, such as disobedience (*ma'siya*) or associationism (*shirk*)" (P. Nwya, *Exégèse coranique et langage mystique*, Beirut 1970, 59).

While *taḳwā* is, in particular, the universal measurement and the final criterion of the sincere religious life of the faithful Muslim who is enjoined to "avoid suspicion" and instead to "fear God" (*taḳwā Allāh*, XLIX, 12; cf. II, 41), in a more general sense *taḳwā* appears as the common ecumenical characteristic of the universal man of faith, regardless of sectarian divisions and political differences based on nationality and ethnic origin in the verse: "We have created you male and female, and made you nations and tribes to know one another. Indeed, the noblest of you in the sight of God is the most God-fearing (*akramakum 'ind Allāh atḳākum*)" (XLIX, 13). In al-Sulamī's recension of the text of the Qur'ānic *Tafsīr* ascribed to Dja'far al-Ṣādiq (d. 148/765 [q.v.]) (ed. Nywia, in *MUSJ*, xliii/4 [1967], 181-230), the Imām explains the verse as follows (221): "the generous person (*al-karīm*) is one who is, in truth, piously God-fearing (*al-muttakī*), and one who is piously God-fearing is one who has severed all his ties to created things for God's sake".

The idea of *taḳwā* as specifically the Islamic species of piety appears in the Prophet's saying: "Faith is naked and *taḳwā* its dress" (*al-īmān 'uryān wa-libāsuhu al-taḳwā*) (cited by 'Ayn al-Ḳudāt Hamadāni, *Tamhīdāt*, ed. 'A. 'Usayrān, Tehran 1962, 325). Another *hadīth* recounts that someone asked the Prophet, "Who are the Family of Muḥammad?" He replied: "Every pious God-fearing person (*kull taḳī*)" (al-Ḳuṣhayrī, *al-Risāla*, 105). From such traditions, it is evident that *taḳwā*, as a religious concept, was seen to represent the robes of the Islamic faith, as well as to personify the very garments which cloak the Sacred appearing within diverse cultures and religions.

## 3. *Taḳwā* and *īmān*.

*Taḳwā* was regarded as an essential element of the interior dimension of the act of faith, of *īmān* 'an 'ilm "enlightened faith" (see L. Gardet, *īmān*, at Vol. III, 1173). "The Prophet said: 'Submission is public and faith is in the heart.' Then, he pointed to his breast three times, repeating: 'Fear of God (*taḳwā*) is here, fear of God is here.'" (Ibn Ḥanbal, and Aḥmad b. Mādjā, cited by C. Ernst, *Words of ecstasy in Sufism*, Albany 1985, 56).

As an element of Faith, *taḳwā* thus embodies the purely internal and contemplative attitude of heart rather than merely external ritual practice; the same interiorisation of *īmān* which is, in fact, reflected in XXII, 37, which, regarding such purely physical practices as the sacrifice of animals to feed the poor, a ritual part of the ceremony of Muslim pilgrimage, affirms that "it is not their flesh nor their blood that reaches God: it is your piety (*taḳwā*) that reaches Him". Commenting on this verse in his *Ihyā'*, al-Ghazālī notes that "What is meant here by 'devotion' (*taḳwā*) is a quality that gains control of the heart, disposing it to comply with the commands it is required to obey" (cited in *Al-Ghazālī. Inner dimensions of Islamic worship*, tr. Muhtar Holland, repr. London 1992, 35). Indeed, interpreting the Qur'ānic reference to "heart-piety" (*taḳwā al-ḳulūb*) in the same sūra (XXII, 32), Ibn al-'Arabī (d. 638/1240) was to point out that just as the human heart is in constant fluctuation in every breath, so genuine *taḳwā* must be understood as a kind of "'pious-wariness-awareness' of God with every breath, which is the ultimate end of what God desires

from man" (*al-Futūhāt al-makkiyya*, Cairo 1911, repr. Beirut n.d., ii, 672, 29-37); cf. Chittick's definition and translation of *taqwā*, cited above.

*Taqwā* was sometimes considered the supreme proof of the certitude of faith (*yaqīn*). Abū Bakr al-Warrāq, (d. 294/906-7), an early Khurāsānian mystic, observed that "certitude (*yaqīn*) is a light by means of which the devotee's spiritual condition is illuminated. After he experiences such enlightenment, he is enabled to realise the rank of the pious (*muttaqīn*)" ('Aṭṭār, *Tadhkirat al-awliyā'*, ed. M. Isti'lāmī, Tehran 1372 A.S.H./1993, 538). Underlining the esoteric nature of piety in the spiritual life, al-Kalābādī's (d. 380/990) *K. al-Ta'aruf*, Cairo 1933, 69, cites the statement of Sahl al-Tustarī (d. 283/896), author of one of the earliest mystical Qur'ān commentaries, that "piety is to contemplate mystical states in the act of isolation [from aught but God]".

Such a radically interiorised outlook, which evokes *taqwā* as the soul of *īmān*—piety as the inner life of faith—of course, was not always understood by exoteric members of the 'ulamā'. Ibn Taymiyya, an opponent of the Sūfism of Ibn al-'Arabī and scholastic philosophy, for instance, in his *K. al-Imān*, interprets piety in its most exoteric meaning, considering *īmān*, *birr* (righteousness) and *taqwā* to be synonymous with each other when used in an "absolute" sense in the Qur'ān (as, for instance, II, 177, V, 2), holding that the believers (*mu'minūn*) are equivalent to the God-fearing (*muttaqūn*), who, in turn, are identical to the upright (*abrār*) (T. Izutsu, *The concept of belief in Islamic theology*, repr. Salem, N.H. 1988, 72-4).

#### 4. The mystical theology of *Taqwā*.

##### (a) *Taqwā*-as-abstinence

In Muslim mystical theology, the general notion of *taqwā* is that of holy fearfulness, pious vigilance over and abstemious fear of following one's passions; in a word, the heart's awe of God who is ever-present in the contemplative life of the soul (cf. al-Ṣharīf al-Djurdjānī, *K. al-Ta'rīfāt*, ed. I. al-Ab'yārī, Beirut 1985, 90). Sahl al-Tustarī's maxim "There is no helper besides God; no guide besides the Prophet. There is no spiritual sustenance besides *taqwā*, nor any other work than patience (*ṣabr*)" quoted by al-Ḳuṣhayrī, *Risāla*, 105) declares *taqwā* to be the mainstay, if not the very sustenance, of Sūfī spiritual practice. In its perfect form, *taqwā* involves abstention from everything but God, for, as Ibn Khalfī (d. 371/981) states, "Piety is to distance yourself from everything which distances you from God" ('Aṭṭār, *Tadhkirat*, 578). The connotation of "*taqwā*-as-abstinence" is also captured in another al-Tustarī maxim: "Whoever wishes to perfect his piety, tell him to refrain from all sins" ('Aṭṭār, *op. cit.*, 313).

##### (b) *Taqwā*-as-heart-abstinence

The contemplative interiority of *taqwā*, with the connotation of "*taqwā*-as-the heart's-abstinence" from all but God, is summed up in one of the earliest definitions of the term given by Dja'far al-Sādiq that "for those who traverse the spiritual path (*ahl al-sulūk*), piety (*taqwā*) is that you do not find within your heart anything but Him" (al-Tahānawī, *Kashshāf iṣṭilāhāt al-funūn. A dictionary of the technical terms used in the sciences of the Musabmans*, Calcutta 1862, ii, 1527). Abū Sa'īd al-Kharrāz (d. 277/890 or 286/899), an important Sūfī of the school of Baghdad, in his *K. al-Hakā'ik* devoted to the vocabulary of Sūfī mystical experience on the two-fold level of rational expression (*ibāra*) and mystical allusion (*ishāra*), combined this interiorised vision of *taqwā* with the more traditional Qur'ānic understanding of the term in his statement

that *taqwā* is "to have a heart vigilant not to let itself pursue passion, and a soul which guards itself against occasions of sin and error" (cited by Nywia, *Exégèse coranique et langage mystique*, 289). Another leading member of the Baghdad school of Sūfīs, Abū 'l-Ḥusayn al-Nūrī (d. 295/907), in the first chapter of his *Makāmāt al-ḳulūb* discovered and edited by Nywia, *Textes mystiques inédits*, in *MUSJ*, xlv/9 [1968], 132, in a section devoted to "the qualities of the house of the heart of the faithful believer", mentions *taqwā* as the Light of Piety, the soul of Sūfī ethics, for the contemplative "Light of Piety" illuminates both faith and works.

This interiorised concept of *taqwā* of the heart more or less disappeared but did not altogether die out from the vocabulary of Sūfism after the 5th/11th century. Thus Rūzbihān Baklī (d. 606/1209 [g.v.]) wrote in his *Mashrab al-arwāḥ* that "The root of God-fearing piety is detachment of one's inmost consciousness (*sirr*) from everything but God, whether from the material or spiritual realms, during contemplation of the proofs of the divine Attributes and flashes of the divine Essence. In this manner, one's inmost consciousness melts away before the onslaught of the majesty of the manifestation of the lights of Post-Eternity. That is the esoteric meaning of the Prophet's saying: Faith is naked and *taqwā* its dress" (ed. N.M. Hoca, Istanbul 1973, 30).

#### 5. *Taqwā* in the spiritual stations of Sūfism.

From the late 3rd/9th to the 5th/11th centuries, *taqwā* was regularly featured in classifications devoted to the spiritual transactions (*mu'āmalāt*) or moral virtues (*akhḷāq*) of the Sūfīs' spiritual journey, being closely aligned to the analogous concepts of fear (*khawf*), asceticism (*zuhd*), and abstinence (*warā'*). Al-Ḥārith al-Muḥāsibī (d. 243/857) propounded in his *K. al-Ri'āya* that all piety stems from fear and dread of God Almighty. According to him, "Obedience [to God's commands and prohibitions] is the road to salvation, and knowledge is the guide to the road, and the foundation of obedience is abstinence (*warā'*), and the foundation of abstinence is godfearing piety (*taqwā*), and the foundation of that is self-examination (*muḥāsaba*), and self-examination is based on fear (*khawf*) and hope (*raḍjā'*)" (Margaret Smith, *Al-Muḥāsibī, an early mystic of Baghdad*, Cambridge 1935, 89, 112). If *taqwā* appears in this description as an essential "foundation" of ascetic theology, the emphasis on piety is even more accentuated later on in the same book: "O brother, let godliness (*taqwā*) be your chief concern, for it is your capital stock, and works of supererogation beyond that represent your profit" (*ibid.*, 129), cf. also Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1928, 149.

Al-Muḥāsibī's emphasis on piety-as-godliness in early Islamic mysticism was formally integrated into the Sūfī methodological approach to the spiritual stations (*makāmāt*) in al-Ḳuṣhayrī's *Risāla* (91-140), where *taqwā* is placed fourth among the first ten spiritual stations, in the following sequence: [1] repentance (*tawba*) → spiritual struggle (*muḍjāhida*) → spiritual retreat, withdrawal (*khawā*, *uzla*) → God-fearing piety (*taqwā*) → abstinence (*warā'*) → asceticism (*zuhd*) → silence (*ṣamt*) → fear (*khawf*) → hope (*raḍjā'*) → [10] grief (*huzn*). Despite al-Ḳuṣhayrī's traditional classification of *taqwā* among the rudimentary spiritual stations of the Path, the term often seemed to fall out of usage among some of the later classical authors who wrote on the *makāmāt*. Thus, there is no mention of *taqwā* (whether as a station or a technical term) in Nicholson's index

of technical terms to his critical edition of al-Sarrādj's (d. 378/988) *K. al-Lumā'*, nor in the *Kūt al-kulūb* by Abū Ṭālib al-Makkī (d. 386/996), nor in the *Ṭabaqāt al-ṣūfiyya* of Abū 'Abd al-Raḥmān al-Sulāmī (d. 412/1021), nor in 'Abd Allāh Anṣārī of Harāt's (d. 481/1089) manual on the *Stages of the Ṣūfī wayfarers*, nor even in Abū Maṣṣūr Iṣfahānī's (d. 417/1026) *Nahj al-khāss*, which had considerable influence on Anṣārī's theory of mystical stations.

The early notion of the fundamental place of *takwā* in the ascetic theology of Islam does sometimes resurface in later works, particularly those written in the Persian language. In his treatise *Sad maydān* ("The hundred fields", in *Manāzil al-sā'irīn*, 299-300), which Anṣārī also devoted to the mystical stations, he set up *takwā* as the sixteenth station, subsequent to the field of abstinence (*warā'*), in the following order: [11] self-examination (*muḥāsaba*) → awakening (*yaqza*) → asceticism (*zuhd*) → detachment (*taḍrīd*) → abstinence (*warā'*) → God-fearing piety (*takwā*) → spiritual transactions (*mu'āmalāt*) → mindfulness (*mubālāt*) → certitude (*yaqīn*) → [20] insight (*baṣīra*). The field of *takwā* [16] is described as follows:

"Those who fear God with proper piety (*muttakiyān*) are three [kinds of] men: the lesser, intermediate, and the great.

"He who possesses the least degree [of *takwā*] does not corrupt his profession of divine Unity with associating others with God (*shirk*), or debase his sincerity (*ikhlas*) with hypocrisy, or contaminate his worship with innovation (*bid'a*).

"He who possesses the medial degree does not vitiate his service (*khidma*) with false shows (*riyā'*), or adulterate his sustenance with food of a doubtful nature, or let his mystical state (*ḥāl*) become perverted by heedlessness.

"He who possesses the greatest degree does not blemish his gratefulness with complaints; or dilute his sins by arguments [of his innocence], or ever cease to be beholden to God for His grace towards him."

As a key technical term or spiritual station, *takwā* is rarely present in any late classical Ṣūfī texts—among some of the more important of which may be mentioned Abu 'l-Nadīb al-Suhrawardī's (d. 563/1168) *Ādāb al-murīdīn* (ed. N.M. Harawī, Arabic text with Pers. tr. Tehran 1363 A.S.H./1984), and 'Izz al-Dīn Maḥmūd Kāshānī's (d. 735/1335) *Miṣbāḥ al-hidāya wa-miṣṭāḥ al-kifāya* (ed. Djalāl al-Dīn Humā'ī, 2nd ed. Tehran 1325 A.S.H./1946); it is even absent from Shihāb al-Dīn Abū Ḥafṣ 'Umar al-Suhrawardī's (d. 632/1234) *Awārif al-ma'ārif*, which formed the literary model for Kāshānī's book, and was later to become the foremost manual of Ṣūfism in the Indian subcontinent.

Wherever the term turns up in later works it is usually considered as a necessary corollary of *warā'* or *zuhd*. For instance, in Sa'īd al-Dīn al-Farghānī's (d. 699/1300) *Mashārik al-darā'ī. Sharḥ-i Tā'īyya Ibn Fārid* (ed. Djalāl al-Dīn Aṣhtiyānī, Tehran 1979, 150-1), *takwā* is placed among the stations belonging to the first of three ascending degrees of "annihilation" (*fanā'*). The first degree of *fanā'* involves annihilation by means of "faring through and realisation of the spiritual stations, stages and mystical states such as repentance (*tauba*), self-examination (*muḥāsaba*), contemplative vigilance (*murākaba*), spiritual struggle (*muḍāhada*), sincerity (*ikhlas*), God-fearing piety (*takwā*), abstinence (*warā'*), asceticism (*zuhd*) and similar related degrees. . . ." As in al-Kuṣhayrī's schema, al-Farghānī's classification places God-fearing piety among those virtues which the mystic must struggle to realise by

his own will; for aspirants still bound in the bonds of egocentric personality, *takwā* is a knife to cut through the cords of Selfhood. In the writings of the Persian mystics of the Kubrawī school, the virtue of *takwā* featured quite prominently. In his monumental conspectus of Ṣūfī doctrine, the *Miṣād al-'ibād* (ed. M.A. Riyāḥī, Tehran 1352 A.S.H./1973, 257-60), Naḍīm al-Dīn Rāzī (d. 654/1256) cites some twenty qualities (*ṣifāt*) with which the disciple must be characterised in a chapter devoted to "the conditions, manners and qualities of a disciple", and here *takwā* is the fifth of his *sulūk*; and a similar conception of the place of *takwā* in Ṣūfī ethics appears in the third book of the *Kashf al-ḥakā'ik* (ed. Aḥmad Dāmghānī, Tehran 1359/1980, 131-2)—"an exposition of the conditions for wayfaring (*sulūk*) the mystical path"—by Rāzī's fellow Kubrawī Shaykh 'Azīz Nasafī (d. between 1281-1300).

As in the Rule of St. Benedict, for the Persian mystics of the Kubrawī order, God-fearing piety had come to be viewed as an essential virtue in the practical ethics of the master-disciple relationship, so that religious devotion is indistinguishable from unhesitating obedience to the order's superior.

6. *Takwā*'s apophysis in mediaeval Ṣūfism.

In the mediaeval period, the master-disciple relationship and the role of the master in spiritual practice, and, in particular, the need for the novice to be guided by an enlightened master, came to the forefront of Ṣūfī theory and practice, replacing the previous emphasis on the ethics of *takwā* as the cornerstone of spirituality and devotional worship in Islam. Djalāl al-Dīn Rūmī stated that "The gnostic is the soul of the Law (*shar'*) and religious piety (*takwā*): gnosis is the fruit of past ascetic effort. . . . He [the gnostic] is both the command to righteousness and righteousness itself; he himself is both hierophant and mystery" (*Mathnawī*, ed. and tr. Nicholson, vi, vv. 2090, 2093). This redirection of Islamic piety towards cultivation of, and concentration on, the elect "Perfect Man" [see AL-INSĀN AL-KĀMIL] with the consequent devaluation of the devotee's own private ascetic vigilance, is visible in the thought of most Ṣūfī poets of the Mongol period. One such poet, Maḥmūd Shabistārī [q.v.], in his *Gulshān-i rāz* thus describes the Perfect Man as "endowed with praiseworthy qualities, celebrated for knowledge (*'ilm*), asceticism (*zuhd*) and piety (*takwā*)" (*Madjmu'a-yi āthār-i Shaykh Maḥmūd Shabistārī*, ed. Samād Muwaḥḥid, Tehran 1365 A.S.H./1986, v. 351), relegating *takwā*, as did the classical masters of the School of Baghdād, to being a rudimentary but not insignificant principle of the Ṣūfī ethical system. However, a discernible difference in accentuation has occurred, so that the Perfect Man is the source of piety rather than piety being the animus of individual spirituality. Ultimately, the Perfect Man may decide to dispense with all pious fear as well, since he is "free of the ties of master and disciple, beyond all asceticism (*zuhd*) and all the fictions of piety (*takwā*)" (*ibid.*, v. 862).

In the works of Sa'īd and Ḥāfiz, the two greatest Persian Ṣūfī lyricists, another kind of de-accentuation on individual piety is evident, with *takwā* often denigrated as a kind of spiritual attitude characteristic of cold-hearted ascetics (*zāhid*) and formalist preachers. "Wherever the Sultan of Love appears, no power is left in the arm of *takwā*," asserts Sa'īd in the *Gulistan* (ed. Kh. Khaṭīb-Rahbar, Tehran 1348/1969, 337), and in his *ghazals* he cries out: "Stand on your feet, so we can cast aside this blue [Ṣūfī] cloak/Throw to the winds of antinomianism this idolatry which bears

the name of piety (*shirk-i takwā-nām rā*)” (*Ghazal-hā-yi Sa’dī*, ed. N. Izadparast, Tehran 1362/1983, 23). Sa’dī probably knew of al-Kushayrī’s notion that “the root of *takwā* is fear of all idolatrous associationism (*al-shirk*)” (*Risāla*, 105), and in this verse no doubt merely wished to criticise the element of self-consciousness which *takwā* often engendered in less sincere adepts, re-evoking the classical concept of *takwā* which had recognised the need to develop an apophatic discourse capable of expressing the interior subtleties of its ideal (Abū Bakr al-Wāsiṭī, d. 320/931, a member of the Baghdad School, stated “piety is that you piously abstain from your own [self-indulgent] piety”, cited in ‘Aṭṭār, *Tadhkirat*, 745).

This paradoxical approach to the classical ideal of piety in Islam, expressed—in order to avoid metaphysical reification—in the wish to transcend the dichotomy of piety/impiety, godliness/ungodliness (understanding the affirmation of faith and piety as a subtle form of delimitation, an idolatry of a mundane doctrine instead of adoration of the Transcendent), is best expressed in the poetry of Ḥāfiẓ, as in the following verse:

In the way of the Ṣūfī it’s total infidelity  
to put your trust in knowledge and piety;  
Although a pilgrim boast a hundred arts  
Just the same, he must have trust.

(*Diwān*, ed. Khānlarī, 2nd ed. Tehran 1362 A.S.H./1983, 559).

Elsewhere he asks: “What relation does libertinism (*rindī*) have to purity and piety (*takwā*)?/How wide the gap between the priest’s homily and the rebeck’s refrain!” (*Diwān*, 20). In another place, he boasts, “So many nights I’ve strayed from Piety’s path (*rah-i takwā*) with harp and daff/but now they say, I’ll set my foot on the strait and narrow path—indeed, a likely tale” (*ibid.*, 324, no. 154 l. 2), scorning to sully the honour of his dervish cloak by following the pedestrian rites of canonical piety. Indeed, Ḥāfiẓ’s libertinism seems a far cry from the religious sentiment of Abū ‘l-Dardā’ (d. 32/652-3 [q.v.]), the celebrated Companion of the Prophet greatly venerated by early Ṣūfis, who was reported to have preferred piety (*takwā*) above forty years of ritual worship and observances (*ibāda*) (Massignon, *Essai*, 158).

With Ḥāfiẓ and his followers, the austere ideals of early Islamic piety reached both a moral threshold and a metaphysical apex, as the journey from Qur’ānic religious concept to ascetic doctrinal ideal based on fear and abstinence, to the interiorised Ṣūfī notion of piety as the faith of the heart culminated in the irony of the paradox which dissolves the mystic’s need for the *scala perfectionis* of his own *via negativa*.

**ṬĀLIB AL-HAKK**, “Seeker of the Truth”, the title given to the Ibādī Khāridjite leader ‘ABD ALLĀH b. YAḤYĀ, d. end of 130-beginning of 131/August-September 748.

According to the chronicler al-Shammākhī (d. 928/1522), the full name of this leader from the Banū Shayṭān of Kinda was Abū Yaḥyā ‘Abd Allāh b. Yaḥyā b. ‘Umar b. al-Aswad b. ‘Abd Allāh b. al-Ḥārith b. Mu’āwiya b. al-Ḥārith al-Kindī (*Siyar*, 98). He adopted the title of “Seeker of the Truth” at the beginning of the year 129/746 on receiving the oath of allegiance as *Imām* of the Ibādī community of

Ḥaḍramawt and Yemen. The Arabic sources give scanty information on him. A biography written by an anonymous Ibādī author, the *Sirat al-Imām ‘Abd Allāh b. Yaḥyā*, together with a collection of his poems, was still available in the 9th/15th century, but has not survived until now (A. de C. Motylinski, *Bibliographie du Mzab*, in *Bulletin de Correspondance Africaine*, iii [1885], 20, nos. 29-30).

‘Abd Allāh b. Yaḥyā was *kādī* to Ibrāhīm b. Djabala b. Maḥrama al-Kindī, the Umayyad vice-governor of Ḥaḍramawt. He was a pious man and an energetic leader, and his inflexible attitude towards infringements of Qur’ānic precepts, which were still widespread, won over the hearts of those Yemenis who were dissatisfied with the Umayyad régime. He was in touch with the Ibādīs of Baṣra, who had spread their propaganda across the Arabian peninsula using the Meccan Pilgrimage to disseminate their principles. Abū ‘Ubayda Muslim b. Abī Karīma, the leader of the Ibādīs of Baṣra, encouraged him to revolt against the Umayyad government and sent to him not only weapons and funds but also some prominent personalities, amongst them Abū Ḥamza al-Muḥtār and Balḍī b. ‘Ukba al-Azdī, who came to the Ḥaḍramawt with the aim of organising an imāmate. The revolt appears to have taken place towards the end of 127 or the beginning of 128/745-6. Having gained control in Ḥaḍramawt, the rebels then in 129/747 crossed into Yemen and occupied the capital Ṣan‘ā’. There ‘Abd Allāh b. Yaḥyā distributed the wealth of the Umayyad treasury to the poor and, as *Imām*, showed himself to be of a mild disposition. He organised a new system of administration but nevertheless kept the former officials in their old ranks. Many Khāridjites from other regions flocked to him, attracted by his honesty and rectitude. At the end of the year 129/747, at the time of pilgrimage, ‘Abd Allāh b. Yaḥyā decided to occupy the two Holy Cities, Mecca and Medina. The Ibādī army, only 900 or 1,000 strong, under the command of Abū Ḥamza al-Muḥtār, took Mecca with ease, and then went on to occupy Medina.

From Ḥiḍjāz, the Ibādīs now became an immediate threat to the Umayyads in Syria, so that, despite his waning might, the caliph Marwān II assembled sufficient strength to overcome the rebels. Around the beginning of Djumādā I 130/January 748, a strong army composed of 4,000 Syrian soldiers, led by ‘Abd al-Mālik b. ‘Aṭīyya, marched against Medina. Abū Ḥamza was defeated and killed. At the end of 130 A.H. the Syrian army marched against Yemen. On receiving news of this, ‘Abd Allāh b. Yaḥyā, at the head of an Ibādī force, left Ṣan‘ā’ to prevent the Syrians from penetrating the land. The encounter between the two armies took place not far from Dījurash, where the Ibādī army suffered a serious defeat. Ṭālib al-Hakk was killed and his head sent to Marwān II, while the rest of the Ibādīs took cover in the fortified town of Shibām [q.v.]. A long elegy on the fallen leaders is quoted in *Aghānī*, xxiii, 148 ff. While this serious Ibādī rising was quelled, it is nevertheless true that the anarchy that it provoked contributed to the final undoing of Umayyad power and enabled the ‘Abbāsīd insurrection to penetrate more easily to the heart of the empire. Having defeated ‘Abd Allāh b. Yaḥyā, ‘Abd al-Mālik b. ‘Aṭīyya took Ṣan‘ā’ and brought Ḥaḍramawt into submission, but afterwards received from the caliph Marwān b. Muḥammad an order to return to Mecca. He was thus forced to conclude a peace with the Ibādīs and to recognise their independence in Ḥaḍramawt. After the death of Ṭālib al-Hakk, ‘Abd Allāh b. Sa’dī

al-Ḥaḍramī was recognised as his successor by the Ibādīs of both Ḥaḍramawt and Baṣra.

(ERSILIA FRANCESCA)

**ṬĀLIBĀN**, Pers. plural of Arabic *ṭālib* "student", a term coming into use in the last years of the 20th century for a radical Islamist group in Afghānistān.

These "religious students" became the face of radical Islam during the late 1990s, when they controlled most of Afghānistān. They emerged in reaction to widespread lawlessness in south-western Afghānistān in the summer of 1994 and went on to become the dominant force in Afghānistān until their defeat by a US-led coalition of forces in the autumn of 2001. Core leaders of the Ṭālibān were trained in the *madrasas* or religious colleges of Pakistan's North-West Frontier Province (NWFP) and Balūchistān affiliated to or run by the conservative Islamist Pakistani political movement, the *Djāmi'at al-'Ulamā-i Islāmī/Jamiat-ul-Ulema-i-Islami* (JUI) party, whose ideology blended Wahhābī influences from Arabia with the *Dēobandi* tradition of South Asia.

Led by a former *muḍjāhid* in the Afghan-Soviet War of the 1980s, Mullā Muḥammad 'Umar, the early Ṭālibān were primarily young former *muḍjāhidīn*, mostly southern *Puṣhtūns*. There is debate about whether the Ṭālibān were essentially an indigenous movement that Pakistan supported to advance its own foreign policy goals, or whether the Ṭālibān were from the beginning a creation of Pakistan, which had seen its Afghan policy frustrated by the civil war between *muḍjāhidīn* factions following the fall of the Communist government in April 1992 and was seeking an alternative faction to support, especially in the fractious *Ḷandahār* area. Regardless of the source of their genesis, the Ṭālibān gained prominence and power through deep, early, and multi-faceted support from Pakistan's Interior Ministry, Inter-Services Intelligence Directorate (ISI), army, and society and were Pakistan's proxy army in Afghānistān by 1995. From a strategic standpoint, the Ṭālibān provided Pakistan with a militia that could possibly settle the power struggle within Afghānistān, but at the minimum could control the southwest of the country and make possible a stable route for trade with Central Asia.

After their unexpected emergence near *Ḷandahār*

in October 1994, the Ṭālibān steadily advanced to gain control of almost all of Afghānistān, despite some setbacks, such as the massacre of their forces at *Mazār-i-Sharīf* in May 1997 and Northern Alliance leader Ahmad Shāh Mas'ūd's counter-attack north of *Kābul* in August 1999. Following their capture of *Ḷandahār* in November 1994, the Ṭālibān advanced through *Puṣhtūn* tribal areas toward *Kābul*, ultimately forcing *Gulbuddīn Ḥikmatyār's* *Hizb-i Islāmī* to evacuate its positions south of the city. The then Defence Minister, Ahmad Shāh Mas'ūd soundly defeated the Ṭālibān and drove them out of range of *Kābul* in the spring of 1995, so the Ṭālibān turned their attention to western Afghānistān, capturing *Harāt* in September 1995. In September 1996 the Ṭālibān flanked *Kābul* to the east and captured *Djalālābād*, then drove up the main road through steep gorges toward *Kābul*, which fell without a fight later that month. Having taken control of the capital and most of Afghānistān after only two years, in 1997 the Ṭālibān sought to conquer the north of Afghānistān and finish off the remnants of the *Burhānuddīn Rabbānī* government.

Divisions within the Northern Alliance made possible the temporary Ṭālibān capture of *Mazār-i-Sharīf* in May 1997, but after four days local militias rebelled and destroyed the Ṭālibān forces there, while a Ṭālibān force that had come up from *Kābul* through the *Salang Pass* was cut off and surrounded in *Ḷunduz*. In the summer of 1998 the Ṭālibān pushed resolutely into the north once again, this time capturing *Mazār-i-Sharīf* in August and *Bāmiyān* in September. Following the fall of both cities, the Ṭālibān killed or forcibly relocated thousands of the residents. After the campaigns of 1998, the Ṭālibān controlled all but 10-15% of the country, primarily the rugged north-eastern mountains where Ahmad Shāh Mas'ūd's well-organised *Tadjik* army held on. Combat ebbed and flowed in and out of this area over the next three years, with Mas'ūd having great success in August 1999, but his assassination on 9 September 2001 by al-*Ḷā'ida* (al-*Qaeda*) operatives coincided with the beginning of a final Ṭālibān push into his salient that might have been successful had the events of 11 September 2001 not brought the United States into Afghānistān with the goal of destroying the Ṭālibān.

Afghānistān's long war destroyed or discredited most of its traditional leadership and led to a deep Islamisation of its society, providing the milieu in which the Ṭālibān could arise. The Ṭālibān were the last and most vehement of Afghānistān's Islamist leaders, but they were simultaneously a *Puṣhtūn* ethnic movement and a militia for Pakistan. Thus, their rise to power hardened ethnic divisions in Afghānistān and heightened the regional competition between Pakistan, Saudi Arabia, Iran and Russia for control within the country. The multiple sources of Ṭālibān identity gave the movement a plasticity that enhanced its resiliency over time. The Ṭālibān leadership was comprised of *Ḷandahār*-area *Puṣhtūns* of different tribal and sub-tribal lineages, but most of the Inner *Shūrā* (council) knew each other from shared combat experiences during the Afghan-Soviet War and/or shared time in Pakistani *madrasas*. As the movement expanded its territorial control, its ranks grew to include eastern and northern *Ḷhilzai Puṣhtūns*, some ethnic minority militias, and former Afghan Communist soldiers from the *Khalk/Khalq* faction (introduced by the Pakistanis to provide the Ṭālibān with specialised military skills in which they were lacking; following the conquests of 1998 most of the ex-Communists were purged).

The Ṭālibān also were an international force, with

thousands of Pakistani "volunteers" (over 100,000 had served by the time of the Tālibān's defeat) and an "international brigade" of largely Arab fighters under the command of Usāma b. Lādīn/Osama bin Laden. When the Tālibān captured Djalalābād in 1996 they began a partnership with Osama bin Laden and his al-Kā'ida organisation that was based in that area. Over the next few years, the Tālibān-al-Kā'ida nexus became more puritanical and intolerant of Afghānistān's northern minorities, and increasingly larger numbers of Pakistani "volunteers" joined the movement. Thus, what was initially seen in the southwest of Afghānistān as a local Puṣhtūn movement came to be seen by its northern opponents as a front for Pakistani aspirations in Afghānistān.

As the Tālibān grew more numerous, tensions between the different factions within the movement occurred on several levels. The early core of Tālibān leaders kept most of the positions of authority, and many of them remained in Kandahār near to Mullā 'Umar, who ruled from there rather than moving to Kābul when it fell in 1996. Over time, a moderate faction led by Premier Muḥammad Rabbānī and Foreign Minister Wakīl Aḥmad lost ground to the growing influence of a hard-line faction affiliated with Osama bin Laden. This cost the Tālibān international recognition (only Pakistan, Saudi Arabia, and the United Arab Emirates ever recognised the movement) and support. During the late 1990s, al-Kā'ida became increasingly aggressive, targeting the U.S. in several high-profile operations, which led to U.S. cruise missile attacks on Afghānistān in August 1998, increased U.S. pressure on the Tālibān to give up Bin Laden, and sanctions by the U.S. and U.N. on the Tālibān régime starting in 1999. The struggle between moderates and hard-liners within the Tālibān shifted in favour of the latter group with the destruction of the cliff Buddhas of Bāmiyān in March 2001 and the death of Muḥammad Rabbānī in April 2001. Ultimately, the attacks by al-Kā'ida on the U.S. on 11 September 2001 brought about the destruction of the Tālibān and al-Kā'ida rule and the implementation of an interim government in December 2001 headed by Hamīd Kārzaī, a Durrānī Puṣhtūn tribal leader.

The Tālibān were a tribal militia, a Pakistani proxy army, and a movement for social change in Afghānistān. Their early success on the battlefield was due to the shared ethnicity and war-weariness of the populations in the areas that they conquered during 1994-6. They also presented themselves as simple men motivated by piety and a desire to Islamise Afghan society, holding themselves in contrast to the formerly noble *muḥāhidīn* whose lust for power had caused them to stray from the straight path of Islamic governance. Ultimately, though, the Tālibān extended their control over almost all of Afghānistān due to extensive Pakistani support, including money, weapons, training, military advisers, direct military involvement, logistical support, and recruits. The return of tens of thousands of these recruits to Pakistan exacerbated and deepened Islamist trends in that society, producing an effect referred to within that country as the "Talibanisation" of Pakistan.

Although they ruled most of Afghānistān for several years, Tālibān governance was mostly non-existent. Perhaps this was by design, and Afghānistān's state failure under the Tālibān was a conscious effort to destroy a Western model of government there, but more likely it reflected Tālibān incompetence at government. Rule was by decree from Mullā 'Umar, or from organisations such as the Ministry for the

Promotion of Virtue and Prevention of Vice (*Amr bi 'l-Ma'rūf wa-Nahy 'an al-Munkar*), a religious police modelled on the similar organisation that exists in Saudi Arabia. A 30 to 40-man Shūrā advised Mullā 'Umar. There were few funds for routine government, and most of the 27 ministries sat idle, as such funds as the Tālibān did have went into the war effort against the Northern Alliance. Traditional social welfare functions of government such as infrastructure re-building were carried out by international aid organisations in Afghānistān, although the Tālibān frequently constrained their operations.

The centrepiece of Taliban Islamisation policy was the maltreatment of women and girls, denying them access to adequate health care, education, jobs and basic human rights. Women's status and position in Afghan society had come to be symbolic of all that the Tālibān opposed, and their mistreatment of females helped keep their young male fighters unified and supportive, since most of them had learned in the Pakistani *madrāsas* that women were supposed to be constrained in the ways practiced by the Tālibān leadership. Other notable Tālibān social policies included applying *Shari'a* punishments (based on Tālibān interpretation of the *Shari'a*, which was influenced by Puṣhtūnwālī, or code of the Puṣhtūns), such as execution for adultery and amputation of hands for theft; forcing men to attend mosque services and grow beards as signs of piety; bans on all forms of secular entertainment, such as sports, music and television; and ultimately the destruction of images in Afghānistān, including the world-famous Bāmiyān Buddhas.

The Tālibān were a by-product of Afghānistān's long and highly destructive war and capped a decades-long movement to Islamise Afghan society, itself a reaction to an even longer attempt by Afghan urban élites to modernise the country. The collapse of the Afghan state, the Islamisation of the Afghan resistance movement and refugee population, and the regional geopolitical struggle following the Cold War combined to create the unique conditions that gave rise to the Tālibān. U.S.-led military operations beginning in late 2001 have now almost destroyed the Tālibān movement, but the underlying ideology of Islamising the state and society remains and continues to influence Afghānistān.

**TARDJAMA.**

4. (b) The 20th century.

In the 20th century, translation into Arabic contributed noticeably to the shaping of modern Arabic literatures and cultures. It arose in historical circumstances which considerably differed from those of the Arabic translation movement (*harakat al-tardjama*) in the previous century (see 4. (a) at Vol. X, 232b). The colonial experience, the rise of nationalist and anti-colonial movements, and the subsequent formation of independent Arab nation states exercised a strong ideological impact on Arab societies. The specific developments of translation as an integral part of Arabic national cultures embodied their changing interests and priorities.

In the early decades of the century, the proliferation of privately-owned periodicals and publishing houses in Egypt, Lebanon, Syria, Palestine and 'Irāk made possible the broader transmission of texts into Arabic. New centres of translation emerged in the communities of Arab immigrants in Northern and Southern America [see **MAHDJAR**]. Journalists, writers and scholars participated, along with trained professionals, in thriving translation practices. As the number of translated works increased on an unprecedented scale, the sources, methods and forms of individual translations diversified.

For the first time in Arabic cultural history, the translation of literature took precedence over other forms of linguistic and cultural import. This new cultural phenomenon was related to a massive translation of Western fiction prompted by the growing demand of readers dissatisfied with traditional forms of literary discourse. Their manifest interest in translated narratives, especially short stories, met a strong response on the part of Arab authors searching for new ways of artistic expression. Transmission of Western literature became an integral part of their creative activity, along with composition of original works in the new fictional genres discovered through the experience of translation. Prominent early contributors to Arabic literary translation were the writers and poets Ḥāfiẓ Ibrāhīm, Muṣṭafā al-Manfalūṭī [q.v.], the first school of modern Egyptian writing, *madrasat al-dīwān* (the Dīwān school); Naḍjīb al-Ḥaddād, Salīm al-Nakkāsh and Niḳūlā Ḥaddād in Lebanon; Khalīl Baydās, Anṭūn Ballān, and Naḍjātī Sidkī in Palestine; Muḥammad Kurd 'Alī and Tanyūs 'Abduh in Syria; Salīm Baṭṭī and Maḥmūd Aḥmad al-Sayyid in 'Irāk; and the leading figures of *madrasat al-mahḍjar* (the literary school of Arab immigrants in the United States) Naṣīb 'Arīda, 'Abd al-Masīḥ Ḥaddād and Miḳhā'il Nu'ayma [q.v.].

The involvement of writers and poets broadened the scale of literary translation. While the majority of translated texts represented short stories, novellas and novels, since the beginning of the century more attempts were made at translation of European drama and poetry. In addition to French classical plays by Corneille, Rostand and Molière, Shakespeare's works—especially *Romeo and Juliet*—inspired several early Arabic adaptations. Tāhā Husayn [q.v.] translated and published an anthology of Greek dramatic poetry (1920), Racine's *Andromaque* (1935) and a selection of Western drama (1959). Poems by Victor Hugo, Lamartine and Shelley were amongst the first rendered into Arabic. Typically, Arab translators dealt with differences of

prosody between the traditions of Western and classical Arabic poetry by rendering Western poetic forms into prose. Further generic changes as in al-Manfalūṭī's radical transformation of a rhymed play—Rostand's *Cyrano de Bergerac* (1921)—into a novel were uncommon. The modern Arabic poetic free-verse style developed since the 1950s offered translators of poetry a new tool.

French literature remained an essential source of translation in the first decades of the century: reportedly, by 1930 more than 150 French authors were represented in Arabic translations, and about 15 English ones. The contributions of *madrasat al-mahḍjar* included the introduction of Arab readers to classical works of American and Russian literatures. In 1920, Aḥmad Ḥasan al-Zayyāt's eloquent Arabic rendition of Goethe's *Die Leiden des jungen Werthers* from the German original was still a rare occurrence. In the inter-war period, single works by Italian, Greek and Turkish authors attracted translators' attention as embodiments of national cultures to which they related by way of human and intellectual experience.

Not all Western source texts selected for translation, nor all of their Arabic versions, were of high literary and cultural value. A great deal of translators' production catered to the needs of a growing popular market for romantic stories, mysteries and adventures. Translation techniques involving rewritings (*tardjama ma'wūdū'a*), adaptations (*tardjama bi 'l-tasaruf*), additions (*idāfāt*), abridgements (*tardjama mulakḥkhaṣa*), and various changes of the genre, set, plot and characters of the original, did not always yield good quality in the target language. Yet the substantial body of Arab fictional texts that those early translations built contributed, by its sheer mass, to familiarising Arabic readers with new genres of fiction. At their best, the pioneers of Arabic literary translation created works, which, like original writings, expressed and affirmed their own cultural identity and traditions through the forms of Western literature. The appreciation of their audiences accounts for the longevity of such creative translations. They continued to flourish well into the 1940s, long after the genres of Western fiction had been adopted in Arabic writing, replacing traditional forms of literary discourse.

A similar symbiosis between translation and creation of literature is observed in many national cultures at the formative stage, when writers commonly use translation as a creative device and for addressing what they perceive as the pressing issues and actual cultural needs of their societies and time. Since the 1920s, modern Arabic literary theory and criticism have contributed to the emergence of new perceptions of translation, which have determined its subsequent evolution as a creative activity with specific social and cultural functions.

Extensive transmission of Western scientific knowledge and intellectual thought continued. Translated contemporary works of history, philosophy and literary theory were an integral part of the critical debates of the day (e.g. the translation of Thomas Carlyle's *On heroes, hero-worship, and the heroic in history* (1911) by the Dīwān school). Translations of Herbert Spencer's *On education* (1908) and Lebon's work on pedagogy (by Tāhā Husayn, 1921) reflected the edifying priorities of Arab intellectuals. Aḥmad Luṭfī al-Sayyid's [q.v.] renderings of Aristotle from the original (1924-35) introduced the classical tradition of Western intellectual thought. At that time, major influences on modern Arabic literary theory and criticism (Freud's psychoanalysis, the ideas of the Russian formalists,

etc.) were also exercised through the intermediary of Western languages different from the original.

In the second half of the century, translation entered a new phase of development under the aegis of the independent Arab nation states. The cultural policy of *al-'arīb* [q.v.] (arabisation) adopted by Arab governments placed special emphasis on translation as a means of interaction with other cultures meant to serve what they deemed the interest of Arab societies and their comprehensive advancement.

Efforts have been made to support the study of translation and develop translators' professional skills. Translation is a commonly taught subject within foreign language acquisition programmes at the high school level. Arab translators receive modern professional training in independent academic institutions (e.g. al-Mustansiriyya School in 'Irāq; King Fahd School for Translation in Morocco), or through academic programmes in translation offered in a number of universities (e.g. the King Su'ūd University in Saudi Arabia; Yarmūk University in Jordan; Alexandria University in Egypt, etc.). The academic institutions develop translation studies as well (e.g. the Translation Center at the King Su'ūd University worked in the last decade on a major project designed to catalogue 20th-century Arabic translations). Pan-Arab conferences provide forums for discussion of policies and issues of translation (e.g. al-Tunis, 1979, on developing common criteria for selecting texts for translation, reassessing the status and training of Arab translators, etc.; Jordan, 1992, on translation studies; Egypt, 1995, on scientific translation; etc.).

At the national level, the ministries of culture and education oversee translation activities. In many countries, translators are syndicated in professional organisations and unions, and some are individual members of the International Translators' Union (Geneva).

At the regional level, two organisations formulate pan-Arab strategies of translation. The objective of the Arabisation Coordination Bureau (1961, Rabat) is to create and update a unified system of modern Arabic terminology. The Arab Center for Arabisation, Translation, Authorship and Publication (1989, Damascus) supports translation into Arabic of materials for higher and university education in all areas of academic and technical specialisation, and of distinguished works in the fields of the sciences, literature and arts. Both organisations are affiliated with ALECSO. Recent contributions of Arab translators to ALECSO's cultural programmes include publications of *Basic Arabic dictionary* (1988) and *Trilingual thesaurus: Arabic, English, French* (1995); and the ongoing projects *Translations of distinguished books on science and technology*, and *Arabic unified dictionaries*. The Islamic Organisation for Culture and Science also retains translation programmes.

Over the last five decades, translation production has increased everywhere in the Arab world. Egypt and Syria hold leading positions, with more than 100 publishers of translations in each country (here and further below, statistics by UNESCO, *Index translationum*). Lately, Saudi Arabia and Kuwait have emerged as major translation centres.

French and English remain the important sources of Arabic translation, used also as intermediaries for transmission of texts written in other original languages. Since the 1930s, and especially with the influx of American culture in the post-World War II period, English became the main source language of translation into Arabic. In the course of the most recent decades, the source languages diversified, reflecting

new cultural priorities on the part of Arab authors, audiences and institutions related to the acquisition of modern technologies and know-how; to the interest in literatures and cultures traditionally not represented, or under-represented by Arabic translation, etc. The pool of languages from which translations are currently undertaken includes Japanese, Chinese, and other less common foreign languages. The leading languages from which books were translated into Arabic in the last 20 years are: English (3188 translations), Russian (1388), French (929), German (263), Spanish (149), Persian (77), Italian (58) and Turkish (49).

The majority of texts translated in the second half of the century represent fiction of European origin: Shakespeare is the most translated foreign author, with a total of 49 Arabic translations, closely followed by Agatha Christie with 47. Emerging since the inter-war period new concepts of the nature of translation and its cultural functions manifested themselves in a more attentive approach to the selection and transmission of original texts. Translators' creativity was employed to best express the ideas of the original using the tools of the modern Arabic language. The resulting more accurate renditions of classics by Balzac, Turgenev, Dickens, Baudelaire, Guy de Maupassant, Sartre, Gorky, Thomas Mann, Camus, James Joyce, T.S. Eliot, Virginia Woolf and Apollinaire exposed readers to a variety of writing styles, and encouraged since the 1950s new trends in Arabic prose (realism, modernism, stream-of-consciousness), and poetry (the free-verse movement). In drama, Chekhov, Henrik Ibsen and Harold Pinter elicited many translations (the latter's works compiled in a three-volume edition appeared in Cairo in 1987). Since 1983, Kuwait's Ministry of Information has published a series of modern translations from classical Greek of Euripides' tragedies.

Among the significant American writers translated in that period (e.g. Faulkner, Hemingway, Fitzgerald, Henry Miller), Edgar Allan Poe was better known for his mystery stories than as a poet, but Mark Twain remained most popular, his early Arabic renditions revisited by later translators. Lately, Arabic versions of Walt Disney's books head the growing production of children's literature in translation, including classic tales by Leo Tolstoy, Wilhelm and Jacob Grimm, Hans Christian Andersen, and modern Western authors.

In the 1960s to early 1980s, publishers in Moscow, Leipzig and other cultural centres of the then Communist countries produced a large number of Arabic translations introducing classics of their national literatures. The collaboration between Arab and European translators and publishing houses continues to broaden the perspective of Arab readers on European literary traditions (e.g. Arab and Swedish translators at present render from the original poems by Tomas Tranströmer, one of Sweden's most important contemporary poets, whose forthcoming Arabic anthology will be published by al-Mu'assasa al-'Arabiyya li 'l-Dirāsāt wa 'l-Nashr in 2003).

Numerous translations of works by Milan Kundera (Czech Republic), Wole Soyinka (Nigeria), Gabriel Garcia Marquez (Colombia) and Aziz Nesin (Turkey) in the course of the last decade testify to lasting aspirations by leading Arab translators and publishers to bring the best of modern world literature to their audiences.

In literary translation, transmission through intermediary languages remains a problem (e.g. Kundera and Marquez were first translated from French; Italo

Calvino and Ibsen from English; etc.). Duplications (e.g. four recent renderings of George Orwell's 1984) could be avoided through better professional communication (al-'Aysawī, 11-12).

Translations of non-fictional literature range from the modern sciences, business, social theories, philosophy (e.g. Foucault), psychoanalysis (e.g. Freud, Pierre Daco), literary theory (e.g. Barthes), general history, history of religions and religious writings, psychology and social behaviour (e.g. Edward De Bono), to popular science adaptations, textbooks at all educational levels, etc. Randomly selected and outdated source texts are by no means an exception.

Works which represent Western points of view on the history and culture of the region, have always aroused interest among Arab translators and readers (e.g. the latest accomplishment of the Egyptian National Translation Project, the 2002 translation of Marilyn Booth's study on Bayram al-Tūnīsī; the recent translations of studies on modern Palestinian and Egyptian history by the German scholar Alexander Schölch; on Libyan history by the Italian scholar Francesco Coro; etc.).

A growing transmission of modern scientific knowledge has emphasised the need for an even closer cooperation between professionals in specific fields and in translation in the search for Arabic equivalents of foreign terms and modes of scientific expression (al-'Aysawī, 15).

During the entire modern period, translations have been made primarily in *al-fuṣḥā*. While the part of *al-'āmmiyya* increases in original fictional writings, and the performing arts of Arabic theatre and cinema, it remains limited in fictional translation. The colloquial versions of Arabic are entirely absent from non-fictional translation. As a target language, *al-fuṣḥā* has shown flexibility, adjusting its structures to fit new forms of discourse brought by translation. In the process of giving shape to new ideas and meanings, translation has constantly perfected its linguistic vehicle. By modernising the vocabulary, amplifying the semantics, and modifying and simplifying the sentence structure of the language, translation contributes to building a modern, informative and to-the-point style of expression in literary Arabic. Modern translation has enriched the cultures of Arab nations and shared their best achievements with the world: in the last two decades of the 20th century alone, 6881 books were translated into Arabic, and 6756 from Arabic into other languages.

## TARĪB.

2. Arabisation as a weapon of modern political policy.

Given that the Arabic language is commonly identified as a vital, if not the most important, aspect of Arab nationalist ideologies—whether they are pan-Arab, regional, or state-specific—Arabisation has played a significant role in modern Arab politics. In the early 19th century, before Arab nationalist discourse began to emerge, Muḥammad 'Alī [q.v.] of Egypt laid the foundations for the use of Arabic as an instrument of state-building. As part of his efforts to modernise education in Egypt, particularly military, medical and scientific education, Muḥammad 'Alī authorised the establishment of a School of Languages (*Madrasat al-Alsun*) in 1835. The school was closed in 1850 during the reign of 'Abbās Hilmī I [q.v.] but reopened in 1863 on orders of Ismā'īl. Under the leadership of Rifā'a al-Taḥṭāwī (1801-73 [q.v.]) during both of its phases, the school undertook an ambitious program of not only training translators, but also of translating and publishing European texts in Arabic. Thus, the School of Languages pioneered the ideology and the methodology of *tarīb*. The European works chosen for translation reflected the interests of the State as determined mainly by al-Taḥṭāwī, who remained loyal to the house of Muḥammad 'Alī throughout his life. These works included texts in geography, history, medicine, military sciences and politics. In translating modern European works into Arabic, the staff of the School of Languages devised not only the principles for rendering foreign languages into a clear, modern Arabic idiom, but also coined Arabic vocabulary to express novel technical terms. In many ways, therefore, the school provided the intellectual resources for the Arab nationalist movement that gained ground in the latter half of the 19th century and provided Arab nationalists with grounds for asserting the continuing vitality and centrality of Arabic in their nationalist programs.

The work of European and American missionaries, primarily in the Levant, provided a second catalyst for the revitalisation of Arabic during the 19th century. American and British Protestant missions, eager to distinguish themselves from the French Catholics, who insisted upon and actively promoted the use of French, encouraged the translation of the Bible and liturgical readings into Arabic. The schools established by Protestant missionaries also promoted the study of Arabic in their curricula. The political consequences of these policies were perhaps more significant and long-lasting than the religious: The missionaries helped to nurture a sense of Arab national identity among both Muslims and Christians that distinguished them linguistically from the other constituents of the Ottoman Empire.

### *Arabisation in Arab nationalist discourse*

The unifying factor of language in Arab nationalism is a theme developed at length by a number of intellectuals during the late 19th and early 20th centuries. 'Abd al-Rahmān al-Kawākibī (ca. 1849-1902 [q.v.]) viewed Arab political unity and cultural revival as a necessary precursor to pan-Islamic unity and revival. In *Umm al-kuwā*, as part of his argument for Arab leadership of the Islamic world, he claims that the language of the Arabs is the language common to all Muslims. Yet he also prepares the foundation for later

secular Arab nationalists by acknowledging that Arabic is the native language of both Muslims and non-Muslims. The Lebanese Maronite scholar Ibrāhīm al-Yāzīdī (1847-1906 [see AL-YĀZĪDĪ, 2.]) equated nationhood with language. The standard Arabic of the educated classes provides an integrative force that surpasses the disintegrative tendencies of religion and culture. For this reason, al-Yāzīdī championed the revival and dissemination of the standard literary language (*al-luġha al-fuṣḥā*), based on classical Qur'ānic Arabic, in opposition to various suggestions for replacing it with colloquial dialects (*al-luġhāt al-'amma*). He participated in efforts to modernise and simplify Arabic pedagogy, arguing that the proper use and teaching of a language is necessary to political, economic and cultural modernisation efforts. The standard Arabic also demarcates, for al-Yāzīdī, the boundaries between the Arab nation and other peoples. To maintain their cultural distinctiveness and by implication their eventual political autonomy, the Arabs had to preserve their language from foreign corruption, including the use of loan words and especially the adoption of the Latin script in place of the Arabic, as suggested by some reformers of the time. Instead, he proposed rules for Arabisation of foreign words and names that would either assimilate them into Arabic phonology and morphology or distinguish them clearly as foreign proper nouns.

The most powerful stimulus for the rise of an Arab nationalist discourse came from the Turkification policy pursued by the Young Turks after they seized power in Istanbul in 1908. The Ottoman constitution of 1876 had established Turkish as the official language of the empire but had provided no details for the practical enforcement of this provision. The political program adopted by the Committee of Union and Progress [see İTTİHĀD WE TERAKKĪ DĪEM'İYYETİ] in 1908 not only reaffirmed that "the official language of the state will remain as Turkish" but it also stipulated provisions for enacting this policy (see Kayal 1997, 90-4). All civil servants and government officials, including members of parliament, were instructed to conduct business in Turkish. The teaching of Turkish was made compulsory in elementary schools and Turkish was imposed as the medium of instruction in all secondary and higher education. As a result of this policy, Arabic was taught in the state secondary schools of the Arab provinces as a foreign language, with instruction in Arabic grammar provided in Turkish by Arab teachers who were often not conversant in Turkish or by Turkish teachers who were frequently not expert in the intricacies of Arabic grammar. Arab students caught speaking Arabic outside the classroom were subject to punishment. The imposition of Turkish was coupled with a campaign conducted through the Turkish newspapers to paint Arabic as a stagnant language and its speakers as an obstacle to the progressive reforms launched by the Young Turks.

Arab responses to the Turkification policy came from a number of political, literary and educational societies, some based in Arab cities, others in Europe. The Arab Congress of 1913, a gathering of Arab intellectuals and political activists in Paris, adopted a resolution demanding in part: "La langue arabe doit être reconnue au Parlement ottoman et considérée comme officielle dans les pays syriens et arabes" (Zeine 1966, 161). Another group, the Arab Revolutionary Society (*al-djām'iyya al-ḥawriyya al-'arabiyya*), called in the same year for a more drastic measure: complete Arab independence from the Ottoman Empire. The

society's "Proclamation (*balāgh*) to the Arabs, the Sons of Kaḥṭān" expounded the superiority of Arabic over Turkish and denounced Turkish attempts to substitute the "sacred" language of Islam with Turkish translations of such things as the call to prayer and the ritual prayer itself. The proclamation also appeals to Christians and Jews to recognise that their common language unites them with Muslims in a single Arab nation: "Let the Muslims, the Christians, and the Jews be as one in working for the interest of the nation (*umma*) and of the country (*bilād*). You all dwell in one land, you speak one language, so be also one nation and one hand." The fanaticism that divides the religious communities is deliberately cultivated by the Turkish authorities, the proclamation avers. Religious hostilities will subside when "our affairs, our learning, and the verdicts of our courts will be conducted in our own language" (*ibid.*, 174-7; Haim 1976, 83-8).

Opposition to the Turkification policy also figures prominently in the works of individual intellectuals. In his newspaper *al-Muḥīd*, 'Abd al-Ġhanī al-'Uraysī (1891-1916) wrote incessantly on the need for Arabs to resist attempts to undermine their language. He demanded that Arabic be recognised in the Ottoman constitution as the primary official language in the Arab provinces of the empire, and that it be enforced as such in the schools and civil administration. He urged Arabs to insist that all foreign schools teach Arabic as the national language of the students they were educating, alongside Turkish, the official language of the empire, and a foreign language, such as English or French. Al-'Uraysī also campaigned for the use of a simple, pure Arabic idiom in private communications, one that avoided flowery expressions that he blamed on Turkish influences or words and phrases borrowed from French, the language popular among many educated Arabs, especially his fellow Lebanese. Al-'Uraysī's growing influence among Arab nationalists led to his execution by Turkish authorities in Beirut in 1916.

Arab nationalist writing in the period after World War I continued to emphasise the role of the Arabic language, but with the imposition of English and French mandates in much of the former Ottoman Arab provinces, the perceived threat to Arabic came from English and French, not Turkish. 'Abd Allāh al-'Alāyilī's (b. 1914) *Dustūr al-'arab al-kaumī*, published in 1941, is a not so veiled attack on the dissemination of French in his native Lebanon: "The duty of nationalists who are imbued with a burning and true belief is to persuade society by all possible means to free itself from all languages except the one which it is desirable to impose, attachment to which must be fanatical. . . . In such a fanaticism we must mingle hate and contempt for anyone who does not speak that national language, which we hold sacred and venerate as a high ideal" (Haim 1976, 121-2). In his 1952 article *al-Islām wa 'l-kaumīyya al-'arabiyya* 'Abd al-Raḥmān al-Bazzāz (1913-73) declared the Arabic language to be the "soul of our Arab nation and the primary aspect of its national life" (*ibid.*, 181). Zakī al-Arsūzī (1900-68) argued that the true Arab genius lies in the Arabic language, which had flowered well before the advent of Islam. Thus, for al-Arsūzī, the origins of the Arab nation lie in its pre-Islamic antiquity, and the Prophet Muḥammad becomes simply one among many who forged an Arab national consciousness. The challenge of all modern Arabs, Christians and Muslims, according to al-Arsūzī, is to reinvigorate this national identity by reviving the language, for which

he suggested a number of radical reform measures (see Suleiman 2003, 146-57).

The period between the two World Wars saw increasing opposition to French rule in Algeria, Morocco and Tunisia as well. French colonialism in all three countries had meant the imposition of a policy of *francophonie* that made French the sole official language. The independence movements in the Maghrib would consequently stress Arabic along with Islam as the unifying and authentic markers of nationhood. In 1931, *Shaykh* 'Abd al-Ḥamīd Ben Bādīs (1889-1940 [see IBN BĀDĪS]) and his colleagues in the Association of Algerian Muslim 'Ulamā' adopted the motto "Islam is our religion, Arabic is our language, Algeria is our country".

More than any other writer, it was Sāṭi' al-Ḥuṣrī (1880-1968 [*q.v.* in Suppl.]) who most firmly established the common Arabic language as the basis for Arab nationalism. Unlike other writers who included such factors as shared culture, customs, interests and physical environment in their definitions of Arab nationalism, al-Ḥuṣrī limited his idea to a shared language and a shared history. The priority he attaches to the two is clearly articulated in the following passage from *Muḥāḍarāt fi nushū' al-fikra al-kaumiyya*: "Language constitutes the life of a nation. History constitutes its feeling. A nation which forgets its history loses its feeling and consciousness. A nation which forgets its language loses its life and [very] being" (Suleiman 2003, 132).

Al-Ḥuṣrī was keenly aware, however, that linguistic unity was largely a fiction, that the common standard Arabic was shared by only a small fraction of Arabs, namely, the literate classes, whereas the vast majority of Arabic speakers were divided by widely divergent colloquial dialects. In order to realise his vision of a language-based Arab identity, al-Ḥuṣrī devoted much of his career to promoting the modernisation and simplification of classical Arabic grammar, with the intention of reconciling standard Arabic with the dialects, and then disseminating this modern standard Arabic in the new educational system of Arab countries. At the same time, he waged a fierce intellectual battle against advocates of regional vernaculars as the basis for an Egyptian, Syrian or 'Irākī nationalism. Salāma Mūsā (1887-1958 [*q.v.*]), for example, campaigned for replacing standard Arabic, which he considered a dead language, with a refined Egyptian colloquial as the medium of writing, communication and education in his vision of Egyptian nationalism. Al-Ḥuṣrī bitterly denounced the suggestion that the teaching of standard Arabic was an anachronism akin to the teaching of Latin. The analogy between Latin and its Romance language successors is inapplicable to classical Arabic and its regional vernaculars because of the continuing use by modern Arabs of the *fushā*. Similarly, in response to Ṭāhā Ḥusayn's (1889-1973 [*q.v.*]) contention that Egypt should look to its pharaonic past as the basis for its modern national identity, al-Ḥuṣrī caustically asked whether a modern Egyptian would be able to speak with a revived Egyptian pharaoh or with Ibn Khaldūn.

#### *Arabicisation in Arab politics*

Arabicisation has been pursued to some degree by all post-colonial Arab states as an integral part of their state-building enterprise, and Arabicisation has generally meant the promotion of modern standard Arabic as the common language within individual Arab states as well as among them. The goal of Arabicisation programs has been to cultivate a national identity in opposition to the European imperialist

legacy that left behind pockets of anglophone or francophone élites or in opposition to ethnic fragmentation caused by indigenous languages such as Berber, Kurdish or various Nilo-Saharan and other African languages spoken in southern Sudan. Promoting standard Arabic also targets the disintegrative tendencies of the spoken Arabic dialects and thus serves an important ideological function in pan-Arabist schemes and a very practical function in more specific national projects, where sometimes different regional vernaculars exist within a single state. Finally, Arabicisation has been bolstered by the rise of Islamist groups that accentuate the connection between Arabic and the Islamic identity of the vast majority of the populations of Arab states. Arabic is today designated as an official language in the constitutions of nearly all 22 members of the Arab League, and it is the sole official language in some 16 states.

Egypt was among the first Arab states to react to the dissemination of English and French as a deliberate policy of imperialism. In 1888, the British colonial administration in Egypt announced that the language of instruction in all Egyptian schools should be either English or French. This policy was coupled with the promotion of the Egyptian colloquial over the literary Arabic as the "authentic" language of Egypt. Various British officials, most famously William Wilcox in a speech in 1892, argued that Egypt's adherence to literary Arabic was a major reason for its backwardness and that the key to Egypt's progress lay in making the spoken language Egypt's written language as well. The British language policies were not met with immediate resistance, but to the contrary the policies found champions among many influential Egyptian reformers. Calls for a restoration of standard Arabic in the national life of Egypt became pronounced when the independence movement gained ground in the early 20th century. Sa'd Zagh'lūl [*q.v.*], in his capacity of Minister of Education (1906-10), worked to replace English with Arabic in Egypt's schools. The Pedagogy Committee of the University of Cairo (est. 1908), headed by the then Prince Fu'ād, recommended that the official language of instruction at the university be Arabic, but, given the poverty of instructional material in that language, French and English would serve by necessity and temporarily as the medium of instruction in many faculties. Despite these early efforts, as late as the 1940s Arabic was rarely the medium of instruction in Egypt's educational system, except for the religious schools supervised by al-Azhar. The foreign-language schools, where most of Egypt's élite were educated, continued to exclude Arabic altogether, leading Ṭāhā Ḥusayn in *Mustakbal al-ṭhakāfa fi Miṣr* (1938) to warn of the cultural and political consequences for the nation. Ṭāhā Ḥusayn's demand that Arabic be taught in all foreign schools (though the medium of instruction remained English or French) became government policy in the early 1940s.

Syria and then 'Irāk launched Arabicisation policies under the direction of Sāṭi' al-Ḥuṣrī, who served as an advisor and education minister to Fayṣal b. Ḥusayn [see FAYṢAL 1]. The short-lived Arab national government in Damascus (October 1918-July 1920) undertook several measures to build Arab national consciousness in the country, including the implementation of an Arabic curriculum at all grade levels, requiring the rapid translation into Arabic of textbooks and the training of qualified instructors. Al-Ḥuṣrī continued the aborted Arabicisation program in Syria when he relocated to 'Irāk with Fayṣal. The teaching of foreign languages was eliminated in state

primary schools, and the foreign-sponsored schools were forced to adopt much of the nationalist-oriented curriculum developed for the state schools.

The ascendancy of pan-Arab politics during the 1950s raised the language issue to new levels of political saliency. Both of the dominant ideologies of pan-Arabism, namely, Nasserism and Ba'ṭhism, emphasised the alleged unity of language as a key constituent of the single Arab nation. The result was the further curtailment, if not outright elimination, of the influence of foreign languages in Egypt, Syria and 'Irāk. In Egypt, standard Arabic was promoted as the language of instruction in all subjects, including technical and scientific subjects generally taught in universities in English. The debates on the place of colloquial Egyptian in Egyptian national life faded, but did not die entirely, as evinced by the controversy engendered by the publication of Luwīs 'Awaḍ's (1915-90) *Mukaddima fi fikh al-luḡa al-'arabiyya* in 1980. This work, which attempts to sever the link between Arabic and Egyptian nationhood, was published, perhaps not by coincidence, following Egypt's expulsion from the Arab League because of its peace treaty with Israel.

Lebanon was the Arab state most torn by the advent of pan-Arab ideologies, and language figured prominently in its political disputes. In 1962, Père Selim Abou, a young Lebanese Jesuit teaching at the University of St. Joseph in Beirut, published *Bilinguisme arabe-français au Liban*, in which he argued that Lebanon's bilingual character is unique among Arab countries and not the result of foreign domination. Much of the Christian population and many of the Muslim élites as well used French well before the French Mandate, he pointed out. French has been voluntarily adopted, Père Abou suggests, by a segment of the Lebanese population, especially the Maronites, "to express their deepest spiritual needs" (Sayigh 1965, 121). Such views were strongly challenged by other Lebanese writers, including a number of prominent Maronites. Kamāl Yūsuf al-Ḥādīdī (1917-76), for example, argued that Lebanon's bilingualism was largely a myth, since only a small percentage of the élite classes in each confessional group commanded native mastery of both Arabic and French. French was the language of Lebanon's European coloniser, and its continued use instead of Arabic by the Lebanese marked their inferior status and dependence upon Europe.

Similar controversies involving the role of French have occurred in the countries of the Maghrib. Algeria, Morocco and Tunisia have all pursued efforts to promote standard Arabic as a marker of their national identities as well as their solidarity with the broader Arab world. But the three countries have exhibited varying degrees of official hostility to the use of French in national life. Algeria, which experienced the longest and most intensive process of Gallicisation, has pursued the most zealous Arabisation agenda. During the 1960s, under President Houari Boumediene, the government adopted the goal of total Arabisation in government and education. Subsequently, laws were passed requiring fluency in standard Arabic as a qualification for a government job, and standard Arabic became the medium for broadcasting on state-controlled television and radio. In the private sector, however, businesses continued to give preference to those with command of French. The discrimination faced by young Arabic-speaking university graduates led to a series of student demonstrations and strikes in the mid-1980s during the presidency of Chadli Benjedid. In an effort to quell the unrest, the Benjedid

government issued a directive to employers to end language-based preferences in hiring, but little changed in actual hiring practices. Continued student protests in 1990, coupled with the rise of the Islamic movement in Algerian politics, led to new legislation to limit the use of French in public spheres and to restrict the number of French-language newspapers and magazines imported into the country.

By contrast, Morocco and Tunisia have demonstrated much less hostility to the legacy of French. Moroccan governments have pursued deeply ambivalent policies. The first government initiated a full Arabisation program for the country's schools and bureaucracy in 1956, only to reverse itself two years later. King Ḥassān II extolled the virtues of Arabisation while doing little to implement it, particularly as he sought greater economic and political ties with France. In Tunisia, the government of Ḥabīb Bourguiba encouraged bilingualism in its efforts to maintain close ties with France and the rest of Europe, a policy that has been continued by Bourguiba's successor, Zayn al-'Abīdīn Ben 'Alī. Islamic opposition groups in Tunisia, mainly the Islamic Naḥḍa Party, include the government's lack of commitment to Arabisation in their criticisms.

In addition to European languages and the colloquial Arabic dialects, the politics of Arabisation has targeted indigenous regional languages. The status of Berber dialects has been especially problematic in Morocco and Algeria, the two countries with the largest Berber-speaking populations and the most organised Berber political movements. In response to Berber agitation in southern Morocco during 1994, Ḥassān II declared in a speech on August 20, 1994, that Berber dialects and Moroccan Arabic should be included in the national educational system, at least in primary schools. This statement signalled a greater visibility of Berber in the state media, but its critics charge that it has effectively undermined the recognition of Berber as a national language alongside Arabic. In Algeria, the political liberalisation from 1988 to 1991 led to a resurgence of Berber political activity. The Mouvement Culturel Berbère (MCB) organised large demonstrations and boycotts of schools and universities, demanding that the government officially recognise the Berber dialect of Tamazight [q.v.]. The government responded by creating the Haut Commissariat à la Amazighité in 1993 for the promotion of Tamazight in education and mass communication. In April 2004 Tamazight was recognised as a second national language in Algeria. The recognition fell short of Berber demands that it be acknowledged as an official language, which the government reaffirmed throughout the 1990s as being standard Arabic.

The Kurdish minorities in Syria and 'Irāk have faced similar obstacles to gaining official status for their language. Kurdish-language publications were banned in Syria after independence. Its 1973 constitution declared Arabic alone to be the official language. 'Irāk's 1925 constitution also established Arabic as the sole official language of the country, but the use of Kurdish in schools and other public spheres was always accepted by the government in the predominantly Kurdish regions of the north. The 'Irākī law of administration for the transition period, promulgated in March 2004 following the American occupation of the country, recognises both Arabic and Kurdish as official languages.

The constitution of Sudan designates Arabic as the official language of the republic, but adds that "the

state shall allow the development of other local and international languages". The reference to other local languages is presumably to the 100 or so African languages spoken in the southern, mainly non-Muslim part of the country. The British colonial administration cultivated these regional dialects along with English in an openly espoused policy of divide and rule. Post-independence Sudanese governments have pursued Arabicisation with the argument that a common language is the most effective means of maintaining the unity of the country. Yet Arabicisation has been strongly resisted in the south as merely one aspect of Khartoum's attempts to Arabise and, since the late 1980s, Islamise the Christian and animist regions of the country.

#### *Organisations promoting Arabicisation*

A number of organisations have been founded by Arab governments and by the Arab League to promote the policy of Arabicisation. The Arab Academy was created in 1919 in Damascus as part of the intensive Arabicisation program launched under Sāṭi' al-Ḥuṣrī. Its principal mission was to coin Arabic terms for scientific and technological applications. The Royal Academy of the Arabic Language (*al-Maǧīma' al-malakī li 'l-lughā al-'arabiyya*) in Cairo was established in December 1932 by a royal decree of King Fu'ād. Its mandate was to explore all means by which the Arabic language could be revitalised. The King personally took an interest in orthographic reform, advocating the use of different characters to function as capital letters, dubbed the *hurūf al-tāǧī*. This experiment was ultimately abandoned, but the academy continued to debate various measures for orthographic and grammatical simplification for years to come. Under Nasser [see 'ABD AL-NĀṢIR, in Suppl.], the academy diverted its attention away from internal reform of the language to formulating new terminology for scientific and technical applications. This shift reflected the régime's argument that Arabicisation should proceed with minimal internal alterations to classical Arabic, the bearer of the common Arab heritage, and should focus instead on only those reforms necessary for economic and scientific progress. Other Arabic language academies have been established in Baǧhdād (1947) and 'Ammān (1976).

The need to coordinate the work of the various national language academies was acknowledged in 1961 by the Arab League. The Bureau for the Coordination of Arabicisation in the Arab World was established the following year in Rabāt. The bureau has organised a number of international scholarly conferences on Arabic reform and pedagogy and publishes the journal *al-Lisān al-'Arabī*. In 1989, the Arab Center for Arabization, Translation, Authorship and Publication (ACATAP) was established in Damascus by an agreement between the government of Syria and the Arab League Educational, Cultural and Scientific Organization (ALECSO). ACATAP's goals include translating foreign works into Arabic and translating key Arabic texts in science, art and literature into selected foreign languages. The centre also publishes a semi-annual journal titled *al-Ta'rīb*.

(SOHAIL H. HASHMI)

**TARĪK** (A., pls. *ṭuruk*, *ṭurukāt*, etc.), "road, route, way, path", apparently a native Arabic word, and with the idea of a way which has been prepared for traffic to some extent by levelling, by the spreading of stones, etc. (see C. de Landberg, *Glossaire datinois*, Leiden 1920-42, iii, 2204-5). The word shares a common field of geographical reference with similar terms like *ṣirāt* [q.v.], *darb* (see R. Hartmann, *Et* art. s.v.), *maslaka* and *shārī'* [q.v.], though each is to be distinguished in its usage.

In the Qur'ān, Moses is bidden to strike a dry road or path (*ṭarīk*) through the sea in order to escape Pharaoh (XX, 79/77) and thus achieve physical salvation. However, the Qur'ān usually employs *al-ṣirāt* [*al-mustaḳīm*] for the spiritual highway to Paradise (I, 6; XLII, 52-3; XLIII, 42/43) and never *al-ṭarīk al-mustaḳīm*; clearly, *ṣirāt* has a more religious and spiritual connotation than *ṭarīk*. This last is more like the Latin *via* in terms of its topographical role, although the physical layout and mode of construction of the two might differ considerably. The Roman Empire had many famous roads like the Vias Appia, Flaminia and Valeria. Many of these were of antique, pre-Roman origin, and the same was true of Near Eastern trade routes which ran from Syria to the towns of the Ḥiǧjāz and South Arabia, linking the Byzantine empire with the Arabian peninsula and the lands across the Arabian Sea towards India. In ancient Rome, the *viae* played a vital role in buttressing Roman military power and in facilitating trade. In early Islamic times, the *ṭuruk* likewise performed these functions, and furthermore, conveyed pilgrims journeying on the Ḥaǧǧj [q.v.] to the Holy Places. Piety was accordingly an additional motive for rulers, governors and others who built and maintained roads, supplied waymarks (*'alam*) and constructed caravanserais [see *KHĀN*], and the Arab geographers record in detail the Pilgrimage routes which crossed the Islamic lands, such as the *Darb Zubayda* [q.v. in Suppl.] across *Nadjd* from 'Irāk to Mecca, as do figures like Ibn Ǧubayr and Ibn Baṭṭūṭa [q.v.] in their travel accounts; the Qur'ān itself (XXII, 28/27) implies a diversity of ways with the *Ka'ba* as their goal. *Maslaka* was in many ways a synonym of *ṭarīk*, but figures prominently in Arabic geographical literature in the name of what R. Blachère defined as an important sub-

genre of this last, the "road books" or *al-masālik wa l-mamālik* [q.v.], an important element of which was also the fixing of the geographical co-ordinates of places (see Blachère, *Extraits des principaux géographes arabes du Moyen Âge*, Beirut-Algiers 1934, <sup>2</sup>Paris 1957, 110-200; **ḤURRĀFIYĀ**, at Vol. II, 575); at all events, Ibn **Khurrādādhbih** [q.v.] may be accounted the father of this sub-genre.

Those *ṭuruk* which were major highways of the Islamic world for trade and communication naturally stimulated the growth of staging posts (*manāzil* [see MANZIL]) and important towns along them. Mecca may have been along one of these *ṭuruk*, the route from Syria down the Wādī l-Ḳurā [q.v.] (but cf. the thesis of Patricia Crone in her *Meccan trade and the rise of Islam*, Oxford 1987, that the importance of Mecca as a centre for pre-Islamic trade has been much exaggerated). Yet undoubtedly, Samarqand [q.v.] lay at the intersection of trade routes coming from India and Afghānistān and from **Khurāsān** and western Persia and then leading northwards and eastwards along the "Silk Route" to eastern Turkistan and China—the "Golden Road to Samarqand" which forms the culmination and envoi of the James Elroy Flecker's (d. 1915) poetic drama *Hassan*. The famous Silk Route, or better, Silk Routes, ran westwards from Xi'an in China through Lanzhou to Dunhuang, where the ways split, proceeding either along the northern or southern rims of the Tarim basin [q.v.] to Tashkent, Samarkand, Bukhārā, and thence to the caliphal lands of Persia and 'Irāk, and through Anatolia or along the Black Sea coast to Byzantium (see M. Mollat du Jourdin, ch. "Des routes continentales à la voie maritime (fin du Moyen Âge)", in UNESCO, *Les routes de la soie. Patrimoine commun, identités plurielles*, Paris 1994, 1-19; K. Baipakov, ch. VIII/2 "The Silk Route across Central Asia", in C.E. Bosworth and Muhammad Asimov (eds.), *UNESCO History of the civilizations of Central Asia*, iv, *The age of achievement: A.D. 750 to the end of the fifteenth century*, pt. 2, Paris 2000, 221-6; Frances Wood, *The Silk Road*, London 2000, 13). At the other side of the Islamic world, caravan routes across the Sahara Desert brought the slaves and gold of ancient Mali and Ghana to the North African cities (see E.W. Bovill, *The golden trade of the Moors*, London 1958), whilst the Darb al-Arba'īn [q.v.] "Route which took forty days" linked Egypt and Nubia with the eastern lands of the Bilād al-Sūdān, bringing slaves, ivory, ostrich feathers, etc. [see SŪDĀN, BILĀD AL].

It should be noted that *ṭarīḳ* should not be confused with the related term *ṭarīḳa*, pl. *ṭarā'īk*, Šūfī "path" or order; for these, see ṬARĪḲA.

**TA'RĪKH.**

II. 1. In the Arab world.

(c) The period 1500 to 1800.

i. *The Ottoman occupation of the central Arab lands*

The Ottoman Empire, in a few decisive battles, destroyed the Mamlūk Sultanate (1250-1517 [see MAMLŪKS]), which included Egypt, Syria and parts of Anatolia (with the Ḥidjāz within its sphere of influence). Egypt, the centre of empires for centuries, and

also Syria became tax-paying Ottoman provinces for the next three, nominally four, centuries. Later in the 16th century, the Yemen, 'Irāk and North Africa (with the exception of Morocco) were also incorporated into the Ottoman Empire with varying degrees of centralisation.

For Egypt in particular, the change of rule was traumatic. It is true that like the Mamlūks, the Ottomans were Turcophone Sunnīs and were ruled by a foreign-born military caste. Yet the language of administration under the Mamlūks had been Arabic; now, under the Ottomans, it was Turkish. Under the new régime, all governors, chief government officials, *kādis* and soldiers came from the Turkish provinces and spoke Turkish. Thus the foreign presence in the Arab lands was much more massive than before. At the beginning, many of the natives of Syria, Egypt and other Arab lands regarded the Ottomans as bad Muslims, negligent of the religious ordinances and disrespectful of the *Shar'ā*. This judgment entailed automatically a view of the rulers as unjust. Later this negative image of the Ottomans changed, however, as the Ottomans, starting with the long and stable reign of Sultan Süleymān **Kānūnī** (the Magnificent, 1520-66 [q.v.]), became themselves more devout. The dynasty emphasised its role as pious Muslim rulers and defenders of Islam against Christian infidels in the west and **Shī'ī** heretics in the east. Nevertheless, anti-Turkish sentiments persisted, beside a genuine loyalty toward the Ottoman dynasty itself and the distant sultan in Istanbul. Such seemingly contradictory sentiments could coexist in that pre-national age and are reflected in the writings of Arab historians.

The Mamlūk sultanate was extremely rich in historiography (see (b) at Vol. X, 276a-280a), more than any other period in pre-modern Islam. Yet research into the history of the Arab provinces of the Ottoman Empire has also been increasing recently, and there is a better appreciation of the wealth of Arabic historiography under Ottoman rule (see *Bibl.*).

EGYPT

The political, diplomatic and military events leading to the Mamlūk-Ottoman conflict and the occupation of Egypt (Muḥarram 923/January 1517), and then the first six years of Ottoman rule (until **Ḍhu l-Ḥidjja** 928/November 1522) are superbly narrated by the Cairene chronicler Muḥammad b. Iyās [see **IBN IYĀS**]. The fifth volume of his *Badā'ī al-zuhūr fī waḳā'i' al-duḥūr* (ed. Muḥammad Muṣṭafā, v, <sup>2</sup>Cairo 1961) is a most valuable work that has few equivalents in describing day by day how a new régime steps into the shoes of the old one. Ibn Iyās not only reports the decisions and moves undertaken by the Ottomans in Egypt but his writing reflects the people's attitudes and feelings toward their new masters.

Ibn Iyās's hostility towards the Ottomans is obvious throughout his chronicle. He identified with the fallen Mamlūks, since he was one of *awlād al-nās* [q.v.] "the sons of the (important) men", namely, the Mamlūks. He judged all the Ottomans—Sultan Selim, who defeated the Mamlūks, his soldiers, and his *kādis*—as cruel and ignorant.

The problem with this chronicle is that it is almost isolated. Ibn Iyās was one of the best, but also the last, representatives of the great Egyptian Mamlūk historiographical tradition. This tradition stops abruptly after the Ottoman occupation. It cannot be determined whether that happened because Egypt was relegated from an empire to a province, or because the greater part of the 10th/16th century in Egypt passed peacefully and without major political upheavals. Some

information about the history of Egypt in the 10th/16th century is provided by non-Egyptian Arabic sources, such as by the important histories of the Meccan historian Ẓuṭb al-Dīn al-Nahrawālī (d. 990/1582 [q.v.]), who wrote a detailed account of the exploits of the Ottomans in the Yemen. He was familiar with developments in Egypt, in the Ḥiǧāz and, to a certain extent, in Istanbul as well, since he travelled to the Ottoman capital where he met some of the most influential men. Al-Nahrawālī wrote a lengthy history of the Ottoman Empire up to his time, which comprises a great part of his book about the history of Mecca (*al-Bark al-yamānī fi 'l-fath al-uttmānī*, ed. Ḥamad al-Djāsir, al-Riyāḍ 1967; *K. al-Flām bi-a'lām bayt Allāh al-harām*, Beirut 1964). His attitude towards the Ottoman state is positive in the extreme, and his works influenced Egyptian historians for a long time.

Since contemporary chroniclers did not cover the greater part of the 16th century, the information about that period is cursory and episodic. The historiography of the period organises its coverage of events by what has been called by scholars the "sultan-pasha" type of chronicle. The *pasha* is the central figure in the narratives. The chroniclers characterise each viceroy by his personality and religious profile.

One of the two notable historians of this period is Muḥammad 'Abd al-Mu'tī al-Ishāki (the chronicle ends in 1033/1623-4). In his *Kutāb Akhbār al-uwal fi-mā taṣarrafa fi Miṣr min arbāb al-duwal* he gives a most laudatory chronicle of the Ottoman dynasty and a history of Egypt up to his time. Of far greater importance are the numerous historical writings of Muḥammad b. Abi 'l-Surūr al-Bakrī al-Ṣiddīki (d. ca. 1071/1661 [see AL-BAKRĪ]), the leading historian of the 11th/17th century. He was a member of a famous aristocratic Ṣūfi family of *Ashraf*, who also claimed descent from Abū Bakr, the first caliph [see BAKRĪYYA]. The Bakrīs played a role in Egypt's religious and public life until the middle of the 20th century. Ibn Abi 'l-Surūr himself had close relations with the Ottoman authorities in Egypt, and his attitude toward the Ottomans is extremely laudatory, describing the sultans as impeccably orthodox. Almost all his chronicles are about Ottoman Egypt, but he also wrote a history of the Ottoman Empire, naturally with a strong emphasis on Egypt (*al-Minah al-raḥmāniyya fi 'l-dawla al-uttmāniyya*, ed. Laylā al-Sabbāgh, Damascus 1995).

It was only towards the end of the 11th/17th century and during the 12th/18th century that Arabic history writing in Egypt became really mature and rich. We have many chronicles, some of them very valuable, which fall into two main categories: (a) literary chronicles, written by educated 'ulamā' or scribes in standard literary Arabic, and (b) the popular chronicles or "soldiers' narratives". The "soldier" language is ungrammatical, and the narratives have the characteristics of stories told before an audience. The chronicles of this category were created in the milieu of the seven *odjaks*, or the regiments of the Ottoman garrison in Cairo, more specifically in the 'Azab *odjak*, the second largest regiment in Cairo (after the Janissaries). These five manuscripts are known as the *Damurdāshī* group, since their authors are related in one way or another to officers in the 'Azab regiment called by this surname. The most important chronicler of this group is Aḥmad al-Damurdāshī Katkhudā 'Azabān [see AL-DAMURDĀSHĪ] (meaning an officer below the rank of the regimental commander in the 'Azab corps), whose chronicle ends in 1170/1756 (*al-Dura al-muṣāna fi akhbār al-Kināna*, ed. 'A. 'Abd al-Raḥīm, Cairo 1989, ed. and tr. D. Creelius and

'Abd al-Wahhāb Bakr, *Al-Damurdāshī's chronicle of Egypt, 1688-1755*, Leiden 1991). His narrative is lively, detailed and trustworthy, and is full of information about military and political events, as well as anecdotes that throw light on various economic, religious and cultural aspects of Egyptian civilian society. It is important to note that Aḥmad al-Damurdāshī was aware of the *de facto* autonomy of Egypt within the Empire. He calls the régime in Egypt *dawlat al-Mamālik*, namely, the Mamlūk government, as it appears in the book's sub-title *Fī akhbār mā waḳā'a bi-Miṣr fī dawlat al-Mamālik* "that which happened in Egypt under the Mamlūk government".

The historians of the period describe in detail the political struggles that they witnessed in Egypt, again, particularly in Cairo. After the *pashas'* authority declined from the latter part of the 10th/16th century, power passed in the next century to the military grandees, called *amīrs*, *beys* or *sanādīk* (the arabised plural of the Turkish *sanjak* or *sanjak beyi*). In the late 17th and early 18th centuries, power shifted to the *odjaks*, primarily to the Janissaries and the 'Azab, in that order. For most of the 12th/18th century, the supremacy belonged to the constantly-feuding Mamlūk *beys* until 1798, when the French occupation put an end to the Mamlūk régime.

Aḥmad Shalabī (Čelebi) b. 'Abd al-Ġhanī's chronicle, *Awḍāḥ al-ishārāt fi-man tawallā Miṣr al-Kāhira min al-wuzarā' wa 'l-bāshāt*, ed. 'A.R. 'Abd al-Raḥīm (Cairo 1978), covers the period from the Ottoman occupation in 923/1517 to the year 1150/1737. He was an 'ālim, and like many 'ulamā' at the time, also had Ṣūfi connections. He is unusually revealing personally, often telling about himself, his impressions of the events and the personalities that he witnessed, together with his personal opinions and his sources of information. Like other contemporary historians, he notes the declining power of the central Ottoman government and its representatives in Egypt. Sometimes he expresses contempt towards an Ottoman *pasha* or a *kādī*, while fully acknowledging the role of the Sultan as the supreme ruler of Islam. In addition to political events, Aḥmad Shalabī, like other historians in Ottoman Egypt, writes about economic, social and cultural, mainly religious, subjects. For example, Aḥmad Shalabī and his near contemporary Yūsuf al-Mallawānī (also called Ibn al-Wakīl) write about the devaluation of the currency, droughts, plague, and the flooding of the Nile and its effect on food shortages and prices. Occasionally, information is provided concerning Arab tribes and their chiefs, since these were often involved in the power struggles in the capital, and more rarely about the common people, the city poor and the fellahen. Events concerning the religious minorities, Christians and Jews are also mentioned.

We come now to the monumental work of 'Abd al-Raḥmān b. Ḥasan al-Djabartī (1168-1241/1754 to 1825-6 [q.v.]), the last and the greatest of the historians of Ottoman Egypt. His importance as a chronicler has been long recognised. He became a historian under the influence of the French occupation of Egypt in 1798. This was a traumatic event, and the Egyptians' first taste of the overwhelming military supremacy of modern Europe. Al-Djabartī wrote a detailed description of the occupation and the people's reaction to the French. The Frenchmen's claims that they were Muslims, or at least friends of Islam, were met with ridicule; the ideas of the Revolution were totally and naturally misunderstood. For all his hatred of the occupiers, al-Djabartī was impressed by their love of learning and science and by their sys-

tem of justice (see S. Moreh [ed. and tr.], *Al-Jabartī's chronicle of the first seven months of the French occupation of Egypt*, Leiden 1975). After the departure of the French army and the return of the Ottomans to Egypt, he wrote another account of the occupation that was much more hostile to the French and much more favourable to the Ottomans (*Mazhar/Muzhir al-takdīs bi-zawāl dawlat al-Faransīs*, Cairo 1958). Finally, he wrote his *magnum opus*, *‘Adjā’ib al-āthār fi ‘l-tarāḍīm wa ‘l-akhbār* (4 vols., Büllāḡ 1297/1880). This work is a chronicle of Egypt from the end of the 12th *Hiḍrī* century (1099/1688), setting the stage for the rivalry within the *amīrs*' ranks between the Faḡārī and the Kāsīmī [see KĀSĪMIYYA] factions. The chronicle ends in the year 1821 (end of A.H. 1236), under Muḡammad ‘Alī's [q.v.] rule. As the book's title indicates, it is a combination of narrative (*akhbār*), organised by the *Hiḍrī* years followed by obituaries (*tarāḍīm*) of the notables who died during the previous year. Al-Djabartī's coverage of events, which took place since his maturity, starting around 1770, is a masterpiece of history writing. The detailed description and evaluation of the French occupation and, later, the early stages of Muḡammad ‘Alī's rule, are written with precision, honesty and insight. The historian's grasp of political events and of his society, with all its shades and nuances, is truly impressive. He presents to the reader a panoramic view of Egyptian, primarily Cairene, society, economy and culture, with several important glimpses of the Bedouin and the fellaheen as well. His obituaries of *amīrs*, Arab *shaykhs*, *ulamā*’, Šūfīs and other outstanding persons, and his chronicle, actually a diary, of the events that he witnessed and experienced, are among the best in Islamic historiography. Al-Djabartī was a man of strong religious faith, an ardent orthodox Muslim, who hated infidels and the vulgar sides of popular Islam. He admired the reformed orthodox Šūfī order of the *Khalwatiyya* [q.v.], to which even the chief *‘ulamā*’ of al-Azhar (*shaykh al-Azhar*) belonged. On the other hand, he condemned and detested the excesses of the vulgar dervish orders. He often criticised the *‘ulamā*’ for their selfishness and the Mamlūk *amīrs* for their behaviour, but he leaves no doubt that in his mind they were better Muslims than the Ottomans, the Turkish soldiers who massacred them at the order of Muḡammad ‘Alī. He hated the latter's tyranny, but acknowledged his talents. Al-Djabartī's education and approach were thoroughly traditional, but he was the first modern historian, and he experienced “the impact of the West”.

#### SYRIA

Arabic historiography during the Ottoman period in *Bilād al-Shām*, Greater Syria, is at least as rich in quality and quantity as its Egyptian counterpart. A central and obvious reason was that Egypt had only one political and intellectual centre, Cairo, while Syria had at least three centres where historical works were written—Damascus, Lebanon and Ḥalab (Aleppo)—and, far behind, smaller towns such as Ḥims, Ḥamāt, Šafad and Jerusalem.

The majority of the Arabic historians in Syria were men of religion, *‘ulamā*’, members of families of religious scholars and functionaries, almost all of them with some Šūfī affiliations, in accord with the spirit of the times. Several of the leading Lebanese chroniclers were Christian clerics or bureaucrats in the service of powerful rulers. The topics covered by the chronicles were local politics, power struggles between men and factions, careers of *‘ulamā*’, Šūfī *shaykhs*, prominent *Aḡrāf*, and other *ayān* (notables). Special

attention was paid to religious matters, both among Muslims and Christians. Since Damascus was a major station on the Pilgrimage route, much information is provided about the Pilgrimage. The chronicles are good sources for social, economic and urban history, giving details about food prices, construction projects, and the like.

By far the most important and prolific historian of the late Mamlūk and the early Ottoman period is an *‘alīm*, a native of the al-Šālīhiyya [q.v.] suburb of Damascus, called Muḡammad b. ‘Alī Šhams al-Dīn b. Tūlūn al-Šālīhī al-Dimashkī al-Ḥanafī (880-953/1475-1546 [see IBN TŪLŪN]). Like Ibn Iyās, his Egyptian contemporary, Ibn Tūlūn witnessed the Ottoman occupation of his town, which he described in detail. He was a professional and devoted *‘alīm*, however, and his judgment of the Ottomans, from the Sultan downwards, was more balanced than that of Ibn Iyās. His Arabic style is literary, unlike that of Ibn Iyās, whose Arabic is lively but ungrammatical. Ibn Tūlūn wrote no less than 753 treatises, many about Islamic learning, but he owes his fame to his many historical writings. He also wrote an autobiography. His best and most detailed historical work is *Mufākahat al-kullān fi ḥawādīth al-zamān*, a chronicle covering the last decades of Mamlūk Syria, Damascus in particular (from 884/1489), and the first years of Ottoman rule in Damascus until the year 926/1520 (ed. Muḡammad Muštafā, 2 vols. Cairo 1381/1962; ed. Khalīl al-Manšūr, Beirut 1418/1998). He reveals a humanistic sense of justice.

Ibn Tūlūn wrote also a book about al-Šālīhiyya, his native suburb, which is an important source of lives of notables, primarily religious functionaries and *‘ulamā*’, and of information on religious institutions (*al-Kalā’id al-djawhariyya fi ta’rīkh al-Šālīhiyya*, ed. M.A. Dahmān, Damascus 1401/1980). He also wrote two important books about the personalities and careers of office-holders in Damascus, who served in that city under the Mamlūks and the Ottomans, one about governors of the Province of Damascus (*Ilām al-warā bi-man wullīya nā’ibīn min al-Atrāk bi-Dimashk al-Šām al-Kubrā*, ed. Dahmān, Damascus 1984) and the second about the chief *kādīs* in that city (*Kudāt Dimashk al-Thaḡhr al-bassām fi dhīkr man wullīya kadā’ al-Šām*, ed. Saḡāh al-Dīn al-Munadjiḍid, Damascus 1376/1956).

Two biographical works on the governors of Damascus were written by Ibn Djum’a al-Makarri and Ibn al-Ḳārī. The former (d. after 1156/1743) was a Ḥanafī *kādī* and a Ḳādirī Šūfī. Sayyid Raslān Ibn al-Ḳārī wrote his book in the first half of the 19th century.

Another outstanding historian of the period, whom Ibn Tūlūn regarded as his teacher, was ‘Abd al-Ḳādir al-Nu’aymī, the author of the important historical encyclopaedia of the schools and houses of worship of Damascus, entitled *al-Dāris fi ta’rīkh al-madāris* (several eds., inc. Dja’far al-Ḥasanī, Damascus 1988). Al-Nu’aymī was an expert on *awḡāf* [see WAḲF]. The work is organised by *madhāhib* and types of institutions—Ḳur’ān schools, *madrasas*, *zāwiyas* (Šūfī centres) and the like, and includes biographies of teachers and also details about relevant *awḡāf*.

An important historical source for Syria in the 10th/16th century is Naḡīm al-Dīn’s al-Ḡhazzī’s *al-Kawākib al-sā’ira fi ayān al-mī’a al-‘ashīra*, the first of the three centennial dictionaries of Ottoman Syria (3 vols. Beirut, Jounieh and Harissa 1945-59). Al-Ḡhazzī (977-1061/1570-1651) was a member of a family of *‘ulamā*’ and an orthodox Šūfī of the Ḳādirī order, who lived in Damascus where he held several religious offices. The biographies in the *Kawākib* are

arranged by generations (*tabakāt*) of 33 years each. The order is alphabetical. Among his biographies there are Ottoman officials, *kādīs*, and governors. He had to rely extensively on information he found in works of earlier historians.

Al-Ḡhazzī continued the *Kawākib* with a dictionary of lives of notables in the first *tabaka* of the 11th/17th century entitled *Lutf al-samar wa-kaṭf al-thamar min tarāḡīm a'yān al-ṭabaka al-ūlā min al-kaṣm al-hādī 'aṣḥar* (2 vols., ed. Muḥammad al-Shaykh, Damascus 1981). It has 254 biographies, including those of Ottoman judges, military personnel, poets, dervishes, physicians and guild chiefs. From approximately the same time we have the biographical dictionary of Ḥasan b. Muḥammad al-Būrīnī (d. 1024/1615), *Tarāḡīm al-a'yān min abnā' al-zamān* (ed. al-Munadǧǧid, 2 vols. Damascus 1959-66).

A popular collection of biographies from early Islam to the year A.H. 1000, the *Shadhārāt al-dhahab fī akhbār man dhahab* (8 vols., Cairo 1350/1931) was written by Ibn al-'Imād, another Ḥanbalī 'ālim born in the al-Šālihiyya suburb of Damascus (d. 1089/1622).

This survey of the biographical dictionaries of the 10th/16th century should include the work of Taṣḥkōprüzāde Aḥmad b. Muṣṭafa (d. 968/1560 [see TAṢḤKÖPRÜZĀDE.2]), a Turkish historian whose *al-Šakā'ik al-nu'māniyya* is a collection in Arabic of lives of Ottoman 'ulamā' and Šūfis since the establishment of the Empire. The biographies are arranged by the sultans' reigns.

The centennial dictionary for 11th/17th-century Syria is the *Kulūšat al-aḥar fī a'yān al-kaṣm al-hādī 'aṣḥar* by Muḥammad al-Amīn al-Muḥibbī (d. 1111/1699 [q.v.]) (4 vols. Cairo 1284/1868 and subsequent prints). Al-Muḥibbī also was a member of a wealthy family of Damascene 'ulamā'. The work consists of 1,289 biographies of distinguished persons. It provides important information about politics, religion and culture in the Ottoman Middle East and the Hidǧāz. There are also biographies about personages from India and Kurdistan.

The history of Damascus in the 12th/18th century is recorded in a detailed and uninterrupted manner by several reliable contemporary chronicles. The earliest is Ibn Kannān's history covering the period between 1111/1699 and 1153/1740 (Muḥammad b. 'Isā b. Kannān al-Šāliḥī, *Yaumiyyāt šhāmiyya*, ed. A.H. al-'Ulābī, Damascus 1994).

The immediate continuer of Ibn Kannān's narrative was a chronicler who, unlike the great majority of the historians of Ottoman Syria, was not a scholar but a barber, called Aḥmad al-Budayrī al-Ḥallāk ("the Barber"). His work, *Ḥawādith Dimashk al-yaumiyya* (ed. Aḥmad 'Izzat 'Abd al-Karīm, Damascus 1959), covers the period between 1154/1740 or 1741 and 1176/1762; hence, with Ibn Kannān, we have a continuous chronological narrative of Damascus for 63 years. Al-Budayrī was a Šūfī, but his order was the Sa'diyya [q.v.], which was notoriously unorthodox.

Another Damascene chronicler, a Greek Orthodox priest of Damascus named Miḥkā'īl Breik, brings the historical coverage of the city to 1782 with his *Ta'rīkh al-Šām* (ed. Kuṣṭantīn al-Bāshā, Harissa 1930). He explains that he began his history at the year 1720 because this was the time when the rule of the governors (*wālīs*) of the 'Azm family started. He makes a point that they were the first native Arabs (*awlād 'Arab*, as distinct from the Turks) who rose to this office. Breik reports of conflicts in Damascus between Catholics and Greek Orthodox. He stands out among his contemporaries as the only historian who wrote

also about events that were taking place outside the Ottoman Empire, mainly in Europe.

The last centennial dictionary for the period under survey is *Silk al-durar fī a'yān al-kaṣm al-thānī 'aṣḥar* (4 vols. Beirut 1997) by the Damascene 'ālim Muḥammad Khalīl al-Murādī (d. 1206/1791-2 at the age of 31 [q.v.]). He came from a family of Ḥanafī 'ulamā' originating from Samarqand. Like his father before him, he served as the Ḥanafī *mufī* of Damascus and the *nakīb al-Aṣḥraf* there. The book, which comprises 1,000 biographies, is a most valuable source for the political, social and cultural history of Syria in the 12th/18th century. In addition to using contemporary chronicles, al-Murādī corresponded with other 'ulamā' in Syria and Egypt, asking them to collect materials for his biographical dictionary.

#### LEBANON

Mount Lebanon was a separate political and administrative unit, and had its own history owing to its unique topography [see LUBNĀN]. It often enjoyed a degree of independence, and had a predominantly non-Muslim population of Christians and Druze. During the Ottoman period, Lebanon had many well-educated historians, several of whom were clergymen, others were bureaucrats. The former were preoccupied with the history of their communities, defending their creed and describing the quarrels among different Christian churches. The Lebanese historians wrote about the politics of the region (some recorded the history of other parts of Syria as well), struggles between factions, the great feudal families of the Mountain, and the leaders. They also wrote about the history of the two semi-autonomous dynasties that ruled Lebanon during the Ottoman period, the Ma'nids [see MA'N, BANŪ] and the Shihābs [see SHIHĀB, BANŪ].

The Patriarch Istifān al-Duwayhī (1630-1704 [q.v.]), the greatest of the Maronite church historians, was the author of the only history of Syria with an emphasis on Lebanon in the 16th and 17th centuries by a contemporary writer. He wrote about the Maronite community and church with the purpose of defending their Catholic orthodoxy and attacking other Christian churches, such as the Jacobites, whom he considered as hostile to his church as the Mamlūk sultans. His general history, *Ta'rīkh al-azmina* (ed. F. Taoutel (Tawtal), in *al-Mashrik*, xlv [Beirut 1950]; another ed. by P. Fahed, Jounieh 1976, covering the period from the rise of Islam until 1098/1686) is a chronicle of Syria from the Crusades until the end of the 17th century, but the fullest and the most informative account is about the two last centuries. Al-Duwayhī's emphasis is on northern Lebanon where the population was Maronite, and which was ruled by Druze *amīrs* or by Muslims, who were appointed by the Mamlūks, and later by the Ottomans.

Ḥananiyā al-Munayyir (d. 1823), a Greek monk of the Shuwayrite religious order, wrote a history of the Shūf region of Lebanon and the Shihābīs. He concentrated on his own religious order and on other Christian religious topics (*al-Durr al-marṣūf fī ta'rīkh al-Šūf*, ed. I. Sarkīs, in *al-Mashrik*, xlviii-lī [1954-7]). The most important historian of that period is Aḥmad Ḥaydar al-Shihābī (1761-1835), a cousin of the Amīr Bashīr II. He had access to official documents, such as Bashīr's correspondence with Ottoman governors. He wrote a history of Lebanon from the rise of Islam until 1827, called *Ḡhwar al-hisān fī akhbār al-zamān*. Aḥmad Ḥaydar was a Maronite convert from Islam. In his history he expresses unmitigated support for the Shihābīs, in particular for Bashīr II, against their

Lebanese and Ottoman enemies (his books have been published in several editions, e.g. *Lubnān fī 'ahd al-umarā' al-Shihābiyyīn*, Beirut 1969, and *Ta'rikh al-Amīr Haydar Ahmad al-Shihābī*, Beirut 2000).

#### IRĀK

For the 10th/16th century, no historical parallel to Ibn Iyās or Ibn Ṭulūn describing 'Irāk's conditions under the Ottomans—who conquered the country in 941/1534—has come down to us, and the few works that were written are in Turkish. The historians tended to write about the main cities—Baghdād, Baṣra, Mawṣil—and several smaller towns. As expected, power struggles among the rulers are constant features in the chronicles. As for foreign affairs, wars between Persia and Ottoman 'Irāk are the main theme. Baghdad itself was occupied by the Ṣafawids from 1622 until 1632. The attacks of the Persians under Nādir Shāh during the first half of the 12th/18th century (1733 until 1746, including sieges of Baghdad, Mawṣil and Kirkūk) were the most traumatic events in the political history of 'Irāk, and are reported in detail by the chroniclers.

The first historian of Ottoman 'Irāk worthy of the name was 'Alī al-Ḥuwayzī (d. 1075/1664). He lived in the court of the *amīrs* of the Afrasiyāb house, founded at the end of the 10th/16th century by a local magnate who administered the Province of Baṣra as his private domain. Al-Ḥuwayzī's history of Baṣra in the first half of the century is entitled *al-Sira al-murdiyya fī sharḥ al-fardiyya*.

Aḥmad b. 'Abd Allāh al-Ḥurābī from Baghdad (d. 1690/1102) wrote the first chronicle that is arranged by years. For his information, he relied on Turkish official documents and eyewitnesses' reports. His book, *'Uyūn akhbār al-āyān mim mā madā sāliḥ al-uṣūr wa 'l-azmān*, is a chronicle of the political events in Baghdad in the 11th/17th century.

Similar to the situation in Syria, 12th/18th-century 'Irāk saw the emergence of governors (*wālis*) of local families. Maḥmūd al-Raḥabī, a *mufī*, wrote the biography of *paṣhas* who confronted the Persians in 1145/1736. 'Abd al-Raḥmān al-Suwaydī (d. 1175/1761), an important chronicler, wrote the history of Baghdad in the first half of the century. His book, *Ta'rikh Baghdad* or *Ḥadīqat al-zawarā' fī sirat al-wuzarā'* (Baghdad 1962), tells the history of the city through the biography of the governors Ḥasan Paṣha and his son Aḥmad Paṣha.

One may conclude by mentioning two brothers from Mawṣil who wrote about the history of 'Irāk until their own time. Yāsīn b. Kḥayr Allāh al-Kḥaṭīb al-Umarī (d. after 1816), the more important of the two, wrote a general historical work from the Hijrā until 1811, with an emphasis on 'Irāk, and also on Mawṣil and Baghdad (*Ẓubdat al-āthār al-djāliyya fī 'l-hawādīth al-ardīyya*, ed. 'Abd al-Salām Ra'ūf, Naḍjaf 1974; *Gḥāyat al-marām fī ta'rikh maḥāsīn Baghdad dār al-salām*, Baghdad 1986; *Munyat al-udabā' fī ta'rikh al-Mawṣil al-ḥadba'*, Mawṣil 1955). Muḥammad Amīn al-Umarī, Yāsīn's brother, wrote *Manḥal al-awliyā'*, another book about Mawṣil.

#### ii. Concluding remarks

Despite the differences between the various Arab provinces of the Ottoman Empire, certain common features emerge in their historiography. With the notable exception of 'Irāk, local chronicles reasonably cover the first decades or at least the first years after the Ottoman occupation in the early 10th/16th century. The rest of that century has much less historiographical coverage (it should be noted, however, that there was a rich historiography in Yemen for the

10th/16th and early 11th/17th centuries; see the book of Frédérique Soudan, below, in *Bibl.*, and AL-MAWZA'Ī). The 11th/17th century witnessed more intensive historical writings in Arabic, which came to full maturity and richness in the 12th/18th century (this being true with regard to 'Irāk as well).

The differences between the societies of the various Arab lands and cities notwithstanding, there are strong similarities owing to the common religion (at least for the Muslim majority) and the common language and culture. The roles and status of the *'ulamā'*, *Ashraf*, *Ṣūfis*, guilds, leaders of city quarters and the like were as a general rule similar in Cairo, Aleppo, Baghdad and Jerusalem.

Latent or even explicit patriotism is discernible in the writings of the local historians. The writers (and no doubt their readers) accepted Ottoman rule and hegemony as legitimate and natural, despite occasional expressions of criticism of the régime or even antipathy toward the Turks. However, as Ottoman rule became more decentralised after the 10th/16th century, and as local forces, such as the Mamlūks in Egypt or the leaders of strong Arab families elsewhere, were entering the ruling élites in Egypt, Syria, Lebanon and 'Irāk, the Sultan and the Ottoman capital seemed more distant and even irrelevant.

*Bibliography* (in addition to references given in the article): Only a few items of the extensive research literature on Arabic historiography during the Ottoman period can be mentioned here. On Egypt. D. Crecelius (ed.), *Eighteenth century Egypt: the Arabic manuscript sources*, Claremont, CA, 1990, which consists of several important essays and has a very rich and useful bibliography in the text and footnotes. Some of the papers also discuss the earlier centuries. References are made to earlier historiographical studies by D. Ayalon, P.M. Holt, Muḥammad Anīs, Laylā 'Abd al-Laṭīf and others. On Syria. Salāḥ al-Dīn al-Munadjdjīd, *al-Mu'arrikhūn al-dimashkiyyīn fī 'l-ahd al-uthmānī wa-āthāruhum al-makhlūṭa*, Damascus 1964; Abdul-Karīm Rafeq, *The Province of Damascus, 1723-1783*, Beirut 1966, 320-33; Laylā al-Ṣabbāgh, *Min al'lām al-fikr al-'Arabī fī 'l-ʿaṣr al-uthmānī al-awwal: Muḥammad al-Amīn al-Muḥibbī wa-kiṭābuhu Khulāṣat al-aṭhar fī āyān al-kam al-ḥādī 'aṣhar 1061-1111/1651-1699*, Damascus 1406/1986. On Lebanon. A.H. Hourani, *Historians of Lebanon*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 226-45. On 'Irāk. (M. WINTER)

#### (e) North Africa.

##### A. The period up to 1450

As far as written documentation goes, the historiography of the mediaeval Maghrib proceeds, *grosso modo*, out of the Arab-Islamic historical tradition of the East. As well as the implicit teleological element, it follows the divisions and techniques of elaboration of those of the East, but nevertheless develops quite early lines of demarcation, which will be examined below, together with points of divergence.

##### 1. Emergence and starting-points.

The newly-emerging Maghribī historiography should be understood as both a result and a support of the mainstream tradition. A certain number of points need to be recognised:

(i) Because of the late character of the conquest of the Maghrib, and its being a peripheral sector of

Islam, an Arabic historiography was fairly late in emerging. Taking into account the loss of the account called *Futūh Ifrīkiya* still attributed on weak grounds to Abu 'l-Muhādġir [q.v.], the effective appearance of this historiography seems to have been in the second half of the 3rd/9th century, at a moment when the historical tradition in Irāk and Syria was firmly enough established to provide an accomplished model. The first text written by a Maghribī in Arabic language is generally considered to be the Ibādī work composed by Ibn Sallām ca. 273/876-7 on the self-Islamisation of the Maghrib along the Khāridġite route from Tāhart to Barġa, which manuscript was discovered in 1964 (ed. W. Schwartz and Shaykh Sālim Ibn Ya'kūb, Wiesbaden 1986).

(ii) As with the above work, after the fashion of the Mashrik, the next works were also closely linked to politico-ideological questions. In this same Eastern tradition, they included, in addition to chronicles (*akhbār, ta'rīkh*), the various fields of biography (*tarāġīm*), the classification of elite groups (*tabakāt*), stories of the conquests (*maghāzī*) and collective genealogies (*ansāb*).

(iii) As well as Maghribī writings, there was early on a contribution from outside authors; it was probably difficult to ignore Ifrīkiya and the Far Maghrib (= Morocco) when dealing with Spain or Egypt. In this regard, towards the first half of the 3rd/9th century, the Egyptian Ibn 'Abd al-Hakam [q.v.], in his *Futūh Miṣr*—dealing with the conquest of Egypt and the Maghrib—is a notable example. A similar instance, older but more debatable as to the early age of the whole text, would be that of al-Wākidī [q.v.] and his *Futūh Ifrīkiya*. As for the overlapping of the two traditions of al-Andalus and the Maghrib, the first tentative steps are seen in the surviving extracts of the *K. al-Rāyāt* of the Persian Muḥammad al-Rāzī of Cordova (d. 273/886 or 277/890), which was still used in the Far Maghrib at the opening of the 8th/14th century (El-Mennouni, 17-18; Lévi-Provençal, *Hist. Esp. mus.*, iii, Paris 1953, 501-3).

(iv) Although uneven, this relative interest by non-Maghribī authors seems to have been motivated by the social and political repercussions of the conquest. As well as these texts by al-Wākidī and Ibn 'Abd al-Hakam, the theme is tackled in the first corpora of *fiḥh* and *hadīth* in the course of the 4th/9th century, e.g. in the *Futūh* of al-Balāġhurī, the *Ta'rīkh* of al-Ṭabarī and, later, in the *Kāmil* of Ibn al-Aṭhīr. In connection with the latter two works, it should be noted that they not only convey the historical tradition of the conquests but at times depend also on what seems to have been oral tradition, cf. al-Ṭabarī, i, 2813-18, tr. R.S. Humphreys, *The History of al-Ṭabarī*, xv, *The crisis of the early caliphate*, Albany 1990, 18-24, year 27, and Ibn al-Aṭhīr, ed. Beirut, iii, 92-3.

(v) This apart, it is notable that, once it developed, the Maghribī historiographical tradition tended in general to restrict itself within its own geographical sphere, apart from the association with the Iberian peninsula. Also, from the time of the first Muslim conquest, it always looks forwards, and almost never backwards; what is pre-Islamic is qualified as *azālī*, outside time, hence History for the Maghrib begins, it seems, with Islam.

2. The process of development, and its salient features.

At first sight, one notes that the relative stability of Ifrīkiya permitted, in a first stage of development up to the end of the 5th/11th century, an activity in composing works which had only its equal in Muslim

Spain. For the rest of the Maghribī region, such an activity seems to come only with the installation, during the second stage of development, of powerful, centralising dynasties, under which the same outburst of historiographical writing now appears in the Far Maghrib.

*The disparate nature of the historical works and the primacy of Ifrīkiya, mid-3rd/8th to late 5th/11th centuries*

After a void following on from the conquests, from the mid-3rd/9th century, various initiatives appear, independently of each other, in Fās and Tāhart and, above all, in Ifrīkiya. However, most of the works from this period have been lost. We possess Ibn Sallām's Ibādī text and the chronicle of Ibn al-Saghīr [q.v.] on the Rustamid Imāms of Tāhart from the end of this same century (ed. and Fr. tr. C. de Motylinski, in *Actes du XIV<sup>e</sup> Congrès International des Orientalistes*, Paris 1908, 2-132, new ed. Tunis 1976), and the contemporary collection of biographies by Abu 'l-'Arab [q.v.], the *Tabakāt 'ulamā' Ifrīkiya* (ed. M. Ben Cheneb, Algiers 1915), but the first chronicles dealing with the Idrīsids of Fās, the Khāridġites of Siġjilmāsa, the Aġhlabids and the Fātimids of Ifrīkiya, and the works on the heretical Barghawāta and the Ġhumāra [q.v.] of the Atlantic seaboard, have not survived. There have likewise disappeared the only two contemporary or near-contemporary accounts of the Idrīsids, viz. a chronicle on the Imāms of Fās by Ibn al-Waddūn (4th/10th century), allegedly called the *T. al-Adārisa*, and one from the previous century, apparently better known since it was still cited by al-Bakrī [q.v.] in the mid-5th/11th century and by Ibn 'Idhārī two centuries later, the *al-Maġimī' al-muftarik* of al-Nawfalī (El-Mennouni, 18, 27). Three works written under the Aġhlabids, apparently detailed and of extended length, have also failed to survive: the *T. Bani 'l-Aġhlab* by the prince Muḥammad b. Ziyādat Allāh (d. 283/896); a second chronicle with the same name; and an important *Tabakāt al-'ulamā'* by Muḥammad b. Saḥnūn (d. 256/870), son of the famous Mālikī jurist of al-Ķayrawān.

Apart from Fātimid Ifrīkiya, our knowledge of the Maghrib during the 4th-5th/10th-11th centuries stems essentially from eastern sources or late Andalusī ones, and only after that from later Maghribī sources. Hence the immense *al-Muġtabas* of the Cordovan Ibn Ḥayyān [q.v.], from the mid-5th/11th century, forms one of the basic chronicles for the Far Maghrib, at that time pulled between the two influences of the Umayyads and the Fātimids or Fātimids-Zīrids. In this context, the contemporary Ifrīkiyan sources would have been a counterpoise to these, in particular the lost, slightly earlier chronicle of Ibn al-Raġīġ [q.v.] called *T. Ifrīkiya wa 'l-Maghrib*. Of this most important source, a supposedly authentic fragment has been recovered and twice published (Tunis 1967, Beirut 1990). We also have, in its entirety, a text equally important for Ifrīkiyan history but one which is not a chronicle and which only concerns in a subordinate way the rest of the Maghrib, sc. the *Riyāġ al-mufīṣ* of al-Mālikī (d. 460/1068 [q.v.]), a work essentially concerned with the biographies of Mālikī scholars and ascetics in Ifrīkiya up to the mid-4th/9th century.

For the rest, other contemporary Ifrīkiyan texts are known only from paraphrases or from quotations by later authors. Here one would include the work called *Fī masālik Ifrīkiya wa-mamālikihā*, plus a range of opuscula concerning strategically-placed towns such as Tāhart, Ténès, Oran, Siġjilmāsa, Nakkūr and al-Baṣra in the northwestern Far Maghrib. Gathered together for al-Hakam II [q.v.] of Cordova, these writings stem

from Abū 'Abd Allāh Muḥammad b. Yūsuf al-Warrāk (292-363/904-74 [q.v.]), of Ḳayrawānī birth and education, who was accordingly to be of great value for al-Bakrī, Ibn Ḥayyān and Ibn 'Idhārī. To these works by al-Warrāk, one may add those of Ibn al-Djazzār [q.v.], whose oeuvre included also geography (the *'Adjā'ib al-buldān*) as well as history (*K. al-Ta'rif bi-ṣaḥīḥ al-ta'riḥ*) as well as *maghāzī* and *ṭabakāt*, likewise utilised by al-Bakrī and Ibn Ḥayyān.

The losses of major sources are paralleled by similar losses of writings for tribal or family history and for the first attempts at Berber genealogy, the compilation of Ibn Ṣhaddād [q.v.], a Zīrid prince exiled in Syria, as well as two continuations of Ibn al-Raḳīḳ's work, that of Ibn Ṣharaf (d. 460/1068 [q.v.]) and that of Abu 'l-Ṣalt (d. 529/1134 [q.v.]), who continued, according to Ibn 'Idhārī, the previous work. Nevertheless, since it happens that a good number of these writings were sufficiently utilised up to the time of Ibn Ḳhaldūn, their legacy remains, despite everything, appreciable.

Furthermore, there exist various sources, more or less contemporary and spread across time, which can be used to fill gaps. Thus, in connection with intellectual and religious life in the Maghrib up to the beginning of the 6th/12th century, the *Madārik* of al-Ḳādī 'Iyād (d. 544/1149 [see 'IYĀD B. MŪSĀ]) of Ceuta, provide information often of first-rate importance. As for court life under the first Fāṭimid Imāms in North Africa, we can comprehend the impact of the Fāṭimid system on wider society and the obvious dysfunctions of the system, from the contemporary documents used in the *Strat al-Ustādh Djawdhār* (Cairo 1954) of al-Mansūr al-Djawdhārī [q.v.] and thanks to the contemporary witness of the *kādī* al-Nu'mān. As well as this witness displayed in his *K. al-Maḳjālīs wa 'l-musā-yarāt*, this *kādī* has in his *K. Iṣṭiḥāḥ al-da'wa* left us a precious account of the Fāṭimids' rise to power. One may deplore the obviously partisan tone of these texts, but this in fact may well have been one of the reasons for their survival. Certainly, for many mediaeval Ismā'īlī authors, these last two works were, even in the Mashrīḳ, basic reference works.

On the margins of this local production tested over the centuries, there existed, too, other non-Maghribī sources. The most relevant relate to the geography of the region. Composed for the most part in 'Irāk and for various motives, these works dealt with the lands of the Maghrib in detail, describing road networks, financial assessments, main economic activities, morals, customs and beliefs. For their works, geographers and literary men had recourse to direct observation or to information which had been transmitted and followed after careful examination. This last procedure may have been the main one, since neither al-Ya'ḳūbī nor Ibn Ḳhurraḍādhbih nor even al-Bakrī, living as he did in nearby al-Andalus, knew the Maghrib first-hand (*bi 'l-'yān*); only al-Muḳaddasī and Ibn Ḥawḳal were exceptions to this rule, and it is undoubtedly this first-hand knowledge that informs the great originality of these two eastern authors, especially of the latter.

*Variations, and the Almoravid-Almohad domination (late 5th/11th to mid-7th/13th centuries)*

With the installation of the Almoravids in the Far Maghrib and their annexation of the western part of the Central Maghrib and of al-Andalus of the *taifas*, there existed at the end of the 5th/11th century the Almoravid empire and the Zīrid-Hammādid grouping. Both belonged to the great Berber group of the Ṣanhādja [q.v.]. These two powers co-existed, through

thick and thin, till the rise, at their expense, of the Almohads in the mid-6th/12th century.

Transposed to the level of history writing, this evolution was going to cause a draining away of effort towards the West. Hence till the mid-7th/13th century, the fundamental works were written either in al-Andalus or in Morocco, and consequently reflect the new environment dominated by the Almoravids and Almohads. Despite this trend, there were many irreparable losses of works, a need to rely on later compilations and even the intervention of eastern authors. Nevertheless, there appear fresh nuances when compared with the earlier period.

#### *Almoravid historical writing*

One of the characteristic traits of this is that it was reduced, over the centuries, to a summation of later, general accounts. Apart from the important information of al-Bakrī, one can hardly distinguish, right up to the mid-20th century, many witnesses who were near to the events described. The only contemporary narrative, that of Ibn al-Ṣayrafī (d. 557/1162 [q.v.]), *al-Anwār al-djāliyya fī akhbār al-dawla al-murābiṭiyya*, has not survived, although it is known that this chronicle, covering the Almoravid period up to 530/1135-6, was in current use right to the end of the mediaeval period. Authors distant in time and space, such as Ibn Ḳhalīkān (d. 681/1282), Ibn al-Abbār (d. 658/1260), Ibn Abī Zar' (d. between 710-20/1310-20) and Ibn al-Ḳhaṭīb (d. 776/1375) [q.v.] either drew material directly from it or refer to it. Moreover, the anonymous author of the chronicle *al-Hulal al-mawṣhiyya* (written 783/1381) probably drew upon it more than he explicitly reveals. Although poor in surviving chronicles, it is possible to construct a fairly precise chronology of Almoravid history. The publication of leaves discovered of the Almoravid *Bayān* (in *Hesperis-Tamuda*, ii [1961], 43-111) makes a large contribution to this process, as do a certain number of Almohad writings, especially for the transition phase between the two dynasties.

The canvas thus delineated can fairly often be enriched, at the level of content, by varied sources ranging from simple accounts to collections of *tarādjim*, travel accounts (*riḥla*), official correspondence, personal writings and juridical literature. This is how the chronicle of Abū Zakariyyā of the Ibādī state of Ṭāhart (partial Fr. tr. E. Masqueray, Paris-Algiers 1878), was put together at the turn of the 6th/12th century. Also from this period date the summa of the *Madārik* of al-Ḳādī 'Iyād as well as the *Ghunya* which he wrote, setting out his own masters. In parallel to this, one should mention the *Dhakhīra* of Ibn Bassām (552/1147 [q.v.]), meant primarily for Andalusī scholars without, however, systematically excluding Maghribīs, whilst Ibn Ḳhāḳān (d. 529/1134) included in his *Ḳalā'id al-'ikyān* distinguished poets, men of letters, government officials and men of state of both shores. Regarding such men, one should note the *Tibyān*, the memoirs of the Zīrid prince of Granada 'Abd Allāh (d. 469/1077) (ed. Lévi-Provençal, Cairo 1955; Sp. tr. idem and E. García Gómez, Madrid 1980; Eng. tr. Amin Tibi, Leiden 1992; ed. A.T. Tibi, Rabat 1995), which give an excellent impression of the struggles of the *reyes de taifas* with Yūsuf b. Tāshufīn [q.v.]. Of the same type of narration, there is the account left by Abū Bakr Ibn al-'Arabī (d. 543/1148 [q.v.]) concerning the official mission of his father, whom he accompanied to the East to seek the 'Abbāsīd caliph's investiture of the same Yūsuf b. Tāshufīn (see *Tres textos árabes sobre Berberes*, ed. M. Ya'lā, Madrid 1996, 275-315).

As well as this documentation concerned with the élites, Almoravid history writing also includes works depicting social-economic realities and governmental practices. The two treatises on *ḥisba* of al-Sakaṭī [q.v.] of Malaga (ed. Lévi-Provençal, Paris 1931) and Ibn 'Abdūn [q.v.] of Seville (ed. idem, Cairo 1954; Fr. tr. Paris 1947) are significant here. Although primarily concerned with the situation in al-Andalus, both of them, and especially the latter, have material relevant for the dominant power on both shores, the Almoravids. Their content is quite often confirmed by legal material contained in the collections of *nawāzil* of the *kādī* Ibn Ruṣhd (d. 520/1126 [q.v.]), forebear of the philosopher, and later, in the *Miṣyār* of al-Wanṣharīsī (d. 914/1508-9 [q.v.]). Many of the problems raised in these *nawāzil* (e.g. the status of the Christians of al-Andalus, the behaviour of the Banū Hilāl in Ifrīkiya, the appearance of Almohad rebels, etc.) are reflected in the *Nuḥat al-muṣhtāk*, the *riḥla* of al-Idrīsī [q.v.], completed in 548/1154, and also in the substantial body of official correspondence emanating from the Almoravid court (see *Revista de Estudios Islámicos en Madrid*, ii [1954], 55-84, vii-viii [1959-60], 109-98).

#### Almohad historical writing

Inasmuch as the Almohad system rested on the Imām's infallibility, all innovation, from any source outside himself, was in principle inadmissible. Whence the complete absence at the documentary level of all traces of *fatwās* [q.v.] and decisions on specific cases (*nāzila* [q.v.]). However, this same system witnessed the spread of a mystical movement more or less tolerated which produced its own literature at the popular level, using, amongst other things, the *manāḳib* [q.v.]. In effect, this genre, immortalising the lives and deeds of "men of God", can be placed with that of the *tarāḏjīm*, with the formal qualification that al-Andalus was the favoured field for *tarāḏjīm* whilst *manāḳib* literature was to flourish above all in North Africa.

Thus on one side there are the collections of *tarāḏjīm* published since the end of the 19th century, such as the *Fahras* of the Sevillian Ibn Kḥayr (d. 575/1179 [q.v.]); the *K. al-Sila* of the Cordovan Ibn Baṣḥkuwāl (d. 578/1182 [q.v.]); and the *K. al-Takmila*, a continuation of the preceding, by the Valencian Ibn al-Abbār. On the other side, there are the *Mustafād* (still in ms.) on the ascetics of Fās and its region by al-Tamīmī (d. 603/1206); the *Taṣḥawwuf* on the lives of saints of southern Morocco by al-Tādīlī (d. 628 or 629/1230-1 [see IBN AL-ZAYYĀR]) (ed. A. Toufiq, Rabat 1984; Fr. tr. M. de Fenoyel, Casablanca 1995); al-Bādīsī's [q.v.] *Maḳṣad*, written ca. 711/1311-12, on the saints of the Rif in the Almohad period; the *Dfāmat al-yakīn* of al-'Azafī (d. 633/1236 [q.v. in Suppl.]) (ed. A. Toufiq, Rabat 1989); and, to a certain extent, *al-Dḥurr al-munazzam*, also by al-'Azafī, in which he invites people to the celebration, at that time (mid-7th/13th century) still a timid one, of the Prophet's birthday (ed. and Sp. tr. F. de la Granja, in *al-And.*, xxxiv [1969], 19-53).

Taking a wide conspectus of relevant literature, one should include the great Ibn al-'Arabī of Murcia (d. 638/1240 [q.v.]), who left behind works on education in the mystical way such as *al-Futūḥ al-makkiyya* and the *Muḥādarāt al-akḥyār* in which *karāmāt* [see KARĀMA] and *manāḳib* play a great part. Conversely, the Andalusī biographical dictionaries were to have a North African counterpart in such works as the anonymous *Siyar al-maṣḥūyikh* and the *K. al-Siyar* of al-Wisṣyānī, both written in the second half of the 6th/12th century on notable figures amongst the *Khāridjites* of Tāhart and Ifrīkiya, as also the *Unwān al-dirāya* of al-Gḥubrīnī

of Bidjāya (d. 714/1314-15 [q.v.]) (Algiers 1910; new ed. Beirut 1969) and *al-Dḥayl wa 'l-takmila* of Ibn 'Abd al-Malik al-Marrākushī (d. 703/1303 [q.v.]), dealing, amongst other things, with well-known Maghribī figures unduly absorbed into the host society or simply ignored by Andalusī authors (Beirut n.d. and 1965; Rabat 1984). Furthermore, in his *Tārīf*, Muḥammad b. 'Iyād included interesting information on his father, the famous judge, on his masters and on his fellow-disciples (ed. Ben Chrifa, Rabat n.d.).

The impact of theological dogma was to generate a genre of popularised doctrine. As well as an *akīda* (creed) and a *murshida* (breviary) spread during his lifetime in the Berber language, Ibn Tūmart [q.v.] is said to have dictated to his disciple and successor 'Abd al-Mu'min educational texts and epistles which the latter collected into *al-Ta'ālīk* ("The commentaries"), and made known as *Le livre d'Ibn Toumert* (ed. L. Luciani, Algiers 1903) or under the title *A'azz mā yuṭlab* (Marrākushī 1997). Like the letters addressed to the Almoravid ruler 'Alī b. Yūsuf (*Documents inédits d'histoire almohade*, ed. Lévi-Provençal, Paris 1927, 11-13, tr. 19-21), this collection is an attempt at spreading the Almohad doctrines whilst stigmatising the distortions of their religious opponents.

The preoccupation of the Almohad state with informing its followers probably explains the profusion of circulars and notes scattered throughout the sources or isolated as documents in archives or collections of official matter. One example of these collections would be the one collated by Ibn 'Amīra [q.v.] towards the mid-7th/13th century. The diversity of the archive material can be appreciated through the *Trente-sept lettres officielles almohades* (ed. Lévi-Provençal, Rabat 1941, Fr. tr. in *Hespéris* [1941], 1-70) and *Nouvelles lettres almohades* (ed. A. Azaoui, Casablanca 1995). The information in these texts is often first-hand, and they illuminate, in general, the underlying aspect of facts generally lacking in cohesion at the level of the narrative sources.

Regarding these latter sources it is, of course, true that they hardly ever deal with real situations, but there is nevertheless an exception in the work of al-Bayḍḥak [q.v.], in which he describes from memory, towards the middle of the 6th/12th century, the peregrinations and stages of ascension of Ibn Tūmart. From a greater distance and probably because of the distance, 'Abd al-Wāḥid al-Marrākushī (d. 633/1235 [q.v.]) undertook, from Egypt, to give a lively account in his *al-Muḏjīb* of the contemporary Maghrib, using his own observations and the memories of an aged member of the Almohad court (Cairo 1949, Fr. tr. E. Fagnan, Algiers 1893). Another text now lost seems to have corresponded to the same schema, *al-Mughrib fī maḥāsīn ahl al-Maghrib*, whose author, Ilyasā' b. 'Isā al-Gḥāfīkī (d. 575/1179) likewise chose to settle in Egypt where he wrote his work at the request of Ṣalāḥ al-Dīn. For the rest, the Almohad accounts, above all utilising this last chronicle, had recourse to compilation, gradually adopting the method of the classical annalists. Out of these accounts, one of the most notable is the *Naṣm al-ḏumān* written by Ibn al-Ḳaṭṭān [q.v.] for al-Murtaḏā, the penultimate Almohad ruler, in the mid-7th/13th century, and of which only the part describing the beginnings of Ibn Tūmart's movement has survived (ed. M.A. Makkī, Tetouan n.d.). It was much used by authors of the immediate succeeding period and later, and depends, in addition to al-Bayḍḥak's work, on *al-Mann bi 'l-imāma* of Ibn Ṣāḥīb al-Ṣalāt (d. 594/1198) (ed. A. Tazi, Beirut 1979, new ed. 1987). The author dwells particularly

on the events of the Almohad lands between 554-68/1159-73. From this same period stem Abū Marwān al-Warrāk's *al-Mikbās fī akhbār al-Maghrib wa 'l-Andalus wa-Fās*, and Ibn Ḥamādu(h) of Ceuta's *al-Muktabis fī akhbār al-Maghrib wa-Fās wa 'l-Andalus*, both now lost but widely used up to Ibn Khaldūn's time. As for the so-called Almohad *Bayān* of Ibn 'Idhārī, it is recognised as the chronicle par excellence for the whole period (ed. A. Huici Miranda, Tetuan 1960, new ed. Beirut-Casablanca 1985). Completed in 712/1312, it appears to reflect an undoubted serenity. Using rare or lost sources, the author obviously aimed at exhaustiveness and scholarly rigour. On the level of the finer points, he does not hesitate to sort out the information, when required, in order the better to achieve a synthesis or even to discern long-term effects.

It remains to mention geographical works. Outside the very unoriginal work of Ibn Sa'īd of Granada (d. 685/1286 [q.v.]), the *K. Baṣṭ al-ard fī 'l-tāl wa 'l-ard* (Beirut 1970) and that, at second hand, of al-Zuhri (d. after 546/1151-2), *al-Sufya* (ed. M. Hadj-Sadok, Paris 1968), one should emphasise the originality of Ibn Djubayr's (d. 614/1217 [q.v.]) *Rihla* (Fr. tr. M. Gaudefroy-Demombynes, Paris 1949-65, Eng. tr. R.J.C. Broadhurst, London 1952) and also the anonymous *al-Istibṣār* (Alexandria 1958). Coming from the last quarter of the 6th/12th century, these two descriptions can be taken, it seems, as pure travel narratives, but with the difference that Ibn Djubayr starts from the Maghrib through the Mediterranean without omitting the Mashriq nor the opposite shores of the Sea, whilst the author of *al-Istibṣār* limits himself to describing from the interior the ensemble of the region, whilst highlighting the Far Maghrib. Also, the first author is interested in morals and the resulting abuses of government, whilst the second is, rather, although an acute observer, simply a writer with a thesis.

#### Post-Almohad developments

With the disintegration of the Almohad empire, there came a certain renewal of historiography dealing with the Maghrib, with biography and chronicles—with their nuances blurred—seeming to be under a similar impulsion, as also the *rihla* and local genealogical works.

Regarding chronicles, this was to benefit from the rival inheritors of the Almohad empire, and these lent themselves to manipulation by the victors. This may explain the disappearance and eventual loss of certain texts. Also, there was a decline in the use of circulars and a complete uninterest, it seems, in preserving for posterity archival documents. However, some documents have survived by chance, such as the collection of al-'Azafi (Rabat 1979) and the later anthologies like al-Ḳalkaṣhandī's (d. 821/1418 [q.v.]) *Shubh al-a'shā* (Cairo 1913-19) or al-Makkarī's (d. 1041/1631 [q.v.]) *Azhār al-riyād* (Rabat 1979-80), but above all, this has been thanks to the rich collections of Barcelona, Italy, Spain and Portugal.

Leaving aside archive material, we have the following:

Chronicles. Between the mid-7th/13th century and the end of the 9th/15th one, the chronicle in the Maghrib is above all the product of Ifrikiya and the Far Maghrib, reflecting the politico-military situation. Accordingly, apart from Abu 'l-'Abbās al-Dardjīnī's [q.v.] *K. Ṭabaḳāt al-mashāyikh*, dealing with the Ibādī community in the mid-7th/13th century (ed. I. Tallāy, 2 vols. Constantine 1974) and the late *K. al-Siyar* of al-Shammākhī (d. 928/1522 [q.v.]), dealing with personalities and events at Mzāb (Cairo 1301/1883-4), the Central Maghrib was to have no

reference work except for the great historian Ibn Khaldūn's brother Yahyā's *Bughyat al-ruwwād* (ed. and Fr. tr. A. Bel, Algiers 1903-10, new ed. A. Hadjrat, Algiers 1980), whilst the land of the Ḥafṣids, in addition to the masterwork *K. al-'Ibar*, pan-Islamic in its sweep, has left behind works of more limited range, such as Ibn Ḳunfudh's (d. 810/1407-8 [q.v.]) *al-Fārisiyya* (ed. M. Nifer and A. Turki, Tunis 1968), Ibn Shammā's *al-Adilla al-bayyina*, written in 861/1457 (ed. Kaak, Tunis 1936), and the *T. al-Dawlatayn* attributed to al-Zarkashī (d. after 894/1489) (new ed. Tunis 1966, Fr. tr. Fagnan, Constantine 1895). From the Marīnid kingdom, we have the *raḍīaz* work of al-Malzūzī (d. 697/1297-8), *Naẓm al-sulūk*, in which he lauds his masters' rise to power (Rabat 1963). This same version of events was soon produced in prose and included in the anonymous *al-Dhakhira al-saniyya* (Rabat 1972) before being included in the *Rawdat al-kirtās* (ed. C.J. Tornberg, Upsala 1843-6, Rabat 1936, 1972, Fr. tr. Beaumier, Paris 1860, Sp. tr. A. Huici Miranda, Valencia 1948). In this, the supposed author Ibn Abī Zar' [q.v.] seems to be an innovator in introducing the idea of historical continuity, leading, with Fās as the centre, from the "founding" state of the Idrīsids to the Marīnids, to stop in the year 726/1326 towards the end of Abū Sa'īd I's reign. In the next reign, there was a further innovation in al-Kaffī al-Zarhūnī's use of the Arabic colloquial of Morocco to describe, in an *urđūza* called *Ma'aba* comprising 497 verses, Sultan Abu 'l-Ḥasan's [q.v.] campaign in Ifrikiya. Much later, and further from the lively eye-witness account of the Marīnids of Ibn Khaldūn, another *urđūza* by al-Kurrāsī (d. 964/1556-7), his *'Arūsāt al-masā'il* dedicated to the Waṭṭāsid dynasty, closes, in literary Arabic, the list of chronicles dealing with the region.

Of works written in the Mashriq and concerning the Maghrib at this time, were Abu 'l-Fidā's (d. 732/1331) *Ta'rikh*, al-Dhahabī's (d. 748/1347) *K. al-'Ibar* (Kuwait 1960-6), Ibn Kathīr's (d. 774/1373) *K. al-Bidāya wa 'l-nihāya* (Cairo 1351-8/1932-9), al-Sakhāwī's (d. 902/1497) *al-Daw' al-lāmī* and al-Djannābī's (d. 999/1590) *al-Bahr al-zakhhār* (Fr. tr. Fagnan, Algiers 1924).

Biographical literature. In post-Almohad times, the focus seems to have been placed apart from on collections of usage, on the elaboration of *fihris* and *banāmādhīs* indicating particular themes.

The biographical collections all have different provenances. Ibn al-Zubayr (d. 708/1309 [q.v.]) tried to follow in the path of his Andalusī compatriots in composing his *Silat al-sila* (ed. Lévi-Provençal, Rabat 1938), whilst Ibn Nādjīr of al-Ḳayrawān (d. 837/1433-4 [q.v.]) followed the work of Ibn al-Dabbāgh (d. 696/1297) on the religious figures of his city, and completed his *Ma'ālim al-imān* (Tunis 1325/1907-9). Further to the west, Ibn Ḳunfudh in Constantine composed his *Wafayāt* (Rabat 1976), whilst throughout his *Nathīr al-djumān* (Beirut 1976), his contemporary Ismā'īl Ibn al-Aḥmar (d. 808/1405) dealt with the poets of al-Andalus and Morocco. Outside the region, the jurist Ibn Farḥūn (d. 799/1397 [q.v.]), of Andalusī origins, wrote in his native town of Medina a dictionary of celebrated Mālikīs, the *Dirbādī* (Cairo 1315/1897-8), including the Maghribī ones. The Sudanese Aḥmad Bābā (d. 1036/1627 [q.v.]) continued and completed the same work in his *Nayl al-ibtihādī* (Cairo 1315/1897-8); and the Egyptian Ibn Ḥadjar (d. 852/1449 [q.v.]) devoted considerable space in his *al-Durar al-kāmina*, to noted figures from the 8th/14th century Maghrib (Ḥaydarābād 1348-50/1929-32).

As well as these general works, there were others devoted to the itineraries of their authors, built round famous masters of the time, each itinerary being the object of a *Fihrist* or *Barnāmaǧī*. We have extant the *Barnāmaǧī* of al-Ishbīlī (d. 688/1289), that of al-Kāsim al-Tudǧībī of Ceuta (d. 730/1329-30) (both publ., the latter in Tunis 1981); and the *Fihrist*s, still in ms., of Ibn Rushayd of Ceuta (d. 721/1321 [q.v.]) and al-Sarraǧī of Fās (d. 805/1402), plus the encyclopaedic *Barnāmaǧī* of al-Mantūrī of Granada (d. 834/1431).

Also important are two biographical portraits, in part convergent: one drawn by Ibn Marzūk (d. 781/1379 [q.v.]) in his *Musnad* (ed. M.-J. Viguera, Algiers 1981, Sp. tr. Madrid 1977), devoted to the Marīnid Abu 'l-Ḥasan; and the other from the pen of Ibn Khaldūn, *al-Ta'rif*, in which the life, education and career of the author are traced (ed. M.T. al-Tandjī, Cairo 1951, Fr. tr. A. Cheddadi, Paris 1980).

Genealogical works. Far from being an isolated phenomenon, these texts stem from the natural prolongation, it seems, of the old polemics between Maghribīs and Andalusīs, especially from Almoravid times onwards; these polemics became, after the downfall of the Almohads, a sub-genre everywhere cultivated. One can cite three texts as testimony here: the anonymous *Mafākhīr al-barbar* [q.v.] (ed. Lévi-Provençal, Rabat 1941, new ed. M. Ya'la, in *Tres textos árabes*, 123-272), which celebrates, at the opening of the 8th/14th century, the scholars, ascetics and heroes, legendary or historic, from the Berber past. The equally anonymous *Ṭūmat al-zarīf fī ahl al-Djazira wa-Tarīf* (ed. Ben Chriā, in *Madǧallat Kulliyat al-Ādāb*, Rabat, i [1977], 7-50) from a few decades earlier aimed at revealing the failings of the Andalusīs and, finally, the opposing situation in Ibn al-Khaṭīb's *Mushāhadāt* (Alexandria 1958, 55-66) between Malaga and Salé, in which, through the two opposing cities, the lively tension between the two cultures is delineated.

Whilst being set on the cultural plane, these writings seem to be the vehicles for consideration of the basic problem of origins, leading to the question of connections with the ruling power. Whilst Ibn Tūmart, in the *K. al-Ansāb* attributed to him (in *Documents inédits*, 18-49, Fr. tr. 25-74), could be given a Sharīfian genealogy, the legitimising process which speedily followed, as Ibn Khaldūn notes (*Mukaddima*, Fr. tr. de Slane, Paris 1863, i, 53-6), was challenged at this same period precisely when there was a strong current displaying Berber origins, with an insistence on salient figures since the beginning of Islam. Another *K. al-Ansāb*, anonymous but written in 712/1312, was also composed to celebrate openly these origins (ed. Ya'la, in *op. cit.*, 13-121).

There developed in parallel to this, under the impulsion of Marīnid power, the cult of Sharīfian lineage, linked with the city of Fās, it meant a predilection for the Idrīsīd branch, whence numerous references to this fact in the works of Ibn al-Khaṭīb and Ibn Khaldūn as well as in late compilations like those of al-Makkarī, the *Nafḥ al-ṭīb* (ed. I. 'Abbās, Beirut 1968) and the *Azhār al-riyād*. Also connected with it were separate monographs like the anonymous collection on the *Buyūtāt Fās al-kubrā* (Rabat 1972) and the *Nuṣḥ mulūk al-islām* (lith. Fās n.d.) of Ibn al-Sakkāk (d. 818/1415), followed, especially from the 10th/16th century onwards, by a host of opuscula on the genealogies of each branch of the Sharīfīs.

Socio-religious works. These include *manāḳīb* texts, those meant for edification and concerned with *bīd'as* [q.v.] and legal texts (*nawāzīl*).

Regarding *manāḳīb*, it would be tedious to rehearse

here all the collections devoted to a particular saint or to a group of them. On the general level, for Ifrīkiya there is the *Ma'ālim al-īmān* of Ibn al-Dabbāgh, and Ibn Kunfudh's *Uns al-fakīr* (Rabat 1965), in which the author concentrates on the Far West of the Maghrib. For the Central Maghrib, there is the late-period *al-Bustān* of Ibn Maryam (d. 1014/1605 [q.v.]), devoted to the saints and scholars of Tlemcen, Oran and Nedroma (Algiers 1928). For the Far Maghrib, there are *al-Minhādī al-wāḍih* of al-Māǧjarī (d. at the opening of the 8th/14th century) (Cairo 1933), and the *Salsal al-'adhb* of al-Ḥaǧramī, a contemporary of the preceding author (ed. M. Fassi, in *RIIMA*, x/1 [1964], 37-98), heralding the *Dawḥat al-nāshīr* of Ibn 'Askar (d. 986/1578 [q.v.]) (ed. M. Hajji, Rabat 1976, Fr. tr. A. Graulle, Paris 1913). As for the edificatory works denouncing innovations (*bīd'a*), the most significant come from the mid-8th/14th century and from the end of the following century. As well as *al-Durr al-thāmin* of Ibn Hīlāl (d. 903/1497), in which the author details the imprecations against Abu 'l-Ḥasan al-Ṣughayyir (d. 719/1319) (lith. Fās 1319/1901-2), there is *al-Madkhal* of Ibn al-Ḥāǧǧī al-'Abḍārī al-Fāsī (d. 737/1336 [q.v.]), in which the author draws up a review of *bīd'a* current in the Far West of the Maghrib and in his natal city, Cairo. Two famous mystics contributed through their writings to the reformation of morals: Ibn 'Abbād (d. 792/1390 [q.v.]) in his *Rasā'il al-kubrā* (lith. Fās 1320/1902), his *Rasā'il al-sughrā* (ed. P. Nwiya, Beirut 1974) and his epistles, still in ms., addressed directly to governors; and Ahmad Zarriūk (d. 899/1493-4), through numerous works, including the *'Uddat al-murīd al-sāḍīk* and the *Fānat al-mutaawāǧǧīh al-miskīn* (ed. A.F. Khaṣḥīm, Tunis-Libya 1979). Finally, the same situations giving rise to similar interventions are developed in a good number of *nawāzīl* compiled in the *Djāmī' al-masā'il* of al-Burzulī (d. 841/1438), still in ms. although well established, and the *Mi'yār* of al-Wansharīšī (ed. M. Hajji, Beirut-Rabat 1981).

Descriptive works and travel accounts. This literature is witness to the strength of contacts, and is to be distinguished from the *Masālik* type of literature, although there are two exceptions: the *Masālik al-absār fī mamalik al-amṣār* of the Syrian Ibn Faǧl Allāh al-'Umarī (d. 749/1348 [q.v.]) (section on the Muslim West, new ed. M. Aboudayf, Casablanca 1988, partial Fr. tr. de Gaudefroy-Demombynes, Paris 1927), and *al-Rawḍ al-mi'tār* of the Ifrīkiyan al-Ḥimiyārī (d. 726/1326), who often confines himself to reproducing the oldest texts (new ed. 'Abbās, Beirut 1975). Around these two extended works, it seems that there are only monographs on local topics or accounts emanating from various motivations.

The monographs relate almost exclusively to towns and cities. Ibn al-Khaṭīb drew up a comparative table in his *Mi'yār al-ikhṭiyār* between two groups of localities in Spain and North Africa (ed. M. Abbadi, Alexandria 1958), but he also wrote his imposing *al-Thāta* on the city of Granada (ed. M. 'Inān, Cairo 1973-7; complement, A. Chakkour, Tetuan 1988). At the same period, al-Djaznā'ī (d. 766/1365) dedicated his precious *Djanā zahrat al-ās* to Fās (ed. and Fr. tr. A. Bel, Algiers 1920-2, new ed. Rabat 1967). Much later, in 825/1441, Muḥammad b. al-Kāsim al-Anṣārī bore witness to Muslim Ceuta, now become Portuguese, with a minute description in his *Ikhṭiyār al-akhbār* (new ed. Rabat 1969). Miknāsa/Meknēs was the subject of a monograph known under the abridged title of *al-Rawḍ al-hatūn*, written by Ibn Ghāzī (d. 919/1513), a learned magistrate in Fās, for his natal town.

There remain the *riḥlas*, which comprehend spatial journeys and/or varied themes. Whilst the *riḥla* of al-Abdārī is a description of the intellectual centres and of the state of knowledge obtaining towards the end of the 7th/13th century, comprising the Maghrib and the lands stretching to the Ḥijāz (Rabat 1968), that by al-Tiǧjānī at the turn of the 8th/14th century has a setting of military considerations and describes the position of the tribes along the eastern littoral of Ifrikiya, at the same time noting the socio-cultural peculiarities and traditions of the inhabitants there (new ed. H.H. Abdul-Wahab, Tunis 1958, Fr. tr. in *Jā*, 4th series, xx, 57-208, 5th series, i, 101-68). The *riḥla* called *Maḥ al-'ayba* of Ibn Ruṣṣhayd (Tunis n.d.) and the *Mustafād* of al-Tuǧǧībī of Ceuta (Tunis-Libya n.d.) bring out the impacts of cultural relations between the Maghrib and the Mashriq at their various periods. Further, the *Notes of the journey of an Andalusī in Morocco* of Ibn al-Ḥādǧǧ al-Numayrī (d. after 768/1367) (ed. and Fr. tr. A.L. de Prémare, Lyons 1981) are a sketch of the same relations between al-Andalus and the southern shores of the western Mediterranean in the mid-8th/14th century, whilst his *Fayd al-'ubāb* is rather a field report tracing the situation in the Central Maghrib at the time of the Marīnid Sultan Abū 'Inān's [q.v.] expedition towards Ifrikiya 757-8/1356-7. Soon afterwards, a fairly different account was to be the subject of a holiday *riḥla* written up by Ibn al-Khaṭīb, the *Nufāḍat al-ajrāb*, in which the society and countryside of the Moroccan southwest are described in a magistral fashion, in spite of artificialities (ed. M. Abbadi, Cairo n.d.; complement ed. F. Faghya, Rabat 1989). Somewhat later, in the second half of the next century, there are two accounts to note: one written in Latin by the Fleming Anselm Adornus on Ḥafṣid Ifrikiya in 1470, and the other in Arabic by the Egyptian 'Abd al-Basīṭ b. Khalīl (d. 920/1515), illuminating, for the same period, the socio-political situation in Fās and Tlemcen (R. Brunschvig, *Deux récits de voyage inédits en Afrique du Nord au XV<sup>e</sup> siècle*, Paris 1936).

Finally, there are two essential pictures of the situation in North Africa of their time, though distant from each other, sc. the *riḥla*, called *Tuḥfat al-nuzzār*, of Ibn Baṭṭūṭa (d. after 770/1368 [q.v.]) and the *Description of Africa* by al-Ḥasan al-Wazzān, called Leo Africanus [q.v.], completed in Italy in the local language.

(M. KABLY)

#### B. The post-1450 period

In Maghribī historiography, which to a great extent follows the patterns of mediaeval Arab historiography, *ta'riḥ* represents a wide range of knowledge; it thus has a broader semantic charge than its equivalents—e.g. history, histoire, historia—in European languages. It is a source of information for those in government, a gallery for the display of former political régimes, a repertory of significant religious events (e.g. the life of the Prophet), biographies of devout men who left to posterity commentaries and compilations of *ḥadīth*, etc. Considered from a simply formal point of view, *ta'riḥ* is the science of the narration of events, especially religious and political, and the art of arranging them logically or chronologically. In the introduction to his *Mukaddima*, Ibn Khaldūn writes that "History (*ta'riḥ*) is a noble science... It conveys to us the biography of prophets, the chronicles of kings, their dynasties and their policies (*siyāsa*)" (Beirut 1967; Fr. tr. V. Monteil, i, 13, Eng. tr. F. Rosenthal, New York 1958, i, 15).

Maghribī historical science affirms its autonomy in relation to the historiography of the Muslim lands of the Orient, from the end of the Middle Ages onwards, as a function of the changes in political organisation, the object of its study, which unfolded in the lands of the Muslim West: the end of the Marīnid empire, and the beginning of a long period of instability affecting the lands of the western Mediterranean at the end of the 15th century and the beginning of the 16th. The territorial individualities which henceforward took the specific names of *al-Maghrib al-aḳṣā*, *al-Maghrib al-awsat*, *Ifrikiya*, etc., gave the intellectuals of each country the idea of belonging to a particular nation, unique and different from all others. Religion was no longer the cement of cohesion. Also, the presence of Ottoman Turks on the coasts of the Maghrib, and that of Christians, Spanish and Portuguese in certain ports where concessions and consulates were established, constituted the driving force contributing to the emergence and affirmation of history specific to each state. Thus, as a result of politics, the idea of the nation was gradually crystallised in the lands of the Maghrib. And history, *ta'riḥ*, fixed these successive events in time and space and was to give rise to another, hitherto little-known phenomenon, sc. that of nationalism.

*Aḥbār* "facts, information, news" (on this subject, see Cl. Cahen, *Introduction à l'histoire du monde musulman médiéval, VII-XV<sup>e</sup> siècle. Methodologie et éléments de bibliographie*, Paris 1982, 69-70) constitute the basis of all historical narration. They are the essential source of chronicles, the object of which is to narrate, from day to day, events concerning princes and dynasts, thus compiling royal annals (see below for examples relating to al-Maghrib al-Aḳṣā). The constitution of a corpus of *aḥbār* might have as its object the description (not analysis nor explanation, since either of these may engender indifference towards the prince) of dynastic politics, or of a wide-ranging social change; compilations of *aḥbār* may show features reminiscent of *ḥadīth*.

From the 15th century onwards, Maghribī historical science abandoned the style of the major epic to concentrate on the history of more circumscribed territories, focusing on towns and local politics, and on

peoples whose ways and customs were known. Ibn Khaldūn remains the master in this field. In the first book of the *Muḥaddīma*, the *Kutāb al-'Ibar* ("book of examples") he set out his theory, indeed his philosophy, of history. He opened the way not only for historiographers of the Maghrib, but for those of other nations as well. But this science is not within the reach of the novice, according to him; it demands qualities and extensive knowledge. "He who practises this science (*ta'rīkhī*) needs to know the rules of the political art, the nature of existing things and the difference between nations, regions and tribes in terms of way of life, qualities of character, customs, sects, schools of thought, etc. He must distinguish the similarities and the differences between the present and the past, and know the diverse origins of dynasties and of communities."

In the 16th century, the centres of study and diffusion of the culture of the Muslim West would henceforward be Fās, Marrakesh, Tlemcen, Tunis and Ḳayrawān. The authors whose historical works are known to us passed through at least one of these centres, articulating and formulating local themes. The best representative of this period is without doubt al-Ḥasan Muḥammad al-Wazzān al-Fāsi, better known by the name of Leo Africanus [*q.v.*]. His work, *Historical description of Africa*, 1556, translated from Italian, is made up of a series of monographs on cities, regions, populations and kingdoms (of Fās, Marrakesh, Tlemcen, Bougie, Tunis and Tripoli). This study reflects the brilliant personality of the author, as well as the ideas that were current at the time. It was to be imitated and plagiarised by numerous Arab and Christian writers, but it would never be equalled. As for Luis del Marmol y Carvajal, *Descripción general de Africa* (Granada 1573-99, 3 vols.), his texts are sometimes overloaded with detail but are not lacking in interest. His debt is considerable, not only to Leo Africanus but also to other "Arab" authors—Maghribis in this instance. The author lays emphasis on the natural riches of the Maghrib, and his work is extremely useful for the study of historical geography and the history of agricultural practices.

In the central Maghrib, where political unity had long been hindered by the absence of a central authority and the existence at certain times of numerous kingdoms, authors exercised their talents in the domain of urban monography, with such titles as *Constantine, and some Arab authors of Constantine* (see Ch. Saint-Calbre, in *RA*, vii [1913], 70-93). Each author evoked, in his own fashion, the history of his town and of the Maghribī town in general. Not all of these studies were published; most remained in manuscript state and were ignored even by a cultured public.

In the conceptions of history held by Maghribī scholars, there is a perennial need to return to the sources, to the origins of life and mankind as far back as Adam, Eve or Noah when they are dealing with anthropology; or to the Prophet Muḥammad when religious questions are being addressed. Genealogy, an area of knowledge dear to scholars, is considered a branch of history in its own right. A text belonging to this genre of writing can be the work of one or several persons, and may be the private chronicle of a family. The object of writers of this genre is to show their illustrious origins, either by associating themselves with the family of the Prophet or with some saintly person whose religious aura is recognised in the West as well as in the East; Berber dynasties, such as the Marīnids and Waḥṣīds, had recourse to this stratagem to bolster their legitimacy. The *Kutāb*

*al-Nasab*, by 'Abd al-Salām b. Abī 'Abd Allāh (who wrote at Fās in 1098/1687; see A. Giacobetti, in *RA*, xlvi-xlviij [1902-4]), is a good example of this. The first part of this work begins with the eulogy of the Prophet, followed by the biography of Sīdī 'Abd al-Kādir al-Djīlānī. The second part (by 'Abd al-Salām b. al-Ṭayyib, written 1089/1678), deals with the descendants of this saint, among whose number the authors of the work claim to be.

The Tunisian historian Ibn Abī Dīnār al-Ḳayrawānī [*q.v.*], considered a successor to Ibn Khaldūn although several centuries separate them, displays in his historical study of Ifrīkiya a certain reserve, even scorn, towards those Arabs who settled in Tunisia in former times, following invasions and migrations. The period which he describes (the 17th century) is far removed, however, from the major invasions of the Arab tribes which left nothing but desolation in their wake. It is evident that these considerations move him closer to the author of *al-Muḥaddīma*.

Al-Ḳayrawānī reclaimed the autonomy and the maturity of Tunisian scholarship. His writings may be used in the service of the history of political ideas or of Tunisian nationalism.

In Morocco, al-Maghrib al-Aḳṣā, historical research and historiography have been fertile in the modern period and even in the 19th century. The number of titles is impressive, but the quality sometimes mediocre. Even religious history, which once enjoyed particular esteem, remained largely incomprehensible. Its new style, sententious and emphatic, had the effect of erecting a barrier between the scholars and those whom they addressed. Although Ibn Khaldūn was known and even admired, no one took him for a model. His unequivocal statements of truth, his criticisms of governments as unscrupulous, indolent, violent, power-hungry, self-seeking, etc., as applied to Morocco, could have endangered those expressing such views. The majority of Moroccan scholars turned at that time towards chronology, literature (on condition that it was not subversive), biography, hagiography and geographical descriptions. The essentials, meaning general history and political history, were utterly neglected.

In sum, the majority of Moroccan historians of the modern and contemporary eras have been chroniclers: most if not all have been historiographers in the service of Sa'dian or 'Alawī sultans. The following may be cited: Abū Fāris, known by the name of 'Abd al-'Azīz al-Fīṣṭalī and his history, *Manāhil al-safā fi akhbār al-mulūk al-shurafā'*; al-Ifrānī [*q.v.*] and his *Nuzhat al-hādī bi-akhbār mulūk al-karn al-hādī*; and Abu 'l-Ḳāsim al-Zayyānī, *al-Turjūmān al-mughrib* (for these works, see É. Lévi-Provençal, *Chorfas*).

In the 17th-18th centuries, Maghribī history was enriched by increasingly numerous European accounts, such as *Histoire des conquêtes de Moulay Archy et de Muley Ismaël* by Germain Mouette (1683) on the first 'Alawī sultans of Morocco; the *Topografia e historia general de Argel* by D. Haedo (1612); and the *Mémoires* of the Chevalier d'Arvieux (1735), who was French consul in Algiers at the end of the 18th century.

In the 17th, 18th and 19th centuries, accounts of journeys proliferated—not least stories of Christian captives and of their ransoming by religious figures who travelled frequently to the Maghrib and to the Orient. Particular mention should be made of the work of Père Dan, *Histoire de la Barbarie et de ses corsaires* (Paris 1637, 1649), the Redemptorist priest who for almost half a century made it his business to ransom Christian captives and who supplied copious information on the three regions of North Africa.

Finally, since the middle of the 19th century, research in European archives (national archives, archives of foreign and marine affairs, chambers of commerce in France and in other maritime states in western Europe) has led to the study of a large number of documents relating to the three above-mentioned lands or to those further east, comprising various treaties, commercial accords, and official correspondence, and some of these have been published, e.g. *Documents inédits sur l'occupation espagnole en Afrique*, published in 1875-77 by de la Primaudaie; the monumental collection of *Sources inédites de l'Histoire du Maroc*, undertaken in 1905 in Paris by Colonel H. de Castries, in which are published documents drawn from the archives of France, Spain, the Netherlands, Portugal and Britain, from the 16th century onwards; and the *Correspondence des deys d'Alger avec la Cour de France (1579-1833)*, Paris 1898, published by E. Plantet.

It is to be noted that the work of the chroniclers continued into the 19th century, exemplified in the very important book written by al-Nāṣir al-Salāwī [q.v.], *K. al-Isṭiṣā li-akhbār duval al-maghrib* (Cairo 1844). In the 1970s, Abdallah Laroui, in his *Histoire du Maghreb*, has become the reference source for the understanding, recording and analysing of the history of the Muslim West. His novel method of approaching documentation facilitates the comparison of texts of diverse origins, and the establishment of more pertinent syntheses.

*Bibliography:* Given in the article.

(AHMED FAROUK and CHANTAL DE LA VÉRONNE)

(g) Christian Arabic historiography.

The information on the course of Muslim history, especially on the early conquests or the struggles and relations with foreign powers, as well as the sometimes one-sided perception of events found in Muslim historiographical sources, is usefully complemented by information provided by Christian historiographers, whose writings are partly based on sources in Syriac, Greek or Coptic—not accessible to Muslim authors—and which were written from a different perspective, that of the conquered peoples who were later to become the Christian minorities. It should be emphasised, however, that the perspective of these Christian writings, even when composed in Arabic, is often not determined by their general Christian background so much as by their more specific communitarian affiliation (Jacobites [see YA'QŪBIYŪN], Nestorians [see NASTŪRIYŪN], Melkites, Copts [see AL-KIBT] and Maronites [see MARŪNIYYA, in Suppl.]). Especially in the Universal Chronicles, Christian historiographers did not hesitate to use different genres of Muslim material, sometimes copying it in a most literal way, without comments or corrections on their side.

The aim of the present article is to give an overview of the historiographical material written by Christians till the end of the 'Abbāsīd period and the first years of the Mamlūks in Egypt insofar as it deals with general history and is relevant for aspects of the relations between Muslims and Christians. Chronicles describing mainly the internal life of the Christian communities, such as the recently discovered East Syrian Ecclesiastical Chronicle *Mukhtaṣar al-akhbār al-bi'yūya* (ed. B. Haddād, Baghdad 2000) are not taken into consideration. This article is, for this period somewhat artificially, limited to the production in Arabic. As a matter of fact, Christian historiography written in the Christian national languages, especially in Syriac, in many aspects shows the same characteristics as the works composed by Christians in Arabic.

### Melkites

The first important historiographer is Euthychius, Patriarch of Alexandria from 323/935 till 328/940, known in Arabic as Sa'īd b. al-Bīṭrīq [q.v.]. He is the author of a universal history: *Kitāb al-Ta'rikh al-madjmū' 'alā 'l-tahkīk wa 'l-taṣdīk*, also known as *Naẓm al-ḡaihar*. This work exists in two different recensions. The first, shorter recension (by the editor designated as "Alexandrian") is preserved only in ms. Sinaiticus Arab. 582 (10th century), possibly an autograph. Mutilated in the beginning and at the end, it gives the history from Moses till the Muslim conquest of Egypt and some subsequent events in Jerusalem (*Das Annalenwerk des Eutybios von Alexandria. Ausgewählte Geschichten und Legenden kompiliert von Sa'īd ibn Batriq um 935 A.D.*, ed. and tr. M. Breydy, CSCO 471-2, Leuven 1985). The longer recension ("Antiochian") enjoyed greater popularity, but contains an important number of later additions and interpolations (ed. L. Cheikho, *Eutychiū Patriarchae Alexandrini annales*, i, Beirut, 1905, ii, 1909, 1-88 (repr. in CSCO 50-1, Leuven 1954, tr. E. Pococke, *Contextio gemmarum seu Eutychie patriarchae Alexandrini annales*, Oxford 1658, repr. in *PG*, cxi, cols. 889-1156, and B. Pirone, *Eutychi, Patriarca di Alessandria (877-940). Gli annali*, Cairo 1987). It covers the period from the creation of Adam till the year 326/938, two years before the death of the author. The work exploits several Muslim sources, among which is historical, juridical and traditionist material. The Alexandrian recension presents the conquest of Egypt according to a version by the local traditionist 'Uḥmān b. Šāliḥ.

In the manuscripts containing the Antiochian recension, Eutychiūs's *Ta'rikh* is continued by a chronicle composed by Yahyā b. Sa'īd al-Antākī [q.v.] covering the period between 326/937-8 to 425/1033-4 (best ed., *Histoire de Yahyā-Ibn-Sa'īd d'Antioche*, ed. and tr. I. Kratchkovsky and A. Vassiliev, in *PO*, xviii/5, xxiii/3, Paris 1924, 1932, crit. ed. I. Kratchkovsky, *Fr. ann. F. Micheau and G. Troupeau*, in *PO*, xlvii/4, Paris 1997, with extensive bibliography). The objective of this work is clearly indicated by the author in the introduction: to write the continuation (*dhayl*) of the work composed by Sa'īd b. al-Bīṭrīq according to the method adopted by the latter. After the discovery of new sources, the author felt, however, obliged to rework the first recension, a first time in Egypt, a second time (in 405/1014-15) in Antioch. The *dhayl* is an important source for our knowledge of the history of Egypt and Syria, especially the regions of Antioch and Aleppo, and the Arab-Byzantine relations during this period. It is based on various Greek (unidentified) and Arabic sources, among which are on the Muslim side, Ṭhābit b. Sinān, an anonymous 'Irākī source, Ibn Zulāk, 'Alī b. Muḥammad al-Šimshātī and al-Musabbihī. A Christian-Arabic source is the *viṭa* of the Melkite patriarch of Antioch Christopher (959-67) by Ibrāhīm b. Yūḥannā (J.A. Forsyth, *The Byzantine-Arab chronicle (938-1034) of Yahyā b. Sa'īd al-Antākī*, Ph.D. diss. Ann Arbor, University of Michigan 1977). The *dhayl* was known to later Muslim authors, such as Ibn al-'Adīm, who used it for the composition of his *Ẓubdat al-ḥalab fī ta'rikh Ḥalab* (ed. S. Dahan, Damascus 1951).

Agapius (Maḥbūb Kuṣṭanṭīn), bishop of Manbiḍj (10th century) wrote a universal history, known as the *Kitāb al-Uwān*, beginning with the Creation and continuing till the reign of the Byzantine Emperor Leo IV (775-80) and the Caliph al-Mahdī. Most information on the Muslim period was drawn from the so-called *Syriac common source*, a work well known to later Syriac historiographers, presumably composed by

the Melkite Theophilus of Edessa, an astrologer in the service of al-Mahdī, who may also have used an unidentified Muslim chronology. Agapius's work was edited by L. Cheikho (*Agapius episcopus Mabbugensis. Historia universalis/Kitāb al-Uwān*, CSCO 65, Paris 1912, and by A. Vassiliev, *Kitāb al-Uwān, histoire universelle écrite par Agapius (Mahboub) de Menbidj, PO*, v/4, vii/4, viii/3. The *K. al-Uwān*, together with the work by Sa'īd b. al-Biṭrīk, was much appreciated by al-Mas'ūdī (*Tanbīh*, 154).

According to al-Nadīm's *Fihrist* (ed. Flügel, i, 1871, 295), Kuṣṭā b. Lūkā (9th century [q.v.]) is said to be the author of a (lost) universal (?) chronicle, *al-Firdaws fi 'l-ta'rīkh*.

#### West Syrians

The most important historiographical work in Arabic composed by a Syrian Orthodox author is the *Mukhtaṣar ta'rīkh al-duwal* of Gregorius Barhebraeus (Syriac: Bar 'Ebrōyō) or Ibn al-'Ibrī (1226-86 [q.v.]). According to information found in his *Ecclesiastical chronicle (EC)*, he allegedly composed this chronicle at the request of some Muslim friends in Marāgha [q.v.], who apparently had heard about Barhebraeus's fame as a historiographer and as author of a voluminous universal history, written in Syriac. This *Chronography* was divided into two parts, an ecclesiastical chronicle and a so-called civil chronicle, which were sometimes considered as two separate works. The structure of the *Mukhtaṣar* (ed. A. Šālḥānī as *Ta'rīkh Mukhtaṣar al-duwal*, Beirut 1898, 1958, new ed. Kh. Maṣṣūr, Beirut 1997) is comparable to that of the *Civil chronicle (CC)*, the *Mukhtaṣar* being divided into ten dynasties and its Syriac counterpart into eleven dynasties; but both works are universal histories covering the period from Adam till the time of the Mongols. The Arabic title suggests that the *Mukhtaṣar* is merely a summary of the *CC*. As a matter of fact, the *Mukhtaṣar* contains much information not found in the *CC*, e.g. many short biographical notices on Islamic scholars. Sometimes the information given in the *Mukhtaṣar* differs considerably from the *CC* or is written from a different perspective. A good example is the attitude towards Muḥammad, depicted positively in the *Mukhtaṣar* as an instrument in the hands of God, whereas the *CC* emphasises forced conversions and the spread of Islam "by the sword". A possible reason for these differences, as suggested by the *EC*, might be the public the author had in mind when he composed his chronicle. A study by L.I. Conrad, *On the Arabic Chronicle of Barhebraeus: his aims and audience*, in *Parole de l'Orient*, xix [1994], 319-78, shows that it is too simplistic to consider Muslims as the intended readership of the *Mukhtaṣar*, since a number of passages are of interest only to Christians. The best way to explain the differences between both works is to consider them as independent histories, which are to an important extent based on different sources (H. Teule, *The Crusaders in Barhebraeus' Syriac and Arabic secular chronicles*, in K. Ciggaar et alii (eds.), *East and West in the Crusader states*, Louvain 1996, 39-49). In the case of the *Mukhtaṣar*, the author used more Islamic historiographical material, such as the *Ta'rīkh al-Hukamā'* of al-Kiṭfī or the *Ṭabakāt al-unam* by Sa'īd al-Andalusī. Written at the end of his life, he did not bother to harmonise the sometimes divergent views expressed in the *Mukhtaṣar* and the *CC*.

#### East Syrians

Hunayn b. Ishāq [q.v.], the most renowned 'Irāqī Christian in Muslim literature, is the author of a lost chronicle in Arabic describing the period from Creation till the time of al-Mutawakkil (cf. Ibn Abī Uṣaybi'a,

*'Uyūn al-anbā'*, 273). Ya'kūb b. Zakariyyā al-Kaṣḥkarī composed a seemingly important chronicle, now lost, comparable to the work of Agapius and Euty chius. It was highly praised by al-Mas'ūdī (*Tanbīh*, 155). Elias, bishop of Nisibis (975-after 1049) is the author of a bilingual (Syriac-Arabic) chronicle, divided into two parts, preserved in only one manuscript, documenting the period from Creation till 409/1018 (*Eliae Metropolitae Nisibenaee opus chronologicum*, i, ed. and tr. E.W. Brooks, ii, ed. and tr. J.B. Chabot, CSCO 62-3, Rome, Paris and Leipzig 1910). The second part consists mainly of conversion tables and descriptions of the different Christian, Muslim and Jewish calendars. The Muslim sources quoted by name in the first part are: Muḥammad b. Mūsā al-Kh'ārazmī, Abū Dja'far al-Ṭabarī, 'Ubayd Allāh b. Aḥmad, Abū Bakr Muḥammad b. Yaḥyā al-Šulī and Ṭhābit b. Sinān. This work was also highly praised by Ibn Abī Uṣaybi'a (*op. cit.*, 72). The voluminous *K. al-Ta'rīkh* or *K. al-Tawārīkh* ("Book of Dates") composed by Yuhannā al-Mawṣilī in 1332 is, in fact, more a theological encyclopaedia than a work of history. The historical section only deals with inner-Christian developments (cf. B. Landron, *Chrétiens et musulmans en Irak*, Paris 1994, 140).

#### Maronites

According to al-Mas'ūdī (*Tanbīh*, 154), a certain Kaṣ al-Mārūnī is said to have written a beautiful historical work beginning with Creation and ending with the caliphate of al-Muktafi. The language of this lost work was supposedly Arabic. Al-Mas'ūdī states that generally speaking the Maronites, unlike the Melkites, the Jacobites and the Nestorians, were not active in the field of historiography.

#### Copts

Traditionally ascribed to Sawīrus b. al-Muḥaffā' (flor. 10th century [see IBN AL-MUḤAFFĀ', Severus] the *History of the Patriarchs of Alexandria* (Ar. *Šiyar al-Bī'a al-muḥaddasa* "biographies" of the Holy Church) is a collective work, the main redaction of which was completed by Mawḥūb b. Maṣṣūr b. Mufarrīdī al-Iskandarānī (ca. 1025-1100). Mawḥūb, who frequently acted as an intermediary between the Fātimid authorities and the Coptic community, is himself the author of the lives of the Patriarchs Christodoulos and Cyril II. His work was continued till the early 13th century by three subsequent authors. Later lives do not belong to the original work. This history (ed. B. Evetts, *History of the Coptic Church of Alexandria, PO* 1.2, 1.4, 5.1, 10.5, Paris 1904-15, continued by Y. 'Abd al-Masīḥ et alii as *History of the Patriarchs of the Egyptian Church*, Cairo 1943-74) describes the history of the Coptic Church, arranged according to the reigns of the Patriarchs. Many *šiyar*, including those by Mawḥūb, deal, however, not only with ecclesiastical life but also record events pertaining to the field of general political history. The work was known to Ibn Khaldūn and al-Makrīzī.

Nuṣḥū' Abū Shākir Ibn al-Sanā' al-Rāhib (13th century), or Ibn al-Rāhib [q.v. in Suppl.], is the author of a *K. al-Tawārīkh* consisting of three parts: a treatise on astronomy and chronology; an elaborate universal history, dealing with world events, Islamic history and ecclesiastical matters; and a short history of the Ecumenical Councils. The so-called *Chronicon orientale*, ascribed by the editor to Ibn al-Rāhib (ed. Cheikho, CSCO scriptor. ar. 1-2, Beirut, Paris and Leipzig 1903), is only a later abridgment of Ibn al-Rāhib's universal history composed by an anonymous author.

The 13th century al-Makīn b. al-'Amīd [q.v.] wrote a universal history, called *al-Maḍmū' al-mubārak*, extend-

ing from Creation to the time of Sultan Baybars (658/1260). It exists of two parts, the second Islamic part being based on al-Ṭabarī or the *Ta'riḫ Ṣāḫhī* of Ibn Wāṣil or one of its sources. The section on the Ayyūbids (ed. Cl. Cahen, in *BEO*, xv [1955], 109-84), describing contemporary events is, however, more original and based on personal observations.

## II. 8. In the Nilotic Sudan.

The extant Arabic historical writings of the Nilotic Sudan (including the outlying western provinces of Kordofān and Dār Fūr [q.v.]) before 1899 are exhaustively listed in R.S. O'Fahey, *Arabic literature of Africa*, i, *The writings of eastern Sudanic Africa to c. 1900*, Leiden 1994. Most of these works are extant only in mss. Of the few published works, the most important are:

(1) "The Funj Chronicle", the conventional name of a chronicle extant in several mss. and recensions. It covers the period from the emergence of the Funj kingdom of Sinnār, traditionally in 910/1504-5, to (at latest) 1288/1871. The original author of the Chronicle was Ahmad b. al-Ḥādīdjī Abū [sic] 'Alī, known as Kātib al-Shūna from his post in the government grain-store. He was born near al-Masallamiyya (Blue Nile) in 1199/1784-5, and died after Rabī' I 1254/May-June 1838, where his Chronicle ends. Beginning as a king-list with added blocks of information (some of anthropological interest), a continuous detailed narrative starts with the reign of Bādī IV, on whose overthrow in 1175/1762 power passed to a clan of regents, the Hamadī *Shaykh*s, ruling over an ever-dwindling region of the Blue Nile until the invasion of the Sudan by the forces of Muḥammad 'Alī Pasha of Egypt [q.v.] in 1235/1820, and the establishment of the Turco-Egyptian régime (*al-Turkiyya*). The later editors and continuators were, like Kātib al-Shūna, formed by a

traditional Sudanese Islamic education, and had appointments under the Turco-Egyptian administration. They were thus members of a group which had little to regret at the passing of the Funj kingdom and the ending of the anarchic Hamadī regency. They show no hostility to the Turco-Egyptian régime as such, which brought greater security and the consolidation under the aegis of the Islamic Ottoman Empire, although they criticise individual officers and administrators. While the later part of the Chronicle is in no sense an official history, it was written by men who accommodated themselves reasonably comfortably to the régime of Muḥammad 'Alī and his successors.

The Chronicle has been published twice: (a) its last recension by Makkī Shubayka, *Ta'riḫ mulūk al-Sūdān*, Khartoum 1947; (b) Kātib al-Shūna's text (some collation with other mss.) by al-Shāṭir Buṣaylī 'Abd al-Djalīl, *Makhtūṭat Kātib al-Shūna*, Cairo 1963. An annotated English summary translation of the final recension was published by H.A. MacMichael, *A history of the Arabs in the Sudan*, Cambridge 1922, ii, 354-430. A fuller translation from a collation of the principal mss. is provided by P.M. Holt, *The Sudan of the three Niles. The Funj Chronicle 910-1288/1504-1871*, Leiden 1999.

(2) *Kitāb al-Ṭabakāt fī khusūs al-awliya' wa 'l-sāliḥin wa 'l-'ulamā' wa 'l-shu'arā' fi 'l-Sūdān* (some minor variants of title in the published editions). As the title indicates, this is a biographical dictionary of the Muslim holy men of the Nilotic Sudan, perhaps the only representative of the genre from the region. It was written and compiled (since there is internal evidence of sources of various kinds) by Muḥammad al-Nūr b. Dayf Allāh, and hence is usually referred to as the *Ṭabakāt* of Wad (i.e. Walad) Dayf Allāh. From internal evidence it was compiled about 1219/1804-5. Wad Dayf Allāh resembled the authors of the Funj Chronicle in being a member of the traditionally educated Muslim élite. He was born in 1139/1727 at Ḥalfāyat al-Mulūk, north of present-day Khartoum North. Like his father, he taught in the mosque, acted as a *muffī*, and became celebrated for his religious writings. He died before the Turco-Egyptian conquest in 1224/1809-10.

The *Ṭabakāt* was published twice in 1930 in Cairo, by Ibrāhīm Ṣadiq (? Ṣuddayk) and Sulaymān Dāwūd Mandīl, respectively. A critical edition, prepared by Yūsuf Fadl Hasan, was published in Khartoum in 1971 (?1974). It contains 270 biographical notices, predominantly of Ṣūfī *shaykh*s (mainly from the Kādīriyya *ṭarīqa*) and jurists, chiefly of the Mālikī *madhhab*. There are a few notices of persons holding formal appointments, and a small number of legendary saints are included. No full English translation has been made, but an annotated summary translation with excerpts from the Arabic text is given by MacMichael, *op. cit.*, ii, 217-323. The text and translation of three notices appear in S. Hillelson, *Sudan Arabic texts*, Cambridge 1935, 172-203. One family of holy men is studied in Holt, *The Sons of Jābir and their kin*, in *BSOAS*, xxx/1 (1967), 142-58.

The roles of charismatic holy man and Islamic reformer were momentarily fused in Muḥammad (Aḥmad) b. 'Abd Allāh, the Sudanese Mahdī [see AL-MAHDIYYA], a hagiography of whom was written by Ismā'īl b. 'Abd al-Kādir al-Kurdufānī (perhaps his court chronicler), and entitled *Kitāb Sa'ādāt al-mustahdī bi-sīrat al-Imām al-Mahdī*. The unique extant copy of this and its sequel, *al-Tirāz al-mankūsh bi-bushrā kall Yuḥannā malik al-Ḥubūsh*, describing the war between the Mahdists and the Ethiopians in 1889, is now in the

Sudan Archive (Box 99/6) of Durham University. The former was edited by Muḥammad Ibrāhīm Abū Salīm and published under its own title at Beirut in 1972; an English summary translation with a useful introduction was published by Haim Shaked, *The life of the Sudanese Mahdī*, New Brunswick, N.J. 1978. An edition of *al-Tirāz* was published by Abū Salīm and Muḥammad Sa'īd al-Kaddāl as *al-Ḥarb al-Ḥabashīyya al-Sūdāniyya 1885-1888* [sic], Khartoum 1972.

The establishment of the Anglo-Egyptian Condominium in 1899 was followed by the development of westernised education. This, continuing under independence, has produced a growing number of professional historians, among their pioneers the late Professor Makki Shubayka (see above), and an increasing body of scholarly historical writing in Arabic and English. A link between the old and new types of historians was Muḥammad 'Abd al-Raḥīm (b. 1878, d. after 1935), the self-styled *mu'arrikh al-Sūdān*, whose writings of historical, literary and political import, include *Nafathāt al-yarā' fi 'l-adab wa 'l-tarīkh wa 'l-iqtimā'*, Khartoum n.d.

## THAṬṬĀ.

### 2. Monuments.

Over the centuries Ṭhaṭṭā has endured invasions, destruction as well as the fluctuations of the Indus river bed. This is reflected in the chequered history of its monuments. Two early mausoleums of saints remain in the most western part of the city by what was once an enlarged part of the river bed. Presumably after the sack of the town by the Portuguese in 1555, boats were built in that area under Akbar. Two *maḥallas* formed the western part of the town and in the northern part stood the *masjīd* Walī-i-Ni'mat, which appears to have been used as the *Djāmi' masjīd* before a new structure was ordered by Shāhjahān. The Shāhī bazaar was the link to the later eastern half of the town. This is a slightly depressed area which could have been the site of a Mughal irrigation channel. In the north-eastern *maḥalla*, Dabgīrān, the wooden box makers' area, now outside the town, there remains part of the Dabgīr mosque ordered by Khusrāu Khān Čarkas in 966/1588. Its measurements are about 25 m by 11 m and the brick building, similar to other important constructions, stands on a stone base. The prayer hall, akin to that of a Lōdī mosque, is still extant with the remains of an octagonal drum

and squinches from the collapsed central dome. Two lower lateral domes cover the rest of the area. Panels of glazed square tiles with vegetal designs in blues, white and yellow still remain on some areas of the building. Part of the visible *saḥn* is paved with flat stones.

The Khirzī mosque standing in the Shāhī bazaar dates from 1022/1613 and was built by 'Abd al-Razzāq Muẓaffar Khān prior to his governorship of Ṭhaṭṭā. A small domed entrance leads to the *saḥn*; each side of the prayer chamber measures 16 m. Some of the tilework remains in place. The square Amīr Muḥammad Khān mosque (1039/1629) with slightly tapered walls, each side measuring 17 m, consists of an entrance portal, a dome on squinches and a square hall. The flower tile decoration on the dado is akin to Mughal flower designs. Other tiles follow Sindhi geometric patterns.

Persian inscriptions give several dates for the building and repairs of the *Djāmi' masjīd*: start 1053/1644, completion 1056/1648, stone paving 1068/1657, first repairs in 1104/1692. During the substantial restoration of the 1970s, the area around the mosque was cleared to make way for a *ṣāḥr-bāgh*. The mosque was ordered by Shāhjahān, and is built along an east-west axis. It follows the Saljūq four-*iwān* plan used in India since the 9th/15th century; cf. the Afālā mosque in Djawnpūr (810/1408). The overall size is 93 m by 52 m. The main dome rising from a drum of sixteen panels covers the square prayer hall. Two lesser domed chambers at the main entrance lead into the *saḥn*, with smaller ones over each lateral entrance in the middle of the side *nivāks*, while its arcades are covered with a series of small domes. There is no minaret. Although the restored glazed tiles on an earthen body look rather crude, the general impact is still effective, with dense geometric patterns including stars and floral designs. The colours include light and dark blue, white and yellow. Here the continuation of the tradition tilework of Multān, Učēh and the tombs of the Maklī Hills, is beset with the same technical problems of loose glazing encountered in earlier times.

(VOLANDE CROWE)

**ṬIBBIYYE-I 'ADLIYYE-I SHĀHĀNE**, the Ottoman Imperial Medical School of Mahmūd II (r. 1223-55/1808-39 [q.v.]), opened in 1254/1838, in the renovated Ḡhalata-Sarāyī [q.v.]. It was a reorganisation of the *Ṭibbkhāne-i 'Amīre*, a medical school founded at Istanbul in 1827. The official opening day of the original *Ṭibbkhāne* was 14 March 1827, adopted by the medical community of the Turkish Republic as Medicine Day (Tıp Bayramı), to celebrate modern medicine. In the *Ṭibbiyye-i 'Adliyye-i Shāhāne*—as in the original *Ṭibbkhāne-i 'Amīre*—European and Ottoman doctors taught modern Western medicine, not the traditional Muslim medicine based still on the humouralistic system from Antiquity.

During the 19th century, medicine in the Middle East underwent profound changes. European medicine was introduced on a much larger scale, and many European texts were translated into Muslim languages. Translations by 'Atā' Allāh Muḥammad Shānīzāde (d. 1826 [q.v.]) were especially important in this regard. The aim of these reforms was to improve the health of the armed forces as the measures in the medical realm were part of military modernisation. Thus medical schools, shaped according to the Western model, and at which French, Italian,

Fig. 1. *Dilmir masjid*, cross section of the *mihrab* domed hall, from Plate I in H. Cousens, *Sindh tiles*, 1906.

Fig. 2. *Djāmi' masjid*, part of a tile panel, from Plate 2 in H. Cousens, *Sindh tiles*, 1906.

Austrian and German professors taught European medicine in French, were founded in all major capitals of the Middle East during the first half of the 19th century. Muḥammad 'Alī Pāshā [q.v.] established the first one in 1827 near Cairo, followed only a month later by Mahmūd II's military medical school in Istanbul. The third, another military medical school, was included in the *Dār al-Funūn*, a polytechnic school founded in Tehran in 1850-1.

The changes in medicine in the Ottoman Empire during Mahmūd II's reign were part of a wide range of reforming measures. Under his rule, government functions proliferated well beyond the traditional realms of administering justice, collecting taxes and maintaining the armed forces. Matters that had traditionally been left to private hands gradually came under government administration. The final aim was to create a new generation of able administrators. Two methods were employed to achieve this. First, Ottoman students were sent to universities in Europe to acquire a profession in selected valued fields; second, new schools were established and given precedence over the traditional Muslim *madrasas*. One of them was the *Tıbbiyye-i 'Adliyye-i Shāhāne*. The many documents and letters produced by the Ottoman bureaucracy dealing with salaries and hiring, teaching aids brought over from Europe, the school's physical setting, etc., reflect the close attention of the central government to this school. Even everyday matters and decisions were not left to the discretion of the school administration.

The curriculum at the *Tıbbiyye-i 'Adliyye-i Shāhāne*, where the language of instruction was French, was decidedly Western. Teaching aids pertaining to medical instruction were imported from Europe. In this it parted ways from the traditional medical schools in the Ottoman Empire. The few of these that existed, for example at the Süleymāniyye complex, reproduced Arab-Muslim medicine based still to a large extent on interpretations of, and additions to, mediaeval Muslim texts. In contrast, the four-year course at the *Tıbbiyye-i 'Adliyye-i Shāhāne* followed a syllabus combining general and medical subjects. The general syllabus included languages (Arabic and Turkish, but also French and Latin). French was mandatory in order to help the students communicate with the teachers, many of whom were Europeans. There was another reason for the French classes. As the sultan explained in his opening address, the first graduates of the medical school were to master French in order to be able to translate the much-needed European medical texts into Ottoman Turkish. Other non-medical subjects included arithmetic and geometry, drawing, geography, history and zoology. The general curriculum was taught by Ottoman Muslim teachers. Medical studies, taught mainly by non-Muslim and non-Ottoman teachers, comprised anatomy, dissection, pathology, chemistry, botany and pharmacology, diagnostics, ophthalmology and medical devices.

Despite the pronounced French influence, the school was the product of the close relationship at the time between the Ottoman and Habsburg empires. Dr. Karl Ambros Bernard, a medical doctor and surgeon and a graduate of the Vienna medical faculty, was brought in 1838 from the Austrian capital at the instigation of Abdūlhak Efendi, the *hekimbaşı* (Ottoman head physician [q.v.]), to found the school. Dr. Bernard served as its first manager till his death at the early age of 38 in 1844. His widow and family were granted a stipend by the empire as a sign of respect to the man and his services to Ottoman medical education. Dr. Bernard was not the only example. Other Austrians

teaching at the school were Dr. Neuner and Dr. Riegler, and in the 1840s an Austrian midwife was given a contract to teach gynaecology and obstetrics at the school.

The student body comprised mainly Muslims but also included Christians. Their numbers fluctuated from around 200 at the beginning to over 400 by the end of the 1840s. Similarly, the teaching cadre rose from fewer than ten in the 1830s to several dozen a decade later. The *Tıbbiyye-i 'Adliyye-i Shāhāne* functioned in Ğhalaṭa for ten years; a fire in August 1848 then obliged the medical school to move to the Golden Horn.

**TONGUÇ**, İSMAIL HAKKI (1893-1960), Turkish educator.

He was born, the son of a peasant family, in Tataratmaca village, Silistre. He attended Kastamonu Teachers' College and later the Istanbul Teachers' College, graduating in 1918. He continued his educational career at the Karlsruhe State Academy for the Graphic Arts and Ettingen Teachers' College in Germany during 1918-19 and 1921-2. After returning to Turkey, İsmail Hakkı worked in several schools both in administrative posts and as a teacher of painting, handicrafts and physical education. In 1935, he was appointed Director General of Primary Education in the Ministry of Education where he had been working as the Director of School Museums since 1926. The fame of İsmail Hakkı rests basically on his views concerning the educational problems of village children in the early Republican period, which found concrete expression in the project of Village Institutes [see KÖY ENSTİTÜLERİ], his major achievement. Being the brain behind the Institute, he played a leading role during their establishment and development. Forced into resigning office in 1946, because of an extensive campaign attacking the Institutes, he was first appointed a member of the *Talim ve Terbiye Kurulu* (Instruction and Training Board) and later in 1949 a teacher at the Atatürk Lycée, where he worked until the Ministry's decision to remove him in 1950. İsmail Hakkı retired, following the annulment of the decision by the Council of State in 1954, and died in Ankara on 23 June 1960.

Throughout his career as an educator, İsmail Hakkı wrote several books and articles. In most of his works, he elaborated the educational problems from theoretical and practical perspectives and stressed the significance of vocational training in the developmental process.

(AYLİN ÖZMAN)

**TUGHDJ** b. **DJUFF** b. Baltakīn (or Yaltakīn) (b. Furān) b. Fūrī b. **Khakān**, military commander of Farghānan origin, d. at Baghdād in 310/922-3. His father had left Farghāna to serve as an officer in the caliph al-Mu'ta'im's army, also serving his successors al-Wāthik and al-Mutawakkil. **Djuff**, said to have received *kaṭā'ī* at Sāmarrā, died in 247/861 on the same night that al-Mutawakkil was assassinated.

**Tughdj** left 'Irāk at the *ghulām* Lu'lu's invitation to enter the service of Aḥmad b. Tūlūn [q.v.], the governor of Fustāt-Miṣr, in 254/868. He is said to have acted as governor of Egypt, Diyār Miṣr, for the latter or, according to a variant reading, of Diyār Muḥar. According to Ibn **Khallikān**, he allegedly recognised the governor of the **Djazīra**, **Ishāk** b. Kundādī, set there by al-Muwaffaq to uphold the 'Abbāsīd cause against Ibn Tūlūn, but **Ishāk** later rallied to the latter. At all events, **Tughdj**, after placing himself at Ibn Tūlūn's service, must have returned once more to 'Irāk since his son Muḥammad, the future **Ikhshīd** [see MUHAMMAD B. TUGHDJ] was born at Baghdād, in the Bāb Kūfa street, in mid-Radjab 268/January 882.

According to Ibn 'Asākīr, Abu 'l-Djaysḥ **Khumārawayh** [q.v.] nominated **Tughdj** governor of Damascus after the death of his father Ibn Tūlūn in 269/882, a post in which **Khumārawayh**'s two sons and successors, **Djaysḥ** (d. 283/896) and then **Hārūn** (d. 292/904-5), confirmed him. He was apparently governor during the whole of al-Mu'ta'id's caliphate (279-89/892-902) and at the beginning of the next reign, that of al-Muktafi. According to Ibn Sa'īd al-Andalusī, he was also governor of Tiberias, in which his son Muḥammad acted as deputy. An 'Alid, one Abu 'l-Tayyib Lahhā Muḥammad b. Ḥamza, who enjoyed great authority in Tiberias, was executed on Hārūn b. **Khumārawayh**'s orders for collusion with the Carmathians (see M. Gil, *A history of Palestine 634-1099*, Cambridge 1992, §§ 467, 473, 487). According to Ibn 'Adīm, **Tughdj** had previously for long acted as governor of Aleppo for **Khumārawayh**.

In 279/892-3, state al-Ṭabarī and Ibn al-Athīr, **Tughdj** led at Aleppo, acting for **Khumārawayh**, an expedition involving 'Abbāsīd and Tūlūnīd generals in the **Djazīra** and northern Syria, and in 281/894, a summer plunder raid deep into Byzantine Anatolia.

In 283/896, a group of Tūlūnīd *ghulāms*, having failed in a revolt against the incompetent buffoon **Djaysḥ** b. **Khumārawayh**, sought *amān* in Baghdād. One of the fugitives was Badr b. **Djuff**, but his brother **Tughdj** remained in his post as governor of Damascus, nevertheless showing more and more autonomy from Fustāt-Miṣr. Certain sources allege that, at the beginning of Hārūn's reign, Badr b. 'Abd Allāh al-Ḥammāmī was sent from Miṣr with an army and compelled **Tughdj** temporarily to evacuate Damascus. At all events, he was still governor in 289/902 when he had to face the Carmathian revolt in Syria; an army under **Bashīr** which he sent against Ibn Zakrawayh was wiped out and he himself besieged in Damascus, losing a large number of troops [see KALB B. WABARA]. The Tūlūnīds' incapacity, faced with the Carmathians, led to the 'Abbāsīds deciding to resume direct control in Syria and Egypt.

On the fall of the Tūlūnīds in 292/905, **Tughdj**

left Damascus, with other commanders, to submit to the new 'Abbāsīd authorities in Miṣr, who sent them back as a garrison in the *ḡund* of **Ḳinnasrīn**. He later returned to Baghdād where, according to Ibn **Khallikān**, he died in prison.

He left six sons, as well as Muḥammad, the future **Ikhshīd**, and at least one daughter who, in 326/938 married the son of the grand Amīr Ibn Rā'ik [q.v.], at the same time as the vizier Abu 'l-Faql's [q.v.] son married Ibn Rā'ik's daughter (al-Ḥamdānī, *Dhayl Ta'rīkh al-Ṭabarī*, ed. M. Abu 'l-Faql Ibrāhīm, Cairo 1977, 314).

**Tughdj** was known for his passion for perfumes; when travelling, he had in his train fifty camels loaded with perfumes [sic]. He is said to have built at Damascus a cupola with latticework, forming a giant censer, from which he had wafted the aroma of perfumes for all the population of the city. Even if these accounts are clearly exaggerated, they do show how the standard of living in the Syrian-Egyptian lands, at the end of the 3rd/9th and beginning of the 4th/10th centuries, had risen, allowing the élites to enjoy a significant amount of luxury goods (see also Ibn Sa'īd, *al-Mughrib*, 154-5).

*Bibliography:* Many sources have information on **Tughdj**, often contradictory. For the present article, the following only have been used: **Ṭabarī**, iii, index; Ibn 'Asākīr, *Tahdhīb*, vii, 57; 'Azīmī, *T. Ḥalab*, ed. Zaghrūr, 283; Ibn al-'Adīm, *Ṣubḥa*, ed. Dahhān, i, index; idem, *Bughya*, ed. Zakkār, ii, ix, index; Ibn **Khallikān**, ed. 'Abbās, v, 56-7; Ibn al-Athīr, vii, index; R. Guest, *The governors and judges of Egypt*, Leiden 1912, index. The richest, but not always the most reliable, source is Ibn Sa'īd al-Andalusī, *al-Mughrib fī ḥulā al-Maghrib*, ed. Zakī Muḥammad Ḥasan *et alii*, Cairo 1954, index. See also J. Bacharach, *The career of Muhammad b. Tughdj al-Ikhshīd . . .*, in *Speculum*, 1 (1975), 586-612.

(TH. BIANQUIS)

## TURKS.

### II. LANGUAGES.

(vi) Turkic languages in non-Arabic and non-Latin scripts.

During their history of over fifteen centuries Turkic peoples interacted with peoples and cultures of three continents. As a result of this process they became acquainted with many writing systems, used in various regions between Central Asia and Europe. The historical scene of the emergence of the first written and literary languages of Turkic peoples is Inner Asia, the territory of modern Mongolia, the Tarim Basin (in Sinkiang) and Kansu. The first epigraphic monuments written in a Turkic idiom belong to the Orkhon Turks (A.D. 552-744) and Uyghurs (744-840), who created empires in the steppe region. These monuments are written in the so-called runic or runiform script. After the collapse of their empire, the Uyghurs left the steppes and moved to the Tarim Basin and Kansu, founding the Kingdom of Kočo (866-1124) and Kan-tsu (880-1028), both becoming centres of the Uyghur culture and offering in abundance written documents mainly of religious (Manichaeen, Buddhist and Nestorian) content. These monuments are written in Sogdian, Manichaeen, Uyghur, and Nestorian scripts (all of Semitic origin), in Brāhmī script (of Indian origin) and in Tibetan script (in the case of the latter, also in its variant, the Phags-pa script).

#### 1. *The Khazar and Karaim languages*

Judaism and Jewish culture played an important role in the **Khazar** empire [see **KHAZARS**] in the region of the Black and Caspian Seas (7th-11th centuries).

Therefore it is very probable that the Hebrew script was in use by this Turkish people, although, unfortunately, no written documents have survived.

The Hebrew script was adopted later by the Karaim, of Jewish religion, living originally in the Crimea [see KARAITES]. A large part of this people migrated, probably before the 14th century, to the western Ukraine and Lithuania. They lived there until the end of the Second World War, when they moved to Poland. The rich written culture of the Karaim is represented by many manuscripts and printed works. Today, the Karaim language is an especially endangered language; some dialects of it can be considered as extinct.

The generally suggested, supposed historical continuity between the Khazars and the Karaim remains unproven.

### 2. *The Armenian-Kîpçak language*

After the collapse of the Armenian Asa empire in the middle of the 11th century, Armenians moved to the Crimea, and later to the western Ukraine. As a result of intensive contact with the Kîpçak Turks, they adopted their language for purposes of administration and religious practice, keeping their original Armenian language for secular life. These documents, which have come down to us from between the 16th and 17th centuries, are written in Armenian script.

### 3. *The Armenian-Ottoman language*

After the Turkicisation of Asia Minor, Armenians living in different provinces of Anatolia seem very soon to have become bilingual. Turcophone Armenians created their own Turkish literature in the so-called Armeno-Turkish language, written in Armenian script. As a result of this activity, a large body of literature (original works, translations, inscriptions, later also journals) was created. This written documentation, which is especially rich from the 17th century onwards, can be traced back until the 14th century.

### 4. *The Greek alphabet used in the Ottoman Empire for Turkish*

The Orthodox Christian Karamans (Turkish *Karâmânîlar*), living in northeastern Anatolia until the Greek-Turkish population exchanges of 1924, created a special literature, the products of which were written in Greek script. The history of this well-documented group of monuments can be traced back to the 16th century. It is obvious that these products (at the outset, works of a religious and historical content, later also journals and newspapers, etc.) written in the so-called Karaman (*Karâmânî*) language (in fact, in a special dialect of Ottoman Turkish), were also used by the bilingual Greeks living in other regions, especially in the Ottoman capital. Many written texts in the Turkish language but Greek alphabet have also come down to us from this large ethnic and religious group of the empire.

### 5. *Other alphabets used in the Ottoman Empire for Turkish*

The Syriac script was used for Turkish by a small Christian community. These texts, mainly preserved in the University Library of Bonn, were destroyed during the Second World War.

At the same time, the Hebrew alphabet was also used by the Jewish community for Turkish, the best-known surviving example being a copy of an Ottoman chronicle in this script.

The Institute of Manuscripts of the Georgian Academy of Sciences in Tbilisi has a large collection of Ottoman Turkish texts written in the Georgian alphabet. Unfortunately, we do not possess any survey of or study on this precious material, so that neither its quantity nor its character and chronology are

so far known. Scholars agree, however, that a systematic analysis of these materials could throw interesting light on the history of the Ottoman Turkish language in this region of the empire.

The Cyrillic alphabet was used in the Balkans for Turkish by intellectuals interested in the official language of the empire. We possess a few manuscripts and printed books, mainly from the 19th century.

### 6. *Other Turkic languages written in Cyrillic script*

Turkic peoples living in Eastern Europe and Siberia (Chuvash, a part of the Volga Tatars, Yakuts, Turkic peoples in the Altai Region, etc.), due to the Russian colonial expansion from the 18th century onwards, experienced Russian missionary activities, and thereby an acquaintance with the Cyrillic alphabet. All other Turkic peoples living in the former Soviet Union adopted the Cyrillic script in the second phase of the Soviet writing reform (1939-40), after a very short period of using the Latin script, introduced to these peoples between 1922 and 1930 as a replacement for the Arabic alphabet.

The collapse of the Soviet Union in 1991 created a new situation for rethinking the language and script policies of the former imperial power. In the sometimes heated discussions, all possible solutions found their supporters (keeping the Cyrillic script; reintroduction of the Latin, or even of the Arabic alphabets). In the course of the 1990s, Azerbaijan, Turkmenistan and Uzbekistan have reintroduced the Latin alphabet with some special signs. In these countries, a transition period, in which both Latin and Cyrillic scripts may be used, has been allowed. Efforts to create a Latin alphabet on a common theoretical and practical basis for all Turkic peoples have until now had no results.

(G. HAZAI)

### III. LITERATURE.

#### 6. (m) Turkish literature in Muslim India.

The constant stream of Turkish migrants started pouring on to Indian soil from the 5th/11th century onwards, but hardly anything is known of the role Turkish language played in the Ghaznawid, Ghūrid and Sultanate periods. Turkish seems to have been used mainly as a medium of communication in the army, but also in court circles (see Amīr Khusrav Dihlawī, *Nuh sipīhr*, ed. Muhammad Wahid Mirza, Oxford 1950, 173). The hitherto unearthed sole remnants of Turkish from this period are the Turkish words contained in a Persian dictionary, the *Farhang-i zafān-gūyā wa dīhān pūyā* (see R. Dankoff, *The Turkish vocabulary of the Farhang-i zafān-gūyā*, Bloomington 1987).

The Tīmūrid conquest and then the establishment of the Mughal dynasty altogether changed this situation. The Tīmūrids and their Turkish military élite arrived in India with a cultural legacy that included support for and cultivation of a Turko-Persian literary tradition which was in a sense founded and elaborated by the activities of ‘Alī Shīr Nawā’ī [q.v.]. Tīmūrids in India remained true to their Central Asian Turkish legacy till the 19th century, and it was a custom for Mughal princes to be trained in Turkish as well as in the other great Islamic languages. The last member of the family whose skills in Turkish grammar, lexicography and poetry were well known in Hindūstān was Mīrzā ‘Alī-bakht Gurgānī “Azfarī” [q.v.].

Tīmūrid and thus also Mughal rulers and princes were not only passive patrons of culture but also played an active role in literary life (see Muḥammad Khālīdī, *Gulīstān-i Tīmūri*, Lakhnaw 1973). Quite a few of them displayed outstanding literary skills but only some of them are known to have contributed to Turkish literary output in India. Except for the first generation of Indian Tīmūrids, the sources do not yield much information on possible Turkish works by members of the royal family. The Turkish oeuvre of Bābur [q.v.] is, of course, well known, and some Turkish lines by Humāyūn [q.v.] and a full *diwān* by Kāmārān [q.v.] have been preserved. Due to the ruler’s political aims and policies, Turkish seems to have been pushed into the background in court circles during the reign of Akbar [q.v.]. Nevertheless, later rulers seem to have been able at least to appreciate Turkish poetry, as was the case with Shāh ‘Ālam II (1760-88, 1788-1806; see Azfarī, *Wākīāt-i Azjarī*, ed. T. Chandrashekhara, Madras 1957, 17). Turkish manuscripts copied in India indicate that Nawā’ī was the most often read author, but contemporary sources remain silent on these rulers’ literary activities in Turkish.

The benefits which the Mughal empire could offer in its heyday attracted many immigrants from the neighbouring lands. Soldiers, poets and scholars flocked to Hindūstān to try their luck by entering imperial service or by being employed at one of the numerous noble courts. Many of these came from regions inhabited by Turkish peoples. Though contemporary sources do not devote much space to achievements in Turkish, their references being random, it is still possible to draw a fairly detailed picture of those persons who cultivated Turkish.

The brother of the historian Bāyazīd Bayāt, Shāh-

berdī, writing under the pseudonym Sakkā Āghatay (d. ca. 1558) composed poetry in Turkish. Mīr Muḥammad, the brother-in-law of Akbar’s wet-nurse, Dīdjī-anāgā, was a renowned art lover who not only supported poets but also composed verses both in Persian and Turkish under the *takhalluṣ* “Ghaznawī”. He is supposed to have written a great number of poems, but nothing has so far been found from his oeuvre. Well known is the poetic achievement of the Turkmen statesman Bayrām Khān [q.v.], whose Persian and Turkish *diwān* has been published. His son, ‘Abd al-Rahīm Khān, Khān-i Khānān [q.v.], following his father’s footsteps, acted as both a generous patron of outstanding literary talents and a dedicated poet who was able to compose poetry in several languages including various dialects of Turkish. The *mushā’iras* [q.v.], meetings of poets organised at his court, were attended by poets who excelled in Turkish poetry as well. Reference should be made here to Kalb-i ‘Alī, a Turkmen from the Bahārū tribe, Siyānī Hamadānī, or the Aleppo-born Turkish poet Darwīsh Mithlī. Though their complete poetical works do not seem to have survived, a few of their couplets in Turkish are preserved in our sources.

One of the most honoured poets of the 17th century, Mīrzā Sa’īb Tabrīzī [q.v.] who received the title of *malik al-shu’arā* or laureate from Shāh ‘Abbās II, was also attracted to the Mughal court. He is famous for his Persian poetry that set a trend which was followed even in Ottoman Turkey, but one should not forget that he was an equally gifted poet in Turkish. This side of his poetic talent almost faded into oblivion because only a handful of the manuscripts of his Persian *diwān* contain Turkish pieces. At some point during the reign of Awrangzīb, there migrated to Hindūstān Ḥusayn Farīdūn Iṣfahānī, whose Persian *diwān* has preserved a couple of Turkish lines as well. Dīwālī Singh (d. 1896) a well-known poet and a great stylist in Persian, became famous under his *takhalluṣ* “Kaṭīl”. Following the practice of members of the Mughal élite in the 17th-18th centuries, he also learnt Turkish and wrote two short stories in this tongue. His famous work on Persian style titled *Ār shārbat* contains a sketchy Turkish grammar explained in Persian.

In a multi-ethnic society like India, it is not considered an extraordinary feat if someone learns several languages, but even in such an environment the achievements of Inshā-allāh Khān “Inshā” [q.v.] earned him fame. Born to a family of Turkish immigrants from Nadjaf, he not only spoke Arabic, Persian, Urdu, Kashmīrī, Purbi, Paṣhto and Turkish but was also able to compose poetry in these tongues. His Turkish output consists of a couple of *kaṣīdas*, *mukhāmmas*, a few *bayts* in his *Shikār-nāma* and a prose diary entitled *Turkī rūznāmīa*. One of his most intimate friends and father poet was Sa’ādat-yār Khān “Rangīn” [q.v.], whose father Tahmāsp Beg Khān I’tikād-Dījang arrived in India with the army of Nādir Shāh and later wrote his memoirs, the *Ahmad-nāma*. Rangīn spent most of his life in Lucknow in the service of Mīrzā Sulaymān-Shukūh. His works in Turkish includes a Turkish-Urdu vocabulary titled *Nisāb-i turkī* and a few Turkish lines in his *Maḍmū’a-yi Rangīn*.

It should be noted, however, that contemporary chronicles and *taḍkhīras* are full of references to poets of Turkish origin whose literary achievements in their mother-tongue have not yet come to light. There is further the fact that libraries, mainly throughout the former British Indian Empire, preserve manuscripts written in or on Turkish whose authors are either

not mentioned in historical sources or literary anthologies, or even when contemporary records provide some information on them, their knowledge of Turkish is not mentioned. One should mention here Kaḫlan Beg, Yolḫulı Beg “Anīsī” Shāmlū, Mullā Shayḏā’ī Tekkelū, Ustād Mirzā ‘Alī Kıpçākī and also Pīr Muḫammad “Aghar Khān” an Uzbek from the Aghar tribe who distinguished himself in the wars of Awrangzīb’s reign. He composed verses filling a full *dīvān* that is preserved in an Indian institution, but contemporary sources remain silent on his contribution to Indo-Turkish literature.

Beside being a medium for artistic expression Turkish was also used for more mundane purposes in Mughal India up to the 19th century, as a language quite common in court circles, in the army and in diplomatic correspondence, mainly with Russia and the Ottoman Empire.

AL-ṬŪSĪ, ‘ALĀ’ AL-DĪN ‘ALĪ b. Muḫammad, important religious scholar of the 9th/15th century. He grew up in Iran (in Samarkand, according to al-Suyūṭī [q.v.]), where he also finished his studies. During the reign of the Ottoman Sultan Murād II [q.v.] (probably in the second phase of his rule, i.e. between 850/1446 and 855/1451), he came to Anatolia and was appointed as a teacher at the *madrasa al-sultāniyya* in Burṣa [q.v.]. After the conquest of Constantinople in 1453, Meḫmed II [q.v.] assigned him to a professorship, first in Istanbul, afterwards in Edirne [q.v.]. It was around this time that the contest between al-Ṭūsī and Khodja-zāde [q.v.] took place. Both had been summoned by the sultan to compose a work of advice on the famous discussion between al-Ghazālī [q.v.] and the philosophers. A jury classified al-Ṭūsī’s treatise as the one of lesser interest. As a consequence, he renounced his academic post in Edirne and returned, via Tabriz [q.v.], to Samarkand. He is said to have returned there to live as a Šūfī, allegedly under the guidance of ‘Ubayd Allāh Aḫrār [see AḫRĀR, KH’ĀDJA ‘UBAYD ALLĀH, in Suppl.]. He is reported to have died in Samarkand in 877/1472 (according to al-Suyūṭī) or in 887/1482 (according to

Ṭāshköprüzāde and Hādjdjī Khālifa [q.v.]).

Notwithstanding the above-mentioned failure, recorded in several sources, al-Ṭūsī was able to compose a considerable number of scientific works. As was the case with many scholars of the 9th/15th century, al-Ṭūsī’s writings deal with the various disciplines that were taught at the *madrasa* [q.v.]. His works can be divided into the following categories:

*Kur’ān exegesis:* superglosses on the glosses of al-Djurdjānī [q.v.] on the *al-Kašhāf* of al-Zamakhsharī [q.v.];

*Fikh:* glosses on the commentary of al-Taftāzānī [q.v.] on al-Maḥbūbī’s *Tawḏīḥ*, and also glosses on the commentary of al-Īdjī [q.v.] on the *Mukhtaṣar muntahā al-su’āl* of Ibn al-Hādhib [q.v.];

*Kalām:* glosses on al-Djurdjānī’s commentary on al-Īdjī’s *al-Mawākif* as well as on al-Djurdjānī’s commentary on al-Īdjī’s *al-Aḫā’id*;

*Logic and philosophy:* superglosses on al-Djurdjānī’s glosses on Kaṭṭāb al-Dīn al-Taḫṭānī’s commentary on Sirāḏj al-Dīn al-Urmawī’s *Maḏālī’ al-anwār fi ‘l-mantiq*, as well as the above-mentioned treatise on the discussion between al-Ghazālī and the philosophers, which has become known under the title *al-Dhakhīra (fi ‘l-muḥākama bayna al-Ghazālī wa ‘l-ḫukamā)*.

Several of these texts have survived in manuscript (see Brockelmann, II<sup>2</sup>, 261-2, S II 279, 292a). So far, however, only the *Dhakhīra* has appeared in print (Ḥaydarābād 1899; recently also under the title *Tahāfut al-falāsifa*, ed. R. Sa’āda, Beirut 1990; cf. the Turkish translation by R. Duran, Ankara 1990). The work shows that al-Ṭūsī, following al-Ghazālī, tried to combine classical doctrines of Sunnī theology with philosophical concepts. Among other things, he underlines that the rules of logic and the results of mathematics and astronomy are incontestable; should the statements of revelation be in contradiction with them, they must be interpreted allegorically. In the doctrine on the soul, too, al-Ṭūsī is a representative of philosophical notions (the soul lives on after death; spiritual enjoyments have precedence over physical pleasures, in both this world and the hereafter). In the question of causality, on the contrary, he insists that the occasionalistic theory of the early Ash’arī theologians is correct.

(U. RUDOLPH)

## U

'UBAYD ALLĀH SULTĀN KHĀN, ruler in Transoxania of the Uzbeks or Özbegs [*q.v.*] 940-6/1533-9.

He was the son of Maḥmūd Sultān, son of Shāh-Būdāgh, son of the founder of the Uzbek confederacy, Abu 'l-Khayr Khān, a descendant of Čingiz Khān's grandson Shībān (hence the epithet "Shībānī," or "Shaybānī" [see SHĪBĀNĪDS]). During his youth, 'Ubayd Allāh accompanied his uncle Muḥammad Shībānī Khān (r. 905-16/1500-10) on his sweeping victories over the Timūrids throughout Central Asia and Khurāsān in order to re-establish Čingizid rule in the area. On 7 Muḥarram 913/19 May 1507 the Uzbek forces under 'Ubayd Allāh and Temūr Sultān defeated the Timūrids outside Harāt. As a victory prize, 'Ubayd Allāh was given in marriage Mihrangiz Begim, a daughter of Muẓaffar-Ḥusayn Mirzā, who shared the throne of Harāt with his brother Badī' al-Zamān Mirzā after the death of their father, Sultān-Ḥusayn Mirzā, in 912/1506. With the consolidation of his rule over Khurāsān and Central Asia, Muḥammad Shībānī Khān appointed 'Ubayd Allāh as governor of Bukhārā.

In Radjab 917/October 1511, Bābur [*q.v.*] re-occupied Samarqand, his ancestral capital, with the help of the Šafawid Shāh Ismā'il I [*q.v.*]. The Uzbeks were not slow to retaliate, and in Šafar 918/April 1512 Bābur launched an ill-prepared attack on the Uzbeks under 'Ubayd Allāh at Kōl-i Malik near Bukhārā, and although Bābur had been winning, suddenly "through the machinations of heaven, the evil eye struck" and Bābur lost. After the battle he left Transoxania forever. On 3 Ramaḍān 918/12 November 1512, 'Ubayd Allāh defeated the Šafawid general Nadjim-i Thānī (Amīr Yār-Aḥmad Isfahānī) at the Battle of Gizhduvan (Ghudjduwān). The next winter, Shāh Ismā'il returned to western Persia to deal with incursions by the Ottoman Sultan Selīm I, and Kāsim Khān of the Kīrghīz-Kazakhs returned to Siberia to tend to his realm, leaving the Uzbeks a free hand in Central Asia. That winter 'Ubayd Allāh took Hissar, to the north of the upper Oxus, from the Moghuls. In 920/1514 the Uzbeks headed for Andīzhān, where the Moghul Sultān-Sa'īd Khān was. Since by then Bābur had withdrawn to Kābul, the khān went to Kāshghar, leaving Hissar to fall to the Uzbeks.

'Ubayd Allāh became the khān of the Shībānids in 940/1533, although, as Mirzā Ḥaydar reports, "from the year 911 [1505] until the end of the reign of the latter khāns, it was really he who had conducted the affairs of the Shībānids, and had he accepted to be khān, no-one would really have opposed him; nonetheless, he maintained the ancient custom and let the office of khān be given to whoever was the eldest—until after Abū Sa'īd Khān, when there was no one older than him" (*Tārīkh-i-Rashīdī*, 181-2). During his ascendancy, six advances were made against Khurāsān. In 930/1523 there was an abortive siege of Harāt. In 932/1525 Mashhad was taken, and 'Ubayd Allāh proceeded to Astarābād and drove the governor out. Astarābād was given to 'Ubayd Allāh's son 'Abd al-'Azīz, but he could not hold out against

Šafawid reinforcements and had finally to abandon the territory. When the Uzbeks advanced on Khurāsān the third time, they clashed with the Šafawid army at Saru Kamīsh near Djam on 10 Muḥarram 935/24 September 1528, and although the battle was going badly against the Šafawids, they managed to turn it into a resounding defeat of the Uzbeks. An eyewitness account of this battle is included in Bābur's memoirs (*Bābur-nāma*, fol. 354), where it is incorrectly recorded that 'Ubayd Allāh was killed. The fifth invasion of Khurāsān was launched in 937/1530-1, but the Uzbeks again pulled out when Shāh Tahmāsp I advanced on them and entered Harāt on 22 Djumādā II 939/19 January 1533. The sixth and last invasion was made in 942/1535, when the Uzbeks again took Mashhad. Harāt was evacuated by the Uzbeks in Shābān 943/January 1537 and re-occupied by the Šafawids under the command of Khudābanda and Muḥammad Khān Sharaf al-Dīn-oghlu Takālu.

In 945/1538-9, 'Ubayd Allāh's forces occupied Khwārazm, but subsequently they were dealt a crushing defeat by Dīm-Muḥammad Khān, another Čingizid descendant with whom Shāh Tahmāsp had formed an alliance and to whom he had given the territory of Nasā and Abīward. Returning to Bukhārā in 946/153, "in answer to the cries of the oppressed, 'Ubayd Allāh took to his bed, overtaken by a severe illness, and while pining for Harāt and yearning to stroll along the banks of the Mālān Bridge, he hastened to the next world, and the residents of Khurāsān were released from the oppression and cruelty of that heathen butcher" (Iskandar Beg, *T-i 'Ālam-ārā*, 66). He left two sons, 'Abd al-'Azīz and Muḥammad-Raḥīm Sultān, but the khānate went to 'Abd Allāh Khān; the son of 'Ubayd Allāh's predecessor, Kūčūm Khān, although 'Abd al-'Azīz continued to rule autonomously in Bukhārā. A valuable eyewitness accounts of events in Bukhārā, Samarqand and Tashkent during 'Ubayd Allāh's reign is Zayn al-Dīn Maḥmūd Wāsiṭī's *Badāyī' al-wakāyī'*.

(W.M. THACKSTON)  
'UḲALĀ' AL-MADJĀNĪN (A.), "wise fools", a general denomination for individuals whose actions contradict social norms, while their utterances are regarded as wisdom. It is not altogether clear whether or not wise fools were particularly numerous in the early 'Abbāsīd period. At any rate, several authors of classical Arabic literature have treated the phenomenon in specific works that belong to the literary genre dealing with unusual classes of people, such as the blind or misers. While the first collection devoted specifically to wise fools was apparently a work written by al-Madā'inī (d. 228/843 [*q.v.*]), the only surviving work is the *Kitāb 'UḲalā' al-madjānīn*

by Abu ‘l-Kāsim al-Ḥasan b. Muḥammad al-Naysābūrī (d. 406/1015 [q.v.]) (ed. ‘Umar al-As‘ad, Beirut 1407/1987).

Al-Naysābūrī, while drawing upon earlier authors such as al-Djāhīz (d. 255/868 [q.v.]) or Ibn Abi ‘l-Dunyā (d. 281/894 [q.v.]), introduces his subject from a theological point of view. For him, God has created the world in splendour and incapacity at the same time: good is blended with evil, and health with illness. In this way, madness, even though apparently a contradiction to God’s benevolence, is a perfectly normal constituent of the human condition. In the following, the author discusses the terms used to denote madness, besides classifying different connotations of madness, such as *aḥmak*, *ma’tūh*, *mamsūs*, *mamrūr*, etc. The main part of his work is devoted to anecdotes about specific characters known as wise fools. He begins with Uways al-Karānī [q.v.], Madjūnūn [q.v.], Sa’dūn and Buhlūl [q.v.], all of whom share a relatively ascertained historical existence. After these, al-Naysābūrī lists a large number of tales about other, less popular wise fools, details about whose lives become progressively more limited. The names he mentions include ‘Ulāyyān, Abu ‘l-Dīk, ‘Abd al-Rahmān b. al-Ash‘ath, Abū Sa‘īd al-Ḍab‘ī, Dju‘ayfirān and many others; the final chapters of his work deal with Bedouin (including Imru‘ al-Qays [q.v.] and Habannaḳa), women, and anonymous persons.

Though each of the characters known as wise fools behaved in an individual manner, several traits were germane to all or most of them (Dols 1992, 349-65): wise fools were indifferent to appearance, often walking around naked or half-clad; they were oblivious to social conventions such as greeting or paying respect; they were ascetics, living on charity and not caring for worldly possessions; they lived in the streets of the cities without any specific abode, while their favourite place of residence was the cemetery. Those of the wise fools whose actions were considered harmful to society were held in hospitals. Wise fools would constantly remind their fellow citizens, particularly the powerful, of their worldliness and vanity, quoting pious verses and admonishing them with stories or allegories alluding to the hereafter; some of them even acted as unofficial preachers. In particular, their quality as free-wheeling admonishers makes the Islamic wise fools appear as precursors of the mediaeval European phenomenon of the court fool (Mezger 1991). Hence it is not surprising to see Buhlūl, who in later tradition all over the Islamic world was to become the stereotypical figure for the character of the wise fool (Marzolph 1983), being listed in European literature as the court fool of Hārūn al-Rashīd (K.F. Flögel, *Geschichte der Hofnarren*, Leipzig 1789, 172 ff.).

Other works of Islamic literature, while more or less drawing upon the same data, interpreted the phenomenon in various directions. Ibn al-Djawzī (d. 597/1200 [q.v.]) in his *K. Šifāt al-ṣafwa*, regards the wise fools as important figures in the early history of Šūfism (Dols 1992, 376), and Ibn al-‘Arabī (d. 638/1240 [q.v.]) in his *al-Futūḥāt al-makkiyya* elevates the holy fools to the position of spiritual leaders (*ibid.*, 408-9). In Persian literature, wise fools figure prominently in the mystical *mathnawīs* of Farīd al-Dīn ‘Aṭṭār (d. 617/1220 [q.v.]), for whom the character is licensed to speak his mind in a way beyond that permissible to ordinary human beings (Ritter 1978, 159-80).

(U. MARZOLPH)

**‘UKBARĀ**, a town of mediaeval ‘Irāḳ, lying, in the time of the classical Arabic geographers (3rd-4th/9th-10th centuries) on the left, i.e. eastern, bank of the Tigris, ten *farsakhs* to the north of Baghdād, roughly halfway between the capital and Sāmarrā’.

As Yāqūt noted (*Buldān*, ed. Beirut, iv, 142), the name is originally Aramaic (*sūriyānī*), sc. ‘Okbarā, and the history of the place can be traced back at least to early Sāsānid times. In the reign of the emperor Shāpūr I (mid-3rd century A.D.), Roman captives were settled there, and by the reign of Khusrāw Anūsharwān (mid-6th century A.D.), it was the cheflieu of the subdistrict (*tassūḍī*) called Buzurdjāsābūr in the *kūra* or province of Khusrāwma (see M.G. Morony, *Iraq after the Muslim conquest*, Princeton 1984, 138-9).

When the Arabs started raiding into Sāsānid ‘Irāḳ, Khālīd b. al-Walīd in 12/633-4 sent the commander al-Nuṣayr b. Daysam al-‘Idjīlī to the region north of al-Madā’in, and the people of ‘Ukbarā and the nearby Baradān made agreements for *amān* or a peace settlement with the incomers. Therafter, the town flourished as part of the rich, irrigated agricultural region stretching along the Tigris banks; al-Muḳaddasī, 122, praises its fruits, and in particular its grapes, and Ibn Hawḳal, ed. Kramers, i, 219, tr. Kramers and Wiet, i, 213, mentions the watermills (*urūb*) there, a feature characteristic of the whole river valley between al-Mawṣil and Baghdād (see A. Mez, *Die Renaissance des Islāms*, Heidelberg 1922, 438-9, Eng. tr. Patna 1937, 466-7). The town was large and populous in the 4th/10th century, and a Jewish community there is mentioned in the early 3rd/9th century. But from Salḍjūk times onwards, mentions of it in the historical and geographical sources dwindle. It appears that the bed of the Tigris above Baghdād began to shift its course, for al-Mas‘ūdī, *Murūḍī*, i, 223, ed. and tr. Pellat, §235, already mentions disputes and lawsuits (*muṭālabāt*) between proprietors along the eastern and western banks. Le Strange noted that the author of the *Marāsīd al-iṭīlā’* (ca. A.D. 1300) clearly mentions ‘Ukbarā as by that time standing a considerable distance to the west of the Tigris, the river’s bed having shifted eastwards into the channel then known as al-Šuṭayṭa “the little *shatt* [q.v.]”, and the ruins of ‘Ukbarā lie at the present day on the left bank of the old channel of the Tigris (see G. Le Strange, *Description of Mesopotamia and Bagdad written about the year 900 A.D. by Ibn Serapion*, in *JRAS* [1895], 37-9; A. Musil, *The Middle Euphrates, a topographical itinerary*, New York 1927, 137-8).

Al-Sam‘ānī, *K. al-Ansāb*, ed. Ḥaydarābād, ix, 345-8, mentions a considerable number of scholars stemming from ‘Ukbarā, and at a slightly later date, the parents of the Ḥanbalī *fakīh* and philologist ‘Abd Allāh b. al-Ḥusayn al-‘Ukbarī [q.v.] came from the town.

### ‘UMĀN.

#### iii. Social structure.

‘Umān is overwhelmingly an Arab, Muslim society, and tribal organisation remains an important element in national identity. The country’s rapid development since 1970 has introduced a measure of physical and social mobility, as well as creating an influx of emigrants.

The migration of Arab tribes into ‘Umān predates Islam, with Kaḥṭānī or South Arabian tribes moving

along the southern Arabian Peninsula from Yemen into ‘Umān around the 2nd century A.D. They were followed several centuries later by ‘Adnānī or North Arabian tribes who penetrated from the west along the Gulf coast. The Islamisation of ‘Umān resulted in the eviction of the Persianised ruling class stemming from Sāsānid influences and completed the organisation of the tribal framework that continues today.

On the local level, the competition for scarce resources in water and arable land created a mosaic of tribal settlement. Many settlements stretch alongside the courses of *wādīs* and attendant *falajīs* (water channels); frequently the *‘alāya* or upper quarter is inhabited by a tribe in traditional rivalry with another tribe occupying the *sfāla* or lower quarter. Regionally, a rough balance was obtained through two competing alliances and this balance was replicated on the national level by association with either the Hināwiyya confederation or the opposing Ghāfirīyya confederation. Above these confederations stood the Ibādī imāmate [see IBĀDIYYA] which served as a supertribal or quasi-national institution. Because the tribal confederations acted principally as balancers of power, membership in one or the other tended to be fluid over time. This has tended to blur earlier tendencies for al-Hināwiyya to consist of Ibādī and ‘Adnānī tribes and al-Ghāfirīyya to consist of Sunnī and Kaḥṭānī tribes.

The power of the Ibādī imāmate derived directly from the personal standing of the *imām*, who was both dependent on the support of the principal *shaykhs* of the major tribes of both confederations for his position and the mediating figure between them and between tribes on the regional and local levels. This system gave enormous power to the leading *shaykhs* who dominated the confederations, and especially powerful *shaykhs* were able to use their power to determine the election of *imāms*. During the second half of the 19th century, the powerful *shaykhly* family of the Hināwī al-Hirṭh tribe of al-Sharkīyya region orchestrated a series of attempts to oust the Āl Bū Sa‘īd [q.v.] rulers in Maskāṭ in order to restore the imāmate. But by the early 20th century, the head of the Ghāfirī Banū Riyām had become the predominant political figure in the interior, and the imām elected in 1920 came from a Ghāfirī tribe.

The reassertion of sultanate control over interior ‘Umān in the mid-1950s, with the attendant demise of the imāmate, reduced the autonomy of the tribes and restricted the role of the *shaykhs*. For the first time, order and authority was maintained by a permanent army presence and, with a single exception, the *shaykhs* found their responsibilities restricted to leadership of their own tribes. When a new development-minded government appeared as a result of a palace *coup d'état* in 1970, the role of the *shaykhs* was further reduced. The government assumed responsibility for public works and welfare. Social service ministries carried out improvements throughout the country, and a new system of courts and national police usurped many of the traditional functions of the *shaykhs*.

But even though the political power of the tribes has waned considerably since 1970, their social functions remain undiminished. Marriages take place by and large within the tribe, if not within the extended family. The government issues identity cards classifying the holder by tribal membership. Tribesmen seek the assistance of fellow tribesmen in obtaining employment, business help, and resolving problems with the police.

The great majority of the ‘Umānī population is

Arab and either Ibādī or Sunnī Muslim. The more prominent of these two divisions is the Ibādī sect, which, until the second half of the 20th century, provided the national leadership of ‘Umān through an elected *imām*. Perhaps slightly less than half of ‘Umān's total population is Ibādī, all in the northern half of the country. Sunnīs are thought to form slightly more than half of the ‘Umānī population. While the north contains both Ibādī and Sunnī tribes, the southern province Zafār [q.v.] (Dhofar) is entirely Sunnī. While Sunnī tribes in northern ‘Umān may be Shāfi‘ī or Mālikī, Zafārīs are all Shāfi‘īs. Much of the Sunnī population of Šūr and its hinterland is Ḥanbalī.

There are also several small Shī‘ī communities, mostly located in the capital area of Maskāṭ, all of which are Dja‘farī or Twelver. Al-Lawāṭiyya form the largest Shī‘ī community, numbering perhaps 10,000 and traditionally residing in a closed quarter of Maṭraḥ, Maskāṭ's sister settlement. The community seems to be Indian in origin, and at one time was in close connection with Agha Khānī Ismā‘īlīs, all of whom have since converted or left ‘Umān. The Lawāṭiyya have been settled in Maṭraḥ for at least three centuries. The Arab Shī‘ī community of al-Bahārīna, formerly concentrated in Maskāṭ itself, is considerably smaller in size and consists of a few families that immigrated to ‘Umān independently of each other. ‘Aḍjam, people of Persian origin whose arrival in ‘Umān may be supposed to have occurred gradually over the course of centuries, comprises the third Shī‘ī group. Their numbers are similarly small and they appear to be assimilating into broader ‘Umānī society.

The largest non-Arab component of the ‘Umānī population is Balūč, mostly residing along al-Bāṭīna coast of the Gulf of Oman and in the capital area. Often included with the Balūč, but nevertheless distinct, is a smaller group known as al-Zaḍjāl. Maskāṭ is also home to a few Hindu families, some of whom can trace back their arrival in ‘Umān approximately a century and a half. Most of these families hold Indian citizenship and form marriages with relations in India.

Arabic is the predominant language of ‘Umān, but nearly a dozen languages are spoken by ‘Umānīs. Balūč undoubtedly produces the second-largest proportion of native speakers. The Zaḍjāl and Lawāṭiyya speak their own languages, both akin to Gujarātī. The long ‘Umānī association with East Africa has resulted in a significant number of ‘Umānīs either born in or formerly resident in Zanzibar and neighbouring African countries. Some of these speak Swahili as their primary language, with English second and Arabic third.

Zafār is distinct from ‘Umān in several respects. Separated by the north by extensive gravel-plain desert, the region traditionally was linked with the Mahra and Ḥaḍramawt regions of Yemen. The widespread Kathīr tribe is perhaps the most extensive group in the region, with subgroups including nomadic sections on the Naḍjd (the stony inland plain) and three clans that traditionally have been prominent in Šalāla, Zafār's largest settlement and now a small city. Another transhumant section, the Bayt Kathīr, inhabits a narrow band of mountainous territory.

The other mountain tribes, commonly known as *qjibbāṭīs* and traditionally transhumant as well, occupy similar strip territories, all running perpendicular to the coast and including parts of the coastal plain. These tribes speak a South Arabian language, Karawī, apparently adopted from the indigenous inhabitants whom they conquered some six or more centuries

ago. The latter, al-Shahra, maintain a separate but socially inferior identity.

Mahra tribes are also found in Zafār, mainly camel-herding nomads in either the northeastern Najd or along the Yemen border in the west. Some have established themselves recently on the mountains. In addition to al-Shahra, other *da‘if* or socially inferior peoples are also present in Zafār, amongst them al-Mashāyikh and al-Barā‘ima. Šalāla and the smaller coastal towns are also inhabited by mixed-race *bahhārs* and descendants of African slaves. Several small groups speaking South Arabian languages have been pushed out into the deserts northwest of Zafār; among these are al-Baḥāhira, al-Hikmān, and the larger and more important al-Ḥarāsī.

Following the end of the civil war in Zafār in the late 1970s, the region has undergone rapid socio-economic development. Most *djibbālīs* have built permanent homes in the mountains, often clustered in new settlements, and some maintain second homes in Šalāla.

Traditionally, ‘Umān was a rural country, with most of its population scattered in small agricultural settlements or coastal fishing villages. The process of development since 1970, however, has produced considerable urbanisation. The capital region, consisting in 1970 of the twin towns of Maṣkaṭ and Matrah with a combined population then of perhaps 25,000, grew to nearly half a million at the beginning of the 21st century. Šalāla’s population grew over the same period to nearly 200,000 and Ṣuḥār (on the north-western al-Bāṭina coast), Nizwā (in the interior), and Ṣūr (near the eastern coastal tip) have become relatively large regional centres.

‘Umānī society is relatively free from social stratification, although members of the ruling Āl Bū Sa‘īd family, tribal leaders, religious figures, and wealthy merchants occupy the upper rungs of society. A small middle class has emerged since 1970, but many ‘Umānīs in the Maṣkaṭ region are employed as government employees, soldiers, drivers, and skilled and unskilled labour. The majority of the population outside the capital remains engaged in subsistence agriculture, fishing, or animal husbandry.

The government has used its modest oil revenues to extend roads, electricity, communications, schools, and health-care facilities throughout the country. The country remains dependent on oil income, however, and diversification into natural gas exports and tourism has had limited success. The first university opened in 1986.

Up to 25% of the total population is expatriate, with the greatest numbers coming from south and southeast Asia. While the heaviest concentration is in the capital area, expatriates are dispersed throughout the country and the government periodically has extended bans on expatriate labour to a growing number of occupations in an effort to “Omanise” the labour force and provide employment for a burgeoning indigenous population.

**URA-TEPE** (Ūrā-Tīpa, Ūrā-Tīpa), Russian Ura-Tyube, a town and a district on the northern slope of the Turkestan chain, now the town and district of Ūroteppa in Tādjkistān. The town is located in lat. 39° 55' N. and long. 69° 00' E. at 1040 m/3,425 feet above sea level. Lying in the foothills between the steppe plains and the mountains, and on a major route linking Samarqand with Tashkent and the Farghāna valley, the historical Ura-Tepe both connected and separated adjacent ecological and political regions.

The place name, signifying a “high hill” (*ōrā tūbe/tōpā/tepā*) in Kīpčaḡ and Čaghatai vernaculars, emerges in the Tīmūrid period. It is first mentioned in the course of events in early Muḥarram 812/late May 1409 when the royal camp of Šhāh Rukh [q.v.] was pitched in the “summer pasture (*yaylāk*) of Ūrā-Tīpa” (‘Abd al-Razzāḡ Samarqandī, *Maṭla‘ al-sa‘ādayn*, ed. M. Šhafi‘, Lahore 1941-9, ii, 141). Several 10th/16th century authorities confirm that the new toponym had come to gradually replace the earlier “Ustrūshana” (Bābur, ed. Mano, 13), “Ūstrūshana” (Muḥammad Ḥaydar, *Tārīkh-i Rashīdī*, ed. W.M. Thackston, 91), or “Ustrūshana” (Ḥāfiẓ-i Tanīsh, *Sharaf-nāma-i shāhī*, ed. Salakhētudinova, i, facs. fol. 88b; and see USRŪSIANA).

At the turn of the 10th/16th century, the district’s centre was a fortified town (*kūrghān*) surrounded by high walls and a moat, amidst cultivated lands and pastures for horses and sheep (Muḥammad Šālih, *Šībānī-nāma*, ed. and tr. H. Vambéry, 174-9). In 908/1503 the former Tīmūrid stronghold fell to the Ōzbegs led by Muḥammad Šībānī Khān. During the Šībānīd and early Aštarkhānīd periods, the Ura-Tepe district (*wilāyat, kalamraw*) at times was allotted as an individual appanage to ruling princes, and at times it was attached to larger entities, such as Tashkent or Samarqand.

From the middle of the 11th/17th century, the Ōzbeg tribe of the Yūz, established in Ura-Tepe, as well as in Khodjand and Hiṣār (to the north and the south of Ura-Tepe, respectively), came to play an increasingly important political role, which was not strictly confined to the realm of Ura-Tepe.

One line of Yūz chiefs can be traced back to Bākī Biy Yūz, who around 1641-4 served as chief military and administrative adviser (*atālik*) to an Aštarkhānīd prince (i.e. Bahrām Sulṭān b. Nadr Muḥammad Khān) ruling at Tashkent. Bākī Biy’s grandson, Muḥammad Raḥīm Biy Yūz (b. Ghāzī Biy), who held Ura-Tepe in 1091/1680 and 1105/1693-4, proved to be loyal to the Bukhāran court, at a time when another leading figure of the Yūz joined a rebellion (Mukhtarov, *Materiali*, 24, 29). Subsequently, Muḥammad Raḥīm was named governor (*hākīm*) of Samarqand. In 1114/1702, when he was further raised to the rank of an *atālik* and “Pillar of the Amirs” (*‘umdat al-umarā’*), one of Muḥammad Raḥīm’s major assets was said to be his prestige among the warlike tribes of “Andigān, Khodjand, Āḡ-Kūtal and Tashkand, up to the regions of Sayrām, Turkistān and Ulugh-Tāgh”, which enabled him to provide auxiliaries for the Bukhāran rulers (Muḥammad Amin Bukhārī, *‘Ubayd Allāh-nāma*, ms. Tashkent, no. 1532, fols. 20b, 28b, tr. Semenov, 34-5, 43-4). While Muḥammad Raḥīm reached the zenith of his career, his son, Muḥammad Āḡbūta Biy, followed his father’s footsteps in Ura-Tepe and Khodjand, where he ruled from 1113/1701 up to 1144/1731

(Mukhtarov, *op. cit.*, 33-9). Sometime between 1731 and 1734, he was killed by a Ming chief of the expanding Khokand state [*q.v.*].

A second line of Yüz chiefs emerges with Muḥammad Fāḍil Biy (b. Šādiḳ Biy). Fāḍil Beg Yüz was one of the commanders of the Bukhāran army that surrendered to Nādir Shāh in 1153/1740. Subsequently, he guided a Nādirid military campaign against "the rebellious Yüz and Ming tribes seated in the mountain and on the banks of the Sīr-Daryā" (Muḥammad Kāzim, *Ālam-ārā-yi nādirī*, ed. Riyāhī, ii, 790, 802, 819). While ruling in Ura-Tepe, Fāḍil Biy supported the Khokand chief 'Abd al-Karīm Biy against the Kalmāqs (Muḥammad Ḥakīm Khān, *Muntakhab al-tawārikh*, ii, 378), i.e. the Djuṅghars, who repeatedly invaded Khokand between 1153/1740 and 1158/1745 (Moiseev 1991, 162-3, 167, 173; Nabiev, 14). His own decrees, issued upon the order of an unnamed khān, confirm Fāḍil Biy's rule over Ura-Tepe in 1164/1750-1 and 1187/1774-5 (Mukhtarov, *op. cit.*, 40, 42). Under Fāḍil Biy, one of the most stubborn opponents of the rising Manghūt dynasty of Bukhārā, Ura-Tepe turned into a strong and nearly independent statelet dominating neighbouring territories such as Khodjand, Djizzāk, and even Samarkand. Around 1780, however, when the town with four gates was under Fāḍil Biy's son Muḥammad Khudāyār, the ruler's authority was confined to the environment of the town (Yefremov, 114). In 1800, Khudāyār's son Beg-Murād Biy, having ruled less than a year, was deposed by the ruler of Bukhārā Shāh Murād.

In the 19th century, Ura-Tepe lost its independence and became a disputed border area between Bukhārā and Khokand. From 1800 to 1866, the two rival states launched dozens of military campaigns into Ura-Tepe, where more than twenty governors succeeded each other. Both sides often chose Yüz representatives as local governors, such as Muḥammad

Rahīm Parwānācī b. Muḥammad Khudāyār, who ruled in 1234/1818 (Mukhtarov, *op. cit.*, 56).

When Filipp Nazarov visited Ura-Tepe in 1814, it had recently been taken by Khokand. He observed that the town "is very large and surrounded by two high walls, separated from each other by a deep moat; openings made in these walls allow the use of fire-arms, if need be. This town is densely populated, the streets are narrow, and the houses built of clay. There are manufactories producing goat wool shawls. The inhabitants trade with the Turcomans, the Persians and the Arab nomads who are subjects of Bukhārā" (Nazarov, 65-6).

On 2 October 1866, the Imperial Russian army conquered the town. Having been ceded by the Bukhāran amīr to Russia in 1868, Ura-Tepe became part of the Khodjand *uezd*. The population of Ura-Tepe at that time was variously estimated to be between 10 and 15,000 people. There were 854 shops of artisans and traders in the town. When the Soviet Republic of Tadjikistān was founded in 1929, Ura-Tepe was its second largest city after Khodjand. In the decade 1976-85 there were ca. 38,000 inhabitants in the town and 143,000 inhabitants in the district (*Entsiklopediyai sovetii tođjik*, viii, Dushanbe 1988, 339). By a presidential decree of 10 November 2000, the town has been officially renamed Istravshan.

(W. HOLZWARTH)

## W

**WADD**, a god of pre-Islamic Arabia, mentioned in the Qur'an in a speech of Noah: "They have said: Forsake not your gods. Forsake not Wadd, nor Suwā', nor Yaghūth, Ya'ūq and Nasr!" (LXXI, 22/23).

Traditionists and commentators have exercised their ingenuity in the pursuit of the identity of Wadd, but their quest has not been very productive. In his "Book of the Idols" (*Kitāb al-Aṣnām*, §§ 7c, 9d, 45e, 49c-51b), Ibn al-Kalbī (d. 204/819 or 206/821) considers that Wadd was a divinity of the tribe of Kalb at Dūmat al-Djandal, the great oasis of north-western Arabia (on the composition of *Kitāb al-Aṣnām*, see Hawting, *The idea of idolatry*, 88-9).

At first sight, the information supplied by Ibn al-Kalbī regarding this god is exceptionally precise. He invokes the direct testimony of Mālik b. Ḥarīṯha al-Adjdārī (collected apparently by his father Muḥammad al-Kalbī, d. 146/763: see § 51b), according to which the statue of the god represented a man of great height, dressed, armed with a sword, a bow and a lance. In his youth, Mālik is said to have been instructed by his father to offer milk to Wadd (§ 49f).

The statue was allegedly destroyed by Khālid b. al-Walīd after the expedition of Tabūk (§§ 49f, 50a-d, 51a). The *nisba* al-Adjdārī associates Mālik with the Banu 'Amīr al-Adjdār, one of the two clans (with the Banū 'Abd Wadd) that opposed the destruction of the statue (§ 50b).

Ibn al-Kalbī also seeks to explain how it was that mankind, monotheistic at the time of creation, came to worship such a multiplicity of divinities. For his purposes, he supposes that originally Wadd was a devout man; after his death, he was commemorated by a statue, then promoted to the rank of intercessor in the presence of God. It was the Flood which would have brought his idol into Arabia, near Djudda; there it was said to have been found by 'Amr b. Luḥayy who is supposed to have entrusted it to the tribe of Kalb (§§ 45e-47b).

Ancient Arabian nomenclature recognised two theophoric forms involving Wadd: 'Abd Wadd (Caskel 1966, ii, 133, nine entries, divided between various tribes of South and North, including one for Kalb), and Wahab Wadd (Abdallah 1975, 76, one instance in the genealogies of Himyar).

The data supplied by Tradition hardly accord with those of pre-Islamic inscriptions. According to the latter, Wadd (*Wd* or *Wd<sup>m</sup>*), who is an important divinity in southern Arabia, is almost unknown in the rest of Arabia. It is in the kingdom of Maʿīn (capital Karnaw, *Kmaw*, today Maʿīn, in the Ḍjāwf of the Yemen) that Wadd occupies the most eminent position: he is one of the divinities of the official pantheon, always included in invocations. He had a temple at Yathīll (*Yl*, today Barākīsh) (*M* 244 = *RES* 3019/1) and another in the Minaean colony of Dedan (today al-ʿUlā) in the north of the Ḥijāz (*M* 356 = *RES* 3695/2). A clan of Yathīll (the Banū *Dmr<sup>m</sup>*) considers itself the “clients of Wadd<sup>m</sup>” *Shahrān* (ʿ*dm Wd<sup>m</sup> hr<sup>m</sup>*) (*M* 222 = *RES* 2999/2). Finally, the permanent river that irrigates the Ḍjāwf bears his name: (*hr<sup>m</sup>*) *ḡyl Wd* (“(Hirrān), torrent of Wadd” (Maʿīn 1 = *M* 29 = *RES* 2774/6; Maʿīn 13 = *M* 43 = *RES* 2789/5; Shaqab 1/11).

The god Wadd was also venerated at Sabaʾ where, not far from Maʿrīb, a small temple was dedicated to him, and in the Sabaeen tribes of the environs of Ṣanʿāʾ (Schmidt 1982, 1987; Müller 1982, 1987). In the kingdom of Awsān, based around the Wādī Markha, one of the sovereigns, Yaṣḍuḳʿil Fari<sup>2<sup>um</sup></sup> Sharaḥʿat, son of Maʿaddʿil Salhīn (*Yṣḍḳʿl Frʾm rhʿt bn Mʿdʿl Sʿlhm*) alleged that the god Wadd was his father; he is the only South Arabian sovereign to have claimed such divine parentage; and the only one to be honoured by statues, like a god, in the Niʿmān (*N<sup>m</sup>*) temple which was dedicated to Wadd. This sovereign probably dates from the 1st century A.D., judging by the foreign influences shown by his statue (preserved in the Museum of Aden) and by the script of his inscriptions (*CIAS* F58/s4/49.10 no. 3; 49.10/o1 no. 2; Louvre 90).

To protect persons and property, the South Arabians made use of the formula “Wadd is father” (*Wdm ʿb<sup>m</sup>*, with variants), which is found on amulets (Louvre 186) and on numerous buildings. It is an interesting fact that this apotropaic formula is more widely diffused than the cult of Wadd; it is found in all the regions of southern Arabia and on the Arabian shore of the Arabo-Persian Gulf (Robin 1994, 85).

South Arabian nomenclature includes a number of theophoric anthroponyms composed with Wadd: these are most notably *ḡwad*, *Bwad*, *Huḡwad*, *Mʿtwad*, *Nḡwad*, *rhwad*, *Whwad*, *Wdʿb*, *Wdʿl* or *Zydwad*.

The god Wadd is not attested in Nabataean inscriptions, not even in nomenclature. In Safaitic, anthroponyms such as *Wdʿl* do not necessarily imply the existence of a god name Wadd, since the radical *w* can have the sense of “love, affection”. At Dedan, finally, the god Wadd seems to be known, according to JS lih. 49/1-9: “Abdwadd priest of Wadd and his sons Salām and Zedwadd have dedicated... to *dhu-Ghabāt*...” (*bdwad ʿfkl Wd w-bn-h Slm w-Zdwad hwdqw... l-ḡ-Ḡbt*...)—with two theophoric forms with Wadd and the title “priest of Wadd”. It may be noted, however, that except for this text, Wadd is almost unknown (see the theophoric *bwad* in AH 11 and possibly 1); one may therefore wonder if the author of JS 49 did not come from the Yemen.

Inscriptions do not confirm the opinion of Hishām Ibn al-Kalbī, who sites the cult of Wadd at Dūmat al-Ḍjandal: mentioned there are *Lh*, *Dtn*, *Rdw*, *trsm* and *Nhy* [see THAMUDIC], but not this god. This is not enough to lead to the conclusion that Ibn al-Kalbī made a mistake, or relayed a tendentious tradition, but a degree of doubt is permissible. Furthermore it is not impossible that the idol of

Dūmat al-Ḍjandal may have borne a name resembling Wadd and that the traditionists were confused. Conversely, the god Wadd enjoyed great popularity in Yemen, a fact totally ignored by Tradition. This would seem to prove that Ibn al-Kalbī was ill-informed and that his principal source was indeed the Qurʾānic text.

**WĀDĪ LAKKU**, a river of the Iberian peninsula, on the banks of which the decisive encounter took place between Ṭarīḳ b. Ziyād [*q.v.*], the first Muslim conqueror of the Iberian peninsula, and Roderic, the last Visigothic king, on 28 Ramaḍān 92/19 July 711.

Identification of the toponym is difficult on account of the lack of clarity of the Arabic language sources. On the one hand, all do not give the same variant of the name: Wādī Lakku, or perhaps Wādī Lagu (the hard *g* sound being conventionally represented in mediaeval script by a *kāf*, surmounted by a *shadda*, which can be pronounced *kku* or *gu*), Wādī Lakka or Wādī Bakka—while on the other hand they sometimes

give a different name to this battle: the battle of Faḥṣ Sharīsh ("plain of Jerez"), al-Sawākī ("the canals"), Kardādjanna (Cartagena), Wādī Umm Hakīm, al-Buḥayra ("the lake": Laguna de la Janda?), Wādī l-Ṭīn, al-Djazīra, etc. (cf. J. Vallvé, *La Cora de Tudmir*, in *And.*, xxxvii [1972], 146 n. 3), although it is the form of Wādī Lakku, the phonetic origin of the Spanish Guadalete, which appears most often. In the Romance transcriptions of the Arabic name one also encounters Guadalac, Guadalec, Guadalet or Guadalete. The intermingling of geographical and historical sources does not permit precise localisation of the site of the encounter, on account of the lack of clarity and above all the numerous contradictions which characterise these texts.

For example, the geographer al-Zuhrī (6th/12th century) states that the Wādī Lakka is a river forty parasangs in length which descends from the mountains of Tākūrūna to discharge into the Atlantic Ocean (*Djaghrafīya*, 167). Furthermore he asserts "on the basis of what is said by the Christians in their chronicles", that the inhabitants of Cadix drink the water of a great river called Wādī Lakka, spanned by a bridge of thirty arches (*ibid.*, 218). This river is said to have flowed into the ocean at a place known as Shant Bātaru. For al-Rāzī, quoted by al-Maḳḳārī, the battle allegedly took place on the banks of the Wādī Lakka, the river into which the last Visigothic king, Roderic, was supposedly thrown, in armour, to disappear there without trace (Maḳḳārī, *Analectes*, i, 162). Ibn 'Idhārī also quotes al-Rāzī (*Bayān*, ii, 10). In the 6th/12th century, al-Idrīsī refers in his geography to the locality of Bakka, a possible variant of Lakka, in the district, or *iklīm*, of al-Buḥayra, a stretch of water identified by R. Dozy as being the Laguna de la Janda (al-Idrīsī, *Description*, 174, tr. 208). According to the notice which al-Himyarī devotes to this locality, at the start of the 8th/14th century (*Rawḍ al-mi'ṭar*, no. 159), Lakku, the ruins of which were said to have survived until his time, was an ancient city boasting "one of the best thermal springs in al-Andalus". It was on the banks of the river flowing through the city that the encounter took place between the Christians (*adīam*) of Roderic and the Muslim contingents of Ṭāriḳ b. Ziyād. This locality of Lakku would correspond to Bolonia, the ancient Baelo, and the Wādī Lakku to Guadalete or to Rio Barbate. The author states (no. 186) that the encounter between Ṭāriḳ b. Ziyād, the freedman of Ibn Nuṣayr, with Roderic, sovereign of al-Andalus and last king of the Goths, allegedly took place on the Wādī Lakku, in the territory of Algeciras, on the southern coast of al-Andalus.

This is why the exact placing of the encounter between Ṭāriḳ and Roderic remains uncertain, and why historians, starting with Gayangos, Dozy, Lafuente Alcántara, Simoney and Saavedra in the 19th century, have discussed at length its precise location. For some, like Dozy and Lévi-Provençal, Wādī Lakku denoted the Laguna de la Janda, source of the Rio Barbate; for others, the place in question was the banks of the Guadalete, between Medina Sidonia, Arcos and Jerez de la Frontera, in the territory of Cadix. Others tend towards the Rio Salado, a small coastal river which has its estuary close to the village of Conil.

Whatever the precise location, the majority of mediaeval Muslim sources concur in situating this battle on the banks of a watercourse (*wādī*, *nahr*) of the *kūra* of Shadhūna (Medina Sidonia). In Raḍjab 92/May 711, on the orders of his master, the Umayyad governor of Ifrikiya, Mūsā b. Nuṣayr, Ṭāriḳ is said to

have embarked with 7,000 Berbers (Matghāra, Madyūna, Miknāsa and Nawāra) and a few Arabs (ranging between a dozen and several hundreds, according to the sources). Arriving at the foot of Mount Calpe (the future Djabal Ṭāriḳ, Gibraltar), Ṭāriḳ repulsed Theodemir, the Visigothic governor of the region, who appealed to his king, Roderic (710-11), occupied in the north of the Iberian peninsula in suppressing an uprising. The latter made haste towards Cordova. Learning of the arrival of the Visigothic troops, Ṭāriḳ called for reinforcements from Mūsā, who sent him an extra 5,000 Berber soldiers. The total strength of his army thus rose to 12,000 fighters, most of them foot-soldiers, not counting certain partisans of Akhila, the dispossessed son of Witiza, the preceding Visigothic king (700-10). Ṭāriḳ decided to halt in the region of Algeciras and there to await the Visigothic army on the banks of the Rio Barbate, Guadalete, Salado or the Laguna de la Janda.

Although superior in numbers (the sources speak of between 40,000 and 100,000 Christians), Roderic's troops, confident of victory, were defeated. According to some authors, both wings of the Visigothic army were commanded by partisans, or actual brothers of Akhila, and at the start of the engagement, they changed sides. Roderic, in the centre, resisted, but was ultimately forced to retreat, and his troops were cut to pieces by the Muslims. According to al-Rāzī, quoted by Ibn 'Idhārī (*Bayān*, ii, 10, tr. 13) and by al-Maḳḳārī (*Analectes*, i, 163) the battle lasted a whole week, from 28 Ramaḍān to 5 Shawwāl 92/19 to 26 July 711. Captives of all social conditions were taken: nobles, plebeians and slaves, recognisable respectively by their gold, silver and leather rings (al-Himyarī, *Rawḍ al-mi'ṭar*, 204). According to certain sources, Roderic lost his life in the battle and Ṭāriḳ sent his head to Mūsā b. Nuṣayr; according to others, he succeeded in escaping. The victory for Muslim arms opened the gates of the Iberian peninsula.

## WAHM.

### 2. In mysticism.

In the doctrinal texts of Muslim mysticism, the term *wahm* can appear with either the general sense of "illusory, uncertain personal conjecture" or the more precise sense of "estimative faculty" acquired through the intermediary of Hellenistic philosophy and medicine. However, in the context of the description of spiritual progress, it takes on specific connotations: it denotes a natural faculty of comprehension capable of giving sense only to sensible phenomena, inclined towards anthropomorphism (*tashbīh*) in religious matters and unsuited to the perception of the divine: "Imagination (*wahm*) is a cloud of dust between intelligence (*'akl*) and profound comprehension (*fahm*). It relates neither to intelligence, of which it is not an attribute, nor to comprehension, nothing in which corresponds to any of its attributes (. . .). It resembles the drowsiness between deep sleep and waking, which is

being neither asleep nor awake. Waking, it is the transition between intelligence and comprehension, and comprehension and intelligence, without there being any fog of obscurity between the two" (Ibrāhīm al-Khawwās, quoted by al-Sarrādj, *K. al-Lama'*, ed. A.H. Maḥmūd and T.A.B. Surūr, Cairo 1960, 298; and R. Gramlich, *Schlaglichter über das Sufitum*, Stuttgart 1990, 345). It is in this sense that al-Hallādj declares in a celebrated poem: "No estimation (*wahm*) could relate to the subject of You, in such a way that in imagination it could be decided where You are!" (*K. al-Tawāsīn*, ed. P. Nwyia, v, 11-12). And subsequently, evoking the spiritual *mi'rādj*, he writes: "Overturn your discourse, abandon conjectures (*al-awḥām*), pick up your feet behind and before!" (*ibid.*, v, 21).

While imagination is a natural faculty, sometimes useful for meditation (see al-Muḥāsibī, *K. al-Tawahhum*), it needs to be mastered and left behind. More profoundly still, illusion, the fundamental *wahm*, consists from the Ṣūfī point of view in believing that existence and, *a fortiori*, human activities, exist independently of God, outside Him. Men assume an illusory existence (*wuḍūʿ al-wahmī*), when this is entirely dependent on pure divine existence (*wuḍūʿ al-hakīkī*). Spiritual exercises, as well as the use of discursive reasoning, amount here to means of waking up and of being freed from this illusion. The most expansive treatment of the functions of imagination is to be found in the works of Ibn al-ʿArabī [*q.v.*]. Although he sometimes employs the terms *wahm* and *khayāl* as synonyms, he propounds a doctrine of precise human imagination where *wahm* regains the connotations mentioned above (for example, *al-Futūḥāt al-makkiyya*, Cairo 1911, iii, 364-5). Basically, he disassociates imagination deriving from simple individual mental representation from that which links the spirit of the person to the superior worlds. Only this second imaginative faculty constitutes a genuine way of knowledge and can become the setting for an authentic theophanic experience (see H. Corbin, *L'imagination créatrice dans le soufisme d'Ibn ʿArabī*, Paris 1958, Eng. tr. R. Mannheim, *Creative imagination in the Sufism of Ibn ʿArabī*, Princeton 1969; W.C. Chittick, *The Sufi path of knowledge: Ibn al-ʿArabī's metaphysics of imagination*, Albany 1989).

## WAKF.

### II. IN THE ARAB LANDS

#### 2. In Syria.

A survey of the history of endowments in Syria, in the geographical sense of Bilād al-Shām [see AL-SHĀM], has to take into account a broad range of changing and often localised rules and practices. This article will focus primarily on Syria's main urban centres, Damascus [see DIMASHQ], Jerusalem [see AL-KUDS] and Aleppo [see HALAB], and occasionally refer to smaller cities.

In general, endowments in Syria have not solicited as much scholarly attention as those in Egypt, particularly before the Ottoman period. To a certain extent, this is due to the fact that access to sources and documentation is less centralised than in Cairo and not always facilitated by adequate research instruments. Large collections of *wakf*-related documents are housed in the National Archives and other institutions in Syria, Lebanon, Jordan, Israel and the Palestinian territories. The putatively rich archives of the Wakf Ministries are not easily accessible for researchers. Important holdings concerning Syrian endowments can be found in Istanbul, Ankara, Cairo and various

archives, libraries and collections in Europe and the United States as well.

If archival holdings are particularly rich for the Ottoman period owing to series of local court registers [see *SUPPL.* 3 and 4], they tend to become comparatively thin for earlier periods. A notable exception are the documents from the Mamlūk period found in the Haram of Jerusalem [see AL-HARAM AL-SHARĪF] (D.P. Little, *A catalogue of the Islamic documents from al-Haram al-Sharīf in Jerusalem*, Beirut 1984). Otherwise, researchers have to rely on legal literature (especially *wakf* treatises and *fatāwā*), *ḥadīth* collections and the different genres of historical writing (chronicles, biographical dictionaries, travelogues, topographies, *fadāʾih*). Much can be learned from archaeological findings, inscriptions in particular (*Matériaux pour un Corpus Inscriptionum Arabicarum [CIA]*, Cairo 1903-56; RCEA, ed. E. Combe, J. Sauvaget, G. Wiet, Cairo 1931-2; H. Gaube, *Arabische Inschriften aus Syrien*, Beirut 1978).

#### i. *Umayyads and ʿAbbāsids*

Only in the 3rd/9th century did various forms of charitable giving (*ṣadaqa* [*q.v.*]) and of immobilisation of property (*ḥabs* in a strict sense) crystallise into the legal institution that is known thereafter, synonymously, as *wakf* or *ḥabs* [see WAKF. I. In Classical Islamic Law, at Vol. XI, 59b]. It is often difficult to put the earliest traces of charitable practices under Islamic rule in their proper context. It is therefore impossible to determine the exact nature of the acts that are known as the earliest endowments in Syria. A freedman of the Prophet named Abū ʿAbd Allāh Ṭhawbān b. Yuhḍad (d. 54/673-4) is said to have given away his house in Hims [*q.v.*] as *ṣadaqa* (Ibn Kuṭayba, *K. al-Maʿārif*, 72; al-Ṭabarī, i, 1178; Gil, *Early endowments*, 129). An incomplete inscription found in the perimeter of the Dome of the Rock in Jerusalem, dated around 290/902-3, mentions a house inalienable for eternity designated for an unknown purpose (*al-dār . . . muḥabbasa abad<sup>am</sup> ʿalā*) (*CIA Jerusalem. II*, no. 218). Two *wakf* inscriptions from Ramla, dated around 300/912-13, however, show that by this time the legal terminology had been fully developed and that endowing followed established procedures, including the deposition of the *kitāb al-wakf* in front of a *kāḍī* (Sharon). Yet even legendary early acts of piety could be transformed into real endowments that endured for centuries. A pertinent example is the endowment for Tamīm al-Dārī [*q.v.*] in Hebron [see *ET*<sup>1</sup>, art. *al-Khalīlī*] which allegedly had been given to him by the Prophet himself. Later, it was sanctioned several times by different authorities, among them the British mandatory administration of Palestine in the 1920s (Massignon).

Hebron was of special significance to early Muslims because of its close connection with the prophet Ibrāhīm [*q.v.*]. Palestine and the rest of Syria possessed a considerable number of such holy places which attracted pious and charitable donations from early on (see e.g. the *wakf* inscription dated 400/1009-10 for the *mashhad* of the prophet Lūt in Banī Nāʾim near Hebron, *Répertoire*, no. 2148). For Muslims, the most eminent of these places was Jerusalem, ceding in sanctity only to Mecca (Makka [*q.v.*]) and Medina [see AL-MADĪNA], but it was seen as a spiritual centre by other religious communities as well. In early Islamic legal thinking, the devotional practices of Christians and Jews were obviously points of discussion, but they were eventually declared permissible (al-Khaṣṣāf, *Aḥkām al-awḳāf*, Cairo 1904, 341), and donations reached Jerusalem even from Christian Europe (Gil, *Donations*).

Little is known about endowments in Syria of the Umayyad period. Some of the most prestigious religious buildings of early Islam were built there, financed by funds from the Muslim treasury [see BAYT AL-MĀL]. In Jerusalem, the Dome of the Rock was completed in 72/691-2 and the al-Aḫṣā Mosque in the reign of al-Walīd b. ‘Abd al-Malik (86-96/705-15 [q.v.]) [see AL-ḲUḌS. B. Monuments]. This caliph also ordered the construction of the Umayyad Mosque in Damascus in 86/705, approximately at the same time as the Great Mosque of Aleppo was built.

Founding a mosque (*masjīd* [q.v.]) was one of the few uncontested early forms of *wakf*. Opening a building for the prayers of the Muslim community made it the property of God (al-Ḳhaṣṣāf, *op. cit.*, 113). Yet evidently not all mosques were endowed with assets that secured their upkeep and provided for the needs of the community, as this was carefully noted in the listings of mosques in early topographical writing (e.g. Ibn ‘Asākir; Ibn Shaddād; Ibn al-Shihna; Muḏjir al-Dīn).

When the ‘Abbāsids removed their capital to ‘Irāk, the Syrian regions lost much of their importance. The following centuries were characterised by warfare, insecurity and changing ruling dynasties [see TŪLŪNIDS; IḲSHĪDIDS; ḤAMDĀNIDS; MARWĀNIDS; ARTUKIDS]. The north was temporarily reoccupied by Byzantine troops, and Jerusalem and Damascus came under the domination of the Ismā‘īlī Fāṭimids [q.v.] of Cairo. According to the legal treatises which have to be situated in the ‘Irākī context, various types of *wakf* must have existed in this period. And even though a special agency, the *ḏiwān al-birr* [see DĪWĀN], was established in Baghdād in the early 4th/10th century to supervise pious endowments and charity (*wakūf* and *ṣadāqāt*) (Miskawayh, I, 151-2, 257), nothing is known about a similar institution in Syria.

#### ii. Fāṭimids and Salḡūkīds

Only in the first half of the 5th/11th century when, under a precarious balance of power between Fāṭimids [q.v.], Buwayhids [q.v.] and the Byzantine empire, commerce resumed, are there some examples of commercial gains being invested in endowments, not surprisingly destined for defence purposes: The historian al-Fārīkī mentions the case of a cloth merchant in Mayyāfārīkīn [q.v.], north of Aleppo, who bought a village and endowed it to secure the upkeep of three forts (Bianquis, 606).

Helping the war effort against enemies of Islam (*fi ṣabīl Allāh*) was by this time a time-honoured *wakf* type. Such endowments belonged to the category designated for the Muslim community as a whole or groups of an undetermined number of people being in need of charity that are supposed to exist continually till the end of time (*wakf ‘āmm*). Thus the ultimate recipients of all charity are the poor and destitute (*al-fuḳarā’ wa l-masākīn*) as prescribed in Ḳur’ān IX, 60 and LI, 19. The other category included endowments for descendants, other family members, clients, liberated slaves or other named persons, i.e. endowments for a limited number of people (*wakf khāṣṣ*) who would eventually die out and thus allow the *wakf* to reach its ultimate stage as everlasting charity (al-Ḳhaṣṣāf, *op. cit.*, 135-7; al-Māwardī, *K. Ahkām al-sultāniyya*, Bonn 1853, 118, 139-40; al-Ṭarābulṣī, *K. al-Is‘āf fi ahkām al-awḳāf*, Cairo 1902, 28-9). The second type—a sub-category of which was later known as the family *wakf* (*wakf ahli* or *dhurri*)—was rather popular if we count the cases discussed in the extant legal literature. One of the earliest documented examples in Syria belonged to a group of *ashraf* [q.v.] in

Fāṭimid Damascus. In 435/1043 several descendants of the endower fought over their allotted shares, which resulted in a document that also presented a list of the *wakf*'s assets (Sourdel-Thomine and Sourdel) [see WAKF. II. 3. ii, at Vol. XI, 70a, for a discussion of family endowments in North Africa]. Compared with al-Maḳrīzī's statement that in early Egyptian endowments urban properties prevailed over agricultural lands, it is of interest to note that in this case the assets consisted of six agricultural domains (*day‘a*). They were situated in the grain-growing regions around Damascus, the Hawrān [q.v.], in the plains at the foot of Hermon, and the Biḳā‘ [q.v.] valley near Ba‘labakk [q.v.]. The distribution of assets within a rather limited geographical region proved rather typical for Syrian endowments in the centuries to come. There were, however, always notable exceptions to this rule: endowments spanning great distances between faraway regions, in particular for the benefit of the Ḥaramayn [q.v.] and in Mamlūk and Ottoman times.

The *wakf* was not only a means to gain rewards in the afterlife for the sake of one's soul (*ḥawāb*) or to secure the material well-being of one's descendants. In the hands of various elite groups it became an eminent instrument for the propagation of status, wealth and power. Charitable giving, aiming at otherworldly rewards, was no longer done preferably in secret, but led to open displays of worldly riches and splendour (Korn). At the same time, new forms of burying and remembering the dead appeared. Funerary art and architecture [see ḲABR] became more elaborate, and saintly persons or the rich and powerful were frequently buried in mausolea [see ḲUBBA; TURBA] and other buildings of public character. We still do not fully comprehend these complex phenomena, but endowments clearly played a significant role in them, resulting in the "constructions of power and piety" (Tabbaa) that give Syrian cityscapes their distinct character till today.

Thus the building type of the mosque, which had been used simultaneously as place of worship, for learning and for sheltering the needy, was complemented by a number of new institutions with more specific purposes. The separation between places of prayer and places of learning had far-reaching implications not only for urban and architectural history. The new urban complexes which were generally financed by endowments had a profound impact on the social, economic, intellectual and educational life of the cities (Makdisi; Pouzet; Chamberlain). *Wakf* stipulations now provided for the regular payment of fixed sums to a growing number of people who worked in and for the foundations. Salaried posts were established for professors and assistant professors, but also for the administration and the physical upkeep of the institutions. Endowments financed the professional reading of the Ḳur’ān which became more widespread and organised at this time (Pouzet, 169).

This feature decisively altered the notion of poverty that was at the core of the concept of *wakf* (Sabra). The early legal texts had maintained that a recipient of *wakf* income had preferably to be poor in a material sense, excluding groups like the blind or those who were in charge of calling for prayer (*mu‘adhdhin* [see ADHĀN]) in a mosque as lawful beneficiaries, because they presumably included poor and rich people (al-Ḳhaṣṣāf, *op. cit.*, 276). Yet this criterion evidently no longer applied, and to receive such payments became a sign of group affiliation or social distinction. Thus the *wakf* could be used as a prop for the formation and reproduction of social groups, as e.g.

the *ashraf*, Sūfī brotherhoods [see *ṬARĪQA*; *ZĀWIYA*], professional guilds [see *ṢINĀʿ*] or diaspora communities.

The first of the new institutions, the *khānkhāh* [q.v.], was introduced from the Persian world to look after the needs of travelling Sūfīs. Some of the earliest examples in Syria were founded in Damascus. The best known goes back to the famous Sūfī, historian and astronomer, Abu 'l-Kāsim 'Alī b. Muḥammad al-Sulamī al-Sumaysāfī (d. 453/1061) (al-Nu'aymī, ii, 118-26; Bianquis, 634; Elisséeff, *Nūr al-Dīn*, iii, 767). Passing through Damascus in 580/1184, Ibn D̲j̲ubayr [q.v.] saw the *khānkhāh* still working as stipulated and remarked that it was a beautiful way to remember the departed and his good works (*Rihla*, ed. M.J. de Goeje, Leiden 1907, 290).

During the second half of the 5th/11th century the advance of the Saldjūkids [q.v.] led to hostilities with the Fātimids. Contemporaries saw the *umma* [q.v.] even more threatened when, at the end of the century, the armies of the Crusaders [see *CRUSADES*] occupied considerable tracts of Syria, among them Jerusalem in 492/1099. In this period, the *madrasa* was introduced into the Syrian cities, an institution specialising in the teaching of Sunnī jurisprudence and law. Endowing a *madrasa* was often part of a larger building programme. The Saldjūk ruler Dukāk and his mother, for instance, founded after 491/1097-8 the first *bimāristān* [q.v.] of Damascus, a *madrasa* for the Ḥanafīyya and a *khānkhāh* which also became their own tomb. Women of the ruling dynasties start to figure prominently among the endowers in this period (Tabbaa, 46).

### iii. *Zangids and Ayyūbids*

The political and spiritual significance of endowments becomes more pronounced when, after 541/1146, Nūr al-Dīn Maḥmūd b. Zankī [q.v.] came to control the parts of Syria that were not under the domination of the Crusaders. Particularly after 558/1162-3, the Zangid ruler adopted a public image of strict religiosity following the model of the Prophet. As part of this policy, he ordered religious and other buildings serving the Muslim community all over Syria to be restored, and he assured their functioning by supplementing their endowments. Among his most important new foundations are the famous *bimāristān* in Damascus, as well as his tomb *madrasa* and the first *dār al-ḥadīth* [q.v.] in Islamic history, and in Aleppo, another *bimāristān* and several colleges of law (for a list, see Elisséeff, *op. cit.*, iii, 913-35).

Only for this period do the historical sources mention a state official in charge of the *wakf* system for Syria. The supervision of endowments (*nazar al-awḳāf*) was among the functions attributed to the *kādī 'l-kuḏāt* [q.v.] of Damascus, the Ḥanafī Kamāl al-Dīn Abu 'l-Faḍl Muḥammad b. 'Abd Allāh al-Shahrazūrī (d. 572/1176-7) (Pouzet, 29). The way in which he exercised his prerogatives was the reason for a legal debate which allows interesting insights into contemporary legal thinking on *wakf*. To finance defence measures, the *kādī* had been authorised to use the surplus income (*jadl*) of endowments which occurred after the stipulated purposes had been paid for (Abū Shāma, i, 11). The debate is related by Abū Shāma [q.v.] as having taken place in the Citadel of Damascus in 554/1159: Nūr al-Dīn convened several experts of the Shāfi'ī, Ḥanbalī and Mālikī schools of law. He wanted to know which of the Umayyad mosque's assets were part of its *wakf* and which were merely additions (*mudāf*) belonging to the treasury (*op. cit.*, i, 17). The distinction was significant, because it allowed the diversion of income of the mosque for other pur-

poses. The second question aimed specifically at the surplus income of endowments. Asked whether it was permissible to spend such funds for the defence of the *umma*, the Shāfi'ī *kādī* Ibn Abī 'Asrūn forcefully denied it and maintained that the ruler should borrow the needed sums in the name of the treasury. *Wakf* income could only be spent for the designated beneficiaries (*op. cit.*, i, 18). It is, however, manifest in Abū Shāma's account that not all jurists held the same opinion, and later on even the Shāfi'īyya adopted the opposite position. These discussions highlight the tensions resulting from the overlapping political and social fields of *wakf*, *bayt al-māl*, personal income of the ruler [see *KHĀSS*], and claims in the name of the general good [see *MASLAḤA*].

The impact of the Crusades is even more apparent under the Ayyūbids [q.v.]. After the reconquest of Jerusalem, Ṣalāḥ al-Dīn pursued his policy of propagating a strict Sunnī Islam, already adopted in Fātimid Cairo, in order to turn it into a truly Muslim city. Endowing was an important part of this programme to repossess the properties of Frankish institutions. In 585/1189, Ṣalāḥ al-Dīn established in the former residence of the Latin patriarch a hospice for Sūfīs, which was named after him *al-Salāhiyya*. The deed of this foundation is the earliest extant example of a complete *wakfiyya* for Syria (Asalī, i, 83-100). In the case of his *madrasa*, the foundation deed of 588/1192 explicitly stated that the sultan had officially purchased the properties which formerly had belonged to two Latin churches from the *bayt al-māl* (Frenkel, *Political and social aspects*; Pahlitzsch).

The return to Muslim rule affected also the status of agricultural land that had been occupied by non-Muslims. In analogy with early Islamic history, several and often contradicting solutions could be drawn from the explanations of the different schools of law. In practice, some of these lands were left with those in possession of them. Others were given out as grants [see *ḲṬĀ'*] (Frenkel, *Impact*, 239-47). Many of these were later incorporated into a growing number of endowments founded by members of the ruling dynasty, its military and administrative functionaries and increasingly also by *'ulamā'* (Humphreys; Tabbaa). A considerable portion of these foundations can be attributed to women. The proliferation of public buildings which resulted from these endowment activities can be traced into the smaller cities and settlements of the region.

### iv. *Mamlūks*

Many features of these *wakf* policies continued under the Mamlūks [q.v.], who after their victory over the Mongols [q.v.] in 'Ayn D̲j̲ālūt [q.v.] in 658/1260 and numerous campaigns against the Franks, came to dominate the whole of Syria. The military triumph of the Muslim forces was followed by an extensive building programme which aimed at propagating the Islamic character of the new rulers. Hence special reverence was shown for the "Sanctuaries" [see *AL-HARAMAYN AL-SHARĪFAYN*], which was used to refer not only to Mecca and Medina but also to Jerusalem and Hebron. Sultan al-Zāhir Baybars I [q.v.] is attributed with a considerable number of endowments in these cities and other places of religious interest, and many of his successors followed his example (Meinecke).

The centre of Mamlūk endowment activities was undisputedly Cairo, but in the Syrian cities, mostly in ruins after the destructions caused by the Crusades and the Mongol invasion, building and restoring also resumed on a large scale. Tripoli [see *ṬARĀBULUS AL-SHĀM*] was rebuilt in a new location (Luz). Aleppo

was slow in regaining its former glory, but new urban quarters developed in the north and north-east (Sauvaquet; Gaube-Wirth). Damascus witnessed a period of considerable growth, illustrated by the endowment of several new Friday mosques outside the old city walls (Meinecke). These building activities came to an abrupt halt in 803/1400-1 when the army of Tīmūr Lang [*q.v.*] invaded Syria. For Damascus, the extent of the destruction can be gleaned from a document which enumerates the assets of the Umayyad Mosque and describes their actual state (to be published by S. Atāsi and B. 'Ulābī, IFPO, Damascus).

Although the written documentation becomes denser for this period, what we know about endowing is still very much an élite phenomenon. This is evident in the appearance of a novel *wakf* type: At first sight it appears as a typical charitable endowment (*wakf khayrī*), yet founders began to stipulate that any surplus (*faḍl*) from the *wakf*'s income was not to be reinvested, but was destined for themselves and their descendants (Amīn, *Awkāf*, 73-8). It was still customary to endow new mosques and other institutions with rather small incomes (Muḍjir al-Dīn; al-Nu'aymī; al-Ghazzī), but some foundations started to produce much higher revenues than warranted by their specified purposes. Such arrangements allowed founders and, after them, their descendants, as administrators and beneficiaries, to pursue their own interests, protected from interference and confiscation by the state by the sanctity of the *wakf* (Petry).

Administrators of such endowments were often accused of embezzling funds belonging to all the Muslims. Such accusations were all the more difficult to refute, as endowments increasingly were made of land that previously had belonged to the treasury and had been given out as military or administrative grants [see *ḳṭā'*]. This practice, known as *irṣād* or in Ottoman times as *wakf ghayr ṣāḥih* (see al-Tarābulṣī, *op. cit.*, 20; Cuno), was not acknowledged as a sound *wakf* by the jurists. In legal theory, it was only allowed for the purposes specified for the *bayt al-māl*. Stipulations could be altered by later rulers.

The Mamlūk administration tried to control this complex *wakf* system [see WAḲF. II. 1. In Egypt, at Vol. XI, 63b] by putting it under the supervision of local governmental agencies: In Damascus, the second capital of the realm, the *naẓar al-awkāf* belonged within the duties of the *Shāhī'ī kāḍī al-kuḍāt*. This official was also charged with the supervision of the *awkāf* of the Umayyad Mosque, whereas the al-Nūrī *bimārīstān* was put under the responsibility of the governor. Similar arrangements can be found in other Syrian towns (al-Kalkāshandī, *Ṣubḥ*, Cairo 1914-28, iv, 191-2, 220-1).

By the end of the Mamlūk period, the *wakf* as an institution built on the initiative of individuals had taken over many functions that the treasury had fulfilled in earlier times. This is evident for instance in the *divān al-asrā*, responsible for the liberation of Muslim war prisoners: it was now financed by endowments, but stayed under the supervision of an appointed agent of the state (*op. cit.*, iv, 191). Ibn Baṭṭūṭa who travelled from Cairo to Damascus in 726/1326, was struck by the "varieties of the endowments of Damascus and their expenditure . . . , so numerous are they. There are endowments in aid of persons who cannot undertake the Pilgrimage. . . . There are endowments for supplying wedding outfits to girls, to those namely whose families are unable to provide them. There are endowments for the freeing of prisoners, and endowments for travellers, out of which they are given food, clothing, and the

expenses of conveyance to their countries. There are endowments for the improvement and paving of the streets. . . . Besides these there are endowments for other charitable purposes." And he went on to relate a story how an endowment "for utensils" (*ālāt*) helped a slave to replace a broken porcelain dish (Ibn Baṭṭūṭa, tr. Gibb, i, 148-9).

#### v. Ottomans

The Ottoman conquest of Bilād al-Shām in 922/1516-17 did not radically change the *wakf* regime [see WAḲF. IV. In the Ottoman Empire, at Vol. XI, 87b]. To establish a secure hold on the tax income of the new provinces which stemmed mainly from agricultural revenues, the Ottoman administration began early on to survey all rights concerning land or access to its produce. These tax registers (*tahrīr* [*q.v.*], later called the *daftar al-khākānī* [*q.v.*] or *al-sultānī*) are a valuable source for Mamlūk and Ottoman *wakf* history, because they allow insights into number, types, composition and lifespan of endowments.

According to the Ottoman provincial regulations (*kānūn* [*q.v.*]), *wakf* properties were subject to an imposition, in many cases, one-tenth of their share (*uṣṭr māl al-wakf*) (Venzke). Only the *wakf al-Haramayn al-sharifayn*, those for Jerusalem and Hebron, and the great imperial endowments, were tax-exempt. Studies of the tax régime tend to focus on the early period of Ottoman rule in Syria. Yet endowments continued as part of rural life and were involved in the conflicts over resources between the different social groups trying to control them. Many court cases and *fatāwā* refer to the necessity of defending the interests of endowments against *ikṭā'*-holders and tax-farmers [see ILTIZĀM; MÜLTEZİM] (Johansen).

The importance of land is highlighted by the issue of the appropriation of state lands [see MİRĪ]. Especially during the first century of Ottoman rule in Syria, highly-placed Ottoman officials included in their endowments large tracts of land, in different regions or even provinces (e.g. the endowments of Lālā Muṣṭafā Paṣḥa and his wife Fāṭma Khātūn). In fact, most of these foundations are formally genuine *awkāf* because a deed of possession (*tamlīk*) from the sultan authorised such transfers. Later on, endowing agricultural land became less frequent, with the exception of privately-owned gardens and orchards. Even in the case of prominent officials and notables, only the rights of cultivation (*mashadd maskā*) and the plantations standing on the land were endowed. Agricultural revenues were appropriated by more indirect means like long-term rents and sublease contracts (Rāfiḳ).

Ottoman endowment practice is more visible in the urban context. Like other rulers before them, the Ottoman sultans showed a marked interest in the *Haramayn* of Jerusalem and Hebron. At the same time, they and members of their households founded large urban complexes in other towns, which added a distinctly Ottoman element to their cityscapes. The most outstanding examples in Damascus are the endowment of sultan Selīm I [*q.v.*] around the tomb of Ibn al-'Arabī [*q.v.*] in al-Šālihiyya [*q.v.*], or the *takiyya* [*q.v.*] of sultan Süleymān [*q.v.*]. In Jerusalem, it was the latter's wife, Khurrem Sultān [*q.v.*], who founded the famous Khāṣṣekī Sultān complex, including a soup-kitchen [see 'İMĀRET] (Singer). Numerous foundations of Ottoman officials and local notables helped to develop urban quarters and contributed in some cases to the establishing of new city centres. Yet the *wakf* was also used by a growing number of persons of rather modest means, among them a high proportion of women. The majority of these endowments are

rather small, consisting of one house or even a part of a house.

It may be stating the obvious to stress that endowing as a social practice was influenced by gender, economic means, social distinction, ethnic and religious affiliations, membership of guilds or *Ṣūfī* groups, etc. Ongoing research, however, reveals how much there is still to be learned to come to a better understanding of such distinctions. The use of *wakf* by Christian and Jewish communities is an important field of research in this context (Oded). Other approaches stress the significance of localised practices. The cash *wakf*, for instance, was quite widespread in Jerusalem, but in the other parts of Syria its introduction was slow and confined to certain social groups from the administrative and military milieu (Arnā'ū). Local practice also influenced notions of family and the modes by which property was transferred from one generation to the next, as shown in a comparative study of late Ottoman Nābulus [q.v.] and Tripoli (Doumani).

Decisive changes in the *wakf* régime of the Syrian provinces occurred under the *Tanzīmāt* [q.v.] reforms. A *Wakf* Ministry had been gradually established in Istanbul between 1826 and 1838. Under the impact of the reforms, the state forcefully claimed to be the sole legitimate representative of public interests. In this context, the administration introduced new *wakf* classifications along the lines of private and public property. The single steps of the reforms are not altogether clear, but a state agency was introduced into the provincial administrations in the late 1830s which cut back the ancient prerogatives of the *kādī*. The new functionaries (*nāzir* [*mu'ad̄j̄jalāt*] *al-awakāf* and *mudīr al-awakāf*) were directly paid from Istanbul to prevent the notorious embezzling of funds. Other laws concerning changes in *wakf* administration followed in 1863 and 1870 (Barnes, 103-54; Gerber, 178-98; Meier).

During the 19th century, the *wakf* institution as a whole came under severe criticism, being denounced as an obstacle on the way to progress and modernity. The family *wakf*, in particular, was accused of being a mere circumvention of the inheritance laws of the *Qur'ān*. These controversies ceased only in the middle of the 20th century, when many of the independent states decided on severe legal restrictions for family endowments or, in the case of Syria, even abolished them completely (see WAKF. II. 5, at Vol. XI, 78b).

#### WARD.

In Arabic literature.

The rose is easily the most sung flower in Arabic poetry. Its natural place is in flower, garden and spring poetry (*zahrīyyāt*, *rawḍīyyāt* and *rabīʿīyyāt*), but the rose also figures prominently in the setting of wine poetry (*khamrīyyāt*), which is actually the place of origin for flower poems. Abū Nuwās (d. ca. 198/813 [q.v.]) still keeps the bacchic framework of his flower descriptions, and it may have been ʿAlī b. al-Djāhm (d. 249/863 [q.v.]) who first wrote pure floral pieces, all of them devoted to the rose (see Schoeler 71-2, 128). Poetic descriptions of it may be individual or part of the description of a garden with a variety of flowers. The vast majority of rose poems deal with the red variety, but the white, yellow, black and blue varieties (the last created artificially with the use of indigo) have also attracted some attention (see al-Nuwayrī, *Nihāya*, xi, 193-6).

#### Gem imagery

The description (*waḡf* [q.v.]) of the rose is rarely a simple recreation of the visual impression it presents. The first step to transcend the natural is the use of similes, which introduce a second layer of imagery; the next step is to omit the particle of comparison, thus creating a metaphorical identification. Two "genres" of the phantastic are the outcome of this procedure. One consists in turning the rose into an aggregate of precious materials, mainly gems. The first stage (similes) may be exemplified by the following example, by Muḥammad b. ʿAbd Allāh b. Tāhīr (d. 237/851 [q.v.]):

"Don't you see the rose bushes presenting to us wonderments that have been mounted on branches, "Their petals are red, their insides are yellow embers, and around them are green boughs.

"It is as if they were rubies framed with emeralds, in the midst of which are chippings of gold."

(al-Sarī al-Raffāʾ, *Muḥibb*, iii, 89 [no. 147]).

The analogues of the simile in the third line form a parallel to the topics in the second line, so this is a very cautious introduction of the precious materials as a new sphere of imagery.

The next step (metaphorical equation) may be seen in the following example (of multiple attribution):

"Don't you see the roses inviting [us] to go down to be 'watered' with aged wine whose color is amber.

"[They are] ointment pots made of rubies laid on top of emeralds, inside of which is gold. . ."

(al-Nuwayrī, *Nihāya*, xi, 189).

The same kind of imagery is also used with other flowers. The unusual "freezing" into gems of the various parts of the blossom may historically be explained as a result of the emergence of flower poems from wine poetry: the latter, especially in Abū Nuwās, is rife with gem similes and metaphors to evoke the wine and the cup (cf. Schoeler, 72-5). Since the materials used as analogues are noble and incorruptible, an additional effect is that time itself freezes (cf. Hamori, 78-87). Finally, one should not forget that the recreation of natural objects, especially animals and plants, with the use of gems was not uncommon in courtly circles.

#### Personification

The other way of introducing a phantastic dimension is the personification of the rose, which in turn allows the poet to attribute a reason or motivation to its outward appearance or its "actions"—the phenomenon called *takhyīl* [q.v.] by ʿAbd al-Kāhīr al-Djurdjānī (d. 471/1078 or later [q.v. in Suppl.]).

Al-Buḥturī (d. 284/897 [q.v.]) composed the following famous lines:

"Gay spring has come to you, strutting [and] laughing with beauty, almost talking even.

"In the darkness before daybreak, Nawrūz has awakened the first roses that yesterday had still been sleeping,

"the coolness of the dew slitting them open, and it was as if it [sc. spring or Nawrūz] were spreading news that yesterday had been concealed (*fa-kaʿannahū yabuthū hadīthū*) kāna amsi mukattamā."

(*Dīwān*, ed. al-Ṣayrafi, p. 2090; the "improved"

version in al-Nuwayrī, *Nihāya*, xi, 189, has *fa-kaʿannamā yabuthū hadīthū* baynahunna mukattamā

"and it was as if it were spreading news that had been concealed among them [sc. the roses])."

The idea that the opening of the buds is a broad-casting of something previously secret is cautiously formulated as an "as if". The second step (full personification) appears in the following line by ʿAlī b. al-Djāhm:

"The roses started laughing only when the beauty of the flower beds and the sound of the chirping birds excited it.

"They appeared, and the world showed them its beauties, and, in the evening the wine came in its new clothes. . ."

(al-Sarī al-Raffāʾ, *Muḥibb*, iii, 92, with slight divergences from the *Dīwān* version).

"Laughing" is "coming into bloom". The roses wait until the stage is set for them. The possibilities of *takhyīl*, the poetic re-interpretation of reality, are made use of in two specific contexts: the rose-cheek equation, and the rose vs. narcissus debate.

#### Rose = cheek

The term "rose" became part of the poetic jargon of the Moderns, where it simply meant "cheek"—alongside "narcissus" for "eye" and "chamomile (petals)" for "teeth", to name but these. Underlying this usage is, of course, the comparison of the red cheek with the red rose. But by reversing the comparison (*kalb*) the rose is often perceived as a cheek. Abū Hilāl al-ʿAskarī says (*Dīwān al-maʿānī*, ii, 23):

"Comparing it to the cheek is an appropriate simile (*tashbih mustah*), but I refrained from indulging in it (*al-ikhtār minhu*) because of its fame and frequency". Here are a few more sophisticated examples of the rose-cheek identification, showing in particular the phenomenon called "harmony of imagery" (*murā'at al-naẓīr*), al-Walīd b. al-Djannān al-Shātibī:

"On the cheek of the rose are tears, dripping from the eyes of the clouds."

(al-Nawādī, *Halbat al-kumayt*, 239).

Abū Bakr al-Khālidī:

"They protected the roses of their cheeks, so that we could not pluck them due to the scorpions of their forelocks."

(al-Khālidīyān: *Dīwān*, 70).

Ibn al-Rūmī:

"Those tears resemble drops of dew that fall from a narcissus (eye) onto a rose (cheek)."

(Ibn Abī 'Awn, *Tashbihāt*, 83, 7ff.; 89, 16).

One of the dandies (*aḥad al-zurāfā*):

"A fawn whose cheek and whose eyes are my rose and my narcissus."

(Ibn Abī 'Awn: *Tashbihāt*, 90, 2).

Kushādjim:

"If you like, it [the wine] is, from his hands, wine and, from his cheeks, roses."

(*Dīwān*, 140 [no. 129]).

*Rose vs. narcissus*

The debate about the precedence of the rose over the narcissus or vice versa was mostly decided in favour of the rose. The rose was considered the king of the flowers. The caliph al-Mutawakkil [*q.v.*] is supposed to have said: "I am the king of the rulers and the rose is the king of the fragrant plants, and each one of us is the most suitable for his counterpart" (al-Nawādī, *Halbat al-kumayt*, 235). Similarly, Abū Hilāl al-Askarī says:

"The one who is sitting in an assembly is not like the one who is standing in it."

(Abū Hilāl al-Askarī, *Dīwān al-mā'ānī*, ii, 23, quoting himself; but it also occurs in Ibn al-Rūmī, *Dīwān*, 1242 [no. 1022], which, however, is strange in view of his well-known predilection for the narcissus).

I.e. the rose blossom is sitting on the bush like the ruler, while the narcissus is standing on its stem like his attendant.

It was Ibn al-Rūmī (d. 283/895 [*q.v.*]) who objected and declared his preference for the narcissus (*Dīwān*, 643-4 [often quoted], also 665 [no. 36], 1234 [a little prose text]; 1458 [no. 1112]). This he emphasised in a notorious invective against the rose, in which he compared it to a mule's anus with remnants of faeces in its midst (*Dīwān*, 1452 [no. 1107]). S. Boustany has offered a political-symbolic interpretation of Ibn al-Rūmī's favouring the narcissus (*Ibn al-Rūmī. Sa vie et son œuvre. I. Ibn al-Rūmī dans son milieu*, Beirut 1967, 339-40), but this has been effectively refuted by Schoeler (213-5). If it is not a simple personal predilection, it seems appropriate to consider Ibn al-Rūmī's position a somewhat sensationalist game in the tradition of *al-mahāsīn wa 'l-masāwī* [*q.v.*], especially if he did indeed on another occasion toot the usual horn (see above). His poem elicited a number of counterpoems, the best known being a six-liner by the famous garden poet al-Ṣanawbarī (*Dīwān*, 498 [no. 123]). On the "proofs" offered by Ibn al-Rūmī and al-Ṣanawbarī, most of them in the *takhyīl* category, see Heinrichs, *Rose versus narcissus*, 184-6. Notable is the fact that al-Ṣanawbarī offers a real *munāẓara*, i.e. the two flowers debate each other, if only in a rudimentary way, while Ibn

al-Rūmī does use personification, but not in a sustained way and without letting the "protagonists" speak.

Some poets, such as Abū Bakr al-Khālidī, refrain from taking sides in the debate; he says:

"I disclosed to the narcissus of al-Rakka my love, and I have no strength to avoid the roses.

"Both brothers are beloved, and I consider judging between them foolishness.

"In the army of flowers one is the vanguard that marches, the other the rear guard.

(al-Khālidīyān, *Dīwān*, 143 [no. 125]).

The most interesting developments in the rose vs. narcissus debate are in prose (prosimetrum, to be exact). From 11th-century al-Andalus we have two *risālas*, one by Abū Ḥafṣ Aḥmad b. Burd al-Aṣghar (d. 1053-4), addressed to Abū 'l-Walīd b. Djahwar, ruler of Cordova (r. 1043-69), the other by Abū 'l-Walīd al-Ḥimyarī (d. ca. 440/1048) and addressed to Abū 'l-Ḳāsim Muḥammad b. Ismā'īl b. 'Abbād, ruler of Seville (r. 1023-42) (both in al-Ḥimyarī, *Badī'*, 53-8, 58-67). The first tells a story of certain leaders among the flowers agreeing on recognising the rose as their king and drawing up a contract (*a contrat social*) that would be binding also on those flowers as are spatially or temporally absent. After quoting the *risāla* of Aḥmad b. Burd, Abū 'l-Walīd al-Ḥimyarī responds to it by entering the fictional realm created by Ibn Burd and continuing the story by pointing out that the recognition of the rose as ruler was an error and that the narcissus should have been in that position (one of the arguments being that the "eye" [narcissus] is much nobler than the "cheek" [rose], which latter is not even a sense organ!).

A political interpretation of the two flower epistles imposes itself. After the recent breakdown of the Umayyad caliphate in al-Andalus, both addressees, Ibn Djahwar and Ibn 'Abbād, ruled their respective city states, Cordova and Seville, with the consent of their people (people of substance, no doubt) and without any regnal title. This democratic, or aristocratic, model was unusual. Both Ibn Burd and al-Ḥimyarī were or had been high-ranking administrators; it is hardly strange that they attempted to make a constitutional statement in "flowery" language, most likely in the sense that they suggested to their addressees to adopt the caliphal title (for further details, see Heinrichs, *Rose versus narcissus*, 186-93).

In a purely literary vein, there are two more prose *munāẓaras* between rose and narcissus, one by Tādj al-Dīn Ibn 'Abd al-Madjdīd (d. 744/1343), with the title *Anwār al-sād wa-nuwwār al-madjdīd fi 'l-mufākkhara bayn al-narjis wa 'l-ward* (in al-Nuwayrī, *Nihāya*, ii, 207-13), and one by Abū 'l-Ḥasan al-Māridīnī (2nd half of 15th century), entitled *al-Djahwar al-fard fi munāẓarat al-narjis wa 'l-ward* (in al-Shūrwanī, *Nafhat al-Yaman*, Hooghly 1841, 107-17). Of interest here is the way in which they establish the fictionality of their debates: Ibn 'Abd al-Madjdīd states that he wanted "to personify the two" (*ushakkhkhishahumā*), while al-Māridīnī uses the phrase: "I represented them (*maththaltuhumā*) as two adversaries in a debate and I made the tongue of their state speak in the way of conversation (*wa 'stanṭaktu lisāna hālihimā 'alā sabīli 'l-muḥādara*)" (for further details see Heinrichs, *op. cit.*, 193-8).

*Rose as emblem*

Given the general interest in the rose-narcissus debate, it is surprising that in two books, each of which contains a chapter on the rose, no such "enmity" is mentioned at all. Al-Washshā' (d. 325/937 [*q.v.*]) compiled a handbook of correct etiquette for the "refined" people (*zurāfā', ahl al-zarf*). The rose chapter

contains mainly two ideas: (1) The rose represents everything beautiful and auspicious. (2) However, according to some, it is inauspicious, because it is shortlived. As such it is called *al-ghaddār*, the "traitor", as opposed to the myrtle that stays fresh for a long time (*al-Washshā'*, *Muwashshā'*, tr. D. Bellmann, ii, 92-6). The idea of the ephemeral and thus disloyal rose and its counterpart, the longlived loyal myrtle, finds expression in some poetry as well. Thus Abū Dulaf al-'Idjīlī, writing to 'Abd Allāh b. Tāhir, said:

"I see your love like the rose inconstant, there is nothing good in someone whose timespan does not last;

"And my love is like the myrtle in beauty and freshness, which has a white blossom that lasts, when the roses fade away."

The latter answered:

"You have compared my love with the rose, and it is similar to it: Is there any flower whose overlord is not the rose?!

"And your love is like the myrtle, bitter of taste; with regard to scent it has neither before nor after."  
(al-Nuwayrī, *Nihāya*, xi, 192-3).

Finally, it needs to be said that in Arabic mystical literature the rose does not even come close to the symbolic value it has in Persian and Persianate literature, where it represents the divine Beloved. Ibn Ghānim al-Makḏīsī (d. 678/1279 [q.v.]), in his book on the symbolic or emblematic meaning of flowers and birds, devotes one chapter to the rose and another to the narcissus, but there is no cross-reference whatsoever (*Kashf al-asrār*, 12-13 and 16-17, tr. 10-12 and 13-14). The book resembles the *munāzaras* in that the flowers speak in the first person. The self-characterisation of the rose revolves mainly around suffering, both from its own thorns that prick it and stain its petals with blood, and from the torment of distillation, when the rosewater is extracted from it.

## AL-WASHM.

### 1. In older Arab society.

Tattooing was a custom among women in pre-Islamic times. The parts of the body mentioned as recipients are the hand ([*zāhir al-lyad*]), the wrist (*mīṣam*), the arm (*dhirā'*), the posterior (*isf*) and the gums (*liḥā*). The motifs used are not mentioned; going by modern-day tattooing in Islamic countries they were probably abstract designs. The tattoo was created by pricking (*gharaza*) the skin with a needle (*ibra*, *misalla*) or—more specifically—with a tattooing needle (*mīsham*, pl. *mawāshim*, see Lewin, *Vocabulary*, 471), so that a trace (*aḥar*) remained. This was then filled with soot (*na'ūr*, explained as *dukhān al-shahm* "smoke of grease"), antimony (*kuhl*), or indigo (*nīl*). As a result the tattoo would become either darkish-green (*yakhḏaru*) or blue (*yazrakku*). An existing tattoo could be touched up or retraced (*ruḏḏī'a*) when it had become weak (*mankūs*) (see *Mufaḏḏaliyyāt*, ed. Shākīr and Hārūn, 105, 7 [no. 19, v. 2]).

In the *nasīb* section of the *qaṣīda*, the traces of former encampments (*aṭlāl*) are sometimes compared to a tattoo, or tattoos, in the same way that they are sometimes likened to foreign writing. The most famous example is the beginning of the *mu'allaqa* of Tarafa, where the traces "appear like the remainder of a tattoo on the back of a hand" (see *Dīwān*, ed. M. Seligsohn, Paris 1901, 5). See also *Mufaḏḏaliyyāt*, ed. Shākīr and Hārūn, 114, 3 (no. 21, v. 7) and 181, 2 (no. 38, v. 2).

In the *Ḥadīth* there are several traditions in which the Prophet is portrayed as cursing women who tattoo others (*wāshimāt*) as well as those who ask to be tattooed (*mustawshimāt*). The curse is often extended to other embellishing procedures that involve changing the body. The common denominator is that one should not alter God's creation (the women are called *al-mughayyirātu khalka 'llāh*) (see e.g. al-Bukhārī, *Sahīh*, part 7, Būlāḳ 1312h., 164, ult.-167, 7, and for further references see A.J. Wensinck, *A handbook of early Muhammadan tradition*, Leiden 1927, s.v. "tattooing"); and idem, *Concordance*, v, Leiden 1969, s.v. *washama*). It seems that there was some hesitation in the early community in this respect: After one of the Prophet's condemnations of *washm* whose chain goes back via Nāfī' to Ibn 'Umar, Nāfī' remarks: *al-washmu fī 'l-liḥā* "tattooing of the gums [is intended]" (al-Bukhārī, *op. cit.*, 165, penult.). Ibn Manẓūr remarks with regard to this that "what is known nowadays is that tattooing is on the skin and the lips" (*L4*, xii, 639b, 10-11).

*Bibliography:* B. Lewin, *A vocabulary of the Hudāilīan poems*, Göteborg 1978; *Mufaddalīyāt*, ed. Ahmad M. Shākir and 'Abd al-Salām M. Hārūn, Cairo 1964; *LA*, xii, 638a-b. (W.P. HEINRICH)

**WIṢĀL**, MĪRZĀ MUḤAMMAD SHĀFI' b. Muḥammad Ismā'īl, Persian poet of the early Kādjār period, also known as MīrZā Kūčik ("the little MīrZā"). He was born in 1197/1782 at Shīrāz in a family of officials who had served the rulers of Persia since the time of the Sāfawids. His studies not only included Arabic and the literary sciences, but also the arts. It is said that Wiṣāl was a graceful person with a beautiful voice and an excellent performer of *ghazals*. He also became a famous calligrapher, proficient in all the current styles of writing (see the autograph in Browne, *LHP*, iv, facing 300). In addition, he was educated as a mystic by MīrZā Abu 'l-Kāsim Sukū, a *shaykh* of the Dhahabiyya order. He died in 1262/1845 and was buried near the shrine of Shāh Čirāgh in Shīrāz.

As a poet, Wiṣāl was a typical representative of the neo-classicism that had set in with the Return Movement (*bāzgašt-i adabī*) of the mid-12th/18th centuries. He wrote panegyrics after the fashion of the mediaeval poets, in particular Manūčihri, Anwarī and Khākāni [q.v.], and *ghazals* in the style of Sa'dī [q.v.]. Among his patrons were, besides the governor and other notables of the province of Fārs, the Kādjār kings Fath-'Alī Shāh and Muḥammad Shāh, as well as people residing in the Deccan, which made him also popular on the Subcontinent. His *mathnawīs* include *Baḡm-i Wiṣāl*, a lyrical account of an excursion into the mountains of Fārs, and the continuation of *Farhād va Shīrīn*, more a treatise on love than a story, which had been left unfinished by Wahshī [q.v.] and is usually printed together with the latter's text (see e.g. *Kullīyāt-i diwān-i Wahshī-yi Bājkī*, ed. Bīdār, Tehran 1373 *sh.*/1994, 476-526). In prose, he wrote an imitation of Sa'dī's *Gulistān* and he translated *Atwāk al-*

*dhahab*, an Arabic *adab* work by al-Zamakhsharī [q.v. in Suppl.]. Another aspect of his work are his religious poems, such as elegies (*marāthī*) mourning the martyrs of Karbalā.

Modern critics have pointed to the lack of originality in his poetry, the main merit of which is the perfect imitation of the old masters. Nevertheless, his reputation as a refined poet and artist lasted throughout the Kādjār period and his works were printed several times both in India and Persia. A substantial selection from his poetry is to be found in the anthologies of Riḍā Kulī Khān. The sons of Wiṣāl followed in the footsteps of their father. One of them is Dāwarī (d. 1283/1866-7), who acquired a reputation as a poet and a painter (see further, Browne, *LHP*, iv, 319-25).

*Bibliography:* Biographical data are to be found in 'Alī-Akbar Bismil Shīrāzi, *Toḥkīna-yi dilgushā* (cf. Storey, i/2, 888); Riḍā Kulī Khān, *Madjma' al-fuṣḥā'*, Tehran 1295/1878, ii, 528-47; idem, *Riḍād al-'arīfin*, Tehran 1305/1888, 337-50. ## Y

**YAGHŪTH**, a god of pre-Islamic Arabia, mentioned in the Kur'ān in a speech of Noah: "They have said: Forsake not your gods. Forsake not Wadd, nor Suwā', nor Yaghūth, Ya'ūq and Nasr (LXXI, 22-3).

Traditionists and commentators (see the references given by Hawting, *The idea of idolatry*, 113 and n. 6) have exercised their ingenuity in the search for the traces of Yaghūth in Arabia. Ibn al-Kalbī (d. 204/819 or 206/821) in his *Book of the Idols* (*Kiṭāb al-Asnām*, §§ 7c, 9d, 45e, 52a) relates in laconic style: "[the tribe of] Madhḥidj and the people of Djurash adopted Yaghūth . . .; it was located on a hill in the Yemen known as Madhḥidj; Madhḥidj and allied tribes worshipped it." Djurash is today an important archaeological site in the south-west of Saudi Arabia, at 'Asīr, 42 km east-south-east of Abhā. The tribe of Madhḥidj [q.v.] is first attested (1st century A.D. or thereabouts) at Karyat al-Fāw (280 km north-north-east of Nadjirān), then in the regions situated between Nadjirān and Ma'rib, and finally in the highlands of southern Yemen (10th century A.D.) where it is still found today.

Shortly before the advent of Islam, the famous battle of al-Razm, which pitted Murād (a subsection of Madhḥidj) against Hamdān, is said to have been provoked by a quarrel over the stewardship of the idol (Fahd, *Le panthéon*, 193-4).

On the divinities of Madhḥidj and of Djurash, the ancient inscriptions of southern Arabia tell us nothing, either because they do not indicate the tribal affiliation of their authors (where they are numerous, as at Karyat al-Fāw and at Nadjirān), or because they are quite rare (as in the region of Djurash). Direct verification of Ibn al-Kalbī's statements is thus impossible; however, the fact that the god Yaghūth is completely unknown in South Arabian epigraphy (including onomastics) inspires some doubt as to their reliability. The only epigraphic attestation of the word *Yḡt* is to be found in a Sabaeen inscription (RES 5002) as an attributive personal name.

Two Nabataean inscriptions from Petra and possibly a third from Sinai mention the anthroponym 'mr<sup>2</sup>-y'wt (Cantineau, *Le Nabatéen*, ii, 64, 104), composed of 'mr' (Arabic *imru*) and Y'wt (Aramaean graphic of

Yaghūth, with notation of *ghayn* by means of ‘*ayn*’. In these anthroponyms, the second element could be the name of a divinity or that of a particularly venerated individual. Safaitic epigraphy knows the anthroponym *Yāḡt* (see, for example, Winnett and Harding, *Inscriptions*, 625).

Finally, Arabic nomenclature attests the anthroponym ‘Abd Yaghūth (Caskel, *Ġamhara*, ii, 133-4, 42 entries). It is known that the element ‘Abd governs either the name of a divinity (see especially ‘Abd dhī l-*Sharā*, ‘Abd Manāf, ‘Abd Manāt, ‘Abd Ruḏā, ‘Abd Suwā’, ‘Abd Shams, ‘Abd al-*Shārik*, ‘Abd al-‘Uzzā or ‘Abd Wadd) or the name of a person or a group (compare with ‘Abd ‘Adī, ‘Abd Ahlih, ‘Abd ‘Amir, ‘Abd ‘Amr, ‘Abd ‘Awf, ‘Abd Bakr, ‘Abd Hind, ‘Abd al-*Hārith*, ‘Abd *Hāritha*, ‘Abd al-Mundhir, ‘Abd al-Nu‘mān, etc.). The distribution of ‘Abd Yaghūth in the genealogies does not make it possible to identify the tribes which particularly appreciated this name, with the exception of Madhhidj (18 entries out of 42). But regarding this tribe, there is no knowing whether it is the frequency of the name which has led traditionists to associate the god with it, or conversely whether it is the association with the god which has multiplied the instances of ‘Abd Yaghūth.

Ibn al-Kalbī also seeks to explain how it was that mankind, monotheistic at the time of creation, came to worship such a multiplicity of divinities. For his purposes, he supposes that, originally, Yaghūth was a devout man; after his death, he was commemorated by a statue, then promoted to the rank of intercessor in the presence of God. It was the Flood which allegedly brought his idol into Arabia near *Djudda*; there it is said to have been found by ‘Amr b. Luḥayy who entrusted it to the tribe of Madhhidj, more specifically to An‘am b. ‘Amr al-Murādī (§§ 45e-52a; note that for the traditionists, Murād is attached to Madhhidj).

The root *gh-w-th* from which the name of Yaghūth is derived (imperfect of *ghātha* “to help”) is current in Arabic nomenclature; see Ar. *Ġhawth*, al-*Ġhawth*, *Ġhiyāth*, *Ġhuwayth* or *Ġhuwātha* (Caskel, *Ġamhara*, ii, 274-6). It is also attested in North Arabian epigraphy; in South Arabia, on the other hand, it is more rare and probably indicates a North Arabian influence.

Like other commentators, Yākūt was struck by the similarity of the names Yaghūth and Ya‘ūk, and by a possible opposition in the sense of the two words; he speculates that it may be necessary to recognise two aspects of one and the same divinity, who “sometimes sends the rain, sometimes prevents the rainfall” (Fahd, *Le panthéon*, 194). It is clear that all the developments of the tradition depend on the *Qur’anic* text and are based on anthroponyms formed on the root *gh-w-th*; as for the origin of the mention of Yaghūth in the *Qur’an*, it remains unexplained.

YAḤYĀ, SHEYKH AL-ISLĀM, Ottoman legal scholar and poet, d. 1053/1644.

The son of Sheykh al-Islām Bayrāmzāde Zekeriyā Efendi, Yaḥyā was born in Istanbul in 969/1561 (some sources give the birth date 959). As the scion of an important *‘ulemā’* family, he underwent a rigorous private education under the tutelage of his father and several other noted scholars, including ‘Abd al-Djebbāzāde Dervish Mehmed Efendi and Ma‘lūzāde Seyyid Mehmed Efendi. In 988/1580, at 19 years of age, he was granted a *mulāzimet* and went on to teach in the most important *madrasas* of the day. In 1004/1595 Yaḥyā was appointed *kādī* of Aleppo and he subsequently served as *kādī* in various parts of the empire until 1013/1604, when he was elevated to the position of *kādī ‘asker* of Anatolia. After several dismissals and reappointments, he was appointed *Sheykh al-Islām* in *Radjab* 1031/May 1622. A brief but turbulent tenure, during which he presided over the funeral of Sultan ‘Othmān II [q.v.], ended in *Dhu l-Ka‘da* 1032/September 1622 when a powerful vizier, angered by Yaḥyā’s opposition to the practice of selling government positions, forced the young Murād IV [q.v.] to dismiss him. Between 1034/1625 and 1041/1632 he again served as *Sheykh al-Islām* and was re-appointed in 1043/1634 for a period that lasted until his death in 1053/1644.

Yaḥyā was noted as a legal scholar. Kātib Čelebi (*Fedhleke*) reports that, in delivering legal opinions, he embodied the perfection of Abu l-Su‘ūd [q.v.] and was its seal. He served in an important position during a period of great turmoil and was a powerful supporter of the reforms instituted by Murād IV. He was widely known as an honest and decent person in a time when few like him rose to power.

Nonetheless, Yaḥyā’s most enduring fame has derived from his talent as a *ghazal* poet. He was said to possess a poet’s inborn nature: witty of speech, a cheerful countenance, a pleasant conversationalist. His poetry, in the manner of Bākī [q.v.], consists primarily of five-couplet *ghazals*, most on the transitoriness of this world and life’s bitter and sweet aspects. His style is simple and flowing, free from the excesses of rhetorical complexity that marked the poetry of many of his contemporaries.

His works include: a *diwān*, the *Sharḥ Djāmi‘ al-dürer* (commentary on Muḥsin-i Kaşerî’s *Fe‘ā’id*), *Ngārīstān çevirisi* (a Turkish translation of Kemāl-Pāshāzāde’s Persian parallel to Sa’dī’s [q.v.] *Gulistān*) and *Fe‘āwā-yi Yaḥyā Efendi* (a collection of legal opinions).

*Bibliography*: Yaḥyā is mentioned in the *tedhkirés* of Kāfzāde Fā’idī, Riḏā, Yümnī, ‘Aşim, Şafāyī, Tewfik, Kātib Čelebī’s *Fedhleke* (Istanbul 1287), and in the addenda to the *Shakā’ik al-Nu‘māniyya* by ‘Ushshākīzāde and Sheykhī Mehmed. There are three editions of his *diwān*: İbnülemin M. Kemāl İnāl, *Diwān-ı Sheykhülislām Yaḥyā*, Istanbul 1334/1915-16 (in Arabic script); Rekin Ertem, *Şeyhülislam Yaḥya diwānı*, Ankara 1995; and Hasan Kavruk, *Şeyhülislam Yaḥya diwānı*, Ankara 2001 (Latin script transcriptions). See also Lütfi Bayraktutan, *Şeyhülislam Yaḥya diwānından seçmeler*, Istanbul 1990; İsmail Hakkı Uzunçarşılı, *Osmanlı tarihi*, III. cild, Ankara 1995; Gibb, *HOP*, iii, 273-84; von Hammer-Purgstall, *Gesch. d. Osm. Dichtkunst*, ii, 378-85; A. Bombaci, *Storia della letteratura turca*, Milan 1956, 371-2.

(W.G. ANDREWS and MEHMET KALPAKLI)

YASH, the Ottoman Turkish form of the name of the Romanian town of Iaşi, conventionally Jassy. It lies on the plain of northeastern Moldavia near the confluence of the Bahlui river with the Prut (lat. 47° 10' N., long. 27° 35' E.).

In Ottoman times, it was the capital of the principality of Boghdān [q.v.] or Moldavia. Dimitri Cantemir, from 1121-2/1710 to 1122-3/1711 resident in this town as prince of Moldavia, stated that the seat of government had been transferred to Yash by Stephen the Great (838 or 9-909 or 10/1435-1504; in reality this was done by Alexander Lapusneanu in 972-3/1565); as a reason for this, Cantemir maintained that, due to its geographical position, Yash was better suited to warfare with the Ottomans and Tatars than its predecessor, the more remote fortress town of Suceava (Demetrius Cantemir, *Beschreibung der Moldau*, facs. repr. Bucarest 1973, 52). Ewliyā Ćelebi, who visited Yash around 1075/1665, called it Yashka Ruhbān, due to the importance of the local monasteries. In his account, Yash appears as a town of 20,000 thatched *korta* (from Romanian *curte* "court"); he noted the absence of (private?) buildings covered with lead or roof-tiles, but commented on the existence of palaces and monasteries built of stone or brick (*Ewliya Ćelebi Seyahatnāmesi. Topkapı Sarayı Bagdat 307 yazmasının transkripsiyonu—dizini*, v. ed. Yücel Dağlı, Seyit Ali Kahraman and İbrahim Sezgin, Istanbul 2001, 180-6).

Among ecclesiastical institutions, the Ottoman traveller refers to the Yashka Deyri, that Ewliyā believed had been a mosque in the reigns of sultans Bāyezīd and Süleymān, in addition to the Menokola, Galata and Lipul Beğ monasteries; the latter must be identical to that of the Trei Erachi/Trieh Switeilei, built by Vasile Lupu in 1049-50/1640—Ewliyā hoped to see it one day transformed into a mosque. As to the Menokola, it was probably identical to the St. Nicholas Church, where a newly-arrived prince was blessed by a church authority (Miron Costin, *Grausame Zeiten in der Moldau. Die Moldauische Chronik des Miron Costin 1593-1661*, tr. and comments by A. Armbruster, Graz, Vienna and Cologne 1980, 196, for a monastery called Galata, see *ibid.*, 207; on the affairs of local monasteries in general, see C. Zach, *Über Klosterleben und Klosterformen in der Moldau und in der Walachei im 17. Jahrhundert*, in Kálmán Béndá et alii (eds.), *Forschungen über Siebenbürgen und seine Nachbarn. Festschrift für Atilla T. Szabó und Zsigmund Jakó*, Munich 1987, 111-22). Ewliyā also referred to the monastery supposedly founded by Duna Bānū, the wife of Prince Lipul Beğ/Vasile Lupu, which contained an "uncorrupted body" of a young woman that Ewliyā claimed was the daughter of the mythical architect Yanķō b. Mādyān; this may well be the relic that Lupu had brought to his capital and that was believed to be the body of St. Paraschiva (Costin, *op. cit.*, 160-1).

To the south of Yash there was an artificial lake full of fish, that Ewliyā thought had been constructed by Prince Lipul Beğ/Vasile Lupu with the permission of Sultan Murād IV. The traveller also admired the princely palace with its grand reception room and numerous pavilions looking out upon the water (judging from a map of the early 20th century, the core of the palace was located at some distance from the one major lake in the town; however, the body of water seen by Ewliyā may have been drained later on; see *Meyers Reisebücher, Türkei, Rumänien, Serbien, Bulgarien*, Leipzig and Vienna, 1908, 93). Costin confirms that Vasile Lupu greatly augmented the palace, constructing gardens, stables and bath-houses; some of the buildings supposedly were covered in tiles of "Chinese porcelain" (Costin, *loc. cit.*). Ewliyā also claims that there were 2,060 shops covered with timber or reeds, six *khāns* used by merchants and a guest house that also accommodated visiting Ottoman and Tatar dignitaries.

Complementary to Ewliyā's account is that of a near-contemporary embassy chaplain (*Conrad Jacob Hillebrandts Dreifache Schwedische Gesandtschaftsreise nach Siebenbürgen, der Ukraine und Constantinopel (1656-1658)*, ed. with comm. by F. Babinger, Leiden 1937, 82 ff.) Hillebrandt served the Swedish embassy that was received at the court of Prince George Stephen, who after his deposition by Mehmed IV (1067-68/1657) emigrated to the Swedish kingdom. The author stressed the commercial activity of Yash, which was, however, unfortified; numerous Jewish traders were active here, in addition to both local and Greek merchants. At the court, where it was customary to accord a visiting Ottoman *çavuşu* absolute precedence, there was a guard of German-speaking soldiers, yet Ewliyā commented on the presence of Ottoman gunners. According to Hillebrandt, the numerous churches of Yash rather resembled mosques without minarets; he also commented on the local folklore, including dances and fairground amusements specific to the Easter season.

Throughout the early modern period, the Polish-Lithuanian commonwealth attempted to influence the decision-making of the Moldavian princes, which meant that Polish-Tatar-Cossack rivalries also were fought out on Moldavian soil. In 918-19/1513 Yash was thus fired on by the Tatars, while Ottoman and Russian attacks in 944-5/1538 and 1097-8/1686 had similar consequences (art. "Jassy" in *Encyclopedia Britannica*, ed. 1963, xii, 972). Ewliyā Ćelebi even claimed that the conditions of Moldavian subjection included the right of the Tatars to pillage the country once every ten years. In 1123/1711 Peter the Great briefly occupied the town, receiving the homage of the learned prince Dimitri Cantemir. On this occasion, numerous Ottoman merchants present in Yash were murdered and their goods pillaged (Akdes Nimet Kurat, *Prut seferi ve barışı 1123 (1711)*, 2 vols., Ankara 1951-3, i, 234 and *passim*); similar atrocities were repeated in 1236-7/1821, when the Greek uprising began in both the Peloponnesus and the Principalities. Russian armies advanced as far as Yash once again in 1148-9/1736, but were not able to hold on to the town due to the defeats suffered at Ottoman hands by their Austrian ally (Barbara Jelavich, *History of the Balkans, i, Eighteenth and nineteenth centuries*, Cambridge 1983, 66-8, 105, 121; H. Uebersberger, *Russlands Orientpolitik in den letzten zwei Jahrhunderten, i, Bis zum Frieden von Jassy*, Stuttgart 1913, *passim*). On the level of international diplomacy, the Moldavian capital was known through the peace of Jassy concluded between the Ottoman and Russian empires (Djümädā II-Radjab 1206/January 1792); this agreement confirmed many of the stipulations of the earlier treaty of Küçük Kaynarđja [q.v.], especially the loss of the Crimea. A coastal strip between Bug and Dniestr was also ceded to Russia, where the town of Odessa was founded the following year. From this time onwards, Russia maintained an influential position in Yash, which was to continue throughout the 13th/19th century.

In the late 12th/18th century, when Istanbul Greek families known as the *hospodars* represented Ottoman authority in Yash, the town possessed a small but active educated stratum that purchased books both religious and secular in Greek, Italian, Romanian and other languages, with an emphasis on the Greek authors of Antiquity, as well as grammars and dictionaries covering modern European languages. Such works were procured by merchants for whom dealing in books must have formed a sideline. These educated traders maintained links to the Athos but also

to Leipzig and Vienna, in addition to stocking works printed in Moldavia itself (Mihail Caratașu, *La bibliothèque d'un grand négociant du XVIII<sup>e</sup> siècle: Grégoire Antoine Avramis, in Symposium l'époque phanariote, 21-25 octobre 1970, à la mémoire de Cléobule Tsourkas*, Salonica 1974, 135-43). A princely academy founded by Antioch Cantemir was attended not only by the sons of local noblemen but also by young people of more modest backgrounds; from 1173-4/1760 onwards, this school began to teach Enlightenment philosophy as well as the natural sciences (Ariadna Camariano-Cioran, *Écoles grecques dans les principautés danubiennes au temps des Phanariotes*, in *ibid.*, 49-56). However, given the frequency of warfare, the depressed condition of the peasantry and the relative weakness of urban life in Moldavia, the level of general education remained low even in the 13th/19th century (Jelavich, *op. cit.*, i, 270).

In the mid-19th century, Jassy came within the principality of Moldavia, now united with Wallachia to form the kingdom of Romania. Though Bucharest became the political capital of the new state, Jassy continued to be the most important cultural centre of the realm. The first book in Romanian had been printed there (1643), and it was the seat of an Orthodox archbishop. Now, in 1860, the University of Jassy was founded. The large Jewish population of the town, approximately one-half, perished in the course of World War II. After 1947, Jassy was within the People's Republic of Romania. In 1996 it was the third city of Romania, with a population of 346,613, whilst the county of the same name, with the town of Jassy as its chef-lieu, had 823,800 inhabitants.

*Bibliography:* Given in the article.

(SURAIYA FAROQHI)

**YA'ŪḲ**, a god of pre-Islamic Arabia, mentioned in the *Qur'an* in a speech of Noah: "They have said: Forsake not your gods. Forsake not Wadd, nor Suwā', nor Yaghūth, Ya'ūḳ and Nasr!" (LXXI, 22-3).

Traditionists and commentators have exercised their ingenuity in the effort to track down the god Ya'ūḳ, with little success. In his "Book of the Idols" (*Kitāb al-Aṣnām*, §§ 7d, 9d, 45e, and 52b), Ibn al-Kalbī (d. 204/819 or 206/821), relates that: "Khaywān adopted Ya'ūḳ; he was in one of their villages called Khaywān, in the region of Ṣan'ā', two nights from Mecca." But he adds immediately: "I have heard neither Hamdān nor any other Arab [tribe] giving a name [composed] with it", explaining this silence by the Judaisation of Hamdān under the reign of Dhū Nuwās [q.v., where his name needs to be corrected in the Sabaeen form, which is Yūsuf As'ar Yath'ar, *Ysf 's'r Yl'*].

The information provided by Ibn al-Kalbī on the location and tribal associations of the township of Khaywān is precise. Khaywān is situated well to the north of Ṣan'ā' in the direction of Mecca, at a distance of 105 km, midway between Ṣan'ā' and Ṣa'da. In the 4th/10th century, the township marked the boundary between Hāshid and Bakil, the two tribal groups constituting the Hamdān confederation (al-Ḥasan al-Hamdānī, *Ṣifat Dja'zirat al-'Arab*, ed. Müller, 66); it is today the last outpost of Hāshid (the al-'Uṣaymāt clan) before entering Sufyān. On the other hand, no divinity named Ya'ūḳ is attested in Hamdān. However, the pantheons of the tribes of this confederation, which give the highest rank to Ta'lab Riyām and Almaḳah, are quite well known through many inscriptions and the vestiges of a large number of temples. A god named Ya'ūḳ is not attested elsewhere in Yemen or in Arabia.

It is clear that Ibn al-Kalbī or his source felt the need to manipulate the available information to provide a basis for the *Qur'anic* text. It was all the easier to locate Ya'ūḳ in Yemen, not only because it was a distant country, but also because polytheism had been officially banned there since the end of the 4th century A.D. and any indications to the contrary had been obliterated.

However, the epigraphy of Yemen is acquainted with the appellation of Ya'ūḳ. It is the name of a synagogue (*mkb*) constructed in A.D. January 465 (*q-d-w* 574 of the Himyarite era), at Dula' apparently (some 12 km to the north-west of Ṣan'ā'), according to the inscription Ry 520/4 (*Yk*) and 9 (*Ywk*). In a relief inscription on the island of Suḳutra [q.v.], *Yk* is apparently an anthroponym (Robin and Gorea, *Les vestiges antiques*).

Among traditionists and Muslim scholars, the cult of Ya'ūḳ was the object of hypotheses other than that of Ibn al-Kalbī: they localise it in the tribes of Khawlān-Ḳuḏā'a, Murād or Kināna (Fahd, *Le panthéon*, 195 n. 1) or at Balkha' (a Sabaeen town known only through traditions relating to idols: see Hawting, *The idea of idolatry*, 107 and n. 15) but without further evidence.

Ibn al-Kalbī also seeks to explain how it was that mankind, monotheistic at the time of creation, came to worship such a multiplicity of divinities. For his purposes, he assumes that originally, Ya'ūḳ was a devout man; after his death, he was commemorated by a statue, then promoted to the rank of intercessor in the presence of God. It was the Flood that would have brought his idol into Arabia near Djudda; there it is said to have been found by 'Amr b. Luhay who entrusted it to the tribe of Hamdān (§§ 45e-52b).

Attestations and the senses of the root from which the name of Ya'ūḳ is derived offer nothing further by way of clarification. One may note only that Yākūt underlines the similarity between the names Yaghūth and Ya'ūḳ and wonders whether it is necessary to recognise two aspects of one and the same divinity, who "sometimes sends the rain, sometimes prevents the rainfall" (Fahd, *Le panthéon*, 194).

It is thus difficult to follow Toufic Fahd when he affirms that "The conclusion cannot be avoided that Ya'ūḳ and the other four divinities cited by Noah belong to the most primitive pantheon of central Arabia" (*op. cit.*, 196); to this day, nothing has been established with certitude as to the origin of the mention of Ya'ūḳ in the *Qur'an*.

(CH. ROBIN)

**YAZĪDJĪ**, ŠALĪḤ B. SÜLEYMĀN, the early Ottoman author of the *Shemsīyye*, one of the ear-

liest works on astrology known to be written in Anatolia. He was the father of Yazıdijıoğlu Mehmed and Ahmed Bıdjan [q.v.], two important religious figures and writers of the 9th/15th century.

The place and date of his birth are uncertain. However, due to the fact that he dedicated his work (the *Şemsiyye*) to Iskender b. Hādij Pasha from the Dewlet Khān family living in Ankara, it is supposed that he was also from Ankara. On the other hand, in the introduction (*sebeb-i te'lif*) of his *Şemsiyye*, he wrote that he was strongly attached to 'Alī Beg, the son of Kaşşāb-oghlu Mahmūd Pasha, who was the tutor (*lala*) of Sultān Mehmed Fātiḥ and vizier to Murād II and Fātiḥ, and that he served him from the year 775/1373 for 36 years until 'Alī Beg's death. Kaşşāb-oghlu Mahmūd Pasha founded a *masjid*, a *madrasa* and a hospital in Malkāra [q.v.] and appointed his son 'Alī Beg to administer them, so Yazıdijı Şāliḥ also lived in Malkāra and in later years he settled in Gallipoli (Gelibolu) probably after 'Alī Beg's death. The date of his death is unknown. The story that his grave is near the graves of his sons Mehmed and Ahmed Bıdjan (outside Gelibolu, on the road to Istanbul) is unauthenticated.

That his father's name was Süleymān, although Ewliyā Çelebi calls him Şudjā' al-Dīn, is certain, because in the manuscript of the *Muhammediyye*, by his son Yazıdijı-oghlu Mehmed, and also in his other works, he speaks of himself as Mehmed b. Şāliḥ b. Süleymān. As a consequence of writing in his work his name as Şālḥ al-Dīn, from the exigencies of the metre, in some sources his name has mistakenly appeared as Şālāḥ al-Dīn.

Although the available information about his education is uncertain, some facts, e.g. that he was a scribe, so that he was given the *lakab* Yazıdijı, that he was a very knowledgeable person about astrology, and that he used Arabic and Persian quotations and titles in his *Şemsiyye*, imply a certain level of education.

The number of his works is unknown. His only extant work is the *Şemsiyye* on astrology. Although Ewliyā Çelebi mentions a *Seb' al-Methāni*, a *Tab'ir-nāme* and works on medicine, no copy of them has so far been found. The work which has appeared in some sources as the *Melhame* is part of the *Şemsiyye*. The question whether the *Şemsiyye* was a compilation or a translation was long discussed. However, considering the manner of book writing of the time and also the fact that Yazıdijı Şāliḥ mentions the works and people from whom he profited (like Ebu 'l-Faḍl Hübeysh b. Ibrāhīm b. Muḥammed al-Tiflisi), it is recognised as a compilation.

Yazıdijı Şāliḥ writes in the introduction of his work that he completed it in 811/1408-9, naming it the *Şemsiyye*, and submitted it to Iskender b. Hādij Pasha. The *Şemsiyye* was written in the form of a *methnewi* and in the metre *fā'ilātūn fā'ilātūn fā'ilūn*. Since no autograph ms. exists and no critical edition has been done, the number of original verses is unknown; they differ in each copy (e.g. in ms. Süleymaniye Kütüphanesi-Per-tevniyal no. 776, 4724 verses). The fact that over 30 mss. of it survive shows that it was widely read. If not great literature, it is nevertheless important linguistically as a text of 15th-century Turkish. It is composed of three sections. In the first section there is the introduction (*ta'wḥid, na't, mir'ādijıyye, sebeb-i te'lif*), which is to be found in works written in the *methnewi* form; the second section is divided into twelve *bābs*, each referring to one of the months, and each divided again into 25 *fāḥşs*; and in the third section,

three characteristics of the moon are narrated, with their subdivisions. It was rendered by his younger son Ahmed Bıdjan into prose form, also including some verse sections, as the *Bostānū 'l-hakāyik*. Apart from this, there is the *Rūz-nāme-i Melhame*, which is composed of selections, summaries and explanations from the *Şemsiyye* (Topkapı Sarayı Müzesi Kütüphanesi-Hazine no. 1740, 129a-141b), printed as the *Melhame* at Kazan in 1891.

*Bibliography*: 'Alī, *Künh al-aḥbār*, Millet Kütüphanesi, Tarih no. 4225, 75b; Bursalı Mehmed Tahir, *Yazıdijı Şālāḥ al-Dīn*, in *Türk Yurdu*, v/6 (1329/1914), 1021-2; idem, *Oḥmānli mü'ellifleri*, iii, 308-9; Halil İnalçık, *Fatih devri üzerinde tetkikler ve vesikalar*, i, Ankara 1995, 71 n. 8; Amil Çelebioğlu, *Muhammediyye*, i, Istanbul 1996, 9-16; idem, *Yazıcı Salih ve Şemsiyye'si*, in *Eski türk edebiyatı araştırmaları*, Istanbul 1998, 55-91; Aulla Batur, *Yazıcı Salih ve Şemsiyye'si*, unpubl. M.A. thesis, Erciyes Üniversitesi, 1996; Ewliyā Çelebi b. Derviş Mehmed Zallı, *Ewliyā Çelebi seyahatnāmesi. (HATİCE AYNUR)

**YEDI ADALAR**, the Turkish name of the Greek Seven (Ionian) Islands (Gk. *Heptanesos/-a*), an insular group off the western coast of north-western Peloponnese (Morea) and mainland Greece, stretching northwards in the following order: Zakynthos, Kephallenia (Cephalonia), Ithake (Ithaca), Leukas, Paxoi (Antipaxos and Paxos) and Kerkyra (Corfu). Sometimes the island of Kythera or Cerigo [see ÇOKA ADAŞI], off the southeastern tip of the Morea, is also included, albeit erratically, in the Seven Islands group (mainly by scholars of the area's Latin domination period). The relevant Arabic names of the islands appear in al-Idrīsī [q.v.], while the Ottoman Turkish names of Zaklise [q.v.], Kifalonia, Siyaki (Ithake), Levkas/Levkada [q.v.] (only the island's main town and fortress was called Aya Mavra by the Ottomans), Bakşiler (Paxoi islands) and Körfüz/Körfüs [q.v.] (stemming, like Corfu, from the island's Byzantine appellation of *Koryphō*) appear in the early 16th-century *Kitāb-i Bahriyye* by Piri Re'is [q.v.] (see detailed comm. in the recent Greek tr. by D. Loupes, Athens 1999, 312-16, 322-37), although Ottoman rule in the Ionian area, usually commencing from 1479 with the ousting of the Italian Tocco dynasty from Benevento, was never definitively established during the Ottoman domination period except for the case of Levkas, where it lasted for almost two centuries. The Toccas' last dukes had retreated to the islands in the 1460s from mainland Eriros in view of the Ottoman conquest there, completed between 1449 and 1479.

In the Byzantine period lasting to the early 13th century (from 1204 onwards the area gradually passed under Latin control), the Heptanese sustained severe attacks, mainly from Muslims and Normans. Of particular importance here are the two attacks, first on Kephallenia and Zakynthos between 878 and 881 by the North African Arabs [see İFRİKİYA], repulsed by the celebrated Byzantine admiral Ooryphas (see Elisabeth Malamut, *Les îles de l'Empire byzantin, VIII-XII s.*, Paris 1988, 77 n. 236 and table on p. 110; sources and refs. in A. Savvides, in *Mésogeios*, i [1998], 91-2), and secondly on Corfu in 1033 by Saracens from Sicily [see ŞIKILLİYA], who burned the island's main town (refs. in A. Savvides, *The Byzantine Heptanese, 11th-early 13th century* [in Gk.], Athens 1986, 19). Other references to possible Muslim attacks in the area, mainly appearing in *Saints' lives*, cannot be corroborated

by parallel sources. Also of importance is the information provided by al-Idrīsī, who ca. 1153 visited Byzantium and gave in his *Kutāb Rudjdjār, inter alios*, details on Tanu (Othonoi), Kurfus (Corfu), Lkata (Leukas), Djefaluniya (Kephallenia), Faskyu (Ithake?) and Djandjnt or Gagni (Zakynthos) (French tr. Jaubert, ii, 121, 123; cf. Soustal-Koder, 168, 176, 179, 195, 278; Savvides, *Byz. Heptanese*, 46-8, and idem, in *Byzantinoslavica*, lx/2 [1999], 454). About 12 years later (1164-5) the Spanish Jew from Tudela, Benjamin, also visited Korypho (Corfu) and Lachta or Lekat (Leukas and not Arta in the Epitro mainland, as in the Eng. tr. by Adler, 10, and in Soustal-Koder, 57-8 n. 97, 113; on this see the recent Gk. tr. by Photeine Vlachopoulou, introd. and comm. by K. Megalommates and A. Savvides, Athens 1994, 34-5 n. 8, 62).

From the second half of the 14th century onwards, Latin control in the Ionian Islands was divided between the Tocco on the southern (until ca. 1479) and Venice on the northern group (until 1797). Since there is no fixed pattern for a unified and lasting Ottoman presence in the area, this article will discuss the islands separately, beginning with Leukas, which sustained the longest Ottoman occupation.

Leukas. In Leukas (Leucata or Santa Maura in western sources) the Ottoman occupation lasted from 1479 until the final Venetian capture of 1684, with an interval between 1502-3 when the Venetians succeeded in seizing it during the Second Venetian-Ottoman war of 1499-1502. By the 1503 treaty, it was returned to Sultan Bāyezīd II [q.v.], who in turn recognised the Venetian occupation of Kephallenia (1500-1). Leukas' conqueror in 1479, the *bey* of Avlonya (Valona) Aḥmad Paṣha Gedik [q.v.], carried out Mehmed II's plans of repopulating Istanbul with deportations, among others, of a significant part of Leukas', Zakynthos' and Kephallenia's populations. In the 16th and 17th centuries, the island's town and fortress of Aya Mavra developed as the largest settlement of the *sandjak* of Karli-İli [q.v.] and as an important Ottoman naval base in the area, with interesting samples of Ottoman fortifications and building activity (refs. in LEVKAS). The Venetian capture of 1684 was ratified by the treaty of Carlowitz [see KARLOFÇA] in 1699.

Zakynthos. A Tocco possession since 1357, Zakynthos (Zante in western sources) was briefly seized (with Kephallenia and Leukas) by the Ottomans (1479); the Tocco soon recovered it (1480), but they were driven out by the Venetians (1482-3), who in 1485 purchased it by special treaty with Bāyezīd II. The 1503 treaty secured Zakynthos and Kephallenia for the Republic of St. Mark in exchange for an annual tribute of 500 ducats, a situation maintained until the Carlowitz treaty (1699). In the 16th century, the island had suffered from raids conducted by Kḥayr al-Dīn Paṣha Barbarossa, Torghud Re'īs and Ulūdī 'Alī [q.v.]; Zakynthians participated against the Ottomans at Lepanto [see AYNABAĞITFI] (1571), the Russian-instigated Orloff insurrection of 1770 and—after the overthrow of Venetian rule (1797)—in the 1821 Greek War for Liberation (refs. in ZAKLISE, and in Savvides, in *Mésogeios*, v [1999], 81-2, 84-5 nn. 26-38).

Kephallenia. Also a Tocco possession since 1357, the island (mentioned as Zeffalonia by Westerners) was also seized by the Ottomans in 1479 and held until 1481, when the Tocco reclaimed it until 1482-3, at which time the Venetians took over; in 1485, however, Kephallenia was ceded, in a state of depopulation, to Bāyezīd II, who extended the second Ottoman rule until 1500-1, when Venice assumed de-

finite control there (as well as in Ithake), resettling the island with Zakynthians and Ithakiotes in the course of the Second Venetian-Ottoman war (see G. Moschopoulos, *History of Cephalonia* [in Gk.], i, Athens 1985, 67-83). From then onwards, the Venetian presence was uninterrupted until 1797, despite two destructive Ottoman raids in 1537-8 and 1570-1 (Moschopoulos, *op. cit.*, 83-6). Kephallians, like other Heptanesians, participated on the side of Venice in the long siege of Crete (1645-69) (Moschopoulos, 86ff.), while Kephallenia and the other islands were to receive hosts of refugees from Crete [see ΙΚΡΤΙΣΗ] following its fall to the Sultanate (see A. Vakalopoulos, *History of modern Hellenism* [in Gk.], iii, Thessalonica 1968, 532ff.).

Ithake. Known as Val de Compare to the Latins, Ithake, following a period of Frankish rule, was laid waste in 1430 and again in the period 1479-85 by Mehmed II's and Bāyezīd II's fleets, in the attempt of the Sultanate to consolidate its hold on the western Greek littoral. In 1500-1 it was captured (with Kephallenia) by the Venetians, who, on account of its depopulated state, resettled it in 1504 with Kephallionians and Zakynthians. The Venetian hold on the island ended in 1797.

Paxos. The island was sold by Venice to a wealthy Corfiote, whose oppressive government forced its inhabitants to flee to the Ottoman-dominated Epirote mainland. On 22 July 1537 an allied Western fleet under Andrea Doria defeated near Paxos the Ottoman vice-admiral 'Alī Ćelebi, seizing 12 Ottoman vessels, but in 1577 the Ottomans, recovering from their defeat at Lepanto (1571) and realising the island's vulnerability, attacked and plundered it before the Venetians took over again (until 1797).

Corfu. Although it never experienced a period of Ottoman domination, the island was severely threatened by three Ottoman attacks [see also KÖRFÜZ]. In 1386 it was ceded by the Navarrese Company to Venice, whose control there lasted until 1797, while after the fall of Constantinople in 1453, Corfu was to become a place of Byzantine refugees and exiles. In 1537-8, Kḥayr al-Dīn Paṣha Barbarossa and the Grand Vizier Luṭfi Paṣha [q.v.] besieged the island but, failing to seize it, they plundered Kephallenia (see Vakalopoulos, *op. cit.*, iii, 143 ff.). Another threatening attack against Corfu took place in the reign of Sultan Aḥmed III, in 1716, in the course of the Seventh Venetian-Ottoman war of 1714-18; despite a stifling blockade by sea (by the *kapudan-pasha* Mehmed) and land (by the *serasker* Kara Muṣṭafa Paṣha), the Venetians and Corfiotes held out (see G. Athanasinas, *The assedio of Corfu, 1716* [Gk. adaptation], Athens 2001, and D. Chatzopoulos, *The last Venetian-Ottoman war of 1714-18* [in Gk.], Athens 2002, 235-97). Finally, following the end of Venetian rule in the Heptanese (1797) and in the reign of Sultan Selīm III, the French were besieged in Corfu (Nov. 1798-March 1799) by a united Russo-Ottoman fleet under Admiral Feodor Uṣhakov, who had also seized Zakynthos, Kephallonia, Ithake (Oct. 1798) and Leukas (Nov. 1798) and whose operations were supported also by the Orthodox ecumenical patriarch Gregory V (detailed description of the operations by the priest Petros-Polykarpos Voulgares, in a recent modern Gk. adaptation by S.-C. Voulgares, *Chronicle of a siege, 1798-9*, Athens 2001; cf. N. Moschonas, in *IEE*, xi, 389ff.). Russo-Ottoman control, in the course of which both the first independent small Greek "Ionian State" was created (1800-7) under the sovereignty of the Porte and treaties were signed with 'Alī Paṣha Tepedelenli [q.v.] of

Ioannina [see YANYA] (on these treaties, see E. Protopsaltes, in *Deltion historikes kai ethnologikes hetaireias hellados*, xi [1956], 59-77), lasted until 1807, when the French took over again until 1814, at which time the British prevailed in the area until its eventual cession to Greece (1864).

**YEMENLI HASAN PASHA** (d. 1016/1607), Ottoman Turkish governor in the Yemen.

In the absence of tribal consensus and an agreed successor to the Zaydī imāmate following the death of al-Muṭahhar [q.v.] in 980/1572, the Ottomans were offered an unprecedented opportunity to extend their zone of influence beyond the Tihāma [q.v.] into the Yemeni interior. Earlier Ottoman advances and the securing of Ṣan'ā' [q.v.] in 954/1547 had still left large areas of the north—including strongholds such as Kawkabān and Thulā [q.v.] situated perilously close to the governor's seat itself—incompletely pacified, and it was only during Ḥasan Pasha's exceptionally long term of office as provincial governor between Djumādā I 988/June 1580 and Muḥarrām 1013/June 1604 (Rāshid, i, 154, 186) that the Ottoman administration began to make serious inroads against local resistance forces. Throughout the period of Ḥasan Pasha's governorship in the Yemen, the Ottomans were preoccupied by wars on both the eastern and north-western frontiers of their empire (against the Ṣafawids 986-98/1578-90 and the Habsburgs 1001-15/1593-1606, so that Ḥasan was given a free hand to secure the consolidation of Ottoman rule within his jurisdiction by his own means. One method he employed to good effect in the early years of his governorship was deportation (*nafī*) of prominent members of the Zaydī leadership. In 994/1586 he sent five of al-Muṭahhar's sons and potential successors to Istanbul for incarceration at Yedi Kule (Rāshid, i, 161), where they remained until the end of his governorship (see *ibid.*, i, 185, noting the death in captivity of Luṭf Allāh b. al-Muṭahhar in 1010/1601-2).

To reinforce his authority locally, Ḥasan Pasha made extensive use of an inner core of long-term associates of proven military ability and unwavering personal loyalty such as his deputy (*ketkhüdā*) Sinān Pasha and another right-hand man called Amīr 'Alī

al-Djazā'irī. In 997/1589 he appointed the latter with the rank of *pasha* as lieutenant-governor in Ṣa'da [q.v.] with key responsibilities for securing the northern districts. When at a later stage in his governorship Ḥasan Pasha faced a resumption of the Zaydī challenge with al-Manṣūr al-Kāsimī's declaration of independence in 1006/1597 [see AL-MANṢŪR BI 'LLĀH], he turned for assistance to his former associate 'Alī Pasha who was called in from his then current post as governor of Eritrea (for 'Alī Pasha's term as *beylerbeyi* of the *eyālet-i Habesh* between Raḍjab 1002/April 1594 and Ramaḍān 1010/March 1602, see C. Orhonlu, *Habesh eyaleti*, Istanbul 1974, 183) to lend his help in the crisis. Through a combination of swift communications, rapid reaction and effective teamwork, the Ottomans succeeded in capturing al-Manṣūr's base of operations at Shāhāra in 1011/1602 and in forcing his re-submission, albeit temporary, to Ottoman rule. In sum, although Ottoman control over the province remained precarious at the close of Ḥasan Pasha's twenty-four year term as governor in 1013/1604, there is no question but that he had contributed significantly to Yemen's fuller incorporation into the Ottoman imperial system.

After Ḥasan Pasha's recall at his own request to Istanbul, he served a brief term as governor of Egypt between the early part of 1014/summer 1605 and 3 Dhū 'l-Ḥijḍja 1015/2 March 1607 (*Tārīkh-i Na'imā*, i, 462). Shortly after his return to the capital, he died on 9 Raḍjab 1016/3 October 1607 (*ibid.*, ii, 23).

**YOGYAKARTA**, the name of a city in central Java, Indonesia, capital of the former sultanate and present-day Special District of Yogyakarta. Inhabitants (in 2002): ca. 448,760 (city) or ca. 3,068,000 (whole district).

Together with the city and area of Surakarta [q.v.] it was formerly part of the kingdom of Mataram [q.v.] located in the southern parts of central Java. The first *kraton* (palace) of Mataram was built in 1582 in Kuṭa Gédé, a present suburb of Yogyakarta, by Kyai Gédé Pamanahan. After his death in 1584 his son took over the *kraton* and military installations and was recognised by Sultan Adivijaya of Pajang as Sēnōpati-ing-Alaga, a military leader ("general"). After the ruler's death in 1587 Sēnōpati established and enlarged his new kingdom. He died in 1601. The greatest ruler among his descendants was Sultan Agung (r. 1613-45), who conquered most of central and eastern Java including Surabaya, and even some regions on other islands. Besides his deep roots in Javanese monistic traditions as *susuhunan* (originally a spiritual title), he also supported the spread of Islam to the interior of the island and obtained the title of *sulṭān* by a special mission from Mecca in 1641. Under his successors, however, the Islamic elements were extensively eliminated once more.

After three wars of succession and the move of the capital city to Kartasura (1677) and Surakarta (Solo, 1745), the kingdom of Mataram was divided in 1755; the Pangéran Mangkubumi III choose again

Yogyakarta as place for his *kraton*, thus reviving the traditions of Sênopati and Sultan Agung. As Sultan Hamengku Buwono I (d. 1792) he became the founder of the dynasty of Nga Yogyakarta Hadiningrat. The situation of his *kraton* was just beside a sacred line reaching from Mt. Merapi in the north to the mouths of the rivers Opek and Progo, the meeting place with the goddess of the South Sea Nyai Lara Kidul, thus underlining his central role in sacred geography, above all, in the cosmos. More than the *susuhunan* in Surakarta, the *sultân* of Yogyakarta gave dominance to Islamic symbols and precepts, combining them to the special brand of Javanese Islam: the normative expressions of Islam, in confession and *Shari'at*, as the vessel for mystical practice; divine decree (*takdir*, *wahy*, *wangsit*, *pulung*) combined with the magical power (*kesaktèn*, *sèkti*, from Sanskr. *sakti*) of the ruler, and thus the subordination of the religious scholar to the king (Woodward, 152). The tradition of Yogyakarta relates these teachings to Sunan Kali Jaga, one of the nine revered teachers of Islam (*wali songo*) in Java who was a particular adviser to Sênopati.

The Java War (1825-30) broke out when Pangëran Diponegoro (1785-1855), son of Sultan Hamengku Buwono III and a person well trained in mystical practices, was taken to fight against the alliance of the court and the Dutch because of new administrative regulations. He was supported by the people, by members of the nobility and the Islamic '*ulamâ'* led by Kiyai Maja. After being treacherously taken prisoner, he was exiled to Makassar [q.v.], while Kiyai Maja was exiled to Menado.

In 1912 Yogyakarta witnessed the founding of the *Muhammadiyah* by K.H. Ahmad Dahlan as a modernist social and educational organisation which is at present the second largest Islamic organisation in Indonesia. The great popularity of Sultan Hamengku Buwono IX (1912-88, r. since 1939), a modernising reform of the village administration in 1946 in his district, and his close co-operation with the republican leaders after 1945, particularly 1946-9 when Yogyakarta was the interim capital of Indonesia because of the Dutch occupation of Jakarta, saved the special status of the district. Its role as a centre of academic learning (1946: founding of Gajah Mada University; 1959: Institute for Higher Islamic Learning, *IAIN*; and others, including Protestant and Catholic seminaries) has been further developed by Sultan Hamengku Buwono X (b. 2 April 1946, succeeded his father in 1988).

**YOMUT**, a Türkmen tribe, or rather a tribal confederacy, in Central Asia.

Today, most of them live in the Republic of Türkmenistan (1926: ca. 100,000; contemporary state policy takes no cognisance of individual tribes). About 130,000 (in the 1960s, cf. Irons 1974) inhabit Iran (east of the Caspian sea, from the Gurgân plain north to the border of Türkmenistan), and between 125,000 and 400,000 (Adamec) live in northwestern Afghânistân (north of the Paripamisus range). The etymology of the name is unclear. The Yomut do not appear among the pre-Mongol Türkmen tribes listed by al-Kâshgharî in his *Diwân lughât al-Turk* (tr. R. Dankoff and J. Kelly 1982-5), nor in Rashîd al-Din's *Djami' al-tawârikh* (*Die*

*Geschichte der Oğuzen*, tr. Karl Jahn, 1969, 46-7). Abu 'l-Ghâzi Bahâdur Khân [q.v.] mentions Yomut, a remote descendant of Salur, the son of the legendary Oghuz Khân's son Tagh Khân (*Shadjiara-yi Tarakima*, fol. 100b, ed. and Turkish tr. Z.K. Ölmez, 1996). Dshikijew (1994) collected among the Yomut in the Türkmen SSR some divergent genealogical tales all of which show that the Yomut believe that they have the same ancestor Salur (Kazan Alp), one of the most famous heroes of Türkmen lore [see DEDE KORKUT], as the Teke, Ersari, Sariğ and Salor tribes [q.v.]. According to Bregel (1981), in the 16th century the Yomut, along with other tribal groups such as the Ersari, Salor, Sariğ and Teke, practised pastoral nomadism in the region between the Mangışlak peninsula and the Balkhân mountains. Due to ecological factors and the pressure of the Kalmuks and Kazakhs from the north, probably in the second half of the 17th century, some Yomut moved to the Gurgân plain while others migrated towards the oases of Kh'arazm in the first half of the 18th century. Eventually they received permission from the khân to remain on the northwestern periphery of the Khîwa oasis.

In the *Firdaws al-iqbâl*, a 19th century chronicle of Khîwa, written by Münis and Āgahî [q.v.], from the early 18th century onward the Yomut are frequently mentioned among the tribal enemies whom several khâns had to subdue at regular intervals. The Yomut also played a certain role in Khîwan history since, as auxiliaries, they often joined the Khân's army, mostly in his fights with the Shī'ī Persians in Khurāsân, but also in campaigns against Bukhārâ. They were also prone to ally themselves with a khân's rebellious relatives or governors. Between 1178/1764-5 and 1184/1770-1, the Yomut even succeeded in capturing twice the city of Khîwa and also most other strongholds of the khânate. After the Russians had reduced Khîwa to a protectorate (1873) and annexed the Türkmen territory from Mangışlak down to the Persian border (1881-4), the Yomut incursions continued across the Russian-Persian border but on a much reduced scale.

From the early 19th to the second half of the 20th century, all the Gurgân (Astarâbâd) Yomut tribes had either predominantly pastoral (*čarva*) or predominantly agricultural (*čomur*) members producing for monetary economy. Their most famous product were carpets. Up to the 1950s, they were also able to preserve slave and livestock raiding as an additional source of income, since the Iranian government exerted firmer political and fiscal control only in the 1930s and, again, from the middle of the century onwards (Irons 1994).

(BARBARA KELLNER-HEINKELE)

**YURTÇI** (r.) (from *yurt* 'tribal territory, camp site, tent site', a general term in the Turkic languages,

cf. Türkmen *yürt* ~ *yüürt*, Karakalpak, Kazak and Kirghiz *žurt*; see KHAYMA, iv, to whose *Bibl.* should be added G. Doerfer, *Türkische und mongolische Elemente im Neupersischen*, Wiesbaden 1965-70, iv, 212-16 no. 1914), Pers. *yürtçī*, the salaried officer responsible for choosing camp sites for the army or court, organising them, and supervising their use.

Djuwaynī's use of *yürt* for the appanages granted by Činggiz Kan to his brother, sons and grandsons demonstrates that *yurt* then included both summer and winter quarters, the whole territory of an *ulus* (i, 31). Rashīd al-Dīn uses it in the same way, saying, for example, that "the dwelling and territories, *makām wa yürt-hā*" of Činggiz Kan were next to those of the Ong Kan (Berezin, *Činggiz*, text, i, 118). The *yürtçī*'s duties are set out by Nakhčiwānī [q.v.] in 1360, in two specimen charters (ii, 64-6): his appointment is to be recognised by all, from the viziers downwards through commanders of ten thousands and thousands to the tribes themselves. He alone is to designate camp sites, *yürt-hā*, in a pleasant district, giving priority to the ruler, and then to his counsellors and lords wherever the camps, *urdū-hā*, are to be pitched in summer and winter quarters, *mawādī-i yāylāk wa kishlākī*. His choices in all districts are to take account of the local population's separate needs: they should be far from the arable land of village peasants, or troops of horse-herders, or those settled in *obas*, or nomads; the site should not be irksome, to the detriment of people's land, and for this reason nothing should be demanded of anyone. No-one should exceed the camp site which he had designated for them. It is emphasised that the *yürtçī* was selected on the basis of his long experience, and knowledge of where camp sites with plenty of water and grazing were to be found in all the districts for summer and winter quarters, and of all the communication routes used by the camp. In whatever direction a royal expedition was undertaken, he was to go in the vanguard and establish the site for royal use, and those for the principal members of the court, so that the troops on arrival at the stage [see MANZIL] should know exactly where to encamp. It is mentioned specifically that these must be far from the courses of rivers which might flood. The office was thus a highly responsible one, in which the experience and competence to be found in those living a largely nomadic life were integrated with a system of state finance and administration. Besides the *yürtçī*, three other officials were particularly responsible for the management of the camp: the *farrāsh*, or tent-pitcher, the *bulavghuā* or keeper of lost property, and the *sārbān* or cameleer. The superintendent of the tent department, *mihtar-i farāsh-khāna*, was accountable for the supply and maintenance of the royal tents. Such camps had to operate under a wide variety of conditions, which must have strained the vigilance of these officials. Though at times the movement from recognised summer quarters to winter quarters was regular enough, the use of at least seven different summer sites by Ghāzān in the course of his nine-year reign shows the extent to which movement was possible in the north of Persia alone. Some sites were preferred for ceremonial purposes, most probably because of their proximity to Tabrīz: a grand assembly was held at Kārābāgh in 1295, and a great public festival of 1302 in the meadows at Ūdjān. Some of these sites at least were registered as royal domains, *indjū*: Lār, for example, belonged to Arghūn.

(P.A. ANDREWS)

**YÜSUF B. AL-HASAN (I)**, MAWLĀY, sultan of Morocco, r. 1330-46/1912-27.

He was born in 1298/1880-1 of a Circassian mother, Āmina. His early life in the royal palace remains obscure. He received education from private tutors in a traditional curriculum and did not emerge into public life until 1330-1/1912 when his brother, sultan 'Abd al-Hāfiz (r. 1325-30/1908-12) appointed him as his *khālifa* (viceroys) at Fez. Later that year, he was named sultan (19 Sha'bān 1330/12 August 1912) after his brother was forced to abdicate by Marshal Lyautey, Resident-General and principal architect of the French Protectorate then being established in Morocco.

Dignified, pious, intelligent, affable, possessed of no political experience or ambitions, and apparently friendly toward France, Mawlāy Yūsuf seemed an ideal choice for an office meant by the French Protectorate authorities to serve as a legitimating symbol and façade for their governance in the country. Under Lyautey's tutelage (1912-25) he would serve this role well: lending his prestige as an 'Alawī *sharif* to French military campaigns against Moroccan resistance to the imposition of French and Spanish rule, and generally remaining publicly co-operative and uncritical of France and its Protectorate policies. He was routinely associated with the inauguration of a wide range of Protectorate initiatives in the areas of government, finance, administration, the judiciary, the education system, infrastructure and economic development.

At the same time, he gradually emerged as a more active and interested participant in the creation of a revitalised sultanate and government (*makhzan* [q.v.]) that linked traditional forms—embodied especially in the person and reign of his father Mawlāy al-Hasan (r. 1290-1311/1873-94)—and modern innovation represented and advocated by France. He took an active interest in the reform and encouragement of Islamic education, and gave generous royal patronage to the repair and construction of mosques, *madrasas* and other public buildings. He effectively opposed French efforts to reduce or replace *Sharī'a* courts in the country's Berber-speaking areas, and was an increasingly vocal opponent of the Protectorate's ongoing expropriation of rural and urban property. Unknown and unpopular at first, his travels throughout the country, extensive publicity and increasing association with the development of a modern Morocco that respected and preserved religious and cultural traditions, gained for him broadening popular acceptance. Recent scholarship (e.g. Rivet) shows him and his relationship to the French Protectorate to be much more complex than earlier interpretations have allowed. Though never enjoying real power, the sultanate during Mawlāy Yūsuf's reign became more than a mere façade lending itself uncritically and unawares to the policies of the Protectorate authorities. Over the course of time, he took on substance sufficient to begin a transition from the status of a perplexed and diffident pupil to that of respected mentor, perhaps, in some ways, even partner, in the governance of the sultanate.

Yūsuf died on 22 D̲jumādā I 1346/17 November 1927 from the effects of uraemia. He was succeeded by his third son Muḥammad (V) [q.v.].

**YŪZBASHĪ** (ر.), lit. "head of a hundred [men]", a term used in later Ottoman and now modern Turkish armies for the rank of captain, and in the form *yūzbashī* in modern Arab armies for this same rank. It was further used in Muslim Indian minting practice for the engraver of coin dies; see DĀR AL-ḌARB, at Vol. II, 121a.

## Z

AL-ZAMAKHSHARĪ, ABU 'L-KĀSIM MAḤMŪD B. 'UMAR.

2. Contributions in the fields of theology, exegesis, *ḥadīth* and *adab*.

His father, as imām of the local mosque in Zamakḥshar, taught him the *Qur'ān*, but since he lacked the means to support the further education of his son, he wanted him to become a tailor. Yielding to his son's wishes, however, he brought him to the capital of *Kh*<sup>w</sup>ārazm, *Djurdjāniyya*, which henceforth became his permanent home and where he first earned his sustenance by copying for a wealthy patron. His ambition was a high secretarial career in government. For his literary education, he studied first with Abū 'Alī al-Ḥasan b. al-Muẓaffar al-Naysābūrī (the death date of 442/1050 commonly given for him is mistaken, since his son 'Umar died only in 536/1142), the leading man of letters in *Kh*<sup>w</sup>ārazm at the time, and after the arrival there of Abū Muḍar Maḥmūd b. *Djarīr* al-Ḍabbī al-Iṣfahānī (d. 507/1114), with the latter, who became his most influential teacher and generous patron. Al-Zamakḥsharī also visited *Bukhārā* to study and hear *ḥadīth*. On his way there he fell from his mount and broke a leg, which had to be amputated and replaced by a wooden substitute.

In his ambition for a high position in government, he first addressed panegyric poems to the famous *Saldjūk* vizier Nizām al-Mulk (d. 485/1092 [q.v.]), referring to his teacher Abū Muḍar, but his hopes were disappointed. Later he travelled widely in *Kh*urāsān and western Persia, pursuing his scholarly interests and addressing similar poems to *Saldjūk* dignitaries such as Mu'ayyid al-Mulk b. Nizām al-Mulk (d. 495/1102) and Muḍjīr al-Dīn Abū 'l-Faṭḥ al-Ardastānī and even to the Sultans Muḥammad b. Malikshāh (d. 511/1118) and Sandjar. Although he received some monetary rewards for these eulogies, he failed to secure any position. This was largely due to his open espousal of Mu'tazilī doctrine, which in the *Saldjūk* period came increasingly to be viewed as heretical. When he fell seriously ill in 512/1118, he vowed never again to visit a court or praise a ruler, seeking thereby a position, and vowed to lead an ascetic life devoted to religion and teaching. After his recovery, he visited *Baghdād* where he engaged in studies and debates with scholars. He assembled with the Ḥanafī jurist Aḥmad b. 'Alī al-Dāmghānī and the grammarian al-Sharīf Hibat Allāh b. al-Shadjarī. As

he made the Pilgrimage in that year, he was welcomed by the *amīr* of Mecca, the *Sharīf* 'Alī b. 'Isā b. Ḥamza b. Wahhās, a Mu'tazilī Zaydī man of letters and learning. A close friendship developed between the two, and al-Zamakḥsharī stayed with the *amīr* for two years as a greatly honoured guest, during which he also visited parts of Arabia and Yemen. Then he returned to *Djurdjāniyya*, where he was honoured in this period by the *Kh*<sup>w</sup>ārazmshāh Muḥammad b. Anūstakīn (d. 521/1127) and his son Atsīz. A decade later, he again set out for Mecca and stayed for an extended time in Damascus, where he composed eulogies for the *Būrid* ruler Tād̲j al-Mulūk Tuḡtakīn (d. 526/1131) and his son Shams al-Mulk. He reached Mecca for the Pilgrimage in 526/1132 and stayed there for three years, again hospitably received by Ibn Wahhās, who encouraged him to assemble his *diwān* of poetry and to compose his *Qur'ān* commentary *al-Kashshāf*. Al-Zamakḥsharī completed the latter after two years in 528/1133. In 533/1138 he made a further trip to Mecca and passed through *Baghdād*, where he visited Abū Manṣūr Mawhūb b. al-Djawālīkī [q.v.], a famous man of letters, and received his *idjāza*. He died in *Djurdjāniyya* on 9 *Dhu* 'l-Ḥij̲d̲ja 538/14 June 1144 and was buried near the town. On account of his prolonged stay in Mecca—he lived there for five years and performed the Pilgrimage seven times according to his own testimony—he claimed the title *Djār* Allāh, under which he remained widely known. In his home country he was commonly referred to as *Fakhr Kh*<sup>w</sup>ārazm "the Glory of *Kh*<sup>w</sup>ārazm".

Although of Persian origin, al-Zamakḥsharī was most basically motivated in his scholarship to serve and promote the Arabic language. Arabic was in his view the most perfect language which God had preferred to all languages as He preferred the *Qur'ān* and Islam over all scripture and religions (see I., at Vol. XI, 432b-434a). In the work on which his fame primarily rests, the *Qur'ān* commentary *al-Kashshāf 'an ḥakā'ik al-tanzīl*, his efforts in explaining the Holy Book's grammatical, lexicographical and rhetorical features, variant readings and the miraculous nature (*i'djāz* [q.v.]) of its beautiful language earned him universal admiration. He did so adducing quotations from a wide variety of early prose texts, including the *tafsīr* of the grammarian al-Zad̲j̲jād̲j [q.v.] and poetry, rather than relying on traditional exegesis. His rationalist Mu'tazilī interpretations, however, provoked criti-

cism among traditionalist Sunnīs. While some of these interpretations were adopted from earlier Mu'tazilī exegetes such as Abū Bakr al-Aṣamm and al-Rummānī, he also frequently presented views of his own. In concord with his Mu'tazilī outlook, he emphasised ethical and ascetic aspects and denounced Sūfī antinomian tendencies and belief in miracles of saints, *Shu'ūbīs* and the Umayyad caliphs. In legal questions, he occasionally backed al-Shāfi'ī and other positions against his own Ḥanafī school. The popularity of his work was in the eastern Muslim world not seriously impaired by the attempt of al-Bayḍāwī [q.v.] to furnish an orthodox counterpart to it in his *Anwār al-tanzīl*. Opposition to his Mu'tazilī tendency was stronger in the Muslim West, where the Mālikī Ahmad b. Muḥammad b. al-Munayyir (d. 683/1284) wrote a refutation of his Mu'tazilī interpretations entitled *K. al-Inṣāf min al-Kashshāf*, which is sometimes printed on the margins of the *Kashshāf*.

In Mu'tazilī theology, al-Zamakhsharī was familiar with the school doctrine of Kādī 'Abd al-Djabbār through the literary transmission of al-Hākīm al-Djushamī [q.v.], which he received from his teacher Ahmad b. Muḥammad b. Ishāq al-Kh'ārazmī. In addition, he studied the school doctrine of Abū 'l-Ḥusayn al-Baṣrī [q.v.], which was first introduced into Kh'ārazm by his teacher Abū Muḍar al-Iṣfahānī, with his colleague Rukn al-Dīn Ibn al-Malāḥimī. In his Mu'tazilī creed *al-Minhādī fī uṣūl al-dīn* he appears partly influenced by the doctrine of Abū 'l-Ḥusayn al-Baṣrī but generally avoids taking side in the conflict between the two schools.

In the field of *ḥadīth*, he composed a large, alphabetically-arranged dictionary of unusual words, *al-Fā'ik fī ḡharīb al-ḥadīth*. The relevant *ḥadīths* are fully quoted and explained. In his *Mukhtaṣar al-Muwāfaqa bayna ahl al-bayt wa 'l-sahāba* he abridged the work of the Mu'tazilī Zaydī traditionist Abū Sa'īd Ismā'īl b. 'Alī al-Sammān al-Rāzī (d. 443/1051), omitting the *isnāds*. The book was intended to demonstrate the concord between the family of Muḥammad and the major Companions (see Hādjdjī Khalīfa, ii, 1890). He assembled biographical data and reports about the virtues of the ten Companions whom the Prophet had promised paradise in his *Khaṣā'is al-ashara al-kiram al-barara*. His *al-Kashf fī 'l-kirā'āt al-ashara* deals with the canonical variant readings of the *Kur'ān*.

In the field of *adab*, he collected an extensive dictionary of Arabic proverbs *al-Mustakṣā fī amṡāl al-'Arab* which rivalled the *Madjma' al-amṡāl* of his contemporary al-Maydānī. Completed in 499/1106, it contains 3,461 proverbs alphabetically arranged according to their beginnings with explanation of their origin and use. His voluminous *Rabī' al-abrār wa-nuṣūṣ al-akḥbār* contains extracts from literary and historical works arranged according to 92 topics. It was meant to be a companion reader to his *Kur'ān* commentary. His *K. al-Amkina wa 'l-ḡibāl* is a small dictionary of Arabic geographical names.

In his own artistic prose works, his predilection was for ethical admonition and preaching. His *Maḳāmāt*, also entitled *al-Naṣā'ih al-kibār*, contain fifty *maḳāmāt* [q.v.] in the older meaning of the term, moral exhortations which he addressed to himself. He composed them after his illness in 512/1118 and later added his own philological commentary. His *Atwāk al-dhahab* or *al-Naṣā'ih al-sighār* consists of 100 pious maxims with allusions to the *Kur'ān*, Sunna and proverbial expressions. It was dedicated to Ibn Wahhās and the people of Mecca. His *Nawābiḡ al-kalim* or *al-Kilām al-nawābiḡ* is a small collection of apophthegms. A com-

mentary on it, *al-Nī'am al-sawābiḡ*, was written by al-Taftāzānī [q.v.].

His poetry, collected into his *dīwān*, reflects his technical skill and understanding of the classical tradition of Arabic poetry more than an original poetical talent. An influence of the poetry of Djarrīr and al-Mutanabbī is occasionally apparent. He wrote a substantial commentary on al-Shanfarā's *Lāmiyyat al-'Arab*, the *K. A'ḡjab al-'aḡjab fī ṣarḥ Lāmiyyat al-'Arab*. His *al-Kiṣṭās al-mustakim fī 'ilm al-'arūd* is a treatise on prosody.

#### ZANDAQA [see ZINDĪK].

AL-ZANDJĀNĪ, 'Izz al-Dīn 'ABD AL-WAḤḤĀB b. Ibrāhīm b. 'Abd al-Wahhāb al-Kharadjī (often given as: al-Khazradjī) al-Shāfi'ī, Abū 'l-Ma'ālī (*fl.* in the middle of the 7th/13th century), grammarian and *adīb*, who ca. 625/1228 wrote a celebrated treatise on morphology (*ṣarf* [q.v.]), *Mabādī' al-taṣrīf* or (*Kūtāb*) *al-Taṣrīf al-'Izzī*, extant in numerous mss. and the subject of many commentaries, the most popular one being that of al-Taftāzānī (see *Bibl.*).

The *Kūtāb al-Taṣrīf* was the third grammatical treatise (after Ibn al-Hādijīb's *Kāfiya* and the *Aḡjurrimīyya*) to be made available in the West, in an edition and two Latin translations, one literal and one idiomatic, by the director of the Medici press, J.B. Raymundus (Giovanni Battista Raimondi), *Kūtāb al-Taṣrīf wa'lif al-Shaykh al-Imām, Liber Tasripis compositio est Senis Alemami, traditur in ea compendiosa notitia conjugationum verbi Arabici*, Rome 1610 (see Chr.F. Schnurrer, *Bibliotheca arabica*, Halle 1811, 25-7, no. 47). The name of the author sometimes appears as al-'Izzī (see e.g. J. Fück, *Die arabischen Studien in Europa*, Leipzig 1955, 56); this seems to have arisen from a careless rendition of the title as *Taṣrīf al-'Izzī* rather than *al-Taṣrīf al-'Izzī* (the *nisba* refers to the author's *lakab* 'Izz al-Dīn). In addition to other works in the fields of, *inter alia*, grammar and lexicography, al-Zandjānī wrote works also in *adab*. One is an anthology of poetic snippets (not entire poems) with the title *al-Maḡnūn biḥī 'alā ḡhayr ahlīh*. It deals with the following themes: books, praise, yearning, love, congratulations, dirges, complaints and invective. An extensive commentary on it was written by 'Ubayd Allāh b. 'Abd al-Kāfi b. 'Abd al-Maḡjid al-'Ubaydī, who finished it in 724/1324. The other book, with the title *K. Mi'yār al-nuzzār fī 'ulūm al-ash'ār*, deals with prosody and rhetoric. It is divided into three parts: metrics ('*ilm al-'arūd*'), rhyme taxonomy ('*ilm al-kawāfi*'), and rhetoric ('*ilm al-badī'*'). This arrangement of the poetic disciplines imitates al-Khaṭīb al-Tibrizī's *al-Kāfi fī 'l-'arūd wa 'l-kawāfi*, which likewise contains an unexpected section on *al-badī'* (ed. al-Ḥassānī Ḥasan 'Abd Allāh, Cairo n.d., 170-204). Interestingly, one of his sources is the *Ḥadā'ik al-sihr fī ḡarīb al-shi'r*, written in Persian by Rashid al-Dīn Waṭwāt [q.v.]. Knowledge of Persian on the part of al-Zandjānī is also shown by a line of Persian poetry in *al-Maḡnūn*

(ed. Yahuda, 25). The *Miṣyār* is often quoted in later rhetorical literature.

*Bibliography* (N.B. ‘Abd al-Wahhāb b. Ibrāhīm al-Zandjānī is not infrequently confused with his father Ibrāhīm b. ‘Abd al-Wahhāb [both having the *lakab* ‘Izz al-Dīn!]): 1. Biographical and bibliographical. Ziriklī, *A‘lām*, <sup>2</sup>Damascus 1373-8/1954-9, iv, 330; Brockelmann, I, 336-7 (‘Abd al-Wahhāb b. Ibrāhīm), S I, 497-8 (Ibrāhīm b. ‘Abd al-Wahhāb, referring to the same person!); Kahhāla, i, 57 (Ibrāhīm, with the *al-Taṣrif al-Izzī* attributed to him); vi, 216-17 (‘Abd al-Wahhāb, author of the remaining works mentioned above).

2. Works. Sa‘d al-Dīn al-Taftāzānī, *Sharḥ Mukhtaṣar al-Taṣrif al-Izzī fī fann al-sarf*, ed. ‘Abd al-‘Alī Sālīm Makram, Kuwait 1983; ‘Ubaydī, *Sharḥ al-Madnūn bihi ‘alā ghayr ahlih*, ed. I.B. Yahuda, Cairo 1913-15, repr. Beirut and Baghdad n.d. [1993 or before] (with a new title-page that omits the name of the editor and with omission of the two, Arabic and French, prefaces of the editor); ed. Faraj Allāh Dhakī al-Kurdī, Cairo 1342; *K. Miṣyār al-nuzḥār fī ‘ulūm al-ash‘ār*, ed. Muḥammad ‘Alī Rizk al-Khafādī, 2 vols, Cairo 1991; ed. of Pts. 1-2 by Mahmūd Fadjdjāl (forthcoming [?], cf. al-Ashkar, introd. to Pt. 3, 3, n. 1); ed. of Pt. 3 by ‘Abd al-Mun‘im Sayyid ‘Abd al-Salām al-Ashkar, Cairo 1416/1995 (with valuable introd., based in part on Mahmūd Fadjdjāl’s unpublished study and ed. of al-Zandjānī, *al-Kāfi fī sharḥ al-Hādī li-dhawī ‘l-albāb fī ‘ilm al-‘rāb*, doctoral thesis, Kulliyat al-Lughā al-‘Arabiyya, Djamī‘at al-Azhar 1398/1978). (Eds.)

**AL-ZARKASHĪ**, ABŪ ‘ABD ALLĀH BADR AL-DĪN MUḤAMMAD b. ‘Abd Allāh b. Bahādur (or Muḥammad b. Bahādur b. ‘Abd Allāh, according to some), prolific writer who lived in Mamlūk Cairo at a time of flourishing intellectual activity.

Born in Cairo in 745/1344, he studied *hadīth* in Damascus with ‘Imād al-Dīn Ibn Kathīr (d. 774/1373 [q.v.]), *fikh* and *uṣūl* in Aleppo with Shihāb al-Dīn al-Adhra‘ī (d. 783/1381; see Brockelmann, S II, 108), and Qur‘ān and *fikh* in Cairo with the head of the Shāfi‘ī school in Cairo at the time, Djamāl al-Dīn al-Asnawī (d. 772/1370, see Gilliot, *Textes arabes anciens édités en Égypte au cours des années 1996 à 1999*, in *MIDEO*, xxiv [2000], 252, entry no. 135, item 4), as well as with Sirādj al-Dīn al-Bulḡīnī (d. 805/1403 [q.v.]) and ‘Alā’ al-Dīn Mughulṭay (d. 762/1361 [q.v.]). He died in Cairo on 3 Raddjāb 794/27 May 1392 and was buried in the smaller al-Karāfa cemetery in the area of the tomb of the Amīr Baktamur al-Sākī. He was called al-Zarkashī because he learned embroidery while he was young; he also became known as al-Minhādī because he learned the text of Muhyī al-Dīn al-Nawawī (d. 676/1277 [q.v.]), the *Minhādī al-ṭalībīn*, by heart. Al-Zarkashī is spoken of as naturally reserved, having spent most of his time in his house or in the bookstores where he would take copious notes in order to avoid spending money to buy books.

According to the study by Muḥammad Abu ‘l-Faḍl Ibrāhīm, the modern editor of one of al-Zarkashī’s more famous works, *al-Burhān fī ‘ulūm al-Qur‘ān* (Cairo 1957, <sup>2</sup>1972; see i, 5-13, for the biography of al-Zarkashī), some 33 works are attributed to him, 23 of which are apparently still in existence. ‘Abd al-Ḳādir ‘Abd Allāh al-‘Ānī, the editor of al-Zarkashī’s *al-Baḥr al-muḥīt fī uṣūl al-fikh* (6 vols., Kuwait 1401/1989; see i, 7-19, for the biography of al-Zarkashī), manages to increase this total to 46 works, although many are attested only by single mentions in historical bibliographies. Brockelmann, II, 91-2, S II, 108,

lists 22 works, all in existence.

About 14 of al-Zarkashī’s works are available in published form today, displaying the broad spectrum of his interests. A jurist of the school of al-Shāfi‘ī, al-Zarkashī’s works cover the full range of traditional scholarship: *hadīth*, *tafsīr*, *fikh*, *adab* and *kalam*. In *fikh*, al-Zarkashī wrote his summary *al-Baḥr al-muḥīt fī uṣūl al-fikh* in 777/1376 when he was only 32. Among his many other legal works of note is a book on hashish, *Zahr al-‘arīsh fī taḥrīm al-hashīsh*, which details the physical hazards of hashish consumption and the moral effects the substance has, which are deemed to be parallel to those associated with wine and intoxication. Al-Zarkashī did, however, admit to some of hashish’s positive (and legal) anaesthetising abilities. It was the use of hashish for enjoyment and pleasure that raised the ire of al-Zarkashī, as it did for almost every Muslim jurist.

His achievements have only recently started to be properly recognised. He lived at a time of significant scholarly activity and his works certainly drew the attention of those in the immediate generations thereafter. His *al-Burhān fī ‘ulūm al-Qur‘ān*, for example, was the first all-encompassing work of its type, only to be eclipsed a century later by al-Suyūṭī’s *al-Itqān fī ‘ulūm al-Qur‘ān*, even though (or perhaps because) al-Suyūṭī benefited from al-Zarkashī’s work in terms of providing the structuring and content of his own work. In a total of 47 chapters in *al-Burhān*, al-Zarkashī brings together every major topic related to understanding the Qur‘ān, devoting what is essentially a monograph to each one; he mentions previous authors who have treated each subject and compares the opinions of the traditionists, the theologians, the exegetes and the grammarians on many of the topics. Al-Suyūṭī also created his own work *al-Durar al-muntahara fī ‘l-ahādīth al-mushṭahara* (Beirut 1995) on the basis of al-Zarkashī’s now lost treatise *al-Tadhkira fī ‘l-ahādīth al-mushṭahira*.

*Bibliography*: 1. Biographical sources. Dāwudī, *Ṭabaḳāt al-mufasssīrīn*, Cairo 1392, ii, 157-8 (no. 504); Ibn Ḥaḍjar, *al-Durar al-kāmina fī ‘ayān al-mī‘a al-thāmina*, Haydarābād 1348-50, iii, 397-8 (no. 1059); other sources cited in G.C. Anawati, *Textes arabes anciens édités en Égypte au cours de l’année 1957*, in *MIDEO*, iv (1957), 223-7, entry no. 18 (on the edition of *al-Burhān*) and Cl. Gilliot, *Textes arabes anciens édités en Égypte au cours des années 1996 à 1999*, in *MIDEO*, xxiv (2000), 247-49, entry no. 131.

#### ZAWDJ

3. Usage in the dialects of the Muslim East.

The original meaning of *zawdj* in Classical Arabic was “one of a pair or couple” (see 1., at Vol. XI, 464b). Its dual in a phrase such as *zawđjān min al-ḥamām* meant “a pair of pigeons” (i.e. one male, one female). *Zawdj* also naturally came to mean “spouse, married person” of either gender. Later, a morphologically marked female form *zawđja* “wife” was coined, as a consequence of which *zawdj* came to designate specifically “husband”. In Modern Standard Arabic, as well as the meaning “husband”, *zawdj* retains the original Classical meaning “one of a pair”, but is also now used to mean “pair”, as in *zawdj min al-ḥidhā* “a pair of shoes”.

In the major (urban) Arabic dialects of the eastern Mediterranean (Cairo, Damascus, Jerusalem, Beirut), the first and third radicals of *zawdj* became metathesised (and modified phonetically in well-known ways), so that one typically hears *gōz* (Cairo), *žōz* (Jerusalem, Damascus, Beirut) for both the “pair” and “husband” meanings, but the non-metathesised forms for the feminine form, e.g. *zōga* (Cairo), *zawže* (Damascus) “wife”. In rural areas, there is a considerable amount of variation between metathesised and non-metathesised forms, as there is in the phonetic realisation of the two consonants. Thus in parts of the Nile valley and Delta, *zawz*, *zōz*, *gōz* and even *gaz* “two, (the) pair, both” may be heard, as in *gōz sa'āt* “two hours”, *gaz t-ushhur* “two months”, *ig-gaz zayyi bād* “the pair/the two are alike”, *hum iz-zawz* “both of them”. The use of *gōz*, etc. for “two” is reminiscent of the general Maghribī form *žūz* “two” (see 2., at Vol. XI, 464b).

In Irāk and Arabia, the non-metathesised forms *zōđj* “pair”; “husband” and *zōđja* “wife” are the normal realisations, though these are koine terms when used to refer to marital partners (which in “pure” dialect are usually words whose basic meaning is “man” and “woman”, e.g. Bahrayn *radjāł/rayyāl* and *mara*). In some derivatives from this root, metathesised forms are also heard among less educated speakers, e.g. *đjawāz* “marriage” (Gulf States), instead of *zawāđj* and *đjawwaz* “to marry” (Nadjd), instead of *zawwāđj*.

It is interesting to speculate on the reasons for the metathesis so widely encountered in this root. One possible reason may be a meaning coalescence in the dialects, because of a similarity of sound, of the originally separate verbs *zawwāđj* “marry, (legitimately) couple” (< *z-w-đj*) and *đjawwaz* “to deem or make permissible” (< *đj-w-z*)—a process which has been referred to by Voigt as *Wurzelangleichung*. There is already a similarity in meaning between them, in that an imām who “marries” (*yizawwāđj*) a man to a woman thereby makes her “permissible” (*yidjawwizhā*) to him. From this coalescence of sound and meaning may have arisen a secondary fusion of other words from the same root, such as we see in the vacillation between the modern dialectal variants *zawđj* and *đjawz*, which were separate words in Classical Arabic.

(C. HOLES)

**ZĪRĪ b. 'AṬIYYA** b. 'ABD ALLĀH b. KHAZAR, Abū Yūsuf, Berber chief of the Maghrib whose fate was linked, at the end of the 4th/10th century and

the beginning of the 5th/11th, on the one hand to that of the *ḥāđjib* al-Manšūr b. Abī 'Amir [*q.v.*] and on the other to that of the Maghrāwa [*q.v.*], who were caught between the forces of the caliphate of Cordova, to the north, and those of the Fātimid caliphate and the Zīrid principality of Ifrīkiya, to the east. In fact, following the proclamation of the caliphate of Kayrawān, the Maghrāwa were compelled by circumstances to pay allegiance to one or other of the neighbouring powers.

Zīrī b. 'AṬIYYA belonged to an illustrious family, the Banū KHAZAR, whose ancestors were already guiding the Maghrāwī confederation at the time of the conquest of the Maghrib by the Muslims. In 351/962, on the death of his grandfather, Muḥammad b. al-KHAIR b. Muhammad b. KHAZAR became the leader of the Maghrāwa. Extending his territory at the expense of the Fātimid zone of influence established by Djawhar [*q.v.*], the new chieftain established a short-lived Maghrāwī state in the central Maghrib, within the orbit of the Umayyad caliphate of Cordova. But in 360/971, the Fātimid governor of Ifrīkiya, Buluggin b. Zīrī [*q.v.*] defeated, close to Tlemcen, the Maghrāwa and the Zanāta. From this date onwards, the history of these tribes, which had formerly established a confederation, is closely linked with the history of what is now Morocco, where the different princes of the family of the Banū KHAZAR created three states, around the cities of Fās, Sidjilmāsa and Aghmāt. Among these Maghrāwī *amirs* who went in search of new territories in the far Maghrib were Zīrī b. 'AṬIYYA and his brother Muḳātil b. 'AṬIYYA. Theoretically dependent on the caliph of Cordova, the two brothers deferred sometimes to the authority of the Umayyad caliph in the region, and sometimes to that of his chamberlain, Ibn Abī 'Amir.

Towards 365/975-6, Muḥammad b. al-KHAIR b. Muhammad seems to have lost control of the northern group of Maghrāwī Moroccans. In fact, at this time Zīrī and Muḳātil b. 'AṬIYYA were in the entourage of the Umayyad governor of the Maghrib, the general Dja'far b. 'Alī b. Hamdūn, appointed by the caliph al-Ḥakam II. The Maghrib served at this time as a source for the provision of fighters in the struggle against the Iberian Christians. The Maghrāwa, the leadership of whom had just been taken over by Zīrī and Muḳātil, and the Banū Īfran [*q.v.*], commanded by Yaddu b. Ya'lā, supported this policy and supplied horsemen to al-Andalus.

The news of the death of the Umayyad caliph al-Ḥakam II arrived in North Africa just as negotiations were in progress between Dja'far b. Hamdūn, Yaddu b. Ya'lā, Zīrī b. 'AṬIYYA and his brother Muḳātil. The minority of Hishām II, leading to the accession of the *ḥāđjib* Ibn Abī 'Amir (366-71/976-81), perceptibly modified the traditional policies of Cordova in this region. In fact, al-Manšūr played on the rivalries between the Zanāta chiefs; in 376/986, he sent a new governor-general to the Maghrib, Ḥasan b. Aḥmad b. 'Abd al-Wadūd al-Sulamī, who moved his headquarters from Sabta to Fās. On the orders of al-Manšūr, Ibn 'Abd al-Wadūd overtly favoured the Maghrāwa to the detriment of the other Zanāta chiefs and especially the Īfranid Yaddu b. Ya'lā, known for his rebellious tendencies. When Muḳātil died in 378/988, Zīrī took over the leadership of the Maghrāwa and became the sole interlocutor of the Cordovan power.

In 379/989, for example, al-Manšūr invited Zīrī to pay an official visit to Cordova. The latter brought with him numerous recruits for al-Manšūr's armies,

who were incorporated into the regular army. He was received in princely style and was awarded on this occasion the title of vizier. On his return to the Maghrib, Zīrī seems to have demonstrated some independence towards the ʿAmīrid master of Cordova, founding in the north of Morocco a principality with Fās as its capital. Seeking the support of the Ifranid, al-Manšūr made overtures of Yaddu b. Yaʿlā which the latter rejected, moving openly into dissidence. The reaction of al-Manšūr was immediate: Ibn ʿAbd al-Wadūd received the order to call upon Zīrī b. ʿAṭīyya to subdue Yaddu. On 18 Muḥarram 381/6 April 991, on the banks of the Wadi Moulouya, an encounter took place in the course of which Yaddu b. Yaʿlā crushed the Cordovan army and the Maghrawī reinforcements.

For Umayyad policy in the Maghrib, this constituted a serious reverse, temporarily alleviated by the unexpected support of a Ṣanhādjī prince of Ifrikiya. In fact, the paternal uncle of the Zīrid king al-Manšūr b. Buluggīn, Abu ʿl-Bahār b. Zīrī, rebelled against the Kayrawān government and declared himself for that of Cordova. According to certain authors, this allegiance was short-lived and Zīrī b. ʿAṭīyya attacked Abu ʿl-Bahār who took refuge first at Ceuta, in Shawwāl 382/end of 992, and then, after being reconciled with his relatives, in Ifrikiya; Zīrī took over all his domains and announced his victory, in 381/391, to al-Manšūr, who invited him to pay a second visit. Arriving at Cordova in 382/992, Zīrī brought numerous presents with him on this occasion, as recorded by the sources (although they are sometimes attributed to a diplomatic mission sent by Zīrī in 384/November 994): 200 racehorses, some 20 of them with a documented pedigree, camels, weapons and shields of antelope hide (*lamī*), a parrot, a gigantic panther and a giraffe, which died en route and was stuffed, all these last for the menagerie of the Caliph's palace. On his return to the Maghrib, Zīrī learned that the Ifranid Yaddu b. Yaʿlā had taken possession of Fās. After a bloody battle, Zīrī regained his throne and sent Yaddu's head to al-Manšūr.

No doubt finding the location of Fās too remote in relation to the assemblage of regions which recognised his authority, in 383/994 Zīrī founded the town of Oujda (Waḍḍja [q.v.], on the border between Morocco and what is now Algeria, with the aim of establishing his court and his household garrison there. Subsequently, relations with Cordova deteriorated. The precise reasons for the conflict between Zīrī and al-Manšūr are not known, but it is possible that Zīrī had emerged as the champion of Hishām II in his claims against al-Manšūr: in 388/998, his battle cry (*shīʿār*) was *yā Hishām yā Manšūr*, while that of the ʿAmīrids was only *yā Manšūr* (Lévi-Provençal, *Fragments*, 29). In 386/997, al-Manšūr sent troops to the Maghrib to intimidate Zīrī, who affirmed his independence without going so far as to repudiate overtly his oath of fealty to Hishām II. In Shawwāl 387/October 997, al-Manšūr deprived him of his title of vizier and sent against him one of his best generals, the former slave Wāḍiḥ, who commanded the middle march of al-Andalus (*al-thaḡhr al-awsaṭ*). In Tangier, the latter received the allegiance of numerous local chiefs who came to rally beneath his banner. Then he set out with all these forces to attack Zīrī, who had taken up positions in a mountainous region of northern Morocco, the Ḍjabal Ḥabīb (Ibn Khaldūn, *Histoire des Berbères*, iii, 244).

As a first step, Wāḍiḥ took possession of Arcila on

the Atlantic and of Nakūr on the Mediterranean. In Raḡjab 388/July 998, he succeeded in surprising the bulk of Zīrī's forces in a mountain pass and inflicted a severe defeat on the Maghrawā. Some weeks later, wanting to reap the rewards of victory, al-Manšūr sent his own son ʿAbd al-Malik with fresh reinforcements. ʿAbd al-Malik joined forces with Wāḍiḥ and then both of them marched against Zīrī. The second encounter, which took place on 19 Shawwāl 388/13 October 998, was at first indecisive. But Zīrī's army, on hearing that its leader had been severely wounded, disintegrated; forced into flight, Zīrī abandoned his camp and his wealth to the Cordovans.

Having tried in vain to take refuge in Fās, where his wives and children were, Zīrī took the Sahara road. In fact, the town refused to open its gates to him and it was occupied by ʿAbd al-Malik. Having barely recovered from his injuries, Zīrī refrained from attempting anything in the north of Morocco, which was strongly held by the Umayyad army. But taking advantage of the death of Zīrid king al-Manšūr b. Buluggīn and the quarrels between the latter's son and successor, Badīs, and his great-uncles Maksan and Zawī, Zīrī b. ʿAṭīyya laid siege to Tāhart, which he took in 388/998. Then he successively conquered the Ṣanhādjī centres of Tlemcen, Chélif, Ténés and al-Masīla, where he had the prayer celebrated in the name of the Umayyad caliph Hishām II and his *ḥādīb* al-Manšūr, whose pardon he sought, asking to have his former prerogatives reinstated. His appeal was accepted.

In 391/1001, Zīrī laid siege to Aṣḥīr [q.v.], the capital of the Ṣanhādja, but his state of health obliged him to raise the siege after a month, and he died shortly afterwards. On the death of Zīrī, his son, al-Muʿizz, took his place at the head of the federation of Maghrawā, and declared himself the loyal vassal of Cordova, continuing the struggle against the Ṣanhādja until the death of al-Manšūr. A little later, al-Muʿizz asked the new *ḥādīb*, ʿAbd al-Malik, to award him an official investiture. A letter of ʿAbd al-Malik dated Dhū ʿl-Ḳaʿda 396/August 1006, the text of which has been preserved (Ibn Khaldūn, *Berbères*, iii, 248-50, and al-Warrāk, *Fragments historiques sur les Berbères*, 40-1) is addressed to the inhabitants of Fās, inviting them to recognise al-Muʿizz b. ʿAṭīyya as governor of the whole Maghrib, with the exception of the territory of Siḡilmāsa, the personal fief of Wānūḍīn b. Khazrūn b. Falḡūl. The rest of the reign of al-Muʿizz was turbulent, but on his death in 417/1026, the general revolt of al-Andalus smashed once and for all the ties which for almost a century had linked the Zanāta North African bloc with the Umayyads of Cordova. The fortunes of the Zanāta [q.v.] declined in the Maghrib, before the increasing power of the Almoravids, who relied for support on the Ṣanhādja tribes.
