

# THE ENCYCLOPAEDIA OF ISLAM

# THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF  
LEADING ORIENTALISTS

EDITED BY

**P. J. BEARMAN, TH. BIANQUIS, C. E. BOSWORTH,  
E. VAN DONZEL AND W. P. HEINRICHS**

ASSISTED BY C. OTT

UNDER THE PATRONAGE OF  
THE INTERNATIONAL UNION OF ACADEMIES

VOLUME XII

**SUPPLEMENT**

LEIDEN  
BRILL

2004

## EXECUTIVE COMMITTEE:

*Members:* P.J. BEARMAN, TH. BIANQUIS, C.E. BOSWORTH, J.T.P. DE BRUIJN, A. DIAS FARINHA, E. VAN DONZEL,  
J. VAN ESS, W.P. HEINRICHS, A.K.S. LAMBTON, B. LEWIS, F. RUNDGREN, A.L. UDOVITCH.

*Associated members:* HALİL İNALCIK, S.H. NASR, M. TALBI.

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government; the British Academy; the Oriental Institute, Leiden; Académie des Inscriptions et Belles-Lettres; and the Royal Netherlands Academy of Sciences.

The articles in this volume were published in double fascicules, the dates of publication being:

1980: Fascs. 1-2, pp. 1-128

1981: Fascs. 3-4, pp. 129-256

1982: Fascs. 5-6, pp. 257-423

2003: Fascs. 7-8, pp. 425-572

2004: Fascs. 9-10, pp. 573-716

2004: Fascs. 11-12, pp. 717-844

ISBN 90 04 13974 5

PRINTED IN THE NETHERLANDS

## AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have listed after each contributor's name the pages on which his or her signature appears. Academic affiliations are given (for a retired scholar, the place of his/her last known academic appointment, when known).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this *Encyclopaedia* or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his or her name appears within square brackets after the name of the original author. The large number of deaths among the contributors of this Supplement volume reflects the fact that the first three double fascicules were published in the early 1980s, 20-odd years before the last three fascicules. Every effort was made to ascertain whether a contributor to the Supplement volume had died, or moved, in the time it took to complete and publish this Supplement, but it is very possible that some contributors not noted as having passed away, are no longer living, and that an affiliation may be passé.

## ADDENDA AND CORRIGENDA

### VOLUME I

P. 702<sup>a</sup>, **ASHRAF 'ALĪ**, *add to Bibl.*: Barbara Daly Metcalf, *Perfecting women: Maulana Ashraf 'Alī Thanawī's Bihishtī Zewar, a partial translation with commentary*, Berkeley 1990.

### VOLUME IV

P. 1091<sup>b</sup>, **KHĀSĪ**, l. 38, *for* Ustādḥ Djawhar [*q.v.*] *read* Ustādḥ Djawdḥar [*q.v.*]

### VOLUME VII

P. 560, **MUNADJIDJIM**, BANŪ 'L-, note 7 to genealogical tree, *for* *Ta'riḫh Baghdād*, iv, 318, nr. 2122, *read* *Ta'riḫh Baghdād*, v, 215, nr. 2688

### VOLUME IX

P. 353<sup>a</sup>, **SHARKĀWA**, *add to Bibl.*: D.F. Eickelman, *Moroccan Islam: tradition and society in a pilgrimage center*, Austin 1976.

### VOLUME X

P. 89<sup>b</sup>, **AL-TAFTĀZĀNĪ**, ll. 14-15 from bottom of article, *for* and a polemical refutation of Ibn al-'Arabī's *Fuṣūṣ al-Ḥikam*, *read* The refutation of the doctrine of Ibn al-'Arabī often ascribed to al-Taftāzānī was written by his pupil 'Alā' al-Dīn Muḥammad al-Buḫārī (d. 841/1430). See Bakrī 'Alā' al-Dīn, *'Abd al-Ghanī al-Nābulusī: al-Wuḡūd al-ḥakk*, Damascus 1995, 15-30.

P. 664<sup>b</sup>, **AL-ṬŪR**, *add to Bibl. on the Arabic mss. of St. Catherine's*: Y.E. Meimaris, *Katalogos ton neon arabikon kheirographon tes hieras Aikaterines tou Orou Sina*, Athens 1985.

P. 868<sup>a</sup>, **'UNAYZA**, *add to Bibl.*: Soraya Altorki and D.P. Cole, *Arabian oasis city: the transformation of 'Unayzah*, Austin 1989.

### VOLUME XI

P. 1<sup>b</sup>, **VIDJAYANAGARA**, l. 5 from bottom of first paragraph, *for* Konkar [*q.v.* in Suppl.] *read* Konkan [*q.v.* in Suppl.]

P. 126<sup>b</sup>, **WĀLIBA** B. **AL-ḤUBĀB**, l. 3, *for* 2nd/9th century *read* 2nd/8th century.

P. 169<sup>b</sup>, **WĀSIṬ**, *add after l. 37*: During the struggle for 'Irāq under al-Ma'mūn, there were, however, small issues of silver from Wāsiṭ in the years 200 and 203, and occasional issues in copper in 147, 167, 177 and 187 or 9.

P. 174<sup>a</sup>, **WASM**, *add to Bibl.*: A second general study is E. Littmann, *zur Entzifferung der thamudischen Inschriften*, Berlin 1904, 78-104, which argues that most of the brands originate from the South Semitic alphabet in its North Arabian form.

P. 177<sup>b</sup>, **WATHANIYYA**, *add to Bibl.*: G.R. Hawting, *The idea of idolatry and the emergence of Islam. From polemic to history*, Cambridge 1999.

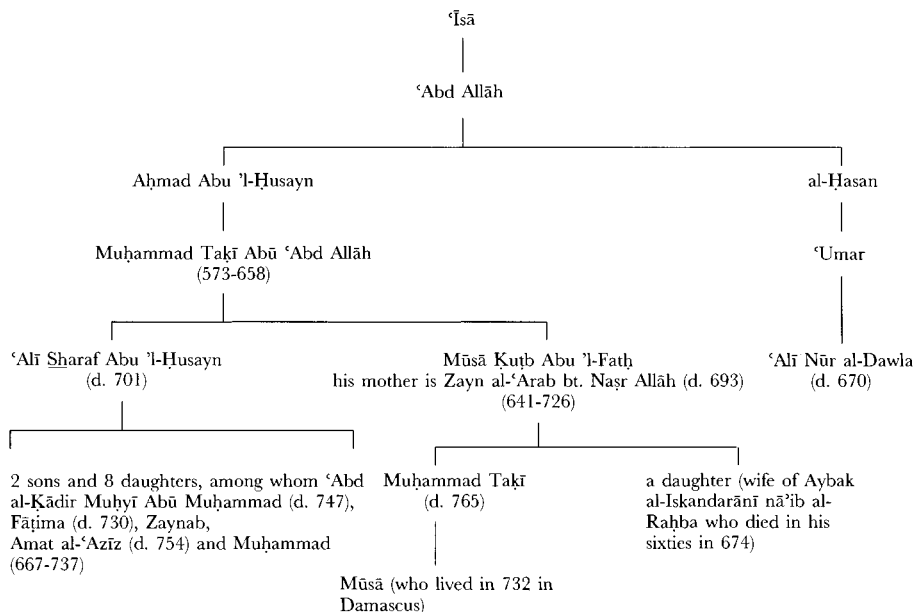

P. 227<sup>b</sup>, **AL-YADĀLĪ**, l. 14 from bottom, *for* (19 lines) *read* (19 folios)

opp P. 264, **YĀKŪT AL-RŪMĪ**, map, *for* Oxus (Sayḥūn) *read* Oxus (Djayḥūn), and *resituate* Cairo on the right-side of the Nile

P. 292<sup>a</sup>, **YARMŪK**, *add to Bibl.*: W.E. Kaegi, *Heraclius, Emperor of Byzantium*, Cambridge 2003, 237-44.

P. 345-6, **AL-YŪNĪNĪ**, *add the following table*:

Genealogical tree of the family of Mūsā al-Yūnīnī, author of *Dḥayl Mu'āt al-zamān*

- P. 361<sup>b</sup>, **YŪSUF AND ZULAYKHĀ**, add to *Bibl.1.(c)*: ed. A'ā-Khān Afṣaḥzād and Ḥusayn Aḥmad Tarbiyat, in *Maḥṇawī-yi Haft awrang*, ii, Tehran 1378 *sh.*/1999, 19-209.
- P. 364<sup>a</sup>, **ZĀ'**, ll. 23-25, read a voiceless /t/ for /d/ is attested in some Northern Yemeni dialects . . . , and a voiceless /t/ for /d/ occurs in North African sedentary dialects l. 42, read Uzbekistan-Arabic) with /d/ > /t/.
- P. 371<sup>b</sup>, **ZABĪD**, add to *Bibl.*: Barbara E. Croken, *Zabīd under the Rasulids of Yemen, 626-858 AH/1229-1454 AD*, unpubl. Ph.D. diss. Harvard University 1990; *Zabīd. Patrimoine mondiale*, in *Saba, revue trimestrielle*, v-vi (1999); 'Abd al-Raḥmān b. 'Abd Allāh al-Ḥaḍramī, *Zabīd. Masāḍīduhā wa-madārisuhā al-'ilmīyya fī 'l-ta'wīkh*, Damascus 2000.
- P. 404<sup>a</sup>, **ZĀ'IRDJA**, add before final paragraph: As for the history of numbers, in his description of the *zā'irdja* Ibn Khaldūn called attention to the use of Arabic characters (*abḍjād* [q.v.]) and *zimām*, or administrative, numerals, as well as *ghubār*, denoting the nine figures of Indian origin. With regard to the *zimām* numerals, this statement allows G.S. Colin to date the entry of the system of Greek numerals into Morocco and to declare that the *zimām* had spread in hermetic circles at the same time. But given their administrative, commercial or diplomatic use, recourse to them did not signify that they required the use of a code-breaker (*De l'origine grecque des 'chiffres de Fès' et de nos 'chiffres arabes'*, in *JA*, ccxxii [1933], 193-215). R. Lemay points out, from two astrological manuscripts, B.N. ar. 2582 (attributed to Abū Ma'shar), a MS from the 18th century (?), fol. 2r, and B.N. ar. 2584, fol. 2r, the list of correspondences between *abḍjād* numerals and *zimām* (Arabic numerals, in *Dictionary of the Middle Ages*, ed. J.R. Strayer, i, New York 1982, 386ff.).
- P. 548<sup>a</sup>, **AL-ZUBAYDĪ**, l. 4, for great-great-great-grandfather read great-great-great-grandfather
- P. 548<sup>b</sup>, l. 30, for He died there on 1 *Djumādā* II read He died there on 1 *Djumādā* II 379

## SUPPLEMENT

- P. 20<sup>b</sup>, **ABU 'L-BAYḌĀ'** AL-RİYĀḤĪ, add after the last sentence of the text: He was also the *rāwī* of Abū Nuwās, and the latter has devoted a *marḥūya* to him (*Dīwān*, ed. Ghazālī, Cairo 1953, 572-4; cf. E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 356).
- P. 28<sup>b</sup>, **ABŪ MĀDĪ**, add to *Bibl.*: G.D. Salīm, *Ī. Abū Mādī (1889-1957): dirāsāt 'anhu wa-ash'ārūh al-madḥūla*, Cairo 1980.
- P. 58<sup>a</sup>, **AL-'AKKĀD**, l. 6, for Ḥāfiz Ibrāhīm read Shukrī
- P. 103<sup>a</sup>, **A'YĀS**, add to *Bibl.*: M.J. Kister, "Call yourselves by graceful names . . .", in *Lectures in memory of Professor Martin B. Plessner*, Jerusalem 1976, 16, 25.
- P. 163<sup>b</sup>, **ĀĀ-NĀMA**, add to *Bibl.*: I. Habib, *A study of Ḥajjāj b. Yūsuf's outlook and policies in the light of the Chachnāma*, in *Bull. of the Inst. of Islamic Studies*, Aligarh, vi-vii (1962-3), 34-48.
- P. 167<sup>a</sup>, **ĀD**, add at the end of the article: These negotiations finally resulted in the formation of a Transitional Government of National Union (GUNT), which did not, however, bring the internal dissensions to an end. The civil war started up again in 1980, and M. Goukouni Oueddāi secured victory over his opponents, thanks to the help of Libyan forces; he has even announced a plan for a union between Chad and Libya, but the FAN (Armed Forces of the North) continue the struggle in the eastern part of the country, simultaneously against the Libyans and the government troops (March 1981).
- P. 241<sup>b</sup>, **AL-DJĀMĪ'A AL-'ARABIYYA**, add at the end of the article: In consequence of the treaty between Egypt and Israel and the Camp David negotiations, the seat of the Arab League has been moved to Tunis, and Shādhli Klēbī was elected Secretary General (27 June 1979).
- P. 408<sup>a</sup>, **AL-IDRĪSĪ**, add at the end of the article: The oldest manuscripts (Princeton of 754/1353, Taymūriyya of 877/1473 and Manchester of 887/1482) and Ibn Abī Ḥajjāla (*Sukkarādān* [together with al-'Āmilī's *al-Miḥlālī*], <sup>2</sup>Beirut 1399/1979, 460) give the title *Anwār 'uḥwīy al-aḍrām*. In the *Anwār al-Idrīsī* mentions other books he wrote: *K. al-Adwār wa 'l-fatarāt*, *K. al-Djawhara al-yatīma fī akhbār Miṣr al-kadīma* and *K. Maṭla' al-tālī' al-sa'id fī akhbār al-Sa'id*; the latter title possibly served al-Udfuwī as a model for his prosopography of Upper Egyptian men of renown. Add to *Bibl.*: al-Udfuwī, *al-Tālī' al-sa'id al-djāmi' asmā' nuḍḡabā' al-Sa'id*, ed. S.M. Ḥasan, Cairo 1966, 179-81, 534-6; Ibn Ḥajjār al-'Askalānī, *Lisān al-mizān*, Ḥaydarābād 1331, v, 262, no. 902; al-Suyūṭī, *Husn al-muḥādara*, ed. M. Abu 'l-Faḍl Ibrāhīm, Cairo 1387/1968, i, 554; Zirīklī, *al-'Ālām*, <sup>2</sup>Beirut 1399/1979, vi, 208b-c; Kaḥḥāla, *Mu'djam al-mu'allifin*, Damascus 1379/1960, ix, 174a-b; A. Mingana, *Catalogue of the Arabic manuscripts in the John Rylands Library in Manchester*, Manchester 1934, 422-5, no. 262; U. Haarmann, *Regional sentiment in medieval Islamic Egypt*, in *BSOAS*, xliii (1980), 55-66; M. Cook, *Pharaonic history in medieval Egypt*, in *SI*, lvii (1983); a critical edition of *Anwār* has been prepared by U. Haarmann (Beirut 1991).
- P. 566<sup>b</sup>, **MAHKAMA**, add to *Bibl.*: See the writings by D. Pearl, in particular *Interpersonal conflict of laws in India, Pakistan, and Bangladesh*, London-Bombay 1981; idem and W. Menski, *Muslim family law*, London 1998 (rev. ed. of D. Pearl, *A textbook on Muslim personal law*, London <sup>2</sup>1987).
- P. 570<sup>a</sup>, **MAKĀṢID AL-SHARĪ'A**, l. 3, for of a ruling read of a possible ruling  
1st line of third paragraph, read *Istiṣlāḥ* and *istiḥsān* [q.v.] were discussed extensively by Mālikīs. l. 2 from bottom, for Muḥammad Ṭāhir b. 'Ashūr, read Muḥammad al-Ṭāhir b. 'Ashūr; and change same in *Bibliography*.  
Add to *Bibl.*: Ṭūft, *Sharḥ Mukhtaṣar al-Rawḍa*, Beirut 1987-89.

AL-'ABBĀS B. AḤMAD B. ṬŪLŪN, eldest son of Aḥmad b. ṬŪlŪn [q.v.]. When the latter set off for the conquest of Syria, he entrusted the government of Egypt to al-'Abbās, his designated heir, but al-'Abbās was very soon persuaded to take advantage of his father's absence to supplant him. Warned by the vizier al-Wāsiṭī, Ibn ṬŪlŪn got ready to return to Egypt, and his son, after having emptied the treasury and got together considerable sums of money, went off with his partisans to Alexandria, and then to Barka. As soon as he got back, on 4 Ramaḍān 265/30 April 879, Ibn ṬŪlŪn tried to bring him back to reason, and, promising him pardon, sent to him a letter, whose text has been preserved by al-Kāḷashandī (*Ṣubḥ*, vii, 5-10; reproduced also by Ṣafwat, *Djānharat rasā'il al-'Arab*, iv, 366-73); but the rebel remained deaf to all these approaches and decided to invade Ifrīkiya at the head of a force of 800 cavalry and 10,000 black infantry, swollen along the way by some local contingents.

Al-'Abbās then claimed that the caliph al-Mu'tamid had named him as governor of Ifrīkiya and demanded of the Aghlabid Ibrāhīm II that he should yield place to him. The latter responded by sending against him a force of cavalry, which met up with him at Labda but did not venture an engagement. Al-'Abbās now sacked Labda, even though the governor there had decided to yield to him, and then went on to lay siege to Tripoli. The Ibādī leader Ilyās b. Maṣṣūr al-Nafūṣī organised resistance, and with the help of reinforcements sent by Ibrāhīm II, succeeded in putting the rebel army to flight (middle of 267/winter 880-1). Al-'Abbās was compelled to return to Egypt, but was captured in the course of a battle outside the city of Alexandria with an army sent by Ibn ṬŪlŪn. He was brought to Fuṣṭāt, led round on a mule (Yāqūt, *Uḍabā'*, vii, 183), condemned to execute personally the poet Dja'far b. Muḥammad b. Aḥmad b. Huḍḥār and others of his retinue considered to be responsible for his revolt, and finally flogged and thrown into prison. He probably did not remain there long, but his attitude nevertheless removed him from all possibility of succession to the throne of Egypt. On Ibn ṬŪlŪn's death (Dhu 'l-Ḳa'da 270/May 884), it was his son Kḥumārawayḥ [q.v.] who followed him, and al-'Abbās's protests were extinguished in blood.

*Bibliography:* The events are recounted in great detail by Balawī, *Sīrat Aḥmad b. ṬŪlŪn*, ed. M. Kurd 'Alī, Damascus 1358, 252-5, and Kindī, *Wulāt Miṣr*, Beirut 1959, 246-50; these basic sources and the data of other historians have been utilised by M. Talbi, *Emirat aghlabide*, 347-52. (Ed.)

'ABBĀS SARWĀNĪ, historian of the Mughal period in India.

Little is known about him personally, but he was a member of a Sarwānī Afghān family which had settled in Banūr town (in the *sarkār* of Sirhind). His ancestor got 2,000 *bighās* of land as a maintenance grant during the reign of Bahllūl Lōdī. It was resumed by Bābur in 932/1526, and Shaykh Bāyazīd Sarwānī, the grandfather of 'Abbās, had to leave for Rōh for this reason. Shēr Shāh Sūr restored it to Shaykh Bāyazīd when the latter returned after the expulsion of the Mughals in 947/1540. Islām Shāh Sūr also renewed it to Shaykh 'Alī, the father of 'Abbās. In 987/1579, it was again resumed by the state. 'Abbās then entered the service of Sayyid Ḥamīd, a scholarly officer of Akbar. In 990/1582 he compiled at the instance of Akbar his famous *Tuḥfa-yi Akbar Shāhī*, generally known as the *Ta'riḫ-i Shēr Shāhī*. It is however, a biography of Shēr Shāh Sūr and not history in the true sense.

The *Tuḥfa-yi Akbar Shāhī* was compiled when the short-lived Sūr dynasty had already passed into the limbo of history; and there was no hope left for the revival of Afghān power. Now an Afghān writer could get satisfaction only in magnifying the Afghān rule, so that 'Abbās was in his work inevitably nostalgic about the past of the Afghāns. In fact, he compiled his work with preconceived notions, practising the economy of truth when the facts were disparaging. Moreover, he is not a first-hand source. All, or almost all, his narratives relating to the life and career of Shēr Shāh are based on the information supplied by the Sarwānī nobles who had served under the Lōdīs and the Sūrs and with whom he was connected by his own marriages. As descendants of Kḥān-i A'zam 'Umar Kḥān Sarwānī, the premier noble of the Lōdī Sultans, they were not expected to enquire about Shēr Shāh's background, who had himself, and his father before him, been their servants before his rise to sovereignty. For this reason, information gathered by 'Abbās about Shēr Shāh's early career from his Sarwānī relations contains important gaps, some of which are filled by Muṣṭāḳī's rambling account, available in the *Wākī'āt-i Muṣṭāḳī*. Despite its defects, the *Tuḥfa-yi Akbar Shāhī* is regarded as the major source for Shēr Shāh's reign. It furnishes fairly detailed data about the early life of Shēr Shāh and provides clues to important facts about his statesmanship. Later works, such as the *Ta'riḫ-i Kḥān-i Djahānī* of Ni'mat Allāh Harawī, *Ta'riḫ-i Shāhī* of Aḥmad Yādgār and *Ta'riḫ-i Dāwūdī* of 'Abd Allāh, all compiled during the reign of the Emperor Djahāngīr, contain very little additional information with regard to Shēr Shāh.

*Bibliography:* 'Abbās Sarwānī, *Tuhfa-yi Akbar Shāhī*, ed. Imām al-Dīn, Dacca 1964; Sir H.M. Elliot and J. Dowson, *The history of India as told by its own historians*, iv, 301-433; Storey, i, 513-5; I.H. Siddiqui, *History of Shēr Shāh Sūr*, Aligarh 1971; S.A.A. Rizvi, *Religious and intellectual history of the Muslims in Akbar's reign*, New Delhi 1975, 234-8. (I.H. SIDDIQUI)

**ABBREVIATIONS**, sigla and conventional signs are nowadays called in Arabic *mukhtaṣarāt* "abridgements" or *rumūz* "symbols", but there does not seem to have been any specific term for them in the classical period, even though from the very beginnings of Islam copyists, scribes and specialists in all sorts of disciplines were led to use them. This is why it has been thought suitable to bring together here a list of the main abbreviations found in the mediaeval texts, together with some examples of those taken up by our contemporaries.

One should first of all recall that a certain number of the *surās* of the *Kur'ān* begin by groups of letters (the *fawātih* or *hurūf mukatta'ā/āt*), which remain curiously inexplicable despite the many interpretations thought up by inventive minds; the reader will find a table of them in the article AL-KUR'ĀN, where the signs indicating pronunciation to be found in various editions of the Holy Book are also considered.

It should also be noted that if the verb *sammā*, means notably "to pronounce the formula *bi-smi llāh al-rahmān al-rahīm*," the formula itself is called the *bas-mala* [q.v.], whose form is obvious; cf. also the *ḥamdala*, the formula *al-ḥamdu li-llāh* "praise be to God", etc.

It is precisely these pious or optative formulae which, because of their frequency, led copyists and scribes to adopt various abbreviations, of which the most frequent are: *t'* = *tā'ālā* "may He be exalted"; *ṣ* = *ṣallā llāh 'alayh*, and *ṣ'm* = *ṣallā llāh 'alayhi wasallam* "may God confer His blessings [on the Prophet] and grant him peace"; *'m* = *'alayhi al-salām* "peace be upon him [sc. upon a prophet]"; *rh* = *rahimahu llāh* "may God have mercy on him"; and *rdh* = *raḍiya llāh 'anhu* "may God be pleased with him" after the name of a deceased person.

For their part, copyists used conventional signs, amongst which one may mention: *ṣ* = *ṣawābuhu* "the correct reading, to be read..."; *b* = *bā'da* "after" or *kh* = *mu'akhkhar* "placed after"; *k* = *kabla* "before" to show that two words should be transposed (or also *m* = *mu'akhkhar* and *m* = *mukaddam* for the same inversion); *sh* = *muṣahḥah* "corrected, verified, the correct reading"; *kh* = *khata'* "error" or *nuskha ukhrā* "another manuscript = variant"; *m* = *mudraḍḍi* "a word straddling two hemistiches of a verse"; *alkh* = *ilā akhrihi* "etc."; *h* or *ah* = *intahā* "end of quotation".

In technical works on grammar, theology, law, etc., the following may occur: *ḍj* = *ḍjam'* "plural"; *ḍjḍj* = *ḍjam' al-ḍjam'* "double plural"; *m* = *mu'annath* "feminine", but also *matn* "text of the *ḥadīth*, etc."; *sh* = *sharḥ* "commentary" and *shāriḥ* "commentator"; *thnā* or *nā* = *ḥaddathānā* "there related to us"; *anā* = *anbā'anā* or *akhbarānā* "[he] related to us (especially of a historical or other tradition)"; *m* or *alm* = *(al)-ma'rūf* or *(al)-mashhūr* "(the) well-known, (the) famed"; *alz* = *al-zāhir* "the obvious, literal sense"; *wz* = *wa-zāhiruhu* "and its literal sense"; *h* = *ḥawil* "change in the *isnād*"; *ṣ* = *muṣannaf* "*ḥadīth* work" or *muṣannif* "author (of the work)"; *alm* = *al-muṣannif* "the author"; *yk* = *yukāl* "it is said"; *aṣ* = *aṣl* "by no means, absolutely"; *ayd* = *ayd* "also, equally"; *s* = *su'āl* "question"; *ḍj* = *ḍjawāb* "reply"; *n* =

*bayānuhu* "its explanation"; *h* = *ḥakīka* "reality", "in truth"; *b* = *bāṭil* "false"; *(al)ḥm* = *(al)-muḥāl* "what is absurd, improbable"; *nm* = *mamnū'* "impossible, absurd"; *(f)lā nm* = *(fa)-lā nusallim* "we do not admit, recognise"; *h, fh* = *(fa)-ḥina'idh* "and then, consequently"; *lā mhh* = *la mahāyata* "without any doubt"; *kk* = *kadhālika* "thus"; *alm* = *al-maṭlūb* "the desired aim" or *al-muṭlak* "the absolute".

Also found are: *s* = *sā'a* "hour", *d* = *daḳīka* "minute", and the names of the months: *m* = *Muharram*, *ṣ* = *Ṣafar*, *rā* = *Rabī' I*, *r* = *Rabī' II*, *ḍjā* = *Ḍjumādā I*, *ḍj* = *Ḍjumādā II*, *b* = *Raḍjab*, *sh* = *Shā'bān*, *l* = *Shawwāl*, *n* = *Ramadān*, *dhā* = *Dhu 'l-Kā'da* and *dh* = *Dhu 'l-Hiḍḍja*.

It will be noted that these abbreviations are often formed by the first letter of the word; another letter may sometimes be chosen, without always there being a care to avoid confusion, so that it may well happen that the groups of letters have an ambivalence, which is not, however, very confusing.

At the present time, the proliferation of sigla, and the perennial desire to save time have multiplied the use of abbreviations, especially in the press and in commercial and financial documents, but also in scholarly works with an apparatus criticus, where one may find e.g. *ḍj* = *ḍjuz'* "volume", *ṣ* = *ṣafha* "page", *s* = *satr* "line", *w* = *waraka* "leaf, folio", *a* and *b* or *w* and *z* = *wadḥ* and *zahr* "recto and verso", *m* = *masāhif/yya* "A.D.", *h* = *ḥiḍḍri/yya* "A.H.", *m* = *malzama* "signature", *kh* = *makhṭūt* "manuscript", *!* = *ṭab'a* "printed edition", etc.

An international abbreviation has yielded, as elsewhere, a genuine noun: *al-Yūna/iskū* "UNESCO". Expressions denoting Unions or Federations are replaced by initials: *ḍj. 'm* = *al-ḍjumhūriyya al-'arabiyya al-muttaḥida* "the United Arab Republic", *a. 'm* = *al-imārāt al-'arabiyya al-muttaḥida* "the United Arab Emirates", etc. Money and currencies, weights and measures are not outside this general tendency: *l.l.* = *lira lubnāniyya* "Lebanese pound"; *d* = *dīnār* (and also *daktūr* "doctor"); *ḍj. m.* = *ḍjunayḥ miṣrī* "Egyptian pound"; *m* = millieme or *mitr* "metre"; *km* = *kilūmītr* "km"; *s.m./ṣ.m.* = *s/ṣantimītr* "cm"; *f* = *faddān* "feddan", etc. Addresses often have *ṣ.b.* = *ṣandūq al-barīd* "postal box" and commercial letter headings *sh.m.m* or *sh.a.l* = *sharika maḥdūdat al-ma'sūliyya* "Ltd. Co.".

The list of abbreviations could be considerably prolonged, but our list will be limited to those given above; one should however add that magazines and periodicals often use these to such an extent that only the initials can unravel them. G. Oman (see *Bibl.*) has mentioned, as characteristic: *m.m.* = "Marilyn Monroe", and *b.b.* = "Brigitte Bardot".

'ABD ALLĀH B. ABĪ BAKR AL-MIYĀNADJĪ, called 'AYN AL-KUDĀT AL-HAMADHĀNĪ, Shāfi'ī jurist and Ṣūfi martyr, born at Hamadhān in 492/1098. Born of a line of scholars, he studied Arabic grammar, theology, philosophy and law, and he is said to have, as an already precocious scholar, started his first book at the age of 14. Also, at the approach of puberty, he became a convert to Ṣūfism. In 517/1123, at the age of 25, he seems to have met Ahmad al-Ghazālī, brother of the great theologian Muḥammad al-Ghazālī, who is said to have initiated him into Ṣūfi meditation and dancing, thus completing his spiritual conversion. Other masters of his

were Muḥammad b. Ḥammūya and a certain Baraka.

His spiritual reputation soon gained him many disciples, and he spent all his time in oral and written teaching, sometimes going beyond the limits of his physical strength for this and having then to retire for two or three months for recuperation. His activities soon provoked the hostility of the orthodox theologians. Provoked by his teachings on the nature of sainthood and prophethood and on submission to the Šūfī *shaykh*, and objecting to his usage of Šūfī terminology which gave the impression that he himself laid claim to prophetic powers, they brought an accusation of heresy against him before the Salḍjūk vizier in 'Irāk, who imprisoned him in Baghdād. It was there that he wrote his apologia, the *Shakwā 'l-gharīb*. Some months later he was set free and returned to Hamadhān, but shortly afterwards, at the time of the Salḍjūk sultan Maḥmūd's arrival (reigned 511-25/1118-31), he was executed in a barbarous manner during the night of 6-7 Djumādā II 526/6-7 May 1131 at the age of 33. His premature death seems to have prevented al-Hamadḥānī from founding a Šūfī monastery, setting up a Šūfī group and designating a successor; nevertheless, his numerous works, written in a fine style, have always found an audience.

His published works include his *Shakwā 'l-gharīb 'an al-awṭān ilā buḍdān al-'ulamā'*, an apologia in Arabic (ed. and Fr. tr. Mohammed ben Abd-el-Jalil, in *JA* (1930), 1-76, 193-297; ed. 'Aff 'Usayrān, *Muṣannafāt-i 'Ayn al-Kudāt-i Hamadhānī*, Tehran 1341/1962; Eng. tr. A.J. Arberry, *A Sufi martyr, the apologia of 'Ain al-Qudāt al-Hamadḥānī*, London 1969); *Risāla-yi Lawā'ih*, on mystic love, in Persian, ed. Raḥīm Farmanīsh, Tehran 1337/1958; *Zubdat al-hakā'ik*, in Arabic, ed. 'Usayrān, in *op. cit.*; *Tamhīdāt or Zubdat al-hakā'ik fī kashf al-dakā'ik*, in Persian, ed. 'Usayrān, in *op. cit.*, twice tr. into Turkish; *Nāmahā or Maktūbāt, Makātib*, letters, in Persian, ed. 'Alīnākī Munzawī and 'Usayrān, 2 vols., Beirut and Tehran 1390/1971; *Risāla-yi yazdānshīnākht*, ed. Bahman Karīmī, Tehran 1327/1948; and *Ahwāl u āthār*, ed. Farmanīsh, Tehran 1338/1959.

'ABD ALLĀH SULTĀNPŪRĪ, called MAKḤDŪM AL-MULK, son of Shaykh Shams al-Dīn of Sultānpūr (Panḍjāb), a leading Indian theologian of the 10th/16th century. He studied under Mawlānā 'Abd al-Kādir of Sirhind, and acquired renown as a scholar and for his command over Muslim jurisprudence, theology and history. He was held in high esteem by Humāyūn [*q.v.*], and Shēr Shāh (947-52/1540-5) gave him the title of *Ṣadr al-Islām*; under Islām Shāh (952-61/1545-54) he was the principal adviser of the king in religious affairs. Upon his return in 962/1555, Humāyūn again conferred on him the title of *Shaykh al-Islām*, and under the next king Akbar [*q.v.*], he received the title of *Makḥdūm al-Mulk*. In 987/1579 he went to the Hidjāz and was received with much respect by the *Mufī* of Mecca. Makḥdūm al-Mulk, however, returned to India without performing the Pilgrimage, and is said to have issued a *fatwā* to the effect that the *Ḥaǧǧ* was not obligatory on the people of India because the journey by sea could not be undertaken without the European passports bearing the pictures of Mary and Jesus and because the land route lay through Shīrī Persia.

Makḥdūm al-Mulk was one of the signatories of the

*Mahḍar* of 987/1579 giving a high religious position to Akbar, but subsequently disowned it; he was in fact a very orthodox Sunnī and drew much criticism from Abu 'l-Faḍl. He died in 990/1582 in disgrace.

'ABD AL-'AZĪZ B. 'ABD AL-RAḤMĀN B. FAYṢAL ĀL SU'ŪD (ca. 1291-1373/ca. 1880-1953), founder king (regn. 1319-73/1902-53) of the Kingdom of Su'ūdi Arabia. His mother was Sāra b. Aḥmad al-Sudayri. At four, 'Abd al-'Azīz was entrusted to a tutor and became a *ḥāfiẓ* at eleven. Simultaneously (1309/1891), at al-Mulayda the Āl Rashīd of Hā'il [*q.v.*] defeated and expelled the Su'ūds from Naǧd, so that 'Abd al-'Azīz grew up subsequently in al-Kuwayt, his father's exiled home.

In 1319/1902, the young hot blood retook al-Riyāḍ, expelled the Rashīdī governor, and proclaimed the restored Su'ūdi rule. Central Naǧd soon re-pledged loyalty to the Su'ūds, and al-Kašīm [*q.v.*] was gradually brought in. By 1330/1912, 'Abd al-'Azīz had restored Su'ūdi rule throughout Naǧd.

In 1912, 'Abd al-'Azīz inaugurated his most imaginative policy, that of settling Bedouin in Wahhābism-centred agricultural colonies whose members were known as al-Ikhwān ("the brothers") [*q.v.*]. This movement simultaneously furthered Wahhābism, provided a new military force, reduced tribalism, and increased agricultural production; it brought with it profound social change, and the movement at its height counted some 150 colonies, one with 10,000 people. Ikhwānīs played a leading role in subsequent conquests, but ultimately revolted, charging the king with religious laxity, so that the founder of the Ikhwān himself suppressed them (1348/1930).

On the eve of World War I, 'Abd al-'Azīz expelled the Ottomans from eastern Arabia thus acquiring access to the sea. For 'Abd al-'Azīz, this war constituted a period of watchful waiting, but with the war's end, he resumed expansion. Djabal Shammar [*q.v.*] was occupied in 1340/1921 and its dependencies the next year. In 1337/1919 'Abd al-'Azīz won an important border fight with the Hāshimīs, and in 1338/1920 annexed upland 'Asīr [*q.v.*]. The end of his festering quarrel with the Hāshimīs began when the Hāshimī king, al-Ḥusayn, somewhat vaingloriously assumed the caliphate (1342/1924). The Ikhwān, affronted, entered al-Tā'if, and Mecca opened its gates, despite the Hāshimīs' descent from the Prophet and long tenure in al-Hidjāz. By 1344/1926, 'Abd al-'Azīz was proclaimed king of al-Hidjāz. His realm, now quite independent, stretched solidly across the peninsula in the first such broad unification in Arabia for many centuries. In addition, responsibility for the holy places, well discharged, converted 'Abd al-'Azīz from the leader of a minor sectarian polity into a central figure in Muslim and international eyes. His one remaining external dispute, with al-Yaman, was settled by a military victory followed by a treaty (1352/1934). In the same year, he unified his government as the Kingdom of Su'ūdi Arabia. 'Abd al-'Azīz treated defeated enemies magnanimously and, especially in al-Yaman, wisely restrained

himself. Much of this period was also spent negotiating with Britain; demarcated borders gradually emerged. During World War II, he maintained formal neutrality, but tilted toward the Allies, subsequently joining the United Nations and the Arab League.

Internally, this commanding monarch ruled traditionally but with his own extra wisdom and strength. He oversaw the successful implantation of the high-technology, American-run petroleum industry into an ultra-traditional society, from a first commercial find in 1356/1937 to the point when, at his death, production approached 1 million barrels/day and gave an annual revenue of \$200 million. Oil revenues financed dramatic developments: water supplies, airports, telephones and radios, roads, electricity, deep water ports, a railroad, hospitals, and schools. 'Abd al-'Azīz had a "marked tendency to uxoriousness". A study of 1952 indicates that he had 35 living sons. The number of his wives, many married ephemerally, was a legendary 300; in addition, he had concubines and slave women. Yet to some wives, he was faithful and always within the letter of Qur'ānic law.

All in all, 'Abd al-'Azīz laid the bases for the modernisation of his country and was one of the greatest leaders to arise in the Arabian peninsula.

'ABD AL-'AZĪZ b. YŪSUF (Abu 'l-Ḳāsim al-Ḥakkār?), the private secretary and trusted adviser of the Būyid amīr 'Aḍud al-Dawla [*q.v.*] from the very beginning to the end of his reign, and then three times alternatively the vizier and in disgrace in regard to his sons Ṣamsām al-Dawla and Bahā' al-Dawla [*q.v.* below]. He is the author of a collection of official correspondence (*inshā'*), largely preserved in ms. Petermann 406 (Ahlwardt 8625), which is however limited to the period of 'Aḍud al-Dawla's reign (some fragments lacking here are cited in al-Tha'ālibī, *Yaṭīma*, ii, 89-90) and which, without securing him a place equal to his contemporaries Abū Ishāḳ al-Ṣābi' and Ibn 'Abbād, merits the historian's consideration, above all for the narrative of events of the reign.

*Bibliography:* Abū Shudjā' al-Rūdhrawārī, continuation of the Miskawayh's *Tadīrīb al-umam*, ed. and tr. Amedroz and Margolouth in *The eclipse of the Abbasid caliphate*, iii and vi (see index, vii, 2); Tha'ālibī, *Yaṭīma*, loc. cit.; Cl. Cahen, *Une correspondance buyide inédite*, in *Studi orientalistici... Levi della Vida*, i, 85-96; J. Chr. Bürgel, *Die Hofkorrespondenz 'Aḍud al-Dawla's*, Wiesbaden 1965; H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Beirut 1969, esp. 240 ff. (CL. CAHEN)

'ABD AL-BĀRĪ, ḲIYĀM AL-DĪN MUḤAMMAD, early 14th/20th century 'ālim and *pīr* of the Farangī Maḥallī family [*q.v.* below]. Born in Lucknow in 1295/1878, he was descended on his father's side from a distinguished line of *pīrs* and on his mother's side from Malik al-'Ulamā' Mullā Ḥaydar (d. 1256/1840-1), who had established the Hyderabad (Deccan) branch of the Farangī Maḥallī family. 'Abd al-Bārī was brought up in Lucknow, where he studied under many teachers, notably his uncle 'Abd al-Bākī and 'Ayn al-Ḳuḍāt, the prominent pupil of 'Abd al-Ḥayy [*q.v.*]. He travelled to the Ḥijāz three times, in 1309/1891-2, 1321/1903-4 and 1330/1911-2, and also visited other parts of the Ottoman Empire. In Medina, where he came to know Sharīf Ḥusayn of Mecca, he both studied *ḥadīth* under Sayyid 'Alī Witri and taught.

With Abu 'l-Kalām Āzād, 'Abd al-Bārī was the first Indo-Muslim scholar to play a major role in modern Indian politics. He came to the fore as Muslims of the subcontinent became agitated over events in the Ottoman Empire just before World War One. In 1913, after returning from Mecca, with Muḥṣir Ḥusayn Kidwārī, he founded the Andjuman-i Ḳhuddām-i Ka'ba [*q.v.* below]. After the War he played a leading part in launching the Indian *Khilāfat* movement: leading in 1918 the first 'ulamā' to attend the All-India Muslim League sessions, developing an alliance with Mahatma Gandhi, helping to organise the Central *Khilāfat* Committee in 1919, and throughout driving the agitation more extreme till in 1920 the *Khilāfat* movement adopted a policy of non-cooperation with the British government and, under its influence, so did the Indian National Congress. In these years 'Abd al-Bārī's influence at its zenith, a fact marked, at least among Indian 'ulamā', by his election as the first president in 1919 of the *Djam'īyyat-i 'ulamā'-i Hind*, which he had played a major part in establishing. But gradually in 1921 and 1922 he began to draw apart from the politicians as they refused to accept his view that force should be used to defend the *Khilāfat*. By 1923 the resurgence of communalism had driven him to defend Islam in India at the cost of Hindu-Muslim unity. Moreover, he continued to fight for the *Khilāfat*, although the issue had ceased to interest politicians. From 1925 he led the tremendous protest in India against Ibn Sa'ūd, and died on 4 Raddjāb 1344/19 January 1926 while in the midst of his campaign.

'Abd al-Bārī knew that Muslims had to face the problems posed by the modernisation of their society. He was willing to support Muslims who sought western learning, sending boys to Aligarh College and making a donation to the Muslim University movement. In an endeavour designed to equip the children of 'ulamā' and *pīrs* for modern life along traditional lines, he established the Madrasa-yi 'Aliya Nizāmiyya at Farangī Maḥall in 1905. This offered an improved form of the Dars-i Nizāmiyya, making "modern" subjects such as algebra and geography compulsory and offering practical subjects such as English to higher classes. 'Abd al-Bārī was no less concerned about the future of mysticism. He felt that the ignorance of those who were mystics, as well as that of those who were not, was damaging the reputation of *taṣawwuf*. He was particularly concerned that mystics should adhere strictly to the *Sharī'a*. It was on this account that around 1914 he revived a plan, first mooted by his father and others in 1896, to establish a madrasa to teach Islamic mysticism systematically. The plan was adopted as the aim of the *Bazm-i Sūfiyya-yi Hind*, an organisation which, with the support of many leading Indian mystics, was founded

during the *‘Urs* of Mu‘īn al-Dīn Īshū‘ī at Adjmīr in 1916.

‘Abd al-Bārī was one of the great teachers of his time, having at least 300 pupils. He wrote 111 books and pamphlets displaying wide learning in Persian as well as Arabic; as was customary in the Farangī Maḥall family, Ḥanafī jurisprudence was his most important field. Initiated into the Qādīrī-Razzāqī and Īshū‘ī-Nizāmī *silsilas*, he was an influential *pīr*, numbering several leading politicians, including Muḥammad and Shāwḳat ‘Alī [q.v.], amongst his *murīds*. An independent-minded but emotional man, ‘Abd al-Bārī was guided by the need to defend and strengthen Islam. He achieved fame and success, in part because of what he did but also in part because of who he was: the dominant member in his generation of the widespread and talented Farangī Maḥall family. In recent years he has been this family’s most distinguished product.

*Bibliography*: There is a biography of ‘Abd al-Bārī, Mawlawī ‘Ināyat Allāh, *Risāla-yi hasrat al-āfāk ba wafāt madjmī‘at al-akhlāq*, Lucknow n.d.; see also Mawlawī ‘Ināyat Allāh, *Tadhkira-yi ‘ulamā’-i Farangī Maḥall*, Lucknow 1928; For ‘Abd al-Bārī’s views on mysticism, see Nūr al-Hasan Adjmīrī, *Khādimāna guzārīsh*, Lucknow 1923 and ‘Abd al-Bārī, *‘Urs Ḥadrat Bāna*, Lucknow n.d., and for his views on education, see Alṭāf al-Raḥmān Kidwāī, *Kīyām-i nizām-i ta‘līm*, Lucknow 1924; His political career is covered by Francis Robinson, *Separatism among Indian Muslims: the politics of the United Provinces’ Muslims 1860-1923*, Cambridge 1974, chs. vii-ix, and Afzal Iqbal, *The life and times of Mohamed Ali*, Lahore 1974, 336-40. ‘ABD AL-LATĪF ĀLEBĪ [see LATĪF].

‘ABD AL-NĀŠĪR, DJAMĀL, Egyptian commander and statesman. His father, ‘Abd al-Nāšīr Ḥusayn, came from the village of Banī Murr near Asyūṭ in Upper Egypt. He was a clerk in the post office and in 1915 moved to Alexandria. In 1917 he married the daughter of an Alexandrian coal merchant and on January 15th 1918, his first son, Djamāl, was born. The father was transferred several times during his son’s early childhood and it was in Asyūṭ that Djamāl began his primary education. At the age of seven he was sent to Cairo to live with his uncle and to study there instead of moving around with his father. He also spent some time in the family village of Banī Murr when he was able to observe the life of the Egyptian peasant—its poverty and its daily toil, its dignity and solidarity. The village was a microcosm of Egyptian rural society. ‘Abd al-Nāšīr’s family belonged to the middle layer of small proprietors and tenants, a class largely dominated by others yet from which there was some outward movement into the towns and cities through education and government employment. This class gave ‘Abd al-Nāšīr his roots in the Egyptian countryside and also his escape into another world.

In Cairo he went to al-Naḥḥāsīn school in Khān al-Khalīlī where he was able to experience at first hand the life of the bustling crowded quarters of Cairo, that other aspect of the poverty of Egypt. During this period he was greatly affected by the death of his mother and by his father’s early re-marriage. This experience turned him against his father and strengthened his independence and perhaps also his introspection. He was noted from then on for his seriousness and thoughtfulness.

After an interval with his family in Alexandria ‘Abd al-Nāšīr moved to Cairo where he spent five de-

cisive years, 1933-8. He went to al-Naḥḥā school and began to mix study with militant activity, protesting both against the British presence and the policies of the Egyptian politicians. He was exposed to the political currents of the time, of the *Wafd*, the National Party (*al-Ḥizb al-Waṭanī*) and especially *Alīr al-Fatāt*, the Fascist-type movement found by Aḥmad Ḥusayn. He felt deeply and personally the problems of Egypt and began to assume them inwardly himself, unconsciously following the example of those future leaders who take upon themselves the burdens of their people, and also searching for a future pattern for his own life. He admired the *Wafd* centred around its leader, Muṣṭafā Naḥḥās; he occasionally marched with *Alīr al-Fatāt*. He wrote at the time: “[The Egyptian] only needs a leader who will lead him to battle”.

In November 1935, when the British opposed the re-establishment of the Egyptian constitution, ‘Abd al-Nāšīr marched with students on to the streets of Cairo and was wounded by a bullet fired by British troops. He was identified as an agitator and asked to leave his school. After a few months in 1936 as a law student in Cairo University, his sense of disillusion with the politicians who had “surrendered” to the British by signing the 1936 Treaty and with what he saw as the indifference of his fellow-students, led him to seek to join the army, in his opinion the best means available for effecting change. He had passed through his early personal crisis and took to the army as a positive means of action.

In 1936 the Egyptian army had lifted its restrictions on the middle and lower classes entering the officer corps. ‘Abd al-Nāšīr was a member of the second entry of such men, an officer cadet in 1937 at the age of nineteen in the ‘Abbāsiyya Military Academy. He was attracted to military life with its discipline and study, and was quickly promoted. Of his future companions in the revolution, he met ‘Abd al-Hakīm ‘Amīr in the academy and Zakariyyā Muḥyī al-Dīn and Anwar al-Sādāt in his first posting to upper Egypt. It is difficult to maintain that their plotting began at once but, being of similar age and background, they were united in their disrespect and even contempt for their senior officers, and this attitude was confirmed when he again met ‘Amīr during their assignment to the Sudan.

The German successes in Libya and Egypt in 1940-1 led some Egyptian officers to see in the Axis their deliverers from British occupation. ‘Abd al-Nāšīr stayed aloof from making approaches to the Germans, but his anger was aroused in February 1942 when Sir Miles Lampson, the British High Commissioner, with the support of British tanks imposed on King Fārūq a *Wafd* cabinet under Naḥḥās. ‘Abd al-Nāšīr was ashamed that the army had taken no counteraction, but he at least felt that some officers had been shaken out of their apathy. In 1943 he was appointed an instructor at the Military Academy, and during his time there was able to make contact with a number of younger Egyptians who were also like him fired by the aim of liberating their country.

The period 1945-52 bears, with hindsight, the signs of the end of an era. Several factors combined to ensure that change eventually became inevitable. King Fārūq’s political erraticness and scandalous private life debarred him as a serious political leader. The *Wafd* had lost most of its credibility, and the more extreme movements were left to clamour for a central role. The Arab disaster in Palestine had a profound effect on the minds of young Egyptian army officers, and the British reluctance to evacuate troops

first from the towns and then from the Suez Canal Zone confirmed their suspicions about the survival of British imperialist aims. The period was one of ferment and tension, so that even a personality less politically sensitive than 'Abd al-Nāṣir could not have remained unaffected, and he was in a sense torn during this period between his position as staff officer and his interests in "revolutionary" movements. He was introduced to Marxism by Khālīd Muhyī al-Dīn, a fellow officer and cousin of Zakariyyā, to the *Ikhwān al-Muslimūn* by al-Sādāt, and to the left wing of the *Wafd* by Aḥmad Abu 'l-Faṭḥ and others. At this time a group of officers began to meet regularly, comprising the above together with 'Āmir, Tharwat 'Ukāsha and one or two others. These so-called *Dubbāt al-Ahrār* ("Free Officers") did not yet coalesce as a movement, having no common ideology but a determination to transform Egypt; but the figure of Djamāl 'Abd al-Nāṣir emerged here as a leader.

It was events outside Egypt which decisively placed the Free Officers on course outwards revolution. In May 1948 the Egyptian army advanced into Palestine in an attempt to destroy the new state of Israel. 'Abd al-Nāṣir was commanding officer of a unit, and was immediately dismayed by the inefficiency and lack of preparedness of the Egyptians who were fighting against greatly inferior numbers; in the fighting he was himself wounded in the chest. After the second United Nations armistice (during which the Haganah improved its positions), the battle for the Negev began in October. 'Abd al-Nāṣir and his unit were trapped at Fallūdja, but together with several other Free Officers they held out against the Israeli forces and were eventually able to counter-attack. In retrospect, 'Abd al-Nāṣir saw this episode as a symbol of their determination to pursue the real fight against all those forces which opposed Egypt. He had fought the Israelis and had even admired them in their successful bid to oust the British from Palestine (during one armistice he had had an opportunity to talk to an Israeli officer), and had himself become more widely known. One general also made his name for heroism in the Palestine war, Muḥammad Naḍjīb (Neguib).

The army returned home bitter in defeat and determined to begin the "real" struggle. The Free Officers began to issue propaganda denouncing the King, the régime and the army, to infiltrate the government, and to co-operate with other organisations. In October 1951 the Egyptian government abrogated the 1936 Treaty, and this action signalled the beginning of guerilla activity against the British troops remaining in the Canal Zone. The Free Officers played a certain part, issuing arms and training commandos, but it was largely students and members of the *Ikhwān* who bore the brunt of the fighting; 'Abd al-Nāṣir himself was biding his time conserving his energies.

Tension was also rising in Cairo. A particularly severe British retaliatory attack on the Ismā'īliyya barracks in January 1952 led to Black Saturday, January 26th, when much foreign and Egyptian property in Cairo was burned and several lives lost. Students, *Ikhwān* and the mob rampaged in a fury of revenge, and the army and police intervened only late in the day. It is still not clear who instigated the riots and how large a part, if any, the Free Officers played; but the events had at least demonstrated the desperate fury of the country and the lack of any solution offered by the régime.

Fārūk and his entourage continued their improvi-

dent course, seemingly careless of the country's plight. The Free Officers decided that a coup could no longer be postponed and began to make their final plans in July. The government had moved for the summer to Alexandria, and two army units favourable to the Free Officers were about to move to Cairo. On 20th July it became known that Fārūk was to appoint a new government, one of whose first actions would be to arrest some of the Officers. The latter advanced their plans; by the morning of 23rd July the key army and communications posts had been taken, with hardly a shot fired and only two lives lost. Although 'Abd al-Nāṣir had been the leader, General Muḥammad Naḍjīb, the older and better-known man, became the new Commander-in-Chief, while arguments raged over the future form of government—should there be co-operation with civilian politicians, and what was to be the fate of Fārūk?

'Alī Māhir, an ex-premier, headed the new government. 'Abd al-Nāṣir stood out for the exile, rather than the execution, of Fārūk, and the ex-king sailed from Alexandria on 26th July. Naḍjīb supervised the abdication while 'Abd al-Nāṣir remained in Cairo.

Muḥammad Hasanayn Haykal has divided the political life of 'Abd al-Nāṣir (known in Egypt as "The Lion") into three parts: 1952-6, the Lion free; 1956-67 the Lion chained; 1967-70 the Lion wounded. By this division, Haykal saw him free until the Suez invasion to concentrate on Egyptian affairs; after 1956 he became chained to Arab and world affairs and a prisoner of his own success and personality; after the Arab-Israeli war of 1967 he was gradually weighed down by the burdens of office. These divisions may be qualified and modified, however. During the whole of his political life he was attempting both to legitimise his rule and to give Egypt a lasting political and social system. Until 1956 he was largely concerned with Egyptian internal affairs, but Suez thrust him on to the world stage, and while chaining him, in Haykal's phrase, he was at the peak of his popularity and success, at least until the dissolution of the Syrian-Egyptian union in 1961. The period 1961-7 saw him more closely chained and less successful, until the disaster of 1967, by which he was mortally wounded.

The Free Officers had no definite political programme before or at the beginning of their régime. No one ideology motivated the seizure of power; they had rather vague ideas about national independence, modernisation, democratisation, social justice and equality. The first years of power entailed a more precise defining of these ideas and forced 'Abd al-Nāṣir to determine his role in the new system. He was the centre of the new ruling body, the Revolution Command Council (R.C.C.) (*Madjlis Kiyādat al-Thawra*), although Naḍjīb was its president, replacing 'Alī Māhir in September 1952, and 'Abd al-Nāṣir not yet publicly acknowledged.

The régime's first declared objective had been the expulsion of the British, and negotiations began immediately over the evacuation of the Canal Zone. Secondly, the direction of domestic policy was established by the agrarian reform law of September 1952 by which no one was allowed to hold more than 200 feddans of land. Thirdly, the régime set about eliminating opposition, i.e. the *Wafd* and especially the *Ikhwān*, who reacted by trying to foment opposition in the army, police and universities. In the early months of 1954 the *Ikhwān* waged what 'Abd al-Nāṣir termed a *qiyāda* against the régime, in an attempt to seize power themselves.

Within the Revolution Command Council, dis-

sensions arose between General Naḍjīb, now President of the Egyptian Republic, and the younger officers. The older man had gained considerable popularity, but was opposed by his colleagues, who accused him of re-establishing relations with the old politicians and wanting to send the army back to its barracks. There were demonstrations in his favour, and the chaos of pre-revolutionary days seemed about to return. This was unthinkable to ‘Abd al-Nāṣir with his deeply authoritarian character, and he and like-minded colleagues isolated Naḍjīb by the end of March 1954; he remained as titular president of the republic, while ‘Abd al-Nāṣir became president of the R.C.C. with *de facto* power.

In July 1954, ‘Abd al-Nāṣir signed a treaty with the British under which the Canal base would be evacuated within twenty months with the provision that it could be “re-activated” by the British in the event of an attack by an outside power on an Arab country or on Turkey. To many Egyptians, this was a capitulation to the West and was strongly opposed by the *Ikhwān*. On 24 October 1954 ‘Abd al-Nāṣir was addressing a crowd in Alexandria justifying the treaty when a member of the *Ikhwān* attempted to assassinate him. Haykal described this as a turning point in ‘Abd al-Nāṣir’s career. Having already gained control of the army and state, his survival might also be seen as confirmation of that control, for charismatic leaders can only gain in prestige from “miraculously” surviving assassination attempts. ‘Abd al-Nāṣir now dominated the Revolution Command Council, the cabinet, the Free Officers and through them the Liberation Rally, his first attempt to organise political support. The *mukhābarāt* (secret police) were his means of supervising the two latter bodies, and the basis of the régime was the army, whose members penetrated most aspects of civil life.

1955 was the year in which ‘Abd al-Nāṣir won his personal battle, and found the role he had written about in his *Falsafat al-thawra* “Philosophy of the revolution”: “In this region in which we live there is a role wandering aimlessly about seeking an actor to play it”. In his writing he had criticised the masses for not enthusiastically following him after the coup. Now he was presented with a cause in which to lead them. The British had established the Baghdad Pact with Nūrī al-Sa’īd of Irāk as the lynch-pin. ‘Abd al-Nāṣir, aware that he was compromised over the Suez base agreement, saw the Pact as an attempt by Britain, and especially by Eden, to maintain domination in the Middle East, and even to shift the centre of power away from Egypt to Irāk, hence he determined to oppose it. In February 1955 he was visited by the proponents of non-alignment, Tito and Nehru, and was greatly influenced by them, especially by the Yugoslav. At the same time an Israeli attack on Gaza convinced him that the Americans were attempting to exploit his vulnerability. He now began to seek arms, first unsuccessfully from the West, and then from the Communist bloc.

His participation in April in the Bandung Conference of Non-aligned Nations made a deep impression on him, for he was hailed as a leader in the anti-colonialist fight and welcomed by an enthusiastic crowd on his return to Cairo. Seven months later he announced an arms contract with Czechoslovakia, though he was loath to sever contacts with the West, and in November he opened negotiations with Britain and America for a loan to finance the construction of the Aswān High Dam. In January 1956 a loan by the West was announced with conditions, notably that Egypt’s budget had to be supervised by the lenders.

‘Abd al-Nāṣir hesitated for a time, having alienated France by his support of the Front de Libération Nationale in Algeria and Britain by his approval of King Husayn’s dismissal of General Glubb in Jordan; and finally in July the offer of the loan was withdrawn because, according to the U.S. Department of State, of doubts about Egypt’s “ability to devote adequate resources to assure the project’s success”.

Such a rebuff was a severe blow to a man of ‘Abd al-Nāṣir’s temperament and he reacted angrily. Under a new constitution he had been elected President, with both the powers of head of state and of government, in June with 99.9 per cent of the votes. He announced the nationalisation of the Suez Canal, against which the British Prime Minister, Anthony Eden, reacted by denouncing the takeover as illegal; he also saw ‘Abd al-Nāṣir as a dictator threatening British security who had to be removed. To the Egyptians, however, the Canal was the symbol of imperialism and ‘Abd al-Nāṣir was the man who had defied the Old World and who had asserted the rights of the newly-independent. His popularity in Egypt was enormous and he was convinced that he could withstand Western attempts to make him retract.

Britain, France and Israel combined to attack Egypt, each for their own reasons, but united in fear and hatred of ‘Abd al-Nāṣir, after attempts to organise forms of international supervision of the Canal had failed. On October 29th Israeli troops crossed into Sinai and the following day were reported to be within 20 miles of the Canal. The British and French ultimatum ordering both Egypt and Israel to withdraw to ten miles on either side of the Canal, was rejected by ‘Abd al-Nāṣir, and two days later British planes raided Cairo. On November 5th British and French troops landed in Port Said. ‘Abd al-Nāṣir convinced his followers of Egypt’s ability to resist, but he was in fact facing defeat, and was only saved by American and Soviet pressure on his attackers. All foreign troops were compelled to leave Egyptian territory, and he emerged as victor in defeat, more popular and powerful than before, and a world figure.

His very success bore within itself the seeds of danger. He had confronted Israel and the West, not only on behalf of Egypt but also of other parts of the Arab world. He was being drawn into the politics of Arabism, with its twin goals of unity and the destruction of Israel, reaction and colonialism. Egypt, the strongest Arab state with its powerful leader, was the natural centre of the Arab world. ‘Abd al-Nāṣir had already shown his support for the Algerian national movement and thereby alienated France. The Voice of the Arabs radio broadcast continual anti-Western propaganda from Cairo. ‘Abd al-Nāṣir had rejected President Eisenhower’s offer of American military support. At the same time Syria, the other centre of Arabism seemed to be slipping into a chaotic situation. Several factions, Ba’thists, Communists and rival nationalist groups, were competing for power. In January 1958 Syrian spokesmen informed ‘Abd al-Nāṣir that only union with Egypt could save their country. He was not immediately convinced, despite his professed belief in Arab unity, and made strong conditions for the Syrians which they nevertheless readily accepted. At the end of January the United Arab Republic came into existence with ‘Abd al-Nāṣir as president, welcomed with relief by the Syrians but not, it seemed, with any great enthusiasm by the Egyptian leader himself, nor by the Egyptian people, some of whom regretted the disappearance of the name of Egypt.

However, he received a great popular welcome in

Syria and appeared determined to make the union a success, if only by imposing his own will on the Syrians. Such an attitude was bound to cause resentment, and socialist measures, the dismissal of army officers, purges of politicians and the arrogant behaviour of 'Abd al-Nāṣir's man in Syria, 'Abd al-Ḥamīd Sarrādj, all contributed to increase feelings of bitterness. By early 1961 the union was falling apart and in September a group of Syrian officers unilaterally took Syria out of the U.A.R.

'Abd al-Nāṣir was stunned, but, after a momentary determination to oppose the split by force, reluctantly withdrew Egyptian troops from Syria. To salvage his self-esteem and perhaps to keep the door open for further unions, he retained the title of U.A.R. for Egypt. His political life was complicated by another factor. The 'Irākīs had overthrown the monarchy in July 1958, had proclaimed their revolution and were disputing with him the leadership of the Arab world. Rivalry was intense, especially as 'Irāk claimed Soviet support and had refused to join the U.A.R. He had been dragged deep into inter-Arab disputes and saw his energies diverted into unprofitable avenues.

After the break-up of the U.A.R., 'Abd al-Nāṣir felt isolated and to some extent withdrew into Egyptian affairs. In a speech of October 1961 he made some surprising admissions; "We fell victim to a dangerous illusion, to which we were led by an increasing confidence in ourselves and in others". He had neglected the economic development and the political organisation of Egypt. He would summon a congress of popular forces which would chart a more socialist and democratic course. In Egypt he had become in all senses the *ra'īs*, enjoying absolute power and now being corrupted by that power. He was the father-figure, protected by the *mukhābarāt*, imprisoning and torturing Communists, with an all-powerful police, and with judicial corruption. His entourage both protected and isolated him. He owed his popularity to the masses, yet he distrusted them, and none of his plans to involve the people more directly in government had very great success. He moved cautiously and pragmatically, approaching a socialist solution slowly. Despite his reliance on Russia, he had persecuted Egyptian Marxists and had no intention of imposing a totally communist programme on the country.

During the fifties there had been some nationalisation, but it was not until July 1961 that 'Abd al-Nāṣir announced more radical measures. He introduced "Arab socialism" into Egypt—land ownership was reduced to a maximum of 100 feddans; banks and many other companies were nationalised; property was sequestered; and the economy was to be totally planned. Smaller businesses were left in private hands. 'Abd al-Nāṣir was clearly reluctant, however, to follow too closely the Soviet pattern. His socialism was to be built on "national friendship" rather than class warfare and there was to be no enforced collectivisation of the peasantry. The Congress of Popular Forces was convened in May 1962 to discuss and approve a National Charter which embodied the ideology of the régime. A new single party, the Arab Socialist Union, was founded to succeed the National Union which had already taken the place of the earlier Liberation Rally.

The A.S.U. was 'Abd al-Nāṣir's attempt to involve the people, in a strictly supervised way, in the government of Egypt. That it largely failed was partly due to the scarcity of enthusiastic and well-trained cadres. Traditional centres of power still held sway in many

of the Egyptian villages and no great enthusiasm was shown for the A.S.U. In an attempt to strengthen the Union, 'Abd al-Nāṣir even released imprisoned Marxists, some of whom in 1964 agreed to work within the organisation.

'Abd al-Nāṣir's economic policies were obviously influenced by his relationship with the Soviet Union and Yugoslavia. He rejected Communism and was categorised by Soviet ideologists as a bourgeois nationalist, yet he was dependent on Russia for aid and Khrushchev considered him an ally in the Middle East. Apart from arms, Russia had in 1960 agreed to finance the construction of Aswān Dam, which became both the symbol of Russo-Egyptian co-operation and of Egypt's rebirth. The dam was built to transform Egypt's economy and agriculture. It has not succeeded in all the ways intended, and in more ways than one it is 'Abd al-Nāṣir's monument.

Despite his intention to concentrate on internal affairs, 'Abd al-Nāṣir's reputation and Egypt's position in the Arab world obliged him to continue to play a leading role. The most serious intervention was in the Yemen where in the autumn of 1962 an uprising had driven out the Imām. A republic was proclaimed which was immediately threatened by Saudi-backed royalist forces. 'Abd al-Nāṣir sent an Egyptian army to support the revolution, an action he later regretted, for it was trapped for five years with a continuing drain of men and equipment, diverted away from a confrontation with Israel, the insoluble problem of his lifetime.

The Israelis had withdrawn from the Suez Canal after 1956, and United Nations troops had moved in between Israel and Egypt. The Arabs had made various plans for and propaganda about the destruction of Israel, but 'Abd al-Nāṣir seemed determined not to let Egypt be engaged in war before the army was ready, or until Arab unity was achieved. However, he joined a pact with Syria in 1966 which trapped him into confrontation. Both Syria and Jordan clashed with Israel and he found himself shouldering their burdens and being ineluctably drawn into a conflict. He was now heard to talk of destroying Israel and of the impossibility of co-existence. 'Abd al-Ḥakīm 'Āmir and others convinced him that the army was strong and prepared, though after the war, 'Abd al-Nāṣir claimed that he had not wanted to fight.

According to his version of the events leading to the war, in May he asked U Thant to withdraw the U.N. Emergency Force from the Israeli-Egyptian frontier, thus allowing the Egyptian army to face Israeli troops directly. The Russians had informed him that the Israelis were preparing to attack Syria, and by his moves in Sinai he intended to deter them; this information seems to have been either incorrect or at least exaggerated. 'Abd al-Nāṣir claimed that the U.N. responded by insisting on withdrawing their troops both from the frontier and from Sharm al-Shaykh. The U.N. version is that Egyptian troops appeared at Sharm al-Shaykh and forced the U.N. to withdraw. Whichever version is correct, Egyptian troops were soon at the entrance to the Gulf of 'Aqaba and blockading the Straits of Tirān to Israeli shipping, and it was clear that Israel could not leave such a challenge unanswered. According to eyewitnesses in Cairo 'Abd al-Nāṣir appeared at the time to be borne down by the inexorable, and he spoke of a moment of decision: either Israel must accept new discussions on the Palestine problem or war was inevitable.

'Āmir and Shams Badrān, the Egyptian War Minister, urged him in vain to strike first. Israel settled

the matter by a pre-emptive attack on June 5th which destroyed the Egyptian air force on the ground. By June 9th Egypt accepted a cease-fire, with Israeli troops once again on the Suez Canal. 'Abd al-Nāṣir had led his country to a catastrophic defeat. He had no excuses. On television on June 9th he admitted his failures and announced his resignation. The reaction was immediate. All Egypt, it seemed, begged him to stay. Egypt and 'Abd al-Nāṣir had together been defeated, and Egypt without him was unthinkable; the identification between leader and people appeared total. His resignation was rejected and the following day he resumed office.

His prestige was, however, diminished, a fifth of his country occupied, the Canal closed; he was confronted by a powerful enemy, and his armed forces were shattered. In the short period left of his life there was little he could do to restore the situation, yet as leader he was forced to try. Even the army was not prepared totally to support him. 'Amir was blamed for the defeat, arrested and allowed (or forced) to commit suicide, Badrān was imprisoned for life. Members of the secret police were arrested. In February 1968 the Air Force commanders were sentenced to imprisonment. Even so, the Egyptian people were not satisfied with 'Abd al-Nāṣir's actions, and there was criticism of him, of the system and of the leniency of the sentences on the Air Force officers.

He responded by increasing the sentences and by urging the Arab Socialist Union to play a more creative and active role. This did not satisfy the people, and in late 1968 there were demonstrations in favour of more political freedom and even demands for his resignation. He had been called back by the people yet was unable to fulfil their expectations.

On the international scene, he was able to offer little that was constructive. At the Khartoum Arab summit in September 1967 he endorsed the Arab refusal to recognise or to negotiate with Israel, although he also seemed to accept the U.N. resolution 242 which entailed recognition of the sovereignty of all states in the Middle East. Soviet support in rebuilding his army at least gave him a position from which he could face Israel on a more equal footing. It led him to launch the war of attrition in 1969-70 during which the Israeli air force on several occasions attacked Egyptian territory. 'Abd al-Nāṣir personally and on behalf of the Arabs could not bring himself to the point of negotiating a peace treaty with Israel, despite Soviet and American pressure. He made several moves which seemed to be leading towards negotiation, but he remained fettered by his position in the Arab world.

On 24 September 1970 King Ḥusayn of Jordan and Yāsir 'Arafat of the Palestine Liberation Organisation met in Cairo under 'Abd al-Nāṣir's aegis to try to achieve reconciliation after Ḥusayn's suppression of the attempted Palestinian take-over in Jordan, and this was his last achievement. On September 28th he died of a heart attack, having suffered from diabetes for ten years and later from arteriosclerosis of his right leg. Despite a previous heart attack in September 1969 he had continued to work until the very end. His funeral in Cairo was marked with astonishing scenes of grief, devotion and disbelief amongst the thousands who surrounded his coffin. It was as though in a very real sense part of the soul of Egypt had died with him.

It is also possible that the mass hysteria of that day contained within itself a grain of relief. 'Abd al-Nāṣir had dominated Egyptian life for some fifteen years and perhaps by 1970 Nasserism had run its

course. He had guided Egypt through a period of intense change and political adjustment. He had seen the end of French and British imperialism and had felt his way towards a new relationship both with the United States and the Soviet Union. He had led Egypt into a relationship with an Arab world newly-conscious of its power and independence. He had had to face the problem of confronting Israel on behalf of that Arab world. As Haykal wrote, these historical conditions formed his destiny and laid on him a burden too great for any one man to bear, or in the words of another commentator, "being unable to solve Egypt's problems, [he] chose to incarnate them".

'Abd al-Nāṣir was thoroughly Egyptian, a Ṣa'īdī who gave back to Egypt a sense of dignity. He remained a man of simple tastes and hard work who continued to live modestly in Cairo. His close friends were almost all political allies and he created with them an atmosphere of intrigue and conspiracy in government. He ruled Egypt through this élite, together with a network of interlocking security systems. He was cunning, mistrustful and a conspirator. He even distrusted the army, which he supervised with the *mukhābarāt*. He was a naturally passionate man, not averse to the use of violence and torture to subdue his opponents. He did not know how to create lasting institutions nor how to gather around him a strong governmental team.

He clearly inspired devotion both among his colleagues and among the masses in Egypt and elsewhere. His figure dominated Arab politics and gave rise to the formation of Nasserist parties in other countries. He was the symbol for many of Arab resistance to foreign influence and to internal reaction. He was the leader who, in Weber's terms, was able to lead the break-through in Egypt's history.

*Bibliography:* Much has been written about 'Abd al-Nāṣir and Egypt under his régime. A survey of English and French studies written before 1967 can be found in D. Hopwood, *Some Western views of the Egyptian revolution*, in P.J. Vatikiotis, ed., *Egypt since the revolution*, London 1968; The most important works specifically on Djamāl 'Abd al-Nāṣir appearing since that date are: J. Lacouture, *Nasser*, Paris 1971 (and Engl. tr., London 1973); R. Stephens, *Nasser*, London 1971; R.H. Dekmejian, *Egypt under Nasser, a study in political dynamics*, Albany, N.Y. 1972; A. Nutting, *Nasser*, London 1972; *Egypt and Nasser*. 3 vols. (Facts on File) New York 1973; M.H. Heikal, *The Cairo documents*, London 1973; Many works in Arabic have been published, especially since his death, both laudatory and critical, and these are too numerous to list here. One of the most revealing is by Haykal, *'Abd al-Nāṣir wa 'Ālam*, Beirut 1972. Essential is 'Abd al-Nāṣir's own *Falsafat al-thawra*, Cairo 1956 (English tr., Washington D.C. 1956). Also of use are memoirs by his colleagues, Anwar al-Sādāt, *Revolt on the Nile*, New York 1957, and Mohammed Nequib, *Egypt's destiny*, London 1955. Many of his speeches were also published. (D. HOPWOOD)

'ABD AL-RAHMĀN B. ḤASSĀN B. THĀBIT AL-ANṢĀRĪ, poet of Medina and Damascus in the early Islamic period and son of the more famous eulogist of the Prophet, Ḥassān b. Thābit [q.v.]. He seems to have been born in ca. 6/627-8 or 7/628, and apart from visits to the Umayyad capital, to have spent most of his life in Medina. He died there, according to Ibn Ḥadjar, *Tahdhīb*, vi, 162-3, in ca. 104/722-3 at the age of 98 lunar years, long-lived like his father.

His father had latterly become a strong advocate of vengeance for the 'Uḥmān and a supporter of Mu'āwiya's cause, and 'Abd al-Rahmān likewise became embroiled in the controversies of the day, including with the poet and supporter of the 'Alids, Ḳays b. 'Amr al-Nadījāshī [q.v.]. 'Abd al-Rahmān himself apparently was of a distinctly provocative and irascible nature, much given to satirising his contemporaries, and he also clashed with the Umayyad poet-prince 'Abd al-Rahmān b. al-Ḥakam, brother of the future caliph Marwān (see *Aghānī*<sup>1</sup>, xiii, 150-4, xiv, 123 f. = ed. Beirut, xii, 279-86, xiv, 284 ff.), and then with the heir to the throne Yazīd b. Mu'āwiya over an alleged slight to the latter's sister in the *naṣīb* of one of 'Abd al-Rahmān's poems (see Lammens, *Études sur le règne du calife omayyade Mo'awia I<sup>er</sup>*, in *MFOB*, ii (1907), 149-51); the moderation of Mu'āwiya protected him from retaliation, although the incident may possibly have sharpened the satires of Yazīd's protégé al-Akḥḥāl [q.v.] against the Anṣār in general. 'Abd al-Rahmān was also a companion of his younger Anṣārī contemporary, the poet 'Abd Allāh b. Muḥammad al-Aḥwaṣ [q.v.]. Only fragments of his verses have survived; these are significant, however, as showing a transitional stage to the poetry of the Hīdjāzī school of al-Aḥwaṣ and then of 'Umar b. Abī Rabī'a [q.v.], though he was clearly inferior in poetic talent to his father.

'Abd al-Rahmān's son Sa'īd was also a poet of this Hīdjāzī lyrical tradition, to judge by the few citations of his work in the *Aghānī* and other sources. He spent some of his career in the Hīdjāz and some in Syria at the court of Yazīd b. 'Abd al-Malik and then in the latter's son al-Walīd's circle during Hīshām's caliphate; the date of his death is unknown. See R. Blachère, *Hist. de la litt. arabe*, iii, 625, and Sezgin, *GAS*, ii, 423.

*Bibliography*: There is no specific biography of 'Abd al-Rahmān in the *Aghānī*, but see the *Tables alphabétiques* for references there to him. The scattered references of the *ṭabakāt* literature, etc., are given in Blachère, *op. cit.*, ii, 316-17, and Sezgin, ii, 422-3, see also Brockelmann, S I, 68, and Zirikī, *A'lām*, iv, 74. Of secondary literature, see in addition to the above, F. Schultess, *Über dem Dichter al Nağāṣī und einige Zeitgenossen*, in *ZDMG*, liv (1900), 421-74 (material from al-Zubayr b. Bakkār's *Muwaffakiyyāt*); Lammens, *loc. cit.*; and W. 'Arafat, *Diwān of Ḥassān ibn Thābit*, London 1971, i, *Introd.*, 6-7. The surviving verses and fragments of 'Abd al-Rahmān's poetic work have recently been gathered together by S. Makki al-Ānī, *Shīr 'Abd al-Rahmān b. Ḥassān al-Anṣārī*, Baghdad 1971.

(C.E. BOSWORTH)

'ABD AL-RAZZĀḲ AL-LĀHIDJĪ [see LĀHIDJĪ].

'ABD AL-SALĀM B. MUḤAMMAD B. AḤMAD AL-ḤASANĪ AL-'ĀLAMĪ AL-FĀSĪ, Moroccan astronomer and physician of the 19th century who lived in Fās, dying there in 1313/1895. Like some others of his fellow-countrymen, he tried to improve the instruments used for calculating the hours of the prayers (*ṭawkīt* [q.v.]), and he describes one of these invented by himself in his *Irshād al-khīl li-ṭahkīk al-sā'a bi-rub' al-shu'ā' wa 'l-zill*. Besides some commentaries (in particular, on al-Wazzānī, called *Abda' al-yawākīt 'alā ṭahrīr al-mawākīt*, Fās 1326/1908), he wrote a *Dustūr abda' al-yawākīt 'alā ṭahrīr al-mawākīt* (ms. Rabat K 980), which aimed at being a general manual based in part on translations of western scientific works, which he had got to know about in Cairo, where he had gone to study medicine; on his return, he also wrote a commentary on the *Tadhkīra*

of al-Anṭākī [q.v.], called *Dīyā' al-nibrās fī hall muḥadāṭ al-Anṭākī bi-lughat ahl Fās* (ed. Fās 1318/1900, 2nd edn., N.D.; with his treatise on haemorrhoids in the margins) and composed a reclassification of the material in this same work in *al-Ṭabṣira fī suḥūlat al-intīfā' bi-muḥjarabāt al-Tadhkīra*. He further wrote an *urḍūza* on surgery, but left unfinished a dictionary of technical terms found in medical works translated into Arabic. This author accordingly marks the transition between traditional medicine and the modern medicine, of which he had been able to acquire some idea during his stay in Cairo.

*Bibliography*: Ibn 'Abd Allāh, *al-Tibb wa 'l-aṭibbā' bi 'l-Maghrib*, Rabat 1380/1960, 86-9; M. Lakhdar, *La vie littéraire au Maroc*, Rabat 1971, 361-4 and *bibl.* given there. (ED.)

'ABD AL-WAHHĀB BUKHĀRĪ, SHAYKH, Sūfī saint of Muslim India.

He was the son of Muḥammad al-Ḥusaynī al-Bukhārī, the descendant of Sayyid Djalāl al-Dīn Bukhārī, who had come to Multān from Central Asia and then settled down in Učch at the instance of his *pīr*, Shaykh Bahā' al-Dīn Zakariyyā' Suhrawardī of Multān. His descendants became distinguished Suhrawardī saints during the latter half of the 8th/14th century owing to the eminence of Makhdūm Djahāniyān. 'Abd al-Wahhāb received his early religious instruction in Uchha and then went to Multān for higher education. He is reported to have studied the religious sciences under Shaykh Aḥmad Khatū in Ahmadābād (in Guḍjarāt). At an early age, he went to Arabia on pilgrimage and whilst there benefited from local scholars. On his return to India he settled down in Dihlī, as most of the Suhrawardī saints of Učch and Multān had moved there. He there became the *murīd* of Shaykh 'Abd Allāh Suhrawardī, the son of Shaykh Yūsuf Multānī and son-in-law of Sultan Bahlūl Lōdī. He also became an associate of Sultan Sikandar Lōdī. After some time, he left on the pilgrimage to Arabia for a second time. This time he went from Guḍjarāt by ship, having on his previous trip travelled by land.

On his return to Āgra, in the beginning of the 10th/16th century. The Sultan accorded him a grand reception. In the year, 915/1509, he was sent to the Central Indian fort of Narwar (in modern Madhya Pradesh) which had been just been conquered and renamed by the Sultan *Ḥisār-i Muḥammad*, so that he could serve the religious cause there. Acting as *Shaykh al-Islām*, he supervised the construction of mosques and *madrasas*, and some mosque inscriptions contain his praise. In the same year, 'Abd al-Wahhāb Bukhārī completed his commentary on the *Qur'ān*, in which the meaning of every verse was explained from a Sūfī point of view. The work is not extant, and only a few extracts, quoted by Shaykh 'Abd al-Ḥaḳḳ in his *Akhbār-al-akhbār*, are known.

'Abd al-Wahhāb Bukhārī's association with the Sultan enhanced his influence and prestige in the ruling class, and as a result, a number of scholars and Sūfīs got stipends and land-grants from the state for their maintenance on his recommendation. But his relations with Sultan Sikandar Lōdī became strained towards the close of the latter's reign. It is said that on his arrival in Āgra from Narwar, the Shaykh advised the Sultan to grow a beard as it was not proper for a Muslim monarch to shave his beard. The sultan tried to avoid discussion over the matter by giving evasive replies. Against the royal wishes, the Shaykh insisted on eliciting a promise from the sultan. However, the sultan got annoyed and became quiet. On the departure of the Shaykh, he expressed his resent-

ment, remarking that he had become presumptuous over royal favour to him and that he did not know that it was because of this that people kissed his feet. When the *Shaykh* came to know of the sultan's remark through a courtier, he left Āgra in disgust and then spent the rest of his life in seclusion in Dihlī. He died in 931/1525 and was buried in Dihlī near the tomb of his *pir*, *Shaykh* ‘Abd Allāh.

‘ABD AL-WAHHĀB, ḤASAN HUSNĪ B. ŠĀLIḤ B. ‘ABD AL-WAHHĀB B. YŪSUF AL-ŠUMĀDĪHĪ AL-TUḌJĪBĪ, born in Tunis 21 July 1884 and died at Salammo in the suburbs of Tunis November 1968, was a polygraph and scholar born into a family of dignitaries and high officials of the Tunisian state. His eponymous grandfather, ‘Abd al-Wahhāb b. Yūsuf, served in positions of administration and protocol in the entourage of the Beys while his father, Yūsuf b. ‘Abd al-Wahhāb, a senior official and interpreter with various Tunisian delegations in Europe, occupied a number of administrative posts under the French Protectorate, including that of *āmīl*, governor, of Gabès and of Mahdia; passionately interested in history, he wrote a history of Morocco that has never been published.

In 1904, on the death of his father, Hasan Ḥusnī ‘Abd al-Wahhāb was obliged to interrupt his short-lived higher studies in Paris where he was following a course in Political Science, for an administrative career in Tunis which was to last from 1905 to 1920.

Governor or *āmīl* successively of *Djabanyāna* in 1925, Mahdia in 1928 and Nabeul in 1935, he exerted himself particularly in the extension of education and the diffusion of culture in these regions through the establishment of primary schools in the *Caidate* of *Djabanyāna*, through weekly lectures on the history of Tunis which he himself gave in Mahdia, and through the provision of books for the libraries of this town and of Nabeul.

Returning to the central administration in Tunis, in 1939 he was given responsibility, having been pensioned off, for the supervision of the *Habous* (properties held in mortmain). From May 1943 to July 1947, he was minister of the Pen (Chancellery and Internal Affairs) of the last Bey of Tunis Lamine or al-Amin I.

Following the independence of Tunisia, he directed, from 1957 to 1962, the Institute of Archaeology and Arts where he introduced young Tunisians to archaeological pursuits, founded five museums in different parts of the country, of which four were museums of Arab-Islamic art to which he donated the whole of his private collection, and at the same time stimulated artistic and archaeological activity by the publication of articles and the writing of prefaces to books which he encouraged and assisted scholars to write.

His vocation as historian of Tunisia, put into effect from 1905 onward by the courses in the history of Tunisia which he gave at the *Khaldūniyya* [q.v.] and in the history of Islam which he conducted at the École Supérieure de Langue et Littérature Arabes from 1913 to 1924, was assisted by his transfer in 1920 to the General Archives of Tunisia, where he

inaugurated a card-index system, then to the Supervision of *Habous*, and also by his work as governor in various parts of Tunisia, which enable him to gain a better acquaintance with the country, its recent history, its hitherto ignored cultural patrimony, its peoples, their ethnology and dialects. In 1933, he gave a series of lectures at the Institut des Études Islamiques at the University of Paris.

A member from its foundation in 1932 of the Arabic Language Academy of Cairo, in which he in effect represented the three countries of the Maghrib, he took an active part in the work of the various commissions, distinguishing himself by “an open-minded approach striving to conciliate modern needs with the norms of Muslim civilisation”. He was also a member of the Academy of Damascus from its creation, of the Academy of Baghdad, a corresponding member of the French Académie des Inscriptions et Belles Lettres from 1939, of the Egyptian Institute, and of the Madrid Academy of History, and of the executive committee of the *El*.

As official delegate of the Tunisian government, he participated, from 1905, in the work of the majority of the International Congresses of Orientalists as well as in a number of seminars, which enabled him to forge fruitful and lasting relationships with numerous orientalist and oriental scholars.

While the title of Doctor *honoris causa* of the Academy of Cairo in 1950, and of the Academy of Algiers—then French—in 1960, confirmed the scholar's prestige, the Prize of the President of the Tunisian Republic crowned, on the very eve of the death of H.H. ‘Abd al-Wahhāb (7 November 1968), the achievements of a long and hard-working life.

His works comprise:

(a). In Arabic: *al-Muntakhab al-madrasī min al-adab al-tūnisī*, Tunis 1908, re-published in Cairo in 1944 and again in Tunis in 1968 in a new version under the title *al-Mudjmal; Bisāt al-aḥik fī hadārat al-Kayrawān wa shā’irihā Ibn Rashīk*, Tunis 1912; *Khulāṣat ta’rīkhī Tunis*, a summary of the history of Tunisia, published three times between 1918 and 1953 and brought up to date with each edition; *al-Irshād ilā kawā’id al-iktisād*, Tunis 1919; *Shahīrāt al-tūnisīyyāt*, Tunis 1934, 2nd ed. 1966; *al-Tārī*, in *al-Maḍalla al-ḥayātīyya*, Tunis, May 1940; *Nisīm Ibn Yaḥyā*, in *al-Nadwa*, Tunis, January 1953; *al-‘Ināya bi ‘l-kutub wa-ḥamā’ihā fī Ifrīkiyā’ al-tūnisīyya*, in *RIMA*, i, (1955), 72-90; *al-Imām al-Māzarī*, Tunis 1955; *Waraqāt ‘an al-ḥadāra al-‘arabiyya bi-Ifrīkiya al-tūnisīyya*, Tunis 1965-72 (3 vols.); *al-‘Arab wa ‘l-‘umrān bi-Ifrīkiya*, in *al-Fikr* (Dec. 1968), 28-31.

(b). In French: *La domination musulmane en Sicile*, Tunis 1905; *Coup d’œil général sur les apports ethniques étrangers en Tunisie*, Tunis 1917; *Le développement de la musique arabe en Orient, au Maghreb et en Espagne*, Tunis 1918; *Un témoin de la conquête arabe de l’Espagne*, Tunis 1932; *Deux dinars normands frappés à Mahdia*, in *RT* (1930), 215-18; *Un tournant de l’histoire aghlabide, l’insurrection de Manšūr Tunbudhī, seigneur de la Muḥammadiyya*, in *ibid.* (1937), 343-52; *Du nom arabe de la Byzacène*, in *ibid.* (1939), 199-201; *Villes arabes disparues*, in *Mélanges W. Marçais*, Paris 1950, 1-15; *Le régime foncier en Sicile au Moyen-Age (IX<sup>e</sup> et X<sup>e</sup> s.)*, ed. and tr. of the *K. al-Amwāl* of al-Dāwūdī (in collaboration with F. Dachraoui), in *Études d’Orientalisme dédiées à la mémoire de E. Lévi-Provençal*, Paris 1962, ii, 401-44.

(c). Editions of texts: *‘Amāl al-a‘lām of Ibn al-Khaṭīb* (section relative to Ifrīkiya and to Sicily), in *Centenario della nascita di M. Amari*, Palermo 1910,

ii, 423-94; *Rasā'ul al-intikād* of Ibn Sharaf, Damascus 1912; *Malkā al-sabil* of al-Ma'arrī, Damascus 1912; *Wasf Ifrikiya wa-'l-Andalus* of Ibn Faḍl Allāh al-'Umarī, Tunis 1920; *Kitāb Yaf'ul* of al-Sāghānī, Tunis 1924; *al-Tabaṣṣur bi 'l-tūjāna* of al-Djāhiz, Damascus 1933, Cairo 1935 and Beirut 1966; *Adab al-mu'allimīn* of Muḥammad b. Saḥnūn, Tunis 1934; *al-Djumāna fī izālat al-ra'āna*, anon., Cairo 1953; *Riḥla* of al-Tidjānī, Tunis 1958.

His works also include a number of articles in Arabic and in French, some of them still unpublished, the others appearing in the *Encyclopaedia of Islām* and in periodicals of Tunisia, Europe and the Orient (see *al-Fikr* [Dec. 1968], 96, with a list of his articles published by this journal, some of which, as well as some of the titles mentioned above, have been reproduced in *Warakāt*, either because they are in a suitable context there or because their original edition has been exhausted).

Manuals or monographs, these works are for the most part dedicated to Arab history and civilisation in Tunisia in a perspective which embraces literature and also linguistic and religious studies, without however neglecting the "exact sciences" and the arts. They prefigure the author's greatest work, the fruit of sixty years of patient research, his *Kitāb al-Umr*, the "work of his life", a posthumous work in several still unpublished volumes, a collection of biographical notes on some thousand scholars and men of letters who lived and worked in Tunisia since the Arab conquest, which he seems already to have foreshadowed in 1953 under the title *Ta'riḫ Tūnis al-kabīr* "Great history of Tunisia" (Preface to the 3rd ed. of *Khulāṣat ta'riḫ Tūnis*), and publication of which he had entrusted to a Tunisian scholar M. el Aroussi el Metou (see especially *al-Fikr* [Dec. 1968], 86).

His only known experiment in the fictional genre, a short story, *Dernière veillée à Grenade*, written in French (in *La Renaissance nord-africaine*, Tunis no. 3, March 1905) and translated into Arabic (by Hamadi Sahli in *Kiṣas*, Tunis, no. 17, Oct. 1970), prefigures the concern motivating him, in all his studies, for the revival of Arab-Muslim civilisation; in addition, he reveals gifts as a writer whose style and poetic imagination have already been noted (see Ch. Bouyahia, review of *Warakāt*, ii, in *Hawliyyāt al-Djāmi'a al-Tūnisīyya*, iv [1967], 166-70).

Through the abundant wealth of his scientific contribution, which goes beyond the Tunisian domain into the broader spheres of Arab-Muslim culture, through the clarity of expression, the tautness and elegance of style, the work of H.H. 'Abd al-Wahhāb, so varied in its unity, has already inspired and guided generations of scholars. Moreover, the influence of the scholar and the master, whose *madjlīs*, the last of its kind perhaps in Tunisia, was a veritable school, continues to be felt today, thanks to his collection of manuscripts, some thousand volumes strong, which he presented to the National Library of Tunis, where they constitute the bequest that bears his name (see catalogue published in *Hawliyyāt al-Djāmi'a al-Tūnisīyya*, vii [1970], 133-272 and the announcement of the gift in his speech accepting the Prize of the President of the Republic of Tunisia, in *al-Fikr* [Dec. 1968], 85-7).

*Bibliography:* (in addition to references given in the article): For H.H. 'Abd al-Wahhāb's life: the sole source is his *Autobiography*, which appeared mainly in the Tunis daily *al-'Amal* for 8 Nov. 1968; *al-Fikr*, Dec. 1968, 87-95; *Hawliyyāt al-Djāmi'a al-Tūnisīyya*, vi (1969), 35-55; *Wara-*

*kāt*, iii, 1972, 11-29; largely used by Muḥammad Mahdī 'Allām, *al-Madjma'īyyūn*, Cairo 1966, 66-8, and by Hilāl Nādji, *Hasan Husnī 'Abd al-Wahhāb*, in *al-Adīb*, Beirut, April 1967; and resumed in *al-Fikr* (Nov. 1968), 6-7; For his works: Ch. Bouyahia, reviews of the 3 vols. of *Warakāt*, in *Hawliyyāt* . . . , iii (1966), 215-27; iv (1967), 161-70; xi (1974), 275-94; idem, *Hasan Husnī 'Abd al-Wahhāb* in *Hawliyyāt* . . . , vi (1969), 7-9; M. **ABŪ 'ABD ALLĀH AL-BAŠRĪ**, AL-HUSAYN B. 'ALĪ B. IBRĀHĪM AL-KĀGHĀDĪ, called (AL-)DJU'AL, "Dung-beetle", influential Mu'tazilī theologian and Ḥanafī jurist, died 2 Dhu 'l-Hijidjja 369/19 June 980 in Baghdad. He was born in Baṣra, at an uncertain date (293/905-6 according to *Ta'riḫ Baghdad*, viii, 73, ll. 20 ff., following 'Alī b. al-Muḥassin al-Tanūkhī and Hilāl al-Šabi'; 308/920-1 according to the *Fihrist*, ed. Flügel, 174, pu.; 289/902 according to Safadī, cf. Kaḥḥāla, *Mu'djam al-mu'allifīn*, iv, 27, n. 1). The nickname Dju'al is not used in Mu'tazilī or Ḥanafī sources.

He left Baṣra at an early age, possibly forced by the constant danger presented by the Ḳarmathians [see ḲARMAṬĪ] since 311/923. He entertained contacts with the representatives of the Baṣran school of the Mu'tazila who lived now in 'Askar Mukram in Khūzistān, with Abū Hāshim (died 321/933) and especially with Abū Hāshim's disciple Ibn Khallād [q.v.]. But he lived mainly in Baghdad, where he studied Ḥanafī law with Abū 'l-Ḥasan al-Karkhī (died 340/952; cf. *GAS*, I, 444). With respect to his theological views, he was isolated there; during the late years of al-Khāyayāt (died ca. 300/913 [q.v.]) the Mu'tazila had lost much of its prestige, perhaps due to the scandal caused by the books of Ibn al-Rāwandī [q.v.], and the wing of the school which still maintained some influence in the capital, namely Ibn al-Khshīd (270-326/883-938 [q.v.]) with his disciples, strongly opposed Abū Hāshim's ideas. Abū 'Abd Allāh therefore suffered serious deprivation during his studies (cf. the stories in *Kāḍī 'Abd al-Djabbār*, *Faḍl al-'iṣṣāl*, ed. Fu'ād Sayyid, 325, pu. ff.; also in Ibn al-Murtaḍā, *Ṭabaḳāt al-Mu'tazila*, 105, ll. 15 ff.). His teacher Abū 'l-Ḥasan al-Karkhī entertained relations with the Ḥamdānid Sayf al-Dawla (333-56/944-67) who rivalled with the Būyids in the game for political power in 'Irāk (cf. *Faḍl al-'iṣṣāl*, 326, ll. 17 f.); when he suffered from a stroke in 340/952, his disciples, among them Abū 'Abd Allāh, ap-

proached the prince for financial support (cf. *Ta'riḫ Baghdād*, x, 355, ll. 4 ff.). This may have initiated or at least strengthened those moderate Shī'ī leanings for which Abū 'Abd Allāh became well-known afterwards. He used them, however, in order to win the favour of Būyid and Zaydī circles which had become decisive after Mu'izz al-Dawla had succeeded in taking over Baghdād in 334/945. He found support with Mu'izz al-Dawla's *wazīr* al-Ḥasan b. Muḥammad al-Muhallabī (339-52/950-63; cf. Hamdānī, *Takmilat Ta'riḫ al-Ṭabarī*, ed. Kan'ān, 186, ll. 13 ff., and Abū Ḥayyān al-Tawḥīdī, *al-Imtā' wa 'l-mu'ānasa*, iii, 213, l. 10), who liked to surround himself with jurists (cf. *Tha'ālibī, Yatimat al-dahr*, ed. 'Abd al-Ḥamīd, ii, 336, ult. ff.). Mu'izz al-Dawla himself did penitence in his presence during his last disease, in 356/967 (cf. Hamdānī, 192, apu. ff.). He gave private lessons in *kalām* to the Zaydī pretender Abū 'Abd Allāh Muḥammad b. al-Ḥasan (304-59/916-70) whom he managed to persuade, at the instigation of Mu'izz al-Dawla, to become *nakīb al-aṣḥrāf* in 349/960 (cf. al-Ḥākim al-Djushamī, *Sharḥ al-'uyūn*, ed. Fu'ād Sayyid, Tunis 1974, 372, ll. 16 ff.; Hamdānī, 188, l. 16; Ibn 'Inaba, *Umdat al-tālib*, Naḍjaf 1380/1961, 84, ult. ff.). When his disciple proclaimed himself *imām* in Gīfān under the title al-Mahdī li-dīn Allāh in 353/964, Abū 'Abd Allāh saw himself exposed to persecution by the mob of al-Karkh who had been instigated against him by a member of the 'Alid aristocracy, but his great prestige even among those who did not share his political leanings, saved him from the banishment planned by the government (cf. al-Nāṭiq bi 'l-ḥaḳḳ, *al-Ifāda fī ta'riḫ al-a'imma al-sāda*, ms. Leiden Or. 8404, fol. 63b, ll. 5 ff.; shorter version also in al-Ḥākim al-Djushamī, 372, apu. ff.). Later on he counted among his pupils Aḥmad b. al-Ḥusayn al-Mu'ayyad billāh (333-411/944-1020) and his brother Abū Ṭālib al-Nāṭiq bi 'l-ḥaḳḳ (340-424/951-1033) who, although originating from an Imāmī family, took up the Zaydī claims in the Caspian region (cf. Madelung, *Der Iman al-Qāsim ibn Ibrāhīm*, Berlin 1965, 177 ff.).

Of greatest importance for his school and for the victory of Abū Ḥāshim's ideas was his friendship with the Ṣāhib Ibn 'Abbād, whom he may have met when he came to Baghdād in 347/958 with Mu'ayyid al-Dawla, and whom he hailed as the "support of religion" (*imād al-dīn*) or even as the expected Mahdī, although in the latter case only in a metaphorical sense. This must be dated to the year 366/976 or somewhat later, when the Ṣāhib had been nominated *wazīr* by Mu'ayyid al-Dawla in Rayy. He ordered Abū 'Abd Allāh's epistle to be reproduced in golden letters and sent it among other gifts to Ḳābūs b. Wushmgīr [q.v.] who took over power in Ṭabaristān and Gurgān in the same year (cf. Tawḥīdī, *Aḫlāk al-wazīrayn*, ed. Ṭanḍī, 202, ll. 3 ff. and 208, ll. 6 ff.). He addressed Abū 'Abd Allāh with the title *al-shayḳh al-murshīd* and agreed, in 367/978, on his recommendation to take over into his service his most promising disciple, 'Abd al-Djabbār b. Aḥmad [q.v.], the later *kādī al-kuḏāt* of Rayy. Abū 'Abd Allāh, at the peak of his influence, seems to have been in ill health; Abū Ḥayyān al-Tawḥīdī remembered having seen him in 360/971, on the occasion of a reception for scholars given by 'Izz al-Dawla, when the guests were conducted to him and when he was too weak to answer an attack launched at him by his colleague 'Alī b. 'Isā al-Rummānī, who represented the school of Ibn al-Iḳshīd (cf. *Aḫlāk al-wazīrayn*, 202, ll. 11 ff.). He was buried in the *turba* of his teacher al-Karkhī; the mourning prayer had been said by the Mu'tazilī grammarian Abū 'Alī

al-Fārisī (286-377/900-87) who was in his eighties himself (cf. *Ta'riḫ Baghdād*, viii, 73, l. 19 and 74, l. 2).

Abū Ḥayyān did not like him, just as he disliked everybody connected with the Ṣāhib Ibn 'Abbād. In his *Imtā'* (i, 140, ll. 3 ff.) he gives a sharp-sighted characterisation of Abū 'Abd Allāh's personality: imaginative, but bad in rhetorics and awkward in discussion; avid of wealth and prestige, but strongly committed to his "people"; skilfully using his political influence—a typical social climber. Several times he stresses the fact that Abū 'l-Ḳāsim 'Alī b. Muḥammad b. 'Allāh al-Wāsiṭī, who seems to have been Abū 'Abd Allāh's closest assistant for some time (cf. *Faḍl al-ṯūzāl*, 329, l. 9), left him out of personal disgust (cf. *Imtā'*, i, 140, ll. 10 ff., and ii, 175, ll. 10 ff.; *Aḫlāk*, 213, ll. 5 ff.). He also mentions a number of other disciples (*Aḫlāk*, 202, ll. 7 ff.), most of them young people from Ḳhurāsān (*ibid.*, 210, ll. 12 f.), whom he calls a "bunch of unbelievers" and whose names were, as a matter of fact, usually not taken over into the Mu'tazilī *ṭabakāt*-literature. This bad reputation is perhaps to be explained by a certain trend towards scepticism (*takāfi'* *al-adilla*) for which at least one of them, Abū Ishāḳ Ibrāhīm b. 'Alī al-Naṣībī, was well known (cf., e.g., Tawḥīdī, *Muḳābasāt*, ed. Muḥ. Tawfiḳ Ḥusayn, Baghdād 1970, 159 f.), and which Abū Ḥayyān tries to impute to Abū 'Abd Allāh, too (cf. *Aḫlāk*, 212, ll. 5 ff., with reference to a conversation between Abū 'Abd Allāh and Abū Sulaymān al-Manṭiqī).

Abū 'Abd Allāh's ideas have to be reconstructed mainly from the numerous quotations found in the works of Ḳādī 'Abd al-Djabbār. The Ḳādī recognises his indebtedness himself (cf. *Mughnī*, xx<sup>2</sup>, 257, ll. 4 ff.), although frequently he did not share his teacher's opinions. He dictated some of his books in the presence of Abū 'Abd Allāh, obviously when he lived in his house in Baghdād (cf. al-Ḥākim al-Djushamī, *Sharḥ al-'uyūn*, 366, ll. 5 f.); when he began his *Mughnī*, Abū 'Abd Allāh was still alive (cf. xx<sup>2</sup>, 258, ll. 8 ff.). A full evaluation of Abū 'Abd Allāh's originality is, however, not yet possible. We get quite a lot of information about his pro-Shī'ī (Zaydī) arguments which he proffered in his *K. al-Tafḍīl* (for the title. cf. Ibn al-Murtaḏā, *Ṭabakāt al-Mu'tazila*, 107, l. 5). He based himself mainly on Shī'ī traditions, the trustworthiness of which he tried to prove with rational speculations about their historicity. Moreover, he practiced what was called *muwāzanat al-a'māl*, i.e. he weighed the virtues of 'Alī and Abū Bakr against each other. In this he seems to have taken up the arguments of al-Iskāfī (died 240/854 [q.v.]), and he had to criticise Abū 'Alī al-Djabbārī; he obviously avoided, however, open disagreement with Abū Ḥāshim (cf. *Mughnī*, xx<sup>1</sup>, 216, ll. 7 ff.; 223, ll. 6 f.; 241, ll. 17 ff.; xx<sup>2</sup>, 120, ll. 13 ff.; 122, ll. 3 ff.; 124, ll. 7 ff.; 125, ll. 4 ff.; 131, ll. 3 ff.; 132, ll. 19 ff.; 140, ll. 3 ff.). He never made any concessions to *rafd*; he drew Mu'izz al-Dawla's attention to the fact that 'Umar had accepted Islam very early and that 'Alī had given his daughter Umm Kulthūm in marriage to him (cf. Hamdānī, *Takmila*, 192, ult. ff.).

He showed great interest in epistemology, probably because of the fact that Abū 'l-Ḥasan 'Alī b. Ka'b al-Anṣārī, a member of the rival school of Ibn al-Iḳshīd, still defended the ideas of al-Djāhīz in his circle, among them certainly al-Djāhīz's famous apriorism (cf. Tawḥīdī, *Aḫlāk*, 203; for al-Djāhīz, van Ess, in *Isl.*, xlii (1966), 169 ff. and Vajda in *SI*, xxiv (1966) 19 ff.). He transmitted Djabbārī's *K. Naḳd al-ma'rifa*, a critique of Djāhīz's *K. al-Ma'rifa*,

and added remarks to it, obviously in his own *K. al-Ma'rifa* (cf. *Fihrist*, ed. Flügel, 175, ll. 4 f.), which were taken over by the Kāḍī 'Abd al-Djabbār in his *Tā'lik Nakd al-ma'rifa* (cf. Ḥākīm al-Djushamī, 367, ll. 10 f.). The book is quoted in *Mughnī*, xii, 131, ll. 19 ff.; the other numerous references (cf. *Mughnī*, xii, 9, ll. 7 ff.; 11, ll. 16 ff.; 12, ll. 11 ff.; 28, ll. 9 ff.; 33, ll. 5 ff.; 46, ll. 5 ff.; 75, ll. 13 ff.; 81, ll. 5 ff.; 102, ll. 8 ff.; 118, ll. 6 ff.; 133, ll. 13 ff.; 187, ll. 18 ff.; 372, ll. 15 ff.; 442, ll. 12 ff.; 446, ll. 10 ff.; 513, ll. 15 ff.; 521, ll. 6 ff.; 532, ll. 5 ff.) may equally well go back to his *K. al-'Ulūm* which is explicitly mentioned in *Mughnī*, xii, 235, l. 16.

In juridical hermeneutics, he departed from Abu 'l-Ḥasan al-Karkhī's ideas. But he seems to have surpassed his teacher in many respects. Some of his views are quoted with the additional remark that he had them 'an Abi 'l-Ḥasan; frequently, however, his name is mentioned alone. He impressed later generations with the precision of some of his definitions, but also with subtle speculations on 'amm and *khāṣṣ*, on *idmā'*, on the *ratio legis* ('illa) in *kiyās*, on *akhbār*, on *naskh* (which, in contrast to many of his contemporaries, he also allowed concerning *hadīth*), etc. Numerous, although scattered, material is found in *Mughnī*, xvii, in Abu 'l-Ḥusayn al-Baṣrī's [q.v.] *Mu'tamad fī uṣūl al-fikh* (cf. the index), and in an as yet unidentified work on *uṣūl al-fikh* preserved in the Vatican library (Ms. Vat. arab. 1100; cf. Levi Della Vida, *Elenco dei manoscritti*, 145 f., and Madelung, *Qāsim ibn Ibrāhīm*, 179 f.). Abū 'Abd Allāh's own works in this domain, among them a *K. al-Uṣūl* and a *K. Nakd al-futūyā* (cf. *Faḍl al-'itizāl*, 326, l. 20), seem to be lost. In the "ethical" chapters of *uṣūl al-fikh*, he circumscribed, like Kāḍī 'Abd al-Djabbār, the good only in a privative way (cf. 'Abd al-Djabbār, *al-Muḥīl*, ed. 'Azmi, 239, ll. 13 ff.); the affirmative definition was apparently reserved for evil, which received the greater share of attention. Evil is never chosen by man for the sake of itself, but only when he sees a need for it (cf. G. Hourani, *Islamic rationalism*, Oxford 1972, 95). Whereas Djubbārī and Abū Ḥāshim believed that the state of mind of an agent determines the quality of evil (evil becoming neutral when performed during sleep or in the state of unconsciousness), Abū 'Abd Allāh upheld a more differentiated position (cf. *ibid.*, 41 f.). His ideas on *furū'* were formulated in his commentary on Karkhī's *Mukhtaṣar*, but also in some monographs where he treated the lawfulness of drinking *nabīdh* or of performing one's prayer in Persian (two typical Ḥanafī tenets) and the *mul'a* marriage (which he deemed unlawful, in accordance with Zaydī *fikh* and in disagreement with Imāmī opinion; cf. *Fihrist*, 208, pu. f.).

In theology proper, he followed the line of the Baṣran school. Only a few personal traits can be recognised with sufficient certainty. In at least three treatises he attacked the doctrine of the eternity of the world, two of them focussing their polemics on special persons, Ibn al-Rāwandī and al-Rāzī (cf. *Fihrist*, 175, ll. 3 f.; 174, ult. f.; 175, l. 2). When he explained creation as an act of thinking (*fikr*) in order to avoid all material connotations, he seems to have taken philosophical critique into consideration (cf. Kāḍī 'Abd al-Djabbār, *Sharḥ al-uṣūl al-khamsa* 548, ll. 11 ff.; *Muḥīl*, 332, ll. 15 f.). He attacked al-Balkhī, probably about divine knowledge (cf. *Fihrist*, 175, ll. 1 f., and *Abi Bakr Rhagensis opera philosophica*, ed. P. Kraus, 167 f.). He did not accept the idea of *lutf*; we never know whether an event

which we interpret as a special "grace" (*lutf*) for somebody is not the ruin of somebody else (cf. *Mughnī*, xiii, 67, ll. 15 ff.; also 155, ll. 4 f.); obviously both quotations from his *K. al-Aṣlah*, together with xiv, 62, ll. 12 f.). He refuted Ash'arī's *K. al-Mūdjiz* (cf. al-Nātik bi 'l-hakk, *Ifāda*, fol. 334, ll. 5 ff. and Kāḍī 'Abd al-Djabbār, *al-Muḥīl*, 634, l. 4; also al-Ḥākīm al-Djushamī, 372, ll. 1 f., where *nakd* is to be read instead of *ba'd*; R. McCarthy, *The theology of al-Ash'arī*, Beirut 1953, 167, 211 f., 229). Altogether, more than 20 titles of books can be traced.

**ABŪ 'L-'ALĀ' AL-RABA'Ī** [see ṢĀ'ID AL-BAḤDĀDĪ].

**ABŪ 'ALĪ** AL-FADL B. MUḤAMMAD AL-MURSHID AL-FĀRMADĪ, one of the greatest Ṣūfī masters of the 5th/11th century, born in 402/1011-12 at Fārmad, a small town in the vicinity of Ṭūs in Khurāsān, and the contemporary of the caliph al-Kādir and the Saljuq princes Toghril, Alp Arslan and Malik Shāh. He was highly respected by various political and religious dignitaries, including by the celebrated minister of the Saljuqs, Nizām al-Mulk, who sought his advice and his spiritual favour. He was also respected as an eloquent preacher, and appreciated for his breadth of knowledge and the beauty of his oratorical language. He approached Ṣūfism after profound studies in the religious sciences, and can therefore be classified as one of the scholarly mystics. When he came to Nishāpūr, he became one of Abū 'l-Kāsim Kuṣhayrī's circle of students, and it seems to have been the latter who turned him towards preaching and who stimulated him to study profoundly the religious sciences. In his Ṣūfī training, he was directed spiritually by two great masters, Abū 'l-Kāsim Djurdjānī and Abū 'l-Ḥasan Kharakānī [q.v.]. The author of the *Asār al-tawḥīd* relates in an

anecdotal form the circumstances of al-Fārmadī's adhesion to Ṣūfism under Ḳuṣhayrī's direction first of all, and then under that of Ḍjurdjānī, who encouraged him to preach from the pulpit and later gave him the hand of his daughter in marriage. None of al-Fārmadī's works remain, apart from a few brief poems in Arabic and a few sentences displaying his philosophy and thought. However, his influence on cultural life and mysticism can be gauged from the fact that the *Imām al-Ġhazālī* [q.v.] was one of his pupils and cites traditions on his authority. He was accordingly considered as the greatest Ṣūfī luminary of his age, who lustre is seen in the fame of his great disciple. Al-Fārmadī died in his native town in 477/1080.

**Bibliography:** Muḥammad b. al-Munawwar, *Asār al-tawḥīd*, ed. Dhahīb Allāh Ṣafā, Tehran 1332/1953, 128-31, 196-7, 199-200, tr. M. **ABŪ 'ALĪ AL-FĀRISĪ** [see AL-FĀRISĪ].

**ABŪ 'ALĪ AL-YŪSĪ** [see AL-YŪSĪ].

**ABU 'L-'AMAYṬHAL**, 'ABD ALLĀH B. ḲHULAYD B. SA'D (d. 240/854), a minor poet who claimed to be a *mawlā* of the Banū Ḥāshim and who was originally from Rayy. He was in Ḳhurāsān in the service of Ṭāhīr b. al-Husayn [q.v.] as a secretary and as tutor to Ṭāhīr's son 'Abd Allāh, whose children he further tutored and whose secretary and also librarian he was. In particular, he had the duty of judging the value of the poems addressed to his master, and it was in this capacity that he came to reject a poem by Abū Tammām, who protested violently. He was, indeed, very much attached to the classical ways, and it was doubtless for this reason that al-Ma'mūn so appreciated his poetic work, finding it superior to that of Ḍjarīr. Bedouin in tradition and classical in mould, this poetry was largely made up of eulogies of the two Ṭāhīrids, though nothing has survived of his poems addressed to Ṭāhīr. His *diwān* amounted to 100 leaves, according to the *Fihrist*, 234, and also contained eulogies of the sons of Sahl, al-Ḥasan and al-Faḍl.

Abu 'l-'Amayṭhal ranks equally as a philologist, to whom various works of a technical character are attributed, sc. the *K. al-Tashābuh* (*al-Tashābih*?), *K. al-Abyāt al-sā'ira* and *K. Ma'ānī 'l-ḡhūr*; F. Krenkow published in 1925 his *K. al-Ma'thūr fī-mā'tafaka lafzuhu wa-khtalafa mā'nāhu*.

**Bibliography:** Ḍjāhīz, *Bayān*, i, 280; idem, *Hayāwan*, i, 155, vi, 316 where, unless the text is corrupt, he is curiously described as a *rāḍjīz*; Ibn Ṭayfūr, *K. Baghdād*, Cairo 1368/1949, 164; Ibn Kutayba, *Uyūn*, i, 85; Ibn al-Mu'tazz, *Ṭabakāt*, 135-6; *Fihrist*, 72-3, 234; Ḳālī, *Amālī*, i, 98; Bakrī, *Simt al-la'ālī*, 308 and index; Āmidī, *Muwāzana*, Cairo 1961-5, i, 20-1; Marzubānī, *Muwashshah*, 14; Ibn Ḳhallikān, *Wafayāt*, No. 344, tr. de Slane, ii, 55-7; al-Rāghīb al-Isfahānī, *Muhāḍarāt*, i, 102; Ibn 'Abd Rabbīh, *Ikd.*, i, 59; Yāqūt, *Buldān*, iii, 832, iv, 796; Ibsḥīhī, *Mustatraf*, i, 84; Yāfī'ī, *Mir'āt al-djānān*, ii, 130-1; Nuwayrī, *Nihāya*, vi, 85; Ibn Abī Ṭāhīr Ṭayfūr, *K. Baghdād*, Cairo 1368/1949, 164; Brockelmann, S I, 195; C.E. Bosworth, *The Ṭāhīrids and Arabic culture*, in *JSS*, xiv (1969), 58; J.E. Bencheikh, *Les voies d'une création*, Sorbonne thesis 1971, unpubl., 108 and index. (ED.)

**ABŪ 'AMMĀR** 'ABD AL-ḲĀFĪ B. ABĪ YA'ḲŪB B. ISMĀ'ĪL AL-T(A)NĀW(A)TĪ, Ibādī theologian who

lived in the middle of the 6th/13th century. He studied in the oasis of Wargla/Wardjilān (in modern Algeria) with Abū Zakariyyā? Yahyā b. Abī Bakr, the famous Ibādī historian (cf. *EI*<sup>2</sup>, I, 167), and also in Tunis, with what must have been Sunnī authorities there. He was a tribesman, and as such he does not entirely fit the model of the bourgeois scholar; he is reported to have come with his herds to the Mzāb and to have proselytised among the tribes of that region, one which was to become a stronghold of Ibādī faith later on.

His main work is the *K. al-Mūḍjīz* (*Mūḍjaz?*) *fī taḥṣīl al-su'āl wa-takhlīṣ al-dalāl* (or *wa-talkhīṣ al-makāl*), a rather voluminous manual of Ibādī theology and polemics against contrary opinions (for its contents cf. *ZDMG*, cxxvi (1976), 56 f.; for manuscripts, cf. *ibid.*, 56; Kubiak, in *RIMA*, (1959), 21, no. 26; Schacht, in *Revue Africaine*, c (1956), 391, no. 80; also in the libraries of Maḥfūz 'Alī al-Bārūnī, Ḍjerba, and Ayyūb Muḥammad, Ḍjannāwan, Ḍjādju; 'Ammār Ṭālibī, Univ. of Algiers, is preparing an edition). In addition, he wrote a commentary to the anonymous *K. al-Ḍjahālāt*, a brief collection of questions and answers used by Ibādī missionaries for theological discussion (cf. *ZDMG*, cxxvi (1976), 43 ff.). His *K. al-Isṭi'ā'a* seems to be lost. In *fikh* he dealt with the law of inheritance; his *K. al-Farā'id* exists in a printed edition (cf. Schacht in *Rev. Afr.*, c (1956), 387, no. 52). Among his historical works are a *K. al-Siyar* (for mss., cf. Schacht, *op. cit.*, 141, and Lewicki, in *RO*, xi (1935), 165 n. 7: preserved?) and a *Mukhtaṣar tabakāt al-mashāyikh* (cf. Ennami, in *JSS*, xv (1971), 86, no. 17-1, and note by van Ess in *ZDMG*, cxxvi (1976), 57). An epistle concerning the problem of *al-wa'd wa 'l-wa'id* addressed to him by a certain 'Abd al-Wahhāb b. Muḥammad b. Ḡhālīb b. Numayr al-Anṣārī was incorporated by his contemporary Abū Ya'Ḳūb Yūsuf b. Ibrāhīm al-Wardjilānī (died 570/1174; cf. *GAL*, S I, 692) into his *K. ad-Dalīl li-ahl al-ukūl* (cf. lith. Cairo 1306, 54-72).

**Bibliography:** (apart from the references mentioned in the article): Ṣhammākḥī, *Siyar* (lith. Cairo 1301/1883), 441 ff.; A. de C. Motylinski, in *Bull. Corr. Afr.*, iii (1885), 27, no. 68; T. Lewicki, in *REL*, viii (1934), 278, in *Fol. Or.*, iii (1961), 33 ff., and in *Cahiers d'histoire mondiale*, xiii (1971), 86; A. Kh. Ennami, *Studies in Ibādism* (Diss. Cambridge 1971, unpublished), 292 ff. (J. VAN ESS)

**ABŪ 'AMR AL-SHAYBĀNĪ**, ISḤĀK B. MĪRĀR, one of the most important philologists of the Kūfan school in the 2nd/8th century, and the contemporary of the two great figures of the rival Baṣran school, Abū 'Ubayda and al-Aṣma'ī [q.v.]. He was born in ca. 100/719 at Ramādāt al-Kūfa, and derived his *nisba* from the Banū Shaybān because he was their neighbour and client and because he also acted as tutor to the sons of certain members of the tribe. After having studied under the masters of the Kūfan school, such as al-Mufaḍḍal al-Ḍabbī, he went out into the desert, where he lived for a considerable time amongst the Bedouins, collecting tribal poetry. Then he settled in Baghdād, where he taught until his death at an advanced age, since he died in ca. 210/825, by then more than a centenarian, leaving behind him sons and grandsons who transmitted his works. Amongst his pupils were the main Kūfan grammarians, sc. Ṭha'lab, Ibn al-Sikkīt and Ibn Sallām [q.v.].

Al-Shaybānī was famed above all as a transmitter (*rāwīya*) of old poetry. Ṭha'lab records that he left for the desert armed with two inkholders and did not return until the ink had been exhausted. According

to his son 'Amr, he collected the poetry of over 80 tribes, which he wrote out and arranged with his own hands in separate collections and then placed in the mosque of Kūfa. The collections have not come down to us, but they were abundantly used by later anthologists.

However, al-Shaybānī was equally known as a lexicographer especially interested in rare words (*nawādir*) and in dialect words and phrases (*luġhāt*). Only one of the many works in this sphere attributed to him by the biographers has survived, the *K. al-Djīm*, so-called because it was unfinished and did not go beyond the fourth letter of the alphabet, although the sources term it equally the *K. al-Nawādir*, *K. al-Hurūf* and *K. al-Luġhāt*. According to F. Krenkow, who proposed to edit it after the unique manuscript preserved in the Escorial, this work is a dictionary of words peculiar to the speech of the many tribes from whom al-Shaybānī collected poetry. It is of great lexical richness, and is all the more important for the knowledge of the old dialects, since Krenkow found from a detailed perusal of the *Lisān al-'Arab* that later lexicographers did not use al-Shaybānī's work.

Finally, he is also said to have been a traditionist worthy of being relied upon, transmitting a large number of authentic *hadīths*; his most celebrated pupil here was the *imām* Aḥmad b. Ḥanbal, whose son 'Abd Allāh transmitted al-Shaybānī's work called the *K. Charīb al-hadīth*.

The post-Ibn al-Nadīm biographers attribute to Abū 'Amr al-Shaybānī several works which, according to the *Fihrist*, belong really to his son 'Amr.

*Bibliography*: Brockelmann, I, 116, S I, 179; *EP*<sup>1</sup>, art. *al-Shaybānī* (Krenkow); Kaḥḥāla, *Mu'allifīn*, ii, 238. (G. TROUPEAU)

**ABU 'L-'ANBAS AL-ŞAYMARĪ**, MUḤAMMAD B. IŞĤĀK B. IBRĀHĪM B. ABI 'L-MUĤĪFĪRA B. MĀHĀN (213-75/828-88), a famous humorist of the 'Abbāsīd court, who was also a *fakīh*, astrologer, oneiromancer, poet and man of letters, and who wrote some forty works, both serious and jesting, even burlesque and obscene. Of Kūfan origin, he was first of all *kāḍī* in the district from which he derived his *nisba*, Şaymara, near Baṣra, at the mouth of the Nahr Ma'kīl, but his vivid penchant for coarse humour very early earned him a reputation as a buffoon sufficient for him to be admitted to the court circle of al-Mutawakkil (232-47/847-61), whose courtier he now became. It is likely that he remained at court under his successors, and he is known to have enjoyed the favour of al-Mu'tamid (256-79/870-92). He died in the capital, but was buried at Kūfa.

Abu 'l-'Anbas was quite an original character, and one is tempted to speak of his personality as being a split one, even though we are lacking in knowledge about the chronology and actual content of his works. It is well known that, from earliest Islamic times, the profession of buffoon paradoxically developed in Arabia (see F. Rosenthal, *Humour in early Islam*, Leiden 1956), but the fame of the humorists of the period was built essentially on their skill in making up amusing stories or in indulging in clowning to distract their masters, without really taking part in literary activity (it is insulting to number amongst them, as certain critics have gone so far as to do, a *Djāhiz*, whose humour was of a quite different quality). Now, if our interpretation of the titles of Abu 'l-'Anbas's works, listed in the *Fihrist* (151, 278; ed. Cairo, 216, 388) and Yāqūt's *Mu'djam al-adabā'* (xviii, 8-14 = *Iṣṣḥād al-arīb*, vi, 401-6) is correct, he may be considered on one hand, if not the creator, at least a prominent representative of a type of

literature which was to culminate in the *makāma* and then in a burlesque or obscene type of *adab*, and on the other hand, as an astrologer, a *mutakallim* and perhaps even a serious depicter of society.

At the court, he acted as royal jester, and on occasion, he would be charged with expressing, in a facetious, impertinent and personal manner, the caliph's own feelings or opinions (see especially the oft-quoted episode concerning his reply to al-Buḥturī, when the latter had been rather offensive: al-Šūlī, *Aṣḥār awlād al-khulafā'*, ed. J. Heyworth-Dunne, London 1936, 325; al-Mas'ūdī, *Murūdj*, vii, 202-4 = § 2885-8; *Aghānī*<sup>1</sup>, xviii, 173 = ed. Beirut, xxi, 537; al-Ḥuṣrī, *Djam' al-djāwāhir*, 15-16; Yāqūt, *Udabā'*, xviii, 12-14; etc.). Like his predecessors, he could also make up amusing stories, since we read that these were gathered together, with his poetry, in an independent volume, passages from which may be found in authors like Ibn 'Abd Rabbihī (*Ikd*, Cairo 1962, iv, 148) and even Ibn al-Djawzī (*Akḥbār al-ḥamkā wa 'l-muġhaḥḥalīn*, Damascus 1345, 85, 111, 141, 143), and which attests the influence exercised by the inimitable *Djāhiz*ian *adab* on the most serious of authors. In this respect, Abu 'l-'Anbas probably differed very little from other "humorous figures" who, as we know from the *Fihrist*, left behind collections of stories; but he is distinguished from them by a series of works whose titles lead one to think that they were burlesque or scabrous. The *K. Fadl al-sullam 'alā 'l-daraġī* "Superiority of the ladder over the staircase", for example, must have been purely humorous, but the *K. Nawādir al-kawwād(a)* "Remarkable stories about pimps", to mention only this one work, must certainly have descended to pornography. After all, there emerges from a conversation between Abu 'l-'Anbas and his crony Abu 'l-'Ibar (al-Šūlī, *loc. cit.*; *Aghānī*, ed. Beirut, xxiii, 77-8) that if he had abandoned scholarship (*ilm*) for *sukḥf* and *raḳā'a* i.e. obscenity and burlesque, it was because these last were much more profitable and lucrative. In the course of this dialogue, which took place in al-Mutawakkil's caliphate, Abu 'l-'Anbas declares that he has written over 30 works on *sukḥf* and *raḳā'a*; does this mean that the lists which we possess are very incomplete, that the works which appear to be serious in content are not serious at all, or that after al-Mutawakkil's death, this writer came back again to topics less frivolous than certain titles would suggest?

Some of these titles recall works of al-Djāhiz, to the extent that C.E. Bosworth (see *Bibl.*) has wondered whether Abu 'l-'Anbas might have plagiarised the former writer's work; the possibility of an influence here must be seriously considered, since one finds in the list a *K. al-Ikḥwān wa 'l-ʿasḍika'* and a *K. Masāwī 'l-ʿawāmm wa-akḥbār al-sifla wa 'l-aghṭām* and even a *K. al-Ṭḥukalā'* "Book of Bores"; in order to know the truth here, it would be necessary to know what lay behind these titles.

The poetry of al-Şaymarī has been referred to above; to judge by those poems available for reading, they were not all licentious and scatological, since they include the well-known line "How many sick persons have survived the physician and visitors, when all hope of cure had been given up".

The lists bring out the existence of at least one work which seems to be of a theological nature, the *K. Ta'kḥīr al-marīfa*, which is alone cited—and doubtless deliberately—by Yāqūt in his *Mu'djam al-buldān* (s.v. Şaymara), whilst the same author enumerates some 40 titles in his *Iṣṣḥād al-arīb*. In fact, Abu 'l-'Anbas, called by Abu 'l-'Ibar a *mutakallim*, must apparently have been a Mu'tazilī, and because

of this he was dignified by being cited by Ibn Batta (H. Laoust, *La profession de foi d'Ibn Batta*, Damascus 1958, 170) amongst "the people of infidelity and error", who for him mean the Mu'tazila. On another level, one finds other titles which give the impression that Abu 'l-'Anbas was equally interested in "scientific" topics. If his *K. al-Radd 'alā 'l-mutaṭabbibīn*, directed against charlatans and homeopathic physicians, strictly speaking belongs to the depicting of society, his *K. al-Radd 'alā Abī Mikhā'il al-Şayḍalānī (?) fī 'l-kimiyā'* may not be a general refutation of alchemy, and his *K. al-Djāwāriṣ wa 'l-darjāt* might lead one to take him for a pharmacologist. The *K. Taḥṣīr al-ru'yā* is quite explicable, since oneirocriticism can be connected with astrology, which gave Abu 'l-'Anbas a lasting fame. In fact, if the above-mentioned works suffered from the reaction of pietistic circles against *sukhf* and *hazl* in general, leading the *warrākūn* to cease at an early date copying them, Şaymarī's name still appears in manuscript catalogues, even though the titles given there hardly correspond at all to the following ones, figuring in the early lists: *K. al-Mawālid*, *K. Ahkām al-nudjūm*, *K. al-Mudkhal ilā şim'at al-nudjūm* and *K. al-Radd 'alā 'l-munaḍḍijīmīn*. In fact, a *K. Aṣl al-uşūl* attributed to him is preserved in both the B.N. of Paris (6608) and the B.M. of London (Suppl. Rieu, 775; cf. Brockelmann, S I, 396), but Ibn al-Nadīm asserts that he appropriated the *K. al-Uşūl* of Abū Ma'shar, and al-Kifī (*T. al-Hukamā'*, ed. Lippert, Leipzig 1903, 410) accuses him of plundering other people's writings and putting them forward as his own compositions. There are several extant manuscripts of another work, the *K. fī 'l-Hisāb al-nudjūmī*, but the *K. Ahkām al-nudjūm* mentioned in the early lists and by Brockelmann is merely the opening of the *Hisāb al-nudjūmī*, whose copy preserved in the Vatican is interesting, since it is dated 30 Rabī' I 1221/17 June 1806 and testifies to the continuing successfulness of this manual of astrology, and at the same time to the respect accorded to the author, al-Şaymarī, depicted as a most learned philosopher who left a masterpiece for posterity. G. Levi della Vida (*Elenco di manoscritti arabo islamici della Biblioteca Vaticana*, Vatican City 1935, Nos. 955/8 and 957) is not far wrong in thinking that we have here another redaction of the *K. Aṣl al-uşūl*, hence in the end, of a recasting of Abū Ma'shar's work. Consequently, it seems that there is nothing left of Abu 'l-'Anbas's genuine work, which therefore enjoys in the "scientific" sphere a spurious reputation. Even so, he must have enjoyed a certain importance, since Ibn Baṭṭa felt the need to criticise him. Also, as well as the *adab* writers who quote anecdotes of his, one famous author, Badī' al-Zamān, thought to make him a kind of romantic personality by reserving for him the *makāma* of Şaymara, in which Abu 'l-'Anbas is both narrator and hero. In this, he tells how, after having been rich and hospitable, he had been abandoned by his friends, had been transformed into a vagabond in the style of the age and hence able to acquire a knowledge of the frivolous poetry of the elegant circles and of the *sukhf* of the professional entertainers sufficient for him to recover his old position in Baghdād and then take his revenge on his faithless former friends.

(CH. PELLAT)

**ABU 'L-ASAD AL-HIMMĀNĪ**, NUBĀTA B. 'ABD ALLĀH, minor poet of the 'Abbāsīd period, originally from Dīnawar. His talent was only moderate, and it was 'Allawayh/'Allūya who rescued him from oblivion, since this singer, the poet's friend, introduced him to the great men of the age and, above all, set some of his verses to music, so that they enjoyed a great success. His career seems to have been quite a lengthy one. He is found, first of all, satirising as early as 153/770 two of al-Manşūr's *mawālī*, Şā'id and Matar (al-Djahshiyārī, *Wuzarā'*, 124), and then frequenting Abū Dulaf al-'Idjlī [see AL-KĀSĪM B. 'ĪSĀ], at whose court he was however eclipsed, it is said, by 'Alī b. Djabala [see AL-AKAWWAK]. After having previously sung the praises of the ruler of al-Karāḍj [q.v.], he launched at him a somewhat coarse diatribe and then turned to the former secretary of al-Mahdī, al-Fayḍ b. Abī Şāliḥ (on whom see Sourdell, *Vizīat*, index), whose praises he now sang (al-Djahshiyārī, 164; Ibn al-Tiḡṡakā, *Fakhrī*, ed. Derenbourg, 256, calls the poet Abu 'l-Aswad). But the chronology of these events is uncertain, and it is even probable that, contrary to what the *Aghānī* asserts, his relations with al-Fayḍ (who died in 173/789-90) were anterior to his stay with Abū Dulaf. Amongst those whose patronage he sought, one even finds Aḥmad b. Abī Du'ād [q.v.], who gave him a modest gift and begged him to cease importuning him. It is, on the other hand, dubious that he was able to make a claim upon 'Alī b. Yahyā al-Munaḍḍijīmī (d. 275/888-9) and to address to him a lengthy anti-Şu'ubī satire; but the intermediary whom he thanks for having secured for him satisfaction could well have been Hamdūn b. Ismā'il [see IBN ḤAMDŪN].

To judge by the few extant fragments of his verse, Abu 'l-Asad had no compunction about composing scabrous epigrams in order to get his revenge on people for the neglect which he sometimes received where he had expected a reward. But he was also able to express very delicate feelings, as in his elegy on Ibrāhīm al-Mawşilī (d. 188/804 [q.v.]), whose outspokenness was nevertheless criticised.

**ABŪ 'ĀŞĪM AL-NABĪL**, AL-ḌAḤḤĀK B. MAḤLĀD B. MUḤLĪM B. AL-ḌAḤḤĀK AL-ŞĪYABĀNĪ AL-BAŞRĪ, ḡadīthionist, born at Mecca in 122/740 but established subsequently at Baṣra, where he transmitted from a host of scholars (notably al-Aşma'ī) a large quantity of *hadīths* gathered by himself, and especially from several *tābī'īs* or Successors. He was considered as trustworthy, and some of his *hadīths* were included in the great collections; his biographers assert that he never fabricated a single one, although he is said to have declared that pious men never lie so much as in regard to traditions from the Prophet (Goldziher, *Muh. Stud.*, ii, 47, Eng. tr. 55). It is said that he was never seen with a book in his hand and that he was knowledgeable about *fiḫh*. Despite such details as these, little is known of his life. Physically, he was remarkable for the size of his nose, and this

particularity is one of the explanations given for his name of al-Nabīl. It is also recorded that he owed this name to his habit of wearing fine clothes, or because he freed his own slave in order to release *Shu'ba* [q.v.] from his oath not to transmit *ḥadīths* for a month. A final explanation seems the most plausible; some elephants passed through Baṣra, and all the population rushed out to see the spectacle, whilst he however stayed with his master Ibn *Djuraḳdj* [q.v. in Suppl.], who gave him the title of "noble". He probably died on 14 *Dhu 'l-Ḥiǧdja* 212/5 March 828 at Baṣra.

**ABU 'L-'AZĀ'IM, MUḤAMMAD MĀDĪ**, an Egyptian and a political activist, was born in the town of *Raṣhīd* on 27 *Raǧjab* 1286/2 November 1869 and grew up in the village of *Maḥallat Abū 'Alī* near *Dasūkh* in the present-day *Qharbiyya* province. He studied at al-Azhar [q.v.] and at *Dār al-'Ulūm* [q.v.]. He graduated in 1308/1890-1 and spent the subsequent twenty-five years as a teacher at various provincial government schools in Egypt and the Sudan as well as at *Gordon College* in *Khartoum*. At the latter establishment he taught Islamic Law from 1905 until August 1915, when he was forcibly repatriated to Egypt—following his refusal to declare himself in support of British administrative reforms in the Sudan, and his public opposition to these—where his freedom of movement was restricted to al-Miniyā province. About a year later, in 1916, he was allowed to take up residence in Cairo, where he devoted himself to the propagation of his own conception of the *Shādhiliyya* [q.v.] order, into which he had been initiated by *Ḥasanayn al-Ḥiṣāfi* [q.v.]. He had been actively proselytising on behalf of his *ṭarīka* [q.v.], which became known as al-'Azamiyya al-*Shādhiliyya*, already since the beginning of his teaching career, and had obtained a substantial following for himself in Egypt as well as in the Sudan. Al-'Azamiyya distinguished itself by the stress it placed upon inner-worldly asceticism in conjunction with active social commitment in conformance with the precepts of the Law, as opposed to the reitraitist other-worldly asceticism and its underlying relatively negative appreciation of life in this world, as found implicitly or explicitly in the teachings of many *ṭarīkas*. After 1916, however, when settled in Cairo, *Muḥammad Māḍī* ceased to look upon himself as merely head of a *ṭarīka*, but assumed the more comprehensive role of religious reformer (*muǧjaddid*) instead, and consequently presented his *ṭarīka* as his conception of a revitalised Islam, which he elaborated over the following years in a variety of books and articles, notably in the periodicals *al-Sa'āda al-Abadiyya* (a bi-monthly published by one of *Muḥammad Māḍī's* disciples, 'Alī 'Abd al-Raḥmān al-Ḥusaynī, from 1914 until 1923) and *al-Madīna al-Munawwara* (a weekly published from 1925 until 1927, and after 1927 until 1929, when it was merged with *al-Fātiḥ*, a periodical of the *Aḥrār al-Dustūriyyīn*, edited by *Muḥammad Maḥmūd*, as *al-Fātiḥ wa 'l-Madīna al-Munawwara*). The majority of these books as well as the periodicals were printed by the *Maṭba'a al-Madīna al-Munawwara*, a press established by *Muḥammad Māḍī* in early 1919. In his aversion to the British presence in Egypt, he committed himself to the case of the nationalists during the revolution of 1919, when he was twice arrested. On 20 March 1924, less than three weeks after the abolition

of the caliphate in Turkey [see *Khalīfa*], he organised a meeting in Cairo, which was attended by scholars and religious dignitaries from all over the Islamic world, in order to discuss the implications of this event. This meeting ended in the foundation of the so-called *Djamā'at al-Khilāfa al-Islāmiyya bi-Wādī al-Nīl* under his presidency. Because of its historical consequences, the foundation of this organisation must be considered as *Abu 'l-'Azā'im's* most notable achievement. It allowed him to mobilise an effective world-wide opposition against *King Aḥmad Fu'ād's* candidacy for the caliphate—to which he objected for religious and political reasons (cf. *Aḥmad Shafīq, Ḥawliyyāt Miṣr al-siyāsiyya*, Cairo 1929, iii, 105 ff.)—and thus determined the outcome of the Caliphate Conference held in Cairo in May 1926 and brought activity in support of *Aḥmad Fu'ād's* candidacy to an end. *Muḥammad Māḍī* died on 28 *Raǧjab* 1356/4 October 1937 and was buried in his *zāwiya* [q.v.] in Cairo near the mosque of al-Sulṭān al-Ḥanaḫī. Here, his shrine as well as the shrine of his son *Aḥmad* (d. 1970), who succeeded him as head of the *ṭarīka*, may be visited in a newly-built mosque (opened in January 1962), which houses the headquarters of the 'Azamiyya *ṭarīka*.

*Bibliography:* The most extensive biography is 'Abd al-Mun'im *Muḥammad Shaḳraf, al-Imām Muḥammad Māḍī Abū 'l-'Azā'im, ḥayātuhu, ḍiḥādūhu, āthārūhu*, Cairo 1972. It contains the text of various relevant documents, evaluates his poetry, clarifies his position with respect to the idea of *al-insān al-kāmil* [q.v.], sets forth his conception of *tawḥīd* (based upon an unpublished treatise), and lists and summarises his works. To these must be added *Min ḍjawāmi' al-kalim*, Cairo 1962; *al-Waǧḍāniyyāt* (ed. 'Abd Allāh Māḍī Abū 'l-'Azā'im), Cairo n.d.; *Diwān* (ed. *Muḥammad al-Baṣḥīr Māḍī Abū 'l-'Azā'im*), Cairo n.d. (mimeo); *al-Ṭarīka al-'Azamiyya* (ed. *Maḥmūd Māḍī Abū 'l-'Azā'im*), Cairo 1328/1910, (important for his affiliations with various *ṭarīkas*); and *al-Shifā' min maraǧ al-tafrīka*, Cairo n.d., which caused the temporary imprisonment of *Muḥammad Māḍī* when it was interpreted as a concealed attack upon *King Aḥmad Fu'ād* (cf. *al-Waǧḍāniyyāt*, 8). The treatise *Wasā'il izḥār al-ḥaḳḳ*, Cairo n.d., should be excluded from *Shaḳraf's* enumeration. It was written by *Muḥammad's* brother, the journalist *Aḥmad Māḍī* (d. 1893), who had founded the newspaper *al-Mu'ayyad* together with 'Alī *Yūsuf* [q.v.]. The treatise was published for the first time in Cairo in 1914, by *Aḥmad's* brother *Maḥmūd*. The authorship was falsely assigned to *Muḥammad Abū 'l-'Azā'im* by his son and successor *Aḥmad* in the subsequent editions published under his auspices. For additional biographical materials, see *Muḥammad 'Abd al-Mun'im Khafāǧī, al-Turāth al-rūḥī li 'l-taṣawwuf al-islāmī fi Miṣr*, Cairo n.d., 170. For details about the history of the al-'Azamiyya *ṭarīka* and further references, see also F. de Jong, *Two anonymous manuscripts relative to the Sūfī orders in Egypt*, in *Bibliotheca Orientalis*, xxxii (1975), 186-90. For the 'Azamiyya in the Sudan, see J.S. Trimmingham, *Islam in the Sudan*, London 1949, 239 f. On his *mawlid*, see J.W. McPherson, *The mawlid of Egypt*, Cairo 1940, 140 ff. A small collection of letters written by *Muḥammad Māḍī* and transcripts thereof, which are in the possession of the 'Azamī family, is preserved on microfilm at Leiden University Library. (F. DE JONG)

**ABŪ ‘L-BARAKĀT** AL-‘ALAWĪ AL-ZAYDĪ, ‘UMAR B. IBRĀHĪM B. MUHAMMAD, Kūfān grammarian, jurist, Kur‘ān scholar and traditionist. He was born in Kūfā in 442/1050-1, heard *ḥadīth* in his home town and Baghdad, and stayed for some time, together with his father, in Damascus, Aleppo and Ṭarābulus. In Aleppo he read in 455/1063 the *K. al-Idāh* of Abū ‘Alī al-Fārisī which he later transmitted in Kūfā. There he finished on 5 Ramaḍān 464/26 May 1072 the reading of the *K. al-Djāmi‘ al-kāfi*, an extensive collection of Kūfān Zaydī *fiqh* doctrine by the Sayyid Abū ‘Abd Allāh Muhammad b. ‘Alī al-‘Alawī. He read it with the Sayyid ‘Abd al-Djabbār b. al-Ḥusayn b. Mu‘ayya, who had heard it from the author, though he also transmitted directly from Abū ‘Abd Allāh al-‘Alawī with an *idjāza*. He taught and led the prayer in the mosque of Abū Ishāq al-Sabī‘ī. Of his works on grammar, a commentary on the *K. al-Luma‘* of Ibn Djinī is extant in manuscript (see Brockelmann, S I, 192). A descendant of Zayd b. ‘Alī, Abū ‘L-Barakāt personally adhered to Zaydī Shī‘ī beliefs, though he generally concealed them from his Sunnī students and gave legal *fatwās* according to Ḥanafī doctrine. Only to Shī‘īs did he transmit partisan Shī‘ī *ḥadīths* and rendered *fatwās* according to Zaydī law. In agreement with the Zaydī creed in his time, he upheld the doctrine of human free will and the createdness of the Qur‘ān. He died on 7 Sha‘bān 539/2 February 1145 in Kūfā.

(W. MADELUNG)

**ABŪ BARĀKISH** (A.) a name, no longer in use, given, according to localities, to two birds whose brilliant plumage is characterised by iridescent colours or shows a colour-scheme varying in the course of the seasons. The quadriliteral root *B-R-K-Šh*, probably derived from the trilateral *R-B-K*, has, like *R-K-Šh*, the sense of “to be variegated, mottled” and the substantive *birkišh* indicates the result, synonymous with *talawwun*. The plural *barākishh* has a superlative quality in expressions such as *būād barākishh* “a land decked with flowers” and it is used as a forename; it was the name of the wife of Luḳmān [q.v.], and of a bitch that became proverbial for her ability to foresee and to foretell with her barking the return to camp of the horsemen of her tribe. As for the plural of the composite noun *abū barākishh*, it would theoretically be *ābā’ barākishh*, but this form is not found in literature. (1) According to the uniform definition provided by Arab lexicographers, the true *abū barākishh* corresponds to this description: “a small bird of the bushes with a greyish head, a scarlet breast and dark lower parts. Just like the porcupine, when excited it ruffles

up all its plumage, showing a whole range of glittering colours”. (al-Damīrī, *Ḥayāt al-ḥayawān*, i, 162, and root *B-R-K-Šh* in the Arabic dictionaries.) Though restrained and concise, this ornithological information is sufficient to identify the *abū barākishh* as a ploceid, the male in the nuptial plumage of the weaver-bird (*tanawwūt nassādī*) the flame-coloured Franciscan or Grenadier, the English Durra-bird (*Euplectes oryx franciscana*), a resident both of the Sudan and of the southern coasts of the Red Sea. In fact, this industrious and gregarious bird, smaller in size than the house sparrow and with plumage that is generally brownish and rather dull, abruptly changes its livery in the mating season and its feathers become soft, velvety, long and finely shaped; the colours are striking: the breast, the back, the upper and lower caudal feathers covering the short tail (whence the expression found in some authors *ṭuqūl al-‘adjiz*) are of the purest pink, while the crown of the head and the stomach have a sheen of glistening black. Nubia is the favourite territory of this bird, which was one of the first to be exported and which very soon came to be known to the Arabs. In the period of mating, the male courts three or four females, making a show of bringing them grains of millet, and throughout the period of nestbuilding he constantly asserts his proprietary rights by fluttering and hovering beneath each nest and ruffling all his feathers which sparkle in the light, accompanying his performance with a loud rustling of wings (*ḥafīf*). After the hatching of the young, the actor abandons his deceptive guise and returns to the gregarious life in large flocks whose greed causes sometimes considerable havoc in the cereal crops. The spectacular variations in colour of the plumage of the Grenadier weaver-bird provided for a poet of the Banū Asad an image whereby to stigmatise the inconstant nature of his enemies, and his proverbial lines (written in *kāmil metre*) *ka-abī barākishh kulla law/nin lawnu-hu yatakhayyalu* “like *abū barākishh*, whose colour resembles all colours”, have determined the way in which the bird is remembered (see Ibn Ḳutayba, *Adab al-kātib*, Cairo 1355/1936, 204; al-Damīrī, *loc. cit.*; *LA*).

(2) For al-Ḳazwīnī (*‘Adjā‘ib al-makhluqāt*, in the margins of al-Damīrī, ii, 252) and for him alone, the *abū barākishh* is a wader with a pleasant-sounding cry, with red beak and feet, of a size close to that of the stork and with plumage fluctuating in colour, in reds, greens, yellows and blues. The livery of this attractive wading-bird apparently provided Byzantine weavers with the inspiration for the creation of the precious dove-coloured shot silk called *abū kalamūn* [q.v.], a name which conversely was applied to the bird. Now, the only wader of the Mediterranean and oriental regions perfectly fitting this description is the Porphyrio or Blue Taleva/Purple Gallinule (*Porphyrio porphyrio*), better known however under the grandiose name of “Sultan-fowl”. This marshland bird, half-a-metre in height, has feet and beak of a fine coral red and on its forehead a knob of the same colour; its rich blue plumage varies from indigo to turquoise with flashing tints of green, purple and bronze. When alarmed, the Sultan-fowl emits a brief, trumpet-like sound. Its Spanish name is “calamon”, a vestige of the Arabic *kalamūn*, while Egypt has retained its ancient Greek name πορφυρίων arabised as *fufūr/fufūr*, pl. *farāfir*; Syria and ‘Irāq call it *buthān* and *shūnūn*. All these countries and Persia are also familiar with the “green-backed” subspecies (*Porphyrio aegypticus* or *madagascarensis*), very closely related to the main species and bearing the

names *dik sulṭānī* "sultan-cock", *dik al-mā'* "water-cock" and *farḫa sulṭānīya* "sultan-pullet". The Sultan-fowl, easily domesticated, was highly thought of among the Persians, the Greeks and the Romans; it was bred in temples and placed under the protection of the gods. In Egypt, it is not unusual to see it in rural areas co-existing peaceably with domestic poultry. Because of the splendour of its plumage, the Persians awarded it the title *shāhmurgh* "king-bird", arabised in the forms *shāhmurk*, *shāhmurki*, *shāmūrḳ*, *shāmūrḳ*, *shāhmurḳī*, *shāhmurḳī*. In legends and stories of Persian origin, while the lion is the king of the animals, it is the Sultan-fowl that sits on the throne of the feathered race, and the peacock is only the vizier (see *Rasā'ul Ikhwān al-Safā'*, Beirut 1957, ii, 248 ff.). Al-Djāhiz several times cites the Sultan-fowl (*Hayawān*, passim) as feeding on flies and small reptiles, which is accurate, the diet of this wader being both vegetable and carnivorous; having killed its prey with a violent blow of the beak, it holds it with one foot and tears it with the other, carrying off the morsels of flesh in its beak.

Thus the *abū barākish* of the poet of Asad was a weaver-bird, while al-Ḳazwīnī saw it as the Sultan-fowl, worshipped in antiquity, and one is inclined to believe that it was on his own authority that this naturalist, perhaps not knowing the Grenadier weaver-bird, identified the *abū barākish* with the *abū ḳalamūn/shāhmurk*; but his decision was regarded as law by his successors, and it should be recognised as such.

(3) In the Hidjāz, through a confusion on the part of the children of the nomads, attested by the philologist al-Azharī, *abū barākish* was used in place of *birḳish* to denote the chaffinch (*Fringilla coelebs*), a finch well-known in all the Arabic-speaking countries and also called *shurshur* (in the Maghrib, *shershīr*, *berkesī*, *zāneb*); this was simply an error ascribable to childish ignorance.

Finally, we may ignore the totally unfounded identification of the *abū barākish* with the bullfinch (*Pyrrhula pyrrhula*) suggested by the encyclopædia *al-Mawsū'a fī 'ulūm al-ṭabī'a* (Beirut 1965, i, no. 154), this western bird being practically unknown in the Near East, in Arabia, in Egypt and the Maghrib.

**Bibliography:** In addition to references given in the text, there are mentions of the *abū barākish* in al-Ḳalkashandī, *Subh*, ii, 76; Ḳuṣhādīm, *Maṣāyid*, Baghdād 1954, wholly imprecise; Ornithology: A. **ABU 'L-BAYDĀ'** AL-RIYĀHĪ, AS'AD B. 'IṢMA, one of the most famous informants of the Baṣran philologists in the 2nd/8th century, notably, of al-Aṣma'ī [q.v.]. This Bedouin teacher, settled in southern 'Irāḳ, may have received his curious *kunya* (*baydā'* = "desert") from the admirers forming a circle around him. He also wrote poetry, transmitted by another teacher, a certain Abū 'Adnān, who is allegedly the author of several works (in particular, of a *K. al-Nahwīyyin* and a *K. Ḳharīb al-ḥadīth*,

*Fihrist*, 68), and whom al-Djāhiz praised greatly for his erudition and his fine language (*Bayān*, 1, 212). Abu 'l-Baydā' also had as his *rāwīya* his son-in-law 'Amr b. Ḳirkira [q.v.], but his poetic work is almost wholly lost.

**Bibliography:** Djāhiz, *Bayān*, i, 66, 252; *Fihrist*, 66; Ibn Ḳutayba, *Uyūn*, i, 71; Marzubānī, *Muwashshah*, 118, 183; Suyūtī, *Muzhir*, ii, 249; Yāḳūt, *Udabā'*, vi, 89-90; Bustānī, *DM*, iv, 224.

**ABŪ DABĪ** [see ABŪ ZABĪ].

**ABŪ DĀWŪDIDS** [see BĀNĪDJŪRIDS].

**ABU 'L-DHAHAB**, *kunya* of MUḤAMMAD BEY, a grandee of Ottoman Egypt. Acquired as a *mamlūk* by *Bulūt ḳapān* 'Alī Bey [q.v.] (the date, 1175, given in Djabartī, *Adjā'ib*, i, 417, is obviously incorrect), he became the chief officer in his master's household as *khāzindār* in 1174/1760. When in 1178/1764-5 he was raised to the beylicate, he obtained his *kunya* by distributing a largesse of gold. In 1184/1770 he commanded the expeditionary force sent by 'Alī Bey to install a Hāshimite protégé in Mecca. As commander of the force sent by 'Alī Bey in 1185/1771 to co-operate with Zāhir al-'Umar against 'Uṯmān Pasha al-Ṣādiḳ, governor of Damascus, he captured the city, but, when the citadel was on the point of surrender, withdrew with all his troops to Egypt. This curious development has been ascribed (e.g. by Volney) to the secret negotiations of 'Uṯmān Pasha; the *iltizām* of Gaza and al-Ramla, which Abu 'l-Dhahab received in this same year (Cohen, *Palestine*, 49) may have been his reward. As master of an exceptionally large household of *mamlūks* and black slaves (*abūd*), and as the head of a faction, he succeeded in 1186/1772 in ousting 'Alī Bey, who sought refuge with Zāhir al-'Umar. Lured into returning to Egypt with a small force, 'Alī Bey was defeated at al-Ṣālihiyya, and died a few days later (Ṣafar 1187/May 1773). Abu 'l-Dhahab was now the effective ruler of Egypt, where he established peace and security, so that internal trade revived. Unlike 'Alī Bey, he followed a policy of ostentatious loyalty to the sultan, and was gratified by investiture as *amīr Miṣr*, i.e. *shaykh al-balad* (Rabī' I 1187/June 1773). He was nevertheless as determined as his former master to control Syria, where he represented himself as the defender of the sultanate against the rebel, Zāhir al-'Umar. The *sanjāq* of Gaza and al-Ramla was conferred on him in 1187/1773 (Cohen, *Palestine*, 148). The fact that he obtained the appointment as viceroy of Egypt of a fugitive Palestinian notable, Muṣṭafā Pasha Tūḳān al-Nābulūsī (not a member of the 'Azm family, as stated in Djabartī, *Adjā'ib*, i, 418; cf. Cohen, *Palestine*, 56, n. 97), may also be linked with his Syrian aims. Early in 1189/March 1175, he led his army into Palestine to overthrow Zāhir. Jaffa was captured, and a massacre ensued. Zāhir fled from Acre, his capital, which was about to fall, when Abu 'l-Dhahab died suddenly of fever. His troops returned forthwith to Cairo.

ABU 'L-FADĀ'IL [see HAMDĀNĪS].

ABU 'L-FARADJ B. MAS'UD RŪNĪ, Persian poet of the Ghaznawid period, was born and raised at Lahore, according to 'Awfī, the earliest and most trustworthy authority for his life. The *nisba* Rūnī has been related by Indian writers of the 16th and 17th centuries to a place by the name of Rūn in the vicinity of Lahore (cf. e.g. Badā'ūnī, *Muntakhab al-tawārīkh*, i, Calcutta 1864, 37; *Fahang-i Djahāngīrī* and *Burhān-i kāfī*, s.v.). But already Badā'ūnī had to admit that this place could not be found anywhere in that area. Others (e.g. Luṭf-'Alī Beg Ādhar, *Ātashkada*, lith. Bombay 1299/1882, 122) have suggested an origin from Rūna, a village in the Dašt-i Khāwarān near Nišāpūr. This would mean that Abu 'l-Faradj was descended from Khūrāsānian settlers in the Pandjāb who must have come there after the conquest of the region by the Ghaznawids in the early 5th/11th century. The mentioning of a Sīstān origin that can be met with in some other sources probably goes back to a confusion with another Ghaznawid poet, Abu 'l-Faradj Sidjī.

The date of his birth is not known. Chronological indications that can be derived from his work make it likely that he started his career as a poet of the court of Lahore some time before Sayf al-Dīn Maḥmūd was installed there by his father Sulṭān Ibrāhīm as a viceroy (*wālī*, or *mālīk*) of Ghaznawid Hindūstān in 469/1076-7. Abu 'l-Faradj appears to have retained his position at the court of Lahore also under the successor of Sayf al-Dīn the later Sulṭān Mas'ūd III, who was in residence there from 480-92/1087-99 (cf. on events in India under these two viceroys, C.E. Bosworth, *The later Ghaznawids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977, 65-8). As he addresses the latter in most of the poems he wrote for him by the title of *mālīk*, it may be concluded that they belong to this period. The last poem by Abu 'l-Faradj that can be dated with certainty is an ode he wrote at the occasion of the accession to the throne at Lahore of Mas'ūd's son Shērzād after his father had become Sulṭān of Ghazna.

The relationship between the poet and the central Ghaznawid court is not quite clear. He wrote several poems for Sulṭān Ibrāhīm and, according to 'Awfī, placed a *kašīda* addressed to the sultan at the beginning of his *Dīwān*. There are also poems preserved which bear dedications to prominent officials of the central government, like the 'arīd-i laṣḥkar Maṅšūr b. Sa'īd Maymandī who patronised other poets of this period as well. But apart from that, there are no indications of a stay of Abu 'l-Faradj at Ghazna for any long period of time. As Lahore was a base for incursions into Hindu territory, in which the Sultan and his retinue also participated from time to time, most of these poems may very well have been written while the patrons from Ghazna were staying at that city temporarily on their way to a campaign.

It seems, therefore, likely that the scene of Abu 'l-Faradj's career was mainly, if not entirely, the court of Lahore, where the young princes showed a greater interest in poetry than the Sultan himself, who has been depicted by historians as a stern and pious man. The only contemporary poet who as far as we know now was in personal contact with Abu 'l-Faradj was Mas'ūd-i Sa'īd-i Salmān [*q.v.*], another Iranian born in the Pandjāb. But the former is to be distinguished from the Abu 'l-Faradj whom Mas'ūd held responsible for his banishment from the court.

(cf. *Dīwān-i Mas'ūd-i Salmān*, ed. Rashīd Yāsīmī, Tehran 1319/1940, Introduction).

The modern Iranian scholar Djalāl al-Dīn Humā'ī has connected one of the poet's *kašīdas* with the conquest of Kānnawdj by Sulṭān Mas'ūd III which he dates between 500 and 508 A.H. This would provide an approximate dating for the death of Abu 'l-Faradj (cf. *Dīwān-i 'Uthmān-i Mukhtārī*, ed. Humā'ī, Tehran 1341/1962, 654 ff. and *passim*, and Bosworth, *op. cit.*, 85).

The work of Abu 'l-Faradj, as we know it now, consists mostly of *kašīdas*, and further of some quatrains and *mukattā'āt*, as well as a few *ghazals* of a pre-classical type. The *kašīdas* are comparatively short poems in which the emphasis is laid on the panegyric. In many cases, the conventional *nasīb* has been left out altogether. The poet developed the style of the panegyric address of the Sāmānid and early Ghaznawid poets into various new directions. The texture of his verse became more knitted through the use of uncommon compounds, original metaphors and hyperboles, and through a greater density in the handling of rhetorical artifices. He also introduced references to elements of religious lore or of the sciences into his poetry with an unprecedented frequency. Through all these features, the work of Abu 'l-Faradj heralds the great change in poetical style which took place in the course of the 6th/12th century and is commonly designated as the development from the Khūrāsānian into the 'Irākī style (for brief analyses of the main characteristics of Abu 'l-Faradj's poetry, see the works by Šafā, Maḥdǰūb and Dāmghānī mentioned in the bibliography).

The stylistic originality of Abu 'l-Faradj was already recognised by his contemporaries and the immediately-following generations of poets. A remarkable instance of his influence is on Anwarī, one of the great masters of the Persian *kašīda*, who did not conceal his indebtedness to this predecessor. The traces of this influence can be noticed in many ways, varying from direct quotations to a more general similarity of ideas, motifs and forms of expressions (cf. *Dīwān-i Anwarī*, ed. by M.T. Mudarris-i Raḍawī, i, Tehran 1347/1968, 104-8).

The wide range of Abu 'l-Faradj's influence is further attested by the many quotations from his poems in the *Katīla wa-Dimna* adaptation by Naṣr Allāh Munshī, written about 540/1145-6, and by the frequent use of his verses as *shawāhid* by Shams-i Kays in his textbook on the theory of poetry. In more recent times, a renewed interest in his work emerged after the "return" (*bā-gaṣht*) to the earlier styles of Persian poetry which occurred in Iran during the late 12th/18th century (cf. Riḍā-Ḳulī Khān Hīdāyat, *Madjma' al-juṣahā', mukaddama*). The perpetual war waged with the non-Muslim neighbours of Ghaznawid Hindūstān is often reflected in his poems. But the identification of events and placenames is still hampered by the philological unsufficiencies of the text of the *Dīwān* as it is accessible at this moment.

It cannot be doubted that the collections of Abu 'l-Faradj's poems differed already at an early date as far as their contents and arrangement are concerned. Even Anwarī could only find a selection (*intikhāb*) from which to make his own copy. The poem opening the *Dīwān*, according to 'Awfī (= ed. Dāmghānī no. 53), is not the same as that which opens the collections contained in the oldest manuscripts known so far. The first printed text was an addition in the margin to a lithograph of the *Dīwān* of 'Unṣurī (ed. by Ākā Muḥammad Ardakānī, Bombay 1320). A critical edition was published by K.I. Čaykin as an

annex (*danāma*) to *Armaghān*, vi (Tehran 1304/1925) with a biography and annotations to the text by Muḥammad 'Alī Nāṣih. The recent edition by Maḥmūd Maḥdawī Dāmghānī reproduces the text of its predecessor, adding variant readings from two ancient manuscripts, viz. a copy in the Chester Beatty Library (cf. *A catalogue of the Persian manuscripts and miniatures*, Dublin 1959, 4, no. 103) and a copy in the British Museum (cf. Ch. Rieu, *Supplement to the catalogue of the Persian manuscripts*, London 1895, 141, no. 211). Many manuscripts of the *Dīwān*, or of smaller collections of poems, still await to be examined (see e.g. A. Munzawī, *Fihrist-i nuskhahā-yi khattī-yi fārsī*, iii, Tehran 1350/1971, 2214-6, nos. 21375-417; Aḥmed Ateş, *Istanbul kütüphanelerinde Farsça manzum eserler*, i, Istanbul 1968, 212).

**ABU 'L-FATH AL-DAYLAMĪ** AL-ḤUSAYN B. NĀṢIR B. AL-ḤUSAYN, AL-NĀṢIR LI-DĪN ALLĀH, Zaydī Imām. There are some variants in the sources in regard to his own, his father's and his grandfather's personal names. He belonged to a Ḥasanid family which had been prominent in Abhar for some generations. Nothing is known about his life before he came to the Yaman after 429/1038 claiming the Zaydī imamate. He gained some tribal support in northern Yaman and established himself in the Zāhir Hamdān region where he built the fortress and town of Zafār [*q.v.*] near Dhū Bīn. In 437/1045-6 he entered and pillaged Sa'da, the stronghold of the descendants of al-Ḥādī ila 'l-Ḥaḳḳ [*q.v.*], and committed a slaughter among the Banū Khawlān living in the area. Still in Shawwāl 437/April-May 1046 he occupied Ṣan'a'. In the following year he gained briefly the allegiance of Dǧa'far b. al-Kāsim al-Iyānī, leader of a Zaydī faction which expected the return of his brother, the Imām al-Ḥusayn al-Mahdī [*q.v.*], as the Mahdī. Dǧa'far soon revolted against him, together with the Sultān Yahyā b. Abī Ḥāshid b. al-Daḥḥāk, chief of the Hamdān, and expelled his representatives from Ṣan'a'. Thereafter the Imām and Dǧa'far fought each other with changing fortunes for the possession of the fortresses of Athāfit and 'Adǧīb. The situation of Abu 'l-Fath deteriorated further after 'Alī b. Muḥammad al-Ṣulayhī occupied the Dǧabal Masār in 439/1047 and

quickly expanded his power over large areas of the Yaman. The Imām was soon deserted by most of his followers and was forced to move from town to town. In Rabī' I 444/July 1052 al-Ṣulayhī defeated and killed Abū Ḥāshid b. Yahyā b. Abī Ḥāshid and took possession of Ṣan'a'. Abu 'l-Fath now corresponded with Naḍǧāh, the lord of the Tihāma, inciting him against al-Ṣulayhī. When he invaded the Balad 'Ans later in the year 444/1052-3, he was defeated and killed by al-Ṣulayhī, together with some seventy supporters, at Naḍǧ al-Dǧāh and was buried in Radmān. His descendants were later known in the Yaman as the Banu 'l-Daylamī.

His Qur'ān commentary *al-Burhān* is extant in manuscript (*Fihrist kutub al-khizāna al-Mutawakkiliyya*, Ṣan'a' n.d., 12; *Dār al-kutub: Kā'imat al-makhtūṭāt al-'arabiyya al-muṣawwara bi 'l-mikrūfilm min al-Dǧumhūriyya al-'Arabiyya al-Yamaniyya*, Cairo 1967, 6). A refutation of the Muṭarrifiyya [*q.v.*] sect is also ascribed to him.

**ABU 'L-FATH AL-ISKANDARĪ** [see **AL-HAMADHĀNĪ**].

**ABU ḤAFṢ AL-SHITRANDJĪ** [see **AL-SHITRANDJĪ**].

**ABU 'L-ḤASAN AL-AḤMAR**, the usual name of a philologist of Baṣra called 'Alī b. al-Ḥasan/al-Mubārak, who was taught by al-Kisā'ī [*q.v.*], whose eager pupil he was; after his master, he became tutor to the future caliphs al-Amīn and al-Ma'mūn. The biographical sources record that al-Aḥmar was originally a member of al-Raṣhīd's guard, so that, being very attracted to the study of philology, he was unable to attend al-Kisā'ī's teaching sessions except when he was not on duty in the palace. When the master came to give lessons to the young princes, al-Aḥmar rushed towards him, both when he went in and when he came out took his stirrup and escorted him, whilst firing questions on grammar at him. When al-Kisā'ī was afflicted by leprosy and unable to teach the princes any longer, he was afraid lest one of the great grammarians of the period, Sībawayh or al-Akhfash [*q.v.*] might take his place; so he recommended as his own successor al-Aḥmar, who was in the end confirmed in the post. The biographical sources mention in this connection the custom whereby, after the first lesson, the new tutor received all the furnishings of the room in which he had been teaching; al-Aḥmar, whose house was too small to take this, saw himself offered now both a house and two slaves, one of each sex. Each day, he went along to learn that morning's lesson from al-Kisā'ī, who every month came to question his pupils in al-Raṣhīd's presence. In this way, al-Aḥmar acquired a vast amount of knowledge. He is said to have known 40,000 *shawāhid* verses and complete *kaṣīdas*, but he had no pupils and did not transmit al-Kisā'ī's knowledge orally. This latter rôle devolved on his rival al-Farrā' [*q.v.*], but he was the author of two works, the *K. al-Tayrīf* and the *K. Taṣannuṭ al-bulaghā'*. He died on the Pilgrimage road in 194/810.

**ABU 'L-HASAN AL-ANŠĀRĪ**, 'ALĪ B. MŪSĀ B. 'ALĪ B. ARFA' (Rāfi') RĀSUH AL-ANDALUSĪ AL-DJAYYĀNĪ (515-93/1121-97), a preacher of Fez, and member of a family of whom one person (Ibn Arfa' Rāsuḥ) is mentioned in the 5th/11th century at Toledo as a composer of *muwāshshahāt* (Ibn al-Khaṭīb has preserved ten examples in his *Djaysḥ al-tawshīh*, Nos. 49-58; cf. S.M. Stern, *Les chansons mozarabes*, Palermo 1953, 43-4; E. García Gómez, *Métrica de la moaxaja y métrica española*, in *al-And.*, xxxix (1974), 25). 'Alī b. Mūsā's fame rests on a poem in 1,414 verses (rhyme -tā, metre *ṭawīl*) on the subject of alchemy and variously called *Dīwān shudhūr al-dhahab fī 'l-ṣinā'a al-sharīfa/fī fann al-salāmāt*, and *Dīwān al-shudhūr wa-tahkīk al-umūr*. This poem's great vogue, whose author gained the name "Poet of the alchemists and alchemist of the poets", is shown by the great number of mss. and commentaries extant, and it was said that if he could not teach the making of gold, he could at least teach *adab*. Furthermore, this poet-chemist left other writings, of a religious nature, *al-Tibb al-rūḥānī bi 'l-Ḳur'ān al-raḥmānī* (ms. BN. 2643) and *Djihat fī 'ilm al-tawdīḥāt* (ms. B.N. 3253).

*Bibliography*: Makkarī, ii, 410; Kutubī, *Fawā'id*, No. 319, ed. Iḥsān 'Abbās, ii, 181-4; Bustānī, *DM*, iv, 252; Brockelmann, I, 496, S I, 908, 2nd edn. I, 654. (Ed.)

**ABU 'L-HASAN AL-BATTĪ**, AHMAD B. 'ALĪ, poet and littérateur, originally from al-Batt in 'Irāk (Yāqūt, i, 488), who was a member of the staff of al-Ḳādir's chancery (reigned 381-422/992-1031). When the future caliph had in 381/991 to flee from al-Tā'ī, al-Battī had already been in his service, since it was with him that al-Ḳādir sought refuge. Hence as soon as he succeeded to the caliphate, he appointed al-Battī to his *dīwān*, where he was in charge of the postal service and of intelligence. A Mu'tazilī in theology and a Ḥanafī in *fiqh*, he had previously specialised in study of the *Ḳur'ān* and *hadīth*, but with his new duties, he soon became for his colleagues the archetypal *adīb* with a vast knowledge of literature, a fine hand for calligraphy, and a certain talent for letter-writing and versifying which made him well-renowned. Since he was extremely witty, had a fierce humour and quick repartee, possessed a great store of anecdotes which he could retail in a sparkling fashion and had a good knowledge of music and singing, he shone with special brightness in the circles of the Būyids. He was intimately linked with al-Sharīf al-Raḍī [q.v.] who, on his death, in Sha'bān 405/Jan.-Febr. 1015, dedicated to him his last composition; al-Sharīf al-Murtaḍā [q.v.] likewise wrote an elegy on him. His own poetry was comparatively mediocre, and it was really as a *rāwī* that he excelled. However, three works are credited to him, a *K. al-Kādirī*, a *K. al-Amīdī* and a *K. al-Fakhrī*, whose contents are unknown but which must have been biographical in nature.

*Bibliography*: Tawhīdī, *Intā'*, iii, 100; Tanūkhī, *Nishwār*, Cairo 1392/1972, iv, 256, v, 224, 225, vii, 24; Khaṭīb Baghdadī, *T. Baghdad*, iv, 320, xiv, 328; Sibī Ibn al-Djawzī, *Muntazam*, vii, 263; Safadī, *Wāfī*, vii, 231-4; Ibn al-Aṭhīr, ix, 175;

(Ed.)

**ABU 'L-HASAN DJILWA**, MĪRZĀ, Persian philosopher, poet and recluse. He was born in 1238/1823 in Ahmadābād, Guḍjarāt, where his father, Mīrzā Sayyid Muḥammad, member of a *sayyid* family from Ardīstān, was engaged in trade. After a brief period in Bombay, Djilwa was brought to Iṣfahān by his father at the age of seven and began his education. When his father died seven years later, he decided to devote himself to learning, conscious of the scholarly and literary traditions of his family: Mīrzā Rāfi' al-Dīn Nā'īnī (d. 1082/1671), a celebrated theologian and jurist, was among his ancestors; the poet Miḍjmar (d. 1225/1810) had been his paternal uncle; and even his father had composed poetry under the pen-name of Mazhar. Djilwa took up residence at the Kāsagarān *madrasa* and soon developed a predilection for the rational sciences, in particular, for metaphysics. It was also at this time that he began the composition of poetry under the pen-name of Djilwa, which became the appellation by which he was generally known. In his autobiographical sketch, Djilwa does not mention the name of any of his teachers in Iṣfahān, remarking only that he soon tired of attending their lectures and therefore began to study independently and himself to offer instruction (le Comte Arthur de Gobineau, in his *Les religions et les philosophies dans l'Asie Centrale*, new ed., Paris 1928, 85, mentions a certain Mullā Abu 'L-Hasan Ardīstānī whose teachers were Muḥammad Hasan Gilānī and Mīrzā Muḥammad Hasan Nūrī; it is possible that this Abu 'L-Hasan is identical with Djilwa). In 1274/1857 he came to Tehran and took up residence in the Dār al-Shīfā *madrasa*; the two narrow rooms allotted him there were to be his home for the remaining forty years of his life. He lived the life of a recluse, and although he had a number of aristocratic admirers and friends, such as Mīrzā Maḥmūd Khān Māzandarānī Mushīr al-Wizāra, who pressed invitations upon him, he scarcely ever left the *madrasa*. Surprisingly, however, despite his deep roots in traditional philosophy, Djilwa is recorded to have been a member of Mīrzā Malkum Khān's pseudo-masonic organisation, the *farāmūshkhāna*, and to have attended its meetings in the house of Djālāl al-Dīn Mīrzā (H. Algar, *Mirza Malkum Khan: a study in the history of Iranian modernism*, Berkeley and Los Angeles 1973, 49-50). The only journey outside Tehran that he undertook was a brief one to Gilān and Adharbāyḍjān. He received at the *madrasa*, with some disdain, visits by Nāṣir al-Dīn Shāh and the British orientalist, E.G. Browne (*Browne, A year amongst the Persians*, Cambridge 1927, 162). Among his principal pupils were the Ni'matullāhī Ṣūfi, Ma'ṣūm 'Alī Shāh (d. 1324/1926) (see his *Tarā'īk al-hakā'ik*, ed. Muḥammad Dja'far Maḥdūb, Tehran 1339/1960, iii, 507), Sayyid Hāshim Ushkūrī (d. 1332/1914) (see Muḥammad Ḥirz al-Dīn, *Ma'arīf al-rīḍāl fī tarāḍīm al-'ulamā' wa 'l-udabā'*, Naḍjaf 1384/1964, iii, 271), and Sayyid Ḥusayn Bādkūbā'i (see preface by S.H. Naṣr to his translation of Muḥammad Husayn Ṭabāṭabā'i's *Shī'ite Islam*, Albany, N.Y. 1955, 22). Djilwa died in 1314/1897 and was buried in Ray near the tomb of Ibn Bābūya. Later, an impressive structure was built over his grave by Mīrzā Ahmad Khān Naṣir al-Dawla and Sulṭān Hasan Mīrzā Nayyir al-Dawla. Djilwa was described by Ma'ṣūm 'Alī Shāh as the "renewer of peripatetic philosophy in the fourteenth (Hidjri) century", as opposed to his friend and contemporary,

Ākā 'Alī Ḥakīm-Ilāhī, who followed the school of illuminationism (*ishrāḳ*) (*Tarā'īḳ al-ḥakā'īḳ*, loc. cit.). But despite his great fame, he never composed original works, regarding independent writing on philosophy as "difficult or even impossible" after the achievements of his predecessors (autobiographical sketch quoted by Muḥsin al-Amīn in *Ayān al-Shī'a*, Beirut 1380/1960, vi, 216), and he preferred instead to write commentaries and glosses on the work of Avicenna and Mullā Ṣadrā. Two of these have been printed in the margin of Ṣadrā's *Sharḥ al-Hudūyat al-Aḥirīyya*, Tehran 1313/1895. His *Dīwān* is also said to have been published.

*Bibliography*: in addition to the works mentioned in the text, see 'Abbās b. Muḥammad Ridā Ḳummī, *Hadiyat al-ahbāb*, Nadjaf 1349/1930, 11; Mīrẓā Muḥammad 'Alī Mudarris, *Rayḥānat al-adab*, Tabriz n.d., i, 419-20; Muḥsin al-Amīn, *Ayān al-Shī'a*, Beirut 1380/1960, vi, 214-16 (including, in Arabic translation, the autobiographical account of Djilwa first printed in *Nāma-yi dānīshwārān-i nāsīrī*); Mahdī Bāmdād, *Sharḥ-i ḥāl-i riḍwāl-i Irān dar karnḥā-yi 12 va 13 va 14-i Ḥidjri*, Tehran 1347/1968.

(H. ALGAR)

**ABU 'L-ḤASAN AL-MAGHRIBĪ**, MUḤAMMAD B. AḤMAD B. MUḤAMMAD, poet and littérateur of the 4th/10th century whose origin is unknown. He seems to have undergone many vicissitudes, since he appears in the service of Sayf al-Dawla, of al-Ṣāḥib Ibn 'Abbād and of the ruler of Ḳlūrasān, where he met Abu 'l-Faraj al-Iṣfahānī, and he also resided in Egypt, in the Ḍjabal, and in Transoxania, at Shāsh. The surviving verses of this great traveller are occasional pieces without any great originality, but he seems also to have been the author of several epistles and books, in particular, of a *Tuḥfat al-kuttāb fi 'l-rasā'il* and a *Tadhkirat/Mudḥakarāt al-nadīm*, in which there were no doubt pieces of advice on style and valuable data on the literary circles of the age. He is also famed from the fact that he was probably the transmitter of al-Mutanabbī's work in the lands of the east, since Yāqūt says of him that he was the *rāwīya* of the celebrated poet, encountered at Baghdād. However, if he made an apologia for the poet in his *K. al-Intiṣār al-munabbī 'an fada'il al-Mutanabbī*, followed by a *Bakīyyat al-Intiṣār al-mukḥīr li 'l-ikhṭisār*, he was equally the author—for reasons unknown to us—of a *K. al-Nabīh/Tanbīh al-munabbī 'an radḥā'il al-Mutanabbī*, which must be the oldest criticism of the poet's work.

*Bibliography*: Tha'ālībī, *Yatima*, iv, 81; Yāqūt, *Udabā'*, xvii, 127-32; R. Blachère, *Abou t-Tayyib al-Motanabbī*, Paris 1935, 227, 273-4; Bustānī, *DM*, iv, 264.

**ABU 'L-ḤASAN AL-RABĀ'Ī** [see AL-RABĀ'Ī].

**ABU 'L-ḤASAN AL-RUMMĀNĪ** [see AL-RUMMĀNĪ].

**ABŪ HAYYĀ AL-NUMAYRĪ**, the usual name for AL-HAYTHAM B. AL-RABĪ' B. ZURĀRA, a minor poet of Baṣra of the 2nd/8th century. The date of his death is given variously in the biographical sources, with dates ranging from 143/760 to 210/825, and the only point of reference which we have is the fact that he was considered as the *rāwīya* of al-Farazdak (d. 110/728). Of Bedouin origin, Abū Ḥayyā must have lived for quite a long time in the desert, to judge by the verses which al-Ḍjāḥiẓ cites in his *K. al-Ḥayawān*, and which other, subsequent authors cite, apparently considering him as an authority. This is not, however, the image that one gains of this personage by reading the notices of him in the biographical sources, since he became legendary for his

cowardice (stories of his sword, pompously called *Lu'āb al-maniyya*, of a dog which frightened him to death, etc.), his tendency to romance and to boast about outstanding deeds of valour (in particular, he claimed to be able to converse with the *ḍjinn*), and his weakness of mind (*lūḥā*), which led to his being sometimes grouped amongst those possessed (especially as he was allegedly epileptic); more indulgently, al-Ḍjāḥiẓ merely classes him amongst the foolish persons, *nawkā*, and forebears to reproduce anecdotes in which he is the hero and which could very well be invented tales.

The biographers state and repeat that Abū Ḥayyā wrote eulogies to the last Umayyads and the first 'Abbāsids, but it very much seems, unless one is mistaken, that none of his panegyrics have been preserved. They further state that he wrote *uḍjūzas* as well as *kaṣīdas*, but the great majority of his surviving verses are not in *radjāz* at all. According to the *Fihrist*, 231, his *dīwān* took up 50 leaves, and one must accept that this work was not lacking in quality, since isolated verses and fragments were appreciated by the critics. Although accusing him of some defects, notably a characteristic ingenuousness (al-'Askarī, *Sinā'atayn*, 165; al-Marzubānī, *Muwashshah*, 227-8), they remark that his style was free from affectation and padding, though sometimes difficult; Abū 'Amr Ibn al-'Alā' even judged Abū Ḥayyā to be superior to his fellow-tribesman al-Rā'ī [q.v.]. As a rule, the pieces of poetry which have been preserved have a descriptive, bacchic, satirical or elegiac character; according to Ibn al-Mu'tazz, the verses inspired by his wife, who died when still young, were often quoted.

(CH. PELLAT)

**ABŪ HIFFĀN**, 'ABD ALLĀH B. AḤMAD B. ḤARB AL-MIHZAMĪ, collector of poetical *akḥbār*, *rāwī* and poet in Arabic, (died between 255/869 and 257/871). Virtually nothing is known of his life, except that he came from a Baṣran family stemming from the B. Miḥzam of 'Abd al-Ḳays, and that he gloried in his Arab origin. He led a fairly poor and constricted life, to the point that he had to sell his clothing to procure food, and he complains of this frequently in his verses.

His reputation arises primarily from his role as a transmitter of poetical *akḥbār*, and he has a place in the *isnāds* or chains of supporting transmitters of several important works, such as the *K. al-Aghānī*, the *Muwashshah* of al-Marzubānī and the works of al-Ṣūlī and Ibn al-Ḍjarrāḥ. He knew the circles of

the poets very well, and previous to his own activity, various of his paternal and maternal uncles had specialised in the collection and transmission of literary anecdotes. He was in contact with Abū Nuwās, whose protégé and *rāwī* he was, and through this connection he developed, and came in his own right to follow the activities of the great contemporary poets, and especially, of the libertine poets. As well as his own master Abū Nuwās, he frequented the company of al-Ḥusayn b. al-Daḥḥāk, al-Buḥturī, al-Kḥuraymī, and also al-Djāḥiẓ, Tha'lab, al-Mubarrad, etc.

He himself put together a work called the *Akḥbar Abī Nuwās*, which has come down to us, and a *K. Sinā'at al-shu'arā'* and a *K. Akḥbār al-shu'arā'*, of which no trace has survived but were certainly used in the 3rd and 4th centuries by several writers of *adab* works.

Abū Hiffān was also a poet, but only a few dozen of his verses have been preserved, sc. fragments of eulogies addressed to 'Alī b. Yaḥyā al-Munadjǧim and 'Ubayd Allāh b. Yaḥyā b. Kḥākān; of satires addressed to Aḥmad b. Abī Du'ād and al-Buḥturī; epigrammatic exchanges, not always in the best of taste, with Abū 'Alī al-Baṣrī, Sa'īd b. Ḥumayd, Abū 'l-'Aynā' and Ya'qūb al-Tammār, all these being his companions in nocturnal sessions; and a few love verses. It is surprising that nothing has come down to us from his wine poetry, which Ibn al-Mu'tazz says enjoyed a wide currency. Altogether, Abū Hiffān was a minor poet who has contributed, through his anecdotes, to our knowledge of the history and sociology of poetry in the 2nd/8th and 3rd/9th centuries.

*Bibliography:* 'A. Aḥmad Farrāǧi has edited the *Akḥbār Abī Nuwās*, Cairo 1373/1953 (an edition with numerous verses in the text censored) with a bibliographical note, to be completed by Bencheikh, *Les voies d'une création*, typescript thesis, the Sorbonne 1971, i, 116-7, and idem, *Les secrétaires poètes et animateurs de cénacles aux II<sup>e</sup> et III<sup>e</sup> siècles de l'Égypte*, in *JA* (1975), 265-315.

(J.E. BENCHEIKH)

**ABU 'L-ḤUSAYN AL-BAṢRĪ**, MUḤAMMAD B. 'ALĪ B. AL-ṬAYYIB B. AL-ḤUSAYN, Mu'tazilī theologian. Little is known about his education and early career. He originated from Baṣra where he heard *hadīth*. As he studied *kalām* and *uṣūl al-fikh* with Kāḍī 'Abd al-Djabbār [q.v.], he must have visited Rayy for some time. With the Christian Abū 'Alī b. al-Samḥ, a student of Yaḥyā b. 'Adī, he studied philosophy and sciences, presumably in Baghdād. This is attested by a manuscript containing his redaction of the notes of Ibn al-Samḥ on the *Physics* of Aristotle. He may have also studied and practised medicine for some time if he is, as has been suggested, identical with the Abū 'l-Ḥusayn al-Baṣrī mentioned by Ibn Abī Uṣaybi'a as a physician contemporary with Abū 'l-Faradǧ b. al-Ṭayyib. Al-Djāḥabī refers to him as *al-kāḍī*, but there is no other evidence that he ever held an official position. During the later part of his life he taught and wrote in Baghdād. As his two *uṣūl al-fikh* works, the *Sharḥ al-'Umad* and the *K. al-Mu'tamad*, were composed still before the death of his teacher 'Abd al-Djabbār in 415/1024-5, he must have begun his teaching career in Baghdād before that date. He died in Baghdād on 5 Rabī' II 436/30 October 1044. The fact that the Hanafī *kāḍī* Abū 'Abd Allāh al-Ṣaymarī led the funeral prayer for him indicates that he belonged to the Hanafī *madhhab*, not to the Shāfi'ī as suggested by some sources.

Of his works on the *uṣūl al-fikh*, his commentary

(*sharḥ*) on 'Abd al-Djabbār's *K. al-'Umad* appears to be lost. His *K. al-Mu'tamad*, written later, has been edited together with his *Ziyādāt al-mu'tamad* and *K. al-Kiyās al-sharī'* (ed. M. Hamidullah, Damascus 1965). This work became popular also among non-Mu'tazilī scholars and, according to Ibn Kḥallikān, formed the basis of Fakḥr al-Dīn al-Rāzī's *K. al-Maḥṣūl*. None of his *kalām* works appears to be extant. The largest one, *K. Taṣaffuḥ al-adilla*, remained unfinished, as he had only reached the chapter on the *visio beatifica* before he died. On the *K. Ghurar al-adilla*, Ibn Abī 'l-Ḥadīd [q.v.] wrote a commentary. A short fragment on the question of the imāmate extant in manuscript (Vienna, Glaser 114) is probably an extract from his *K. Sharḥ al-Uṣūl al-khamsa*. His theological doctrine can, however, be recovered from later references and especially from the extant parts of the *K. al-Mu'tamad fī uṣūl al-dīn* (ms. Ṣan'ā') of his student Maḥmūd al-Malāḥimī, who quotes the *K. Taṣaffuḥ al-adilla* extensively. Also lost are his refutations of two works of the Imāmī Sharīf al-Murtaḍā, his contemporary in Baghdād: the *K. al-Shāfi'* on the imāmate and the *K. al-Muknī'* on the doctrine of the concealment (*ghaybā*) of the Twelfth Imām.

In his doctrine, Abū 'l-Ḥusayn al-Baṣrī was deeply influenced by the concepts of the philosophers and diverged from the Bahāshīma, the school of Abū Hāshim al-Djubbārī represented by his teacher 'Abd al-Djabbār. He was therefore shunned by the Bahāshīma, who accused him of refuting his Mu'tazilī *shaykhs* in an unfair and injurious manner. This charge is repeated by al-Shahraṣṭānī, who maintains that he was really a philosopher in his views (*falsafī al-madhhab*) but the Mu'tazilī *mutakallimūn* were not aware of this fact. Ibn al-Kiḥfī, too, suggests that he concealed his philosophical views under the forms of expression of the *kalām* theologians in order to guard himself from his contemporaries. Notable points on which he differed from the Bahāshīma were his rejection of their theory of modes (*aḥwāl*) [q.v.] and their thesis that the non-existent (*ma'dūm*) is a thing, his indecision about their theory of atomism, his admission of the miracles of saints (*karāmāt*), and his reduction of the divine attributes of will, hearing and seeing to that of knowledge. Evidently also under the influence of the doctrine of the philosophers, he affirmed that the acts of man occur necessarily in accordance with their motive (*dā'ir*) thus, as Fakḥr al-Dīn al-Rāzī pointed out, in effect undermining the Mu'tazilī doctrine of human free will.

Abū 'l-Ḥusayn's school was continued by his students, the Kḥ'arazmian Maḥmūd b. Muḥammad al-Malāḥimī and Abū 'Alī Muḥammad b. Aḥmad b. al-Walīd al-Karkḥī (d. 478/1086) who, like his teacher, also studied logic and philosophy and taught in Baghdād. According to Ibn al-Murtaḍā, Fakḥr al-Dīn al-Rāzī adopted many of his views on the "subtleties" (*latīf*) of *kalām*, i.e. matters not touching fundamental dogma. His theological doctrine progressively exerted a strong influence among the Imāmiyya and, to a lesser extent, among the Zaydiyya.

(W. MADELUNG)

**ABŪ ḤUZĀBA**, AL-WALĪD B. HUNAYFA (b. Naḥik in Ṭabarī, ii, 393) AL-TAMĪMĪ, a minor poet of the 1st/7th century. He was a Bedouin who settled at Baṣra and was a panegyrist, at the time of Ziyād b. Abīhi (45-53/665-72) or shortly after, of 'Abd Allāh b. Khālīd b. Asīd, governor of Fārs. His family urged him strongly to join the circle of Yazīd b. Mu'āwīya, before the latter's assumption of the caliphate (60/680); he finally decided to try his luck, but was not received by the prince, and he returned to Baṣra and joined up with the army. He was sent to Sistān (Sijjīstān), and from 60/680-1, under the orders of Salm b. Ziyād, he sang the praises of the governor Ṭalḥa al-Ṭalḥāt [q.v.]; he recited a funeral elegy on the latter which contained critical aspersions on Ṭalḥa's successor, 'Abd Allāh b. 'Alī al-'Abshāmī, who had shown himself less generous to the poet. He also had occasion in Sijjīstān to mourn the death of a certain Nāshira al-Yarbū'ī killed at the time of Ibn al-Zubayr, in an elegy set to music by Ibn Djamī' [q.v.]. Finally, he returned to Baṣra and then, after various adventures, rallied to the cause of Ibn al-Ash'ath [q.v.] and was possibly killed at the same time as him (85/704).

Abu Ḥuzāba had the reputation of turning nasty when his hopes of reward were disappointed. He has left behind a certain number of *raḍīa* poems, as well as *kaṣīdas* which have kept his name from falling into oblivion.

(CH. PELLAT)

**ABU 'L-'IBAR**, ABU 'L-'ABBĀS MUḤAMMAD B. AḤMAD B. 'ABD ALLĀH AL-HĀSHIMĪ, burlesque poet and member of the ruling family, who was born in ca. 175/791-2 in the reign of al-Raṣhīd and who died in 252/866, probably assassinated by an 'Alid partisan. He is known by the name of Abu 'l-'Ibar, a sobriquet which he made up himself, adding a letter each year, and in the end making it unpronounceable. He was carefully educated, had an acute literary sense and was a fine connoisseur of poetry. The severe al-Ma'mūn did not appreciate him, and even imprisoned him, but he welcomed the accession of al-Mutawakkil, giving himself up to all sorts of amusing deeds.

Since he felt his way blocked by the great poets of his time, and in particular, by Abū Tammām and al-Buḥturī, he found it more profitable to devote himself to *humk* and *sukhf*, thereby illustrating a tradition which was to continue with e.g. Ibn al-

Hadjdjādī and Ibn al-Habbāriyya [q.vv.]. Abu 'l-'Ibar did not allow his membership of the caliphal family to constrict him, and cultivated a real burlesque art in his own life and writings, in which he displayed acrobatics. In reality, under the form of burlesque, satire is often hidden, and under the form of buffoonery, an element of suffering. Whether he invents new words, writes phrases devoid of sense, wittily parodies a scholar, or fishes with a line in the pond of the caliphal palace, he goes quite contrary to the accepted cultural norms, defies the usual patterns, confronts an atmosphere of seriousness with drollery, and in short, gives himself up to grotesque pieces of clowning which might have opened up a way for an original and new strain in Arabic literature. But for this, Arabo-Islamic culture would have had to accept new values alien to its own ones. The terms of *humk* and *sukhf* show clearly the lack of esteem for these tentative efforts, which never had any really fruitful consequences [cf. ABU 'L-'ANBAS above].

Dāwūd al-Djarrāh, *Waraka*, 120-1; cf. J.E. Bencheikh, *Le cénacle d'al-Mutawakkil, contribution à l'étude des instances de légitimation littéraire*, in *Mélanges Henri Laoust = BEO*, xxix [1977].

(J.E. BENCHEIKH)

**ABŪ 'IMRĀN AL-FĀSĪ**, MŪSĀ B. 'ĪSĀ B. ABĪ HĀDJĪ/HĀDJĪĀDJ (?), Mālikī *fakīh*, probably born between 365/975 and 368/978 at Fās into a Berber family whose *nisba* is impossible to reconstruct. No doubt to complete his studies, but perhaps also because of other reasons hard to discern, he went to settle in al-Ḳayrawān, where his master was in particular al-Ḳābisī (d. 403/1012 [q.v.]). He is known to have stayed in Cordova with Ibn 'Abd al-Barr [q.v.] and to have profited by the chance to follow the lectures of various scholars there, which his biographers list, without however giving the date of this journey. Soon after the end of the century, he went to the East, possibly spending some years in Mecca, since he made the Pilgrimage several times, and deriving further instruction from the *fukahā'* of the Holy City. In 399/1008-9 he was in Baghdād, benefiting from the teaching of al-Baḳillānī (d. 403/1013 [q.v.]), a Mālikī like himself but an Ash'arī in *kalām*, and it was in the 'Irāqī capital that he had the revelation of a theological doctrine in whose subsequent diffusion in the West he was to take part (see H.R. Idris, *Essai sur la diffusion de l'aṣ'arisme en Ifrīqiya*, in *Cahiers de Tunisie*, ii (1953), 134-5). He returned to Mecca from Baghdād, and then in ca. 402/1011 returned via Egypt to al-Ḳayrawān, which he never seems then to have left apart from a last journey to the East in ca. 425/1033-4 or 426/1034-5. He died on 13 Ramaḍān 430/8 June 1039 in his adopted home; al-Mu'izz b. Bādīs [q.v.] was present at his funeral, together with a great crowd, and his tomb has henceforth been venerated as equal to that of a saint. His descendants still live in al-Ḳayrawān.

His biographers stress the breadth and diversity of his education, and mention in detail the numerous teachers whose courses he followed, both at al-Ḳayrawān and during his travels; and they make him in some way the heir of Mālikī teaching at the opening of the 4th/10th century. Nor do they omit to list all the pupils who thronged his courses, and they give the impression that he exercised a deep influence on intellectual activity in the juridical-religious domain. He was at the outset a specialist on the seven readings

of the Qur'an, and then after his return from the East, turned to *hadīth* and *fiqh* and, to some extent, *kalām*. He attracted a host of disciples not only from Ifriqiya, but even from Spain, Sicily and Morocco, and several of these later made a name for themselves. Furthermore, he kept up a correspondence with scholars in distant places, who consulted him on points of doctrine, and he even gave *idjāzas* at a distance. It would be tedious to enumerate here all the pupils of his mentioned by biographers but one should mention that they included Ibn Sharaf [q.v.], and a person homonymous with the name of the author of the *Umda*, 'Abd Allāh Ibn Rashīk (d. 419/1028), who was also a poet, and dedicated to him the greater part of his verse (see Ch. Bouyahia, *La vie littéraire en Ifriqiya sous les Zirides*, Tunis 1972, 67, 116).

Two other pupils of Abū 'Imrān's ought to be mentioned also because they were associated with important historical events. At a date which, with Ibn Abī Zar' (*Kirtās*, 122-3) can be fixed at 427/1035-6 (whilst Ibn Khaldūn, *Berberes*, ii, 67, places the events in 440/1048-9, Ibn 'Idhārī, *Bayān*, iii, 242, in 444/1052-3 and Ibn al-Athīr, ix, 258-9, in 447/1056, which is unlikely), the Lamtūna chief Yahyā b. Ibrāhīm passed through al-Ḳayrawān whilst returning from the Pilgrimage, attended Abū 'Imrān's courses and, realising the depth of his compatriots' ignorance, asked the great scholar to designate one of his followers to go and teach them. Abū 'Imrān then recommended to him one of his former pupils called Ugg'ag (Wadīdjādī in Arabic transcription), who had returned to his own land, and this latter scholar in turn designated 'Abd Allāh b. Yāsīn (see al-Bakrī, *Description de l'Afrique septentrionale*, new edn. Paris 1965, 165-6/311-12; *al-Hulal al-mawshūyya*, 9; A. Bel, *La religion musulmane en Berbérie*, Paris 1938, 215; G. Marçais, *La Berbérie musulmane et l'Orient au moyen âge*, Paris 1946, 238; H. Terrasse, *Histoire du Maroc*, Casablanca 1949, i, 214; J. Bosch Vilá, *Los Almorávides*, Tetuan 1956, 49; and see AL-MURĀBĪTŪN). Now the anonymous author of the *Mafākhīr al-Barbar* (ed. E. Lévi-Provençal, *Fragments historiques sur les Berbères au moyen âge*, Rabat 1934, 69) states that these two men impelled the Almoravids to expand out of the Sahara on the order (*bi-amr*) of Abū 'Imrān.

One would like to have exact details about this, but if the assertion is true, it shows the influence of the Ḳayrawānī *fakīh*, which was, at all events, a profound one. His pupils transmitted his oral teachings and doubtless also his works (cf. Ibn Khayr, *Fahrasa*, i, 440), which do not however seem to have been very numerous. Some of his *fatwās* have been preserved, in particular by al-Wansharīsī in his *Mi'yār* (but one should be careful, since the name "Abū 'Imrān al-Fāsī" was fairly widespread; see e.g. Brockelmann, S II, 961; a *K. al-Dalā'il wa 'l-addād* is mentioned in the *Mi'yār*, x, 105, and a manuscript of *al-Ihkām li-masā'il al-ahkām al-mustakhradja min Kitāb al-Dalā'il wa 'l-addād li-Abī 'Imrān al-Fāsī* has also been catalogued (1342-D. 1444) at Rabat). His *K. al-Ta'āliq 'alā 'l-Mudawwana* is one of the Ḳāḍī 'Iyād's sources (*Madārik*, i, 56), who cites him frequently. He is moreover said to have made a selection of *hadīths* which was especially important and covered a hundred leaves, and a *Fahrasa* is attributed to him; finally, a manuscript of his *Nazā'ir* is mentioned as existing at Algiers (Brockelmann, S I, 660-1). Some verses are also attributed to him.

(CH. PELLAT)

**ABŪ ISHĀḲ AL-FĀRISĪ**, IBRĀHĪM B. 'ALĪ (d. after 377/987), celebrated grammarian and also lexicographer of the golden age of grammatical studies in Baghdād during the 4th/10th century, and equally a poet. As a pupil of Abū 'Alī al-Fārisī (d. 377/987 [q.v.]) and of al-Rummānī (d. 384/994 [q.v.]), he belonged to the second generation of grammarians of this century, and more especially, to the first group "moulded by the pupils of al-Mubarrad", and he assured "the triumph of the method of Baṣra in Baghdād" (G. Troupeau). He wrote several works, in particular, on prosody, and like his master Abū 'Alī al-Fārisī somewhat earlier, criticised the work of the poet al-Mutanabbī.

**ABU 'L-ḲĀSIM AL-WĀSANĪ** [see AL-WĀSANĪ].

**ABŪ KHALĪFA AL-DJUMAḤĪ** [see AL-FAḌL B. AL-HUBĀB in Suppl.].

**ABŪ MĀDĪ**, ILIYĀ (1889-1957), poet and journalist of Lebanese origin, who spent his childhood in the village of al-Muḥaydiḥa near Bikfayā, his birthplace, but left his native land at the age of 11 to help his maternal uncle with his business in Alexandria. During his stay of some dozen years in Egypt, he was able to find time to acquire an advanced literary education, to learn a lot of classical and modern poetry and to frequent the circles of intellectuals who were in varying degrees engaged in political activities which roused the authorities' suspicions. Like so many of his compatriots, he began early to write poetry, which gave him an initial fame, and he was even able in 1911 to publish at Alexandria a first collection called *Tadhkār al-māḍī, Dīwān Iliyyā Dāhir Abū Mādī*, which the critics were unanimous in considering of no great literary value. In this same year of 1911, he decided to leave for the United States and rejoin his brother, who was a merchant like his uncle. He then spent several years in Cincinnati, where he continued to write verse, and then abandoned trade for poetry and journalism, and went in 1916 to New York. There he published on arrival, under the title of *Dīwān Iliyyā Abū Mādī*, a second edition of his first collection, but now augmented by some poems on social questions and inspired by Arabism and nationalism, which he had avoided inserting in the *Tadhkār al-māḍī*. Both these editions are very rare today, but they add nothing

to the poet's fame and have only an historical interest.

In New York, Abū Mādī threw himself into journalism and took charge of editing *al-Maḍjalla al-ʿarabiyya* and then *al-Fatāḥ*. It is at this point that he became connected with the great names of *mahḍjar* literature who were to found *al-Rābiḥa al-kalamiyya*; it was also there that he married the daughter of Naḍjīb Diyāb, director of the *Mirʿat al-Ḡharb*, of which he became chief editor 1918-29, i.e. until the time when he founded the monthly *al-Samīr*, which he transformed into a daily in 1936 and directed till his death on 23 November 1957.

Abū Mādī's talent began to take shape in New York, with his poetic work partly spread by the periodicals to which he contributed and brought together in a new *diwān*, *al-Djadāwīl* (New York 1927; reprinted at Naḍjaf three times between 1937 and 1949); with his fame thus assured, his poetic talent became more widely known in his last collection published during his lifetime, *al-Khamāʿil* (New York 1940; 2nd edn. Beirut 1948, with additions). Some further poems were collected together in 1960, after his death, as *Tibr wa-turāb*.

Within the limits of this brief article, it is not possible to go into the details of Abū Mādī's poetic achievement, but the most striking feature for the reader is what might be called the philosophical tone of many of the poems, a succinct philosophy conveyed as a scepticism which is stressed many times. In this respect, the famous quatrains which appear in the *Djadāwīl* and which have been thought worthy of separate publication under the title of *al-Talāsīm*, are characteristic; musing on the origins of man, the poet replies to the questions put in each strophe by a *lastu adri* "I do not know" (which has inspired the *shaykh* Muḥammad Ḍjawād al-Ḍjazāʿirī to compose a reply: in his *Hall al-Talāsīm* [Beirut 1946], each strophe ends, somewhat presumptuously, with an *anā adri* "I myself know"). His social, political and nationalist themes, already animating his first *diwān*, became more refined and precise, and the poet was moved to act as a moralist in a well-known piece, *al-Ṭīn*, which condemns human pride, commends humility and advocates equality (see a commentary in Ḍj. Rikābī *et alii*, *al-Wāfi fi ʿl-adab al-ʿarabī al-hadīth*, Damascus 1963, 180-4; Fr. tr. in *Anthol. de la littérature arabe contemporaine*, iii, *La poésie*, by L. Norin and E. Tarabay, Paris 1967, 83-4). But the poet, in spite of his disquiet and his philosophical doubt, nevertheless had an optimistic and lively character which made him love life just as it is and made him proclaim his faith in the lasting value of art and literature. In his *Khamāʿil*, he chanted the praises of Lebanon, which at bottom he knew very poorly, and expressed his nostalgia for his native country, which he did not see again till 1948.

In regard to poetic technique, one might have expected Abū Mādī to utilise free verse (*al-shiʿr al-ḥurr*), but in fact he remained faithful to classical metres, which he only abandoned in order to adopt a strophic pattern or, in his narrative poem of 79 verses *al-Shāʿir wa ʿl-sultān al-ḍjāʿir* (1933), to be able to employ several metres and sometimes alter the rhyme.

Abū Mādī's successful poetical work, with its immediate accessibility to the reader, has tended to obscure his work as a journalist and the quality of his prose. It would undoubtedly be an exaggeration to maintain that all his contributions to the numerous *mahḍjar* periodicals, on which he collaborated, are poems in prose. However, the poet's personality comes through constantly in his editorials and in his

articles, admittedly those on literary topics, but also in those on political, economic and social questions, which he treats in an eminently poetic fashion, displaying his reflective attitude and allowing the same preoccupations as those of his verses to appear through.

*Bibliography*: Abū Mādī has already been made the subject of some studies, amongst which are Fathī Ṣafwat Naḍjīda, *ʿIlīyā Abū Mādī wa ʿl-ḥaraka al-adabiyya fi ʿl-mahḍjar*, Baghdad 1945; Zuhayr Mīrzā, *ʿI. Abū Mādī, shāʿir al-mahḍjar al-akbar*, Damascus 1954; ʿAbd al-Laṭīf Sharāra *ʿI. Abū Mādī*, Beirut 1961; Works on the literature of the *mahḍjar* naturally include material on Abū Mādī's work; on his prose, see in particular, ʿAbd al-Karīm al-Aṣṭar, *al-Naṭh al-mahḍjarī*, Beirut 1964, index; idem, *Funūn al-naṭh al-mahḍjarī*, Beirut 1965, index; Amongst the numerous articles devoted to him, see Ilyās Abū Shabaka, *ʿI. Abū Mādī*, in *al-Muḳtataf*, October 1932; Ḍj. ʿAbd al-Nūr, *ʿI. Abū Mādī*, in *al-ʿAdāb*, 1953; idem, in *Daʿwat al-maʿārif*, v, 101-4 (with bibliography); G.D. (Ed.)

**ABŪ MAḤALLĪ** (al-Maḥallī on coins) AL-FILĀLĪ AL-SIDJILMĀSSĪ, the name by which ABŪ ʿL-ʿABBĀS AḤMAD B. ʿABD ALLĀH is known, one of the chief pretenders who took part in the ruin of Morocco during the agony of the Saʿīd [*q.v.*] dynasty and whose brief spell of success has a useful illustrative value.

We know by his autobiography, which forms the beginning of his still-unpublished book, the *Kitāb Isṭī al-khīrū fi ʿl-kaṣʿ bi-ʿulūm al-ʿifrīn*, but which al-Ifṛānī gives in his *Nuḥa*, that he was born at Sidjilmāssa in 967/1559-60 into a family of jurists, which were said to be descended from the Prophet's uncle. His father was a *kādī*, and in the first instance took charge of his son's education, and then sent him to complete his studies at Fās, where the young man spent several years. After the accession of Aḥmad al-Manṣūr and the end of the troubles which had racked northern Morocco, he went to visit the tomb of the Berber saint Abū Yaʿazza [*q.v.*]; then, despite the great distrust he had felt for mystics, he became a convert to Ṣūfism and attached himself to the *shaykh* Muḥammad b. Mubārīk al-Zaʿīrī and lived for eight years close to him. His master then sent him to Sidjilmāssa "in order to bring blessing on its inhabitants". In 1002/1594 Abū Maḥallī made the Pilgrimage to Mecca. On his return, he visited the eastern provinces of Morocco and finally settled with his family in the Sāwra valley, and in some place unknown to us now, devoted himself to God.

It was at this point that this first-rate jurist, now deeply affected by mysticism, proclaimed that he had received divine inspiration and gave himself out to be the *mahḍī*. Al-Yūsī says that he was no longer content to put together, in an elegant style, legal works or mediocre poetry, but began to deal with subjects which showed that he had reached the point of possessing divine grace (*dhawq*) up to a certain degree. He probably also had within in him something of the thaumaturge, like so many other claimants to such powers. When in 1019/1610 he learnt

that the sultan Muḥammad al-Shaykh II had handed over the town of Larache (al-'Arā'ish [q.v.]) to the Spaniards, he shared in the popular indignation, fanned the general wave of xenophobia and skilfully utilised the occasion to launch an appeal for the holy war and to proclaim the downfall of the Sa'dids. With a few hundred followers inflamed by his words and promises, he managed to seize Sidjilmāssa from its legal governor and set up there the reign of justice. His prestige grew so great that he was recognised as far away as Timbuctu and received delegations from distant tribes and even from the town of Tlemcen. He further began negotiations with the *zawiya* of Dilā' [q.v. below].

Mawlāy Zaydān, Muḥammad al-Shaykh II's brother, who was ruling over Marrakesh and its region, took fright and organised a powerful army in the valley of the Wādī Dra'. Abū Maḥallī marched on them immediately, and his opponents, convinced that he was supernaturally aided, laid down their arms and were crushed.

The pretender, benefitting from the sound advice of a renegade commander, did not hesitate to march on Marrakesh at the head of his rough and savage Saharan followers, whose numbers increased daily. Mawlāy Zaydān offered no resistance and retreated to Safi. On 20 May 1612 Abū Maḥallī occupied the royal *kaṣaba* and adopted all the insignia of royalty; and since supplies of gold continued to arrive in Marrakesh, he had minted in his own name fine-quality gold coins. Nevertheless, although he disapproved of foreign occupation of Moroccan territory, he had the sense to allow Christian merchants to continue their commercial activities. It is thanks to these last that we have first-hand information about the claimant and the immense prestige which he enjoyed amongst the troops and the peoples whom he had brought under his control.

Mawlāy Zaydān had prudently to leave Safi for the Sūs, where he got into contact with another religious leader, Yahyā b. 'Abd Allāh b. Sa'īd al-Hāhī, who enjoyed great fame and who promised to expel Abū Maḥallī from Marrakesh. He gathered together numerous bodies of troops and soon appeared with them near the southern capital. Abū Maḥallī came out to do battle at the head of his faithful Saharan troops, but at the beginning of the engagement was killed by a shot. His army believed that the divine favour had abandoned it and was unable to resist the attack. On 30 November 1613 Yahyā occupied the city and had his rival's head hung above the gateway of the *kaṣaba*.

The tragic spiritual and mental process which led a pious scholar to seek after temporal power and then to give himself out as a Messiah, finally ending up like a sorcerer's apprentice, remained in the Moroccan mind as such a baleful example that the chroniclers only mention it whilst at the same time praying for the divine pardon to Abū Maḥallī.

**ABŪ MANŠŪR b. YŪSUF**, in full 'ABD AL-MALIK b. MUḤAMMAD b. YŪSUF, wealthy Ḥanbalī merchant, the most important patron of the Ḥanbalī movement and a staunch supporter of the 'Abbāsīd caliphate in the 5th/11th century. Abū Manšūr b. Yūsuf was for Baghdād and the caliph what Nizām al-Mulk was for Khurāsān and the sultan. Both distinguished themselves from among their contemporaries by their political and administrative genius, as well as by their wealth and power, Abū Manšūr accumulating his wealth through commerce, and Nizām al-Mulk through power which he exercised in the name of the sultan.

In 453/1061, Abū Manšūr saw to the destitution of the caliphal vizier Abū Turāb al-Aḥḥīrī whom he had replaced by Ibn Dārūt. In 447/1055 it was Abū Manšūr who had influenced the caliph to appoint Abū 'Abd Allāh al-Dāmaghānī, a Ḥanafī, as *kādī 'l-kuḍāt* in order to placate the Ḥanafī Saldjūks conquerors. Three years later, Abū Manšūr, who had been on friendly terms with the Saldjūks, was thrown into prison by Basāsīrī on the latter's return to Baghdād during the absence of his archenemy the Saldjūk Toḡhrīl Beg. It was only after paying great sums of money that Abū Manšūr regained his freedom, but he did not feel entirely safe until Toḡhrīl Beg had returned to Baghdād, wresting it from the hands of Basāsīrī, stripping the latter of all the wealth he had accumulated, and killing him. In the affair of the marriage of Toḡhrīl Beg with the caliph's daughter, a marriage which scandalised the caliph, Abū Manšūr, along with Abū 'Abd Allāh al-Dāmaghānī, played the role of mediator between caliph and sultan.

Abū Manšūr b. Yūsuf was known for his good works and for the favours which he bestowed upon his contemporaries. Among his works was the reconstruction of the 'Aḡudī Hospital, al-[Bī]Māristān al-'Aḡudī, which he also endowed with *awḳāf* properties in order to provide for its needs in perpetuity. Among those who benefitted from his largesse were the Ḥanbalī 'ulamā' and ascetics who enjoyed a great following among the masses, the preachers, the leading Ḥāshimīs and their followers, the Saldjūks' functionaries, including *shihnas* and the 'amīds, as well as the Bedouin and Turkish *amīrs*.

This wide influence enjoyed by Abū Manšūr did not please Nizām al-Mulk, and the rivalry between these two influential men can be seen in some of the events of the period. The founding of the Nizāmiyya *madrasa* in Baghdād (inaugurated in 459/1067) is an instance in point. Abū Ishāk al-Shīrāzī, for whom the *madrasa* was founded, having refused to assume the chair of law for religious reasons (the *maghsūb*, or misappropriated character of the materials), was replaced by another Shāfi'ī, Ibn al-Sabbāgh, chosen by Abū Manšūr, with the concurrence of the caliph. The founding of the *madrasa* by Nizām al-Mulk appears to have been considered by Abū Yūsuf as interference in the latter's sphere of interest.

The rivalry between these two powerful and influential men also expressed itself quite clearly in the ideological sphere. While Abū Manšūr was the great support and consolation of the traditionalist *‘ulamā’* in Baghdad, men belonging essentially to the Ḥanbalī movement, Niẓām al-Mulk supported the rival Ash‘arī movement. And whereas Niẓām al-Mulk lent his support and bestowed his patronage upon men of the rationalist Mu‘tazilī movement, Abū Manšūr had reduced the Mu‘tazilīs to silence in Baghdad. It was because of him that the great Mu‘tazilī professor of the period in Baghdad, Abū ‘Alī b. al-Walīd, could not publicly profess his teachings in that city. The riot which occurred in Baghdad in 460, led by the traditionalists against Ibn al-Walīd, was caused by the latter’s reappearance in public to teach Mu‘tazilism; Abū Manšūr had disappeared from the scene at the beginning of that year. There is some evidence indicating that Abū Manšūr’s death was not a natural one, and that he had paid with his life for interfering with Niẓām al-Mulk’s plans. For instance, the contemporary Ibn al-Bannā’, writing in his *Diary* about five months after the death of Abū Manšūr, mentions a dream in which he saw Abū Manšūr walking barefoot and, upon asking him the cause, replied saying that that “was the way to walk for those who complain of wrongdoing” (*hādhā . . . maṣly al-mutaḏallimīn*). Elsewhere in the *Diary* (ii, 26, 47), the following invocation is made: “May God have mercy on the blood of [Abū Manšūr] Ibn Yūsuf”. The word *blood*, in this context, implies *bloodshed*, blood calling for revenge, or for justice. It is perhaps significant that the title *al-Shaykh al-Adjall* “the most eminent *Shaykh*”, applied only to Abū Manšūr during his lifetime, is found later applied not only to his two sons-in-law, Ibn Djarada and Ibn Riḏwān, but also to Niẓām al-Mulk (E. Combe *et al.*, *Répertoire*, vii, Nos. 2734, 2736, 2737).

The two sons-in-law of Abū Manšūr, though they inherited from their father-in-law his title, presented no threat to Niẓām al-Mulk. Ibn Riḏwān succeeded to Abū Manšūr’s position of influence with the caliph; but far from following in the footsteps of his father-in-law in opposing Niẓām al-Mulk, he became reconciled with him by effecting a marriage between his daughter and Niẓām al-Mulk’s son. On the other hand, Ibn Djarada seems to have inherited the place of honour enjoyed by his father-in-law with the traditionalists, for whom he founded mosque-colleges (*masājid*) in Baghdad.

**ABŪ MISMĀR**, AL-ŠARĪF ḤAMMŪD B. MUḤAMMAD B. AḤMAD AL-ḤASANĪ, an important *sharīf* of Abū ‘Arīsh who in the early years of the 19th century defended his independent state, based on the coastal plain of ‘Asīr [q.v.] (Tihāmat ‘Asīr) and embracing most of the Tihāma region of Yemen, against the encroachments of the Wahhābī Āl Sa‘ūd of Naǧǧd, the Zaydī *imāms* of Ṣan‘ā’ and the Ottomans under Muḥammad ‘Alī. Born in or before 1170/1756-7, he was descended from the Āl Kḥayrāt *sharīfs* who emigrated from Mecca to the al-Mikhhlāf al-Sulaymānī district

of lowland ‘Asīr early in the 11th/17th century. His death occurred in 1233, probably during Ramaḏān/July 1818 but possibly several months earlier.

While serving as the Zaydī *imām*’s governor of Abū ‘Arīsh in the mid-18th century, Sharīf Aḥmad, Ḥammūd’s grandfather, declared his family’s independence, although the *imām*’s suzerainty was recognised. Ḥammūd assumed power in about 1215/1800-1, and shortly afterwards had to expel a troublesome Wahhābī agent of ‘Abd al-‘Azīz (d. 1218/1803), the chief of the Āl Sa‘ūd. But when in 1217/1802-3 Abū ‘Arīsh was captured by Abū Nuḳṭa (d. 1224/1809), the Wahhābī *amīr* of upland ‘Asīr, Ḥammūd declared allegiance to ‘Abd al-‘Azīz. He undertook to pay certain taxes to the Wahhābī chief and send a son to al-Dir‘iyya as hostage, in return for which he was appointed ‘Abd al-‘Azīz’s governor of lowland ‘Asīr. Aided by Wahhābī reinforcements, Ḥammūd subsequently captured from the old Zaydī *imām*, al-Manšūr bi’llāh ‘Alī (1189-1224/1775-1809), and added to his own lands, the bulk of the Tihāma region of Yemen, including such centres as al-Luḥayya, al-Ḥudayda, Bayt al-Faḳīh, Zabīd and al-Ḥays, but not Mocha.

Ḥammūd’s allegiance to the Wahhābīs was only nominal; and early in 1224/1809 he conspired with Aḥmad, the heir apparent to Imām al-Manšūr ‘Alī, to replace Wahhābī suzerainty with that of the Zaydī *imām*, on condition that he himself was allowed to retain the Tihāma lands already under his control. Although his forces were twice defeated by those of Abū Nuḳṭa later that year, and despite occasional Wahhābī forays into the northern Tihāma thereafter, Sharīf Ḥammūd was able, with the aid of his competent vizier, Sharīf al-Ḥasan b. Kḥālīd al-Ḥāzīmī, to hold control of both his ancestral lands and the extensive Tihāma territories acquired with Wahhābī help. He flirted alternately with the *imām* in Ṣan‘ā’ and the Wahhābī chief in al-Dir‘iyya just enough to forestall a serious military intervention by either.

Initially disposed to cooperating with Muḥammad ‘Alī against the Wahhābīs (1229/1814), Ḥammūd cooled towards him, owing to a series of Wahhābī victories over the Ottomans and his fear of the Egyptian viceroy’s designs upon his lands. In 1233/1818, just a few days before his death, Ḥammūd’s forces nearly annihilated an Egyptian army. His son Aḥmad ruler after him for about a year before submitting to Muḥammad ‘Alī’s commander in the south and being sent to Egypt where shortly he died. Although Ḥammūd’s lands were restored by the Ottoman sultan to the *imām*, the governorship of lowland ‘Asīr was awarded to a nephew of Ḥammūd.

*Bibliography*: The basic source for the life of Sharīf Ḥammūd Abū Mismār is his unpublished biography, *Nafḥ al-‘ūd*, by ‘Abd al-Rahmān al-Bahkalī (a ms. of which is in the al-‘Aḳīlī private collection at Dījāzān). This treats of the *sharīf*’s life to 1225/1810-11, the remaining years being covered by al-Ḥasan b. Aḥmad ‘Ākīsh in a *dhayl* entitled *Nuḥat al-zarīf*. Other mss. in which Sharīf Ḥammūd figures, sometimes prominently, are Luṭf Allāh Dījhāf, *Durar nuḥūr al-hūr*; ‘Ākīsh, *al-Dībādī al-kḥusrawānī*; al-Ḥasan b. ‘Abd al-Rahmān al-Kawkabānī, *al-Mawāhib al-saniyya*; and Badr al-Dīn Muḥammad al-Kibṣī, *al-Laṭā’if al-saniyya*. Of these works, *Nafḥ al-‘ūd*, its *dhayl* and *al-Dībādī* were consulted by Muḥammad b. Aḥmad ‘Isā al-‘Aḳīlī in Part I of his *Min ta’rīkh al-Mikhhlāf al-Sulaymānī*, Riyadh 1958.

Other works providing useful information about Sharīf Ḥammūd’s life are al-Shawkānī, *al-Badr al-*

**ABU 'L-MUṬAHHAR AL-AZDĪ**, an Arab writer who lived in the 5th/11th century, but since no known biographical source mentions him, his dates and the milieu within which he lived can only be inferred from his sole surviving work, the *Hikāyat Abi 'l-Kāsim* (one should however add the information of al-Bākhārī (d. 467/1075), who says that he knew in Iṣfahān a writer called Abū Muṭahhar, very likely our author). He must have lived between Baghdād and Iṣfahān, as emerges from a *munāzara* between the two cities given in the *Hikāya*, before the Saldjūk assumption of power in 'Irāk, which he never mentions. Concerning the rest of his work, he himself mentions an *Hikāya badawīyya*, now lost, and al-Bākhārī a *Tūnāz al-dhāhab 'alā wāshāh al-adab* (assuming that the same person is involved).

The *Hikāyat Abi 'l-Kāsim al-Baghdādī* (ms. Brit. Mus. Add. 19,313; ed. A. Mez, Heidelberg 1902) has remained till now a unique work in classical Arabic literature, a conscious variation of the highly-appreciated *makāma* genre [*q.v.*] which al-Hamadhānī had just launched and which al-Ḥarīrī (who lived just one or two generations after our author) was to bring to perfection. The novelty of the *Hikāya* of Abū 'l-Muṭahhar in relationship to the *makāma* of the above two authors is the displacement of the centre of interest from the purely linguistic and formal aspect to the representation of a character and an environment in a genuine *mimesis* of reality (in this case, the bourgeois environment of Baghdād, with its bons viveurs and drinkers, amongst whom Abū 'l-Kāsim displays his bravura style and his vagabond's effrontery). This bravura style is also a linguistic one, and Abū 'l-Muṭahhar attaches himself to this means to the *makāmāt* writers; but whilst the latter remain merely that, and their heroes al-Iskandarī and al-Sarūdī offer us nothing more than a somewhat monotonous and stereotyped cliché figure of a rogue, al-Azdī's Abū 'l-Kāsim is wholly alive, and to be compared more with the characters in Petronius's *Satyricon* and the "pícaros" of Spanish narrative literature. The text of the *Hikāya* raises a lot of philological problems for the language and sometimes the jargon used in it, but its literary importance is far from being limited to pure philology; the work of this 5th/11th century 'Irākī writer, himself almost unknown, remained an isolated effort of its time, but heralding fields of interest and artistic currents of the future.

*Bibliography*: Mez, in the introd. to his edition; the arts. *Hikāya* in *EI'* and *EI''* by Macdonald and Pellat respectively; F. Gabrieli, in *RSO*, xx (1942), 33-45.

(F. GABRIELI)

**ABŪ NUKHAYLA AL-ḤIMMĀNĪ AL-RĀDJIZ**, a poet of Baṣra who owed his name to the fact that his mother gave birth to him by a palm tree (*nakhla*). He was given the *kunya*s of Abū 'l-Djunayd and Abū 'l-Ḥimās and the name of Ya'mar (or Ḥazn, or Ḥabīb b. Ḥazn) b. Zā'ida b. Laḳīṭ, but it is possible that he forged a fictitious genealogy to attach himself to the Sa'd b. Zayd Ma'nāt of Tamīm; in fact, al-Farazdaq, angry at being released from jail at his intervention,

calls him a *da'ī*, and Ibn al-Kalbī does not cite him in his *Djamhara*. It is said that he was ejected by his father, on account of his ingratitude, and spent some time in the desert, where he improved his knowledge of the Arabic of the Bedouins and gained a certain fame. He then went to Syria and succeeded in attaching himself to Maslama b. 'Abd al-Malik [*q.v.*], despite a personal inhibition which led him at first to attribute to himself an *urđūza* of Ru'ba [*q.v.*], and then afterwards addressed eulogies to Hishām b. 'Abd al-Malik and his successors, who showed their favour to him and gave him the largesse of which he was avidly hungry. He nevertheless had no scruples in going and presenting himself to Abū 'l-'Abbās al-Saffāh and in reciting to him an *urđūza* in *dāl* which he had previously dedicated to Hishām. His panegyrics of the first 'Abbāsids, filled with attacks on his former patrons, gained him the title of "poet of the Banū Ḥāshim", but his greed led in the end to his downfall. He wrote, and caused to be widely spread, a poem in which he urged al-Manṣūr to proclaim his own son Muḥammad (al-Mahdī) as heir-presumptive instead of 'Īsā b. Mūsā, whom al-Saffāh had designated heir. The caliph generously rewarded him and followed his advice, but he instructed him to flee to Khurāsān. However, one of 'Īsā's agents pursued him, slaughtered him, stripped the skin from his face and threw his corpse to the vultures. This took place at some time shortly after 136/754.

Abū Nukhayla wrote some *kaṣīdas*, but above all favoured *rađīaz*; he was involved in poetic contests with another famous *rāđīz*, al-'Adjdjādī [*q.v.*] and left behind a body of work considered good enough to be formed into a *dūwān*. This poetry is not always easy to understand, because of the Bedouinisms which abound in it, but it has a verve which is sometimes fairly coarse and a humour which disarmed his opponents and made his audience laugh, these last being more or less inclined accordingly to open their purse-strings. This was, indeed, the poet's sole object, and he seems to have been an inveterate demander of money. Cutting epigrams are to be found side-by-side with poems on hunting themes, elaborate panegyrics and unexpected elegies, since, despite an innate sense of ingratitude, the poet knew occasionally how to display his thanks, and especially after the death of al-Muhādđir b. 'Abd Allāh al-Kilābī, who had been a kindred spirit. The critics, and especially Ibn al-Mu'tazz, considered him to have been a born poet, and much appreciated his work, which was widely-distributed in the 3rd/9th century.

**ABŪ RAKWA** [see AL-WALĪD B. HISHĀM].

**ABŪ RASHĪD AL-NĪSĀBŪRĪ**, SA'ĪD B. MUḤAMMAD, a theologian of the Mu'tazilī tradition of Baṣra and disciple of 'Abd al-Djabbār al-Hama-

dhānī [q.v.]. Originally a follower of the Mu'tazilī school of Baghdad, Abū Rashīd frequented the lectures of 'Abd al-Djabbār, whose doctrine he came to follow in its entirety, surrendering his former adherence to the teaching of al-Ka'bī and the Baghdadīs. Subsequently, having given up his circle (*halka*) at Nīsābūr, he took up permanent residence at Rayy where, after the death of 'Abd al-Djabbār in 415/1025, he became the acknowledged leader of the Baṣran Mu'tazila. The date of his death is unknown. Abū Rashīd's teaching insofar as it is revealed in the presently available sources, is essentially undistinguishable from that of 'Abd al-Djabbār. His works include (1) *K. al-masā'il fi 'l-khilāf bayn al-Baṣriyyīn wa 'l-Baghdādīyyīn* (Berlin 5125 = Glaser 12), the first part of which was published with a translation by A. Biram, *Die atomistische Substanzlehre aus dem Buch der Streitfragen*, Berlin 1902; a paraphrase of much of the work is found in M. Horten, *Die Philosophie des Abu Raschid*, Bonn 1910. This work (entitled in several of the section headings *al-Masā'il fi 'l-khilāf bayn shaykhinā Abī Hāshim wa 'l-Baghdādīyyīn*) contains rather fulsome expositions of a number of the Baṣrans' philosophical theses, set forth against unelaborated theses of al-Ka'bī, and grouped under fourteen major topics; and (2) *Ziyādāt al-Sharḥ* (cited in *K. al-Masā'il*, fol. 112v<sup>o</sup>), of which a lengthy portion of the first part is published by M. Abū Rīdā under the title *Fī 'l-tawḥīd*, Cairo 1969 and a large part of a later section, though in a different rescension, is found in British Museum ms. Or. 8613. The *Sharḥ* in question is a work of Ibn Khallād, a disciple of Abū Hāshim [q.v.], that appears to have been completed by 'Abd al-Djabbār. Other works, not currently known to have survived, are (3) *Dīwān al-uṣūl*, a lengthy work written for *talīk* at the direction of 'Abd al-Djabbār, divided into two sections, the first philosophical and the second theological, viz. (a) *al-Djauhūr wa 'l-ā'rād* and (b) *al-Tawḥīd wa 'l-aql*; (4) *al-Toḥkīra*; (5) *K. al-Djuz'*; (6) *K. al-Shahwa*; (7) *Masā'il al-khilāf baynanā wa-bayn al-Muḥabbīha wa 'l-Muḍḍibira wa 'l-Khawārij wa 'l-Murḍī'a*; and (8) *Nakd 'alā aṣḥāb al-tabā'i'*.

*Bibliography*: Besides the works cited in the text, see Ibn al-Murtaḍā, *Ṭabakāt al-Mu'tazila*, ed. S. Diwald-Wilzer, Wiesbaden 1969, 116; R. Martin, *A Mu'tazilite treatise on prophethood*, diss. New York University 1976 unpublished; R. Frank, *Beings and their attributes*, Albany 1977, index; and also Brockelmann, S I, 244 and Sezgin, *GAŠ*, ii, 626 f. (R.M. FRANK)

**ABŪ RIYĀSH AL-KAYSĪ**, AḤMAD B. IBRĀHĪM AL-SĤAYBĀNĪ, *rāwī*, philologist and poet, originally from Yamāma, who settled at Baṣra and was famous at the beginning of the 4th/10th century for his exceptional knowledge of the Arabic language, genealogies and ancient poetry. He was a former soldier who had become a civil servant, and had the job of levying dues on the ships coming to 'Aḥbādān. He was totally lacking in education and in tidiness, but his knowledge led to his faults being excused and overlooked. He had a powerful voice, and he spoke in the Bedouin fashion, expressing the *ṣ'rāb*, at a time when this was normally neglected in the spoken language. He was said to pose as a Zaydī. He died in 339/950 (but in 349/960, according to al-Suyūfī, who moreover calls him Ibrāhīm b. Aḥmad).

His clashes with Ibn Lankak (d. 360/970 [q.v.]), who found in his lack of cleanliness a vein of attack easy to exploit, would have been enough to save him from oblivion, but Yākūt, *Uḍabā'*, xix, 6, goes as far as to assert that Ibn Lankak was eclipsed by al-

Mutanabbī (d. 345/965) and by Abū Riyāsh, who both at this time were outstanding. If such an assertion is valid for the first-named poet, it hardly seems justified in regard to the second, since if Abū Riyāsh had been poet of remarkable quality, it is likely that posterity would have preserved his work more carefully; whereas only a limited number of his verses are extant, notably, apart from his replies to Ibn Lankak, a piece in praise of al-Muhallabī [q.v.], which nevertheless drew down on himself the poet's criticising Abū Riyāsh; he himself owed part at least of his fame to al-Tanūkhī (d. 384/994 [q.v.]), who had been his pupil, and to Abu 'l-'Alā' al-Ma'arrī (d. 449/1058 [q.v.]). Abū Riyāsh is said not to have appreciated Abu Tammām's work, but nevertheless wrote a commentary on the latter's *Hamāsa*, which was criticised by al-Kifīfī but used especially by al-Baghdādī (who does not, however, cite it in the list of sources of his *Khizāna*, ed. Cairo, i, 33), and he thought it opportune to put together in his turn an anthology called *al-Hamāsa al-Riyāshīya* (in the art. *HAMĀSA*, the reading *Abū Dimās* taken from the *Fihrist*, ed. Cairo, 120, should be corrected to Abū Riyāsh). This anthology must have enjoyed a certain fame, since al-Ma'arrī did not esteem his reputation damaged by completing a commentary on it, whose title only is known, *al-Riyāsh al-muṣṭanīfī* (Yākūt, *Uḍabā'*, iii, 157, in the biography of Abu 'l-'Alā'; cf. M. Saleh, in *BEO*, xxiii (1970), 278).

**ABŪ SA'D AL-MAKHZŪMĪ**, the name currently given to 'ĪSĀ B. KHALĪD B. AL-WALĪD, minor poet of Baghdad whose fame stems from his clashes with Di'bil [q.v.]. The long dispute between the two poets was clearly a manifestation of the latent conflict between the partisans of Yemen and those of Nizār, and it was probably provoked by the famous *kaṣīda* of Di'bil in praise of the South Arabs ('Abd al-Karīm al-Ashtar, *Shīr Di'bil*, Damascus 1964, No. 212), to which Abū Sa'd replied by a poem in *-rā'* which achieved some fame in its time. After this incident, the Banū Makhzūm might well have closed their door to Di'bil, but the fear which he inspired in them led them at that point to deny to their defender any connection with their clan, and on the advice of al-Ma'mūn, they issued a formal declaration to this effect (*Aghānī*, ed. Beirut, xx, 127, 130). Abū Sa'd, who claimed to be descended from al-Hārith b. Hishām, then had inscribed on his ring *al-'Abd b. al-'Abd*; and al-Djāhīz himself calls him *da'ī Banū Makhzūm* (*Bayān*, iii, 250-1; *Hayawān*, i, 265). The *Aghānī*, which has no special notice on Abū Sa'd, gives in its section on Di'bil (xx, 121 ff.) some details on the two poets' attitudes and on the measures used by the latter expressly to humiliate his opponent. Having, in an epigram, dubbed Abū Sa'd as *Ḳawṣara* (a metonymy denoting a woman, but Ibn *Ḳawṣara* means pariah), Di'bil hired children to chant it around the streets (*Shīr Di'bil*, No. 119; *Aghānī*, xx, 123, 131; Ibn al-Mu'tazz, *Ṭabakāt*, 140), which enraged Abū Sa'd. For his own part, he took care to incite al-Ma'mūn (*Aghānī*, ii, 130) against the poet of the South Arabs who had abused him in one of his poems, and even asked him for authorisation to bring Di'bil's head to the caliph (*Aghānī*, xx, 93, 130, 132); but the caliph refused this request, and advised him to limit himself to replying to the attacks. Di'bil

allegedly even tried to murder his enemy (*Aghānī*, xx, 127); and if the report in *Aghānī*, xx, 125-7, of an apparent reconciliation is authentic, it must indicate Abū Sa'd's duplicity. Various pieces aimed against him have been gathered in *Shi'r Di'bil*, Nos. 68, 81, 96, 119, 223, 235; see also p. 293).

Abū Sa'd was also exposed to attacks from Di'bil's cousin, the son of Abu 'l-Shiṣ (*Aghānī*, xx, 130-1; *Shi'r Di'bil*, 349), but he on his part made al-Ash'ath b. Dja'far al-Khuzā'ī his target, and the latter had Abū Sa'd flogged with a hundred lashes (Ibn al-Mu'tazz, *Tabakāt*, 139-40). In the end he left Baghdad to seek shelter at Rayy, where he died in the caliphate of al-Wāthiq ca. 230/845 (*ibid.*).

It is interesting to note that not only did Abū Sa'd take the trouble to introduce one of his own verses into a poem by Di'bil (*Aghānī*, xx, 124), but also that a certain number of pieces are attributed to one or the other poet at the same time (*Shi'r Di'bil*, 289, 313, 322, 338). As well as the epigrams aimed at his enemies, Abū Sa'd addressed praises to al-Ma'mūn and wrote several pieces glorifying Nizār; the *Aghānī*, xx, 128, even speaks of a *daftar al-Nizāriyyāt*. Di'bil's fame, since his works were spread far and wide, threw Abū Sa'd's work into the shade, although this last is by no means of inferior quality. To believe al-Marzubānī, *Muwaṣṣṣhah*, 329, Abū Tammām would have given half of his own work for a hemistich by Abū Sa'd which he particularly appreciated. Abū Sa'd, who constituted himself as defender of the North Arabs and by that fact also the defender of Sunnism against the Shi'ī Di'bil, at a time of ethnic and religious conflicts, deserves to be no longer ignored by historians of Arabic literature; it happens fortunately that Razzūk Farajī Razzūk has just endeavoured to put together his *Dīwān* (Baghdād, 1971).

**ABŪ SA'ĪD AL-KHAṬṬĀBĪ** [see AL-KHAṬṬĀBĪ].

**ABŪ SA'ĪD AL-SĪRĀFĪ** [see AL-SĪRĀFĪ].

**ABŪ SAYYĀRA**, 'UMAYLA B. AL-'AZĀL B. KHĀLĪD AL-'ADAWANĪ, a personage of the end of the Djāhiliyya, said have been the first to fix the *dīya* or pecuniary composition for murder at 100 camels and the last to lead the pilgrims, either at the departure for 'Arafāt (*ijāda*) or from al-Muzdalifa to Minā (*idjāza*), since the sources disagree on this point, and the more careful authors merely use the expression *dafa'a bi 'l-nās*. This man, who probably owed his *kunya* to this function of his, a privilege of the Kayṣī tribe of 'Adwān (see Ibn al-Kalbī-Caskel, *Tab.* 92 and ii, 142), became proverbial because he is said to have exercised this office, always mounted on the same black ass (which was, however, according to al-Aṣma'ī and others, a she-ass, sometimes further described as one-eyed), for 40 years. As al-Djāhīz amusingly points out (*Hayawān*, i, 139), no-one can doubt the longevity of this animal which, amongst all asses, lived the longest time; it gave rise to a proverb *aṣaḥḥ min 'ayr Abī Sayyāra* "more sturdy than Abū Sayyāra's ass" (al-Maydānī, *Amthāl*, i, 422-3; Abū 'Ubayd al-Bakrī, *Faṣl al-makāl fi sharḥ K. al-Amthāl*, Beirut 1391/1971, 500-1); al-Djāhīz provides

a variant (*Hayawān*, ii, 257), *aṣbar min...* "having greater endurance than...".

Abū Sayyāra is compared, because of his humility, with 'Uzayr [*q.v.*] and with Christ, and his ass is cited by prominent people who preferred this humble form of mount.

**ABŪ SHABAKA**, ILYĀS (usual orthography, Elias Abou Chabakeh), Maronite poet, journalist and translator (1903-47). He was born in Providence, R.I., whilst his parents were travelling in the United States, but he spent all his life in Lebanon, dividing his time between his home in the village of Zūḥ Mikhā'īl (in Kisrawān), from which his family came, and the cafés and editorial offices of Beirut, to which he went each day.

His father held some estates in the region of Khartoum, but in 1914, when he went there, was murdered by bandits. Hence the young orphan had soon to interrupt his studies, especially as the French school at 'Aynūra, where he had been enrolled, was closed by the authorities during the First World War. He then resumed his studies, but never finished them, preferring to complete his education by plunging into reading the Bible and the French Romantics, which early inspired his first literary efforts. He was compelled to earn a living, hence taught for a while, but also contributed to several Lebanese newspapers, did translations, at the request of publishers, of a series of novels and dramas by French authors as varied as Lamartine, Henry Bordeaux, Voltaire, Edmond Rostand, Molière, the Abbé Prevost, Bernardin Saint-Pierre or Choukri Ghanem, and was even employed as a translator in the press and radio services of the French High Commission during the Second World War. He died of leukaemia on 27 January 1947.

The greater part of Abū Shabaka's original work is made up of seven collections of poems. The first, *al-Kithāra* (1926) contains juvenilia which attest at the same time his great inexperience and a distinct poetic talent. This latter is clearly affirmed in *Afā'ī 'l-Firdaws* (1938), in which the poet has gathered together thirteen pieces written between 1928 and 1938. The basic source of his inspiration is love, its transports, its joys and its sufferings, and there can be clearly seen the influence of the French Romantics in this collection, which the native critics regard as one of the master-pieces of Lebanese poetry. Romantic feelings of nature inspire the next *dīwān*, *al-Alhān*, a real hymn to nature as well as being at the same time a poetic description of the life of the Lebanese peasants. The poet reverts to the theme of love with *Nidā' al-kalb* (1944) and *Ilā 'l-abad* (1945). In this very same year, 1945, there appeared *Ghalewā'*, whose title is an anagram of the name Olga, the woman whom he had at last married after ten years of betrothal and who had naturally been his principal muse. Finally, in 1958 Abū Shabaka's friends put together in *Mīn Sa'īd al-ālīha* a number of pieces of occasional verse already published in periodicals.

Abū Shabaka had a deeply religious mind, a tormented soul, and was an enthusiastic reader of the Romantics. He was undoubtedly one of the main representatives of a school which has, in Lebanon,

followed, with a certain amount of side-stepping, a tendency long dormant in the West. This romantic movement is now outmoded in the East itself, but Abū Shabaka's work continues to attract young readers who appreciate pure poetry and have little taste for the politico-social preoccupations of engaged poets, who tend moreover to break loose from classical metres. Abū Shabaka generally respects these last, although he may at times adopt a strophic form or vary the rhymes and metres, as in *Ghalwā'*.

As well as his translations and a great number of articles which he left behind, Abū Shabaka wrote, as one might have expected, a *Lāmarīn* (1935) and a study of comparative literature, *Rawābiṭ al-fikr wa 'l-rūh bayn al-'Arab wa 'l-'Ifrānḡ* (1943). Lastly, a series of portraits of literary and political personalities, which appeared in *al-Ma'rid*, have been gathered together in one volume, *al-Rusūm* (1931).

*Bibliography:* The main studies are a collection of articles about the poet and dedicated to his memory by the most prominent names in contemporary Lebanese literature, *Ilyās Abū Shabaka*, Beirut 1948; Razzūk Faraḡī Razzūk, *Ilyās Abū Shabaka wa-shi'rūhu*, Beirut 1956; and Ḥiyyā al-Ḥāwī, *Ilyās Abū Shabaka, shā'ir al-ḡaḥīm wa 'l-na'im*, Beirut n.d. See also *Anthologie de la littérature arabe contemporaine*, iii, *La Poésie*, by L. Norin and E. Tarabay, Paris 1967, 96-8; A. Miquel, *Réflexions sur la structure poétique à propos d'Elīās Abū Shabaka*, in *BEO*, xxv (1972), 265-74; Salma Khadra Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, ii, 424-52; Bustānī, *DM*, iv, 367-8 (art. by F. Bustānī, with bibl.). A thesis is now in the course of preparation at the Sorbonne on poetic image in the work of Abū Shabaka. (Ed.)

**ABŪ SHĀDĪ**, AHMAD ZAKĪ (1892-1955), Egyptian physician, journalist, writer and poet, a man of an astonishing variety of diverse activities.

Born in Cairo on 9 February 1892, he had his primary and secondary education in his natal city, and then in 1912 went to study medicine in London, where he specialised in microbiology; at the same time, he became especially interested in apiculture and acquired quite an extensive knowledge of Anglo-Saxon culture and life which was to exert a deep influence on his literary production. On returning to Egypt in 1922, he was appointed to do research in microbiology, but also became at the same time busy with many other fields, and soon became secretary of several associations of beekeepers, agricultural industrialists, poultry rearers, etc. Furthermore, he quickly took over at the same time the secretaryship of the *Apollo* group inspired by Aḡmad Shawḡī and Ḳhalīl Muṭrān. It was he who created and directed the journal *Apollo* from 1932 to 1934, at a time when he had just founded three other journals of a totally different nature: *Mamlakat al-naḥl* (1930), *al-Daḡḡī* (1932) and *al-Sinā'at al-zirā'iyya* (1932). All these responsibilities in no way kept Abū Shāḡī from giving talks and lectures, from writing articles on all the subjects which interested him, and above all, from throwing himself into a literary activity which gives the impression of a remarkable breadth. A man like himself, rather too restless, inevitably provoked jealousies and enmities in those circles which were not ready to accept his ideas, especially those on modern poetry. It was perhaps the reactions to his innovations which made him in 1946 decide to emigrate to the United States. He worked on the transmissions of The Voice of America from New York and then Washington, where he died on 12 April 1955.

It is extremely difficult, in this brief notice, to evaluate his role in the evolution of contemporary Arabic poetry and to enumerate and classify his expositions of his ideas and the totality of his literary work. The latter is largely composed of poetry and theatrical works, and is characterised at base by an inspiration which is primarily Egyptian, both Pharaonic and Arab. He embarked on almost every poetic genre, at times giving himself up to romanticism and at times to symbolism, and even went so far as to found in 1936 an ephemeral journal called *Adabī* "My literary work". With regard to form, Abū Shāḡī used the framework of the *muwawshshah* [q.v.] and other strophic structures, but he was above all the proponent of blank verse (*al-shi'r al-mursal*) and of free verse (*al-shi'r al-hurr*), under the simultaneous influence of Anglo-Saxon poetry and of that of the *mahḡjar*, and he tried to launch a literary movement in this sense.

In various commentaries which accompanied his collections, as also in his articles explaining his ideas and his work of criticism *Masrah al-adab* (Cairo 1926-8), he insisted on the primordial importance in poetry of metre; he freed himself from the fetters of rhyme, but respected up to a certain point classical metrics at the same time mixing different metres in one and the same poem (on this question and on Abū Shāḡī's influence, see S. Moreh, *Free verse (al-shi'r al-hurr) in modern Arabic literature: Abū Shāḡī and his school, 1926-46*, in *BSOAS*, xxx/1 (1968), 28-51).

If he had enemies, he also made friends and admirers who busied themselves in collecting together his poetry into more or less coherent collections. Hence there appeared in this way *Miṣriyyāt* (1924); *al-Shafak al-bākī* (1926); *Amīn wa-narīn au ṣuwar min shi'r al-shabāb* (1925), on the initiative of Ḥ.Ṣ. al-Djaddāwī; *Shi'r al-wiḡḡān* (1925), on the initiative of Muḡ. Shubḡī; and *al-Muntakhab min shi'r Abī Shāḡī* (1926) by 'Abd al-Ḥamid Fu'ād.

As for the *dūwāns* published by Abū Shāḡī himself, the main ones of these are *Waḡan al-Farā'ina* (1926); *Ashī'a wa-zilāl* (1931); *al-Shu'la* (1933); *Alyaf al-rabī'* (1933, with an introduction by Ḳhalīl Muṭrān and others); *Aḡḡānī Abū Shāḡī* (1933); *Andā'* *al-faḡīr* (1934: poems of his youth); *al-Yanbū'* (1934); *Fawk al-'ubāb* (1935); *al-Kā'in al-ḡānī* (1935); *Awḡad al-nā'ī* (Alexandria 1942); and *Min al-samā'* (New York 1949). There must also be still further unpublished collections of poems written in America.

As well as his *dūwāns*, Abū Shāḡī left behind some fifteen novels and theatrical pieces whose Pharaonic and Arab inspiration is comparable with that of his poetry and in which the use of blank verse is not uncommon: *Zaynab, nafaḡāt min shi'r al-ghina'* (1924); *Mafkharat Rashīd* (1925); *'Abduh Bek* (1926); *al-Āltha* (1927, a symbolist opera); *Iḡsān* (1927, an Egyptian drama); *Ardashīr* (1927, an opera); *Akhnaton* (1927, an opera); *Néfertiti*; *Mā'shūkāt Ibn Ṭūlūn*; and *al-Zibbā' malikat Tadmur* (1927); *Bint al-Sahrā'* (1927, an opera); *Ihtidār Imrī' al-Kays*; *Ibn Zaydūn fī sidjinihi*; *Bayrūn wa-Tīrīz*; and *Mahā'* (a love story).

It is not possible here to speak at length about Abū Shāḡī's scientific works, but one should mention that he was at the same time the theoretician of free verse and the promoter of apiculture in Egypt, notably with his *Tarbiyat al-naḥl* (1930). Not forgetting that he was a physician, he also wrote *al-Ṭabīb wa 'l-mā'mal* (1928); and not forgetting either that he was a Muslim, he explained why he was a believer in his *Limā anā mu'min* (1937) and published in the year he died *al-Islām al-ḡayy*, all of which had not prevented him from praising freemasonry in

his *Rūh al-māsūniyya* (1926). Finally, one should mention his verse translation of the quatrains of 'Umar Khayyām and Ḥāfiẓ (1931), as well as the one of Shakespeare's *The Tempest*.

This brief survey can only give a partial idea of an exceptional personality, one who was discussed and criticised, but also admired, and who merits particular interest.

*Bibliography:* In addition to S. Moreh's article, the main monographs on him are Muḥammad 'Abd al-Ghafūr, *Abū Shādī fi 'l-mīzān*, Cairo 1933; I.A. Edhem, *Abushady, the poet. A critical study with specimens of his poetry*, Leipzig 1936; and Muḥammad 'Abd al-Fattāh Ibrāhīm, *Aḥmad Zakī Abū Shādī, al-insān al-muntadī*, Cairo 1955; See also Bustānī, *DM*, iv, 373-4 (with bibliography); and N.K. Kotsarev, *Pisateli Egipta*, Moscow 1975, 31-4 (with bibl.), and index; Salma Khadra Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, ii, 370-84.

(Ed.)

**ABŪ SHAKŪR BALKHĪ**, born possibly in 300/912-13, one of the most important Persian poets of the Sāmānid period. 'Awlī's *Lubāb al-albāb* attributes to him a *mathnawī* in the *mutakārib* metre called the *Aḡarīn-nāma*, completed in 336/947-8 and probably dedicated to the *amīr* Nūh b. Naṣr (331-43/943-54). Nothing is known about his life, but allusions in his verses suggest that he was a professional poet and had known setbacks in life. The only surviving parts of his work are short fragments and isolated verses quoted in dictionaries, anthologies and a few other works. These comprise some 60 lyrical distichs and some fragments of *mathnawīs* in various metres, but above all, about 140 *mutakārib* distichs which must belong to the *Aḡarīn-nāma*, to which one should perhaps add almost 175 distichs cited anonymously in the *Tuḥfat al-mulūk* of 'Alī b. Abī Ḥafṣ Iṣfahānī (7th/13th century), which seem to be extracts from the same work. This last was apparently a collection of anecdotes illustrating moral sentiments; maxims and moral sayings are prominent in the extant verses of Abū Shakūr, who was certainly the chief heir amongst the Persian poets of the 4th/10th century of the wisdom literature of pre-Islamic Iran. He must have enjoyed a great renown in his time; Manūčehrī mentions him as one of the ancient masters, along with Rūdākī and Shahīd Balkhī.

*Bibliography:* There is an edition of the fragments with a French translation, together with a notice on the poet and a bibliography, in G. Lazard, *Les premiers poètes persans*, Tehran-Paris 1964, i, 94-126, ii, 78-127; see also J. Rypka, *History of Iranian literature*, Dordrecht 1968, index. (G. LAZARD)

**ABŪ SHURĀ'A**, AḤMAD B. MUḤAMMAD B. SHURĀ'A AL-KAYSĪ AL-BAKRĪ, minor poet of Baṣra who, during the course of the 3rd/9th century, took part in the social and intellectual life of his native town, and hardly left it, it seems, except to make the Pilgrimage or to visit places very close at hand. For the rest, his life is poorly documented. It seems unlikely that he was able, as Ibn al-Mu'tazz asserts (*Tabakāt*, 177-8), to praise al-Mahdī (158-69/775-85) during the latter's lifetime, to have reached an advanced age in al-Ma'mūn's time and to die in the caliphate of al-Mutawakkil (232-47/847-61). In the first place, the *Aghānī* speaks of his relations with Ibrāhīm b. al-Mudabbir (d. 279/892-3 [see IBN AL-MUDABBIR]) at Baṣra, where the latter, according to his own words, acted as governor (it is not impossible that he was governor there before 252/866, but he is only mentioned as tax-collector in Ahwāz in ca. 250/

864). One item of information concerning Abū Shurā'a's meeting with Dī'bil (d. 246/860 [q.v.]) in Ahwāz is of no help. Moreover, al-Djāhīz, so far as is known, cites him only once (*Rasā'il*, ed. Hārūn, ii, 314), repeating an epigrammatic verse aimed at al-Sidrī (cf. *Aghānī*, xxii, 435), whilst Abū Shurā'a's name would certainly figure more often if he had been older. Moreover, several other authors cite five fairly mediocre verses of his (see Pellat, *Milieu*, 166) which he is said to have composed on al-Djāhīz's death (255/868). Finally, his son Abu 'l-Fayyād Sawwār, who was also a poet, went to Baghdād after 300/913, and it was he who indirectly furnished Abu 'l-Farajī with most of the information about his father. All these pieces of information lead one to think that Abū Shurā'a died after 255 at a considerable age.

Although he was reputed to have written epistles and to have delivered eloquent discourses, he was mainly known as a versifier, and Abū Bakr al-Šūlī even deigned to gather his works into a *dīwān* (*Fihrist*, 216). According to the *Aghānī*, his poetry was in the Bedouin tradition and fairly obscure, but the part of it now extant does not allow of a categorical judgement. As well as verses inspired by his ruinous generosity, he wrote mainly some fairly coarse epigrams, an attractive poem on Ibn al-Mudabbir's departure and some occasional verses which reflect the idle way of life led in Baṣra at this time by the poets, always lying in wait for some reward or ready to heap ridicule on some patron who had disappointed them.

*Bibliography:* In addition to the references given above, see *Aghānī*, ed. Beirut, xxii, 178-9, 429-50; Marzubānī, *Muwashshah*, 219; idem, *Mu'djam*, 431 ff.; Khaṭīb Baghdādī, *Tārīkh*, xii, 219-20; Mubarrad, *Kāmil*, 306; Sandūbī, *Adab al-Djāhīz*, 195; Bustānī, *DM*, iv, 383-4.

(CH. PELLAT)

**ABŪ SINBIL**, an ancient village on the western side of the Nile between the first and second cataracts, in lat. 22° 22' north and long 31° 40' east. It lies ca. 175 miles south of Aswān. The French discoverers of the two huge rock-hewn temples built by Ramses II (1304-1237 B.C.) referred to it as Ipsamboul at the beginning of the 19th century. The name Abū Sinbil is a popular arabicisation ("father of an ear of corn") of the local Nubian designation, which is also known by many other variants in the spelling, e.g. Abū Simbil/Simbūl/Sunbul/Sunbūl.

Abū Sinbil later became known as Farīk in the Official Government Register, being one of the villages within the financial jurisdiction of the Ibrīm (Piromi, ca. 35 miles north of Abū Sinbil) district until 1272/1855 when it became a separate administrative unit. In 1917 the name Farīk was dropped, and the village was given its former name, Abū Sinbil. Its irrigated land extends over several hundreds of acres.

Abū Sinbil became famous as the site of two rock temples which gave it its special artistic and religious significance. The temples, which represent some of the most spectacular examples of ancient Egyptian architecture, were unknown to the outside world until the discovery of the Smaller Temple by J.L. Burckhardt in 1813, and its opening by the Italian engineer Giovanni Belzoni in 1817.

The Great Temple of Abū Sinbil is carved in the rock and stands 33 m. high and 38 m. wide. The façade shows four colossal seated figures of Ramses II, two on either side of the entrance to the temple, each measuring 20 m. high. Ramses II dedicated this temple to the sun gods Amon Rē of Thebes and Rē-Horakhti of Heliopolis.

Less than 50 yards away was constructed the Smaller (northern) Temple, which was dedicated to Queen Nefertari, wife of Ramses II, in homage to the goddess Hathor. Its façade is decorated with six 35-foot statues of the Pharaoh and his wife.

The Abū Sinbil cliff had been buried by large sand drifts, which covered the Great Temple until its rediscovery by Burckhardt. But the Smaller Temple, which had not been buried, served the inhabitants of the nearby village Bilyānī (ca. 5 miles from Abū Sinbil) as a refuge from marauding Bedouin tribes from Nubia. Only modern Arab authors give particulars about the Abū Sinbil temples, based on French sources, and reports of the French archeological expedition which undertook the excavations at Abū Sinbil in the 19th century.

The original site was submerged by the Nile in 1966 as a result of the building of the Aswān High Dam. The two temples were salvaged from the rising waters of the Nile by sawing them into sections and re-erecting them on top of the rock face from which they were originally hewn.

(R.Y. EBIED)

**ABŪ TAGHLIB** FAḌL ALLĀH AL-ḠAḌANFAR AL-ḤAMDĀNĪ, 'UDDAT AL-DAWLA, Ḥamdānīd *amīr* of MOSUL [see ḤAMDĀNIDS] and son of the *amīr* al-Ḥasan Nāṣir al-Dawla and a Kurdish mother, Fāṭima, born 328/940. He seems to have had a certain authority over his younger brothers, and when their father grew old, Abū Taghlib seems to have obtained tacitly from them, except for Abu 'l-Muzaḥfar Ḥamdān, who was born of another mother, authority to depose their father and imprison him in the stronghold of Arduṣuḥt in the Djabal Djudī to the north-east of Mosul. This operation was carried out with the complicity of Fāṭima in Djumādā I 356/beginning of May 967, and Nāṣir al-Dawla died there on 12 Rab' I 358/3 February 969. As this act of deposition had been carried out without Ḥamdān's agreement, and Ḥamdān controlled the towns of Niṣībīn, Māridīn and Raḥba, with the addition of Rakka, seized on the death of the Ḥamdānīd of Aleppo Sayf al-Dawla, Abū Taghlib secured support from the Būyid *amīr al-umara'* in Baghdad and master of the caliphate Bakhtiyār, and attacked Ḥamdān, forcing him to surrender Rakka and evacuate Raḥba.

Abū Taghlib continued the war against Ḥamdān, but the latter now obtained Bakhtiyār's support and re-entered Raḥba, whilst certain of Abū Taghlib's other brothers now turned on him and took Ḥamdān's side. But a new offensive by him forced Ḥamdān to flee for refuge with the Būyid in Baghdad. He now was able to consolidate his power in Mosul, seizing his brother's possessions and endeavouring to unite under his authority the territories of the Ḥamdānīd amirate of Aleppo held by his cousin, Sayf al-Dawla's son, and obtaining from the caliph al-Muṭ' lillāh an investiture patent for the united amirates of Mosul

and Aleppo. He extended his authority over Diyār Bakr and Mayyāfāriḳīn, where he left Sayf al-Dawla's mother and his sister Djāmīla with a certain amount of authority, then seized Ḥarrān and Diyār Muḍar (359-60/969-70). Recalling that his father Nāṣir al-Dawla had been *amīr al-umara'* in Baghdad, whence he had been dislodged in 334/945 by the Būyid Mu'izz al-Dawla, Bakhtiyār's predecessor, Abū Taghlib now dreamed of recovering this rôle in Baghdad and becoming the real master of the caliphate. For his part, Bakhtiyār, with whom Ḥamdān was now living, was urged by the latter into warfare with Abū Taghlib.

However, Bakhtiyār preferred to make an entente with Abū Taghlib and to conclude an agreement with him confirming this last in his possessions, including Diyār Muḍar and Diyār Bakr, and this was sealed by Abū Taghlib's marriage with one of Bakhtiyār's daughters. It is probable that one of the reasons behind this agreement was the threat to both parties from Fāṭimid ambitions. Hence both of them gave help to the Fāṭimids' enemy, the Karmaṭi chief Ḥasan al-A'sam, who received subsidies from them and was accordingly with their help briefly able to seize Damascus. Nevertheless, in the end Bakhtiyār yielded to Ḥamdān's solicitations. In 363/973 he marched against Mosul and took up a position at Dayr al-A'ā to the north of the town. Abū Taghlib evacuated the town and made a diversion southwards as far as the gates of Baghdad, provoking much excitement there. He then retired towards Mosul, and Bakhtiyār, though numerically stronger, entered into negotiations with Abū Taghlib, who obtained an advantageous agreement. On returning to Baghdad, and considering Abū Taghlib's position as over-advantageous, he launched another expedition against Mosul. Again, negotiations were begun; Abū Taghlib agreed to pay tribute to the Būyid, and received from the caliph the *lakab* of 'Uddat al-Dawla "Support of the dynasty" in 974. His relations with Bakhtiyār remained friendly, and he gave support to the latter when the Būyid had to face a rebellion of his Turkish mercenary troops in Baghdad itself.

The rebellion of the Turkish troops had led Bakhtiyār to appeal also to the head of the family, Rukn al-Dawla, who authorised 'Aḍud al-Dawla, ruler of Fārs, to march on Baghdad, thus favouring the ambitions of the latter, who dreamed of securing 'Irāk. Abū Taghlib, pressed by the Turks who had overthrown Bakhtiyār, had left Baghdad. 'Aḍud al-Dawla expelled the Turks, but now received the total submission of Bakhtiyār, whom he forced to abdicate, and also made an agreement with Abū Taghlib, upon whom depended the supply of provisions for the city; the treaty previously made between Abū Taghlib and Bakhtiyār was renewed and the Ḥamdānīd excused from the payment of tribute. However, Rukn al-Dawla showed his opposition to 'Aḍud al-Dawla's treatment of Bakhtiyār and recalled 'Aḍud al-Dawla; Bakhtiyār accordingly resumed power in Baghdad. But when Rukn al-Dawla died in 366/977, 'Aḍud al-Dawla, who had never renounced his ambitions in 'Irāk, returned to Baghdad in November 977.

Abū Taghlib's position now appeared firm. But Ḥamdān, who had always remained in Bakhtiyār's entourage, persuaded the latter to attack Mosul, and Bakhtiyār advanced as far as Takrīt. Abū Taghlib acted skilfully. He promised to aid Bakhtiyār in recovering Baghdad and getting free of 'Aḍud al-Dawla, provided he would surrender to him Ḥamdān, and he marched on Baghdad in concert with Bakhtiyār. But 'Aḍud al-Dawla defeated them near Sāmarrā and captured Bakhtiyār, whilst Abū Taghlib fled. 'Aḍud

al-Dawla entered Mosul itself in June 978 and refused to negotiate in any way with Abū Taghlib. The latter fled to Nišībīn and thence to Mayyāfārīkīn, pursued by the Būyid troops. Deciding not to go to Bitlis, where his sister Djamīla had taken refuge, he entered the Kurdish mountain region of the Tigris affluent of the Khābūr al-Ḥasaniyya, perhaps with the hope of shutting himself up in the Ḥamdānid stronghold of Ardumush. But in the end he decided to make for the region of the Tigris sources and the great loop of the Euphrates, where was the Byzantine rebel Sklēros, with whom he had been in contact and to whom he had promised help against the imperial troops. He was pursued by 'Aḍud al-Dawla's forces, and had an engagement with them at the beginning of 368/August 978 in the mountain region near Ḥiṣn Ziyād (Kharpūt), territory held by Sklēros. He was victorious in this, and stayed for some time at Ḥiṣn Ziyād. He hoped for a victory by Sklēros over the imperial army and help from the latter to reconquer Mosul, but Sklēros was subsequently beaten. Abū Taghlib arrived at Āmid in Diyār Bakr, having learnt that Mayyāfārīkīn, held by his supporters, had been captured by the Būyids; he now fled with Djamīla to Raḳqa, abandoning Diyār Bakr and Diyār Rab'ā to 'Aḍud al-Dawla.

The Būyid amīr rejected attempts by Abū Taghlib to negotiate with him, and he was unable to count on any help from his cousin Abu 'l-Ma'ālī Sa'd al-Dawla in Aleppo, who had just recognised the suzerainty of 'Aḍud al-Dawla. He now further abandoned Diyār Muḍar, which had till then remained under his control, and decided to make for Fātimid territory and go to Damascus, not daring however, to go to Egypt itself. Abandoned by various of his brothers, exposed to the hostility of both the Fātimid troops and those of the rebel master of Damascus, Kassām, he attempted, with the support of one of the Arab tribes of Syria, the 'Ukayl, to capture Ramla in Palestine from the Ṭayyī Mufarrīdj b. Daḡfal b. al-Djarrāh. But he clashed with Fātimid troops, and in Ṣafār 369/end of August 979 he and his allies were defeated and he was handed over to Mufarrīdj, who, instead of delivering him to the Fātimid commander, killed him with his own hand. It seems that Abū Taghlib was killed at the instigation of 'Aḍud al-Dawla, whom Mufarrīdj had recognised as suzerain in 371 (see Madelung, in *JNES*, lxxvi (1967), 22, n. 29).

Such was the end, at the age of 40, of the last Ḥamdānid of Mosul, of Naṣir al-Dawla's son, and of the Ḥamdānid amirate of Mosul, where new powers were now installed but where memories of the Ḥamdānids long remained in the minds of the local population.

*Bibliography:* See for this, M. Canard, *Histoire de la dynastie des Ḥamdānides de Djazira et de Syrie*, I, Algiers 1950, where the vicissitudes of Abū Taghlib's career are set forth in ch. vi, 541-72.

(M. CANARD)

**ABU 'L-ṬAMAḤĀN AL-KAYNĪ**, ḤANZALA B. AL-ŠARĪKĪ, *Mukhadram* Arab poet, considered to be one of those endowed with an unduly long life (al-Sidjistānī, *K. al-Mu'ammariin*, ed. Goldziher, in *Abh. zur arab. Philologie*, ii, 62, asserts that he lived 200 years). During the *Djahiliyya* he led the life of a brigand or *ṣulūk* [q.v.] and of a libertine (especially, at Mecca, in the company of al-Zubayr b. 'Abd al-Muṭṭalib), and he does not seem to have altered his ways in any measure after his conversion to Islam. He is said to have been killed at Adjnādayn [q.v.] in 13/634, but F. Bustānī (*DM*, iv, 408-9) believes that

he died ca. 30/651, whilst the *Aghānī* asserts that he spent his last years among the Banū Šamkh of Fazāra, with whom he had sought refuge from the efforts of the authorities to arrest him for a crime committed by him. This source (ed. Beirut, xiii, 3-13) also recounts adventures of his whose authenticity raises serious doubts. It tells how Abu 'l-Ṭamaḥān managed to set free Ḳaysaba b. Kulthūm (on whom see Ibn al-Kalbī-Caskel, Tab. 240 and ii, 464), who had been captured during the course of the pilgrimage; and it dilates on his own capture during a battle between two groups of the Ṭayyī' (Baḍjīla and al-Ḡhawṭh) and his ransoming by Buḍjayr b. Aws al-Ṭā'ī, who set him free and received eulogies in verse.

It is difficult to get an idea of Abu 'l-Ṭamaḥān's poetic work, since although this was collected together into a *Diwān* by al-Sukkarī (*Fihrist*, 224), only fragments of this have been preserved, and this only thanks to their fame, which led to several of them being set to music. The authenticity of the most-oft cited verse (metre *ṭawīl*, rhyme *ṭhakībūh*) should nevertheless be regarded with caution; it appears in *Djāhiz* (*Ḥayawān*, iii, 93) in a fragment attributed to Laḳīṭ b. Zurāra and given immediately after that of Abu 'l-Ṭamaḥān, of which it forms part in the other sources; Ibn Ḳutayba (*Uyūn*, iv, 24; *Šu'ūr*, 692) expressly attributes it to Laḳīṭ.

Finally, the existence of at least three poets bearing this same *kunya* (see al-Āmidī, *Mu'talif*, 149-50) should demonstrate the need for the greatest prudence.

*Bibliography:* In addition to references given in the text, see *Djāhiz*, *Bayān*, i, 187, iii, 235, 237; idem, *Ḥayawān*, iv, 473; Ibn Ḳutayba, *Šu'ūr*, 348-9; Buhturī, *Ḥamaṣa*, 294; Abū Tammām, *Ḥamaṣa*, ii, 77-8, 258; Ibn al-Kalbī-Caskel, ii, 298; Mubarrad, *Kāmil*, 46-7, 100, 436; Ibn Durayd, *Ishṭikāk*, 317; *Nakā'id*, ed. **ABU 'L-ṬAYYIB AL-LUGHAWĪ**, 'ABD AL-WĀḤID B. 'ALĪ AL-ḤALĀBĪ, grammarian of the 4th/10th century, interested above all in lexicography (*ilm al-lughā*), whence his surname. He came originally from 'Askar Mukram in Khūzistān, but left his natal town for Baghdād, where he studied under Abū 'Amr al-Zāhid and Abū Bakr al-Šulī. Then he moved to Aleppo, whose ruler, Sayf al-Dawla, was attracting scholars from all disciplines. It was thus in Aleppo that Abu 'l-Ṭayyib found himself competing with the grammarian Ibn Khālawayh [q.v.], who had followed the same masters at Baghdād as himself and who had become tutor to Sayf al-Dawla's son. Abu 'l-Ṭayyib was killed in the massacre by the Byzantines when Aleppo was captured in 351/962. His most famous pupil was Ibn al-Ḳarīh, to whom Abu 'l-'Alā' al-Ma'arrī presented his *Risālat al-Ḡhufiān*, giving there information on Abu 'l-Ṭayyib's works, many of which, he stated, perished in the sack of Aleppo. His extant works include the following: *K. Marātib al-naḥwīyyīn*, ed. M. Abu 'l-Faḍl Ibrāhīm, Cairo 1955; *K. Šadjar al-durr*, ed. M. 'Abd al-Djawād, Cairo 1957; *K. al-Ibdāl* and *K. al-Muthannāwī*, ed. Tanūkhī, Damascus 1960; *K. al-Itbā'*, ed. Tanūkhī, Damascus 1961; and *K. al-Addād*, still unpublished. In regard to the *K. al-Furūḳ*, cited by al-Suyūfī in his *Muzḥir*, i, 447, this seems to have been lost.

*Bibliography*: Brockelmann, S I, 190; Kahhāla, *Mu'djam*, vi, 210; 'Izz al-Dīn al-Tanūkhī, in *MMIA*, xxix, 175-83.

**ABŪ USĀMA AL-HARAWĪ**, **ḌJUNĀDA B. MUḤAMMAD**, grammarian and lexicographer of the 4th/10th century, a native of Harāt in **Ḳhurāsān**. He was the pupil of Abū Maṣṣūr al-Azharī and Abū Aḥmad al-'Askarī, whose works he transmitted. After residing at **Shīrāz**, where he frequented the circle of the vizier the Ṣāhib Ibn 'Abbād [*q.v.*], he went off to Cairo. There he taught in the Nilometer mosque (*Ḍjāmi' al-Miḳyās*) and, in company with the traditionist 'Abd al-Ḡhanī b. Sa'īd al-Miṣrī and the grammarian 'Alī b. Sulaymān al-Anṭākī, he held lectures at the House of Knowledge (*Dār al-'Ilm*). He was subsequently accused of preventing the rising of the Nile by casting spells on it, condemned to death by the caliph al-Ḥākim and executed in 399/1009. His biographers only provide the name of one of his pupils, that of Abū Sahl al-Harawī, and they attribute no works to him; however, a commentary by him, on the *Mu'allaka* of Imru' al-Ḳays, has come down to us.

**ABU 'L-WALĪD AL-BĀDJĪ** [see AL-BĀDJĪ].

**ABU 'L-YUMN AL-'ULAYMĪ** [see MUḌḌIR AL-DĪN].

**ABŪ ZA'BAL**, an ancient village in Lower Egypt ca. 15 miles north of Cairo. Its original name was al-Ḳuṣayr, under which designation it is mentioned by Ibn Mammātī (d. 606/1209) in his *Kitāb Kawānīn al-dawāwīn*. It became known as Abū Za'bal from the end of the Mamlūk period, the first record of this name being found in a deed of *wakf* granted by **Ḳhāyir Bey al-Ḍjarkasī**, Ottoman governor of Egypt 923-8/1517-21, dated 10th Radjab 926. It had a population of approximately 2,000 people towards the end of the 19th century.

In 1827 Muḥammad 'Alī founded a School of Medicine in Abū Za'bal, which was chosen because of its convenient location near the barracks of his army. The School was attached to the largest military hospital in Egypt, which had been built in Abū Za'bal in 1825. Muḥammad 'Alī appointed the Frenchman Clot Bey (then Physician and Surgeon-in-Chief of the Egyptian army) as its first director. In order to overcome the difficulty posed by the language barrier between the students and the French and Italian professors, Clot Bey appointed a team of interpreters who were also entrusted with the translation into Arabic of the necessary medical textbooks. The first of these translations, *al-Kawāl al-ṣarīḥ fī 'ilm al-tashrīḥ*, was printed at the press of the Medical School of Abū Za'bal (also founded by Muḥammad 'Alī) in 1248/1832 (the first book to be printed in Abū Za'bal).

To the Abū Za'bal School of Medicine were later added the School of Pharmacy (1830), the School of Veterinary Medicine (1831) and the School of Obstetrics (1832). The Medical School was transferred in 1837 to its present site at **Ḳaṣr al-'Aynī** (Cairo), a palace built in 870/1466 by Aḥmad b. al-'Aynī, grandson of the Sultan **Ḳhushkadam**.

The area around Abū Za'bal was the scene of considerable military activity during the Napoleonic occupation, Abū Za'bal itself being twice attacked by the French troops. When Napoleon's troops demanded an impost for the upkeep of the military from the people of Abū Za'bal on the 23 Ṣafar 1213/

7 August 1798, they refused to give it, and as a result the French sacked the village and set it on fire. Five months later the French attacked Abū Za'bal again and seized all the cattle and the beasts of burden (on 30 Radjab 1213/11 January 1799). **Al-Ḍjabartī** also records that Abū Za'bal was looted on 6 **Ḍjumādā I** 1207/23 December 1792 by Murād Bey and his Mamlūk soldiers, who killed about 25 of the villagers, and arrested and imprisoned the *shaykhs* of Abū Za'bal.

Today Abū Za'bal is well-known for the large prison situated there.

*Bibliography*: 'Abd al-Raḥmān al-Ḍjabartī, *'Adjā'ib al-āthār fī 'l-tarāḏīm wa 'l-akhbār*, Būlāk 1297/1880, ii, 239-40, iii, 13, 14, 38; Muḥammad Amīn al-Ḳhāndjī, *Mundjam al-'umrān fī 'l-mustadrak 'alā mu'djam al-buldān* [of Yāqūt al-Rūmī], Cairo 1325/1907, i, 109; Aḥmad 'Izzat 'Abd al-Ḳarīm, *Tārīkh al-Ta'lim fī 'aṣr Muḥammad 'Alī*, Cairo 1938, 251-316; Naguib Mahfouz Pasha, *The history of medical education in Egypt*, London 1947, 14-16; **Ḍjamāl al-Dīn al-Shayyāl**, *Tārīkh al-Tarḏjama wa 'l-ḥaraka al-thakāfiyya fī 'aṣr Muḥammad 'Alī*, Cairo 1951, *passim*; Abu 'l-Futūḥ Ridwān, *Tārīkh Maṭba'at Būlāk*, Cairo 1953, 354-8; Muḥammad Ramzī, *al-Kāmūs al-ḏjughrāfī lil-buldād al-Miṣrīyya*, ii/1, Cairo 1954-5, 31. (R.Y. EBIED)

**ABŪ ZAKARIYYĀ' AL-FARRĀ'** [see AL-FARRĀ'].

**ABŪ ZAYD AL-ḲURASHĪ**, MUḤAMMAD B. ABI 'L-ḲHATTĀB, *adīb* of the end of the 3rd/9th or of the beginning of the 4th/10th century, and known only as the author of the *Ḍjamharat ash'ār al-'Arab* (ed. Būlāk 1308/1890). No personal details about the author can be derived from this collection, and the only relevant data are two *isnāds*, one (p. 13) going back to al-Haytham b. 'Adī (d. ca. 206/821 [*q.v.*]) through two intermediaries, and the other (p. 14) going back to Ibn al-'Arābī (d. 231/846 [*q.v.*]) through one intermediary; these *isnāds* would thus allow us to date the *Ḍjamhara* approximately to the end of the 3rd century. The mention (p. 165) of the *Ṣahāḥ* of al-Ḍjawharī (d. ca. 398/1107-8 [*q.v.*]) is probably a reader's note incorporated in the text by a copyist. Another problem is raised by the references to a certain Mufaḍḍal, falsely identified (p. 1) with al-Mufaḍḍal al-Dabbī (d. ca. 170/786 [*q.v.*]), for this cannot be a case here of the author of the *Mufaḍḍaliyyāt*; Brockelmann surmised that Abū Zayd al-Ḳurashī and al-Mufaḍḍal might be two pseudonyms referring to Abū Zayd al-Anṣārī (d. 215/831 [*q.v.*]) and to the **Ḳūfan** anthologist, but this hypothesis hardly seems tenable. A.J. Arberry, for his part (*The seven odes*, London 1957, 23) prudently suggests, but without insisting upon this, an identification of Abū Zayd with 'Umar b. **Shabba** (d. 262/875-6 [*q.v.*]).

After an introduction containing observations on the value of poetry for the philological point of view and on Muḥammad's interest in it, a comparison between the language of the **Ḳur'ān** and that of the poets, a judgment on the merits of these last and some fragments attributed to Adam, Satan, the angels, the **ḏjinn**, etc., the *Ḍjamhara* comprises 49 *kaṣidas* written by 49 poets of the *Ḍjāhiliyya* and the beginnings of Islam. These poems are divided into 7 groups, each of which should comprise 7 poets, but 'Antara, mentioned in the introduction as one of the 7 of the second group, figures in the end (in the printed edn., though not in all the mss.) amongst the authors of the *mu'allakāt*, so that this particular group comprises 8 poems and the following one 6 only. Abū Zayd chose the following terminology: *mu'allakāt*, *muḍjamharāt*, *muntakayāt*, *mudḥahabat* /

*mudh̄bahāt*, *marāṭhī*, *mashūbāt* and *mulhamāt*. He certainly is lacking in any critical spirit, but his *Djamhara*, which possesses no outstanding originality, offers some interesting variants and also the advantage of grouping together for the first time the *mu'allakāt* [q.v.] and of reflecting the public's taste at a time when the *ruwāt* had gathered together a considerable number of poetic productions and it had become convenient to select and to classify those which would ultimately constitute the Arabic humanities and, on the whole, the classical ideal.

**ABŪ ZAYD AL-SĪRĀFĪ** [see **AKHBĀR AL-SĪN WA'L-HIND** in Suppl.].

**ABŪ ZUR'Ā**, the *kunya* by which the Shāfi'ī scholar and jurist 'AḤMAD B. 'ABD AL-RAḤĪM, called **IBN AL-'IRĀQĪ**, was best known. Abu Zur'ā, the son of a prominent Shāfi'ī jurist of Kurdish origin, was born in Cairo on 3 Dhu 'l-Ḥijja 762/14 October 1361. His mother was the daughter of a Mamlūk officer. For a time his father was the *kādī* of Medina. Abū Zur'ā studied in Cairo, Damascus, Mecca and Medina, and completed his education at an early age. He began his career as a *mudarris*, teaching *hadīth* and jurisprudence in various *madrasas* in Cairo. Appointed deputy Shāfi'ī *kādī* of Cairo, probably in 792/1390, he held this and other judicial positions outside the capital for twenty years, before he returned to resume his original function as *mudarris*. In 822/1419, he was summoned by Sultan Ṭaṭar to assume the position of Shāfi'ī grand *kādī* of Cairo—the foremost judicial office in the Mamlūk empire. The strict and honest manner in which he discharged his functions as chief magistrate won him the enmity of powerful Mamlūk *amīns*, who pressured Ṭaṭar's successor, Barsbāy, into dismissing him from the office in 825/1421, after a tenure of barely fourteen months. Abū Zur'ā died on 27 Sha'bān 826/5 August 1423, a few months after his dismissal.

At a time when corruption in the judiciary was rampant, and when prominent jurists were spending large fortunes to secure high judicial appointments, Abū Zur'ā stands out as a jurist and *kādī* of unusual integrity. A scholar of great prominence, he was also renowned for his personal modesty; upon his appointment as grand *kādī*, he proceeded to exercise his functions in his ordinary clothes, and considerable efforts had to be exerted before he was persuaded to don the customary ornamental robes for the dignity of the office. His contemporaries were unanimous in the praise of his character, learning and command of the Arabic language. He left a number of works on *hadīth* and jurisprudence, which were mostly commentaries on earlier works; he also wrote on other subjects and left a compilation of obituaries for the years 762-93 A.H. (now lost), an anthology of anecdotes about hypocrites (*Akhbār al-mudallisīn*), a commentary on an *urdu'za* (versified tract) on algebra, and some scattered verse.

(K.S. SALIBI)

**ABYAD**, GEORGES (b. Beirut, 5 May 1880; d. Cairo, 21 May 1959), a Syrian Christian who became a prominent protagonist of the modern Egyptian theatre. After acting in school-plays, Abyad attempted a career as a clerk; unhappy with this work, he moved in 1898-9 to Egypt, then the centre of the young theatre in Arabic. In Alexandria and Cairo, he attended theatrical performances, both local and foreign, then, with a group of Egyptian amateurs, repeatedly tried his own hand, with some success. The turning point in his career came when the Khedive 'Abbās II Ḥilmi awarded him a stipend to study acting in France, where Abyad stayed from 1904 to 1910. Sylvain, Director of the *Conservatoire* in Paris, became his teacher, mentor and model; but he was also impressed and inspired by such leading actresses as Sarah Bernhard. Upon his return to Egypt, Abyad commissioned the translation of several plays into literary Arabic, without colloquialisms or slang, and assembled a troupe in Cairo to perform these and other works. In 1912, with packed halls, his troupe was virtually the first to perform plays in Arabic without music—for Abyad introduced music, vocal or instrumental, only when it was organic to the play. The troupe was organised and re-organised, and it played in Cairo as well as on repeated tours in Egypt and other Arab lands. Although Abyad sometimes had to act in vernacular comedies and dramas (to please and attract the public), his forte remained the tragedy in literary Arabic. From 1927, he acted occasionally in broadcast plays, and, in 1930, started to teach acting and diction at the newly-established Institute of Dramatic Arts and at various universities and schools. In 1931-2 he acted in the first Arabic talking film, a musical entitled *The Song of the heart*. Abyad retired from the State National Theatre in 1942, but he continued to lecture, direct plays, and occasionally act in Egyptian films. He was the first President of the Actors' Union, which was established in 1943. Until his death, he was active in the intellectual circles of Cairo and Alexandria. Abyad's main merits were that, almost single-handed, he created a classical non-musical Egyptian theatre in literary Arabic, modelled on the modern French theatre; he encouraged the production of translated and original plays; and he increased the respectability of acting as a profession, socially and financially (paying his actors a regular and adequate salary).

**AL-ABYĀRĪ**, **SHAYKH** 'ABD AL-HĀDĪ NADJĀ B. RIDWĀN B. NADJĀ B. MUḤAMMAD, a leading Egyptian author and grammarian who was born in 1236/1821 in Abyār in the Ḡharbiyya province of Lower Egypt. He was brought up in Abyār where he received his early education from his father and in one of the *kuttābs* of the town. He studied at al-Azhar and later became a teacher there. Ismā'īl Pasha entrusted him with the instruction of his children, and Tawfīk Pasha appointed him *imām* and *muftī* of his entourage, a post which he held until his death on 18 Dhu 'l-Ka'da 1305/28 July 1888. He belonged to the *Shāfi'ī madhhab*.

Al-Abyārī is credited with the authorship of more than 40 books on various subjects, including grammar, Islamic mysticism, *fiqh* and *hadīth*. He corresponded with a number of leading scholars, including Ibrāhīm al-Aḥḍab and Nāsif al-Yāzīdjī. The collection of his correspondence with Ibrāhīm al-Aḥḍab in Beirut and with others on literary and linguistic topics, *al-Wasā'il al-adabiyya fi 'l-rasā'il al-aḥḍabiyya*, was published in Cairo in 1301/1883. A dispute on certain linguistic matters between Aḥmad Fāris al-Shidyāk and Sulaymān al-Harīrī al-Tūnisī led to an adjudication of the questions at issue by al-Abyārī, which judgement appeared in print in Cairo in 1279/1862 under the title *al-Naḍm al-thākhīb*. A number of his works remain unpublished.

**Bibliography:** 'Alī Pasha Mubārak, *al-Khitāt al-tawfiqiyya al-djadida*, viii, Būlāk 1305/1888, 29; E. Zakhkhūrā, *Mir'āt al-'aṣr fi ta'rīkh wa-rusūm akābir al-riḍjāl bi-Miṣr*, i, Cairo 1897, 239-40; Hasan al-Sandūbī, *Afān al-bayān*, Cairo 1914, 222-31; Ḥūrūdī Zaydān, *Tarāḍim mashāhīr al-sharḥ fi 'l-ḥam al-tāsi' 'aṣhar*, ii, Cairo 1903, 144-5; Sarkīs, *Mu'djam al-maḥbū'āt al-'arabiyya wa 'l-mu'araba*, Cairo 1928, 358-61; al-Ziriklī, *al-'Alām*, iv, 322-3; Zakī Muḥammad Muḍjāhid, *al-'Alām al-sharḥiyya fi 'l-mi'a al-rābi'a 'aṣhra al-ḥijriyya*, ii, Cairo 1950, 138-9; Kaḥḥāla, *Mu'djam al-mu'allifin*, vi, 203-4.

**ĀDARRĀḲ**, the name of a family of Berber "physicians", whose ancestor, Abū 'Abd Allāh Muḥammad (d. 1070/1658-60) left the Sūs and settled at Fās; he must have used completely empirical methods, but nevertheless obtained significant results. Ibn Shākrūn [*q.v.* in Suppl.] was the pupil of a certain Aḥmad b. Muḥammad ĀdarrāḲ, who was probably the son of the above-mentioned person, but the best-known member of the family was this Aḥmad's son, ABŪ MUḤAMMAD 'ABD AL-WAḤHĀB B. AḤMAD (b. ca. 1077/1666, d. 28 Ṣafar 1159/22 March 1746), who was attached to Mawlāy Ismā'īl (1082-1139/1672-1727). 'Abd al-Waḥhāb had also received a traditional education and had a certain talent as a versifier. In actuality, apart from a few poems of an ethico-philosophic nature, a *kaṣīda* in praise of the saints buried at Meknēs (*Manzūma fī madḥ ṣālihi Miknāsāt al-zaytūn*), his biographers mainly mention some pieces having a certain connection with medicine: these comprise first of all a commentary on

the *Nuzha* of al-Anṭākī and two *urḍūzas*, one complementing that of Ibn Sīnā, the other on the subject of smallpox (these works apparently lost); then a *kaṣīda* of 31 verses on the fine qualities of mint (*na'na'*), which exists in ms. (Rabat D 158 and D 1131; partial tr. in Renaud, *Médecine*, 104-5; Lakhdar, 189); and finally, an *urḍūza* of 179 verses on syphilis (*ḥabb al-'Ifranḍī*), based largely on al-Anṭākī's *Nuzha* and on the *riṣāla* of Ibn Shākrūn on sarsaparilla (*fi 'l-'ushba al-hindiyya*), text published and tr. by Renaud and Colin, *Mal franc*, Arabic text 25-32, tr. 81-94.

Another ĀdarrāḲ called Aḥmad is also cited as physician to Sīdī Muḥammad b. 'Abd Allāh (1171-1204/1757-90).

(Ed.)

**AL-'ADAWĪ**, MUḤAMMAD ḤASANAYN MAḤLŪF, Azharī scholar and administrator, one-time *shaykh* of the Aḥmadī mosque in Ṭanṭā, born on 5 Ramaḍān 1277/18 March 1861 in the village of Banī 'Adī, near Manfalūt in the Upper Egyptian province of Asyūt.

After the completion of his studies at al-Azhar [*q.v.*] in 1305/1887-8, when he was granted the degree of 'ālim [see 'ULAMĀ?], and a short period of teaching at that institution, he was appointed Director of al-Azhar Library which was established and organised at his initiative. His commitment to the cause of reform in al-Azhar gave his further career its content and significance when, in the various high administrative offices he held within this institution—the most notable of which were the offices of *muḍīr al-Azhar* and of the Religious Institutes attached to it, *muftiṣh al-awwal* and *wakīl al-Azhar*—as well as in the period in which he held the office of *shaykh* of the Aḥmadī mosque in Ṭanṭā, he was able to give inspiration and direction to the reformist efforts (cf. Aḥmad Shaffīk, *Mudhakkirātū fī nisf ḥam*, Cairo 1936, ii/2, 137 f., 140, 182, 233). He continued to do so after his resignation from all his administrative functions following a dispute with the Egyptian Sultan Ḥusayn Kāmil in 1915 (see 'Abd al-Muta'āl al-Sa'īdī, *Ta'rīkh al-islāh fi 'l-Azhar wa-ṣafahāt min al-djihad fi 'l-islāh*, Cairo n.d., 142 ff.).

From the latter year onwards, he committed himself mainly to private teaching and to the writing of a variety of books and tracts, of which some forty were published, largely pertaining to legal issues and to *taṣawwuf* [*q.v.*]. He was an active member of the Shārkāwiyya branch of the Khalwatīyya [*q.v.*] and among the principal disciples of its founder Aḥmad b. Shārkāwī al-Khalīfī (1834-98). He died in Muḥarram 1355/April 1936.

**Bibliography:** In addition to the references in the article, see the biographies by Ilyās Zakhkhūrā, *Mir'āt al-'aṣr fi ta'rīkh wa-rusūm akābir riḍjāl Miṣr*, Cairo 1897, ii, 455; Khayr al-Dīn al-Ziriklī, *al-'Alām*, Cairo 1954-9, vi, 326; Muḥammad 'Abduh al-Hijādījī, *Min a'lām al-Sa'īd fi 'l-ḥam al-rābi' 'aṣhr al-ḥijrī*, Cairo 1969, 93-112, and Zakī Muḥammad Muḍjāhid, *al-'Alām al-sharḥiyya fi 'l-*

*mī'a al-rābī'a 'ashra al-hijriyya*, Cairo 1950, ii, 160, where additional references may be found as well as an enumeration of al-'Adawī's writings. A similar list may be found appended to several of al-'Adawī's publications. To these must be added *al-Taqrīr al-awwal li-mashyakhāt al-Djāmi' al-Ahmadī 'an sana 1316 dirāsiyya*, Cairo 1327/1909, which was drawn up by him at the time when he was *shaykh* of the Ahmadī mosque in Tanṭā. For a summary of the reforms and improvements implemented by him at the Ahmadī mosque, when he was in charge of that institution, see *Dhikrā tashrif Samū al-Djanāb al-'Alā' al-Khu-daywī al-Mu'azzam 'Abbās Halmi al-Thāni li 'l-Djāmi' wa 'l-Ma'had al-Ahmadī, sana 1332*, Cairo 1332/1913-4, 29 f.

(F. DE JONG)

**'ADĪ B. ARTĀT AL-FAZARĪ**, ABŪ WĀṬILA, official in the service of the Umayyads who governed 'Irāk from Baṣra between 99/718 and 101/720. He was appointed to this office by 'Umar b. 'Abd al-'Azīz in place of Yazīd b. al-Muhallab, and received the order to arrest all the sons of al-Muhallab. He managed to get hold of al-Mufaḍḍal, Ḥabīb, Marwān and Yazīd, but the latter escaped and returned to the attack. 'Adī then raised the troops of Baṣra and had a trench dug round the town to prevent the rebels from breaking in, but these measures had no effect. In the event, Yazīd managed to get possession of Baṣra without much difficulty, and ordered the arrest of 'Adī, who was killed at Wāsiṭ in 102/820-1 by Mu'āwiya b. Yazīd. There is, first of all, attributed to this governor's name a canal excavated at Baṣra in order to bring a satisfactory supply of drinking water, the *Nahr 'Adī*, and secondly, an epidemic which broke out in 100/719, the *ṭā'un 'Adī*.

*Bibliography*: Djarīr, *Diwān*, 241; *Nakā'id*, index; *Djāhiz*, *Bayān*, index; Ibn Kutayba, *Ma'ārif*, index; *Tabarī*, index; Balādhurī, *Futūh*, 77, 349, 359, 369-70; Ibn al-Kalbī-Caskel, *Tab.* 130 and ii, 138; Ya'kūbī, *Hist.*, ii, 362, 370, 373; idem, *Buldān*, tr. Wiet, 94, 124; Mubarrad, *Kāmil*, index; Mas'ūdī, *Murūdj*, v, 453-4, 457 = § 2206, 2209; idem, *Tanbih*, index; Khatīb Baghdādī, *Ta'rikh*, xii, 306; Ibn al-Athīr, v, 31, 42, 53, 64; Yāqūt, i, 643, iv, 841; Ibn Abi 'l-Ḥadīd, *Sharh*, i, 303; Caetani, *Chronographia*, 1205, 1239, 1244, 1248, 1260; Š. al-'Alī, in *Sumer*, vii (1952), 78; Pellat, *Mihieu*, index; Ziriklī, vi, 8. (Ed.)

**ADĪB PĪSHĀWARĪ**, SAYYID AHMAD, Persian poet, was born ca. 1844 in the district of Pīshāwar (Peshawar) in north-west India to a clan of nomadic *sayyids* who traced their spiritual lineage back to Shihāb al-Dīn Suhrawardī. While he was still a boy, his father and most of his male relatives were killed in fighting against the British government. He himself escaped to Kābul, and after spending several years in Ghāzvin, Harāt and Turbat-i Shaykh Djam, settled in Mashhad, where he studied under a number of distinguished divines. For two years he was in Sabzawār at the feet of the famous Mullā Hādī Sabzawārī. During his stay in Mashhad he became known as *Adīb-i Hindī*, "the Indian scholar". In 1884 he moved to Tehran, where he spent the rest of his life, and was honoured by Nāṣir al-Dīn Shāh. He died in 1930. His writings include a *diwān* of 4,200 Persian and 370 Arabic verses, a *mathnawī* poem in the *mutakārib* metre, the *Ḳayṣar-nāma*, dedicated to the German Kaiser and describing the events of the 1914-18 war, two philosophica essays, a commentary on the *Ta'rikh-i Bayhakī*, and an incomplete Persian translation of Avicenna's *Kitāb al-Ishārāt*.

Although his mother-tongue was Pash̄to, Adīb Pīshāwarī was regarded as a master of the Persian language, his wide reading and powerful memory enabling him to clothe his ideas in a high literary style. Nevertheless, although he took no active part in public affairs and lived an unwordly life, his poems show that he was well-acquainted with world events; he commented freely on such matters as the Russo-Japanese War, India's fight for freedom, pan-Islam, and the Great War. His early tragic experience had given him a lasting hatred of British imperialism, from which no doubt his support for the Kaiser in part stemmed. At heart he was a fervent nationalist and patriot. At the same time he placed no reliance on patrons, and was never known to have composed a panegyric. He may be regarded as the first of the new generation of poets who abandoned the classical themes and wrote about subjects closer to the lives of ordinary people.

*Bibliography*: Adīb's *Diwān* was edited by 'Alī 'Abd al-Rasūlī, Tehran 1933. His edition of the *Ta'rikh-i Bayhakī* was published in Tehran in 1889, and the commentary was incorporated with corrections in Sa'īd Nafīsī's edition, 3 vols., Tehran 1940-53. The *Ḳayṣar-nāma* has never been published. Biographical information in: M. Ishaque, *Sukhanwarān-i Irān dar 'asr-i ḥādīr*, i, Calcutta 1933, 1-8; Rashīd Yāsīmī, *Adabiyāt-i mu'āsīr*, Tehran 1937, 10-3; M. (L.P. ELWELL-SUTTON)

**ADĪVAR**, 'ABD AL-ḤAKK 'ADNĀN, modern Turkish ABDŪLHAK ADNAN ADIVAR, Turkish author, scholar and politician (1882-1955). He was born in Gelibolu (Gallipoli), while his father Ahmed Bahā'ī, who came from a prominent 'ulamā' family of Istanbul, was *kādī* there. He studied medicine at the University of Istanbul and while a student, contributed to various newspapers and was in trouble with the Hamīdian police. Upon graduation he fled to Europe, spent a year in Paris and Zürich and settled in Berlin where he became an assistant in the Faculty of Medicine. After the restoration of the Constitution in July 1908, he returned to Turkey, taught at the University of Istanbul and was Dean of the Faculty of Medicine (1909-11). As a prominent member of the powerful Committee of Union and Progress (CUP), he contributed substantially to re-organising the Red Crescent and the Department of Health. In 1917 he married, by proxy, the prominent writer Khālide Edīb [*q.v.*]. Elected a deputy in the post-Armistice Ottoman Parliament, Dr. 'Adnān (as he was known until 1940 when he took the family name Adıvar) left Istanbul secretly with his wife in order to avoid certain arrest and deportation by the British, and joined the Nationalist government in Ankara (April 1920), where he served as Minister of Health and of the Interior and as Deputy Speaker of Parliament. Later he joined dissident generals and former members of the CUP, with whom he founded the Progressive Republican Party (*Teraḳkīperver Djumhūriyyet Fırkası* [*q.v.*]), which represented the main opposition to Muṣṭafā Kemāl Paṣha (1924). In the summer of 1926, a Unionist conspiracy to assassinate Muṣṭafā Kemāl was discovered and several people were arrested. Dr. 'Adnān was tried in his

absence as he had been in Europe for some months. Although he was acquitted, he and his wife did not return to Turkey until 1939. They lived in England and later in France where he worked as lecturer at the Ecole de Langues Orientales Vivantes in Paris, together with Jean Deny (1929-39).

When Hasan 'Alī Yüdjel (Yücel), the reforming Minister of Education (1938-46) decided that a Turkish edition of the *Encyclopaedia of Islām* should be published, he appointed Adnan Adıvar its chief editor (1940); the latter organised the secretariat of the *Islām Ansiklopedisi* and successfully launched and directed it as an independent deputy (1950-4). He died in Istanbul on 1 July 1955.

Adnan Adıvar's main work is his book on the history of science in Turkey, prepared during his exile in France: *La science chez les Turcs ottomans* (Paris 1939), which he revised and enlarged in the second edition in Turkish, *Osmanlı Türklerinde ilim* (Istanbul 1943), where for the first time all the extensive data on the subject are put systematically together. Apart from an essay on Faust (*Faust, tahlil tecrübesi*, Istanbul 1939) and a study of the conflict of religion and science in history; *Tarih boyunca ilim ve din* (2 vols., Istanbul 1944), his remaining work consists of essays and articles on problems of general culture, history, science and politics which he published in daily papers; some of these have been put together in *Bilgi Cumhuriyeti haberleri* (1945), *Dur, düşün* (1950) and *Hakikat pesindeki emeklemeler* (1954).

*Bibliography*: *Yeni ufuklar*, special number, August 1955; Halide Edib Adıvar, *Doktor Abdülhak Adnan Adıvar*, Istanbul 1956; Tahir Alangu, *100 ünlü Türk biyografisi*, ii, Istanbul 1974, 1259-65. (FAHİR İZ)

**ADJMAN**, the smallest of the seven shaykhdoms of Trucial 'Umān, which now comprise the United Arab Emirates (*al-Imārāt al-'Arabīyya al-Muttaḥida* [q.v. below]). The shaykhdom proper measures about 100 square miles in extent, and there are two small enclaves, Masfūt and Manāma, in the interior. The total population is around 5,000. The leading tribal elements are the Karātisa, Hamīrat and Āl Bū Dhanayn sections of the Āl Bū Khuraybān branch of the Na'īm (or Nu'aym), which is also to be found in the Buraymī Oasis and its vicinity. The ruling shaykh, from the Karātisa section, is Rashīd b. Humayd, who succeeded in 1347/1928-9.

Throughout the 13th/19th century 'Adjman was little more than a client state of the neighbouring Kaṣīmī shaykhdom of Shārdja (al-Shārika [q.v.]). It subscribed independently, however, to the various engagements concluded between the Trucial Shaykhs and the British government during the century, from the General Treaty of Peace in 1235/1820 to the "Exclusive" Agreements of 1309/1892. Early in the century, as a consequence of Sa'ūdī penetration of the area, the Āl Bū Khuraybān of 'Adjman, like most of their fellow Na'īm, were converted to the Wahhābī practice of Islam.

'Adjman's economy until recent years depended wholly upon fishing and subsistence agriculture. It is now sustained primarily by grants from the wealthier members of the UAE, notably Abū Dhābī (Zabī), and by concessionary payments from the Occidental Oil Company for exploratory rights in 'Adjman territory and waters. (J.B. KELLY)

**ADMIRAL** [see KAPUDAN].

**ADVENTURER** [see KAZAK].

**AFĀWĪH** (pl. of *afwāh*, sing. *fūh*) are spices, aromatic substances, which are added to food and beverages in order to increase pleasant flavour

and promote digestion. In general they are vegetable products which are active through their contents of volatile oils or pungent substances. The classification according to the individual constituents of plants (fruits and seeds, blossoms and buds, peel, roots, etc.), in use at present, does not seem to have been in practice realised anywhere. It is possible that Abū Ḥanīfa al-Dīnawarī (end 3rd/9th century) has this in mind when he says that *al-afwāh* fall under various classes and types (*aṣnāf wa-anwā'*), and then quotes a verse each of Dhū 'l-Rumma and of Djamīl [al-'Udhri], according to which there is a distinction between *afwāh al-nawr* and *afwāh al-buḳūl* (*Kitāb al-Nabāt. The book of plants*, part of the monograph section, ed. B. Lewin, Wiesbaden 1974, 200 f., no. 757). An unsystematic list of food spices, among which are included the most common like salt (*milḥ*), is to be found in Ibn Kutayba, *'Uyūn al-akhḅar*, iii, Cairo 1348/1930, 296-9, under the heading *maṣāliḥ al-tā'am*, where *maṣāliḥ* must have the plain meaning of "spices, food-flavourings". In Arabic the meaning of *afwāh* is not sharply marked off from *'itr*, *ḥib* "scents", and *akḅār* (plur. *akākīr*, *uḳḅār*), "drugs" [see 'AṬṬĀR]. The lexicographers call *al-afwāh* what is added to scents, and *al-tawābil* what is added to food (see Lane, s.v. *fūh*).

Specific monographs on *al-afwāh* do not seem to be known. These substances are treated in their appropriate places in works on botany, pharmacognosics, medicine, knowledge of commodities, encyclopaedias and other writings. A list which is, to a certain extent, representative for the 4th/10th century, is to be found in al-Mas'ūdī, *Murūdj*, i, 367, containing 25 main kinds of spices: 1. *sunbul* spikenard, 2. *karānful* clove, 3. *ṣandal* sandalwood, 4. *djāwzbuwā* nutmeg, 5. *ward* rose, 6. *salkha* cassia, 7. *zarnab* (meaning doubtful, cf. Meyerhof's edition of Maimonides, *Sharḥ asmā' al-uḳḅār*, no. 137), 8. *kirfa*, cinnamon, 9. *ḳarnuwa* (a kind of sonchus?, cf. Ibn al-Bayṭār, *al-Djāmī'*, Bülāk, iv, 17, tr. Leclerc, no. 1775), 10. *kākulla* cardamom, 11. *kubāba* cubeb, 12. *hālbūwā* small cardamom, 13. *mansḥim* carpobalsam, 14. *fāghira* xanthoxylum, 15. *maḥlab* morello, 15. *wars* Flemmingia rhodocarpa, 17. *kuṣṭ* costus, 18. *azfār* (*al-ḥib*), *Strombus lentiginosus*, 19. *birānk* Embelia Ribes, 20. *ḍarw* lentisk gum, 21. *lādhan* ladanum, 22. *may'a* aromatic gum of the storax tree, 23. *kanbīl* Mallotus philippinensis, 24. *kaṣāb* *al-dhārira* calamus, 25. *zabāda* civet.—Notable is the fact that one of the oldest and most utilised spices, pepper (*ful-ful*), with its ca. 700 different kinds, does not appear in this inventory.

In the section on knowledge of commodities in his handbook on mercantile science, Shaykh Abu 'l-Faḍl Dja'far al-Dimashkī (probably 6th/12th century) enumerates, under the term *saḳaṭ* (plur. *askāt*, strictly speaking "refuse"), a list of spices which is quite different from that of al-Mas'ūdī (*Kitāb al-Ishāra ilā maḥāsīn al-ḥijāra iḳḅ*, Cairo 1318/1900, 21-4): under the "small spices" (*al-saḳaṭ al-ṣaḡīr*) he mentions only the rhubarb (*rāwand*) and leaves the others out as being less important, but under the "great spices" (*al-saḳaṭ al-kabīr*) he reckons: 1. *nīl* indigo, 2. *bakkam* sapanwood, 3. *fulful* pepper, 4. *lubān* frankincense, 5. *maṣṭakā* gum mastic, 6. *dārsīnī* *al-tā'am* food-cinnamon, 7. *āl* yellow ginger, 8. *zandjabil* ginger, 9. *zurūnbād* redowary-root, 10. *khūlandjān* galingale, 11. *kuṣṭ* costus, 12. *lādhan* ladanum, 13. *iḥṭlādīāt*, kinds of myrobalan (see concerning this list, E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, ed. W. Fischer, Hildesheim 1970, ii, 11-5; H. Ritter, in *Isl. vii* [1917], 17 f.).

Scattered or unsystematically-arranged material for the knowledge of spices is to be found, as can be expected, in the encyclopaedias of the Arabic and Persian literature. Preliminary statements already appear in al-Kh<sup>h</sup>ārazmī's *Mafātiḥ al-ʿulūm* (ed. van Vloten, Leiden 1895) under medicaments (169-80), while ample material is given by Nuwayrī, *Nihāyat al-arab*, the entire twelfth volume of which (Cairo 1356/1937) is devoted to this subject; scents (*tīb*), perfumery (*bakhūrāt*), many kinds of *Galia moscata* (*ghawālī*), perfumes made of aloe with various admixtures (*nudūd*), distillates (*mustakḥarāt*), oils (*adhān*) and certain perfumes (*naḍḥāt*). Among these rubrics we find also descriptions of some of the spices already mentioned, such as sandalwood (39-42), spikenard (43 f.), cloves (45-8), costus (49-51), etc. All this is mixed up with detailed statements about other materials which can be counted among spices only with reservations or in no way at all. As in mediaeval Europe, ground spices were often adulterated, especially in times of distress. Here we only recall the original work of Djawbarī (ca. 615/1218), *Kitāb al-Mukhtār fī kaṣf al-asrār wa-hak al-asīār*, which allegedly informs traders about deceitful devices in commerce and trade; it was printed several times in the Orient and urgently deserves a critical edition (now in preparation by S. Wild). The section on adulterations of spices and perfumes was translated into German by E. Wiedemann (*op. cit.*, i, 1970, 679-82).

Since there is hardly any spice which was not at the same time used as medicament, it is no wonder that the most comprehensive material on spices is to be found in the pharmacopoeias. These are essentially based on the *Materia medica* (ῥηλ ἰατρικῆ) of Dioscorides [see ΔΙΥΣΚΥΡΙΔΙΣ]. This work, translated into Arabic at an early period, lived on in the Islamic world in ever-new compilations, expanded by a great number of drugs which the Arabs had come to know in the course of their conquests. The material is to be found on the one hand in pharmacognostic and pharmaceutical monographs, the development of which came to a certain conclusion with Ibn al-Baytār's great compilation, and on the other hand in the pharmaceutical sections of compendia on general medicine [see ΤΙΒ]. It should, however, be remembered that in these works spices are entered and described as medicines in the first place, not as condiments.

Together with cambric textiles, spices were considered as the most fashionable luxury; both products are often mentioned together as the most lucrative ones (Mez, *Renaissance*, 452 ff.). In Egypt, where for a long time corn had offered the best chances for investment, spices and drugs took its place after the Crusades. In the later Middle Ages, the spice trade, and the pepper trade in particular, was mainly in the hands of Egyptians and Venetians. A good survey on the spice trade under the Ayyūbids and Mamlūks is to be found in G. Wiet, *Les marchands d'épices sous les sultans mamlouks*, in *Cahiers d'histoire égyptienne*, série vii (1955), 81-147, with a rich bibliography. However, the author does not deal with particular spices, but with their general trade. Under the protection of the sultans this trade was carried out by important bodies of merchants, who forwarded the spices from India and South-East Asia to Europe by way of Egypt through the Red Sea or by way of Syria through the Persian Gulf. About these trading companies and their monopoly we have some detailed information, especially about the wealthy Kārimī [q.v.], who controlled the spice trade between the

Yemen and Egypt. The "spice-wars" with the European ports in the Mediterranean, started by the Ayyūbids and continued by the Mamlūks and the Ottoman Turks, were waged on both sides with great ruthlessness. Internal policy was carried out, just as rigorously, especially by the Mamlūks: in 832/1429 Barsbāy founded a state monopoly of pepper and three years later he forced the wholesale merchants to buy from him for 80 *dīnārs* a *himl* the pepper which they had sold to him earlier for 50 *dīnārs*. Even so, Kānshawh al-Ghawrī not only maintained this monopoly system, but imposed additional heavy taxes on the merchants. Hopes of cutting out Egyptian middlemen were the decisive inducement for the Spanish and the Portuguese to search for a direct sea-route to India; but after the conquest of the Moluccas in 1607, the Dutch snatched the monopoly of the spice trade away from the Portuguese.

(A. DIETRICH)

AFDAL AL-DĪN TURKA, more frequently referred to as Kh<sup>h</sup>ādja Afḍal-i Ṣadr, was a famous theologian in the reign of the Timūrid Shāhrukh Mirzā [q.v.], and a member of an originally turco-phone family of Iṣfahān, whence the appellation Turka. In 845/1441, when Shāhrukh appointed his own grandson, Muḥammad b. Bāysonkor as governor of a part of 'Irāk-i 'Adjamī (al-Djībāl), Afḍal al-Dīn Turka was among the learned courtiers of this young prince. But later when, in consequence of Muḥammad's revolt, Shāhrukh came to Iṣfahān, Afḍal al-Dīn together with a number of other leading figures, were arrested as Muḥammad's accomplices and put to death by the order of Shāhrukh with no further inquiry (Ramaḍān 850/November 1446). Afḍal al-Dīn is responsible for a partial translation of Shāhrastānī's *Kitāb al-Milāl wa 'l-nihāl*, in which contrary to the original author, he did not confine himself to expose only the heretical doctrines, but endeavoured also to refute these heresies. This translation was originally made in 843/1439 for Mirzā Shāhrukh, but later when Muḥammad b. Bāysonkor came to 'Irāk-i 'Adjamī, a new version of the book was dedicated to him. Among other famous dignitaries of the Turka family we know of another Afḍal al-Dīn Turka (d. 991/1583), a grandson of our Kh<sup>h</sup>ādja Afḍal al-Dīn, and also a famous theologian of the Ṣafawid period who held for a time the office of *kādi* and *mudarris*, at Kaẓwīn, under the Ṣafawid Shāh Tahmāsp I.

(A.H. ZARRINKOOB)

AL-‘AFĪFĪ, ‘ABD AL-WAHHĀB B. ‘ABD AL-SALĀM B. AḤMAD B. HĪDĪJĪZĪ, an Egyptian mystic belonging to the Shādhiliyya [q.v.] order, after whom one of its branches is named al-‘Afifiyya. He was born in Mīnyat ‘Affī in the present-day Mīnūfiyya province in the last quarter of the 17th century. After a period of study at al-Azhar under a number of notable scholars like the Mālikī muftī Sālim b. Aḥmad al-Nāfrāwī, and Aḥmad b. Muṣṭafā al-Sikandarānī al-Ṣabbāgh, he taught the Ṣaḥīḥ of Muslim at the madrasa al-ashrafiyya and confined himself to an ascetic way of life based upon the precepts of the Shādhiliyya order. He had been initiated into this *ṭarīqa* [q.v.] by the son of the founder of the Moroccan Tayyibiyya [q.v.], the Wazzānī shaykh Mawlā Aḥmad al-Tihāmī al-Tawwātī (d. 1715), from whom he had also received the *khilāfa* [q.v.]. In addition he held an *idjāzat khilāfa* of the Kḥalwatiyya order issued to him by Muṣṭafā Kamāl al-Dīn al-Bakrī [q.v.].

His contacts with the Mamlūk *amīrs* who used to come and visit him in his house in Kaṣr al-Shawḳ and the generous way in which he gave away to his *murīdūn* most of what was presented to him as pious donations caused his circle of adepts to increase and to spread into the rural areas.

When he died on 12 Ṣafār 1172/15 October 1758, he was buried close to the mosque of Kayīt Bāy in a grave which was swept away by a torrent in the year 1178/1764-5. After this event his body was re-interred at a much higher site in the same area where a domed shrine was constructed over his tomb, together with a number of adjacent buildings at the expense of Muḥammad Katkhudā Abāza, a Mamlūk *amīr* and onetime *katkhudā* [q.v.] of Muḥammad Bey Abu ‘l-Dhahab [q.v.]. As reported by ‘Abd al-Rahmān al-Djabartī, *‘Adjā‘ib al-ūthār*, Būlāḳ 1297, i, 220 f., and iv, 163, the yearly *mawlid*, about which he makes highly derogatory remarks, was not celebrated until after this event. At the end of the 19th century it had become one of the larger popular *mawlid*s in Cairo (cf. J.W. McPherson, *The mawlid*s of Egypt, Cairo 1941, 50, 174; Murray’s *Handbook of Egypt 1888*, 209), and lasted for eight days (cf. ‘Alī Mubārak, *Khīṭat*, v, 50 f., xvi, 73). According to McPherson, 174, the *mawlid* was not celebrated any more by 1940, but in the fifties celebrations were held again (cf. *Madjallat al-Islām wa ‘l-Taṣawwuf*, i (Cairo 1958), no. 6, 82).

AL-‘Afīfī has left no writings of his own, but his teachings have been summarised by one of his disciples ‘Abd al-Rahmān b. Sulaymān al-Ghuraynī, in *Risālat al-Silsila*, and they mirror Shādhilī teaching as formulated by Aḥmad Zarrūk. The latter’s *wazīfa* [q.v.], known as *Safīnat al-Nadīja* [*li-man ulla ‘l-lāh illadja*] was incorporated into the *ṭarīqa*’s liturgy and was adopted as part of the daily office prescribed for the *ṭarīqa*’s members, to whom two of al-Zarrūk’s treatises, *Risālat al-Uṣūl* and *Risālat al-Ummahāt* became standard reading at a later period, towards the end of the 19th century.

Followers of the ‘Afifiyya order have been criticised

on various grounds for wearing yellow headgear in imitation of al-Zubayr b. ‘Awwām [q.v.], who, according to one tradition, wore a yellow turban on the day of the battle of Badr. In defence of headgear of this colour, a small treatise was published by the order, written by Ibrāhīm al-Sadqīnī under the title *al-Aman al-akbar fi ‘ayn man ankara libs al-asfar*.

Two branches of the al-‘Afifiyya *ṭarīqa* were active in Egypt in 1958 (cf. Muḥammad Maḥmūd ‘Alwān, *al-Taṣawwuf al-Islāmī, risālatuhu wa-mabādī‘uhu, māḍiyuhu wa-hādīrūhu*, Cairo 1958, 72, 74).

*Bibliography*: The biographies by ‘Alī Mubārak, *Khīṭat*, xvi, 72 f.; al-Ḥasan b. Muḥammad al-Kūhīn, *Ṭabakāt al-Shādhiliyya al-kubrā*, Cairo 1347/1928-9, 157 f.; and Muḥammad al-Bashīr Zāfir, *al-Yawāqīt al-ṭamīna fī ‘ayn ‘ālim al-Madīna*, Cairo 1324-5/1906-7, are essentially reproduced from ‘Abd al-Rahmān al-Djabartī, *‘Adjā‘ib al-ūthār*, i, 220 f. A short biography may be found in Muḥammad Kḥalīl al-Murādī, *Silk al-durar fī ‘ayn al-karn al-ṭhānī ‘ashar*, Istanbul/Būlāḳ 1291-1301/1874-83, iii, 143 f., which was utilised by Yūsuf b. Ismā‘īl al-Nabahānī, *Ḍāmī karāmāt al-awliyā‘*, Cairo 1329/1911, ii, 139. On the construction of the mosque of al-‘Afīfī in the second half of the 19th century, see ‘Alī Mubārak, *Khīṭat*, v, 51. Information about descendants of al-‘Afīfī and ‘ulamā’ buried in the precincts of the mosque may be found in Abu ‘l-Ḥasan Nūr al-Dīn ‘Alī b. Aḥmad al-Sakhāwī, *Tuḥfat al-aḥbāb wa-buḥyat al-tullāb fi ‘l-khīṭat wa ‘l-mazārāt wa ‘l-tarādīm wa ‘l-bikā‘ al-mubārakāt*, Cairo 1937, 54. The treatises by Aḥmad al-Zarrūk, ‘Abd al-Rahmān al-Ghuraynī and Ibrāhīm al-Sadqīnī, referred to in this article were published by ‘Afīfī al-Wakḳād in a collection under the title *Hidāyat al-sā‘il ilā maḍimū‘ al-rasā‘il*, Cairo 1316. The order’s chain of transmission of the *wazīfa* and the *sanad* [q.v.], which are given in the treatise by ‘Abd al-Rahmān al-Ghuraynī referred to in this article, figure also in ‘Abd al-Kādir Zakī, *al-Naḥḥa al-‘aliya fī awrād al-Shādhiliyya*, Cairo 1321, 220 f. (photomechanical reprint: Tarābulus (Libya) 1971).

A manual of religious instruction and mystical practice intended for the members of the ‘Afifiyya order was written by one of its *khālifas*, Sayyid ‘Abd al-Nabī Muḥammad Kḥaḍīr, *al-Irshādāt al-dīniyya*, al-Mīnyā n.d. [1970]. Prayer manuals of al-‘Afifiyya are Fu‘ād Ramaḍān, *Maḍimū‘at aḥzāb*, Cairo n.d.; and Aḥmad Ḥasan (ed.), *Maḍimū‘at awrād wa-aḥzāb li ‘l-sāda al-Shādhiliyya*, Cairo 1351/1932-3. (F. DE JONG)

AFLĪMŪN, FULAYMŪN, IFLĪMŪN, the Greek rhetorician and sophist Antonius Polemon (ca. 88-144 A.D.) of Laodicea (near modern Deñizli [q.v.] in western Turkey). He lived most of his life in Smyrna, and was the author of a book on physiognomy, which has been preserved, apart from one single Greek quotation, in an Arabic translation only. The translator is not known. Polemon’s book (*K. Afīmūn fi ‘l-firāsa*) presents the characterological physiognomy, in contrast to the branch of physiognomy which aims at medical morphoscopy [see FIRĀSA]. It was believed that characterological physiognomy provided an insight into someone’s character by means of a skilful interpretation of his physical appearance (*al-istidlāl bi ‘l-kḥulk al-zāhir ‘alā ‘l-kḥulk al-bāṭn*). Polemon’s book is divided into 70 chapters. Ch. 1 treats the characteristics of the human eye, and ch. 2 the characteristics of animals from which, by analogy, conclusions can be drawn about human nature; these constitute about half of the book. Then

follow chs. 3-30 on the different parts of the body, chs. 31-5 on the different nations of the world, chs. 36-40 on the colour of the parts of the body, chs. 41-8 on the growth of hair on the parts of the body, chs. 49-50 on the movements of the body, chs. 51-66 on several outspoken character types, and chs. 67-70 on several other topics connected with foretelling someone's destiny. The book appears to be authentic, as can be seen from the many Greek examples; thus mention is made of Oedipus (ed. Hoffmann, 111, 7), Cyrene (*ibid.* 119, 14), Lydia and Phrygia (*ibid.* 139, 13), Egypt, Macedonia, Phoenicia, Cilicia and Scythia (*ibid.* 237, 14-239, 2). The eyes of the Roman Emperor, Hadrian of whom Polemon was a favourite, are described (*ibid.* 149, 4). Polemon's opponent, Favorinus, is only too well recognisable in the anonymous and malicious description on p. 161, 8 ff. Allusion to the attempt on the Emperor's life is made on p. 141, 1 ff.

Polemon does not give a theoretical introduction to his method. He used materials from the *Physiognomicon* of Ps. Aristotle and gave his book a lively tone by including anecdotes about contemporaries and avoiding a monotonously scientific treatment of his subject (Stegemann, 1345-7). Polemon's name is mentioned by al-Djāhīz (d. 255/868 [q.v.]) in his *Ḥayawān*, ed. 'A.M. Ḥarūn, Cairo 1938, iii, 146, 269-75, 284), with extensive quotations on the physiognomy of the dove (*fīrāsāt al-ḥamām*), none of which however can be found in the Arabic *physiognomicon* as it exists now. Ibn al-Nadīm (d. 377/987 [q.v.]) mentions Polemon's book and, without naming its author, a *Fīrāsāt al-ḥamām* (*Fihrist*, ed. Flügel, 314). Mention of Polemon is also made by Ibn Ḥazm (413/1022 [q.v.]) in his *Ṭawq al-ḥamāma* (ed. D.K. Pétrof, Leiden 1914, 30). The quotation by Ibn Ḥazm is only a faint echo of Polemon, ed. Hoffmann, 169, 1-4. An anecdote about Polemon and Hippocrates (a crude anachronism) in Ps. Aristotole, *Sirr al-aswār* (cf. ed. Foerster, ii, 187-90) found its way into Ibn al-Kifīrī (d. 646/1248 [q.v.]), *Ta'riḫ al-Ḥukamā'*, ed. Lippert, Leipzig 1903, 91 l. 12-92 l. 2 and into Ibn Abī Uṣaybī'a (d. 668/1270 [q.v.]), *Uyūn al-anbā'*, ed. Müller, Königsberg 1884, i, 27-8.

Polemon's book was widely used and epitomised. An Arabicised short version is the edition of M.R. al-Ṭabbākh, Aleppo 1929. The characteristics of the several nations of the Hellenistic world (ed. Hoffman, 237-9, ed. al-Ṭabbākh, 46) are applied to peoples of the Islamic world. Another short version is MS Gotha 85 (3) (see bibliography), which lacks the specific Greek characteristics but is less adapted to Islamic taste than the Aleppo version. An evaluation of the texts written under the name of Polemon has not been undertaken so far. Polemon's book was probably a primary source of al-Dimashkī (d. 727/1327 [q.v.]), *K. al-Siyāsa fī 'ilm al-fīrāsa* (cf. Brockelmann, S II, 161) and Ibn al-Akfānī (d. 749/1348 [q.v.]), *Asās al-rīyāsa fī 'ilm al-fīrāsa* (MS Paris, BN, Arab. 2762). *Fīrāsa* was, and still is, a popular science with its uses both in court life, human relationships and the slave trade. The exact impact, directly or indirectly, of Polemon's work on the numerous tracts on physiognomy of later times, cannot now easily be discerned.

*Bibliography:* On Polemon in general see the art. *Polemon* (by W. Stegemann) in Pauly-Wissowa, xxi/2, cols. 1320-57, and F. Sezgin, *GAS*, iii, 352-3. On Polemon's position in the Arabic *fīrāsa* tradition, see T. Fahd, *La divination arabe*, Strasbourg 1966, 384-6, and Y. Mourad, *La physiognomie arabe...*, Paris 1939, 44-6, with the literature

cited there. Polemon's book was edited by G. Hoffmann, in R. Foerster, *Scriptores physiognomici Graeci et Latini*, Leipzig 1893, i, 93-294 (= MS Leiden Or. 198 (1)). The only Greek quotation of Polemon preserved is given in *ibid.*, i, p. LXXXVI. A Pseudo-Polemonic treatise is mentioned in *ibid.*, ii, 147-60 (= MS Gotha Arab. 85 (3)); Other MSS. of treatises going under the name of Polemon are mentioned by Fahd, *op. cit.* 384-6; Ullmann, *Medizin*, 96; Foerster, *Script. phys.*, i, p. LXXXVII (identical with Ḥādīdjī Khālifā, ed. Flügel, vii, 297, and (?) with MS Nuruosmaniye, *Defter*, no. 2388); and M.R. al-Ṭabbākh in his edn., introd. p. 2. The Greek *physiognomicon* ascribed to Polemon in *Aeliani variae Historiae Libri XIII*, Rome 1545, ff. 79-91 is not authentic, as has been demonstrated by R. Foerster, in *De Polemonis Physiognomicis dissertatio*, Kiel 1886, 10 ff. (J.J. WITKAM)

**ĀFRĀG** (AL-MANŠŪRA), an 8th/14th century Marīnid royal camp-town (whence its name), commanding Ceuta from the heights west of the peninsula on which this old Moroccan (now Spanish) seaport is situated. Its site lies in an area of modern suburban development: in the north-east the line of its west wall stops short of the Ceuta-Punta Blanca coast road (Carretera de la Playa Benitez), and, from south-west to north-east, the trapezoid site is bisected lengthways by the Carretera de Torrones. More than half a kilometer of the west wall, including the remains of one of its three original gates, Bāb Fās, and its towers has survived. Construction techniques suggest Andalusian influence.

Āfrāg owed its existence to that of Ceuta, which, from around 1250, had acquired growing economic and strategic importance and become the great entrepôt of the western Mediterranean, boasting an economy thriving on commerce and privateering. Militarily, it was ideally suited to assist Islam in its struggle to maintain its increasingly precarious foot-hold in Spain: it had ships, harbours and a seafaring population equipped for war by land and sea; in good weather its ships could rapidly cross to Algeciras; its fortifications were formidable and, on its landward side, impregnable. However, because it could easily withstand assault and siege from the mainland, it had long enjoyed a profitable measure of independence and, at times under the 'Azafids [q.v.], escaped Marīnid control altogether. Accordingly, when in 728/1327-8 the total collapse of 'Azafid authority was followed by internal dissension, the Marīnid sultan Abū Sa'īd decided to assert his authority there once and for all. Among measures to achieve this end were decisions to demolish Ceuta's Outer Suburb (*al-rabad al-banānī*) wall, the most formidable barrier to access from the west, and to impart solidity and permanence to what had doubtless been the site of many an earlier siege camp. Like a similar foundation built by a dynastic predecessor outside Tlemcen, it was given the name al-Manšūra. Abū Sa'īd is credited with the construction of a palace there with adjacent mosque as well as other buildings. Most of the wall and fortifications, however, seem to have been the work of Abu l-Hasan (931-52/1331-51). In the 9th/15th century Āfrāg was regarded as a suburb of Ceuta. Much of the place was still standing in the 18th century.

(J.D. LATHAM)

**ĀGAHĪ**, poetical name of MUḤAMMAD RIDĀ MĪRĀB B. ER NİYĀZ BEK, **Khīwān** historian, poet and translator, born 10 **Dhu** 'l-**Qa**'da 1224/17 December 1809 in the township **Kiyāt**, near **Khīwa**, in **Kh**'ārazm.

He belonged to Uzbek tribe of Yūz and to an aristocratic family, whose members were hereditary *mīrābs* (in the **Khānate** of **Khīwa** there were four high officials with the title *mīrāb*, members of the **khān**'s council consisting of 34 *'amaldārs*). His uncle was **Shīr** Muḥammad Mīrāb with the poetical name Mu'nīs [*q.v.*], a poet, translator and historian. Āgahī studied in a *madrasa* and especially under his uncle, whom he repeatedly calls his *ustād*. After the death of Mu'nīs in 1244/1829, he received the title and the post of his uncle (Āgahī, *Riyād al-dawla*, MS. of the Leningrad Branch of the Institute of Oriental Studies of the Academy of Sciences of the USSR, E-6, f. 334a). As a *mīrāb* he supervised the irrigation system in the country (a special interest in irrigation is noticeable in his historical works), but also, as other high officials, he usually accompanied the **khāns** of **Khīwa** in their military campaigns. In 1255/1839 he was ordered by Allāh-Kulī **Khān** to complete the history of the **Khānate** of **Khīwa** *Firdaws al-ikbāl* written by Mu'nīs, which had remained unfinished after his death (see *Firdaws al-ikbāl*, MS. of the Leningrad Branch of the Institute of Oriental Studies, C-571, f. 445a-b). Having completed this work, carrying it to the death of Muḥammad Raḥīm **Khān**, 1240/1825, Āgahī proceeded with separate histories of Allāh-Kulī **Khān** and his successors, thus becoming a kind of official historiographer of the **Khānate** of **Khīwa** (formally such a post did not exist in the **khānate**). In 1268/1851 he resigned from the post of *mīrāb* because of an illness (see his *Djāmi' al-wākī'āt-i sultānī*, MS. of the Leningrad Branch of the Institute of Oriental Studies, E-6, f. 488a-b) and dedicated all his time to literary work until his death in 1291/1874, shortly after the Russian conquest of **Khīwa** (see Muḥammad Yūsuf Bek Bayānī, *Shāḡhara-yi Kh*'ārazmshāhī, MS. of the Institute of Oriental Studies in Tāshkent No. 9596, f. 4b).

His literary production in **Āghatāy** was very considerable. Besides the continuation of the *Firdaws al-ikbāl* of Mu'nīs he wrote five other historical works, continuing one after the other till 1289/1872: (1) *Riyād al-dawla*, history of Allāh-Kulī **Khān** (1240-58/1825-42) and the first two years of the reign of Raḥīm-Kulī **Khān** (1258-9/1843-4); (2) *Żubdat al-tawārīkh*, history of Raḥīm-Kulī **Khān** (1258-62/1843-6); (3) *Djāmi' al-wākī'āt-i sultānī*, history of Muḥammad Amīn **Khān** (1262-71/1846-55), 'Abd Allāh **Khān** (1271/1855) and Kutluḡ Murād **Khān** (1271-2/1855-6); (4) *Gulshan-i dawlat*, history of Sayyid Muḥammad **Khān** (1272-81/1856-64); and (5) *Shāhid-i ikbāl*, history of the first eight years of the reign of Sayyid Muḥammad Raḥīm **Khān** II (1281-9/1864-72). Except for the *Firdaws al-ikbāl* and the greater part of the *Riyād al-dawla*, all of them are contemporary chronicles arranged in annalistic form, with their main subdivisions being the years of reign of respective **khāns**. Āgahī's accounts are based on his own observations as well as reports of other eyewitnesses, and, in some cases, on official documents. These

chronicles are the most outstanding work of late Central Asian historiography "in regard to the minuteness of account and the quantity of facts" which they comprise (Barthold). His Turkī *dīwān* entitled *Tāwīdh al-āshkīn* includes mainly *ghazals*, but also *qasidas*, *mathnawīs*, *mukhammasāt*, etc.; he wrote also some poems (mostly *ghazals*) in Persian.

Āgahī was also a prolific translator. At the beginning of his literary career he continued the translation into **Āghatāy** on the *Rawdat al-ṣafā'* by Mīrkh'ānd [*q.v.*] begun by Mu'nīs (Āgahī translated the second half of vol. ii, vol. iii and, allegedly, vol. vii), and later translated a number of other Persian works: *Tā'rikh-i ājāhān-gushā-yi Nādīrī* by Muḥammad Mahdī **Khān**; *Durra-i Nādīrī* by the same author; the 3rd vol. of *Rawdat al-ṣafā'-yi Nāsīrī* by Ridā-Kulī **Khān**; the *Gulistan* by Sa'dī; *Yūsuf wa-Żulaykhā* by **Djāmi**; *Haft paykar* by Nizāmī (a prose translation); *Shāh wa-gadā* by Hilālī; *Żubdat al-hikāyāt* by Muḥammad Wārīḡ; the *Kābūs-nāma*; the *Akhlak-i Muhsinī* by Husayn Kāshifī; and the *Miftāh al-ṭālibīn* by Maḥmūd **Ghizhduwānī** (cf. Storey, i/2, 973) (there exist MSS. of all above-mentioned translations, see Bibliography). In the preface to his *dīwān* he mentions also several other translations made by him, manuscripts of which, however, have still not yet been discovered: a *Żafar-nāma* [apparently by **Sharaf al-Dīn Yazdī**]; *Salāmān wa-Ābsāl* by **Djāmi**; the *Bahāristān* by **Djāmi**; [the memoirs of] Wāṣifī (cf. Storey-Bregel, 1123-6); *Tadhkira-yi Mukīm-Khānī*; *Tabakāt-i Akbar-Shāhī*; the *Haṣṣt bihiṣṣt* by Amīr **Khusrav**; and also a *sharḥ* to the *Dalā'il al-khayrāt* from Ottoman Turkish.

The *Dīwān* was published lithographically in **Khīwa** in 1300/1882 and 1323/1905 and in modern Cyrillic transcription in 1960 in Tāshkent (partial edition only). On the MSS. of his translations of Persian historical works see Storey-Bregel, 374, 375, 479, 910, 913; *Sobraniye vostochnikh rukopisey Akademii nauk Uzbekskoy SSR*, iii, 111, v, 107, vii, 48, 68-9, 217-8.

(YU. BREGEL)

**ĀGHĀ HASHAR KASHMĪRĪ** (1879-1935), the

best-known Urdu dramatist. His actual name was Āghā Muḥammad Shāh and Ḥashar his *takhalluṣ*, while his *nisba* alludes to the country of origin of his father. The latter came from Kashmīr, and settled in Benares as a merchant. Here Āghā Ḥashar was born and educated, until in 1897 he ran away from home and made for Bombay. He feared his father's wrath for his misuse of money entrusted to him; and his appetite for the new Urdu drama form, which was flourishing in Bombay, had been whetted by the visit of a theatrical company to Benares. He worked as playwright for various companies in Bombay, and subsequently in several provincial capitals such as Hyderabad and Madras, writing over thirty plays. Many of them were extremely successful, and earned him a fine reputation, and also considerable wealth, which, however, he quickly dissipated. He later worked in films. He died and was buried in Lahore.

When he entered the field, the main lines of the Urdu dramatic form were already established. Āghā Ḥashar, by his technical brilliance and command of language raised it to its highest point. The form was hardly challenged until after the 1939-45 War. Common elements in the form were: the use of poetry and rhymed prose, often rhetorical to the point of bombast, prose being reserved for comedy or social drama; the development of subsidiary plots alongside the main one, as in Shakespeare; and historical or heroic themes, based on either Islamic and Indian stories or Shakespeare and other English dramatists, whose plays were freely adapted, with changes in locations and names of characters. Social themes were also employed. Violence and death were common on stage, as in *Sohrāb-o-Rustam* (1929, publ. Lahore 1959); yet adaptations of Shakespeare's tragedies might be given happy endings—thus *Safed Khawm* (1907, publ. Lahore 1954), based on *King Lear*.

**Bibliography:** For accounts of earlier Urdu drama, see Muḥammad Sadiq, *History of Urdu literature*, London 1964, 393-9; Ram Babu Saksena, *History of Urdu literature*, Allahabad 1927, 346-67; J.A. Haywood, *Urdu drama—origins and early development, in Iran and Islam—in memory of Vladimir Minorsky*, ed. C.E. Bosworth, Edinburgh 1971, 293-302; Accounts of Āghā Ḥashar and his dramatic art are to be found in Waḳkār 'Azīm, *Āghā Ḥashar aur un ke drāme*, Lahore 1956; and idem, *Urdū drāma—ta'rīkh-o-tankīd*, Lahore 1957. For the texts of the plays, those published by Urdu Markaz, Lahore, are recommended. Other and earlier editions are based on information supplied by actors; many were published in the author's lifetime without his authority. They differ substantially from Āghā Ḥashar's manuscripts, many of which are in the Nawāb of Rampūr's library. Of the Urdu Markaz series, apart from the two mentioned in the text, the following may be noted: *Sayd-i-haws* based on Shakespeare's *King John* (1954); *Asir-i-hirs*, based on Sheridan's *Pizarro* (1954); *Khawbsurat balā* (1954); and *Pahla piyār* or *Balwā mangal* (1955). (J.A. HAYWOOD)

**AGHAOGLU**, AHMED (originally AHMED ACHAYEF, later AGHAOGLU AHMED and after 1934 Ahmet Ağaoglu), Turkish writer and journalist (1869-1939). Born in Shusha, a town in the Karabāgh [q.v.] region of Ādharbāydjān, he was educated in his home town and Tiflis (Tbilisi) and later studied political science in Paris. In 1894 he returned home, where he collaborated with progressive and nationalist intellectuals like Ḥusayn-Zāde 'Alī, Ismā'īl Gaspīralī (Gaspinski) [q.v.] and 'Alī Merdān Topçibāshī and contributed to various papers. After the restoration

of the Constitution in Turkey in 1908, he went to Istanbul, joined the Committee of Union and Progress (CUP) and became a leader writer of the French daily *Jeune turc*. Together with Diyā Gökalp, Yūsuf Akçura and Mehmed Emīn (Yurdakul) he became one of the promoters of the Turkism movement (*Türkçülük*) which developed, with the foundation in June 1911 of the nationalist association Turkish Hearth (*Türk Odjaghı*) and its organ *Türk yurdu*, into an influential current in Turkish intellectual life after 1912. In 1913 Aghaoglu was appointed professor of Turkish history in Istanbul University and continued his contributions to various papers. Elected deputy to Parliament and a member of the executive board (*Merkez-i 'Umūmi*) of the CUP, in 1917 he accompanied the Turkish expeditionary force to the Caucasus as a political officer. On his return to Istanbul he was arrested by the British and exiled to Malta with other leading CUP members. Freed from Malta in July 1921, he joined the Nationalists in Ankara and was appointed director general of the Press. Elected to the Grand National Assembly, he contributed at the same time to the semi-official daily *Hākimiyyet-i millīyye* and taught at the newly-established Faculty of Law in Ankara. He was one of the founders of the short-lived Liberal Party (*Serbest Fırka*) of August 1930 and following its abolition in November of the same year, retired from political life, teaching in the Istanbul Faculty of Law until his retirement in 1933. He died in Istanbul on 19 May 1939.

Essentially a journalist and politician, Aghaoglu is the author of the following major works: (1) *Üç medeniyet* ("Three civilisations") Istanbul 1927, 2nd ed. in Roman script *Üç medeniyet*, Istanbul 1972; (2) *Serbest insanlar ülkesinde* ("In the land of free people"), Istanbul 1930; (3) *Devlet ve fert* ("State and individual"); and posthumously, (4) *Serbest Fırka hatıraları* ("Reminiscences of the Liberal Party"). Istanbul 1949. Aghaoglu's innumerable articles published in various dailies have not been published in book form.

**Bibliography:** Samet Ağaoglu (his son), *Babamdan hatıralar*, Istanbul 1940 (contains the author's reminiscences of his father, Aghaoglu's own incomplete memoirs and impressions of a number of writers on A.A.); idem, *Babamın arkadaşları* ("My father's friends"), Istanbul 1969. (FAHIR İZ)

**AGRICULTURE** [see FİLĀḤA].

**AL-AHDAB** [see IBRĀHĪM AL-AHDAB].

**AHMAD AL-HĪBA**, a religious leader of southern Morocco, and ephemeral pretender to the Sharīfian throne, known above all as al-Hība. He was born in Ramaḍān 1293 or 1294/September-October 1876 or 1877, the fourth son of the famous Shaykh Mā' al-'Aynayn [q.v.]. He was brought up and educated in his father's bosom, and his natural talents and temperament gave his teachers high literary hopes of him.

When his father died at Tiznīt in Shawwāl 1328/November 1910, he succeeded him at the head of the *murīdān* of the order and was then at the peak of his responsibilities. However, when there was announced the signing of the Protectorate Treaty between France and sultan Mawlāy al-Ḥāfīz [q.v.], followed by the rumour of the latter's death and of the murder of the 'ulamā' of Fās by the French, he proclaimed himself sultan, organised his own *makhzan* [q.v.] and launched throughout the Sūs, and then through all Morocco, appeals for resistance. Soon the tribes of

the South (except for the ports) rallied to him, and before official letters announcing the accession of Mawlāy Yusūf [q.v.] could arrive, he appointed fresh officials with high responsibilities in the regions which had recognised him. He then used the way via Tīzī n'Ma'shū and followed the road to Marrakesh in an imperial procession. When he arrived before the southern capital, he met with hostility from the high political leaders, but was received with joy by the people of the Hawz [q.v.]. The new sultan entered Marrakesh on Sunday, 5 Ramaḍān 1330/18 August 1912, occupied the *kaṣaba* and installed himself in the palace of the 'Alawīs. He had to face grave troubles immediately. Profiting by the great unrest which had seized people's hearts and minds, the *ʿasākīr* troops, the floating population of the city and the hungry hordes which had followed the new *amīr* from Taroudannt, launched themselves into sacking the shops and imposing all sorts of exactions on the populace.

Al-Ḥiba had secured the handing-over to himself of the few French residents, including the vice-consul of France, who had attempted to flee the city. In an endeavour to save their lives, Gen. Lyautey's troops got the order to go by forced marches to Marrakesh. Aḥmad al-Ḥiba sent out to confront them about 5,000 men, who were crushed on 6 September at Sīdī Bū ʿUḥmān by Col. Mangin's column, in every way better-armed and better-led than the pretender's force. In front of the rapid French advance, al-Ḥiba and his remaining supporters, the "blue men" quickly evacuated the city which they had occupied three weeks previously and fled into the Atlas, pursued by all those who have suffered from their extortions and insolent behaviour. Col. Mangin entered Marrakesh on 7 September 1912, with an enthusiastic welcome from the Jewish community; the majority of the Muslim population sullen and silent. Sultan Mawlā Yusūf was then proclaimed, in an atmosphere of general relief, by the great religious and political leaders of the city and of the surrounding region, wearied by the disorders and insecurity.

Al-Ḥiba withdrew first of all to base, whence he "reigned" over the Sūs over nearly eight months, after having refused nomination as the sultan's *khālifa* over all the south of Morocco. He was then expelled from his capital by the *Shariḥīn mahallas* [q.v.] sent against him from Marrakesh, and finally, continually defeated but always remaining proud, he died at Tiznit in dignity on 18 or 24 Ramaḍān 1337/17 or 23 June 1919.

**AḤMAD B. ʿĪSĀ B. ZAYD B. ʿALĪ B. AL-ḤUSAYN B. ʿALĪ B. ABĪ ṬĀLIB, ABŪ ʿABD ALLĀH, Zaydī leader and scholar, was born on 2 Muḥarram 157/22 November 773 in Kūfa. His father ʿĪsā b. Zayd, who was supported by many Zaydīs as their candidate for the imāmate, had gone into hiding in the houses of the Kūfan Zaydī traditionist al-Ḥasan b. Ṣāliḥ b. Ḥayy [q.v.] after the failure of the revolt of**

Ibrāhīm b. ʿAbd Allāh [q.v.] in 145/762-3. After the death of his father in 166/783 and of al-Ḥasan in 167/783-4, Aḥmad and his brother Zayd were brought to the caliph al-Mahdī, who took charge of their upbringing. He permitted them to reside in Medina, where Zayd died. Aḥmad remained there until he was denounced to the caliph Hārūn al-Rašīd, it being alleged that the Zaydīs were gathering around him. On the order of the caliph, he and another ʿAlid, al-Ḥasīm b. ʿAlī b. ʿUmar, were brought to Baghdād and put under the custody of al-Faḍl b. al-Rabīʿ. They escaped, however, and Aḥmad b. ʿĪsā, according to al-Ṣafādī, led a revolt in ʿAbbādān in 185/801, but soon fled and went into hiding in Baṣra. This date for Aḥmad's escape and concealment would agree well with the report of al-Ṭabarī (iii, 651) that Thumāma b. Aṣbras was imprisoned by Hārūn in 186/802 "because he had been lying in the matter of Aḥmad b. ʿĪsā" and the report of al-Djahshiyārī (*al-wuzaraʿ*, ed. Muṣṭafā al-Sakkaʿ, Cairo 1357/1938, 243) that the Barmakid Yahyā b. Kḥālīd, when he fell into disgrace in the same year, was accused of having sent 70,000 *dirhams* to Aḥmad in Baṣra. Al-Yaʿkūbī's account (*Tārīkh*, 512) that Aḥmad was seized and imprisoned in al-Rāfiḳa in 188-804 appears mistaken, and the date may refer merely to the capture and execution of Ḥādīr, the servant and assistant of Aḥmad, reported in the same account. According to one report, Aḥmad was discovered in Kūfa in the time of the caliph al-Mutawakkil, but left free because he was afflicted with cataracts. He died, after having become blind, in Baṣra on 23 Ramaḍān 247/1 December 861.

Like his father, Aḥmad was considered by many Kūfan Zaydīs as the most suitable candidate for the imāmate, though he refused, after his initial failure, to become involved in any revolutionary activity. He was also accepted by his followers as an authoritative teacher in religious matters. His doctrine was collected by some Zaydī transmitters who had access to him, in particular by the foremost Kūfan Zaydī scholar of the 3rd/9th century, Muḥammad b. Maṣṣūr al-Murādī (d. ca. 290/903), whose *K. Amāli Aḥmad b. ʿĪsā* (with additions from the transmission of other Zaydī authorities) is extant in manuscript. His *fiḥk* doctrine was based primarily on the traditions transmitted by Abū Kḥālīd al-Wāsiṭī from Zayd b. ʿAlī [q.v.] and by Abū ʿĪ-Djārūd from Muḥammad al-Bāḳir, though he occasionally also relied on other traditions or taught on his own authority. He thus represented a more strictly Zaydī (Djārūdī) outlook, considering only the *ḥadīth* of the *Ahl al-Bayt* as authoritative, in contrast to his father who, in accordance with the view of the Batriyya [q.v.], accepted the *ḥadīth* transmitted by the Muslim community at large. Concerning the imāmate, however, he stood close to the Batriyya, apparently admitting the legitimacy of the caliphate of Abū Bakr and ʿUmar. In theology, he upheld the majority views of the early Kūfan Zaydiyya. He supported predestination and the creation of the acts of men by God versus human free will, held the Muslim sinner to be an "unbeliever by ingratitude" (*kāfir mīma*) though not a polytheist (*mushrik*), and refused to take a definite position concerning the question of the createdness of the *Qurʾān*. In the first of these doctrines he sharply differed from his contemporary al-Ḥasīm b. Ibrāhīm [q.v.], whose positions were closer to Muʿtazilī views.

His religious doctrine became one of the four *madhhab*s to which the Kūfan Zaydīs adhered in the 4th/11th century. Some Zaydīs are said to have restricted the imāmate to his descendants. His popu-

larity among the *Shī'a* is also reflected by the fact that the leader of the Zandj rebellion [see 'ALĪ B. MUḤAMMAD AL-ZANDJĪ] for some time claimed to be his grandson.

**AḤMAD B. MUḤAMMAD** or MAḤMŪD, called MU'IN AL-FUKARĀ', Transoxanian author of an important work on the religious leaders and saints of Bukhārā, the *Kitāb-i Mullāzāda* or *Kitāb-i Mazārāt-i Bukhārā*, in which the cemeteries of the city and their occupants are described. Since the last date mentioned in the book is 814/1411-12, the author must have lived in the reigns of Timūr and Shāh-Rukh [see TIMŪRIDS]. From the number of extant manuscripts, the work was obviously popular in Central Asia. Extracts from it were first given by Barthold, *Turkestan v epokhu Mongolskago nashestviya*, i, *Teksty*, 166-72, and a lithograph appeared at New Bukhārā in 1322/1904. Of secondary sources, see Barthold, *Turkestan*, Eng. tr., 58; Storey, i, 953; O. Pritsak, *Āl-i Buhān*, in *Isl.*, xxx (1952), 95-6 (the critical text of the *K.-i Mullāzāda* mentioned here as being in preparation as a Göttingen thesis never in fact materialised).

*Bibliography:* Given in the article. (Ed.)

**AḤMAD B. MUḤAMMAD AL-BARKĪ** [see AL-BARKĪ, in Suppl.].

**AḤMAD PAṢHA KŪČŪK** ("the small"), d. 1046/1636, Ottoman military commander who took a prominent part in the revival of the Ottoman empire under Murād IV (1033-49/1623-40). Of Albanian origin, he began as a soldier and became commandant of the Türkmen troops. He became governor of Damascus for the first time in 1038/1629, but was soon recalled by the Porte to become governor of Kütahya. The sultan then charged him with suppressing the revolt of Ilyās Paṣha, who was ravaging Anatolia, and he rapidly achieved success here and brought the rebel back a prisoner to Istanbul (1042/1632). He then became governor of Damascus again, with the charge of pacifying the Druze country, and whilst passing through the region of Aleppo suppressed the endemic state of revolt of the nomads in the mountainous zone to the north-west of the city.

Aḥmad Paṣha easily managed to master the revolt of Fakhr al-Dīn II [*q.v.*], whom he took captive (1043/1633-4). As a reward for his many services, Murād IV appointed him to the vizierate with three *tughis* and bestowed upon him, by a *firmān* of 1046/1636, the whole of Fakhr al-Dīn's wealth, which included numerous buildings in Ṣayda, one of which was the *khān* for rice in the quarter near the port in the northwestern sector of the town (and not the *khān* of the French, as often stated, including by P. Schwarz in *El'* art. SIDON). Aḥmad Paṣha used these revenues for a *wakf* in favour of the Holy Cities in Arabia and a *tekiyye* which he had built in the southern part of Damascus, outside the Bāb Allāh on the pilgrimage route; this is accordingly one of the rare monuments

built in Damascus in the first half of the 17th century (it is known today as the mosque of al-'Assālī).

The pacification of Lebanon was hardly finished when he joined the forces campaigning against Persia as commander of the Ottoman vanguard, and he distinguished himself above all at the time of the great battle of Tabrīz. In the following year, Murād IV entrusted to him the defence of al-Mawṣil, where he found a glorious death in battle against the Persian troops (20 Rabī' II 1046/21 September 1636). He was buried in his *tekiyye* in Damascus.

It seems that during his Lebanese expedition, Aḥmad Paṣha showed his usual severity, so much so that remembrance of "the year of Kūčūk" remained stamped on the popular memory in Mount Lebanon. Indeed, the Porte did not hesitate on future occasions (notably in 1214/1799) to remind the Druzes of this harshness. The terrible legacy of fear left behind in the local consciousness is probably the origin of the Lebanese legend of "Kūčūk". Aḥmad Paṣha is represented as a polished traitor who engineered the ruin of his benefactor and then seized his possessions. The legend relates in effect that Aḥmad Paṣha was an orphan brought up by Fakhr al-Dīn II, who appointed him tax-collector for southern Lebanon, but since he committed various financial defalcations, he had to leave his service and then sought Fakhr al-Dīn's ruin by accusing him at the Porte of wanting to make himself independent, for which he was rewarded by the wealth of the Ma'ns.

*Bibliography:* There is a long, fairly confused biography in Muhibbī, *Khulāṣat al-aḥḥar*, Cairo 1862, i, 385-8, who, together with Sāmī Bey (*Kāmūs al-'alām*, Istanbul 1888, i, 797), emphasises his courage and fidelity to Murād IV. Extracts from the text of the *wakfiyya* of Aḥmad Paṣha are in the *Zāhiriyya* at Damascus, No. 8518 (history), containing in particular the description of Fakhr al-Dīn's possessions; see A. Abdel Nour, *Étude sur deux actes de waqfs du XVI<sup>e</sup> et du XVII<sup>e</sup> siècles des wilayets de Damas et de Ṣayda*, Sorbonne thesis 1976. For a detailed account of Aḥmad Paṣha's death, see Na'imā, *Ta'rikh*, Istanbul 1866, iii, 291-2. On his official career, see Von Hammer, *Histoire*, Paris 1838, ix, 275-6. On the "year of Kūčūk", see Chebli, *Fakhr al-Dīn II Ma'n*, Beirut 1936, 186 ff. One of the oldest versions of the Lebanese legend of Kūčūk is to be found in 'Īsā al-Ma'lūf, *Ta'rikh al-amīr Fakhr al-Dīn al-Ma'nī al-ḥanī*, Beirut 1966, 202-10.

(A. ABDEL NOUR)

**AḤMAD-I RŪMĪ**, Persian Ṣūfī and author, who lived and worked in India in the first half of the 8th/14th century. Little is known of his life except that he travelled from *khānakāh* [*q.v.*] to *khānakāh*, preaching and composing his moralistic treatises for the residents of these convents. He has been incorrectly identified by Blochet as Aḥmad b. Muḥammad Rūmī al-Ḥanafī (Ḥādīdī *Khaliḥa*, iv, 582) and by Massignon as Sultān-i Walad's grandson, Aḥmad Paṣha.

Aḥmad's most popular work, the *Dakā'ik al-ḥakā'ik*, is divided in 80 chapters, each opening with an *āya* or *ḥadīth*, which serves as a starting point for the discussion of some aspect of Ṣūfī doctrine. Mawlānā Djalāl al-Dīn Rūmī [*q.v.*] is quoted frequently, and each chapter is concluded by a short *mathnawī* in imitation of Mawlānā. Like his later, similar composition, *Umm al-Kitāb* (727/1327) it is a first instance of a class of works expounding Mawlānā's teachings, without however constituting an actual attempt at a commentary of the *Mathnawī* (as Furūzanfar would have it in his *Sharḥ-i Mathnawī*, i, Tehran 1346, 10).

The instruction of the convent's residents takes a more practical turn in *al-Dakā'ik fi 'l-tariḳ*, a lengthy *mathnawī* in 12 chapters on the relation between *murshid* and *murīd*. Although Ahmad describes himself as a "follower of Mawlānā", from his exposition of Šūfī praxis he does not appear as a Mawlāwī in the strict sense of the word. Rather, Aḥmad's works indicate that Šūfī life in the 8th/14th century did not have to be organised along the formal lines of the later great orders.

One instance of lyrical poetry (a *ghazal*) occurs in a *Mathnawī* manuscript in Edinburgh (Hukk, Ethé, Robertson, *Descriptive catalogue*, no. 281).

*Bibliography*: A.C.M. Hamer, *An unknown Mawlāwī-poet: Aḥmad-i Rūmī*, in *Studia Iranica*, iii (1974), 229-49. (A.C.M. HAMER)

**AḤMADĪ**, a town about 30 years old some 20 km. south of Kuwait City. During the early days of exploration for oil in Kuwait, the Kuwait Oil Company (KOC), then owned in equal shares by the Anglo-Iranian Oil Company (later renamed British Petroleum) and by the Gulf Oil Corporation of the United States, established its base camp at Magwa (al-Maḳwa) not far north-west of the ridge known as Dhahr (al-Zahr), which with an elevation of ca. 120 m. is one of the few fairly high places in the state. In 1936/1938 KOC discovered oil south of the ridge at Burgan (Burḳān), destined to become one of the largest oil fields in the world. The involvement of Britain and later the United States in the Second World War delayed the first export of oil until 1965/1946. KOC gradually moved its field headquarters to the desert area of the ridge, which was renamed Aḥmadī (in Arabic al-Aḥmadī) in honour of Šhayḳh Aḥmad Āl Džābir Āl Šabāh, then the Ruler of Kuwait. Oil from Burgan and other fields, including one called Aḥmadī, is brought to a tank farm on the ridge, whence it flows by gravity to the nearby coast for shipment from the terminal of Mīnā' al-Aḥmadī. The company built at Aḥmadī a planned community with many amenities designed especially for the comfort and pleasure of the expatriate staff (British, Americans, etc.). With the passage of time, Kuwaitis in increasing numbers received the training necessary to qualify them for higher positions in the company. The government also inaugurated and expanded in stages its participation in the ownership of KOC, culminating in a complete takeover in 1394/1975, with the original owners being retained to lend a hand in the operations. The town and the indigenous parts of the state have thus moved towards full integration.

Aḥmadī town is also the seat of the Aḥmadī Governorate (*muhāfazā*). As Kuwait endeavours to diversify its economy in order to escape undue dependence on the export of oil and natural gas, emphasis is placed on industrialisation. The largest industrial area in the state is now Shuaiba (al-Shu'ayba) on the coast of the Governorate south of Mīnā' al-Aḥmadī, with huge plants for generating electricity, distilling sea water, and manufacturing petrochemicals.

*Bibliography*: In addition to the general bibliography for KUWAIT, see *al-'Arabī*, Kuwait, Shawwal 1395 and Rabī' II 1396; *Madjallat Dināsāt al-Khalījī*, Kuwait, Raǧab 1396; *The Kuwaiti Digest*, Kuwait, Jan.-Sept. 1976. (G. RENTZ)

AL-AḤMAR [see ABU 'L-ḤASAN AL-AḤMAR, in Suppl.].

**AḤMED, FAḲĪH**, or AḤMED FAḲĪH, early Anatolian Turkish poet whose identity and date are controversial. He is accepted to be the author of the

*Ārḳh-nāme*, a poem of about eighty couplets in *kašīda* form, which is found in the *Madjma' al-nazā'ir*, compiled in the early 16th century by Hādīdī Kemāl of Egirdir. It was first published by M. Fu'ād Köprülü as a specimen of early 13th century Turkish verse (*Anatolische Dichter in der Seldschükenzeit*, ii, *Aḥmed Faḳīh*, in *KCSA*, ii (1926), 20-38). Mecdut Mansuroǧlu, who edited the work in transcription, modified the text of the 16th century manuscript, adapting it to the linguistic characteristics of the 13th century. Recent research by T. Gandjei (*Notes on the attribution and date of the "Ārḳh-nāme"*, in *Studi preottomani e ottomani, Atti del Convegno di Napoli*, Naples 1976, 101-4) shows that there has been a confusion among several Faḳīh Aḥmeds and Aḥmed Faḳīhs mentioned in the sources and that the *Ārḳh-nāme* attributed to one of these cannot linguistically be dated earlier than the late 14th century. The *Ārḳh-nāme*, which is written in the literary language of early Anatolian (Ottoman) Turkish, repeats some of the *leitmotifs* of *dīwān* poetry: life is short, all the signs indicate that the end is near; none, even prophets and kings can escape death; consider the day of Judgement and repent; etc. (For a paraphrase in modern Turkish and evaluation of the poem, see Fahir İz, *Eski türk edebiyatında nazım*, ii, Istanbul 1967, Introduction).

**AḤRĀR**, **Kh**"ADJA 'UBAYD ALLĀH B. MAḤMUD NAŠĪR AL-DĪN (806-95/1404-90), a *shayḳh* of the Naḳshbandī order under whose auspices it became firmly rooted in Central Asia and spread also to other regions of the Islamic world; furthermore, the effective ruler of much of Transoxania for four decades. He was born in Ramaḍān 806/March 1404 in the village of Bāghistān near Tashkent into a family already renowned for its religious and scholarly interests. It was his maternal uncle, Ibrāhīm Shāshī, who first assumed the task of educating him and who sent him to pursue his studies in Samarkand. Because of illness and lack of inclination on his part, Ahrār soon abandoned his studies in Samarkand, and according to his own admission never mastered "more than two pages of Arabic grammar". Throughout his life, indeed, he manifested a certain disdain for formal religious learning, assigning more importance to the enactment of the *Shari'a* and the practise of Šūfism. At the age of 24, Ahrār went to Herat, and it was evidently there that his active interest in Šūfism was awakened. He associated with numerous *shayḳhs* of the city without, however, offering his formal allegiance to any of them. The master to whom he gave his devotion was instead Ya'qūb Ārḳhī (d. 851/1447), one of the principal successors of Baḥā' al-Dīn Naḳshband, eponymous founder of the Naḳshbandī order, who had left Bukhārā after the death of his master to settle first in Badakhshān and then in the remote province of Čaghāniyān. Ahrār had already had some dealings in Samarkand with another Naḳshbandī *shayḳh*, **Kh**"ADJA ḤASAN 'Aṭṭār, son-in-law of Baḥā' al-Dīn Naḳshband, but 'Aṭṭār had seen little sign in him of spiritual talent, and advised him instead to learn the martial arts. Returning from Čaghāniyān to Tashkent in about 835/1431, Ahrār established himself as chief Šūfī *shayḳh* of the city.

Ahrār's rise to political prominence came in 855/1451, when he extended to the Timūrid prince Abū Sa'īd assistance that proved decisive in enabling him to capture the Timūrid capital of Samarkand.

According to the account found in the biographies of Ahrār, Abū Sa'īd, defeated in battle by a rival prince, 'Abd Allāh Mīrẓā, fled northward to Tashkent, and in the course of his flight dreamed of the celebrated saint, Aḥmad Yasawī [q.v.]. Yasawī introduced him to a luminous figure who would aid him in his struggle. Describing the figure he had dreamed of to the people of Tashkent, Abū Sa'īd was told that it was none other than Kh"ādja 'Ubayd Allāh Ahrār. Ahrār was at the time absent from Tashkent, and it was at the small town of Parkent (Fārkāt) outside the city that Abū Sa'īd went to meet him. Ahrār consented to aid him, on condition that he use his rule to enforce the *Sharī'a* and to alleviate the lot of the people. In the ensuing battle, 'Abd Allāh Mīrẓā was defeated, and Abū Sa'īd entered Samarqand, soon to be followed by Ahrār. Abū Sa'īd's battle against 'Abd Allāh Mīrẓā had been won, in reality, by his Uzbek auxiliaries, commanded by Abu 'l-Khayr Khān; it is said that they had intervened at the request of Ahrār, but this is uncertain. In any event, Abū Sa'īd felt himself to be in the debt of Ahrār and even, according to the chronicler 'Abd al-Razzāk Samarqandī, "regarded himself as being under his orders". Ahrār's domination of Samarqand became complete in 861/1457 when Abū Sa'īd transferred his capital to Herat. It survived the death of that prince in 874/1469, this death occurring in the course of a disastrous campaign undertaken with Ahrār's advice; Abū Sa'īd's son, Sultān Aḥmad, proved even more devoted to Ahrār than his father had been.

There are a number of episodes, apart from the conquest of Samarqand in 855/1451, that may be mentioned as particularly illustrative of Ahrār's political influence; his organisation of the defence of Samarqand against an army from Khurāsān in 858/1454; his success in 865/1460 in persuading Abū Sa'īd to abolish the *tamgha* in Bukhārā and Samarqand, and to promise the abolition of it and all other non-*sharī* imposts throughout his realm; his mediation between Abū Sa'īd and a rebellious prince, Muḥammad Dǰūkī, at Shāhrukhīyya in the years 865/1461 and 867/1463; and his arbitration of three conflicting claims for the possession of Tashkent in 890/1485.

Ahrār expounded the reasons for his political activity in a number of explicit utterances, which make it clear that he sought ascendancy over rulers in order to secure justice and the implementation of the *Sharī'a*. He is thus reported as saying: "there must stand between the people and their ruling lords one capable of checking violence and oppression. The people are helpless, and have no recourse against the great. Hence it is necessary to convince kings not to transgress against God's law or to torment the people" (Mir 'Abd al-Awwal Nishāpūrī, *Masmū'āt*, ms. Institut Vostokovedeniya, Uzbek Academy of Sciences, Tashkent 3735, f. 131b). His sense of political mission is also apparent from the following utterance: "if we acted only as *shaykh* in this age, no other *shaykh* would find a *murīd*. But another task has been assigned to us, to protect the Muslims from the evil of oppressors, and for the sake of this we must traffic with kings and conquer their souls, thus achieving the purpose of the Muslims" (Fakhr al-Dīn 'Alī Ṣafī, *Rashahāt 'ayn al-hayāt*, Tashkent 1329/1911, 315).

In fulfilling this role, Ahrār was aided by the gradual accumulation of a vast amount of wealth, which permitted him to bestow patronage and charity as well as to exercise political influence. He

may, indeed, have been the largest landowner in Transoxania of his time. Documents survive indicating that he owned 30 orchards, 64 villages with their surrounding lands and irrigation canals, and scores of commercial establishments and artisan workshops in different cities (O.D. Čekhovič, *Samarkandskie dokumenti XV-XVI vv.*, Moscow 1974). Some of this property, worked partly by slaves of Indian origin, was used for the upkeep of Naqshbandī *khānakāhs*, but it is evident that in many cases the purchase of land by Kh"ādja Ahrār was purely nominal; the property remained in the effective ownership of the sellers, who benefited from the security and prestige bestowed by the name of Ahrār.

In addition to thus establishing, in his own person, Naqshbandī supremacy in Transoxania, Ahrār extended the influence of the order to other regions. One of his principal followers, Muḥammad Qādī, travelled to the Mughal rulers of Farghāna and obtained their adhesion to the Naqshbandī order, thus laying the foundation for several centuries of both spiritual and temporal rule by Naqshbandī *kh"ādjas* in Eastern Turkestan (see Muḥammad Haydar Dughlāt, *Tārīkh-i Rashīdī*, ms. British Museum or. 157, f. 67b). Others undertook to travel to the presence of Ahrār in Samarqand; by way of example we can mention Mawlānā 'Alī Kurdī of Qazwīn and Shaykh 'Ayan Kāzarūnī, who introduced the Naqshbandīyya to western and southern Iran before it was swept away by the Šafavids (Muḥammad b. Husayn b. 'Abd Allāh Qazwīnī, *Silsil-nāma-yi Kh"ādjağān-i Naqshband*, ms. Istanbul, Laleli 1381, f. 13a. Ff. 10a-14a of this work contain a complete list of the *murīds* of Ahrār). Possibly most significant was the transmission of the Naqshbandī order to Turkey by another *murīd* of Ahrār, Mollā 'Abd Allāh Ilāhī, since whose time the Naqshbandī order has maintained an uninterrupted presence among the Turks (see Kasim Kufralı, *Molla İlahi ve kendisinden sonraki Nakşibendîye mühtîi, in Türk Dili ve Edebiyatı Dergisi*, iii [October 1948], 129-51).

Ahrār died in Rabī' al-Awwal 895/February 1490, and a decade later Tīmūrid rule in Transoxania came to an end. Muḥammad Shaybānī, the Uzbek conqueror of Transoxania, showed himself hostile to the sons of Ahrār, confiscating much of the property they had inherited from their father, and putting to death Kh"ādja Muḥammad Yahyā, his second and favourite son. However, Muḥammad Shaybānī's nephew, 'Ubayd Allāh Khān, restored the major part of their lands and took pride in the coincidence of his name with that of the great Ahrār. In general, the posthumous repute and influence of the *kh"ādja* were great, and the various branches of the Naqshbandī order that descended from him played a major role in the history of Central Asia down to the Russian conquest.

*Bibliography:* Materials on the life of Ahrār are unusually copious. A complete bibliography is given in Hamid Algar, *The origins of the Naqshbandī order*, ii (forthcoming), which contains a full discussion of the career of Ahrār. Here the following primary sources—all of them in Persian—will be mentioned: Mir 'Abd al-Awwal Nishāpūrī, *Masmū'āt*, ms. Institut Vostokovedeniya, Uzbek Academy of Sciences, Tashkent 3735; Fakhr al-Dīn 'Alī Ṣafī, *Rashahāt 'ayn al-hayāt*, Tashkent 1329/1911 (numerous other editions also exist, as well as Arabic and Turkish translations); Muḥammad Qādī, *Silsilat al-'arifīn wa-tadhkkirat al-siddīqīn*, ms. Istanbul, Hacı Mahmut Efendi

2830; and Mawlānā Shaykh, *Manāḳib-i Kh"ādja Ahrār*, ms. Institut Vostokovedeniya, Uzbek Academy of Sciences, Tashkent 9730. There is mention of Ahrār in most of the Timūrid chronicles, and a long encomium of him in 'Abd al-Rahmān Djāmī's *Nafahāt al-uns* (pp. 406-13 of the edition published in Tehran in 1336/1957 by Mahdī Tawhīdīpūr). Most later manuals of Naḳshbandī biography also contain accounts of Ahrār, generally based on the *Rashahāt*; see, for example, Muḥammad Amīn al-Kurdī, *al-Mawāhib al-sarmadiyya fī manāḳib al-Naḳshbandiyya*, Cairo 1329/1911, 155-72. Averse to formal learning, Ahrār did not leave many writings; there survive from him, however, a commentary on a quatrain of obscure meaning attributed to Abū Sa'īd b. Abī 'l-Khayr, *Sharḥ-i hawā'īyya* (published by V.A. Zhukovskii as an appendix to his edition of Muḥammad b. al-Munawwar's *Asrār al-tawhīd*, St. Petersburg 1899, 489-93), and two treatises, entitled *Risāla-yi wālidīyya* and *Fakarāt* (numerous mss. of both are to be found in European, Turkish and Soviet collections; the former has been translated into both Ottoman and Çağhatāy Turkish). Some of his correspondence has also been preserved in Soviet collections, partly in autograph; see, for example, ms. Institut Vostokovedeniya, Tajik Academy of Sciences, Dushanbe 548. The branches of the Naḳshbandiyya descending from Kh"ādja Ahrār are enumerated in Kamāl al-Dīn al-Ḥarīrī, *Tibyān wasā'il al-ḥaḳā'ik*, ms. Istanbul, Ibrahim Efendi fl. 34a-41b. Scholarly writing on Ahrār has been done up to the present almost entirely in Russian: mention may be made of the pages devoted to Ahrār in V.V. Bartold's *Ulug Beg i ego vremya*, reprinted in *Sochineniya*, Moscow 1964, ii (2), 121-4, 205-17, Eng. tr. V. and T. Minorsky, in *Four studies on the history of Central Asia*, ii, Leiden 1958, 117-18, 166-77, and a number of more recent studies concentrating on the socio-economic aspects of Ahrār's activity: R.N. Nabiev, *Iz istorii politiko-ekonomičeskoj žizni Mavernakhra XV v. (zametki o Khodzha-Akhrare)*, in *Velikii Uzbekskii Poet—Sbornik Statei*, Tashkent 1948, 25-49; Z.A. Kutbaev, *K istorii vakufnykh vladenii Khodzha Akhrara i ego potomkov*, doctoral thesis, Tashkent University 1970; and O.D. Čekovič, *Samarkandskie Dokumenty XV-XVI vv.*, Moscow 1974.

(HAMID ALGAR)

**AHRUN** (AHRŪN) b. A'YAN AL-KASS, "the priest", presbyter and physician, who lived in Alexandria probably in the 7th century and belonged, with Paulus of Aigina, to the last great medical scholars produced by the Alexandrian School. A satirical verse of al-Ḥakam b. 'Abdal [q.v.], in which a tax official of 'Abd al-Malik b. Bishr b. Marwān, governor of Baṣra, is advised to have the offensive smell of his breath and nose cured by Ahrun before presenting himself to the *amūr* (Djāḥiz, *Hayawān*, i, Cairo 1949-50, 247, 14 = 249, 8 = 250, 2; Ibn Kutayba, *Uyūn*, Cairo 1930, iv, 62; *Aghānī*, Cairo 1928, ii, 424), possibly offers a *terminus post quem* for the period in which Ahrun lived. 'Abd al-Malik b. Bishr was governor under Yazid II in 102/720-1 (Tabarī, ii, 1433, 1436).

Ahrun (probably = ᾠρρ ων) allegedly composed a medical compendium (Πανδεκτης, Σύνταγμα?) consisting of 30 books, which was translated into Syriac by a certain Gōsiōs (*The Chronography of Gregory Abu 'l-Faraj... Bar Hebraeus*, tr. Budge, Oxford 1932, 57; see also M. Meyerhof in *Isl.*, vi

(1916), 220 f.). Māsardjuwayh is said to have translated the work afterwards into Arabic under the title *al-Kunnāsh* and to have added two more books. The information on this procedure is, however, defective and inconsistent (see *Fihrist*, 297; Ibn Djulḍjul, *Ṭabaḳāt*, ed. F. Sayyid, 61; Kūfī, *Hukamā'*, ed. Lippert, 80; Ibn Abī Uṣaybi'a, *Uyūn al-anbā'*, i, 109; Šā'id, *Ṭabaḳāt*, ed. Cheikho, 88; Barhebraeus, *Duwal*, ed. Šālhānī, 157). The data are the more uncertain because it is not known when Māsardjuwayh was living. According to Ibn Djulḍjul, he is said to have translated Ahrun's work under the caliphs Marwān (64-5/684-5) or 'Umar b. 'Abd al-'Azīz b. Marwān (99-101/717-20); according to others he belongs to the 2nd/8th or 3rd/9th century.

In any case, the *Kunnāsh* must have been highly appreciated (*Kunnāsh fādil al-kanānīsh al-ḳādīma*, Kūfī, *Hukamā'*, 324), although it was very badly arranged and difficult to consult even for specialists, according to the judgement of Abū Sahl Bishr b. Ya'qūb al-Sidjīzī (4th/10th century). For example, the twenty kinds of headaches (*sudā'*) are said to have been brought together in one place, while their causes, symptoms and treatments are discussed separately in various places. The subject-matter could thus only be mastered by lengthy readings (see Dietrich, *Medicinalia arabica*, Göttingen 1966, Arabic text, 6 ff.). Al-Madjuṣī (*Kitāb al-Malakī*, i, Būlak 1294, 4 f.) remarks that the work is bad and without value, especially for those who had not read Ḥunayn b. Iṣḥāḳ's translation—which thus also did exist.

The *Kunnāsh* has not been preserved in complete manuscript, but it has survived in many quotations, especially in al-Rāzī's *Ḥawā'ī*. They have been brought together by Ullmann, *Die Medizin im Islam*, 88 f., and by Sezgin, *GAS*, iii, 167 f. They can certainly be enlarged through systematic research, see e.g. Maimonides, *Sharḥ asmā' al-'uḳkār*, ed. Meyerhof, Cairo 1940, no. 247; Ibn al-Khaṭīb, *Kitāb 'amal man ṭabb li-man ḥabb*, ed. Maria C. Vazquez de Benito, Salamanca 1972, 89, 132, 135, 140. A judgment on the work will only be permitted after all the quotations attainable have been compiled systematically with the greatest possible completeness. Rāzī more than once quotes an abstract from the *Kunnāsh* under the title *al-Fā'ik*. It could not be verified whether the *al-Adwiya al-kātila*, mentioned by S. Munadjjid in *RIMA*, v (1959), 278, is indeed a work of Ahrun, but Munadjjid considers the attribution as doubtful.

*Bibliography*: given in the article. See further, Ullmann and Sezgin, and for the older literature, L. Leclerc, *Histoire de la médecine arabe*, i, 1876, 77-81. (A. DIETRICH)

**'Ā'ISHA ẸANDĪSHA**, a female spirit, diversely referred to as a *djinnīyya* (a female *djinnī* [q.v.]), an *'afīla* [see IFRĪṬ] or a *ghūla* [see GHŪL], by the peoples of northern Morocco. Westermarck classifies her as one of the "individual spirits" whose characteristics are more explicitly elaborated than those of the run-of-the-mill *djinn*. Although there is some difference of belief in her attributes, 'Ā'isha Ẹandīsha is said generally to appear as either a wondrous beauty or an old, wrinkled hag with elongated nipples, pendulous breasts, and long finger nails. In both manifestations she has a hooved foot of a camel, a goat, or an ass. She it thought to be jealous, arbitrary, whimsical, and quick-tempered—ever-ready to strangle or strike those who have offended her. Her victims, at least in the area around

Miknās, must undergo the rituals of the Hamādīsha [q.v. in Suppl.], her special devotees, to be rid of the symptoms of her attack: paralysis, sudden deafness, blindness, or mutism. In her beautiful manifestation she is an insatiable temptress. Once a man has succumbed to her—he is said to be married to her—he is in her absolute power and must follow her every command. His only redress is to plunge a steel knife into the earth before giving into her.

Ā'īsha Kāndīsha is said to be married to a far less elaborated *djinnī*, Hammu Kiyu, and to live in the earth or under a river. Along the Moroccan littoral she is thought to live in the sea. The Hamādīsha claim that her favourite home is a grotto under a giant fig tree, near the sanctuary of Sīdī 'Alī b. Hāmdush, one of the saints whom they venerate, on the Djebel Zarhūn. This grotto is visited by Ā'īsha Kāndīsha's followers, especially by women who are anxious for children or for relief from menstrual cramps and other gynaecological complaints. Such women smear henna on their ailing body and make a promise (*'ār* [q.v. in Suppl.]) to sacrifice a chicken or goat if they are relieved of their complaint. During the *musem*, or annual pilgrimage [see MAWSIM], to Sīdī 'Alī's sanctuary, the grotto is the scene of wild, trance-like dances in which some of Ā'īsha Kāndīsha's female followers grovel in the mud in imitation of pigs. Ā'īsha Kāndīsha is said to like henna and to fear iron and steel. Her favourite colours are red and black. She has a preference for black benzoin and certain Hamādīsha melodies.

Ā'īsha Kāndīsha is often indigenously confused with similar female spirits. She is, of course, identifiable with other female spirits in North Africa and the Middle East. Westermarck has related her worship to that of Astarte. The Hamādīsha claim that she was brought north from the Sudan by one of their saints, Sīdī Ahmad Dghughī.

**ĀKĀ KHĀN KIRMĀNĪ**, MİRZĀ 'ABD AL-HUSAYN, also known as Bardsīrī (ca. 1270-1314/1853-96), a modernist thinker of 19th century Iran. He belonged to a well-to-do family of Kirmān. He studied Persian and Arabic literature, Islamic history, *fikh*, *uṣūl*, *ḥadīth*, mathematics, logic, natural philosophy, and mediaeval medicine under several teachers such as Mullā Dja'far, Hādjdjī Ākā Šādīk, and Sayyid Djawād Karbalā'ī. He also learned some English, French, Turkish and Old and Middle Persian. In 1298/1880 he assumed a position in the Kirmān Revenue Office. After approximately three years, however, he suddenly abandoned his job and secretly left Kirmān for Iṣfahān because he was not willing to cooperate with the Nāṣir al-Dawla, the oppressive governor at that time of Kirmān. Thereafter he began to work for the governor of Iṣfahān, Zill al-Sultān, and at the same time he continued to study French under the Jesuits. Because of the trouble that the Nāṣir al-Dawla created for him, he, together with his close friend, Shaykh Ahmad Rūhī, went to Tehran in 1303/1885, but he could not stay there for the same reason. He and Rūhī therefore, after spending a few months in Mashhad, proceeded to Istanbul towards the end of 1303/1886. Soon afterwards, they both went to Cyprus and each married a daughter

of the then Bābī leader, Mīrzā Yahyā Nūrī, known as Subḥ-i Azal.

While in Istanbul, Ākā Khān was living in poor circumstances; his mother and his brother had deprived him of the wealth to which he was due by inheritance. He had therefore to live on a modest income earned through teaching, as well through contributing to the Persian newspapers, such as the *Akhtar* of Istanbul and Malkam Khān's *Kānūn* published in London. He was one of the outspoken opponents of the 1890 Persian Tobacco Concession and other concessions granted by the Shāh, and his sharp criticism of Nāṣir al-Dīn made the latter so angry that "... while kicking the ground and chewing his lips, the Shāh said: 'Anyone who establishes correspondence with Ākā Khān, I will demolish his house over his head'" (Yahyā Dawlatābādī, *Ta'rikh-i mu'āsīr yā ḥayāt-i Yahyā*, i, Tehran 1957, 125).

In addition to his press campaign, Ākā Khān joined the Pan-Islamic group headed by another bitter critic of the Shāh, Sayyid Djāmāl al-Dīn Asadābādī "Afghānī", and he also corresponded with the Persian '*ulamā*' of Irāk. Because of these anti-Shāh activities, the Iranian government urged the Turkish authorities to extradite Ākā Khān and his close associates to Iran. This development coincided with the 1893-4 Armenian unrest in Turkey, and Ākā Khān was accused of cooperation with the rebels. An arrangement was therefore made that Turkey should exchange Ākā Khān and his friends for the rebellious Armenians who had fled to Iran. In the meantime (1314/1896), Nāṣir al-Dīn Shāh was assassinated by a disciple of Afghānī, Mīrzā Riḍā Kirmānī; this incident expedited the process of Ākā Khān's extradition. Finally, in Šafār 1314/July 1896 Ākā Khān, together with two friends, Rūhī and Ḥasan Khān Khabīr al-Mulk, were beheaded in Tabriz while Muḥammad 'Alī Mīrzā, the later Shāh, was watching the scene.

Ākā Khān has been recognised as a distinguished forerunner of modernist thinking in Iran, of greater intellectual calibre than other contemporaries such as Malkam Khān, Ākhūnd-Zāda, and Mustashār al-Dawla Tabrizī; for one thing, his linguistic ability provided him with a broader access to European sources on social, political, and philosophical thought. Despite his Pan-Islamic activity, he was anti-religious and quite hostile to many traditional practices.

As a modern school of thought, Bābism attracted Ākā Khān and for a while he became one of its adherents. Later, however, he turned against Bābism, and considered all religious sects to be useless (Firīdūn Adamiyyat, *Andīshahā-yi Mīrzā Ākā Khān Kirmānī*, Tehran 1967, 66). In his thinking, he was influenced by European thinkers such as Voltaire, Spencer, Rousseau, Montesquieu, and Guizot.

Ākā Khān's works, many of them unpublished and incomplete, include detailed accounts of materialism, anarchism, nihilism, nationalism, and the philosophy of religion. He had modernist interpretations of history and suggested a new methodology for Persian historiography; in regard to the arts, and particularly literature, he believed that they should be responsible to and representative of society. In his treatment of society, he proclaimed that "Wealth consists essentially of (1) material objects such as metals and mines, and (2) the labourers' wages. The true criterion for wealth is physical as well as intellectual labour alone... not silver and gold, which are the means of exchange alone" (*ibid.*, 237-8).

(ABDUL-HADI HAIRI)

**ĀKĀ NADJAFĪ**, ḤĀDĪDĪ SHĀYKH MUḤAMMAD TAKĪ IṢFAHĀNĪ (1845-1931), member of a very powerfully-established clerical family of Iṣfahān and himself an influential and wealthy religious authority in that city. Contrary to some of his clerical contemporaries, such as Mirzā Ḥasan Shīrāzī and Muḥammad Kāzīm Khurāsānī [q.v.], Ākā Nadjafī was not known as being devoted to the welfare and prosperity of the Muslims in general and the Iranians in particular. Rather, he has often been referred to as a grain hoarder, a venal, power-hungry religious leader, a usurper of other people's property, and an unjust judge. After his primary education under his

father, who was also a powerful cleric, he went to Nadjaf and studied *fiqh* and *uṣūl* under Shīrāzī and others. After his father's death in 1883, Ākā Nadjafī was widely recognised as a religious leader in Iṣfahān: he led the prayers in congregation in the Shāh mosque, and performed judicial duties at home. Despite the governmental injunction, he went as far as to execute the judgements which he himself passed on civil and criminal cases. Many books on prayers, ethics, *fiqh* and other Islamic subjects have been ascribed to him and were published at his own expense, but it is believed that they were not in reality written by himself (Mahdī Bāmdād, *Sharh-i ḥāl-i riḳāl-i Irān*, iii, Tehran 1968, 327). Since he was a wealthy landowner, he naturally had much in common with the feudal governor of Iṣfahān, Żill al-Sultān; they often worked together, although at times this co-operation was replaced by hostility, conspiracy, and struggle.

Ākā Nadjafī has been held responsible for two major disorders in Iṣfahān and Yazd, in which many people were murdered, on the accusations of Bābīsm and irreligiosity: once in 1890 and another time in 1902, both of which resulted in Ākā Nadjafī's banishment to Tehran. He, along with many other people, protested against the Tobacco Concession of 1890 being given to a British company; he also favoured the Persian Constitutional Revolution of 1906. In both cases Ākā Nadjafī appears less as a genuine lover of freedom than as an opportunist who hoped to increase his prestige, wealth, and influence in the light of those national movements. To preserve his power and wealth, Ākā Nadjafī declared as unbelievers, and even at times had murdered, those who opposed him or who were critical of him (Mahdī Malik-Zāda, *Tārīkh-i inkilāb-i mashrūṭiyyat-i Irān*, i, Tehran 1949, 166). Moreover, by 1911, Ākā Nadjafī and his sons had made a volte-face and wished "to place their extensive landed property under foreign protection" (Cd. 5656. *Persia*, No. 1 (1911), G. Barclay, to E. Grey, Feb. 25, 1911, London 1911, CIII, p. 30).

(ABDUL-HADI HAIRI)

**AKAGÜNDÜZ**, Turkish writer and novelist (1886-1958) whose original name was Ḥusayn 'Awnī. In his writings he used the pen-name Enīs 'Awnī which he later changed to Akagündüz. The son of an army major, he was born in a village of Alasonia, near Salonica, and was educated at the Kuleli military high school and the War College (*Mektebi harbiyye*), which he left because of ill health, being sent to Paris for treatment where, for three years, he attended the courses of the Academy of Fine Arts and the Faculty of Law. Back in Salonica, he volunteered for the Action Army (*Hareket ordusu*) which was sent to quell the mutiny of 13 April 1909 (*31 Mart vak'ası*) in Istanbul. He was active as a journalist until 1919, when, because of his enthusiastic support of the Nationalists in Anatolia, he was arrested by the British and deported to Malta. Freed by the Nationalist government, he settled in Ankara where he combined the functions of a Member of Parliament with his career as a writer. He died in Ankara on 7 November 1958.

Akagündüz started his career in Salonica in close relationship with his friend 'Ömer Seyf el-Dīn, as a poet, short story writer and playwright. But he is primarily known as a novelist. Apart from his collection of verse *Bozghun* ("Débâcle", 1913) and his plays *Muhterem kâtil* ("Respectable assassin", 1914) and *Mai yıldırım* ("Blue thunderbolt", 1934), he is the author of several volumes of short stories and more than sixty novels, the most famous of which are *Dikmen yıldızı*, ("The star of Dikmen", 1928); *İki süngü arasında* ("Between two bayonets", 1929); *Üvey ana* ("The step-mother", 1933) and *Yayla kızı* ("The girl of the plateau", 1940). Akagündüz's unsophisticated novels and short stories, written in an unpolished style with no claim to literary value, which were immensely popular in the 20s and early 30s, treat, with a certain element of realism, mainly of sentimental or tragic themes among ordinary people.

*Bibliography*: *Yeni yayınlar*, February 1960 (complete list of works; Behçet Necatigil, *Edebiyatımızda isimler sözlüğü*<sup>1</sup>, Istanbul 1975.

(FAHİR İZ)

**'AKĀR** (A.), a legal term denoting "immovable property", such as houses, shops and land, as opposed to *māl mankūl* ("movable property"). As such, *'akār* is identical with "realty" or "real property". All property which is *'akār* is non-fungible (*kīmī*), but the two terms are not co-extensive, since animals, furniture, etc. are *kīmī*, although they do not constitute *'akār*.

The owner of *'akār* is deemed also to be the owner of anything on it, over it or under it, to any height or depth, so that ownership of land includes ownership of minerals beneath it and buildings and plants

on it. Like personality, realty may be held in joint ownership in Islamic law, without the shares being allocated (*mushāf*). As regards ownership of the foreshore and new land formed by natural processes, this is vested in the state in modern Islamic countries.

*Bibliography*: Muḥafā Aḥmad al-Zarkā', *al-Fiḫ al-islāmī fī ḥawābiḥ al-ḥadīd*, Damascus 1968, and bibliography there cited; for examples of how items of *'akār* are described and defined in legal documents, see R.Y. Ebied and M.J.L. Young, *Some Arabic legal documents of the Ottoman period*, Leiden 1976.

(R.Y. EBIED and M.J.L. YOUNG)

**AKBAR B. AWRANGZĪB**, Mughal prince. His mother dying when he was an infant, he was very affectionately brought up by Awrangzīb [*q.v.*]. In 1090/1679 he was deputed to lead an army against the Rathors, and after initially taking a vigorous part in the operations, he was won over to their side by the rebels. His own reasons for his defection are given in a letter to Awrangzīb in 1092/1681, where he criticises his father's hostility to the Rāḍjputs. However, his attempt at a surprise attack on his father at Adjmēr failed, and he had to flee, first to Shambhadji, the Marāthā ruler (1680-9), and then to Persia; where he died in 1116/1704; until his death, Awrangzīb continued to feel some anxiety of a threat from Persia.

A large number of letters written on behalf of Akbar are preserved in the well-known collection of Awrangzīb's letters, the *Ādāb-i 'ālamgīrī* (see *Bibl.*).

*Bibliography*: Muḥammad Ḥāshim Khāfi Khān, *Muntakhab al-lubāb*, ii, *Bibl. Ind.*, Calcutta 1860-74; *'Arḍ-dāshṭ* of Shāhzāda Muḥammad Akbar to the Emperor Awrangzīb, Royal Asiatic Society London, MS. No. 173; *Ādāb-i 'ālamgīrī*, numerous mss.; see V.J.A. Flynn, *Ādāb-i 'ālamgīrī, an English translation...*, Australian National Univ., Canberra Ph.D. thesis 1974, unpublished.

(M. ATHAR ALI)

**AKHBĀR AL-ŞĪN WA 'L-HIND**, the title by which are now designated two narratives concerning China and India which have, for various reasons, attracted the attention of Arabists.

Ms. 2281 of the B. N. contains amongst other things: I. fols. 2a-23b, an untitled and anonymous text which constitutes the basis of the work; and II. fols. 24a-56a, a sequel to the preceding, of which the author is named as Abū Zayd al-Sīrāfi.

In 1718, the Abbé Renaudot published in Paris, under the title *Anciennes relations des Indes et de la Chine, de deux voyageurs mahométans qui y allèrent dans le neuvième siècle, traduites d'arabe, avec des remarques sur les principaux endroits de ces relations*, a version of I and II, which was in its turn translated into English and Italian; since he had supplied no precise information regarding the origin of the text, Renaudot was accused of committing a hoax, but the original (the actual ms. 2281, to which was added, as no. 2282, the copy made by the translator himself) was subsequently found in the Bibliothèque Royale and printed through the good offices of Langle's; it was, however, M. Reinaud who put it into circulation 34 years later, accompanied by a new annotated translation and an introduction, under the title *Relations des voyages faits par les Arabes et les Persans dans l'Inde et Chine dans le IX<sup>e</sup> siècle de l'ère chrétienne* (Paris 1845, 2 vols.). In 1922 G. Ferrand produced a new translation, *Voyage du marchand arabe Sulaymān en Inde et en Chine, rédigé en 851, suivi de remarques par Abū*

Zayd Hasan (vers 916), as vol. vii of the *Classiques de l'Orient*. Finally, in 1948, J. Sauvaget published in Paris the text, a translation of and a lavish commentary on no. I, as Aḥbār aṣ-Šīn wa 'l-Hind, *Relation de la Chine et de l'Inde rédigée en 851*.

Independently of the reactions provoked by Renaudot's version (see Sauvaget, p. xvi), the anonymity of the first of these narratives has given rise to discussions and hypotheses. Quatremère (in *JA* (1839), 22-5), thought rather unwisely to attribute it to al-Mas'ūdī [q.v.]; Reinaud, on the basis of the name of Sulaymān al-Tādjir which is quoted in the text (§ 12 of the Sauvaget edition), thought that this last was the author; G. Ferrand, adopting this point of view, entitled his work *Voyage du marchand arabe Sulaymān*, and V. Minorsky (*Hudūd al-'ālam*, index) is seen to follow him deliberately in speaking only of "Sulaymān the Merchant". It is true that these authors can claim support from an important authority, since Ibn al-Faḳīh refers (*Buldān*, 11; tr. H. Massé, 14) to Sulaymān al-Tādjir in a context other than the narrative in which his name appeared. However, H. Yule (*Cathay and the way thither*, London 1866, pp. cii-ciii) and after him P. Pelliot (in *T'oung-Pao*, xxi (1922), 401-2, xxii (1923), 116) have drawn attention to the fact that this Sulaymān was apparently only an informant, among others who remained anonymous.

As for the general title, it may be deduced from a remark figuring at the beginning of the "sequel" written by Abū Zayd, who says that his own contribution is *al-kitāb al-thānī min akhbār al-Šīn wa 'l-Hind*; even if these words are more a general indication of the contents of the work, later authors have considered them as a title, notably al-Bīrūnī who, in his *Nubadh fī akhbār al-Šīn* (ed. Krenkow, in *MMLA*, xiii (1935), 388), claims to borrow a fact from the *Kitāb Akhbār al-Šīn*, and there is no reason not to adopt this solution.

The anonymous narrative is called *al-Kitāb al-awwal* by Abū Zayd, who gives the precise date of 237/851. On the other hand, that of the *kitāb al-thānī* is not so precisely known; but we possess some information on the author of this "sequel", thanks to al-Mas'ūdī, who incidentally commits an error in calling him, probably inadvertently, Abū Zayd Muḥammad b. Yazīd al-Strāfi, although he himself says that his surname is al-Ḥasan. The author of the *Murūdj* declares (i, 321 = § 351) that he met Abū Zayd at Baṣra, where he was resident in 303/915-16, and that he received information from him; in reality, Abū Zayd must have supplied him with the text of the two narratives which were put to extensive use in the *Murūdj*, often distorted by al-Mas'ūdī's zeal for elegance.

Texts I and II are quite dissimilar; both are clearly recollections of journeys in exotic lands, but if the first is characterised by the quality of the observations of the author or of the merchants who gave him the information and probably constitutes the most ancient account of China, the second, later by about 70 years, seems less reliable. While the first narrative, without pretension of any sort, is in general exact and spontaneous, that of Abū Zayd, which had itself been moreover commissioned, is more laboured, gives much space to sailors' stories and to marvels, and betrays the tendency, resisted however by al-Djāhiz, to introduce fables into this form of *adab*.

Other authors than al-Mas'ūdī have exploited, directly or indirectly, admitting it or not, the *Akhbār al-Šīn wa 'l-Hind* (see Sauvaget, pp. xxiii-

xxix), and it is astonishing that only one ms. of it has survived. It is, however, not impossible that parts of it were detached and passed into the oral domain, which would explain why at a fairly early date the texts ceased to be copied, although these texts were originally intended for a literate public.

*Bibliography*: Pre-1948 references appear in Sauvaget's work. See further, I. Kračkovskij, *Arabskaya geografičeskaya literatura*, Moscow-Leningrad 1957, 141-2; A. Miquel, *La géographie humaine du monde musulman*<sup>2</sup>, Paris 1973, 116-26 and index.

(CH. PELLAT)

**AKHBĀRIYYA**, in Ithnā 'Aṣḥarī Shī'ism, means those who rely primarily on the traditions, *akhbār*, of the *Imāms* as a source of religious knowledge, in contrast to the Uṣūliyya [q.v.], who admit a larger share of speculative reason in the principles (*uṣūl*) of theology and religious law. Opposing traditionalist and rationalist currents were apparent in the Ithnā 'Aṣḥarī Shī'ra from its beginnings in the 2nd/8th century. In the Buwayhid age, the three leading scholars, al-Mufīd (d. 413/1022), al-Murtaḍā (d. 436/1044) and the Shaykh al-Tūsī (d. 460/1067), in confrontation with the traditionalist school of Kūm, put the rationalist Uṣūlī doctrine on a firm basis by adopting Mu'tazilī theological principles and elaborating a distinctive Ithnā 'Aṣḥarī methodology of jurisprudence (*uṣūl al-fikh*). Akhbāriyya and Uṣūliyya are first mentioned as antagonistic factions by 'Abd al-Djalīl al-Ḳazwīnī, an Ithnā 'Aṣḥarī scholar of Rayy writing ca. 565/1170, who characterises the former as narrowly traditionalist and literalist, the latter as basing the fundamentals of religion on reason and rational investigation.

Akhbārī opposition to the predominant Uṣūlī trend remained latent during the following centuries, until Mullā Muḥammad Amīn b. Muḥammad Sharīf al-Astarābādī (d. 1033/1624), encouraged by his teacher Mīrzā Muḥammad b. 'Alī al-Astarābādī (d. 1028/1619), articulated the Akhbārī position in his *K. al-Fawā'id al-madaniyya* and thus became the founder of the later Akhbārī school. He proposed to restore the early Akhbārī doctrine which had remained undisputed until the time of al-Kulaynī (d. 328/929) and vigorously criticised the innovations of the three famous scholars of the Buwayhid age and, even more so, of the 'Allāma al-Hillī (d. 726/1325), the Shāhīd al-Awwal Muḥammad b. Makkī al-'Amīlī (d. 786/1384) and the Shāhīd al-Thānī Zayn al-Dīn al-'Amīlī (d. 966/1558) in the *uṣūl al-fikh* and theology. The basic theses which he affirmed against the Uṣūlī position included the doctrine that the *akhbār* of the *Imāms* take precedence over the apparent meaning of the *Qur'ān*, the *ḥadīth* of the Prophet and reason, since the *Imāms* are their divinely appointed interpreters. The apparent meaning of the *akhbār* which were accepted as sound (*ṣahīḥ*) by the early Ithnā 'Aṣḥarī community provide "customary certainty" (*yaḳīn 'ādī*), not merely probability (*ẓann*) as the Uṣūlī *muḍṭahhids* maintained. All *akhbār* contained in the four canonical collections of the Ithnā 'Aṣḥariyya belong to the category of *ṣahīḥ*. The categories besides *ṣahīḥ* and *ḍa'īf*, weak, which the 'Allāma al-Hillī, in imitation of Sunnī practice, introduced with regard to the reliability of the transmitters, are irrelevant. Also, consensus (*iḍmā'*), which has been handled too laxly by the *muḍṭahhids*, is valid only if the inclusion of the *Imām* is absolutely certain and thus does not provide a source of the law separate from the *akhbār*. *Iḍṭihād*, leading to mere *ẓann*, and *taḳlīd*, i.e. following the opinions of a *muḍṭahhīd*,

are forbidden. Every believer must rather follow the *akhbār* of the *Imāms*, for whose proper understanding no more than a knowledge of Arabic and the specific terminology of the *Imāms* is needed. If an apparent conflict between two traditions cannot be resolved by the methods prescribed by the *Imāms*, *tawakkuf*, abstention from a decision, is obligatory.

The *Akhbārī* school flourished during the following two centuries. Muḥammad Amīn al-Astarābādī's teaching was expressly endorsed by the elder al-Madīlisī, Muḥammad Taqī (d. 1070/1660), and adopted by Mullā Muḥsin Fayḍ al-Kāshānī (d. ca. 1091/1680), both inclining to Sūfism and philosophy. An influential champion of *Akhbārī* doctrine was al-Ḥurr al-‘Amīlī [q.v.] (d. 1104/1693), author of a vast collection of *akhbār* of the *Imāms*, *Tafṣīl waṣā’il al-shī’a ilā akhām al-sharī’a*, who strictly adhered to, and refined, *Akhbārī* methodology, refraining, however, from any polemics against the *muḍṭahids*. His contemporary ‘Abd ‘Alī b. Djam‘a al-‘Arūsī al-Ḥuwayzī, author of the Qur’ān commentary *Nūr al-thīkalayn*, also staunchly supported *Akhbārī* views. Al-Astarābādī's verbal attacks on the Uṣūlī *muḍṭahids* were resumed by ‘Abd Allāh b. Ḥādīdj Šāliḥ al-Samāhīdjī al-Baḥrānī (d. 1135/1723), who in his *Munyat al-mumārīsīn fī adjuibat su’ālāt al-shaykh Yāsīn* expounded some forty points of conflict between the *Akhbārīs* and the *muḍṭahids*, and by the *Muḥaddith* ‘Abd ‘Alī b. Aḥmad al-Dirāzī al-Baḥrānī (d. 1177/1763-4) in his *Iḥyā’ ma’ālim al-shī’a*. Among the more moderate supporters of *Akhbārī* positions were ‘Abd Allāh b. al-Ḥādīdj Muḥammad al-Tūnī al-Buṣhrāwī (d. 1071/1666), author of *al-Wāfiya fī uṣūl al-fikh*, the Sayyid Ni’mat Allāh al-Djazzā’irī al-Shuṣhtarī (d. 1112/1700), and Yūsuf b. Aḥmad al-Baḥrānī (d. 1186/1773), brother of the previously mentioned ‘Abd ‘Alī b. Aḥmad and author of the *Lu’lu’at al-Baḥrayn* and of the extensive and popular *fikh* work *al-Ḥadā’ik al-nādira*. The latter originally upheld pure *Akhbārī* doctrine, but later he espoused an intermediate position between the two factions and blamed al-Astarābādī for having opened the door of slandering the *muḍṭahids* and splitting the ranks of the *Shī’a*.

In the second half of the 12th/18th century, Uṣūlī doctrine was forcefully restated by Muḥammad Bākīr al-Bihbihānī (d. 1208/1793-4) in his *al-Idjṭihād wa’l-akhbār* and other works. He went so far as to denounce the *Akhbārīs* as infidels and was able to break their dominant position in Karbalā’. The last prominent representative of the *Akhbārīyya*, the *Muḥaddith* Muḥammad b. ‘Abd al-Nabī an-Nisābūrī al-Akhbārī, author of a *K. Munyat al-murtād fī nufāt al-idjṭihād*, countered with polemical vituperation and cursing of the *muḍṭahids*. He gained the favour of the Kādjar Šahā Fath ‘Alī Šahā for some time, but, having been denounced by the *Shaykh Dja’far Kāshif al-Ghiṭā’* [q.v.], was eventually exiled to ‘Irāq and, in 1233/1818, was killed by a mob in al-Kāzīmāyn. Thereafter the *Akhbārīyya* rapidly declined. The only *Akhbārī* community known to have survived to the present is in the region of *Khurramshahr* and *Abādān*.

‘**ĀKIL KHĀN RĀZĪ**, MTR MUḤAMMAD ‘ASKARĪ, Mughal official and commander. He came from a family of the Sayyids of *Khawāf* [q.v.] in *Khurāsān*, but was born in India. He was in the service of Prince Awrangzīb from the very beginning. When Awrangzīb left the Deccan to contest the throne in 1068/1658, ‘Ākil *Khān* was left in charge of the city of *Dawlatābād*. Subsequently, he was promoted to the rank of 1,500/1,000 and was made *sawḍjār* [q.v.] of the *Dōāb*. In 1092/1681 he was appointed as *ṣubādār* of *Dihli*, and he held this post till his death in 1108/1696-7, having been promoted to the rank of 4,000/1,000.

A work called the *Wākī’at-i ‘ālamgīrī* or *Zafarnāma-yi ‘ālamgīrī* is ascribed to him. This contains a very interesting, but on occasions a highly-coloured, account of the war of succession and the opening years of Awrangzīb's reign. It does not always present a very flattering picture of Awrangzīb, and contains much information not found in the official history, the *‘Ālamgīr-nāma*. ‘Ākil *Khān* was devoted to literary pursuits and was interested in poetry, leaving behind a *Diwān* and a number of *mathnawī* poems.

*Bibliography:* ‘Ākil *Khān* Rāzī, *Wākī’at-i ‘ālamgīrī*, ed. Zafar Ḥasan, Aligarh 1945 (see Storey, i, 584-5); Muḥammad Kāzīm, *‘Ālamgīrnāma*, Bibl. Athar Ali, *The Mughal nobility under Aurangzeb*, Bombay 1966. (M. ATHAR ALI)

AL-‘**AKKĀD**, ‘ABBĀS MAḤMŪD, one of the most influential figures in the development of Egyptian culture in the first half of the 20th century, littérateur, journalist, educator, polemicist and critic. Born in Aswān in 1889, he did not complete his secondary education but moved to Cairo at the age of fourteen. While taking a series of minor posts in the civil service, he began to make up for his lack of formal education by reading widely. He was particularly interested in literature, philosophy and the natural sciences, and among his greatest contributions was to pass on to a younger generation of Egyptians a synthesis of his views on these and other subjects. His writings on aesthetics and poetic theory show a strong influence of English writers such as Hazlitt, Coleridge, Macaulay, Mill and Darwin, and he was also acquainted with the ideas of Lessing, Schopenhauer and Nietzsche among the German philosophers. It was early in the 1910s that al-‘*Akkād* met Ibrāhīm al-Māzīnī, and the two men formed a firm friendship based both on a love of poetry (especially that of the English Romantics found in such works as Palgrave's *The Golden Treasury*) and on a distaste for the conventions of the neo-classical school of Egyptian poets personified by Aḥmad Šhawḳī and Ḥāfiẓ Ibrāhīm. Al-‘*Akkād* wrote the Introduction to al-Māzīnī's first collection of poetry (1913) and published two collections of his own during this decade, *Yakẓat al-ṣabāḥ* (1916) and *Wahādj al-zahīra* (1917). The same views on poetry were also shared by a third writer, ‘Abd al-Raḥmān

Shukrī, the best poet of the group. These three are often referred to as the "Dīwān School", but that is somewhat of a misnomer in that al-'Akkād and al-Māzinī alone were the authors of *al-Dīwān*, a blistering piece of criticism in which al-Māzinī accused Ḥāfiẓ Ibrāhīm of madness and confusion while al-'Akkād attacked Shawkī's occasional poetry in the most caustic of terms. The three men seemed to have shared a common view of the nature and rôle of poetry, but it was al-'Akkād who provided much of the critical impetus for which the group is primarily remembered.

At the conclusion of the First World War, al-'Akkād became closely associated with Sa'd Zagh'lūl, the leader of the Wafd, and began to write articles for the party's newspaper, *al-Balāgh*. Many of these articles on literature, aesthetics, religion and history were later collected into book form under such titles as *Muwāḍi'āt fi 'l-ādāb wa 'l-funūn* and *Muṭāla'āt fi 'l-kutub wa 'l-ḥayāt*. During the regime of Ismā'il Ṣidqī in the early 1930s when the constitution was revoked, al-'Akkād's fervent convictions led him to undertake the considerable risk of publishing a work criticising the ruling authorities, *al-Hukm al-muṭlak fi 'l-kam al-'iṣṭrān*, for which he was imprisoned for nine months. This decade also saw the appearance of three more volumes of his poetry (*Wahy al-arba'īn*, *Hadiyyat al-karawān*, and *Ābir sabīl*), the novel, *Sāra*, and a series of biographies on famous figures from the early history of Islam. These latter works seem to form part of a trend in the 1930s whereby Egyptian intellectuals (including Ṭāhā Husayn and Muḥammad Husayn Haykal) turned their attentions to religious biographical themes.

In 1938, al-'Akkād abandoned the Wafd Party and joined the breakaway Sa'dist group led by Aḥmad Māhir and al-Nukrāshī. However, the self-reliance and outspokenness which had served his purpose as a younger man seem to have turned progressively to scepticism, arrogance and extreme conservatism. He left the Sa'dist group and became essentially a one-man party. In the literary sphere, he not only vigorously opposed the new free verse poetry which began to emerge following the Second World War, but also changed his mind about the possibilities of blank verse in Arabic, something which he had encouraged Shukrī to experiment with in the earlier part of their careers. He joined a number of other conservative critics in opposing "committed" literature; in fact, as David Semah notes (*Four Egyptian literary critics*, Leiden 1974, 25) he seemed unwilling to accept any kind of criticism of his own views or to tolerate the idea that some of his earlier theories had been superseded.

Al-'Akkād's contributions to creative literature tend to be of interest more for historical reasons than for their intrinsic literary merit. He composed a large number of personal poems as well as some occasional ones, and translated a number of works from English (see Mustafā Badawī, *A critical introduction to modern Arabic poetry*, Cambridge 1975, 109 ff.). In his novel, *Sāra*, the psychological insights into the relationship of the two lovers may have been on a new level of sophistication when compared with previous works in this genre, but the element of doubt and questioning which pervades the work (six of the chapters have questions as their title) reduces it to an almost abstract analytical plane. Several commentators have also pointed out that the attitude to women found in this work is more than a little autobiographical (Aḥmad Haykal, *al-Adab al-ḥasaṣī wa 'l-masrahī*, Cairo 1971, 164;

Hilary Kilpatrick, *The modern Egyptian novel*, London 1974, 32; 'Abd al-Ḥayy Diyāb, *al-Mar'a fi ḥayāt al-'Akkād*, Cairo 1969, 100 ff.).

The views of al-'Akkād on aesthetics and poetic theory propounded so forcibly in many of his works are also clearly visible in his writings on other poets, both ancient and modern. While he wrote numerous articles on ancient poets during the 1920s (such as on Imru 'l-Qays, Abū Nuwās, Baḥshār b. Burd and al-Mutanabbī), it is his study of Ibn al-Rūmī published in book form in 1931, *Ibn al-Rūmī, ḥayātuhu min shi'rīhi*, which is widely regarded as his best literary study and especially as the one which permits al-'Akkād to use his own theories on psychology, race and poetics in an analysis of this somewhat neglected poet. Al-'Akkād's introduction of such objective criteria, often based on non-literary information, into the analysis of literature led to new insights into the Arabic poetic tradition of ancient times. However, it also tended to place more emphasis on the writer than the work of literature, and it was left to the next generation (and especially Muḥammad Mandūr) to restore importance to the work itself in literary analysis, while fusing into the critical process the best elements of the theories which al-'Akkād had developed.

In 1960, he was awarded the State Appreciation Prize for his contribution to Egyptian literature. Shawkī Dayf's work, *Ma'a 'l-'Akkād* (Ikra' Series no. 259, Cairo 1964) shows a picture of the aged bachelor browsing in the natural science section of his library (opp. p. 65). He died in 1964.

*Bibliography* (in addition to those works already cited in the text of the article): Shawkī Dayf, *al-Adab al-'arabī al-mu'āṣir fi Miṣr*, Cairo 1961, 136; 'Abd al-Ḥayy Diyāb, *Abbās al-'Akkād nāḥiyyatun*, Cairo 1965; Mounah Khouri, *Poetry and the making of modern Egypt*, Leiden 1971, passim; S. Zubaydī, *Al-'Akkād's critical theories, with special reference to his relationship with the Dīwān school and to the influence of European writers upon him*, University of Edinburgh Ph.D. thesis, 1966, unpublished; idem, *The Dīwān School*, in *JAL*, i (1970), 36; Salma Khadra Jayyusi, *Trends and movements in modern Arabic poetry*, Leiden 1977, i, 153-4, 163-75.

(R. ALLEN)

**AKKĀR** (A.), pl. *akara* (abstract *ikāra*), literally "tiller, cultivator of the ground", a word of Aramaic origin (see Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 128-9), borrowed into Arabic, apparently in the post-Islamic period (it does not appear in the Qur'ān), and applied to the peasantry of Aramaean stock in Syria and 'Irāk; accordingly, the term had in Arabic eyes, like the name *Nabat*, a pejorative sense (see *LA*<sup>1</sup>, v, 85-6). Some of these peasants were sharecroppers who cultivated lands of wealthy landlords for one-sixth or one-seventh share of the produce and on *muḥāsama* [q.v.] terms of contract (cf. Abū Yūsuf, *al-Ḥārāḍī*, Būlak 1884, 52; Ibn Ḥawkal, *Sūrat al-arḍ*, ed. Kramers, 218). Following the Arab conquest of the Fertile Crescent, the *akara* paid the lowest amount of poll-tax (*ḍjīzya*) at the rate of 12 *dirhams* per head per annum (Balādhurī, *Futūh*, 271).

Social and economic conditions deteriorated for the *akara* during the 'Abbāsīd period. One finds them as itinerant farm labourers moving from village to village in search of work and working on estates

of land for the highest bidder among landlords (Šābī, *Wuzarā'*, ed. Amedroz, 259). They also worked on lands owned by Christian monasteries (Shābushtī, *al-Diyārāt*, 214-15). In a typical story we read of a certain *akkār* who was employed by a rich man of Bašra as a domestic servant, possibly out of farming season. His work included husking rice, grinding it in a mill turned by an ox, and making bread for his master (Djāhīz, *Bukhālā'*, Cairo 1963, 129). Djāhīz has evidently recorded in the story of the *akkār* and his employer the tale of the toiling labourers and the hard task-master of this epoch. Djāhīz also mentions a certain *mashāyikh al-akara* (elder of the *akara*), which may be indicative of some form of organised social grouping of the *akara* headed by a revered *Shaykh* (cf. *Hayawān*, v, 32). The rural population of the Sawād of 'Irāk, at least, seems to have continued to be Aramaic-speaking into the 3rd/9th century and perhaps until later; cf. the anecdote of al-Mu'tašim and the old *Nabaṭī* peasant of the Sawād in Mas'ūdī, *Murūdj*, vii, 113-4 = § 2796.

AL-AKŠARĀYĪ, KARĪM AL-DĪN MAHMŪD B. MUḤAMMAD, historian of Anatolia under the Saldjūks and Il-Khānids. The date of his birth is unknown, but it seems that he died at an advanced age in the 720/1320s. As an official in the Il-Khānid service, he was attached to the retinue of Muđjir al-Dīn Amīr Shāh (the representative of the Mongol fiscal department in Saldjūk Anatolia, and then *nā'ib* from 1281 to 1291) until the latter's death in 1302. Ghāzān Khān then appointed him *nāzir* or intendant of the *awkāf* in the Saldjūk territories, and an uncertain date he acted as military commandant (*kuṭwāl* [see *kōṭwāl*]) of Akšarāy, his natal town. He enjoyed a privileged view of the events of his time, and in 723/1323 put together in Persian his chronicle the *Musāmarat al-akhbār wa-musāyarat al-akhyār* which is, together with Ibn Bībī's work, one of the essential sources for Anatolian history in the period of Mongol domination. This period forms the subject of the fourth and last chapter of the work, the most important one, since it takes up three-quarters of the book and covers some 75 years contemporary with al-Akšarāyī himself. The chronicle is known only in two manuscripts (Ayasofya 3143, copied in 734/1334, and Yenikami 827, copied in 745/1345, both now in the Süleymaniye Library in Istanbul), and was hardly used by sub-sequent historians, with the exceptions of Kādī Ahmad of Nigde (14th century) and the Ottoman compiler Münedđjim Bāshī (d. 1702), until it was rediscovered by Turkish historians at the end of the 19th century. In his preface to his critical and annotated edition of the text, Osman Turan conveys all the information known about the author, and gives an account of previous studies on the latter and his book.

**Bibliography:** *Müāmeret ü-ahbār. Mogollar zamanında Türkiye Selçukları tarihi*, Mukaddime ve haşiyelerle tashiḥ ve neşreden Dr. Osman Turan, Ankara 1944; Fikret Işıltan, *Die Seltshuken*

*Geschichte des Akseray*, Leipzig 1943 (summary translation in German of the fourth chapter of the history). (J.-L. BACQUÉ-GRAMMONT)

AKŪNĪTUN (Greek ἀκονίτον) appears frequently in Arabic medical writings as a particularly deadly poison originating from a plant root; it can denote a substance either (A) from the Mediterranean region, or (B) from India. Synonyms for (A) include *khānik al-nimr*, *khānik al-dhī'b*, *kātil al-nimr* and *bīsh*. This last, however, is the name generally accepted for (B). Akūnītun thus well exemplifies a constant problem of Arabic botanical literature: identification today of the actual plant referred to and of its Greek equivalent.

(A) Mediterranean region: ἀκονίτον as a poison in Greek writings: remedies are given by Nicander in his *Alexipharmaca* (95, lines 11-73). Theophrastus describes two types, (a) ἀκονίτον with a prawn-shaped root; (b) θηλυφονον or σκορπιον able to cure scorpion bite (*HP*, 9.16.4 and 9.18.2). Cf. Paulus of Aegina (Eng. tr. F. Adams, London 1844-8, III.28). Dioscorides similarly lists two types, in the reverse order, described in much the same terms: (i) = (b) above, with synonyms *παρδαλιαννης*, *καμμαρον*, *θηλυφονον*, *κυνοκτονον*, *μυοκτονον* (IV. 77); (ii) = (a) above, synonym *λυκοκτονον* (IV.78). When Dioscorides was translated into Arabic, the possibility of regional variation in species was not always considered; some Greek names were transliterated, but in time most were given standard equivalents in Arabic. In the Julia Anicia MS, 6th century, marginal notes in Arabic explain ἀκονίτον (i) as *akūnītun* and *khānik al-nimr*; (ii) as *khānik al-dhī'b* (f. 66b).

The Arabic version of these sections (Bodleian MS Hyde 34) gives as synonyms for (i) *nabbāl* and *khānik al-nimr* (f. 123a, marginal note). *Nabbāl* occurs also in the *Tafsīr* to Dioscorides by Ibn Djudjul (Madrid, Biblioteca Nacional MS 4981, f. 7a); in Ibn Djudjul's *Supplement* to Dioscorides (MS Hyde 34, f. 198b) *nabbāl* is mentioned as a poisonous plant whose antidote is *bustān abrūz* (*Amaranthus tricolor* L.). Cf. F.J. Simonet, *Glosario de voces ibéricas y latinas usadas entre los mozárabes*, Madrid 1888, 395.

(B) India: *Bīsh*, although sometimes considered a synonym for *akūnītun*, refers to a far more poisonous plant (probably *Aconitum ferox* Wall) and is described as the most deadly of plant poisons by such writers as Thābit b. Qurra (*Dhakhīra*, ch. xxv, 143 (298)), Djābir b. Hayyān (*Gifte*, 56 = f. 46a-b, 104 = f. 95b, 185 = f. 179a), Ibn Wahshīyya (*Poisons*, 84-5, 108), Ibn Sīnā (*Kānūn*, I, 276, III, 223), al-Bīrūnī (*Saydana*, Arabic 81, Eng. 53). Most agree that there is little if any hope of recovery, even if the Great *Tiryāk* is administered. Ibn Sīnā distinguishes clearly between *bīsh* and the plant known as *khānik al-dhī'b* etc., the latter being described separately (I, 424, 460).

(C) Possible identifications: Although (A) *Akūnītun* is often equated with an *Aconitum* sp. (e.g. Ghalib I.86, Nos. 1752-7, Issa 5.1, cf. W. Schmucker, *Die pflanzliche und mineralische Materia Medica im Firdaus al-Hikma des Tabarī*, Bonn 1969, 126, No. 157, where *bīsh* = ἀκονίτον), a modern botanist thinks it likely that the ἀκονίτον of Dioscorides was (i) a *Doronicum* sp., (ii) a *Delphinium* sp., possibly *D. staphisagria* or *D. elatum*. In the case of (B) *bīsh*, this did not have to be identified in the growing state, but was known to the Arabs as a deadly poison from India (Issa 4.19).

(P. JOHNSTONE)

ĀL-i AḤMAD, SAYYID DJALĀL, Iranian prose writer and ideologist (1923-69). His œuvre may be tentatively classified as comprising literary fiction on the one hand (*kiṣṣa*, *dāstān*), and essays and reports on the other hand (*maḳāla*, *guzārīsh*). This classification, however, only follows the author's own designation. Āl-i Aḥmad lacks the technical concern and sophistication of a contemporary like Šādīk Čūbak, and in terms of formal structure, this tends to blur the dividing lines, not merely between the "novel" (*kiṣṣa*) and the "short story" (*dāstān*), but also between the *dāstān*, often approaching the "narrative essay", and the *maḳāla*. Among biographical data, three factors stand out for their crucial influence on Āl-i Aḥmad's career as a writer: his birth in a Tehrani family of lower Šhrī dignitaries; his occupation as a professional schoolteacher; and his vivid interest and, for a brief period, active participation in national politics.

The religious element is reflected in the early collections of short stories *Did wa bāzdīd* (1945), *Sih-tār* (1948) and *Žan-i ziyādī* (1952). Written after the "flight" from his traditional family background and adherence to the leftist ideologies of post-war political parties, they offer an ironic picture of the religious milieu of lower and middle class Tehran. A similar, if more outspoken aloofness pervades his *hadīdī*-diary of 1966, *Khāssī dar miḳāt*. While preserving a personal piety throughout his life, Āl-i Aḥmad is the critical observer, rather than the raptured participant. A tone of irony is seldom absent; yet it is generally mild and benevolent, occasionally even slightly nostalgic.

His life-long experiences as a schoolteacher prompted an interest in educational and, more broadly, cultural issues, as expressed in some of his

most vitriolic articles (notably in *Sih maḳāla-i dīgar* (1959)). Moreover, they inspired the "novels" *Mudīr-i madrasa* (1958) and *Nafīrīn-i zamīn* (1967). The former especially, which relates the alienation of a provincial school-principal, is counted among his most successful literary achievements. If indebted to an earlier prose-experiment in French literature, i.e. *Voyage au bout de la nuit* by Louis-Ferdinand Céline (1932), *Mudīr-i madrasa* convincingly established Āl-i Aḥmad's reputation as an innovator of Persian literary style. Its highly economic use of words, abundant colloquialisms and vivid, scattato rhythm has been described in a laudatory fashion as *inshā'-i kārikātūrī* by Djāmālzāda (cf. bibliography).

Some similarity exists between the development of Āl-i Aḥmad's religious attitudes and his political ones. After an intensive exposure to the orthodox milieu in the early stages (as son of a Šhrī rūḥānī, as a devoted and prominent member of political parties), he proved in both instances incapable of conforming to collective, organised loyalty. His membership of the recently established communist *Tūda* party lasted from 1944 until early 1948 only; his subsequent adherence to the "anti-Stalinist" faction of Khalīl Malīkī ended in early 1953, following bitter experiences with personal rivalries within this "Third Force" movement. He left the forum of organised politics, never to return. Among the literary documents of this political career, the short stories collected in *Az randī-kih mībarīm* (1947) belong to the *Tūda* period. First printed at the party-press *Shu'lawar*, it constitutes an effort to create "socialist-realist" literature. With its very explicit commitment, in some ways reminiscent of Buzurg 'Alawī's work, it lacks the ironic, observing distance common to Āl-i Aḥmad's remaining œuvre, and was afterwards considered a failure by the author himself. *Žan-i ziyādī* was written after the breakthrough from the *Tūda*, and contains the story *Khudāādā-d-khān*, a sarcastic description of the ambitions, hypocrisy and luxuries of a leading party executive. The ideological importance of this collection further lies in the introduction which the author added to the second edition (1963), *Risāla-i Pawlūs bi-kātībān*. A "testament" according to the writer, it calls for literary honesty and commitment. In a less biblical fashion, this theme dominates many of his other essays: the conviction that "in our land, writing literature means waging a battle for justice", and that "the pen has become a weapon". Since the ending of the Mossadegh experiment in August 1953 and Āl-i Aḥmad's departure from party-politics, he saw this battle for justice as a cultural, rather than political one. Its primary target is not the external force of oppression, but the spirit of submissiveness which had turned his countrymen into voluntary, even zealous servants. This phenomenon was diagnosed as *gharbi-zadagī* ("western-struckness" sc. blind worship and imitation of western civilisation), and its causes and symptoms are described at length in the essay of the same name (1962), which, in spite of its prompt confiscation by the authorities, remained Āl-i Aḥmad's most widely read and most hotly debated work. In search of a cure, he calls for an "inner revolt" (*kiyām-i durūnī*): a return to the classical virtues of unconditional devotion and self-sacrifice. This *shahādāt* forms the central theme of *Nūn wa 'l-kalam* (1961), an allegory tale explaining the failure of contemporary leftist movements.

Finally, mention should be made of the regional monographs which the author composed during his numerous travels throughout the country, trying to

recapture the "majesty" (*'izmat*) and "authenticity" (*aṣālat*) which he could no longer find in the capital. *Aswāzān* (1954), *Tātnishān-hā-i Balūk-i Zahwā* (1958) and *Djazwa-i Khārg* (1960) have appeared as separate volumes; comparable studies of Khūzistān, Yazd and the outskirts of the Kawr have been included in his collected essays.

*Bibliography*: 1. Works by Āl-i Ahmad, in addition to those mentioned in the text: *Sarguzāsh-i kandū-hā* (1333 sh.) is a symbolic *kīssa* dealing with the abortive oil-nationalisation 1951-3. Not included in the four collections mentioned above are the short stories *Djashn-i far-khanda*, *Khāhar wa 'ankabūt*, *Khūnāba-i anār*, *Shawhar-i Amrīkā'ī* and *Guldastahā wa falak*. The first one is available through M.A. Sipānlū's anthology *Bāz-āfarīnī-yi wākī'yyat* (Tehran 1352 sh.). The other ones have been collected in the posthumously-edited and only narrowly distributed *Pandj dāstān* (1350 sh.), which also contains a short autobiographical sketch dated Day 1347 sh.: *Mathalan sharh-i ahwālāt*. The majority of Āl-i Ahmad's numerous essays and travel reports were first published in periodicals and afterwards reprinted in the collections *Haft makāla* (1334 sh.), *Sih makāla-i dīgar* (1337 sh.), *Arzābūt-yi shūtābzāda* (1344 sh.) and *Kārnāma-i sih-sāla* (1348 sh.). These collections, however, are far from exhaustive, and a substantial number of articles remains scattered over the various magazines, for the later period notably *Andīsha wa hunar*, *Ārish* and *Djahān-i naw*. Certain other writings were completed by the author before his death, but have not yet been deemed suitable for publication. These include a novel (*Nasl-i djādīd*) and diaries of his travels to Europe, the United States and the Soviet Union. Of the latter, two fragments have appeared in *Hunar wa sinimā*, Nos. 1 (18 *Ādhar* 1345) and 2 (25 *Ādhar* 1345). Translations prepared by Āl-i Ahmad were almost without exception done from or via French; well-known among these are his rendering of works by André Gide, Albert Camus, Eugene Ionesco and Dostoievski. Translations made from Āl-i Ahmad's writings include *The old man was our eyes*, a monography on the poet Nīmā Yūshīdj, in *The Literary Review*, Rutherford N.J., xviii (1974), 115-28, *The pilgrimage*, in *Life and letters*, lxiii (1949), 202-9, *Someone else's child*, in *Iranian Studies*, i (1968), 161-9, and *The school principal*, by J.K. Newton and M.C. Hillmann, Minneapolis and Chicago 1974; the preface to this volume also contains an English translation of the story *Guldān-i cīnī*.

2. Studies. See the cursory remarks in H. Kamshad, *Modern Persian prose literature*, Cambridge 1966, 125-6; B. Alavi, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964, 221-2; Miloš Borecký, in *MEF*, vii (1953), 238-9; and M. Zavarzadeh, in *MW*, lviii (1968), 311-12. Opinions of Iranian critics may be found in the special Āl-i Ahmad issue of the periodical *Andīsha wa hunar*, v (1343 sh.), 344-489, including also a lengthy interview with the author. For more specific discussions, cf. *Djamālzāda's* review of *Mudr-i madrasa in Rahnamā-yi Kitāb*, i (1337 sh.), 166-78; Ridā Barāhinī, *Kīssa-niwīsi*, Tehran 1348 sh., 416 ff.; G.L. Tikku, in *idem* (ed.), *Islam and its cultural divergence*, Urbana, Chicago and London 1971, 165-79; and G.R. Sabri-Tabrizi, in *Correspondance d'Orient* 11, Brussels 1970, 411-18.

'ALĀ' AL-DĪN KHALDĪ [see KHALDĪS].

AL-'ALAMĪ, 'ABD AL-ĶĀDIR [see ĶADDŪR AL-'ALAMĪ].

ALANGU, TAHIR, Turkish author and literary critic (1916-73). The son of a naval officer, he was born in Istanbul and graduated from the Department of Turkish Studies of Istanbul University (1943). He taught Turkish literature in various high schools until 1956, when he was appointed to Galatasaray Lycée in Istanbul where he taught until his death on 19 June 1973. During the last few years of his life he was also a part-time lecturer at Boğaziçi University in Istanbul.

Two leading themes of his many books and large number of articles are firstly, Turkish folk-lore, and secondly, the modern Turkish novel and short story. As a literary critic and research worker, his judgments are based on sound scholarly research and are (with rare exceptions when his close friends are involved) balanced, responsible and fair. Alangu is the author of the following major works: *Cumhuriyetten sonra hikāye ve roman*, 2 vols, Istanbul 1959 and 1965, a comprehensive study on Turkish short story writers and novelists of the 1920-50 period, with copious examples of their works; *Ömer Seyfettin*, Istanbul, 1968, a monograph in the form of biographical novel of this pioneer of the modern Turkish short story; and his posthumous *100 ünlü Türk eseri*, 2 vols, Istanbul 1974, an anthology from 100 famous works from Turkish literature, with introduction and comments. The second volume of this work covering the last hundred years (1870-1970) is particularly valuable as it is based mainly on his own research. Unfortunately, many of his articles published in various journals and reviews have not yet been collected into book form. Alangu translated (from the German) several authors, and particularly from the Israeli author Samuel Agnon.

*Bibliography*: Mehmet Seyda, *Edebiyat dostları*, Istanbul, 1970; Behçet Necatigil, *Edebiya-tımızda isimler sözlüğü*, 1975, s.v. (FAHİR İZ)

'ALĪ B. HANZALA B. ABĪ SĀLIM AL-MAHFŪZĪ AL-WĀDĪ'Ī AL-HAMDĀNĪ, succeeded 'Alī b. Muḥammad b. al-Walīd [q.v.] as the sixth *dā'ī muṭlak* of the Musta'li-Ṭayyibī Ismā'īlīs in Yaman in 612/1215. As the country was passing through a critical period of internal strife after its occupation by the Ayyūbids, the *dā'ī* pursued a policy of non-interference in politics. He maintained good relations both with the Ayyūbid rulers of Ṣan'ā' and the Yāmīd sulṭāns of Banū Ḥātim in Ḍhamarmar which enabled him to carry out his activities without much difficulties. He died on 12 or 22 Rabī' I 626/8 or 18 February 1229.

Both his compositions, *Simṭ al-hakā'ik* and *Risālat Diyā' al-hulūm wa-miṣbāh al-ūlūm*, concerning *al-mabḍā' wa'l-ma'ād*, are considered important works on *hakā'ik* [q.v.]. The former, edited by 'Abbās al-'Azzāwī (Damascus 1953), is a *raḍjāz* poem, whereas the latter is an elaborate treatment of the subject and exists in manuscript.

*Bibliography*: The main biographical source, Idrīs b. al-Ḥasan, *Nuḣat al-aḳḳār*, still in manuscript, is studied by H.F. al-Ḥamdānī, *al-Ṣulayhiyyūn*, Cairo 1955, 291-7; Ḥasan b. Nuḣ al-Bharūcī, *Kitāb al-Azhār*, i, ed. 'Adīl al-'Awwā, in *Muntakhabāt Ismā'īliyya*, Damascus 1958, 195, 247; Ismā'īl b. 'Abd al-Rasūl al-Madjdū', *Fihrist*, ed. 'Alī Nakī Munzawī, Tehran 1966, 196-7, 269-70. For a detailed account, see Ismail Poonawala, *Bio-bibliography of Ismā'īlī literature*, Malibu, Cal. 1977.

(I. POONAWALA)

'ALĪ B. MUḤAMMAD B. DJA'FAR B. IBRĀHĪM B. AL-WALĪD AL-ANF AL-KURASHĪ, the mentor of 'Alī b. Ḥātim al-Hāmidī [*q.v.*], whom he succeeded as the fifth *dā'ī muṭlaq* of the Musta'li-Tayyibī Ismā'īlīs in Yaman in 605/1209, came from a prominent al-Walīd family of Quraysh. His great-grandfather Ibrāhīm b. Abī Salama was a leading chieftain of the founder of the Ṣulayhid dynasty 'Alī b. Muḥammad al-Ṣulayhī, and he was sent by the latter on an official mission to Cairo. He studied first under his uncle 'Alī b. al-Ḥusayn and then under Muḥammad b. Tāhīr al-Ḥārithī. After al-Ḥārithī's death, Ḥātim b. Ibrāhīm al-Hāmidī [*q.v.*] appointed 'Alī b. Muḥammad as his deputy in Ṣan'ā'. He lived in Ṣan'ā' and died there on 27 Sha'bān 612/21 December 1215 at the age of ninety. He headed a distinguished family of *dā'īs*: for approximately three centuries the headship of the *da'wa* was held by his descendants.

He was a prolific author and his works are held in high esteem by the community. The following works are extant. On *ḥakā'ik*: 1. *Tāḍīj al-akā'id*, ed. 'Arīf Tāmir, Beirut 1967, English tr. (in summary form) W. Ivanow, *Creed of the Fatimids*, Bombay 1936. 2. *Kitāb al-Dhakhīra*, ed. Muḥammad al-A'zamī, Beirut 1971. 3. *Risālat Djīlā' al-ukūl*, ed. 'Ādil al-'Awwā in *Muntakhabāt Ismā'īliyya*, Damascus 1958, 89-153. 4. *Risālat al-Idāh wa 'l-tabyīn*, ed. R. Strothmann, in *Arba'a kutub Ismā'īliyya*, Göttingen 1943, 138-58. 5. *Risāla fī ma'nā al-ism al-a'zam*, ed. Strothmann in *ibid.*, 171-7. 6. *Ḍiyā' al-albāb*. 7. *Lubb al-ma'ārif*. 8. *Lubāb al-fawā'id*. 9. *Risālat mulḥikat al-adhḥān*. 10. *al-Risāla al-mufīda*, a commentary on the *kaṣīdat al-naṣf* ascribed to Ibn Sīnā. Refutations: 11. *Dāmigh al-bāṭil*, refutation of al-Ghazālī's *al-Mustazhiri*. 12. *Mukhtaṣar al-ūṣūl*, refutation of Sunnīs, Mu'tazilīs, Zaydīs and *Falāsifa* who deny God all attributes. 13. *Risālat tuḥfat al-murtadd*, ed. Strothmann in *Arba'a kutub Ismā'īliyya*, 159-70, a refutation of the Ḥāfiẓī-Madḡirī *da'wa*. Miscellaneous: 14. *Maḡjālis al-nuṣh wa 'l-bayān*. 15. *Diwān*, eulogies of the *Imāms* and his teachers, elegies, and valuable historical information about contemporary events in Yaman.

HUSAYN B. 'ALĪ, son of the preceding. He succeeded Aḥmad b. al-Mubārak b. al-Walīd as the eighth *dā'ī muṭlaq*. He lived in Ṣan'ā' and died there on 22 Ṣafar 667/31 October 1268. His writings deal mainly with *ḥakā'ik*. The following works have survived. 1. *Risālat al-Idāh wa 'l-bayān*. The section about the fall of Adam has been edited by B. Lewis in *An Ismā'īlī interpretation of the fall of Adam*, in *BSOS*, ix (1938), 691-704. 2. *al-Risāla al-wahīda fī taḥbīt arkān al-akāida*. 3. *Akīdat al-muwāḥhidīn*. 4. *Risālat al-idāh wa 'l-tabyīn fī fadl yawm al-Ghadīr*. 5. *Risāla Māhiyyat al-zūr*. 6. *al-Mabda' wa 'l-mā'ād*, ed. and tr. H. Corbin, in *Trilogie Ismaélienne*, Tehran 1961, 99-130 (Arabic pagination), 129-200.

'ALĪ B. HUSAYN, son of the preceding. He succeeded his father as the ninth *dā'ī muṭlaq*. He lived in Ṣan'ā' and then moved to 'Arūs, but following the Hamdānid repossession of Ṣan'ā', he returned and died there on 13 Dhū 'l-Ḳa'da 682/2 February 1284. His *al-Risāla al-kāmila* is extant.

*Bibliography*: Ḥātim al-Hāmidī, *Tuḥfat al-kuṭūb*, in manuscript, (edition being prepared by Abbas Hamdani); Idrīs b. al-Ḥasan, *Nuḡhat al-aḡkār*, manuscript used by H.F. al-Hamdānī, *al-Ṣulayhiyyūn*, Cairo 1955, 284-91; Ḥasan b. Nuḡ al-Bharūcī, *Kitāb al-Azhār*, i. ed. 'Ādil al-'Awwā in *Muntakhabāt Ismā'īliyya*, Damascus 1958, 191,

193-4, 198, 247-8; Ismā'īl b. 'Abd al-Rasūl al-Madḡidū', *Fihrist*, ed. 'Alī Naḡī Munzawī, Tehran 1966, 41-2, 80, 93-5, 123-7, 131, 140, 151, 153, 200-1, 229-37, 244-6, 257, 278; For a full description of works and sources, see Isma'il Poonawala, *Bio-bibliography of Ismā'īlī literature*, Malibu, Cal. 1977. (I. POONAWALA)

'ALĪ B. MUḤAMMAD AL-TŪNISĪ AL-İYĀDĪ, pro-*Shī'ī* poet of Ifrīḳiya, who was, according to Ibn Rashīḡ (*Kurāda*, 102), in the service of the Fāṭimid caliphs al-Ḳā'im, al-Manṣūr and above all al-Mu'izz, whom he joined in his new capital in Egypt, despite his great age and the hazards of the journey. It was probably in Cairo that he died, in the same year as his protector, 365/976, according to H.H. 'Abd al-Wahhāb (*Tārīkh*, 96), but later than this, according to Ch. Bouyahia (*Vie littéraire*, 39); these two authors place his birth in Tunis, apparently in order to explain his ethnic of al-Tūnisī, which in the 4th/10th century, and even later, referred merely to a small place adjacent to the ruins of Carthage (cf. *Kāḏī Nu'mān, K. al-Madḡālis wa 'l-musayyarāt*, ed. Yalaoui-Feki-Chabbouh, Tunis, 1978, 203, 332-3, and al-Bakrī, ed. de Slane, 37). This *nisba* has caused him to be often confused with a later homonym, 'Alī b. Yūsuf al-Tūnisī, also the eulogist of an al-Manṣūr and an al-Mu'izz, but this time, Zīrīds (cf. Bouyahia, *loc. cit.*). On the other hand, the ethnic al-Iyādī leads one to postulate an Arab origin, the Iyād being a component of a section of the Banū Hilāl, the Aḥbādī, who had established themselves in the region of Msila (see P. Massiera, *Msila du X<sup>e</sup> au XV<sup>e</sup> siècles*, in *Bull. de la Soc. hist. et archéol. de Sétif*, ii [1941], repr. in *CT*, No. 85-6).

The poet's fame reached the Spanish shores in his own lifetime; an anecdote of the same Ibn Rashīḡ (*Umda*, i, 111) shows us the Andalusian Ibn Ḥānī [*q.v.*] on his arrival in al-Ḳayrawān involved in hostilities with the poets already established there, but making specific mention only of al-Iyādī. However, despite the high esteem in which later critics held him, such as Ibn Ṣharaf (*Questions de critique littéraire*, ed. Ch. Pellat, Algiers 1953, 9), no poem of his has come down to us in complete form; is this attributable to later Sunnī ostracism of the poet after the sudden change to the Zīrīd régime, or a change in literary tastes? Whatever the reason may be, out of the 105 verses which the present writer has been able to gather together (*Hawliyyāt*, 1973, 97), only two fragments are *Shī'ī* in inspiration. These however are preserved by pro-Fāṭimid authors, these being firstly a rather poignant and moving relation of the end of Abū Yazīd, "the man on the donkey" (*Sirat Ustādīh Dhawāḡhar*, Cairo, 48, tr. M. Canard, 69) and secondly a eulogy in honour of al-Manṣūr (Dawādārī, *Kānz al-dawar*, vi, 117). The remainder is made up of well-turned, descriptive fragments, which abound richly in images, hence admired and gathered together for this reason by the anthologists; thus out of these last, al-Ḥuṣrī (*Zahr*, 189, 314, 1003) reproduces a description of the Fāṭimid fleet, armed with the fearsome Greek Fire, a picture of a galloping horse and a tableau of the splendours of the Lake Palace, Dār al-Baḡr, at Manṣūriyya.

In sum, al-Iyadi seems to have been a great poet, quite apart from his Fāṭimid allegiance, but our knowledge of his poetry—apart from his talent—remains till now only fragmentary.

*Bibliography*: Ibn Rashīḡ, *Kurādat al-dhahab*, ed. Bouyahia, Tunis 1972; H.H. 'Abd al-Wahhāb, *Muḡjmal tā'rīkh al-adab al-tūnisī*, Tunis 1968, 96; Ch. Bouyahia, *La vie littéraire en Ifriqiya sous les*

*Zirides*, Tunis 1972; M. Yalaoui, *Poètes ifriqiyens contemporains des Fatimides*, in *Hawliyyāt al-Djāmi'a al-Tūnisīya* (Annales de l'Université de Tunis), 1973. (M. YALAOUI)

'ALĪ EMĪRĪ (1858-1924), Turkish bibliophile and scholar. He was born in Diyārbekr, the son of Mehmed Sherif, a wealthy merchant from a locally prominent family. He learnt Arabic, Persian and the Islamic sciences from his great-uncle and private tutors. At the age of 18 he published in the local paper *Diyārbekr a djūlūsīyye*, a poem commemorating the enthronement of Murād V which made his name widely known in educated circles. When 'Abidīn Paṣha (the *Mathnawī* commentator) came in 1879 to Diyārbekr as president of the committee of reform for the eastern provinces, he appointed 'Alī Emīrī as secretary, and later took him to Salonika when he became the governor of that province. Thus there began his career as a civil servant which was to last for three decades. He served in diverse parts of the Empire until he retired in 1908. He died in Istanbul on 20 January 1924.

A life-long passionate collector of rare books, he saved many important manuscripts from destruction (e.g. the unique copy of Kāshgharī's *Divān luḡhāt al-turk*), and made copies of the rare books which he could not purchase. He conveyed his invaluable collection to the *Shaykh* al-Islām Fayḍ Allāh Efendi Library at Fātih in Istanbul (1916), then re-named the Millet Library, of which he remained Director until his death. 'Alī Emīrī wrote *diwān* poetry with great ease and facility (but with not much talent), and his enormous output of several volumes is among his personal papers in the Millet Library. Except for the biographies of poets of his native Diyārbekr (*Tedhkire-yi shū'arā'yi 'Amid*, Istanbul 1325 *rūmī*/1909), very little of his research work on the Ottoman poets (with special emphasis on sultan and prince poets), has been published (and that mainly in his journal '*Othmānī ta'rīkh ve edebīyyat meḡmū'asi*', founded in 1920, 31 issues). 'Alī Emīrī followed, in method and approach, the tradition of the classical *tedhkire* [*q.v.*] writers. The bulk of his manuscript notes is in the Millet Library. His study on the Eastern provinces, '*Othmānī wilāyat-ı sharḡīyyesi*', Istanbul 1334 *rūmī*/1918, was of great use and was appreciated by the Nationalists in Ankara; Muṣṭafā Kemāl Paṣha (Atatürk) personally gave financial help to him in his old age. The list of 'Alī Emīrī's other publications are given in Ahmed Refik and Ibnülemin M.K. Inal (see Bibl. below).

'ALĪ MARDĀN KHĀN, AMĪR AL-UMARĀ', a military commander of Kurdish origin, was one of the prominent nobles of Shāh 'Abbās of Persia. During the reign of Shāh Saḡī (1038-52/1629-42) he came under a cloud. He thereupon went over to the Mughal Emperor Shāh Djāhān (1037-68/1628-58) and handed over the fort of Kāndahār [*q.v.*] to the Mughals. He was given the rank of 5,000/5,000 by his new master in 1048/1638 and was appointed governor of Kāshmīr. In 1050/1640 he was promoted to 7,000/7,000 and was appointed governor of the Panḡjāb. In 1641 he was appointed governor of Kābul in addition to the Panḡjāb.

'Alī Mardān Khān was connected with the construction of a major canal running from Ravi to Lahore, and laid out the famous Shalamār garden-

at Lahore. He died in 1067/1657 and was buried in his mother's tomb at Lahore.

'ALLĀL AL-FĀSĪ, MUḤAMMAD, Moroccan statesman and writer (1907-74). Born at Fās, he was educated at the university of al-Ḳarawīyyīn [*q.v.*]. From the age of 18 onwards, he took part in the diffusion throughout Morocco of the progressive movement of the Salafiyya [*q.v.*], and his militant attitude in favour of local nationalist aspirations, as well as his oratorical powers, soon led the government to confine him to a house, under guard, at Tāza. He was freed in 1931 and returned to Fās, where he began to lecture at the Ḳarawīyyīn; these lectures were however boycotted by certain religious leaders who feared that his unrestrained political attitudes might well cause difficulties for the Moroccan authorities in their relations with the French Protectorate. Al-Fāsī then took part in the delegation of the most influential nationalist leaders to the sultan of Morocco in 1934, when the document called *Maḡālib al-sha'b al-maḡhribī* ("Demands for reform of the Moroccan people"), the first catechism of the nationalist movement, consisting of a complete programme for the reform and renovation of the land, especially in the politico-social sphere, was presented to the sovereign. The tergiversations and delays of the speakers engaged in this exasperated the more ardent of patriots, and led the *Kutlat al-'amal al-waṭanī al-maḡhribīyya* ("Moroccan bloc for national action") which had until 1934 worked in the background, to intensify its activities. Disorders broke out in 1936 in Fās, Salé and Casablanca, and the leaders of the bloc, including 'Allāl al-Fāsī, were arrested. After their freeing almost immediately, the bloc decided to disband itself, and two parties were then formed, *al-Haraka al-ḳawmīyya* and *al-Hizb al-waṭanī li-tahḳīk al-maḡālib*, which merged in 1943 to form the single party of the *Istiklāl*, led from 1946 onwards by al-Fāsī. In the following year he fled to Cairo, where he organised the resistance movements against the French and Spanish Protectorates from a centre in the *Maktab al-Maḡhrib al-'arabī* founded in the Egyptian capital. He returned to Morocco in 1956, the year when his country gained its independence, and was nominated Professor of Islamic Law at Rabat and Fās and then Minister of State entrusted with Islamic affairs and a Deputy.

'Allāl al-Fāsī's work as a publicist, as well as a politician, continued to be most intense. At the beginning of 1957 he founded the newspaper *Le Sahara marocain* in order to promote the inclusion of Mauretania in Morocco, and in 1962, the monthly review *al-Bayyana*, which was at the same time Pan-Arab and Pan-Islamic and also concerned with culture and social progress. In all his work, the writer dealt with topics and problems of the Maḡhrib's history and politics, above all in regard to the modern and contemporary periods, with the exception of his *Makāsīd al-sharī'a al-islāmīyya wa-makārimuhā* (Casablanca, n.d.), in which the author gathered together his lectures on law at the Faculty. Two books are devoted to an historico-juridical analysis of the French and Spanish Protectorates over Morocco: *al-Himāya fī Marrākush min al-wiḍiḡha*

*al-ta'rikhiyya wa 'l-kānūniyya wa Himāyat Isbāniyā fī Marrākush min al-wiḍḥa al-ta'rikhiyya wa 'l-kānūniyya* (publ. in Cairo 1947). His *al-Maḡrib al-'arabī min al-harb al-'ālamīyya al-ūlā ilā 'l-yawm* (Cairo 1955), on the other hand, belongs to the usual class of historical compilations. His essay on *al-Ḥaraka al-istiḳlālīyya fī 'l-Maḡrib al-'arabī* (Cairo 1948, 2nd ed. 1956) may be considered as an unpretentious contribution to our knowledge of Maghribī nationalism, especially in Morocco; there exist of these an English translation (New York 1954, repr. 1970) and a Spanish one. Other works comprise collections of lectures given in various capitals of the Arab world (as in *Hadīth al-Maḡrib fī 'l-Mashriq*, Cairo 1956) and radio talks (as in *Nidā' al-Kāhira*, Rabat 1959)—these last revealing the passionate character of the writer's political beliefs. *Al-Nakd al-dhātī* (Cairo 1952), of which there even exists a Chinese translation, is a self-criticism of the Arab world (particularly in regard to Morocco), in which the author analyses with a careful dialectic the recent past, and above all the present, in order to discern exactly the most effective way for Arabism to face up to the exigencies of modern life and to become part of European civilisation without at the same time renouncing its own particular genius and identity. In this, 'Allāl al-Fāsī places himself in the forefront of the ideology of Islamic fundamentalism with its roots in Muḥammad 'Abduh's [q.v.] thought, but at times he goes beyond this basic model when it is a question of penetrating more clearly to the heart of western thought.

*Bibliography*: There is information on 'Allāl al-Fāsī in all the numerous works (mainly in French) on Morocco. There is a good source of documentation on his political activity in *Oriente Moderno*, esp. xvii (1937), 595, xix (1939), 429-30, and xxxii (1952), 1-31 *passim*. See also Anouar Abdel-Malek, *Anthologie de la littérature arabe contemporaine*. ii. *Les essais*, Paris 1965, 190-6; and A. Laroui, *L'idéologie arabe contemporaine*, Paris 1967, *passim*.

(U. RIZZITANO)

'ALLAWAYH AL-A'SAR, ABU 'L-ḤASAN 'ALĪ B. 'ABD ALLĀH B. SAYF, court musician in early 'Abbāsīd times, died in or shortly after 235/850. He was of Soghdian origin, *mawlā* (al-'ik) of the Umayyads and *mawlā* (al-*khidma*) of the 'Abbāsīds. Ibrāhīm and Iṣḥāq al-Mawṣilī taught him the "classical" *hidjāzī* music, but he preferred the "romantic" style of Ibrāhīm b. al-Mahdī and introduced "Persian melodies" (*naghām fārisīyya*) into Arab music. As a court musician, he started in the third class (*tabaqa*) under Hārūn al-Rashīd and continued to serve the caliphs up to al-Mutawakkil, but suffered from the rivalry of his more brilliant colleague Mukhārīk. 'Allawayh is described as being a master musician (*mughannī hādhiḳ*), an excellent lutenist (*dārīb mutaḳaddim*)—being left-handed he used an instrument strung in reverse order—and a skilful composer (*sānī' mutaḳannin*). Abu 'l-Faradj al-Iṣbahānī recorded 80 of his songs, using sources like 'Allawayh's own *Kitāb* (or *Djāmi'*) *al-Aghānī* and the songbooks of 'Amr b. Bāna, Ibn al-Makkī, Ḥabash and al-Hishāmī.

*Bibliography*: *Aghānī*, xi, 333-60 (main source, see also indices); Ibn Ṭayfūr, *Kitāb Baghdād*, Cairo 1949 (see indices); Ibn 'Abd Rabbih, *Ikḍ*, vi, Cairo 1949, 31, 33, 37; *Djāhiz*, *Bayān*, i, 132; Ṣūlī, *Awarāk* (*Ash'ar awlād al-khulafā'*), 30; Nuwayrī, *Nihāya*, v, 9-13; O. Rescher, *Abriss der arabischen Literaturgeschichte*, ii, Stuttgart 1933, 81-3; H.G. Farmer, *History*

(E. NEUBAUER)

ALUS, SERMED MUKHTĀR, modern Turkish SERMET MUHTAR ALUS, Turkish writer (1887-1952). He was born in Istanbul, the son of Ahmed Mukhtār Paṣha, the founder of the Military Museum and a teacher at the War College. Educated mainly privately at Galatasaray Lycée, he studied law, graduating in 1910. As a student, he founded with two friends, the humorous paper *El-Üfürük* (1908) and contributed essays and cartoons to another humorous paper *Davul* (1908-9). His early interest in philosophy and social studies did not last long, and he turned to the theatre. Between 1918 and 1930, apart from a number of short stories which he contributed to various papers, he concentrated exclusively on the theatre, writing and adapting from the French many plays, some of which were performed in the Istanbul Municipal theatre (*Dār al-Bedāyī*). Some of his plays were serialised in satirical weeklies (*Akbaba* and *Amcabey*). The year 1931 was a turning point in his literary career. He began to publish in the newspaper *Akşam* sketches of everyday life in Istanbul at the turn of the century, *Oltuz sene evvel Istanbul* ("Istanbul thirty years ago") which were followed by stories, essays, autobiographical sketches, novels, etc. serialised in the same paper and in the dailies *Son posta*, *Cumhuriyet*, *Vatan*, *Vakit*, etc. and in the periodicals *Yedigün*, *Hafta*, *Yeni mecmua*, etc., all describing life in mansions, villas, *yahıs* (sea-side villas), famous resorts, or in the humble homes of Istanbul during the last decade of Ḥamīdian era.

An extremely prolific writer, he produced continuously until his death in Istanbul on 18 May 1952. Unfortunately the great bulk of his output (articles, essays, short stories, novels, memoirs) always accompanied by his own designs and sketches, remains scattered in many dailies and periodicals. Four of his novels have been published in book form: *Kivrek Paṣa* (1933), *Pembe maşlahlı hanım* (1933), *Harp zengininin gelini* (1934), *Eski Çapkan anlatıyor* (1944). The plots in these novels, as in all Alus's writings, are loose and unimportant, and are only a pretext for describing and reporting the conversations of his pet characters, who are Ḥamīdian pashas, local beauties or toughs, snobs and simple people. Alus is the last representative of the popular entertainment narrative school inaugurated by Ahmed Midhat and continued by Husayn Rahmī, Ahmed Rāsim and O. Dj. Kaygılı [q.v.]; perhaps he is more akin to the latter in that he is more entertaining and simplistic without high claims to any moral or philosophical conclusions. In spite of his often unpolished, even sloppy, style and his weakness for the farcical, his work has a great documentary value for the spoken language, way of life, customs and folklore of the period.

*Bibliography*: Reşat Ekrem Koçu, in *İstanbul ansiklopedisi*, Istanbul, 1958-69, s.v. (the main source for all subsequent studies); Metin And, *Meşrutiyet döneminde Türk tiyatrosu*, Ankara 1971, 112.

(FAHİR İZ)

'AM'ĀK, SHIHĀB AL-DĪN BUKHĀRĪ, one of the leading Persian poets at the court of the İlek-Khāns (Kara-Khānids) [q.v.] of Transoxania. Late sources ascribe to him the *kunya* Abu 'l-Nadjiḳ (e.g. Taḳī al-Dīn Kāshānī). It is not certain whether 'Am'āk is a personal name or a *lakab* used as a pen-name. It cannot be connected with any existing Arabic, Persian or Turkish word. Dh. Ṣafā has

suggested a corruption of an original ‘ak’ak (“magpie”) which occurs as the name of the poet in a manuscript of the *Dīwān* of Sūzānī. S. Nafīsī conjectured a possible Soghdian origin. The forms ‘Amīk and ‘Amīkī, which can be found in some manuscripts of the *Bahāristān* of Dījāmī, are certainly to be rejected.

‘Am’ak was born in Bukhārā, probably before the middle of the 5th/11th century. If any of the dates given for his death by later biographers viz. 542 (e.g. Dawlatshāh and Ridā-Ḳulī Khān Hidāyat), 543 (Takī al-Dīn Kāshānī) or 551 (Ṣādīk b. Šālīh Iṣfahānī in *Shāhid-i Ṣādīk*) is correct, he would have lived to become a centenarian.

The earliest datable poems that are attributed to ‘Am’ak are *kašidas* written for the Ilek-Khān Naṣr b. Ibrāhīm (460-72/1068-80). The poet must have lived at least till 524/1129-30, according to the anecdote that he was ordered to write an elegy for Sulṭān Sandjar’s daughter Māh-i Mulḳ Khātūn, whose death occurred in that year (Dawlatshāh, on the authority of ‘Am’ak’s contemporary Khātūnī), or even later if the prince Maḥmūd named in a fragmentary poem is identical with the Ilek-Khān who was put on the throne of Samarḳand by Sandjar in 526/1132.

Already during the short reign of Khiḍr b. Ibrāhīm (472-3/1080-1), ‘Am’ak appears to have reached a dominating position at the court of Samarḳand. The story about his rivalry with Raṣhīdī, told in the *Čahār maḳāla*, pictures him as an *amīr al-ṣu’arā’*. In his later years he is said to have lived a secluded life, communicating with his patrons through a son by the name of Ḥamidī or Ḥamid al-Dīn. ‘Am’ak also wrote a poem for the Salḡūk ruler Alp Arslān.

Although the greater part of ‘Am’ak’s poetry seems to have been lost, a small number of his *kašidas* has been preserved in anthologies or in *madjmu’a* manuscripts. There are also some quatrains attributed to his name. A *mathnawi*-poem on the theme of Yūsuf and Zulaykhā, which is said to have been written in such a way that it could be scanned according to two different metres, has, however, left no trace.

In spite of this early loss of the *dīwān*, estimated at 7,000 *bayts* (*Haft iḳlīm*), ‘Am’ak appears to have had a remarkable influence on the poetry of his contemporaries as well as on that of the following generation. No one less than Anwarī styled him “a master of poetry” (*ustād-i suḳhan*), and designed one of his poems on a model provided by ‘Am’ak (cf. *Dīwān-i Anwarī*, i, Tehran 1347<sup>2</sup>, 205, 274). This reputation was based, first of all, on the clever use ‘Am’ak made of rhetorical artifices which were still a novelty in his time. A fragment of one of his *kašidas*, in which the words *mūr* (“ant”) and *māy* (“hair”) have been used in every line, is often quoted as an example of this. ‘Am’ak was also renowned as a writer of elegies, but nothing more than the few lines he wrote at the request of Sandjar has been preserved.

Another notable feature of ‘Am’ak’s poetry is the use of long and elaborate prologues to his odes. The most extreme example of this, a prologue of 100 *bayts*, contains the conceit of a spiritual journey to an imaginary world on the back of the donkey of ‘Īsā combined with satirical hints to the poet’s rivals (*Dīwān*, ed. Nafīsī, 141 ff.). ‘Am’ak had a distinct taste for fantastic images; in one of his many descriptions of nocturnal scenes, the night is represented as a preacher who from his pulpit extols the virtues of the poet’s native town Bukhārā (*op. cit.*, 176 ff.).

According to Dh. Ṣafā, the “fantastic simile” (*tashbih-i khayālī*) is also a major characteristic of the imagery ‘Am’ak applied to the individual lines of his poems.

*Bibliography*: The *Dīwān* of ‘Am’ak published at Tabriz, 1307 *sh.* (624 *bayts*) is unreliable, as it contains several poems that actually belong to other poets. S. Nafīsī has assembled a collection of 806 *bayts* from various sources in *Dīwān-i ‘Am’ak-i Bukhārī*, Tehran 1339/1960. This volume lacks, however, precise references on the provenance of each item. The *kašidas* written for the Ilek-Khāns have also been inserted into the *ta’likāt* to Nafīsī’s edition of *Ta’rikh-i Bayḳakī*, Tehran 1332/1953, iii, 1301-23.

The most important sources containing fragments of his poetry are: ‘Awfī, *Lubāb*, ed. Browne, 181-9, ed. Nafīsī, 378-84, cf. *ta’likāt*, 686-94; Raṣhīd-i Watwāt, *Hadā’iq al-sihr*, Tehran 1308/1929, 44-5; Shams al-Dīn Muḥammad b. Ḳays al-Rāzī, *al-Mu’jam fi mā’ayir aṣṣ’ar al-’adajm*, Tehran 1338/1959, 351, 381; Dījādmī, *Mu’nis al-aḥrār fi daḳā’iq al-aṣṣ’ar*, ii, Tehran 1350/1971, 499; Dawlatshāh, 64-5; Dījāmī, *Bahāristān*, Dushambe 1972, 107; Amīn Aḥmad Rāzī, *Haft iḳlīm*, Tehran 1340/1961, iii, 409-20; Ḳāsimī, *Sullam al-samawāt*, Tehran 1340/1961, 53, cf. *hawāshī*, 303-4; Luṭf-’Alī Beg Aḍḍar, *Ātashkada*, lith. Bombay 1299 A.H., 337-42; Ridā-Ḳulī Khān Hidāyat, *Madjma’ al-fuṣṣḥā’*, lith. Tehran 1295 A.H., i, 345-50, ed. Tehran 1336/1967, ii, 879-88.

For manuscripts of *madjmu’a* containing poems by ‘Am’ak, see E. Blochet, *Catalogue des manuscrits persans de la Bibliothèque Nationale*, Paris 1912, ii, 48 ff.; Ch. Rieu, *Catalogue of Persian manuscripts in the British Museum*, London 1881, ii, 869, *Supplement*, 105; A.J. Arberry, in *JRAS* (1939), 379; A. Munzawī, *Fihrist-i nusḳahā-yi khaṭṭī-yi fārsī*, iii, Tehran 1350/1971, 2551, nos. 24876-9.

Bibliographical references to ‘Am’ak are to be found in Nizāmī Arūdī, *Čahār maḳāla*, Tehran 1955-7, *matn* 44, 73, 74, cf. *ta’likāt* 138 ff., 232 f. and 615, as well as in the *tadhkīra* works mentioned above. See further Browne, ii, 298, 303, 335 f.; Dh. (J.T.P. DE BRUIJN)

**AMĀN ALLĀH**, Amīr of Afghānistān and the successor and third son of Habīb Allāh [*q.v.*] by his chief wife, ‘Ulyā Ḥaḍrat (d. 1965). He was born on 2 June 1892 in Paghmānt and educated at the Military Academy. Intelligent, energetic and hard-working, he was attracted to the nationalist and Islamic modernist ideas of Maḥmūd Tarzī (1866-1935), the editor of *Sirādī al-akhbār*, and in 1914 married Tarzī’s daughter, Soraya (Thurayyā) (d. 21 April 1968). At the time of his father’s murder on 20 February 1919, Amān Allāh, as Governor of Kābul, controlled the capital with its garrison, arsenal and treasury. Supported by the army, the younger nationalists and the Bārāzkay faction, he resisted the claims of his uncle, Naṣr Allāh, and his eldest brother, ‘Ināyat Allāh, and was recognised as *amīr* on 28 February.

Amān Allāh promptly asserted Afghānistān’s in-

dependence from British control of her foreign relations. Possibly hoping to promote his goal by the threat of war, he despatched forces to the Indian frontier, but hostilities commenced on 3 May and endured until an armistice at the beginning of June (the Third Afghan War). By the Treaty of Rāwalpindī (8 August 1919) Britain recognised, by implication, Afghānistān's independence, although the Durand Line remained the frontier. After further negotiations at Mussoorie (April-July 1920) and in Kābul, a treaty of good neighbourliness was signed by Britain and Afghānistān on 22 November 1921. In the meantime Amān Allāh had obtained international recognition through treaties with the USSR (28 February 1921) and Turkey (1 March 1921). Relations were also established with Italy, France and Iran. In the early years of his reign Amān Allāh espoused a Pan-Islamic policy involving support for Indian Muslims, friendship with Turkey and Iran and the creation of a Central Asian federation under Afghān leadership including Bukhārā and Khīwa, but the reassertion of Soviet control over Turkistān put an end to this project.

Amān Allāh's internal policy was one of rapid modernisation. His reforms came in two main bursts. In the period 1921-4 he reformed the structure of Afghān government, introducing the first budget (1922), constitution (1923), and administrative code (1923). He introduced legal reforms including a family code (1921) and a penal code (1924-5). The legal reforms were partly the work of ex-Ottoman advisors and influenced by Islamic modernism, being derived largely from the *Sharī'a* but replacing '*ulamā'* control by that of the state. Education was central to his reforms and he established new secondary schools and sent Afghān students abroad. His support of female education gave rise to bitter criticism from traditional groups. Amān Allāh made some effort to promote economic development by fostering communications (aircraft, radio and telegraph introduced, and railway surveys begun), reforming the currency (the rupee replaced by the *afghānī*), reorganising the customs, and helping light industry. The principal economic success of his reign, however, owed nothing to his efforts; this was the development of the *Karakūl* and carpet industries following Uzbek immigration into the northern provinces. There was also some agricultural development. Amān Allāh's reforms were financed largely from domestic resources and lack of money imposed constraints which were especially marked in his military reforms. With the aid of foreign instructors (mainly Turks) Amān Allāh sought to develop a non-tribal national militia based on conscription for short periods, and at the same time to reduce military spending. The result was strong tribal opposition to conscription, and a disaffected, discontented and inefficient army. Hostility to centralisation, conscription and certain social reforms lay behind the *Khōst* [*q.v.*] rebellion in 1924, which was suppressed only after a protracted struggle. For a time Amān Allāh was obliged to abate his reforming zeal.

In December 1927 Amān Allāh departed for a tour of Europe, returning to Kābul on 1 July 1928. His object, he explained, was to discover the secrets of progress; his conclusion was that these were the discarding of outworn ideas and customs. He summoned a national assembly (*Loe Džirga*) (28 August-5 September) and dressed the delegates in European clothes to hear his new ideas. At the last moment he was persuaded to omit his most far-reaching proposals, but his announced changes in the con-

stitution, new social reforms, and increased taxes were sufficiently disturbing to his hearers. Unabashed, Amān Allāh repeated his proposals in a further series of five three-hour speeches delivered between 30 September and 4 October to an invited audience, which was treated to the spectacle of Queen Soraya dramatically unveiling herself.

Enraged by the social reforms, by their diminution of their own authority, and by new proposals by Amān Allāh to examine them in their proficiency to teach and to expel those trained at Deoband, the '*ulamā'*, under the leadership of the Hazrat family of Shor Bazaar, denounced Amān Allāh as an infidel. The Āmir arrested the leaders, but in November found himself confronted by two tribal risings supported by '*ulamā'*, one in the vicinity of *Djalālābād*, involving the *Shīnwārīs* and other tribes, and the second in the *Kūhistān*, led by a *Tādjik* bandit known as *Bačča-yi Saḡaw*. His inadequate forces divided, Amān Allāh was unable to resist the attack on Kābul from the *Kūhistān*, and his belated withdrawal of nearly all his reforms did not pacify the rebels. On 14 January 1929 Amān Allāh abdicated in favour of 'Ināyat Allāh and fled to *Ḳandahār*. 'Ināyat Allāh also abdicated on 18 January and the *Bačča* became ruler of Kābul with the title of *Ḥabīb Allāh II*. At *Ḳandahār* Amān Allāh rescinded his abdication on 24 January and sought help from Britain (which remained neutral), from the USSR (which briefly sent troops to northern Afghānistān), and from Afghān tribes. Although Amān Allāh received help from the *Hazāras* and some other tribes, he failed to command the support of the *Durrānīs* and the majority of the *Ghālzays*, and was forced to turn back his advance on Kābul at *Ghazna*. On 23 May he left Afghānistān for India and on 22 June sailed from Bombay to exile in Rome. He died in Switzerland on 26 April 1960 and was brought home and buried at *Djalālābād*.

*Bibliography:* The older biographies of Amān Allāh such as those by R. Wild, London 1932 and Ikbāl Alī Shah, London 1933 have little value by comparison with modern studies based on the British archives. **AMĪD TŪLAKĪ SŪNĀMĪ**, *Kh*<sup>h</sup>ADJA 'AMĪD AL-DĪN FAKHR AL-MULK, poet of Muslim India. He was born in Sūnām, an important town (now in the district of Patiala in the Indian part of the *Pandjāb*) that had emerged as a centre of culture and learning in the 7th/13th century. 'Amīd called himself Tūlakī along with Sūnāmī because his father was said to have migrated from Tūlak in *Khurāsān* to India. In the art of poetry, he was the disciple of a famous master, *Shihāb Mahmrā*. He started his career as a poet in *Multān*, which had become the capital of a short-lived kingdom under *Malik 'Izz al-Dīn Khān-i Ayāz* and his son, *Tādj al-Dīn Abū Bakr* (who died in 638/1241). Two of his *kaśīdas* preserved in mediaeval anthologies are in praise of *Sultan Tādj al-Dīn*. On the death of patron, he moved from *Multān* to *Dihlī*, and during the reign of *Sultan Balban* he was appointed *mustaufī* of the district of *Multān* and *Učch*, placed under the charge

of Prince Muḥammad, who was later known as *Khān-i Shāhid*.

‘Amīd’s *diwān* is not extant, but the poems contained in mediaeval anthologies and other literary works give us an idea of his greatness and excellence in the art of poetry, showing that he was one of the distinguished poets of the Dihlī Sultanate during the 7th/13th century, contributing to the growth of Indo-Persian literature. It emerges from his poems that he was interested in the philosophy of *Ishrāk* or illuminative wisdom as propounded and advocated by *Shaykh Shihāb al-Dīn Suhrawardī* (d. 587/1191).

Like most of his contemporaries, ‘Amīd was basically a poet of the *kaṣīda*, and his known poems largely comprise panegyrics on rulers, princes and noblemen. Among his poems, there are also one *Tarjū‘-band*, two *ghazals* and one *hazl* (humorous poem); their characteristic features are simplicity, spontaneity, freshness of thought and beauty of diction. His *habsiyyāt* (poems written in prison and depicting the prisoner’s life [see *Ḥabsiyya* below]) shed light on the actual conditions in mediaeval jails. It should also be stressed that his *ghazals*, like those of *Shaykh Djamal of Hānsī*, paved the way for the *ghazal*’s subsequent popularity as an independent branch of poetry.

(I.H. SIDDIQI)

**AMĪN AL-ḤUSAYNĪ**, *muftī* and Palestinian leader. He was born in Jerusalem in 1893, the son of Ṭāhir al-Ḥusaynī. The Ḥusaynīs were a leading family in Jerusalem who claimed *Sharīfī* lineage although this was disputed by others, as on two occasions the line had passed through female members of the family. They had often held the office of *muftī* in the past, and three had been *muftī* in the period immediately before 1821: Muṣṭafā, Amīn’s grandfather; Ṭāhir, his father; and Kāmīl, his elder brother by another mother. The holding of this office enhanced the standing of the family, other members of which had held other high positions, including that of Mayor of Jerusalem and of deputy in the Ottoman parliament. Thus Amīn came from a family used to the prestige and authority of high office and also to rivalry on the part of the other leading families in Jerusalem. Moreover, the concept of Jerusalem as the third holiest city in Islam and of preserving it as such must have been at the very centre of their thoughts. The office of *muftī* gave the Ḥusaynīs a special role in this act of preservation.

Amīn al-Ḥusaynī had a varied education. He first attended a local Muslim school and then the Ottoman state school in Jerusalem. It seems that he also attended for a year the school of the Alliance Israélite Universelle where he studied French. In 1912 he went to Cairo and entered al-Azhar, but stayed less than a year and left without graduating and without the title of *‘ālim*. He immediately went to make the *hajj*, from which he returned to Jerusalem. His religious education was incomplete and did not qualify him for the office of *muftī*. Further education was received in the Ottoman army in

which he served during the First World War. He undertook his basic training in the School of Officials, the *Mülkiyye*, in Istanbul and at the Military Academy. His war years were spent chiefly in an office in Izmir. By virtue of this training he was permitted to wear the *tarbūsh*, the symbol of an Ottoman official but not of a religious dignitary.

On the conclusion of the war, Amīn returned to Jerusalem which was to be the base of his activities for the next nineteen years. He worked as teacher, translator and civil servant, but he soon turned to journalism and direct political activity. He was an intensely political man, possessed of great energy and organising ability and from the first inspired by two deeply-held ideas, Arab nationalism and a hatred of the Zionist attempt to change the character of Palestine. For him, Palestine was an Islamic Arab country belonging to the wider Arab world and he believed that any alteration of its basic Arab character would isolate it and its inhabitants from their Arab neighbours. He was convinced that the Palestinians had the right to determine the future form of government of their country, a right possessed by neither the British government nor the Zionist organisation. He also believed that European Jews settling in Palestine would spread customs and usages alien to the more traditional Islamic way of life. If change was to come in Palestine, it should be organic and internal and not imposed from outside. He devoted the rest of his life to a vain attempt to stem this tide of change.

Opposition to Zionism amongst the Arabs of Syria and Palestine grew in intensity once Jerusalem and Damascus had fallen to the Allied forces. The opposition was led by a group of young Palestinians, foremost amongst whom were Amīn al-Ḥusaynī and ‘Arīf al-‘Arīf. Verbal opposition in speeches and newspapers led to street demonstrations in September 1919. Editorials and sermons called for the shedding of Jewish blood if protests went unheeded. Amīn began to organise small groups of *fidā’iyyūn* whose task was to strike against the Jews and the British. When in March 1920 the Syrian National Congress voted for Syrian independence, Palestine Arabs took to the streets in the belief that their country was included in the new state. ‘Arīf’s newspaper *Sūriyya al-Dīanūbiyya* published the headline: “Arabs arise! The end of the foreigners is near. Jews will be drowned in their own blood”. Because of the Amīr Fayṣal’s lack of strong leadership, the Palestinians tended to separate from his state and follow their own path. In April, the Arabs of Jerusalem in the prevailing tense atmosphere exploded from a demonstration into an assault on the Jewish population.

Amīn, who was leading the demonstration, was reported to have tried to restrain the rioters, but two days of trouble left five Jews dead and 211 wounded and four Arabs dead and 21 wounded. During the disturbances, Vladimir Jabotinsky’s Jewish Self-Defence Group attempted to assassinate Amīn and ‘Arīf, whose *fidā’iyyūn* tried to retaliate. British intelligence forestalled these attempts and the two had to flee to Transjordan after having been accused of provoking the riots. This was the first of a series of charges laid against Amīn during his lifetime. His precise role in the provocation can never be ascertained, but it is certain that he approved of all actions taken to discomfort the Jewish population and that he was not averse to the shedding of blood. The concepts of *ḍiḥād* and of the *fidā’ī* were in Islamic history associated with the possibility of death in the pursuit of a goal. All Muslims could

be summoned to a *djihad* in defence of Islam against a perceived threat, while the *fidā'ī* was always prepared to die himself while assassinating an opponent.

The first British High Commissioner in Palestine, Herbert Samuel, pardoned Amīn in August 1920 and he returned to Jerusalem. Samuel had issued the pardon in order to try to calm Arab feeling and to attempt to enlist Arab support for his policies. In March 1921 the *muftī* of Jerusalem, Kāmil al-Ḥusaynī, died. The British authorities had assumed the mantle of the Ottoman government and consequently the responsibility for religious appointments. In an election, local '*ulamā'*' had to select three candidates for the office of *muftī*, one of whom would be approved by the government. The al-Ḥusaynī family campaigned for their nominee, *Hādīdj* Amīn, but he was not one of the three selected in April. It appeared however that he had some popular support in the country and the government was loathe to go against the wishes of the people. Samuel eventually decided that Amīn was his man and in May he was appointed Grand Muftī (*al-muftī al-akbar*), a title given by the British to enhance the status of the office.

Amīn's appointment as head of the Muslim community in Palestine did not settle the problem of the Muslim religious organisation of the country. In Ottoman times, the *shari'a* courts had come under the general jurisdiction of the *Shaykh al-Islām* and the *wakfs* had been administered by the Ministry of *Awkāf*. The British assumed responsibility for these, but the Muslims soon demanded that they be allowed to run their own religious affairs. The government concurred and the Supreme Muslim *Shari'a* Council (*al-Madjlis al-Shar'i al-Islami al-A'la*) was elected by leading Muslims. *Hādīdj* Amīn was chosen as *Ra'is al-'Ulamā'* and President of the Council, as he later maintained, for life. He had thus, as a young man, consolidated his position as leader of the Palestinian Arabs both in their religious and their secular affairs. In March 1921 he wrote a Memorandum to the British Colonial Secretary, Winston Churchill, in which he outlined Palestinian resistance to Zionism and the ideas which were the foundation of his future policy—the complete prohibition of Jewish immigration, the abolition of the Jewish National Home and the establishment of an Arab government of Palestine.

The period 1921-9 was used by the Muftī to build up his following. As President of the Supreme Muslim Council, he controlled the *wakf* revenues, which were not used exclusively for charitable purposes. Preachers were paid to disseminate political propaganda and those who did not support his policies were dismissed. Financial assistance was given to Arab schools to instruct their pupils in the Arab nationalist spirit. Demonstrations and boycotts were encouraged. Money was also used to enhance the status of Jerusalem and its mosques in the Islamic world. To Amīn, the area of the *Harām* was the very centre and symbol of his aspirations to preserve Jerusalem and Palestine as Arab and Islamic. In 1928 a screen was set up by the Western Wall of the sanctuary to separate male and female Jewish worshippers. This move was taken as a reason for protest and seen by Muslims as a Jewish encroachment on the *Harām*. The Muftī felt the threat deeply, and encouraged propaganda to the effect that the Jews were planning to take over the Muslim holy places. A year later feelings between the two communities became so exacerbated that the Arabs attacked and committed

atrocities amongst the Jews. 133 were killed by the Arabs and 116 Arabs killed by police action. The subsequent British government report did not accuse the Muftī directly of provoking the attacks, but blamed him for not doing enough to forestall them and for having played upon public feeling. The agitation had been conducted in the name of a religion of which, in Palestine, he was head. The British still saw him as a force for moderation, whereas it is clear that he was committed to an uncompromisingly anti-Zionist policy and that he would do everything in his power to frustrate the establishment of a Jewish National Home.

In 1931 he convened a Pan-Islamic Conference in Jerusalem which he attempted to use as a platform to further his anti-Zionist policy, although his position was challenged by other Palestinian leaders. He later travelled to other Muslim countries to gain political support and to raise funds. In 1935 he helped to found the Palestine Arab Party, a Ḥusaynī organisation under the presidency of *Djamāl*, the Muftī's cousin. The Party's policy was that of Amīn himself, and it attempted to prohibit the further sale of Arab land to Jewish settlers.

The year 1936 was a time of rising tension in Palestine, culminating in the Arab revolt. The increase in Jewish immigration caused by the rise of Nazism led the Arabs to fear the future takeover of their country by the Zionists. In April an Arab Higher Committee of Christians and Muslims was formed under the leadership of Amīn. It immediately supported a general strike, to be called off when the British government suspended Jewish immigration. Murderous attacks on Jews began to occur, but the brunt of the Arab effort was quickly turned against the British and those Arabs considered disloyal. The strike and the unrest continued until October. The British Commission appointed to investigate the disturbances apportioned a large share of the blame for them to the Muftī. The Arab Higher Committee under his chairmanship had clearly instigated illegal acts and had not condemned sabotage and terrorism. The Muftī had seen and encouraged the revolt as a movement of the people, largely peasants, who had risen to defend their country and their rights.

The British still clung to their hope of using Amīn as a moderating influence, but after the assassination of a government officer in September 1937, stricter regulations were introduced. The Arab Higher Committee was declared illegal and Amīn was removed from his post as president of the Supreme Muslim Council. Six members of the former were arrested and deported (although *Djamāl al-Ḥusaynī* escaped) and the Muftī, fearing arrest himself, fled to Lebanon. From there he fought a propaganda war against the British, while his followers contributed to the continuing unrest in Palestine or set about eliminating members of rival clans. He was not allowed to attend the London Conference on the future of Palestine in February 1939, although a four-man delegation of members of the disbanded Higher Committee was present.

In October 1939 the Muftī made another move, this time to Iraq. As German successes multiplied in the Second World War, he began to make approaches to the Nazis in the hope that at the end of the war he would be on the winning side. He sent his private secretary to Berlin in September 1940 to ask for German commitments to the Arabs—recognition of the complete independence of the Arab countries, the abrogation of the mandates,

and the right of the Arabs to solve the Jewish question in Palestine "in the national and racial interest on the German-Italian model". These latter words were the Nazi Secretary of State's report of his conversation with Amīn's secretary, and it is not clear exactly what the Muftī knew in Baghdad in September 1940 of the "model" on which the Nazis were solving the Jewish problem and how he would apply it in Palestine. However, his letter was noted in Berlin and he was able to build on it later. His pro-German feelings led to him to support Rashīd 'Alī al-Gaylānī, the anti-British 'Irākī politician who had become Prime Minister in March 1940. They both sought promises of material support from the Axis, and in April 1941 al-Gaylānī and his supporters carried out a shortlived pro-German coup. Promised German support was too little and too late, and a small British force was able to unseat him. Amīn had issued a *fatwā* urging all Muslims to support the coup and to fight the British, and when it failed he had once again to flee, via Iran to Italy.

He was warmly welcomed by Mussolini who hoped to use him for his own purposes. The Muftī was more interested in negotiating with the senior partner of the Axis in Berlin, and he arrived there in November 1941. Al-Gaylānī arrived later the same month and the two disputed for the position of spokesman for the Arab cause. Amīn claimed that he was the leader of the Arab national movement. He was the first to be received on November 20th by Hitler to whom he repeated his request for the formal recognition by Germany of the independence of the Arab countries. The Führer was non-committal. Nevertheless the Muftī assured him of the friendship and co-operation of the Arabs.

The period that the Muftī spent in Nazi Germany, November 1941 to May 1945 is the most controversial in his life. He had fled to Germany to escape the British and because he believed that the Axis would win the war. As a strict Muslim he could have had little sympathy with National Socialism as such, but his chief aim in life of ridding Palestine of the Jews coincided hideously with the Nazi final solution of the Jewish "problem". He therefore used all available anti-British and anti-Jewish sources in the naïve hope that he would be recognised by the Axis as the ruler of an independent Arab state. He never obtained written pledges from the Germans (although the Italians were more forthcoming), and he was used to the limit by Nazi propaganda. The Germans provided staff and finance for *Das Arabische Büro* from which the *Grossmuftī* was able to send propaganda, both printed and broadcast, to the Middle East. He issued calls to the Arabs to rise against the British and the Jews and to destroy them both. "Only when Britain and her Allies are destroyed will the Jewish questions, our greatest danger be definitely resolved" (broadcast of 11th November 1942). He also helped to organise fifth columns in the Middle East and to establish Muslim and Arab units to fight in the German armies.

The greatest suspicions surround his attitude to, his knowledge of, and his possible encouragement of the Nazi extermination policy. Calls to Palestinians to rise and kill the Jewish settlers had been frequent since the Balfour Declaration; they had been the headlines of newspapers and the slogans of demonstrations, but they became much more sinister when proclaimed in Nazi Germany. The evidence produced to condemn him is difficult to substantiate. He is said to have been befriended by Eichmann, one of

the chief executives of Hitler's policy. During his trial in Jerusalem in 1961, Eichmann denied having known the Muftī well, having met him only once during an official reception. The evidence for the friendship came from Dieter Wisliceny, one of Eichmann's aides, who months before the Nuremberg trials had begun to prepare an alibi for himself at the expense of Eichmann. Wisliceny went much further and accused the Muftī of being an "initiator" of the extermination policy. Other evidence of the Muftī's alleged role came from Rudolf Kastner (a Jewish leader in Hungary), who reported that Wisliceny had told him that "According to my opinion, the Grand Muftī... played a role in the decision... to exterminate the European Jews... I heard say that, accompanied by Eichmann, he has visited incognito the gas chamber at Auschwitz". These reports coming only from Wisliceny must be questioned until substantiated from other sources.

It has been established that Amīn actively tried to prevent the emigration of Jews to Palestine from Nazi-occupied countries. With his aims in mind it is understandable that he would try to prevent an expansion of the Jewish population in Palestine. By his protests he might have influenced German actions, although Hitler had long ago formulated a policy of extermination which could not be contradicted. Eichmann had once offered the lives of a million Hungarian Jews for 10,000 trucks, but Hitler had insisted on extermination. All the Jews in Hungary had been condemned to death, and the voice of the Muftī was insignificant.

A further piece of evidence which has been adduced to condemn him is a broadcast he made in September 1944 in which he referred to the eleven million Jews of the world, when it is said that before the Second World War it was well known that the world Jewish population was seventeen million. Thus, it is alleged, the Muftī knew that precisely six million Jews had been murdered. In September 1944 the holocaust had not been completed, as Eichmann continued his activities at least into October 1944. Moreover, Eichmann is said to have spoken of 5 million victims. The Muftī's figure does not prove that he, alone with the top Nazi leaders, knew the full horror, but neither does it disprove that he knew at least in general terms of German atrocities. At a press conference in 1961 he denied that he knew Eichmann and that he had visited the camps. By his presence in Germany, by his propaganda and other activities, by his protests against Jewish emigration, he gave moral authority to Nazi policy. He was, however, never brought to trial as a war criminal, for the technical reason that he was not, from the British point of view, an enemy national. Amīn had chosen the wrong side in the war but as a Palestinian Arab nationalist he had had little choice. If the Nazis won they would adopt an anti-Jewish policy in Palestine, if the British, then they would continue to support the establishment of a Jewish National Home.

When the outcome of the war was clear he escaped again, first to Paris, 1945-6, and then back to the Middle East, to Egypt. During the war Palestinian politics had been rather muted, but in 1944 the Ḥusaynīs had decided to re-establish the Palestine Arab Party and soon called for the return to the exiled Ḥusaynī politicians. Amīn began to try to regain his former position and influence. He had become the symbol of Arab opposition to Zionism, and the Arab League, in an effort to end political quarrels amongst the Palestinians, ordered the dis-

solution of the Arab Higher Committee and the Higher Front (the anti-Ḥusaynī body) and the formation of the Arab Higher Executive with the Muftī as its chairman. He was not allowed by the British to return to Palestine and had to direct the resistance from outside. He continued to follow an uncompromising line, boycotting the United Nations Special Committee on Palestine, refusing to contemplate any partition plans, and urging total opposition to the Zionists. As violence on both sides increased, the Higher Executive at the end of 1947 began to organise and direct military resistance. An Arab Liberation Army, owing partial allegiance to the Muftī, was created which later attempted to co-operate with other Arab armies.

Inter-Arab rivalry hindered co-operation, and after the proclamation of the State of Israel a split grew over Transjordan's ambitions in the West Bank of the Jordan. Egypt supported the Muftī and allowed him to settle in Gaza, where he announced in September 1948 the formation of a Palestine government. A self-constituted Assembly elected him its president and several Arab governments recognised the Gaza régime. However, the rump of Palestine was under Transjordanian control and its final annexation in April 1950 was not opposed by the Arab League. Henceforward the Muftī lost any real base of power and spent the rest of his life vainly trying to rally support for an effort to destroy Israel. Amīr 'Abd Allāh of Transjordan appointed his own *muftī* and president of the Muslim Supreme Council.

In July 1951 'Abd Allāh was assassinated and Amīn was thought to be implicated although this was never conclusively proved. In 1951 he chaired a World Muslim Conference which he used as a platform to publicise his policy. He attended the Bandung Afro-Asian Conference in a minor capacity, having to accept the predominance of President 'Abd al-Nāṣir [q.v. in Suppl.]. In fact, the latter's lack of regard for him caused him to move to Beirut in 1959. He had more freedom of action in Lebanon, but no more authority. He tried various alliances, with President Kāsim of 'Irāq, with the Sa'ūdīs, with Jordan, all to no avail. In the shifting sands of inter-Arab politics, Amīn was now of little account. He moved about, to Damascus, to al-Riyāḍ and back to Beirut. In the Palestine movement, first Aḥmad Shukayrī and then the Palestine Liberation Organisation took over precedence.

Al-Ḥādīdī Amīn died in Beirut on July 4th 1974. To the end, he proclaimed his unwavering belief that his country had been illegally given away by foreigners to other foreigners, both of whom had scant regard for its Arab and Islamic character. He spent his adult life trying to prevent a change in the character of Palestine. Through his intransigence, his desire to dominate his rivals and his inability to distinguish between his personal aspirations and his political goals, he ended by losing everything for himself and almost everything for the Palestinian Arabs.

*Bibliography:* Two works deal specifically with the Muftī, M. Pearlman, *Mufti of Jerusalem*, London 1947, written in an attempt to have him tried as a war criminal, and J.B. Schechtman, *The Mufti and the Fuehrer*, New York and London 1965, a fairer work but one taking too much for granted from Pearlman. Otherwise, references have to be sought in the many histories of the Palestine problem, and in works dealing with German relations with the Middle East and with Nazi policy towards the Jews.

**AMĪNDJĪ** B. **DJALĀL** B. **ḤASAN**, an eminent Musta'li-Ṭayyibī Ismā'īlī jurist of India, was the son of the twenty-fifth *dā'ī mutlak*. He lived in Aḥmadābād in Guḍjarāt and died there on 13 Shawwāl 1010/6 April 1602. His works deal mainly with jurisprudence and are considered a great authority on legal matters after the works of al-Kāḍī al-Nu'mān [q.v.]. The following works have been preserved: 1. *Masā'il Amīndjī b. Djalāl*, in the form of questions, answers, and anecdotes bearing on legal issues, hence also known as *Kitāb al-Su'āl wa l-ġawāb*. The book contains many problems that are typically Indian, and although the book is in Arabic, the author uses many local Gujaraṭī words and expressions. 2. *Kitāb al-Ḥawāshī*, consisting of problems in the form of questions and answers relating to the text of al-Kāḍī al-Nu'mān's *Da'ā'im al-Islām* and *Mukhtaṣar al-āthār*. The problems discussed in the book throw some light on the social history of the Ismā'īlī Bohra community. 3. *Hisāb al-mawāriṭh*, concerning inheritance. 4. *Sharḥ al-muntakhaba al-manzūma*, a commentary on al-Kāḍī al-Nu'mān's *al-Urdjūza al-muntakhaba* on jurisprudence. 5. *Sharḥ Asās al-ta'wīl wa-ta'wīl al-da'ā'im*, a commentary on al-Kāḍī al-Nu'mān's *Asās al-ta'wīl* and *Ta'wīl al-da'ā'im*.

*Bibliography:* Ismā'īl b. 'Abd al-Rasūl al-Maḍjdū, *Fihrist*, ed. 'Alī Naḳī Munzawī, Tehran 1966, 37-8; Kuṭb al-Dīn Burhānpūrī, *Muntaza' al-akhbār*, manuscript; Muḥammad 'Alī b. Mullā Djiwābhā'ī, *Mawṣim-i bahār*, Bombay 1301-11/1883-94, iii, 206, 252; Asaf A.A. Fyzee, *Compendium of Fatimid law*, Simla 1969 (both the works of Amīndjī b. Djalāl, Nos. 1 and 2 are used as sources); Ismail Poonawala, *Biobibliography of Ismā'īlī literature*, Malibu, Cal. 1977.

(I. POONAWALA)

**AMĪR KABĪR**, MĪRZĀ MUḤAMMAD TAḲĪ **KHĀN** (ca. 1222-68/1807-52), the most prominent reformist statesman of 19th century Iran. He was a son of Karbalā'ī Ḳurbān, the chief cook of the Ḳāḍjār ministers 'Isā and Abu 'l-Ḳāsim Ḳā'immaḳām, through whom he found his way to the Ḳāḍjār royal court. After receiving the necessary education in Arabic and Persian studies, he began his secretarial position in the court and rapidly achieved in succession the important titles of "Mīrzā", "**Khān**", "Wazīr-i Nizām", "Amīr-i Nizām", and finally the highest of all, "Amīr-i Kabīr Atābak-i A'zam". He also married Naṣīr al-Dīn Shāh's sister, 'Izzat al-Dawla.

The Amīr Kabīr served the Persian government in different capacities such as the State Accountant of Āḍharbāyḍjān in ca. 1240-5/1829-34 and as Minister of the Army in 1253/1837. Before being appointed as Grand Vizier in 1264/1848, the Amīr Kabīr took part in three diplomatic missions. In 1244/1828 he went to St. Petersburg with **Kh**usraw Mīrzā in order to settle the problems caused by the murder of Griboyedov, the Russian special envoy to Iran. The second diplomatic mission was his accompanying, in 1253/1837, the then Crown Prince, Naṣīr al-Dīn Mīrzā, to Erivan for a meeting with the Russian Emperor. The Amīr was also appointed as the head of the Iranian mission to the "Erzurum Conference", which was held in Erzurum in 1259-63/1843-6 to deal with Ottoman-Persian territorial and border disputes.

During these missions to Russia and Turkey, the Amīr studied closely the processes of modernisation in those countries. In his term of office as a Grand Vizier, therefore, he made strenuous efforts to in-

roduce certain modernising measures into his own country. He took steps, for instance, towards the secularisation of Iranian legal systems, the separation of religion and state, toleration towards religious minorities, publication of newspapers, abolition of ceremonial titles, foundation of modern factories and schools, and so on. He did not, however, pay much attention to the limitation of the monarchic absolute power by establishing a law-making body in Iran; on this problem, he had reportedly said, "I had the intention of [establishing] constitutionalism (*konstitüsyun*), but my big obstacles were the Russians" (Firdûn Âdamiyyat, *Makâlât-i ta'rihî*, Tehran 1973, 88-9).

In the course of his service as a Grand Vizier, the Amîr created many domestic and foreign enemies for himself because, on the one hand, he limited bribery, injustice, and abuses of power committed by government officials and high dignitaries at court, including the Shâh's mother, Mahd 'Ulyâ, and on the other hand he opposed the Anglo-Russian interventions in Iranian affairs. This hostility at court, together with the Anglo-Russian intervention, finally brought about the Amîr's execution in Kâshân some two months after his dismissal from the Grand Vizierate, and the succession to that position of Âkâ Nûrî, a protégé of the British.

(ABDUL-HADÎ HAIRÎ)

**AMİR NIZÂM**, HASAN 'ALÎ KHÂN GARRÛSÎ (1236-1317/1820-99) was born into a distinguished Kurdish family of the Garrûs district in western Iran. His ancestors and relatives held important positions at the courts of the Timûrids, the Safawids, the Afshârîds, the Zandîs, and finally the Kâdjâr's. After studying Persian, Arabic, history and calligraphy, he began his government service at the age of seventeen and, as a commander of the Garrûs regiment, he helped Muḥammad Shâh Kâdjâr's army to lay siege to the city of Harât in 1253/1837. After that, the Amîr Nizâm (a title which he received from Nâsir al-Dîn Shâh in 1302/1884) continued his administrative, political, military, and diplomatic duties with little interruption for approximately 62 years. His military missions include his victorious participation in the 1265/1848 expedition to Mashhad, and that of 1273/1856 to Harât. He was also one of those military commanders who ended the Bâbî movement in Zandjân in 1267/1850 and that of the Nakshbandî Sûfîs led by Shaykh 'Ubayd Allâh in Kurdistân in 1297/1879; the former success gained the Amîr Nizâm the title of "aide-de-camp" to Nâsir al-Dîn Shâh, and the latter the governorship of five western regions in Iran.

In the sphere of civil offices the Amîr Nizâm served, among other things, as Director of the Office of Royal Effects and Treasuries (1273-5/1856-8), as a member of the Grand Consultative Assembly (1283-8/

1866-71), as Minister of Public Works (1289-99/1872-81), and as Governor of Kurdistân, Kirmân-Balûçistân, and other provinces at various times.

As Nâsir al-Dîn Shâh's special political envoy, the Amîr Nizâm went to Europe and met the heads of state in London, Paris, Berlin, Brussels, and a few other European capitals in 1275/1858. It was on this trip that he was accompanied by 42 students seeking further education in Europe. Later, from 1276/1859 to 1283/1866, he was appointed Minister Plenipotentiary in Paris.

The Amîr Nizâm is known to have refused to cooperate with the Shâh in putting into effect the Tobacco Régie Concession of 1890 which had caused wide-spread unrest in Âdharbâydjân. For this reason, he resigned from his position as vizier to the Shâh's heir-apparent in that province (Muḥammad Hasan Khân 'Iṣmâd al-Salṭana, *Rûz-nâma-yi khâtirât*, Tehran 1971, 765-70 and *passim*). Curzon held that "the Amîr-i Nizâm was reputed to be a strong Russophile" (*Persia and the Persian question*, i, repr. London 1966, 415, 431). Besides, the 'Iṣmâd al-Salṭana reported that the Russians were insisting in sending the Amîr Nizâm back to his previous position in Âdharbâydjân (*Rûz-nâma*, 773). We also know that the Amîr Nizâm was popular with the Russians to the extent that he received the insignia of the order of the "White Eagle" from the Russian Emperor (Amîr Nizâm, *Munsha'ât*, Tehran 1908, 14). It would accordingly probably be safe to assume that, in his opposition to the Tobacco Concession, the Amîr Nizâm was not inspired by a desire to protect national interests, but was, rather, protecting the interests of the Russians, the latter power being a firm opponent to the Concession.

The Amîr Nizâm had continued contacts with the West through his diplomatic missions abroad. He was one of the distinguished companions of Nâsir al-Dîn Shâh during the latter's trip of 1290/1873 to Europe (Nâsir al-Dîn Shâh, *Safar-nâma*, Tehran 1964, 12), a trip in which "Our principal goal", said the Shâh, "... is to learn about the basis of reform, development, and the means of interests and progress. We would like to see in person, and choose those things which are instrumental for the welfare and progress of the people in other countries" (Abdul-Hadi Hairî, *Shi'ism and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977, 15). In addition, the Amîr Nizâm was closely associated with intellectuals such as Malkam Khân and Yûsuf Khân Mustashâr al-Dawla Tabrizî, two men who were widely known as apostles of modernist ideas (idem, *The idea of constitutionalism in Persian literature prior to the 1906 Revolution*, in *Akten des vii. Kongresses für Arabistik und Islamwissenschaft*, Göttingen, 15. bis 22. August 1974, Göttingen 1976, 189-207). He even reportedly signed an oath, together with a number of Persian modernist thinkers, to work towards "the progress of our beloved people and country" (Firdûn Âdamiyyat, *Andîsha-yi tarakkî va hukûmat-i kânûn: 'asr-i Sipahsâlâr*, Tehran 1972, 249 ff.).

Despite all these facts, however, the Amîr Nizâm seems in practice to have followed very much the traditional ways characteristic of despotic régimes. Thus it is reported that he used to burn in furnaces bakers who were believed to have overcharged their customers, and mutilated Kurds when he was sent to suppress their uprisings. At one time, his hostility towards modernisation went so far as to have 'Alî Kulî Şafarov bastinadoed and his Tabriz newspaper

*Ihtiyājī* banned in 1316/1898 because Šafarov had advocated the idea of industrialisation in Iran (Mahdī Bāmdād, *Šarh-i hāl-i riḡāl-i Irān*, i, Tehran 1968, 367, under “Hasan ‘Alī”).

The Amīr Nizām’s reputation as a learned man, a stylistically distinguished prose writer, an excellent calligrapher, and a tough bureaucrat made him so highly respected in the royal court that at one time, in 1316/1898, even Muẓaffar al-Dīn Šah preferred to side with the Amīr Nizām in the latter’s conflicts with the royal heir-apparent, Muḥammad ‘Alī Mirzā (Mahdī Kulī Hidayat, *Khāṭirāt va khatarāt*, Tehran 1965, 98-9). Among foreign observers, Curzon called him “a man of very strong will and determination” (*Persia*, i, 431). Dr. J.B. Feuvrier admired him as a “vieillard d’une intelligence supérieure, d’une grande expérience et d’une sagesse consommée” (*Trois ans à la cour de Perse*, Paris, n.d., 86).

The Amīr Nizām wrote a book called *Pand-nāma-yi Yahyaviyya*; it consists of counsels given to a child of his, and has been published several times since 1315/1897 in Tehran and Tabriz. This short book is also included in a collection of his epistolary prose called *Munsha‘āt*, already cited. This comprises letters written by the Amīr Nizām to many Iranian political and religious figures, and provides much interesting and useful information about 19th century Iran. Some of his epistolary works can also be found in ‘Abbās Ikbāl, *Amīr Nizām Garrūsī*, in *Yādgār*, iii/6-7 (1947), 8-33, and in some other references given in the Bibliography below.

Mumtaḥin al-Dawla *Shākāḳī*, *Khāṭirāt*, Tehran 1974. (ABDUL-HADI HAIRI)

AL-‘ĀMIRĪ, ABU ‘L-HASAN MUHAMMAD B. YŪSUF, philosopher who lived mainly in Persia, born early in the 4th/10th century in Khurāsān, where he studied with the well-known geographer and philosopher Abū Zayd al-Balkhī [see AL-BALKHĪ]. From about 355/966 he spent some years in Rayy, enjoying the patronage there of the Būyid vizier Abū ‘l-Faḍl b. al-‘Amīd, and of his son and successor Abū ‘l-Faḥ [see IBN AL-‘AMĪD]. Al-‘Āmirī also visited Baghdād at least twice, in 360/970-1 and again in 364/974-5. There he met many of the leading intellectuals of the day, but according to al-Tawḥīdī he was very coldly received, being regarded as an uncouth provincial. By 370/980 he had returned to Khurāsān, where he dedicated a treatise to the Sāmānid vizier Abū ‘l-Husayn al-‘Utbī (d. ca. 372/982), and composed another in Bukhārā in 375/985-6. Al-‘Āmirī died in Nīshāpūr on 27 Shawwāl 381/6 January 992.

In his *K. al-Amad ‘ala ‘l-abad* (MS Istanbul Servili 179, edition by E.K. Rowson forthcoming), written only six years before his death, al-‘Āmirī gives a list of his works, comprising seventeen titles, of which four are known to be extant: *K. al-Ibṣār wa ‘l-mubṣar* (MS. Cairo, Taymūriyya *ḥikma* 98) on optics; two works on predestination, *Inkādh al-baṣar min al-djabr wa ‘l-ḳadar* and *al-Taḳrīr li-awḍūḳ al-takdīr* (together in MS Princeton 2163 (393B)); and a philosophical defense of Islam entitled *K. al-Flām bi-manāḳib al-Islām* (ed. A. Ghurāb, Cairo 1967). Omitted from the list are his Aristotelian commentaries, three of which (on the *Categories*, *Posterior Analytics*, and *De Anima*) he cites elsewhere. Also missing from the list is the *Fusūl fi ‘l-ma‘ālim al-ilāhiyya* (MS Istanbul Esat Ef. 1933), a metaphysical work which paraphrases large sections of the famous *K. al-Khayr al-mahd* (known in Latin as the *Liber de causis*). Another work possibly to be attributed to al-‘Āmirī is the doxographical *K. al-Sa‘āda wa ‘l-is‘ād* (facs. ed. M. Minovi, Wiesbaden 1957-8).

Al-‘Āmirī’s philosophy is a rather conventional amalgam of Neoplatonism and Aristotelianism, of a type familiar from works by such figures as his contemporary Miskawayh [q.v.], but his particular concern seems to have been to justify the pursuit of philosophy to the religious establishment. In the *Flām* he attempts to show the ‘ulamā’ how philosophy and Islam can be seen as complementary rather than contradictory, illustrating his point by using philosophical methods in a programmatic demonstration of the superiority of Islam to other religions. The *Amad* similarly combines philosophical and dogmatic evidence in a discussion of the afterlife, as well as giving the ‘ulamā’ an elementary (and highly apologetic) introduction to the Greek philosophers. This conciliatory attitude towards Islam represents a conscious continuation of the tradition initiated by al-Kindī [q.v.], the master of al-‘Āmirī’s master al-Balkhī.

Al-‘Āmirī’s only pupil of note was Ibn Hindū [q.v.], and his influence on later figures seems to have been minimal. The massive impact of Ibn Sīnā, who began writing shortly after al-‘Āmirī’s death, all but obliterated his memory.

**AMĪRĪ**, MĪRZĀ MUḤAMMAD ŠĀDIḲ ADĪB AL-MAMĀLIK, Persian poet and journalist, was born at Kāzarān near Sulṭānābād (mod. Arāk) in 1860. On his father's side he was directly descended from Mīrzā Abu 'l-Qāsim Kā'immaḳām Farāhānī, statesman and writer of the early 19th century, while his mother was a member of the same family. After his father's death in 1874 the family was in serious financial difficulties, until in 1890 Mīrzā Šādiḳ took service with Amīr-i Nizām Garrūsī, whom he accompanied to Tabrīz, Kirmānshāh and Tehran. During this period he acquired the titles *Amīr al-Shu'arā'* (whence his *takhallus* Amīrī) and later *Adīb al-Mamālik*. In 1894 he was in charge of the Government Translation Bureau in Tehran. Two years later he returned to Tabrīz, and after taking theological qualifications became Vice-Principal of the Luḳmāniyya College of science and medicine. For a time he published *Adab*, a literary and scientific journal, and in 1900 travelled by way of the Caucasus and Khīwa to Mashhad, and in 1903 to Tehran, in both of which cities he resumed publication of his journal. 1904 saw him in Baku, where he edited a Persian supplement to the Turkish periodical *Irshād*. After the Constitutional Revolution of 1906 he became editor of *Madjlis*, the record of the National Assembly debates, and later of the official periodicals *Rūznāma-yi Dawlati-yi Īrān* and *Āftāb*; in between he started his own journal, *'Irāk-i Ājam*. In 1911 he entered the judicial service and held posts in Simnān, Sāwudjbulāgh, Sulṭānābād and Yazd. He died in Tehran in 1917.

Amīrī had a wide range of interests from geography, mathematics and lexicography to history, literature and astrology. He was well-versed in Persian and Arabic, in both of which he composed poems, and was familiar with a number of other languages. However, he was no ivory tower poet; his poems, following the new trend to re-unite literature and daily life, reflect the turbulent politics of his time, in which he was generally on the side of the Constitutionalists. His later writings are marked by social satire and revolutionary fervour.

*Bibliography:* Amīrī's *Diwān-i kāmīl* was edited by Waḥīd Dastgirdī, Tehran 1933. Biographical information in: E.G. Browne, *Literary history of Persia 1500-1924*, Cambridge 1924, repr. 1930, 346-9; M. **'AMR B. KIRKIRA**, ABŪ MĀLIK AL-A'RĀBĪ, *mawlā* of the Banū Sa'd, had learnt the *'arabiyya* in the desert and had settled at Baṣra. Since his mother had married Abu 'l-Bayda' [q.v.], he acted as *rūwiya* to this last, but he owed his fame to his incomparable knowledge of the Arabic language, since, according to an oft-mentioned tradition, he knew it in its entirety, whereas al-Aṣma'ī had only one-third of it, Abū 'Ubayda (or al-Khalīl b. Aḥmad) half of it and Abū Zayd al-Anṣārī (or Mu'arrīdj) two-thirds of it. His speciality was rare words. Abū Mālik was allegedly the author of at least two works, a *K. Khalk al-insān* and a *K. al-Khlayl*. Al-Djāhīz was one of his auditing students.

*Bibliography:* Djāhīz, *Bayān*, iv, 23; *idem*, *Ḥayawān*, iii, 525-6; *Fihrist*, 66; Suyūṭī, *Muzhir*, ii, 249-50; *idem*, *Bughya*, 367; Zubaydī, *Ṭabaḳāt*, 139; Anbārī, *Nuzha*, 82; Yāqūt, *Udabā'*, xvi, 131-2.

(ED.)

**AMRŪHĀ**, a district and town of mediaeval northern India, now a town. It arose as a metropolitan centre after the accession of Sultan Ghiyāth al-Dīn Balban to the throne of Dihlī in 664/1266. Since the Rād̄jpūt Rād̄jā of Kētehr or Katahr [q.v.] (modern Bareilly district in the U.P.) rose in rebellion and carried his depredations as far as the *īktā'* of Badā'ūn, Balban attacked him in his own region, and having cleared the vast district, carved out the *īktā'* of Amrōhā that comprised the area of the modern districts of Bareilly, Murādābād, Rāmpūr and Bīd̄jnore in Western Uttar Pradesh. For the consolidation of his authority, he brought the *īktā'* under direct, *khāliṣa* administration and appointed efficient officers. As a result of this, the town of Amrōhā soon developed considerably with public buildings, a fort, mosques, *madrasas* and Šūfī *khānqāhs*; Among all these, only the mosque constructed by an officer of Sultan Mu'izz al-Dīn Kayqubād in 686/1287 is intact.

In the 8th/14th century Amrōhā became a centre of Muslim culture, and was held by a high noble of the sultanate. For instance, the Prince Khidr Khān, the eldest son of Sultan 'Alā' al-Dīn Khaldjī, was appointed its governor towards the close of his father's reign. In the time of Muḥammad b. Tughluḳ, (725-52/1325-51), Ibn Baḡṭūta found Amrōhā a beautiful city, placed under the joint responsibility of a number of important nobles. 'Azīz Khammār, the governor, was in charge of its revenue affairs, while Šams al-Dīn Badakhshānī acted there as the army commandant. Besides, there was a *kādī*, Sayyid Amīr 'Alī, to administer justice; a *shaykh al-Islām*, charged with the duty of looking after the religious affairs and providing maintenance land for the scholars, saints and other deserving persons; and 4,000 royal slaves stationed there under Malik-Shāh for military service. The Ḥaydarī *kalandar* dervishes also settled down there in quite large numbers.

During the reign of Sultan Firūz Shāh, Amrōhā lost its importance as a provincial capital, for administrative headquarters were shifted from here to Sambhal because of the contumacious activities of the Katehriya Rād̄jpūt *zamīndārs*. However, Amrōhā continued as a centre of culture and learning, with many saints and scholars. Shaykh Čā'ildā, a descendant of Shaykh Farīd al-Dīn Gandj-i Shakar of Adjodhān, was a respectable Šūfī saint in Amrōhā during the reign of Sultan Sikandar Lōdī. The Masnad-i 'Alī Maḥmūd Khān Lōdī, the governor of the territory of Sambhal, gave Shaykh Čā'ildā two

villages in maintenance grant in the *pargana* of Nindru (now in the district of Bidjnore).

During the Mughal period, Amrōhā also produced famous Sūfis and scholars, such as Shaykh Ibban Čiṣṭī during the reign of Akbar. Mīr Sayyid Muḥammad, the famous Mīr ‘Adl (Chief justice) and Mawlānā Allāhdād (d. 990/1582), a leading scholar, also belonged to Amrōhā. Maṣḥafī Amrōhāī, the famous Urdu poet of the 18th and 19th centuries, was also born and educated there. Wikār al-Mūlk, an associate of Sir Sayyid Aḥmad Khān and one of the founder members of the Aligarh Movement, also hailed from Amrōhā. It is now a *taḥṣil* headquarters in the district of Murādābād in Uttar Pradesh.

AL-ĀMULĪ [see HAYDAR-I ĀMULĪ, in Suppl.].

**ANDJUMAN-I KHUDDĀM-I KA’BA**, a religious society founded by Indian Muslims in their period of great pan-Islamic fervour just before World War One. The Andjuman was started by Mawlānā ‘Abd al-Bārī [q.v. above] and Muṣḥīr Ḥusayn Kidwāī [q.v.] of Lucknow who hoped to be able to defend Mecca and Medina by raising ten million rupees to build dreadnoughts and airships and to maintain armed forces. Such an ambitious programme proved impracticable, and the final constitution of the organisation published early in 1332/1914 declared that to defend the Holy Places it would: “(a) preach the aims and objects of the Andjuman to Muslims generally; invite them to join it; and induce them to render sincere service to the holy places; (b) spread Islamic ethics in the neighbourhood of the holy places; invite the attention of the inhabitants of those places to a knowledge of the religion; promote intercourse and unity among them; and persuade them to the allegiance and assistance of the guardian of the holy places; (c) promote relations between Muslims and the holy places and extend and facilitate means of communication with the holy places”.

The leaders of the Andjuman came in large part from young western-educated Muslims of pan-Islamic predilections, for instance, Muḥammad and Shawḳat ‘Alī [qq.v.], Dr. M.A. Anṣārī and Muṣḥīr Ḥusayn Kidwāī, and ‘ulamā’ who were in some way connected with the Farangī Maḥall family [q.v. below] of Lucknow, for instance, ‘Abd al-Bārī, Shāh Aḥmad Aṣhrāf of Kaḳāwā and ‘Abd al-Maḍjīd Kādirī of Badā’ūn. The ‘ulamā’ of Deoband, landlords, and men closely associated with government, were conspicuous by their absence. Nevertheless, many, including women, joined the Andjuman. By Shawwāl 1332/September 1914 the Andjuman had over 17,000 members, a central organisation in Dihlī and branches throughout India: moreover, it had grown faster and spread more widely than any other Indo-Muslim organisation.

The achievements of the Andjuman, however, were limited. One problem was that the Government of India, suspicious of the alliance between young western-educated politicians and ‘ulamā’, refused to support it. The Andjuman’s work was restricted to

the *Ḥaḍjī*, and here Shawḳat ‘Alī strove to improve the conditions of Indian pilgrims and attempted to break the European monopoly of the pilgrim trade by setting up, with Turkish aid, a wholly Muslim shipping company. But the outbreak of World War One and the closing of the *Ḥaḍjī* route put an end even to this work, and the organisation, without an obvious function, fell apart amidst squabbles between the ‘ulamā’ and the young politicians. In 1334/1916 ‘Abd al-Bārī moved its central office to Lucknow and the organisation was last talked of in 1336/1918 when he tried to restart it as a vehicle for a campaign to release Muslims who had been interned during the War.

The importance of the Andjuman lies more in what it portended than in what it achieved. In working to protect the Holy Places, the leading pan-Islamic politicians of the day, Shawḳat and Muḥammad ‘Alī, met ‘Abd al-Bārī and became *murīds* of this very important *pir*. More generally, young western-educated politicians came to appreciate the widespread influence in Indo-Muslim society of ‘ulamā’ like those of the Farangī Maḥall family. These same people were to come together again after World War One to organise a much greater effort for a pan-Islamic cause, the *Khilāfat* movement [q.v.].

**ANĪS**, MĪR BĀBAR ‘ALĪ (1217-91/1802-74), Urdu poet, was born in Fayḍābād (Fyzabad) [q.v.] into a family which had produced five generations of poets. Some of these, including his father Khālīk, wrote the characteristically Indian type of *marthiyya* which thrived at public recitals in Lucknow, capital of the Shī‘ī Nawābs of Oudh. This type, which may have originated in the Deccan, was devoted to the martyrdom of al-Ḥusayn b. ‘Alī at Karbalā’ (61/680). Anīs moved to Lucknow as a young man, and devoted his life to writing poetry, especially *marāthī*. He became the leading exponent of this form; thousands attended his readings in Lucknow, and in other Indian cities which he occasionally visited later in life. Some critics thought his contemporary and rival Dabīr superior, but this view is now discounted. By the time Anīs began writing, the main lines of the Indian *marthiyya* had already been foreshadowed, if not fully established; and he used it to the full. Formerly in quatrains, it was now almost always in *musaddas* form. Starting as a short emotional and devotional lament, it was lengthened to over a hundred verses of varied content. Alongside the incidents involving al-Ḥusayn and his followers at Karabalā’, Anīs includes description of nature, such as landscape, the desert, and storms; character sketches of the protagonists; the horse, the sword; warlike accountrements; and a philosophising which gave universality to a superficially restricted theme. The language employs all the devices of rhetoric (*balāgha*), yet there is an inherent simplicity and sincerity which contrasted strongly with the Urdu *ghazal* [see GHAZAL, iv] then in vogue. It consequently won the approval of forward-looking critics and poets such as Hālī and Āzād, and occupies an important place in Urdu literary history. It says much for Anīs’s artistry that he managed to sustain interest in an output estimated at 250,000 verses; but it is

hardly surprising that the form ceased to be widely cultivated after the end of the 19th century.

*Bibliography:* Critical accounts of Anīs and his *marāthī* may be found in Muhammad Sadiq, *History of Urdu literature*, London 1964, 155-63; Abu 'l-Layth Šiddīkī, *Lahṅnāū kā dabistān-i shā'irī*, Lahore 1955, which also contains examples from previous and subsequent *marthīya* poets. Ram Babu Sakṣena's *History of Urdu literature*, Allahabad 1927, in a general chapter on "Elegy and elegy writers" (123 ff.), contains a genealogical table of Anīs's family (p. 136), showing the poets in the family before and after him.

Among critical studies of Anīs are Amīr Aḥmad, *Yādgār-i Anīs*, Lucknow 1924, and Dja'far 'Alī Khān, *Anīs kī marthīya nigārī*, Lucknow 1951. Shibli Nu'mānī's *Muwāzana-yi-Anīs-o-Dabīr* is still the standard comparison of the two poets, though heavily weighted in Anīs's favour. There are numerous editions of Anīs's poetry, none complete. One of the fullest is *Marāthī Anīs*, ed. Na'ib Husayn Nakwī Amrotā, 4 vols., Karachi 1959. The three-volume edition of Nawāb Ḥaydar Dīang, Badāun 1935, is less full, but has an introduction by Nizām al-Dīn Husayn Nizāmī Badāunī.

(J.A. HAYWOOD)

**ANŠĀRĪ**, SHAYKH MURTAḌĀ, despite his being rather unknown in the West, is considered to have been a Shīrī *muḍṭahid* whose widely-recognised religious leadership in the Shīrī world has not yet been surpassed. He was born into a noted but financially poor clerical family of Dizfūl, in the south of Iran, in 1214/1799; his lineage went back to Djabīr b. 'Abd Allāh Anšārī (d. 78/697), a Companion of the Prophet. After learning the recitation of the Qur'an and related primary subjects, Anšārī studied under his uncle Shaykh Ḥusayn Anšārī until 1232/1816 when he, accompanying his father, Muḥammad Amīn, went to visit the shrine cities of 'Irāk. While in Karbalā', he attended the teaching circle of the then Shīrī leader, Sayyid Muḥammad Muḍjāhid (d. 1242/1826), who found Anšārī a man of extraordinary genius and urged Anšārī's father to let his son remain in Karbalā'. Anšārī then studied under Muḍjāhid until ca. 1236/1820, when Anšārī, together with hundreds of other Iranian people, fled from Karbalā' due to the pressures imposed by the Ottoman governor at Baghdād, Dāwūd Pasha, after the growth of the Perso-Ottoman hostility at that time (S.H. Longrigg, *Four centuries of modern Iraq*, Oxford 1925, 242-9; Sir Percy Sykes, *A history of Persia*, ii, repr. London 1963, 316 ff.). Anšārī then returned to Dizfūl.

In ca. 1237/1821, Anšārī again went to Karbalā' and attended the circle of the famous *muḍṭahid* Mullā Muḥammad Sharīf al-'Ulamā' (d. 1245/1829). In ca. 1238/1829 he proceeded to Naḍjaf and continued his studies under Shaykh Mūsā Kāshif al-Ghītā' (d. 1241/1825), and after a year or so he again returned to his home town, Dizfūl. Heading for Mashhad in 1240/1824 with the intention of attending the circles for religious learning in different Iranian cities, Anšārī joined the teaching circle of Shaykh Asad Allāh Burūdjirdī (d. ca. 1271/1854) in Burūdjird ('Abd al-'Azīz Šāhib al-Djawāhīr, *Dā'ira al-mā'arīf al-islāmīya: Irān wa hama-yi mā'arīf-i Shī'a-yi Imāmīyya-yi Iḥnā'a-asharīyya*, ii, n.d., 155, under "Asad Allāh") and that of Sayyid Muḥammad Bakīr Shaftī (d. 1270/1853) in Iṣfahān (Anšārī's biography written by Muḥammad Riḍā al-Raḍawī al-Kh'ānsārī (sic), in Anšārī, *Kitāb al-Matāḍjir (al-Makāsib)*, Tehran 1908, 1), each for no more than a month.

When Anšārī met Mullā Aḥmad Narākī (d. 1245/1829) in Kāshān, he decided to remain there because he found Narākī's circle most congenial for learning. Narākī also found Anšārī exceptionally knowledgeable, saying that within his experience he had never met any established *muḍṭahid* as learned as Anšārī, who was then ca. thirty years of age (Murtaḍā al-Anšārī, *Zīndigānī wa shakhsīyyat-i Shaykh-i Anšārī kuddisa siruh*, Ahwāz (sic) 1960, 69).

In 1244/1828, Anšārī left Kāshān for Mashhad, and after a few months living there he went to Tehran. In 1246/1830, he returned to Dizfūl, where he was widely recognised as a religious authority, despite the presence of other important 'ulamā' in that town. It is said that Anšārī suddenly left Dizfūl secretly after sometime because he, as a religious-legal judge, was put under pressure to bring in a one-sided verdict in a legal case. He then arrived in Naḍjaf in ca. 1249/1833 and joined the teaching circle of Shaykh 'Alī Kāshif al-Ghītā' (d. 1254/1838) and, according to some sources, that of Shaykh Muḥammad Ḥasan Šāhib al-Djawāhīr (d. 1266/1849), but each for only a few months, and soon organised his own teaching circle independently.

Anšārī's life as a distinguished religious scholar entered a new phase in 1266/1849 after he had received an overwhelming recognition from all the Shīrī communities which formed a population then estimated at 40 million across the Muslim world, so that the institution of *marḍja'-i taklīd* [q.v.] reached its highest point. "The Twelver Shīrī population of Iran," wrote one of Anšārī's contemporaries, Muḥammad Ḥasan 'Iṭimād al-Saltāna, "and the numerous Shīrī groups who live in India, in Russia, in some of the Ottoman provinces, and in several other cities of Afghānistān, Turkistān, and elsewhere used to send to Anšārī their endowment funds, alms taxes, one-fifth of their annual savings... and other similar payments, which amounted to 200,000 *tūmāns* [ca. \$ 30,000.00] annually" (*al-Ma'āthīr wa 'l-āthār*, Tehran 1888, 136-7).

Despite his vast income and his overwhelming leadership, Anšārī, according to a number of eyewitness accounts, nevertheless denied his family a comfortable life and himself lived an ascetic life, as was evident from his appearance (cf. *inter alia*, Muḥammad Ḥīrz al-Dīn, *Mā'arīf al-riḍā'āl*, ii, Naḍjaf 1964, 399-404). Instead, he gave the money to the poor and needy, to the students of religious schools, and at times to those Muslims who, on their way to visit the shrine of Imām Riḍā in Mashhad, were taken captive by the Turkomans. When Anšārī died in 1281/1864 his wealth and belongings were worth only seventeen *tūmāns* (less than three dollars), for an equal amount of which he was in debt. One of his followers therefore took charge of the funeral expenses.

Anšārī's piety, and above all his scholarly qualifications, deserved of course such recognition, but other factors also were certainly instrumental in establishing his leadership: the then great *marḍja'-i taklīd*, Šāhib al-Djawāhīr, shortly before his death declared Anšārī to be the legitimate sole *marḍja'-i taklīd* of the Shīrī. This endorsement was compounded with the earlier death of other distinguished religious authorities such as Shaykh Muḥammad Ḥusayn Šāhib al-Fuṣūl (d. 1261/1845). In addition, this development was preceded by the gradual decline of Iṣfahān as religious centre, a process which had begun its course since the fall of the Šafawīd dynasty and was accelerated by the death of such religious authorities of Iṣfahān as Shaftī and Ibrāhīm

Karbāsī (d. 1262/1845). Consequently, Nadjaf began then to enjoy an unprecedented attention from the Shī'ā of Iran, and most of this attention was certainly focused on the person of Anşārī.

Anşārī not only established a new era in the history of the Shī'ī leadership but was also an important figure in the field of Shī'ī jurisprudence, being credited with introducing a new methodology in the field of *uṣūl*. His interpretation, for instance, of the "principle of no harm" (*kā'ida lā darar*), which had long engaged the Shī'ī 'ulamā', opened up a more settled way for practising *idjtiḥād* in general and for dealing with the problem of private ownership in particular. Anşārī's system in jurisprudence laid great importance on the *marḡā'a-i taklīd*'s being the most learned man of his time; he said that 'aql (reason) and 'urf (social conventions and common practices) are to be taken as criteria and bases for introducing new laws. His name is also mentioned as an authority with original views on such *uṣūl* subjects as the principles of *istishāb*, *barā'a*, and *zamm*, each of which were the subject of an independent study done by Anşārī (for a concise definition of the above terms, cf. Dja'far Saḍjdjādī, *Farhang-i 'ulūm-i naḡlī va adabī*, Tehran 1965, 51-3, 136, 359).

Anşārī's school of thought has been clearly dominant in the Shī'ī clerical circles since the middle of the 19th century, and his views have been discussed and adopted by most of the Shī'ī 'ulamā'. A descendant of Anşārī's brother has listed the names of 144 *muḍjtahids* who have written commentaries on Anşārī's various books (Anşārī, *Zindigānī*, 354-87). Anşārī's influence on the later 'ulamā' can also be found in the bio-bibliographical dictionaries compiled on the Shī'ī authorities (cf. *Bibl.*). The influence of Anşārī's ideas is further seen in the laws made for various Shī'ī communities, because many of those who were involved in the process of law-making were either Anşārī's disciples or were indirectly under the influence of his thought. The Persian civil law which was substantially based on the Shī'ī jurisprudence may be mentioned as an example; and the man who "translated into Russian the Islamic law according to which the Muslims of Caucasus were being tried in the legal courts" was Mirzā Kāzīm Bey, a disciple of Anşārī (Mahdī Khān Mumtaḥin al-Dawla Shākakī, *Khāṭirāt*, Tehran 1974, 110).

Anşārī's circle of teaching was attended by numerous pupils, many of whom became great *marḡā'a-i taklīd*'s of their times, e.g. Husayn Kūhkarī (d. 1291/1874), Muḥammad Irwānī (d. 1306/1888), Habīb Allāh Raṣḥī (d. 1312/1894), Muḥammad Hasan Shīrāzī (d. 1312/1894), and Muḥammad Kāzīm Khurāsānī (d. 1329/1911). There are also reports that Sayyid Djamāl al-Dīn Asadābādī "Afgḥānī" was also a pupil of Anşārī (Aṣghar Mahdawī and Irādj Afshār, *Madḡmī'a-yi asnād va madārik-i cāpnaṣhuda dar bāra-yi Sayyid Djamāl al-Dīn mashhūr bi Afgḥānī*, Tehran 1963, 20) and that Afgḥānī studied in Anşārī's circle for four years prior to Afgḥānī's departure from Nadjaf in 1270/1854 (Mirzā Luṭf Allāh Khān Asadābādī, *Sharḥ-i ḥāl va āḥḥār-i Sayyid Djamāl al-Dīn Asadābādī mar'uf bi Afgḥānī*, Berlin 1926, 21-2; but these accounts are controversial. It cannot be accepted that Anşārī, despite his great caution in issuing a certificate of *idjtiḥād*, gave one to Afgḥānī, then only sixteen years of age (Khān Malik Sāsānī, *Siyāsāt-garān-i dawra-yi Kāḍjār*, i, Tehran 1959, 186, nor has Luṭf Allāh Khān been correctly quoted by Nikki R. Keddie that "Shaikh Murtaẓā gave Jamāl ad-Dīn an *ijāzeh* (certificate of advanced knowledge)" (*Sayyid Jamāl ad-Dīn "al-Afgḥānī": a politi-*

*cal biography*, Berkeley and Los Angeles 1972, 15-16); rather, Luṭf Allāh reported that Anşārī gave a certain certificate to Afgḥānī's father (Asadābādī, *op. cit.*, 15, 21 and the Arabic translation of Asadābādī's book by 'Abd al-Na'īm Muḥammad Ḥasanayn, Beirut 1973, 64; see also Abdul-Hādī Hairī, *Andīshahā-yi Sayyid Djamāl al-Dīn Asadābādī dar pūrāmīn-i inḡitāt-i musalmānān va inkilāb-i maṣhrūṭiyat-i Irān*, in *Vahīd*, nos. 225-9 [1978], 47-52, 57-61, etc.).

Despite his being a one-eyed man, Anşārī was quite productive in writing. According to a report, he wrote over thirty books (Anşārī, *Zindigānī*, 131-4), twenty-four of which are listed as Anşārī's published works in Khānbābā Mushār, *Mu'allifīn-i kutub-i cāpī-yi fārsī va Arabī*, vi, Tehran 1965, nos. 126-35; many of these books have been published several times in India, 'Irāq, and Irān since 1267/1850. Two of his works are especially frequently consulted and have been considered by the Shī'ī 'ulamā' to be of exceptional importance: *Farā'id al-uṣūl (al-Rasā'il)* on *uṣūl* and *al-Makāsib* on *fiḡh*, which were first published in Tehran in 1268/1851 and 1280/1863 respectively. Both these have constantly been used as text books in all Shī'ī circles.

One of the financial foundations with which many of the Shī'ī 'ulamā' of 'Irāq were knowingly or unknowingly connected was the so-called "Oudh Bequest". It was, in the words of the British Minister of Tehran, a "powerful lever which helped to promote good relations between the Persian ecclesiastics and myself and . . . afforded opportunities for influencing the leading Persian Ulama" (Sir Arthur Hardinge, *A diplomatist in the East*, London 1928, 323-4). The British authorities, however, did not succeed in influencing Anşārī through the Oudh Bequest (Sayyid Muḥsin Amīn, *A'yān al-Shī'a*, xl, Beirut 1960, 43-6). He received money only for a short period of time, and then rejected further sums (Maḥmūd Maḥmūd, *Ta'rīkh-i rawābiṭ-i siyāsī-yi Irān va Ingīlīs*, vi, Tehran 1953, 1743).

In the arena of politics and public affairs, Anşārī was quite inactive. He refused to make use of his influence in the interest of his followers. Persian or otherwise, in their political and other struggles. Theoretically, however, he believed that the 'ulamā' are not only the custodians of religions, but are also unquestionably responsible for judicial and political affairs also (Hairī, *Shī'ism and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977, 60). Anşārī's lack of interest in social and political issues has been criticised by contemporary modernist thinkers. Faṭḥ 'Alī Ākhūnd-Zāda, for instance, said: "God has not given Anşārī enough insight to understand why Irān is in the state of collapse and why the Iranians are suffering abasement" (*Alifbā-yi ḡadīd va maktūbāt*, Baku 1963, 121), and Akā Khān Kirmānī [q.v. above] believed that Anşārī contributed to the people's ignorance and perplexity (Firīdūn Ādamiyyat, *Andīshahā-yi Mirzā Akā Khān Kirmānī*, Tehran 1967, 66).

On the other hand, his aloofness from politics was warmly welcomed by the political authorities, who seem to have taken it as a sign of his asceticism. Thus we come across the reports that the governor of 'Irāq referred to him as the Greatest Fārūk (i.e. one who distinguishes truth from falsehood) and that the British Ambassador allegedly said: "Anşārī is either Jesus himself or his special deputy on earth" (Hasan Khān Shaykh Djabīrī Anşārī, *Ta'rīkh-i Isfahān va Ray va hama-yi ḡahān*, Tehran 1943,

inside the front cover). The cult formed around him led some people to say that Anšārī had met with the Twelfth Imām.

Anšārī has also been praised in Bābī literature as "... a man renowned for his tolerance, his wisdom, his understanding justice, his piety and nobility of character"; the leader of the Bahā'īs, Mīrzā Ḥusayn 'Alī Nūrī known as Bahā' Allāh [q.v.], included Anšārī among "those doctors who have indeed drunk of the cup of renunciation"; 'Abbās Efendī ('Abd al-Bahā') also referred to Anšārī as "the illustrious and erudite doctor, the noble and celebrated scholar, the seal of seekers after truth" (Shoghi Effendi, *God passes by*, Wilmette, Illinois 1944, 143). Anšārī is thus praised because he did not share the condemnation by other Shī'ī 'ulamā' of the Bābī faith and rituals. He did not attend the meeting convened by the Shī'ī 'ulamā' in Kāzīmāy in ca. 1863 for determining on the banishment of Bahā' Allāh and his adherents from 'Irāk (Muḥammad Khān Za'im al-Dawla, *Miftāḥ Bāb al-abwāb*, Cairo 1903, 347). According to Bābī sources, he did attend the meeting, but as soon as he was informed of the 'ulamā's actual design, he left, declaring that he was not acquainted with the new faith and that he had not witnessed in the Bābīs' demeanour anything at variance with Islam (E.G. Browne, ed. and tr., *A traveller's narrative written to illustrate the episode of the Bāb*, ii, Cambridge, 1891, 86-7).

Although Bābism appeared at the outset as a religious sect within Shī'ism, it did eventually assume a variety of political aspects, aspects which Anšārī was very reluctant to deal with. It seems, therefore, that Anšārī's lack of publicly-expressed opinions here was substantially a result of his lack of interest in and cautious attitude towards issues of political and public significance.

Anšārī, however, remote from politics, did train disciples who made use of the highly influential position he had earned for the Shī'ī 'ulamā' of 'Irāk by their taking part in contemporary social and political movements; thus Mīrzā Ḥasan Shīrāzī issued a *fatwā* against the Tobacco Concession (cf. *inter alia*, Firuz Kazemzadeh, *Russia and Britain in Persia, 1864-1914*, New Haven 1968, 241 ff.), and Khurāsānī [q.v.] actively supported the 1906-11 Persian Revolution and helped to depose the then Persian monarch (Abdul-Hadi Hairi, *Why did the 'Ulamā participate in the Persian Constitutional Revolution of 1905-1909?*, in *WI*, xvii (1976), 127-54).

(ABDUL-HADI HAIRI)

**ANTHROPOID** [see KIRD].

**ANZARŪT**, greek σαρκοκόλλα, is a gum-resin from a thorn-bush which cannot be identified with certainty; known from antiquity, it is used for medical purposes. Synonyms are: *anzarūt*, *anzarūt*, *kuhl fārisī*, *kuhl kirmānī*; in Persian: *anzarūt* or *anđjarūt*, *tashm* (< *čashm*), *kandjūbā*, *kandjūdhā*, *kandjūdak*, *bāzahr-i čashm* (so instead of *zahr dīsham*, Antāki, *Tadhkiva*, see *Bibl.* below). Much has been written on this drug. Formerly, the species *Penaea*, belonging to the Thymelaeaceae, was generally considered to be the original plant, namely either *Penaea mucronata* L., or *P. Sarcocolla* L. or *P. squamosa* L. But in 1879 W. Dymock was able to prove that at least the Persian *Sarcocolla* is the product of what he called *Astragalus Sarcocolla* Dym. (Leguminosae). Widely known in antiquity, the drug has practically disappeared from the

European store of medicines, but, according to Meyerhof, it is still well-known in the Orient, especially in the drugmarket in Cairo.

According to Dioscorides, the yellowish bitter resin was above all useful for causing new flesh wounds (σάρξ "flesh", κόλλα "glue") scar over. Already al-Kindī used it as component of a good number of recipes (*Akrābādīn*, see *Bibl.* below), among others for leprosy. The most detailed description is given by Ibn al-Bayṭār on the basis of Greek and Arabic sources as well as his own observations. The resin consumes the festering flesh of putrescent abscesses, assists the ripening of tumours, carries away mucus and yellow gall, and is a remedy for inflammations of the eye, for agglutinating eyelids and for excessive secretion of the eye. Taken internally, the resin is a strong purgative, but causes also the hair to fall out. The best Sarcocolla consists of crushed, white seeds, mixed with walnut oil. Measured out in different ways, it can be mingled with other drugs (sagapenum, myrobalanum, aloes, bdellium, etc.). When taken neat, the resin can be lethal; therefore, the dose should not be more than 2¼ *dirhams*. Ibn al-Bayṭār, however, maintains that he saw in Egypt women partaking, immediately after a bath, of up to 4 ounces of *anzarūt*, together with the pulp of the yellow melon, hoping to increase thus their corpulence.

(A. DIETRICH)

**APE** [see **KIRD**].

'**ĀR** (A.), "shame, opprobrium, dishonour", has undergone in North Africa a semantic evolution

analogous to that of the root *dh.m.m.* of classical Arabic, arriving at a sense close to that of *dhimma* [q.v.], that is to say, of "protection", with nuances which should be taken into account. A formula such as 'ārī 'alayk/'alik, "my shame upon you", contains visibly a threat against the person to whom it is addressed and means in effect "the shame shall be yours if you do not grant my request" (cf. W. Marçais, *Textes arabes de Takroûna*, Paris 1925, 200, 215-6, where the challenge is addressed to a deceased saint and the appeal is for rain). When applied to a living person the formula presupposes a transfer of responsibility accompanied by a mystical sanction, the divine malediction which will not fail to afflict the man whose refusal is unjustified. To this sense of 'ār, current even in Tunisia, there is added in Morocco (where the term was adopted by Berber in the form *a'ar*, *kar*), a new sense which appears in expressions of the type: *anā f-'arāk* "I am in your 'ār—under your protection" (cf. W. Marçais, *Textes arabes de Tanger*, Paris 1911, 396). The sense of "conditional malediction" (E. Westermarck, *Survivances paiennes dans la civilisation mahométane*, Paris 1935, 87) continues to underlie it, and from "mystical responsibility" (G. Marcy, *Le droit coutumier zemmoûr*, Algiers-Paris 1949, index, s.v. *a'âr*), we pass into the material world when 'ār comes to designate the indemnity due in cases of breach of honour.

In fact the "throwing" (Arabic verb: *ma*, Berber: *gər*) of the 'ār is effected by means of practices already in part attested in the pre-Islamic period, for example touching the pole or the cords of a tent, taking a child in one's arms, etc. (see Wellhausen, *Reste*, 223 ff.), which permitted a solitary person or a fugitive to obtain the status of *dakhīl* or of *djār* and in consequence the protection of an individual, a clan or a tribe (cf. B. Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932, 88-9). J. Chelhod (*Le droit dans la société bedouine*, Paris 1932, 222 ff.) has called attention to three terms in current use, of which the connotations are close:

(1) *dakhīl* "an oppressed or hunted man who seeks the aid of his own tribe", according to a ritual comprising especially a gesture of humility; this practice, introduced by the formula *anā dakhīl 'alayk*, constitutes the *dakhala* and implies, on the part of the beneficiary, a recompense for the services rendered by the protector, henceforward responsible for the conduct of the affair in which his intervention has been solicited. A much attenuated vestige of this type of requisition survives in the Oriental expression *dakhīlak*, which means nothing more than "I beg you";

(2) *ṭanīb* "a man who, to safeguard his rights, to escape from justice or to save his life, leaves the clan of his birth, alone or with his family and goes to establish himself in a different tribe which promises to assist him". This term is to be linked with *ṭunub* "tent-cord" [see **KHAYMA**], the suppliant being obliged, originally, to touch at least a cord of the tent of the one to whom he appeals; while in Morocco this gesture is still a part of the ritual, it has been forgotten in the Orient, where the *ṭanīb* pronounces the same formula as the *dakhīl*, but enjoys a wider protection and owes no indemnity; and

(3) *kaşīr*, also a refugee, but entitled to make use of his prestige among his former group with which he has not severed all relations.

In all the cases cited above, the Bedouin who has granted his protection cannot again withdraw it, and if he falls short of his obligations, tacit or ex-

plicit, he will be forever marked by dishonour. Thus we return to the primitive sense of the word *ʿār*, which is not however used in the Orient in the same way as in Morocco. J. Chelhod (*op. laud.*, iii), who has drawn attention to the use of this word to designate a spouse (*ʿārī* = my wife), links it to *ʿawa* "nudity, modesty, etc.", but the two words do not belong to the same root and, what is more *ʿird* "honour" is also used in the same sense (for Mosul, see A. Jaussen, *Coutumes des Arabes au pays de Moab*<sup>2</sup>, Paris 1948, 45, n. 3). In this case, *ʿār* would seem rather to imply the idea that dishonour would affect the husband who did not protect his wife; one dare not go so far as to attribute to this term the sense of "protection", but there is found here a notion firmly rooted in the Arab mentality, the notion of honour upon which B. Farès has founded his entire thesis.

The Moroccan *ʿār* thus implies a transfer of responsibility and of obligation, for the supplicatee, to accord his protection to the suppliant, in default of which dishonour falls on the former, who is obliged to give satisfaction to the latter. This transfer can operate in a number of ways, with variable consequences. The most simple consists in saying *ʿār ʿalīk* "the *ʿār* on you" and making a material contact with the person to whom the appeal is made, for example touching the edge of his turban, or laying one's hand upon him or his mount. More serious is the case of a man guilty of a crime or a misdeed and pursued by his enemies: the pursuit must cease as soon as the suppliant has touched the ropes or the pole of the tent of the supplicatee or has penetrated his home: the result is still more spectacular when the latter is an interested party of the suppliant's victim. However, in such serious cases a more efficacious means consists in slaughtering an animal (Arabic *dbīha*, Berber *tam ghrust*) without pronouncing the *basmala*, so as to preclude the eating of its flesh, on the threshold of the house or at the entrance of the tent of the member of the alien tribe to whom appeal has been made. The latter is obliged to grant the request presented in this manner from the instant that he sets foot in the pool of blood or simply perceives it; here the efficacy of the procedure is due to the blood [see DAM, in the Supplement], which possesses magic power. Finally, to appeal for the aid of another tribe, to address a request to the authorities or to give force to a submission to central government, recourse would made to the *ʿargība* which consisted in hamstringing a horse, a camel or a bull and placing it in the posture of a suppliant.

Other procedures are still employed (see E. Westermarck, *op. laud.*, 87-107) which may be passed over without comment except to recall that the persons solicited are not permitted to refuse and that they are bound, whatever their inner inclination, to protect the suppliant, and whatever the circumstances, to provide him with hospitality: a private house, and in more serious cases where the *ʿār* has been imposed on the tribe, a mosque, or the tomb of a saint enjoying a right of asylum rarely violated.

There was quoted at the beginning of this article an example of *ʿār* exercised with regard to a Tunisian saint. The Moroccans also use it towards their saints (see below), to whom they offer sacrifices to obtain their intercession; they also employ other procedures (heaps of stones, votary offerings, etc.) which doubtless rely more on sympathetic magic than on *ʿār* in the true sense of the word. In the same way, they

assure themselves of the neutrality of djinns by immolations which could be interpreted as offerings and therefore unrelated to *ʿār*.

The latter is imposed, so it is understood, to obtain all sorts of things, from the most banal to the most important; to obtain pardon for an offence, to assure oneself of an intervention, to protect oneself from an enemy, to bring about a change of mind on the part of a father who has refused to give his daughter in marriage to a suitor, to oblige the parents of a murdered man to accept the *diyya* and not to insist on vengeance on the guilty party; a douar can even impose it on another whose cooperation it is seeking, for example in the harvest.

Women can also have recourse to the *ʿār*, under the same conditions as men or using procedures of their own. In certain Berber tribes of Morocco, a woman who wishes to leave her husband may take refuge in an alien tent or house, kiss a beam or handle the mechanism of a mill: from that moment, the owner of the property must marry her and compensate the abandoned husband, or . . . take flight. A fugitive who has succeeded in sucking a woman's nipple obtains her protection and that of her husband, and cases are known of adoption by suckling (see G. Marcy, in *RAfr.*, lxxix (1936), 957-73) or even by simulated suckling [see for instance AL-KĀHINA].

As regards adoption, which does not exist in Islamic law, a particular aspect of *ʿār* in certain Berber tribes is an institution concerning an individual called, with nuances, *amazzal*, *amzyad*, *amhaz*, *amhars*, *awrith*, etc. It occurs in the case of a stranger to the group who, usually after committing some offence in his own clan (also sometimes one refused by a father whose daughter he has asked for in marriage), has imposed the *ʿār* and obtained the protection of another group which he makes henceforward the beneficiary of his work. He becomes *amazzal* when his protector has given to him in marriage his own daughter or another woman over whom he holds the right of *ḡabr* [*q.v.* in Suppl.]; the marriage-price must be paid in work over a prescribed period. If the head of the family so decides, the *amazzal* may be adopted and may enjoy all the rights of a legitimate son, even though he is the daughter's husband. In certain parances, a distinction is drawn between the *amhars*, a term designating the stranger adopted by a man, and the *amazzal* in the true sense of the word; in this last case, a widow who is the head of a family may adopt a stranger whom she makes her concubine and whom she has the right to reject or to marry legally when the pre-arranged marriage-price has been paid in full. This institution gives rise to judicial arrangements, the details of which cannot be discussed here (see G. Marcy, *Zennour*, index; G. Surdon, *Institutions et coutumes des Berbères du Maghreb*, Tangier-Fez 1938, 244-50).

In spite of the absence, in Berber speech, of an original term to designate *ʿār*, it is quite certain that this custom presents a number of autochthonous features which justify a treatment distinct from that of the ancient *ḡiwār* and its aspects which define within strict limits the protection accorded by oriental Bedouin to strangers to their tribe. However, orthodox opinion is particularly worried by the practice of throwing one's cloak or turban on the tomb of a saint, or furthermore, of slaughtering an animal there as a form of *ʿār*, and the *fukahā*<sup>2</sup> make the comment that the deceased would not be able alone to fulfil the request. They object in other

ways besides to the use of the word *ār*, and only permit these rites when their object is to obtain the *baraka* of the saint or when an animal is sacrificed for the distribution of its meat to the guardians of the sanctuary (see al-Kattānī, *Salwat al-anfās*, i, 54-6).

Westermarck, *Ritual and belief in Morocco*, London 1928; idem, *L'ār, the transference of conditional curses in Morocco*, in *Anthropological essays presented to E.B. Tylor*, Oxford 1907, 361-74; A. Jaussen, *Coutumes des Arabes au pays de Moab*<sup>2</sup>, Paris 1948, 187-220. (CH. PELLAT)

**ARAGHŪN**, Arabic name corresponding to the Spanish Aragon. In fact, this word has both a geographical and a political sense. As a geographical term, it refers to a river, dominated by the fortress of *Shantamariyya*, the first of the defensive system of Navarre (al-Himyarī, *Rawḍ*, no. 105). This watercourse rises on the southern slope of the Pyrenees, near Canfranc; after passing the town of Jaca, the Sierra de la Peña diverts it towards the west, watering Berdun, Tiermas, Sangüesa, Rocafort, Aibar, Caparroso and Villafraña before joining the Arga and flowing into the Ebro in Navarre.

This *Wādī Araghūn* would seem to constitute the natural path of incursion into the Christian kingdom of Navarre. Having followed the river as far as Sangüesa, the Muslim forces followed the course of its tributary the Irati, in the direction of Pamplona. This is to be inferred from *Bayān*, ii, 148, "Muḥammad b. 'Abd al-Malik al-Ṭawīl marched in 298/911 towards Aragon with the object of capturing Pamplona and linking up there with 'Abd Allāh b. Muḥammad b. Lubb." This is precisely the route used in the famous campaign of 'Abd al-Rahmān III in 312/924. The forces of the caliph, coming from Tudela, attacked the stronghold of *Karkastal*/Carcastillo on the river Aragon, *Marḳwīz*/Marcuella, Sangüesa, Rocafort and Aibar, Lumbier and Pamplona (*Muḳtabis*, v, 123; *Bayān*, ii, 186; A. Cañada, *La Campaña musulmana de Pamplona. Año 924*, Pamplona 1976). In 325/937 we find the same juxtaposition of details when the general Aḥmad b. Muḥammad b. Ilyās was sent, with 1,500 horsemen, on a reconnaissance expedition, *ilā basīṭ Banbalūna wa-wādī Araghūn* (*Muḳtabis*, v, 271).

For Rāzī it was also a mountain range (*Crónica moro* . . ., ed. Catalan, Madrid 1975, 48-9) "E en su termino (de Huesca) ha . . . otro (castillo) que ha nonbre Tolia, yaze cerca de la sierra de Aragon. E Aragon es muy nonbrada sierra entre las Españas. E en ella yazen dos castillos muy buenos, el uno ha nonbre Sen e el otro Ben; e yazen en dos peñas que son encima de la sierra de Aragon, e corre por entre ellos un rrio de Flumen . . . E de las sierras . . . e logares nombrados en fortaleza, son en aquella tierra que se ayunta con monte Aragon que ha nonbre Monte Negro, e non lo podra pasar ome a cavallo, que ande bien, en menos de tres dias." Al-'Udhri (*Masālik* . . ., 56) states that the town and district of Huesca "lies in the vicinity of the *Djabal Araghūn*, renowned among the Christians."

If it is accepted that this valley was the route employed by the various Muslim expeditions, not only towards the Christian centre of Jaca but also, and especially, towards Navarre, it must be assumed that it was organised as a "frontier" for the defence of Pamplona. This defensive function would create a centre for resistance and for counter-attacks. The

"reconquest" of the valley of the Ebro would have been an enterprise of Aragon rather than Navarre, just as Castille had absorbed the old kingdom of Leon. The Christian advance at the expense of al-Andalus would henceforward be the product of these two "frontier" forces, *Kashṭāla* [q.v.] and Araghūn.

In fact, these two kingdoms were to share between themselves their future conquests. This gave rise to various formal treaties: Tudellen (1151), Cazorla (1179) and Almizra (1244) (Roque Chabas, *División de la conquista de España nueva entre Aragón y Castilla*, in *Congreso Hist. Aragón*, Barcelona 1909), in which were fixed the respective zones of the legal expansion of Aragon and Castille. The former, having achieved by 1238 its own particular "reconquest", turned its attention to the sea. It was then that there took shape the broad outlines of its policy towards Africa (Ch. E. Dufourcq, *L'Espagne catalane et le Maghrib aux XIII et XIV siècles*, Paris 1965), the Mediterranean (Corsica, Sardinia, Sicily, and the kingdom of Naples—in competition with the Angevin dynasty), annexation of part of the Byzantine empire (the duchies of Athens and of Neopatria), of the island of Cyprus, and commercial relations with Mamlūk Egypt (A. Masia de Ros, *La Corona de Aragón y los estados del Norte de Africa*, Barcelona 1951; A. Lopez de Meneses, *Los consulados catalanes de Alejandria y Damasco en el reinado de Pedro IV el Ceremonioso*, Saragossa 1956; F. Giunta, *Aragonesi e Catalani nel Mediterraneo*, Palermo 1959; L. Nicolau d'Olwer, *L'expansió de Catalunya a la Mediterrania Oriental*, Barcelona 1926). After the union of the kingdoms of Aragon and Castille in 1474, Spain inherited this interventionist line to the Mediterranean: attempts at invasion of Algiers in 1519 and 1541 (directed against the piracy of the Barbarossa brothers [see 'ARŪḌ and KHAYR AL-DĪN BARBAROSSA]), conquest of the island of *Djerba* (1520), the capture of La Golletha at Tunis (1535) (E.G. Ontiveros, *La política norteafricana de Carlos I*, Madrid 1950) and the battle of Lepanto [see *AYNABAKHTI*] in 1571.

But Araghūn above all has a political sense. According to al-Himyarī (*Rawḍ*, no. 8), "it is the name of the territory of *Ḡharsiya* b. *Shandjuh*, comprising cantons (*bilād*), staging posts (*manāzil*) and districts (*amāl*). According to Maḳḳarī (*Nafḥ*, ed. Beirut, i, 137), "The fifth region passed through Toledo and Saragossa and their environs, towards the territory of Aragon, to the south of which lies Barcelona." As a political concept, its borders were constantly changing. Just as al-Andalus did not cease to contract in the course of the centuries, *Araghūn* constantly expanded. So its history is founded on the recession of the Muslim *thaghīr al-a'lā* [q.v.], sc. of the Upper March. Its growth took place at the expense of the neighbouring Hispano-Arab states; the Banū *Qasī*, *Tuḡjībids*, Banu 'l-Ṭawīl, Banū *Hūd*, Banū *Razīn*, *Almoravids*, Banū *Ḡhāniya* and Banū *Mardaniṣh* [q.v.], following a continuous advance during the 11th-13th centuries. The principal landmarks of this "reconquest" are the taking of *Graus* (1083), *Monzón* (1089), *Alquézar* (1091), *Almenara* (1093), *Huesca* (1096), *Barbastro* (1100), *Balaguer* (1105), *Ejea* and *Tauste* (1106), *Tamarite* (1107), *Morella* and *Belchite* (1117), *Saragossa* (1118), *Tarazona* and *Tudela* (1119), *Calatayud* and *Daroca* (1120), *Alcañiz* (1124), *Tortosa* (1148), *Lérida*, *Fraga* and *Mequinenza* (1149), *Teruel* (ca. 1157), *Valderobes* (1169), *Caspe* (1171), *Majorca* (1229), *Morella* (1232), *Burriana* (1233), *Peñíscola* (1234), *Ibiza* (1235), *Valencia* (1238) and *Minorca* (1287). The expansion

of Castile was fundamentally local, while that of Aragon took place in a wider context. Alfonso I was in a sense a crusader. The author of the *Hulal maushīyya* (76) tells us that for his epic raid in 1225-6 against the Levante and Andalusia—which brought back numerous Mozarabs [q.v.]—"He chose, assembled and equipped 4,000 horsemen of Aragon, whom they selected with their squires. They agreed and swore by the Gospel that not one of them would desert his companion". First of all, a psychological offensive took place (articles by D.M. Dunlop, A. Cutler and A. Turki, in *Al-Andalus*, 1952, 1963 and 1966; Chalmeta in *RUM*, xx, 1972), followed by the Council of Toulouse in 1118 which proclaimed the expedition against Muslim Spain. There was also participation by numerous French troops, creating a greater "mass movement" and a change of tactics. Technical innovations (catapults and mobile siege-towers built by an expert, a veteran of the sieges of Nice, Antioch, and especially Jerusalem, Gaston de Béarn) made possible the capture of strongholds hitherto impregnable. The great campaigns of James I the Conqueror (the Balearic islands in 1229 and Valencia in 1238) were also to be considered as a crusade (R.I. Burns, *The Crusader kingdom of Valencia*, Cambridge, Mass. 1967). The royal house of Aragon was systematically more tolerant than Castile towards the conquered Muslims. The treaties of capitulation seem all to have been inspired by the need to retain labourers and peasants (hence this was a policy different from "repopulation"). The first example was to be that of the conquest of Valencia by the Cid in 1094. Those, subsequently, of Saragossa, Tudela and Tortosa, as well as the later ones signed by James I, also correspond to this scheme (R.M. Menendez Pidal, *La España del Cid*, Madrid 1956, 483-93; R.I. Burns, *Islam under the Crusaders*, Princeton 1973, 118-38, 173-83). These circumstances explain the importance of the Mudéjars (q.v., and Macho Ortega, *Condición social de los mudéjares aragoneses (s. XV)* in *Mem. Fac. Fa. Zaragoza*, i (1923), 137-319, and L. Piles, *La situación social de los moros de realengo en la Valencia del s. XV*, Madrid 1949), and later of the Moriscos (q.v., and T. Halperin Donghi, *Un conflicto nacional: moriscos y cristianos viejos en Valencia*, in *CHE*, xxiii-xxiv (1955), 5-115; xxv-xxvi (1957), 83-250; idem, *Recouvrements de civilisation: les morisques du royaume de Valence au XVI s.*, in *Annales*, xi (1956), 154-82; J. Reglá, *Estudios sobre los moriscos*, Valencia 1964; M.S. Carrasco Urgoiti, *El problema morisco en Aragón al comienzo del reinado de Felipe II*, Valencia 1969) in these regions where they were almost always vassals of local lords and bore the name of "exarico"/*sharik* (E. Hinojosa, *Mezquinos y exaricos . . .*, in *Obras*, Madrid 1948, 245-56). It is the permanence of this *modus vivendi* which explains the fact that the vast majority of aljamiada [q.v.] literature comes from this region.

For the Arab historians, *Araghūn* means not only a region but also all the territories of the political entity embodied in the Kingdom of Aragon. In this context are included Catalonia, the Balearic Islands and Valencia. Al-Marrakūshī (*Mu'djīb*, 50-1, 235, 267) defines its extent in 621/1224 thus: "The Banū Hūd possessed the towns of this region (al-Andalus), Tortosa and its environs, Saragossa and its environs, Fraga, Lérida and Calatayud. They are now in the hands of the "Franks", belonging to the prince of Barcelona, and constitute the country known as *Araghūn*. The latter has the borders of the kingdom of Barcelona, to the French frontier. Neighbouring

the Banū Hūd, there used to be Abū Marwān 'Abd al-Malik b. 'Abd al-'Azīz . . . who possessed Valencia and its surrounding territory. The Frontier was under the control of Abū Marwān b. Razīn, whose rule extended as far as the frontiers of Toledo. The four parts of Spain are ruled by four kings: one is constituted by the afore-mentioned Aragon and lies to the south-east . . . The first town, at the south-east border on the Mediterranean coast, is Barcelona, followed by Taragona, then Tortosa. In this region, the non-coastal cities are Saragossa, Lérida, Fraga, and Calatayud all under the rule of the king of Barcelona. It is the region called *Araghūn*". For Hīmyarī (*Rawḍ*, no. 182), "Majorca lies one day's sail from Barcelona, *min bilād Araghūn*", and in 636/1238 "the Rūm entered into possession of Valencia, demanding capitulation and James/*Djākmuh malik Araghūn* took control of it". Finally, we find the equation *Araghūn* = the territories of the Kingdom of Aragon clearly expressed in the 14th century. Ibn Khaldūn (*Ibar*, ed. Beirut, iv, 395) declares: "As for the king of Barcelona, in the Levante of al-Andalus, his territories are extensive and his kingdom is great. The latter includes Barcelona, Aragon, Jativa, Saragossa, Valencia, Dénia, Majorca, and Minorca." Speaking of the taking of Valencia by James I, he describes him as *malik* or *tāghīyat Araghūn*.

The origin of the future Navarre-Aragon heartland apparently dates back to the period of the Muslim invasions. It seems in fact that the Arabs only penetrated fairly superficially into the region of the Pyrenees (F. Codera, *La dominación arábiga en la Frontera Superior*, Madrid 1879; idem, *Limites probables de la conquista árabe en la cordillera pirenaica*, in *BRAH* (1906); J. Millas Vallicrosa, *La conquista musulmana de la región pirenaica*, in *Pirineos* (1946), ii, 53-67). Thus "the regions lying beyond the sierras of Santo Domingo and Guara, of Alquézar in Sobrarbe, Roda in Ribagorza, Agar in Pallars, like the highlands of Urgel, Bergada, Ripolles and Besalu in Catalonia" were not occupied.

Although the texts lack precision, they agree in asserting that Mūsā b. Nuṣayr [q.v.] conquered Saragossa in 96/714. He marched for twenty days and captured a sea-port town, probably Taragona, if we are to believe the *Cronica del moro Rasis* (41-2), which attributes this deed to "*Tarife, el hijo de Nazayr*". Pamplona capitulated before 100/718, during the emirate of al-Ḥurr, and the *tābī's* 'Alī b. Rabāḥ al-Lakhmī and Ḥanash b. 'Abd Allāh al-Ṣan'ānī (Ibn al-Faraḍī, no. 913) countersigned it. This was hardly a durable submission, since "Uḫba conquered Narbonne . . . Pamplona, where he established Muslims" (*Bayān*, ii, 29) and the *amīr* Yūsuf hurried thither with clearly insufficient forces, "Sulaymān b. Shihāb and al-Husayn b. Daḍīn against the Vascons of Pamplona" (*Akhbār maḍjūm'a*, 75). After seven years of siege, Huesca surrendered (al-'Udhri, 56-7) on conditions similar to those of Tudmīr [q.v.], under the governorship of al-Ḥurr or of al-Samḥ: "When the Muslims penetrated into Spain, the inhabitants of the mountain fortresses of Lérida and the High Aragon made a pact with them, and paid them tribute, without any argument" (*Cronica Rasis*, 42-3).

In 132/750, the situation of the valley of the Ebro began to pose serious problems when Yūsuf al-Fihri sent there, as *wālī*, his adviser and *alter ego* al-Ṣumayl. In 136/753, there broke out the rebellion of 'Āmir and the Banū Zuhra b. Kilāb, who, at the head of a coalition of Yemenis and Berbers besieged him in

Saragossa. The Kayısı relieved al-Şumayl while 'Abd al-Rahmān I attempted a crossing to Spain (*Akhbār*, 62-79). Later the *amīr* sent there his trusted lieutenant, the *mawlā* Badr. The Yemenī Sulaymān b. Yağzān al-Kalbī and al-Ḥusayn b. Yahyā al-Anşārī, by promising Saragossa to Charlemagne, encouraged him to undertake his ill-fated expedition of 778. This Upper March was always an extremely volatile zone and politically very unstable. We find there the Tuğjibid Banū Salama in the region of Huesca, ousted by the "reign" of Bahlūl b. Marzūq. The loyal 'Amrūs b. Yūsuf re-established authority there in the name of al-Ḥakam I, but the representative of the *muwallad* family of the Banū Kaṣī, Mūsā b. Mūsā [q.v.], rebelled in 842 at Tudela, took possession of Saragossa and Huesca and declared himself the "third king of Spain". To curb him, the *amīr* Muḥammed installed at Calatayud and Daroca the Tuğjibid Banū Muḥādīr who, having succeeded, transformed themselves into autonomous "lords" of the March of a more-than-changeable loyalty. In the north, we find in the 10th century the Banū Şhabrīt b. al-Tawīl at Huesca. All these peoples did not hesitate to play the Franks, the Arabs, the *muwallads* and the Navarro-Aragonese (with whom they had family ties) off against their rivals, Muslim as well as Christian. Such was also the policy of the Banū Hūd, who employed the Cid and were able for a long time to balance the ambitions of the Almoravids, the Aragonese, the Catalans, the Navarrese and the Castilians. In fact, it seems that, in about 228/843 there was legal recognition of the North-Pyrenean enclaves by the emirate of Cordova. Thanks to an annual tribute of 700 *dīnārs* and the status of *vasalage*, there was *ikrār* [q.v.] of the territories of Iñigo and of Sancho (al-'Udhri, 30).

(P. CHALMETA)

**ARAT, REŞİD RAHMETİ**, up to 1934 G.R. RACHMATI, modern Turkish REŞİD RAHMETİ ARAT, Turkish scholar and philologist (1900-64). Born at Eski Üdjüm, to the south-west of Kazan, he was the son of 'Abd al-Reşīd 'İşmet Allāh, of a family of *mudarisūn* who emigrated from Kazan and set up a "hereditary" *madrasa* there. He attended various schools in his home town. and later in Kızılyar (Petropavlovsk) and in Harbin in Manchuria where

he finished high school (1921). He joined cultural associations of the Kazan Tatars in Harbin and contributed to various papers. In December 1922 he left for Germany and he enrolled in Berlin University, where he was trained in Turkish philology by Willy Bang. He obtained his Ph. D. in 1927 with a thesis on *Die Hilfsverben und Verbaladverbien im Altäaischen* which was published in *Ural-altäische Jahrbücher*, viii/1-4 (1927), 1-66. He then joined the teaching staff of the Department of Oriental languages at the University. In the same year he married Dr. Rabī'a, also from the Kazan area, whom he had met in Harbin. In 1928 he was made a research assistant in the Prussian Academy. In 1933, following the university reform in Turkey, he was offered the chair of Turkish philology in the University of Istanbul where he taught until his death. He was the director of the Institute of Turcology (1940-50) founded by Fu'ad Köprülü in 1924 and a visiting professor in the SOAS London (1949-51). He died in Istanbul on 29 November 1964. R.R. Arat, who contributed greatly in introducing the historic and comparative approach to studies of Turkish language and dialects, was a scholar who preferred to limit his efforts to a given area and to deepen it rather than spread over many problems and cognate fields. He remained strictly interested in linguistic and philological problems and text criticism. He is the author of the following major works: *Şur Heilkunde der Uighuren*, 2 vols, Berlin 1930-2; *Die Legende von Oghuz Qaghan* (with W. Bang), Berlin 1932; *Türkische Turfan Texte*, vii, Berlin 1936; *Un yarlık de Mehmed II, le Conquérant*, in *Annali RISON*, xx (1940); *Bābur, Vekayi*, 2 vols, Ankara 1943-6; *Kutadgu Bilig* (critical edition), Istanbul 1947; *'Atebetü 'l-hakāyik* (critical edition and modern Turkish paraphrase), Istanbul 1951; *Yusuf Has Hacib. Kutadgu bilig* (Modern Turkish paraphrase), Ankara 1959; *Türk şivelerinin tasnifi*, in *TM*, x (1953), 59-139 (a summary of former attempts to classify Turkish dialects, together with a new proposal; under the influence of his own dialect, Arat insisted on using the term *şive* (accent) instead of *lehçe* (dialect) of standard Turkish); *Eski türk şüri* (Pre-Islamic and early Islamic Turkish verse, texts, modern Turkish paraphrase and notes), posthumous, Ankara 1965.

**Bibliography:** *Reşit Rahmeti Arat için*—A memorial volume published by Türk Kültürünü Araştırma Enstitüsü, Ankara 1966, pp. x, xxx (the principal source for biographical and bibliographical data on Arat up to the date of publication).

(FAHİR İZ)

**ARBA'ÜN HADİTH'AN**, a genre of literary and religious works centred round 40 *hadīths* of the Prophet.

This type of work has arisen, from one aspect, from the *hadīth* which says "The member of my community who learns 40 *hadīths* connected with the prescriptions of the faith will be raised to life by God among the authorities on the law and the scholars", and from another aspect, from certain secondary factors: the desire to be covered by the Prophet's grace, the hope of escaping the tortures of hell-fire, the intention of enabling oneself to see the great ones, etc.

Works in this category of *arba'ün hadīth'ān* may be written in prose, verse or in the two combined. The contents may also differ; some writers and compilers are content to gather together the *hadīths*, others add to them explanations, whilst yet others adorn and complete these texts by means of accounts, *āyāt* and homiletic material. The elements of works

in this general category are selected according to differing principles: *aḥādīth kudsiyya*, of divine inspiration [see ḤADĪTH KUDSĪ]; *khutbas* of the Prophet; *hadīths* chosen from amongst those texts easy for learning by heart; etc. *Arba'ün* collections are also found centred on a particular subject: the qualities of the Kur'ān, the essential principles of Islam, the Prophet and his Companions (or even his children and grandchildren), sects and mysticism, knowledge and the scholar, politics and law, the holy war, social and moral life, etc.

The genre is called *ḥihl hadīth* by the Persians and *kirk hadīth* by the Turks. It developed first of all in Arabic and developed extensively. Amongst the oldest collections are those of Abū Bakr al-Ādjurrī (d. 330/942) and of Ibn Wad'ān (d. 494/1101). But the most celebrated is that put together by Muḥyi 'l-Dīn Abū Zakariyyā' Yaḥyā al-Nawawī (631-76/1235-77), the object of numerous commentaries in Arabic and translations into other Islamic languages. The first *ḥihl hadīth* collections in Persian which have come down to us were written in the 6th-7th/12th-13th centuries, sc. the *Tabīb al-kulūb* of Muḥammad b. Muḥammad b. 'Alī al-Farawī and *al-Arba'ün al-Bahā'* of 'Imād al-Dīn Ḥasan b. 'Alī. However, the most famous and most widely-disseminated collection is that composed in quatrains, the *Tarḡuma-yi Arba'ün hadīth* of 'Abd al-Raḥmān Djamī (817-98/1414-92). The works of Nawawī and Djamī were translated into Turkish and published on many occasions.

It should further be noted that the Turks not only appreciated highly the genre in question, but also composed didactic works full of teaching points. The oldest one of these in Turkish known to us is the *Nahj al-farādis* of Maḥmūd b. 'Alī (8th/14th century), followed in the next one by Kemāl Ummī (translation after 815/1412) and also 'Alī Shīr Nawā'ī (845-906/1441-1501), and then in the 10th/16th century by Fuḍūlī (?885-963/21480-1556), Uṣūlī (d. 975/1568), New'ī (942-1007/1535-99), 'Ashīk Ālebi Naṭṭā'a (translation 979/1571) and Muṣṭafā 'Ālī (translation 1005/1597). This work of translation was further pursued with enthusiasm in succeeding centuries, the most important works being those of Meḥmed Khākānī (1011/1603), Ismā'īl Rusūkhī (d. 1040/1631), Yūsuf Nabī (1052-1124/1642-1712), 'Oṭṭmān-zāde Tā'ib (1120/1708), Mūnīf (1145/1733), 'Ömer Diyā' al-Dīn (publ. 1326/1908) and Aḥmed Na'īm (publ. 1343/1925).

(ABDÜLKADIR KARAHAN)

**ARGHIYĀN**, the name found in mediaeval times for a district of northern Khurāsān. It lay to the south of Kūcān/Khabūshān [q.v.], straddling the hilly region of the modern Kūh-i Shāh Djahān and the Kūh-i Binālūd, around the sources of the Kashaf-Rūd. It is not to be identified with the district of Dīādjam [q.v. in Suppl.] lying further to the west, as was done by Le Strange, *The lands of the Eastern Caliphate*, 392, an error perpetuated by B. Spooner in his *Arghiyān. The area of Jājam in western Khurāsān*, in *Ian, Jnal. of the British Institute of Persian Studies*, iii, (1965), 97-107. The name of Arghiyān's *chef-lieu*, Rāwnīr, appears in the *Hudūd al-'ālam*, tr. Minorisky, 103, as Rāwīnī (restored by

Aubin as Rāwnīr, see *Bibl.*); the correct form Rāw(a)nīr is further given in Yākūt, *Buldān*, ed. Beirut, i, 153, as the *kaṣaba* of this district of 71 villages, and by Sam'ānī, *Ansāb*, ed. Hyderabad, i, 167-70, who visited the district personally and who has a long list of the '*ulamā'*' of Arghiyān.

In Tīmūrid times, we find the administrative coupling Djahān u Arghiyān, and then in the Safawid period, Djahān-i Arghiyān is linked with the district of Kalīdar (thus as a single *ṭyūdār* under Shāh Šafī in 1046/1636). By modern times, however, the name of Arghiyān dropped out of usage.

*Bibliography:* In addition to the sources mentioned in the article, see the penetrating discussion of J. Aubin in *Réseau pastoral et réseau caravanier. Les grand' routes du Khurassan à l'époque mongole*, in *Le monde iranien et l'Islam*, i (Geneva-Paris 1971), 109 ff.

(C.E. BOSWORTH)

**'ĀRIF ĀLEBĪ**, dervish mystic, grandson of Mawlānā Djalāl al-Dīn Rūmī and the third *khālifa* of the Mawlawiyya order, was born at Konya on 8 Dhu 'l-Kā'da 670/7 June 1272 as a son to Sulṭān Walad and Fāṭima Khātūn, the daughter of the goldsmith Šalāh al-Dīn. His actual name was Djalāl al-Dīn Farīdūn. Mawlānā, who named him thus after his two grandfathers, gave him also the by-name Amīr 'Ārif, from which the commonly-used Turkish form Ulu 'Ārif has been derived.

An extensive biography with many hagiographic traits is contained in the eighth chapter of the *Manākh al-'arīfīn* by Allākī [q.v.]. Being one of 'Ārif's pupils, Allākī was an eyewitness to a great part of his life and accompanied him on a number of his travels. 'Ārif frequently wandered through Anatolia, but he made journeys to 'Irāk and Persia as well. On one occasion, Sulṭān Walad sent him to the court of the Īl-Khān at Sulṭāniyya to remonstrate against the pro-Shī'a policy adopted by Öldjeytū. In 712/1312, 'Ārif succeeded his father as the head of the Mawlawiyya. His death occurred at Konya on 23 Dhu 'l-Ḥiḡdja 719/5 November 1320. His tomb is still extant in the Mawlawī *türbe*.

The anecdotes related by Allākī depict 'Ārif as a colourful personality. Through his conduct, he expressed the antinomian tendencies inherent in the Mawlawī tradition from its origin. He acted like a *rind* dervish and indulged in long and exhaustive *samā'* sessions which often gave rise to scandal.

Unlike his ancestors, 'Ārif was neither prominent as a scholar nor as a writer. The only works known to us are collections of his *ghazals* and his quatrains which were all written in Persian. The rareness of these poems both in separate manuscripts and in collections of Mawlawī poetry suggests that they were not very highly appreciated in the literary tradition of the order. A manuscript in the Leiden University Library contains a collection of 'Ārif's *ghazals* and *rubā'īs* under the heading *al-Aswār al-'arīfiyya* (Or. 1676 B/8, ff. 89a-130a).

*Bibliography:* Allākī, *Manākh al-'arīfīn*, ed. Tahsin Yazıcı, Ankara 1961, ii, 825-974; H. Ritter, *Philologica XI*, in *Isl.*, xxvi (1942), 127; Feridun Nazif Uzluk, *Ulu Arif Ālebinin rubalere*, İstanbul 1949; Abdülbaḳı Gölpinarlı, *Mevlānā'dan sonra Mevlevilik*, İstanbul 1953, 65-95; idem, *Mevlānā Müzesi yazmalar kataloḡu*, Ankara 1971-2, ii, 211; iii, 21 f.

(J.T.P. DE BRUIJN)

**'ĀRIF, MĪRZĀ** ABU 'L-KĀSİM, Persian revolutionary poet and satirist, was born in Kaṣwīn ca. 1880, and after studying Persian, Arabic, calligraphy and music, became a *rawdakhān*, an occupation that he abandoned after his father's death.

At 17 he married a young girl against her parents' wishes, and two years later was obliged to divorce her; he never married again. Leaving for Teheran, he took service at the court of Muzaffar al-Dīn Shāh, where his singing attracted the attention of the sovereign and leading courtiers. Court life, however, did not appeal to him, and he returned to Kazwīn, where he remained until the 1906 Constitutional Revolution, of which he was one of the leading spirits. His outspoken and reckless verses, usually sung at public concerts, made him many enemies, including even his former friend the poet Īraj Mīrzā. In 1915 he joined the *muhājjarat* to Kirmānshāh, whence he went to Istanbul, returning to Persia in 1919. During the next few years he gave his support successively to Col. Muḥammad Taqī Khān, the dissident gendarmier officer in Khurāsān, Sayyid Diyā', and Riḍā Khān. In 1924 he campaigned in favour of the establishment of a republic, but after the accession of Riḍā Khān to the throne he was unable to continue his public concerts, and retired on a small government pension to Hamadān, where he died in poverty in 1934. His *Diwān* was published in Berlin in 1924 together with an autobiography on the lines of Rousseau's *Confessions*.

‘Ārif was a man of dervish-like disposition, and had no use for material wealth or respect for authority and position. His poetry is full of social satire, attacks on corruption, and nostalgia for Persia's great past, all couched in popular language free from classical artificialities.

*Bibliography:* After the edition of ‘Ārif's *Diwān* published by Riḍā-zāda Shafaq, in Berlin 1924, further writings appeared in M.R. Hazār, *Ārif-nāma-yi Hazār*, Shirāz 1935, and Sayyid Hādī Hā'irī Kūrūsh, *Djild-i dawwum-i diwān-i Ārif*, Tehran 1942; Biographical information is to be found in E.G. Browne, *Press and poetry of modern Persia*, Cambridge 1914, 250-2; M. Ishaque, *Sukhanawārān-i Īrān dar ‘asr-i hādīr*, i, Calcutta 1933, 191-218; Rashīd Yāsīmī, *Adabiyāt-i mu‘āsir*, Tehran 1937, 69-70; M. Ishaque, *Modern Persian poetry*, Calcutta 1943, *passim*; Sayyid Muḥammad Bākīr Burka'ī, *Sukhanawārān-i nāmī-yi mu‘āsir*, i, Tehran 1950, 159-61; J. Rypka, *Iranische Literaturgeschichte*, Leipzig 1959, 352-3; *ibid.*, *History of Iranian literature*, Dordrecht 1968, 372-3; Bozorg Alavī, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964, 36-44.

(L.P. ELWELL-SUTTON)

‘ĀRIFĪ, MAWLĀNĀ MAḤMŪD, Persian poet. Virtually nothing is known of the life of ‘Ārif except the approximate dates of his birth and death (791-853/1389-1449), and that he belonged to the circle of poets that flourished at the court of Shāh Rukh [q.v.] in the first half of the 9th/15th century.

The best-known of his works is a brief *mathnawī* of some 500 *bayts* entitled *Gūy u čūgān* or *Hāhnāma*, which he composed in just two weeks during his fiftieth year to honour a prince Muḥammad, assumed to be Muḥammad b. Bāysoṅkor (Browne, *LHP*, iii, 496). The subject of the poem is a mystical romance between a dervish and a prince whom he first sees playing polo. The game of polo provides the predominant imagery. R.S. Greenshields published an edition of this work, of which there are many good manuscripts, in 1931, and a translation of it under the title *The Ball and polo stick or Book of ecstasy*, in 1932 (both at London).

According to Dawlat-Shāh, ‘Ārifī was the author of numerous panegyrics of the kings and princes of his day, and of *ghazals* and *kifās* as well. The same

source says that in addition he composed ten letters in verse addressed to Kh<sup>n</sup>ādja Pīr Aḥmad b. Ishāk and a versified work on Ḥanafī *fiḥh* called *Mā lā budd madhhab Imām A‘zam*. None of these works has yet been published.

Although the authors of contemporary *tadhkiras* credit him with an elegant style and considerable popularity, in the modern period his works have received only cursory mention.

(J.W. CLINTON)

ARĪN [see KUBBAT AL-ARD].

ARNAB (A.), pl. *arānīb*, in poetry, *al-arānī*. Grammatically this noun is feminine and denotes the hare with the general meaning of a leporid, either as a collective noun, or specifically the doe-hare (see Ch. Pellat, *Sur quelques noms d'animaux en arabe classique*, in *GLECS*, viii, 95-9). In all the Arabic dialects the term maintains this meaning, but in Maghribī two plural forms are found, *rawānīb* and *arānīb*. Today its archaic synonym *kuwā‘* (fem. *kuwā‘a*) seems to have been forgotten. Arabic lexicographers relate *arnab* to a root *r-n-b* (see *LA*) according to the rules of trilateralism, but its etymology should perhaps be sought in Sumerian or Akkadian, from which a number of animal and bird names in Arabic are derived (like *dhī‘b*, *ghurāb*, *iwaz*, *kurkī* etc.). Semantic equivalents to *arnab* are *khargūsh* in Persian, *tavsan* in Turkish, *antül* (pl. *üval*, fem. *tawult*, pl. *tiwatālin*) in Berber of the Maghrib, *emerwel* (pl. *imerwel*, fem. *temerwelt*, pl. *timerwelīn*) from the verb *erwel*, “to flee”, in Tamahaq, while *abekni* (pl. *ibeknit*, fem. *tabeknit*, pl. *tibeknitīn*) is little used.

Among the order of lagomorphs and the family of leporids, the genus *lepus* is represented in Islamic lands predominantly by the *lepus capensis* or Cape hare. Its breeding ground stretches from Africa (Cape of Good Hope) to China (Shantung, bordering on the Yellow Sea of Asia). In the Mediterranean zone it is found with the plains species, *l. granatensis* (Spain), *l. schlumbergeri* and *l. sherif* (Morocco), *l. mediterraneus* and *l. kabylicus* (Algeria), *l. tunetiae* (Tunisia) and *l. rotschildi* (Egypt); in western Morocco the smaller *l. atlanticus* is also found. In the hills are found *l. maroccanus* and *l. pedicatus* (Morocco) and *l. sefranus* (Algeria). The characteristically desert hare, *l. arabicus*, is found on the borders of the Sahara, together with *l. pallidior*, *l. harterti* and *l. barcaeus*, from Morocco to the Sinai peninsula. A systematic study of the hares of the Arabian Peninsula has yet to be made. The species *l. europaeus* is represented in the Near East in several isolated places as well as *l. syriacus* (Lebanon) and *l. judeae* (Palestine).

Literary authorities differ about the gender of the noun *arnab*; some see it as masculine in an associated feminine *arnaba* (see *al-Ifsāh fī fiḥh al-lughā*, Cairo 1929, 391), but country people, both sedentary and nomadic, knew from very early times how to distinguish the sex and age of hares by a specific terminology which is unambiguous. The male, or buck, was called *khuzaz* (pl. *khizzān*, *akhizza*) or *hawshab* or *kuffa* (Maghribī ‘*akrūsh*). The female, or doe, was named ‘*ikriṣha* (Sa‘ūdī, ‘*idana*); while suckling she was called ‘*djamarish*. The leveret was called *khimik* (pl. *khārānik*) or the *khawta‘*, and the weanling *suhla* (Maghribī *khārbūsh*, *harbūsh*; Tamahaq

*eberdewel*, pl. *iberdewēlen*, fem. *teberdewelt*, pl. *tiberdewēlīn*). From an ethnological point of view, these country folk knew the habits of the hare in detail and its simple form or lair (*makā / makʿ / makw*, pl. *amkāʿ*, *khīl*, Maghribī, *margad*) did not escape the eyes of the herdsman; it was found facing the prevailing wind behind a tuft of grass. Regions where hares were plentiful were named *muʿarība/murība* or *makhazza* or *mukhamika*, according to whether adults or young hares were predominant. Most of the Bedouin observations about the leporids have been recorded by the naturalists al-Ḳazwīnī (*ʿAdjāʾib al-makhlūkāt*, ii, 215-217, margin), al-Damīrī (*Hayāt al-hayawān al-kubrā*, Cairo 1356/1937, i, 20-3) and especially al-Djāhīz (*Hayawān*, vi and *passim*). From these records scholars can learn that the hare has hair inside its cheeks, that it dozes with its eyes wide open, and that it is always on the alert and flees at the slightest danger, which has gained it a universal reputation as a coward. The doe, like a bitch or she-ass, menstruates from time to time and because of this impurity in the family of leporids, the species was not mounted by the djinn. The passion of the rut linked with the phenomenon of superfœtation in fertilising the doe led to a popular belief in the hare changing sex annually. In antiquity, it was also considered to be a case of hermaphroditism.

The enormous length of the hare's back legs in comparison with its front legs allows it to run extremely swiftly, and this is its chief means of defence. It can thwart the best saluki tracker set on its heels, especially on hard and hilly ground where it will make turns and back-casts (*murāwagha*) frequently, whence the saying "to swerve more than a hare", and the nicknames the hunters give it emphasise its speed, like *darrāma*, *dāmika hudhama*, *mukattīʿat al-suhūr* and *al-niyāʿ*. When a hare is surprised at its form, the leap (*nafjā*) it makes is so instantaneous and impetuous that it has become an illustration of the brevity of life on earth compared with the life beyond, as in the expression in *hadīth* form *mā al-dunyā fi ʿ-ākhīra illā ka-nafjātī arab* "compared with the world hereafter, this present world is like a hare's leap" (*Hayawān*, vi, 352-3). Because of the many ruses they devise to avoid the hounds, hares and foxes are considered the most difficult of animals to catch. When hard pressed on loose ground, one of the commonest tricks is the *tawbīr* (*Hayawān*, vi, 357), which is an instinctive attempt to blur the tracks by placing the body weight on the back foot only. The back of the foot has a pad which is covered with hair and thus prevents the toes and claws from marking the ground.

The hare is certainly one of the most highly-prized game animals in Muslim countries, as elsewhere. To catch it, man has employed all kinds of ingenuity; he has caught it with nets (*hibāla*, pl. *ḥabāyil*), snares (*sharak*, pl. *ushrāk*) and traps (*mighwāt*, pl. *maghāwī*; *mughawwāt*, pl. *mughawwayāt*; *hukna*, pl. *hukan*), and he has hunted (*taradū*) with the help of trained beasts (*dawārī*) like the gazehound (*salūkī salūkī*, pl. *-iyya*), which always hunts by sight, and pointers or other hounds (*zaghārī*, pl. *-iyya*, Maghribī *tārūs*, pl. *tawāris*) which hunt by scent. The Persian lynx (*ʿanāk al-ard*) and trained birds of prey (*djawāriḥ*) are also used. He has used various weapons to attack the hare like the thrown cudgel (*hirāwa*, *zarīta/zarwāta*), which the young shepherds of the plains of the Maghrib can wield so skillfully, as well as the sling (*mikhdhafa*, *miklāʿ*), the bow, then the cross-bow and eventually firearms. As well as man,

the hare is surrounded by a number of natural enemies, carnivores and rapacious predators; it is especially threatened by the tawny eagle (*aquila rapax*) which is appropriately called *ʿukāb al-arnab* or *sakī al-arnab*. Hare flesh has no fat or tendons, owing to the alimentary eclecticism of the animal. It is instinctively attracted to certain aromatic and sweet plants, and the Bedouin expression *arnab al-khulla*, "the hare of the sweet plants" summarises the appreciation of the gourmet and the glutton (*Hayawān*, iv, 134). The gastronomic authority Abu ʿl-Wadīh al-ʿUklī, a man of the desert and one of the informants of al-Djāhīz, gave pride of place to the hare in the metaphor "If the uromastix-lizard (*dabb [q.v.]*) had been a chicken, the hare would be a francolin (*durrādī*)" (*Hayawān*, vi, 353). Oriental cookery books esteem hare highly in their chapters on meats (see M. Rodinson, *Recherches sur les documents arabes relatifs à la cuisine*, in *REI* [1949], 107). To serve jugged hare (*arnabī*) or roast saddle of hare (*ʿadjz mashwī*) to a guest was a mark of honour, especially if one kept the kidneys for him; these were regarded as the finest morsel, as can be seen from the picturesque maxim *alʿim akhā-ka min kuhbat al-arnab* "feed your brother with hare's kidneys", which meant using the tenderest words to console a friend in difficulty.

Al-Djāhīz draws attention to the double benefit which the hare provides. Apart from its highly desirable flesh, its fine warm pelt also has a commercial value in the fur trade [see FARW] and the textile industry. An anonymous satirical line of verse (*Hayawān*, vi, 360) alludes to the trade in these terms: "When gentle folk move (among them), it is to see them touching hare skins with their hands wide open". The sentence expresses the scorn which has always attached to rabbit skin dealers. Rabbit skin is not distinguished from hare skin in the making of fabrics called *muʿarnab/murnab* and certain felts. The fur is also used to line gloves and slippers and to trim winter bonnets. It is not inconceivable that they were also used as counterfeit furs, which would normally be more highly priced, but the secrets of dyeing and other treatments were known only to the tricksters. The colour of the fur can vary from light brown almost to blonde according to the hare's habitat, and certain beige materials are called *mamabānī* "hare coloured"; conversely, in popular French the hare is known as "capuchin" because of the brown habit worn by the monks of that order. The hare's tail is black on top and immaculately white underneath; it is conspicuous even from a distance because the tuft is always erect. The Saharans have a name (*abū nawwāra*, "the one with the flower" which is used for the hare as well as for the fox.

As Islam expanded westwards to Spain and north-eastwards to the Indus, Arabs were introduced to a second leporid, the rabbit (*Oryctolagus cuniculus*), both wild and domestic. Since there was no specific term for rabbit in the *ʿarabiyya*, *arnab* was used. At first they regarded the wild rabbit simply as a small hare, and it was sometimes called "levret" (*khimik*). The duality of the term *arnab* in the East to cover hare and rabbit is a source of constant confusion, but one of the first to find difficulty with it was Ibn al-Muḳaffāʿ. When he was translating the fables of Bidpai from Pahlavi, he encountered the typically Indian episode of the elephants who were looking for water and trampled over a rabbit warren (*ard li ʿl-ʿarānib*), crushing the inhabitants in their burrows (*djnh*, pl. *adjhār*, *adjhira*, *djahara*), but the

clever rabbit Fayrūz (= Felix) became their spokesman and drove away the elephants by a trick (see *Kātila wa-Dimna*, Cairo 1931, 207-9). This story could not possibly be concerned with hares, for they do not live in colonies and they do not tunnel underground. Once the domestic rabbit was being bred on a large scale, it became necessary to add epithets to *arnab* to make the word more specific; *arnab barriyya* or *wahshīyya* was used for the hare, and *arnab ahliyya* or *dāḡīna* or *bal-adiyya* for the domestic rabbit, but the wild rabbit hardly had any specific name. In the Muslim West the same confusion did not arise, because in Spain as well as in the Maghrib the wild and domestic rabbit kept its original Latin name *cuniculus* in Arabised form (compare Fr. *conil* or *conin*, Provençal *counièu*, Sp. *conejo*, Port. *coelho*, It. *coniglio*, Eng. *cony*, Ger. *Kaninchen*, Swed. *kouin*). The Hispano-Arabic names *kunīya/kunīya*, *kullīn*, *kulaḡn* are still found in the Maghrib as *kanīn/ganīn* (sing. -a, pl. -āt and *knāyer/gnāyer*), *kaḡīn* (pl. *klāyer*), *kūnīn/gūnīn*, *ganūn* and Kabyle *agunīn* (pl. *igunīnen*). Besides *arnab*, Hispanic languages use *labbay* (pl. -āt), ultimately derived from Ibero-Roman *lapparo* (from *leporis*, Sp. *liebre*, Catalan *lèbre*, Prov. *lèbre*, Fr. *lièvre/lapereau/lapin*). As for Tunisia, Ibn Sa'īd (in al-Makkarī, *Analectes*, i, 122) notes that the practice of raising rabbits for fur was introduced there from Spain in the 7th/13th century; the wild rabbit is to be found only on some coastal islets, but it is common in Algeria (*cuniculus algirus*) and in northern Morocco.

According to Qur'ānic law, the flesh of a hare which has had its throat cut ritually may be consumed; the doctors of law agree unanimously about this, for the hare is a product of hunting and the animal is herbivorous and not carnivorous. It is true that some *ḥadīths* suggest that the Prophet Muḥammad abstained from eating hare, but no-one accepts this as a formal prohibition [but see ḤĀYAWAN concerning the Rāfiḏīs]. This permission extended *ipso facto* also to the rabbit when the animal was introduced to Muslims. In al-Andalus, the rabbit was highly prized and the only restriction imposed on it was that it should not be sold around the Great Mosque. Instead, a place was chosen by the *muhtasib* and there they had to be offered for sale properly slaughtered and skinned so that the meat could be seen to be fresh (see Ibn 'Abdūn-Lévi-Provençal, *Séville musulmane au début du XII<sup>e</sup> siècle*, Paris 1947, 95-6).

In pre-Islamic times the Arabs attached great power to the hare's foot as a talisman (*ka'b al-arnab*). It was considered to be a protection against all evil spells, and mothers would affix one of their children to preserve them from the evil eye [see 'AVN]. Every man who went into a strange village would equip himself with one to protect him from evil spells, which were always to be feared in unknown territory.

In Greek medicine a number of specific virtues were accorded to particular organs of the hare. The flesh was thought to have laxative and aphrodisiac properties. Later Arab medicine confirmed the views of Hippocrates and Galen on this subject, but added some new empirical prescriptions. Perhaps the most important parts were the brain and the gastric juices (*infaha*); the brain was the best remedy for trembling and senility, and it could be applied to an infant's gums to suppress the pain in teething, but if it was mixed with camphor and drunk it was thought to be an infallible love philtre. The gastric juices and stomach tissue were mixed into a potion

with a vinegar base and used as an antidote for all kinds of poison. It is interesting that modern science, whether by chance or not, knows no proven remedy which has any real chance of fighting the poison of the phalloidine (death's cap) fungus other than the absorption of a mixture of minced brains and stomachs of leporids. Perhaps after all, Arab empirical medicine was not just pure fancy. Dried and powdered hare's blood had recognised healing qualities for sores and wounds and helped to extract foreign bodies like splinters and thorns; it was also used to treat arrow wounds. In surgery, leporid hair was used instead of cotton wool as an absorbent tampon and as a cap for ruptured veins and arteries.

Since Sāsānid times in Iran, hares and rabbits have held a position of not negligible importance in the field of Muslim art. They figure either as a decorative motif incorporated into a hunting scene or are themselves the main theme of inspiration. Besides the mass of Persian miniatures, probably the most typical representations of leporids are in illustrations of the incident mentioned above, where the wily Fayrūz harangues the king of the elephants; it is found in Syrian manuscripts of the 8th/14th century of *Kātila wa-Dimna* (Paris B.N., ms. Ar. 3467, fol. 70, and Oxford Bodl. Libr., Pococke 400, fol. 99). Iranian ceramics, which also inspired those of Fāṭimid Egypt, frequently incorporate the motif of "the hare". There is a glazed ewer from Gurgān (6th/12th century, Paris Mus. Arts Déc.) which is decorated on its bulged-out sides with a frieze of hares chasing each other in an endless circle. Another example is the remarkable glazed Fāṭimid cup of the 5th/11th century (Paris Louvre, coll. F. Sarre), with its white base decorated with a beautiful hare strolling among the flora, symbolised by the stylised Kūfic inscription on its margin. Persian silks and carpets from every period, but especially from that of the Ṣafawid dynasty (10th/16th century), assert their inborn taste for nature. Animals are portrayed as living in an earthly paradise, with hares and gazelles gambolling among their carnivorous enemies, and there are hunting scenes commemorating famous slaughters by battues, of which the Chosroes were so fond. All these interpretations have been carefully represented in bronze, copper and ivory, and here also hares and gazelles have their proper place. The Fāṭimid goldsmiths in Egypt, following their Persian predecessors, were skilled in portraying animals and birds in metal, even on commonplace objects, as is shown by the famous "hare on the alert" bronze aquamanile. This is the proud possession of the Museum of Brussels (coll. Stoclet), and naturalists are amazed at its realism. The same Persian animal themes are found on carved ivory caskets (pyxes) from Egypt through Sicily to Muslim Spain, and in Mesopotamia they are even found on the stone of lintels and door cases in Artuḡid art (6th/12th century).

In zoology, the name *arnab bahrī*, translated from the Latin *lepus marinus*, "sea hare", has been given to *aphysia depilans*, a nudibranch mollusc of the order *opisthobranchia*. It is found widely in the sea, and ancient man treated it with a profound disgust as much for its hideous appearance (it looks like a slug with a hare's head) as for the nauseating violet secretion which it emits in self-defence and which was thought to be a deadly poison (see al-Damirī, *op. cit.*, i, 23).

Finally, in astronomy *al-arnab* "Alarnab" is the Hare constellation found beneath the left foot of Orion, the legendary hunter. The first star of the

constellation is called "Arneb" ( $\alpha$  *Leporis*, mag. 2.7; see A. Benhamouda, *Les noms arabes des étoiles*, in *AIEO*, Algiers [1951], 179-80).

(F. VIRÉ)

**ARMOUR** [see SILĀH].

**ĀT** [see FANN].

**ĀS**, Arabic for the myrtle, *Myrtus communis* L. (Myrtaceae), the well-known fragrant, evergreen shrub, growing to over a man's height. The term, derived from Akkadian *āsu* came into Arabic through Aramaic *āsā*; the Greek term μύρτιν (μύρτος) exists also as *masīnī* (and variants). Much material has been collected by I. Löw (*Die Flora der Juden*, ii, 257-74), among which are many, more or less locally-defined synonyms. Occasionally, myrtle is mentioned in the *ḥadīth* (Dārimī, see Wensinck, *Concordance*, i, 132b), by the Arab botanists and in the verses quoted by them (Dīnawarī, *K. al-Nabāt*, ed. B. Lewin, Uppsala-Wiesbaden 1953, 25 f.; Aṣma'ī, *K. al-Nabāt*, ed. al-Ghunaym, Cairo 1392/1972, 32), but the plant was mainly used as medicine. Like Dioscorides, the Arabs knew the black garden-myrtle (*al-ās al-bustānī al-aswad*) and the white field-myrtle (*al-ās al-barī al-abyaḍ*), the leaves, blossoms and berries of which occasioned positive therapeutic results. The scent of the myrtle mitigates headaches and invigorates the heart. The extract is suitable for hipbaths which cure ulcers of the fundament and uterus; as a beverage it calms down the spitting of blood and cures coughs and diarrhoea. Dried and pulverished leaves of the myrtle remove putrescent boils and facilitate the growing of new flesh. Rāzī, otherwise critical and not given to superstition, curiously enough declares in his *Kitāb al-Kḥawāṣṣ* (preserved in Latin; of the Arabic text, only quotations are known) that a man, suffering from a boil in the inguinal region, may find mitigation by putting the stalk of a myrtle around his finger by way of a ring. The manifold symbolical meaning attributed to the myrtle on festive occasions by the Israelites, Greeks and Romans seems to have remained unknown to Islam; according to an Arab legend, it was brought from Paradise by Adam (Löw, *op. cit.*, 269).

**AL-ASAD** [see MINTAKAT AL-BURŪD].

**ASAD B. MŪSĀ B. IBRĀHĪM B. 'ABD AL-MALIK B. MARWĀN B. AL-ḤAKAM AL-UMAWĪ**, Arab traditionalist and author of ascetic writings. He was born in Baṣra (Ibn Ḥadjjar, *Tahḍīb*, i, 260), and died in Egypt in 212/827. He made his reputation as a *ḥāfiẓ*, *rāwī* or *akhḫbārī*, had disciples and was nicknamed *Asas al-Sunna*. He exchanged *ḥadīth*s with the majority of the Egyptians who are known to us from this period, in particular with 'Abd Allāh b. Lahī'a (97-174/715-90) and al-Layṭh b. Sa'd (94-175/713-91), a great master and one of the richest men in Egypt, into whose house he entered in disguise, following his flight from the persecution of the Umayyad family to which he himself belonged (Abū Nu'aym, *Hilya*, vii, 321 ff.), but also with 'Abd Allāh b. al-Mubārak (118-81/736-97), an author of ascetic writings who, among his numerous masters, exercised the most profound influence on him, although the texts that are available to us show very few signs of this influence *expressis verbis*. Opinion is divided among Arab-Islamic writers as to the value of Asad's activity as a traditionalist; while al-Bukhārī calls attention to the reputation of his *ḥadīth*, al-Nasā'ī refutes this statement to some extent in declaring that he is "worthy of belief, but he would have done better not to write" (Dhahabī, *Huffāẓ*; Ibn Ḥadjjar, *Tahḍīb*). Since then, the tendency has been to attack him vociferously, pointing out the exaggerated side of his traditions, as is indicated by Ibn Khaldūn's resumé on this subject (*Muḳadimma*, 564-6). This distrust, like that shown towards the work of Ibn Ishāq and many authors of the early period of Islam, is explained, not so much by the fact that some of his traditions go beyond the serious framework accepted by Muslim theological good sense, as by the fact that Ibn Mūsā was under no obligation to masters recognised as such by the major schools of *ḥadīth*. On this basis, the author's fate was no better than that of his master Ibn Lahī'a, whose material has been taken into consideration and propagated by other means, and especially under other names (see R.G. Khoury, *Asad*, 28).

Asad is known primarily as transmitter of the *Kitāb al-Tiḍjān* of Ibn Hishām, more particularly of the part that is associated with Ibn Munabbih (Abbott, *Studies*, i, 12; R.G. Khoury, *Wahb b. Munabbih*, 286 ff., esp. 292). Asad's interest in the Yemenī heritage is no doubt explained by the in-

fluence of the policies of Mu'āwīya on all his descendants, but also by the author's wish to borrow material for his own writings from a *kāṣṣ* as famous as Wāḥb. As a transmitter, he is also encountered in a number of historical and ascetic books, like the *Futūḥ Miṣr* of Ibn 'Abd al-Ḥakam (see *Bibl.*), where there is a large number of traditions linked with his name; these are, like the majority of those attributed to his Egyptian masters, of an ascetic and pious nature. Other works are further attributed to him: *Musnad Asad b. Mūsā* (Ibn Khayr, *Fihrist*, 141-2; Ibn al-Farādī); the four versions mentioned by the *isnāds* of Ibn Khayr were the work of one Naṣr b. Marzūk. Not one of them seems to have appeared in book form. Then there is a treatise entitled *Risālat Asad b. Mūsā ilā Asad b. al-Furāt* [142-213/759-828] *fī luṣūm al-sunna wa 'l-taḥdīr min al-bidā'* (Ibn Khayr, 299) (see R. Sayid, who seems to have discovered a manuscript of it). Ibn Khayr (270) also mentions *Faḍā'il al-tābi'īn*, a book that he attributes to Sa'īd, son of Asad, which Ibn Ḥajjar had seen in two volumes and which apparently contained, according to the last-named, a great deal of information afforded by the father (Asad) and his circle (Ibn Ḥajjar, *ibid.*). Finally, there is the *Kitāb al-Zuhd wa 'l-ibāda wa 'l-wara'* (Ibn Khayr, 270; Ḥādjījī Khalifa, v, 91); this book seems to have been the author's most important work, and according to Ibn Khayr comprised several books (*kutub*) corresponding to the three parts of the title which he supplies. Unfortunately, only two copies of the *Kitāb al-Zuhd* are available to us, one of them preserved in Berlin (Sprenger, 495) the other in Damascus (Zahiriyya, *madj.* 100/1). The first was edited by Leszynsky who, in the guise of an introduction, devoted a study to the traditions of the book and compared them with their parallels in Judaism and Christianity, but was not at all concerned with the author himself. The author of the present article has re-edited this copy, also taking account of the second, and adding to it all the "certificates of reading" in both of them, with a study of Asad (see *Bibl.*). It will be appreciated that the word *kitāb* is used here in the most flexible sense, seeing that one of the two copies begins with the word *bāb*, which tends to give to all the *kutub* cited by Ibn Khayr on this subject the dimensions of a single work. This book perhaps best illustrates the influence of the author and his importance in the sphere of ascetic and pious literature in general from the formative period of Islam, for it is the second work of its kind, after the *Kitāb al-Zuhd wa 'l-rak'īk* of 'Abd Allāh b. al-Mubārak, which provided a model for it, both in content and in title, although Asad does not acknowledge this. It is made up of a collection of traditions with eschatological questions, while the other lost portions, corresponding to the *Kutub al-'Ibāda wa 'l-wara'* mentioned by the bibliographer must have contained the remainder of the themes encountered in the work of Ibn al-Mubārak; piety, ascetic meditation, etc. (see Khoury, *Asad*, 39 ff.; Abbott, *Studies*, ii, 237 ff.).

(R.G. KHOURY)

—AL-AŞAMM, ABŪ BAKR 'ABD AL-RAḤMĀN B. KAYSĀN, died 200/816 or 201/817, early theologian and *mufasssīr*, commonly counted among the Mu'tazilīs, although always treated as an outsider by the Mu'tazilī *ṭabaqāt*. In his youth he served, together with other *mutakallimīn* like Mu'ammār, Ḥaḥṣ al-Fard and Abū Ṣhamīr al-Hanaḥī, as *adlats* (*ghulām*) to Ma'mar Abu 'l-Aṣḥ'ath, a Baṣran physician with certain "philosophical" leanings (cf. *Fihrist*, ed. Flügel, 100, ll. 28 ff.). In the later days of Dirār b. 'Amr [*q.v.*], i.e. in the last quarter of the 2nd century A.H., he created in Baṣra a circle of his own. Abu 'l-Hudhayl did not like him; he called him, with a Persian expression, *khārbān*, the "donkey-driver", obviously alluding to his low origin (cf. Malaḥī, *Taḥbīh*, ed. Dederling, 31, ll. 12 ff.). But Abu 'l-Hudhayl became influential only when he had been called to Baghdād by al-Ma'mūn after 204/819, at a rather advanced age; in Baṣra al-Aṣamm seems to have enjoyed the higher prestige (cf. Kādī 'Abd al-Djabbār, *Faḍl al-'iḥzāl*, ed. Fu'ād Sayyid, 267, ll. -5 and pu. f.). This may be due to his eventual relations with the Ibādiyya who had, at that time, not yet entirely left the town (Abū Ḥayyān al-Tawḥīdī introduces him as *ṣāḥib al-Ibādiyya* in his *Baṣā'ir*, ed. Kaylānī, ii, 825, ult. f.). But it may also be attributed to the fact that he was a prolific writer; Ibn al-Nadīm mentions 26 books, none of which is unfortunately preserved (cf. *Fihrist*, ed. Fück, in *Shafī' comm. volume*, 68, ll. 5 ff.). All of them treated of theological and juridical subjects. But he seems also to have been a poet (if the 'Abd al-Rahmān b. Kaysān mentioned by Djāḥīz, *Ḥayawān*, iv, 205, ll. 6 ff. is identical with him; cf. Goldziher, *Isl.*, vi (1916), 174, n. 2). At least he was known to be eloquent; al-Djubbārī still acknowledged him as such (cf. *Faḍl al-'iḥzāl*, 267, l. -6 and 268, l. 3; also the aphorism mentioned in Djāḥīz, *Bayān*, i, 80, ll. 1 f.). With the authority of an expert, he passed a severe judgment on Ibn al-Mukaffā' (cf. Djāḥīz, *Dhamm akhlāk al-kutāb*, in *Rasā'il*, ed. 'Abd al-Salām Muḥammad Ḥārūn, ii, 195, ll. 7 ff.).

His solidarity with certain Mu'tazilī ideas is attested by his repeated polemics against the pre-destinarians (al-Muḍjibira; cf. titles nos. 5 and 14 in the *Fihrist*, also no. 11) and by his reflections about tawḥīd (cf. title no. 3). But he did not accept the tenet of *al-manzila bayn al-manzilatayn* (cf. Aṣḥ'arī, *Maḳālāt al-Islāmiyyīn*, 269, ult. ff.); he believed that the *fāsiḳ* remains a believer because of his monotheistic creed and because of the good deeds he has performed (*ibid.*, 270, ll. 9 ff.). The

*fāsiḳ* will nevertheless be condemned to eternal punishment; for this al-Aşamm did not base himself, like his Mu'tazilī colleagues, on Kur'ānic evidence (which refers to unbelievers), but on the unanimous judgment of the community (*ibid.*, 278, ll. 3 ff.; Ibn Ḥazm, *Fişal*, iv, 45, ll. 10 ff. seems to be a wrong generalisation). His ideas on the principle of *al-amr bi 'l-ma'rūf wa 'l-nahy 'an al-munkar* (cf. *Fihrist*, title no. 9) equally did not entirely correspond to those of other Mu'tazilīs (cf. *Ash'arī*, 278, ll. 7 ff.); he based himself on a peculiar exegesis of sūra III, 104 (cf. Ibn Ḥazm, *Fişal*, iv, 171, ll. 10 ff.). He wrote about the createdness of the Qur'ān at a moment when other Mu'tazilīs did not yet touch the problem (cf. title no. 2); a fierce opponent of this doctrine, Yazīd b. Hārūn (died 205 or 206/820-822), saw him here as in line with Bishr al-Marīsī, who was younger than he and whom he may have influenced (cf. Bukhārī, *Khalk al-af'āl*, in Nashshār-Talībī, *Ākā'id al-salaf*, 129, ll. 16 ff.). It was perhaps for this reason that Thumāma b. Ashras recommended him to al-Ma'mūn when the caliph was still in Marw (cf. *Fihrist*, ed. Fück, 67, ll. -4 ff.). He clashed with Hishām b. al-Ḥakam, certainly because of his strongly anti-Shrī feelings (cf. *Fadl al-'itizāl*, 267, apu. f. and title no. 13), but also because of Hishām's "anthropomorphism" (cf. title no. 10), and he attacked the *zanā-dīka* and the Dahriyya, probably in correspondence with the policy pursued by al-Mahdī (158-69/775-85) and his successors (cf. titles no. 24 and 15).

The theological doctrine most strongly connected with Aşamm's name was his denial of the accidents (*ar'ād*), which put him in opposition to Ḍirār b. 'Amr [*q.v.*] and may have brought him into a certain connection with Hishām b. al-Ḥakam [*q.v.*; cf. Tawḥīdī, *Bayā'ir*, ii, 825, ult. ff.]. He seems to have proceeded from a sensualistic basis: only bodies are visible; qualities appearing on them cannot subsist by themselves and can therefore not be ascribed a separate existence (*ibid.*, also *Ash'arī*, *Maḳālāt*, 335, ll. 12 ff.). In comparison with Ḍirār's ideas, this was perhaps not so much a difference in substance but in explanation and in the conceptual apparatus. Like Ḍirār, he was led to deny a separate existence of the soul (cf. *Ash'arī*, *Maḳālāt*, 335, ll. 12 ff., and 331, ll. 6 ff.; Ibn Ḥazm, *Fişal*, iv, 70, l. 4 and 74, ll. 4 f.); like him he seems to have rejected the idea of *kumūn* (*q.v.*; cf. *Ash'arī*, 328, ll. 14 f.). In any case, he was not an atomist; this is why he was attacked for his doctrine by Abu 'l-Hudhayl, who tried to show that juridical obligations are normally not concerned with man as a whole, but with one of his accidents (e.g. his prostration in prayer, or his being flogged in case of adultery; cf. *Fadl al-'itizāl*, 262, apu. ff.). Hishām al-Fuwaṭī, a disciple of Abu 'l-Hudhayl, seems to have been mainly shocked by the ensuing denial of movement (which, understood in a very broad sense, was considered as the only accident by al-Nazzām; cf. the title of Fuwaṭī's book in *Fihrist*, ed. Fück, 69, l. 1). Many opponents and, influenced by their polemics, the later heresiographers, tended to understand Aşamm's denial of the accidental character of qualities as a denial of qualities as such (cf. *Ash'arī*, 343, ll. 12 ff.; Baghdādī, *Fark*, 96, ll. 8 f./116, ll. 3 f.; *idem*, *Uşūl al-dīn* 7, ll. 14 ff. etc.). He consequently also regarded the Qur'ān as a body, and may have derived its createdness from this; God is the only essence which is not a body. Under this aspect, the doctrine seems to have been taken over by Dja'far b. Mubashshir (*q.v.*; cf. *Ash'arī*, 588, ll. 4 ff.).

In addition to these ideas, al-Aşamm is frequently mentioned for his unusual views concerning political theory. Government (*imāma*) was according to him not an obligatory attribute of human society; the ideal community is the community of the righteous which can do without a ruler (cf. Baghdādī, *Uşūl al-dīn*, 272, l. 10 and 271, ll. 14 f.; many later sources like Māwardī, *al-Aḥkām al-sultāniyya*, ed. Enger, 3, l. 7; Ghazzālī, *Fadā'ih al-Bāṭiniyya*, ed. Badawī, 170, ll. -5 ff.; Rāzī, *al-Muḥaṣṣal*, 176, ll. 9 f. etc.). Government is therefore not prescribed by reason nor by revelation, but is a mere practical measure against human iniquity. Theoretically speaking, universal knowledge of the Qur'ān should be sufficient in order to keep a society in order (cf. Pazdawī, *Uşūl al-dīn*, ed. Linss, 186, ll. 11 ff.); but the reality being imperfect, the Muslims always decided to choose somebody as their *imām*. This can only be done by consensus (cf. *Ash'arī*, 460, ll. 6 f.; Baghdādī, *Fark*, 150, ll. 4 f./164, ll. 1 ff.; etc.), and once somebody has been agreed upon, the election is irreversible, even if a more appropriate (*afdāl*) candidate presents himself afterwards (cf. al-Nāshī' al-akbar, *Uşūl al-nihāl*, ed. van Ess, § 99). Armed resistance against a ruler is only allowed if this person has seized power in an unjust way and if the leader of the rebellion has been agreed upon by consensus (cf. *Ash'arī*, 451, ll. 12 f.).

Applied to the historical reality of the past, this meant that al-Aşamm accepted Abū Bakr and 'Umar as the most appropriate candidates in the moment of their election. After 'Umar's death, the *afdāl* was 'Abd al-Rahmān b. 'Awf, who demonstrated his virtue by renouncing the caliphate for himself; 'Uthmān was only second in rank after him (cf. Nāshī', *Uşūl al-nihāl*, § 100). In contrast to him, 'Alī was not elected by a *shūrā*, i.e. by consensus; his government was therefore unrighteous (*ibid.*, § 101). This does not mean that all his measurements were unlawful *per se*; in the case of his war against Ṭalḥa and Zubayr and of his establishing the arbitration at Siffin, an impartial assessment would have to proceed from his intentions and those of his opponents, whether he acted out of mere despotism or in order to put things right again. But as these intentions are no longer known, we have to suspend judgment. It is clear, however, that Ṭalḥa and Zubayr had a certain superiority over 'Alī (perhaps because they sought revenge for 'Uthmān) and that Abū Mūsā al-Ash'arī was right when he deposed 'Alī in order to give his community a single ruler (cf. al-Mufid, *K. al-Djama'l*, Naḍjaf 1382/1963, 26, ll. 16 ff., tr. M. Rouhani, *La victoire de Bassora*, Paris 1974, 17, and, shorter, *Ash'arī*, 457, ll. 13 ff.; *ibid.*, 453, ll. 13 ff.). Mu'āwiya was right in his resistance against 'Alī, because he had been legally appointed governor of Syria by 'Umar and confirmed in his office by 'Uthmān; he would have only been obliged to hand over Syria to a ruler who had been elected by consensus (cf. Nāshī', § 102).

Thus far Aşamm's theory could be learnt from his books, mainly his *K. al-Imāma* (cf. *Fihrist*, title no. 7) which, for understandable reasons, encountered opposition especially from the Shrīs and from the theologians sympathetic to them: from Bishr b. al-Mu'tamir (cf. *Fihrist*, ed. Flügel, 162, l. 21), probably from the early Shrī Faḍl b. Shādhān (died 260/874; cf. Ṭūsī, *Fihrist*, 150, ll. 10 f.) and even much later from the *shaykh* al-Mufid (died 413/1022), who also seems to quote from the original in his *K. al-Djama'l*, 26, ll. 16 ff. Al-Nāshī' also preserves, however, an oral tradition from Aşamm's closest adherents saying

that there may be several rulers at once in the Muslim community, provided that they are legally elected and co-ordinate their efforts in righteousness. He based this theory on the fact that the Prophet appointed governors for different regions and that, after his death, his prerogative had been transferred to the population of these regions, who may decide according to their consensus. For his own time, al-Aşamm deemed this even to be the better solution: a condominium, with its smaller political entities, would allow closer contact between the people and the ruler (cf. §§ 103 f.). As to the origin of these ideas, Goldziher suggested the influence of the Pseudo-Aristotelian Περὶ βασιλείας which may have been translated thus early (cf. *Isl.*, vi (1916), 176 f. and Cheikho's edition of the text in *Machriq*, x (1907), 311 ff.; for an analysis of the text itself S. M. Stern, *Aristotle on the World State*, Oxford 1968, passim, M. Grignaschi in *BEO*, xix (1965-6), 14 and M. Manzalaoui in *Oriens*, xxiii-xxiv (1974), 202). But it seems easier to assume that they were stimulated by discussions in Iḥādī circles in Baṣra (cf. *ET*<sup>2</sup>, III, 658a, and Bosworth, *Sistān under the Arabs*, 88).

Aşamm's high appreciation of the consensus led him to the theory that the 'ulamā', if they are sufficient in number not to agree on a lie, are able to issue laws (cf. *Ash'arī* 467, l. 6 f.). For their *idjtiḥād* is not a matter of mere probability; every true judgment is based upon an irrefutable proof. Among *muḥtahiḍūn* of different opinions, therefore, only one is right (cf. Abu 'l-Ḥusayn al-Baṣrī, *al-Mu'tamad*, ed. Hamidullah, 949, ll. 10 ff.). In principle, there is no difference between juridical and dogmatical verities in this respect (cf. Kādī 'Abd al-Djabbār, *al-Mughnī*, xvii, 369, ll. 17 ff.); but we may distinguish between errors which lead to unbelief (about God and prophecy), other ones which lead only to sinfulness (*fisk*); about the *ru'ya* or about *khalk al-Kur'an*, e.g.) and those which result in the mere imputation of a fault (*ta'thīm*) as in juridical questions (cf. Ghazālī, *Mustasfā*, ii, 107, ll. -6 ff.; Shīrāzī, *Lumā'*, Cairo, Ṣubayḥ, n.d., 76, ll. 17 ff.; Māwardī, *Adab al-kādī*, Baghdād 1391/1971, i, 532 no. 1234; Āmidī, *Ihkām*, iv, 244, ll. 7 ff.). Because of this rational criterion, even a sinful *kādī* may pass righteous judgments (cf. Māwardī, *ibid.*, i, 634, no. 1579). On the other hand, the *āḥād*, isolated traditions (which, at that time, must have comprised the majority of *ḥadīth* in the view of the Mu'tazila), cannot claim any value as criteria (*ibid.*, i, 376, no. 787). In these ideas, which seem to have been characteristic for Baṣra (cf. Mas'ūdī, *Tanbih*, 356, ll. 10 ff.), al-Aşamm was followed by Bishr al-Marīsī [*q.v.*] and Abū Ishāq Ibrāhīm b. Ismā'il Ibn 'Ulāyya, who had been his *adlatus gḥulām* and who founded a quite influential juridical school in Egypt (he died, like al-Marīsī, in 218/832, cf. *Ta'rikh Baghdād*, vi, 20 ff. no. 3054, etc.; there were adherents of his in Rāmhurmuz even in the 4th/10th century, cf. *Faḍl al-ʿiṭzāl*, 316, l. 3).

A rational trend appears also to have permeated al-Aşamm's *Tafsīr*. He defines the *muḥkamāt* as those verses, the veracity of which cannot be denied by any opponent as, e.g., all statements about the past; the *mutashābihāt* are verses which tell something about the future and which reveal their truth only after reflection as, e.g., statements about the Last Judgment (cf. *Ash'arī*, 223, ll. 3 ff.; Baghdādī, *Uṣūl al-dīn*, 222, ll. 4 ff.; Rāzī, *Mafāṭīḥ al-ghayb*, Cairo n.d., vii, 182, ll. -5 ff.). There are thus no verses which remain permanently obscure to human

reason. Al-Aşamm seems to have concentrated on the meaning of entire passages (*ma'nā*); he did not deal with philological problems. The verse containing the problematic word *abb* (sūra LXXX, 31) is counted by him among the *muḥkamāt*. Nazzām criticised his arbitrariness and did not distinguish him from non-Mu'tazilī commentators like Kalbī or Muḳātil b. Sulaymān (cf. Djāḥiẓ, *Ḥayawān*, i, 343, ll. 5 ff.; translated by Goldziher, *Richtungen der Koranauslegung*, 111 f.). But he was quoted exclusively by Djubbārī in his lost *Tafsīr* (although perhaps only for one passage; cf. *Faḍl al-ʿiṭzāl*, 268, ll. 1 f.) and later on by Māturīdī in his *Ta'wīlāt ahl al-sunna* (cf. i, 59, ll. 4 ff.; 95, ll. 8 f.; 103, ll. 1 ff.), by Aḥmad b. Muḥammad al-Tha'labī al-Nīshābūrī (died 427/1035) in his *Kashf wa 'l-bayān* (cf. *GAS*, i, 615), by Hākīm al-Djushamī (died 494/1101) in his voluminous *Tafsīr*, and by Fakhr al-Dīn al-Rāzī in his *Mafāṭīḥ al-ghayb* (cf. iii, 230, ult. ff.; ix, 160, ll. 13 ff. etc.). Djāḥiẓ uses the work sometimes (cf. *Ḥayawān*, iv, 73, ll. -4 ff.; also 205, ll. 6 ff.?). and Ṭabarī may have known it, although he does not mention al-Aşamm by name. But it was interesting mainly to theologically-minded commentators and accessible obviously only in the East. Whether the ms. Kılıç Ali 53/8 really contains the text (cf. *GAL*, S II, 984 no. 7) has still to be checked.

This Baṣran Mu'tazilī should not be confounded with another Mu'tazilī by the name of Abū Bakr al-Aşamm who lived in Egypt and who initiated the *miḥna* there at the instigation of Ibn Abī Duwād. He was called Naṣr b. Abī Layḥ and was at least one generation younger than 'Abd al-Raḥmān b. Kaysān (cf. Kādī 'Iyād, *Tartīb al-madārik*, Beirut 1387/1967, i, 516, ll. -5 ff.; 527, ll. 6 ff.; 564, pu. ff. etc.; cf. the index).

*Bibliography*: Given in the article, but cf. also amongst sources: *Ash'arī*, *Maḳālāt*, 242, l. 2; 456, ll. 9 ff.; 458, ll. 3 ff.; 564, ll. 3 f.; Nawbakhtī, *Firaḳ al-Shī'a*, 14, ll. 1 ff. = *Ḳummī*, *Maḳālāt*, 14, ll. 3 f.; Ibn Baṭṭa, *Iḥāna*, ed. ASĀṬĪR AL-AWWALĪN "stories of the ancients," a phrase occurring nine times in the *Kur'an* (VI, 25/25, VIII, 31/31, XVI, 24/26, XXIII, 83/85, XXV, 5/6, XXVII, 68/70, XLVI, 17/16, LXVIII, 15/15, and LXXXIII, 13/13; see also *ET*,

IV, 980b, s.v. **KHALK**) and there "put exclusively in the mouth of unbelievers... expressing themselves against the Qur'anic revelation or, more specifically, against the doctrine of the Resurrection, by referring to the *asāfir* of the former (generations) when similar, and in their opinion silly, things could already be found without being accepted" (R. Paret, *Der Koran, Kommentar*, Stuttgart 1971, 137). The commentators (e.g. al-Ṭabarī, to VIII, 31) connected its use at one point with the opponent of the Prophet, al-Naḍr b. al-Hārith. Travelling as a merchant to Fārs or al-Hīra, he saw Christians praying and reading the Gospels and, upon returning to Mecca, compared their activities to the Prophet's allegedly similar worshipping. More interestingly, another version (Ibn Hiṣhām, 191 f.) says that al-Naḍr compared the Prophet's story-telling unfavourably with "the stories of the Persian kings and the stories of Rostum and Isfandiār" he had learned in al-Hīra.

The fact that, with the exception of XXV, 5/6, all occurrences are at the ends of verses suggests a set expression that had been long in use. The appearance of *asāfir* in a verse by the *mukhaddam* poet 'Abd Allāh b. al-Zi'barā, although attribution and date are uncertain, seems to support the assumption of its currency in Mecca in pre-Islamic times (cf. J. Horowitz, *Korānische Untersuchungen*, Berlin-Leipzig 1926, 70; A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 56 f.; P. Minganti, in *RSO*, xxxviii, (1963), 326 f., 351). With its general meaning hardly in doubt, most of the discussion has concerned the grammatical form and, more generally, the derivation of the word. It was declared a *plurale tantum*, or else entirely hypothetical singular forms were reconstructed (Lane, 1358b). Its widely accepted derivation from *s-t-r* led to meanings such as "writings, written (accounts, stories)." It was glossed "lying stories," or *asāḍīr* "rhymed prose pieces," or, frequently, *turhāt* "obscure and confused statements." It was explained as reflecting *s-t-r* 'alā in the sense of "making up embellished stories for" (Ibn al-Aṭhār, *al-Nihāya*, s. rad.). Later Muslims (as, strangely, also a modern scholar, D. Künstlinger, in *OLZ*, xxxix (1936), 482), imbued with respect for the cultural achievements of the "ancients," would ask themselves why the phrase should have been used in a negative sense when "the ancients wrote things containing knowledge and wisdom which it was not blame-worthy to state", and give the answer that use of it was meant to criticise the Qur'ān as unrevealed or as difficult and obscure (Ibn al-Djāwzī, *Ẓād al-masīr*, Damascus 1384-8, iii, 20, to VI, 25).

Orientalists, beginning, it seems, with Golius, have suggested a derivation from Greek *historia*; see, e.g., the references in T. Nöldeke and F. Schwally, *Geschichte des Qurāns*, i, 16; Horowitz; Jeffery; R. Köbert, in *Orientalia*, N.S., xiv (1945), 274-6; F. Rosenthal, *A History of Muslim historiography*, Leiden 1968, 28 f.; Paret, *op. cit.*) This is philologically possible and would make good sense. However, neither this etymology nor another connecting the word with Syriac *sh-t-r* "stupidities" (Künstlinger) can be supported by proof, nor is there any compelling evidence for a South Arabian origin. For the time being, its connection with Arabic *s-t-r* "to write" (possibly supported also by Qur'ān, XXV, 5/6) appears to have the best claim to being correct.

*Bibliography*: given in the article.

(F. ROSENTHAL)

**ĀSHĪK WEYSEL**, modern Turkish ĀŞIK WEYSEL (1894-1973), Turkish folk poet and the last great representative of the tradition of *Sāz shā'irleri* [see

**KARADJAĞOHLAN**]. He was born in Sivrialan, a village near **Şarkışla** of Sivas province, the son of a farmer, **Kara Ahmed**, whose family name of **Şhātiroğlu** Weyssel rarely used. Loss of sight in both his eyes at the age of seven followed smallpox. At ten he began to chant poetry accompanied by his instrument the *sāz* [q.v.]. An *āshik* of his own village and other wandering folk poets whom he came across and who discovered his talent, taught him poetry and music and encouraged him to continue. In 1931, in a traditional gathering of folk poets at Sivas, he was hailed as a prominent *āshik*. In 1933 he joined, as a volunteer, the 10th Anniversary celebrations of the Turkish Republic in Ankara, to which he went wandering on foot during several months, accompanied by a friend. He went all over Anatolia reciting his poems and playing his *sāz*. He performed many times on Ankara and Istanbul radios. For a short while (1942-4) he taught folk songs in the Village Institutes [see **KÖY ENSTITÜLERİ**]. He died in his village on 21 March 1973. **Āshik** Weyssel was married and had six children. Differing from many contemporary folk poets who joined the "social protest" literature of most modern writers, **Āshik** Weyssel preferred to follow the classical tradition of folk poetry in the line of **Karadjaoghlan**, **Emrah**, **Rukhşatı** and others, and he sang of love, friendship, nostalgia, separation, life's mutability and death. He is the author of *Deyişler* (1944) and *Sazından sesler* (1950). His collected works have been edited by Ümit Yaşar Oğuzcan as *Dostlar beni hatırlasın* (1970).

*Bibliography*: Ü.Y. Oğuzcan, *Aşık Veysel, hayatı ve şiirleri*, İstanbul 1963; S.K. Karaalioglu, *Resimli Türk elebhyacıları sözlüğü*, İstanbul 1974, s.v.

(FAHİR İZ)

**ASHRAF AL-DĪN GĪLĀNĪ**, Persian journalist and poet, was born in **Rasht** in 1871. He completed his early studies in **Qazwin**, and from 1883 to 1888 was a theological student in **Nadīaf**. Returning to **Rasht**, he earned his living as a letter-writer until the Revolution of 1906, when he began the publication of *Nasīm-i Shīmāl* (a name that he also sometimes used as his *takhtālūs*). This weekly journal was suppressed after the counter-revolution of **Muḥammad 'Alī Shāh** in 1908, but the following years **Ashraf** accompanied the Constitutionalist forces on their successful occupation of **Tehran**, where he resumed publication of his journal. Although he admired **Riḍā Khān**, he abandoned public life after the latter's accession to the throne in 1925, and devoted him-self to literary pursuits. Apart from his poems, which mostly first appeared in *Nasīm-i Shīmāl*, he wrote a novel in verse and prose and works on history and philosophy. He died in poverty and ill-health in 1934.

Though **Ashraf's** poetic talent was not up to the level of some of his contemporaries, he was an influential innovator in the use of colloquial vocabulary and style. He was an ardent supporter of constitutionalism and social reform, including the emancipation of women, and a fervent patriot who often cited the example of Persia's great past. *Nasīm-i Shīmāl* was regarded as one of the best literary journals of its day.

*Bibliography*: **Ashraf's** poems were collected in *Bāgh-i Būshk*, **Tehran** 1919, and *Djild-i dawwam-i Nasīm-i Shīmāl*, **Bombay** 1927; Biographical details in: E.G. Browne, *Press and poetry of modern Persia*, **Cambridge** 1914, 182-200; M. Ishaque, *Sukhtanwanān-i Irān dar āsh-i hādīr*, i, **Calcutta** 1933, 146-70; *ibid.*, *Modern Persian poetry*, **Calcutta** 1943, passim; Sayyid **Muḥammad Bākīr**

Burkāfī, *Sukhanwarān-i nāmī-yi mu'āshir*, ii, Tehran 1951, 250-5; Muḥammad Ṣadr Hāshimī, *Tā'rikh-i ḡarā'īd wa maḡallāt-i Irān*, iv, Tehran 1953, 295-9; Bozorg Alavi, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964, 51-5.

(L.P. ELWELL-SUTTON)

**ASHTURKA**, ASTURKA, the Spanish town of Astorga, the Asturica Augusta of the Roman period, capital of the Conventus Asturum, already by then a focal point for communications (J.M. Roldán, *Iter ab Emerita Asturicam. El camino de la Plata*, Salamanca 1971), and later a halting-point on the "route of the herds" (R. Aiken, *Rutas de trashumancia en la Meseta castellana*, in *Estudios geográficos*, xxvi (1947), 192-3) and on the "road to St. James" (C.E. Dubler, *Los caminos a Compostela en la obra de Idrisi*, in *And.*, xiv (1949), 114; N. Benavides Moro, *Otro camino a Santiago por tierra leonesa*, in *Tierras de León*, v (1964). Al-'Udhri compares it with Saragossa (F. de la Granja, *La Marca Superior en la obra de al-'Udhri*, in *Estudios Edad Media Corona Aragón* (1967), 456). Astorga was another *urbs magnifica*, although Theodorich destroyed it in 456 (A. Quintana, *Astorga en el tempo de los suevos*, in *Archivos Leoneses* (1966). Al-Idrīsī says that Astorga was "a small town, surrounded by a green countryside" (E. Saavedra, *La geografía de España del Edrisi*, Madrid 1881, 67, 80; H. Mu'nis, *Tā'rikh al-ḡuḡhrāfiya wa 'l-ḡuḡhrāfiyyin fi 'l-Andalus*, Madrid 1967, 265).

Astorga was captured by Tāriḡ b. Ziyād in 95/714. In 718 there was formed to the north of it the kingdom of the Asturias, which nevertheless did not include all the territory of the Conventus Asturum (G. Fabre, *Le tissu urbain dans le N.O. de la péninsule ibérique*, in *Latomus* (1970), 337). The region was settled by Berbers, who rose against the Arabs in 123/740-1 (*Akhbār maḡmū'a*, 38, tr. 48). The Christian advance which overcame the Muslims and expelled them from the whole of Ḍjalīkiya (133/750-1) compelled them "to cross the mountains towards Asturka" (*ibid.*, 62, tr. 66). It seems definite that in this region, the Berber element has left behind an enduring ethnic imprint (= Maragatos (?); P. Guichard, *Al-Andalus. Estructura antropológica de una sociedad islámica en Occidente*, Barcelona 1976, 143 n. 5, 146). Alfonso I reconquered Astorga in 753-4, but it was not repopulated till ca. 854 (C. Sanchez Albornoz, *Despoblación y repoblación del valle del Duero*, Buenos Aires 1966, 261-2; *idem*, *Repoblación del reino asturleonés. Proceso, dinámica y proyecciones*, in *CHE*, liii-liv (1971), 236-49) or in 860 (J.M. Lacarra, *Panorama de la historia urbana en la península desde los siglos V al X*, in *Settimane . . . Spoleto*, 1958, 352). In 179/795 the town was attacked by Hishām I's general 'Abd al-Karīm b. Muḡhith (A. Fliche, *Alphonse II le Chaste et les origines de la reconquête chrétienne*, and A. de la Torre, *Las etapas de la reconquista hasta Alfonso II*, in *Estudios sobre la Monarquía asturiana*, Oviedo 1971, 115-31, 133-74). In 267/878, al-Mundhir launched an expedition against Astorga. We possess documents dating from that year proving the presence there of Mozarabes (M. Gómez Moreno, *Iglesias mozárabes*, Madrid 1919, 107-11), who played a key role in the repopulating of the town (L.C. Kofman and M.I. Carzolio, *Acerca de la demografía astur-leonesa y castellana en la Alta Edad Media*, in *CHE*, xlvii-xlviii (1968), 136-70). Under Alfonso III, Astorga, by now properly organised, was part of a defensive line with Coimbra, Leon and Amaya (Sanchez Albornoz, *Las campañas del 882 y del 883 que Alfonso III esperó en León*, in

*León y su historia*, i (1969), 169-82). The bishopric was re-established there (A. Quintana Prieto, *El obispado de Astorga en los siglos IX y X*, Astorga 1968), and its bishops played an important role in political life (L. Goñi Gaztambide, *Historia de la Bula de la Cruzada en España*, Vitoria 1958, 84-5, 155, 184, 203, 386, 521, 681, 683; H. Salvador Martínez, *El "Poema de Almería" y la épica románica*, Madrid 1975, 48-9, 399). It was attacked by al-Manṣūr Ibn Abī 'Āmir [q.v.] in 385/995. It fell into decay at the beginning of the 14th century. In the 15th century the "marquisate of Astorga" was formed there (A. Seijas Vazquez, *Chantada y el señorío de los Marqueses de Astorga*, Chantada 1966).

(M.J. VIGUERA)

**ASMĀ'** BINT 'UMAYS B. MA'D AL-KHATH'AMIYYA, a contemporary of the Prophet (d. 39/659-60). Her mother, Hind bint 'Awf b. Zubayr, called al-'Adjūz al-Djurashiyya, was famous through the illustriousness of her sons-in-law, amongst whom were included the Prophet, al-'Abbās b. 'Abd al-Muṭṭalib and Ḥamza b. 'Abd al-Muṭṭalib (Ibn Ḥabīb, *Muḡhabbar*, 91, 109), as well as of Asmā's husbands. In fact, the latter probably married in the first place Rabī'a b. Riyāḡ al-Hilālī, by whom she had three sons, Mālik, 'Abd Allāh and Abū Hubayra; but all the sources agree that she was successively the wife of (1) Ḍja'far b. Abī Ṭalīb, by whom she had three further sons, 'Abd Allāh, 'Awn and Muḡammad, with whom she emigrated to Abyssinia, where she saw for the first time biers, introducing them subsequently into usage in Arabia; the continuance of Ḍja'far's line was assumed by Muḡammad; (2) Abū Bakr, by whom she had Muḡammad; and (3) 'Alī b. Abī Ṭalīb, by whom she further had Yahyā. Despite all these marriages, she was not considered to be one of the famous *mutazawwiḡāt*, and the number of sons which she brought into the world does not seem to have attracted particular attention.

On the other hand, she is considered to be the authoress of a *Kitāb* which Ya'kūbī cites (*Historiae*, ii, 114, 128) and which must have contained *ḡadīth*s of the Prophet; that Asmā' should have made such a compilation, which would circulate in Shī'ī circles, is a priori suspect, even though 'Alī's main wife, Fāṭima, would have been able to hand on to Asmā' the doings and happenings concerning her father. Furthermore, the Sunnis seem to have accepted only with reservations *ḡadīth*s transmitted by this woman (cf. I. Goldzihier, *Muḡ. Studien*, ii, 9, Fr. tr. L. Bercher, Paris 1952, 10-11, Eng. tr. Barber and Stern, London 1967-71, ii, 22).

(CH. PELLAT)

AL-ASMAR, 'ABD AL-SALĀM B. SALĪM AL-FAYTŪRĪ, 16th century revivalist of the 'Arūsīyya order, was born on 12 Rabī' I 880/16 July 1475 in the coastal oasis of Zlīṭen (Zalīṭan, Zlīṭan; obsolete forms, Zalītan, Yazlītan, Yazlītīn, Izlītan) in Tripolitania. He belonged to the Faytūrīyya (Fawātīr) tribe, whence his *laqab*, while the nickname al-Asmar was given to him by his mother who had been ordered to do so in a dream. He received his early mystical training from 'Abd al-Wāhīd al-Dūkālī, a *khalīfa* [q.v.] of the 'Arūsīyya order, who initiated him into this *ṭarīka* [q.v.] and to whose circle of disciples he belonged for seven years. According to the canonised history of the order, he received additional instruction from eighty other *shaykhs* before he started to manifest himself as the revivalist of al-'Arūsīyya, whose coming had been predicted by the founder of this *ṭarīka* Aḥmad b. 'Arūs (d. 868/1463). His proselytising efforts involved him in tribal rivalries and led to accusations of sorcery and heresy being brought against him. On various occasions he was expelled from villages and from tribal territories, where he must have aroused the hostility of the population because of his denunciations of the prevailing marriage customs (cf. *WK*, 113; see Bibliography), mourning rites (cf. *WK*, 117), and of the relatively free social intermingling of the sexes in tribal society (see e.g. *WK*, 127). He was expelled from the town of Tripoli, where he had settled in the early 16th century, and where he had become an increasingly popular religious leader, by the local ruler, who may well have considered 'Abd al-Salām's proselytising activities as part of a Ḥafṣid [q.v.] plot aimed at his overthrow and the re-establishment of the dynasty's power in the area. The actual revival of the *ṭarīka* did not start until after he again took up residence in Zlīṭen, where he established a *zāwiya* [q.v.] in the territory of one of the local tribes, the Barāhima, who had come to accept his claims to sainthood. Here he died in Ramaḍān 981/January 1574.

'Abd al-Salām al-Asmar gave a new direction to the original 'Arūsīyya of which he amended the ritual and to which he added his own body of teachings. He obliged his adherents to wear white clothes (*WK*, 100 ff.), forbade smoking (*WK*, 70), and introduced the playing of the *bandīr* (*duff*) during the *ḥadra* [q.v.], claiming that he had received an authorisation to this effect from heaven (al-Mulaydjī, 257 ff.; see bibliography). In addition, he prohibited self-mutilation during the *ḥadra* (*WK*, 201) and stressed the importance of attending these occasions by proclaiming that attendance was half the *wird* [q.v.] and that absence consequently meant abandoning the *wird* (*WK*, 170; *Rawdat*, 307), which had come to consist of a number of *awrād* composed by 'Abd al-Salām himself, in addition to the original 'Arūsī *wird* (cf. Mulaydjī, 393 ff.). He claimed that the 'Arūsīyya were the original *Shādhiliyya* [q.v.], which was the *ṭarīka* practised by the most intimate companions of the Prophet (*Rawdat*, 104), and that its outstanding nature was testified to by the fact that in a miraculous act, the angels had written the names of the *shaykhs* mentioned in the *silsila* [q.v.] on the *lawḥ al-maḥfūz* [q.v.] (*WK*, 267). Moreover, he taught that anybody who knew his speech by heart, i.e. who memorised everything which had been written down—he himself was an analphabetic—of that which he had ever said (which was partly codified in *kaṣīdas* [q.v.] sung during the *ḥadra* and on other ceremonial occasions) would be protected by God in this world and in the next (*WK*, 217), and that his adherents

would be assisted by him, wherever they were, by means of his miraculous omnipresence (*WK*, 262; this belief is also expressed in the introductory lines to every *kaṣīda* composed by him, viz. *al-asmār fī kull<sup>m</sup> diwān, kursihī fī 'l-wasaṭ al-'alī . . .*). Members of the order were moreover directed to direct their lives in accordance with a number of ethical precepts and admonitions elaborated by 'Abd al-Salām in a set of rules known as *al-Waṣīyya al-kubrā*, which is very similar to the Ṣūfī tracts on *ādāb* [q.v.] of earlier eras. To abandon the *ṭarīka* was considered as equal to apostasy and would, as was taught, not be considered as such only by those belonging to the order, but by God himself (*WK*, 260). 'Abd al-Salām exhorted his adherents to adopt al-Sanūsī's *'akāida* in matters of *tawḥīd* (*WK*, 3), but urged them at the same time to pay tribute to Ibn al-'Arabī as the greatest *walī* [q.v.] of all times—except for the Prophets and the companions of the Prophet Muḥammad—and stressed him as the pillar of the *ṭarīka* (*WK*, 245).

The period in which 'Abd al-Salām lived, largely coincided with the turbulent era in which the Ḥafṣids, the Spaniards, local tribal chiefs, the Knights of Saint John and the Ottomans, had all become involved in the struggle for control of Tripolitania. This caused conditions of life to become increasingly unsettled, and must have made it possible for an exclusivist mystical salvationist movement, like the one into which the original 'Arūsīyya had been elaborated by 'Abd al-Salām, to flourish and spread the way it did.

Throughout the collections of sayings and texts attributed to 'Abd al-Salām al-Asmar, the *ṭarīka* is referred to as al-'Arūsīyya. It does not seem to have been referred to as al-Salāmiyya until in the 19th century in Tunisia (cf. Muḥammad Muḥammad Maṣhīna, *al-Anwār al-kudsīyya fī 'l-kaṣf 'an ḥakīka al-ṭarīka al-Salāmiyya al-Shādhiliyya*, Cairo 1365, 9), where the order had obtained a substantial membership, in particular in the southern parts (cf. Mustafa Kraïem, *La Tunisie pré-coloniale*, Tunis 1973, ii, 129).

Nowadays, the names 'Arūsīyya and Salāmiyya are used more or less synonymously throughout North Africa, except for Egypt where the names refer to two distinct branches, which emerged there in the 19th century. Active lodges of the *ṭarīka* of 'Abd al-Salām may be found in Tunisia (see al-Ṣādiq al-Rizkī, *al-Aghānī al-Tunisiyya*, Tunis 1967, 129 ff.), in Egypt, where it has a wide-spread membership (see Ibrāhīm Muḥammad al-Faḥḥām, *Ibn 'Arūs wa 'l-ṭarīka al-'Arūsīyya*, in *al-Funūn al-sha'biyya*, iv (Cairo 1970), no. 15, 71), and in Libya (see Djamīl Hilāl, *Dirāsāt fī 'l-wāk' al-Lībī*, Tripoli 1969, 141 f.; 'Abd al-Djalīl al-Tāhīr, *al-Mudjāma' al-Lībī, dirāsāt idjūmā'iyya wa-anthirūbūlūđjiyya*, Ṣayḍā/Beirut 1969, 325 ff.; and *al-Muslim*, xx (Cairo 1969), no. i, 23). The shrine of 'Abd al-Salām at Zlīṭen has significance, as a centre of pilgrimage; religious education is provided at the establishment attached to it known as *al-ma'had al-asmārī* (cf. Mulaydjī, 23).

*Bibliography:* *al-Waṣīyya al-kubrā* (abbreviated in the article as *WK*, with reference to the paragraphs in which it is sub-divided), also known as *Nasīhat al-murīdīn li 'l-djāmā'a al-muntasibīn li 'l-'Arūsī*, was published in Cairo n.d., in Tripoli (cf. O. Depont and X. Coppolani, *Les confréries religieuses musulmanes*, Algiers 1897, 339-49, 351), and in Iṣḥāk Ibrāhīm al-Mulaydjī, *Fī ḥāmish ḥayāt Sīdī 'Abd al-Salām al-Asmar*, Tripoli 1969, 422-529. This book contains also 'Abd al-Salām's

*Waṣīyya al-sughra* (which is essentially a summary of the *Waṣīyya al-kubrā*), the texts of various prayers (*aḥzāb*) composed by him (402-19), a collection of his admonitions as well as a list of works (largely unpublished) containing data about al-Asmar's life (247 ff.). The biography presented in it is based upon oral information collected by the author (cf. 93) and upon materials contained in Muhammad b. Muḥammad b. Makhḷūf al-Munastirli, *Tanẓīh raʿdat al-azhār wa-muṣṣayāt al-sādāt al-abrār fī manāḳib Ṣīdī 'Abd al-Salām al-Asmar*, Tunis 1325/1907-8. This work, also known under the title *Mawāhib al-rahīm fī manāḳib Mawlānā al-Shaykh Ṣīdī 'Abd al-Salām Ibn Salīm* (cf. *Tanẓīh*, 4), is an abridgement of the unpublished *Raʿdat al-azhār wa-muṣṣayāt al-sādāt al-abrār fī manāḳib Ṣāhib al-Tār*, by Karīm al-Dīn al-Barmūnī, a disciple of 'Abd al-Salām al-Asmar. A sample of al-Asmar's poetry, reflecting his ideas, may also be found in al-Rizkī's book referred to in the article and in 'Abd al-Salām al-Asmar, *Safīnat al-buḥūr*, Cairo 1969. For a defence of playing the *bandīr* (*duff*) in this *ṭarīka*, see Muḥammad Muḥammad Maṣhīna, *Risālat al-kaʿal al-ma'rūf fī aḥkām al-ḍarb bi 'l-duff*, contained in Maṣhīna's *al-Anwār al-kudsiyya* (see the article). For details about the history of al-Salāmiyya and al-'Arūsiyya in Egypt and further references, see F. De Jong, *Turuq and turuq-linked institutions in 19th century Egypt, passim*, Leiden 1978. In addition to these references and the references in the article, see the biographies by Ṭāhā Muḥammad Maṣhīna al-Tādjūrī, *al-Ṭarīka al-Salāmiyya al-Shādhiliyya*, in *Madjallat al-Islām wa 'l-Taṣawwuf* (1959), no. 10, 79-81; Sālim b. Hamūda, *al-Shaykh 'Abd al-Salām al-Asmar*, in *al-Muṣlim* xiii (Cairo 1962), no. 8, 16-20; Muḥammad al-Baṣhīr Zāfir, *al-Yawāqīt al-ḥamīna fī a'yān madhhab 'ālim al-Madīna*, Cairo 1324-5/1906-7, 200 f.; Muḥammad 'Abd al-Hayy al-Kattānī, *Fihris al-fahāris*, Cairo 1346/1927-8, i, 147.

**ASSASSINS** [see **HASHIṢHIYYA**].

**ASSOCIATION** [see **ANDJUMĀN**, **DJAM'IYYA**].

**ASYLUM** [see **BAST**, **BIMĀRISTĀN**].

**'ATABĀT** (A. "thresholds"), more fully, *'atabāt-i 'āliya* or *'atabāt-i mukaddasa* ("the lofty or sacred thresholds"), the **Shīrī** shrine cities of 'Irāk—Nad̲jaf, Karbalā', Kāzīmayn and Sāmarrā [*q.v.*]—comprising the tombs of six of the *Imāms* as well as a number of secondary shrines and places of visitation.

Nad̲jaf, 10 km. to the west of Kūfa, is the alleged site of burial of 'Alī b. Abī Ṭālib (d. 41/661) (another shrine dedicated to 'Alī is that at Mazār-i Sharīf in Northern Afghanistan; see **Kh**<sup>w</sup>ad̲ja Sayf al-Dīn **Kh**udjandī, *Karwān-i Balkh*, Mazār-i Sharīf, n.d., 18 ff.). His tomb is said to have been kept secret throughout the Umayyad period, and was marked with a dome for the first time in the late 3rd/9th century by Abu 'l-Hayd̲jā', the Ḥamdānīd ruler of Mosul; this early structure was repaired and expanded by 'Aḍud al-Dawla the Buwayhid in 369/979-80 (Ibn al-Athīr, viii, 518). Karbalā', 100 km. to the south-west of Baghdād, the site of the martyrdom and burial in 61/680 of Ḥusayn b. 'Alī, became very early a centre of **Shīrī** pilgrimage; according to **Shīrī** tradition, the first pilgrim was **Djābir** b. 'Abd Allāh, who visited the site forty days after the death of Ḥusayn. Endowments were settled on the shrine (known as Maṣhad al-Ḥā'ir, "shrine of the garden pool") by Umm Mūsā, mother of the 'Abbāsīd caliph al-Mahdī (Ṭabarī, iii, 752), but it was temporarily destroyed in 236/850

by an 'Abbāsīd less favourable to the **Shīrī**, al-Mutawakkil: he caused the site to be flooded (Ṭabarī, iii, 1407). By the time that Ibn Hawḳal visited Karbalā' in 366/977, the shrine had evidently been restored (ed. J.H. Kramers, i, 166), and it was expanded, like that at Nad̲jaf, by 'Aḍud al-Dawla in the late 4th/10th century (Ibn al-Athīr, *loc. cit.*).

From the Buwayhid period onward, Nad̲jaf and Karbalā', the two most important of the *'atabāt*, have in fact had a common destiny, each receiving patronage and pilgrimage from the successive conquerors and rulers of 'Irāk. Thus Malik **Shāh** the Sald̲jūk visited both Nad̲jaf and Karbalā' in 479/1086-7 and bestowed gifts on the shrines (Ibn al-Athīr, x, 103). Spared by the Mongol invaders, the two shrines prospered under Il **Kh**ānīd rule. 'Alā' al-Dīn **Djuwaynī** **Shāhib** al-Dīwān had a hospice erected at Nad̲jaf in 666/1267 to accommodate pilgrims, and also began the construction of a canal linking the city with the Euphrates ('Abbās al-'Azzāwī, *Tārīkh al-'Irāk bayn iḥtilālayn*, Baghdād 1354/1935, i, 263, 310). In 703/1303, **Gh**āzān **Kh**ān visited both shrines: in Nad̲jaf he built a lodging for the *sayyids* resident there (*dār al-siyāda*), together with a further hostel for pilgrims, as well as improving the canal constructed by **Djuwaynī**, and he bestowed similar favours on Karbalā' (Rashīd al-Dīn Faḳl Allāh, *Tārīkh-i mubārak-i Ghāzānī*, ed. K. Jahn, London 1940, 191, 203, 208). After his capture of Baghdād in 803/1400, **Timūr** made a pilgrimage to Nad̲jaf and Karbalā' and presented gifts to the shrines (al-'Azzāwī, *op. cit.*, ii, 240).

In the 10th/16th century, 'Irāk became an object of dispute between the Ṣafawīds and the Ottomans, and both sides endowed and patronised the shrines of Nad̲jaf and Karbalā' during their periods of control. **Shāh** Ismā'īl the Ṣafawīd visited and bestowed gifts on the two shrines in 914/1508, as well as restoring the canal at Nad̲jaf dug in Il **Kh**ānīd times (al-'Azzāwī, *op. cit.*, iii, 316, 341). Sultan Sulaymān **Kānūnī** made a similar pilgrimage to Nad̲jaf and Karbalā' after his conquest of 'Irāk in 941/1534, and had a new irrigation canal dug at Karbalā', called *al-nahr al-sulaymānī* after him (al-'Azzāwī, *op. cit.*, iv, 29, 36-7). **Shāh** 'Abbās I restored 'Irāk and the *'atabāt* to Ṣafawīd control in 1032/1623; this new occupation, terminated by Murād IV in 1048/1638, led to a further enriching and expansion of the shrines at both Nad̲jaf and Karbalā'. Again in the years 1156-9/1743-6, parts of 'Irāk, including Nad̲jaf and Karbalā', were temporarily removed from Ottoman sovereignty, this time by **Nādīr Shāh**; he is variously reported to have had the main dome at Karbalā' gilded, and to have plundered the treasury at the shrine. This was the last time that Ottoman rule of 'Irāk was threatened from Iran, but throughout the 13th/19th century royal Iranian patronage of both Nad̲jaf and Karbalā' continued, and it is this that accounts for the largely Iranian appearance of the shrines in the present age. **Aghā** Muḥammad **Kh**ān, the first **Kādjār** monarch, had the dome at Karbalā' regilded, and endowed the tomb at Nad̲jaf with a golden grill (H. Algar, *Religion and state in Iran, 1785-1906; the role of the Ulama in the Qajar period*, Berkeley and Los Angeles 1969, 42). Following his example, **Fath** 'Alī **Shāh** had the minarets at Karbalā' gilded, as well as reconstructing the dome out of gold bricks; Muḥammad **Shāh** provided for the repair of the damage inflicted on Karbalā' by the **Wahhābīs** during their incursion of 1216/1801; and **Nāṣīr** al-Dīn **Shāh** himself visited the *'atabāt* in 1287/1870 and commissioned

various work in Nadjaf, Karbalā’ and Kāzimayn (Algar, *op. cit.*, 48, 104, 167). Gifts and endowments were also sent to the ‘atabāt by the rulers of various Shīrī principalities in India, especially Oudh (J.N. Hollister, *The Shi’a of India*, London 1953, 107, 112, 162-3).

Kāzimayn (also known as Kāzimīyya), the third of the ‘atabāt, formerly a separate city on the right bank of the Tigris but now virtually a suburb of Baghdād, is the site of the tombs of the seventh and ninth Imāms, Mūsā al-Kāzim (d. 186/802) and Muḥammad al-Ṭaqī (or al-Ḍjawād) (d. 219/834). It occupies a geographically central place among the ‘atabāt, being situated between Sāmarrā to the north and Nadjaf and Karbalā’ to the south, and has always received a steady flow of pilgrims. Unlike Nadjaf and Karbalā’, it did not escape the Mongol invasion unscathed, and was extensively damaged by fire during conquest of Baghdād in 656/1258. Most of the existing structures in Kāzimayn date from the time of Shāh Ismā’il, who was particularly lavish with his patronage in Kāzimayn because of his claim to descent from the seventh Imām. The work begun under his auspices was completed by Sultan Sulaymān in 941/1534 and restored and expanded by several Qādjar monarchs in the 19th century. The major courtyard (*sahn*) in Kāzimayn was built in 1298/1880 by Farhād Mirzā, a Qādjar prince. Also buried in Kāzimayn are two early Shīrī scholars, Sharīf al-Raḍī (d. 406/1015) and Sharīf al-Murtadā (d. 436/1044); two sons of Mūsā al-Kāzim, Ismā’il and Ibrāhīm; Tāhīr b. Zayn al-‘Ābidīn, a son of the fourth Imām; Khadīja bint al-Hasan; and Fāṭima bint al-Husayn (L. Massignon, *Les saints musulmans enterrés à Bagdad*, in *Opera minora*, ed. Y. Moubarac, Beirut, iii, 100-1).

Sāmarrā, the fourth of the ‘atabāt, contains the tombs of the tenth and eleventh Imāms, ‘Alī al-Nakī (d. 254/868) and Ḥasan al-Askarī (d. 260/873), as well as the cistern (*sardāb*) where the twelfth Imām, Muḥammad al-Mahdī, entered the state of occultation (*ghayba*) in 260/873 and where too he is destined to reappear at the beginning of his renewed manifestation at the end of time.

The ‘atabāt play a role of great importance in the life of Shīrī Islam, functioning almost as a secondary *kābla*. They are above all places of pilgrimage (*ziyārat*), visited by countless Shīrīs from Iran, the Indian sub-continent and elsewhere. Pilgrimage to the ‘atabāt consists primarily of circumambulating the sacred tombs while reading a series of traditional prayers (*ziyāratnāma*) and fervently caressing the golden grills enclosing the tombs; one may also seek the intercession of the Imāms or make to them a vow (*nadhīr*). Karbalā’, which contains the tombs not only of Ḥusayn but also of his half-brother, ‘Abbās, and his son, ‘Alī Akbar, is in particular much frequented by pilgrims, who after their return home may prefix the title “Karbalā’ī” to their names. The soil of Karbalā’, having been moistened with the blood of Ḥusayn, is deemed to possess special properties; from it is generally fashioned the clay disc (*mahr*) on which the Shīrīs place their foreheads when prostrating in prayer. When diluted in water, the soil also yields a beverage (*āb-i turbat*) thought to have theurgical and curative properties; the sick, the dying, and women in labour are caused to imbibe it, and it is lightly sprinkled over the face and lips of the dead (H. Massé, *Croyances et coutumes persanes*, Paris 1938, i, 38, 96; B.A. Donaldson, *The wild rue*, London 1938, 205). The dust accumulating on the grill around the tomb of Ḥusayn is also highly re-

garded; it is carefully collected for its curative properties (Donaldson, *op. cit.*, 67), and is sometimes used in India as a lining for tombs (Hollister, *op. cit.*, 153). Burial at the ‘atabāt is considered highly desirable, again with a marked preference being shown for Karbalā’; corpses are often transported for burial from Iran and India to the ‘atabāt, where vast cemeteries have sprung up, particularly at Nadjaf and Karbalā’. Traditionally numerous pious Shīrīs have also gone to spend their last years in the ‘atabāt as “neighbours” (*mudjāwūrīn*) to the Imāms.

The ‘atabāt have also occupied an important place in the intellectual and theological life of Shīrīsm, the *madrāsas* situated there drawing scholars and students from every region of Shīrī population; Nadjaf, frequently entitled Dār al-‘Ilm, is the chief centre of learning today in the Shīrī world. In the 12th/18th century, after the Afghān sack of Iṣfahān, many Iranian Shīrī scholars took refuge in the ‘atabāt, and it was there—above all in Karbalā’—in the last quarter of the century that the long-standing controversy between the Akhbārī and Uṣūlī schools of *fiqh* was settled in favour of the latter. Although centres of religious learning revived in Iran in the Qādjar period, the ‘atabāt continued to exert their attraction, and most leading scholars either resided and taught there, or studied for a time before returning to Iran. When in the late 19th and early 20th centuries an important segment of the Iranian ‘ulamā’ clashed with the Qādjar monarchy and supported the constitutional movement, the ‘atabāt—particularly Nadjaf—came to function as an important base of clerical operations beyond the reach of the Iranian state. The role of three great constitutionalist *mudjtahids* resident in Nadjaf—‘Abd Allāh Māzandarānī, Muḥammad Kāzim Khurāsānī and Mirzā Ḥusayn Khalīlī Tīhrānī—deserves particular mention (see Abdul-Hādī Ha’iri, *Shi’ism and constitutionalism in Iran: a study of the role played by the clerical residents of Iraq in Iranian politics*, Leiden 1977). *Mutatis mutandis*, Nadjaf has fulfilled a similar function in recent years, following the exile there in 1963 of Āyat Allāh Khumaynī. The Shīrī ‘ulamā’ resident in the ‘atabāt have also exerted influence on the 20th century history of Irāk; they played, for example, a directive role in attempts to thwart the imposition of a British mandate on the country (‘Abd Allāh Fahd al-Nafīsī, *Dawr al-Shi’a fī taṭawwur al-‘Irāk al-siyāsī al-hadīth*, Beirut 1973, 80 ff.).

Finally, mention may be made of the fact that the ‘atabāt are of interest not only to the Iṭhnā ‘Asharī Shīrīs, but also to the adherents of various branches of Ismā’ilism; although they hardly ever make the *hadjji*, they frequently perform pilgrimage to Nadjaf and Karbalā’ (Hollister, *op. cit.*, 289, 391) and it is probable that a number of Nizārī Imāms of the post-Mongol period are buried in Nadjaf (W. Ivanow, *Tombs of some Persian Ismā’ilī Imams*, in *JBRAS*, xiv (1938), 49-52). The Bektashīs, who in many ways may be considered a crypto-Shīrī sect, also used to maintain *tekkes* in Nadjaf, Karbalā’ and Kāzimayn (al-‘Azzāwī, *op. cit.*, iv, 152-3; Murat Sertoğlu, *Bektashik*, Istanbul 1969, 319).

**ATAÇ**, NÜR ALLĀH, modern Turkish NURULLAH ATAÇ (1898-1957), prominent Turkish essayist and literary critic, the guiding spirit of the Turkish contemporary linguistic and literary renewal for two decades (1935-55). Born in Istanbul, the son of Mehmed ‘Atā’, civil servant and writer (1856-1919), better known as the translator of J. von Hammer’s *GOR* (from the French version), Ataç signed his writings as Nūr Allāh ‘Atā’ until the introduction of family names in 1934, when he changed ‘Atā’ into Ataç and later dropped Nūr Allāh altogether. Of his various pen-names, the most frequently used one was Kavafoğlu. Ataç’s education was irregular. He attended various schools (including Galatasaray for four years and then the Faculty of Letters), without finishing either. Although he spent some time in Switzerland during the First World War, his thorough knowledge of the French language and literature was, like all his accomplishments, mainly self-acquired. Ataç made his living as a teacher, translator and constant contributor to a great number of newspapers and periodicals. He taught French literature and French in various schools of Istanbul, Ankara and the provinces, and served as a translator in government departments including the office of the President of the Republic. He died in Ankara on 17 May 1957.

Ataç started his literary career in 1921 with poems, critical reviews and theatrical criticism in the famous fortnightly *Dergāh*, to which all the leading writers of the time and many young talents were contributors. At this period he was particularly interested in the theatre and wrote theatre reviews mainly in the daily *Akşam* (see Metin And, *Ataç tiyatrosu*, Istanbul 1973). Later he concentrated on literary criticism, and closely following the day-to-day developments of the literary scene, wrote articles of criticism untrudgingly in more than sixty newspapers and periodicals, particularly in *Akşam*, *Akşam*, *Hakimiyet-i milliyet*, *Milliyet*, *Varlık*, *Yeni adam*, *Tan*, *Son posta*, *Haber*, *Tercüme*, *Ülkü*, *Türk dili*, *Cumhuriyet*, *Pazar postası*, *Dünya*, and most frequently of all, *Ülüs* (see Konur Ertop, *Ataç bibliyografyası*, in *Ataç*, ed. *Türk Dil Kurumu*, Ankara 1962). Ataç developed the essay, a much-neglected field in Turkish literature, into an independent genre of which he became a recognised master, and had many followers. He wrote thousands of essays on literature, classical and modern, on cultural change and problems of culture in general, on individual writers, etc. with a very personal, natural, concise and unadorned style. In the early 1940s he espoused the language reform movement and gave it great support and impetus, increasing its prestige in literary circles. It is no exaggeration to say that he became the greatest master of the nascent contemporary Turkish prose, and his style was taken as the model by many young writers. This prose was to supersede that of the pre-1930 masters like R.Kh. Karay, Reshād Nūr Güntekin [q.v.] and others. Although Ataç’s authority as a literary critic is controversial because he chose a subjective and impressionistic approach to criticism

according to his own temperament and personal taste, it is unanimously accepted that it is his sharp flair as a critic which discovered and launched many young talents on to the literary scene (e.g. Orhan Veli Kanik, F.H. Dağlarca, etc.). Restless, impatient, aggressive by temperament and equipped with a piercing mind and armed with “methodical doubt”, Ataç waged an unrelenting war against fanaticism, intolerance, sentimentality, “poetical” artificiality, clichés and ready-made thoughts and formulae. He was a conscious extremist in language reform and believed that only the “self-sacrifice” of some extremists would nullify the harm caused by the ultra-conservatives. Ataç studied 15th century prose works, particularly Merdjümeke Ahmed’s masterly translation of Kay Kā’ūs’s *Kābūs-nāma* [see KAY KĀ’ŪS B. İSKANDAR] and used them as the model for a new style. He experimented successfully with a new syntax which included inversion (*devrik tümce*), which naturally exists in spoken Turkish and which was frequently used in early Turkish writings before the syntax of the written Turkish was “frozen”. Ataç coined a number of neologisms, some of which survived and were incorporated into the language (for a list of Ataç’s neologisms, see *Ataçın sözcükleri*, ed. Türk Dil Kurumu, Ankara 1963). Ataç left several thousand essays and articles, some of which (mostly his post-1940 writings) have been published in book form in 10 volumes: *Günlerin getirdiği* (1946), *Karalama defteri* (1952), *Sözden söze* (1952), *Ararken* (1954), *Dişelim* (1954), *Söz arasında* (1957), *Okuruma mektuplar* (1958), *Günce* (1960), *Prospero ile Caliban* (1961), *Söylesiler*, 2 vols. (1964) Ataç’s diaries covering the years 1953-7 have been published in two volumes as *Günce*, Ankara 1972.

Ataç also made perfect examples of literary translation in Turkish. He translated more than 50 literary works from ancient Greek, Latin and Russian authors (via French), and in particular, directly from French, the most famous of which being his translation of Stendhal’s *Le rouge et le noir* rendered as *Kırmızı ve siyah* (1941), second edition as *Kızıl ile kara* (1946).

*Bibliography*: Tahir Alangu, *Ataç’a saygı*, Ankara 1959; Konur Ertop, Introduction to his complete works published by *Varlık*: *Günlerin getirdiği-karalama defteri*, Istanbul 1967, 5-69; Asım Bezirci, *Nurullah Ataç, eleştirisi anlayışı ve yazıları*, Istanbul 1968; Mehmed Salihoglu, *Ataç’la gelen*; Türk Dil Kurumu (ed.), *Ötümünün 10. yıldönümünde Ataç’ı anış*, Ankara 1968. (FAHİR İZ)

**ATALĪK**, Turkic title which existed in Central Asia in the post-Mongol period, with the same original meaning as the title *atabeg* [see ATABAK].

In the *ulus* of Djüçi (the Golden Horde) and its immediate successors, as in the *khānates* of Kazan and Kırım and the *ulus* of Shiban (Aq Orda), as well as in the Çağhatâyid state in Moghōlistān, the *atalik* was, in the first place, a guardian and tutor of a young prince and, in this capacity, an actual governor of his appanage. The sovereign himself (*khān* or *sultān*) also had an *atalik* who was his close counsellor and confidant, often playing the role of the first minister. The *ataliks* were nominated from among the Turkic tribal nobility, the senior begs (*amirs*). It seems that, according to Turkic nomadic custom, a ruler should always have an *atalik*; it was a kind of control over his conduct exercised by the tribal aristocracy. Tīmūrid and Shaybānid sources often also use, instead of the term *atalik* and in the same meaning, the term *atakā*, or *ätükā* (most probably,

a contracted form from *ata-ākā*, or *atabeg-ākā*, *atalik-ākā*, where *ākā* is "the elder brother", which was also a usual form of polite address in Eastern Turkic, added to proper names and titles). The post of *atakā* (*atalik*) was entrusted often to a *kökältäsh* "foster-brother" (also *ämildäsh*); these persons were brought up together with the princes of the ruling dynasty, which created a special relationship (*kökältäshī*) between the two sides (see *Tawārikh-i guzīda-i nuṣrat-nāma*, ed. by A.M. Akramov, Tashkent 1967, facsimile 270, lines 4250-4, and 272; Russian tr. from the *Shaybānī-nāma* by Binā'ī, in *Materiali po istorii kazakhskikh khanstv XV-XVIII vekov*, Alma-Ata 1969, 98, 100; V.V. Vel'yaminov-Zernov, *Issledovaniye o Kasimovskikh tsaryakh i tsarevichakh*, pt. 2, St. Petersburg 1864, 438; V.V. Bartol'd, *Sochineniya*, ii/2, 212; G. Doerfer, *Türkische und mongolische Elemente in Neupersischen*, ii, 9 (No. 419), 481 (No. 343), iv, 402-3, with further references).

In the Uzbek *khānates* of Central Asia, the meaning of the title *atalik* was gradually transformed. In Bukhārā, till the beginning of the 18th century, "the great *atalik*" (*atalik-i buzurg*) was the senior *amir* and the first minister (hence his epithets '*umdat al-umarā'* and *wizārat-panāh*). In the Aṣhtar-khānid period, he often appears in historical sources together with the *diwān-begi* [*q.v.* below], who was the second figure in the government. He could be at the same time governor of a province; *atalik* Yalangtush Biy, who was *hākim* of Samarqand in the first half of the 17th century and became famous by his building activity, was a semi-independent ruler. There was also, besides him, an *atalik* of the *khān's* heir residing in Balkh with the same functions in his respective region. In the reign of 'Ubayd Allāh Khān (1114-23/1702-11), the *kosh-begi* [*q.v.*] became the head of the civil administration in Bukhārā, he being an official of mean origin—probably as an attempt of the *khān* at cutting down the influence of the Uzbek aristocracy. But the importance of the *atalik* did not diminish; already earlier, at the end of the 17th century, the *atalik* in Balkh became independent ruler of this province, and in the middle of the 18th century Muḥammad Raḥīm Atalik of the Mangit [*q.v.*] tribe founded a new ruling dynasty in Bukhārā, having killed the last *khān* of the Aṣtarkhānids. Muḥammad Raḥīm was proclaimed *khān* in 1170/1756; his uncle and successor Dāniyāl Biy (1172-99/1758-85) preferred to remain *atalik*, enthroning puppet *khāns* of Čingizid origin, but his son Shāh Murād eliminated these *khāns* and proclaimed himself *amir*, which later remained in Bukhārā the title of the Mangit rulers par excellence. In the administrative manual *Madjma' al-arkām* compiled under Shāh Murād in 1212/1798, the post of *atalik* is defined as that of senior *amir*, who was charged specifically with oversight of the irrigation of the Zarafshān valley from Samarqand to Karakul, and, at the same time, was the *mīrāb* of the main city canal of Bukhārā, Rūd-i Shahr, as well as *dārūgha* [*q.v.*] of the *rabād* of Bukhārā (see facsimile in *Pis'menniy pamyatniki Vostoka 1968*, Moscow 1970, 50-1; cf. A.A. Semenov, in *Sovetskoye vostokovedeniye*, v [1948], 144-7). But already in the first half of the 19th century, the *atalik* became a purely honorary rank (the highest in the hierarchy of 15 ranks in Bukhārā) given very rarely. In 1820 a semi-independent governor of Hiṣār, father-in-law of the *amir*, had this rank (see G. Meyendorff, *Voyage d'Orenburg à Boukhara, fait en 1820*, Paris 1826, 259; cf. V. L. Vyatkin, in *Izvestiya Sredneaziatskogo otdela Russkogo geografi-*

*českogo obščestva*, xviii [1928], 20); in 1840 the *atalik* was also a father-in-law of the *amir*, a ruler of Shahrīsabz (see N. Khanikov, *Opisanīye Bukharskogo khanstva*, St. Petersburg 1843, 185). Under the last two *amirs*, only the governor of Hiṣār (who had also the title *kosh-begi*) was given the rank of *atalik*.

In the Khānate of Khīwa, *atalik* was originally also a guardian and counsellor of the *khān* and of princes (*sultāns*) who ruled in their appanages. Abu 'l-Ghāzī [*q.v.*] in his *Shadīyara-yi Turk* (ed. Desmaisons, text, 252, tr. 269) says about an *atalik* (in the middle of the 16th century) that he was "the mouth, tongue and will" (*aghīzī, tili wa ikhtiyāri*) of his *sultān*. Russian sources of the 17th century compare the *ataliks* in Khīwa with the Russian boyars (see *Materiali po istorii Uzbekskoy, Tadžikskoy i Turkmenskoy SSR*, Moscow-Leningrad 1931, 266). According to Mu'nis [*q.v.*] (*Firdaws al-ikbāl*, MS. of the Leningrad Branch of the Institute of Oriental Studies, C-571, f. 65b), Abu 'l-Ghāzī Khān, reorganising the administration of the *khānate*, established posts of four *ataliks*, who were members of the *khān's* council of 34 '*amaldārs*. Later they were called "the great *atalik*" (*ulugh atalik*, cf. *ibid.*, ff. 112a, 118b); they represented four tribal groups (*tuḡā*) into which all Kh'ārizmian Uzbeks were divided: Uyghur and Nayman, Kungrat and Kiyat, Mangit and Nukuz, Kangli and Kīpčak. One of the "great *ataliks*" was the *atalik* of the *khān* (see *ibid.*, ff. 69b, 101b). In the first half of the 18th century, the *atalik* of the *khān* was a most powerful figure in Khīwa, but from the 1740s onwards he was pushed somewhat into the background by another dignitary, the *inaḥ* [*q.v.* below]. It is not clear whether in the time of Abu 'l-Ghāzī there existed only the four *ataliks* mentioned by Mu'nis; but in the middle of the 18th century there was quite a number of them. In 1740 a letter to the inhabitants of Khīwa sent by the Khīwan dignitaries from the camp of Nādir Shāh was signed by eleven *ataliks* (see *Geografičeskīye izvestiya*, 1850, 546-7). Apparently, already at that time, as in the 19th century, the title *atalik* was given also to the chiefs of the Uzbek tribes; such an *atalik* was senior *biy* in his tribe, and his title was usually hereditary, though it had to be confirmed by the *khān*. In the 19th century this title was granted also, as a purely honorary distinction, to some Turkmen tribal chiefs (see Yu. Bregel', in *Problemi vostokovedeniya*, 1960, No. 1, 171; cf. *idem*, *Khorezmskiye turkmeni v XIX veke*, Moscow 1961, 129). In 1859 this title was introduced also for the chiefs of the Karakalpak tribes (see Yu. Bregel', *Dokumentli arkhiva khivinskiikh khanov po istorii i etnografii karakalpakov*, Moscow 1967, 58). The number of the "great *ataliks*" increased before 1873 from four to eight (see A.L. Kuhn's papers in the Archives of the Leningrad Branch of the Institute of Oriental Studies, file 1/13, 105-6). As distinct from the other tribal chiefs, they were considered among the *umarā-yi 'azām*. The *atalik* of the *khān*, who in the 19th century always belonged to the *khān's* tribe, the Kungrat [*q.v.*] and was mostly a relative of the *khān*, was considered as the senior *amir* in the *khānate*; in the first half of the 19th century he still exercised some influence as the *khān's* counsellor, but later this post lost its importance.

Less is known about the role of *ataliks* in the Khānate of Khoḡand [*q.v.*]. The ruler of Farghāna and the founder of the Ming dynasty of this *khānate*, Shāhrukh Biy (early 18th century) received the title *atalik* from the *khān* of Bukhārā (see V.P. Nalivkin, *Histoire du khanat de Khokand*, Paris 1889,

68). In the 19th century, governors of large provinces (such as Tashkent and Khudjand) also sometimes had this title; they could be not only Uzbeks: Kanā'at Shāh Atalik, the governor of Tashkent in 1850s and early 1860s, was a Tadjik. Apparently, the *atalik* in the Khānate of Khokand, as well as in Bukhārā of the same period, was considered rather an honorary rank than an official post.

In Eastern Turkestan under the Čaghatāyids in the 16th and 17th centuries, the title *atalik* preserved its original meaning. The governors of provinces (princes of the ruling house), the khān's heir and the khān himself had their *ataliks*, who were always senior Turkic *beks*. The *atalik* of the khān was at the same time the governor (*hākim*) of Yarkand, and that of the heir the governor of Aqsu or Khotan (see Shāh Mahmūd Čurās, *Ta'rikkh*, ed. by O.F. Akimushkin, Moscow 1976, text 30, 52, 64 et *passim*). The ruler of the last independent Muslim state in Eastern Turkestan, Ya'qūb Bek [*q.v.*], styled himself Atalik Ghāzi; apparently he received the title of *atalik* on being sent from Khokand to Kāshghar as a counsellor and guardian of Buzurg Kh'ādja.

(YU. BREGEL)

**ATAY, FALİH RİFKİ**, Turkish writer, journalist and politician (1894-1971). He was born in Istanbul, the son of Khalil Hilmi, an uncompromising traditionalist and *imām* of a mosque at Djibali on the Golden Horn. He was educated at Merdjān high school, where his teacher, the poet Djelāl Šāhir, encouraged him to publish his early poems, and at the Faculty of Letters. His elder brother, a progressive officer, provided him with all the advanced literature from Nāmik Kemāl to Tewfik Fikret [*q.v.*]. Fālih Rifki began his career as a journalist in 1912 in Husayn Djāhid's [*q.v.*] *Tanin*, the organ of the Committee of Union and Progress (CUP), where he wrote once a week his *Istanbul mektūbları* ("Istanbul Letters.") These and his later articles in the same paper during the Balkan War were full of emotional, patriotic and anti-reactionary spirit. After serving briefly in the chancery of the Sublime Porte, he was appointed to the Private Secretariat of Tal'at Pasha [*q.v.*], then Minister of the Interior, whom he accompanied on his trip to Bucharest, whence he sent his first travel notes, a *genre* in which he would later excel. He was at the same time contributing to various periodicals, particularly *Shehbāl*. At the outbreak of the First World War he was called up as a reserve officer and accompanied Djemāl Pasha [*q.v.*], the Commander of the Fourth Army in Syria, as his adjutant and private secretary. When Djemāl Pasha returned to Istanbul as Minister of the Navy, he appointed him deputy-director of his secretariat which he combined with instructor at the naval N.C.O.s' school. When at the end of the War the CUP leaders fled the country, Fālih Rifki founded, with three of his friends, the daily *Akshām*, becoming known as a staunch defender of the Nationalist movement in Anatolia (1918-22) versus the journalists who backed the collaborationist Istanbul government. In the autumn of 1922 he left for Izmir, which had just been liberated on 9 September, to meet

Muštafā Kemāl Pasha, who had invited him together with other prominent journalists. Muštafā Kemāl told them that "the real battle is beginning now" and urged them to enter political life. Elected deputy for Bolu in 1923, Fālih Rifki became the leader writer of the daily semi-official *Hākimiyyet-i milliye* (later re-named *Ulus*) founded by Muštafā Kemāl. He remained in Parliament for 27 years until the defeat of the Republican People's Party in the general elections of 14 May 1950, when he moved to Istanbul and wrote a weekly column in *Cumhuriyet* until he founded his own daily *Dünya*, which he published until his death in Istanbul on 20 March 1971.

Essentially a journalist and always concerned with the "topical", Atay had literary talents far beyond those of a routine journalist. He excelled in the essay, sketches, travel notes and autobiographical writing. An anti-traditionalist and a dedicated Kemalist, he devoted all his writing career to defend and support the reforms achieved by the Republican régime. He fought relentlessly and uncompromisingly for the survival of a modern, progressive and secular Turkey. No matter what he wrote about, the lesson which he drew remained the same: No going back.

A great master of modern Turkish prose, he used, like R.Kh. Karay and 'Ömer Seyf el-Din [*q.v.*] the spoken Turkish of ordinary people and wrote in a concise, but vivid, colourful and very personal style, carefully avoiding all artificialities of the earlier generations of writers. Except for certain doubts towards the end of his life, Atay was a great supporter of the language reform movement, revived by government support in the 1930s, and his handling of the reformed language became the model for young writers until the appearance of Nūr Allāh Atač [*q.v.* above], the linguistic and literary "guru" of the generations between the 1940s and late 50s. It is perhaps because of this fascinating style that his readers are seldom worried about the lack of depth in some of his writings, which brilliantly observe, describe and report, but do this without much sophistication. Atay is the author of more than thirty works, but the great bulk of his essays and articles published in newspapers and periodicals have not yet been published in book form. His major works are: (1) *Ateş ve güneş* (1918) and *Zeitindağı* (1932), the two published in one volume as *Zeitindağı* (1970), impressions of the First World War in Palestine and Syria which are powerful sketches of the end of the Ottoman Empire; *Denizaşırı* (1931), *Yeni Rusya* (1931), *Taymis kıyıları* (1934), *Tuna kıyıları* (1934), *Hind* (1944) are evocative travel notes on respectively Brazil, Soviet Russia, England, the Balkans and India; *Gezerek gördüklerim* (1970), selections from travel notes; *Çankaya* (in two vols., 1961, revised one volume edition, 1969) is the most important and comprehensive of Atay's many books on Atatürk and his achievements. It has powerful sketches of Atatürk and interesting character-studies of the many people of his time. The second edition has been substantially altered in places and anti-İnönü passages have been borrowed from Y.K. Karaosmanoğlu's political memoirs (*Politikada 45 yıl*, 1968) and introduced here to discredit the former Commander of the Western Front during the War of Liberation, both writers having broken with İsmet İnönü, for political reasons, towards the end of their lives; *Başveren inkılapçı* (1954), a monograph on 'Alī Su'āvī (1839-78), the controversial writer and revolutionary.

(FAHİR İZ)

**ATHĀTH** (A.), furniture. The Arabic language lacks terms adequate to express the concept of furniture. Taking into account the mutual overlapping of the notions of "furniture", "table-ware", "carpets", "household objects" and "utensils", Arabic frequently has recourse to approximative terms and to broader categories (combinations of two expressions, for example (*farsh* = carpets, bedding and furniture; *āla* = crockery and household objects; *farsh* and *āla* may be used in combination; *adāt* = utensils etc.; *athāth* = literally, belongings, various household objects and (especially in modern Arabic) furniture; *farsh* and *athāth* may be used in combination; *matā'* = personal property, domestic items, etc.).

In the mediaeval Muslim home, life was conducted relatively close to the ground. Meals were served to the diners in a kind of "serving-dish" with or without legs (the receptacle being separable from its support or not, as the case might be) which was laid on a carpet on the floor. The diners did not have individual plates but served themselves directly from the dish placed on a low table (*khuwān*, *mā'ida*, *daysak*, *fāḥūr*, *mudawwara*, *muḥawwal*, *mū'taşamāt*, *simā'*, the majority of these terms indicating a very small round table; some, like *simā'*, a low oblong table) each of them sitting on a "seat" adapted to the appropriate height (a cushion [*wisāda*, *mīrfaqa*, *tuk'a*, *miswara*, *numruk*, and even *mikhadda* which was originally a pillow], a pair of cushions super-imposed, a cushion folded in two, the carpet itself, etc.). The table was removed from the room as soon as the meal was completed.

It is understandable that such scenes should have misled western travellers and even some orientalis who described the interior of the Muslim household as being "empty", "uninhabitable", etc., without considering that the dimensions of furniture are frequently adapted to the way of life, to the manner of sitting, and to taste. However it would be incorrect to suppose that all mediaeval Arabic furniture was low. Carpenters and other craftsmen constructed trestles and benches of a fair height for various purposes outside the private house; they also made chairs with legs of wood or metal [see KURS] and throne-like seats (*sarir*, *takht*), but such seating arrangements were not used at meal-times. A high stool was somewhat exceptional in the Middle Ages and it focussed attention on the person seated there (a prince, the head of the family, sometimes an ordinary individual) in relation to the others present.

The hierarchy of heights in sitting (on a throne, on a high stool, on two superimposed cushions, on one cushion folded in two, on a single ordinary cushion, on the carpet itself, on the ground, this last position indicating humiliation, humility or mourning) only reflects the categories and class-distinctions of etiquette. Another aspect of the stratification of classes is reflected in the range of materials and qualities: beds with legs, a sign of luxury, beds without frames, and lower down the scale the *martaba*, a good-quality mattress stuffed with down, simple mattresses laid on the ground and serving as a bed at night, simple mattresses, mats and carpets for sleeping on, piles of rags and scraps of clothing for the same purpose (only the poorest slept on the ground); cushions and pillows stuffed and covered

with choice materials, silk for example, and at the other end of the scale, rags or simply a stone serving as pillow for a poor man.

The very high "western style" thrones such as those appearing in Umayyad iconography, seem to have been copied from Byzantine models and do not reflect true conditions in the court (see V. Strika, in *AIUON* xiv/2 (1964), 729-59); but cf. O. Grabar, in *Studies in memory of Gaston Wiet*, Jerusalem 1977, especially 53-6, who puts into perspective the remarkable development of etiquette already taking place in the Umayyad court). According to mediaeval texts, another kind of throne, a long sofa for reclining, was quite widely known in the courts of the Umayyads, of the 'Abbāsids and of local princes (such as the *Ikhsīdids*). The sovereign could invite a friend to sit beside him, on the same *sarir* (hence quite a long seat); he could alternatively recline on it. The overlapping of the concepts mattress-seat-throne-bed (for example, from the Persian; *takht* can mean any of the following: board, seat, throne, sofa, bed, calculating tablet, chest or box) did not prevent the evolution of ceremonial and the differentiation of functions (a seat or a throne for public or solemn audience, or for private audience, feasts etc.) from establishing or re-establishing in usage thrones and narrow seats (of Persian manufacture, for example) and long and more elaborate thrones. Towards the end of the 3rd/9th and the beginning of the 4th/10th centuries, the use of the bed with frame (for reclining and sleeping) became fashionable in high society and among the bourgeoisie. The belief of certain orientalis that the bed did not exist in the mediaeval Muslim world is only partially correct: unsprung mattresses were more common (even in documents from the Cairo Geniza, many mattresses are to be found serving as relatively inexpensive beds; among the dowries of young brides there is mention of a very small number of beds with frames, extremely expensive, and between these two categories is the *martaba*, which would correspond in function with the divan-bed of the present day).

To return to the subject of tables: *mā'ida*, *khuwān* and *suffa* are synonymous: they refer to the small eastern "table", the first two to a solid "table" (the attempts on the part of mediaeval philologists to differentiate between them were quite arbitrary) while the third (and sometimes also *naḥ*, as well as *mā'ida*, exclusively in the context of the Kur'ān and its commentaries and in certain passages in the literature of *hadīth*) was applied to a skin stretched out on the ground and serving, not only among the early Bedouins, but also in circles of sedentary Arabic civilisation, various functions in the home and in the country (in dialect, *suffa* is an ordinary table and *suffadīr* is a waiter in a restaurant or a café). This is one of the characteristic cases which raises the question whether the continuity of sedentary habits (from the Persians, Byzantines, from the ancient Syrian and Egyptian stocks, etc.) was an exclusive characteristic of daily life in the mediaeval Muslim world, in the sense that it is reflected in the use of furniture, and if there was not here a minimal contribution on the part of the Bedouin element, betrayed in the spread of ancestral customs through the disappearance of the high furniture of the Byzantine metropolis in favour of the low furniture which existed in Iranian civilisation and in certain local Aramaeo-Syrian and Irāqi centres, as is revealed by the mediaeval lexicographers and commentators (*tustkhuwān* and *fāḥūr*, for example). Nevertheless, specimens of wooden furniture from

the Middle Ages are available to us and we have ceramic objects designed to imitate them (supports sometimes containing cavities to accommodate jugs, resembling the supports-plus-shelves attested by the texts; some of these still exist today: *mīfaʿ* or *kursī-plus-ṣīniyya*, in various Muslim lands lying far apart from one another); iconography also shows a certain standardisation, in spite of regional styles, of way of life and of taste throughout the whole of the Muslim world (household objects, such as tables, being exported from one country to another).

The mediaeval Muslims made use of a whole range of chests, cases and boxes (*ṣundūk*, *takht*, *kaṣṣara*, *muḳaddīma*, *saḳāṭ*), as well as recesses and racks (*nūḳūf*), but they had no cupboards as such.

The Mongols introduced the use of a higher type of square table, but the essential nature of the "oriental style" way of life has been preserved up to the very threshold of the modern age (Turkish and Persian miniatures attest this, *grosso modo*). Even in the 19th and early 20th centuries, travellers, writers and orientalis (E. Lane for Egypt, Lortet for Syria, E. Jaussen for Palestine, for example) were still describing such a way of life; some elements (such as beds with frames) introduced from abroad, or under foreign influence, were still called *ḥanḍī* in certain semi-urban centres, at the beginning of the present century. The modern age has made fashionable the use of European style furniture and the original form of the "oriental" way of life, with its abundant taste and comfort, has tended to disappear.

*Bibliography*: J. Sadan, *Le mobilier au Proche-Orient médiéval*, Leiden 1976 (esp. the bibliographical index, 155-69). (J. SADAN)

**ATHÜR**, modern **KAŁ'AT SHARKĀT**, a large ancient mound on the west bank of the River Tigris in the *vilāyet* of Mawṣil, about 250 km. north of Baghdād and about 100 km. south of Mawṣil, in 35° 30' N and 45° 15' E. It is strategically placed on a spur of the *Djabal Ḥamrīn* and is identified with Ashur, one of the capital cities of ancient Assyria. In the middle of the 3rd millennium, it was occupied by migratory tribes coming either from the west or the south, and was venerated as the religious and sometime political centre of Assyria until it was captured by the Babylonians in 614 B.C. This battle devastated the city and it was not reoccupied as a city again. Ashur is the name not only of the place but also of the local deity, and it occurs in Akkadian, Aramaic and Greek sources. The site was known by the Turks under the name *Toprak Kał'e*, "Earth Citadel". The meaning of the element *sharkāt* in the Arabic name is not known, but it is probably to be explained as an independent proper name. It is not mentioned by Arab geographers; the earliest reference to it is in the 18th century, and it is the name used by later Western travellers.

The site was described by C.J. Rich, who visited it in March 1821, and it was subsequently investigated by J. Ross (1836), W. Ainsworth with E.L. Mitford, A.H. Layard and H. Rassam (1840), and again by Layard and Rassam (1847) on behalf of the British Museum, when an important statue of Shalmaneser III (858-825 B.C.) was found. In 1849, after excavations by J. Talbot, J. Oppert, E. Hincks and H.C. Rawlinson, an inscribed historical prism recording the history of the reign of Tiglath Pileasar III (744-727 B.C.) was found, and two duplicate copies of this inscription were discovered by Rassam in 1853 in further British Museum excavations under the general supervision of Rawlinson. Several inscrip-

tions from the reign of Adad Nirari III (810-783 B.C.) were discovered by G. Smith in 1873. The most rigorous excavation of the site was conducted between 1903-13 by the Deutsche Orient Gesellschaft, first by R. Koldewey and then by W. Andrae and others, which followed the presentation of the site to Kaiser Wilhelm II by Sultan 'Abd al-Ḥamīd II.

To the north and east the site is naturally protected by the river and the escarpment, and the only necessary fortifications were buttressed walls. Senacherib (704-681 B.C.) records the building of a semicircular sallyport tower of rusticated masonry which is probably the earliest of its kind. To the south and west it was more heavily fortified. After an early period of dependence upon the south during the Third Dynasty of Ur (2112-2004 B.C.), it begins a separate history. Evidence about life in Ashur for the earliest period comes from the documents of an Assyrian group of traders working in Anatolia at the ancient city of Kanesh, modern Kültepe, in Turkey, but the earliest palace is that of Shamshi Adad I (1813-1781 B.C.), and spacious private houses with family vaults beneath the floors have been found in the north-western area. Much of the history of this period has to be reconstructed from an archive of the letters of Shamshi Adad which were discovered at Mari (modern Tell Harīrī) in eastern Syria. He controlled Ashur after it had been subject to Naram Sin of Eshunna (modern Tell Asmar). Although he did not use Ashur as his capital city, preferring Shubat Enlil (modern Chagar Bazar), he did build there a temple to Enlil, the local god of Nippur (modern Niffar), and the one who traditionally named the king and entrusted to him the symbols of royal power.

During the period of Cassite domination in Mesopotamia, Puzur Ashur III (ca. 1490 B.C.), made a treaty with Burnaburiash I of Babylon, and in Ashur he records rebuilding part of the Ishtar temple and a section of the southern city wall. Building operations of this kind are often recorded on clay cones which were inserted between the courses of the new brickwork. Ashur Nadin Akhe II (1402-1393 B.C.) secured Egyptian support for his country and received gifts of gold from the Pharaoh.

Official lists of the Assyrian kings have been found and these are an essential source for establishing a framework of the classical history of the site. They often contain more than fifty names and record the length of each reign. Other lists record the names of the temples there, but only a few of the 34 mentioned have actually been identified. The architectural features of these early buildings are similar to those of Old Babylonian buildings, but the lengthening of the sanctuary on its main axis and the positioning of an altar in a deep recess are distinctively Assyrian features.

The traditional founder of the Assyrian empire was Ashur Uballit (1365-1330). At the beginning of his reign he was subject to Tushratta of Mitanni, but in 1350, with the help of Suppiluliumas, the Hittite king, he was able to attack and annexe the Mitanni areas in northeast Mesopotamia. Ashur Uballit called himself *šarru rabu*, the great king, equal in status to the Pharaoh, and was a severe threat to the Babylonians. Two of his letters to Akhnaten have been preserved in the famous archive from Tell al-Amarna, Egypt (see Knudtzon (1915), nos. 15-16). He called his country *mat Aššur*, the Land of Ashur, while the older name of Subartu was used by the Babylonians, possibly in a deprecatory sense. Even so, Assyrian royal inscriptions

are composed in the Babylonian dialect of Akkadian because, presumably, such language had a traditional air of refinement. His son Enlil Nirari (1329-1320 B.C.) fought against Babylon, and Arik Din Ili (1319-1308 B.C.) harassed the Akhlamu, the Semitic tribes to the west. Adad Nirari I (1307-1275 B.C.), by his battles with the Cassites and the Mitanni, was eventually able to unite Mesopotamia into an empire, but the territory he gained was later eroded because of the rise of the Hittites and the unsatisfactory defences against the tribes to the east.

Shalmaneser I (1274-1245 B.C.) records building a new royal city in the north at Kalkhu (modern Birs Nimrūd) and his son Tukulti Ninurta I (1244-1208 B.C.), also built a new residence but much nearer, just to the north-east, which he named Kar Tukulti Ninurta, "the Quay of Tukulti Ninurta" (modern Tulūl 'Akr). He records having captured Marduk god of Babylon, and a figure of primary importance in Babylonian mythology who was later to be assimilated into Assyrian versions of religious texts. Despite these alternative capitals, Ashur was still used as a political centre from time to time, yet it gradually became primarily a religious centre. By the 10th century B.C. it was overshadowed by Kalkhu and Nineveh, and the later kings chose these northern sites as capitals from which to administer their empire.

The city was attacked and devastated by the Babylonian ruler Nabopolassar (625-605 B.C.) in 614 B.C. two years before he destroyed Nineveh and brought the Assyrian empire to an end. Afterwards, there is only scanty documentation from which to reconstruct the history of this important site. Under the Babylonians, it was probably only sparsely inhabited, for Cyrus the Great, when he conquered Babylon in 539 B.C., claims: "To the sacred cities on the other side of the Tigris as far as Ashur . . ., the sanctuaries of which have been ruins for a long time, I returned the images which used to live therein and established for them permanent sanctuaries" (from the *Cyrus Cylinder*, the basic historical source for the Persian conquest of Babylon). The name occurs again in the Old Persian text of the *Behistun Inscription* but the only other inscriptional evidence comes from Aramaic documents from the site; these used to be dated to the Parthian period, and taken as evidence that the names of the old Assyrian gods survived in the community until the 3rd century A.D., but they are now said to come from the 7th century B.C. As a geographical name Athūrā may refer simply to the town but in Greek sources it is clear that Ἀτρουρία refers to the whole northern area. The site seems definitely to have declined in importance under the Sāsānids, and Athōr in Syriac indicates simply a parish which continued until the late Middle Ages.

The Arab geographers refer to Athūr (sometimes written Akūr); it is, however, defined by them not as modern Kal'at Sharḳāt but as an earlier name for Mawṣil, and also as the name of the province which was later called al-Djazīra [q.v.]. The ruin associated with the name is described as near to al-Salāmiyya, 4 km. N.W. of Nimrūd. They also make the observation that al-Djazīra, which practically coincides in area with Assyria, is a name derived from Athūr. Although it is clear that a ruin was still known at this site, the name Athūr has been transferred erroneously to the ruin near al-Salāmiyya; this transposition was influenced by the fact that there were two famous capitals of Assyria in the north and is similar to the case of Baghdad, which travellers of

the Middle Ages until Pietro della Valle (1616-17) considered to be the site of ancient Babylon. According to Layard (1853), 165, the hill in the corner of the ruins of Nimrūd was still called "Tell Athūr".

It is surprising that there appears to be no mention of the name Sharḳāt before the narratives of European travellers. Rich (1821) mentions it, and it is described more fully by Layard (1849), 3, who says "We entered Mosul on 10th April 1846. During a short stay in that town we visited the great ruins which have been generally believed to be the remains of Nineveh. We rode also into the desert and explored the mound of Kalah Shergat, a vast ruin on the Tigris about fifty miles below its junction with the Zab". He did not identify it with Ashur; all he could say was, "A few fragments of pottery and inscribed bricks discovered after a careful search amongst the rubbish which had accumulated around the base of the great mound, served to prove that it owed its construction to the people who had founded the city of which Nimrod is the remains" (*loc. cit.*). But later, during the river trip from Mawṣil to Baghdād, he was told of a connection in folklore between the two names, based on the ancient dam in the river: "The Arab explained the connection between the dam and the city built by Athur, the lieutenant of Nimrod, the vast ruins of which were then before us, and its purpose as a causeway for the mighty hunter to cross to the opposite palace now represented by the mound of Hammam Ali." (*op. cit.*, 6). These traditions may still survive in local villages.

Today the site is situated on the edge of the rainfall zone, so that agriculture relies on artificial irrigation. Local inhabitants often rely on employment outside the village to supplement their income, and some of the men and boys have become particularly skilful assistants for archaeological excavations. Most of the settled population belong to the Djubūr tribe; although the *shaykh* of this branch lives at Kayyarā further up the valley, there is a mansion at Sharḳāt, 8 km. north of the site, belonging to Shaykh Adjil al-Yawir of the Shammar. The population density of the area is 4.8 per sq. km., which reflects its relative poverty. Sharḳāt is the headquarters of a *nāhiya*, the smallest administrative unit in Irāk.

*Bibliography:* For a general topographical description of the area, see Admiralty, Intelligence Division, *Geographical Handbook: Iraq and the Persian Gulf*, London 1944; R. Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927 and G. Tchalenko, *Villages antiques de la Syrie du Nord*, Paris 1953. The site itself is fully described by E. Unger, in E. Ebeling and B. Meissner, *Reallexicon der Assyriologie*, Leipzig 1928, 170-96, but for an accurate historical assessment, more modern works should be consulted. See in general, I.E.S. Edwards *et alii* (eds.), *Cambridge Ancient History*, Cambridge 1973, Part ii, Ch. 1 (by J.R. Kupper), Ch. 2 (by M.S. Drower) and Ch. 5 (by C.J. Gadd), and more specifically D. Oates, *Studies in the ancient history of Northern Iraq*, London 1968.

The official reports of the excavations are given by W. Andrae, with others as indicated, in the following volumes of *Mitteilungen der Deutschen Orient Gesellschaft*, xx (1903, R. Koldewy); xxi, xxii, xxv (1904); xxvi-xxix (1905); xxxi-xxxiii (1906); xxxiii, xxxvi, xxxvii (with J. Jordan) (1908); xl, xlii (1909, with J. Jordan); xliii-xliv (1910); xlv, xlvii (1911); xlviii-xlix (1912, with J. Jordan); li (1913, with P. Maresch); liv (1914,

with H. Luhrs and H. Lucke); lxi (1921); lxiii (1924); lxxi (1932, H.J. Lenzen); lxxii (1935) and lxxvi (1938). A series of monographs by Andrae and others have been published in the following volumes of *Wissenschaftliche Veröffentlichungen der Deutschen Orientgesellschaft*: x (1909); xxiii (1913); xxiv (1913); xxxix (1922); lvii (with H.J. Lenzen, 1933); lviii (1935); xlvi (1924); liii (1931).

In the same series, editions of the cuneiform texts discovered at the site have been published as follows: xvi (1911) and xxxvii (1922) by L. Messerschmidt and O. Schroeder; xxviii and xxiv (1915-23) by E. Ebeling; xxxv (1920) by Schroeder; lxiv (1954) and lxvi (1955) by C. Preusser; lxv (1954) and lxvii (1955) by A. Haller; lxii (1956) by F. Wetzel and others. The Aramaic ostraca and tablets were published originally by M.M. Lidzbarsky, also in the same series, xxxviii (1921), but the more recent edition by H. Donner and W. Rollig, *Kanaanäische und aramäische Inschriften*, 2nd ed., Wiesbaden 1969, Texts 233 and 234-6, should now be used.

The Arab geographers referring to the site are as follows: Ibn Rustih, 104, tr. Wiet, 115, equating Athūr with Maṣṣil; and Yāqūt, i, 119, 16; 340, 5; 118, 18. For *Djazīrat Akūr*, see *ibid.*, ii, 72, 13; 231, 9, which coincides with the *Iklīm Athūr/Akūr*, "the region of Ashur", mentioned only by al-Muḥaddasī, 20, 3 (see also 27, 10, and 28, 7). For *[Djazīrat] Akūr* as an older name for the *Djazīra*, see also Le Strange, *The lands of the Eastern Caliphate*, 86.

For the records of early travellers, see C.J. Rich, *Narrative of a residence in Koordistan*, London 1836, ii, 137 ff.; J. Ross, in *JRGS*, ix (1839), 451-3; W. Ainsworth with A.H. Layard and E.L. **ĀTISH**, **KHWĀDJA HAYDAR 'ALĪ** (d. 1263/1847), Urdu poet, was born in Faizabad (Fayḍābād [q.v.]) probably around 1191/1778, according to A.L. Ṣiddīqī (see *Bibl.*, below). His ancestors are said to have originated in Baghdad, whence they came to Dihli. His father moved from there to Fayḍābād and died during the poet's youth. As a result, Ātish's formal education was curtailed, though he supplemented it by avid reading. In early manhood, he led the life of a fop and a roué, and carried a sword. But his aptitude for poetry was noticed, and he was taken to Lucknow. There he was trained by the poet *Shaykh Ghulam Hamadāni Muṣḥafī*, and was soon recognised as a leading *ghazal* poet, along with his chief rival, *Shaykh Imām Bakhsh Nāsikh*. Such poetical rivalries were a familiar feature of Lucknow cultural and social life, but—as we see in the case of Ātish—they did not always involve personal animosity. Indeed, he ceased to write poetry after the death of his rival.

Modern critics regard Ātish as the greater poet of the two. Urdu *ghazal*, as he found it, tended to be rich in vocabulary and ornate in style, with similes, metaphors, and other rhetorical devices which were at times far-fetched and exaggerated. Ideas were largely stereotyped, with much concentration on the physical features of the beloved such as tresses (*zulf*) and face (*ruḥṣān*) as in Persian models. Ātish seems to have been an independent-minded eccentric

in his private life, and this is reflected in his poetry to some extent. He would not write poetry for patronage, though he accepted a small pension from the King of Oudh (Awadh [q.v.]). He spurned wealth, living like a dervish in a broken-down house. He was humble to the poor but haughty to the wealthy. In his verse, he was not a great innovator, but neither was he a slavish imitator of time-honoured poetical techniques. Thus while he did not radically change the form and style of *ghazal*, he frequently appears less artificial than his predecessors and contemporaries, writing in a more natural language nearer to everyday speech as used by the educated of Lucknow; perhaps his lack of formal education encouraged this tendency. He was criticised for using non-literary turns of phrase, and mis-spelling Arabic words—the latter perhaps deliberately, in the interests of prosody, or to reflect actual pronunciation of these words in Urdu. In short, we at times sense spontaneity and even sincerity in his verse, and his literary language became accepted as a model. His poetical output of over 8,000 verses is practically entirely composed of *ghazals*.

*Bibliography*: Ātish's poetry was published originally in two *diwāns*—the first in 1845 in Lucknow under the poet's supervision; the second, which contains many of his best poems, was published in the same city after his death by his pupil, Mīr Dūst 'Alī *Khalīl* in 1268/1851. Many editions of his collected poetry have since been published, for example the *Kullīyyāt* in Cawnpore 1871 and 1884. There is a useful introduction by Zāhir Aḥmad Ṣiddīqī in *Kullīyyāt-i Ātish*, Allahabad 1972. Short critical accounts of the poetry will be found in Muḥammad Ḥusayn Āzād, *Āb-i ḥayāt*, 379-93 in the Lahore edition of 1950; Abu 'L-Layṭh Ṣiddīqī, *Lakhnāu kā dabistān-i-shā'iri*, Lahore 1955, 525-41; Muḥammad Sadiq, *History of Urdu literature*, London 1964, 138; and Ram Babu Saksena, *History of Urdu literature*, Allahabad 1927, 111-13; Further information may be found in *Shaykh Ghulam Hamadāni Muṣḥafī, Riyād al-fuṣḥā'*, Dihli 1934, 4-9; Karīm al-Dīn and Fallon, *Tadhkirah-i-shu'arā'-i-Hind*, Dihli 1838, 354; Ṣafīr Balgrāmī, *Djalwa-i-khidir*, 2 vols., Ara, Bihar 1882, ii, 106 f.; *Kh'ādja 'Abd al-Ra'uf 'Ishrat Lakhnawī, Āb-i bakā'*, Lucknow 1918, 11-19, 170-7; *Memoirs of Delhi and Faizabad*, English tr. of Fayḍ Bakhsh, *Tārīkh-i-farah bakhsh*, Allahabad 1889, 266-302; and Iḍjāz Ḥusayn, *Kalām-i-Ātish*, Allahabad 1955; For a general picture of Lucknow cultural life in the first half of the 19th century, see Abdul Halim Sharar, tr. **AWRABA**, a Berber tribe of Morocco. Ibn *Khaldūn*, *Ibar*, Fr. tr. de Slane, i, 286, provides all the information which we have on the early history of this tribe, which formed part of the sedentary *Barānis* [q.v.]. Certain of these appear to have been Christians. At the time of the Muslim conquest, they held the premier place among the North African Berber tribes because of their forcefulness and the bravery of their warriors. Ibn *Khaldūn* also gives us the names of the tribe's main branches and those

of the most outstanding chiefs whom they had before the Arabs' arrival. The celebrated Kusayla [q.v.], who was probably a Christian, is said to have been their *amīr*, as of all the Barānis. He rebelled, and was defeated and killed in 62/682, and it was after his death that the Awraba (or Awriba?) no longer directed the resistance against the invaders.

The tribe makes its real appearance in the history of Morocco by making *Shīrī* doctrines triumphant there, even though these were contrary to the *Khāridjī* ones embraced by the Berbers in the preceding century. It was indeed under the protection of the Awraba chief, Abū Laylā Ishāk b. Muḥammad b. 'Abd al-Hamid, that the 'Alid fugitive Idrīs I [q.v.] established himself in 172/788 at Walīla, the ancient Roman town (the present Volubilis), situated in the little mountain massif of Zarhūn, north of Mēknēs.

These mountain folk called themselves descendants of the Awraba of the Aurēs, driven out of the central Maghrib after Kusayla's death, as also were those elements of the Awraba to be found in the regions of the Zāb [q.v.] and the Ouarsenis [q.v.].

Like several of the northern Moroccan tribes, the Awraba professed Mu'tazilī doctrines; they were accordingly favourable to the 'Alids and regarded the nomination of an *imām* as a necessary obligation for the community. This is why Abū Laylā could without difficulty have himself proclaimed sovereign *imām* of his own tribe and of the neighbouring tribes (4 Ramaḍān 172/5 February 789) a few months after Idrīs's arrival in the Zarhūn. The Awraba then successfully took part in Idrīs I's work of Islamisation. Idrīs II showed his gratitude badly towards his father's benefactor, since he had him executed 20 years later, on the accusation of having relations with the Aghlabid ruler of al-Kayrawān, who recognised the authority of the hated 'Abbāsids, but this action was doubtless also from reasons of local politics.

At Idrīs II's death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to them (221/836) by giving allegiance to the nine-years old 'Alī b. Muḥammad, ruler of Fās, assuring tutelage over the kingdom till the young *imām*'s majority. 'Alī died after a peaceful reign of 13 years. New disputes now divided Morocco between rival factions, and finally, in 251/866, the Awraba recognised 'Alī's cousin, 'Alī b. 'Umar.

Awraba were still in contact with the principality of Nukūr [q.v.], and in mediæval times, they were to be found in Algeria, at Niḳaws (N'gaous) and in the region of Bōne. They never disappeared completely, and re-appear in the historical texts, e.g. under the Almohads; at first (559/1164) they espoused the cause of a rebel and were opposed to the Almohads, but then in 580/1184 rallied to them in order to go and fight in Spain. They appear further under the Marīnids, being specially mentioned in the texts concerning the meetings for the holy war in al-Andalus, and one of them commanded the renowned "volunteers for the faith". In 707/1308, some Awraba chiefs involved in the revolt of a pretender, were executed on the orders of the sultan Abū Thābit, and their bodies exposed in crucifixion on the encircling walls of Marrakesh.

At the present time, some of their former tribes (the Ladjāya, Mazyata and Raghīwa) are established on the banks of the Wādī Wargha, to the north of the Zarhūn.

(G. DEVERDUN)

**A'YĀS**, a component group of the Meccan clan of Umayya or 'Abd Shams, the term being a plural of the founder's name, a son of Umayya b. 'Abd Shams b. 'Abd Manāf b. Ḳuṣayy called al-'Īs or Abu l-'Īs or al-'Ās(ī) or Abu l-'Ās(ī) or 'Uwayṣ, these being given in the genealogical works as separate individuals, but doubtless in fact one person (on the two orthographies al-'Ās and al-'Āsī, the former explicable as an apocoped *Ḥiḍjāzī* form, see K. Vollers, *Volksprache und Schriftsprache im alten Arabien*, Strassburg 1906, 139-40). The group formed a branch of the clan parallel to that of Harb b. Umayya, from whom descended Abū Sufyān, Mu'āwiya [q.v.] and the Sufyānids. Amongst the sons of al-'Ās, etc., were 'Affān, father of the caliph 'Uthmān [q.v.]; al-Ḥakam, father of the caliph Marwān I [q.v.] and progenitor of the subsequent Marwānids; Sa'īd [q.v.], governor of Kūfa under 'Uthmān and of Medina under Mu'āwiya b. Abī Sufyān; and al-Mughīra, whose son Mu'āwiya was the mutilator of the Prophet's uncle Ḥamza b. 'Abd al-Muṭṭalib and the father of 'Abd al-Malik b. Marwān's mother 'Ā'isha.

Because of the strenuous hostility shown to the Prophet by al-'Ās (he was killed, a pagan, at Badr) and his son Mu'āwiya, and because of al-Ḥakam's ambiguous role in the first years of Islam (as the "accursed one" banished by the Prophet), the family was often regarded by later Islamic sources with especial rancour; Sa'īd b. al-'Ās, however, found some contemporary favour with the Ḥāshimī clan and the supporters of 'Alī, see Lammens, *Mo'āwīa I'*, in *MFOB*, i (1906), 27-8.

(C.E. BOSWORTH)

**ĀYATULLĀH** (ĀYAT ALLĀH, current orthography Ayatollah), a title with an hierarchical significance used by the Imāmī, Twelver *Shīrī*'s, and meaning literally "Miraculous sign (*āya* [q.v.]) of God". In order to understand its sense and its implications, one has to consider the recent evolution of certain institutions worked out by the Imāmī '*ulamā'*'.

Since the dominating attitude of Imāmism has been dictated by the doctrine that all political power—even if exercised by a *Shīrī*—is illegitimate during the occultation of the Hidden Imām, it has only been comparatively late, from the Ṣafāwīd period (907-1135/1501-1722) onwards, that political theories have taken shape and an hierarchy within the top ranks of the *mudjtahids* [q.v.] has been formed. After their long disputes against the *Akhbārīs* [see *AKHBĀRIYYA* in Suppl.] and *Šūfīs*, the *Uṣūlīs* [q.v.] in the course of the 19th century elaborated the theory according to which at every given moment there could only be one unique *marḡā'-i taḳlīd* [q.v.] "source of imitation" (see Algar [1969], 5-11, 34-6, 162-5, etc.; Binder, 124 ff.). This title of *marḡā'-i taḳlīd* [q.v.] was subsequently applied retrospectively to numerous *mudjtahids* (for lists of the *nā'ib-i 'āmmis* of the Hidden Imām going back to Muḥammad Kulaynī, d. 329/940, see Bagley [1972], 31; Fisher, 34-5; Hairī, 62-3). During the 1960s, several discussions took place

concerning the manner of selection and the functions of the *marjā'a-i taklīd*, at the very time when the Āyatullāh Burūdjirdī (d. 1961), recognised as the sole *marjā'a-i taklīd* by the mass of Imāmī Shī'īs, disappeared (Algar [1972], 242; for some reserves about this recognition, see Binder, 132). Drawn up by religious leaders and laymen, a collective work called *Bahthī dar bāra-yi marjā'īyyat va rūhānīyyat*, dealing in particular with Imāmī institutions and on links with the political authority, appeared at Teheran in December 1962 (a brief analysis by Lambton, 121-35). After the disappearance of Burūdjirdī—whose attitude to politics had been one of quietism—the institution of the *marjā'īyyat* seems to have spread out widely (in 1976, there were six *marjā'a-i taklīds* of first rank, including the Āyatullāh Ḳhumaynī; Fisher, 32). However, from 1963 onwards, a certain consensus seems to have grown up around the Āyatullāh Ḳhumaynī, the main religious opponent of the Pahlavī régime (Algar [1972], 243; but it also seems that the consensus over the *marjā'īyyat-i kull* of the Āyatullāh Muḥsin Ḥakīm Tabātabā'ī of Nadjaf (d. 1970) was at least partially realised in ca. 1966 (Bagley [1970], 78, n. 7; this *āyatullāh* enjoyed the favour of the Shah; see Algar [1972], 242-3).

From the time of the protest against the Tobacco Concession (1891-2), the *marjā'a-i taklīd*—who at that period resided in the holy places of 'Irāk, the 'Atabāt [*q.v.* in Suppl.]—often took the lead in the fight of opposition to Ḳādjār autocracy and to foreign domination. This association of the *muḏjtahids* with political opposition seems to have been clearer with the grant of the title *āyatullāh*. In practice, this *kaḡab* seems first of all to have designated the two great leaders of the constitutional revolution, the *sayyids* 'Abd Allāh Biḥbahānī and Muḥammad Tabātabā'ī (*Lughat-nāma-yi Dihkhudā*, s.v. *Āyatullāh*). It has since been applied to numerous great *muḏjtahids* (sometimes retrospectively), independently, it appears, of their political attitudes. It tends to replace in current usage (but not in the actual hierarchy) certain titles such as that of *ḥudjāt al-Islam* which nowadays can mean any and every *ākhund* (this latter term tending, despite its pejorative character, to supplant that of *mullā*).

As with that of *marjā'a-i taklīd*, attribution of the title is above all a question of opinion. In effect, above the title of *muḏjtahid* the level of respect accorded and the religious chief's charisma depend on the consensus of the mass of faithful. The *āyatullāh* is placed at the top of the hierarchy, amongst the élite of the great *muḏjtahids*. At the summit of all is to be found the *āyatullāh al-'uzmā* (the "greatest miraculous sign of God"), the supreme *marjā'a-i taklīd* or *muḏjtahid*. This rank seems to have been first of all accorded to Burūdjirdī (Binder, 132). There seems also to be at Ḳum a limited sort of college which makes decisions about the title (*ibid.*, 134). This clearly reinforces the position of Ḳum, which has become the "symbolic capital" of Iran since the Āyatullāh Ḳhumaynī's return (the title *Imām* sometimes applied to him seems to be taken from 'Irākī usage).

Although they are sometimes of modest origin, the great majority of *āyatullāhs* are now *sayyids* (whereas the great '*ulamā*' of the past were not always from this class). Marriages and alliances traditionally reinforce the strength of religious leadership (see Fischer, genealogical tables, 33-4). Whether he be *marjā'a-i taklīd* or not, the *āyatullāh* exercises a double role of manager within his sphere of activity. On the administrative level, he controls the levying

of various religious taxes, the direction of pious gifts and property in mortmain (*wakf* [*q.v.*], controlled by the state under the Pahlavī régime), the distribution of various grants and alms, the administration of centres of learning, etc.; on the intellectual and spiritual level, he is responsible for education. His influence on the social level is limited by his faithful followers: the students and those who bring their financial support to him (Fisher, 41).

The role and influence of the Iranian *āyatullāhs* are now very diverse. Their prerogatives have increased through the progressive installation of an Islamic Republic since the events of winter 1978-9. But, despite the abolition of the monarchy, they are inevitably subject to all the hazards of political power and to the pressures of antagonistic forces (secularism, communism, the growth of nationalisms, religious particularisms, etc.). There is at least one *āyatullāh* in each province and several in each main centre of religious teaching (*ḥawda-yi 'ilmī*). Thus there are 14 traditional *madrasas* at Ḳum directed by *āyatullāhs*, of whom some have attained the rank of *marjā'a-i taklīd* (Fisher, table, 23).

*Bibliography*: (for works in Persian, difficult to find outside Iran, see the bibliographies cited by Algar, Bagley, Fisher and Hairī); A.K.S. (J. CALMARD)

'AYN AL-ḲUDĀT AL-HAMADHĀNĪ, 'ABD ALLĀH B. ABĪ BAKR AL-MIYĀNADĪ, Shāfi'ī jurist and Šūfi martyr, born at Hamadhān in 492/1098. Born of a line of scholars, he studied Arabic grammar, theology, philosophy and law, and as an already precocious scholar, began writing his books at the age of 14. Also, at the approach of puberty, he became a convert to Šūfism. In 517/1123, at the age of 25, he seems to have met Aḥmad al-Ghazālī, brother of the great theologian Muḥammad al-Ghazālī, who initiated him into Šūfi meditation and dancing, thus completing his spiritual conversion. Other masters of his were Muḥammad b. Ḥammūya and a certain Baraka.

His spiritual reputation soon gained him many disciples, and he spent all his time in oral and written teaching, sometimes going beyond the limits of his physical strength for this and having then to retire for two or three months for recuperation. His activities soon provoked the hostility of the orthodox theologians. Provoked by his teachings on the nature of sainthood and prophethood and on submission to the Šūfi *shaykh*, and objecting to his

usage of Ṣūfī terminology which gave the impression that he himself laid claim to prophetic powers, they brought an accusation of heresy against him before the Saldjūk vizier in ‘Irāk, who imprisoned him in Baghdād. It was there that he wrote his apologia, the *Shakwā ‘l-gharīb*. Some months later he was set free and returned to Hamadhān, but shortly afterwards, at the time of the Saldjūk sultan Maḥmūd’s arrival (reigned 511-25/1118-31), he was executed in a barbarous manner during the night of 6-7 Djumādā II 526/6-7 May 1131 at the age of 33. His premature death seems to have prevented Hamadhānī from founding a Ṣūfī monastery, setting up a Ṣūfī group and designating a successor; nevertheless, his numerous works, written in a fine style, have always found an audience.

His published works include his *Shakwā ‘l-gharīb ‘an al-awṭān ilā ‘ulamā’ al-buldān*, an apologia in Arabic (ed. and Fr. tr. Mohammed ben Abd-el-Jalil, in *Jā* (1930), 1-76, 193-297; ed. ‘Afif ‘Usayrān, *Muṣannafāt-i ‘Ayn al-Ḳudāt al-Hamadhānī*, Tehran 1341/1962; Eng. tr. A.J. Arberry, *A Sufi martyr, the apologia of ‘Ain al-Ḳudāt al-Hamadhānī*, London 1969); *Risāla-yi Lawā‘ih*, on mystic love, in Persian, ed. Raḥīm Farmanīsh, Tehran 1337/1958; *Zubdat al-ḥakā‘ik*, in Arabic, ed. ‘Usayrān, in *op. cit.*; *Tamhīdāt* or *Zubdat al-ḥakā‘ik fi kashf al-dakā‘ik*, in Persian, ed. ‘Usayrān, in *op. cit.*, twice tr. into Turkish; *Nāmāhā* or *Maktūbāt*, *Makātib*, letters, in Persian, ed. ‘Alīnaḳī Munzawī and ‘Usayrān, 2 vols., Beirut and Tehran 1390/1971; *Risāla-yi yazdānshī-nākhāt*, ed. Bahman Karīmī, Tehran 1327/1948; and *Aḥwāl u āthār*, ed. Farmanīsh, Tehran 1338/1959.

*Bibliography*: Sandilāhī, *Makhzan al-gharā‘ib*, Bodl. Pers. ms. 395, 1523; Brockelmann, I, 490, S I, 674-5; F. Meier, *Stambuler Handschriften dreier persischer Mystiker*, in *Isl.*, xxiv (1937), 1-9.

(J.K. TEUBNER)

‘AYN AL-MULK MULTĀNĪ, official and military commander under the Dihlī sultans of India.

His actual name and early career are not known. Contemporary writers mention him by his honorific title, ‘Ayn al-Mulk, with the *nisba* Multānī because he hailed from Multān; the 9th/15th century chronicler Yahyā Sirhīndī calls him ‘Ayn al-Mulk-i Shihāb signifying that his father’s name was Shihāb. However, ‘Ayn al-Mulk Multānī started his career in the reign of Sultan ‘Alā’ al-Dīn Khalījī (695-715/1296-1316), and soon attained to an important position in the official hierarchy, showing excellence in both penmanship and military generalship. Amīr Khusraw showers praises on him in his works, depicting him as a learned statesman in peace time and a veteran general on the battlefield. Ḍiyā’ al-Dīn Baranī speaks of him as one who was wise in counsel, widely travelled, ripe in experience and much distinguished for his sagacity and successful tackling of complicated problems.

His first important assignment was his posting in Mālwa as the *mukṭa’* or governor of Dhār and Udjḍayn in 704/1305. In Mālwa, he not only consolidated the sultan’s rule, but also subdued the recalcitrant *zamīndārs* of Central India. In 716/1316, he held the territory of Deogīrī (in modern Maharashtra), when he was recalled to Dihlī by Malik Nā‘ib just after Sultan ‘Alā’ al-Dīn had died. En route he received another order from Dihlī directing him to proceed to Guḍjarāt, where rebels had captured the province. In compliance to Malik Nā‘ib’s order, ‘Ayn al-Mulk turned aside, but had to halt in Čitōr as many fellow-nobles in the royal army refused to march after Malik Nā‘ib had been killed

and the policy of the new ruler, Sultan Ḳuṭb al-Dīn Mubārak Shāh, was not known. After a few days, the new Sultan sent him and other nobles *famāns* ordering them all to go to Guḍjarāt and establish peace and order there.

On arrival, ‘Ayn al-Mulk tried to solve the problem diplomatically. He wrote to the leaders of the rebellion that the murder of their leader Alp Khān had already been avenged, as the culprit (Malik Nā‘ib) was now dead, and for this reason they should not persist in rebellion. He also warned them of the serious consequences if they did not submit to the central authority. In response to his letter, many rebels joined his camp. Only Ḥaydar and Zīrak fought against the royal army and they were easily routed. Having settled the affairs of Guḍjarāt, he then returned to Dihlī.

In 718/1318, he was sent to Deogīrī when Malik Yak Lakhī, the local *mukṭa’*, rose in rebellion. This time he was appointed as *wazīr*, with Malik Tādī al-Dīn, son of Kh‘ādja ‘Atā’ as *Mushrif* and Mudjīr al-Dīn Aburdja as military commandant. In 720/1320, he was present in Dihlī when Sultan Ḳuṭb al-Dīn Mubārak Shāh was killed by the allies of Khusraw Khān. Though ‘Ayn al-Mulk was not in alliance with Khusraw Khān, the latter honoured him with the title of ‘Alam Khān in order to win him over to his side. Soon afterwards, Ghāzī Malik, the *mukṭa’* of Depālpur, organised a movement against Khusraw Khān aiming at revenge for the murder of Ḳuṭb al-Dīn Mubārak Shāh, persuading all the important nobles, including ‘Ayn al-Mulk, to help him against the regicide. ‘Ayn al-Mulk, afraid of Khusraw Khān’s agents, showed Malik Ghāzī’s letter to the usurper, and thus assured him of his own loyalty. Ghāzī Malik, anxious to win him over, again wrote a letter to him. This time ‘Ayn al-Mulk expressed his sympathy with Ghāzī Malik’s undertaking and promised not to participate in the battle against any party because he was in Dihlī, surrounded by the allies of Khusraw, and could not take up arms against him. On achieving the throne, Ghāzī Malik, who assumed the title of Sultan Ghiyāth al-Dīn, and apparently retained ‘Ayn al-Mulk Multānī in his service.

According to ‘Iṣāmī, ‘Ayn al-Mulk joined Ulugh Khān (later Sultan Muḥammad b. Tughluḳ) on the Warangal expedition of 722/1322. Since the siege of Warangal became prolonged and Ulugh Khān insisted on capturing the citadel, the officers got tired and many of them mutinied, although ‘Ayn al-Mulk remained loyal. This was the last expedition that he had joined, for we do not hear of him afterwards.

Certain mediaeval as well as modern scholars have confused ‘Ayn al-Mulk Multānī with ‘Ayn al-Mulk Māhrū, who is the author of the famous work, *Inshā‘-i Māhrū*. Māhrū was a noble of Muḥammad b. Tughluḳ’s and Firūz Shāh’s entourage. ‘Iṣāmī distinguishes ‘Ayn al-Mulk Multānī from Māhrū by calling the latter ‘Ayn al-Dīn. Ḍiyā’ al-Dīn Baranī differentiates between them by making different statements about their qualities, stating that ‘Ayn al-Mulk Multānī could not only wield the sword successfully but was also adept in diplomacy and penmanship, while Māhrū had no experience of military generalship, since he belonged to the class of scribes and clerks. Shams al-Dīn Sirāḍī ‘Afif presents Māhrū as the creature of Muḥammad b. Tughluḳ. Further, most of the letters and documents contained in the *Inshā‘-i Māhrū* were drafted in Firūz Shāh’s reign, and only a few belong to the time of Muḥammad b. Tughluḳ; there is no letter written by Māhrū during

the reigns of the latter's predecessors. In short, 'Ayn al-Mulk Multānī and 'Ayn al-Mulk Māhrū were two different persons belonging to different generations.

(I.H. SIDDIGUI)

**AYTĀKH AL-TURKĪ** (d. 235/849), a Khazar military slave or *ghulam* [q.v.] who had been bought in 199/815 by the future caliph al-Mu'taṣim, and who played an important role in the reigns of his master, of al-Wāthik and of al-Mutawakkil. At the opening of al-Wāthik's caliphate, he was, with Ashnās, the "mainstay of the caliphate". After being commander of the guard in Sāmarrā, in 233/847 he was made governor of Egypt, but delegated his powers there to Harthama b. Naṣr (Ibn Taghribardī, *Nudjūm*, ii, 265; al-Makrīzī, *Khīṭat*, ed. Wiet, v, 136). It was he who, in this same year, seized and put to torture the vizier Ibn al-Zayyāt. At this time, he was combining the functions of *hādīb*, commander of the caliphal guard, intendant of the palace and director of the postal and intelligence system; but he laid these duties down in 234/848 in order to go on the Pilgrimage. When he returned, he was arrested by Ishāk b. Ibrāhīm b. Muṣ'ab, and he died of thirst in prison the following year. It is said that al-Mutawakkil confiscated from his house a million *dīnārs*.

**ĀZĀD**, ABU 'L-KALĀM, reviver of Muslim thought in India and influential politician of the first half of the 20th century. Born in Mecca in 1888, he received in Calcutta, where his family settled in 1898, an austere and rigorously orthodox education. With great precocity he made his début in the literary world at the age of fourteen with an article published in the Urdu language magazine *Makḥzan*. At the age of sixteen he made the acquaintance of the remarkable poet Alṭāf Ḥusayn Ḥālī [q.v.], on whom he made a strong impression, and shortly after he met Mawlānī Shihbī Nu'mānī who immediately recognised his exceptional qualities and took him to Lucknow to teach him journalism, entrusting to him the editing of his journal *al-Nadwa*.

In July 1912 Abu 'l-Kalām Āzād published the first issue of his journal *al-Hilāl*, which very quickly earned him a vast audience, thanks to the original composition of the publication, to its articles dealing with subjects of the most burning relevance, and to the fiery and poetic style of the author. This enterprise was suspended by the British government at the start of the 1914-18 war, and Abu 'l-Kalām Āzād then launched, in 1915, another periodical, *al-Balāgh*, which had only a short existence since the writer was expelled from Bengal in 1916. The texts published in *al-Hilāl* and *al-Balāgh* have been collected in two volumes bearing the title *Makālat-i-Āzād*.

Abu 'l-Kalām Āzād continued and extended the work begun by Shihbī with the object of encouraging the 'ulamā' to participate in the most modern developments of civilisation. As a theologian experienced in the disciplines of the most traditional religious thought, he provoked the 'ulamā' into an increasingly sharp awareness of social and political problems. In 1920 he rejoined the ranks of the Indian Congress Party and participated more or less overtly in the *Djam'iyat al-'ulamā'-i-Hind* [see DJAM'IYYA. India and Pakistan], an Indian association of Muslim theologians which showed itself always sympathetic to a political scheme of nationalistic tendency, with the object of driving the British colonial power from Indian territory. An ardent opponent of Sir Sayyid Ahmad Khān (1817-1898 [q.v.]) and of the movement which the latter launched in founding the university of 'Aligarh, Abu 'l-Kalām Āzād revived the pan-Islamic proposals of the great reformist Djamāl al-Dīn al-Afghānī and exhorted the Muslims of India not to remain passive observers of the upheavals which were transforming the world, but to associate themselves with the struggle whose primary object was to free them from the foreign yoke, so that they could subsequently participate actively in the complex and fruitful changes which, in the modern era, contribute to the prosperous life of free nations. But was there not in this attitude a contradiction between pan-Islamism, ideally asserted, and nationalism as constantly practised in a context where, in the event, India, once independent, could not be other than a nation dominated by the Hindu community?

In the more strictly theological sphere, Abu 'l-Kalām Āzād expressed his opposition to Sir Sayyid in numerous articles in *al-Hilāl* and especially in the introduction to his celebrated work *Tarjūmān al-Ḳur'ān*, a project which he had conceived when he established himself at Rāncī after his expulsion from Bengal in 1916, but of which the first part was not published until 1931. According to Abu 'l-Kalām Āzād, the Ḳur'ān must be disencumbered of all artificial interpretations founded on a philosophy and a terminology more or less borrowed from the Greeks; it is necessary also to resist the temptation of wishing to consider the Holy Book only from the point of view of its conformity with newly-discovered scientific laws. If we wish to restore to the Ḳur'ān its original atmosphere, the exercise of *idjithād* must become a vital experience, in the course of which each article of faith will be confronted by the abrasive forces of scepticism so that the individual will emerge from the process more positive in his belief and more enthusiastic in his actions.

When in 1947 the Indian sub-continent was divided to permit the creation of Pakistan, Abu 'l-Kalām Āzād chose to stay in India, and he became minister of National Education in the Central Government, a post which he held until his death in 1958.

Attention should also be drawn to two other important works by this author, who contributed much to the development of the Urdu language: *Tadhkirā* (published in 1920), a selection of autobiographical memories, and especially *Ghubār-i Khāṭir*, which has the form of a collection of letters addressed to a friend by Abu 'l-Kalām Āzād during his imprisonment in the fort of Ahmadnagar between 9 August 1942 and 15 June 1945. Finally, the work which the author wrote in English, *India wins freedom* (Calcutta 1959) constitutes a valuable document for the historian.

**ĀZĀD**, MUḤAMMAD ḤUSAYN (1830-1910), Urdu writer, was a leading exponent of "new" Urdu prose, and a pioneer of the reaction against the Persian tradition in Urdu poetry, with its emphasis on *ghazal* and its preoccupation with ornate, stylised language.

Born in Dihlī, he was the son of one of the first leading journalists of north India. He was educated at Delhi College, and acquired a mastery of both Arabic and Persian. By 1854, he was editor of his father's newspaper, the *Dihlī Urdu Akhbār*. A love of poetry was fostered in him by the poet Dhawḳ (1789-1854), who was a friend of his father's. However, the Indian Mutiny of 1857 and its aftermath completely changed his life, and its effect probably never left him. His father was executed for treason by the British authorities, and he himself fled and became a wanderer. In 1864 he arrived in Lahore, where he was to reside for the remainder of his life. He obtained a minor post in the Panjab Ministry of Public Instruction. He twice visited Persia, and in 1865 he accompanied an Indian Government secret mission to Bukhārā, aimed at investigating Russian penetration of that region.

In his early years in Lahore, he quickly won the confidence of local British dignitaries, including Colonel Holroyd, Director of Public Instruction. He wrote several educational works, including a Persian course in two books, and, in Urdu, Volume ii of *Kiṣāṣ-i-Hind*, a three-volume series of Indian historical stories. Though designed for students, the latter book won the admiration of more mature readers, for its vivid style. In 1865 Dr. G.W. Leitner, Principal of Government College, founded the *Andjūmān-i Panjāb*, a literary society, and Āzād was appointed secretary in 1867. One project of the Society was to encourage the reform of Urdu poetry, and Āzād threw himself whole-heartedly into this. For nearly a year, monthly *mushāʿaras* (poetical contests) were held, a set theme being specified in advance for each meeting. These themes, which included "the rainy season", "winter" and "patriotism", were chosen to discourage the use of antique poetical diction. Āzād opened the series with a lecture on the nature of poetic art, and wrote poems for the meetings. Nevertheless, even allowing for criticism based on prejudice or personal animosity, Āzād's poetry hardly enhanced his reputation; and it was not he, but Alḩāf Ḥusayn Ḩālī, [q.v.] who also took part in the *mushāʿaras*, who came to be recognised as the pioneer of the "new" poetry, both for his verse and his critical writings. Nevertheless, a reappraisal of Āzād's verse is overdue. It is uneven

in quality; but there is strength and drive behind a poem like *Ūlū ʿI-azmī* (Resolution).

Āzād wrote some important prose works, which were better received than his verse, and indeed ultimately gained him recognition as a great—some would say the greatest—master of Urdu prose. Yet he was destined never to be free from some hostile, even carping, criticism. *Nayrang-i khayāl* (1880) is a collection of thirteen allegorical essays, translated—with minor changes and interpolations—from the English of Samuel Johnson, Addison and their contemporaries. *Sukḩandān-i-Fārs*, based on his lectures on Persian language and literature, dates from 1872, but was not published until 1907. However, his fame rests chiefly on his long critical account of Urdu poetry, *Āb-i-hayāt* (1881). His last major work, *Darbār-i-akbarī* (1898), is a dazzling account of the court of the Mughal emperor Akbar [q.v.], but, despite its rich style, it is often described as a failure. Āzād's prose is imaginative and colourful, far removed from the straightforward style of Sir Sayyid Ahmad Khān and Ḩālī. Muhammad Sadiq (*History of Urdu literature*, 300) says that it "recalls old patterns in its syntactical peculiarities and word-arrangement", and adds, perhaps with a little exaggeration, that its syntax seems Persian. Āzād was not directly involved in the 'Alīgarḩ Movement, but was highly respected by its leaders. Ḩālī wrote complimentary reviews of *Nayrang-i-khayāl* and *Āb-i-hayāt*.

The last twenty years of Āzād's life were marred by periods of mental illness bordering on insanity. Personal tragedies, and overwork—including his edition of Dhawḳ's *Divān*—have been blamed for this. He died in Lahore in 1910.

*Bibliography*: In addition to information given above, some of the many reprints of Āzād's works may be mentioned; thus for *Āb-i-hayāt*, Lahore 1950, Faizabad 1966. As for *Darbār-i-akbarī*, Muḩammad Ibrāhīm, editor of the Lahore edition of 1910, claims in his preface that his text is more complete and more in keeping with Āzād's intentions than the original (1898) edition of Mīr Mumtāz 'Alī. There is a Lucknow edition n.d., but ca. 1965. For *Nayrang-i-khayāl*, there is a Karachi edition of 1961. Āghā Muḩammad Bākīr has edited selected articles by Āzād (*Makālāt Maḩulānā M.H. Āzād*, Lahore 1966). *Kiṣāṣ-i-Hind* was reprinted in Lahore (1961) and Karachi (1962). Selected letters have been published: *Maktūbāt-i-Āzād*, Lahore 1907, and *Makālāt-i-Āzād*, Lahore 1966. The collected poetry was published as *Nazm-i-Āzād*, Lahore 1910.

Among critical biographies, Muhammad Sadiq's *Muḩammad Husayn Āzād—his life and work*, Lahore 1965, is of prime importance. The same author's shorter account in his *History of Urdu literature*, London 1964, 288-302, includes a conveniently brief analysis of Āzād's prose style (297-301), with extracts. In Urdu, there is Dījāhān Bānū Begum's *Muḩammad Husayn Āzād*, Hyderabad Deccan, 1940. Among detailed studies of *Āb-i-hayāt*, mention must be made of Rīqāwī Mas'ūd ḩasan's *Āb-i-hayāt kā tanḩīd muḩālaʿa*, Lucknow 1953. Ḩālī's reviews of *Nayrang-i-khayāl* and *Āb-i-hayāt*, originally published in the 'Alīgarḩ University Gazette, are available in *Kullīyyāt-i-naḩr-i-Ḩālī*, Lahore 1968, ii, 176-83 and 184-94.

(J.A. HAYWOOD)

**ĀZĀDĪ** (p.), freedom, synonymous with Arabic *ḩurriyya* [q.v.]. Deriving from the Avestan word *ā-zāta* and the Pahlavi word *āzāt* (noble), the word

*āzādī* has as long a history as Persian literature itself. It was employed by Persian writers and poets such as Firdawsī, Farrukhī Sīstānī, Gurgānī, Rūmī, Khākānī, Nāṣir-i Khusraw, and Zahr Fāriyābī in a variety of meanings including, for instance, choice, separation, happiness, relaxation, thanksgiving, praise, deliverance, non-slavery, and so on (see Dihkhudā, art. *Āzādī*, in *Lughat-nāma*, ii/1, 86-7). In modern times, the idea of social and political liberty has also been expressed by the term *āzādī* (and sometimes by the term *ikhtiyār*), the latter sense of which will be dealt with below in reference to the Iranian world.

From its very nature, the modern connotation of *āzādī* has been associated with the process of Western impact on Persian culture and therefore its history. Considering the fact that the activities of the British East India Company (from 1600) coincided with the mass migration of Persian writers and poets to India, plus the information brought to India by travellers such as I'tiṣām al-Dīn, who recorded his impression of Europe in 1767, it would be logical to conclude that the Persian emigrants to India were among the first eastern people to have been exposed to European new ideas. It seems, however, that no noticeable Western influence can be observed in the Persian writings of the 17th century. The earliest favourable, but brief, account known to us of Europe is that of Muḥammad 'Alī Ḥazīn (d. 1766), who wrote in 1732 that some of the European countries enjoyed laws, a better way of life, and more stable systems of government, and regretted not to have taken a trip to Europe, as was suggested to him by an English captain (Ḥazīn, *Tārīkh-i Ḥazīn*, Tehran, 1953, 92-3, 110-11).

One of the earliest, and relatively detailed, accounts in the Persian language of European social and political institutions belongs to a Shūshṭarī-born émigré of India, 'Abd al-Laṭīf Mūsawī Dajazā'irī, who learnt about the new ideas which had developed among the newly-born middle class of Europe and had been imported to India. Writing in 1801, 'Abd al-Laṭīf dealt with modern topics such as freemasonry, equality, liberty and the function of the administration of justice in England. He also made reference to the British system of mixed government, i.e. the division of power among the king, the lords, and the subjects (*ra'āyā*), the latter being obviously considered as the property men who were entitled to elect and be elected.

For more detailed descriptions of modern ideas, including that of *āzādī*, one may look into the eyewitness accounts, the most widely quoted of which are those of Mīrzā Abū Ṭālib Iṣfahānī, son of another émigré to India, and Mīrzā Ṣāliḥ Shīrāzī of Iran. Both Abū Ṭālib, who travelled and lived in Europe from 1798 till 1803, and Mīrzā Ṣāliḥ, who studied in England from 1815 till 1819, wrote in detail about the type of liberty which then existed in England. Some differences, however, may be observed in their accounts: Abū Ṭālib seems more critical of the British system; he found, for instance, freedom of the press somewhat harmful, and refused to accept membership of freemasonry (cf. his *Maṣīr-i Ṭālibī*, Tehran 1974, 152, 195-6). Mīrzā Ṣāliḥ, on the contrary, called England with admiration *vilāyat-i āzādī* (land of freedom), and joined freemasonry with great interest (*Ṣafar-nāma-yi Mīrzā Ṣāliḥ Shīrāzī*, Tehran 1968, 189, 207, 374). As a matter of fact, most, if not all, of the Persians who went to Europe throughout the 19th century became freemasons, and learnt there to propagate the type of freedom which was understood by the masons and included

in their famous slogan of *liberté, égalité, fraternité* (Ismā'īl Rā'īn, *Farāmūshkhāna va Farāmāsūnī dar Iran*, i-iii, Tehran 1968; Maḥmūd Katīrā'ī, *Farāmāsūnī dar Iran*, Tehran 1968).

In Europe, such ideas as liberty, equality, *laissez-faire* and so on, were developed in the course of the struggles between the old feudal system and the newly-born capitalism, so that for the "Third Estate", liberty meant freedom from the yoke of feudalism and the freedom for private enterprise. Accordingly, this concept of liberty expressed could have had little meaning for the Persian audiences who were still experiencing their own type of "feudalism" at that time, and it must have appeared as an entertaining fiction.

One of the consequences of the development of capitalism in the West was the latter's need, among other things, of raw materials, cheap labour and profitable investments in other parts of the world. At the turn of the 19th century, Iran appeared to the then great powers, i.e. England, France and Russia, as important both strategically and economically. Since Iran found itself too weak to survive Western encroachments, the Persian government saw it as indispensable to take certain measures for strengthening of the country through modernisation, so that students such as Mīrzā Ṣāliḥ were dispatched to Europe to acquire modern sciences. Although the internal and external forces supporting the old régime of Iran were still strong, the process of modernisation did not come to a standstill. In addition to sending students abroad, there were several diplomatic missions to Europe during the reigns both of Faṭḥ 'Alī Shāh (1797-1834) and Muḥammad Shāh (1834-48). Missions such as those of Mīrzā Abū 'l-Ḥasan Īlčī (England, 1814), Khusraw Mīrzā (Russia, 1829), and Ādjūdānbāshī (Austria, France, and England, 1834) helped the Iranian ruling circles to obtain more information about the European ideas and institutions. A number of memoirs, such as Khusraw Mīrzā's, do indicate a misunderstanding by some of the Iranian diplomats of the idea of liberty. However, there appeared also intelligent accounts of parliamentary systems in European countries.

In the outset of Nāṣir al-Dīn Shāh's reign (1848-96), a wide range of modernising measures were initiated by the Amīr Kabīr. In 1858 Mīrzā Dja'far Khān Mushīr al-Dawla formed his government, modelled roughly on European cabinet systems. Believing in Dja'far Khān's progressive thought, Mīrzā Malkam, another modernist, wrote to him a long letter urging him to reform the system of government and to separate the powers. He declared the opinions of the Iranian people to be free, *āzād*. Shortly after the appearance of Malkam's letter, an anonymous author touched upon the necessity for free elections and freedom of the press (MS. Maḥjilis library, Tehran No. 31856/4147, *Daftar-i Tanzīmāt*, in *Maḥmūd'a-yi āthār-i Mīrzā Malkam Khān*, Tehran 1948, 24-6). In the same year (1858), when an Italian nationalist, Orsini, attempted the life of Napoleon III, Farrukh Khān Amīn al-Dawla was on a diplomatic mission to Paris. He wrote not only of the French parliament, but he also described with favour the remarks made in a letter to the Emperor by Orsini on patriotism, liberty, and the freedom of Italy, for whose sake he had taken that action; Farrukh included a Persian translation of that letter in his memoirs (Ḥusayn b. 'Abd Allāh Sarābī, *Makḥzan al-wakāyī'*: *Sharḥ-i ma'mūriyyat va musāfarat-i Farrukh Khān Amīn al-Dawla*, Tehran 1965, 354-86).

In 1866 an anonymous author wrote a treatise on social and political affairs, and paid special attention to the ideas of freedom and equality and their applicability to Islamic teachings. He classified "commendable freedom" (*ikhṭiyār-i mamdūh*) into six types which included freedom of speech, assembly and publication (Ms. Maǧlis Library 137; for an account of this exceptionally interesting work, see Abdol Hossein Haeri, *Fihrist-i kitābkhāna-yi Maǧlis-i shūrā-yi millī*, xxi, Tehran 1974, 135-8).

The last few decades of the 19th century witnessed a number of important changes from within and from without; constitutional movements took place in many European and some Asian countries; more efforts were made by powerful and industrially advanced nations to colonise other countries; and Anglo-Russian rivalries in Iran were intensified. These developments, together with other factors, exposed Iran to new ideas and predisposed towards the establishment of a new order involving a degree of political freedom for the subjects. The modernising measures undertaken by Mīrzā Ḥusayn Khān Sipahsālār (d. 1881), and the appearance of newspapers such as *Irān*, *Waḳāyī-i 'adliyya*, *Waṭan*, *Nizāmī*, *Ilmī*, and *Mirikh* in the 1870s, and the emergence of writers and social critics such as Mīrzā Fath 'Alī Ākhūnd-zāda (d. 1878), Yūsuf Khān Mustashār al-Dawla Tabrīzī (d. 1895) and Malkam Khān (d. 1908), may be studied against the background of those developments. The critics fought earnestly for the establishment of a free enterprise system and the destruction of the old social structure, and this involved agitation for a limited freedom of election, freedom of speech, etc. Some of the modernists like Malkam and Sipahsālār went as far as not only to advocate foreign investment in Iran, but also played an active role in encouraging it. They seem to have understood the concept of liberty as defined in Europe. Ākhūnd-zāda, for instance, propounded the view that no reconciliation is possible between liberty and Islam. He also saw freedom as preserved through freemasonry activities (Farīdūn Ādamīyyat, *Andīshahā-yi Mīrzā Fath 'Alī Ākhūnd-zāda*, Tehran 1970, 148-9). Out of expediency, however, most of the writers gave their definition of liberty some Islamic colouring; they likened, for instance, freedom of speech with the Islamic concept of *al-amr bi 'l-ma'rūf wa 'l-nahy 'an al-munkar* (Abdul-Hādī Hairī, *The idea of constitutionalism in Persian literature prior to the 1906 Revolution*, in *Akten des VII. Kongresses für Arabistik und Islamwissenschaft, Göttingen, 1974*, Göttingen 1976, 189-207).

At the same time, there appeared two more groups of intellectuals who also wrote about freedom. Writers such as Mumtaḥin al-Dawla (d. 1921), an experienced diplomat, and Mīrzā Ḥusayn Khān Farāhānī, who visited Russia, Turkey, and the Hijāz from 1884-5, found *azādī* to be quite harmful. In 1870, while sitting at the place reserved for the diplomatic corps in the British parliament, Mumtaḥin al-Dawla witnessed a serious attack waged by one of the members on the Queen and the institution of monarchy in Britain. At this point, Mumtaḥin envied the British members of parliament their freedom of speech, but did not believe that the Persians could have the same privilege in the near future; accordingly, he flatly discredited the Iranians' struggles for freedom during the Constitutional Revolution of 1906-11 (Mahdī Khān Mumtaḥin al-Dawla *Shakāḳī*, *Khātirāt-i Mumtaḥin al-Dawla*, Tehran 1974, 188-9, 210-11). To Farāhānī, freedom appeared to be a destructive element in history; he held that no system

could survive unless it was based on one-man rule (*Safar-nāma-yi Mīrzā Ḥusayn Khān Farāhānī*, Tehran 1963, 139-46).

A third group of intellectuals, which also included some men from the first group, emerged in reaction to the intensification of foreign rivalries, the spread of governmental corruption and tyranny, and above all the concessions made to foreigners. The works of Hādī Sayyāh (d. 1925), Zayn al-Ābidīn Marāgha'ī (d. 1911), Mīrzā 'Abd al-Rahīm Tabrīzī Talibov (d. 1911), Mīrzā Ākā Khān Kirmānī (d. 1896), and some of the writings of Malkam and Afghānī (d. 1896), are the best representative expressions of the people's response to the existing political and economic situation in Iran. To Afghānī, freedom meant the replacement of the existing tyrannical régime by a benevolent government. Other writers especially Talibov, however, attached more meanings to the idea of freedom. The latter defined it in full details as involving the franchise and freedom of the press, assembly, and opinion. All of the men in this group opposed the existing "feudally" based social system and advocated a free enterprise system not dependent on foreign concessions, foreign goods, or foreign interventions.

It was during the same period that a number of reformist intellectuals, headed by Aḥmad Dānish (d. 1897), also began to emerge in Bukhārā. Dānish's most important political and philosophical work *Navādir al-waḳāyī'* (written 1875-82), was devoted to the necessity of social reforms and freedom of the people from the tyranny of the then Bukhārān Amīr. His disciples such as Shāhīn, Sawdā, Asīrī, 'Aynī, and many others followed his steps (Jiri Bečka, *Tajik literature from the 16th century to the present*, in J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 485-605). In a later period we also see revolutionary pieces of poetry such as "Surūd-i Āzādī" by 'Aynī and "Bi Sharaf-i Inḳilāb-i Bukhārā" by 'Akkāsbāshī (Šadr al-Dīn 'Aynī, *Namūna-yi adabīyyāt-i Tāǧik 300-1200 hidjri*, Moscow 1926).

This period also coincided with some measures of modernisation in Afghānistān. To the Afghāns, because of the Anglo-Russian rivalries throughout the 19th century, political *azādī* simply came to mean the independence of their country from foreign encroachments, in connection with which a number of short-lived periodical papers such as *Kābul* (1867) and *Shams al-Nahār* (1875) came into being. The Afghāns' approach to the idea of freedom was best represented in their first important weekly paper, *Sirāǧ al-Akhbār-i Afghāniyya* (1911), where problems of modernisation and national independence were dealt with in a highly sophisticated manner. Its chief editor, Maḥmūd Ṭarzī, argued that "genuine national development and progress were possible only when a society enjoyed complete independence, sovereignty, and freedom" (Vartan Gregorian, *The emergence of modern Afghanistan*, Stanford 1969, 178). This type of argument about liberty was pursued by later papers such as *Amān-i Afghān*, *Itihād-i mashriḳī* and many others (Said Qassim Reshtia, *Journalism in Afghanistan*, in *Afghanistan*, ii (1948), 72-7).

In the course of the Persian Constitutional Revolution of 1905-11, the idea of freedom was approached by the factions involved in the Revolution in three different ways. One of the groups, influenced principally by Islamic teachings, was in favour of freedom, but a type of freedom consonant with Islam. Mīrzā Muḥammad Ḥusayn Nā'imī (d. 1936), for instance, defined freedom as an opposite to slavery,

but like Montesquieu (*De l'esprit des lois*, i, l. iii, ch. viii) held that living under despotism was itself equal to slavery; therefore, freedom may be achieved only by the replacement of the existing tyrannical régime of Iran (Hairi, *Shi'ism and constitutionalism in Iran* [see *Bibl.*], 173-80, 218-19). The second group, to which belonged the Tabrīz revolutionaries, had a better insight into European ideas, together with a close association with the Russian revolutionaries, so that they interpreted freedom in a more western sense. In their approach both groups emphasised particularly the downfall of despotic rule in Persia and the ending of foreign intervention as being integral parts of freedom. The third group, i.e. the supporters of the old régime, under the leadership of Shaykh Faḍl Allāh Nūrī (d. 1909), opposed any principles of democracy, and especially the concepts of liberty and equality, which appeared to the Shaykh as detrimental to Islam (Abdul-Hadi Hairi, *Shaykh Fazl Allāh Nūrī's Refutation of the Idea of Constitutionalism*, to appear in *Middle East Studies*). The latter group even organised many mob demonstrations in which the people chanted: "We want no liberty; we want the Prophet's religion".

The Anglo-Russian agreements of 1907 and 1915, and the Anglo-Persian treaty of 1919 gave rise to a number of nationalist movements, such as those led by Kūčak Khān [q.v.], Khiyabānī [q.v.], and Muḥammad Taqī Khān Pisyān. After the 1917 Russian Revolution, the Soviets withdrew the claims of the Tsars against Iran, so that freedom meant exclusively the abolition of the 1919 treaty and the freedom of Iran from any foreign intervention which could limit its independence. The newly-established Communist Party of Iran (1920), which co-operated with some of these movements, added a socialist colouring to the idea of freedom by propagating the idea of freedom of the peasants from the landowners through dividing up the latter's lands among the former.

Towards the end of the Kādjār dynasty, a number of poets and writers, such as Mīrzāda 'Ishkī, Muḥammad Farrukhī Yazdī, Muḥammad Taqī Bahār and Abu 'l-Kāsim Lāhūtī, wrote very critically about the freedom of the Persian people both from internal tyranny and from external influences; some of them met an untoward fate. Under Riḍā Shāh's reign (1925-41) the term *āzādī* was used only in rare cases; for instance, the newspaper *Iṭtilā'āt* used *āzādī* in the sense of the freedom from the Kādjār dynasty or from the movements and rebellions which had existed in Iran. In 1932 Riḍā Shāh outlawed the Communist Party, but the activities of some of the communists led by Dr. Taqī Arānī (d. 1939) continued. In their literature, e.g. in *Dunyā*, social and political concepts, including liberty, were defined from the socialist point of view. Some other intellectuals such as the woman poet, Parwīn Iṭisāmī (d. 1941), wrote about freedom in a symbolic and subtle way, but their general message was the freedom from the existing situation.

The period following Riḍā Shāh's abdication (1941-53) witnessed a campaign for the nationalisation of the Anglo-Persian Oil Company. The new Communist party, now calling itself *hizb-i tūda-yi Irān* (founded in September 1941) held freedom to be the nationalisation of the oil. However, it also saw freedom in the establishment of better relations with the Soviet Union so that Iran might evolve a Communist government. To the nationalists, on the other hand, freedom depended not only on the nationalisation of the oil but also on the extinguishing of Russian and all other foreign influences in Iran. These ideological

conflicts culminated under Dr. Muḥammad Muḥaddīk's 28 month-rule, a period referred to by his supporters as *dawra-yi āzādī* ("the epoch of freedom"), during which for the first time popular involvement in politics was allowed to a certain extent and the activities of opposing political parties plus the campaigns of the press belonging to different political wings were some-what tolerated. This period came to an end in August 1953 when Muḥaddīk's government was overthrown by the army.

(ABDUL-HADĪ HAIRĪ)

'AZAFĪ, BANŪ'L-, family of notables resident in the annals of medieval Ceuta (Sabta [q.v.]) and descended from a Ceutan *fakīh* by the name of Abu 'l-'Abbās Aḥmad b. al-kādī Abī 'Abd Allāh Muḥammad b. Aḥmad al-Lakhmī, whose ancestor Muḥammad al-Lakhmī was known as Ibn Abī 'Azafa, whence "Azafī". There is no reason to suppose that the 'Azafids were descended from Madjksa Berbers, as some 8th/14th-century Ceutans alleged. A gratuitous (but not wholly unreasonable) assumption of more recent date is that the family was of Andalusian origin.

Abu 'l-'Abbās was born on 17 Ramaḍān 557/30 August 1162 and died on 7 Ramaḍān 633/16 May 1236. From all accounts he was a man of profound piety, and, throughout his adult life, he taught *hadīth* and *fikh* in the Great Mosque of Ceuta. It was on his initiative that the festival of the Prophet's nativity (*mawlid*; vulgar *mūlūd*, *mīlūd*) was introduced into the Maghrib, and it was undoubtedly his example that in after times inspired his son Abu 'l-Kāsim to adopt the custom of celebrating the *mawlid* as a public festival on a grand scale. At the time of his death, Abu 'l-'Abbās was writing and had possibly almost completed his *K. al-Durr al-munazzam fī mawlid al-Nabī 'l-mu'azzam*, the purpose of which was to promote his idea of celebrating the *mawlid* and putting an end to the celebration of non-Islamic festivals. The *Durr*, which is extant and has been carefully studied by F. de la Granja (see *Al-Andalus*, xxxiv (1969), 1-53) is ascribed by some to Abu 'l-Kāsim, who actually seems only to have put the finishing touches to a largely completed work. Abu 'l-'Abbās was also the author of a work entitled *Dī'āmat al-yakīn fī zā'imat al-mutakīn*. By the time of his death in 1236 both he and his family must already have achieved a position of eminence in Ceuta, for not long before the loss of Seville to Ferdinand III (end of 1248) one of that city's most notable families, the Banū Kḥaldūn, anticipated the disaster by emigrating to Ceuta where they contracted matrimonial alliances with the sons and daughters of "al-'Azafī".

The First *Dawla*. For thirteen years after the death of Abu 'l-'Abbās, the history of the 'Azafid family is shrouded in obscurity. Not so the troubled history of their native Ceuta. The period was one of Almohad decline, Ḥafṣid intervention in the Muslim West and spectacular Christian triumphs in Spain which cost Islam both Cordova and Seville, to say nothing of Valencia, Murcia, Jaén and Játiva. In 1243 the governor of Ceuta, a certain Abū 'Alī b. Kḥalās, withdrew his allegiance to the Almohad caliph and shortly afterwards acknowledged the sovereignty of the Ḥafṣid Abū Zakariyyā. After the death of Ibn Kḥalās, which more or less coincided with the fall of Seville, the Ceutans were in no mood to tolerate his successor, Ibn Shāhīd, an ineffectual cousin of Abū Zakariyyā. The Sevillian disaster loomed large in their preoccupations: their ships had fought on the Guadalquivir, and their harbours had witnessed a sizeable influx of Sevillian refugees—among them Shaḥkāf, the hated *kā'id* who had actually surrendered the keys of Seville to Ferdinand. There was, too, one aspect of Ḥafṣid administration which this mercantile people deeply resented—the exactions of its customs officer, Ibn Abī Kḥālīd. Such was the position when news of Abū Zakariyyā's death reached Ceuta (29 Raḍjab 647/7 November 1249 or, more probably, 27 Ramaḍān 647/3 January 1250).

This was the signal for action. As the most widely respected notable, Abu 'l-Ḳāsim al-'Azafī was approached by Ceuta's *kā'id al-bahr*, Abu 'l-'Abbās Ḥadjībūn al-Randāhī, and persuaded to consent to the overthrow of the regime and, in the event of success, to assume leadership of the community. The plan, as executed by al-Randāhī, but not quite as envisaged by Abu 'l-Ḳāsim, resulted in the decapitation of *Shakkāf* and Ibn Abī *Khālid*. Ibn *Shahīd* was deported, and the 'Azafid, after assuming control, declared Ceuta's allegiance to the Almohad Caliph al-Murtadā (reg. 646-65/1248-66), who duly appointed a governor. The Almohad governor's stay was short: after only a few months in Ceuta, Abu 'l-Ḳāsim expelled him and sent the caliph a letter of explanation which he accepted.

What arrangement followed is unclear. We are only told that in 654/1256-7 the 'Azafid became absolute ruler of Ceuta, which he took over and administered with great application and total devotion to the interests of its inhabitants. What is certain is that, despite his *de facto* autonomy, he remained loyal to the tottering throne of al-Murtadā and even defended his interests when the occasion demanded.

Considering that Abu 'l-Ḳāsim was, in his day, a key figure in the western Mediterranean, specific information on his life and rule is so sparse that most of what can be said of him must be deduced from his ascertainable policies. Born between 606/1209-10 and 609/1212-13, he was around forty when he came to power and seems to have had a maturity of judgment to match his years and such as to militate against rash ventures. His primary aim was to create and maintain a strong and prosperous Ceuta at a time when it was fast becoming not only a prime military objective for Castile, but also a target for ambitious Marīnids seeking control of Morocco. He therefore set about strengthening Ceuta's defences and evidently profited from a truce with Castile against handsome tribute over two consecutive two-year periods (? 1251-5). At the same time he aimed at stabilising, conserving and developing Ceuta's already extensive trans-Mediterranean trade, notably with Barcelona, Genoa and Marseille. Within about ten years, Ceuta seems to have gained real naval and economic strength. In 659/1261 her first real test came when the prospect of a Naṣrid Ceuta lured Ibn al-Aḥmar of Granada into launching a naval assault on the place—a venture that ended in disaster for Granada. As long as he lived, Abu 'l-Ḳāsim remained keenly alive to the dangers threatening Islam in the West and always took whatever measures were necessary to combat them. Thus, in 662/1263-4 we find him co-operating with the Marīnids as they launch their first *djihad* in Spain. In the years immediately following, we find him endeavouring to achieve and maintain stability between Ceuta and the Atlantic coast and, to that end, bringing a weak and divided Tangier (665/1266-7) under his control. Then, at the end of 1274 or early in 1275 we see him apparently sacrificing his autonomy to the Marīnid Abū Yūsuf, but in fact skilfully extricating him from an alliance concluded with Aragon and potentially dangerous to Islam. In practice he sacrificed little: a yearly "gift" to the Marīnid assured him virtual independence. Thereafter he made common cause with the ruler in prosecuting the *djihad* in Spain. Abu 'l-Ḳāsim died on 13 *Dhu 'l-Hijja* 677/27 April 1279, leaving Ceuta rich and powerful at sea.

Abu 'l-Ḳāsim was succeeded by his son Abū Ḥatīm Aḥmad, an unambitious and self-effacing

man, who was content to leave the administration of Ceuta to his elder brother Abū Ṭālib 'Abd Allāh. Little is known of a third brother, Abū Muḥammad Ḳāsim, but he may have been a senior military officer, since he commanded a Ceutan expeditionary force in Spain in 1285. Abū Ṭālib carried his father's policy of co-operation with the Marīnids a stage further by proclaiming all territory under 'Azafid jurisdiction to be Marīnid and by abandoning the trappings of royal authority enjoyed by his father. He also actively participated in the *djihad*, and in July 1279 at the relief of Algeciras, then blockaded by Alfonso X, it was 'Azafid ships that formed the backbone of the Marīnid fleet which utterly routed the Castilians. But gradually the certain rewards of peaceful trade, notably with the Crown of Aragon, began to have greater appeal than the uncertainties of the *djihad*. Marīnid setbacks in Spain in the 1290s and commitments in the Maghrib encouraged the 'Azafids first to withhold their dues to Fez and then, in 1304, to rebel against the sultan Abū Ya'qūb, who, without Aragonese naval assistance, was powerless to impose his will. But 'Azafid independence was short-lived: in May 1305 Naṣrid forces were enabled by a disaffected garrison commander to seize Ceuta. All members of the 'Azafid family were deported to Granada, where they remained, royally treated by Muḥammad III until his deposition in March 1309.

The Second *Dawla*. In July 1309 Naṣrid Ceuta, following an internal rising, capitulated to the Marīnid Abū 'l-Rabī', who then allowed the 'Azafids to return from Spain and settle in Fez. There Yahyā, a son of Abū Ṭālib, met and found favour with Abū Sa'īd 'Uṭhmān, the very prince who was to gain the throne on Abū 'l-Rabī's death (November 1310). In 710/1310-11 Yahyā was made governor of Ceuta and returned with the family to his native city. His brothers Abū Zayd 'Abd al-Raḥmān and Abū 'l-Ḥasan 'Alī were appointed, respectively, *kā'id al-bahr* and superintendent of the naval shipyard. However, the temporary success of the sultan's rebel son Abū 'Alī resulted in their recall to Fez late in 1314, and during their stay there the ageing Abū Ṭālib died. In 715/1315-16 Yahyā returned to Ceuta as Abū Sa'īd's governor, leaving his son Muḥammad as a guarantee of his continuing allegiance to Fez, but accompanied by the rest of the family. Soon after, Abū Ḥatīm died and was survived by at least one son, Ibrāhīm.

Once back in Ceuta, Yahyā soon put himself at the head of a council of notables (*shūrā*) and, with the aid of a Marīnid pretender, succeeded both in retrieving his son and in proclaiming and maintaining Ceuta's autonomy. In 719/1319, however, he chose to effect a reconciliation with Abū Sa'īd and to remit taxes in exchange for recognition as Marīnid governor. His motive in so doing was probably growing apprehension at the popularity, in Ceuta, of an ambitious Ḥusaynid *sharif* who bore him a personal grudge and was, at the same time, respected by Abū Sa'īd. When Yahyā died at some date in or after 722/1322-3, he was succeeded by his apparently ineffectual son, Abū 'l-Ḳāsim Muḥammad, who governed under the tutelage of his cousin Muḥammad b. 'Alī, admiral of the fleet (*kā'id al-asāṭil*). Details of the situation that in due course culminated in the 'Azafids' downfall are unclear; we know only that their authority collapsed, that Abū Sa'īd marched on Ceuta in 728/1327-8, and that disaffected notables surrendered the 'Azafids to him. The reasons for the 'Azafids' downfall are complex, but, as their enemy, the Ḥusaynid *sharif* Abū 'l-'Abbās Aḥmad,

soon emerged as president of Ceuta's *shūrā*, it is hard not to see in him one major cause of their undoing.

Circumstantial evidence suggests that the ‘Azafids were all taken to Fez where they were usefully employed—under surveillance—in the administration. The Marīnids bore the family no ill will, and indeed Muḥammad b. ‘Alī reappears as admiral of Abu ‘l-Ḥasan's fleet which in 1340 almost annihilated the Castilian fleet off Algéciras. Ten years later he was still admiral of the fleet when he fell in action fighting the ‘Abd al-Wādids [q.v.] in the Chélif plain.

‘AZAMIYYA (*tarīka*) [see ABU ‘L-‘AZĀ‘IM].

AL-AZDĪ, *nisba* formed from the tribal name of Azd and borne by a family of Mālikite *kādīs* of Baghdād, who will be treated under IBN DIRHAM, the name of their ancestor.

AL-AZDĪ, ISMĀ‘ĪL b. ISHĀK b. ISMĀ‘ĪL b. ḤAMMĀD b. ZAYD, ABŪ ISHĀK AL-KĀDĪ (199-282/814-95), Mālikī *faḳīh*, originally from Baṣra, who in 246/860 succeeded Sawwār b. ‘Abd Allāh as *kādī* of Baghdād East. After having been removed from office in 255-6/869-70, he was restored to office, transferred to Baghdād West in 258/871-2 and then given charge of both halves of the city from 262/876 till his death; he was then supreme *kādī* without having the official title, although currently described as *kādī ‘l-kudāt*. He was also sent as an envoy to the Ṣāfiarid who had invaded the province of Ahwāz in 262/875-6.

This *kādī* was equally a specialist in the *Kur‘ān*, *ḥadīth*, *fikh* and *kalām* and knowledgeable about grammar and *adab*. He was very opposed to all innovation, refuting al-Shāfi‘ī and Abū Ḥanīfa and spreading Mālikism through ‘Irāk. He was the author of a considerable number of works: the *K. Ahkām al-Kur‘ān*, *K. al-Kur‘ān*, *K. Ma‘ānī ‘l-Kur‘ān*, *K. al-Ihtijādī bi ‘l-Kur‘ān*, *al-Mabsūt fi ‘l-fikh*, *K. al-Amwāl wa ‘l-maghāzī*, *K. al-Shafī‘a*, *K. al-Salāt ‘ala ‘l-nabī* (ms. Köprülü, 428), *al-Fawā‘id*, *K. al-Uṣūl*, *Shawāhid al-Muwatta‘a*, *K. al-Sunan*, five *Musnads*, *K. al-Shuf‘a* and several refutations.

His works were known in Spain, probably thanks to his nephew Aḥmad al-Duḥaym b. Kḥalīl (278-338/891-949), and are often cited (see Ibn al-Farādī, *BAH*, vii, No. 110; Ibn Kḥayr, *Fahrāsa*, *BAH*, ix, 51-2, 148, 247-8, 303-4). In particular, his *K. Ahkām al-Kur‘ān* (cited elsewhere only in the *Fihrist*, ed. Cairo, 57) was copied by Kaṣīm b. Ashbagh [q.v.]; see Ch. Pellat, in *al-And.*, xix/1 (1954), 77.

(CH. PELLAT)

AZOV, Sea of—[see BAHR MĀYŪṬIS].

AZRŪ, Berber “stone”, “pebble”, and above all, “rock”, the name of numerous villages in North Africa dominated by a rock or built at its

foot, on its slopes or on its summit. One of these in Morocco, in the middle of the ancient province of the Fazāz and lying at 1,200 m. height, has become a small town of 15,000 inhabitants. In 1901, the Marquis de Segonzac estimated the population at only 1,400 (woodcutters, including 200 Ayt Mūsā Jews), and in 1940 there were still only 3,500.

Azrū is well-placed at the junction of two great imperial highways, now modernised: Fās to Marrakesh, and Meknès to the Tafilālt, and has become an important market for livestock. Two further facts have contributed to its growth: firstly, in 1914 a French military post was set up there to control the great Berber confederation of the Banī Mgīld (who speak a Tamazight dialect and are of Ṣanhādja origin), and this made it an administrative centre; and secondly, in 1927 a “Berber” secondary college was founded there, confirming its demographic development and making it a lively and enduring cultural focus.

Azrū's strategic position has resulted in its frequent appearance on the pages of Moroccan history. In 534/1140 the Almohads, under the orders of the caliph ‘Abd al-Mu‘min and after a check which had scattered them, established themselves there firmly, and the *amīr* took a wife there, who was to be the mother of the prince ‘Abd Allāh, the future governor of Bougie. In 674/1274, under the Marīnids, one of the natural uncles of sultan Yaḳūb rebelled against him and entrenched himself in the Azrū mountain; the ruler besieged him there, reduced him to submission and pardoned him. In 1074/1663-4 Mawlāy al-Sharīf came to encamp at Azrū. The *ulamā*’ and *shurafā*’ of Fās came to him there and proclaimed him ruler; but the prince prudently remained at Azrū for that summer. In 1093/1684 Mawlāy Ismā‘īl journeyed in force into the Fazāz mountains in order to subjugate the Ayt Idrasen tribe who had been committing all sorts of depredations in the plain of the Sā‘is. On his approach, the tribe fled towards the upper part of the valley of the Wādī Mulūya, and the sultan profited by their absence to build at Azrū a *kaṣaba* garrisoned by 1,000 cavalymen. Pushed back into the highlands, and cut off from their agricultural lands, the Ayt Idrasen sued for peace and obtained it in return for harsh conditions of *amān*. In 1226/1811 sultan Mawlāy Sulaymān, at the head of an army from all the provinces of the empire and of those Berbers who had remained faithful to him in his misfortunes, marched against the tribes of the Igerwān and the Ayt Yūsī. His ill-led troops suffered a bloody and humiliating defeat before Azrū, and were only kept safe through the protection of the Ayt Idrasen, the foes of 1093/1684. The “Azrū affair” had widespread repercussions throughout Morocco, and deprived the sultan of all his prestige; he never recovered, and died soon after.

The *kaṣaba* of Mawlāy Ismā‘īl is more or less in ruins today, but the modern town is developing rapidly, and is famous for its woollen carpets woven by a prosperous workers’ co-operative. Thanks to the beauty of its location and to the magnificent cedar forests in the vicinity, Azrū has also become a flourishing tourist centre.

One should be careful not to confuse the above Azrū—as do the authors and interpolators of the *Kūntās* and the *Dhakhīra*—with the place of the same name which dominates Tafarsit, in the country of the Banī Tūzīn in northern Morocco; it was here that, under the Marīnids, Tālḥa b. Yahyā took refuge and then left it after getting an authorisation to make the Pilgrimage to Mecca. See al-Bādīsī, *al-Maḳṣad*,

(G. DEVERDUN)

**BĀ ḤMĀD**, Moroccan grand vizier whose real name was Aḥmad b. Mūsā b. Aḥmad al-Bukhārī. His grandfather was a black slave belonging to the sultan Mawlāy Sulaymān (1206-38/1792-1823), whose *hādīb* he had become [see ḤĀDĪB in Suppl.]. His father likewise became *hādīb* to Sayyidī Muhammad b. 'Abd al-Raḥmān (1276-90/1859-73), and then became grand vizier during the reign of Mawlāy al-Ḥasan (1290-1311/1873-94); he enjoyed a miserable reputation, but his immense fortune allowed him to connect his name with the Bāhiya palace in Marrākush, whose building he undertook (inscription of 1283/1866-7, in G. Deverdun, *Inscriptions*, No. 206). He himself was said to be the offspring of a Spanish mother, and he had several children, amongst whom are mentioned Sa'īd, Idrīs—who both held important offices—and Aḥmad, called Bā Ḥmād. The latter was born in 1257/1841-2, and was first of all *hādīb* to Mawlāy Ismā'īl who was the *khālīfa* in Fās of his brother Mawlāy al-Ḥasan. He then occupied the same office for that sultan. Since he had been responsible for the education of 'Abd al-'Azīz b. al-Ḥasan, he favoured the accession to the throne of that prince, then 14 years old (1894); he took the title of grand vizier and, leaving the young sultan to amuse himself with childish pleasures, exercised real power in the state with sufficient political astuteness and authority to prevent Morocco falling into anarchy. Bā Ḥmād, whose strong personality has left behind a lasting impression, constructed in Marrākush the reservoir of the Agdal which bears his name, undertook various public works in the towns, and above all, continued his father's work; he enlarged the Bāhiya, apparently without any preconceived plan, on the site of some 60 houses and he purchased 16 gardens to form its parkland. He died on 17 Muḥarram 1318/17 May 1900, and was buried in the royal mausoleum of Mawlāy 'Alī al-Sharīf (poetic epitaph in Deverdun, *Inscriptions*, No. 176).

**BĀBĀ NŪR AL-DĪN RISHĪ**, the son of Shaykh Sālār al-Dīn, an Indian holy man, was born in the village of Bīdjbehāra, 28 miles south-east of Srinagar, in about 779/1377. Although a Muslim, he has been called *rishī*, because he was more influenced by the ideas and practices of the Hindu Sadhūs and Rishīs than by those of Muslim *Ṣūfis* and saints. From the age of thirty, Nūr al-Dīn began to withdraw to caves for meditation and prayers. He finally renounced the world and its pleasures and left his wife and children. In his last days he subsisted only on one cup of milk, and towards the end

he took nothing except water, dying at the age of 63 in 842/1438. He is the patron saint of the Valley, and is greatly revered by its people. His sayings and mystical verses, like those of Lallā Ded, are sung and recited all over Kaṣhmīr. His tomb in Ārār, 20 miles south-west of Srinagar, attracts thousands of people, both Muslims and Hindus, every year.

The tendency to asceticism became more pronounced among the followers of Nūr al-Dīn Rishī, called Rishīs after him. They did not marry; they abstained from meat and subsisted on dry bread and wild fruits; and they lived away from human habitations, leading a life of piety, self-denial and simplicity. They moved from place to place, planting shady and fruit-bearing trees for the benefit of the people. According to Abu 'l-Faḍl, the Rishīs "were looked upon as the most respectable class in the Valley." But in recent years, owing to their worldliness and greed, respect for them has declined, except among the very ignorant.

*Bibliography*: Abu 'l-Faḍl, *Ā'in-i Akbarī*, ii, tr. Blochmann, Calcutta 1927; Ḥādjīdjī Mu'īn al-Dīn Miskīn, *Ta'rikh-i Kabīr*, Amritsar 1322/1904; Mohibbul Hasan, *Kaṣhmīr under the Sultans*, Calcutta 1959. (MOHIBBUL HASAN)

**BĀBŪNADJ** (Babūnak), from Persian *bābūna*, is the common camomile, primarily *Anthemis nobilis* L. (Compositae), also called Roman camomile, but also *Matricaria chamomilla* L. (Comp.) and other varieties. The nomenclature is rather confused; it can indeed hardly be expected that the various kinds of the camomile were kept apart with precision. The term is derived from *χαμαίμηλον* ("apple of the earth") and was known to the Arabs partly in a transcribed form (*khāmānālīn*, and variants), partly as borrowed translation (*tuffāḥ al-ard*). The relatively clearest determination is perhaps offered by an anonymous pharmacobotanist of Spanish-Arabic origin (very probably Abū 'Abbās al-Nabātī b. al-Rūmiyya, 561-637/1166-1240): "There are three kinds of *al-bābūnadj*, the stalks, leaves and general form of which are similar to each other. The distinction between them is to be found in the colour of the blossom-leaves which enclose the yellow, situated in the middle of the blossoms, for the blossoms of these three kinds are yellow in the middle. In the white kind they are enclosed by small leaves which are white inside and outside, in the purple-coloured kind by small leaves which are blue inside and outside, and in the yellow kind by small leaves which are yellow inside and outside. The distinction between the white and the chrysanthemum (*al-ukhuwān*) lies in the scent, for the chrysanthemum assumes [extraneous] scents, and all these kinds have a pleasant scent" (Nuruosmaniye 3589, fols. 108b, 23-109a, 4). In general, *bābūnadj* corresponds to the *ἄνθεμις* of Dioscorides (*Materia medica*, ed. M. Wellmann, ii, Berlin 1906, 145-7 = lib. iii, 137), and appears therefore also transcribed as *anthāmis* (and variants). *Ukhuwān* just mentioned, which is uncommonly often equated with *bābūnadj*, is otherwise used by the Arabs to render the *παρθένιον* (*barthāniyūn*, and variants) of Dioscorides (*op. cit.*, lib. iii, 138), by which we should probably understand the medical *Matricaria chamomilla*, still in use today. Ibn al-Bayṭār, on the other hand, says that the "white" kind of camomile described by Dioscorides and called *ukhuwān* by the Arabs, has been replaced by *bābūnadj* (*Djāmī*, i, 73, 11-13 = Leclerc no. 220, at the beginning).

The blossoms of the camomile, which contain an

oil that checks inflammations, were used as a medicine for loosening spasms and for stimulating easily the peristaltic motion; infusions made from the blossoms ("camomile tea") were utilised externally for baths, compresses and rinses at inflammations of skin and mucous membranes, in both antiquity and in Islam in a manner similar to present practice.

**Bibliography:** For full information on camomile, see A. Dietrich, *Zum Drogenhandel im islamischen Ägypten*, Heidelberg 1954, 51-5, with bibliography. (A. DIETRICH)

**BACTROMANCY** [see ISTIKSĀM].

**BADAJOZ** [see BATALYAWS].

**BĀDGĪR** (p.), literally "wind-catcher", the term used in Persia for the towers containing ventilation shafts and projecting high above the roofs of domestic houses. They are also erected over water-storage cisterns and over the mouths of mine-shafts in order to create ventilation through the tunnels below. In domestic houses, cooler air is forced down either to rooms at ground level or to cellars (the *zīr-i zamīn*), and it provides an early form of air conditioning. The towers are usually substantial, square-sectioned structures with rows of apertures in all four walls, and are divided internally by thin mud-brick or timber and mud-brick partitions and baffles; but not enough of the surviving *bādgīrs* (which are mainly situated on the central plateau of Persia, e.g. around Yazd, or in the south near the Gulf coastlands, and are now often falling into disrepair with the advent of modern methods for cooling air and water) have been examined scientifically to ascertain exactly how the difference in air pressure required to create a draught is achieved. See H. E. Wulff, *The traditional crafts of Persia*, Cambridge, Mass. 1966, 15, 106, and E. Beazley, *Some vernacular buildings of the Iranian plateau, in Iran, Jnal. of the British Inst. of Persian Studies*, xv (1977), 100-1 (both with illustrations). Marco Polo mentions the *bādgīrs* of Hormuz on the Persian Gulf coast as the only things which make life bearable there in summer, and other travellers, such as Pietro della Valle and Figueroa, have left good descriptions of them (see H. Yule, *The book of Ser Marco Polo the Venetian*, London 1871, ii, 383-4).

The wind-shaft or wind-catcher was equally known in the mediaeval Arab world and has con-

tinued in use to the present day. Indeed, it seems that such contrivances were known in the buildings of the Ancient Near East, such as those of Pharaonic Egypt and Babylon. In mediaeval Arabic, the device was known by the term *bādahanġj* or *bādanġj*, arabised from the alternative Persian term to *bādgīr*, *bād-handġj* (see Dozy, *Supplément*, i, 47). Already in the early 'Abbāsīd palace of Ukḡaydīr in 'Irāk [see ARCHITECTURE I. (3)]. The 'Abbāsīd caliphate] we find square-sectioned ventilation shafts in the walls, and the word *bādgīr* appears in 'Irāk as *bādgīr*. It seems probable that 'Irāk formed the intermediate stage of the contrivance's spread westwards, in its new phase of life during Islamic times, to Syria and Egypt. The *bādahanġj* was already a feature of the landscape in early Fāṭimid times, for the astronomer Ibn Yūnus (d. 399/1008-9) [*q.v.*] discusses the correct orientation of what was normally a single aperture at the top of the shaft, since the prevailing cooler wind in Egypt is from the north or north-west. 'Abd al-Laṭīf al-Baġhdādī (d. 629/1231-2 [*q.v.*]) states that the large and ornate wind-shafts of his time cost up to 500 *dīnārs* to construct. The earliest surviving example from Cairo seems to be the shaft in the *kibla* wall of the mosque of al-Šāliḡ Ṭalā'ī' (555/1160), see K.A.C. Creswell, *The Muslim architecture of Egypt*, Oxford 1952-9, i, 284-5. The *bādahanġj* is mentioned in the *Thousand and one nights*, and the littérateur 'Alā' al-Dīn al-Ghuzūlī (d. 815/1412-3 [*q.v.*]) devotes a chapter of his anthology the *Maḡālī' al-budūr* to the *bādahanġj* in poetry and literature (see F. Rosenthal, *Poetry and architecture: the Bādhanġj*, in *Jnal. of Arabic Literature*, viii [1978], 1-19). In modern Egypt, the usual term for the contrivance became *malkaf* "[wind] catcher", noted by Lane in his *Manners and customs of the modern Egyptians*, ch. xxiv, and still in use (see S. Spiro, *An Arabic-English dictionary of the colloquial Arabic of Egypt*, Cairo 1895, 544: "ventilator, air-shaft, wind-sail"); in domestic houses, the air-shaft usually led down to the public rooms of the *kā'a* or *mandara*, or else to another chamber used for sleeping (see A. Lézine, *La protection contre la chaleur dans l'architecture musulmane d'Égypte*, in *BEO*, xxiv [1971], 12-15).

**Bibliography:** In addition to references given in the article, see A. Badawy, *Architectural provision against heat in the Orient*, in *JNES*, xvii (1958), 125, 127-8 and Figs. 4, 6, 8; and see also KHAYSĪL.

(C.E. BOSWORTH)

**BĀDHĀM, BĀDHĀN**, Persian governor in the Yemen towards the end of the Prophet Muḡammad's lifetime. A Persian presence had been established in the Yemen ca. 570 A.D. when there had taken place a Yemenī national reaction under the Ḥimyarī prince Abū Murra Sayf b. Dhī Yazan [see SAYF B. DHĪ YAZAN] against the Ethiopian-backed governor Masrūġ b. Abraha. The Persian Emperor Khusraw Anūshīrwān had sent troops to support Sayf b. Dhī Yazan, and eventually, a Persian garrison, with a military governor at its head, was set up in Ṣan'a'. It was the progeny of these Persian officials and soldiers, who intermarried with the local Arab population, who became known as the Abnā' [*q.v.*].

The Arab sources recount the story of the Persian occupation of the Yemen and give the names of the succession of Persian governors, beginning with Wahrīz and his descendants and closing effectively with Bādhām, who seems himself to have been unconnected with Wahrīz's family (see al-Ṭabarī, i, 945-51; al-Dīnawarī, *al-Akhbār al-tiwāl*, Cairo

1960, 64; al-Mas'ūdī, *Murūdj*, iii, 162-7 = ed. Pellat, §§ 1015-20; Ibn al-Athīr, ed. Beirut, i, 447-51).

Bādhām seems to have been governor in Ṣan'ā' during Muḥammad's Medinan period, and when Muslim control began to be extended towards South Arabia at a time just after Heraclius's defeat of the Sāsānids, the Persian community's position must have become increasingly isolated and vulnerable; by now, they can have been little more than one of several local groups contending for mastery in the Yemen. Bādhām and the Abnā' may accordingly have been inclined to receive Muḥammad's overture sympathetically, but whether this involved anything more than an acknowledgement of distant political suzerainty is uncertain. The sources record Bādhām's conversion to Islam under the year 10/631-2, together with that of other Abnā' leaders such as Firūz al-Daylamī and the Abnāwī scholar Wahb b. Munabbih [*q.v.*] (al-Tabarī, i, 1763; Ibn al-Athīr, ii, 304; Caetani, *Annali*, ii/1, 358, 369). Western scholars have, however, been suspicious of this story of the conversion of Bādhām and the Abnā', and Caetani described it as "a pious fiction of the Muslim traditionalists, in order to give a flavour of orthodoxy to Bādhām's nominal submission to Islam" (*ibid.*, ii/1, 371). The first Ridda War in the Yemen, under 'Ayhala b. Ka'b, called al-Aswad or Dhu 'l-Khimār [see AL-ASWAD], now supervised. Bādhām died at this point; his son Shahr succeeded temporarily to some of his power in the Yemen in 11/632-3 (al-Tabarī, i, 1864), but was killed by al-Aswad. Muslim political authority was probably not imposed in the Yemen by Abū Bakr's generals till 12/633-4. In any case, these events marked the end of any degree of Persian control in the Yemen, though the Abnā' continued as a distinct social group well into the early Islamic period (cf. al-Sam'ānī, *Ansāb*, facs. ff. 17b-18a, ed. Hyderabad, i, 100-2).

**Bibliography:** In addition to the references given in the article, see Nöldeke-Tabarī, *Geschichte der Perser und Araber*, 220 ff.; Caetani, *Annali*, ii/1, 358, 369-71, 661-85; idem, *Chronographia islamica*, i, 113, 123; A. Christensen, *L'Iran sous les Sassanides*, Copenhagen 1944, 368-70, 373; W. Montgomery Watt, *Muhammad at Medina*, Oxford 1956, 118, 128-30. (C.E. BOSWORTH)

**AL-BADHDH**, a district and fortress of northern Aḡharbāyḡjān, famous as being the headquarters of the Khurramī rebel Bābak [*q.v.*] in the first decades of the 3rd/9th century. The exact site is uncertain, but it must have lain in the modern Karadja-Dagh, older Maymad, the ancient Armenian region of P'aytakaran, to the north of Ahar and south of the Araxes River, near Mount Haštād-Sar, at some spot between the modern districts of Hārānd, Kalaybar and Garmādūz (V. Minorsky, *Studies in Caucasian history*, London 1953, 116 and Addenda et corrigenda slip). Bābak's fortress there was stormed by the caliphal general the Afshīn Haydar [*q.v.*] in 222/837 (Tabarī, iii, 1198 ff., tr. E. Marin, *The reign of al-Mu'taṣim (833-842)*, New Haven 1951, 29 ff.). The only early Islamic geographer or traveller to give first-hand information about al-Badhdh is Abū Dulaf al-Khazraǧī [*q.v.*], who travelled from Tiflis to Ardabil via al-Badhdhayn (this ostensibly dual form reflecting an original Badhīn?), probably leaving the Araxes valley and going up the Kalaybar River. He speaks in his Second *Risāla* of a mine of red *Yamānī* alum there whose product was called *Badhdhī*; he also mentions that local traditions about

Bābak were still strong a century or more later, with Khurramī sympathisers in the area expecting the return of a Mahdī (*Abū-Dulaf Miṣ'ar ibn Muḥalhil's travels in Iran (circa A.D. 950)*, ed. and tr. Minorsky, Cairo 1955, § 15, tr. 35-6, comm. 75). A later source mentioning al-Badhdh, Kazwīnī's *Athār al-bilād*, Beirut 1380/1960, 511, repeats Abū Dulaf's information; and Yāqūt's entry, *Buldān*, i, 529, is laconic and uninformative.

(C.E. BOSWORTH)

**BADHL AL-KUBRĀ**, songstress and *rāwiya* in early 'Abbāsīd times, died before 227/842, probably in 224/839. She was born as a mulatto (*muwallada safa'a*) in Medina and brought up in Baṣra. Dja'far, a son of the caliph al-Hādī, acquired her and, after 193/809, she became a favoured *ḡariya* of al-Amīn and gave birth to a son of his. Being a pupil of Ibn Djamī', Fulayḡ and Ibrāhīm al-Mawṣilī she preserved the "classical" *hidjāzī* style of Arab music, preferring verses by *hidjāzī* poets also for her own compositions. She was a good songstress and lutenist (*dārība*), a *zarīfa*, and was famous for having a répertoire of about 30,000 songs. For 'Alī b. Hishām she compiled a *Kitāb fi 'l-aghānī* which contained 12,000 song texts (without musical indications), and this became one of the sources of Abu 'l-Faradǧ al-Iṣbahānī (22 quotations). 'Alī b. Hishām rewarded her with 10,000 *ḡinārs*, and when she died, she left a fortune, which was inherited by the descendants of 'Abd Allāh b. al-Amīn. Among her pupils were Danānīr and Mutayyam al-Hāshimiyya.

**AL-BADĪ'** [see MARRĀKUSĪ].

**BĀDIYA** (A.) meant, in the Umayyad period, a residence in the countryside (whence the verb *tabaddā*), an estate in the environs of a settlement or a rural landed property in the Syro-Jordanian steppeland.

For Musil, the *bādiya* was the successor to the summer encampment called by the old Syrian Bedouin name of *al-ḡira*. At the opening of the 20th century, the sense was restricted by archaeologists to the desert castles. They went so far as to construct theories about the attraction of the Bedouin way of life for the Umayyads and about the conservatory role of the desert in upholding certain very persistent traditions stronger than those of the nascent Islam. Since the Umayyads were of urban Meccan origin, it is hardly necessary to look for an atavistic Bedouinism in order to explain their preferences for the *bādiyas*. The new masters of Syria replaced, in the towns as in the countryside, the old landholders, whose territories, abandoned at the time of the Islamic conquest, were part of the plunder distributed to the great men. It was said that they sought outside Damascus, their official capital, purer air, the freshness of summer nights, protection against epidemics and vast, open spaces for hunting; in fact, the Umayyads had a keen sense of the value of the land and the possibilities of financial return from fertile agricultural properties.

The agricultural development of Syria goes back well into Roman times. Exploitation of the soil developed in regions where the water supply was difficult, necessitating an elaborate system of irri-

gation and water conservation which could only be undertaken with state aid or the injection of private capital and which was not to survive the downfall of the Umayyads. One very often finds an adaptation of earlier Romano-Byzantine or Ghassānid installations as at Ḳaryatayn, the Byzantine Nazala, at Ḳuṭayfa, Ptolemy's Atera, at the Roman station of Ūsays or at the classical and Byzantine centre of Bayt Rās [q.v.]. Alternatively, there were new buildings erected, as at the two Ḳaṣr al-Hayrs [q.v.] or at Ḳaṣr al-Hallābāt. These were not "desert palaces" so much as "palace-towns", to be considered as essentially Umayyad and constructed on the plan of the small forts inherited from the *castra* of the *limes*, which had themselves been replaced by the rural foundations of the Ghassānids. There is virtually no Umayyad construction which does not utilise classical structures or earlier foundations. No residence is to be found in the deep desert, and they are all built in a zone within the *limes* which had been cultivated and populated since Hellenistic times and had been protected against any possible occupation by Bedouins who might damage the crops. After harvest, the sheep-raising tribes were allowed to pasture their flocks on the cultivated lands, which then benefited from their dung.

The *bādiyas* are generally to be found where there is a water supply, either on a line of transhumance, thus permitting contacts with the Bedouin tribes, or else near some great artery of communication like the routes from Damascus and Boṣrā towards Taymā', the road from Damascus to Ḳarḳisiyā [q.v.], and the route which runs along the cultivable margin of the *Hamad* from Ruṣāfa of al-Nu'mān as far as Taymā', passing through Tadmur or Palmyra, *Bakhrā'* [q.v.], *Djabal Says* [q.v. below] and Ḳaṣr Burku' [see *BURKU'* below]. Their construction along the communication routes permits one to attribute a function of *khāns* [q.v.] or caravanserais to them, in particular for certain constructions in the Wādī 'Araba listed by J. Sauvaget.

The Umayyads liked to stay to the south of Damascus, on the Ghassānid sites of *Djābiya* and *Djillik* [q.v.], and often spent the winter in the Jordan valley at al-Sinnabra or in the palaces built at *Khirbat al-Mīna* and *Khirbat al-Mafḍjar* [q.v.]. Their movements around were often dictated by the need to visit agriculturally productive centres. They had a special liking for the region of the *Balkā'* [q.v.], where their residences among the mild oases are numerous around *Mshattā'* [q.v.], an unfinished work of the caliph al-Walīd II [q.v.], which marks the end of the architectural evolution of the *bādiyas*.

*Bādiya* can be a synonym of *qaṣr* [q.v.], when it is a question of a residence erected within a four-sided enclosure with dimensions recalling those of Roman small forts. The walls are provided with round towers, unknown in Roman and Byzantine fortifications. There is a central courtyard within on to which open rooms grouped in separate units and forming *bays* and backed by blind external walls which keep the environment cool and increase the building's defensive potential. The disposition of internal arrangements is on the axes, and opposite the entrance gate flanked by monumental towers is an audience chamber usually basilical in plan with apse at the end of greater or lesser importance. On the floors above are lodging suites of rooms divided according to the same plan as those on the ground floor. These last are decorated with marble slabs, stucco work, frescoes and mosaics. In the immediate vicinity of

the princely residence there may well be a mosque and a bath, as at *Djabal Says*. Certain *bādiyas* were used as centres for hunting (*mutaṣayyad*), like *Abā'ir* or *Ḳuṣayr 'Amra*. A good picture of the architectural activities of the Umayyads in the *bādiya* is given by Abu 'l-Faraj al-Iṣfahānī in his *K. al-Aghānī*.

(N. ELISSÉFF)

**BADR-I ČĀČĪ**, fully **BADR AL-DĪN MUḤAMMAD ČĀČĪ**, poet of the 8th/14th century Dihlī Sultanate. A native of Čāč (*Shāsh*, *Tashkent*), he migrated to India and rose to favour at the court of Sulṭān Muḥammad b. Tughluḳ [q.v.], who conferred on him the style of *Fakhr al-Ḳamān*. His *kaṣā'id*, which contain references to a number of contemporary events, with the dates often expressed in chronograms, constitute an important source for a period which is notoriously obscure and controversial. It is all the more unfortunate, therefore, that his *Shāh-nāma*, an epic chronicle of Muḥammad's reign completed in 745/1344-5, has not survived: it was still extant in the late 10th/16th century, when the Mughal historian Badā'ūnī (*Muntakhab al-tawārīkh*, ed. M. Aḥmad 'Alī, Calcutta 1864-9, 3 vols., *Bibl. Indica*, i, 241) describes it as a "treasure".

(P. JACKSON)

**BADR AL-MU'TAQIDĪ**, **ABU 'L-NADĪM**, commander-in-chief of the armies of the caliph al-Mu'taqid (279-89/892-902). He was the son of one of al-Mutawakkil's *mawālī*, whose name cannot be established with certainty (*Khurr* or *Khayr?*), and was first in service as an equerry to al-Muwaffak, gaining from that time the favour of the future caliph al-Mu'taqid, who, whilst still regent after al-Muwaffak's death (Ṣafar 278/June 891), made him chief of police in *Baghdād* and then, after his accession, commander of all the forces. Badr led several expeditions into various regions (*Fārs*, *al-Djazīra*, *Irāk*, etc.) in order to re-establish the military situation which had been rendered insecure by the *Ḳarāmīta* [q.v.]. At the same time, he played a political role of prime importance, for he became all-powerful, with a complete domination over the caliph, exercising a veto over everything. He gave

one of his daughters in marriage to al-Mu‘taḍid’s son, the future al-Muḑtadir, increasing his influence still further. He had the right to be addressed by his *kunya*, and the poets, and Abū Bakr al-Sūlī in particular, did not fail to include him in their eulogies of the caliph. It was because of his exceptional position that he acquired the name of “al-Mu‘taḍidī”, distinguishing him moreover from several homonyms.

In 288/901 he pleaded in favour of al-Kāsim b. ‘Ubayd Allāh [see SULAYMĀN B. WAḤB] who was made vizier thanks to his intervention, but who failed to show him much gratitude for it. In fact, Badr refused to take part in his machinations against the sons of al-Mu‘taḍid, so that al-Kāsim, fearing denunciation, took care immediately on the accession of al-Muktafi (289-95/902-8) to blacken Badr in the eyes of the new caliph and probably to profit also by the hostility towards Badr of certain other commanders. Badr fled to Wāsīt, but was invited to return to Baghdād under a guarantee of *amān*; in the course of his trip up the Tigris, he was attacked on the heights of al-Madā’in by al-Kāsim’s agents, who cut off his head whilst he was at prayer and sent it to al-Muktafi (6 Ramaḍān 289/14 August 902). His body was left on the spot and was later carried away by his family for burial at Mecca. This murder was denounced by the poets and imputed to the caliph, who might have been expected to heave a sigh of relief at seeing the head of the once-powerful general whom he had at first honoured on accession, but who seems however to have reproached his vizier for it.

**BAGHR** [see MĀRID].

**BAHĀ’ AL-DAWLA WA-ḌIYĀ’ AL-MILLA, ABŪ NAṢR FĪRŪZ KHĀRSHĀDH B.** ‘AḌUD AL-DAWLA FANĀ-KHUSRAW, Būyid supreme *amīr*, who ruled in ‘Irāk and then in southern Persia also from 379/989 to 403/1012) after 381/992 with the further honorific, granted by the caliph al-Kādir, of Ghīyāth al-Umma, and towards the end of his life, those of Kīwām al-Dawla and Ṣafī *Amīr al-Mu‘minīn*). He was the third son, after Ṣaṣṣām al-Dawla Marzubān and Sharaf al-Dawla Shīrīzīl, of the great *amīr* ‘AḌud al-Dawla [q.v.], who had built up the Būyid confederation into the mightiest empire of its time in the Islamic east.

On ‘AḌud al-Dawla’s death in Shawwāl 372/March 983, Ṣaṣṣām al-Dawla, as the eldest son, succeeded as *amīr al-umarā’*, but his succession was disputed by Sharaf al-Dawla, and internecine warfare followed, in which the young Bahā’ al-Dawla was also involved. Finally, in Ramaḍān 376/January 387 Ṣaṣṣām al-Dawla’s position in Baghdād became parlous; he submitted to Sharaf al-Dawla, who now became the supreme *amīr*, and was partially blinded and imprisoned at Sirāf. However, Sharaf al-Dawla died in Djumādā II 379/September 989, and Bahā’ al-Dawla, whom Sharaf al-Dawla had nominated before his death as his successor, assumed power in Baghdād as *amīr al-umarā’* at the age of 19. He thus began a reign of 23 years, long by Būyid stand-

ards. This reign falls into two roughly equal parts, the first filled with warfare against rivals like his uncle Fakhr al-Dawla ‘Alī of Ray and Ḍijbāl and Ṣaṣṣām al-Dawla, now escaped from incarceration, until by ca. 1000 he had consolidated his power in Fārs and Kirmān and was able to make Shīrāz, his father’s old capital, the centre of his own dominions for the rest of his lifetime, acknowledged by all the Būyid princes as supreme *amīr*.

At the outset of his reign, Bahā’ al-Dawla recognised Ṣaṣṣām al-Dawla in Shīrāz as an equal ruler controlling Fārs, Kirmān and ‘Umān. In 381/991 he deposed the ‘Abbāsīd caliph al-Ṭā’i’ [q.v.] in favour of his cousin al-Kādir [q.v.], whom he hoped to find more tractable; this proved in fact the case, and the new caliph agreed subsequently in 383/994 to become betrothed to Bahā’ al-Dawla’s own daughter, though she died before the marriage could take place. The *amīr* also secured from the caliph at this time a fresh grant of titles; and it is from this year that the ancient Iranian title *Shāhānshāh*, used unofficially by his father, appears on his coins (cf. W. Madelung, *The assumption of the title Shāhānshāh by the Būyids and “The reign of the Daylam (Dawlat al-Daylam)”*, in *JNES*, xxviii [1969], 174-5). Bahā’ al-Dawla now had to defend ‘Irāk and Ahwāz against the ambitions of Fakhr al-Dawla (who, urged on by his vizier the Ṣāhib Ismā’īl b. ‘Abbād [see IBN ‘AB-BĀD], had on ‘AḌud al-Dawla’s death himself assumed the title of *Shāhānshāh* and the implied headship of the Būyid family), and northern ‘Irāk against various local Arab and Kurdish chiefs. Ṣaṣṣām al-Dawla, after his escape, took advantage of unrest in ‘Irāk and of Bahā’ al-Dawla’s preoccupation with internal strife in Baghdād—the divisions of the Sunnī and Shī‘ī populace and of the Turkish and Daylamī elements in the Būyid army—and seized Ahwāz and Baṣra. Bahā’ al-Dawla secured the alliance of the ruler of the Baṭīḥa, Muḥadhḥīb al-Dawla ‘Alī b. Naṣr, and of the Kurdish prince Badr b. Ḥasanūya [see ḤASANAWAYH]. Even so, his vizier and general Abū ‘Alī b. Ismā’īl al-Muwaffaq could make little headway against Ṣaṣṣām al-Dawla’s skilful commander Abū ‘Alī al-Ḥasan b. Ustādh-Hurmuz. After several oscillations in the fortunes of war, Ṣaṣṣām al-Dawla was in 388/998 assassinated near Iṣfahān by Abū Naṣr Shāh-Fīrūz, a son of ‘AḌud al-Dawla’s cousin and former rival ‘Izz al-Dawla Bakhtiyār. Abū ‘Alī b. Ustādh-Hurmuz now came over to Bahā’ al-Dawla’s side with the remnants of Ṣaṣṣām al-Dawla’s Daylamī troops. Once Abū Naṣr Shāh-Fīrūz had been killed in Kirmān, Bahā’ al-Dawla was sole master of the southern provinces of Persia, Fārs and Kirmān, and of their dependency ‘Umān. Two years later, his implacable enemy Fakhr al-Dawla died, and his successors in Ray and Hamadhān, the young and inexperienced Maḍjīd al-Dawla Rustam and Shams al-Dawla Abū Ṭāhīr respectively, acknowledged Bahā’ al-Dawla’s supreme overlordship, as coins minted at Ray from 400/1009-10 and at Hamadhān from 401/1010-11 attest.

Bahā’ al-Dawla now moved his capital from ‘Irāk to Shīrāz, captured from the temporary control of the sons of ‘Izz al-Dawla, and never returned from it to Baghdād. The move eastwards showed that he regarded southern Persia as the heartland of the Būyid dominions, and except for the brief occupation in 390-1/1000-1 of Kirmān by the Ṣaffarīd Ṭāhīr b. Kḫalaf, the Persian lands remained generally peaceful. But the relinquishing of Baghdād as capital meant a distinct relaxation

of control in 'Irāk, which was henceforth entrusted to governors (for much of this period, until his death in 401/1010-11, to the 'Amīd al-Djuyūsh Abū 'Alī b. Ustādih-Hurmuz) at a time when powerful enemies were rearing their heads there. Bahā' al-Dawla's departure for Fārs allowed the caliph al-Kādir to enjoy more freedom of action and tentatively to assert his authority, especially over the protection of Sunnī interests against Shī'ī policies of the Būyid amīr [see AL-KĀDIR BI'LLĀH for details]. Above all, the confused situation in 'Irāk after 'Aḍud al-Dawla's death and the squabbling of his sons in Fārs over control of the empire had allowed local Arab potentates in 'Irāk to extend their power at Būyid expense, so that direct Būyid authority was to be for much of Bahā' al-Dawla's reign confined to Baghdād and Wāsiṭ and their immediate vicinities. In northern 'Irāk there were the 'Ukaylids [*q.v.*] of Mawṣil; Bahā' al-Dawla sent against the amīr Abu 'l-Dhawwād Muḥammad several expeditions, but could not entirely quash his power, and after Abu 'l-Dhawwād's death in 386/996, his nephew Kīrwāsh b. al-Muḥallad (after 391/1001) carried on the struggle. In central 'Irāk, the Asadī amīr 'Alī b. Mazyd was ever ready to stir up the Bedouins of the Khafādjā and Muntafik groups [*q.v.*] against Būyid rule, whilst in the south of the country a rebel called Abu 'l-'Abbās b. Wāṣil in 393/1003 seized Baṣra and invaded Ahwāz, having driven out from the Baṭiḥa Muḥadhḥīb al-Dawla. In 396/1006 a coalition of Badr b. Ḥasanūya's Kurds and Ibn Wāṣil's forces were able to besiege Baghdād, but the capital was saved by Ibn Wāṣil's being captured and then executed (397/1006). An attempt was made to conciliate the Arab amīrs of 'Irāk, so that the 'Ukaylid Kīrwāsh b. al-Muḥallad was in 396/1005-6 awarded the *lakab* of Mu'tamid al-Dawla and the Mazyadid 'Alī in 397/1007 that of Sanad al-Dawla. Also, the new governor for Bahā' al-Dawla in Baghdād after 401/1010, Fakhr al-Mulk Muḥammad b. 'Alī, defeated the 'Ukaylids, drove off the Khafādjā and managed to make peace with the Kurds, who in fact ceased to be such a threat to the Būyid position in 'Irāk after Badr's murder in 405/1014-15.

In Djumādā II 403/December 1012 Bahā' al-Dawla died at Arradjān, probably en route for Baghdād. His corpse was taken to Baghdād and then, like that of his father, interred near the grave of the *Imām* 'Alī b. Abī Tālib at Naḍjaf near Kūfa. It appears that during his lifetime, Bahā' al-Dawla's (eldest?) son Abū Maṣṣūr had been the *waṭī al-'ahd*, for his name, with the title of amīr al-*umayyā'*, appears on an inscription at Persepolis dated 392/1002, but this son had died in 398/1008. Hence just before his death, he had nominated his 19-year old son Sulṭān al-Dawla Abū Shudjā' as supreme amīr, the latter after his accession appointed his brothers Djalāl al-Dawla and Kīwām al-Dawla as governors in Baṣra and Kirmān respectively. The ensuing struggles amongst Bahā' al-Dawla's sons, combined with the ambitions of the Arab amīrs in 'Irāk and distant pressure from the Ghaznawids and then the Saldjūks in the east, were soon to destroy the precarious unity of the Būyid empire inherited by Bahā' al-Dawla from his father.

It is not easy to form a clear picture of Bahā' al-Dawla's character and personality, and he suffers in the sources by comparison with his father. They describe him as tyrannical to his entourage, avid for gold and niggardly over its disbursement, but these vices were not unfamiliar among other members of

the Būyid family, and were in large part a reflex of the recurrent financial crises of the later Būyids and their desperate search for money and for fresh *iktā'* land with which to pay their troops.

Concerning his cultural interests, little is known specifically, and the first half of his reign was in any case largely taken up with warfare. The historian and philosopher Miskawayh [*q.v.*] served as a secretary in his administration, and despite the absence of mention of outstanding poets in his circle at Shīrāz (Tha'ālibī in his *Tatimmat al-Yatima*, ed. Eghbal, i, 16-18, 26-30, mentions only two poets of note, Abū 'Abd Allāh al-Ḥusayn al-Mughallis and Abū Sa'd 'Alī al-Hamadhānī), there is reason to suppose that Bahā' al-Dawla continued the tradition of patronage of Arabic learning established by 'Aḍud al-Dawla before him. Certainly, Ṣamṣām al-Dawla had as his vizier for two years Abū 'Abd Allāh al-Ḥusayn b. Aḥmad, Ibn Sa'dān [*q.v.* below], whose circle of scholars is known to us through the works of Abū Ḥayyān al-Tawḥīdī, and Sharaf al-Dawla was the patron of the distinguished astronomer Abū Sahl al-Kūhī [*q.v.*]. Abū Naṣr Shāpūr b. Ardashīr (d. 416/1025 [see SĀBŪR b. ARDAŠĪR in *ET*]), who served Bahā' al-Dawla as vizier on several brief occasions during the first part of his amirate, seems to have been a scholar of outstanding calibre, considered by Tha'ālibī as worthy of a separate section in his anthology because of the amount of poetry dedicated to him by such figures as Abū 'l-Faraj al-Babbaghā, Ibn Lu'lu' and Abū 'l-'Alā' al-Ma'arrī (*Yatimat al-dahr*, ed. Damascus, ii, 290-7, ed. Cairo 1375-7/1956-8, iii, 129-36); whilst the governor for Bahā' al-Dawla in Baghdād (and subsequently for his successor Sulṭān al-Dawla) Fakhr al-Mulk was the patron of the poet Mihyār al-Daylamī [*q.v.*] and of the mathematician of Baghdād Abū Bakr Muḥammad al-Karājī [*q.v.*; the *nisba* to be corrected thus from the "al-Karkhī" frequently found in western sources], the latter dedicating to the governor his treatise on algebra *al-Kūtab al-Fakhrī fi 'l-djabr wa 'l-muḥābala*.

*Bibliography:* Miskawayh's chronicle stops short of Bahā' al-Dawla's reign, but much detailed historical material is to be found in the *Diwān* of Abū Shudjā' al-Rūdhrawārī (up to 389/999) and in the surviving fragment of Hilāl al-Ṣābī's *Ta'rīkhī* covering 389-93/999-1003 (both sources forming vol. iii of Margoliouth and Amedroz's *Eclipse of the Abbasid caliphate*, tr. vol. vi, the latter source being utilised by H.F. Amedroz for his study *Three years of Buwāhid rule in Baghdad, A.H. 389-393*, in *JRAS* [1901], 501-36, 749-86). These specifically Būyid sources can be filled out and supplemented by the general chronicles of Ibn al-Athīr, ix, Ibn al-Djawzī, vii, and Sibī Ibn al-Djawzī, the latter two especially important for events in Baghdād and 'Irāk.

Of secondary literature, there are connected accounts of Bahā' al-Dawla's amirate and of the cultural life of the period in Mafizullah Kabir, *The Buwāhid dynasty of Baghdad (334/946-447/1055)*, Calcutta 1964, 77-91, 179 ff.; in H. Busse, *Chalif und Grosskönig, die Buayiden im Iraq (945-1055)*, Beirut-Wiesbaden 1969, 67 ff. and index; and in idem, ch. *Iran under the Būyids*, in *Camb. hist. of Iran*, iv, ed. R.N. Frye, Cambridge 1975, 289-96; The extensive bibliography in Busse's book expands and brings up-to-date that of the article BUWAYHIDS [*q.v.*].

(C.E. BOSWORTH)

**BAḤRIYYA.** I. The navy of the Arabs up to 1250. Although Near Eastern writers in mediaeval

times did not address themselves specifically to the subject of *bahriyya*, references to seafaring activities made by Arab, Byzantine, southern and western European chroniclers, geographers and travellers, as well as pertinent details found in the Arabic papyri and the Geniza documents, provide a considerable body of information concerning the rise and fall of the Arab navy.

The naval requirements of the Arabs were dictated by the necessity of defending their Mediterranean territories—stretching from Cilicia and Syria in the East to the Spanish Levante seaboard in the West—and of protecting their shipping, as well as by their offensive operations against Christian enemies in the Mediterranean. Until the appearance of aggressive Italian fleets and the coming of the Crusaders, Muslim sea power, along with that of the Byzantines, constituted the dominant factor in mediaeval Mediterranean naval history.

The organisation and command structure of the *bahriyya* were affected by the policy and strategy of the caliphate. In the beginning of the 2nd/8th century, the naval organisation involved several naval districts and distinct, self-controlled fleets. The naval districts, with their strategic ports (*thaghr*, pl. *thaghūr* [q.v.]) and warships, remained under the jurisdiction of commanders appointed by the caliph and responsible for the supervision of the construction and equipment of the ships; for their safety in the winter bases; for the selection of the entire naval personnel; for gathering and analysing naval intelligence; and for giving operational orders. With the decline of the caliphate, the organisational logistic, and operational responsibility for the *bahriyya* rested with those dynamic régimes whose power was based on the coastal provinces, whether they enjoyed a sovereign status, as was the case of the Fāṭimids, or that of local dynasties, like the Aghlabids, the Ṭūlūnids, the Ikhshīdids and the Ayyūbids [q.v.].

An essential feature of the *bahriyya* were the *dār al-ṣinā'a* (sing. *dār al-ṣinā'a* [q.v.]). These naval installations served not only as operational bases, but also as shipyards, naval arsenals and as the manpower centres supplying sailors and combat personnel. The number and activity of these installations depended on the degree of concern for naval matters of individual régimes. The latter ensured the operations of the installations by raising taxes specifically earmarked for naval expenditure; by procuring raw materials needed for the construction and fitting of warships; and by conscripting the necessary manpower. The Muslim naval inventory involved a great diversity of combat and supportive vessels. In fact "the Muslim navy not only had a variety of names for a single type, but a single name for a variety of types" (A.M. Fahmy, *Muslim naval organization*, 137).

A fleet (*al-ustūl* [q.v.]) was commanded by the *rā'is al-ustūl* (commander of the fleet) selected from among the top naval officers (*al-kuwwād*), but the care of weapons and direction of naval action were discharged by the chief sailor (*kā'id al-nawātiya*). The crews of the warships were made up of sailors (*nūṭī*, pl. *nawātiya*); oarsmen (*kadhdhāf*); craftsmen and workmen (*dhawu 'l-ṣinā'a wa 'l-mihan*); as well as of the fighting men, such as the naphtha throwers (*al-naffātūn*) and the marines. The actual fighting involved both the bombardment with combustible projectiles, and the subsequent ramming, boarding and hand-to-hand combat of the marines. The latter were employed also for landing raids.

The early history of the *bahriyya* was highlighted by the raids against Cyprus in 28/649 and 33/655; by the victory over a Byzantine armada in the Battle of the Masts (*Dhāt al-Sawārī* [q.v. in Suppl.]) in 34/655; and by the two sieges of Constantinople in 54-69/763-9 and 98-9/717-18), during which the Muslim fleets attempted to blockade maritime access to the imperial capital, and supported logistically the Arab land forces. In that period Muslim squadrons raided Sicily in 32-3/652 and 46/666-7, temporarily occupied Rhodes in 52/672 or 53/673 and Arwād (Cyzikus) in 54/673, and raided Crete in 55/674. In the first half of the 3rd/9th century, the position of the *bahriyya* was enhanced by the reassertion of Muslim influence over Cyprus [see KUBRUS] and the conquest of Crete [see İKRİTİSİ]; both these strategic islands facilitated offensive operations against Byzantine possessions. Regular Muslim fleets were stationed at Alexandria, Rosetta, Damietta, 'Akkā, Tyre, Sidon and Ṭarsūs. In the Western Mediterranean, the navy of the Aghlabids engaged in relentless attacks against Sicily [see ŞIKALLIYYA] and the southern and western shores of Italy from the naval base of Tunis.

The pursuit of ambitious political goals in Egypt and Syria by Aḥmad b. Ṭūlūn (254-70/868-84) entailed both an expansion of naval installations, especially those of 'Akkā, and the strengthening of naval squadrons. His example was emulated by Muḥammad b. Tuḡhdj al-Ikhshīd (323-34/935-46); but neither the fleet of the Ṭūlūnids nor that of the Ikhshīdids proved to be very effective. The former was annihilated in 293/905 by a small 'Abbāsīd fleet, the latter was unable to support Crete and Cyprus against the resurgent Byzantine navy. On the other hand, in 291/902 the Muslim *bahriyya* achieved a great success when Aghlabid naval forces conquered Sicily.

Following the Byzantine re-conquest of Crete (350/961) and Cyprus (352/963), the difficult task of upholding the prestige of the *bahriyya* was taken over by the Fāṭimids. Having inherited strong naval traditions from the Aghlabids, the Fāṭimids undertook a major expansion of the fleet. Their powerful naval squadrons proved instrumental in contesting supremacy in the western Mediterranean. Malta, Sardinia, Corsica, the Balearic and other islands were attacked. In 324-5/934-5 a Fāṭimid fleet harried the southern coast of France, took Genoa, and coasted along Calabria, carrying off slaves and other booty. In 344/955 another Fāṭimid fleet raided the coasts of Umayyad Spain. In 358/969 a powerful Fāṭimid armada participated in the conquest of Egypt. Concerned with the offensive operations of the Byzantines, as well as with the need for preserving the unity of their realm, which stretched from North Africa to Syria, the Fāṭimids attached great importance to the status of their navy. They founded a "Department of the Holy War or of Maritime Constructions": (*Dīwān al-Djihād wa Dīwān al-'Amā'ir*). Ships were built in Alexandria, Damietta, at the island of Rawḍa, in Mişr, and in the new dockyards of al-Maḳs, which alone is credited with producing 600 vessels. Availability of the services of the Syrian *thaghūr*, such as Tyre and Tripoli, extended the operational capacity of the Fāṭimid fleet in the eastern Mediterranean.

In the 5th/11th century the power of the *bahriyya* began to decline. The North African provinces slipped away from the Fāṭimids. The fleets of the Italian mercantile republics asserted their preponderance in the western Mediterranean and began

to raid with virtual impunity the Algerian and Tunisian shores. The dynamic Normans conquered Sicily and Southern Italy, and then began preparing for expansionist moves in Eastern Mediterranean. In the first half of the 6th/12th century, the victories of the Crusaders were facilitated by the decline of Fātimid naval forces, and resulted in the loss of all Islamic coastal towns with the exception of 'Askalān. After the surrender of that fortress in 548/1153, the coast of Egypt became an easy target for Norman, Italian and Byzantine squadrons.

An attempt to challenge the Christian naval power was made by Ṣalāh al-Dīn (567-89/1171-93), the supplanter of the Fātimids. He increased the salaries of the sailors, re-fortified Egyptian naval bases, and created a special office of the fleet (*diwān al-uṣūl*), to which several branches of Egyptian revenue contributed. In 574-5/1179 his fleet counted 80 vessels, of which 60 were galleys and 20 transports. Although the revitalised navy achieved some success during Ṣalāh al-Dīn's struggle against the Crusaders (including an effective counter-attack in *Dhu 'l-Hijja* 578/February 1183 against a daring Frankish penetration of the hitherto immune Red Sea waters), it proved impotent to prevent the movement of Christian fleets bringing new hosts of European warriors eager to fight against the Muslim conquerors of Jerusalem. The Third Crusade (585-7/1189-91) did not recover the Holy City, but it delivered a mortal blow to the Egyptian navy, whose squadrons tried suicidally to support the garrison of 'Akkā blockaded by a tremendous concentration of European fleets. According to al-Makrīzī (766-845/1364-1442), "After the death of Ṣalāh al-Dīn the affairs of the fleet were given little attention . . . Service in the navy was considered to be a disgrace to such an extent that to call at an Egyptian 'You sailor!' was treated as an insult. What a change from the days when the names of the sailors were invoked in the prayers of the people, and from the times when these very sailors had been called the soldiers of God, waging the Holy War against the foes of Allāh!"

II, III [See Vol. I, 945 ff.].

**BAKHĪT AL-MUṬĪĪ AL-ḤANAFĪ**, MUḤAMMAD, *muftī* of Egypt from 1914 until 1921. He was born in the village of al-Muṭṭā'a in the province of Asyūt on 10 Muḥarram 1271/24 September 1854. After completion of his studies at al-Azhar in 1292/1875, he remained attached to that institution as a teacher until 1297/1880, when he was appointed *kādī* of al-Qalyūbiyya province. This was the beginning of his career in the judiciary, in which he served as provincial judge in various resorts, as *kādī* of Alexandria, as *kādī* of Cairo, and in a number of other high positions such as the office of Inspector and the office of *muftī* in the Ministry of Justice, prior to his appointment as *muftī* of Egypt on 21 December 1914. In the course of his career he was involved, either directly or indirectly, in notable events of the day, such as the intrigues against reform in al-Azhar, as sponsored by Muḥammad 'Abduḥ (cf. Aḥmad Shafīk, *Mudhakkirātī fī nisf kam*, Cairo 1936, ii, part 2, 35), the complications surrounding the marriage of 'Alī Yūsuf (*ibid.*, 61), and the events of 1921, preceeding Egyptian independence (cf. Shafīk, iii, 275 ff.). He was a member of al-Rābiṭa al-Sharqiyya [q.v.], but resigned from this association in 1925 in protest to the efforts of some of its members to bring about the annulment of the intended trial of 'Alī 'Abd al-Rāziq (cf. Aḥmad Shafīk, *A'mālī ba'd mudhakkirātī*, Cairo 1941, 183 f.). The latter's *Islām wa-uṣūl al-ḥukm* was severely criticised by Muḥammad Bakhīt in his *Hakīkat al-Islām wa-uṣūl al-ḥukm*, Cairo 1344/1925-6. This book, as well as publications with suggestive titles such as *al-Murhafāt 'l-yamāniyya fī 'uḥūḥ man kāla bi-butlān al-wakf 'alā 'l-dhuriyya*, Cairo 1344/1925-6; *Iṣḥād al-kārī wa 'l-sāmī ilā anna al-ṭalāk idhā lam yudif ilā al-mar'a ghayr wākī'*, Cairo 1348/1929-30; *Hudūdāt Allāh 'alā khalīqatīhi, fī bayān haqīkat al-Ḳur'ān wa-ḥikam kitābatīhi*, Cairo 1932, reflect Muḥammad Bakhīt's active intellectual involvement with the various issues of his time, such as the disputes pertaining to the translation of the *Ḳur'ān*, the position of women, and the campaign for abolition of the *wakf ahlī*. Other publications such as his *Tambīh al-'uḳūl al-insāniyya limā fī āyāt al-Ḳur'ān min al-'ulūm al-kawniyya wa 'l-'um-rāniyya*, Cairo 1344/1925-6; *Tawfiḳ al-Rahmān li-tawfiḳ bayn mā kālahu 'ulamā' al-hay'a wa-bayn mā dījā' fī ahādīth al-sahīha wa-āyāt al-Ḳur'ān*, Cairo 1341/1922-3; and *al-Djawāb al-shāfi' fī ibāhat al-taṣwīr al-fūṭūghrāfi*, Cairo n.d.; and *Risāla fī Ahkām kirā'at al-fūṭūghrāfi*, Cairo 1324/1906-7, show his concern with problems arising out of the confrontation of Islam with the results of Western science and technology. Muḥammad Bakhīt died on 20 Radjab 1354/18 October 1935.

**BĀKĪ B'ILLĀH**, **KH<sup>H</sup>'ADJA**, *Sūfi* saint of Muslim India, born in Kābul in 71/1563-4. His father, Kādī 'Abd al-Salam **Khaldī** Samarkandī, was a scholar *Sūfi*, and his mother a descendant of Shaykh 'Ubayd Allāh Aḥrār (d. 896/1491), the distinguished saint of the Naqshbandī order. [see AḤRĀR, **KH<sup>H</sup>'ADJA**, above]. He completed his early

education and then studied the religious sciences under the guidance of Mawlānā Šādiq Halwā'ī, who had stayed in Kābul at the persuasion of Mīrzā Hakīm in 978/1570-1 on his way back from the Hīdjāz to Samarkand. After some time, he accompanied Halwā'ī to Transoxiana, and there he outshone other students of his in Islamic theology. As he was inclined towards piety and Šūfism, he visited the famous Šūfīs and developed a desire for spiritual perfection. Hence he turned to India and wandered about here and there in the Panđjāb, spending nights in vigil and performing mystical exercises, to the point that his health was adversely affected.

Having spent sometime in the Panđjab and Kāšmīr, Bākī bi'llāh again went to Transoxiana in 1000/1592 in search of a spiritual guide. In Samarkand, he became the disciple of the Naqshbandī saint Mawlānā Kh'ādjađī, who acquainted him with the teachings and philosophy of his order. He adopted the teachings of Shaykh Ahrār and returned to India towards 1007/1599, settling down in Dihlī as a founder of the Naqshbandī order there and gathering a number of disciples, including some of the leading grandees and scholars. Shaykh Farīd Bukhārī, one of Akbar's prominent nobles, also became his disciple, and met all the expenses of his *khānkāh* in Dihlī. As regards his teachings, he emphasised the importance of right faith, strict adherence to the Islamic *Shari'a*, constant meditation and the service of man; to him, this was the essence of Šūfism, and no importance was attached to other mystic experiences. He considered Ibn al-'Arabī's philosophy of *wahdat al-wuđūd* ("unity of being") as a narrow lane, while 'Alā' al-Dawla Simnānī's concept of *wahdat al-shuhūd* he declared to be a wider road.

Bākī bi'llāh died in 1011/1603 leaving a number of distinguished disciples to further his work. It was largely due to him that the Naqshbandī order subsequently gained popularity in India and became one of the important orders there, making an impact on the religious life of the Indian Muslims which can be felt even today.

(I.H. SWIDIQWI)

**BAKR B. AL-NATṬĀH**, ABU 'L-WĀ'IL, minor poet of Baṣra, who belonged to the tribe of Bakr b. Wā'il and who eulogised Rabī'a; but it is not known for certain whether he was descended from Ḥanīfa b. Luđjaym or from his brother 'Idjl (Ibn al-Kalbī-Caskel, Tab. 141), so that he is sometimes given the *nisba* of Ḥanāfi and sometimes that of 'Idjlī. He spent part of his life in Baghdād, and according to information given in the *Aghānī* (xix, 38), he is even said to have received for some time a stipend from the *diwān* of al-Rašīd. However, he seems to have led a fairly restless life in search of patrons, being avid for rewards. He is moreover made into a *su'lūk*, a brigand of the highways, because he boasted of using his sword in order to earn his living; but the only relevant episode here mentioned in the sources is an attack by the hordes of Abū Dulaf al-Kāsim b. 'Isā al-'Idjlī (d. 225/840 [q.v.]) after the latter had remarked to Ibn al-Natṭāh that he was always boasting of his bravery but never

put it to the test. For the rest, his relations with Abū Dulaf are unclear; according to one tradition, he was recruited into his army and received a stipend until the end of his life, whilst another tradition describes him as coming every year to the master of al-Karādġ asking for money to buy an estate allegedly adjacent to his own existing one. Whatever the truth, he eulogised his benefactor, above all in a fine *kašīda* of 90 verses which has been preserved by Ibn al-Mu'tazz. Abū Dulaf's brother, Ma'kil b. 'Isā, interceded on his behalf for the prince to pardon Ibn al-Natṭāh's indiscretions, which led to similar eulogies on Ma'kil and an elegy on his death. Ibn al-Natṭāh also mourned the death of Mālik b. 'Alī al-Khuzā'ī, at whose side he had fought in campaigns against the Khāridġis of the district of Ḥulwān. He is also found in Kirmān, where he received a regular stipend, and at the side of Mālik b. Ṭawġ [see AL-RAḤBA], to whom he dedicated some panegyrics. However, the chronology of all these events is far from certain, and it is most unlikely that he could have praised the latter person (who died in 260/874), at least if he himself died in 192/808, which an allusion to his loss in the *Diwān* of Abū 'l-'Atāhiya (ed. Beirut 1964, 105, rhyme *-āta*, metre *sarī'*) seems to support.

The critics recognised that he handled with talent the various poetical genres, though at the same time criticising him for certain exaggerations on occasion. His eulogies and elegies remain within the Bedouin tradition, but several poems in which he hymns a *djāriya* called Durra have a more modernist form; it was because these were set to music that Bakr b. al-Natṭāh merited a notice in the *Aghānī*. Out of his total poetic production, which ran to a hundred or so leaves (*Fihrist*, 232), Aḥmad b. Abī Ṭāhir Tayfūr made a selection (*Ikh'yār shi'r Bakr b. al-Natṭāh*) which Yākut cites (*Udabā'*, iii, 92).

(CH. PELLAT)

**AL-BAKRĪ**, MUḤAMMAD TAWFIK B. 'ALĪ B. MUḤAMMAD, Egyptian religious dignitary. He was born in Cairo on 27 Dġumādā II 1287/24 August 1870, and was appointed *naġīb al-aṣhrāf* [q.v.], *shaykh mashāyikh al-turuk al-šūfiyya* (head of the *ṭarīkas* [q.v.]), and head of al-Bakriyya [q.v.] in January 1892 in succession to his deceased brother 'Abd al-Bākī, obtaining life-membership of the *mađlis shūrā al-kawānīn* (Legislative Council) and of the *dġam'iyya al-'umūmiyya* (General Assembly) in that very same year. During the period in which he held the office of *shaykh mashāyikh al-turuk al-šūfiyya*, various regulations for the *šūfi* orders in Egypt were introduced. These regulations, which were in force until 1976, allowed him to re-establish the authority over the orders to which the head of al-Bakriyya had been legally entitled since 1812, and

which had declined dramatically under his predecessor 'Abd al-Bakrī.

As *naḳīb al-ashraf*, he was forced to abdicate in January 1895 by the Khedive 'Abbās Ḥilmī, who must have aimed at curbing al-Bakrī's aspirations to political significance, as was suggested by Māhir Ḥasan Fahmī (92 ff.; see bibliography). Following this event, relations between al-Bakrī and the Khedive grew progressively worse when the latter sought to mobilise Ottoman support in his attempts to assert his position over Lord Cromer, the British proconsul. This was totally unacceptable to al-Bakrī, since it ran counter to the unadulterated Egyptian nationalism which he advocated. In consequence, he showed himself to be aggressively antagonistic to 'Abbās Ḥilmī's policy, to a degree which brought him close to being faced with legal prosecution for *lèse-majesté* (cf. Aḥmad Shafīk, *Mudhakkirātī fī nisf kam*, Cairo 1936, ii/1, 248 f.; Muḥammad Ḥusayn, *al-Ittidjāhāt al-waṭaniyya fī 'l-adab al-mu'āsir*, Cairo 1954, i, 94). When the Khedive changed his policy and turned to the Egyptian nationalists in his effort to achieve freedom from British tutelage, relations improved considerably, and in early 1903 Muḥammad Tawfīk was again installed as *naḳīb al-ashraf*, in succession to 'Alī al-Biblawī [q.v.], who had been appointed *shaykh* of al-Azhar. Concomitant to and as the result of this *rap-prochement* between the Khedive 'Abbās Ḥilmī and Muḥammad Tawfīk, the latter became gradually more implicated in the Khedive's policy, notably in his efforts aimed at the deposition of the *muftī* of Egypt, Muḥammad 'Abduh, who was a protégé of Cromer's, when the Khedive called upon him for mediation on various occasions (cf. Shafīk, *Mudhakkirātī*, ii/1, 348, ii/2, 34 ff., 95 f.; Fahmī, 103 ff.). On the political scene he manifested himself, moreover, as an advocate of parliamentary government, for which he campaigned in the Legislative Council as well as in the Press. He was committed to pan-Islamism, and was actively involved in the movement when he presided over the preliminary meetings for the foundation of the Universal Islamic Congress (*al-Mu'tamar al-Islāmī al-'Āmma*), proposed by Ismā'īl Gasprinsky [q.v.], held in the palace of the Bakrīs in Cairo at the end of 1907. From the latter year onwards, relations between al-Bakrī and the Khedive again become strained when Eldon Gorst, who had succeeded Cromer to the proconsulate at the beginning of that year, managed to win 'Abbās Ḥilmī away from the nationalists and obtained his support for British policies. This caused the relationship between al-Bakrī and the Khedive to deteriorate into one of the mutual distrust and hostility, which must have contributed to the severe paranoia which forced al-Bakrī to abdicate at the end of 1911. In 1912, he left Egypt for Beirut, where he was confined to a mental hospital until early 1928 when he returned. He died in Cairo in August 1932.

In addition to Muḥammad Tawfīk al-Bakrī's significance for the *Sūfī* orders in Egypt, which have been under the lasting impact of an administration which was at least partially designed by him and which was instituted under his auspices, he is also notable for his literary activities. He founded a short-lived predecessor of the Academy of the Arabic Language, he compiled an anthology of *radjaz* poetry (*Arādīj al-'Arab* Cairo 1313/1895-6)—about which it was rumoured that it had not been compiled by him at all but by Aḥmad b. Āmin al-Shinkīrī (cf. *al-Muḳātaf*, xix (Cairo 1895),

930 ff.; xx, 44 ff.)—and he published a selection from the works of eight poets from the 'Abbāsīd period (*Fuḥūl al-balāgha*, Cairo 1313/1895-6), in addition to a collection of poems and *makāmas* in the style of al-Ḥarīrī written by himself (*Ṣahārīj al-lu'lu'*, Cairo 1907). A selection from this work was published by 'Uthmān Shākīr under the title *al-Lu'lu' fī 'l-adab*, Cairo 1927). As a poet, he is considered as one of the last representatives of the classical tradition.

*Bibliography*: The most extensive biography is Māhir Ḥasan Fahmī, *Muḥammad Tawfīk al-Bakrī*, Cairo 1967, referred to in the article. It contains amongst others a lengthy discussion of his publishing activities and of his literary output, and gives further references. An autobiography is to be found in his *Bayt al-Siddīk*, Cairo 1323/1905, 11 ff. For a discussion of the nature of his authority over the *Sūfī* orders in Egypt, and of the impact of the regulations introduced under his auspices and of his political activities, see F. de Jong, *Al-Mashāyikh al-Bakrīyya and the transformation of their authority in 19th century Egypt*, in A. Dietrich (ed.), *Akten des vii. Kongresses für Arabistik und Islamwissenschaft*, Göttingen 1976, 224 ff.; and idem, *Turuq and turuq-linked institutions in 19th century Egypt*, Leiden 1978, ch. v, where additional references may be found.

**BALANCE** [see MINTAKAT AL-BURŪJ; MĪZAN].

AL-BALATĪ, ABU 'L-FATH 'UTHMĀN b. 'ISA b. MAṢŪR b. MUḤAMMAD, TĀDĪ AL-DĪN, grammarian, poet and *adīb*, originally from the town of Balad on the Tigris, which also had the name of Balat (see Yāqūt, i, 721), whence his *nisba* of al-Balatī, sometimes given in the diminutive form of al-Bulayṭī. Abu 'l-Fath went first of all to teach in Syria, and then, when Saladin assumed power in Egypt (567/1171), he migrated to Cairo where the new sultan allotted to him a fixed stipend and appointed him to teach grammar and the *Kur'ān* in one of the mosques of the town. He remained there till his death on 19 Ṣafar 599/7 November 1202; his corpse was not discovered till three days after his death because the people of Cairo were preoccupied by the famine then raging and were unconcerned with each other.

Thanks to 'Imād al-Dīn al-Iṣfahānī (519-97/1125-1201 [q.v.], who knew him personally, and to a *sharīf* called Abū Dja'far al-Idrīsī (apparently not to be confused with the famous geographer) who had been his pupil and who was in contact with Yāqūt (d. 626/1129), we possess a very detailed physical description of this scholar and information on his habits. He was tall, corpulent, with a lofty forehead, a long beard and a ruddy complexion; he was very susceptible to cold, always wrapped himself up, took a thousand precautions when he went to the *ḥammām* and hardly went outside in winter. He had the reputation of being extremely learned in all the literary fields, but his personal conduct left something to be desired; he apparently sought the company of dissolute persons and sometimes got drunk.

The examples which have been preserved from his poetry show that it was of traditional type, and some poems show a special aptitude for verbal pyrotechnics in the vein of his time (all through one *kaṣīda*, a differing word in each verse which could be read equally well in the three grammatical cases; a rhyme in *-ūnū* which exhausts the lexicon's possibilities; a schema *maf'ala* arbitrarily constructed; etc.). Nevertheless, he also wrote a long poem in

praise of al-Kādī al-Fāḍil [q.v.], in which Saladin's secretary is placed above al-Djāhiz, Ibn 'Abbād and Ibn al-'Amīd, as well as a *muwashshaha* whose *khawḍja* is not however in accordance with the rules, since it is in literary Arabic.

Al-Balaṭī is, in addition to his poetry, the author of various works: a *Kitāb al-'Arūd al-kabīr*, a *K. al-'Arūd al-ṣaghīr*, a *K. al-'Izāt al-mūkizāt*, a *K. al-Nayyir*, a *K. Akhbār al-Mutanabbī*, a *K. al-Mustazād 'ala 'l-mustadjād min fa'alat al-aḍwād*, a *K. 'Ilm ashkāl al-khatt*, a *K. al-Tashīf wa 'l-tahīrīf* and a *K. Ta'til al-'ibādāt*.

*Bibliography*: Yāqūt, *Udabā'*, xii, 141-67; idem, *Buldān*, i, 721, ii, 735; 'Imād al-Dīn, *Kharīdat al-kaṣr*, *Kism shu'arā'* al-Shām, ii, 383; Kutubī, *Fawā'id*, ii, no. 279; Ibn Ḥadjar, *Lisān al-Mizān*, iv, 150-1; Suyūṭī, *Bughya*, 323-4; Hāǧǧī Khalīfa, ed. Istanbul, *passim*; Brockelmann, S I, 530; Bustānī, *DM*, V, 24-5; M.Z. Enani, *Le muwaššah en Orient*, Sorbonne thesis 1973 (unpublished), 90-1.

(CH. PELLAT)

**BALBAN**, GHYĀTH AL-DĪN ULUGH KHĀN, the most prominent of the slave Sultans of Dihlī, was originally a Turkish slave of the Ilbarī clan. A member of the famous corps of Forty Slaves or *Čihilgānī* raised by Sulṭān Ilutmīsh, Balban rose, by dint of sheer merit and ability, to be the minister and deputy (*nā'ib-i-mamlakat*) of the ascetic king Naṣīr al-Dīn Maḥmūd Shāh (644-64/1246-65), to whom he had given his daughter in marriage. As *de facto* ruler during Maḥmūd's reign, he checked the forces of disintegration and infused vigour into the administration. The experience which he earned during his deputyship stood him in good stead when he inaugurated his own reign in 664/1266 as Ghīyāth al-Dīn Balban, following the death of the childless Maḥmūd. Many and varied were the problems which beset Balban as he set to administer the country ruined by internal anarchy and threatened with foreign invasion. The treacherous manoeuvrings of the Turkish nobility, the growing intensity of the Hindu resistance and the mounting menace of the Mongol inroads, combined to create a situation which called for realistic approach, coupled with a will to take bold action.

As a typical oriental monarch, he advocated the theory of the divine right of the king and rigidly insisted on the observance of court ceremonial. For refractory nobles, he thought the assassin's dagger or poison to be the only remedy and he got rid of most of them by a liberal use of both. With firm determination and concentrated drive, he brought the Mewati insurgents to their knees and suppressed the uprising of the Hindus of the Dōāb. For repelling the Mongol marauders, he put his able and trusted son Muḥammad Khān in command of an elaborate defence arrangement along the north-western frontiers, and as a result, the advance of the Mongols was effectively halted. At home, the army was reorganised, an efficient espionage system perfected and art and literature liberally patronised. The celebrated Amīr Khusrāw [q.v.] was one of the literary luminaries of his court. As a result of this vigorous administration, perfect peace and prosperity prevailed over his kingdom, except for an insurrection in distant Bengal. After persistent flouting of the king's will by the governor of that province, Toḡhrīl Khān, Balban had to take personal charge of a strong military expedition which resulted in the rebellious governor being caught and slain. His adherents were taken by the Sulṭān to Lakhnawī [q.v.] where they were publicly punished by impalement. This

exemplary chastisement was also intended to be served as a stern warning to his son Bughrā Khān, whom he appointed governor of Bengal before returning to Dihlī.

Balban's beloved son Prince Muḥammad, whom he had designated his heir, was killed early in 685/1286 in a fierce engagement with the Mongols. This bereavement eventually brought about his own death a year later in 686/1287; this sounded the death-knell of the Slave-King dynasty, for the Khaldjīs took over the reins of the Dihlī sultanate only three years later.

(ABDUS SUBHAN)

**SĪDĪ BALLĀ**, ABŪ MUḤAMMAD 'ABD ALLĀH IBN 'AZZŪZ AL-KURASHĪ AL-SHĀDHLĪ AL-MARRĀKUSHĪ, a cobbler of Marrakesh to whom thaumaturgic gifts were attributed and who died in an odour of sanctity in 1204/1789. His tomb, situated in his own residence at Bāb Aylān, has been continuously visited because of its reputation of curing the sick. Although he had not received a very advanced education, Ibn 'Azzūz nevertheless succeeded in leaving behind an abundant body of works, dealing mainly with mysticism and the occult sciences, but also with medicine. However, his works display hardly any originality, and none of them has interested a publisher despite the success in Morocco of his *Dhahāb al-kusuf wa-naḥy al-zulumāt fī 'ilm al-tibb wa 'l-tabā'ī' wa 'l-hikma*, a popular collection of therapeutic formulae (see L. Leclerc, *La chirurgie d'Abulcasis*, Paris 1861, ii, 307-8; H.P.J. Renaud, in *Initiation au Maroc*, Paris 1945, 183-4); his *Kashf al-rumūz* concerning medicinal plants is equally well-known. Out of his three works on mysticism, the *Tanbīh al-tilmīdh al-muḥtāǧ* is perhaps the most original since it endeavours to reconcile the *sharī'a* with the *ḥakīka* [q.v.]. Finally, in the field of the occult sciences, his *Lubāb al-hikma fī 'ilm al-hurūf wa-'ilm al-asmā' al-ilāhīyya*, of which at least one manuscript survives, is a treatise on practical magic and divinatory magic.

*Bibliography*: On the manuscripts of Sīdī Ballā's works, see Brockelmann, S II, 704, 713; M. Lakhdar, *Vie littéraire*, 253-6; see also Ibn Sūda, *Dalīl Mu'arrikh al-Maghrib al-Akṣā*, Casablanca 1960, ii, 446, 449; 'A. Gannūn, *al-Nubūḡh al-Maghribī*<sup>2</sup>, Beirut 1961, i, 304-5, 310.

(Ed.)

**BALYŪNASH**, also **B.NYŪN.SH** (in Leo Africanus *Vignones*, in Marmol *Valdeviñones*), Portuguese Bulhões, Spanish Bullones, site of a once-important *karya* 8 km. W.N.W. of Ceuta, beneath Sierra Bullones (Djabal Mūsā). Its name is from the Spanish Romance *bunyólex* "vineyards", not Bū or Benī Yūnus/-ash, etc. Surrounded on land by mountains, Balyūnash lies in a small valley dropping sharply to a creek in a bay set in a narrow part

of the Straits of Gibraltar. Bérard thought it the home of the Homeric Galypso's cave. Its Roman precursor has been named as Exilissa.

In Islam the area's history may well have begun with Mūsā b. Nuṣayr [q.v.], who is said to have crossed to Algeiras in 93/712 from what became Marsā Mūsā, later within the orbit of Balyūnash. Lévi-Provençal (*Hist. Esp. mus.*, ii, 260) associates the emergence of Balyūnash proper with a palace built among gardens by Ibn Abī 'Amir (Almanzor) and protected by a fortress on the shore. In the 5th/11th century Balyūnash was certainly known to the geographer al-Bakrī as a large, fertile and populous place. Thereafter its importance grew with that of Ceuta. In 1342 it witnessed a battle between ships from a Marīnid-Naṣrid fleet and vessels from a Castilian fleet covering Alfonso XI as he besieged Algeiras. The heyday of Balyūnash—lauded as an Eden by poets from the 6th/12th century onwards—apparently came with the 8th/14th century. Details of its buildings, water resources, the range of its horticulture, arboriculture, etc. have been left by al-Anṣārī, a native of the area until 1415 when the Portuguese occupation of Ceuta brought about its desertion. In 1418 Balyūnash was briefly the estate of one João Pereira, a Portuguese courtier from Ceuta.

Mediaeval Ceuta, a relatively barren, isolated and arid peninsula, can be seen as the *raison d'être* of Balyūnash. A resort for princes and the rich, who had fortified villas there, the latter was certainly a rich source of fresh food and above all flowing water, which, in Marīnid times at least, must have been fed directly to Ceuta as indeed it is today. Ruins still to be seen there bear marks of Andalusian architectural and artistic influence.

(J.D. LATHAM)

**BĀNĪDJŪRĪDS** or ABŪ DĀWŪDĪDS, a minor dynasty, probably of Iranian but conceivably of Turkish origin, which ruled in Ṭukhārīstān and Badakhshān, sc. in what is now Afghan Turkestan, with a possible parallel branch in Khuttal, sc. in what is now the Tadjik SSR, during the later 3rd/9th and early 4th/10th centuries.

The genealogy and history of the Bānīdjūrīds are very imperfectly known, despite the attempts of J. Marquart, in his *Ērānshahr*, 300-2, and R. Vasmer, in his *Beiträge zur muhammedanischen Münzkunde. I. Die Münzen der Abū Dā'udiden*, in *Numismatische Zeitschr.*, N.F. xviii (1925), 49-62, to elucidate them through the sparse historical references and the meagre numismatic evidence. It seems that they sprang from one Bānīdjūr, a contemporary of the early 'Abbāsīd caliphs al-Manṣūr and al-Mahdī, who had connections with Farghāna, and his son Hāshīm (d. 243/857-8) was ruler of the mountain districts of Wakhs̄h and Halāward on the upper Oxus. But the first member of the family known with any certainty is Dāwūd b. al-'Abbās, who was

governor of Balkh from 233/847-8 onwards, being still there when the Ṣaffārīd Ya'qūb b. al-Layth captured the city temporarily in 258/872. Dāwūd fled to Samarkand in Sāmānīd territory (sc. to refuge with his suzerains ?) but returned to Balkh shortly afterwards and died there in 259/873 (Barthold, *Turkestan down to the Mongol invasion*<sup>3</sup>, 77-8). It was probably this Dāwūd (thus according to Vasmer, *op. cit.*, 50, *pace* Marquart), and not the Dāwūd b. Abī Dāwūd of the Khuttal local rulers (see below), who at one point in his career made a raid south of the Hindu Kush against the local ruler Fīrūz b. Kabk, who was probably from the family of Zunbīl of Zābulistān (Ibn Khurrādādhbih, 180; cf. Mas'ūdī, *Murūj*, viii, 42, 127-8).

Dāwūd b. al-'Abbās's kinsman (? nephew) Abū Dāwūd Muḥammad b. Ahmad ruled in Balkh from 260/874 onwards, after having already controlled Andarāba and Pandjīr in Badakhshān, the latter place important for its silver mines; during the years 259-61/873-5 Ya'qūb b. al-Layth took over Pandjīr and minted coins there, but in 261/875 Abū Dāwūd Muḥammad was once more able to issue his own coins from there (Vasmer, *Über die Münzen der Ṣaffārīden und ihrer Gegner in Fārs und Hurāsān*, in *Num. Zeitschr.*, N.F. xxiii (1930), 133-4). If the information of the local historian of Bukhārā Narshakhī is correct, Abū Dāwūd Muḥammad was still ruling in Balkh in 285/898 or 286/899, when 'Amr b. al-Layth summoned him, together with the Farīghunīd amīr of Gūzgān and the Sāmānīd Ismā'īl b. Ahmad, to obedience (*Tārīkh-i Bukhārā*, tr. Frye, *The history of Bukhara*, 87, cf. Vasmer, *Beiträge*, 54-5).

A parallel line of governors ruled north of the Oxus in Khuttal at this time [see KHUTTALĀN], and Ibn Khurrādādhbih, *loc. cit.*, describes the ruler of Khuttal in ca. 272/885-6, al-Hārīth b. Asad, as the kinsman of Dāwūd b. al-'Abbās, governor of Balkh; on the evidence of certain extant coins of his, he was still ruling in 293/906-7. Nevertheless, Vasmer thought that the appellation of al-Hārīth b. Asad's line to the main stock of the Bānīdjūrīds was dubious. These Khuttal princelings minted coins in the early 4th/10th century, and the rebellious governor of Khurāsān Abū 'Alī Āghānī in 336/947 received help from the amīr Ahmad b. Dja'far, whom Vasmer, however, attached to the direct offspring of Abū Dāwūd Muḥammad b. Ahmad (*Beiträge*, 59 ff.), cf. Gardīzi, *Ẓayn al-akhbār*, ed. Nāzīm, 36, ed. 'Abd al-Hayy Ḥabībī, 157, and Barthold, *Turkestan*<sup>3</sup>, 248. We do not know how long the power of these putative Bānīdjūrīds in Khuttal lasted, although there was certainly a line of local rulers in Khuttal during the early Ghaznavīd period, and a sister of Maḥmūd of Ghazna, the Hurra-yi Khuttalī of Bayhaḳī, was possibly married to one of these rulers, cf. Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, 138, 237, and idem, *The later Ghaznavids, splendour and decay. The dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977, 148.

*Bibliography:* Given in the article. Vasmer, *Beiträge*, 53, has a conjectural genealogical table, followed by Zambaur in his *Manuel*, 202, 204.

(C.E. BOSWORTH)

**BARBER** [see ČELEBI; HALLĀK, in Suppl.].

**BARDALLA, ABŪ 'ABD ALLĀH MUḤAMMAD** AL-'ARABĪ B. AḤMAD AL-ANDALUSĪ, prominent Moroccan *kādī* in the reign of Mawlay Ismā'īl [q.v.]. Born in Fās on 2 Djumādā II 1042/15 December 1632, he died there on 15 Radjāb 1133/12 May 1721

and was interred outside Bāb Gīsa (al-Djīsa) on the left, or Ḳarawiyīn, bank of the Wādī Fās.

Mainly because of its non-Arabic origin, "Bardalla" is vocalised differently in the Arabic sources, and, in some, one encounters corrupt forms such as Bin Dalla. Understandably, we find inconsistencies in European spellings (Bordola, Bordala, Berdella, etc.). This last form most nearly represents the pronunciation of the family name as found in 20th century Fās, and it closely accords with the only two forms which—on the basis of scrutiny of manuscripts and inquiry from informed local sources—can be considered acceptable, viz. Bardalla, Burdalla. The Andalusian origin of Muḥammad al-'Arabī's family suggests that the etymology is to be sought in a Romance diminutive in *-ello* of an epithet corresponding to, say, the modern Casūlian *parido* "brown", "dusky". Such a name is quite probable (see FILĀHA, vol. iii, 901, col. 2, and cf. N.gh.rāl.h < Negrello, and on *-uh* > a (*tā' marbūta*), cf. also Ibn Sīda [q.v.] < Ibn Sīduh).

A respected jurist and teacher, Muḥammad al-'Arabī seems to have been a popular and influential religious leader. During the first half of the 17th century and the first half of the 18th, notably between 1088/1677 and 1118/1706-7, we see him, against the background of the mosque of al-Ḳarawiyīn [q.v.], serving in various religious capacities—*muftī*, superintendent of religious endowments (*nāzir al-awḳāf/ahbās*), *khātib* and *imām*, and, last but not least, *kādī* of Fās (*kādī 'l-djāmā'a*). In this last office his career was somewhat erratic because of dismissals and reinstatements by the sultan. Thus from 1088/December 1677, when he replaced one Muḥammad b. al-Ḥasan al-Madjdjāsī, he had at least five or six separate terms of office. His initial troubles seem to have stemmed from the attempts of al-Madjdjāsī to cling to office and his later ones from the effects of local politics and rivalries. In 1116/1704 he was denounced to Mawlāy Ismā'īl for performing the *ṣalāt* over his dead rebel son, Mawlāy Muḥammad al-'Ālim, but the sultan's wrath can have done him little harm, for we find him leading the Eclipse Prayer at al-Ḳarawiyīn in 1118/1706. A man of evident integrity, he is described in one source as "the last just *kādī* of Fez".

**Bibliography:** In addition to Lévi-Provençal, *Chorfa*, 306 (see references in n. 1), 309, 312, 403, see the new edition and English translation, by Norman Cigar, of al-Ḳādīrī's *Nashr al-mathānī* (= part I of a D. Phil. thesis, Oxford 1976 (details in *Bulletin of the British Society for Middle Eastern Studies*, 3 (1976), 43 f.)), i (tr.), 23 and n. 8, 26, 29, 30 f., 35, 46, 54 f.; ii, 94, etc.; Mawlāy Sulaymān, *K. 'Ināyat ūlī 'l-madjd bi-dhikr āl al-Fāsī b. al-Djadd*, Fās 1347, 27, 26, 40, etc.; al-Nāsīrī, *K. al-Istikṣā'*, vii, Casablanca 1957, 54, 91, 106, 107, 113; In Ibn Sūda, *Dalīl mu'arrikh al-Maghrib al-Akṣā* there are references to parts of two works preserved in the private library of Muḥammad b. Ahmad Bardalla in Fās, one dealing with the early 'Alawids, the other treating of the *ṣulahā'* of Fās, but they seem to be the work of Muḥammad al-'Arabī's son despite the index reference (*Dalīl*, Casablanca 1960, 1965, i, 42 (no. 69), 145 (no. 525), ii, 608 (index), cf. ii, 441 (no. 2034)). (J.D. LATHAM)

**BĀRHA SAYYIDS** (Bārha from the Hindī numeral *bārāh* "twelve"), the name applied from Akbar's reign onwards to those in possession of a certain group of twelve villages in the Dō'āb (Muẓaffarnagar district, U.P.).

After the establishment of the Īkhānid Mongol kingdom in Persia and Irāk in ca. 656/1258, many Sayyid families migrated to India and obtained grants of villages in the area extending from the Panḍjāb to Bihār. Some of them were endowed with qualities of leadership and not only exercised effective control over their own villages, but rallied the support of the neighbouring village leaders, generally Hindus. The authenticity of their claims to be Sayyids was always suspect, but their chivalry and heroic achievements made them indispensable to the Dihlī *sultāns*. The ancestor of the Bārha Sayyids, Abu 'l-Farah, left his original home in Wāsīt [q.v.], in Irāk, with his twelve sons at the end of the 7th/13th or in the 8th/14th century, and migrated to India, where he obtained four villages in Sirhind [q.v.]. By the 10th/16th century some of Abu 'l-Farah's descendants had taken over the Bārha villages in Muẓaffarnagar. In the reign of Akbar, the Bārha Sayyids occupied a place of distinction, and nine of them held *mansabs* [q.v.] ranging from 2,000 to 250, the total family *mansab* being 8,550, a very high position in the Mughal hierarchy. Naturally, with the Bārha villages as a nucleus, the Sayyids owned extensive *ḍjāgīrs* [q.v.] in the region. Their pride in their Indian birth greatly appealed to the local Hindu leaders, who helped them to raise the strong contingents they led in the Mughal imperial wars. Occupying a distinguished place in the vanguard, like many Rāḍjpūt warriors, they preferred to fight as footsoldiers.

By the reign of Awrangzib, although ostensibly they maintained their traditional loyalty, they were impelled by ambition to join in the scramble for political power. For example, Sayyid Ḥasan 'Alī (afterwards 'Abd Allāh Ḳuṭb al-Mulk) and his younger brother Husayn 'Alī, known as the Sayyid brothers, by helping Farrukh-Siyar [q.v.] succeed to the throne in 1124/1712, obtained for themselves the highest civil and military positions in the government of their puppet emperor. They abolished the *ḍjīzya* and tried to conciliate the Rāḍjpūts; but by giving too much administrative power to their favourite, Lāla Ratan Čand, a Vaishya, they dislocated the entire administrative machinery. Finally, in 9 *Djumādā* II 1131/29 April 1719, they deposed and strangled Farrukh-Siyar. They then raised four puppet rulers to the throne, one after the other. However, early in the reign of the fourth puppet emperor, Nāṣir al-Dīn Muḥammad Shāh [q.v.], they and their supporters were defeated by an opposition party under the leadership of Nizām al-Mulk [q.v.]. On 6 *Dhu* 'l-Hiḍjja 1132/9 October 1720, Ḥusayn 'Alī was assassinated, and, on 14 Muḥarram 1133/15 November 1720, 'Abd Allāh was defeated near Agra, taken captive and killed in his Dihlī prison on 1 Muḥarram 1135/12 October 1722.

The Bārha Sayyids were Shīrīs, and many Sunnī Sayyid families, such as that of Shāh Walī Allāh Dihlawī [q.v.], who lived in their neighbourhood, exerted themselves to ensure that the Bārha Sayyids did not recover their political power.

**BĀRİZ**, **DĪJĀBAL**, a mountainous and, in early Islamic times, apparently wooded region of the Kirmān province in Iran, described by the mediaeval historians and geographers as the haunt of predatory peoples like the Kūfīcīs or Kūfīs and the Balūc [see BALŪCISTĀN, KIRMĀN and KUFĪS]. It is the steep-sided granite chain running in a NW-SE direction from the mountain massif of central Kirmān (sc. the massif which culminates in such peaks as the Kūh-i Hazār and the Kūh-i Lālazār), to the south of the towns of Bam [q.v.] and Fāhrādj; the geographers count it as amongst the *gamṣīrāt* or warm regions [see KĪSILĀK] of Kirmān province. The *Djābal Bārīz* rises to 12,450 feet, and the *Hudūd al-ʿālam* states that it possessed mines of lead, copper and lodestone.

The actual name appears variously in the sources as Bārīz, Bārīdjān, etc., the modern form being Kūh-i Bārīcī, and appears to be old. Herodotus mentions Περσικόντοί who paid tribute to Darius and supplied infantry for Xerxes' army (cf. Marquart, *Ērānsahr*, 31), and Ṭabarī, i, 894, says that Khusraw Anūshīrīwān re-established Sāsānid control over the people of al-Bārīz after the anarchy of Kūbādh's last years. Until the early 'Abbāsīd period, the *Djābal Bārīz* remained a stronghold of Zoroastrianism. The Kūfīcīs or "mountaineers" of the region resisted the attempts of Ya'kūb b. Layṭh to assert Ṣaffārīd control over Kirmān, and it was probably only after this time (sc. the later 3rd/9th century) that Islam began to penetrate there. The geographers of the following century describe the people of the mountain as savage robbers and brigands, whom the punitive expeditions of Ya'kūb b. Layṭh, the Būyīds Mu'izz al-Dawla and 'Aḍud al-Dawla, and the Saljūq Kāwurd b. Čaghri Beg quelled only temporarily (see C.E. Bosworth, *The Kūfīcīs or Qufīs in Persian history, in Iran. Jnal. of the British Institute of Persian Studies*, xiv (1976), 9-17). Only two villages, Kaftar and Dihak, are mentioned as market centres for the mountain. The *Djābal Bārīz* long remained an inaccessible place, and Sir Percy Sykes describes it as still being a haunt of thieves when he was British Consul in Kirmān (*A fifth journey in Persia*, in *Geogr. Jnal.*, xxviii (1906), 433).

**Bibliography:** In addition to the references given in the article, see Muḥammad b. Ibrāhīm, *Tārīkh-i Saldjūqīyān-i Kirmān*, ed. M. Bastānī-Pārīzī, Tehran 1964, 6, n. 1; *Hudūd al-ʿālam*, tr. Gabriel, *Die Erforschung Persiens*, Vienna 1952. (C.E. BOSWORTH)

**AL-BARKĪ**, *nisba* of a Shīrī family of which one member, Abū *Dja'far* AHMAD b. MUḤAMMAD b. KHĀLĪD b. 'Abd al-Rahmān b. Muḥammad b. 'Alī, enjoys a considerable renown in Imāmī circles. When the ancestor of the family, Muḥammad b. 'Alī, was imprisoned and put to death by Yūsuf b. 'Umar al-Thakafī (governor of 'Irāk from 120/738 to 126/744 [q.v.]) following the suppression of the revolt of Zayd b. 'Alī (122/740 [q.v.]), his son 'Abd al-Rahmān escaped and established himself at Barqa, in the region of Kumm, whence the ethnic name al-Barkī, to which there is sometimes added, for the purpose of avoiding confusion, the name al-Kummī (Yākūt, *Buldān*, i, 572, s.v. "Barqa", gives the *nisba* precisely, but in the Egyptian edition of his *Mu'djam al-udabā'*, iv, 132, al-Barkī becomes al-Raḳḳī). 'Abd al-Rahmān b. Muḥammad was accompanied by his

son Khālid, who was still a child; the son of this last, Abū 'Abd Allāh Muḥammad (correcting Yākūt, *Udabā'*, loc. cit.), would appear to be the first member of this family to participate in the transmission of Shīrī tradition. A supporter of 'Alī al-Riḍā (d. 203/818 [q.v.]) and of his son Muḥammad al-Djāwād (d. 219/834) whom he certainly visited, he was the author, (if we are to believe Ibn al-Nadīm, *Fihrist*, Cairo ed. 309-10; cf. al-Tūsī, *Fihrist*, 153) of a number of works, sc. the *Kitāb al-'Awāṣ*, *K. al-Tabṣira*, *K. al-Riḍā'āl* (on transmitters of traditions ascribed to 'Alī b. Abī Ṭālib) and the *K. al-Mahāsīn*, which poses an interesting problem of composition and attribution. If we are to judge by the details supplied by Ibn al-Nadīm this *K. al-Mahāsīn* would be a collection of "books" (*kutub*), that is, of chapters constituting a sort of encyclopaedia of knowledge which a good Shīrī would be obliged to possess in order to conform to tradition: Kur'ān, history, geography, ethics, divination from dreams, etc. However, Ibn al-Nadīm, who probably did not have the opportunity to examine all these *kutub*, numbers about eighty of them and adds that the son of Muḥammad, Abū *Dja'far* Ahmad, composed three works of his own: the *K. al-Ihtidāj* (a subject already dealt with by the preceding), *K. al-Safar* and *K. al-Buldān*, "more developed than that of his father."

Now the author of the *Fihrist* is, curiously, the only one to attribute a first version of the *K. al-Mahāsīn* to Muḥammad b. Khālid. Yākūt totally ignores this individual, whom he mentions neither in the *Mu'djam al-buldān*, nor in the section of the *Mu'djam al-udabā'* (iv, 132-6) devoted exclusively to Ahmad b. Muḥammad and probably incomplete; basing himself, without admitting it, on the *Fihrist* of al-Tūsī (20-2), he lists a total of ninety-six titles, not specifying that they constitute the *K. al-Mahāsīn* mentioned above, but giving the impression all the same that the number of these *kutub* is variable and asserting that he has personal knowledge of those that he enumerates; he judges this Barkī "worthy of credence, reliable" (*thīka*), although he reproaches him for relying on feeble transmitters (*du'afā'*) and for taking as a basis *hadīths* transmitted directly by representatives of the second generation (*marāsīl*).

The same reproach is directed at him—and in the same terms—by Shīrī writers who describe how he was temporarily expelled from Kumm because of the defects of his methods; these authors ignore too the father of Ahmad; they declare that this last was very wise and learned, composed verse and had many disciples (although the ones that they mention by name mostly belong to a later period); they make him an associate of Muḥammad al-Djāwād (which would seem hard to accept) or of 'Alī al-Hādī (d. 254/868) and a contemporary of al-Mu'tasim (218-27/833-42); they make no mention of his successors; and they suggest that he died in 274/887-8 or in 280/893-4.

The articles which the Shīrī *najāhiyyūn* devote to him are conveniently reproduced by Muḥsin al-Amīn al-ʿAmilī in his *Aṣyān al-Shī'a* (ix, 266) and most completely by al-Sayyid Muḥammad Ṣādiq Baḥr al-'Ulūm, who was responsible for the second edition of the *Kitāb al-Mahāsīn* (Nadjaf 1384/1964, two volumes bound in one; the first edition, by *Djālāl al-Dīn al-Husaynī*, Tehran 1370 (?) remained inaccessible to the author of the present article).

It must in fact be said that this celebrated *K. al-Mahāsīn*, which appears to have enjoyed great influence over a long period, has not survived in an

integral form, although it has not totally disappeared, and eleven of its "books" have been preserved: (1) *al-Aṣḥkāl wa 'l-ḥarā'in* (11 *bābs*); (2) *Thāwab al-a'māl* (123 *bābs*); (3) *Ikāb al-a'māl* (70 *bābs*); (4) *al-Safwa wa 'l-nūr wa 'l-raḥma* (47 *bābs*); (5) *Maṣābiḥ al-zulam* (49 *bābs*); (6) *al-'Ial* (1 *bab*); (7) *al-Safar* (39 *bābs*); (8) *al-Ma'ākil* (136 *bābs*); (9) *al-Mā'* (20 *bābs*); (10) *al-Manāfi'* (6 *bābs*); (11) *al-Marāfiḥ* (16 *bābs*). These titles almost all appear, in the same form, in the ancient lists, where there is also reference to *kitābs* derived from *bābs* in the published chapters. So we possess one-sixth or one-seventh of the original work, which is essentially a collection of *hadīths* attributed to the Prophet and to the *Ahl al-Bayt*, in particular to al-Ḥusayn b. 'Alī b. Abī Ṭālib, simply classified and reproduced without any interference on the part of the compiler. To judge by what has survived, the collection constituted a sort of *muṣannaf* of a particular type grouping together all the traditional elements that the Imāmī considered to be essential, both in matters relating to the faith and in questions of everyday life. All the same, a certain lack of order dominates the classification of traditions, so for example we find *hadīths* concerning bread in the chapter devoted to water (no. 9), whereas we would expect to find them in the preceding chapter (*al-Ma'ākil*), which is extensive and contains references to a long list of foodstuffs. The titles enumerated in the lists give the impression that the author did not neglect literary formation, poetry and other cultural fields, which makes the more regrettable the loss of so many chapters, no doubt considered less indispensable by posterity. It is probable that the *kitābs* formed independent fascicules, which would explain both how they could be so easily lost and why authors cannot agree either on their number or their order.

A comparison between Ibn al-Nadīm's list and all the others might perhaps allow an insight into the respective roles of the father and of the son in the compilation of the *Kitāb al-Mahāsin*, but this would be a hazardous enterprise and ultimately of doubtful benefit. In other respects, the presentation of these lists is such that it is impossible to see clearly whether Muḥammad or his son wrote works that were not included in the composition of the *K. al-Mahāsin*; it is however possible that one or the other left biographies of *riqā'il*, and al-Mas'ūdī (*Murūdj*, i, 12 = § 8) mentions among the sources, attributing it to Ahmad, a *Kitāb al-Tabyān* which no doubt had a historical or a hiero-historical character.

(CH. PELLAT)

**BARŞAWMĀ** AL-ZĀMIR, IŞĦĀK, famous flute player in early 'Abbāsīd times, died after 188/804. He was a dark-coloured *muwallad* of humble origin, son of a "Nabataean" woman from Kūfa. Ibrāhīm al-Mawṣilī brought him to Baghdād, gave him an education in "Arab music" (*al-ghinā'* *al-arabī*) and introduced him to Hārūn al-Rašīd. He accompanied

the singers in the concerts at court, belonging first to the second class (*tabaqa*) of court musicians, and later on was promoted by the caliph to the first class. Işḥāk al-Mawṣilī knew "nobody being more competent in their profession than four persons: al-Aṣma'ī as an expert in poetry, al-Kisā'ī in grammar, Manşūr Zalzal as a lute player and Barşawmā as a flautist".

(E. NEUBAUER)

**BASBĀS** is the fennel (*Foeniculum vulgare*), belonging to the family of umbellal plants. The term *bisbās*, used in the Maghrib for fennel, indicates in the Eastern countries the red seed-shell of the nutmeg (*Myristica fragrans*), known as Macis, while the term *basbāsa*, not to be confused with the two other terms, indicates only nutmeg in the entire Arab world. The most often used synonym of *basbās* is *rāzīyānaǧ*, borrowed from the Persian. The complete nomenclature, also taken from other oriental languages, has been brought together by I. Löw, *Die Flora der Juden*, iii, 460-5. The Greek term μάραθ(ρον) is found as *mārathūn* (and variants) in the Arabic medical inventories. Like in Dioscorides, this term indicates the garden fennel (*basbās bustānī*), *Anethum foeniculum*, while *ιππομάραθον* (*ibbūmārathūn*, and variants, strictly speaking "horse fennel"), which is mostly mentioned in connection with the garden fennel, apparently stands for the wild fennel. The term *basbās ḡabalī*, likewise used for the latter, is confusing, for the "mountain fennel" (Seseli) does not belong to the genus *Foeniculum*. Other kinds mentioned cannot as yet be determined.

The volatile oil extracted from the fruits of the fennel has a strongly fragrant scent and a bitter, camphor-like smell. It loosens phlegm and was, in the form of fennel-tea or fennel-honey, used, as it is now, against coughs and flatulence. A decoction of the flower stalk was considered to be a diuretic and to further menstruation; mixed with wine it was used as a medicament against snake bites, while the pressed juice is praised as an ophthalmic remedy. The leaves and fruits were added to food as a spice. Aṣma'ī counts them among the precious spices (*Nabāt*, ed. Ḡhunaym, Cairo 1392/1972, 13 ff.). Abū Ḥanīfa al-Dīnawarī praises their aroma, remarks that the plant thrives on wild soil and proves both observations with verses (*Nabāt. The Book of Plants*, ed. B. Lewin, 59 f.). Fennel has been used as spice from Old Egyptian times until today. Ibn al-'Awwām consecrates a special chapter to the cultivation of the fennel (*Kitāb al-Filāḥa*, tr. Clément-Mullet, ii, Paris 1866, 250 f.). Curious is the assertion of Nuwayrī (*Nihāya*, xi, 82), that vipers and snakes, when leaving their holes in spring, rub their eyes at the fennel shrub in order to be able to see again; the same is mentioned repeatedly by Kazwīnī (see Wiedemann, *Aufsätze zur arab. Wissenschaftsgeschichte*, ii, 336, 386).

**BASHKARD**, **BASHĀKARD**, Europeanised form **BASHKARDIA**, a region of south-eastern Iran, falling administratively today within the 8th *ustān* or province of Kirmān and in the *shāhrastān* or district of Djīruft, of which it comprises one of the nine constituent rural areas (*dihistānhā*), see *Farhang-i dūghrāfiyā-yi Irān*, viii, Tehran 1332/1953, 49. It is the mountainous hinterland of western Makrān, lying to the east of Mīnāb near the Straits of Hormuz and bounded on the north by the southern fringes of the Djāz-Muryān depression; the peaks of the Māriz range within it rise to just over 7,000 feet. The whole region has been, and still is, extremely remote and inaccessible, and only in recent decades has a measure of control from Tehran been extended over a people formerly much given to raiding and brigandage. The main settlement is at Angohrān, but the population is everywhere sparse; the *Admiralty handbook, Persia*, London 1945, mentions 100 reeds huts at Angohrān, and a total population for Bashkardia of an estimated 8,000 families; the *Farhang, loc. cit.*, mentions 108 settlements (*ābādī*), with a population of ca. 6,700.

The people of Bashkardia are ethnically Iranian and Shī'ī in *madhhab*; at least until very recently, the social structure there included a slave element, both negroid and native Iranian. It was first speculated by Tomaschek that the modern Bashkardīs could be the descendants of the mediaeval Islamic Kūfīčīs or Kuḡḡ, the predatory people of Kirmān and Makrān provinces often linked in the sources with the Balūč [see BALŪ-CISTĀN and KUḡḡ]; for a discussion of this, see C.E. Bosworth, *The Kūfīchīs or Kuḡḡ in Persian history, in Iran. Jnl. of the British Institute of Persian Studies*, xiv (1976), 9 ff. The actual name Bashkard (Bashākard is a form apparently exhibiting a pseudo-Arabic broken plural) is unattested till the mid-19th century, when the first Europeans, Col. E. Mockler and E.A. Floyer, visited the region; Dr. I. Gershevitch, who stayed in Bashkardia for some months in 1956, has nevertheless suggested that the name might derive from the dominant Persian tribe, to which the Achaemenids themselves belonged, of the Pasargadae, located by Ptolemy in Carmania (= Kirmān). The Bashkardi language is very aberrant from New Persian, and exists in two forms, a northern and a southern group of dialects. It contains certain old Iranian words not surviving elsewhere, e.g. the hardwood

*djag* or *djakh*, identifiable with the O. Pers. *yakā*-wood used in the construction of Darius's palace at Susa, see Gershevitch, *Sissoo at Susa (O. Pers. yakā = Dalbergia Sissoo Roxb.)*, in *BSOAS*, xix (1957), 317-20, xx (1958), 174.

*Bibliography*: The main items in the exiguous bibliography of Bashkardia are given by Bosworth in *art. cit.*, 11, n. 13; of special note are the works of Floyer and A. Gabriel, and most recently, of Gershevitch, *Travels in Bashkardia*, in *Jnl. of the Royal Central Asian Society*, xlvii (1959), 213-24, and F. Balsan, *Étrange Baloutchistan*, Paris 1969; Linguistic material was collected by Gershevitch, but has not yet been published in  *toto*; for sections of it so far accessible in print, see Bosworth, *art. cit.*, 13, n. 20.

(C.E. BOSWORTH)

**BASHKUT**, **DJEWĀD FEHMĪ**, modern Turkish Cevat Fehmī Baḡkut, Turkish playwright and journalist (1905-71). He was born in Edirne and educated at an Istanbul high school, choosing journalism as his career when he was still a very young man. He began to write plays in the early 1940s and became very popular. Of his 23 plays, most of which were performed in the city theatre (*Şehir tiyatrosu*) of Istanbul, the best known are *Küçük şehir* ("Little town") 1946; *Paydos* ("Break") 1949; *Harput'ta bir Amerikalı* ("An American in Harput") 1956; and *Buzlar çözülmeyen* ("Before the thaw") 1964. His plays are sentimental and unsophisticated renderings of human dramas and comic situations, with an edifying approach. He writes in an easy style at times tending to be somewhat literary and pedantic.

(FAHİR İZ)

**BASQUES** [see **BASHKUNISH**].

**BATRIYYA** or **BUTRIYYA**, the pejorative designation for a group of moderate Shī'īs in the time of Muḡammad al-Bāḡir (d. 117/735) and for the moderate wing of the early Zaydiyya [q.v.] who did not repudiate the caliphates of Abū Bakr and 'Umar. Their position was opposed to the more radical Shī'ī stand of the Djārūdiyya [q.v.], who considered 'Alī the only legitimate immediate successor of the Prophet. The name is most often derived in the sources from the nickname *al-Abtar* of Kathīr al-Nawwā' and explained as referring to their "mutilating" (*batr*), either of the legitimate rights of the family of the Prophet, or of the recitation of the *bas-mala* in the prayer which they performed only with a subdued voice, or of the caliphate of 'Uṡmān, which they repudiated for the last six years of his reign. The first of these explanations is clearly the most plausible one and points to an origin of the name in internal Shī'ī controversy.

Imāmī sources name the Kūfāns Kathīr al-Nawwā', Sālim b. Abī Haḡḡa (d. 137/754-5), al-Ḥakam b. 'Uṡayba (d. 112/730 or 115/733), Salama b. Kuhayl (d. 122/740), and Abū 'l-Miḡdād Ṥhābit al-Ḥaddād as the chiefs of the Batriyya in the time of Muḡammad al-Bāḡir, and describe them as not recognising his full rank as *imām* and sole authority in religion and as criticising him for ambiguities in his teaching. 'Umar b. Riyāh, who at first recognised the imāmate of al-Bāḡir, later also renounced him and joined the Batriyya after he had found al-Bāḡir contradicting a previous statement and proffering *takīyya* as an excuse.

Though only a few of the leaders of the Batriyya are expressly mentioned as participants in the rising of Zayd b. 'Alī in 122/740, it may be assumed that the early Batriyya generally inclined towards supporting him, as his attitude toward the first caliphs was close to their own. The Zaydī Batriyya held that 'Alī was the most excellent of men after the Prophet, but admitted the legitimacy of the imāmates of Abū Bakr and 'Umar, since 'Alī had voluntarily pledged allegiance to them. Concerning 'Uthmān, they either abstained from judgment or renounced him for the last six years of his reign. Unlike the Djarūdiyya, they did not ascribe a superior knowledge in religious matters to the descendants of 'Alī, but accepted the *hadīth* transmitted in the Muslim community and admitted the use of individual reasoning (*iḍṭihād, ra'y*) in order to close gaps in the *Shari'a*. Thus they did not adopt the specifically *Shi'i* theses in various points of the ritual and law and belonged to the traditionalist school of Kūfa in their *fiqh* doctrine. A leader of the Batriyya in the revolts of Zayd and of Ibrāhīm b. 'Abd Allāh (145/762-3) was the traditionist and *fakīh* Hārūn b. Sa'īd al-'Idjīlī, whose supporters, known as the 'Idjīliyya, were probably recruited from among his tribesmen. Equally prominent among the Zaydī Batriyya was the traditionist and theologian al-Ḥasan b. Šāliḥ b. Hayy [*q.v.*] (d. ca. 168/784-5), who supported the candidacy of Zayd's son 'Isā to the imāmate and concealed him from the 'Abbāsīd authorities. 'Isā b. Zayd, in spite of his preference of the *Shi'i* position in some ritual matters (see L. Veccia Vaglieri, *Divagazioni su due Rivolte Alidī*, in *A Francesco Gabrieli*, Rome 1964, 328 ff.), generally inclined to *Batrī* views. A son of al-Ḥasan b. Šāliḥ b. Hayy led a group of Kūfan Batriyya in the revolt of Yaḥyā b. 'Abd Allāh in the mountains of Daylamān [see DAYLAM] (ca. 176/792), but was soon alienated by Yaḥyā, who, espousing strictly *Shi'i* ritual, disapproved of some of his practices. Also to be counted among the chiefs of the Batriyya is the *kalām* theologian Sulaymān b. Djarīr al-Raḳḳī [*q.v.*], although his supporters were often mentioned as a group separate from the Batriyya. He participated in the debate about the imāmate in the circle of the Barmakids, and a community of his followers survived in 'Anāt for some decades. In the 3rd/9th century, the Batriyya quickly disintegrated as the Kūfan traditionalist school was absorbed in Sunnism, while within the Zaydiyya, the Djarūdi views concerning the imāmate prevailed and Zaydī *fiqh* was elaborated on the basis of the doctrine of the family of the Prophet.

AL-BATTĪ [see ABU 'L-ḤASAN AL-BATTĪ, in Suppl.]

**BAWRAḲ** (*būraḳ*) is natron, sesqui-carbonate of soda, a compound of various salts containing mainly sodium carbonate (soda). Derived from the Persian *būra*, the term does not indicate borax in the modern sense (Natrium bivoracicum), but has given its name to it. The Arabic lexicographers know the *bawraḳ mā'i*, *b. ḡjābālī*, *b. armanī*, *b. miṣrī* (= *naṭrūn*), *b. al-sāgha* ("borax of the goldsmiths", Chrysocolle), *b. al-khabbāzīn* (or: *al-khubz*) and *b. ifrīkī*. Since unbiassed elucidations of these terms are almost completely lacking, this enumeration is almost valueless. Al-Khwārazmī (*Mafātiḥ*, ed. van Vloten, 260) mentions, furthermore, the *bawraḳ zarāwandī* and also the *tinkār* which is made artificially; both are known as tincal until today. Further information about the nomenclature, also in other languages, is given in Moattar, *Ismā'il Gorgānī* (see *Bibl.*). In his cosmography, Dimashḳī distinguishes between *bawraḳ* and *tinkār*; he says that both have a natural and an artificial kind and that both kinds of the latter were used in melting and purifying minerals (Wiedemann, *Aufsätze zur arab. Wissenschaftsgeschichte*, i, 713). The fact that there existed a class of borax-traders (*bawraḳī*) indicates that trade in these various sodium compounds required specialised knowledge. This trade was apparently lucrative: Ibn Ḥawḳāl, 346 (tr. Kramers-Wiet, ii, 339) mentions a borate (*milḥ al-bawraḳ*) which was delivered from Lake Van to the bakers in 'Irāḳ and Mesopotamia (*bawraḳ al-khabbāzīn*, see above); this denomination comes from the bakers who used to coat the bread with borate dissolved in water before putting it into the furnace, in order to give it a prettier and more shiny appearance. The particularly valuable *bawraḳ al-sāgha* (see above) was exported with great profit from Kabudhān to 'Irāḳ and Syria.

The books on mineralogy mention the numerous find-spots and kinds of *bawraḳ*. Like salt it is found either as a liquid in water or as a solid on the surface of the soil. It is white, grey or red, and causes all kinds of solid substances to melt. *Naṭrūn*, a kind of *bawraḳ*, cleanses the body and beautifies the skin; it is also used in chemistry as a reagent against impurities (J. Ruska, *Das Steinbuch des Aristoteles*, Heidelberg 1912, Arab. text 118, tr. 173).

In antiquity *bawraḳ* (*naṭrūn*) was known as *νίτρον*, which is different from our saltpetre (Nitrum). At that time, as in Islamic times and nowadays, it was gained from lakes which have no discharge, in which it was left behind as a gleaming crust as a result of evaporation. According to Ghassānī and Ibn al-Ḳuff (see *Bibl.*), *naṭrūn* is "Armenian borax", but they also say that the best *naṭrūn* comes from the Egyptian saltlakes. It was widely used in therapeutics, especially to treat skin-diseases like itching, scaly eruptions, scabies, pimples and boils, and also to cleanse fresh wounds. Dissolved in wine, honey or water, it purifies dirty and purulent sores. Taken internally, it has a loosening effect, softens the bowel motions and dispels flatulence. In al-Kindī's collection of prescriptions, it is an ingredient of various tooth-powders. Spread on the eyes, it removes the so-called hard white spot (*bayād al-'ayn al-ghalīz*); however, especially in the treatment of the eyes, quackery took possession of this substance (according to Djawbarī, *al-Mukhtār fī kaṣḥ al-asrār*, cf. Wiedemann, *Aufsätze*, i, 765 ff.).

**BAY'AT AL-RIDWĀN**, the name given to an oath exacted by the Prophet from some of his followers during the Medinan period.

During the expedition to al-Hudaybiya [q.v.] in Dhū l-Ka'da of the year 6 (March 628), a report reached Muḥammad that the Meccans had killed 'Uṭhmān b. 'Affān, who had gone into Mecca to negotiate a truce. Muḥammad realised that he would lose face unless 'Uṭhmān's death was avenged, and summoned the members of the expedition to take an oath of allegiance to himself. There are different versions of the content of the oath. Some held it was a pledge not to flee; others that it was a pledge "to the death" (*'alā l-mawt*); and one man (Sīnān) is said to have pledged himself to do "what was in Muḥammad's mind" (*'alā mā fī nafsika*). To fight the Meccans would have been very dangerous since the Muslims, as pilgrims, were lightly armed, and this was doubtless why Muḥammad asked for the pledge and why it is described as a pledge "not to flee" or "to the death". If the third version is correct, it indicates a formal increase in Muḥammad's autocratic power, which is known to have been increasing informally about this period. One man, al-Djadd b. Ḳays, refused to take the oath and appears to have shortly afterwards been deposed by Muḥammad from being chief of the Anṣārī clan of Salima. The incident is mentioned in Qurān, xlviii, 18: "God was well pleased (*raḍīya*) with the believers when they pledged themselves to you under the tree." From this is derived the name *Bay'at al-riḍwān* which may be translated "the pledge of good pleasure" or "the pledge which pleased (God)". It is also known as "the pledge of the tree", and those who made the pledge here were later honoured as the *Ashāb al-shajāra*, "the men of the tree". It has been suggested that the tree might have been a sacred one in pre-Islamic times. At a later period, there was a mosque on the spot (Bukhārī, iii, 113 = *Maghāzī*, 35; Wellhausen, *Reste*<sup>2</sup>, 104).

(W. MONTGOMERY WATT)

**BAYHAQĪ SAYYIDS**, a religio-political group active in the political life of early Islamic Kashmīr. The Bayhaqī Sayyids migrated to Kashmīr from Dihlī in the time of Sulṭān Sikandar (791-816/1389-1413), and played a very important part in the social and political life of the Valley until its conquest by the Mughals in 996/1588. Owing to their descent from Prophet Muḥammad, through his daughter Fāṭima, they were treated with great respect by the Sulṭāns, who gave them *djāgīrs* and high offices and entered into matrimonial relations with them. At first they were unpopular and aroused both the anger and jealousy of the Kashmīrī nobles, because, conscious of their high birth, they behaved arrogantly and joined those elements who were critical of Hindū practices and ceremonies and wanted the enforcement of the *Sharī'a* and the Islamic way of life. But gradually they began to identify themselves with the aims and aspirations of the Kashmīrīs, who, thereupon, accepted them as their leaders on account of the abilities they displayed as soldiers and administrators.

The chronicles give such exaggerated accounts of the exploits of the Bayhaqī Sayyids in Kashmīr that it is difficult to disentangle fact from fiction. The first Bayhaqī Sayyid, however, about whom any reliable evidence exists was Sayyid Muḥammad, who gave his daughter, Tādī Khātūn, in marriage to Sulṭān Zayn al-'Ābidīn (823-74/1420-70); and later his grandson, Sayyid Ḥasan, was married to the Sulṭān's daughter. On the death of Zayn al-'Ābidīn's son and successor Ḥaydar Shāh (874-6/1470-72), Ḥasan Shāh, who succeeded him, made Sayyid Ḥasan his *Wazīr*; and since Sayyid Ḥasan succeeded in setting up Muḥammad Shāh, Ḥasan Shāh's minor son, as Sulṭān in 889/1484, he continued as *Wazīr*. But his arrogance and his opposition to Hindū customs and practices aroused the anger of the Kashmīr nobles, who plotted against him, and early one morning they entered the fort of Nawshahr in Srīnagar, where they were holding court, and killed him and his thirteen followers. His two sons, Sayyid Ḥashīm and Sayyid Muḥammad, who were not in the fort at the time, carried on the struggle against the enemies of their father, but they were defeated and exiled from the country along with their followers. But after two years the Sayyids were recalled, and under the leadership of Sayyid Muḥammad, they once again became active in the struggle for the throne between Muḥammad Shāh and Faṭḥ Shāh, intriguing with and making alliances with different groups as suited their interests. In the end, Sayyid Muḥammad succeeded in 898/1493 in becoming *Wazīr* of Muḥammad Shāh, but in 910/1505 he was defeated and killed by his rivals. This, however, did not demoralise the Sayyids. Instead, when Mirzā Ḥaydar Dughlāt established his power in Kashmīr (948-58/1541-51), Sayyid Ibrāhīm, the son of Sayyid Muḥammad, joined the Kashmīr nobles in overthrowing him.

Under the Ćak Sulṭāns also, the Bayhaqī Sayyids continued to play an important part. 'Alī Shāh Ćak (978-86/1570-78) appointed Sayyid Mubārak the son of Sayyid Ibrāhīm as *Wazīr*, and took his advice on all important matters. But on Alī Shāh's death, Sayyid Mubārak set aside the latter's son Yūsuf Shāh on grounds of incompetence and declared himself Sulṭān (986/1578). Yet, after a few months he was overthrown by the nobles, who were

denied by him any share in the government. In spite of this, he joined Ya'kūb Shāh, Yūsuf Shāh's son and successor, in the struggle against the Mughal armies sent by the Emperor Akbar to conquer Kashmīr. Finding resistance to the Mughals fruitless, he submitted to the Mughal commander Kāsim Khān Mīr Bahr on 27 Dhu 'l-Hijjā 994/9 December 1586, and was sent to Āgra. Akbar wanted Sayyid Mubārak to accompany Yūsuf Khān Ridwī, who was ordered by him to proceed to Kashmīr to relieve Kāsim Khān. But Sayyid Mubārak refused; so he was imprisoned and sent to Bengal. His son, Abu 'l-Ma'ālī, also fought side by side with Ya'kūb Shāh against the Mughals, but he was taken prisoner. This was the end of the significant role which the Bayhaqī Sayyids had played for over 150 years of Kashmīr history.

**BENĪ MELLĀL**, formerly Kaṣaba Benī Mellāl (from the name of the tribe living around it), or sometimes Kaṣaba B. Kuṣh, a town of Morocco roughly equidistant from Casablanca, Marrakesh and Fās. It lies on one of the slopes of the Dīr [q.v. in Suppl.], at an altitude of 620 m./1,980 feet, in this piedmont region between the Middle Atlas and the wide, historic plain of the Tādā, of which it has recently become the official chef-lieu.

The town is built around the fortress or *kaṣaba* built towards 1099/1688 by Mawlāy Ismā'īl, restored in the 19th century by Mawlāy Sulaymān and since once again restored. The Vauclousian spring of Asardūn to the south of the town leads one to think that Benī Mellāl, like all the other centres of the Dīr, e.g. Aghmāt, Damnāt [q.v.], etc., goes back to ancient times, but no traces of prehistoric life have as yet been discovered there. It is possible that Benī Mellāl is Ḥiṣn Daī, the little capital which Yahyā b. Idrīs inherited in the 3rd/9th century at the time of the division of his father's kingdom. It is mentioned by the Arab geographers as a fortress and an important market centre. In 534/1140 or 535/1141 it was occupied by the Almohads.

The demographic explosion of the town has been remarkable. In 1918 it had an estimated 3,000 inhabitants; now it has 60,000, and the increase between the 1952 and 1960 censuses has been 81%. This undoubtedly stems from its administrative role today, one of the results of agricultural development of the great alluvial plain of the Tādā or else of the very important hydraulic reservoir works and irrigations improvements made over the last 30 years. Benī Mellāl's importance has grown still further from its role as a market centre for provisions of the Berber tribes in the Middle Atlas valleys, and also those of the central Grand Atlas (especially the Wādī Tadghat). A very lively fair is held in the town centre every week, where curious coverlets of thin rugs (*hanbal*) in gaudy and evanescent shades of colour are sold, and are much appreciated.

Superb gardens, rich olive-groves and flourishing orchards of mulberry trees, oranges and pome-

granates, extend as far as the scarp out of which gush six abundant and pure springs of water. In the midst of this oasis is the *zāwiya* of Sīdī Aḥmad b. Kāsim, whose minaret is attributed to the great Almoravid Yūsuf b. Tashfin (it is more probable that it was the work of his grandson Tashfin, who passed through Benī Mellāl before going on to die in Orania). The town has now become a centre for tourist excursions into the mountains, and has promise of a great future.

**BESTIARY** [see ḤAYAWĀN].

**THE BEYOND** [see ĀKHĪRA].

**AL-BIBLĀWĪ**, 'ALĪ B. MUḤAMMAD, 26th *shaykh* of al-Azhar. He was born in the village of Biblāw near Dayrūt in Upper Egypt in Radjab 1251/November 1835. After a period of study and teaching at al-Azhar [q.v.], he was employed at the Khedivial Library and became its Director (*nāzir*) for a short period in 1881 and 1882. In the wake of the 'Urābī insurrection in 1882, he was removed from this office, to which he had been appointed thanks to the help of his friend Maḥmūd Sāmī al-Bārūdī [q.v.], one of the insurrection's principal protagonists. Subsequently he held the office of *khatīb*, and from 2 Šafar 1311/14 August 1893 onwards the office of *shaykh khidma* of the Ḥusayn mosque in Cairo. In addition to the latter office he was appointed *nakīb al-ashraf* [q.v.] on 6 Shawwāl 1312/1 April 1895, following the abdication of the former *nakīb*, Muḥammad Tawfiq al-Bakrī [q.v.]. During his term of office, which was to last until the end of 1320/March 1902, a set of regulations was promulgated, the so-called *lā'ihat nikābat al-ashraf* (cf. *al-Wakā'ī' al-Misriyya*, 17 June 1895, no. 67), which made the incumbent to this office virtually an official within the Ministry of *Wakf* and a subordinate to its *nāzir*. His appointment as *shaykh* of al-Azhar on 2 Dhu 'l-Hijjā 1320/1 March 1903 in succession to Salīm al-Bishrī, who had been deposed because of his efforts to frustrate implementation of the reforms provided for in the law of 20 Muḥarram 1314/1 July 1896, was the result of a compromise between the Khedive and his ministers, who had originally favoured other candidates. Only two years later, on 9 Muḥarram 1323/15 March 1905, he found himself compelled to resign when his inability to deal with the obstruction of his efforts to implement reforms had reduced his authority to an acceptably low level. He died shortly afterwards on 30 December 1905.

*Bibliography:* Biographies may be found in Aḥmad Taymūr, *Tarāḍīm a'yān al-karn al-thālith 'aṣhar wa-awā'il al-rābi' 'aṣhar*, Cairo 1940, 81-5; and Maḥmūd b. (F. DE JONG)

**BIBLIOMANCY** [see KUR'A].

**BIGHĀ'**, the Kur'anic term (XXIV, 33) for prostitution. "Prostitute" is rendered by *baghiyy* (pl. *baghiyā*), *mūmis* (pl. *-āt*, *mayāmis/mayāmis*, *mawāmis/mawāmis*), *'ahīva* (pl. *'awāhir*), *zānya* (pl. *zawānī*), etc.; a more vulgar term, although we have here a euphemism, is *kahba* (pl. *kihāb*), which the lexicographers attach to the verb *kahaba* "to cough", explaining that professional prostitutes used to cough in order to attract clients.

Although M. Gaudefroy-Demombynes (*Mahomet*<sup>2</sup>, Paris 1969, 48) saw in the legend of Isāf and Nā'ila [*q.v.*] the "reminiscence of sacred prostitution", no such custom seems to have existed amongst the pagan Arabs; T. Fahd considers moreover that the legend in question is edifying in its aim and "has as its intention putting pilgrims on guard against sacred prostitution as it was practised in the Syrian temples". However, it is quite possible that vestiges of pagan ceremonies continued sporadically in islamised regions, in particular, amongst certain Berber tribes.

In any case, pre-Islamic Arabia certainly was familiar with the world's oldest profession which was, at least in the larger centres of population, carried on by free women, spinsters, widows or divorced women, reduced by misery to trafficking in their own bodies, but mainly by slaves "working" for their masters. These women were recognisable, as elsewhere, by the banners which they flew at the doors of their dwellings; they accepted all comers as clients; if they produced a child, the latter was entrusted to the official responsibility of the man whom the physiognomists (*kāfa* [see KIYĀFA]) designated as the father, the latter not having the right to refuse. These items of information are given, on the authority of 'Ā'isha, by al-Bukhārī (*Ṣaḥīh. K. al-Nikāh, bāb 36, vii, 19-20*; tr. O. Houdas, *Les traditions islamiques*, iii, 565-6), who mentions the preceding usages as one of the three forms of *nikāh* forbidden by the Prophet, the two others being the *istibdā'* and a kind of polyandry. *Istibdā'* consisted of a man who feared that he himself could not sire a robust offspring placing his wife in the hands of a better progenitor. In the *nikāh al-raḥt*, the woman in question takes a group of husbands (less than ten) and, if she has a child, attributes the paternity to one of this group, who is unable to refuse it. Al-Bukhārī does not in this passage cite temporary marriage, *mu'ta* [*q.v.*], which was likewise prohibited. In his *K. al-Bukhālā'* (ed. Hādīrī, 112, tr. Pellat, 179), al-Djāhīz uses the expression *zawḍī nahārī* "husband by day", the sense of which is hard to determine, but may allude to a very fleeting type of temporary marriage.

A form of more or less disguised prostitution was always the fate of the lower level of singing girls [see KAYNA] attached to haunts of pleasure and taverns (it should be noted that the modern Arabic term for "brothel", *mākhūr*, comes from Persian *māy-khūr* "wine-drinker"). It was indeed a tavern-

keeper (*khammār*) who is said to have procured for Abū Sufyān the woman who was to give birth to Ziyād b. Abīhi; the traditions concerning the recognition of the latter's collateral affiliation (*istihāk*) by Mu'āwiya reveal the existence in al-Ṭā'if of a quarter of the courtesans (*hārat al-baghāyā*) inhabited in particular by slave girls belonging to the famous "physician of the Arabs", al-Hārith b. Kalada [*q.v.* below], to whom they had to pay a tax (see e.g. al-Mas'ūdī, *Murūj*, v, 21 ff. = §§ 1778 ff.), as was the usual practice for slaves working on their own account or employed by third parties. The Medinan 'Abd Allāh b. Ubayy [*q.v.*] is also said to have practised this same form of exploitation, this being allegedly the origin (see the Kur'anic commentaries on xxiv, 33; al-Ṭabarī, *Tafsīr*, xviii, 132-4, al-Kurṭubī, *Tafsīr*, xii, 254-5, etc.) of the verse condemning this practice: "And do not constrain your maidservants (*fatayāt*) to prostitution (*bighā'*), if they wish to live in reputable marriage (*taḥaṣṣun*), in order that you may seek the chance gains of this present life; if anyone compels them thus [he will bear the sole responsibility for it], for God, who is merciful and compassionate, will pardon them after compulsion has been laid upon them". Thus the Kur'anic does not expressly condemn prostitution, and is content to forbid any woman being compelled to practise it.

For his part, the Prophet must certainly have spoken about the prostitutes, examples of whom he must have seen in Mecca and Medina (see Wensinck, *Concordances*, s.v. *baghiyy*, i, 204), but the most significant *hadīth* seems to be the one in which he forbids payment for the services (if the word *mahr* is correctly interpreted here) of the prostitute and the gains (*kaṣb*) from prostitution (al-Bukhārī, *Ṣaḥīh. K. al-Ṭalāk, bāb 51*; tr. Houdas, iii, 642). It was a roundabout way of prohibiting what was considered as a dishonourable activity, but one in the end adjudged by posterity as a necessary evil.

In practice, despite pious persons who inveighed from time to time against an institution which was regarded as incompatible with Muslim ethics, prostitution has always flourished in Muslim lands, keeping itself, under necessity, discreet, as in Fās, where at certain periods the police authorities suppressed it severely, shaving the heads of women thus misbehaving, parading them through the streets of the town and then expelling them, and insisting on their being buried in a special part of the cemetery (R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 580). This seems to have been a special case, and the severity does not always seem to have been completely successful. Although travellers and historians are sparing of details, there are pieces of information testifying to the existence of more or less free-lance prostitutes as well as the existence of brothels in the various Islamic cities. Thus al-Muḥaddasī (*Aḥṣan al-takāsim*, 407) saw a brothel at Sūs, near the mosque, whilst Leo Africanus speaks of taverns at Fās with whores residing in them (tr. Epaulard, 191) and prostitution at Tunis (385). According to al-Kifītī (*Hukamā'*, ed. Lippert, 298), the *muhṭasib* of Latakia put up for auction the favours of the public women and issued to the successful bidders a ring which they had to show if they were met at night with one of the women.

Indeed, at all times prostitution was not merely tolerated but even recognised officially and very often was subject to a tax payable to the public treasury. At Fās, the headman of the quarter had the task of supervising the courtesans and of prevent-

ing disorders, but in general, it was the *muhtasib* who fulfilled this function (see P. Chalmeta, *El "señor del zoco" en Espana*, Madrid 1973, index, s.v. prostitutas). However, the manuals of *hisba* do not mention the existence of a precise regulatory scheme, and Ibn 'Abdūn, for instance, is content to forbid the denizens of places of public resort to show themselves bareheaded outside the house (E. Lévi-Provençal, *Trois traités hispaniques de hisba*, Cairo 1955; idem, *Séville musulmane*, Paris 1947, § 168). In al-Andalus, the tax imposed on them was curiously called *kharādj* ("land tax" [q.v.]) and the brothels called *dār al-kharādj* (or *dār al-banāt*), whilst the prostitutes themselves were called *kharādjīyyāt* (Ibn Bassām, *Dhakhira*, i/1, 207, where the text should be corrected) or even *kharādjīyāt* (Lévi-Provençal, *Hist. Esp. Mus.*, iii, 445-6). It is further known that 'Aḍud al-Dawla [q.v.] imposed a tax on the whores of Fārs (al-Mukaddasī, 441) and that the Fātimids did likewise in Egypt (al-Makrīzī, *Khitat*, i, 89).

As in many other lands, various categories of women might be distinguished. At the bottom of the scale were the somewhat wretched women who hired rooms in caravanserais by the town gates or near the centre, and in addition to the rent, paid a due to the keeper of the caravanserai; but there were also procurers who brought them clients, mainly strangers visiting the town; peasants, seasonal workers, soldiers, etc. Some of these women certainly sank to the level of the rogues and vagabonds whose various activities have been described by C.E. Bosworth in his *The mediaeval Islamic underworld* (Leiden 1976, 2 vols.). At a higher level, brothels proper catered for a more affluent clientele. As in pre-Islamic al-Tā'if, special quarters were reserved for prostitution, which the authorities were thereby more easily able to control. This system has remained down to our own time, and a visit to these localities, which are sometimes picturesque, may even be recommended to tourists, male and female, by guides and travel agents; this is especially the case in regard to Bousbir (< Prosper) at Casablanca and the street of "dancing girls" of the Ouled Nail at Bou Saada (Algeria).

The practice of early marriage among the Muslims, who can take four legitimate wives and as many concubines as they can afford to keep, ought in the natural course of things to have set bounds to venal love-making. However, many young men from the modest levels of society were unable to find their sexual initiation otherwise than by recourse to prostitutes, and legal marriage entailed financial burdens which men from the masses of people were not always in a position to undertake, especially if they had to migrate away from their original home. Furthermore, the Qur'anic prohibition could always be easily circumvented by procurers and procuresses lured on by the prospect of gain, whilst the easy facilities for husbands in regard to the repudiation of their wives [see TALĀḲ] threw on to the streets women who did not always have the possibility of returning to their families.

*Bibliography:* There does not seem to have been produced any monograph on prostitution in mediaeval Islam. In the list of writings of Abu 'l-'Anbas al-Ṣaymarī [q.v. above] a *K. Nawādir al-kuwā'id* (?) and a *K. al-Rāha, wa-manāfi' al-kiyāda*, which may possibly have dealt with pimps, are to be found, but these have not survived. In addition to sources cited in the article, see A. Mez, *Renaissance*, Eng. tr. 361-4; A. Maza-

héri, *La vie quotidienne des Musulmans au moyen âge*, Paris 1947, 64-5; R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 557-9 and index; al-Markaz al-kawmī li 'l-buḥūth al-idjūmā'iyya, *al-Bighā' fi 'l-Kāhira*, Cairo 1961; a fairly well-developed study by a sociologist is that of A. Bouhdiba, *La sexualité en Islam*, Paris 1975, 228-39 and the bibl. cited there. On male prostitution, see LIWĀT. (Ed.)

**BIHBĪHĀNĪ**, ĀḲĀ SAYYID MUḤAMMAD BĀḲĪR, Shī'ī *muḍjtahid* and proponent of the Uṣūlī [q.v.] *madhhab*, often entitled Waḥīd-i Biḥbihānī or Muḥakkiḳ-i Biḥbihānī, and commonly regarded by his Shī'ī contemporaries as the "renewer" (*muḍjaddid*) of the 12th Hijrī century. He was born in Iṣfahān some time between the years 1116/1704-5 and 1118/1706-7. After a brief period spent in Biḥbihān, he was taken to Karbalā' by his father, Mullā Muḥammad Akmal, whose principal student he became, while studying also under Sayyid Sadr al-Dīn Ḳummī. Mullā Muḥammad Akmal had studied under Mullā Muḥammad Bāḳir Maḍjlīsī, the great divine who had dominated Iranian Shī'ism in the late 11th/17th century, and had also married his niece. The young Biḥbihānī, who came to exercise a similar dominant role at the end of the 12th/18th century, was thus both spiritually and genealogically related to Maḍjlīsī. It is related that after completing his studies in Karbalā', Biḥbihānī intended to leave the city, but was dissuaded from doing so by the appearance of the *Imām* Ḥusayn to him in a dream, instructing him to stay (Muḥammad Bāḳir Ḳh'ānsārī, *Rawḍat al-djannāt fi ahwāl al-'ulamā' wa 'l-sādāt*, Tehran 1304/1887, 122). In obedience to the dream, he stayed on, and engaged in fierce controversy with adherents of the Akhbārī school of *fiḥh*, which at that time was predominant in Karbalā' as well as the other 'atabāt [see AKHBĀRIYYA above]. The controversy between the Akhbārīs and the Uṣūlīs, centering on various questions of *uṣūl al-fihh* and particularly on the permissibility of *idjtiḥād*, was an ancient one, but had become particularly acute in the late Ṣafawid period and the middle part of the 12th/18th century. Before the appearance of Biḥbihānī, the Akhbārīs were so assured in their dominance of the 'atabāt that anyone carrying with him books of Uṣūlī *fiḥh* was obliged to cover them up for fear of provoking attack. By the end of his life, however, Biḥbihānī had been able almost completely to uproot Akhbārī influence from the 'atabāt and to establish the Uṣūlī position as normative for all of the Twelver Shī'a. He accomplished this change partly by debate, polemic and the composition of written refutations of the Akhbārī school, the most important of which was *Kitāb al-idjtiḥād wa 'l-akhbār*. Hardly less effective was the demonstration of the prerogatives of *muḍjtahid* that he provided. One of his pupils, Shayḳh Dja'far Nadjāfī (d. 1227/1812), records that he was constantly accompanied by a number of armed men who would immediately execute any judgement that he passed. The example that he thus gave was to be followed by numerous Iranian 'ulamā' of the Ḳādjār period. Another target of Biḥbihānī's hostility was the Ni'matallāhī Sūfī order; such was the enmity that he nurtured for them that he gained the title of *ṣūfīkuṣh* (Sūfī-killer). He died in 1206/1791-2 or 1208/1793-4, and was buried near the tomb of the *Imām* Ḥusayn in Karbalā'. Biḥbihānī is credited with more than sixty works; the titles of twenty of them are listed in Muḥammad 'Alī Mudarris, *Rayḥānat al-adab*, new ed., Tabriz n.d., i, 52, and a further fourteen

titles are preserved in autograph in the library of Bihbihānī's descendants in Kirmānshāh (see Muhsin al-Amīn, *A'yan al-shī'a*, Beirut 1378/1959, xlv, 96). It is said that his writings on *uṣūl al-fikh* were compiled into a single work by one of his pupils, Sayyid Mahdī Kaẓwīnī. The number of his pupils was very large; among the most influential we may mention his sons, Ākā Muḥammad 'Alī, who settled in Kirmānshāh and inherited his father's violent hatred of the Šufīs, and Ākā 'Abd al-Ḥusayn; *Shaykh* Dījā'far Naḍjafī, author of a number of important works on Uṣūlī *fikh*; and three *muḍtahihs* who dominated the life of Iṣfahān in the first quarter of the 19th century—Hāq̄d̄j Muḥammad Ibrāhīm Kalbāstī, Sayyid Muḥammad Bākīr Šhafī, and Sayyid Mahdī Baḥr al-'Ulūm. But his influence extended far beyond the generation of *muḍtahihs* he trained; through his theoretical vindication of the Uṣūlī position and his practical demonstration of the function of *muḍtahihs*, he was in effect the ancestor of all those *muḍtahihs* who have sought since his time to assert a guiding role in Iranian society.

**BIHRANGĪ**, ŠAMAD, Persian prosewriter (1939-68). Bihrangī's birth in a lower-class, Turkish-speaking family in Tabriz and his eleven-years' employment as a primary schoolteacher in rural Ādharbāyḡd̄jān are attested in the greater part of his *fārsī* writings. These, both fictional and non-fictional, largely deal with village life in his native province and with the specific problems of a cultural minority region. His concern for the plight of Ādharbāyḡd̄jānī peasant youth prompted a series of educational essays, as well as some twenty children's stories, the chief foundation of his present fame. Notable for their "ideological" content rather than for strictly literary merits, Bihrangī's children's stories no longer recommend the conventional virtues of obedience, cleanliness and modesty, but aim at imparting "a correct view of the dark, bitter realities of adult society". Accordingly, his stories picture the needy, powerless village children, their search for freedom and their revolt against ignorant parents, local landlords or urban aristocracy. The political commitment felt in most of these stories contributed to Bihrangī's considerable popularity among the dissident intelligentsia; at the same time, it gave rise to an increasingly restrictive censorship of his writings by the Iranian authorities and to a vast wave of rumours at his sudden death in September 1968, reportedly a drowning accident. More explicit views on society and literature are present in Bih-

rangī's essays, notably the insistence on straightforward, firmly committed writing and contempt for the "defeatist pseudo-intellectualism" of westernised Tehran. The tenets of his educational criticism are roughly similar to those earlier voiced by the author Āl-i Aḥmad [q.v. above], both a schoolteacher and a writer like himself; rejecting the unquestioned adoption of American teaching methods and finding the current textbooks inapplicable in a classroom with Azeri Turkish-speaking pupils, Bihrangī designed an alternative "textbook for village children": the completed but yet unpublished *Alif-bā barā-yi kūdakān-i rūstā'ī*.

*Bibliography*: The greater part of Bihrangī's writings first appeared in newspapers and periodicals under various pseudonyms, such as Šād, Kārānkūsh, Bihrang, Bābak, etc. Thirteen of his children's stories were posthumously collected in *Maḡmū'a-yi kiṣṣahā*, Tabriz 1348 sh., which also contains a chapter on *Adabiyāt-i kūdakān* (originally published as part of a review-article in *Rahnāmā-yi Kitāb* xi (1347-53 sh.), 48-5), outlining the author's conception of children's literature. Not included in this volume are his most successful story, the internationally awarded *Māhī-yi siyāh-i kūcūlū*, separately published in Tehran 1347 sh., and the collection *Talkhūn wa čand kiṣṣa-i dīgar*, Tehran 1349 sh. A number of his educational essays appeared as *Kānd-u-kāw dar mas'āl-i tarbiyātī-yi Irān*, Tabriz 1344 sh., while other articles on various subjects were posthumously edited as *Maḡmū'a-yi makālahā*, Tabriz 1348 sh.; this collection contains several chapters on Ādharbāyḡd̄jānī culture and language, including the four articles listed in *Afšār's Index iranicus* ii, Tehran 1348 sh., 84, 415. An anthology of translated folktales was separately edited in collaboration with B. Dīkhānī: *Afsānahāyi Ādharbāyḡd̄jān*, i: Tabriz 1344 sh., ii: Tehran 1347 sh. Finally, Bihrangī prepared some Persian translations from modern Turkish poetry and prose.

A valuable secondary source is the special Bihrangī issue of *Āraš*, ii/5 (Ādhar 1347 sh.); for additional information, cf. 'A.A. Darwīshīyān's short monograph *Šamad ḡāwīdāna šud*, Tehran 1352 sh., and G.R. Sabri-Tabrizi, *Human values . . .*, in *Correspondance d'Orient*, xi (1970), 411-8. Bihrangī's political role as a "totally involved revolutionary artist" is stressed by Th. Ricks in *The little black fish and other modern stories*, Washington, D.C. 1976, 95-126; his folklore studies are passingly mentioned by L.P. Elwell-Sutton in *Iran and Islam, in memory of the late Vladimir Minorsky*, Edinburgh 1971, 253-4; Of the children's stories, a German translation has appeared in B. Nirumand ed., *Feuer unterm Pfauenthron*, Berlin 1974, 19-35; English translations include two different renderings of *Māhī-yi siyāh . . .* in *The Literary Review*, xviii/1 (Rutherford, N.J. 1974), 69-84, and in *The little black fish . . .*, op. cit., 1-19. For other translated stories, cf. M.C. Hillmann, ed., *Major voices in contemporary Persian literature*, and M.A. Jazayeri, ed., *Literature East and West*.

(G.J.J. DE VRIES)

**BINN**, a term of the Druze religion. In this, the Binn were conceived of as one of a number of earlier races or sects whose names are also mentioned in the Druze writings, such as the Rimm and the Timm. The Binn were said to have been a group of inhabitants of Hadjar in the Yemen who believed in the message of Šaḡnīl, the incarnation of Ḥammad

in the Age of Adam. According to the Druzes, the city was originally called Şurna (meaning "Miracle" according to Hamza), and Şaṭnīl came there from India. He called on the people to renounce polytheism and worship al-Ḥākīm bi-Amr Allāh [q.v.] as their sole deity. Those who accepted his message he commanded to "be separate" (*yabīnūn*) from the polytheists; as a consequence they were known as al-Binn. This etymology is clearly unsatisfactory, and it is possible that a Persian origin should be sought for this term.

One of the Druze *dāʿīs*, al-Ḥārith b. Tirmāh of Iṣfahān refused to obey Şaṭnīl, and was expelled from the number of the *dāʿīs*, being dubbed "Iblīs". He became the *imām* of the polytheists in Şurna (the *ḍinn* in the Druze account). When one of the Binn met another, he would say: "Flee from (*uhḍjuw*) Iblīs and his party!". As a result, Şurna acquired the name of Haḍjar.

Das Buch der Punkte und Kreise*, Kirchhain 1902, 71; Muḥammad Kāmīl Husayn, *Tāʾifat al-Durūz*, Cairo 1962, 116; D.R.W. Bryer, *The Origins of the Druze Religion*, in *Isl.*, liii (1976), 8.

(R.Y. EBIED and M.J.L. YOUNG)

**BISĀT** (A.), pls. *bust/busut, absīta*, which implies the general meaning of extensiveness (thus in Ḳurʿān, LXXI, 18), is a generic term for carpet, more specifically, one of fairly large dimensions. Any kind of carpet with a pile is called a *ṭinfīsa*; if it is decorated with multicoloured bands, a *zarbiyya* (*zīrbīyya, zurbīyya*, pl. *zarābī*; cf. Ḳurʿān, LXXXVIII, 16); if it is decorated with a relief design, a *maḥfara*; whilst a prayer carpet is called a *saḍḍjāda* (modern Turkish *seccade*), and the collective *saḍḍjād* is sometimes used as a generic term (on the numerous Arabic terms, see W.H. Worrell, *On certain Arabic terms for "rug"*, in *Ars Islamica*, i (1934), 219-22, ii (1935), 65-8). The word *kālim*, applied to a woollen rug generally long and narrow in shape, is often taken to be of Turkish origin (see e.g. Lokotsch, No. 1176), but seems rather to be Iranian (Persian *gilim*). Sumak, not far from Bakū, and the districts of Verne and Sile in the southern Caucasus, have given their name to a type of flatwoven carpets. The etymology of *kālī* (vars. *ghālī, khālī*, modern Turkish *halı*) is unclear; Yāḳūt, *Buldān*, iv, 20, remarks that the carpets (*busut*) called *kālī* are manufactured at Kālfkalā (= Erzerum [q.v.]), but since this word was difficult to pronounce, the *nisba* has been shortened. Although this particular term is generally considered to be Turkish in origin, it is unattested in ancient Turkish texts; it is, however, used by Gardīzī [q.v.] and may therefore be of Iranian origin (detailed study in Doerfer, No. 1405).

(Ed.)

## I. CARPETS OF THE CENTRAL AND EASTERN ISLAMIC LANDS

### 1. Technique

For the manufacture of oriental carpets, sheep's wool, cotton, silk, goat-hair and camel-hair are used, which are prepared, spun and partly wound. The foundation consists of warp-threads (Fr.: *chaîne*, Ger.: *Kette*) stretched the length of the loom, and weft-threads (Fr.: *trame*, Ger.: *Schüsse*) run in horizontally. For knotted carpets which form the bulk of the products, one or several weft rows are inserted between knot rows, the latter forming the pile. In Turkey, the Caucasus and the regions of

northwestern Persia inhabited by the Kurds, the Turkish or Gördes knot (so called after the Turkish town of Gördes [q.v.]), has been commonly used. But whilst the Persian or Senneh-knot (so-called after the Persian town of Senneh, today called Sanandaḍj [q.v.]) is commonly associated with Persia, India and Turkestan, the Gördes knot is also found in Persian rugs and the commonly-accepted geographical demarcation must be treated with reserve (for diagrams of these two knots see *IA*, v/1, 137). Kilims, and Sumak, Verne and Sile rugs are flat woven, with no pile. Until aniline and chromate dyes were introduced in the eighties of the 19th century, only natural dyes were used (see C.E.C. Tattersall, *Notes on carpet-knotting and weaving*, Victoria and Albert Museum, 1961; A.N. Landreau and W.R. Pickering, *From the Bosphorus to Samarkand, flat-woven rugs*, The Textile Museum, Washington 1969).

## 2. History

### a. Early Stages

The oldest known knotted carpet was discovered in 1949 in the tomb of a local prince in Pazyryk, in the Altai Mountains. By means of other finds in the tomb, it may be dated to the 4th century B.C. There are as yet no indications as to the place of its manufacture, but the suggestion of its manufacture in Achaemenid Persia has been put forward. Its technique (3,600 Turkish knots to the square decimetre) and its design, in Achaemenid style, are of a remarkable perfection; it is one of, and the most important of, the three extant pieces of evidence for a highly-developed art of knotting of this early date. It shows in a developed form the composition of a central field surrounded by borders, which consist of a wide main border and several subsidiary or guard borders, characteristic of all oriental carpets.

Very small fragments of carpets, conjecturally dated between the 3rd and 6th centuries A.D., were discovered by Sir Aurel Stein during his Turfan expeditions (at Lop Nor). These, however, are not knotted carpets but napped fabrics, in which the pile is produced by the wefts, introduced first as loops and later split (see A. Stein, *Ruins of desert Cathay*, London 1912, 380, plate 116, 4). The "Spanish knot", on the other hand, always tied around a single warp, is used in a fragment discovered by Le Coq in Kucha during the fourth Turfan expedition, the earliest possible date of which is the 5th-6th century (see F. Sarre, *Ein frühes Knüpfteppich-Fragment aus chinesisches-Turkestan*, in *Berliner Museen* (1920-1), 110). The piece is too small and the design too faint to permit any conclusions about the carpets of this period. The many small fragments of knotted carpets from Fuṣṭāt can hardly be dated (see M.S. Dimand, *An early cut-pile rug from Egypt*, in *Metropolitan Museum Studies*, iv (1933), 151 ff.; S.Y. Rudenko, *The world's oldest knotted carpets and fabrics*, Moscow 1968 (in Russian); R.B. Serjeant, *Material for a history of Islamic textiles up to the Mongol conquest*, in *Ars Islamica*, ix (1942), 54 and xv-xvi (1951), 29).

### b. Turkey

#### *Konya carpets.*

The development of oriental knotted carpets can be traced to a certain extent only from the 7th/13th century onwards. The oldest coherent group comes from Anatolia. In 1907 F.R. Martin discovered three large and several small fragments in the

'Alā' al-Dīn mosque at Konya, to which were given the generic name "Konya carpets". Shortly afterwards, smaller fragments of the same type were found in the Eşrefoğlu mosque at Beyşehir. The date of the enlargement of the 'Alā' al-Dīn mosque, 1218-20, provides a date *post quem* for these carpets, but they do not necessarily belong to the 7th/13th century. Their designs and technical execution are simple and the knots are not very close. Where they survive, the borders with their heavy Kūfic character or large stars predominate over the inner motifs, which have small, all-over, repeat patterns. See F.R. Martin, *A history of oriental carpets before 1800*, i, 113, ii, plate xxx; K. Erdmann, *Siebenhundert Jahre Orientteppich*, Herford 1966, 117; R.M. Riefstahl, *Primitive rugs of the "Konya" type in the mosque of Beyşehir*, in *The Art Bulletin*, xiii/2 (1931), 16 ff.; E. Kühnel, *Islamic art and architecture*, London 1966, 94 and Pl. 37b; and Pl. I.

#### *Anatolian animal carpets.*

The styles of Anatolian carpets of the 8th/14th and 9th/15th centuries are attested by reproductions in Italian paintings of the period. They are characterised by a series of square or octagonal motifs filled with stylised animals. The best known fragment of such a carpet, which is in the Islamic Museum of Berlin, shows on a yellow ground two octagons, set in squares, in which are found a dragon and a phoenix, the pair borrowed from Chinese mythology (Kühnel, *Islamic art* . . ., 109-10 and pl. 42b). A fresco of Domenico di Bartolo, dated between 1440 and 1444, shows a carpet with a corresponding motif treated in an almost similar way. Another carpet from a church in Marby, preserved in the Statens Historiska Museet in Stockholm, is closely connected in design, technique and colouring with the Berlin fragment. See C.J. Lamm, *The Marby rug and some fragments of carpets found in Egypt*, in *Svenska Orientsällskapets Årsbok*, 1937, 51 ff.; K. Erdmann, *Der Türkische Teppich des 15. Jahrhunderts*, Istanbul n.d. [1957]; R. Ettinghausen, *New light on early animal carpets*, in *Aus der Welt der islamischen Kunst, Festschrift E. Kühnel*, Berlin 1959, 93; and Pl. II.

#### *"Holbein" and "Lotto" carpets.*

On the portrait of the merchant Gisze, painted by Hans Holbein the Younger in 1532 and kept in the Picture Gallery of the Staatlichen Museen, Berlin, can be seen a carpet that serves as tablecloth. It represents a further group of Anatolian carpets which appear frequently on paintings from the middle of the 15th century until the end of the 16th century; these are characterised as "small-patterned Holbein carpets", and a fair number of them have survived. Their design, too, is based on squares with inset octagons in vertical and horizontal rows. The octagons are formed by bands knotted several times and the corners of the squares are filled by stylised arabesque leaves, which, joined together, merge into diamond-shaped linking motifs. Variety of colours within the squares of some specimens produces a kind of chessboard effect. In the details, these carpets correspond with the so-called large partitioned Holbein-carpet, the pattern of which is limited to a few broad, clearly separated motifs which are ranged only lengthwise. The decoration of the borders is mostly based on Kūfic characters. In the earlier designs the vertical strokes which have been directed to the edging of the carpet are

clearly recognisable. Later on they develop into a twined band without definite orientation. Red, with brownish shades, blue, yellow, white and green are dominant. The large-partitioned Holbein-carpet is believed to have been made in Bergama, the small partitioned ones in Uşak. See Pls. III, IV.

The fourth type of early Ottoman carpets is also localised in Uşak. These are the so-called Lotto-carpet, because they appear among others, on the paintings by the Italian painter Lorenzo Lotto. They are also called "carpets with arabesque tendrils", since all specimens of this group show a red foundation covered with a yellow net of tendrils, arabesque leaves and palmettes. As is the case with the small patterned Holbein-carpet, their arrangement is basically determined by a system of octagons set in squares, while the fillings of the spandrels form also diamond-shaped figures. More often than the Kūfic-borders, those of the Lotto-carpet are made up of undulating tendrils, multifoiled lozenges and later on, alternating cloud bands. See Pl. V.

#### *Medallion and Star Uşaks.*

In the 11th/17th century the early Ottoman patterns are replaced by Persian-influenced arrangements of motifs which characterise the Medallion and Star-Uşaks. The centre of the Medallion-Uşak is usually marked by a pointed oval-shaped medallion with a flamboyant outline and a floral inner-design. Lengthwise on both sides shield-shaped pendants are attached to the medallion. In the corners of the field quadrants of a differently shaped medallion appear. The composition can be understood as being a part of a system of staggered rows of medallions. Examples showing greater parts of the pattern prove this. The usually red ground colour between the medallions is traversed with entangled, angularly drawn tendrils. The Star-Uşak, with staggered star-shaped medallions, connected by lozenges, is a variant of the Medallion-Uşak. Both types occur frequently on Dutch 17th century paintings. Like the Lotto-carpet, the Uşaks were manufactured in coarse, misconstrued versions far into the 18th and 19th century (see K. Erdmann, *Weniger bekannte Uschak-Muster*, in *Kunst des Orients*, iv, 79 ff.; and Pls. VI, VII).

#### *"Bird" and "Tschintamani" carpets.*

Uşak-carpet with a white ground both in field and border are rare. Two simple patterns can here be distinguished: the "Tschintamani" and the "Bird" motifs. The first, in all-over repeat, consists of two parallel undulating lines and three balls arranged in a triangle over them. This motif is undoubtedly of Far Eastern origin. From the 15th century onwards it is known as a pattern for clothing in Persian and Turkish miniatures, and from the 16th century it was popular on Turkish textile fabrics. The "Bird"-motif consists of horizontal and vertical running stripes crossing each other, and is composed of rosettes and leaves, the form of which superficially looks like birds. Both patterns have often been copied in the 20th century.

#### *Transylvanian carpets.*

An important group of small-sized Anatolian carpets from the 17th to 19th centuries, showing analogy with the Uşak-carpet, are the Transylvanian carpets, so-called because they have survived in great number in the churches of Transylvania. Besides some smaller versions of the Lotto-, Bird- and Tschintamani-patterns, they are mainly prayer-

rugs, the inner-fields of which are arch-shaped to represent the *mīhrāb*, often in connection with one or more pairs of columns. They form a link with the Turkish prayer rugs of the 18th and 19th centuries from Gördes, Ladik and Milas (see E. Schmutzler, *Allorientalische Teppiche in Siebenbürgen*, Leipzig 1933; J. de Vegh and Ch. Layer, *Tapis turcs provenant des églises et collections de Transylvanie*, Paris 1925; M. Mostafa, *Turkish prayer rugs*, Cairo 1953; Turkish Rugs, *The Washington Hajji Baba*, The Textile Museum, Washington 1968).

### c. Egypt

#### *Mamlūk, Ottoman and Chess-board carpets.*

Fifteenth-century Mamlūk Egypt saw the origin of clearly recognisable carpets with a kaleidoscopic design, consisting of stars, rectangles and triangles, filled with small leaves, shrubs and cypresses. Their wool is soft and glossy, and the colours normally range between cherry-red, vivid green and bright blue. The many-sided star-like ornaments and the arrangement of the motifs towards the centre show a stylistic connection with the inlaid metal-work, the wood and the leather fabrics and the book-illuminations of the Mamlūk period. Only a few large-sized Mamlūk carpets have survived, among which one with a silk pile counts as one of the most beautiful carpets in the world (Vienna, Museum für Angewandte Kunst). More numerous are small specimens with a medallion that takes up the entire width of the carpet, to the upper side and bottom of which a tightly patterned rectangular field is attached. An essential distinction between the Mamlūk and the Anatolian carpets lies in the fact that the former are characterised by groups of patterns and not by regular repeat patterns from which, within a constant internal relation as far as size is concerned, variable formats can be chosen. In the borders rosettes usually alternate with oblong cartouches. European and Oriental sources mention Cairo as an important centre of the knotting industry at least from 1474 onwards.

After Egypt was conquered by the Ottomans in 1517, the Mamlūk carpets were replaced by carpets manufactured in the Ottoman court-style. Their luxuriant floral decoration presents a sharp contrast to the geometrical patterns of the Mamlūk carpets. The palmettes and rosettes, the feathered lanceolate leaves and the naturalistically treated tulips, pinks and hyacinths are also to be found on the contemporary textiles and on pottery and tiles of Iznik. It would therefore seem obvious to deduce that the carpets also were manufactured in Turkey. However, in their fineness, technique and colour-scheme, they differ completely from the rest of the Anatolian carpets, but match to a considerable extent the Mamlūk carpets. It is therefore plausible that they were manufactured in the Cairene workshops after models made by Ottoman artists. This theory is supported by some hybrid types, *i.e.* Mamlūk carpets with elements of Ottoman carpets, and vice versa. The products of the Cairene workshops were of a special quality, as may be seen from the fact that Murād III in 1585 summoned eleven master carpet-makers together with their materials from Cairo to Istanbul. It is as yet unknown whether they carried out there a special order or established a local weaving-industry. Among the Ottoman carpets are some prayer rugs. Ewliyā Çelebi mentions the use of Egyptian prayer rugs in Anatolia in the middle of the 17th century. See Pls. VIII, IX.

The chess-board carpets hold an intermediate

position between the Mamlūk and the Anatolian carpets. Their basic motifs are clearly Mamlūk in character: a star with eight rays on which small cypresses, blossoms and rosettes are radially directed, stands in a hexagon or octagon which is itself placed in a square. The way in which this motif is dealt with, the use of various-sized sections of the pattern, the coarse wool, and the weft (which is always red) point however at Anatolia. The colours are restricted to bright blue, vivid green and red, and thus come near to the Mamlūk carpets. Moreover, these chessboard carpets have the Persian knot in common with the Mamlūk and Ottoman carpets. As their place of origin E. Kühnel proposed the area around Adana in Anatolia; Rhodes and Damascus have also been suggested. They can be considered to have originated between the middle of the 10th/16th and the end of the 11th/17th centuries (see E. Kühnel and L. Bellinger, *Cairene rugs and others technically related, 15th-17th cent.*, Washington 1957; K. Erdmann, *Kairener Teppiche*, i, *Europäische und islamische Quellen des 15.-18. Jh.*, in *Ars Islamica*, v (1938), 179; idem, *Mamluken- und Osmanenteppiche*, in *Ars Islamica*, vii (1940), 55; idem, *Neuere Untersuchungen zur Frage der Kairener Teppiche*, in *Ars Orientalis*, iv (1961), 65).

### d. Persia

#### α. *Tīmūrid carpets.*

The oldest Persian carpets which have been preserved date from the first half of the 10th/16th century. They represent culminating points of the art of carpet knotting which are inconceivable without earlier stages. Tīmūrid miniatures of the 9th/15th century represent indeed with great accuracy various genres of carpets. Roughly, two basic types can be distinguished. First a small-pattern group with geometrical design, consisting of repeating squares, stars and crosses, hexagons, octagons or circles. They resemble contemporary tile-patterns. The motifs are framed by bright, small bands which interlace into stars or crosses and in between into knots. The central field is monochrome or is divided in chess-board style with contrasting colours. In the borders a Kūfic-like writing stands out from a dark background. The relation to the small-patterned Holbein carpets is unmistakable.

This type is replaced by arabesque and flower patterns towards the end of the 9th/15th century. The finest specimens are to be found in the miniatures of the painter Bihzād [*q.v.*]. He belonged to the school of Herāt and was in 1522 entrusted with the direction of the library of Shāh Ismā'īl I in Tabrīz. A direct influence on the royal carpet manufactures is thus possible. In this new style with arabesque-patterns, construed lines cross the field—symmetrical to both axes—and outline semi-circles, circles, multi-foils, cartouches and ellipses. These forms intersect, creating segments which are emphasised by their colour and by their arabesque tendril decoration. There are also carpets in which medallions are arranged over arabesques, and others with a simple decoration of scrolls on a monochrome ground. Instead of the stiff Kūfic borders, elegantly twisted tendrils are used. These general principles and individual motifs form the bases of the Šafawid carpets of the 10th/16th and 11th/17th centuries (see A. Briggs, *Timurid carpets*, in *Ars Islamica*, vii, 20, and xi-xii, 146).

#### β. *Šafawid carpets.*

*Dating.* Four carpets with a date inserted and some

documents provide the basis for dating the carpets which were manufactured in the 10th/16th and 11th/17th centuries under the Šafawids: (1) the carpet with the hunting scene, designed by Chiyāth al-Dīn Djāmī and now in the Museo Poldi Pezzoli, Milan, with the date 929/1522, occasionally also read 949/1542; (2) the famous Ardabil carpet by Maḥsūd Kāshānī, dated 946/1539-40, manufactured together with one or even two others for the tomb mosque of Shaykh Šafī; then, after a gap of more than 100 years, (3) a "vase" carpet in the museum of Sarajevo, 1067/1656, by Ustādh Mu'min b. Ḳuṭb al-Dīn Māhānī; and finally (4) a silk carpet by Ni'mat Allāh Djawshakānī, dated 1082/1671, from the mausoleum of Shāh 'Abbās II in Ḳum. Other inscriptions are of a literary character.

A group of silk carpets with larger fields, executed with gold and silver threads, the so-called "Polish"-carpets, represent the style prevalent around 1600 and in the first half of the 17th century (Pl. XV). With the aid of documentary evidence they can be dated as follows. In 1601 the Polish king Sigismund Vasa III ordered such a carpet in Kāshān. In 1603 and 1621 Shāh 'Abbās I had five specimens sent as gifts accompanying an embassy to the Signoria of Venice. Besides, contemporary reports of European travellers contain many references to these carpets. European paintings, which contribute to the dating of Anatolian carpets, are of no help in this respect as far as the Persian carpets are concerned. Only the "Herāt" carpets occur frequently on Dutch paintings of the 17th century. The Šafawid miniatures show that at the beginning of the 10th/16th century the basic types of carpets had been developed. The reproductions are, however, not sufficiently differentiated for conclusions to be drawn from the schools of painting about periods of their origin and localisation. Dates are to a high degree determined by stylistic aspects, the quality of the design and realisation and the shape and various degrees of development of the singular forms being weighed one against another. The margin for a subjective judgment remains thus relatively large.

*Localisation.* Because of their patterns and technical singularities, the Šafawid carpets, with some exceptions, can be divided into clearly discernible groups. It is however difficult to see the relations of these groups with the historically-established knotting centres. Undoubtedly the successive capitals Tabrīz (from 1502), Ḳazwīn (from 1548) and Iṣfahān (from 1596-7) had their court weaving manufactories. It is possible that the early Šafawid carpets came into being in Tabrīz under the influence of Bihzād. It is surprising that no attempts have been made to localise carpets at Ḳazwīn. The work-shops of Iṣfahān are sufficiently documented. Jean-Baptiste Tavernier describes even their exact locality in the *Maydān* area. The manufacturing of silk so-called "Polish carpets" and woollen carpets is proved to have taken place in Iṣfahān. Apparently Kāshān was known before Iṣfahān for its silk weaving. Pedro Teixeira mentions already in 1604 carpets from Kāshān with gold and silk, beautiful brocades and velvets, and the fame of the town was evident in 1601 when King Sigismund Vasa III ordered from there silk carpets, worked with gold. So late as 1670 Chevalier Chardin calls Kāshān the centre of the silk-industry. See Pl. XIV.

The woollen carpets, however, cannot be classified since they are only very summarily dealt with in travellers' accounts. In his appraisal of the quality of Persian carpets, Pedro Teixeira, who left Goa in

1604 and travelled to Europe through Persia, puts those from Yazd in the first place, those from Kirmān—further characterised in 1684-5 by Engelbert Kaempfer as carpets with animal patterns made from the best wool—in the second place, and those from Khūrāsān in the third. Thadäus Krusinski mentions the provinces of Shīrwān, Ḳarabāgh, Gilān, the towns of Kāshān, Kirmān, Mashhad, Astarābād and the capital Iṣfahān as localities in which court weaving manufactories were erected under Shāh 'Abbās I. Tabrīz was important during the 16th century, but in the 17th century it is hardly mentioned any more. Indications of the regions of origin, like north-western Persia (Tabrīz), southern Persia (Kirmān) and eastern Persia (Herāt etc.), which have become quite current in the literature on oriental carpets, represent rather a description of a particular type than a concrete localisation. The discovery of oriental sources like town chronicles, descriptions of weaving manufactories or patterns for designs, might clear up this problem.

*Compartment rugs.* The "Compartment rugs" of the Šafawids are derived from the carpets with arabesque pattern of the Timūrid period. The early specimens resemble their painted examples so closely that one is tempted to give them an earlier date. A Compartment rug in the Metropolitan Museum, New York, and its companion in the *Musée historique des tissus*, Lyons, thus belong entirely to the Timūrid tradition; the net-like pattern consisting of eight-lobed rosettes surrounded by shield-shaped motifs formed by interlaced bands and the East Asian motifs which fill these fields, such as the dragon, the phoenix and cloud bands as well as the arabesque tendrils in the background and the vertical arranged cartouches of the borders can easily be connected with Timūrid miniatures. If dated to the beginning of the Šafawid period, both carpets could have been manufactured in Tabrīz. To this pair of carpets belong some later variants with a raised medallion, establishing the transition to the medallion carpets of North-West Persia, and other variations with shields and quatre-foils in alternating rows. The overlapping fields, found in the carpets in Bihzād's miniatures, are seen again on several 17th century "Polish" carpets.

*Carpets with hunting scenes and animals.* The influence of miniature-painting is most evident on the carpets with hunting scenes and animals. Except for a few carpets with figures arranged asymmetrically, the scenes are adjusted symmetrically on the background, both in horizontal and vertical directions. An arrangement of medallions is put above this, usually with one medallion in the centre and quarters of medallions in the corners of the field. The hunters, on foot or horseback, attack lions, leopards, gazelles, deer and hares with spears, swords and arrows. Together with a great variety of birds, these animals appear also on the carpets with only animals, on which fights between deer or bull and lion, or between the *ch'i lin* or Chinese unicorn and dragon are in the foreground. The "Chelsea" carpet of the Victoria and Albert Museum, London (pl. X), with its net of medallions connected by diagonally arranged pointed ovals, holds a middle position between the Compartment rugs and the traditional carpets with medallions and animals. An upward and downward string of arabesque leaves divides the border in interlocking parts of contrasting colours. As "reciprocal pinnacle border", it was, in a simpler form, very popular on the later Šafawid carpets. Among the carpets which are close to the miniatures,

two large, silk carpets with hunting scenes, in Vienna and Boston (see below), are conspicuous. To these are closely connected some silk woven carpets and about 12 woollen carpets (the so-called "Sanguszko" group).

Carpets with figures flourished in the 10th/16th century under Shāh Tahmāsp I. Apart from the mastery of the designs, their technical realisation is exemplary. They are an expression of court luxury. Such carpets were undoubtedly manufactured in Tabrīz, but the stylistic and technical differences point to other weaving centres as well. Under Shāh 'Abbās I carpets with figures lose their importance, so that the few specimens of the 11th/17th century are mere offshoots of the 10th/16th century carpets.

*North-west Persian Medallion-carpets.* Together with a series of medallion carpets with figures, a restricted group of carpets which have in common a medallion on a background that is filled with tendrils is localised in north-western Persia, including Tabrīz. The most conspicuous specimen is the Ardabil carpet, according to its inscription dated 946/1539-40. A star-shaped medallion, with corresponding quarter medallions in the corners of the field, appears above a fourfold symmetrical double system consisting of elegant spiral tendrils (see Rexford Stead, *The Ardabil carpets*, J. Paul Getty Museum, California 1974). More characteristic is a simpler class of carpets with medallions on a continuous, somewhat clumsy designed pattern of scrolls with small repeat. Here too the medallions are star-shaped and, as in the case with all medallion carpets of the 10th/16th century, they clearly stand out from the pattern of the background. Often secondary designs are added of a vertical cartouche and a shield-pendant, mostly to be found lengthwise on both sides. Border patterns consist of alternating cartouches and rosettes or a continuous, mirrored repeat of short, interlaced arabesque tendrils. Particularly striking in these carpets is their relatively long format. See Pl. XI.

*Herāt carpets.* The Herāt carpets normally have no medallion. They are characterised by a variety of large palmettes with flamboyant contours, which cover the points where most delicate spiral scrolls split and touch the symmetrical axes. The colour of the field is almost always purple, that of the borders dark green or deep blue. On the specimens of the 10th/16th century the spiral scrolls are tightly connected. The design is dense, with many bizarre cloud bands and often intermingled with animals and scenes of animal fights. The rich use of East Asiatic motifs has led scholars to localise these carpets in eastern Persia; it is indeed proved that high-quality carpets were manufactured in Khurāsān and its capital Herāt.

In a later type, the arrangement of tendrils is looser and wider, the cloud bands are less frequent and more clumsy, and animals are completely absent. The pattern is determined by palmettes and long, often two-coloured lanceolate leaves, also simplified. The details and borders show parallels with the "Polish" carpets, and therefore this type of Herāt carpets too can be dated to the 11th/17th century. It is as yet undetermined whether these are identical with the woollen carpets manufactured in Isfahan. Such "Herāt" carpets were exported to India and there imitated. It is difficult to distinguish between Persian and Indian workmanship. So far unambiguous criteria are lacking (see below). These carpets are the only type of classical Persian carpets which appear frequently on European paintings, especially the Dutch genre-paintings of the 17th century. These

"Herāt" carpets were evidently a valuable commodity to Europeans, for they have been preserved in great quantity mainly in Portugal and Holland, countries which through their East India Companies had close commercial relations with Persia and India. See Pl. XII.

*"Vase" carpets.* In contrast with the medallion and "Herāt" carpets, the "vase" carpets have mostly a rising pattern which is mirrored only with respect to the longitudinal axis. The direction is determined by blossoming shrubs and, on many of these carpets, by receptacles which have the form of vases of Chinese porcelain, filled with flowers, from which the name of this group of carpets is derived. Typical is the division of the field by means of oval lozenges. Three groups of lozenges, pushed one against the other, are mostly intersected. They arise from undulating pairs of tendrils which touch each other and retreat behind magnificent flowers. The lozenges may however also be outlined clearly by tendrils or broad lanceolate leaves and be filled up with various colours. Occasionally, the arrangement of lozenges is absent and there remain entangled rows of flower-vases or shrubs arranged in a staggered pattern. Sometimes also patterns of arabesques occur, intermingled with shrubs and in connection with medallions. Striking are the wealth of colours, especially conspicuous in large-sized rosettes and palmettes, and the combination of these stylised flowers with naturalistic bushes. The borders are relatively small and the inner or outer guards are often lacking.

Opinions differ about the date of the "vase" carpets. Some fragments with very luxuriant décor and vivid lineation recall stylistically the best "Polish" carpets, with which they can be dated to the beginning of the 17th century. It is still under discussion whether the pieces of the main group, which are designed in a clearer and stiffer way, originated before or after these fragments. Some are of later date, as is shown by the impoverishment of the pattern. More difficult is the decision about others, which are rich in details notwithstanding the rather simple pattern. The "vase" carpet of the museum of Sarajevo, dated 1656, is not typical. Its extraordinary well-executed design and the fact that figurative motifs are in general lacking, favours the opinion that most of the "vase" carpets originated in the 11th/17th century. Southern Persia (Kirmān) is regarded as the region of their manufacture (see K. Erdmann, review of *A survey of Persian art*, in *Ars Islamica*, viii, 174 ff.). See Pl. XIII.

*Garden carpets.* Safawid gardens with their geometrical division by rectilinear canals, as e.g. Hazār Djarīb near Isfahān, and the garden at Ashraf, laid out by Shāh 'Abbās I in 1612, are reflected in the garden carpets. With their canals and basins with fish and ducks, bordered by trees and bushes in which birds and other creatures frolic, these carpets represent "portable gardens" which are accessible all year round. The earliest specimen is probably a garden carpet in the Jaipur Museum. According to an inscription on the back, this "foreign carpet" arrived at the palace in Jaipur on 29 August 1632, probably by order or as a gift. Apart from this one, only two other garden-carpet from the Safawid period have survived. The type lives on in a later, restricted group which can be distinguished from its Safawid predecessors by the schematic outline of the details, although the general principle remains the same. They may have been manufactured in north-western Persia from the second half of the 18th century until sometime in the 19th century (see M.S. Dimand,

*A Persian garden carpet in the Jaipur Museum, in Ars Islamica, vii (1940), 93; and Pl. XVI, no. 17).*

"Portuguese" carpets. The ten to fifteen "Portuguese" carpets all go back to the same model and form thus the most coherent group. They owe their name to the representations of sailing ships with European-dressed persons on board and a man who emerges from the water among fishes and sea monsters. The representation is repeated four times in the corners, and recalls the ornamental motifs on European maps. One of the interpretations of that scene is that it depicts the arrival of Portuguese ambassadors in the Persian Gulf. From the combination of oriental and European motifs it was further concluded that these carpets were intended for Portuguese in Goa. The rest of the filling of the fields is also unusual. It consists of a lozenge-shaped middle field with four small, pointed oval medallions and irregularly notched and feathered outline, surrounded by concentric interlacing stripes of various colours. In the earlier specimens these stripes are vivid and irregularly forked, in the later ones they are rectilinear, parallel and regular. While there is no doubt about dating them to the 17th century, their place of origin still remains uncertain. Formerly these carpets were considered to have originated in southern or central Persia, but now some scholars have proposed India. Neither hypothesis is supported by convincing proofs (see C.G. Ellis, *The Portuguese carpets of Gujarat, in Islamic art in the Metropolitan Museum of Art*, ed. R. Etinghausen, New York 1973, 267).

*Silk carpets.* The change in style which the Šafawid carpets underwent between the 10th/16th and the 11th/17th centuries, is especially recognisable in the silk carpets. The most famous and largest carpet of this kind is the so-called Vienna hunting carpet which was in the possession of the Austrian imperial house and is now in the Museum für angewandte Kunst in Vienna. The use of silk for pile, warp and weft produces a very fine texture and gives the possibility for an extremely precise design. So it is not only because of its costly material that this carpet heads the figurative medallion carpets oriented towards the miniature painting and dating from the period of Šhāh Ṭahmāsp. Its size of 6.93 × 3.23 m. corresponds with that of the large, woollen, knotted carpets. Many details are executed in gold and silver brocade. It is said to have originated from Tabriz or, more probably, from Kāshān, known for its silk industry. A silk hunting carpet from the collection of Baron M. de Rothschild, which can be compared with the Vienna carpet, is now in the Museum of Fine Arts in Boston. Some thirteen small-sized silk carpets, which K. Erdmann called the "small silk carpets of Kāshān" (*Siebenhundert Jahre Orientteppiche*, 143), are related to these two. Apart from four carpets with animals and animal fights in a rising, symmetrical arrangement, they also represent the type of the early medallion carpets. Representations of persons and peris are lacking. They return on some woven silk carpets, also mostly of small size, which fit in stylistically with the figurative woollen carpets of the "Sanguszko" group, and among which a fragmentary hunting carpet in the Residenzmuseum at Munich stands out. Because of its size, theme and quality of delineation it is directly related to the Viennese hunting carpet. It must, however, be taken into account that the technique of a woven carpet does not permit the elegant lineation of a knotted one. All these woven carpets have pointed oval medallions with transverse cartouches, borders with alternating cartouches and quatrefoils. In comparison

with the knotted silk carpets the use of gold and silver brocade on large fields is new, and not only with respect to the emphasising of details. If the making of the Vienna hunting carpet, which undoubtedly figures at the beginning of the development, is dated to about the middle of the 16th century, then the "small silk carpets of Kāshān", the figurative woven carpets and the woollen carpets of the "Sanguszko"-group present the style of the second half of the 16th century.

Contrasting with the new figurative woven carpets, there is a large group of woven carpets with purely floral decor, in which a coarsening of the lineation is recognisable. In two of these carpets—one completely preserved in the Residenzmuseum in Munich (Pl. XI) and the lengthwise half of another in the Textile Museum in Washington—the arms of the Polish king Sigismund Vasa III have been woven. As is known from documents, the king ordered in 1601 silk carpets worked with gold from Kāshān. In a bill of 12 September 1602 pairs of carpets are mentioned, together with the sum of five crowns for the weaving of the royal arms. In 1642 an undefined number of carpets came as dowry into the possession of the Elector Philip William of the Palatinate by his marriage to princess Anna Catherina Constanza, a daughter of Sigismund III. Among these carpets were undoubtedly not only the woven carpets with the arms but certainly also the other woven carpets and the "Polish" carpets, now in the Residenzmuseum. The carpets with the arms thus illustrate the style of woven carpets about 1600. They form the starting point for a chronological order of the floral woven carpets, which with their latest specimens may reach as far as the second half of the 17th century. In the shape of their medallions, however, they remain related to the early Šafawid carpets.

The view that carpets with figurative representations were no more in fashion in the 17th century is confirmed by the knotted silk carpets, the large fields of which are brocaded with gold and silver threads, and the manufacturing of which flourished under Šhāh 'Abbās I. At first these carpets were thought to be of Polish origin and therefore were called "Polish carpets". The group includes now about 230 specimens, which came into the possession of European courts or churches as gifts of ambassadors or on order. They were however not only intended for export but were also in Persia a sign of wealth and luxury, and bear witness to the court taste in the beginning of the 17th century. Since these "representation" carpets, in contrast to the woollen carpets, evoked again and again the admiration of European travellers, they form rich source material, much more so than any other kind of Šafawid carpets. And thus it can also be ascertained that the main group was produced in the court manufactory in the *Maydān* area of Iṣfahān. In the "Polish" carpets the relaxation of the 16th century rules for the form of the carpets is unmistakable. This is shown by the shifting from lines to fields, which finds expression in the abandoning of the monochrome foundation and in the loss of the clear delineation of the medallions against the background. Characteristic is further a luxuriant, merely floral décor.

Production in great quantities brought about a rationalisation of the design, as can easily be shown from the many specimens known. This kind of production necessitated also economy in the material, as may be seen from the preference for smaller sizes

and above all from the use of cotton besides silk in the weft.

The patterns can be reduced to about a dozen basic systems, mostly present in the few large-sized carpets. Variety is brought about by a difference in choice of various details, by different medallions and borders and by variations of colours. Apparently these carpets were preferably knotted in pairs, because until today 25 exact pairs are known, harmonising even in the borders and the division of colours. Continuing the tradition of Kāshān, where the earliest of these carpets may have originated, the uniform style of the "Polish" carpets was probably developed in Iṣfahān at the beginning of the 17th century, after the court was transferred there in 1005/1596-7. The "Polish" carpets, characterised by an obvious negligence in the discipline of the drawing, may date from the second half of the 17th century. The destruction of the Ṣafawid dynasty by the Afghāns in 1722 put an end to the manufacture of brocade textile (see K. Erdmann, *Persische Wirkteppiche der Safawidenzeit*, in *Pantheon* (1932), 227; F. Spuhler, *Der figurale Kaschan-Wirkteppich aus den Sgn. des regierenden Fürsten von Liechtenstein*, in *Kunst des Orients*, v/1 (1968), 55; T. Mankowski, *Note on the cost of Kashan carpets at the beginning of the 17th century*, in *Bull. of the American Inst. for Persian Art and Archaeology*, iv (1936), 152; M.S. Dimand, *Loan exhibition of Persian rugs of the so-called Polish type*, Metropolitan Museum New York 1930; F. Spuhler, *Ein neuerworbener "Polenteppich" des Museums für Islamische Kunst*, in *Berliner Museen*, N.F., xx/1, 27; idem, *Seidene Repräsentationsteppiche der mittleren bis späten Safawidenzeit*, inaugural thesis, Berlin 1968, to be published by Faber and Faber, London).

#### y. 18th and 19th Centuries

The few carpets from the 18th century abandon to a great extent the tradition of the two preceding centuries. Simpler repeated patterns with plant motifs like trees, shrubs, forked leaves, palmettes and rosettes are preferred. In the 19th century production revives. The old centres of Tabriz, Iṣfahān, Kāshān, Kirmān and Khurāsān with Herāt gain new importance with mostly large carpets. In Tabriz and Kāshān small-sized silk carpets are knotted too, also as prayer rugs. The arrangement of the medallions on a monochrome or small-patterned background is preferred. A typical design of the 19th century is the "Herātī" pattern, spread all over Persia. The main element of its repeat is a lozenge with four lanceolate leaves which run parallel to the sides and a rosette in the centre. The *boteh* or almondstone pattern is equally popular. The figural carpets have their origin in the hunting and animal carpets of the 10th/16th century and came mainly from Tehran and Kirmān. Elements of the classical pattern are geometrised and distorted. Peculiarity and liveliness cannot be denied to the products of the 19th century. This is especially true for the carpets from the surroundings of the town of Bidjār, which are, moreover, of outstanding quality. Characteristic is an extremely fine carpet, dated 1209/1794 (formerly in the McMullan collection, now in the Metropolitan Museum, New York), which in colouration and structure belongs to the Bidjār carpets and for the drawing of which a pattern of a "vase" carpet was used. A series of later Bidjārs can be connected to this one.

In contrast with the preceding centuries, there have been preserved from the 19th century not only

carpets from the manufactories, but also carpets that were made by tribes and villages for their personal use, and village products of cottage industries, marketed in the larger towns. They are usually small-sized. Their charm lies in their originality. To these belong carpets from the towns of Hamadān, Saruḳ, Bidjār, Heriz, Senneh and Kirmānshāh and from the Kurdish tribes in the neighbourhood. Some of the patterns of the Bakhtiyāris living to the west of Iṣfahān are based on the Iṣfahān-style. The Kaṣhkā'ī nomads around Shīrāz use both purely geometrical forms and flowers and animals (see A.C. Edwards, *The Persian carpet*, London 1953) (see further on tribal carpets, Section iii below).

#### e. India

During the 16th and 17th centuries carpets sometimes of very high perfection were manufactured in the towns of Āgra, Lahore and Jaipur, evidently without any preceding Indian tradition in this field of handicraft. The stimuli surely came from Persia. Under the Mughal Akbar I (1556-1605), a strong tendency towards Ṣafawid taste was developing. This led to the summoning of Persian artists and craftsmen and affected all the artistic activities under Akbar's successors Ḍjahāngīr, Shāh Ḍjahān and Awrangzīb until about 1700. Between 1625 and 1630 European influences too made themselves felt. In the present state of research it is not possible to establish a chronology of the Indian carpets of the Mughal period. It is plausible that the separate groups did not replace one another but existed contemporaneously. Some fragments with grotesque animal patterns which are rooted in Indian mythology are to be placed at the beginning of the development and dated perhaps as early as the 16th century. The miniatures in the *Akbar-nāma* of Abu 'l-Faḍl [q.v.], dated 1602-5, give us an idea of the carpets ca. 1600. With their ogival medallions, scrolls and cloud-bands, they correspond to the Persian carpets of the 16th century, so that the actual origin remains obscure. In the same way the Indian carpets of the later "Herāt" type cannot with certainty be separated from their Persian predecessors. A group with pattern of scrolls stands out more clearly; it is characterised by lanceolate leaves at the ends of the scrolls, formed by leaves of blossoms which overlap like scales. This group is represented by a carpet which was ordered in Lahore and presented in 1634 by Mr. Robert Bell, now in the possession of the Girdlers' Company of the City of London. Also authentically Indian is a carpet with scenes of animal fights, carrying the arms of the Fremlin family (now in the Victoria and Albert Museum in London), which helps to distinguish the Indian animal carpets from the Persian ones. R. Skelton has proved convincingly that a naturalistic flower style arises in miniature painting between 1620 and 1627, towards the end of the reign of Ḍjahāngīr. This style, encouraged by the import of European botanical works, spread to carpets and textile fabrics and did not hesitate to employ plastic effects in its design, produced by gradations of colour. A carpet with rows of blossoming shrubs lies underneath Awrangzīb's throne on a portrait painted around 1660. A date *post quem* is thus available for quite a number of extant carpets of this kind, with cherry-red background and a fine arrangement of colours. Such a date is valid too for the extraordinarily tight-knotted prayer rugs with a central blossoming bush, standing out from a flat landscape. Apparently both types did not originate before the second quarter of

the 17th century and may have reached their peak of popularity about the middle of that century. Their differing quality indicates that they were manufactured in various centres. In the 18th and 19th centuries the Indian carpets seem to have been made only for export and are artistically without consequence (see R. Skelton, *A decorative motif in Mughal art*, in *Aspects of Indian Art, Papers presented in a symposium at the Los Angeles Country Museum of Art*, October 1970, Leiden 1972, 147; and Pls. XVI, XVII).

#### f. The Caucasus

The stylised, archaising representations of pairs of animals, dragons, trees, bushes, etc. on the Caucasian dragon and tree carpets caused F.R. Marquart in 1908, in the first chronology of Oriental carpets, to place these carpets at the beginning of the development and to date them to the 13th/14th centuries. This opinion however is contradicted by the evident influence the Şafawid carpets have had on these "dragon" carpets, as is shown by the floral motifs, animals and scenes of animal fights. These carpets got their name from the dragons which are mostly distorted until they are unrecognisable. The dragons are inserted into a rising lozenge-shaped design, made from diagonal stripes. This arrangement and the narrow borders point to a relation with the "vase" carpets. According to modern opinion, only a few of these carpets date back to the 17th century. Together with their Caucasian versions, most of them are derived from the 18th century tree-carpet and floral carpets with spiral tendrils and have their origin in the Shirwān/Karabāgh area. Some of the Caucasian carpets of the 17th and 18th centuries are of considerable size, which indicated that they were manufactured in urban manufactories. In accordance with the sense of decoration of the rural population, a profusion of bright patterns with large fields in lively colouration developed in the 19th century from the above-mentioned wealth of forms. With their geometrical design these small carpets and runners—there are no more large-sized carpets in this period—stand out clearly from the Persian carpets of the 19th century. The most important knotting centres were Kazak, Shirwān, Dāghistān, Karabāgh, Mūghān, Talīsh, Gandja and Kuba (see A. Sakisian, *Nouveaux documents sur les tapis arméniens*, in *Syria*, xvii (1936), 177; M. Ağaoğlu, *Dragon rugs, a loan exhibition*, The Textile Museum Washington 1948; U. Schürmann, *Teppiche aus dem Kaukasus*, Brunswick n.d., Eng. tr. Grainger, Basingstoke 1974; Catalogues: *Kaukasische Teppiche*, Museum für Kunsthandwerk Frankfurt 1962; C.G. Ellis, *Caucasian carpets in the Textile Museum*, in *Forschungen zur Kunst Asiens*, in *Memoriam Kurt Erdmann*, Istanbul 1969, 194; and Pl. XVII, no. 20).

#### g. Spain

In a survey of knotted carpets as expressions of Islamic handicraft, the early Spanish carpets should also be mentioned. The so-called synagogue carpet of the Islamisches Museum, Berlin (I, 27), is probably the oldest and may belong to the 14th-15th centuries. They are often large-sized pieces in a style which prefigures the later "Holbein" carpets. The colours of the Spanish carpets are marked by stronger contrasts. The "Turkish" group may date from the 15th/16th centuries and is succeeded by works with Renaissance elements. Alcaraz, Letur, Cuenca and Valencia are known as knotting centres. The technical peculiarity of the Spanish carpets consists in the fact that the knot is always twisted about a warp

(see J. Ferrandis Torrès, *Exposición de alfombras antiguas españolas*, Madrid 1933; E. Kühnel, *Maurische Teppiche aus Alcaraz*, Pantheon 1930, 416; E. Kühnel and L. Bellinger, *Catalogue of Spanish rugs, 12th cent. to 19th cent.*, The Textile Museum, Washington 1953).

#### h. Turkestan

The varieties of the Turkoman productions are determined by the use that is made of them, especially as furnishing of the tent [see KHAYMA, iv, Central Asia]. Small carpets serve as floor-coverings, as curtains for the entrance, corresponding in format and design with a prayer rug, as tent-bands which border the upper edge of the round yurt. Various bags to store supplies, saddlebags and camel-ornaments are also knotted. They all have in common a deep-red to dark-purple ground and an all-over, geometric, repeat design in bright red, blue, white and (rarely) green and yellow. The way in which the *gül*, the star-shaped to octagonal leading motif which has the function of a tribal sign, is executed, may indicate the particular nomadic tribes: Tekke Turkomans, Yomuts, Čavdiris (Tchodovs), Ersaris and Sariqs, to whom can be linked the Balūč in the west and the Afghāns in the south. The way in which transposed rows of principal and subordinate *güls* are arranged, already existent on carpets to be seen on Timurīd miniatures and on "Holbein" carpets, suggests a long tradition in the knotting art. Since, however, any support for an accurate dating is lacking, one hesitates to date single specimens to the 18th century (see A. Bogolubow, *Tapis-series de l'Asie centrale faisant partie de la collection réunie par A. Bogolubow*, St. Petersburg 1908 (new edition: A.A. Bogolyubov, *Carpets of Central Asia*, ed. J.M.A. Thompson, London 1973); H. Clark, *Bokhara, Turkoman and Afghan rugs*, London 1922; A. Thacher, *Turkoman rugs*, New York 1940; U. Schürmann, *Zentral-Asiatische Teppiche*, Frankfurt 1969, Eng. tr., *Central Asian rugs*, London 1970; V.G. Moshkova, *Kovry narodov sredney Asii Konca 19-20 vv.*, Tashkent 1970, Ger. tr., *Die Teppiche der Volken Mittelasiens*, Hamburg 1974).

#### 3. Public Collections of Oriental Carpets

*Europe.* The most important collections are in Vienna, Österreichisches Museum für angewandte Kunst; London, Victoria and Albert Museum; Istanbul, Türk ve İslām Eserler Müzesi; Berlin, Islamisches Museum, Staatliche Museen zu Berlin (East Berlin) and Museum für Islamische Kunst, Staatliche Museen, Stiftung Preussischer Kulturbesitz (West Berlin). Also in Amsterdam, Rijksmuseum; Florence, Museo Bardini; Hamburg, Museum für Kunst und Gewerbe; Leningrad, Hermitage; Lisbon, Fondation Calouste Gulbenkian; Lyons, Musée Historique des Tissus; Milan, Museo Poldi Pezzoli; Munich, Residenzmuseum and Bayerisches Nationalmuseum; Paris, Musée des Arts Décoratifs.

*U.S.A.* The most important collections are in New York, The Metropolitan Museum of Art, and Washington, The Textile Museum. Also in Boston, Museum of Fine Arts; Cleveland, The Cleveland Museum of Arts; Detroit, The Detroit Institute of Arts; Los Angeles, County Museum; Philadelphia, Philadelphia Museum of Art; St. Louis, City Art Museum of St. Louis.

#### 4. Bibliographies

The most extensive bibliography is in K. Erdmann, *Der orientalische Knüpfteppich*, Tübingen 1955 (several

editions) arranged according to areas and within these chronologically by the year of publication (English tr. C.G. Ellis, *Oriental carpets*, London 1960, 2nd impression, Fishguard 1976); K.A.C. Creswell, *A bibliography of the architecture, arts and crafts of Islam to 1st Jan. 1960*, London 1961, Oxford 1973, 1139-1204, alphabetically arranged by authors (Supplement, Jan. 1960 to Jan. 1972, Cairo 1974 (329-37)); J.D. Pearson, *Index islamicus*; R. Ettinghausen art. *Kālī*, in *Et* Suppl.

*Bibliography*: In addition to the works mentioned in the article, see *Tafelwerk zur Ausstellung orientalischer Teppiche, Orientalische Teppiche, Wien, London, Paris 1892-1896*, 3 vols.; Supplement, *Altorientalische Teppiche*, Leipzig 1908, ed. A. von Scala; F.R. Martin, *A history of oriental carpets before 1800*, Vienna 1908; *Die Ausstellung von Meisterwerken muhammedanischer Kunst in München 1910*, ed. F. Sarre and F.R. Martin; F. Sarre and H. Trenkwald, *Altorientalische Teppiche*, i, Vienna and Leipzig 1926; ii, 1928; *A survey of Persian art*, London, New York 1938, ed. A.U. Pope (reprint 1967).

Exhibitions and Museum publications: *L'Art de l'Orient Islamique, Collection de la Fondation Calouste Gulbenkian*, Museu Nacional de Arte Antiga, Lisbon 1963; *Meisterstücke orientalischer Knüpfkunst, Collection A. Danker*, Städtisches Museum Wiesbaden, 1966; *The Kevorkian Foundation collection of rare and magnificent oriental carpets, Special Loan Exhibition, a guide and catalogue*, by M.S. Dimand, Metropolitan Museum of Art, New York 1966; *Islamische Teppiche, The Joseph V. McMullan collection, New York*, Museum für Kunst-handwerk Frankfurt 1968, catalogue by U. Schürmann; *Alte Orient-Teppiche*, Museum für Kunst und Gewebe Hamburg 1970, ed. R. Hempel and M. Preysing; *Arts de l'Islam des origines à 1700*, Orangerie des Tuileries, Paris 1971; *Islamic carpets from the collection of Joseph V. McMullan*, Hayward Gallery, London 1972; M.S. Dimand and Jean Mailey, *Oriental rugs in the Metropolitan Museum of Art*, New York 1973.

Private collections and handbooks: J.V. McMullan, *Islamic carpets*, New York 1965; M.H. Beattie, *Die orientalische Teppiche in der Sammlung Thyssen-Bornemisza*, Castagnola 1972; P.M. Campana, *Il tappeto orientale*, Milan 1962; G. Cohen, *Il fascino del tappeto orientale*, Milan 1968; R. Hubel, *Ullstein Teppichbuch*, Berlin, Frankfurt, Vienna 1965; K. Erdmann, *Siebenhundert Jahre Orientteppich*, Herford 1966 (Eng. tr. M.H. Beattie and H. Herzog, *Seven hundred years of oriental carpets*, London 1970).

(F. SPUHLER)

## ii. IN THE MUSLIM WEST

In the Muslim West, the term *bisāt*, pl. *busuṭ* is attested, notably by Ibn Khaldūn, *Muḳaddīma*, who uses it to describe the revenues paid every year by the Aghlabids to the 'Abbāsīd caliphs; under the caliphate of al-Ma'mūn, there is mention of 120 carpets (*busuṭ*). It may thus be supposed that these were precious objects of real artistic value and one's natural inclination is to think of "the carpet on which the sovereign and his ministers are seated" (Dozy, *Suppl.* i, 85, col. 2). Unfortunately, nothing is known of these carpets which were presumably manufactured in the large cities, al-Ḳayrawān and its satellites 'Abbāsiyya or Raḳḳāda, in particular. Does the fact that these products were intended for the highest dignitaries permit us to suppose that, as early as this period, there was at least one *ṭīrāz* [q.v.] in Ifrīkiyya? A workshop of this kind is attested

at Mahdiyya in the period of the Fātimīd al-Manṣūr (*Djawdhār*, tr. Canard, 75), and there is mention of the manufacture of carpets there. It would seem legitimate to suppose that, under the Aghlabids, there was the capacity for weaving luxury carpets (no doubt inspired by the carpets of the East) intended for the caliphs and for the most senior officials of the Muslim world.

The term *bisāt* is also employed by Yāḳūt (7th/13th century), who mentions *busuṭ* in the region of Tebessa and describes them as sumptuous, well-made and long-lasting. Should these carpets be seen as the ancestors of the lock-stitched carpets which, until recently, still constituted one of the principal items of tent furniture, especially in the region of Tebessa: the tribes of the Nememsha, the Ḥarakta, the Mahadba and the Hamāma? The most ancient of these products, with strictly geometric decoration, appear to perpetuate the old local traditions such are still to be found in the Djebel Amour, as well as in the Moroccan Middle and High Atlas.

*Bisāt* is not at the present time employed in any part of North Africa, where various other Arabic words are used to designate these long, polychrome, woven fabrics: *ḳīṭf* or *ḳāṭifa*, *maṭrah*, *fāsh*, *farrashīyya*, while in Morocco, Berber or Berberised words are also used (P. Ricard, *Corpus*); as for the carpets manufactured in the towns (al-Ḳayrawān, Guergour, Nedroma, Rabat, Mediouna), they are called *zarbiyya*, pl. *zrābi*, or *sadjjādā*, pl. *sadjjādāt*. These carpets are strongly influenced by the carpets of Anatolia and of old Andalusia.

The existence of *busuṭ* carpets in Muslim Spain is attested by various authors, in particular at Murcia. These products were much valued in the Orient (al-Maḳḳārī, *Nafḥ al-ṭīb*, i, 123). Yāḳūt speaks of the *busuṭ* of Elche (Alsh) (i, 350); but the expression *watā'* is preferred when describing the carpets of Chinchilla or of Baza, the reputation of which extended as far as the Orient.

In the modern and contemporary period, the centres of traditional lock-stitch weaving in North Africa are distributed as follows:

(1) Carpets woven usually by men (*reggām*), generally within the tent:

*Tunisia*: the Hamāma, the Mahadba, the Durayd, the Ouled bou Ghanem tribes.

*Algeria*: the Nememsha, the Ḥarakta, the Maadid, the Hodna tribes. See Pl. XVIII.

All these carpets are characterised by ancient, essentially geometric patterns, with compositions that vary little, and a colour scheme reduced to two or three shades, and by apparently more recent patterns inspired by the carpets of Anatolia, characterised by one or several central polygonal motifs (*mīhrāb*) framed by orthogonal filets. The multiplication of *mīhrābs* permits the creation of carpets of large dimensions. They are all polychrome, red being the dominant background colour.

The carpets of the Djebel Amour (Algeria) have remained faithful to geometric décor and to ancient local compositions; there are only two dominant colours, red for the background and dark blue for the motifs (recently replaced by black). At the edges there are fringes woven with a polychrome geometric design. These carpets are comparable with certain Moroccan woven products of the Middle Atlas. See pl. XIX.

*Morocco*: carpets of the High Atlas: Haouz of Marrakesh, Ouled bou Sbaa, Aīt Ouauzguit, etc.; carpets of the Middle Atlas: Zemmour, Zaian, Beni

M'tir, Beni Mguild, Ait Youssi, Marmoucha, Ait Saghrouchen, Beni Alaham, Beni Ouarain, etc.

All these carpets manufactured among Berber tribes are of geometric design and employ only a limited range of colours.

(2) Carpets of urban manufacture showing Anatolian influence (woven by women):

*Tunisia:* al-Kayrawān, Tunis, and various coastal cities where the influence of al-Kayrawān has been effective for about a century, there being sometimes local types with a fair degree of originality, (Bizerta in particular).

*Algeria:* Cuergour and Sétif (at this present time in the process of disappearing), Souf, Qal'a of the Banū Rached (influenced by Andalusian products).

*Morocco:* Rabat-Salé, Casablanca, Mediouna (also influenced by Andalusia).

All these carpets were, or still are, woven in the home, as a family business.

In the contemporary period, the manufacture of carpets, an export product, is tending to become an industry, especially in the major cities such as al-Kayrawān, Tunis, Tlemcen, Rabat-Salé, Casablanca, and also in the more modest towns such as Nabeul, Bizerta, Tebessa, Cherchel, etc.

*Bibliography:* Giacobetti, *Les tapis et tissages du Djebel Amour*, 1932; P. Ricard, *Corpus des tapis marocains*, 4 vols. 1923-24; L. Poinssot and J. Revault, *Tapis tunisiens*, 4 vols. 1937-57; L. Golvin, *Les arts populaires en Algérie*, 6 vols. 1950-6. (L. GOLVIN)

### iii. TRIBAL RUGS

1. Nomenclature. Until the 1960s few writers on carpet history except, perhaps, A.C. Edwards (*The Persian carpet*, London 1975), distinguished between the output of cities, villages and tribal groups, and only in the past twenty-five years has the ancient life style of Central Asia's pastoral nomads attracted anthropologists, making it possible to isolate and study their artefacts.

The custom of marketing an area's rugs in the local town has obfuscated classification—for instance, Bergama has lent its name to rugs made by villagers and tribes in its hinterland, while Bukhara is still the popular label for the rugs of the Tekke Türkmén. Such misleading nomenclature, coined in the last century, is now being superseded by more precise classification. Similarly, confusing technical terms, with variants in different countries, are being replaced by clearer terminology, based on I. Emery's work (*The primary structure of fabrics*, Washington, D.C. 1966). In the past the words *carpet* and *rug* (and in French the word *tapis*) have been used synonymously, leading to difficulty in the study of documentary evidence. *Carpet* is now used to define a knotted article of some size, say, 300 by 240 cm. and upwards, while a *rug*, also of knotted pile, is smaller, measuring up to about 300 by 200 cm. Both words have been used to define flat-weave articles as well, and these are now named after their technique, for instance, *kilim* or *gelim*, which is tapestry-woven, and *sumak*, after *sumak* weft-wrapping. Only knotted pilework is discussed here.

2. Technique. There are a number of knots of which, as noted in Section i. 1 above, the two most common are the Gordes or Turkish knot and the Senneh or Persian knot. Both are of known antiquity; the Pazryk rug, dating from the 4th to 3rd century B.C., was made with the Turkish knot, while the Basadar fragments, possibly a century older,

show the Persian knot. Again, these terms have proved confusing. The second was named after Senneh, in northwestern Iran, but in the area of modern Sanandaj the Turkish knot predominates. Consequently, although the so-called Turkish knot is the most commonly used in Turkey, both knots are found in Iran and both have been found in the same rug. Classification by knot only, therefore, should be regarded with caution. Each has different characteristics: the Turkish knot is symmetrical, the two tufts lying evenly on either side of the warps, and it is suited to a longer pile, while the Persian knot is asymmetrical, the tufts slanting to the left or right of the warps, and is favoured where clear definition of a complex pattern is required. Some scholars have now adopted the term *symmetrical* for the Turkish knot and *asymmetrical* for the Persian.

Description of designs is also prone to variation and many names have been arbitrarily coined by Europeans. A floor carpet can be described as follows: first, the central field and its ornament (some German writers, however, use the word *field* to define the motifs), while the borders are numbered starting from the inner one and specifying the main, or largest, border and the guards or narrow bands which divide them. This system may be adapted to describe saddlebags, tent-bags and animal trappings.

In city workshops, fixed vertical looms make large pieces possible, and women knotters work from a cartoon under male supervision. Villagers use both vertical and horizontal looms, while among the tribes the latter is normal. The tribal loom (Pl. XX), evolved into streamlined simplicity, consists of wood warp beams, pegged into the ground. It is light, easily transported and flexible since it can be used to weave tapestry or, with the addition of a tripod supporting heddle rods, can be adapted for knotting or various compound weaves. It is necessarily small, and tension is difficult to control since it may be moved while a rug is being made. While cotton warps are favoured in cities and villages, tribal rugs until recently were knotted on wool warps, or a mixture of wool and goat hair, giving them their characteristic suppleness. Tribal wool is of fine quality, carefully selected and dyed. Vegetable dyes were retained longer by the tribes than by settled weavers, and a much-admired feature is the variations in tone, known as *abrash*, due to the dyeing of small batches of wool as required. Most of the dye plants like madder, weld and indigo are common, and it is the recipes which give colours their individuality.

The technique of knotting varies. In southern Iran knots are tied with the fingers and cut with a knife, while up in the north-west the wool is pulled through the warps with a hooked tool, at the other end of which is the cutting-blade. Having begun with up to 20 cm. of flat-weave, known as an "end", the weaver ties one, two or more rows of knots and between these inserts a row or two of plain-weave wefts, packing them down firmly with a carpet comb (Pl. XXI) to hold the knots in position. The cording at the sides is put in as the work progresses. Tribal weavers will use an old rug as a model and are free to improvise, especially on detail. The rug is finished with another "end" and the excess warps form the fringes. Clipping of the pile, requiring great skill, is done by tribeswomen as they go along, while in city workshops the knots are roughly slashed and the finished carpet, looking like an unkempt hedge, is clipped by a specialist. Tribal knotting varies from the coarse, shaggy pile of

Yürük rugs to the fine, velvety surface of Türkmen bags. Each has its own attraction, since the design is evolved to enhance the quality of the wool.

3. History. The carpet from Barrow 5 at Pazyryk (see S.I. Rudenko, *Naseleniya gornogo Altaya v Skifskoe Vremya*, Moscow-Leningrad 1953. Eng. tr. M.W. Thompson, *Frozen tombs of Siberia*, London 1970, 298-304) pushed back the beginnings of carpet history from the 6th century A.D. to the late 3rd century B.C. It is, however, a sophisticated piece, both in technique and design, arguing a long-developed tradition. It is unlikely that it was made by the Altai people, and it more plausibly reflects an eclectic taste for exotic imports. The Pazyryk burials, however, provide invaluable evidence of the life style of these Central Asian pastoral nomads, putative ancestors of later tribal groups, which was notable then, as now, for the major part played by textiles in their economy and cultural heritage. With their wealth based on their animals, and their sources of conflict pasturage and water, they made seasonal migrations, as do the Bakhtiyārī, the Kashkā'ī and Khamseh in Iran today. They produced a class of mounted warriors who revolutionised warfare for both the Romans and the Chinese, gave rise to innumerable legends and bred distrust and fear among urban dwellers. It is likely that the women undertook the spinning and weaving, and even today these activities are considered effeminate by tribesmen with the memory of an élite warrior caste (Pl. XX). It can be surmised that knotting originated among even earlier pastoral nomads living in a harsh winter climate who were naturally reluctant to slaughter their animals and, as an alternative to fleeces, evolved a warm, tufted fabric. K. Erdmann and others believed that knotting may have developed among Turkic peoples in West Turkestan, (Erdmann, *Der orientalische Knüpfteppiche*, Tübingen 1955, Eng. tr. C.G. Ellis, *Oriental carpets*, Fishguard 1976, 14-16) and it would seem likely that it arrived in Anatolia with the Saldjüks in the 11th century A.D., where it was established by the 13th century as is attested by the Saldjük pieces from the mosque of 'Alā' al-Dīn in Konya (now in the Türk ve İslam Müzesi, Istanbul, illustr. in O. Aslanapa, *Turkish art and architecture*, London 1971). Also, Marco Polo, writing of his visit to Anatolia in 1271-2, says that the finest carpets in the world were made in Konya, Sivas and Kayseri, while Abu 'l-Fidā, quoting Ibn Sa'īd, who died in 1274, says that Aksarāy's carpets were exported "to all countries", and Ibn Baṭṭūṭa in the 14th century mentions that Turkish carpets were widely exported. Since many tribes surviving into modern times claim Turkic descent, it is no surprise to find design elements which are traceable to Saldjük pilework. The all-over geometricised repeat, found in the Konya pieces, is a characteristic of Türkmen floor rugs, while octagons, hooked medallions and eight-pointed stars, together with border motifs (always the most conservative element in rug design), like the angular scrolling stem, key fret and arrowhead, are ubiquitous in tribal rugs and village rugs from Turkey, the Caucasus and Iran. Some of the creatures which appear frequently on Akstafa, Kashkā'ī and Khamseh rugs also have a long pedigree, for their distant ancestors appear in Italian paintings of the 13th to 15th centuries, copied from rugs imported to Italy from Asia Minor (for a detailed discussion of painting evidence see *Bibl.*) *The marriage of the Virgin*, painted in the early 14th century by Niccolò di Buonacorso, in the National Gallery, London,

shows a carpet with repeating octagons, each enclosing a large-tailed bird, precursor of the fantastic birds knotted into 19th century rugs from south-western Iran; while of surviving knotted examples, similar birds appear in one of the Konya fragments, and the Marby rug, of early 15th century date, now in the Statens Historiska Museet, Stockholm, has two octagons, each enclosing a pair of crested birds on either side of a stylised tree (see C.J. Lamm, *The Marby Rug and some other fragments of carpets found in Egypt* (see above section i. 2. 6. for full ref.).

Since they were subjected to continuous wear, very few tribal rugs of a pre-19th century date have survived (although notable exceptions are the Türkmen rugs in the Ethnographic Museum, Leningrad, unpublished in the West), making it impossible to write a coherent history. It can be inferred, however, that these ancient patterns persisted in spite of the revolutionary changes in 16th century Iran under royal patronage, emulated in Ottoman court workshops, where the influence of illuminators and bookbinders emphasised the centre of the carpet and introduced a large new repertoire of motifs. The village and tribal traditions seem to have developed independently of the cities but, although they were inevitably more conservative, there is evidence of borrowing and of organic growth; and 19th century rugs show considerable diversity in the treatment of old themes.

The 19th century, which saw the earliest European documentation of the Central Asian tribes, also marked a watershed, for the definition of the national frontiers of Iran, Russia and Afghanistan dealt a major blow to pastoral nomadism, and this century has seen wholesale settlement.

The ethnically most homogeneous tribal confederacy was the Türkmen, who retained their exclusivity until their territory on the Trans-Caspian steppes was split up in the 1880s. Modern study has demonstrated major shifts of influence within the confederacy, however, with tribes like the Salur and Sarīk, powerful in the 17th and 18th centuries, being overtaken in the 19th by the Tekke and becoming extinct as tribal entities (see S. Azadi, *Türkmenische Teppiche*, exhibition cat., Hamburg, Eng. tr. 1970, *Turkoman carpets*, London 1975, 13-14 for detailed lists of tribes and *tā'īfeh's*).

Türkmen pilework is justly famous for its hard, glossy wool, excellent vegetable dyes and fine knotting, normally using the asymmetrical or Persian knot (but see M.H. Beattie, in *The Turcoman of Iran* [see *Bibl.*], 38-41, for exceptions), and Türkmen rugs are unmistakable with their ground and borders of the same colour, always red, but varying from the clear tones of Salur and Tekke to the ox-blood of the Sarīk and aubergine of the Yomut, and having in the central field an all-over repeat of *güls* which, when used as primary ornament, served as a tribal totem, *tamgha*, exclusive to the tribe which used it. Tekke floor rugs (Pl. XXII) have octagonal *güls* quartered by a lattice to enclose trifoliate forms identified by Moskova as birds (see Azadi, *op. cit.*, 20-41) and also of totemic significance, while the Yomut owned a number of *güls* including the *kepshe*, based on plant forms, and the *dimak*, a hooked diamond enclosing birds (illustr. in Azadi, *op. cit.*, and U. Schurmann, *Central Asian carpets*, London 1969, pls. 15-25). It is known, however, that the Sarīk and Tekke used older forms of the *gül* than those featuring in 19th century rugs, while secondary *güls* and border patterns pose complex

problems, since it is now suggested that these may be the ornaments originally belonging to another tribal group which was subjugated or absorbed. Moreover, a subjugated tribe, having lost its right to its primary ornament, possibly transferred it to small items like bags, while the victorious group might incorporate the weaker tribe's primary ornament in its own smaller pieces. Ersari rugs are unusual in showing strong outside influences and, in addition to classic Türkmen motifs, large central medallions are introduced to bags while floor rugs and prayer rugs may have floral patterns, treated semi-naturalistically and in a higher tonal key (illustr. in Azadi, *op. cit.*, pls. 7, 9, and 36, and Schurmann, *op. cit.*, pls. 41-56). As well as floor rugs, the Türkmen women used to knot many articles for their own use, including the tent-band, *yolami*, *bu*, *yup*, which encircled the tent lattice with the knotted pattern on a white plainweave ground facing inwards; the *engsi* or *ensi*, a handsome rug with a cruciform design which acted as a tent door; the *kapunik*, a fringed decoration hung over the inside doorway; and a variety of bags, from saddle-bags, *khordün*, large storage bags, *çoval*, to smaller ones, *torba*, for specific purposes like storing bread, spindles, etc.. These articles performed the functions of storing the household equipment, transporting it on the migration and giving the interior of the round, felt-roofed tent an appearance of tapestry-hung splendour.

The finest knotting was reserved for covers, *tainaksha*, for the much-valued horses, and the Yomut, who made the widest variety of articles and patterns, used to knot a set of trappings for the bridal camel, consisting of pentagonal flank hangings, *asmalik* (discussed in detail in R. Pinner and M. Franses, *Turkoman studies*, i, London 1979), frequently patterned with hooked stems or lozenges (Pl. XXIII), and matching knee-hangings, *diyah dizlik*, while the two bundles of tent-poles lashed to a camel when on the move would each have a bag-shaped cover, *uk bash*, fitted over their protruding ends.

Türkmen patterns have been influential, the two groups which have borrowed most substantially from them being the Afghān and the Balūč. Modern Afghān rugs are knotted in the towns of Pakistan. Old ones, however, made by tribes related to the Ersari in northern Afghānistān, had qualities of their own. With a medium high pile, using the asymmetrical or Persian knot, their central fields show an adaptation of the Tekke *gül*, without the lattice, although the squarish octagons are quartered and enclose trifoliate stems and leaves. They have more minor ornament than modern examples, and their colours, which include blues, yellows and browns on a red ground, are in a higher key. Borders include geometricised plant forms, also borrowed from the Türkmen, and angular ribbon. Commercial success has resulted in the standardisation of patterns and colours, and rugs are often chemically washed to produce the "golden Afghans" popular in the West.

A black-tented people, the Balūč nomadise in arid country now forming parts of Iran, Afghanistan and Pakistan. They utilise the good but undurable wool of their sheep and undyed camel hair for warps, wefts and knotting, the Turkish or symmetrical knot being more favoured, to produce a long, medium coarse pile. Distinctive features are the elaborately beautiful ends in a variety of flat-weaves, and a limited range of dark colours: blues, blackish browns, several reds and white. Their patterns reflect borrow-

ing from Türkmen, Caucasian and Afshār sources, absorbed and reproduced in a characteristic manner. Floor rugs show octagons and Yomut borders, or all-over floral repeats treated semi-naturalistically and resembling Ersari-Beshir rugs, this type being more commonly made in Iran. Their most typical product is the small prayer-rug with a stylised "Tree of Life" on an undyed camel hair ground.

Among the several tribes of Lur origin in western Iran, the Bakhtiyārī still migrate twice-yearly over difficult country in the Zagros mountains, in the proximity of other Lurs and of Mamassānī, Kashkā'ī and Khamseh. Few of the so-called "Bakhtiyārī" rugs are tribal pieces, but were made by villagers in the Čahār Mahall area, near Işfahān (see Edwards, *op. cit.*, 309-12, pls. 354-64). The Bakhtiyārī do very little weaving now, but still make a type of bag which is unique to them, the front and back of which are in flat-weave, usually *sumak* weft-wrapping with, along the bottom and up the sides, a strip of rather coarse, shaggy pile in the Turkish or symmetrical knot. This gives durability and is visually pleasing when the bags are stacked in the tent. Favourite motifs are 8-pointed stars in octagons, rosettes, the *z-boteh* and borders of scrolling stem, while the flat-weave areas share these motifs and often have animals as well. Sizes vary from a very large saddle-bag, *talīs*, and bedding-bag, *mafraş*, and storage bags which can be loaded on to pack animals, *rūkati*, to small, lavishly decorated bags, *namak-dān*, with narrow necks for pouring. Colours are rich dark reds, browns and blues, with white cotton in the flat-weave areas. These bags, hardly known in the West, are often bought by the Khamseh and Kashkā'ī and can be seen in their tents.

The Afshārs, another tribe of Turkic descent, are believed to have been deported from Adharbāy-djān to Kirmān province by Shāh Ismā'īl in the 16th century. Surrounded by Persian villagers, their tribal identity became blurred, so that it is difficult to distinguish a nomad from a village Afshār rug. Both knots are found. Old tribal pieces show a colour scheme of rich mid-blues, a clear red, yellow and ivory, and favour the diamond medallion layout, but the Persian *boteh* is often used as an all-over repeat, known as *dehadj*, and the chicken, *murghī*, found all over Fārs, is a favourite, while more naturalistic floral designs have been borrowed from Kirmān carpets. Borders, which are finely organised, range from rosettes, medallions and angular scrolling stem to Işfahānī floral ornament.

The tribal situation in Fārs province in south-western Iran has long been a complex one, since it is nomad country *par excellence*, with the Zagros mountains and hill valleys in the north and warmer plains south of Shīrāz, so that the migration routes of a number of tribes have impinged on one another. The two largest tribal confederacies, the Kashkā'ī and the Khamseh, were founded for political reasons, the Kashkā'ī during the 18th century and the Khamseh in 1861-2. The major *tā'ijehs* of the Kashkā'ī are Turkic, with some Lurs, Afshārs and Persians, while the Khamseh consists of five tribes of Turkic, Persian and Arab stock. Some tribes-people, however, are settled in villages, while of other groups like the Bolvardi, small sections belong to the Kashkā'ī and the rest are villagers with no tribal allegiance. There has been wholesale borrowing of patterns and, since both knots are used, consequent difficulty in rug classification. The Kashkā'ī have a reputation for the finest rugs. Their most typical composition, three stepped or hooked medallions in

the central field, is shared by the *Khamseh* and other tribes, but in *Qashkā'i* pieces each medallion encloses a motif described as a crab or a stretched sheepskin but more likely a stylised plant form (Pl. XXIII). This simple scheme is garnished with detail: hooked octagons, rosettes, the Persian *both*, the Chinese knot and flower sprigs, as well as a menagerie of creatures like stylised peacocks, porcupines, gazelles, goats (Pl. XXIVa), hawks, chickens and bees, powdering the ground with a nice sense of space. Another type has repeating *botehs* all over the central field, a layout shared by the *Afshārs*. Main borders include the calyx and scrolling stems of city carpets (Pl. XXIII), but the narrow guard bands often retain older forms like the oblique stripe and reciprocal diamond. Skilled dyeing, for which the *Shesh Bolūki Reshkūlī* and *Bullū* were renowned, produced a sharp, clear red, several blues, a rich, creamy yellow, apricot, and soft dark brown and green, skilfully juxtaposed against ivory. Rug patterns are repeated on saddlebags of fine workmanship (Pl. XXIVb), chickens are shown here drinking at a fountain. Tent bags are generally made in flat-weave, but the *Qashkā'i* have lavished sumptuous trappings on their horses, including saddle covers and horsecloths to cover the animals when they are tethered, which have knotted patterns on a plain-weave ground, while fringed chest and rump bands are still made, often embellished with blue beads against the Evil Eye.

Some attributions of designs to specific *tā'ifehs* have been made (J. Allgrove, in *The Qashqā'i of Iran*, exhibition cat., Manchester 1976, 64-95, pls. 5-8, 37-46), but the ethnic complexity of all the Fārs tribes and the eclectic nature of their patterns are barriers to precise classification.

The role of the tribeswomen who have always been responsible for the textile crafts extends into other areas for, since their rugs are the visual manifestation of tribal culture, the women have been the artists of the tribe and custodians of tribal traditions, a phenomenon unknown in the West; similarly, in this situation artists are not a specialist class, but have made for their own use artefacts both functional and of great beauty, bringing to mind Rudenko's comment concerning the Pazyryk textiles on the "astonishing skill and care lavished on the most trifling of articles". These are powerful reasons for studying tribal knotting in its own context.

**BIYĀR, AL-BIYĀR** (A. "wells, springs"), modern Biyārdjūmand, a small town on the northern edges of the Great Desert, the Dašt-i Kavīr, of Persia. The mediaeval geographers describe it as being three days' journey from Bisfām and 25 *farsakhs* from Dāmghān, and as falling administratively within the province of Kūmis [q.v.], although in Sāmānid times (4th/10th century) it seems to have been attached to Nīshāpūr in Khurāsān. It was the terminus of an only-moderately frequented route across the northeastern corner of the desert to Turshīz in Kūhīstān.

We have in Muḳaddasī, 356-7, 372, an especially detailed description of the town, considering its moderate size and importance, lying as it did off the great highway connecting western Persia with Khurāsān; this is explicable by the fact that Muḳaddasī's maternal grandfather had emigrated thence to Jerusalem. He mentions that Biyār had good cultivated fields and orchards, and grazing grounds for sheep and camels; the rather scanty water supply was carefully controlled in irrigation channels. There was an inner citadel approached through a single gateway, but there were three iron gates in the outer walls. There was no Friday mosque, and the inhabitants were all Hanafīs, strongly opposed to the Karrāmiyya [q.v.]; nevertheless, Muḳaddasī states elsewhere (365) that the Karrāmiyya had a *khānakāh* in Biyār. He further stresses the building skills of the Biyārīs, above all in the medium of mud brick. Politically it came within the Sāmānid dominions at this time, and coins in the name of the Sāmānid *amīrs* were minted there between 298/910-11 and 369/979-80; a coin is also extant of the Ghaznawīds, from the year 426/1035, the eve of the passing of the provinces of Khurāsān and Kūmis into Salḡūkh hands (E. von Zambaur, *Die Münzprägungen des Islams, zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 83). Yākūt, *Buldān*, ed. Beirut i, 517, mentions several scholars produced by Biyār, amongst whom were some noted Hanafī ones. Mustawfī, *Nuzhat al-kulūb*, tr. Le Strange, 148, refers to the town's good cereals, but apart from these mentions we possess little information on the place.

A few European travellers, beginning with Forster towards the end of the 18th century, began to cross the northern edge of the Great Desert and to pass through Biyār, by now known as Biyārdjūmand (the "Bearjemand" of Capt. C. Clerk, in *Jnal. of the Geographical Soc.*, xxxi (1861), 53). There were in Clerk's time some 200 houses there, with a good water supply from *kanāts* and gardens and fields; in the nearby hills, the Kūh-i Biyārdjūmand, copper, galena and marble were obtained, cf. W. Tomaschek, *Zur historische Topographie von Persien. II. Die Wege durch die persische Wüste*, in *SBW AW*, Phil.-Hist. Cl., cviii (1885), 632-3. At the present day, Biyārdjūmand is the chieftown of the *bakhs* of the same name, in the *shahrastān* of Shāhrūd, in the second *ustān* of Iran; its population is ca. 2,600, see Razmārā, *Farhang-i dīghrāfiyāʿ-i Irān*, iii, 54.

**BÖLÜKBASHĪ**, RİDĀ TEWFİK, modern Turkish orthography RIZA TEVFİK BÖLÜKBAŞI, Turkish poet and writer (1866-1949). He was born in D̄jīs-i Muḫṣafā Pasha in Rumelia (Dimitrovgrad in present-day Bulgaria, formerly Čaribrod) while his father Khōdja Mehmed Tewfik Efendi, a civil servant and teacher, was *ḳāyimakām* there. His mother, a Circassian slave girl, died when Rīdā was eleven years old. His grandfather Aḫmed Durmuş Bōlūkbashī was a guerilla leader from Debra in Albania who had fought against the Greeks during the rising in the Morea ([Feridun] Kademir, *Kendi ağzından Rıza Tevfik* ("Rıza Tevfik from his own mouth"), Istanbul 1943, 94-7, 109). After attending various schools (including the Alliance Israélite school and Galatasaray) in Istanbul, he finished in the *rüşdiyye* (high school) of Gelibolu (Gallipoli), his family town, and entered the school of political science (*Mekteb-i Mülkiyye*), whence he was however expelled for political activities and insubordination. He switched to medicine, and after several temporary suspensions, graduated in 1899. He worked as government doctor at the Customs Office in Istanbul until the restoration of the Constitution in July 1908, when he joined political life. An enthusiastic member of the ruling Committee of Union and Progress (CUP) [see İTTİHĀD WE TERAKKĪ D̄JEM'İYYETİ], he was elected deputy for Edirne, but soon broke with the CUP leaders and joined the opposition and became one of the leading figures of the Liberal Union [see HÜRRIYYET WE İ'TİLĀF FİRKASI] (Refik Halid Karay, *Minelbab ilelmihrab*, Istanbul 1964, *passim*). He taught philosophy at the University of Istanbul and Turkish literature at the American Robert College. He served as Minister of Education in 1918 and was made president of the Council of State (*Shūrā-yi Dewlet*) in 1919. As a member of the collaborationist Ottoman government, he signed the treaty of Sèvres (10 August 1920), which sealed his fate in the eyes of the Nationalists. Student protests forced him to give up his chair in the University (1921) and he fled the country following the Nationalist victory in Anatolia (September 1922). His name was later included in the list of the 150 undesirables [see YÜZELLİLİKLER]. After a brief stay in Egypt, he served for seven years in the government of *Amīr* 'Abd Allāh (a former fellow-deputy in the Ottoman Parliament) in Jordan, spent a year in the USA and eventually settled in D̄jūniyya in Lebanon, where he lived with his wife in retirement until he returned to Turkey in 1943, five years after the general amnesty of 1938. He died in Istanbul on 31 December 1949. Although Rīdā Tewfik is known by the nickname *Feylesof* ("The Philosopher") on account of his numerous publications on philosophical topics (see below), which are mainly works of compilation (but which greatly contributed to the teaching of modern philosophy in Turkey), his real contribution to Turkish literature is as a poet. In the late 1890s a young poet, Mehmed Emīn (Yurdakul) [q.v.], suddenly appeared on the literary scene and made a sensation by his use of spoken Turkish, syllabic metre and the use of popular subjects. He was greeted as a guide and innovator, but did not have any following as his poetry was uninspired, awkward in style and totally lacking in musical effect. In contrast, Rīdā Tewfik, who started his career in the same period by writing poems on the line of 'Abd al-Ḥaḳḳ Ḥāmid and Tewfik Fikret [q.v.] found, in the early 1900s, the

key to a regeneration of Turkish poetry; he was able to capture the style, language and inner warmth of leading poets and popular mystic (dervish) poets without blindly imitating them, but re-creating their warm and lively atmosphere in a modern garb [see KARADJAĞHLAN, KAYGHUSUZ ABDĀL and YÜNUS EMRE]. His success ushered in a new trend which was later moulded into a school by Diyā' (Ziya) Gökalp, that of the *Millî edebiyât* ("National literature"). Riđā Tewfîk did not abandon the *'arūd* like most of his younger colleagues of the new school, but used it in parallel with the *hedje*. His influence on succeeding generations of poets continued in the 1920s and early 1930s and his style began to date only with the appearance of Orkhan Velî (Orhan Veli) Kanık and Fâdil Hüsni (Fazıl Hüsni) Dağlarca, who revolutionised all concepts in Turkish poetry.

Riđā Tewfîk Bölükbaşî is the author of the following major works: *Abd al-Hakk Hâmîd ve mülahazât-î felsefiyesi* ("A.H. and his philosophic reflections"), Istanbul 1329 rûmî/1913; *Felsefe dersleri* ("A course of philosophy"), i, Istanbul 1330 rûmî/1914; *Mufaşşal Kâmûs-î felsefe* ("A comprehensive dictionary of philosophy"), i, Istanbul 1330 rûmî/1914; *Étude sur la religion des Houroufîs*, in Cl. Huart, *Textes persans relatifs à la secte des Houroufîs*, Leiden 1909; *Serabı ömrüm* ("Mirage of my life"), Lefkose (Nicosia) 1934, 2nd ed. Istanbul 1949, (contains all his poems, except some political satires); *Omer Hayyam ve rûbailerî*?, Istanbul 1945, Introd.

**BOOTY** [see FAY?, GHANĪMA].

**BORNEO**, a large island (area 292,000 sq. miles/755,000 km<sup>2</sup>) straddling the equator in the Indonesian archipelago, and mainly covered with tropical rain forest. The spinal range of mountains rises to 13,455 ft./4,100 m. in Mount Kinabalu in the northeastern tip of the island. Politically, the greater part of the island has since 1949 formed the Indonesian region of Kalimantan (a name which Indonesia also applies to the whole island); along the northern coast lie Sabah, the former British crown colony of British North Borneo and Sarawak, both of whom joined the Malaysian Federation in 1963, and the British-protected sultanate of Brunei [*q.v.* in Suppl.]. The following article deals only with the Indonesian part of the island; see also BORNEO in *Et.*

Indonesian Kalimantan is divided into four provinces (*daerah tingkat I*): Kalimantan Barat (Western Kalimantan, 157,066 sq. km., 2,019,936 inhabitants, capital: Pontianak), Kalimantan Tengah (Central Kalimantan, 156,552 sq. km., 699,589 inhabitants, capital: Palangka Raya), Kalimantan Selatan (Southern Kalimantan, 34,611 sq. km., 1,699,105 inhabitants, capital: Banjarmasin), and Kalimantan Timur (Eastern Kalimantan, 202,619 sq. km., 733,536 inhabitants, capital: Samarinda). South and Central Kalimantan originally formed one province, until on 23 May 1957, the area was divided because of the opposition of the Dayak people against the "Malays" (Muslims) in the southern parts.

1. *Earlier History.* In Sambas (north-western

Kalimantan), which had been a Buddhist cultural centre already in the 6th century A.D., a descendant of the sultan's family of Johore established a sultanate at the time of Brunei's conversion to Islam (between 1514 and 1521), and Malays began to settle in the area. Chinese workers were brought to work in the gold mines, but in 1770 they revolted and formed semi-independent "republics" (*kung si*). Islam had little influence on them, and only after 1965, when they were required to confess one of the acknowledged religions in Indonesia, did a few of them become Muslims. Sambas has remained a stronghold of Malay culture. The area of Lawei, an old Javanese colony, and Matan on the Pawan river, turned to Islam soon after the conversion of the sea ports in northern Java. Sukadana, having—like Sambas—experienced the influence of Buddhist Sri Vijaya, was islamised mainly by Malay and Arab traders from Palembang, which at that time (first half of 16th century) was under the rule of Demak. In 1608-9 Surabaya imposed its dominance, until in 1622 Sultan Agung of Mataram wiped out the influence of his main rival. Only in these areas of south-western Kalimantan Barat, did classical Javanese (*Kawi*) remain "the sultan's language", in Ketapang e.g. until this century, although in this place only a *panembahan* resided. The 18th century saw the rise of the sultanate of Pontianak, founded in 1771 by an Arab adventurer, Sharîf 'Abd al-Rahmân, the son of a Hâdramawtî and a princess of Matan. Pontianak always stressed its Arabic background and claimed that its understanding of Islam was a notably pure one.

According to tradition, Demak initiated the spread of Islam in southern Kalimantan, seizing the opportunity for this when at the beginning of the 16th century a conflict occurred between two pretenders, Pangeran Samudra and Pangeran Tumenggung, in the course of which the former appealed to the help of Demak. This was granted, and Samudra became the founder of the Muslim sultanate of Banjarmasin, acknowledging the supremacy of Demak (1520). His successors ruled until 1860, when the Dutch colonial government abolished the sultanate after the revolt of Hidâyat, the legal heir to Sultan Adam (d. 1857). Like other revolts in 19th century Indonesia, his movement was inspired by the idea of *djihâd*. At present, the area of the former sultanate is part of the province of South Kalimantan, with the *kabupaten* of Hulu Sungai (east of the Barito river) as one of the strongest Muslim areas on the island. In the earlier days of the sultanate, its ruler exercised his influence in most of the trading centres on the southern coast, like Sampit, Kota Waringin, etc., which became centres for the propagation of Islam among the neighbouring Dayak tribes; some of them, however, further withdrew to the interior. Although the impact of Javanese customs and manners was strong, the literary language was Malay, influenced by local idioms and Javanese. J.J. Ras emphasises that in spite of its particularities, even *basa Banjar* (Banjarese colloquial) should be counted among the numerous Malay dialects (*Hikajat Bandjar*, 7-12). This explains also why the Banjarese Muslims and above all their *'ulamâ*, felt a special obligation to present themselves as authentic teachers of Malay Islam after the *bahasa Indonesia* was proclaimed the official medium of communication in the archipelago (1928). On the other hand, they distinctively separated themselves linguistically and, as a consequence, culturally, from the Dayak tribes, for whom the term "Malay" and "Muslim" became

identical. Becoming a Muslim (= Malay) means for a Dayak to loose his social relationships. Only a few Dayak tribes became Muslims, e.g. the Bakumpai, a former sub-tribe of the Ngaju Dayak (Danandjaja, 139, in consent with Mallinckrodt).

In East Kalimantan, Pasir and Kutai [g.v.] saw the rise of colonies of Buginese traders and ship-builders from South Sulawesi, soon after their homeland had turned over to Islam (1605-11). According to tradition, the first teacher of Islam in Pasir was an Arab, while Makassarese preachers, among them the miraculous Tuan Tunggang Parangan, were active in Kutai. Like in South Sulawesi, Islam in Kutai seems to have been mixed with many animistic survivals and remained weak throughout the 18th century. The sultans had their *kraton* in Tenggarrong, between Samarinda where most of the Buginese settled, and the Dayak area. Their story is told in the *Salasila Kutai*, written in Malay.

2. *Modern developments.* As the sultans both in East and West Kalimantan during the times of Dutch supremacy were relatively independent in their internal jurisdiction, Islamic law, more or less modified by the local customary (*adat*) law, played a significant role. Courts were closely attached to the palace. After independence, the Indonesian government tried to bring these "religious courts" under the authority of the local branches of the Ministry for Religious Affairs (Lev, *Islamic courts*, 78 f.). On the other hand, Islamic law has also influenced the *adat* law of the non-Muslim Dayaks.

Since the beginning of the century, Sambas, Pontianak and Banjarmasin have been caught up in Islamic modernist movements. The Malay periodical *al-Imām* (since 1906), partly inspired by Rashīd Riḍā's *al-Manār*, was distributed in Pontianak and Sambas. The "Serikat Islam", the oldest nationalist movement, held a congress in Kalimantan in 1923. In 1930, the traditionalist "Nahdlatul Ulama" established its first branches in Banjarmasin and Martapura, and South Kalimantan remained, besides East Java, a stronghold of this party until 1942. The modernist "Muhammadiyah" became active in 1927, its first branch being opened in Banjarmasin. *Muballighūn* or propagandists from Java and Minangkabau were sent there, some of them being former attendants of the "Thawalib" schools in West Sumatra. Their progress seems to have been slow; at the Muhammadiyah's national congress in 1929, no participant from Kalimantan was noted. In 1935, the movement had 29 branches on the island. It is active in *da'wa* or missionary and educational work by building schools, clinics, and distributing pamphlets and books, its activities reaching now the Hulu (up-river) areas and the border districts between West Kalimantan and Sarawak. In Banjarmasin, a government-related "Institut Agama Islam Negeri" (I.A.I.N.) has been established, whereas in Pontianak a branch of the *Fukuctas Tarbiyah* of the I.A.I.N. Jakarta Ciputat is active. A branch of the same I.A.I.N.'s *Fakultas Ushuluddin*, now in Singkawang, is to be moved to Pontianak.

**BRAHMANS** [see BARĀHIMA].

**BRICK** [see LABIN].

**BRIGAND** [see FALLĀK, KAZAK, LISS, TARIK].

**BRUNEI**, a sultanate on the northern coast of Kalimantan (Borneo [g.v.]), 5,765 sq. km. (2,226 sq. miles) in area with ca. 145,000 inhabitants. The capital is Bandar Seri Begawan (before 1970 called Bandar Brunei or Brunei Town), with ca. 45,000 inhabitants. Its principal landmark is the great Mesjid Omar Ali Saifuddin, built after World War II. Since the 6th century A.D., trade relations existed with China. Occasionally tribute was paid, not only to China but also to Buddhist Sri Vijaya (South Sumatra) and Majapahit (Java), where it was mentioned among other Bornean tributaries in ca. 1365. The *Shā'ir Awang Semaun*, probably the oldest legendary account of Brunei's history, narrates how the 14 sons of "sultan" Dewa Emas Kayangan, who was of celestial origin, founded the empire of Brunei. The youngest brother was the warrior Semaun, their leader Awang Alak Betatar. When the sultan of Johore sent his daughter to be married to the sultan of Sulu, she was abducted and married to Alak Betatar. The sultan of Johore finally agreed to this state of affairs and installed Alak Betatar as the first Muslim sultan of Brunei, bestowing on him the regalia of Johore (Brown, 134 f.). As Sultan Muhammad he is said to have reigned from 1405 to

1415. His successor Aḥmad married his daughter to an Arab from al-Ṭā'if, and their son Sulaymān became the ancestor of the later sultans of Brunei.

There seems to have existed, however, a rival pagan kingdom besides the Muslim sultanate, which gave the impression, in 1514, to the Portuguese that Brunei was still heathen. When Antonio Pigafetta, an Italian member of Magellan's expedition, visited Brunei in 1521, he mentioned that the sultan (Bulkiāh I, the fifth of his dynasty) was waging heavy warfare against a rival pagan kingdom in the same harbour. Finally, Sultan Bulkiāh succeeded in safeguarding his supremacy and brought Brunei to the climax of its glory, ruling over most of "Borneo" (hence its name), the Sulu Islands and parts of Mindanao and Luzon. It was the Spaniards, however, who, since 1578, from their stronghold in Manila, successfully began to confine Brunei's strength to the northern coasts of Borneo, from where, in their turn, pirates intimidated the Spanish, and other, fleets. During the 19th century, the territory of Brunei was encircled decisively. In 1841 most of Sarawak was ceded to Sir James Brooke. In 1888, Brunei became a British protectorate. Later, in 1906, the sultan was granted the right to supervise matters which concern Religious (Islamic) and Customary Law (*adat-law*). In 1959, however, when a new constitution was introduced—the first written one in Brunei's history—his juridical functions were turned over to the courts. Nevertheless, his internal position was also strengthened considerably, as a number of rights of the former resident were transferred into his hands. Brunei became "an internally self-governing Islamic Sultanate under British protection". Only security and foreign affairs were still handled by the British, who from now on were represented by a High Commissioner.

New perspectives for Brunei's future opened when in May 1961, Tengku Abdul Rahman as the Prime Minister of the Malayan Federation, forwarded the plan for a new federation, Malaysia, which was to include, besides the Malayan Federation, Singapore, Sarawak, British North Borneo (now Sabah), and Brunei. At the beginning, Sultan Sir Omar Ali Saifuddin's attitude was a positive one, in the hope that he would be able to join the *collegium* of the nine Malayan sultans who were to elect the Yang Dipertuan Agung from among themselves as the nominal Head of State for a period of five years. In a memorandum, prepared by the Malaysia Consultative Committee in February 1962, it was further stated that Islam was to be the official religion in the Federation (Gullick, 64), another matter favourably received by Brunei with its outspoken Malay tradition, contrasting to the other North Bornean territories where Islam is followed only by minorities and where the Malays were not acknowledged as *bumiputera* (indigenous).

But the sultan met with opposition from the "Party Ra'ayat" (People's Party), led by Shaikh A.M. Azahari, which had gained 22 out of 23 possible seats when the Legislative Council of Brunei was elected in October 1962. Azahari himself had not run for a seat, and there is some doubt whether he is a Brunei citizen (Brown, 127); he is known to have fought against the Dutch in the Indonesian Independence War. On 6 December 1962, his followers staged a revolt, somewhat untimely, because Azahari at that time happened to be in Manila. His aim was to form a Negara Kalimantan Utara ("State of North Borneo"), including Sarawak, Brunei and Sabah, with the sultan as nominal ruler

and himself, Azahari, as Prime Minister. With British help, however, the revolt was soon suppressed, Azahari stayed in exile abroad, but the strong opposition of Indonesia and the Philippines against the formation of Malaysia, which probably inspired Azahari's policy, now came into the open. Finally, the sultan in July 1963 decided that Brunei should not join Malaysia, officially because of his dispute with Sarawak about the Limbang valley which nearly divides his territory into two enclaves; but problems about the distribution of the profit of Brunei's rich oil fields (exploited since 1929 by the British Shell Company) may also have affected the decision.

Since 1974, the question of Brunei's independence has become acute again. Sultan Sir Hassanāh Bulkiāh, ruling since his father's abdication in 1967, is again opposed by Azahari who opts for a more democratic and completely independent Brunei (now without Sarawak and Sabah), with the sultan as the mere symbolic head of state. Azahari, still in exile, sees the future of Brunei based on a *Trisila* ("Three Pillars", obviously in distinction to Malaysia's and Indonesia's *Pančasila* or "Five Pillars") of (a) the Islamic Religion, (b) Nationalism, and (c) Democracy. The national colours he proposes are still those of the former "State of North Borneo", sc. red and white (like Singapore and Indonesia), with a green triangle symbolising Islam.

**BŪ 'AZZA** [sec ABŪ YA'AZZA].

**BUBASHTRU (BOBASTRO)**, also spelt **BUB.ŠI.T.R.**, **BĀB.ŠI.T.R.** and, frequently from the 5th/11th century, **BAŠI.T.R.** or **BUŠI.T.R.**, a mountain stronghold famed as the headquarters, first, of 'Umar b. Ḥaḥṣūn [*q.v.*], leader of Andalusian resistance, mainly south of Cordova, to the Umayyads from 267/880-1 until his death in 305/917, and, then, of his sons until 315/928. The precise location of Bobastro, often confused (as in *EF*<sup>2</sup> i, 1250) with Barbastro (Barbāshṭuru) in Huesca province, has proved a thorny problem. Erroneously identified by Dozy with Castellón, near Teba (Málaga province), it was believed by Simonet to be situated 6 km. east of Ardales in the Mesas of Villaverde (Málaga province). His view prevailed, and in the 1920s it was identified with a site excavated above the Hoyo de Chorro near the railway running from Cordova to Málaga via Bobadilla. This identification was accepted by Lévi-Provençal (*Hist. Esp. mus.* i, 303 n. 1), and it remains acceptable to some. It has, however, been challenged by J. Vallvé Bermejo, who, after meticulous examination of all available evidence, some of it new, has cogently argued that the facts of the Bobastro campaigns as reported by our sources point to a site much further to the south-east. This site, he submits, is to be sought not far from the present Cortijo de Auta in the Sierra del Rey, north of Riogordo (Málaga province) and the name Bobastro to be seen in a toponym recorded in a 15th-century source, viz. Postuero, otherwise Corral del Encina (Repartimento de Comares). The origin of the name—which survives in one form or another elsewhere in Spain—is very likely Iberian.

During the anti-Umayyad rebellion, Bobastro was frequently the scene of military activity, and

indeed it was there that the *amīr* al-Mundhir died in 275/888 while pressing a siege. In 278/891 his successor 'Abd Allāh tried to take the place, but failed. Subsequent attempts made by his sons Muṭarrif (280/894) and Abān (291/904 and 294/907) to attain the same objective also came to nothing. Not until 316/928 was Bobastro finally subdued after a decade of slow but sure policy pursued by 'Abd al-Rahmān III. So far as we can glean, Bobastro thereafter remained an important Umayyad garrison until it fell to the Berbers who defeated Muḥammad II's troops on the banks of the Guadiaro in 400/1010. For the years 1039 and 1047 we have passing references to Bobastro under the Ḥammūdīd "party kings" of Málaga, and in 1147 we find it sheltering al-Mahdī's brothers after a rising in Seville against the Almohads who had just occupied the city. By the 7th/13th century the fortress was in ruins.

*Bibliography:* All the main references are contained in J. Vallvé Bermejo, *De Nuevo sobre Bobastro*, in *Al-Andalus*, xxx (1965), 139-74. Apart from a study of the boundaries of Rayya (roughly Málaga province), this monograph provides a good index of place-names. (J.D. LATHAM)

**BUDŪḤ**, an artificial talismanic word formed from the elements of the simple three-fold magic square

4	9	2	expressed in <i>Abḍjad</i> by	ب	ط	د
3	5	7		ز	هـ	ج
8	1	6		ر	أ	ح

Other groups of letters from that square are similarly, but not see generally, used, e.g. *بطد*, *زهج*, *وواح*, and together *بطدز هج وواح*. From some, also, larger squares are built up, as a four-fold on *بذوح* and a six-fold on *بطذوواح*. In the older Arabic books on magic (e.g. *Shams al-ma'arīf* of al-Būnī [q.v. in Suppl.], d. 622/1225) this formula plays a comparatively minor part; but after it was taken up by al-Ghazālī and cited in his *Munqidh min al-dalāl* (ed. Cairo 1303/1886, 46, 50, tr. W. Montgomery Watt, *The faith and practice of al-Ghazālī*, London 1953, 77, 79-80), as an inexplicable, but certain, assistance in cases of difficult labour, it came to be universally known as "the three-fold talisman, or seal, or table of al-Ghazālī" (*al-wakf*, *al-khātam*, *al-ḡadwāl*, *al-muthallath li'l-Ghazālī*) and finally has become the foundation and starting point for the whole "Science of Letters" (*ilm al-hurūf*). Al-Ghazālī is said to have developed the formula, under divine inspiration (*ilhām*), from the combinations of letters *حعص* and *كهيمص* which begin Sūras XIX and XLII of the Qur'ān, and which by themselves are also used as talismans (Reinaud, *Monuments musulmans*, ii, 236). For the process, see the *Majāliḥ al-ghayb* (ed. Cairo 1327/1909, 170 ff.) of Aḥmad Mūsā al-Zarkawī, a contemporary Egyptian magician, and on the subject in general, the sixth and seventh *Risālas* in that volume. Others trace the formula back to Adam, from whom it passed down to al-Ghazālī (cf. the *al-'Ināya al-rabbāniya*, 44, and *al-Asrār al-rabbāniya*, 16 of Yūsuf Muḥammad al-Hindī, an early 20th century Egyptian writer on magic). In all this, al-Ghazālī's established reputation as a custodian of mystical knowledge and especially of the book *al-Djāfi*, evidently played a

part (*JAOs*, xx, 113; Goldziher, *Le livre de Ibn Tournert*, 15 ff.). Another suggested origin is the Arameo-Persian name of the planet and goddess Venus, *Bidukht* *بیدخت*, *بیدخت*. G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, 128 ff.). But though this name appears in the *Fihrist*, 1, 311, 7, with magical and diabolical associations and is quoted very occasionally in connection with Zuhara (e.g. Makrīzī, *Khitāt*, 1324/1906, i, 8; Tha'l-abī, *Kiṣaṣ al-anbiyā'*, 1314/1896-7, 29—both with misprints) it appears to be totally unknown in magical or *Djinn* literature. Yet the name evidently passed early into South Arabic, became used there as a feminine proper name and as a feminine epithet, "fat" and was confused with the root *بذخ* (*LA*, iii, 484, *sub* *بذخ*). Other standing in Arabic it does not have. Further, when Budūḥ is associated with a particular planet, it is with Saturn (*ẓuḥal*) and its metal is lead (Zarkāwī, *Majāliḥ*, 170), not copper as Venus would require. Hardly worthy of mention is Von Hammer's fancy that Budūḥ is one of the names of Allāh (*JA*, 1830, 72) though it may have a Turkish basis (and see, too, de Sacy, below), and the derivation he suggests or the story told by Michel Sabbagh to de Sacy (*Chrest. arabe*, iii, 364 ff.) that it was the name of a pious merchant whose packages and letters never went astray, though that may well be a popular Syrian explanation. In magical books there are few cases even of personifying the word (e.g. *Tā Budūḥ* in *al-Fath al-rahmānī* by Ḥādīdj Sa'dūn, 21), but for the popular mind Budūḥ has become a *Djinnī* whose services can be secured by writing his name either in letters or numbers (*JA*, Ser. 4, xii, 521 ff.; Spiro, *Vocabulary of colloquial Egyptian*, 36; Doutté, *Magie et Religion*, 296, with *Kayyūm* as though a name of Allāh; Klunzinger, *Upper Egypt*, 387). The uses of this word are most various, to invoke both good and bad fortune. Thus, in Doutté, [*op. cit.*], against menorrhagia (234), against pains in the stomach (229), to render one's self invisible (275) and against temporary impotence (295). Lane's Cairo magician also used it with his ink mirror (*Modern Egyptians*, ch. xii), and so in several magical treatises. It is also engraved upon jewels and metal plates or rings which are carried as permanent talismans, and it is inscribed at the beginning of books (like *Kabīkaḍī*) as a preservative, e.g. in *al-Fath al-ḡalīl*, Tunis 1290. But by far the most common use is to ensure the arrival of letters and packages.

**BUFFALO** [see *ḌĀMŪS*, in Suppl.].

**BUGHĀT** [see *MĀRID*].

**BUK'Ā** means etymologically "a patch of ground marked out from adjoining land by a difference in colour, etc." or "a low-lying region with stagnant water" (see Lane, *s.v.*); the latter sense is obviously at the base of the plural *Biḳā'* [q.v.] to designate the (originally) marshy valley between the Lebanon and Anti-Lebanon ranges in Syria, and doubtless at that of the name al-Buḳā'ya for a settlement near the Lake of Ḥimṣ [q.v.] (see Le Strange, *Palestine under the Moslems*, 352). From these senses it acquires the broader one of "province, region, tract of land", as in the classical Arabic geographers (for Muḳaddasī, 31, tr. Miquel, 70, *buḳ'a* is a simple synonym for *mauḍū'*), and this seems to have been the farthest development of the term in the Muslim West (see Dozy, *Supplément*, i, 103b, who registers this latter sense only).

However, in the central and eastern parts of the Islamic world, *buḳ'a* acquired, apparently during the Salḳjūḳ period, the sense of "dervish convent", "mausoleum", or in general "a building for pious, educational or charitable purposes". The transition here in sense clearly arises from the Kur'ānic phrase *al-buḳ'a al-mubāraka* (XXVIII, 30), traditionally interpreted as "the blessed hollow", the place where God spoke to Moses from the burning bush. From Salḳjūḳ times onwards, *buḳ'a* appears in epigraphic phraseology. Thus an inscription of Yaḡhī-basan b. Ghāzī b. Dānishmand (537-60/1142-65) from Niksar and dated 552/1157-8 describes the construction of a *buḳ'a mubāraka*, probably to be interpreted as a dervish convent (see M. Van Berchem, *Épigraphie des Danishmendides*, in *ZA*, xxvii [1912], 87 = *Opera minora*, Geneva 1978, ii, 703, with further references to *CLA*, i, *Égypte*, nos. 44, 459, and iii, *Asie Mineure*, 24). It was likewise used in the Syro-Palestinian region from Ayyūbid times onwards, e.g. in 595/1198 to describe at Jerusalem a school (*maktab*) originally endowed by Saladin, and Van Berchem noted that in this same city, a *Ḍjāmi'* al-Nisā' adjacent to the *Haram* was still called al-Buḳ'a al-Bayḏā', perhaps from its white rough-cast walls (*CLA*, ii, *Syrie du Sud, Jérusalem Ville*, i/2, 110, 112, no. 39, ii/1, 130, no. 176). Some three-and-a-half centuries later, we find the Ottoman Sultan Süleymān I described on a restored fortress at Jerusalem as *khādīm al-haramayn wa 'l-buḳ'a al-akdasīyya* (*ibid.*, i/2, 147, no. 45). In these instances, there still appears to be an ambivalence of meaning, with the double sense of the land on which the building stood and that of the building itself, one intended for religious or charitable uses.

Nevertheless, in the Turco-Iranian world the connection of the term *buḳ'a* with dervish convents and with mausolea, especially those of Šūfī saints, seems certain; such structures, whatever their precise architectural form and plan, would always be felt as "blessed places" in the Kur'ānic sense. In the biography of the Šūfī *Shayḳh* Abū Sa'īd al-Mayhanī, the *Asnār al-tawhīd* of Muḥammad b. al-Munawwar (written in the last quarter of the 6th/12th century), *buḳ'a*, in one place *buḳ'a-ī az khayr*, is synonymous with *khānakāh* [q.v.] in the sense of "dervish convent" (ed. *Dhābiḥ* Allāh Ṣafā, Tehran 1332/1953, 44, 146, 331, cf. F. Meier, *Abū Sa'īd-i Abū l-Ḥayr* (357-

440/967-1049), *Wirklichkeit und Legende*, Tehran-Liège 1976, 305, n. 75, 310 and n. 115). B. O'Kane has gathered together instances of buildings described, usually in their inscriptions, as *buḳ'as*, from the Anatolian region (after the Dānishmandī instance, see above, for the periods of the Rūm Salḳjūḳs and the *beylik*s) and from the Iranian one (8th-9th/14th-15th centuries, extending as far eastwards as the Tīmūrid *Shāh-i Zinda* in Samarḳand), and has noted that the term seemed eventually found more favour in those regions than in the Arab one; see his *Tāybād, Turbat-i Jām and Timurid vaulting, in Iran, Jnal. of the British Institute of Persian Studies*, xvii (1979), 94-6.

*Bibliography*: given in the article.

(C.E. BOSWORTH)

**BUKRĀT**, Hippocrates, the most famous physician of antiquity, was born *ca.* 460 B.C. on the island of Cos, and died *ca.* 375 in Larissa (Thessaly). He sprang from the Asclepiads, an old native family of physicians, where the name Hippocrates occurred repeatedly. Already in antiquity he was considered an exceptional and model physician. This prestige was due to Galen [see *ḌĀLĪNŪS*] in the first place, who brought to its culmination the "Hippocrates-revival" which had started in the 2nd century A.D. and thus determined the image of Hippocrates for the whole period to come; in Islam as in Europe, Hippocrates became the symbol of "the true physician". It is the more astonishing that hardly any of the many writings transmitted under his name can be traced back to him with full certainty. Dependent on the classification, the size of this "Corpus Hippocraticum" varies, but it comprises at least 60 writings. To the Arabs Hippocrates was well-known; his name appears as *Buḳrāt*, with suppression of the Greek ending like in *Suḳrāt* (Socrates) and *Ḍimuḳrāt* (*Demokritos*), and also as *Ibuḳrāt* and *Abuḳrāt*. The forms *Ibuḳrātīs*, *Abuḳrātīs*, etc. are older; Syriac influence is still present in *Hifūkrātīs*, *Īfūkrātīs*.

There is no lack of biographical information about *Buḳrāt* among the Arabs; the longest section is found in Ibn Abī Uṣaybi'a, *'Uyūn al-anbā'*, i, 24-33. *Buḳrāt*'s teachers are mentioned here (24, ll. 16-17), his father *Īraklīdis* (*Heracleides*) and his grandfather *Buḳrāt*; besides his father, the ancient sources name also others, like *Herodicos* of *Selymbria* (Pauly-Wissowa-Kroll, *Real-Encyclopädie der class. Altertumswissenschaft*, viii, 1912, 978 f.). He is said to have lived up to the age of 95. The Arab biographers, to be sure, often present misleading information, e.g. Ibn Abī Uṣaybi'a (*op. cit.*, i, 24, ll. 22-3) says that *Buḳrāt* was trained on *Rhodes*, *Cnidos* and *Cos*, while Ibn al-*Ḳifī* (*Hukamā'*, ed. Lippert, 90 at the end to 91, 1) makes him stay for a while in *Ḳirūhā* (i.e. *Βέροια* = *Aleppo*), in the text identified with *Ḥimṣ*; see also *Barhebraeus*, *Tārīḳh Mukhtaṣar al-du'ual*, ed. Cheikho, 85) and *Damascus*; both pieces of information perhaps mean no more than that *Buḳrāt* travelled far and wide, as was already known in antiquity. On the other hand, one may assume that the Arabs retained scattered biographical data which are not found elsewhere. They were also right in stating that the *Corpus Hippocraticum* does not go back to one single author and that there have been several physicians of this name: the mathematician *Ṭhābit* b. *Ḳurra* names four *Baḳārīta* or *Buḳrātūn* ("Hippocraticians", one might say), the first of whom (in fact the second) would have been the famous *Buḳrāt* (Ibn al-Nadīm, *Fihrist*, ed. Flügel, 293 f.; Ibn al-*Ḳifī*, *op. cit.*, 100).

The Arabs also knew about the unconfirmed statement of Galen according to which Hippocrates declined a lucrative offer of Artaxerxes I to come to the Persian court (P. Bachmann, in *NAWG*, Phil.-Hist. Kl. 1965, 20 f.). Again and again he is commended for his care of the sick and his personal devotion; he allegedly was the first to found a hospital (Ibn Abī Uṣaybi'a, i, 27, ll. 1-2). Evidently, the "Hippocratic oath" was also known to the Muslims, naturally in a somewhat different form; it can be found in Ibn Abī Uṣaybi'a, i, 25 f. and has been translated by F. Rosenthal, *Das Fortleben der Antike im Islam*, Zürich 1965, 250-2. But Bukrāt was admired not only as the great physician but also as the master of alchemy, astrology and magic (M. Ullmann, *Die Natur- und Geheimmwissenschaften im Islam*, Leiden-Cologne 1972, 155, 288 f., 389); as such he gave his name to the handbook of Hellenistic magic which has become famous and notorious under the name *Picatrix* (distorted from *Bikrātīs* "Hippocrates").

It is impossible to say to what extent the Arabic canon of Hippocratic writings coincides with the Greek one. We would probably have more accurate information if had come down to us Galen's work, now lost, *Περὶ τῶν γνησίων καὶ νόθων Ἱπποκράτους συγγραμμάτων*, which existed in Ishāk b. Hunayn's translation as *Kiṭāb fi kutub Bukrāt al-sahīha wa-ghayr al-sahīha* (G. Bergsträsser, *Hunain ibn Ishāq über die syrischen und arabischen Galen-Übersetzungen*, in *AKM*, xvii/2, Leipzig 1925, no. 104). We know several bibliographical compilations of various size. The first to be mentioned is the valuable survey of the following 10 works, ca. 259/972, compiled by the historian al-Ya'kūbī (*Ta'rikh*, ed. Houtsma, i, 107-29): *K. al-Fuṣūl Afurūṣi*, *K. al-Buldān wa-l-miyāh wa-l-ahwīya* *Περὶ ἀέρων ὑδάτων τόπων*, *K. Mā' al-sha'ir* *Περὶ πτισάνης*, *K. Takdimat al-mā'rifa Prognostikón*, *K. al-Djanīn* *Περὶ γονῆς*, *Περὶ φύσιος παιδίου*, *K. al-Arkān* (or: *K. Tabī'at al-insān*) *Περὶ φύσιος ἀνθρώπου*, *K. al-Ghidhā'* *Περὶ τροφῆς*, *K. al-Asābī'* *Περὶ ἐβδωμάδων*, *K. Awḍiā' al-nisā'* (*Γυναικεῖα*; cf. however, M. Ullmann, *Zwei spätantike Kommentare zu der hippokratischen Schrift "De morbis muliebribus"*, in *Medizin-historisches Journal*, xii [1977], 245-62), *K. Abidhimiya* 'Επιδημία. This text has a specific value in so far as Ya'kūbī has added more or less detailed indices to six of these titles, so that their identification can be assured through comparison with texts that have been preserved (cf. M. Klamroth, *Über die Auszüge aus griechischen Schriftstellern bei al-Ja'qūbī*, in *ZDMG*, xl [1886], 189-203).

Another canon of 10 works, all commented upon by Galen, is given by Ibn al-Nadīm, *Fihrist*, 288, who also names the translators. They partly coincide with those given above, but instead of *K. Mā' al-sha'ir*, *K. al-Djanīn*, *K. al-Ghidhā'*, *K. al-Asābī'* and *K. Awḍiā' al-nisā'*, we find here: *K. al-Ahd* "Ορκος, *K. al-Amrād al-hādida* *Περὶ δαιτίης ὀξέων*, *K. al-Kasr* *Περὶ ἄγμων*, *K. al-Akhilāt* *Περὶ χυμῶν* and *K. Kāyatryūn* (read: *Kāyatryūn*) *Κατ' ἰητρείων*. Barhebraeus (*Duwal*, ed. Cheikho, 35) names 9 Hippocratical works, all of which appear in both of the inventories given above, while there is added the *K. Shihādāji al-ra's* *Περὶ τῶν ἐν κεφαλῇ τρομῶτων*.

The by far most detailed classification is found in Ibn Abī Uṣaybi'a, i, 31-3; a corpus of ca. 61 titles, thus nearly the same number as in the Greek list. Around 30 of them are considered authentic by Ibn

Abī Uṣaybi'a. However, only 12 of these are marked as important; they are found in the lists given so far; for the others, see Ullmann, *Medizin*, 31-5; Sezgin, *GAS*, iii, 38-47. From the indications given on the title-pages and colophons of the manuscripts as well as in the lists of titles, it cannot always be established with certainty who were the Arabic translators of the works. In any case, Hunayn b. Ishāk and his school were at the head. But there is no inventory of translations from Hippocrates's works drawn up by Hunayn himself, as is the case for his translations from Galen's writings. Bukrāt is extremely frequently quoted by the Arab physicians. The following works of the Arabic corpus have been published so far: 1. *K. al-Fuṣūl. The Aphorisms of Hippocrates*, translated into Arabic by Honain Ben Ishak, ed. J. Tytler, Calcutta 1832; 2. *K. Takdimat al-mā'rifa*, ed. M. Klamroth in *ZDMG*, xl (1886), 204-33; 3. *K. Tadbīr al-amrād al-hādida. Hippocrates: regimen in acute diseases*, ed. and tr. M.C. Lyons (*Arabic Technical and Scientific Texts*, i), Cambridge 1966; 4. *Kāyatryūn. Hippocrates: In the Surgery*, ed. and tr. by Lyons (*ibid.*, iii), Cambridge 1968; 5. *K. Habal 'alā habal. Hippocrates: On superfoetation*, ed. and tr. J.N. Mattock (*ibid.*, iii), Cambridge 1968 (cf. Ullmann, *Die arabische Überlieferung der hippokratischen Schrift "De superfetatione"*, in *Sudhoffs Archiv*, lviii [1974], 254-75); 6. *K. Tabī'at al-insān. Hippocrates: on the nature of man*, ed. and tr. Mattock and Lyons (*ibid.*, iv), Cambridge 1968; 7. *K. fi 'l-amrād al-bilādīyya. Hippocrates: on endemic diseases (airs, waters and places)*, ed. and tr. Mattock and Lyons (*ibid.*, v), Cambridge 1969; 8. *K. fi 'l-Akhilāt. Hippocrates: de humoribus*, ed. and tr. Mattock (*ibid.*, vi), Cambridge 1971; 9. *K. fi 'l-Ghidhā'. Hippocrates: de alimento*, ed. and tr. Mattock (*ibid.*, vi), Cambridge 1971. 10. *K. al-Adjīna. Hippocrates: on embryos (On the sperm and on the Nature of the child)*, ed. and transl. M.C. Lyons and J.N. Mattock (*ibid.*, vii), Cambridge 1978.

An effort should be made to establish a Corpus Hippocraticum Arabicum, an aim which is admittedly still rather far away, but to which the above-mentioned editions form important preliminary studies. To this corpus should certainly be joined the Arabic translations of Galen's commentaries as well as the most important commentaries and paraphrases of the Arab physicians.

*Bibliography:* The Arabic sources for the life and works of Hippocrates, the new material in manuscripts which has become widely known, especially after the last World War, and the relevant secondary literature have been put together by M. Ullmann, *Die Medizin im Islam*, Leiden-Cologne 1970, 25-35, and F. Sezgin, *GAS*, iii, Leiden 1970, 23-47. Further important are: M. Steinschneider, *Die arab. AL-BULAYṬĪ [see AL-BALAṬĪ, in Suppl.].

**BULBUL SHĀH**, *Ṣūfī* saint of mediaeval India. Bulbul Shāh, whose real name was Sayyid Sharaf al-Dīn, was a Mūsawī Sayyid and a disciple of Shāh Ni'mat Allāh Fārsī, belonging to the Suhrawardiyya order. He entered the Valley of Kashmīr in the reign of Rādjā Suhādeva (1301-20) from Turkistān with 1,000 fugitives, fleeing before the Mongol invasion. Rīnčāna, a Ladakhī prince, who seized power from Suhādeva, possessed an inquisitive and a restless mind and was dissatisfied with both Buddhism, his own religion, and Hinduism, the religion of his subjects. Having come into contact with Bulbul Shāh, and learning from him about Islam, he was so much impressed by its teachings which, unlike those of Buddhism and Hinduism, were simple and free from caste, priesthood and ceremonies, that he became a Muslim and adopted the name of Ṣadr al-Dīn on the advice of the saint. The next person to embrace Islam was Rawančandra, Rīnčāna's brother-in-law; and according to one tradition Bulbul Shāh was able to convert nearly 10,000 people to his faith.

Rīnčāna built for Bulbul Shāh a *khānakāh* [q.v.] on the bank of the river Jehlam and endowed it with a number of villages, from the income of which a *langar* (free kitchen) was opened. Bulbul Langar has disappeared, but a quarter of Sīnagar, bearing the name of the hospice still exists. Rīnčāna also built near the hospice a mosque, the first ever to have been built in Kashmīr. It was destroyed by fire, and a smaller mosque was built in its place. Bulbul Shāh died in 728/1327 and was buried near it.

(MOHIBBUL HASAN)

AL-BŪNĪ, ABU 'L-'ABBĀS AḤMAD B. 'ALĪ B. YŪSUF AL-ḲURASHĪ AL-ṢŪFĪ MUḤYĪ 'L-DĪN (variants Taḳī al-Dīn, Shihāb al-Dīn), Arab author who wrote around forty works on magic. Hardly anything is known about his life; the date of his death (622/1225) was found by the present writer only in Hādīdjī Ḳhalīfa (*Kashf al-zunūn*, *passim*, cf. Kaḥḥāla, *Muḍjam al-mu'allifīn*, ii, 26; Bagdath Ismā'il Paṣa, *Hadīyyat al-'arifīn*, i, 90 f.). He came originally from Būna ('Annāba [q.v.]). It is doubtful that he transmitted information on the construction in 425/1033 of the Sīdī Bū Marwān mosque in that place, in a work called *al-Durra al-maknūna* (cf. G. Marçais, in *Mélanges William Marçais*, Paris 1950, 234), since this work does not appear in the catalogues of his writings. He is said to have died in Cairo and to have been buried in the Ḳarāfa cemetery near the tomb of 'Abd al-Djalīl al-Taḥāwī (d. 649/1251) (Ibn al-Zayyāt, *al-Kawākib al-sayyara fi tartīb al-ziyāra fi 'l-Ḳarāfatayn al-kubrā wa 'l-ṣughrā* [written in 804/1401], Baghdad n.d., 268).

Al-Būnī's main work is the *Kitāb Shams al-ma'ārif wa-laṭā'if al-'awārif*, published in 4 volumes, Cairo n.d. [1905]. In 40 chapters, the headings of which are clearly arranged in Ahlwardt's Catalogue no. 4125, it contains a collection both muddled and dreary of materials for the magical use of numbers and letters-squares, single Ḳur'ān-verses, the names of God and of the mother of Mūsā, indications for

the production of amulets, for the magical use of scripts etc., all matters belonging to the field of the *hurūf* [q.v.] or *awfāk*. In ch. 7 appear even the words with which Jesus is supposed to have resuscitated the dead. The work exists in three forms, a short one which is the oldest, a long one and a middle-sized one (cf. H.A. Winkler, *Siegel und Charaktere in der muhammedanischen Zauberei*, Berlin 1930, 67; *ibid.*, 68-86 contains the translation with commentary of the chapters on the "seven seals" and the "highest name of Allah"). The number of manuscripts which became known in the course of time is considerable; the oldest—if the colophon is authentic—dates from 618/1221, thus from the author's lifetime (Manisa, Genel Küt., 1445, cf. T. Fahd, *La divination arabe*, Leiden 1966, 230-3). The work is a compilation based rather on current popular customs than on literature transmitted from Hellenistic superstition, since sources are hardly mentioned. Like all magic, these practices serve to realise wishes and longings and to ward off hardships, by trying to influence "supernatural" powers which cannot be grasped by the intellect or the senses. At the end of the work, al-Būnī therefore states that the mysteries of the letters (*al-hurūf*) cannot be proved by logical intellect, but only by insight into divine wisdom. He expresses himself in the same way in another work, the *Kitāb Laṭā'if al-ishārāt fi asrār al-hurūf al-'ulwiyyāt* (the title is variable; I did not have access to the lithography of Cairo 1317), quoted by Ibn Ḳhaldūn, *Muḳaddima*, iii, 140 (Engl. tr. Rosenthal, iii, 174; Fr. tr. Monteil, iii, 1106). In his *Risālat al-Shifā' li-adwā' al-wabā'* (cf. M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 249), Tāshḳoprūzāde (d. 968/1560) copied much of al-Būnī's magic to warding off the plague.

Most of the other works circulating under the name of al-Būnī seem to be more or less accurate extracts from the *Shams al-ma'ārif*; their relation to one another and to the main work is still to be investigated. We may mention here the *Kitāb al-Uṣūl wa 'l-dawābiṭ*, a kind of introduction to the secret sciences; the *Kitāb Sharḥ sawākīṭ al-Fāṭiha al-sharīfa* on the consonants *th*, *dh*, *kh*, *z*, *sh*, *z*, *f*, which do not occur in the first Sūra; the *al-Luma' al-nūrāniyya* on the highest names and several writings on the divine names (enumerated in Fahd, *op. cit.*, 237 f.). In addition to Goldziher's earlier studies, G. Vajda has pointed to Jewish and pseudo-Jewish elements in the *Shams al-ma'ārif*, especially with regard to the names of God, the angels the idea of *thakūfa* (from Hebrew *tekūfa*, something like "quarter of a year" and several other derived meanings): *Sur quelques éléments juifs et pseudo-juifs dans l'encyclopédie magique de Būnī*, in *Goldziher Memorial Volume*, i, Budapest 1948, 387-92. J. Ruska deserves the credit for having drawn attention to the abstruse chapter on alchemy in the *Shams* and its sources; since this chapter fits somewhat unnaturally in the work, it may indeed have been added by a later author who was familiar with al-Rāzī's *Kitāb al-Asrār* (cf. *Isl.*, xxii [1934], 307-10).

*Bibliography* (in addition to the works quoted in the article): the excellent study of W. Ahrens, *Die "magischen Quadrate" Al-Būnī's*, in *Isl.*, xii (1922), 157-77; in addition, G. Bergsträsser, *Zu den magischen Quadraten*, in *ibid.*, xiii (1923), 227-35, and again, Ahrens, *ibid.*, xiv (1925), 104-10; E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1909, *passim*; Brockel-

mann, I<sup>2</sup>, 655 f., S I 910 f.; M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, 234, 390 f., 415. (A. DIETRICH)

AL-BURAK AL-ŠARĪMĪ (Šuraymī in Ibn al-Kalbī), (AL-)ḤADĪDĪ B. ‘ABD ALLĀH (d. 40/660), a *Kh̄ārīdī* who is said to have been the first to proclaim that “judgement belongs only to God” (*taḥkīm*; cf. al-Mubarrad, *Kāmil*, Cairo edn., 917), but who is famed in history because of his being one of the three plotters sworn to kill simultaneously ‘Alī b. Abī Ṭālib [see IBN MULĀJAM], ‘Amr b. al-‘As, [q.v.] and Mu‘āwiya b. Abī Sufyān. Al-Burak accordingly proceeded to Damascus and stabbed Mu‘āwiya whilst he was praying, but only managed to wound him in the hip. According to tradition, the attack had two consequences: firstly, the “marriage vein” (*‘ir̄k al-nikāh*) was severed, so that Mu‘āwiya was unable to beget any more children, and secondly, the latter decided that in future he would pray inside a *maḥṣūra* (but see the ironical remark of al-Djāhīz, *Ḥayawān*, ii, 161, where a dog is said to have led him to take this precaution).

When al-Burak was arrested, he immediately told Mu‘āwiya about the plot hatched against the three persons. He asked him to await news of the attack on ‘Alī, and proposed to Mu‘āwiya that he should go and kill the caliph if Ibn Mulḏjam had failed and then return and throw himself on Mu‘āwiya’s mercy. From this point, the accounts diverge. According to some, Mu‘āwiya had him executed on the spot; according to others, he threw him into prison and freed him when he heard of ‘Alī’s death. According to the apparently most current account, he had his hands and feet (or one hand and one foot) cut off and sent him to Baṣra, where Ziyād b. Abīhi put him to death when he learnt that he had had a child born to him whilst Mu‘āwiya remained henceforth sterile.

**BURKU’** or **KAŠR BURKU’**, a ruin situated in northern Jordan about 25 km. northwest of the pumping-station H 4, now a small village on the road from Mafraq to Baghdād. Here one of the earliest Islamic inscriptions, dated 81/700, is preserved. A *ḥarra*-plain of about 650 m. altitude surrounds the ruin, which lies on the northeast bank of the Wādī Minkād. About 2 km. northwest of Burku’, the wādī is blocked by a modern dam forming a small lake which contains water from late autumn until summer. The alignment of the foundations of the southwest-part of the *kašr* suggests that a similar dam existed there in the 7th century A.D.

The building was first visited in 1928. An archaeological report on the site was published in 1960 (H. Field, *North Arabian desert archaeological survey 1920-1950*, Cambridge Mass. 1960, 94-9). The building was re-studied in 1974 by H. Gaube, *An examination of the ruin of Qasr Burqu’*, in *Annual of the Department of Antiquities of Jordan*, xix, (1974), 93-100 and 207-14.

The remains consist of a plain enclosure-wall at the northwest and the southwest sides, and ranges of rooms at the southeast (five rooms) and the northeast sides (six rooms), enclosing a courtyard where there is a rectangular tower. Enclosure and rooms show traces of repeated repairs, plan alterations and reconstructions. The masonry of the structure is of poor Hauranian style (basalt blocks

on the inner and outer faces, with a filling of lumps of basalt and clay). However, a thorough technical examination permits the isolation of five different stages of building-activity which can partly be connected with chronological evidences provided by inscriptions found at the spot. These inscriptions are: a Greek inscription from the 3rd century A.D. (Field, *op. cit.* 161 ff.); a Greek inscription from Byzantine times (Gaube, *op. cit.* 97); an Arabic inscription with the name of the *Amīr al-Walīd* (the later caliph Walīd I), dated 81/700 (*RCEA*, no. 12; Field, 154 f.; Gaube, 97); an Arabic inscription dated 782/1380 (Gaube, 97), and an Arabic inscription dated 812/1409 (Gaube, 97 f.).

In the course of its centuries-long use, Kašr Burku’ served different purposes. The nucleus of the site, the rectangular tower in the courtyard, was a Roman-Byzantine watch-tower controlling one of the main caravan-roads from Arabia to Syria. All installations to secure the water supply of the place (the artificial lake and two reservoirs) are most probably contemporary with the tower. In the 5th or the 6th century A.D. this advanced post was transformed into a monastic settlement and some rooms were built to the southeast of the tower. By Walīd’s order, rooms northeast and southeast of the tower and the enclosure were added. At this time Burku’ served as a modest country-residence. It proves that in Umayyad times important members of the ruling family erected even small and rather primitive buildings. Later, in the Ayyūbid period, the building was restored and was most probably used as a *khān*.

*Bibliography*: Given in the article.

(H. GAUBE)

**BURNOUS** [see LIBĀS].

**BURŪDJIRDĪ**, ḤADĪDĪ ĀKĀ ḤUSAYN ṬABĀTABĀ’Ī (1875-1961), the greatest religious authority (*marja’-i taklīd-i mullaq*) of the Shī’ī world in his time. He belonged to a well-established and wealthy clerical family from which emerged distinguished figures such as Sayyid Mahdī Baḥr al-Ulūm (d. 1797). After primary education in his home town, Burūdīrd, he moved to Iṣfahān in 1892 and studied *fiqh*, *usūl*, philosophy and mathematics under several specialists including Sayyid Muḥammad Bakīr Durcā’ī. In 1902 he went to Naḏjaf and attended the lectures of *Khurāsānī* [q.v.] and others until 1910, when he went back to Burūdīrd with the intention of returning to Naḏjaf, but the death both of his father and *Khurāsānī* in 1911 made him remain in Burūdīrd. Despite the fact that Burūdīrdī was closely associated with *Khurāsānī* during the Persian Constitutional Revolution of 1905-11, we do not know of any co-operation between Burūdīrdī and *Khurāsānī* in the latter’s constitutionalist campaign. This is an indication of Burūdīrdī’s conservatism in the field of politics, which continued to present itself during Burūdīrdī’s sole leadership from 1947-61.

While in Burūdīrd he was recognised as a respected religious authority in the western part of Iran. He was so popular in his region that in 1926, when he was temporarily living in Kum, he was urged by the Burūdīrdīs to return to Burūdīrd; he lived there until 1944. At this time the Kum Circle for Religious Studies which had been founded by Shaykh ‘Abd al-Karīm Ḥā’irī [q.v. in Suppl.] in 1921 was being run by three men (Šadr, Ḥudjdjat, and *Khwansārī* [q.v.]). It was envisaged that due to his priority in age, experience and background in religious leadership, Burūdīrdī would be able to

reorganise the Circle which, under the government's pressures, and especially after Hā'irī's death in 1937, had been greatly diminished. To this end Burūdjirdī was cordially invited to Ķum in December 1944. After the death of Sayyid Abu 'l-Ḥasan Iṣfahānī and Ḥādīdjī Ākā Ḥusayn Ḳummī in Naḍjaf in 1946 and 1947 respectively, Burūdjirdī was unquestionably acknowledged as the sole *marḡa'-i taklīd* in the whole Shī'ī world and held this title until his death.

During his leadership, many religious activities were undertaken: several libraries, hospitals, mosques, and religious schools were established or revived in different locations in Iran and other countries, including 'Irāk and Germany; the publication of a number of religious books were subsidised; religious emissaries were dispatched to Europe, USA, Pakistan, Saudi Arabia and Africa. The Ķum Circle for Religious Studies, which had become only a convenient alternative to that of Naḍjaf during Hā'irī's leadership, now proved to be the most important clerical centre in the Shī'ī world. Thanks to this centrality, many students and specialists of Shī'ism formerly living in Naḍjaf and elsewhere joined the Ķum Circle, to the extent that their number exceeded 5,000, and for the first time the Naḍjaf Circle looked to Burūdjirdī for assistance, financial or otherwise.

In the field of scholarship, Burūdjirdī made noticeable contributions; in addition to regular teaching and handling religious affairs, Burūdjirdī wrote a number of books on *fikh* and *uṣūl*, several of which were never published; one speciality of his was *ḥadīth*. He has been widely acknowledged as the initiator of a new scheme which facilitates the process of determining the number and the extent of authority of the *ḥadīth* transmitters; it determines the time gap existing along the chain of transmitters, so that the classification of the *ḥadīths* into *mursal* and *musnad* becomes easy. His scheme also helps to identify the identical names which appear in the chain of *ḥadīth* transmitters and to disclose any distortions or alterations there. Finally, it classifies the transmitters into 36 groups, each with distinguishable characteristics.

Another area of Burūdjirdī's concern was Sunnī-Shī'ī relations; to this end, Burūdjirdī closely cooperated with the Cairo *Dār al-Taḡrīb bayn al-Madhāhib al-Islāmiyya* and entered into correspondence with the Azhar rectors such as Shaykh Maḥmūd Shaltūt. This relationship, it is believed, resulted in the issuing of a *fatwā* in which Shaltūt declared Shī'ism to be as true a Muslim creed (*madhhab*) as other *madhhabs* which have been followed by the Sunnīs, and invited all Muslims to recognise it (see the Peer Mahomed Ebrahim Trust, *Shi'ism explained*, Karachi 1972, pp. x ff.).

In the arena of politics Burūdjirdī remained rather inactive. At times, however, he favoured the Shāh of Iran and some of the factions tied to the Royal Court. On a certain occasion, the Shāh even went to Ķum and visited Burūdjirdī at home. In 1952, during the general election for the 17th Iranian Parliament, Burūdjirdī was considered as a supporter of a Ķum feudal candidate, Abu 'l-Faḍl Tawliyat, who was also supported by the Court. In the Shāh-Muṣaddīk struggles, Burūdjirdī was widely recognised as being opposed to some of the measures taken by the latter and was happy over Muṣaddīk's downfall in 1953. In 1952 a member of the *Fidā'iyyan-i Islām* [q.v.] and then a friend of Muṣaddīk, Ḳhalīl Ṭahmāsbī, who was accused of the assassination of the former prime minister 'Alī Razmārā,

went to Ķum to visit Burūdjirdī, but he refused to meet with Ṭahmāsbī. In other political matters, which did not form Burūdjirdī's immediate concern, he was very reluctant to interfere. During the Palestine movement of 1947-8, for instance, a demonstration was organised in front of his house urging him to condemn Israel, to which he did not respond; however, in the end he prayed for the victory of the Palestinians and anathematised the Israelis (according to a leaflet picked up by the present writer on the street in Ķum at the time).

(ABDUL-HADĪ HAIRĪ)

**BURUSHASKI** is the language of the Burūshō, who form the majority of the population of the isolated principalities of Hunza and Nagir [q.v.] in the western Karakoram. It is probably used by about 20,000 persons. A closely related dialect, called Werčūkwār, is spoken in the Yāsīn valley further west towards Čitrāl. The language was no doubt formerly current over a larger territory than at present. Al-though it shares much vocabulary with the Dardic languages *Šīna* of Gilgit and *Khōwār* of Čitrāl [see DARDIC and KĀFIR LANGUAGES], Burushaski has no known genetic relationship either with the neighbouring Aryan, Turkic, or Sino-Tibetan languages or with any other group, e.g. Causasian, Dravidian, etc. This may be shown by the numerals 1-10: *hi, ālti, īski, wālti, ḡīndi, miṣīn, tale, āltam, hunti, tōrīmi*. Characteristic features are (i) the division of nouns into four classes, approximately: human, (hm) masculine and (hf) feminine, (x) non-human animate and objects conceived as units, and (y) inanimate, amorphous and abstract, (ii) the occurrence of a plethora of plural suffixes, and (iii) the pervasive use of "possessive" personal pronoun prefixes with both nouns and verbs.

(D.N. MACKENZIE)

AL-BŪŞĪRĪ, ŠHARAF AL-DĪN ABŪ 'ABD ALLĀH MUḤAMMAD B. SA'ĪD B. ḤAMMĀD AL-ŞANḤĀDJĪ, AN

Egyptian poet of Berber origin, born on 1 Shawwāl 608/7 March 1212 at Būšīr [q.v.] or near to Dalāš (see Yākūt, s.v.) in Upper Egypt. He was in fact known also by the *nisba* of Dalāšī, it being said that one of his parents originated from Dalāš and the other from Būšīr; he also had a composite *nisba*, al-Dalāšīrī, but this last was never very current. He followed the courses of the Šūfī Abu 'l-'Abbās Aḥmad al-Mursī (d. 686/1287; see al-Sha'rānī, *al-Ṭabaḳāt al-kubrā*, Cairo n.d., ii, 12-18; P. Nwyia, *Ibn 'Atā' Allāh*, Beirut 1972, index) and was also involved in the first developments of the Shādhiliyya order [q.v.]. He spent ten years in Jerusalem, and then resided at Medina and Mecca before settling at Bilbays [q.v.], where he held a minor administrative job (*mubāshīr*; see al-Ḳal-ḳaṣhandī, *Subḥ*, i, 451). He died at Alexandria, at a date which varies in the sources between 694 to 696/1294-7, and was buried at the foot of the Muḳaṭṭam, near to al-Shāfi'ī [q.v.].

Al-Būšīrī was a skilled calligrapher, a traditionist and a celebrated reciter of the Ḳur'ān, but his name has been immortalised by a poem of his in praise of the Prophet, the *Burda* ode [q.v.], upon which a host of commentaries have been written and which has enjoyed up to the present time an extraordinary success. It has not, however, thrown wholly into the shade another work of his on the same theme, *al-Ḳaṣīda al-hamziyya fi 'l-madā'ih al-nabawiyya* or *Umm al-Ḳurā fi madā khayr al-warā'*, printed and commented upon several times. Al-Būšīrī is furthermore the author of a *Lāmiyya* in praise of the Prophet, of *al-Ḳaṣīda al-muḍarriyya fi 'l-ṣalāt 'alā khayr al-bariyya*, of the *Dhukhr al-mā'ād 'alā waḥn Bānat Su'ād*, of a *Yā'yya*, of *al-Ḳaṣīda al-khamriyya* and of some secular pieces more or less written for various occasions.

*Bibliography*: Kutubī, *Fawā'id*, no. 411; Suyūfī, *Husn al-muhādara*, Cairo 1293/1876, i, 260; R. Basset, *Intro.* to his tr. of the *Burda*, Paris 1894, I-XII; Ibn al-'Imād, *Shadhārāt*, v, 432; G. Gabrieli, *al-Burdatayn*, Florence 1901, 24-9; Brockelmann, I, 264-5, S I, 467-72. (Ed.)

AL-BUSTĀNĪ, name of a Lebanese family distinguished in the field of Arabic literature, which from the *mu'allim* Buṭrus al-Bustānī to Sa'īd S. al-Bustānī represents the various stages of the *nahḍa* and marks the contribution of the Lebanon to the Arab literary renaissance. Also, from the old *Encyclopaedia* of Buṭrus al-Bustānī to the present-day *Dā'irat al-ma'ārif* of F.É. al-Bustānī, a period of a century embraces the wide range of activities covered by Lebanese and Arab scholars in the sphere of general culture. A detailed comparison of these two generations of writers and of their methods of investigation and erudition shows more plainly than by any other means, the long road that the Lebanese travelled in their quest to acquire and to benefit from the knowledge and the methods of the West. The Bustānīs, in waves that were successive and intense, took turns in the service of the Arabic language.

A Maronite family, whose cradle was in northern Lebanon, it was drawn, at the end of the 16th century, in the time of the *amīr* Fakhr al-Dīn II, towards Dayr al-Ḳamar, to take advantage of the Ma'nid peace and the commercial prosperity of the region. The descendants of this prolific family were not slow to settle in other districts of the Shūf, such as Dibbiyya, Ibkishīn and Marḍī.

In a period of less than a hundred years, we see that dozens of representatives of this family have occupied posts of supreme importance in the ad-

ministration, the bar, the judiciary, the civil service and most of all in education, in the press and in literature. It was their idea to found a National School for the purpose of grouping together all the children of the country without religious segregation. Also, it was they who took the initiative in the sphere of encyclopedias and modern dictionaries. It was to one of them finally that the Lebanese government entrusted, in 1953, the task of founding the Lebanese University. In the following pages we shall confine ourselves to mentioning, by way of example, and in alphabetical order, some famous names among the Bustānīs of the past who have done service to Arabic letters.

1. 'Abd Allāh al-Bustānī (1854-1930), eminent teacher and lexicographer, born at Dibbiyya, studied at the National School of Beirut under two distinguished *shaykhs*: Nāṣif al-Yazīdī and Yūsuf al-Aṭīr. After founding, in Cyprus, with Iskandar 'Ammūn, a review *Dumaynat al-akhbār* which had little success, he devoted his energies to education. In a career spanning forty years, he acquired high renown and formed, at the College of Wisdom and the Patriarchal College, an élite of poets (Wadī 'Aḳl, Bishāra al-Ḳhūrī, Shibli al-Mallāt, Amīn Takī al-Dīn, etc.) and of journalists (Dāwūd Barakāt, Yūsuf al-Bustānī, etc.) and of writers (Shakīb Arslān, Is'af Nashāshībī, etc.). It was in the course of this career, and mainly for the benefit of his disciples, that 'Abd Allāh al-Bustānī composed the majority of his writings. To assist in the teaching of Arabic, he prepared a dictionary, *al-Bustān* (2 vols. Beirut 1927-30), and an abridged version *Fākihāt al-Bustān*. It was also for their benefit that he composed a number of plays, some inspired by French dramatic art (*La Guerre des deux Roses*, *Brutus*, etc.), some taken from the storehouse of Arab history (*Djassās, assassin de Kulayb*, *Umar al-Himyarī*, etc.) In recognition of his versatile achievements, he was elected a member of the Arab Academy of Damascus, and president of the short-lived Lebanese Academy.

*Bibliography*: M. al-Bustānī, *Kawthar al-nufūs*, 398-419; *al-Salsabil*, Djounieh 1968, 154-8; Y.A. Dāghīr, *Maṣādir al-dirāsa al-'adabiyya*, ii, 193-5; A. al-Djundī, *A'lām al-'adab*, ii, 253-4; 'U.R. Kaḥḥāla, *Mu'djam al-mu'allifīn*, vi, 148-9; Ḳh. Ziriklī, *al-'A'lām*, iv, 285; and see *Munāzara lughawiyya*, Cairo 1936; *Tadhkār al-yūbil*, Beirut 1928.

2. Buṭrus b. Būlus al-Bustānī (1819-83) was born at Dibbiyya and first attended the village school, then the college of 'Ayn Warḳa, where he spent ten years, between 1830 and 1840. In order to help his mother, who had just lost her husband, in the task of raising and supporting his brothers, he refused the offer of a scholarship and went to Italy to complete his religious training at the Maronite College in Rome. It seems that he applied himself to learning English while at 'Ayn Warḳa, which was to serve him well in his future contacts with the Protestant missionaries. He settled finally in Beirut where he lived for forty-three years, and pursued a most distinguished career. His arrival coincided with the troubles caused by the departure of the *amīr* Baṣhīr II and the withdrawal of Egyptian troops. He made the acquaintance of some American missionaries, with whom he formed a friendship that grew stronger in time and contributed to his conversion to Protestantism. It was at this period that he met the doctor Cornelius Van Dyck, who was then a young physician working with the missionaries; he had just established himself in Beirut

and was eager to learn the language of the country. From 1846 to 1848, having temporarily left the city, he helped his friend in the school at 'Ubey, which the latter founded and which enjoyed a high reputation in this period. It was there, for the benefit of his pupils, that Bustānī composed his two educational manuals *Kashf al-hidjāb fī 'ilm al-hisāb* and *Bulūgh al-arab fī nahw al-'Arab*; it was also there that his eldest son Salīm was born. On his return to Beirut in 1848, the American Consulate employed him as an interpreter, a post that he held until 1862. During this period, he continued to educate himself, to learn European and Semitic languages with the object of assisting Dr. Smith in his venture of translating the Protestant Bible. His energy was also reflected in a large corpus of lectures, articles and pamphlets. In 1860, he published his magazine *Nafīṭ Sūriyā* ("The Syrian bugle"); then in 1863 he founded his famous National School which continued to operate until 1875 and rendered the country very valuable service. In 1870, he undertook the publication of his two periodicals *al-Djinnān* and *al-Djanna*, followed a year later by *al-Djunayna*. The major achievements of Buṭrus al-Bustānī were, besides his school and his reviews, his contribution to the translation of the Bible, his large dictionary *Muḥīṭ al-muḥīṭ*, edited in 1870 and the *Encyclopaedia*, the first volume of which appeared in 1876. He died while involved with this task, and he was able to produce only six volumes. His son Salīm applied himself to this work and added two further volumes. The encyclopedia in question came finally to a halt with the eleventh volume and was never completed.

The influence of al-Bustānī at his apogée was very deep. Lucid, far-sighted and sincere, he made accurate judgements of the state of his country from a national, cultural and moral point of view; then he set to work, applying himself to projects the achievement of which would seem impossible for one man alone. He saw clearly, in a setting of considerable obstacles, of a confused political situation, of intolerance and of opposition to Turkish rule, the long path that must be travelled in the quest for an authentic social and cultural renaissance. An indefatigable craftsman, of bold and progressive spirit, he devoted himself to his work and was involved with it to the very last days of his life.

Andraos, *al-Mu'allim B. al-Bustānī* (dissertation submitted to the Lebanese University, 1970); F.E. al-Bustānī, *al-Rawā'ī*, no. 22, Beirut 1950; M. al-Bustānī, *al-Salsabil*, Djunieh 1968, 142-8; *al-Hilāl* of 15th January 1896; 'U. Kaḥḥāla, *Muḍjam al-mu'allifin*, iv, 48-9; Sh. al-Khūrī, *Maḍjma' al-Masarāt*, Beirut 1908; *al-Mukṭataf*, of 1st August 1883; N. Naṣṣār, *Nahwa muḍjama' djadīd*, Beirut 1969; M. Ṣawāyā, *al-Mu'allim Buṭrus al-Bustānī*, Beirut 1963; L. Shaykhū, *al-Ādāb al-'arabiyya*, ii, Beirut 1910; Ph. Tarrāzī, *Ta'rikh al-sihāfa*, i and ii, Beirut 1913; Dj. Zaydān, *Tarāḍim mashāhīr al-Shark*, ii, Cairo 1911.

3. Buṭrus b. Sulayman al-Bustānī (1893-1969), born at Dayr al-Ḳamar where he barely completed his primary studies, and went to live in Beirut with his brother Karam (see below, 4). Self-taught, his thorough linguistic and literary education was the fruit of assiduous personal effort. He first achieved distinction with his grammatical knowledge and his understanding of ancient texts which he analysed and annotated to make them accessible to his readers. In 1923 he founded his review *al-*

*Bayān* which he edited until 1930. Here he dealt with literary and social themes, analysed new works appearing in the Lebanon and in the Arab countries and encouraged the study of comparative literature. In the course of its publication, *al-Bayān* was both a magnet and a support for young Lebanese writers. The world economic crisis forced Buṭrus to give a different direction to his vocation. Henceforward he devoted his efforts to education and to all that might facilitate his task as teacher. It was to introduce his pupils from the Brothers and the College of Wisdom to Arabic literature that he composed, in three volumes, his valuable textbook *Les auteurs arabes*. The first of these volumes (1931) covers the period from the pre-Islamic age to the Umayyads, the second (1934) deals with the 'Abbāsīd age, the third with al-Andalus and the *nahḍa*. Later, in 1943, this series was crowned by a fourth volume, an anthology. Even though scientific method is not respected scrupulously in his writings, Buṭrus excels through the purity of his style and the accuracy of his comments. The last years of his career were spent at the Lebanese University.

*Bibliography*: M. al-Bustānī, *al-Salsabil*, 199-206.

4. Karam al-Bustānī (1888-1966) was born at Dayr al-Ḳamar, studied in the Jesuit school there, then went and settled in Beirut with his brother Buṭrus (see above, 3.); here he applied himself simultaneously to a number of tasks: teaching, journalism and critical editing of ancient texts. Over a number of years, he was associated with Catholic missionary establishments (Jesuits, Franciscans, Sacre Coeur, Friars, etc.), where he taught Arabic literature. At this time he was collaborating in various Lebanese reviews and journals that were then in fashion (*al-Bark*, *Lisān al-hāl*, *al-Arz*, *al-Makshūf*, etc.) and he gave generous assistance to his brother Buṭrus in the editing of his review *al-Bayān*. His thorough knowledge of Arabic and his erudition are shown in his study and editing of Arabic manuscripts and most of all in a series of collections of poetry (*Diwān Ibn Zaydān*, *Diwān Ibn Khafāḍja*, *Diwān Ibn Hānī' al-Andalusī*, *Luzūmiyyāt al-Ma'arrī*, *Diwān al-Khansā'*, etc.). As regards original production, the work of Karam is confined to a small number of works of a historico-social nature (*Légendes orientales*, *Princesses du Liban*, *Femmes arabes*).

*Bibliography*: M. al-Bustānī, *al-Salsabil*, 196-8.

5. Sa'īd b. Salīm al-Bustānī (1922-77) born at Mardj (in the *Shūf*), studied in Beirut at the College of Jesuit Fathers, then at the Institute of Oriental Literature, and pursued his studies in France, where he obtained a State Diploma in Arabic and a Doctorate of Letters. On his return to Lebanon, he occupied some important posts at the Lebanese University. In 1974, he was appointed Dean of the Faculty of Administration, then, in 1977, Dean of the Faculty of Literature. In the course of his brief university career, he published his thesis *Ibn ar-Rūmī, sa vie et son oeuvre* (Beirut 1967). In addition, he contributed to the *Encyclopaedia of Islām* and to the *Da'irāt al-ma'ārif* of F.E. al-Bustānī. In university circles, Sa'īd al-Bustānī was associated with bilingualism and western culture, and he defended his positions of principle vigorously. The hope of the Lebanese élite, he died in mid-struggle, carried off suddenly by an incurable disease, leaving a number of important works unfinished.

6. Salīm b. Buṭrus (1846-84) journalist and novelist, born at 'Ubeiy. He studied in the centres established in the north of the Lebanon by Protestant missionaries recently arrived from America to compete with the propaganda diffused over two centuries by the Catholic missionaries. As teachers, he also had his father Buṭrus and Nāṣif al-Yazīdī, who introduced him to the subtleties of Arabic. At the age of sixteen (in 1862) he entered the service of the American Consulate in Beirut as an interpreter, a post that he held for ten years. Then his father called upon him to collaborate with him in his many projects, especially in the running of the National School, the editing of his reviews and the elaboration of the *Encyclopaedia*. Thanks to his knowledge of foreign languages, his civic sense and his literary and philosophical training, Salīm gave a new impetus to the Renaissance, and turned it in directions other than those pursued by the generation of his father, of N. Yazīdī, Athīr, Aḥḍab and others. The West influenced his thinking and his conception of society. He went far beyond the cultural level deemed sufficient by his contemporaries and tackled new and original genres in vogue in the West. He displayed this tendency towards innovation in several spheres. First, in participating in the activities of literary societies and cultural associations, in particular in belonging to the Syrian Scientific Society in which he played a significant role; he occupied the post of vice-president, and for the benefit of members and friends, he composed some plays, most notably *Maḍīnūn Laylā*, in six acts, performed on the 11th May 1869, and greeted by Beirut audiences as a masterpiece. Later, he was tempted to pursue this line of activity further and he composed more plays in which prose and poetry lie side-by-side and blend harmoniously. Later, he found in his father's various reviews a useful medium for dealing with subjects fashionable in the western press. The columns of *al-Djīnān* (1870-86) discussed moral and civic questions never dealt with before in Arabic journals of this period. The obsequious journalist, the flatterer of power and high authority (and such men were the general rule at that time), came under attack in Salīm's articles from a thinker fired with civic concern and patriotism, believing sincerely in his mission as social reformer. The titles of his surveys and articles suffice by themselves to reveal the breadth of the spectrum of social, moral, economic and political problems that he studied. We shall quote, by way of example, the following titles: *Birth and evolution of nations*, *Factors of progress*, *Methods of education*, *The role of economics in the evolution of society*, etc. In addition, he blazed the first trail of the modern Arabic novel. Taking the ancient heritage as a base, he tackled subjects with a historical theme and thus sketched the path later to be followed by Naḥḥla al-Mudawwar and Dī. Zaydān.

Among his works we shall mention the following:

- (a) Nine novels published in serial form in *al-Djīnān* between 1870 and 1879;
- (b) Some twenty short stories composed directly in Arabic or translated from French or English (published at the same period in the same review);
- (c) *A history of France*;
- (d) *A history of Napoleon Bonaparte in Egypt and Syria*;
- (e) *Statesmen*.

These three last were also published in *al-Djīnān*.  
 (f) Volumes vii and viii of the *Encyclopaedia* (and valuable participation in the editing of the first six volumes).

*Bibliography:* Dī. Ayyūb, *Index alphabétique contenant noms d'auteurs et titres d'articles insérés dans al-Djīnān, au cours de sa publication (1870-1886)*, see in particular articles signed by Salīm (typescript thesis, the Lebanese University); M. al-Bustānī, *al-Salsabīl*, 152-3; Y. Dāghūr, *Maṣādīr*, ii, 186; Dī. Khaṭṭār, *Salīm al-Bustānī: vie et oeuvre* (manuscript essay submitted to the Lebanese University, 1970). 7. Sulaymān b. Khaṭṭār al-Bustānī (1856-1925), politician and writer, born at Ibkīshṭūn, a small village in the neighbourhood of Dibbiyya (Shūf). He studied at the National School, attending the Arabic classes of Nāṣif al-Yazīdī and Yūsuf al-Athīr, and gaining a knowledge of the French, English and Turkish languages, as well as the sciences that were then in vogue. His artistic temperament was noticed by Buṭrus, his illustrious father, who took care of him and invited him to collaborate in his educational work, the editing of his reviews *al-Djīnān*, *al-Djanna* and *al-Djunayna*, and the preparation of the *Encyclopaedia*. Invited to Baṣra, Sulaymān founded there a modern-style educational establishment, then he spent eight years in Baghdād where he occupied some very important administrative posts. A tireless traveller, Sulaymān visited many countries, notably Turkey, Egypt, India and Iran, as well as European and American states. Resuming his work on the *Encyclopaedia*, he settled in 1896 in Cairo and he contributed substantially to the editing of the tenth and eleventh volumes. In 1904, he accomplished his greatest work, a translation of the *Iliad* into Arabic verse (1260 pages of introduction and text). From this time onward he devoted his energies to politics, participating in the activities of various parties that were then proliferating in the Arab countries. His attitude was, initially, favourable towards the Ottomans, and this earned him, in 1908, when the Constitution was put into effect, election as representative of the *villāyet* of Beirut in the Ottoman parliament, and later, in 1913, appointment to the post of Minister of Agriculture, Commerce and Industry. The change in policy on the part of the Sultan 'Abd al-Ḥamīd II (1876-1909), and the opposition of Sulaymān to Turkey's entry into the First World War against the Allies, obliged him to retire from the government and leave Istanbul, going into exile first in Switzerland (1914-19) then in Egypt (1919-24) and finally in New York where he died a year later, totally blind.

In general, the literary output of Sulaymān is hardly extensive and does not appear to equal that of Buṭrus or Salīm; but thanks to his political involvements, his participation in the activities of literary circles and reformist parties, and his innumerable articles in the Arabic press, his work had a profound influence on the development of Arab aspirations and democratic views in regard to Ottoman rule. Setting aside his translation of the *Iliad*, the thorough research that he conducted by way of introduction to the translation, reveals to the Arabic reader, for the first time, a cultivated mind, familiar with Greek, Latin and modern sources, and involved in considerations related to comparative literature, something totally ignored at that time in Arab literary circles.

In *'Ibra wa-dhikra*, or *l'État ottoman avant et après la Constitution*, published in Egypt (1908),

Sulaymān shows himself as a reformer, following the path blazed by his predecessors, and he expresses, in a clear and direct style, his ideas concerning different styles of government, liberty, tyranny, and the means of exploiting the resources of the Ottoman caliphate, as well as various procedures to be adopted for the modernisation of the state. In addition, a number of manuscript works are attributed to him, including *l'Histoire des Arabes*, and a book of *Memoirs* in English. In the Lebanese civil war of 1975-6, the house where Sulaymān was born in Ibkishṭīn was not spared; it was plundered and partially destroyed, and his library suffered the same fate.

Ghurayyib, *Sulaymān al-Bustānī et l'introduction de l'Iliade*, Beirut n.d.; Dī. al-Hāshim, *Sulaymān al-Bustānī et l'Iliade*, Beirut 1960; M. Sawāyā, *Sulaymān al-Bustānī et l'Iliade d'Homère*, Beirut 1948; A. Hamorī, *Reality and convention in Book Six of Bustānī's Iliad*, in *JSS*, xxiii (1978), 95-101. See also the other authors mentioned in articles concerning the Bustānīs.

8. Wadī' al-Bustānī (1836-1954), born at Dibbiyya, studied at the American school of Sūḵ al-ʿarb, then at the American University of Beirut where he obtained his B.A. in 1907. He was involved in an astonishing range of activities. Following in the tracks of previous and contemporary members of the Bustānī family, he applied himself to literature and to travels in Arabia, especially to the Yemen (1909) and to the Far East (1912) where he became a friend of Tagore. He returned to Egypt, then, after 1917, occupied some very important administrative posts in Palestine, at that time under British Mandate. In 1953, he left Haifa to return to his native country and there he spent the last year of his life. Two major principles dominated his long career. The first was reflected in his participation in all the efforts to preserve the Arab identity of Palestine. The second, more important, and more fortunate in its results, consisted essentially in a long list of Hindu or Western books translated from English, a language which he knew thoroughly. Thanks to him, the major works of Lord Avebury came to be known in Arabic, notably *The pleasures of life* (Khartoum 1904), *The meaning of life* (Beirut 1909), *The fruits of life* (Cairo 1910) and *The beauties of nature* (Cairo, 1913). Other authors, too, attracted his attention; he translated *The Quatrains of Khayyām* (Cairo 1912), and some poems of Tagore which he published under the title *The sardine fisher* (Cairo 1917). His most remarkable and successful achievement was without doubt the translation of the Sanskrit epic of the *Mahābhārarata* (Beirut 1952), as well as other epic or semi-epic works from ancient India.

Other than translations, his principal works are:

- (a) *Lyrics of the War* (Poems, Johannesburg 1915);  
 (b) *The absurdity of the Palestine Mandate* (Beirut 1936);

(c) *Palestinian poems* (Beirut 1946);

(d) *The Quatrains of Abu 'l-ʿAlā'* (manuscript).

**BUTRUS KARĀMA**, Christian Arab official and writer, the son of Ibrāhīm Karāma, was born in Hīmṣ in 1774. Together with his father he was converted from the Greek Orthodox faith of the Karāma family to Greek Catholicism. As a result they were forced to migrate to Acre, where Butrus entered the service of the Paṣḥa 'Alī al-As'ad (1806). In 1811 he moved to Lebanon, where he was employed by the amīr Baṣhīr al-Shihābī [see BAṢHĪR SHIHĀB II] as a tutor to his sons and as head of his chancellery. After Baṣhīr's deposition in 1840, Butrus accompanied him to Malta, and later to Constantinople, where he became a secretary of the Sultan and court interpreter, thanks to his mastery of both Arabic and Turkish. He died in Istanbul in 1851.

Butrus composed many poems in Arabic, the majority of which were collected in his *diwān* entitled *Sadīf al-ḥamāma fī Dīwān al-Mu'allim Butrus Karāma*.

When one of his Arabic compositions was attacked by a Muslim critic, he replied with a spirited *makāma* in which he maintained the proposition that excellence in Arabic letters and mastery of the Arabic language was not dependent on being a Muslim. Notwithstanding the point of this dispute, it was conducted along thoroughly Islamic lines, with opposing views being expressed in verse, and Butrus himself uses forms of expression which differ very little from standard Islamic formulae, e.g. his *makāma* begins "In the name of God, the Compassionate, the Merciful. Praise be to God, the Lord of the worlds: Ruler of the Day of Judgement . . ."

Fair-minded Muslim critics appreciated the worth of Butrus's poetry, and one, 'Abd al-Djalīl al-Baṣrī (1776-1854), composed a poem in which he adjudicated between Butrus and his chief detractor, finding in favour of the former.

## C

**ĆAĆ-NĀMA**, a Persian history of the Arab incursions into Sind in the 1st/7th and 8th centuries, with an introductory chapter concerning the history

of the province on the eve of the Arab conquest (ed. Dā'ūd-pota, New Delhi 1939, 14-72) and an epilogue describing the tragic end of the Arab commander

Muḥammad b. al-Kāsim and of the two daughters of Dāhir, the defeated king of Sind (*ibid.*, 243-7). According to the author, 'Alī b. Hāmid b. Abī Bakr Kūfī (about whom see Storey, i, 650), the *Čač-Nāma* is a translation of an Arabic book which Kūfī found some time after 613/1216-17 in the possession of the *kādī* of Alōr, Ismā'īl b. 'Alī . . . b. 'Uthmān al-Thaḳafī (*ibid.*, 9-10). No details about the author and name of that book are given. However, a comparison between the *Čač-Nāma* and Arab historians such as Balādhurī (*Futūh*, 431-46) bears out the Arab provenance of those parts of the book that describe the battles leading to the conquest of Sind; Kūfī might well have used Madā'inī's *Kitāb Thaḡhr al-Hind* and *Kitāb Ummāl* (or *A'māl*) *al-Hind* (*Fihrist*, 100; Yāḳūt, *Udbā'*, v. 315; cf. A. Schimmel, *Islamic literatures of India*, Wiesbaden 1973, 12). The *Čač-Nāma* seems to have preserved Madā'inī's tradition concerning India in a much fuller fashion than classical Arab histories. On the other hand, the book also comprises a considerable amount of material which probably reflects a local Indian historical tradition. The part dealing with the rise of the Čač dynasty (14-72), the story of Darōhar, Džajsinha and Džankī (229-234), and some traditions attributed to a Brahman called Rāmsiya (179) and to "some Brahman elders" (*bādī mashāyikh-i barāhima*) (197; cf. also 206<sup>11</sup>) deserve to be mentioned in this context.

The extensive account of the relationship that developed between the Arab conquerors and the local population, which may well reflect a local Muslim Indian tradition, is perhaps the most meaningful and fascinating part of the *Čač-Nāma* (208 ff.). Here Muḥammad b. al-Kāsim is said to have given his unqualified blessing to the social characteristics of India and to have sanctioned both the privileges of the higher classes and the degradations of the lower ones. He upheld the central and indispensable function of the Brahmins and confirmed the privileges accorded to them by ancient tradition. As for the lower classes, represented in the *Čač-Nāma* by the Džats [*q.v.*] (al-Zuṭī in Arab historiography), Muḥammad b. al-Kāsim confirmed the disabilities imposed upon them by the deposed Čač dynasty (208 ff.). Some of these disabilities bear a striking similarity to the discriminatory measures employed against the *ahl al-dhimma* according to Islamic law. It is fascinating to observe the way in which the *šar'* injunctions were transposed into the Indian milieu and probably blended with local custom. Even more fascinating is the transformation of the injunctions themselves: they are not applied to all non-Muslims, irrespective of class, because of their refusal to embrace Islam; they serve rather as an instrument to demonstrate and perpetuate the inferior social status of an ethnic group. The *Čač-Nāma* occasionally sounds like a document intended to accord Islamic legitimacy to the Indian social structure, to sanction the privileges of the Brahmins and to confirm the degraded status of the lower classes. It seems to be a historical and even religious justification of the persistence, under Islam, of a social system which is in sharp conflict with the Islamic world view. It may be considered an illustration of Intiāz Ahmad's statement that "... if the formal Islamic ideology rejects caste, the actual beliefs held by the Muslims not only recognise caste distinctions but also seek to rationalise them in religious terms" (*Caste and social stratification among the Muslims*, New Delhi 1973, p. xxviii).

(Y. FRIEDMANN)

**ČAD, CHAD**, a region of Inner Africa. The Republic of Chad (area: 1, 284,000 km<sup>2</sup>; population: about 4,000,000 in 1975) is one of the four states which emerged from the former French Equatorial Africa. The country stretches over 1,600 km. from south of latitude 8° N. to the north of latitude 23° N. Consequently, climate and vegetation vary from savannah woodland with an annual rainfall of more than 1,000 mm. in the south to the arid desert of the Sahara in the north. Chad is torn between two conflicting orientations, between North and Equatorial Africa.

Islam has created a measure of cultural unity in the northern and central parts of Chad, but it has also contributed to the alienation of the region south of latitude 11° N., which remains almost untouched by Islam.

About one million members of the Sara tribe form the main element among the Bantu population of the better-watered south. The Sara are also the largest single ethnic group in Chad as a whole. For centuries the Sara, together with other peoples of the south, were the target for slave raiding from the north.

Farther north the open country between latitudes 12° and 15° N. attracted waves of migrants, mainly nomads, from the north (the Tubu) and from the east (Arabs and Arabised groups). The nomads played an important role in the history of that region which saw the emergence of islamised African states.

Kānim, the earliest state in this region [see KANEM], was first mentioned by al-Ya'qūbī (*Ta'rikh*, ed. Houtsma, 219) in the second half of the 3rd/9th century. The state of Kānim and its Kanembu people evolved as a result of an interaction between rulers of nomad origin (probably Tubu from Tibesti) and the indigenous population at the northeastern corner of Lake Chad. An interpretation of the Arabic sources (Ibn Sa'īd, ed. Vernet, 1958, 28; al-Maḳrīzī, ed. Hamaker, 1820, 206; a *maḡram* in Palmer, *Sudanese memoirs*, iii, 3) suggests that the rulers of Kānim became converted to Islam in the 5th/11th century, undoubtedly through the influence of Muslims who moved along the trade route from Tripoli via Fazzān [*q.v.*] to Lake Chad. By the 7th/13th century Islam had spread to other

sectors of the population. People from Kānim went on pilgrimage to Mecca and came to study in Cairo, where a *madrasa* for Kānimī students was established in the 640s/1240s (al-Makrīzī, *Khitāt*, ed. Wiet, 1922, iii, 266).

The ruling dynasty of Kānim claimed descent from Sayf b. Dhī Yazan [*q.v.*], and became known as the Saifawa. In the second half of the 8th/14th century the Saifawa were forced to evacuate Kānim because of harassment by the Bulala. The Bulala were probably an offshoot of the same dynasty who had mingled with one of the earliest Arab nomad groups coming from the east. The Saifawa moved to Bornu [*q.v.*] at the south-western corner of Lake Chad (now in Nigeria). After a transitory period the Saifawa rebuilt a state in Bornu, which towards the end of the 10th/16th century, under the reign of Idrīs Alawōma, regained its hegemony over the Chad basin. Kānim was reconquered by the Saifawa, who preferred to stay in Bornu. The Bulala rulers of Kānim became vassals to Bornu. About the middle of the 17th century the Bulala were removed from Kānim by the Tundjur, who had been themselves pushed out of Wādāy [*q.v.*]. Authority over Kānim rested with the *alifa* (from the Arabic *khaliḥā*), who was nominally a deputy of the Saifawa rulers of Bornu. In the first half of the 19th century the *alifa* paid allegiance to the *sultān* of Wādāy, but in the second half of the century he came under the patronage of the Arab Awlād Sulaymān.

Arab nomads made their impact on Chad since the 14th century, when offshoots of Arab tribes which had penetrated the Nilotic Sudan advanced westwards across Kordofan and Dār Fūr. In the Chadian *sāhil*, on the fringes of the Sahara, the Arabs maintained their traditional way of life as camel breeders, but those who had to seek pasture farther south abandoned the camel and became cattle pastoralists (*bakkāra*). They mixed with the local population but retained their Arabic dialect. Though they are divided into many tribes, these Chadian Arabs are generally referred to as Shuwa Arabs [*q.v.*]. To the south, the Arabs reached as far as 11° N., and through their contact with the local population contributed to the spread of Islam. In most cases the Arabs accepted the authority of local rulers though they became involved in intra-state and inter-state politics.

Wādāy, on the western boundary of Dār Fūr [*q.v.*], lay on the route of the Arab nomads. The first Muslim rulers of Wādāy were the arabised Tundjur, but they did little to spread Islam among the local population. The spread of Islam is associated with 'Abd al-Karīm b. Djamī', of the Arab Dja'aliyyīn [*q.v.*]. He had propagated Islam among the Maba of Wādāy and then mobilised them in a *djihād* against the Tundjur rulers. The Tundjur had been ousted and 'Abd al-Karīm established a new dynasty which has survived to the present time. Until the middle of the 18th century Wādāy had been considered vassal to Dār Fūr, but then its *sultāns* asserted their independence and expanded south and west to reach the peak of their power in the 19th century. In 1850 the capital of Wādāy moved from Wara to Abeshe (Abeché). In 1851 H. Barth (*Travels*, 1857, iii, 566) wrote: "The Wadaway faqihs and 'ulamā' are the most famous of all the nations of the Sudan for their knowledge of the Kuran, the Fulbe or Fellani not excepted."

In its westward expansion, Wādāy came into conflict with Bornu, mainly over the kingdom of Baghirmi [*q.v.*]. The latter emerged at the begin-

ning of the 16th century southeast of Lake Chad on the right bank of the Shari river, in a region which had formerly been raided for slaves. Under the influence of Bornu, its rulers adopted Islam, but the islamisation of the population of Baghirmi was a longer process, as remarked by Barth (*Travels*, 1857, ii, 561): "Their adoption of Islam is very recent, and the greater part of them may, even at the present day, with more justice be called pagans than Mohammedans". During the 18th century, when the power of Bornu declined, Baghirmi prospered mainly on trade in slaves procured in raids to the south and the south-east. But in the 19th century both Bornu (which had recovered under the *shaykh* Muḥammad al-Amīn al-Kānimī) and Wādāy claimed Baghirmi as tributary. Pressed between her two powerful neighbours and exposed to raids and exactions from both directions as well as from Fazzān, the kingdom of Baghirmi disintegrated. Its destruction was completed in 1892 and 1897 by Rābiḥ.

Rābiḥ b. Faḍl Allāh [*q.v.*], one of the flag-bearers of the slave trader Zubayr Paṣha in the Sudan, retreated westwards after his master had been defeated by Gessi Paṣha. At the head of a slave army he skirted the powerful Wādāy and occupied the disintegrating Baghirmi in 1892. He then invaded Bornu, which had been caught unaware, sacked its capital Kūkawa [*q.v.*] and became master of the whole Chad basin. He wrought destruction by his slave raids and punitive expeditions until he was overcome in 1900 by the advancing colonial troops of France, Germany and Britain. Though Rābiḥ had considered himself for some time a follower of the *mahdī* of the Sudan, he had little interest in religious affairs. Only in one corner of Chad does he seem to have contributed to the spread of Islam. Dār Runga, south of Wādāy, had been for centuries a hunting ground for slaves, separated from the Muslim north by a hostile boundary. The absence of Muslim settlements or even itinerant traders beyond this boundary inhibited the spread of Islam. Rābiḥ made Dār Runga a base for slave raiding farther to the south, and it was during this period that people adopted some Arab customs, Arabic garb and rudiments of an Arabic dialect. This process of acculturation, which brought also the spread of Islam, was most evident among chiefs and in the trading villages which developed at that time.

Most of the Arab tribes in Chad came from the Nilotic Sudan. The northern approaches through the Sahara had always been blocked by the Tubu and the Tuareg. But in 1842 a section of the Awlād Sulaymān, who had been defeated by the Ottomans in Fazzān, migrated south to the region just north of Kānim. During the second half of the 19th century, the Awlad Sulaymān fought against the Tubu and Tuareg. Feuds among those nomads were somewhat mitigated towards the end of the century when the Sanūsiyya [*q.v.*] became established among both the Tubu and Awlad Sulaymān as well as in Wādāy.

In 1835 Muḥammad al-Sharīf, who later became the *sultān* of Wādāy, met Muḥammad b. 'Alī al-Sanūsī [*q.v.*] in Mecca. Closer relations between the leaders of the Sanūsiyya and the *sultāns* of Wādāy developed during the reign of 'Alī b. Muḥammad al-Sharīf (1858-74), when the two parties cooperated in reviving trade along the route from Benghazi to Wādāy via Kufra. Sanūsī traders enjoyed virtually a monopoly over this trade, and the influence of the Sanūsiyya among the Saharan nomads contributed to greater security for the caravans. Successive

centres of the Sanūsiyya—Djaghbūb (1856-95), Kufra (1895-9) and Kūrū in Borku (1899-1902)—were along this route. The southward shift of the centres of the Sanūsiyya indicates the growing importance of this region for that order.

In 1874 the Sanūsī leader Muḥammad al-Mahdī (1859-1902) exerted his influence to settle a succession dispute in Wādāy. The successful candidate Yūsuf (1874-98) became a devoted adherent of the Sanūsiyya. In 1909 the Sanūsīs encouraged the *sultān* of Wādāy to resist the French colonial occupation. In Kānim, the Sanūsī *zāwiya* of Bī'r 'Alālī led resistance to the French from November 1901 to June 1902. Because of their involvement in anti-colonial resistance, the activities of the Sanūsiyya came to an end after the French occupation. The Sanūsiyya still have some adherents in Kānim and Wādāy, but the predominant *ṭarīka* in Chad is the Tidjāniyya. The rulers of Wādāy and Baḡhirmi, as well as the *aliḡa* of Mao (Kānim), are Tidjānis. The Sanūsiyya, however, still maintain their influence among the Tubu of Tibesti.

Though the Tubu had been nominally Muslims for a long period, Islam had had little impact on their life until their exposure to the Sanūsiyya. The Tubu who had successfully resisted outside cultural and political influences, accepted the Sanūsī traders and teachers. Traditionally the Derde, the spiritual and temporal head of the Tubu in Tibesti, had only limited authority over his tribesmen, and Derde Shay (d. 1939) believed that greater commitment to Islam and the application of the *Shari'a* would enhance his personal authority. He invited Sanūsī teachers to teach the Tubu the ways of Islam. Though there is still considerable laxity in observing Islamic rituals and customs, the Tubu have become aware of their Islamic identity. Tubu elders often refer to the pre-Sanūsiyya period as their *qūhiliyya*.

The Tubu are divided into two main groups: the Teda whose centre is in Tibesti and the Daza who live in Borku and Ennedi. The latter were exposed to the influence of 'ulamā' from Borno and Wādāy and seem to practise Islam with greater conformity. With greater security under colonial rule, traders and teachers were able to move more freely and farther away. The growing number of pilgrims from Nigeria and other parts of West Africa who passed through Chad as well as foreign merchants from Nigeria, Fazzān and the Sudan who operate in Chad, added to the impact of Islam on public and private life.

Some ethnic groups which in the past had sought refuge from the aggression of the islamised states gradually came out of their isolation, mixed with other groups and adopted Islam. In 1910 Islam had reached only a few notables among the Buduma on the islands of Lake Chad, but in the middle of the century all the Buduma were considered Muslims. Though there are no exact figures, it is estimated that more than half of the population of Chad are Muslims.

Chad was of great strategic importance for France as the link between its African possessions of French Equatorial Africa, French West Africa and French North Africa. In the heartland of Africa and remote, more than any other territory in Africa, from seaports, the conquest of Chad, and subsequently its administration and development, posed numerous logistic problems. Only in 1920 did the French complete the "pacification" of Chad, when they overcame the resistance of the Tubu, who had been inspired by the Sanūsiyya.

In 1920 Chad was also constituted into a separate territory. In the delineation of its boundaries a crucial decision was made to include the Sara and other Bantu tribes south of 11° N. in Chad rather than in Oubangui-Chari (the present Central African Republic), where culturally-related ethnic groups live. It was this decision which gave Chad its bipolar structure of the non-Muslim Bantu south and the Muslim, partly arabised, north. Hence Chad is internally divided—there are no clear boundaries with its neighbours. Ethnic groups in Chad often feel closer to their own kins, or to related groups beyond the international boundary, than to other ethnic groups in Chad. In the colonial period and after independence, the authorities had to withstand powerful centrifugal tendencies.

In 1929 the French introduced the cultivation of cotton as a cash crop in the south, and the Sara were the first to integrate into the modern sector of the economy and to reap its benefits. It was also among the Sara that the French recruited troops to their colonial army, and the Sara continue to dominate the army also after independence. Protestant and Catholic missionaries opened schools in the south and an educated élite emerged among the Sara.

The Muslims in the central and northern parts of Chad had their own system of Islamic education and were reluctant to send their children to French schools, or even to government (non-missionary) schools. Only a few sons of Muslim chiefs were sent to study in French schools in the first years of colonial rule. They returned to hold positions in the administration and were able to articulate support for the traditional authorities. Young Muslims preferred to go for advanced studies to Cairo and Khartoum, but on their return they discovered that because of their lack of French education they could not be employed by the administration. This frustration, combined with Islamic militancy which they had acquired in the Arab countries, led to their being considered a threat both to the colonial administration and to their own traditional authorities. As a remedy, an Arabic-French school was opened in Abeshe in 1952, under the patronage of the sultan of Wādāy, in order to keep students away from Arab countries and to give them both an Islamic and French education.

The French preferred to rule the central and northern provinces of Chad through their *sultāns* and chiefs. Following their initial resistance to colonial encroachment, the *sultāns* of Wādāy, the *aliḡa* of Mao, the Derde of the Tubu and lesser rulers, cooperated with the French administration and were able to retain, and sometimes even to strengthen, their political and religious authority. Only in the 1950s did the French introduce a series of reforms in local government which imposed some limitations on the power of the traditional rulers. But the latter faced an even greater threat with the introduction of elections to representatives assemblies and with the emergence of political parties. With the support of the administration, the *sultāns* were able for some time to send their own men to the territorial assembly. But in 1957, with an almost universal franchise, the neutrality of the administration and the decline of the chief's powers, the radical *Parti Progressiste Tchadien* (PPT), which had been engaged in grass-roots politics, became dominant. The PPT's basis of power was among the Sara who were better educated, more advanced economically and more articulated politically. The PPT exploited divisions

among Muslim politicians, some of whom represented the interests of the traditional rulers while others, who had been exposed to influences from Cairo, North Africa and the Sudan, followed a more radical orientation.

When the Republic of Chad became independent in August 1960, the PPT had a marginal majority in coalition with minor political groups and individual politicians. Its leader, François Tombalabaye, became the first president of the republic. In the following years, Tombalabaye consolidated his power by gradually eliminating political rivals as well as ambitious allies. He relied on the support of the Sara, his own tribesmen, who dominated the armed forces. Most of the university graduates in Chad were also from among the Sara and they were appointed to senior political and administrative positions. But Tombalabaye sought also the cooperation of the traditional rulers, such as the *sultān* of Wādāy and the *alifā* of Mao. In order to appease them, he restored some of the powers that the *sultāns* had lost in the reforms during the last years of colonial rule. In order to maintain a semblance of national unity, he had Muslim ministers in his cabinet, some of whom were brought back to the government after periods of isolation in prison or in the political wilderness.

Muslims in Chad felt humiliated when they found themselves ruled by the people of the south, whom they had considered for centuries savage infidels and a fair game for slave raids. The Muslims found it hard to adjust to the change in the balance of powers, and resentment increased when Sara officials replaced the French not only in the capital but also in the territorial administration.

Since 1966 sporadic clashes between the government forces and dissidents spread from the south-eastern provinces of Salamāt to the provinces of Wādāy, Batha and Baghirmi. Disturbances occurred simultaneously also farther north in Borku, Ennedi and Tibesti. Widespread unrest was channelled into a co-ordinated rebellion by the FROLINAT (*Front de Liberation Nationale*), a radical movement which sought to overthrow the régime of Tombalabaye, to eradicate survivals of French colonialism and to foster closer relations with the Arab countries. Though couched in ideological terms, the rebellion was really an escalation of the conflict between north and south, in which the historical, cultural and religious background had current economic and political implications.

Until February 1972, FROLINAT operated almost freely from Libyan and Sudanese territories. Since then the Sudan has effectively sealed its border with Chad. In the middle of 1972 Libya also agreed to withdraw its support from the rebels, but it still harbours the leaders of FROLINAT and does not stop the supply of provisions and arms into Chad from Libya. French troops were sent to Chad, and they succeeded in establishing a measure of security in the eastern and central provinces. But following the withdrawal of the French troops the government's control of the countryside remained rather fragile.

In Tibesti there is not a clear line between Tubu tribesmen who support FROLINAT and those who fought in the name of the Derde, their spiritual and temporal leader. Through most of the colonial period the Tubu nomads of the farthest north were under French military administration. By agreement with President Tombalabaye this military administration continued after independence until 1964, when

French troops have been replaced by Chadian troops who were mainly from among the Sara. These troops had hardly been prepared for the subtle task of governing the non-compliant Tubu nomads, and the situation has been aggravated by mutual distrust. Following a violent confrontation between troops and tribesmen, the military command resorted to collective punishment and detained for some time the Derde and his sons. In defiance of the government, the Tubu nomads deserted the oases and moved with their herds into the desert, as they had done also in the first years of colonial rule. The Derde and his sons took refuge in Libya, and from there directed the resistance of the Tubu.

On 13 April 1975 a military coup brought to power General Malloum who, like the deposed President Tombalabaye, was a member of the southern Sara tribe. The new government had only a partial success in achieving national reconciliation whereas the military situation deteriorated even further. In February 1978 a northern offensive extended the area controlled by FROLINAT to a point only 250 km from the capital Ndjamena (the former Fort Lamy). Their advance was checked only by French troops who had hastily been flown in. The internal conflict had international implications, and Libya, together with Chad's two other neighbours—Niger and Sudan—brought the representatives of FROLINAT and the Chadian government to agree on a cease-fire. For the first time, after twelve years of fighting, there were at least formal arrangements for negotiations aiming at the rebuilding of Chad on the basis of equality between the north and the south. These negotiations, however, are bound to be difficult and lengthy [See also the Addenda and Corrigena].

*Bibliography:* al-Ya'kūbī, al-Muhallabī (quoted in Yākūt), al-Idrīsī, Ibn Sa'īd, Ibn Faḍl Allāh al-'Umarī, Ibn Khaldūn, al-Kalkāshandī, and al-Maḳrīzī are the most important Arabic sources for the study of the history of Kānim. They are to be collated with local Arabic documents (like the *mahrāms*) and chronicles. For a scholarly analysis of these sources, see J. (N. LEVTZION)

**ÇAKS**, a tribal group which emigrated to Kašmīr from Dardistān under their leader Lankar Çak during the reign of Rādĵā Sūhadeva (1301-20). Šhams al-Dīn (739-42/1339-42), the founder of the Sultanate in Kašmīr, made Lankar Çak his commander-in-chief, patronising the Çaks in order to counteract the power of the feudal chiefs.

During the early part of Sulṭān Zayn al-Ābidīn's reign, Pāndū, the leader of the Çaks, organised a strike as a protest against corvée labour, and set fire to the Sulṭān's palace and some government buildings. As a punishment, the Sulṭān ordered the destruction of all the houses of the Çaks in Trahgām, 25 miles north-west of Bārāmūla. Pāndū escaped, but was captured and executed along with all the members of his family fit to bear arms. Thus suppressed, the Çaks remained quiet for some years. But taking advantage of the weakness of Zayn al-Ābidīn's successors, they recovered their position, and engaged themselves in the struggle for power against their rivals, the Māgres. When Mīrzā Haydar Dughlāt (845-55/1441-51) established his rule in Kašmīr, they suffered an eclipse. But by making common cause with the nobles against him, they brought about his downfall; and in the struggle which followed his death, they succeeded in securing for themselves large *ḡāgirs* and the *wizārat* from the reigning Sultans. They became so powerful that in 968/1561 Ghāzī Khān Çak set aside Habīb Shāh, and declared himself king, becoming the first Çak Sulṭān. He was a good administrator, generous, tolerant and just, but also at times ruthless; he was the first Kašmīr Sultan to introduce the practice of blinding and mutilating the limbs of political opponents.

The Çaks ruled Kašmīr from 968/1561 to 996/1588. The outstanding ruler of the dynasty was Ḥusayn Shāh, who was generous, and although a good Shī'ī, liberal towards both the Sunnis and Hindūs. A man of cultured tastes, he wrote verses in Persian and enjoyed the society of poets, artists and learned men of all religions. His brother 'Alī Shāh succeeded him, following his policies and ruling from 978/1570 to 987/1579.

The weakest ruler among the Çak Sulṭāns was Yūsuf Shāh. It was he who surrendered to Rādĵā Bhagwān Dās, Emperor Akbar's commander, without offering any resistance (24 Šafar 994/14 February 1586), and made a treaty with him, according to which his kingdom was to be restored to him. But Akbar denounced the treaty and imprisoned him. Later, Yūsuf Shāh was given a *mansab* of 500 and sent to Bihār. He died on 14 Dhū'l-Ḥiĵĵā 1000/22 September 1592, and was buried at Biswak in the Patna district.

Ya'kūb Shāh, the son of Yūsuf Shāh, denounced

the treaty and declared himself sultan. He carried on the struggle against the Mughals, and inflicted defeats on the Mughal commander, Kāsim Khān. Meanwhile, Ya'kūb's intolerance towards the Sunnis, who were compelled to recite the name of 'Alī in the public prayers, antagonised their leaders, who appealed to Akbar for help. The emperor sent Yūsuf Khān Ridwī to Kašmīr, accompanied by some Kašmīr chiefs who acted as guides. Yūsuf Khān, by adopting a policy of conciliation won over many Kašmīr nobles, and at the same time sent a force against Ya'kūb. The latter continued to resist, but finding himself alone and isolated, he surrendered when Akbar arrived in the Valley early in Raĵĵab 996/June 1588. He was imprisoned and died in Muḥarram 1001/October 1592 and was buried, like his father, in Biswak.

Although leaderless, the Çaks continued to resist the Mughals, but were ruthlessly crushed. Dĵahāngīr's governor of Kašmīr, Iṭīkād Khān (1032-7/1623-7) hunted them down and killed them; eventually, they escaped to the hills and remote villages, taking up agriculture and other peaceful pursuits.

The Çak rule, though short-lived (968-96/1561-88), was culturally important, for the Çak Sultans, like the shāh Mīrs, encouraged education, patronised poets and scholars and promoted arts and crafts. Two outstanding poets and scholars of the period were Bābā Dāwūd Khākī and Shāykh Ya'kūb Šarfī; and the most noted calligraphist was Muḥammad Ḥasan, who entered Akbar's service and was given the title of *zarīn kalam*. Under Dĵahāngīr and Shāh Dĵahān also, the most prominent calligraphists were those of Kašmīrī origin.

**ÇAMLİBEL**, FĀRŪK NĀFİDĪH modern Turkish FARUK NAFİZ ÇAMLİBEL, Turkish poet and playwright (1898-1973). He was born in Istanbul, the son of Süleymān Nāfidīh, a civil servant in the Ministry of Forests and Mining (Orman ve Ma'adin Nezāretī). After high school he began to study medicine, but soon abandoned it to turn to journalism and teaching. He taught Turkish literature in Kayseri (1922-4), Ankara (1924-32) and Istanbul high schools and the American Robert College (1932-46). He was elected a deputy for Istanbul of the Democratic Party (DP) and served 14 consecutive years (1946-60) in Parliament until his arrest with other DP deputies by the Committee of National Unity (*Millī Birlik Komitesi*) which carried out the Revolution of 27 May 1960. He was detained on a Marmara island (*Yassada*) until his acquittal 16 months later. He died on 8 November 1973 on board ship during a cruise in the Mediterranean. Fārūk Nāfidīh (as he was known until 1934 when he added Çamlıbel) began to write poetry at the age of 17 using the traditional *'arūd* metre. His early works *Šarkīn sultānları* ("The Sultans of the East"), Istanbul 1918, and *Gömülden gömüle* ("From heart to heart"), Istanbul 1919, reveal the strong influence of Yaḥyā Kemāl [q.v.], who was the dominant literary figure of the period. The impact upon him of Dĵiyā' (Ziya) Gökalp's teaching was most marked, and from then

on he wrote in the line of the popular bards (*saz şabâ'irleri*), becoming the most important member of the group called *Besh hedjedji şabâ'ir* (five poets using syllabic metre, the others being Yüsf Dîyâ', Orkhan Seyfi, Enis Behîdji and Khâlid Fakhrî): *Dinle neyden* ("Listen to the flute"), Istanbul 1919, and *Coban çeşmesi* ("Shepherd's fountain"), Istanbul 1926. But he did not completely abandon the *'arûd*, which he used (like his contemporaries) whenever he thought the subject matter lent itself better to this metre, as his *Suda halkalar* ("Circles on the water"), published in 1928 in *'arûd*, shows. In 1933 Fârûk Nâfidh published a selection of his poems under the title *Bir ömür böyle geçti* ("A whole life gone by like this"). He collected his humorous poems *Tatlı sert* ("Bitter sweet") in 1938, and his epic poems *Akuncu türküleri* ("Raider's songs") in 1939. Then followed a long silence until the publication of his *Zindan duvarları* ("Prison walls") in 1967. These are impressions of his prison days, in a rather outdated and hackneyed style, in the form of *kîta* (and not *rubâ'î* as stated by Mehmed Kaplan, *Cumhuriyet devri Türk şiiri*<sup>2</sup>, Istanbul 1975, 31-3, *passim*). An anthology selected from all his works was published by the Ministry of Education in 1969, *Han duvarları* ("Inn walls"), which is the title of his most popular poem). A master of form, Çamlıbel wrote unsophisticated romantic and sentimental poems of love, with no particular depth of feeling, but in an easy, flowing, polished and harmonious style which made him one of the most popular poets of the 1920s. Following the trend of the period, he also wrote patriotic and epic-historic poems, and many poems eulogising Anatolia (and its people), these being increasingly popular subject-matter for literature under the inspiration of the Nationalist movement following the First World War. Çamlıbel is also the author of a number of verse plays, mostly inspired by political motives (e.g. *Akan* ("Raid"), Istanbul 1932), except for his powerful *Djānawār* ("The monster"), Istanbul 1926, a vivid portrayal of the chronic conflict between peasants and landowners in Anatolia. Çamlıbel also attempted one novel, *Yıldız yağmuru* ("Rain of stars"), Istanbul 1936.

**CAMONDO**, AVRAM, financier, philanthropist, and reformer active amongst Istanbul's Jewish community (d. 1873). Born in Venice, he arrived in Istanbul and entered the banking business midway through the reign of Sultan Mahmūd II (1808-39). As his influence and power increased, Camondo became the *şarâf* (personal banker) of a number of Ottoman officials, most notably of the Grand Vizier Muştafâ Reshîd Paşa, with whom he established extremely close ties. Camondo later became financial representative of the Baron Hirsch interests and at times acted in concert with the firms of Rothschild and Bleichröder.

In 1854 Camondo became a member of the *Intizâm-ı Şehir* Commission, a body charged with advising the central government on measures necessary for the modernisation of Istanbul [see BALADRYA]. To carry out the extensive plans of this commission, the Ottoman government in 1858 created an autonomous municipal council in Çhalağa [*q.v.* in Suppl.], the European district of the capital.

From 1858 until 1861 Camondo was a leading member of this council, which marked the first systematic effort to provide Istanbul with the services and amenities of a modern European city.

Camondo's efforts at modernisation were also directed toward the Jewish community of Istanbul, which by the 19th century was marked by extreme ignorance and fanaticism. In 1854 he founded a modern school at Piri Paşa, where Turkish and French were studied in addition to scripture. The resulting attempt by conservatives to excommunicate him provoked a serious conflict in the Jewish community, which was resolved in favour of the liberal faction only because of the intervention of the Ottoman government. Camondo then became head of the Jewish Community Council and continued the task of educational reform. In 1870 he took up permanent residence in Paris, but continued to provide Istanbul's Jewish community with synagogues and educational institutions. After his death, his body, in accordance with his will, was returned to Istanbul and buried in Sütlüdjic.

(S. ROSENTHAL)

**ÇAWDOR**, or Çawdır, one of the major tribes of the Turkmen [*q.v.*].

It appears already in the lists of 24 Oghuz tribes given by Mahmūd al-Kāshgharî (i, 57; *Djuwaldar*) and Rashîd al-Dîn (ed. A. Ali-zade, Moscow 1965, 80, 122; *Djāwuldur*). The tribe participated in the Saldjūk movement; the famous *amūr* Çaka, who founded an independent Turkmen principality on the Aegean coast at the end of the 11th century, is said to be a Çawdor. The tribal name (in the form Çawundur) was registered in Anatolia in the 16th century (see F. Sümer, *Oğuzlar*, Ankara 1967, 315-17). The main part of the tribe, however, remained in Central Asia or returned to it from the west. In the *Şadjarā-yi Tarākima* by Abu 'l-Ghāzî [*q.v.*] (ed. A.N. Kononov, text 61, Russian tr. 68), the Çawdor are mentioned among those tribes which came to Mangışlak [*q.v.*] after disturbances in the Oghuz il. It remained on Mangışlak till the 19th century, longer than any other Turkmen tribe. In his *Şadjarā-yi Türk* (ed. Desmaisons, text, 210, tr. 224) Abu 'l-Ghāzî mentions the Çawdor only once, in the account of the Turkmen tribes which paid tribute to the Uzbek khāns of Khārazm at the beginning of the 16th century. The Çawdor are mentioned in this connection together with another old Oghuz tribe, the Iğdir (in a form "Iğdir *Djāwuldur*"); together they are said to pay three-fourths of the tribute imposed on Hasan-ili. The term Hasan-ili (Esen-ili in the Turkmen pronunciation; also Esen-Khān-ili) has continued to exist till the present time, but its exact meaning is not quite clear; it seems that latterly it has been applied mainly to the Çawdors themselves and sometimes only to one of their main clans, the Kara-Çawdor. Besides the Çawdor and the Iğdir, the Hasan-ili group included also the tribes of the Abdāl, Būzaçî (Boz Hādji), Burundjîk and Soyınadji (Soyin Hādji). In the 19th century all of them, except the last one, were mostly considered only as different clans of the

same tribe ĀwĀdor; in some descriptions, however, they appear as separate tribes.

In the 16th and 17th centuries, the dwellings of the ĀwĀdor were located mainly in the northern part of Mangiṣḥlak, where the Būzāci peninsula still preserves the name of one of the above-mentioned clans. From the early 17th century, they were exposed to a strong pressure both from the north, by the Kalmuks [q.v.], and from the south, by the Khānate of Khīwa. As a result of this pressure in the late 17th and the early 18th century, a part of the ĀwĀdor and the Iğdir as well as all the Soyinađji migrated to the region of the Volga Kalmuks, and, together with the Kalmuks, they became Russian subjects (see V.V. Bartol'd, *Sočineniya*, ii/1, 613-14). At the end of the 18th century, they moved to the Northern Caucasus, and now they live on the rivers Manič and Kuma in the region (*kray*) of Stavropol; in 1960 their total number was estimated as more than 5,000. The greater part of the ĀwĀdor moved however in the first half of the 18th century to Kh'ārazm. At the end of this century their main centre, ĀwĀdor-kala, was in Arāl, in the north of Kh'ārazm, and they were the allies of the independent Uzbek rulers of the town of Kūngurat in their wars with the khāns of Khīwa. After the victory of Khīwa over the Kūngurat [q.v.] in 1810, part of the ĀwĀdor returned to Mangiṣḥlak, but in the 1830s and 1840s they finally left Mangiṣḥlak for Kh'ārazm under the pressure of the Aday Kazaks, and since then their centre has become the town of Porsī (now Kalinin), about 30 miles to the east from Old Urgeñč. Only an insignificant number of ĀwĀdors still remain on Mangiṣḥlak.

On Mangiṣḥlak the ĀwĀdor were nomads, though the number of their cattle was relatively small and an important part of their economy was fishing and seal-hunting on the Caspian sea. In Kh'ārazm they became sedentarised farmers. Their exact number is unknown; the estimations of the late 19th and the early 20th century vary between 3,500 and 17,000 families.

(YU. BREGEL)

**ĀY-KHĀNA**, lit. "tea-house", a term covering a range of establishments in Iran serving tea and light refreshments, and patronised mainly by the working and lower middle classes. The term *kahwa-khāna*, "coffee-house", is used almost synonymously, though coffee is never served. This latter name, however, tells us something of the history of this institution, for most of which we have to rely

on the accounts of the European travellers. One of the earliest references occurs in Chardin's *Voyages* (ii, 321), where in his description of Iṣfahān in about 1670 he speaks of "les cabarets à café, à tabac, et pour ces boissons fortes qu'on fait avec le suc du pavot." There is no mention of tea here, nor in Hanway's *Journal of Travels*, written nearly a hundred years later, nor even in Malcolm's *History of Persia* compiled at the beginning of the 19th century. Up to this point it seems that coffee remained the popular drink, but by 1866 Lycklama a Nijeholt was able to write that tea "forme la boisson ordinaire des divers habitants de la Perse" (ii, 105), though elsewhere he mentions that coffee as well as tea was served to him by the Imām Djum'ā of Iṣfahān. Yet even he does not use the term *āy-khāna*, though he does mention that the word *kahwa-khāna* was applied to part of the servants' quarters in a large Persian house. E.G. Browne in 1887 records a stop at "a little roadside tea-house" near Tehran, and adds, "Many such tea-houses formerly existed in the capital, but most of them were closed some time ago by order of the Shah. The reason commonly alleged for this proceeding is that they were supposed to encourage extravagance and idleness, and, as I have also heard said, evils of a more serious kind. Outside the town, however, some of them are still permitted to continue their trade and provide the 'bona fide traveller' with refreshment, which, need-less to say, does not include wine or spirits." (*A year amongst the Persians*, 82). Elsewhere Browne mentions frequently the serving of tea at private entertainments, but never coffee.

Evidently, then, a fairly sudden change of habit took place during the first half of the 19th century, though why tea should suddenly have been preferred to coffee (neither of which grew in Irān at that time) is not clear. It is not even certain when tea first became known to the Iranians. Bīrūnī's *Kitāb al-Saydāna*, written in the first half of the 5th/11th century, gives a detailed account of *āy*, but only as a plant grown and used in China. According to a Ṣafawid manuscript referred to without quotation by Farīdūn Ādamiyyat in his *Amīr-i Kabīr wa Irān*, tea was drunk in Irān in Ṣafawid times; but the same author suggests that the widespread introduction of tea-drinking into Irān was due to Amīr-i Kabīr [q.v. in Suppl.], who in 1849 received gifts of silver samovars from the Russian and French governments on the occasion of the coronation of Naṣīr al-Dīn Shāh, and encouraged the craftsmen of Iṣfahān to copy them. From then on, tea began to be imported in significant and increasing quantities, mainly the black tea of India, which was preferred to the milder Chinese. Tea was not actually grown in Irān, and specifically in the Caspian area, until 1896.

The first dictionary appearance of the word *kahwa-khāna* is in Francis Johnson's, published in 1852; but the word *āy-khāna* does not appear until the most recent dictionaries (e.g. Dihkhudā, pt. 41, 1338/1959). Even the omniscient Haim (1935) does not list it, but under *kahwa-khāna* adds the definition "[in Persia] a tea-house". However, the word *āy-khāna* was certainly in common use by that time; indeed A.V. Williams Jackson met it as early as 1903, when he found along his route "mud cabins which served as tea-houses (*chāi khānah*)" (*Persia past and present*, 34).

At the present time the terms *āy-khāna* and *kahwa-khāna* are to some extent interchangeable, but the former tends to be used for the small way-

side establishments catering primarily for travellers (cf. Dihkhudā's definition "places on the highways and caravan routes where formerly carriage horses were changed"). Since the coming of motor transport most of these have disappeared, while others have acquired a degree of sophistication appropriate to the bus passengers who now constitute their main clientèle. By contrast the word *kahwa-khāna* usually designates the tea-shops in the towns and large villages, which serve as meeting-places for the local (male) community (a very few have curtained-off compartments for women). Both types of establishment serve much the same fare—tea, prepared with the aid of a large samovar, bread and cheese, eggs, perhaps *āb-i gūsh* or some other such simple dish, and of course the *kalyān* (water-pipe). (Coffee is obtainable only in the more sophisticated, European-style café (*kāfa*), patronised by wealthier clients, where tea, ice-cream, soft drinks, and French pastries are also to be had). For entertainment, there is the *takhta-yi nard* (backgammon board), and often the *nakkāl*, who recites long dramatic episodes from the *Shāh-nāma*, or traditional epics and folktales in prose or verse. In *Ādharbāyadjān* a similar role is often filled by the *āshīk*, who recites mystical poetry in Turkish, Arabic or Persian, accompanying himself on a stringed instrument. Dervish fortune-tellers (*rammāl*) are also commonly to be seen. In times of high political activity the *kahwa-khāna* may serve as a centre for the dissemination of news and views. Browne, in *The Persian revolution*, 143, quotes an unnamed Persian correspondent, writing on 19 June 1907: "In many of the *Qahwa-khānas* professional readers are engaged, who, instead of reciting the legendary tales of the *Shāh-nāma*, now regale their clients with political news."

Many of the older *kahwa-khānas* are decorated with paintings and frescoes dating from Kādjar times. These may depict religious scenes (the martyrdom of Ḥusayn, for instance, or the *Mirāj* of the Prophet), *Shāh-nāma* episodes (the death of Rostam, the court of Dāhḥāk, the fight between Bīzhan and Hūmān), love-stories (Laylā and Madjūnūn, *Shūrīn* bathing), and dancing girls, musicians and entertainers at the royal court.

(L.P. ELWELL-SUTTON)

**ĀYLAĞ TEWFĪK**, modern Turkish ÇAYLAĞ TEWFĪK, Turkish writer and journalist (1843-92). A self-taught man, he was born in Istanbul and became a civil servant. He started his career in Bursa and continued in Istanbul where he published the papers *Asir* ("Century"), later renamed *Letā'if-i āthār* and *Terakkī* ("Progress"). In February 1876 he published his best-known paper, the humorous *Çaylak* ("The Kite"), which became his nick-name

and which ceased publication in June 1877 after 162 numbers. In 1877 he went, with a delegation, to Hungary for a month and on his return he published his impressions as *Yādīgār-i Mađjaristān* ("Souvenir of Hungary"). Çaylak Tefwīk is the author of the following works: *Kāfile-i shu'arā'*, alphabetically arranged biographies of poets (which stop at the letter *dāl*); *Istanbul'da bir sene* ("A year in Istanbul"), Istanbul 1297-9 Rūmī/1881-3, his best known work, the general title of a series of five books, consisting of realistic descriptions of everyday life in Istanbul. The subtitles of the work are (1) *Tandır*; (2) *Maḥalle kahvesi*; (3) *Kāghidkhāne*; (4) *Ramadān geđjeleri*; and (5) *Meykhāne*. Çaylak Tefwīk pioneered the Naşr al-Dīn Khōdja literature in modern Turkish, and published three volumes containing about 200 stories on him, *Letā'if-i Naşr al-Dīn, Bu Ādem* (1883) and *Khazine-i Letā'if* (1885).

*Bibliography:* *Türk Ansiklopedisi*, xi (1961-3), 407-8; Behçet Necatigil, *Edebiyatımızda isimler sözlüğü*<sup>8</sup>, Istanbul 1975. (FAHİR İZ)

**ĀEH**, the Ottoman term for the inhabitants of present-day Czechoslovakia, mainly Bohemia and Moravia, but partly also Slovakia. The Arabs did not use this term, although the territory was known to them at least since the end of the 3rd/9th century. In the so-called "Anonymous relation" on East European and Turkish peoples, preserved by a group of early and later Muslim geographers (Ibn Rusta, *Hudūd al-Ālam*, Gardīzī, al-Bakrī, Marwazī, 'Awfī), the name of Svatopluk (spelled variously as Sw.n.t.b.l.k., Sw.y.t.m.l.k., etc.) ruler of the Great Moravian Empire (871-94), is mentioned. The name of his land (Mīrwāt, M.r.dāt) is also given in some sources, but its localisation is erroneously shifted too far to the east (cf. Ibn Rusta, 142-5, tr. Wiet, 160-3; *Hudūd al-Ālam*, tr. Minorsky, §§ 42, 46; Gardīzī, ed. Barthold, 99-100, ed. 'Abd. al-Ḥayy Ḥabībī, Tehran 1347/1968, 275; Marwazī, ed. Minorsky, 22, 35).

Al-Mas'ūdī must have had an excellent informant (probably a Slavonic slave from this region) on the ethnic and political situation in Central Europe, since his relation is entirely independent of other sources and rich in detail not to be found elsewhere. In the list of Slavonic tribes and their rulers we find also the name of Wenceslaus (Prince of Bohemia, 926-35), spelled as Wān.dj Slāw, but only as ruler of the Dudlebs (Dūlāba), one of the many Czech tribes at this period (*Murūdj*, iii, 62-3 = §§ 905-6; Marquart, *Streifzüge*, 102 ff., wanted to read another ethnic name in the list Šāşīn as Čāhīn [= Czechs], but this is unlikely as the context points rather to the Saxons). In his *Tanbīh*, 62, al-Mas'ūdī describes the Danube (Danuba) and the Morava (Malawa) rivers and mentions also the Slavonic peoples Bāhmīn (Bohemians; this can be read also as Nāmdjīn, the Slavonic term for the Germans), and Murāwa (Moravians).

The most copious and detailed information about the territory of Czechoslovakia and its peoples is to be found in Ibrāhīm b. Ya'qūb's [*q.v.*] narration, who visited these countries in the sixties of the 10th century and could well be called the discoverer of Central Europe. He names the successor and brother of Wenceslaus, Boleslav I (935-67) as the ruling prince over Prague (Frāgh), Bohemia (Būyāma) and Cracovia (Krakūwā). His detailed account is full of precious information about the economic and commercial situation, and brings many facts about the life, manners and customs of the people, as well as a few Slavonic words. His description of Prague is

the oldest extant in the literature, and the whole account belongs to the most valuable sources of early Czech history. Unfortunately his relation is not conserved in its entirety, but only in excerpts in al-Bakrī's *al-Mamālik wa'l-masālik*; some fragments are preserved by al-Kazwīnī and by the late Maghribī geographer Ibn 'Abd al-Mun'im al-Himyarī in his *Kitāb al-Rawḍ al-mi'yar* (Bibl. Nat. Rabat, Ms. no. 238).

After the 4th/10th century, the country of the Czechs and Slovaks wanes from the horizon of Arab and Persian geographers. The only exception is al-Idrīsī, who in two sections (vi, 2 and 3) mentions Bū'āmiyya (Bohemia), but under this name he understood two different countries, as is to be seen from the list of towns belonging to it. His first Bū'āmiyya represents Slovakia (and partly northern Hungary) with the towns of Bāšū (either Bratislava, formerly Poszon, or Vácov), Akrā (Jager, Erlau), Buṭaṣh or \* -nṣīn (either Bíteš in Moravia, or Trenčín in Slovakia), Shubrūna (Sopron), Nītram (Nitra), etc. The second Bū'āmiyya, in which the towns of Ifrākāt (Prague) and Māsila (Meissen) are located, forms, according to al-Idrīsī, a part of his Allamāniyya (Germany). All this shows that he had rather vague knowledge about this part of Europe, borrowing his information from various sources and being unable to harmonise it (cf. Lewicki, *Polska*, part 2, *passim*).

The next time the Muslim peoples came into contact with the territory of modern Czechoslovakia was under the Ottoman Empire. The Ottoman expansion in the 11th/17th century touched also some southern regions of present-day Czechoslovakia, these regions then forming a part of the Hungarian kingdom. Following the Battle of Mohács in 1526, the Turks successively conquered Buda in 1541 and Esztergom in 1543 and occupied the village of Kakat (today Štúrovo), where they built a small fortress, called Cigerdelen Parkani; this was the beginning of Ottoman rule over Czechoslovak territory. In 1544 they conquered the fortress Fil'akovo in eastern Slovakia and Nógrad and Szécsény in northern Hungary. This territory was then organized into four *sandjaks*, those of Esztergom, Nógrad, Szécsény and Fil'akovo, where more than 90 villages and hamlets on the territory of present-day Czechoslovakia were located.

During the so-called Fifteen-Years' War of 1593-1606, the Ottomans lost the larger part of this region, so that afterwards only about 200 villages remained under their rule.

The greatest military enterprise of the 11th/17th century, the campaign of Köprülü Ahmed Paşa against the Hapsburg monarchy in 1663-4, touched again Czechoslovak territory. In 1663 the Turkish army conquered the important fortresses of Nové Zámky (Uyvar, Neuhausel, Ersekújvár), Nitra and Levice as well as many smaller fortifications. After the peace of Vasvár of 14 August 1664, the fortress of Nové Zámky, together with 786 villages and hamlets in southern Slovakia, remained in Ottoman hands (cf. *Defter-i muṣaṣsal-i eyālet-i Uyvar*, Başbakanlık Arşivi, Tapu Defterleri, Nos. 115-698). Out of this territory a new *eyālet* was constituted with its headquarters in Uyvar. Ottoman rule lasted here until the reconquest of Nové Zámky in 1685, whereas in the eastern regions of Slovakia it persisted till a year later, when the township of Rimavská Sobota paid for the last time taxes to the Ottomans.

Since the treaties between the Ottomans and the

Hapsburg monarchy were frequently infringed, the frontiers remained unstable and underwent many changes. The Ottoman administration considered all villages inscribed in the tax-registers or *defters* as its own territory and insisted firmly on this view, whereas the opposite party was not willing to accept this state of affairs. There thus emerged a wide frontier zone under the fiscal jurisdiction of both parties, i.e. a condominium. The inhabitants were forced to pay taxes to both sides; the levy of taxes on the disputed territory led to incessant fighting, to punitive expeditions for non-payment, to raids and plunderings of villages as well as to dragging-away of peoples into captivity or slavery. The main raids occurred against Rožňava and Jelšava in 1556, Gemer in 1569, Vrábce in 1584 and 1630, Krupina in 1654, Žarnovica in 1654, etc. The marauding raids, chiefly by Tatar troops, devastated many times the whole region of the Váh and Nitra rivers (1543, 1552, 1575), as well as eastern Moravia (1530, 1599, 1663).

The only Turkish traveller who visited the territory of Czechoslovakia was Ewliyā Čelebi, who travelled in the southern regions in 1660-6 and also took part in the campaign of 1663-4. He visited and described the following towns and fortresses: Nové Zámky (Uyvar), Komárno (Komaran), Parkán-Štúrovo (Cigerdelen Parkani), Surany, Košice (Kašhša), Fil'akovo (Filek), Hlohovec (Gaľgofča) and Bratislava (Podjon), cf. *Seyāhat-nāme*, vi, 46-51, 278-392; vii, 133-6, 335-45.

Two participants in the same campaign have also left accounts: Muṣṭafā Zühdi in the *Ta'riḫ-i Uyvar* (Halis Efendi Ktph., No. 2230) and Mehmed Nedjātī in the *Ta'riḫ-i sefer-i Uyvar* (Revan Ktph., No. 1308), both written in 1665. In the Turkish historical literature the events of war on Czechoslovak territory were described in some detail by Ibrāhīm Pečewī (conquest of Fil'akovo, *Ta'riḫ*, i, 139-40; of Sobotka, ii, 140; the siege of Komárno, ii, 154-6). Kātib Čelebi gave an account of events of the Fifteen-Years War in his *Fedhlike*, i, 19-20, 132-6, 261-2.

**CITRUS** [see MUHAMMADĀT].

**ČOBĀN-OGHULLARĪ**, a family of *derebeyes* [q.v.] in Ottoman Anatolia, who controlled the districts (*nāhiyes*) of Tiyek, Ekbez and Hacilar in the eastern parts of the Amanus Mountains or Gāvur Dağı (in the hinterland of Iskenderun [see ISKAN-DARŪN] in modern Turkey). They claimed hereditary power in the area from the time of Sultan Murād IV (1032-49/1623-40), when the latter, in the course of his campaign against the Persians in

Baghdād, granted these districts to a local shepherd (*ġobān*). By the 19th century, the family was divided into two branches, one controlling Tiyeq and Ekbez and the other Hacilar. The Āobān-oghullarī played a part in the attempts of the more powerful *derebey* families of the Cilician region to maintain their local

autonomy against the Porte in Istanbul, and were at times allied with e.g. the Kūcūk 'Alī-oghullarī [q.v.].

*Bibliography*: see A.G. Gould, *Lords or bandits? The derebays of Cilicia*, in *IJMES*, vii (1976), 491. (Ed.)

## D

**DABBĀGH** (A.), "tanner", frequent as a *nisba* in mediaeval and modern Arabic. In pre-Islamic Arabia, the tanners were Jewish craftsmen. During the lifetime of the Prophet, his Companions, such as al-Ĥārith b. Šabīra, Sawda, Asmā' bint 'Amīs and others, were associated with tanning. Sa'd b. 'Ā'idh al-Karaz, one of the Companions of Muḥammad, was busy trading in fruit of the acacia (*karaz*) which was widely used as a material for the processing of leather. During the Umayyad, 'Abbāsīd and Mamlūk periods, there were many Jewish and Arab tradesmen engaged in tannery. Džāhīz mentions Jewish tanners; al-Sam'ānī and Ibn al-Athīr, on the other hand, cite numerous names of Arabs who were well-known not only as *dabbāghs*, but also as transmitters of traditions and religious lore.

The tanners worked and lived in the suburbs of towns and villages, and had their separate lanes (*darb*) in the markets known as *darb al-dabbāghīn*. They had their shops close to the camel-market of Mirbad in Bašra during the Umayyad period. The shops of *dabbāghūn*, together with those of fishmongers, were situated in the markets of Karḫ in Baghdad, away from the shops of the perfumers (*aṭṭārūn*). The *muhtasib* supervised the artisans' works and prevented the *dabbāgh* from using oak galls (*afṣ*) instead of acacia fruits (*karaz*) for leather processing, and cautioned the tanners not to mix hides of ritually-slaughtered cows with those of animals like horses, mules and donkeys which had died natural deaths without being properly slaughtered.

The *dabbāgh* does not appear prominently in Arabic anecdotes and humorous tales, whereas the weaver (*ḥā'ik*) and the cupper (*ḥadḏjām*) was often portrayed as a comic character in Arabic literature. The relative silence of Arabic *uḍabā'* about tanners was partly due to the social isolation in which the *dabbāghūn* worked and lived. Al-Rāghīb al-Iṣfahānī expresses the accepted view about the *dabbāgh*, the *ḥā'ik* and the *ḥadḏjām*, that they are *siflat al-nās*, men of mean status. The 'Abbāsīd government, from time to time, imposed extraordinary taxes (*maks*) on skilled artisans, including tanners, but these fiscal measures were temporary. We find some evidence which suggest that the witness (*shahāda*) of craftsmen of low status like the sweeper (*kannās*), tanner, cupper and weaver was not acceptable in law; some Mālikī jurists, however, pleaded in favour of the waiving of this restriction and the acceptance of their *shahāda*. Ibn 'Ābidīn and some other jurists, while discussing the law of *kafā'a*, debated the question whether the tanners were eligible to contract marriages outside their own social group, and Arab prejudices against the *dabbāghs* clearly hindered upward social mobility among tanners through marriages with families of higher status.

(M.A.J. BEG.)

**AL-DABBĀGH, ABŪ ZAYD 'ABD AL-RAHMĀN B. MUḤAMMAD B. 'ALĪ B. 'ABD ALLĀH AL-ANŠĀRĪ AL-USAYDĪ**, b. 605/1208-9, d. 699/1300, was, according to the eyewitness and probably interested testimony of al-'Abdarī, the unique true scholar in al-Ḳayrawān of his time. If one can believe an anecdote which states that he owed his cognomen of al-Dabbāgh to the fact that his great-grandfather disguised himself as a tanner in order to avoid the office of *kādī*, he must have stemmed from an ancient family of Ḳayrawānī *fakīhs*. Al-'Abdarī, who visited him in 688/1289 and received from him a general *idjāza* for the transmission of his whole work, praises his hospitality, fine appearance, amiability, lofty mind and breadth of knowledge. He was well-versed in all the traditional Islamic sciences, was a felicitous poet and excelled above all in *ḥadīth*. His masters had been numerous (over 80), and he devoted to them, in the fashion of the time, a *bamāmaḏj* or catalogue, which has survived. He also wrote a work on *ḥadīth*, *al-Aḥādīth al-arba'in fī šumūm raḥmat Allāh li-sā'ir al-'ālamīn*, a history, *Ta'riḫ Mulūk al-Islām* and a collection of edifying *ḡalā'*, *Ḍjalā' al-aḳār fī manāḳib al-anṣār*; none of these works has come down to us.

However, al-Dabbāgh owed his reputation above all to his *ṭabakāt* devoted, in a chronological order by dates of death, to the saints and scholars who had either lived in al-Ḳayrawān or had visited it. According to al-'Abdarī, this was called *Ma'ālīm al-imān wa-ravḍat al-riḍwān fī manāḳib al-mashḥūrīn min ṣulḥā' al-Ḳayrawān*, and was in two big volumes. He drew substantially on the oldest sources, and especially on the *Ṭabakāt* of Abu l-'Arab and the *Riyāḍ* of al-Mālikī. Al-Dabbāgh's work was in turn copied and enlarged firstly by Ibrāhīm al-'Awwānī (d. ca. 719/1320), and above all by another Ḳayra-

wānī, Ibn Nādjī (d. after 839/1435), who completed it by adding biographical notices of the scholars of his own century and by interpolating all through the earlier texts personal remarks generally introduced by the verb *kuḷlu* "I say". Hence al-Dabbāgh's work is only known to us through this definitive work in four volumes given to us by Ibn Nādjī with the title *Ma'ālīm al-īmām fī mar'fat ahl al-Kayrawān*. In sum, we have here a collective work which, by means of anecdotes and edifying stories, brings to life before our very eyes and in successive layers, the highly diverse world of piety and *fiqh*. The Tunis edition of this (1320-5) is very poor, but has been re-edited in a more critical way by Ibrāhīm Shabbūh (i, Cairo 1968), which has however now stopped after the first volume and seems unlikely to continue. For his part, M.H. al-Hīla has made a very useful index which is unfortunately only available in reotyped form and has had little circulation.

Al-Dabbāgh was buried in al-Ḳayrawān at the Tunis Gate, in the enclosure reserved for his ancestors and called the Silsilat al-Dḥahab ("Golden chain"). He was in fact the descendant of a famous line of Anṣār.

*Bibliography*: 'Abdarī, *al-Rihla al-maghribiyya*, ed. M. al-Fāsi, Rabat 1968, 66-7; Ibn Nādjī, *Ma'ālīm*, iv, 89-92; al-Wazīr al-Sarrādj, *Hulal*, ed. M.H. al-Hīla, Tunis 1970, i, 262-70 (largely repeats 'Abdarī); R. Brunschwig, *Hafsides*, Paris 1947, ii, 382-3.

(M. TALBI)

**DABĪR** (P.) "scribe, secretary", the term generally used in the Persian cultural world, including the Indo-Muslim one (although in the later centuries it tended to be supplanted by the term *munshī*, so that Yule-Burnell, *Hobson-Jobson*, a *glossary of Anglo-Indian colloquial words and phrases*, London 1886, 328, record "dubeer" as being in their time "quite obsolete in Indian usage"), as the equivalent of Arabic *kātib* and Turkish *yazıdji*. The word appears as *dīpīr/dībīr* (Pahlavi orthography *dpy(w)r*), see D.N. MacKenzie, *A concise Pahlavi dictionary*, London 1971, 26) in Sāsānid Persia to denote the secretaries of the government departments, an influential body in the state, and a chief secretary, *Erān-dībīrpat* or *dībīrān-mehisht* is mentioned in such sources as the *Kārmāmag-i Ardashīr*; see, for instance, Mas'ūdī, *Tanbūh*, 104, tr. Carra de Vaux, 148, giving the *dafīrbadh* as the fourth of the five great dignitaries in the Sāsānid state. A knowledge of writing and secretaryship was considered part of a gentleman's education, and the *Kārmāmag* records that Ardashīr learnt *dībīrīh* at Bābak's court (see M. Boyce, *The Parthian gosān and Iranian minstrel tradition*, in *JRAS* [1957], 32-3). From Sāsānid usage it passed into Armenia, where we find mentioned a chief secretary, *drapet Areae'* (H. Hübschmann, *Armenische Grammatik*, i, Leipzig 1897, 145). The origin of the word is seen in Old Iranian \**dīpībara* "bearer of writing", and this originally Iranian word passed during pre-Islamic times into more westerly languages, such as Aramaic and Armenian; for etymological details, see W. Eilers, *Iranisches Lehngut im arabischen Lexikon: über einige Berufsamen und Titel*, in *Indo-Iranian Jnal.*, v (1961-2), 216-17.

For the functions of *dabīrān* in Islamic times, see KĀTIB, ii and iii, and also DRWĀN, iv and v.

(C.E. BOSWORTH)

**DABU'**, ḌAB' (A. *dub'*, *dubū'*, *dibā'*, *adbū'*, *madbā'a*), grammatically feminine singular nouns designating the hyena (Persian: *kaḫlār*, Turkish: *şirtlan*, Berber: *ifis*, pl. *ifisen*) irrespective of sex or species (see Ch. Pellat, *Sur quelques noms d'animaux en arabe classique*, in *GLECS*, viii, 95-9). From this vague generic term, additional forms have been derived to differentiate the sexes: *dib'ān*, pl. *dabā'in* for the male (alongside *dḥīkh*, pl. *dḥuyūkh*) and *dib'āna*, pl. *-āt*, for the female. The word *dabu'* (preferable to *dab'*) is of Sumero-Akkadian origin and is found in several languages of the Semitic group, most notably in Hebrew with *sebū'a* (Jeremiah, xii, 9) and its plural (*sebū'im* in the Biblical toponym of the "Valley of the Seboim" or "Valley of the Hyenas" (I Samuel, xiii, 18), currently the valley of the Wādī Abū Ḍab'a, tributary of the Wādī al-Kilt, to the west of Jericho. The Arabic dialects of the present day have all retained the original name of the animal in the forms *dabā'* and *dab'as* (fem. *dab'a*, pl. *dbū'a*).

The hyena family comprises four species, distributed geographically throughout Africa and from Arabia to Bengal; this means that the majority of Muslim peoples, and especially all Arabic and Berber speakers, have always been familiar with this repulsive carrion-eater, closely related to the dogfamily. The species that is most widely distributed, from the Atlantic coast of North Africa to India, is the striped hyena (*Hyaena hyaena* or *Heaena striata*) which lives a solitary life, occasionally in pairs, at altitudes of up to 1,500 metres and is essentially nocturnal. It is distinguished by its hide, varying in colour from grey to a dingy shade of yellow, and by its erect dorsal mane (*mar'afīl*) which accounts for 'arfā', one of the many epithets applied to the animal. Its den (*widjār*, *hidn*, *rudjma*, *irān*) is usually a deep, vaulted burrow under an outcrop of rock. Litters consists of five or six cubs (*jur'ul*, *fur'ulān*, pl. *farū'il*, and in poetry, *bahdal*, *fartanā*, *hubayra*, *hinbar*, *hinnabr*, *hunbu'*). In Africa, the southern limit of its habitat is the mid-Sahara, where it is called, in Tamahaḳ, *erkeni/terkenit*, pl. *erkeniten/terkeniten*. The Arab nomads of the Sahara regions, for reasons of superstitious euphemism, refer to it as *bāb marzūk* "lucky door". The spotted hyena (*Hyaena crocuta*), in Arabic *dabu' rakḫā'*. Stronger and more ferocious than the former, this hyena has no mane and its hide is reddish with black speckles. It is found throughout Africa south of the Sahara, and its habitat overlaps that of its striped cousin in the central desert regions, where it is called *tahūri*, pl. *tihūryawīn*; it is common in the Sudan and Eritrea under the name *marfa'in/marfā'il/marfā'ib*. Its behaviour differs considerably from that of the striped hyena; a strong gregarious instinct causes it to live in packs (in dialect: *mdab'a*, pl. *mdābi'*), each one of which may include more than a dozen members. Hunting in groups, both by day and night, the members of a pack pose a formidable threat to cattle and deer, and they have been known to attack isolated travellers; within the pack, a strict law regulates the distribution of captured prey. Much less prolific than the striped hyena, the spotted hyena has no more than one or two cubs to a litter. The other two species of hyena, the brown hyena (*Hyaena brunnea*) and the aard-wolf (*Proteles cristatus*), an insectivore, are virtually unknown in the Arab countries, being confined to central and southern Africa.

The Greeks, who knew of the hyena through the writings of Aristotle (*Hist. Anim.*, vi, 32) and Hero-

dotus (iv, 192), had only two words for the animal: *ῥαῖνα* and *γλάνυς*, while the Arabs, many centuries before Islam, employed a wide vocabulary of terms to describe both the physical appearance and behaviour of the hyena (see Ibn Sīduh, *Mukhaṣṣas*, viii, 69-72); ancient Arabic poetry contains the bulk of this terminology, which has virtually disappeared from contemporary speech. The first thing which struck the Bedouin about the appearance of the hyena was its swaying and limping gait (*hanbala*, *hunbū'a*), owed to the fact that its forequarters are higher and more powerful than its hindquarters. This trait earned the animal a whole range of pejorative epithets with the general sense of "lame", such as: *dḥay'al/dḥayal*, *'ardjā'*, *math'ā'*, *khāmī'a*, *khū'a'*, *khala'la'*, *khaz'al*, etc. The effect of this ignominious gait is aggravated by the animal's bandy forelegs, on account of which it was called *'aythūm*, *'athāmi*, *fashāhi* and *na'thal*, while its thick, matted and mangy coat gave rise to the names *bākī'*, *a'thā'*/*'athwā'*/*'ithyān*, *umm 'ithyāl* and *ghunāfir*. Because of its black jowls and muzzle, it was known as *rashmā'* and *umm rasham*, and because of its ungainly and misshapen body, *hadāqir*, *'aṣḥalīl*, *umm ri'm* and *umm dabkal*. Its nocturnal habits and appetite for carrion earned it a number of epithets with the general sense of "vileness", "filth", such as *djay'ar*/*djā'ār*, *kūtham*/*kathāmi*, *kash'*, *khān'as* and *madrā'*. It has always inspired disgust, with its necrophagous instinct and its habit of raiding cemeteries and unearthing and consuming freshly-interred corpses; as a result of this repugnant behaviour, the hyena earned uncomplimentary nicknames such as *umm al-kubūr* "mother of the tombs", and *nabbāsh al-kubūr* or *nakāthi*, "grave-digger".

Al-Djāhīz amassed a considerable quantity of information on the hyena by collecting legends relating to the animal in Bedouin circles, and he mentions this reprehensible behaviour, without himself believing in it, in connection with the coupling with swollen, unburied corpses of enemies slain in battle or of executed criminals (*Hayawān*, v, 117, vi, 450). He also mentions the fact that, like the hare, the hyena was alleged to be a hermaphrodite. Furthermore, this hermaphroditism was believed to be alternate, not simultaneous, the same individual being male one year, female the next. In reality, such legends may have arisen from the fact that the female hyena is seen to possess a strangely hypertrophied external genital organ, allowing it to be mistaken for a male. On account of its contact with corpses and its menstrual cycle, the hyena was regarded in the superstitious minds of the nomads as something essentially unclean, and for this reason could not serve as a mount for the genies (*Hayawān*, vi, 46). According to another fable, it was believed that by penetrating the shadow cast by a dog in the moonlight, the hyena could make the animal fall from the wall or the terrace where it was standing; the dog would then be eaten.

All in all, the hyena was regarded as a totally reprehensible and ill-omened beast, as is suggested by epithets with the sense of "mother of calamity" (*umm kash'am*, *umm khinnawr*, *umm nawfal*), while its nocturnal rallying cry (*khaff*, *khafkhaḥa*), resembling a sardonic laugh, and its raucous growl of anger (*nawf*, *kusha'*), have always been of a type calculated to terrify the traveller stranded in the countryside, looking anxiously for the reassuring lights of an encampment or a village. To meet at night the animal known in different regions as "the crier" (*al-khaffūf*), "the growler" (*umm attāb*), "the host of the road"

(*umm al-tarīk*), "mother of the sands" (*umm al-rīmāl*) and "the mother of the hill" (*umm al-kalada*) is a sign of bad luck; striking a light is the only way of banishing this unwelcome companion, this animal which joins forces with the wolf (*akhū nahshal*), the jackal and the vulture in consuming the scraps left behind by the lion, the panther, the leopard or the caracal lynx. Another, more empirical means of protecting oneself against any possibility of attack from the hyena was to carry on one's person pieces of colocynth (*hanzal*) or sea-onion (*'unsul*) or to rub the skin with black nightshade (*'inab al-tha'lab*), plants whose smell is repellent to the hyena. On the other hand, the underground cave where the hyena sleeps during the day is often shared by some snake or other large reptile with which it coexists peaceably; this explains the hyena's most widely-spread nickname *umm 'āmir* "mother of the serpent".

In spite of its ferocious and formidable appearance, the hyena is, in fact, characterised by cowardice; once captured and muzzled and seen in daylight, the animal is so terrified that it gives the impression of total bewilderment and stupidity. This well-known behaviour led the Bedouin to coin the phrase *aḥmak min dabu'* "more foolish than a hyena" and the epithet *daba'ta/dabagh'ta/dabagh'tarā'* "stupid", described the animal before being used as a word of reproach for silly or mischievous children. In the Maghrib, a brutal or foolish person is contemptuously described as *madbū'* or *mdabbā'*, implying that, in the words of the proverb *klā rās dba'*, "he has eaten a hyena's head". Although the young of the species, if caught before the age of weaning, is easily domesticated and proves very much attached to its master, the adult is quite untamable, as is shown by the tragic story of the kind Bedouin who gave refuge to a hunted hyena and was eaten in his sleep as a reward for his benevolence, an episode which gave rise to the proverbial expression *muḍjir umm 'āmir* "protector of the hyena", applied to excessive hospitality shown towards a stranger. The incorrigible and unsocial temperament of the adult hyena and its latent malevolence gave rise to the metaphorical sense of the word *dabū'*, as used by the Arabs to describe years of drought and the distress and misery which accompanied them (*Hayawān*, vi, 446-7). Still more explicit was the old adage *khari'at bayna-hum al-diba'* "the hyenas have defecated between them", used in reference to rival tribes divided by implacable hatred. Comparison to the hyena, as to the monkey [see *KIRD*] and the pig [see *KHINZĪR*], was a grievous insult in Arabic as in Persian; in the latter, *rū-yi kaftār* "face of a hyena" was used to describe repulsive features inspiring distrust (*Hayawān*, vi, 452).

Belief in hybrid forms produced by matings of the hyena and the wolf was firmly entrenched in the Arab mentality, and al-Djāhīz was the first to dare to refute it categorically (*Hayawān*, ii, 181-3). According to the latter, copulation of a male hyena with a she-wolf would have produced the *sm'*, a creature renowned for its agility (see al-Damīrī, *Hayāt*, ii, 27-8), identified by modern naturalists with the Cape hunting-dog (*Lycan pictus*), a canine. An inverse crossing would have produced the *'isbār* (see al-Damīrī, *op. cit.*, ii, 115-6), probably to be identified with the aard-wolf, a species of hyena mentioned above. According to another legend dating from the early years of Islam, the *sm'* and the *'isbār*, offspring of the hyena and the wolf were, in fact, the progeny of two tax-collectors, transformed into these two carnivores by Allah as a punishment for their greed (*Hayawān*, v, 80, 148-50); this alleged pu-

nishment gives historical force to the unfortunate reputation for usury acquired in this period by tax-collectors and money-changers. Still more extravagant was the idea of the evolution of the giraffe (*zarāfā*), according to the following process: in Abyssinia, a male hyena mates with a "wild" she-camel, producing a hybrid (unknown and unnamed!) which, mating in its turn with, according to its sex, a male or a female oryx, gives birth to the giraffe as a definite product. Although this comical explanation defies all the laws of genetics, it does, for the simple-minded, account for the physique of the giraffe; it has the low hindquarters of the hyena, the long neck of the camel and the thin legs and cloven hooves of the antelope. Taking into consideration the colour of its hide, orange speckled with black, we can understand its compound name in Persian: *ushurgāw-i palang* "camel-bovine-panther" and its current scientific name, borrowed from the preceding, *Giraffa camelopardalis* L.

In pre-Islamic Arabia the hyena does not seem to have been the object of a taboo. It was considered a game-animal and there was no objection to its meat being eaten in times of hardship; there was even a trade in the animal, and according to some compilers of tradition (see al-Damiri, *op. cit.*, ii, 82, and al-Ḳazwīnī, *Adjā'ib*, same edition, ii, 235), it was sold between al-Safā and al-Marwa, on the Pilgrims' Route. In later times, the question of the legality of the consumption of the meat of this canine-toothed carnivore was answered differently by the four judicial schools of orthodox Islam. This is understandable, since the Prophet Muḥammad, when asked to give a ruling on this vexed question, replied in an ambiguous fashion, saying that he himself did not eat it, but that it was a form of game (*sayd*) and could therefore be consumed. The exegetes expounded this advice at some length, arguing that the hyena does not hunt living prey as predatory animals do, an argument which holds good only for the striped hyena, the sole species known in Arabia. As a result, consumption of the meat of the hyena is regarded as permissible by the Shāfi'īs and the Ḥanbalīs (see H. Laoust, *Le précis de droit d'Ibn Qudāma*, Beirut 1950, 224; al-Ḳalkashandī, *Subḥ al-a'shā*, ii, 47-8; E. Gräf, *Jagdbeute und Schlacht tier im islamischen Recht*, Bonn 1959, 143, 233). Mālik b. Anas and his followers were more reticent, considering the consumption of the meat of this scavenger "worthy of reproof" (*makrūh*). As for Abū Ḥanīfa, he maintains categorically that this meat is absolutely impermissible, on the basis of the formal prohibition applying to all carnivores equipped with canine teeth.

Whatever the motive, consumption or destruction, the capture of the hyena was a practice that always had enthusiasts, using the best means available according to the time and the place. In Islamic countries, the simplest and oldest method of hunting, no doubt dating back to prehistoric times, was to trap the animal with cords in the burrow itself. The brave man who had the audacity to confront this adversary, in spite of its terrible bite, was obliged, as a preliminary, to undress and to arm himself with cords tied into slip-knots; he would then approach his quarry as stealthily and silently as possible and muzzle and hobble the creature without, apparently, encountering any resistance. In this delicate operation the hunter relied not only on his own courage, but also, and most of all, on the magic power of formulae proclaimed in a loud voice at the moment of contact with the beast; in the East, the most efficacious formula was: *Umm 'Āmir nā'ima!* "Umm 'Āmir is asleep!" Another injunction was more distateful

(see LA under 'm-r): *khāmīrī Umm 'Āmir abshīrī bi-djārād 'azlā wa-kamar' riḍā'āl katlā*. "Go back Umm 'Āmir, go and play with mating grasshoppers and the penis of slain men!" In the Maghrib, the hunter, having invoked the local saint, said, with more delicacy: *hāti yeddek nehennihā*. "give me your foot and I shall dye it with henna." It should be emphasised that the first condition for success was, before embarking on the enterprise, to seal up the smallest fissure capable of shedding light into the burrow; the hunter was obliged to operate in total darkness, as in indicated by al-Djāhīz (*Ḥayawān*, vi, 48); he could, for his personal safety, arm himself with a short dagger (see L. Mercier, *La chasse et les sports chez les Arabes*, Paris 1927, 29-30). Arab authors who have described hunting, like the poet Kushādjīm [*q.v.*] in his *Kitāb al-Maṣāyid wa 'l-matārid* (ed. A. Talas, Baghḍād 1954, 103, 213-15) from the 4th/10th century, or the encyclopaedist of field sports 'Īsā al-Asadī, in his monumental *Djamhara fī 'ulūm al-bayzara* from the 7th/13th century (ms. Escorial 903, fols. 162b-163b), have given accounts of various procedures, other than that described above, for the capture of the hyena; these include the hunting-trap, using a ditch fenced in with stakes, the kennel-trap with a guillotine-style door (*riḍāha*, *riḍā'a*) or the snare (*kiffa*) with a running knot to catch the paw. Each of these devices was accompanied by a bait (*rimma*) consisting of the carcase of some animal. In more recent periods, metal traps with tongues have replaced all devices previously in use. Such traps should be large and very powerful, because in many cases the hyena's vice-like jaws are strong enough to bend steel. The Mamlūk Ibn Manglī, summarising the works of al-Asadī in his *Kitāb Uns al-malā' bi-waḥsh al-falā*, in the 8th/14th century, gives the following advice, the fruit of his personal experience, to the mounted hunter: "When pursuing the hyena on horseback, the animal should be approached from the left-hand side; an archer, if right-handed, should overtake it on the left flank. If the hunter is armed with a lance or a sabre, he should attack at very close quarters. Nevertheless, it is said that if the hyena charges at you from the right, you will be unable to strike it, although if it approaches you on the left, it is vulnerable and you will have it at your mercy, if Allah wills." With much less style and finesse, the general practice in the Maghrib is simply to stun the hyena with a club, having first smoked it out of its lair, the same procedure as is used in Europe for the fox, the badger and the polecat. Heavy and sudden rainfall can sometimes force the hyena to evacuate its flooded burrow; a fact illustrated by the old Arabic expression used to describe torrential rain *sayl dī'ār al-dabu'* "a flood to drive the hyena outside".

The truth is that the hyena has never enjoyed any kind of favour on the part of Muslim communities because the animal, while alive, is of absolutely no use to them. At the very most, in ancient Arabia the shepherd could hope for its presence when his flock was threatened by a wolf since, according to his not illogical reasoning, so long as these two carnivores were in violent competition with each other, his sheep were safe, which explains the shepherd's prayer *Allahumma dab' wa-dhīb'!* "Oh Allah, [send me at the same time] a hyena and a wolf." There was a time when, in certain regions, the hyena could play the role of the Hebrew scapegoat; in cases of persistent drought where all other propitiatory rites had failed, the procedure of last recourse was to tie the hyena

to a wall by its tail and to set dogs on it, torturing it for three days before killing and burying it; with the evil destiny thus exorcised, rain was sure to come soon. Such is the interpretation laid on these obscure ritual practices by the mythologists.

In spite of everything, the hyena should not be unjustly abused because, wherever it lives in proximity to man it is, with the jackal and the vulture, a factor in biological equilibrium, contributing to the elimination of decomposing organic matter, the source of all diseases and epidemics. In Islamic countries, the rural populations willingly accept the presence of the hyena in spite of its unpleasant instinct for digging (*djāyāf*); at night, the animal is present in large numbers on the outskirts of encampments and villages, disposing of the garbage and waste products thrown out without any regard for hygiene.

In ancient medicine, as practised by the Greeks and later by the Arabs, the hide of the hyena, in all its forms, offered a wide range of therapeutic properties, the most valued being the supposed aphrodisiac quality of its brains and genital organs when dried and made into powder; but this drug only had a generative effect on the man and induced frigidity in the woman. Bearing in mind the mutual hostility between the live hyena and the dog, it was quite logical to extend this hostility beyond death and to use the remains of the former to repel the latter; also, carrying in one's person a piece of hyena's skin or its dried tongue gave protection against dog-bites and, consequently, rabies. Similarly, anointing oneself with grease from a hyena would prevent dogs from barking at one's approach; this practice was well-known to burglars. Applying the same grease to a placid dog would immediately transform it into a ferocious animal. A hyena skin buried at the entrance to a house was a permanent means of denying access to all dogs and, hung up outside a village, it kept all pestilence at bay. Wrapped round the sieve or the measure used in the handling of grain, this skin preserved the seed against depredation by grass-hoppers and birds; with fruit trees, the same effect could be achieved by the use of the animal's claws. In addition, the head and the tongue of the hyena were lucky talismans; the former promoted fertility in a dove-cote and the latter, hung in a room where a banquet or a wedding feast was to take place, guaranteed enjoyment and was a protection against unpleasantness. On the basis of the hyena's power of vision in the darkness, its gall, used as an eye-wash, was believed to prevent cataract and make nictalops. Finally, the dried heart of a hyena, hung as a talisman round at a child's neck, was a sure means of improving spirit and intelligence; and the right paw of the animal, attached to the arm or the leg of a woman in labour, assuaged the pains of childbirth and guaranteed a successful birth. To this list of major qualities a large number of secondary properties could be added, and one might conclude that the hyena, for which the Arabs had no sympathy in its lifetime, the outlaw al-*Ṣhanfarā* excepted (see his *Lāmiyyat al-'Arab*, v. 5, 59), was reconsidered and enjoyed a measure of favour after its death, on account of its numerous beneficial contributions to medicine and magic, two areas which were then regarded as being one.

**DABŪSIYYA**, a town of mediaeval Transoxania, in the region of Soghdia, and lying on a canal which led southwards from the Nahr Ṣuġd and on the Samarkand-Karminiyya-Bukhārā road. The site is marked by the ruins of Kal'a-yi Dabūs near the modern village of Ziyāudin (= Diyā' al-Dīn), according to Barthold, *Turkestan*<sup>3</sup>, 97. It lay in a prosperous and well-watered area, say the mediaeval geographers, and Muḳaddasī, 324, cf. R.B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 101, mentions in particular the brocade cloth known as Waḏḥārī produced there.

Dabūsiyya's main significance in history was as the place of a victory in 394/1094 of the last Sāmānid Ismā'il al-Muntaṣir [see ISMĀ'IL B. NŪḤ] over the Karakhānids before his final defeat and death, and also the scene of a sharp but indecisive battle between the Karakhānid 'Alitigin or 'Alī b. Hasan Bughra Khān [see ILEK-KHĀNS] and his Saldjūk allies on one side and the Ghaznawid governor of Kh'ārazm, Altuntash [*q.v.* and also KH'ĀRAZM-ŠĀHS] on the other, in which the latter was mortally wounded (see Barthold, *op. cit.*, 270, 295-6). Dabūsiyya apparently flourished at this time and was a mint-town of the early Karakhānids (see Zambaur, *Die Münzprägungen des Islams zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 110). During the Mongol period, Dabūsiyya and Sar-i Pul both opposed Čingiz Khān's hordes in early 617/1220 (Djuwayni-Boyle, i, 102, 107, 117), and operations around it between warring Ozbeg princes are recorded by Bābur in the opening years of the 10th/16th century (*Bābur-nāma*, tr. Beveridge, 40, 124, 137).

**DACTYLONOMY** [see ḤISĀB AL-'AKD].

**DĀGH U TAŞĪHA**, "branding and verification", a term used in Muslim India for the branding of horses and compilation of muster rolls for soldiers. The system of *dāgh* (horse branding) was first introduced in India by 'Alā' al-Dīn Khaldjī (695-715/1296-1316), and was revived by Sher Shāh Sūrī (947-52/1540-5). The system of double ranks (*dhāt* and *suwār*) made its appearance during the second half of Akbar's reign. The motive probably was to compel every *manṣabdar* actually to maintain the number of horses and cavalry men expected of him for imperial service. But dishonesty among the nobles was found to be so widespread that a mere paper edict could not remove it. Therefore, to check all evasions of military obligations, Akbar introduced *dāgh* (branding) for the horses and the *chhra* (descriptive rolls) for the men. Detailed rules were framed for *dāgh u taşīha*. Each *manṣabdar* had to bring his horses and men every year for branding and inspection; in case of delay, assignment of one-tenth of his *djāgūr* was withheld. Nobles whose

*ḡāḡirs* were remote were not expected to bring their horses to the muster before twelve years, but after six years since the last muster, one-tenth of their income was withheld. If a *manṣabdār* was promoted to a higher *manṣab* and three years elapsed since he last presented his horses at a muster, he received a personal increase of salary, but was allowed to draw the allowances for the increased number of his men only after the first muster. He then obtained assignments against his old and new men.

The entire machinery of branding and inspection was controlled by the *Bakhshī-yi mamālik* (or *Mīr bakhshī*) in the central administration. He had under him *bakhshīs* posted at the capitals of *sūbas* or provinces. The actual work of branding and inspection was done by an officer known as the *Dārūgha-yi dāgh u taṣhīha*, who reported to the *bakhshīs*. This department was very important for maintaining the Mughal army up to prescribed standards, and the decline in the quality of Mughal troops in the 12th/18th century was widely ascribed to the collapse of the *dāgh u taṣhīha* system.

(M. ATHAR ALI)

**DĀHIS**, the name given to a pre-Islamic war waged during the latter half of the 6th century A.D. between two closely related tribes of Ḡhatafan, the Banū 'Abs and the Banū Dhubyān, or more accurately the Banū Fazāra, a sub-tribe of Dhubyān. The war took its name from a stallion called Dāhis, over which the quarrel arose, and which became proverbial for bad luck.

The real reasons for the war are probably to be sought in the enmity generated by the domination by 'Abs of all Ḡhatafan, as well as Hawāzin, which had reached its peak around the middle of the century but had begun to decline with the death of Zuhayr b. Djadhīma, the chieftain of 'Abs [see ḠHATAFĀN]. The war, which is said to have lasted forty years, continued until some years after the Day of Shī'b Djabala, on which 'Abs joined with 'Amīr against Dhubyān and Tamīm; this battle is traditionally dated in the year of the Prophet Muḡammad's birth.

The major events of the war, as well as their proper sequence, are clear from our sources, although many details are uncertain, since the main primary source shows signs of a tendentious recasting to give added prominence to the two leaders, Ḡays b. Zuhayr b. Djadhīma al-'Absī and Hudhayfa b. Badr al-Fazārī of Dhubyān.

The most detailed study of the first part of the war down to the Day of al-Habā'a is by E. Meyer, *Der historische Gehalt der Ayyām al-'Arab*, Wiesbaden 1970, 50-65, who gives a full bibliography. The main primary source is the commentary on the *Nakā'id*, i, 83-108, which is a continuous narrative on the authority of al-Kalbī (probably the son Hishām, d. 206/821-2), *Aghānī*, xvi, 24-33; xvii, 187-208, gives the same account almost verbatim on the authority of Muḡammad b. Ḥabīb (d. 245/860), Abū 'Ubayda (d. 209/824-5), Muḡammad b. Sa'dān (*fl.* 3rd/9th century), but stops with the death of Hudhayfa on the Day of the Well of al-Habā'a, omitting the latter half of the war and the final conclusion of peace. Other accounts are those of al-Mufaḡḡal b. Salama, *al-Fakhīr*, Cairo 1380/1960, 219-35 (quoted verbatim by

Maydānī, *Maḡma' al-amṡāl*, Cairo 1959, ii, 110-21), and Ibn al-Aṡḡūr, Beirut 1965, i, 566-83, neither of whom cites his authorities. The latter version is considerably curtailed and at the same time is eked out by the addition of dialogue and transitional passages to make the story more interesting and to fill in gaps in the narrative. A much shorter account also from Abū 'Ubayda, in Ibn 'Abd Rabbih, *al-'Ikd al-farīd*, v. Cairo 1946, 150-60, is divided into *ayyām*.

All the primary accounts differ considerably one from another. We shall first summarise the main events of the war as they are related in the *Nakā'id* and then point out the more important differences in the other sources.

Dāhis was ill-omened even before his birth, since the owner of his sire tried but failed to recover the seed deposited in the womb of the dam, because the pair had mated without his knowledge or consent. The stallion grew up to be a swift runner and eventually became the property of Ḡays b. Zuhayr of 'Abs, who seized him in a raid (83-5).

Different reasons are given for the ill-will between Ḡays and Hudhayfa, but whatever the cause, it eventually culminated in a horse-race arranged between the two. Each agreed to run a stallion and a mare. Ḡays ran Dāhis and al-Ḡhabrā' and the entries of Hudhayfa were al-Khaṡṡār (or Ḡurzul) and al-Ḥanfā'. To make sure of winning, Hudhayfa stationed men along the course who seized and held Dāhis until the other horses passed. When released, Dāhis overtook the two horses of Hudhayfa and would have come in second behind al-Ḡhabrā', but again the Banū Fazāra intervened and beat off the leaders, preventing them from finishing first. Both sides claimed victory, and the wager was not paid (85-8).

First blood in the conflict was drawn by Ḡays, who while on a raid killed 'Awf b. Badr, the brother of Hudhayfa. The bloodwit of 100 camels was paid by al-Rabī' b. Ziyād al-'Absī. Despite this, Hudhayfa retaliated by sending a group of men, among whom was his brother, Ḥamal b. Badr, against Mālik b. Zuhayr, the brother of Ḡays, who was married to a woman of Fazāra and living in the vicinity. Ḥamal kills Mālik, and when al-Rabī' hears of this, he leaves the *djūwār* of Hudhayfa, which he had enjoyed up to this time, and joins Ḡays (88-92).

At this point there is a digression to explain an estrangement that had occurred between Ḡays and al-Rabī', who had stolen a coat of mail belonging to Ḡays. The murder of Mālik, however, reconciles the two men, who combine their forces against Hudhayfa (90). They demand the return of the camels that had been paid as blood money for 'Awf, but Hudhayfa refuses. Then another brother of Hudhayfa, Mālik b. Badr, is killed by a certain Djunaydīb akḡū Banī Rawāḡa, a distant relative of Ḡays (93-4).

Peace is then sought by al-Aslā' b. 'Abd Allāh al-'Absī, who gives several young boys to Fazāra as hostages. Hudhayfa, however, is implacable. He gets possession of the boys and kills them one by one, forcing them to call on their fathers for help as he shoots them to death with arrows. Among the boys were Wākid b. Djunaydīb and 'Utba, the son of Ḡays b. Zuhayr (93-4).

Next follows a series of battles in which 'Abs are victorious. On the Day of Khāṡhira, at which Hudhayfa was not present, Fazāra lost several prominent men, among them al-Ḥārīth, another brother of Hudhayfa (94). Hudhayfa mustered his forces and set out in pursuit of 'Abs, but fell into a trap laid

by Ḳays, who sent off the animals and non-combatants in one direction, and together with his warriors went in another. As he expected, Ḥudhayfa and Dhubyān followed the animals, and, as they scattered to gather in the plunder, 'Abs fell on them unexpectedly and wreaked such slaughter that al-Rabi' b. Ziyād and his brothers begged him to desist. This battle was known as the Day of Dhū Ḥusā (94-5). Ḥudhayfa and his brother Ḥamal escaped the carnage, and with a few companions came to the Well of al-Habā'a, where they were finally hunted down by a group of 'Abs, among whom was Shaddād, the father of the poet 'Antara. Both Ḥudhayfa and Ḥamal were killed. The *Nakā'id* adds as an after-thought that it was said that Ḥudhayfa killed the mother of Ḳays, whom he found among the animals, on the Day of Dhū Ḥusā (95-6).

From this point, the fortunes of war change. The rest of the chronicle is given over to the wanderings of 'Abs, who, hard-pressed by the combined forces of Dhubyān, leave their homeland in an attempt to find allies or *ḡiwār* among the Arabs who were not of Ḡhaṭafān. They first defeat the Banū Kalb on the Day of 'Urā'ir; then they go to the Banū Sa'd b. Zayd Manāt, who give them a pledge of security for three days, but attack them later and are defeated on the Day of Farīk. Then 'Abs go to the Banū Hanīfa in al-Yamāma, but find no support with them. They finally find *ḡiwār* with 'Amir b. Ṣa'ṣa'a, but it is given grudgingly and 'Abs are subjected to indignities. It is during this period that they participate in the Day of Shi'b Djabala referred to above. Thereafter they leave 'Amir and go to the Banū Taghlib. Taghlib react favorably to their request and send a delegation to consult with 'Abs, but among the delegates Ḳays recognises an old enemy, Ibn Khims al-Taghlibī, who had killed al-Hārith b. Zālim, the man who had avenged the murder of Ḳays's father. Ḳays slays Ibn Khims and the chances for *ḡiwār* with the Banū Taghlib are ruined (98-104).

Thereafter, weary of war, Ḳays sends his tribe home to try to make peace with Dhubyān. After some difficulties this is accomplished, but Ḳays himself refuses ever again to be a *muḡāwir* of any house of Ḡhaṭafān and departs for 'Umān, where he later dies. Peace is concluded with Dhubyān by al-Rabi' b. Ziyād and the rest of the Banū 'Abs (104-8).

It is clear that whoever put together this account of the war—al-Kalbī or his informants—was a partisan of 'Abs. Ḳays is made to appear as a paragon of forbearance (*ḥilm*) and Ḥudhayfa an unmitigated villain. Ḳays in the beginning attempts to call off the wager, which was made without his consent, because he realises that it can only lead to trouble. Ḥudhayfa insists on running the race, and then wins it only by cheating. He later on sends Ḥamal to kill Mālik b. Zuhayr, although he had previously accepted the bloodwit for his brother 'Awf, and now refuses to return the camels. Ḳays lets one of his sons go as a hostage in an effort to bring about peace, and Ḥudhayfa kills him with the other children in a barbarous manner. Later on he kills Ḳays's mother. Finally, at the end, at the Well of al-Habā'a, Ḥudhayfa shows himself a coward and has to be pushed into the fray by his brother Ḥamal. Ḳays, who was not present, expresses in verses his regret at the incident and refers to Ḥamal as "the best of men", and says he would weep for him forever, were it not that he had behaved unjustly.

In the other sources, Ḳays does not appear in such a good light, nor is Ḥudhayfa so wicked. According to *'Ikd*, v, 151, Dāhis and al-Ḡhabrā' raced against

each other and not as a team. The wager was between Ḳays and Ḥamal b. Badr, the owner of al-Ḡhabrā', who arranged the deception, and thus appears as instigator of the war instead of his brother.

Ḳays is said to have killed not the brother, but Mālik (or Nadba), the son of Ḥudhayfa, whom his father had sent as a messenger to ask for payment of the wager. As a messenger his person should have been sacred, but Ḳays said grimly, "I'll pay you later", and then thrust his spear through his back (*'Ikd*, v, 152; Ibn al-Athīr, i, 572).

The killing of the children is told in two separate episodes. Rayyān b. al-Asla' is taken prisoner, but is released by Ḥudhayfa and gives his two sons and nephew as hostages. Ḳays kills Mālik b. Badr and only then does Ḥudhayfa in retaliation kill the two sons of Rayyān, who die calling for their father. He is prevented from killing the nephew by the boy's maternal uncles, who were apparently of Fazāra (Ibn al-Athīr, i, 576). Later, 'Abs agree to pay Ḥudhayfa ten bloodwits for his losses and give as hostages a son of Ḳays and a son of al-Rabi' b. Ziyād. Ḥudhayfa is only able to get his hands on the son of Ḳays, but captures two other 'Absī and kills the three of them together. It is not actually stated that this last group were children (*ibid.*, 577). In still another account of this incident, Ḳays is made to bear the blame for foolishly insisting on giving hostages against the advice of al-Rabi' b. Ziyād, who wished to stand and fight (Maydānī, ii, 114). In general, the other sources give much more importance to al-Rabi' than does the narrator in the *Nakā'id*.

According to the *Nakā'id*, Ḳays was not present at al-Habā'a when Ḥudhayfa and Ḥamal were slain, but he is there in the other versions, egging his comrades on with the cry *labbaykum* in answer to the cries of the children as they were murdered (*'Ikd*, vi, 157; Ibn al-Athīr, i, 579).

'Abs and Dhubyān were permanently reconciled, and the war of Dāhis had no political aftermath that affected the course of events after the advent of Islam. For later Muslims, the most important results of the war were literary, since it is the best-documented of all the wars of the pagan Arab tribes. Several famous poets participated in it or allude to it in their poetry. Among them are 'Antara b. Shaddād, Nābigha al-Dhubyānī, Labīd, whose mother was of 'Abs, and the 'Absī leaders Ḳays and al-Rabi'. The memory of the major events in the struggle was doubtless still fresh when scholars began to collect the poetry and anecdotal material connected with it, though it is likely that the minor incidents, the personalities of the participants, and the real causes of the quarrel had already been invested with an aura of romanticism. Probably the very quantity of data facilitated this process which is apparent in the surviving accounts. Even as late as the Umayyad period, the war was exploited for *fakhr* and *hidā'* themes; several Arabic proverbs and proverbial expressions are said to have originated in the dialogue between Ḥudhayfa and Ḳays (Maydānī, nos. 537, 613, 821, and 1530), and Dāhis became a permanent part of Arabic folklore and literature as a symbol of bad luck and enduring enmity, embodied in the proverbs *ash'am min Dāhis* and *kad wak'a bay-nahum ḥarb Dāhis wa 'l-Ḡhabrā'* (*ibid.*, nos. 2033, 2925).

**DĀ'IRA SANIYYA**, the term used for the administration of crown lands in the Ottoman Empire during the last quarter of the 19th century. *Saniyya* lands were the *mulk* (private freehold) of the Sultan. They were administered by a well-organised establishment, the *Dā'ira Saniyya*, which had branch offices in areas where these lands were abundant. After the revolution of 1908, Sultan 'Abd al-Ḥamīd II ceded his private properties to the state. The lands continued to be called *saniyya*, but they were transferred to the newly-formed department of *al-Amlāk al-mudaawwara*.

Within months of the accession to the throne of 'Abd al-Ḥamīd II, vast areas of the richest agricultural lands in 'Irāk had been registered as his private property. Most of these lands were in the Ḥilla-Diwāniyya, 'Amāra, and Baṣra districts. They were acquired by all possible means, from expropriation by imperial order to *bona fide* purchases with the sultan's money. The *Saniyya* Land Department in 'Irāk had close ties with the army, the only source of trained engineers and surveyors able to collect the revenues. The lands continued to be farmed out by *iltizām*; tribes occupying *saniyya* lands persisted in considering them as their tribal *lazma*. The Sultan received from *saniyya* lands both the *mallākīyya* (owner's share) and the tithes. Tenants were granted certain privileges in order to induce them to remain on these lands.

In Egypt, the term was related to the Muḥammad 'Alī dynasty. Land given by Muḥammad 'Alī and his successors to themselves or to members of their family originally was called *ḥajfīk* (pl *ḥajfālik*), and Ismā'īl adopted the term *ḥajfālik saniyya* or *ḥajfālik al-dā'ira al-saniyya*. By 1880 the *Dā'ira Saniyya* lands amounted to 503,699 feddans, most of them in Upper and Middle Egypt. This land was pledged as security for two loans contracted by Ismā'īl in 1865 and 1870 and consolidated and unified in 1877 and 1880. After Ismā'īl's deposition and in the course of the liquidation of Egypt's debt, the *Dā'ira* lands passed into the control of the state, and only a small part was later restored to the princes in a final settlement in 1893 or repurchased by them. The bulk was sold to land companies and private persons. In 1898 British capital formed the syndicate which later became the Daira Sanieh Company and disposed of all *Dā'ira* lands on behalf of Egypt's creditors. The operation was completed by March 1906, resulting *inter alia* in a considerable increase in the area owned in large estates.

**DAKAR**, the capital of Senegal, is situated at the tip of the Cape Verde peninsula. Its position

is the westernmost outpost of the ancient world (its longitude reaches 17° 16' W. at the point of the Almadies). The region of Dakar, which covers almost the whole of the peninsula, is subdivided into three parts: (1) An eastern highland area (more than 100 m. in altitude); the N'Diass range rises some 70 m. above lake Tanma; to the east, the relief consists of hills or low plateaux with very gentle slopes not exceeding 40 to 50 m.; (2) the tip of the peninsula; from Fann Point to Bel-Air Point, the coastline is very jagged; numerous capes (Fann Point, Cape Manuel, Bel-Air Point) define the bays (Soumbédioune, the Madeleines, Bernard, Port of Dakar, etc.); the altitude is very modest, except at Cape Manuel (40 m.); (3) In the north-west of the region, the coast-line is more or less jagged, with a series of capes; the Cape of Yoff, Cape of the Almadies. Here, by contrast, the contours are higher, with the Marmelles (100 m.), and with plateaux at altitudes of between 30 and 50 m. A vast plain links the two mountainous regions of the Cape Verde peninsula. The centre of this plain is a marshy area with stable dunes. In the north, a strong cordon of dunes forms a distinct barrage for sea-farers and isolates a whole series of lakes: lake Yovi, lake Tanma, lake Retba, lake Mbebeuse, etc. To the south there is a cordon of shifting dunes.

The peninsula of Cape Verde has a special climate totally different from that of the interior of the country. During the "bad season" or rainy season, which lasts from mid-June to October, temperatures reach 25° to 27° C., the air is humid, and there is an average of 600 to 650 mm. of rainfall, the maximum being in the month of August. The singular feature of the climate is the length of the "good season", or dry season, which lasts from November to mid-June. Temperatures are mild (19° to 23°), owing to the proximity of the sea, but especially to the cold current of the Canaries, which hugs the Senegal-Mauretanian coast, and to the *alizé*, the sea-wind of the Azores, which bars the way to the *harmattan* (a hot and dry wind).

Historically, the peninsula of Cape Verde was part of the kingdom of Kayor. It was visited in 1444 by the Portuguese Denis Diaz. While Gorée, an island lying 3 km. to the east provided a transit centre for European navigators and for the slave trade, and was the residence of governors controlling the whole of the coastline as far as Gabon, Dakar was nothing more than a tiny village occupied by fishermen of the Lebou tribe (a branch of the Wolof). It was on 25 May 1857 that the captain of the vessel *Protet*, in agreement with the leaders of the theocratic Republic of the Lebou, officially hoisted the French flag at Dakar, which henceforward became a port of call on imperial communications routes to south America. In 1895, a general government was formed charged with co-ordinating the policy of the governments of the different colonies constituting French West Africa (A.O.F., l'Afrique Occidentale Française). The governor of Senegal was, however, actually installed at Saint-Louis, capital of the A.O.F.

It became a naval base in 1898, the capital of the A.O.F. in 1902 with a governor-general, the focal point of the major axes of communication between the A.O.F. and metropolitan France, and the seat of the Grand Federal Council in 1957. Dakar also became the capital of the colony of Senegal from 1957 onwards, then that of the Federation of Mali (comprising Senegal and the former French territories of the Sudan), and finally that of Senegal after the accession of the country to international sovereignty in 1960.

Officially the administrative, economic and religious capital, Dakar comprises urban sectors with remarkably clear-cut divisions, regulated by the plans of 1946 and 1961. The former established four zones: (1) A mixed African and European residential zone on the western sea-board as far as Yoff (the airport); (2) A commercial and administrative zone centred on the southern region, bordering on the commercial port; (3) An industrial zone, from the main jetty to Thiaroye; and (4) Finally, a group of reserved territories, *non aedificandi* sectors.

The 1961 plan modified the earlier very little; the only changes were the specialisation of the industrial zone, the constitution of an important university centre, and the designation of the new urban centre of Dagoudane-Pikine as the co-ordination centre for the direct plan.

With reference to the urban structure, the town of Dakar occupies the south-eastern extremity of the tip of the peninsula. It is the region which has developed round the port, on the south-eastern plateaux and on the southern part of the plain where is situated the Medina. The essential characteristic of this urban zone is that it is almost the only area having buildings of solid construction. Grouped within it are the national organisations of a political nature, the administrative services, the entire wholesale trade, almost all the banks, insurance companies and real-estate organisations. The plan of the town is not a homogeneous unity; the port sector, the most ancient, is in the form of rectangles, squares or triangles; the south-eastern sector is of the radio-centric type with a series of roundabouts; the central part is of chequer-board form with narrow streets, whilst in the south, urbanisation is least advanced.

The town of Dakar comprises several quarters: the business quarter, an ancient nucleus, having as its centre the Kermel market, with several old administrative buildings, the main post-office, the town-hall, an area which is very busy in the morning and deserted at night; the western quarter centred on the Place de l'Indépendance, very modern and full of activity (banks, estate agencies, travel agencies and insurance offices); the heterogeneous central quarter which consists rather of services establishments and of wholesale houses, and is a centre of the textile trade and of traditional commerce; the human population is very mixed there, with Lebanese and Syrians, French, Portuguese Cape Verdeans, Moors, Toucouleurs, etc.; and the administrative quarter with high-rise public buildings: the National Assembly, the Presidency of the Republic, the government ministries building, the embassies, hospitals, the Palais de Justice. It is also a residential quarter.

The northern sector of the town of Dakar comprises an eastern section with some buildings of solid construction in an area of insalubrious shanties (Rebeuss) a central section, with waste-ground and some large buildings (Colis Postaux, the Ecole Malik Sy, the Great Mosque, the Institut Islamique, the Polyclinique) and some industrial establishments: Huilerie Petersen, Brosette, Air Liquide, etc.

The third industrial zone contains export and import industries (oil-works, large mills, maritime industries and light industries). This zone is not built up: it is mostly waste-ground with some market-gardens and shanty-towns (Darou Kip, Maka-Colobane, etc.).

The *Grande-Médina* comprises several quarters: the *Gueule-Tapée*, relatively urbanised with many solidly-built houses, and some large modern establishments

(the Mandel maternity hospital and dispensary, municipal nursery, etc.); *Fas*, barely urbanised, with very few asphalted roads, dotted with shanties giving place more and more to modern developments (the O.H.L.M. Centre). It is there that the Independence monument and the Kennedy girls' lycée are situated; *Colobane*, a quarter identical to *Fas*; *Gibraltar*, entirely residential, with some stylish villas constructed by the O.H.L.M.

*Grand-Dakar* constitutes the most recent, the most extensive and the most populous zone of urban development of Dakar. A very modern urbanisation exists alongside patches of shanty-town. It consists of the following quarters: Fann-Hock, Fann-Residence, Mermoz, Point E and Zone B, a superior residential zone, (the University, the École normale supérieure, the École nationale d'économie appliquée, the Blaise Diagne and Delafosse Lycées, numerous embassies and luxury villas for government ministers). In the centre of Grand-Dakar there are some small self-contained estates: Zone A, Cité du Port de Commerce et des Douanes, the estates of Bopp and of Wâgouniaye.

The allotments of the north encompass, between the Avenue Bouguiba and the Route du Front de Terre: the Cité de Police, the Karak, the simple or multistoreyed villas of the Sicap, the quarters of the Castors, of *Derkle* and of the *Cité des Eaux*, some villas of the O.H.L.M. I and II.

The *Grand-Dakar* with its shanty-towns is the quarter with the densest population (500 to the km<sup>2</sup>). The dominant characteristic is insalubrity. It lies between streets 10 and 13. SICAP and the O.H.L.M. are beginning to apply there a modern urbanisation policy.

*Dakar and its suburbs.* In the immediate hinterland of the town is a zone where the influence of Dakar is shown by certain characteristic features; installation of industrial establishments as far as MBao where there is a petrol refinery and where there begins the free industrial zone of Dakar-marine; the military camps of Quakam and of Camberene, the international airport of Yoff and its technical buildings; the major telecommunications establishments grouped at Yeumbel and to the north of Rufisque, a military conglomeration situated 30 km. from the capital; the presence of residential estates accommodating the workers of Dakar; the estates of the Almadies, of Ngor, of the airport, of Sabe, of Grand-Yoff, of the Patte d'Oie, the villas of the O.H.L.M., Guédiawaye, Pikine, Thiaroye and Diakaw.

Dakar also maintains reciprocal trading relations with certain villages in its close vicinity, providing the villages with fish and vegetables and furniture in exchange for various types of merchandise. These villages are Hann-Pêcheur, Oukam, Ngor and Yoff.

*Demography.* Dakar, which had only 20,000 inhabitants at the beginning of the century, today numbers more than 350,000. The census of 1961 gave a total population of 302,920 for the town of Dakar and 71,780 for the surrounding area. The same investigation listed 45,000 non-Africans, of whom 29,180 were French, 9,900 Lebono-Syrians, 5,800 Métis, 500 Antillaise and about a hundred North Africans. With the exception of the Lebanese community, this non-African population has tended to diminish as a result of the Africanisation of cadres and the reduction of the French military presence.

The African population in 1961 numbered in total 398,060, or 9/10 of the population of Cape Verde (443,560). There are some thirty tribes represented, but five predominate: the Wolof (203,840 or 51.2%),

the Toucouleurs (50,480 or 12.6%), the Lebou (36,860), the Sereres (25,980), and the Peul and Foula (23,900), a total of 341,060.

The Lebano-Syrians deal in commercial activities. The Africans practise fishing and agriculture (the Lebou), or are agents in public services (functionaries and members of the security forces), workers in personal services (the Toucouleur, Peul, young Sereres and Diola) or members of the liberal professions (lawyers, bailiffs, experts in various fields). Industries employ as many people as do the services. Commerce involve the employees of European commerce (clerks, bookkeepers, administrators), tradesmen based in the African quarters and vendors in the markets with a strong colony of Foula from Guinea (Konakry).

*Religions.* The two main religions practised in Senegal are Islam and Christianity (both Catholic and Protestant), and it is at Dakar that they are officially represented.

The primary religion of Senegal, after the virtual disappearance of animism, is Islam. In fact, 90% of Senegalese are Muslims, as are 4/5 of the population of Dakar. Unlike Christianity, Islam in Senegal takes on a traditional, even local, character. The Muslims of Senegal, of the Mālikī rite, belong, in a general sense, to a religious fraternity (*ṭarīka*) led by a marabout, their spiritual chief. As a result of the rural exodus, Dakar is the meeting-point of all the fraternities existing in the country. From Dakar thousands and thousands of pilgrims travel once a year towards Touba, capital of Murīdism [q.v.], a fraternity founded by Shaykh Ahmadu Bamba Mbacké in ca. 1895, or towards Tivaouane, capital of the Tidjāniyya order. These two towns are certainly religious capitals, but it is at Dakar that contacts between the temporal (the secular state) and the spiritual take place. Periodically, the various religious leaders leave their respective capitals to meet the governmental authorities in Dakar.

The different fraternities represented in Dakar are: (a) The Tidjāniyya [q.v.], of which the present spiritual chief is the "caliph" (*khalīfa*) El-Hadji Abdoul Aziz Sy, the third son of the late El-Hadji Malick Sy (1850-1922). The *khalīfa* has his official residence at Tivouane, a *zāwiya* founded by his father; however, he possesses houses in Dakar which provide him with a *piéd à terre* and serve as accommodation for the *ṭālibs*, disciples who generally conduct Qur'ānic schools. These residences are constantly changing when the *khalīfa* is moving through the capital. A large number of the members of the Sy family reside in Dakar, and each one, in his home, has his following of *ṭālibs*.

While speaking of the Tidjāni at Dakar, one cannot ignore El-Hadji Seydou Nourou Tall, grandson of El-Hadji Omar Tall (1796-1864), a man of the first importance both in the religious and the political sphere, whose residence is constantly full of Senegalese Toucouleur and Malian disciples.

(b) The Murīds. With the rural exodus of the peasants from the Baol, where are situated Touba and the *zāwiya* of Shaykh Ahmadu Bamba, Dakar contains a significant number of Murīds, who every year make the Magal, or pilgrimage to Touba. Almost all the members of the Mbacké family reside either at Touba, at Mbacké, at Diourbel or in the neighbouring villages, and to our knowledge, only Serigne Shaykh Mbacké, grandson of Shaykh Ahmadu Bamba, representing the industrialist tendency of Murīdism, resides permanently in Dakar. He owns many houses there and a quarter bears his name (Sicap Serigne

Cheikh); his residence is remarkable for the daily crowds of *ṭālibs* and of dependents. When the *khalīfa* is on his way to Dakar, the crowds become more numerous, each man pressing forward to express his allegiance to his spiritual leader; the *ṭālibs* sing poems by the founder of Murīdism or recite the Qur'ān for the whole length of the journey. Dakar becomes a sort of Touba during the entire visit of the *khalīfa*, the Shaykh Abdul Ahad Mbacké.

(c) The Kādiriyya, who have several important centres in Senegal. Senegalese pilgrims often travel to Baghdad, where there is the tomb of Shaykh 'Abd al-Kādir al-Djīlānī [q.v.], founder of the fraternity, but every year thousands of Kādiri adherents make their way to Nimzat, in Mauretania, where the order arose. NDiassāne in Senegal is the most important centre of the Kādiri fraternity. As in the case of the others, many associations of Kādiri *ṭālibs* exist in Dakar. They are very active, especially during visits of their *khalīfa*, grandson of Shaykh Sa'd Buh, one of the propagators of the sect in Senegal. In Dakar, the Kādiriyya has its own quarter in the Gueule-Tapée on street 6.

(d) Of recent creation (1890), the fraternity of the Lāye is less widespread than the previous three groups. The Lāyes take their name from Libasse (a corruption of al-'Abbās), better known as Limāmu Lāye (Imām Allāh) (1843-1909), marabout and founder of the order whose influence remains limited to the Cape Verde peninsula, more particularly among the Lebou. It was from a base at Yoff that the founder preached his doctrine.

The present *khalīfa* is Shaykh Sidinā Mandione Lāye; he lives in Camberence, a village not far from Dakar.

(e) The Tidjānī sub-group of the Niassenes is based at Kaolack. In Dakar, Maryama Niassé (daughter of the late El-Hadji Ibrahim Niassé, founder of the subject) lives in Malik Sy Avenue and receives visitors coming from all parts of Senegal, as well as from Nigeria, Egypt, Ghana, Dahomey, etc. Her brother, also in Dakar, supervises an important Qur'ānic school whose renown stretches beyond the frontiers of the country.

In addition to its role as a capital, Dakar is the meeting-point of all the fraternities existing in Senegal, where the Muslim religion, because of its importance, enjoys a number of official institutional benefits conferred by the secular state.

At the University of Dakar, in the Faculty of Literature, there is an Arabic section, and there is a department of Islamology at the I.F.A.N. (Institut Fondamental d'Afrique Noire).

The Great Mosque of Dakar is a religious institution of an official nature. Its construction was 90% financed by the state. The *Imām* is appointed by the Lebou community, but paid and housed by the government. The Friday prayer in the Great Mosque is transmitted only by the radio-masts of the O.R.T.S. and on the occasion of major Muslim festivals, the head of state is always officially represented by the Prime Minister. In the precinct of the Great Mosque is the Islamic Institute of Dakar, which was inaugurated in 1974 by the President of the Republic and which has as its purpose basic research, education and Islamic instruction.

Catholicism is under by a Senegalese archbishop who has his seat in Dakar, the centre of the activities of the Catholic Church in Senegal. The Church contributes very effectively to education; it administers infant, primary and secondary schools which

are officially recognised by the Government and receive valuable subsidies from it.

Protestantism is poorly represented in Senegal; the Protestants administer some infant schools which are also recognised by the State.

Educational, sporting, cultural, artistic, manufacturing and touristic institutions are almost all centralised on Dakar. The only Senegalese University—with its Faculties and Institutes, the I.F.A.N. and its major schools, of which the Ecole Normale Supérieure provides higher education, basic research and the formation of higher cadres—is situated in Dakar. The Institutes of Applied Research (Institute of Nutritional Technology, the O.R.S.T.O.M., the Institute of Development and of International Organisations, the Institute of Oceanographic Studies of Thiaryoye, the B.A.N.A.S., the Pasteur Institute, the Institute of Psychiatric research, the Institute of Applied Leprology and the National Institute of Arts, are also based on the capital. There are in Dakar 12 centres of technical, professional, industrial and catering training, 112 primary and secondary schools and centres of General Education, without counting the Customs Service, Military Health, Gendarmerie and Police training schools. All the museums are situated in Dakar or in Gorée.

An administrative, economic, human, cultural and religious focus, forced brutally into contact with contradictory elements generating conflict between the modern and the traditional, anxious to overcome these contradictions and reduce these tensions so as to progress towards an integral and harmonious development, Dakar tends to be concerned not only with its own destiny, but more realistically, with that of the whole of Senegal.

**DAKHALIEH** [see DAKAHLIYYA].

AL-DALĀL, ABŪ ZAYD NĀKID, *mawlā* of the Fahm tribe, musician and *zarīf* in Medina, born about 70/690, died about 145/762. Like his teacher Tuways (d. 92/710) he was a *mukhannath*—hence the proverb “more effeminate than al-Dalāl”—and is said to have been castrated by order of one of the caliphs, either Sulaymān or Hishām [but see KHAṢĪ]. His musical gifts and ready wits he used as an entertainer of Qurayshī women and a singer at weddings, accompanying himself on a tambourine (*duff*). He composed highly artistic (*kathīr al-ʿamal*) melodies in a style called *ghināʾ mudʿaf*, most of them on verses by contemporary poets. Yūnus al-Kātib recorded one, Ibrāhīm al-Mawṣilī 19, and Abu ʿl-Faraj al-Iṣbahānī 30 of his song texts in their *kutub al-aghānī*, the latter using sources like the songbooks of al-Hishāmī and Ḥabashī and the *Akhbār al-Dalāl* by Iṣhāk al-Mawṣilī.

NEUBAUER)

**DALMATIA** (Dalmacija in Serbocroat), a historic province of Yugoslavia, formerly covering parts of the Federal Republics of Croatia (the territory of contemporary Dalmatia), of Montenegro and a very small section of Bosnia-Herzegovina.

*I. Generalities*

Skirted by the Adriatic Sea, Dalmatia stretches in a north-west-south-east direction at the foot of the Dinaric mountain ranges (Velebit, Svilaja, Biokovo) from the peninsula of Istria (according to some authors, only from the island of Pag) to the Albanian frontier, marked by the river Bojana.

But in fact, the territory designated by historians and geographers under the name Dalmatia is an area without strictly defined borders; these borders have indeed changed a number of times over the centuries. During the periods when the hinterland was controlled by powerful states (Croatia, Zeta, Bosnia, Hungary under the Angevins and the Ottoman Empire at its zenith), the territory of Dalmatia was limited to the Adriatic islands and to a few strongly fortified towns. In times of disintegration among the continental states, Dalmatia extended further into the interior of the Balkan Peninsula.

At the present day, the term broadly covers the central part of the Yugoslav Adriatic coast, that is, the coast-line from west of Velebit to the source of the river Zrmanja, and from there, in a south-easterly direction, to the frontier of Montenegro. The two other parts of the Yugoslav littoral are on one side *Severno Primorje* (the northern littoral): the peninsula of Istria, the gulf of Kvarner, as well as part of the coast in a south-easterly direction; and on the other side *Crnogorsko Primorje* (the Montenegrin littoral): the coast between Herceg Novi and the Albanian frontier.

Dalmatia comprises three geographical regions:

(a) the littoral, flat in places, steeply sloping in others, indented with deep gulfs and well sheltered anchorages;

(b) the interior of the country, with poorly defined limits; and

(c) the numerous islands which make up the Dalmatian archipelago.

The climate of Dalmatia is Mediterranean, although it is colder to the north of Split on account of the wind known as *bura* (called βορέας or βορράς by the Greeks, *aquilo* by the Romans).

In the past, the economy depended most of all on fishing, on the rearing of sheep, the growing of cereals, olives, vines and fruit-trees; today, additional sources of income are industry, shipbuilding and tourism. Ports worthy of mention include Split, Šibenik, Zadar, Ploče, Gruž (the port of Dubrovnik, formerly Ragusa) and with regard to the Montenegrin littoral, Bar (for the contemporary period), without forgetting the bay of Kotor, with Tivat, Kotor, Perast, Risan and Herceg Novi; whereas Rijeka (formerly Fiume), the principal port of Yugoslavia, situated at the end of the gulf of Kvarner, is not generally regarded as a city of Dalmatia (the territory of which, as stated above, is reckoned to lie further to the south) but as a city of “the Adriatic coast”.

## II. History

### A. The pre-Ottoman period.

Inhabited since Neolithic times, Dalmatia was populated in the Bronze Age by Illyrian tribes, one of which would seem to have born the name Delmates/Dalmates. (This was in any case the name given by the Romans, after the 1st century, to their province of Illyricum or Hilluricum.)

From the time of the 5th and 4th centuries B.C., the Greeks began establishing trading-posts (and later, colonies) on a number of islands (Vis, Hvar, Korčula, etc.) as well as in some of the coastal towns (Solin, Trogir, etc.). In the 3rd century B.C., there are records of raids by Celtic tribes.

The Illyrians of Dalmatia subsequently underwent conquest by the Romans, a conquest which was accomplished in stages, provoking wars of resistance and numerous revolts on the part of the indigenous population against the invader. Six centuries later, in 297 A.D., the enormous Roman province of Dalmatia (which stretched from Istria to Skadar, and from the Adriatic to Sava, Kolubara and Zaprada Morava) was divided by Diocletian into two regions: *Dalmatia* and *Prævalis* (*Provincia Prævalitana*), the latter approximately covering the territory of present-day Montenegro, with part of Albania, of Macedonia and of Serbia.

Under Byzantine rule from the 5th century onwards, Dalmatia also suffered invasion and temporary subjugation at the hands of various barbarian peoples, first the Ostrogoths, then the Avars; subsequently, it was swamped by the influx of Slavic tribes, who arrived in the Balkans in the 6th and 7th centuries.

During the following centuries, the various regions of Dalmatia passed successively (although belonging effectively, or nominally at least, to the Byzantine Empire) under the domination of the Franks, the different Croatian and Serbian states (Hrvatska, the Principality of Neretva, Zahumlje, Travunija, Duklja, etc.) and the Normans.

In the intervening period (in the 3rd/9th century), there are records of raids by the Arabs against the Dalmatian coast, in particular an unsuccessful siege of Ragusa (Dubrovnik), which seems to have lasted fifteen months, in 252/866-7 (cf. Theophanes Continuatus, *Historia de vita et rebus gestis Basilii* . . ., ed. I. Bekkeri, Bonnæ 1838, 289-90; G. Musca, *L'emirato di Bari* (847-871)<sup>2</sup>, Bari 1967; U. Rizzitano, art. *ITALIYA*, in *EL*<sup>2</sup>).

From the 11th century onwards, domination of the northern part of Dalmatia was contested by the Venetians, the Croats (*Regnum Croatiae et Dalmatiae*), and the Hungarians, and domination of the southern part by the various local Bosnian and Serbian principalities and kingdoms.

Between 1205 and 1358 a large portion of Dalmatian territory was held by Venice. During this period, there was a raid by the Mongols, who, while in hot pursuit of King Béla of Hungary, devastated the suburbs of Split and ransacked the town of Kotor in March 1242 (cf. R. Grousset, *L'Empire des steppes*, Paris 1948, 332-3).

Between 1358 and 1409 Dalmatia fell under the domination of Angevin Hungary (*regna Dalmatiae et Croatiae*), then under that of Venice (1409 and 1420-1797), although for a long time previously, many of the towns had often existed in a more or less (or totally) autonomous state, as was the case of Dubrovnik in particular (cf. M. Novak, *Autonomija dalmatinskih Komuna pod Venecijom*, Zadar 1965).

### B. The Ottoman period.

(For the Republic of Dubrovnik, see RAGUSA; for the history of the coastal region to the south of Dubrovnik, see KARA DAĞI, i.e. Montenegro (Crnogorsko Primorje).)

The conquest of the Balkan Peninsula by the Ottomans, and their break-through in the direction of Vienna, changed the map of Dalmatia yet again. In fact, throughout the period of the Ottoman Empire's greatest power, Venice controlled only the Adriatic islands, the cities of the coast and a narrow coastal strip stretching as far as Omiš, while the littoral between the rivers of Cetina and Neretva (Makarsko Primorje), and the entire hinterland, were in the hands of the Turks (*sandžak Lika*, *sandžak Klis*, and *sandžak Hercegovina*). It was only after the beginning of the decline of Ottoman power (end of the 17th century), that Venetian Dalmatia began once more to extend into the interior of the peninsula.

Venetian rule in Dalmatia in the 15th and 16th centuries operated on a feudal pattern. The land belonged to the nobility, the majority of whom were of foreign stock. In the towns the artisans and tradesmen were not permitted to take part in municipal councils. There are records of numerous popular rebellions against the feudal landlords. Maritime commerce was reduced to the advantage of that of Venice. Agriculture, on the other hand, became rather more prosperous (especially on the islands), mainly as a result of the influx of peoples fleeing from the Turks. In the course of the next two centuries, there is evidence of a major transformation of Dalmatian society, a transformation which coincided with the decline of Venice. Finally, we should take note of the emergence of a Dalmatian culture of a very high level.

#### (a) From the arrival of the Turks to 1570

The first Ottoman raids against northern Croatia began in 820/1417, those against Dalmatia a little later. In 1432 the Turks invaded the region of Zadar, and soon after 1463 that of Senj; subsequently, in September 1468, they mounted attacks against Zadar, Šibenik and Split, then they once more devastated the region of Zadar in 1470, those of Split and of Trogir in 1471, of Modruša (in the region of Lika not far from Senj) in 1486, etc. But it was the region of Makarska (at the foot of the mountain of Biokovo) which was most exposed to the Ottoman attacks. From the years 1465-70 onwards, the Turks were in control of the entire hinterland, with the towns of Ljubuški, Vrgorac and Imotski. A little further to the north, Omiš (which was to keep up a valiant resistance throughout the Ottoman period) repelled the first attack, that of 1498. (On the frontiers of Venice in Dalmatia in the 15th century, see M. Šunjić, *Pomjeranje mletačkih granica u Dalmaciji i odnosi sa susjedima tokom XV stoljeća*, in *Godišnjak Društva Istoričara B.i.H.*, xv [1964], 47-62.)

The pressure on Dalmatia became still more intense after the decisive defeat inflicted on the Croats by the Turks (*cladis croatica*) at Krbavsko Polje near Udina (1493), and especially during the Venetian-Turkish war of 1499-1503. Having once again devastated the territories of Split, Trogir, Šibenik, Zadar and Nin, the Ottomans took control of the whole of Makarsko Primorje (from Cetina to Neretva) (on the conquest of Makarska, see V. Trpković, *Vilajet Primorje*, in *Godišnjak Društva Istoričara B. i. H.*, xiv [1963], 229-37), as well as the salient of Bosiljina (Busoljina?) lying between Trogir and Šibenik (1501).

The peace treaty signed at the beginning of 1503

had little effect on the situation on the ground, with Turkish troops continuing to attack and devastate Dalmatian territories: an attack on Split in 1507, on Omiš in 1509, on Skradin in 1512; the capture of Čačvina (in Posušje) of Nutjak (on the river Cetina) and of Vir (near Imotski) in 1513; in 1514 attacks on Skradin and Knin, and the capture of Karin; in 1515 an attack on the fortress of Klis; in 1520 the plunder of the region of Split; in 1522 a fresh siege of Klis (by K̄hosrew Beg [q.v.], the illustrious *sandjakbeg* of Bosnia), the capture of Knin (cf. V. Klaić, *Knin za turskoga vladanja (1522-1688)* in *Serta Brunsmidiana*, 1928, 257-62) and of Skradin; in 1523 the capture of Ostrovica (an important strong-point, controlling secondary strategic areas to the south of Velebit), the destruction of Nadin and of Vrana; in 1524 the capture of Sinj (according to some authors the town of Sinj was taken in May-June 1513. cf. H. Šabanović, *Esljia Celebi, Putopis*, Sarajevo, Svjetlost 1967, 151 n. 14); in 1526 the capture of Gabela, etc.

Thus, after the year 1524, the Turks held all of the hinterland between the rivers Cetina and Zrmanja, with the exception of the fortresses of Klis (besieged again in 1531, finally taken in 1537) and of Obrovac (taken in its turn in 1527), while Venetian Dalmatia was limited to the islands, a narrow coastal strip to the south of Velebit, and the territory lying between Omiš and Novigrad (minus the salient of Bosiljina).

Also to be noted in this period are a number of popular revolts (revolts of the *pučani* against the feudal landlords), which we may add to the long list of similar revolts of the preceding centuries. Worth mentioning are the revolt at Šibenik of 1510, and most important of all the great rebellion of the island of Hvar (1510-14) which had repercussions not only in Split, Šibenik and Zadar, but also in many other regions of Dalmatia.

The Venetian-Turkish war of 1537-40, which followed the capture of the fortress of Klis (1537) and the siege of Omiš by the Turks, brought ruin once again to the regions of Split (which was henceforth to have the river Jadro as its frontier) Trogir, Šibenik and Zadar, and led to the destruction of Vrana (on the town of Vrana under the Ottoman domination, see S.M. Traljić, *Vrana pod turskom upravom*, in *Radovi JAZU*, ix [Zadar 1962], 337-58; idem, *Vrana injeni gospodari u doba turske vladavine*, in *Radovi...*, xviii [Zadar 1971], 343-77) and of Nadin (1537-8), while the Venetians briefly regained control of Skradin and ransacked the town. Shortly after, in 1540, the territory (*župa*) of Poljica passed into Ottoman hands, and was granted special status (cf. A. Sućeska, *O položaju Poljica u Osmanskoj državi*, in *Prilozi za orijentalnu filologiju*, xvi-xvii [Sarajevo 1966-7 (1970)], 77-91; idem, *O državno-pravnom položaju Poljica pod turskom vlašću*, in *Zbornik Pravnog fakulteta u Zagrebu*, xvii/3-4 [1967], 386-94; idem, *O položaju Poljica u osmanskoj državi*, in *Poljički Zbornik*, ii [Zagreb 1971], 61-72; idem, *O posjedovnim odnosima u Poljicama u svjetlu poljičkih turskih isprava*, in *Godišnjak Pravnog Fakulteta*, xxii [Sarajevo 1974], 411-22). It was probably in the same period, certainly during the first half of the 16th century, that the little town of Jablanac (to the south of Senj, opposite the island of Rab) was razed to the ground. It was not until the following century that the ruined town began to recover (on the general situation, see G. Stanojević, *Dalmacija i crnogorsko primorje u vrijeme mletačkoturškog rata 1537-39 godine*, in *Istorijski Glasnik*, Belgrade 1960/3-4, 87-112).

The peace, signed in October 1540 (after a suspension of hostilities for three months in 1539), had the effect of ceding to the Ottomans all the territories which they had previously occupied. In addition, the Turks were given war reparations.

The truce lasted for thirty years. During this period efforts were made to heal the ravages caused by a near-century of devastation and misery. Agriculture and stock-rearing, which had been very severely affected, improved, mainly as a result of the influx of people fleeing the occupied regions. Fishing also prospered, but commerce and craftsmanship were not so fortunate.

But it was a fragile truce, broken daily by the raids of the famous *Uskoci* on Ottoman territory. These were commando bands of guerrillas, based in Dalmatia (principally in Senj) and conducting military operations within the conquered territories; at sea they committed acts of piracy which did not only affect the Turks. In addition, they did not hesitate to engage in conflict with the Venetians, who hunted them most energetically, but would appeal to them for help when the occasion arose (cf. V. Vinaver, *Senjski Uskoci i Venecija do Kiparskog rata*, in *Istorijski Glasnik*, 1954/3-4, 43-66; G. Stanojević, *Prilozi za istoriju Senjskih Uskoka*, in *Ist. Gl.*, 1960/1-2, 111-141; idem, *Jedan dokument o senjskim Uskocima*, in *Vesnik Vojnog Muzeja JNA*, vi-vii [Belgrade 1962], 97-108; and naturally the same author's major work *Senjski Uskoci*, Belgrade 1973, as well as the two volumes of archive material published by B. Desnica, *Istorija Kotarskih Uskoka*, Belgrade, SANU, 1950-1; and S. Pavičić, *Raseljavanje staroga stanovništva Senja i okolice, nastajanje uskoka i njihovo djelovanje*, in *Senjski Zbornik*, iii [Senj 1967-8], 324-70).

In the towns there was a remarkable florescence of Dalmatian culture, of literature especially, written either in Latin or in the language of the country, the most significant writers being Marko Marulić (1450-1524), Hanibal Lucić (1485-1553), Petar Hektorović (1487-1572) and others. Three other authors, equally celebrated, deserve greater attention, because they devoted many of their works to study of the Turks, and may therefore be regarded as the ancestors of "Yugoslav orientalism". They are: Feliks Petančić (Felix Brutus Petancius, de Petancius, Petancius, Ragusinus Dalmata) (ca. 1455-ca. 1517) of Ragusa; Ludovik Crijević Tuberon (Ludovicus, Aloysius de Cerva, de Crieva, Cervarius, Tubero) (1459-1527) also of Ragusa; and Antun Vrančić (Verantius, Vrantius, Wrantius, Vrancich) (1504-73) of Šibenik.

The writings of the first of these include a *Historia imperatorum regni Turcici* (or *Historia Turcica*) the manuscript of which is in Nuremberg; *De itineribus in Turciam...* (or *... Quibus itineribus Turci sint aggredienti...*), ed. Vienna 1522; *Genealogia turcorum imperatorum...* (or *Descriptio Turcicae*) the manuscript of which is in Budapest (see D. Kniewald, *Feliks Petančić i njegova djela*, Belgrade, SANU, 1961; M. Kurelac, *Enciklopedija Jugoslavije*, vi, 474).

The writings of the second include: *De Turcarum origine, moribus et rebus gestis commentarius*, ed. Florence 1590; *Commentariorum de rebus, quae temporibus eius in illa Europae parte, quam Pannonii et Turcae eorumque finitimi incolunt, gestae sunt, libri xi*, 1st ed. Frankfurt 1603, 2nd ed. (under the title *Syndromus rerum Turcico-Pannonicarum*) Frankfurt 1627, 3rd ed. in J.G. Schwandtner, *Scriptores rerum Hungaricum*, ii, 107-381, 4th ed. Dubrovnik 1784 (see K. Krstić, in *Enc. Jug.*, ii, 390-1).

The third (who personally visited Turkey on a number of occasions and lived there for four years) wrote: *Iter Buda Hadrianopolim anno MDLIII* . . . ed. Venice 1774; *Diarium legationis nomine Maximiliani II* . . . *ad portam ottomanicam suscepta a.C. 1567*, ed. in M.G. Kovacich, *Scriptores rerum Hungaricarum*, Budae 1798; *Ratio itineris in Turciam facti per Danubiam*, ed. in *ibid.*; *Expeditionis Solymani in Moldaviam et Transylvaniam* . . . ed. Budapest 1934 (see M. Kurelac, in *Enc. Jug.*, viii, 534-5).

(b) *From the Cyprus War (1570-3) to the Cretan War (1645-69)*

Having refused to cede the island of Cyprus to the Ottoman Empire in 1569, Venice found itself engaged in another war against the Turks, which lasted from 1570 to 1573. The effects of this war were to the detriment of Dalmatia, in spite of the crushing defeat inflicted on the Ottoman fleet at the battle of Lepanto (October 1571), a battle in which a number of Dalmatian ships, with local crews, also took part (see *Lepantska bitka. Udio hrvatskih pomoraca u Lepantskoj bitki 1571 godine*, Zadar JAZU, 1974). In fact, Venetian successes in Dalmatia were ineffectual; Klis was besieged in 1571 and occupied briefly in 1572, as was Skradin, which the Venetians evacuated after demolishing part of its fortifications. Makarska was also besieged, but without success.

The Ottomans, on the other hand, ransacked the island of Mljet (1572), attacked the island of Korčula (cf. V. Foretić, *Turska opsada Korčule godine 1571*, in *Vesnik Vojnog Muzeja*, v/2 [Belgrade 1958], 61-91), burned the island of Hvar (1571) devastated the region of Split on a number of occasions (taking Solin and Kamen (according to H. Šabanović, *op. cit.*, 155, n. 37, the city of Kamen was taken as early as 1537), also the regions of Trogir, of Šibenik and of Zadar where they took Zemunik (which according to other sources had been captured in 1539, cf. H. Šabanović, *op. cit.*, 162, n. 92), besieged Novigrad, and occupied Nin for some time (for the town of Nin, see S.M. Traljić, *Nin pod udarom tursko-mlatičkih ratova*, in *Radovi* . . . , Zadar 1969, 529-48). The peace treaty of March 1573 restored the situation that had existed before the hostilities, but the Turks retained Zemunik and strategic positions around Solin. Mention should also be made of the unexpected capture of the fortress of Klis by a combined group of *Uskoks* and people of Split (7 April-31 May 1596), an exploit which had significant repercussions throughout Dalmatia.

After these distressing events, and in spite of continual border skirmishes, relations between the two Dalmatian territories (Turkish territory and Venetian territory), became gradually more correct and increasingly normalised. Trade with the Turkish-occupied hinterland developed, as did an important trans-Balkan commerce, in which, especially after 1592, the port of Split played a dominant role (see V. Morpurgo, *Daniel Rodriguez i osnivanje splitske škole u XVI stoljeću*, in *Starine JAZU*, liii [1966] 364-415).

But there were other towns, Trogir and Zadar for example, which established close commercial relations with the Ottomans, for the most part selling salt, and buying wheat, meat, cheese and wool (see S. Traljić, *Trgovina Bosne i Hercegovine s lukama Dalmacije i Dubrovnika u XVII i XVIII stoljeću*, in *Pomorski Zbornik*, i [Zadar 1962], 341-71). This normalisation of relations lasted more than seventy years, from 1573 to 1645, in other words, until the war of Crete.

(c) *From the War of Crete (1645-69) to 1683*

This long period of peace was broken in the spring

of 1645 by a new Venetian-Turkish war which lasted a quarter of a century. Many things had changed in the meantime, both within the Ottoman Empire (the heyday of which was now long past), and in Europe. But the outcome of the war was once again favourable to the Ottomans, except however in Dalmatia.

On Dalmatian soil, the most significant military actions took place between 1646 and 1649. In 1646 the Ottomans mounted a lightning raid into northern Dalmatia, in the regions of Šibenik and Zadar. The town of Novigrad was taken (3 July 1646) as were Biograd and Nin, but an attack on Šibenik was repelled (October 1646). In the course of their counter-attack, the Venetians and Dalmatians laid siege to Skradin, and recaptured it briefly in 1647. In 1646 the region of Poljica, and, in February 1647, that of Makarsko Primorje (the littoral between the rivers Cetina and Neretva), severed their ties with the Ottoman Empire and allied themselves to Venice (Poljica nevertheless was compelled for some time to pay a *kharāǰī* to the Ottomans). (On the position of Poljica in the 17th century, see V. Mošin, *Poljičke konstitucije iz 1620 i 1688*, in *Radovi Staroslovenskog Instituta JAZU*, i [Zagreb 1952], 175-206.)

In 1647 the Venetians (the bulk of whose army was made up of Dalmatians and of Slavs who had fled from the regions under Ottoman rule) recaptured the towns of Zemunik, of Novigrad, of Vrana and of Nadin, before inflicting a further defeat on the Turks outside Šibenik (August 1647). Recovering Ostrovica, Obrovac, and for a brief period Drniš (where all the Turkish fortifications and monuments were demolished), the Venetians attacked Knin and Vrlika, and regained definitive control of Biograd (1648), and, most significant of all, of the famous stronghold of Klis (30 March 1648). The Ottoman reaction was not slow in coming; shortly afterwards, Turkish troops devastated the region of Poljica and that of Ravni Kotari in the vicinity of Biograd.

Finally, in 1649, major military operations came to an end, when there was an outbreak of plague in Dalmatia, especially in Šibenik and in Zadar, followed by a period of widespread famine (see G. Stanojević, *Dalmacija u doba Kandijškog rata 1645-1669*, in *Vesnik Vojnog Muzeja JNA*, v [Belgrade 1958], 93-182; idem, *Trgovina robljem u doba Kandijškog rata, 1645-1669*, in *Istorijski Glasnik*, 1958/3-4, 105-112; D. Kečkemet, *Dva odlomka iz "Povijesti Kandijškog rata u Dalmaciji" Šibenicanina Franje Dvornića (Diftnika) in Mogućnosti*, xx [Split 1973], 876-88; S.M. Traljić, *Turskomletačke granice u Dalmaciji u XVI i XVII stoljeću*, in *Radovi Inst. JAZU*, xx [Zadar 1973], 447-58).

For some time previous to this, there are records of a large-scale migration of Slavic peoples known as *Vlasi* (sing. *Vlah*) or *Morlaci* (sing. *Morlak*)—these are clearly to be understood as being armed men—towards Dalmatian territory, daily swelling the ranks of the guerrilla commando bands (*hajduci*, sing. *hajduk*, and *uskoci*, sing. *uskok*). The latter made constant invasions of Ottoman territory (Lika, Bosnia, Herzegovina), mounting attacks and ambushes far into the interior, pillaging, killing, burning and kidnapping on their way. At the same time, *Hajduci* and *Uskoci* conducted a policy sometimes favouring Venice, sometimes Austria, but more often the latter. A state of permanent minor war was thus perpetuated on both sides of the frontier, a situation well described in Yugoslav popular epic poetry (from both the Christian and the Muslim side), with a full gallery of heroes, all of whom are well-known historical figures. (There are a great

many publications dealing with the *hajduks*. Particularly worth mentioning are the works of D. Popović, *O hajducima*, Belgrade 1930-1, 2 vols., and R. Samardžić, *Hajdučke borbe protiv Turaka u XVI i XVII veku*, Belgrade 1952.)

In the context of larger-scale battles, mention could be made of the defeat of a Venetian-Dalmatian force outside Knin (1654), and the ravages perpetrated by Ottoman troops in 1657-8 in the regions of Split, Šibenik and Zadar, with a raid on the island of Brač, following an attack on Split (1657).

The peace treaty was signed in 1671. In Dalmatia, the position of the Venetians was then more favourable, since they retained Klis and its surrounding area, the region of Poljica, and the littoral to the south of Omiš (Makarsko Primorje) (it may be noted that *de jure*, this last territory should have remained under Ottoman control, but it belonged *de facto* to Venice). The whole of Dalmatian territory under Venetian rule was henceforward known as *acquisto vecchio*, and the frontier with Turkey became a fortified line called *linea Nani* (1671) (see I. Grčić, *Jedna mletačka agrarna operacija u Dalmaciji*, in *Žadarska Revija*, ii [Zadar 1953], 65-76; V. Omašić, *Mletačko-tursko razgraničenje na trogorskom području nakon Ciparskog i Kandijskog rata i njegove posledice*, Trogir 1971).

The brief period of peace which followed lasted some fifteen years. It was not long enough to allow Dalmatia to recover from the ruin caused by long years of war, nor to revive its shattered agriculture and commerce, not to mention the epidemics and famines which had weakened the country to a considerable extent. Split quickly regained its status as the leading port for commerce between Italy and the Balkans. The port of Zadar was then of secondary importance.

The Ottoman military operations and the situation in Dalmatia in this period are documented in a sometimes whimsical but entirely first-hand account written by the famous Turkish traveller Ewliya Čelebi, who visited these areas in about 1660; the *Seyāhat-nāme*, v, 458-72, 476-78, 480-91, 494-500 (see the excellent annotated translation by H. Šabanović, *E.Č., Putopis*, Sarajevo, Svjetlost 1967, 149-67, 175-91, 195-204).

(d) *From 1683 to the Treaty of Sremski Karlovci (26 January 1699)*

The decisive defeat of the Ottomans beneath the walls of Vienna (September 1683) signalled the end of their presence in Dalmatia, where a large-scale popular insurrection broke out. The Muslims of the area panicked and fled towards the interior of the empire. Within a short time the whole of northern Dalmatia had been liberated; even before the end of the year 1683, Skradin, Karin, Vrana, Benkovac, Obrovac and Drnič were in the hands of the rebels, the Turks retaining only the cities of Knin and Sinj.

Venice entered the war in the spring of the following year (1684), and Dalmatia was the scene of a large number of military operations; Sinj was recaptured from the Ottomans in September 1686, Knin, Vrljka and Zvonigrad in 1688, Vrgorac between 1690 and 1694, Gabela in 1693, while the territories of Trogir, Šibenik and Zadar were finally liberated.

The peace treaty was signed at Sremski Karlovci in January 1699. Venice retained the areas she had conquered, and her territory in Dalmatia (which bore the name *acquisto nuovo*) extended as far as the new fortified frontier (*linea Grimani*), in other words, Knin-Vrljka-Sinj-Zadvarje-Vrgorac-Gabela. In addition, each of these strategic points was surrounded by

a neutral zone covering the range of a day's march. In return, Venice ceded to the Ottomans the territories conquered in Herzegovina. In turn, the Republic of Dubrovnik was enabled, with Austrian support, to free itself from Venetian influence; Turkey thus had access to the Adriatic Sea in the form of two narrow corridors, that of Sutorina (near Herceg Novi) in the south, and that of Neum-Klek in the north. The latter, nine kilometres long, is nothing more than a tiny gulf, situated to the south of the mouth of the river Neretva (on this period in general, see G. Stanojević, *Dalmacija u doba Morejskog rata 1684-1699*, Belgrade, Vojno Delo, 1962; on the new frontier between Dalmatia and the *pašaluk* of Bosnia, see E. Kovačević, *Granice bosanskog pašaluka prema Austriji i Mletačkoj republici prema odredbama Karlovačkog mira*, Sarajevo 1973.)

(e) *From 1699 to the Peace of Požarevac (21 July 1718)*

At the end of the 17th century and the beginning of the 18th one, Venetian Dalmatia witnessed a spate of popular uprisings (such as, for example, that of the region of Vrana in 1692, and that of Bukovica and Ravni Kotari in 1704), caused in part by the penurious economic state of the peasantry, in part by the aggressive policy of the Roman Catholic church towards the Orthodox one.

On the military level, a new war against the Turks broke out in December 1714. Thanks largely to indirect aid from Austria, Venice scored a number of successes in Dalmatia; in 1715 Sinj repulsed the final siege by the Ottomans, and in 1717 Venetian-Dalmatian troops definitively recaptured the town of Imotski. These victories were augmented by successes achieved in Herzegovina, where the Venetians took the town of Mostar in 1717 (cf. G. Stanojević, *Dalmacija za vreme mletačko-turskog rata 1714-1718*, in *Istorijski Glasnik*, 1962/1-4, 11-49; S.M. Traljić, *Tursko-mletačko susjedstvo na Žadarskoj Krajini XVIII stoljeća*, in *Radovi JAŽU*, iv-v [Zadar 1959], 409-24; M. Perojević—T. Macan, *Odjek Bečkog rata na Makarskom Primorju i u Hercegovini 1683-1723*, in *Historijski Zbornik*, xxiii-xxiv [Zagreb 1970-1], 179-214).

The peace treaty of Požarevac (July 1718) obliged Venice to give up all her conquests in Herzegovina, including the town of Gabela. In Dalmatia, however, her territory was enlarged through the addition of the region of Imotski, which led to some minor adjustments to the frontier of 1699. Thus the whole of Dalmatia was liberated from the Ottomans and came under Venetian control, with the exception of the two corridors of Neum-Klek and Sutorina (see the monograph by G. Škrivanić, *Dnevnik Dubrovčanina Mihajla Pešića o Požarevačkom mirovnom kongresu 1718 godine*, Belgrade 1952; L. Katić, *Prilike u splitskoj okolici poslije odlaska Turaka*, in *Starine JAŽU*, xlvii [1957], 237-77).

The new frontier, *linea Mocenigo* (1721-3), passed to the east of the cities of Metković, Imotski, Sinj, Vrljka and Knin and extended as far as Klek and Žabska Gora, and all Dalmatian territory belonging to Venice was henceforward known as *acquisto nuovissimo*.

The Muslim inhabitants who had not succeeded in leaving Dalmatian territory in time were very soon forcibly converted, mostly by the Franciscans (cf. J. Cvijić, *Balkansko Poluostrvo*, Belgrade 1966, 337 which gives details borrowed from S. Zlatović, *Franovci države presvetog otkupitelja i Hrvatski puk u Dalmaciji*, Zagreb 1888, 233-4, 236-7, and from M.V. Batinić, *Djelovanje franjevaca u Bosni i Hercegovini za prvih šest vijekova njihova boravka*, Zagreb 1881-7,

ii, 147). On the Muslim inhabitants of Dalmatia who emigrated to Bosnia-Herzegovina, see M. Petrić, *O migracijama stanovništva u Bosni i Hercegovini Doseljavanja i unutrašnja kretanja*, in *Glasnik Zemaljskog Muzeja*, xviii (Etnog.) [Sarajevo 1963], 10-11.

### C. After the Ottomans

Dalmatia remained under Venetian rule until the dissolution of the Republic in 1797. It was subsequently part of the Austrian Empire (1797-1805), the French Empire (1805-9), then one of the Illyrian Provinces (1809-13), before returning to the Austrian Empire (1815-1918).

After 1878 a number of Muslims from Herzegovina (which in that year became part of the Austro-Hungarian Empire) came and settled in Dalmatia. After a certain period of time they had grown considerably in number, and as a result the Muslim religious community (Hanafi rite) of Dalmatia was officially recognised by the Austro-Hungarian government, on 15 July 1912 (see *Reichsgesetzblatt für Oesterreich 1912*, 875, paras. 1-7; M. Begović, *Organizacija Islamske verske zajednice u Kraljevini Jugoslaviji*, in *Arhiv za pravne i društvene nauke*, god. xxiii, drugo kolo, knjiga xxvii (xliv) br. 5, 25 November 1933, p. 379; the same, *Islamska verska zajednica*, in *Enciklopedija Jugoslavije*, iv, 372).

From 1920 to 1941 Dalmatia was part of the Kingdom of Yugoslavia, then from 1941 to 1945 it was divided between fascist Italy and the Ustachi Croatian State (*Nezavisna Država Hrvatska*), finally, since 1945, it has belonged to the People's Federal Republic of Yugoslavia (as part of the People's Republic of Croatia).

In 1971, there were roughly 4,000 Muslims in Dalmatia (the total number of Yugoslav Muslims at the time was a little over three million, of whom 18,457 lived in Croatia; see K. Hadžić, *Brojnost i rasprostranjenost muslimana u Jugoslaviji*, in *Takvim* [Sarajevo 1975], 119-34).

*Bibliography:* There has as yet been no study of Dalmatia in the Ottoman period (15th to 18th century) which takes into account simultaneously local, Turkish and Venetian sources. It is true that the existing documentation is indeed enormous, and that a large portion of this (archive documents in particular) is accessible only to a very small number of specialised researchers. Naturally, emphasis should be laid on the writings of Yugoslav historians and Turcologists who have in the past produced an impressive number of studies, monographs and articles on this subject. It should be noted however that the bulk of these publications have been primarily concerned with the Republic of Dubrovnik, and that consequently it is most difficult to present a bibliography concentrating exclusively on the history of the territory of Dalmatia as strictly defined.

An excellent general survey by J. Tadić is to be found in *Istorija naroda Jugoslavije*, ii, Belgrade 1960, 247-74, 519-30, 595-601, 1145-60. This work also contains a wise and intelligent analysis of the sources (the Ottoman sources are simply mentioned) and the entire bibliography available at that date (cf. 266 ff., 528 ff., 1159 ff.).

For a convenient list of Yugoslav publications on Dalmatia since 1945, see J. Tadić (ed.), *Dix années d'historiographie yougoslave 1945-1955*, Belgrade 1955 (see especially 217-55, 268-71, 374-84, 410-15, 540-54, 566); J. Tadić (ed.), *Historiographie yougoslave 1955-1965*, Belgrade 1965 (especially 113-42, 201-20 and *passim*); D. Janković

(ed.), *The historiography of Yugoslavia 1965-1975*, Belgrade 1975, (esp. 136-59, 185-96 and *passim*).

In addition to the Ottoman historians (Nā'imā, Reshid, Pečewī, etc.) and the major histories of the Ottoman Empire (those of von Hammer, Zinkeisen, Iorga, etc.), special attention should be drawn to the following works: G. Cattalinich, *Storia della Dalmazia*, 3 vols., Zadar 1834-5; Š. Ljubić, *Pregled hrvatske povijesti*, Rijeka 1864; V. Lago, *Memorie sulla Dalmazia*, Venice 1869; V. Lamansky, *Secrets d'État de Venise*, St. Petersburg 1884; J.N. Tomić, *Grad Klis u 1596 godini*, Belgrade 1908; J. Tadić, *Španija i Dubrovnik u XVI veku*, Belgrade 1932; L. Voinovitch, *Histoire de Dalmatie*, 2 vols., Paris 1934; J. Ravlić, *Makarska i njeno Primorje*, Split 1934; B. Poparić, *Povijest senjskih uskoka*, Zagreb 1936; G. Novak, *Prošlost Dalmacije*, 2 vols., Zagreb 1944; A. de Benvenuti, *Storia di Zara*, 2 vols., Milan 1944-53; J. Radonić, *Rimska Kurija i južnoslovenske zemlje od XVI do XIX veka*, Belgrade 1950; I. Božić, *Dubrovnik i Turska u XIV i XV veku*, Belgrade 1952; A. Ujević, *Imotska Krajina*, Split 1953; G. Praga, *Storia di Dalmazia*, Padua 1954; L. Katić, *Solin od VII do XX stoljeća*, Split 1956; G. Novak, *Povijest Splita*, 2 vols., Split 1957-61; V. Vinaver, *Dubrovnik i Turska u XVIII veku*, Belgrade 1960; R. Samardžić, *Veliki vek Dubrovnika*, Belgrade 1962; B. Djurdjević and M. Vasić, *Jugoslovenske zemlje pod turskom vlašću do kraja XVIII stoljeća*, Zagreb 1962; G. Novak, *Jadransko more u sukobima i borbama kroz stoljeća*, Belgrade 1962; E. Albrecht, *Das Türkenbild in der ragusanisch-dalmatinischen Literatur des XVI. Jahrhunderts*, Munich 1965; *Grad Zadar, presjek kroz povijest*, Zadar 1966; M. Šunjić, *Dalmacija u XV stoljeću*, Sarajevo 1967; G. Stanojević, *Jugoslovenske zemlje u mletačko-turskim ratovima XVI-XVIII veka*, Belgrade 1970; T. Popović, *Turska i Dubrovnik u XVI veku*, Belgrade 1973.

Finally, one should add those articles already cited in the present article: A. Strgačić, *Upadi osmanskih gusara u predjele Zadarskih otoka*, in *Zadarska Revija*, ii/4 (1953), 195-204, iii/1 (1954), 44-53; S.M. Traljić, *Zadar i turska pozadina od XV do potkraj XIX stoljeća*, in *Grad Zadar* (Zadar 1966), 206-28; A.J. Soldo, *Prilozi proučavanju agrarno-društvenih odnosa u Gornjem primorju od XVI do polovine XIX stoljeća*, in *Makarski Zbornik* (1970), 337-80; A. Rube-Filipi, *Biogradsko-vransko primorje u doba mletačko-turskih ratova s osrtnom na povijest naseljenja*, in *Radovi Inst. JAZU* xix (Zadar 1972), 405-98.

(A. POPOVIĆ)

**DAM** (A.), pl. *dimā'* "blood", also "blood-guilt" [see *DIYA*, *KAṬL*]. In the present article it will be appropriate to mention the numerous blood sacrifices offered by the Muslims, but we will not concern ourselves with the theory, nor is it our intention to list them [see *DHABIHA*, *HADJDI*, 'ID AL-ADHĀ]. We will confine ourselves to a brief survey of the beliefs relative to blood and the uses to which it is put or to which it may be put by Muslims in the various circumstances where the sacrifice of an animal is required, and the role attributed to it in magic and therapy.

Arabic texts of the Middle Ages speak of four cardinal humours: black bile (*sawdā'*), phlegm (*balgham*), yellow bile (*safrā'*) and blood, associating this last with joy and with the second string (*mathnā'*) of the lute (see al-Djāhiz, *Tarīḥ*, § 152), and asserting that it is dominant in March, April and May (al-Mas'ūdī, *Murūj*, iii, 425 = § 1313). But these ideas

are late and unknown to the Qurʾān, which, setting aside the story of the creation of man represented by a clot of blood (*alaka*, XXII, 5, XXIII, 14, XL, 69/67, LXXV, 38) and the dietary prohibition (see below), makes only one brief reference (VII, 130/133) to the miracle of the river turned into blood (Exodus, vii, 17-21) and does not even mention the bleeding of the nose (*ruʾāf*) among the sufferings inflicted by God upon the ancient peoples of Arabia as punishment for their impiety (see al-Djāhīz, *Tarbīʿ*, § 47 and index). The Qurʾān gives no information as to the place occupied by blood during the Djāhiliyya where, however, gory sacrifices were not lacking (see J. Chelhod, *Sacrifice, passim*), nor as to the conception that the Arabs had of it. However, for them, as for the Hebrews (Genesis, ix, 4; Leviticus, xvii, 11, 14), the soul of all flesh was in the blood, and oaths were sworn on the *dam* or the *dimāʿ*, as well as on the pagan deities (see LA, s.v. *d. m. y.*). A distinction was drawn between *rūh*, air circulating within the body, and *nafs*, the soul for which blood, itself sometimes designated by the same word (cf. al-Masʿūdī, *Murūdj*, iii, 309-10 = §§ 1190-1; LA, s.v. *n. f. s.*), is the vehicle: only animals possessing a *nafs saʿīla*, that is to say blood, render impure the water in which they die. The soul of a murdered man, leaving the body with the spilt blood (see Chelhod, *op. laud.*, 102-3), then took the form of a bird (*hāma*, *sādā*) which did not cease to haunt the tomb of the victim and could not be set at rest until the blood of an enemy had been shed there; thus J. Chelhod also sees in blood-vengeance a human sacrifice owed to the spirit of the deceased. An analogous belief per-persists in various parts of the Mediterranean area: throwing stones upon the scene of the crime has the effect of covering the voice of the blood appealing for vengeance and contributes to the immobilising of the soul of the deceased (cf. Westermarck, *Ritual*, i, 549; Jaussen, *Moab*, 335-6; Servier, *Portes de l'année*, 33-4 [see also KARKŪR, RADJIM]). If blood that has been spilt thus appeals for vengeance, it is because the earth has no longer absorbed it since the murder of Abel (Qurʾān, V, 30-5/27-32) and the ten punishments that it incurred for hiding him from view (cf. al-Djāhīz, *Hayawān*, iv, 201); the earth therefore feels the utmost aversion for blood, except perhaps for that of the camel, (*ibid.* iii, 136, iv, 201), but this last idea is borrowed from Aristotle. And if, after some sacrifices, the blood that has been shed disappears the next day, it is because it has been drunk by errant souls (Servier, *op. laud.*, 325). Even in the view of Muslims who do not believe in the *hāma*, the blood of the victims of an unjustified murder does not cease to stop seething until proper vengeance has been taken; that of John the Baptist has become proverbial in this respect (al-Djāhīz, *Nābita*, in *AIEO* Alger, x (1952), 312; Balʿamī-Zotenberg, i, 569).

Since the blood is the vehicle for the soul, it is understandable that among the Hebrews, its consumption was forbidden (Genesis, ix, 4; Leviticus, iii, 17, vii, 26, xvii, 10, 12, xix, 26; Deuteronomy, xii, 16, xv, 23; I Samuel, xvi, 33), and it is probable that even before the prohibition enunciated by the Qurʾān (II, 168/173, V, 4/3, VI, 146/145, XVI, 116/115), the pagan Arabs—but not the Christians—generally abstained from it. Nevertheless, if we believe the commentators, they used to eat a sort of black pudding made from camels' blood (al-Bayḍawī, on Qurʾān, II, 173; Chelhod, *op. laud.*, 175) and, according to al-Djāhīz (*Hayawān*, iv, 96), they used to drink as a tonic the blood extracted by the

phlebotomist, the free-thinkers asserting that meat is only blood transformed. In this regard, it will be recalled that one of the reasons invoked as a justification for the refusal to pay a salary to the blood-letter is that before Islam he used to sell the blood to third parties and that this type of sale was forbidden by a *hadīth* (cf. R. Brunschvig, *Métiers vils en Islam*, in *St. Isl.*, xvi (1962), 47). In another connection, a group of Quraysh was given the name *Laʾakat al-dam* [q.v.] "lickers of blood" because of their practice of licking their fingers after dipping their hands into a receptacle containing the blood of a camel, as a means of sealing an alliance. There are scarcely any attestations of the practice consisting, in cases of the adoption by the tribe of a foreign element, of mixing the blood of the adopted man with that of a representative of the group, but in southern Turkey there still exists the "fraternity of blood", effected by the making on the wrist a gash which is sucked by the contractants (J.-P. Roux, *Traditions*, 324).

The ancient Arabs considered the blood of kings to be a specific remedy for rabies (*kalab*) and possession (*khābal*), and it may have happened that it was preserved for this purpose (cf. al-Djāhīz, *Hayawān*, i, 5, 310; *idem*, *Tarbīʿ*, § 69; al-Masʿūdī, *Murūdj*, iii, 192-3 = § 1049; see also the legend of *Djadhīma* [q.v.] in which blood plays a certain role; this belief is still alive (cf. Wellhausen, *Reste*<sup>2</sup>, 139-40; Doutté, *Magie et religion* 85).

Al-Djāhīz mentions (*Bukhālāʿ*, ed. Hādjjirī, 198, 200), somewhat as an exception, the practice of Bedouins who, dying of thirst in the desert, were constrained, after exhausting the contents of the first stomach of a camel, whose purpose was ultimately to provide them with water, to slaughter another; they collected its blood, which they beat carefully so as to separate the sediment (*thuyf*) from the serum (called *māʿ* = water); this alone they drank; this drink was called *maddūh* (cf. LA, s.v. *dj. d. h.*; Chelhod, *Sacrifice*, 175).

Drinking the blood of an enemy does not seem to have been a current practice, in spite of the hatred which tribes sometimes held for one another; there is indeed a recent attestation of it (Jaussen, *Moab*, 177, n. 1), but it is exceptional. On the other hand, an arrow stained with the blood of an enemy (*sahm mudanm<sup>m</sup>*) and returned to the archer who had dispatched it was retained as a lucky talisman (*tabarruk<sup>m</sup>*) by the latter (LA, s.v. *d. m. y.*).

Without being obsessed by blood, the ancient Arabs were especially superstitious about menstruation [see *HAYD*] and considered the woman thus indisposed (*hāʾid*) as impure and disqualified from performing certain acts. After Islam, the notion of impurity remained, but the Qurʾān (II, 222) confined to sexual relations the prohibition affecting women during the period of menstruation: and it is said that if this prohibition is infringed, Satan interposes between the partners. From another point of view, it is not impossible that the prohibition regarding the consumption of the hare and the rabbit, differently justified by Deuteronomy, xiv, 7, derives, in certain sects [see ARNAB in Suppl.] in part at least from the fact that the doe, which is believed to menstruate, naturally does not purify itself; the hyena is a similar case, and as a result these two animals cannot serve as mounts for the djinn (al-Djāhīz, *Hayawān*, iii, 529, vi, 46).

Once it has left the veins of a living being, blood is at the same time impure and taboo, for it is through blood that a link is established between

man and God, where it is a case of canonical sacrifices, between men and the invisible powers in the case of immolations which, although permitted, have retained a pagan character. Once it begins to flow, it is the blood which "gives to the ceremony its true sense of expiation, of purification and of protection" (Servier, *op. laud.*, 83).

Although the *Kur'ān* (XXII, 38/7) states with regard to sacrifices, "neither their flesh nor their blood shall reach Allāh, but only the piety coming from you shall reach Him" (cf. Amos, v, 21-2), a *ḥadīth*, retained only by al-Tirmidhī and Ibn Mādja (no. 3126) but often quoted, proclaims: "the blood [of the victim sacrificed for the Great Feast] finds its place in the presence of Allāh even before it has touched the ground" (al-Ghazālī, *Iḥyā'*, ed. 1278, i, 252; Westermarck, *Survivances*, 199; Chelhod, *Sacrifice*, 59), and such is doubtless the belief of the Muslims. The more abundant it is, the greater its power, and it is essential that the victim has been completely emptied of blood before dying (besides, it is this total effusion which renders legitimate the consumption of the butcher's animals, and the list of dietary prohibitions which figures in the *Kur'ān* (II, 168/173 and especially V, 4/3) is instructive in this regard, since it declares illicit all animals killed accidentally and not ritually bled to death, except in cases of necessity).

Independently of the role played by the blood of the sacrifice of the Great Feast in actually conveying the sacred offering from the Believer to God, it possesses protective and curative properties sometimes put to profitable use. It is thus that in Iran a piece of cotton is dipped in the blood of a sheep that has been immolated and allowed to dry; if a child has pains in the throat, a morsel of this cotton is put into water which he is made to drink (H. Massé, *Croyances*, 142). In Kabylia, blood is mixed with cattle dung which is smeared on a sheltered wall and administered in fumigations (*Fichier de Documentation berbère*, 1964/4, 12); in the same region a woman takes a little blood to mark the forehead of a child less than one year old (*ibid.*). In certain tribes, the mistress of the house still smears the posts and the lintel of the door with it to protect her home (Servier, *op. laud.*, 346); it is also poured over a ploughshare to consecrate it (*ibid.*, III-2; among the Zaghāwa (M.-J. Tubiana, 149) it is the hoes that are sprinkled with the blood of a he-goat, but in different circumstances). On the occasion of the feast of 'Ashūrā' [*q.v.*] it is the practice to dip in the blood of a sacrificed animal branches of rose-laurel which are hung between the stable and the living-quarters (Servier 370); elsewhere blood is sprinkled on the threshing floor (Koller, 325).

In the few examples mentioned above, magical practices have come to be grafted on to rites considered orthodox; more numerous and more obvious are the vestiges of paganism which appear in the multifarious sacrifices offered to the djinn [see *ḌINN*], those invisible powers whose existence orthodoxy was obliged to admit. Just as during the *Ḍjāhiliyya* one became united with the divinity by pouring blood over the rocks which were their home (cf. T. Fahd, *Le Panthéon de l'Arabie centrale*, Paris 1968, 103, on Isāf and Na'ila [*q.v.*]), similarly, one enters into communication with the protective genies or wards off the maleficent spirits by means of blood poured on the altar of the home or on high places especially frequented by spirits. Although it is difficult to arm oneself against the hostile attentions of the djinn which haunt the places, very dangerous

for men, where blood flows abundantly, especially abattoirs (see Doutté, *op. laud.*, 86; Westermarck, *Survivances*, 14, 165; Servier *op. laud.*, 60-1), it is very easy to protect oneself against invisible spirits by means of the blood of sacrifices which, while attracting them, also annuls their maleficent power. This is why the life of superficially Islamised populations is marked by immolations, often modest in scale, which are followed by anointings and sprinklings with the purpose of gaining protection from enemy spirits of the nether world, and of obtaining in some measure the goodwill of the protective genies of the house or of the tent or of those who can assure the prosperity of fields and herds.

The threshold or the door (cf. Jaussen, *Moab*, 343), the central pole of a tent, the mill or the hearth (cf. J.-P. Roux, *Traditions*, 255) are the true domestic altars; but every new object is likewise consecrated by offering the blood of an animal to the protective genies of the home. When a tent is constructed, or an old one enlarged or a part of it replaced, the central pole is smeared with blood (Jaussen, 399). In Morocco, a woman smears a pole of the tent with the blood of an animal when her first child is born (E. Laoust, *Transhumants*, 58) to assure herself of numerous progeny. In the land of Moab, marriages are the occasion for a number of successive immolations, and in the course of the last at any rate, the bride is sprinkled with the blood of the victim. In the present day, in Iran [see *KHAYR*], masons still sacrifice an animal before starting to build, so that its blood may protect them against any accident which might cause their own to be shed. There seems little purpose in recording further examples of this type which the ethnologists have noted in the course of their inquiries.

A problem of a different order is posed by the blood sacrifices which, in agricultural areas, accompany all work in the fields: ploughing, harvesting, threshing, etc. It seems that blood is not encountered in rites designed to bring rain [see *ṢṢṢKĀ'*], but the Zaghāwa who sprinkle it in the fields and in river beds (M.-J. Tubiana, index) can hardly be the only ones who do so. E. Laoust (*Mots et choses berbères*, 315) has noticed in one Moroccan tribe an interesting annual custom which takes place on a Wednesday or a Thursday before ploughing begins: in a hole dug in the first piece of land to be sown and then ploughed, the farmer slaughters a sheep and smears with the blood his own right foot, then the left foot of the *khammās* responsible for the ploughing; on to the pool which forms at the base of the hole, a little earth is thrown and on this the farmer scatters grains which he thrusts into the ground with his hand; this place is henceforward sacred. E. Laoust suggests two interpretations of this rite: to ward off the evil influences of the djinn, or to restore to the soil the vital forces of growth. The two explanations are, it seems, both to be accepted, for they are confirmed on the one hand, by the practice which consists of fixing with blood, after the harvest, the force liberated by the work in the fields, on the other hand the practice of sprinkling the sheaves with it, of spreading it in various places and of smearing it on the clogs of the beasts that tread the grain on the threshing-floor (*ibid.* 391). After the harvest, the jars containing the grain are also smeared with blood (Servier, *op. laud.*, 254). As for livestock, it too is protected by anointings, as is done in the land of Moab, to a newly-bought mare or to a new-born filly (Jaussen, 354).

In the times when it was still possible to hunt

big game, in the Moroccan Rif, some of the blood of each animal killed was set aside to be offered to the spirits of the rocks with the object of lessening the ferocity of the lions (Koller, 331).

Springs are also haunted by djinn. At Sefrou, Morocco, in the autumn, a black or seven-coloured goat or a white cockerel is slaughtered beside one of them, and the blood of the animal is poured into the water (H. Basset, *Grottes*, 89). In the case of hot springs, the bathers arm themselves against evil spirits by sprinkling the basin with the blood of a victim (Jaussen, 359-360).

As well as djinn, deceased saints must be appeased by immolations (See Servier, *op. laud.*, 179). In the land of Moab, for example, blood is cast on to the lintel of a sanctuary (Jaussen, 356). Blood still serves as the vehicle for the conditional malediction imposed upon a saint or another man, or for the transfer of responsibility in the practice of 'ār [q.v. in Suppl.] and, on the contrary, for the honour done to the host for whom an animal has been slaughtered (Chelhod, *Sacrifice*, 185).

In another context, it plays a particular role in the taking of virginity, and it is well known that on the day after a wedding, a cloth stained with the blood of the bride must be exhibited. In Kabylia, the water used to wash it is poured out at the foot of a pomegranate tree, the symbol of fertility (Servier, *op. laud.*, 144).

The preceding topic brings us back to menstrual blood, which possesses particular properties. In folk-medicine, it is recommended as an antidote for dog-bites, scurvy and freckles and serves also to preserve the firmness of the breasts, but it also possesses a magical power since seafarers can protect themselves against the dangers of tempests and against the threat of a sea monster called expressively *hūt al-hayd* "fish of the menses", by fixing to the stern of their ship a cloth stained with this blood. Al-Damīrī, in his *Hayāt al-hayawān*, from whom these details are borrowed (s.v. *insān*) provides in every account, under the heading of *khawāṣṣ* "properties" data concerning the use of the blood of animals in magic and medicine. By its very nature, its uses in the preparation of philtres are fairly limited in number. These are a few examples: the blood of the parrot (*babbaghā*), dried, powdered and spread between friends transforms their friendship into hatred. Sprinkling a mixture of the blood of a weasel (*ibn 'irs*) and of a rat or a mouse (*fa'r*) and water brings discord to families. The blood of a shemule (*baghla*) buried under the threshold of a house prevents rats and mice from entering. If a man can keep about his person a quantity of the blood of a fox (*tha'lab*), he is safe from all forms of trickery.

Virility can be improved or restored thanks to the blood of the *tinīn* (sic [q.v.]), of the frog (*difda'*) of the sparrow (*usfūr*) or of the hedgehog (*kunfudh*), while that of the cat (*simawr*) and of a kind of pigeon (*shafīn*) is a guarantee against feminine infidelity; that of the swallow (*khuttāf*) even deprives a woman of all sexual desire. If the blood of the frog prevents the growth of hair and causes the teeth to fall out, that of the fox encourages growth of the children's hair, and that of the lizard called *sāmm abraṣ* prevents loss of hair; against the re-growth of eyebrows (though al-Damīrī speaks of eye-lashes), the blood of the chameleon (*hirbā*), of the bear (*dubb*) and of the jerboa (*yarbū'*) is efficacious.

In folk-medicine, again, the blood of the tortoise (*sulahfāt*) is effective against pains in the joints

and stiffneck. That of the hare (*arnab*) causes scurvy and freckles to disappear; like that of the horse (or of the mare, *faras*), it has contraceptive properties. To cure maladies of the eyes, the blood of the viper (*af'ā*), of the mole (*khuld*), of the cockerel (*dīk*) or of the wood-pigeon (*warshān*) may be used; that of the cockerel is also a remedy for insect-bites and that of the mole or the weasel seems to be supremely efficacious against scrofula. The blood of the stag (*ayyil*) is efficacious against bladder-stones and that of the bull against haemorrhages; that of the pigeon (*hamām*) cures styes, stops nose-bleeds and, with oil, soothes the pain caused by burns; the effects of a dog-bite are alleviated by means of the blood of the hedgehog. Deafness can be cured with the blood of the wolf (*dhi'b*), while that of the monkey (*kird*) has salutary effects in treating dumbness. A leper benefits from anointing himself with the blood of a ewe (*da'n*) or of a ringed pigeon (*fākhīta*); abscesses are treated with the blood of the peacock (*tāwūs*), when they are serious, of the starling (*zurzūr*) if they are benign. The blood of the beaver (*kundus*, *kalb al-mā'*) is effective against incontinence of urine, that of the ichneumon (*nims*) restores lucidity to a man who is possessed and finally, that of the crow (*ghurāb*) cures habitual drunkenness if it is mixed with wine, for which it inspires a definitive distaste. This is one of the few cases where the blood of an animal is imbibed; in the majority of cases mentioned above, it is used in the form of ointments, but whatever the manner in which it is utilised, it must, in principle at least, for this is not the case with some of the animals mentioned, come from a licit animal, which has been ritually slaughtered (al-Ḳayrawānī, *Risāla*, ed. and tr. Bercher, Algiers 1949, 321).

(CH. PELLAT)

AL-DĀMAGHĀNĪ, ABŪ 'ABD ALLĀH MUḤAMMAD B. 'ALĪ B. MUḤAMMAD B. 'ALĪ B. MUḤAMMAD B. AL-ḤUSAYN B. 'ABD AL-MALIK B. 'ABD AL-WAḤHĀB B. ḤAMMŪYA B. ḤASANAWAYH, Hanafī jurist who, as Chief *kādī* of Baghdād, stands at the head of a family dynasty holding the positions of *kādī* or *kādī 'l-kuḍāt* down through the years. The following sketch is based mostly on *al-Ḍawāḥir al-muḍīyya fī tabakāt al-Hanafīyya* by 'Abd al-Ḳādir b. Abi 'l-Wafā' al-Ḳurashī (d. 775/1373). The best way to distinguish between them is

by the use of their patronymic (*kunya*) and first name (*ism*). Among the eighteen identifiable members of this family, three distinguished themselves from among the others; namely, the eponym Abū 'Abd Allāh Muḥammad (no. 1), his son Abu 'l-Ḥasan 'Alī (no. 2), and one of their last descendants Abu 'l-Ḳāsim 'Alī (no. 15). The eponyms *kunya* and *ism* are also those of the latter's brother (no. 16), and for this reason, the eponym was referred to—not it seems, in the contemporary documents, but later—as *al-Kabīr*, the Elder; this was in order to distinguish him from all the rest, not merely from his much later descendants who were too far removed to cause confusion and who had the same *kunya* and *ism* (nos 4 and 16), but of whom none was referred to as *al-Saghīr*.

1. Dāmaghānī the Elder was born in 398/1007 in Dāmghān in the province of Kūmis [q.v.], where he was first educated and pursued his initial studies in law. He then came to Baghdād in 419/1029 at the age of 21. Here he continued his studies of law under the two great masters of Ḥanafī law, al-Ḳudūrī (d. 428/1037) and al-Ṣaymarī (d. 436/1045). The juriconsult Ḳudūrī, famous for his work on law, known especially by his name, *Mukhtasar al-Ḳudūrī*, with numerous commentaries (see a list in *GAL*, I, 183, Suppl. I, 295), was also one of his teachers of *ḥadīth* (see the certificate or *samā'* dated Dhū 'l-Ḳa'da 423 in the Köprülü Library (Istanbul) no. 1584, fol. 41b).

Coming from humble beginnings, Abū 'Abd Allāh experienced material difficulties in pursuing his studies in the great capital. The *madrasas* had not yet begun to flourish in Baghdād, with their endowments for the benefit of students as well as the teaching staff. He had therefore to work, as other needy students did, and pursue his studies at the same time. He took a job as night guard which also allowed him to study by the light of the guard's lamp. He studied hard and learned by heart the current textbooks on law. One night he was surprised by a son of the caliph al-Muḳtadir, now an old prince who, admiring his knowledge of the law, invited him to come to his residence on Thursdays and aided him materially.

When the Chief *Kādī* of the caliph al-Ḳā'im died in 447/1055, the year that the Saldjūks defeated the Buwayhids, the caliph consulted with the wealthy Ḥanbalī merchant Abū Maṣ'nūr b. Yūsuf [q.v.] regarding his replacement. He wanted someone who was more knowledgeable in the field of law than the deceased. Abū Maṣ'nūr suggested al-Dāmaghānī, who was thus qualified, but whose appointment would also please the *wazīr* of the Saldjūk Toghrīl Beg, 'Amīd al-Mulk al-Kundurī [q.v.]. Previously, the post of chief magistrate had been particularly reserved for adherents of the Shāfi'ī law school. Assigning it to a member of the Ḥanafī school, which was also that of the Saldjūk Sultan and his *wazīr*, was an act dictated by political expediency, not by al-Dāmaghānī's superior knowledge of the law; for there were other juriconsults of the Shāfi'ī school, from which previous chief magistrates were chosen to serve, who were more highly qualified than he was, namely Abu 'l-Tayyib al-Ṭabarī (d. 450/1058), the great Shāfi'ī juriconsult of the period; al-Māwardī (d. 450/1058), the celebrated author of *al-Aḥkām al-sultāniyya*; Abū Ishāq al-Shīrāzī (d. 476/1083), disciple of Abu 'l-Tayyib al-Ṭabarī, his repetitor (*mu'īd*), and first professor at the Madrasa Niẓāmiyya of Baghdād; and Abū Naṣr b. al-Ṣabbāgh (d. 477/1084), disciple of Abu 'l-Tayyib al-Ṭabarī, classmate and later colleague and rival of Abū Ishāq

al-Shīrāzī, and believed by Ibn Khallikān to be even more knowledgeable in Shāfi'ī law than al-Shīrāzī.

After his appointment, the fortunes of al-Dāmaghānī changed. Only three years after his appointment, his residence was rich enough to attract the attention of burglars, and again later, in 493/1100, when his son Abu 'l-Ḥasan 'Alī was the occupant.

Dāmaghānī the Elder was considered in his day as one of the leaders of his legal school, with some reputation in the field of disputation (*munāẓara*). He continued in his post as *Kādī 'l-Ḳudāt* for thirty years, under the caliphs al-Ḳā'im (d. 467/1075) and al-Muḳtadī (d. 487/1094). He served as a substitute-*wazīr* under both caliphs, refusing to accept the vizierate itself and not wanting to exceed his position as *Kādī 'l-Ḳudāt* (Ibn al-Djawzī [also *apud* Ibn 'Aqīl], *Muntaẓam*, ix, 210, 11. 15-16: *fa-abū ta'addiya rubḥatī 'l-kaḍā'*). This genuine modesty was perhaps due to a gentle personality as well as to his humble beginnings. The period of his life when he lived in poverty, hardly having enough to eat, was also perhaps the cause of his becoming a voracious eater when he could afford to buy all the food he wanted. One anecdote (*Muntaẓam*, ix, 24, 11. 3 ff.) tells of his finishing off a thirty-pound (*ratl*) plate of pastry at the end of a copious meal at a banquet given by the caliph's *wazīr* Fakhr al-Dawla b. Ḍjahīr. He died in 478/1085.

Only one work on law has come down to us from al-Dāmaghānī, the *Kitāb Mas'ūl al-ḥīṭān wa 'l-turuk* (Berlin Ms. 4982). His biographers do not cite any works for him. Among his students was Abū Ṭāhir Ilyās al-Daylamī (d. 461/1069), who was the first professor of law at the great Madrasa of Abū Ḥanīfa founded the same year as the Niẓāmiyya of Baghdād (see *GAL*, I, 460, Suppl. I, 637, and bibliography cited; G. Makdisi, *Ibn 'Aqīl*, 171 ff. n. 6, and index, s.v. Abū 'Abd Allāh al-Dāmaghānī).

Here follows a list of his descendants with full names, according to the enumeration in the sketch below, all of whom were known by the *nisba* of al-Dāmaghānī.

2. Abu 'l-Ḥasan 'Alī b. Muḥammad [q.v. below].

3. Abū Ḍja'far 'Abd Allāh b. Muḥammad, Muhadhḥib al-Dawla (d. 518/1124); became a *shāhid-notary* under his father (no. 1); appointed as *kādī* of the East Side quarter of Bāb al-Ṭāk in Baghdād, and of the stretch from upper Baghdād to Mawsil, by his brother (no. 2) when the latter became *Kādī 'l-Ḳudāt* (23 Sha'bān 488/28 August 1095) (*Ḍjawāhir*, i, 287-8).

4. Abū 'Abd Allāh Muḥammad b. 'Alī, Ṭādj al-Ḳudāt (d. 516/1122); became *shāhid-notary* under his father (no. 2), who appointed him as his representative magistrate in Baghdād and elsewhere; when his father died, he was put up as candidate for the post of *Kādī 'l-Ḳudāt* to succeed his father, but was not appointed; was sent as ambassador of the caliph to Transoxania and died during the mission at 38 years of age (*Ḍjawāhir*, ii, 96).

5. Abu 'l-Ḥusayn Aḥmad b. Alī (d. 540/1145); was appointed *kādī* of the West Side quarter of Karkh in Baghdād, and later of the whole of the West Side quarter of Bāb al-Azādj (*Ḍjawāhir*, i, 82; al-Tamīmī al-Dārī al-Ghazzī, *Muntaẓam*, ix, 117; *al-Ṭabaḳāt al-saniyya fī tarāḍīm al-ḥanafīyya*, i, 473).

6. Abū Naṣr al-Ḥasan b. 'Alī (d. 555/1160); substituted for his brother (no. 5) as *kādī* of the West Side quarter of Karkh (*Ḍjawāhir*, i, 199-200).

7. Abū 'Abd Allāh al-Ḥusayn b. 'Alī (d. 561/

1166) (see *Ḍjawāhir*, i, 214-5, where the year of death is given as 461, erroneously, because (a) the day of death is given as Friday 11 Radjab, and 11 Radjab was a Friday for 561, but a Wednesday for 461, and (b) the biographical notice cites him as a brother of "Abū Naṣr al-Ḥasan" (no. 6), who died in 555/1160. One more discrepancy appears at the end of the notice where the author of the *Ḍjawāhir* quotes Ibn al-Nadīdjār (d. 643/1245) as citing the father (no. 2) of this Dāmaghānī as his informant regarding the son, which is not possible).

8. Abū Maṣṣūr Ḍja'far b. 'Abd Allāh (d. 568/1172-3); born in 490/1097, he studied *ḥadīth* under the two Ḥanbalīs Abū 'l-Khaṭṭāb al-Kalwadhānī (d. 510/1116), known for both *ḥadīth* and *fiqh*, and Yahyā b. Manda (d. 511/1118), the great *ḥadīth*-expert (*Ḍjawāhir*, i, 179).

9. Abū Sa'īd al-Ḥasan b. 'Abd Allāh (d. 575/1179); studied *ḥadīth* under the great *ḥadīth*-expert Abū 'l-Kāsim Hibat Allāh b. Muḥammad al-Shaybānī al-Baghdādī (d. 524/1130) (*Ḍjawāhir*, i, 196).

10. Abū 'l-Muẓaffar al-Ḥusayn b. Aḥmad (d. 579/1183); his brother (no. 12) accepted him as *shāhid*-notary in 552/1157 and appointed him as his representative magistrate in the quarter of the Caliphal Palace on the East Side of Baghdād (*Ḍjawāhir*, i, 207-8).

11. Abū Muḥammad al-Ḥasan b. Aḥmad (d. 582/1186); his brother (no. 12) accepted him as *shāhid*-notary in 552/1157 and appointed him *kādī* in the West Side quarter of Karkh in Baghdād, then also in Wāsiṭ; he spent a lifetime in his career as *kādī*, in Wāsiṭ and Baghdād, between dismissals and reappointments (*Ḍjawāhir*, i, 188-89).

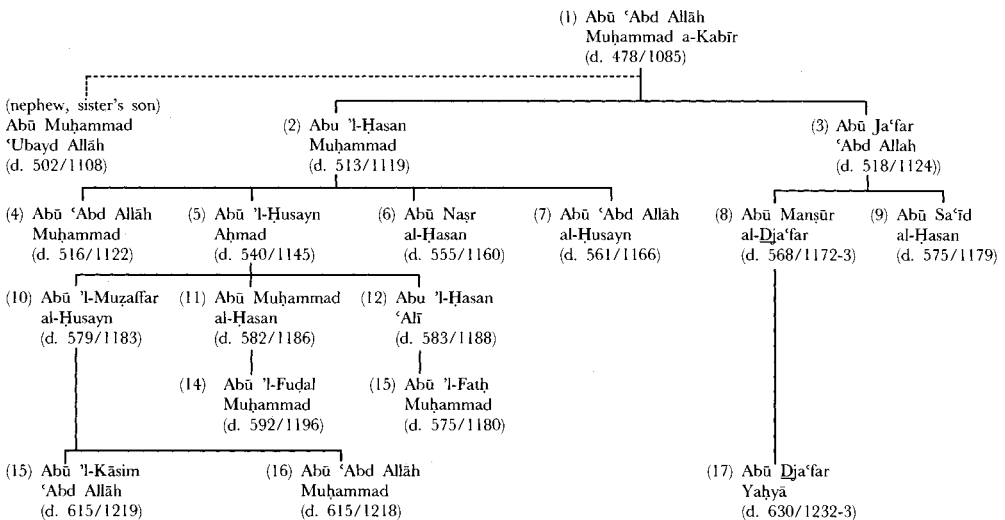

12. Abū 'l-Ḥasan 'Alī b. Aḥmad (d. 583/1188); was appointed *kādī* in the Karkh quarter of Baghdād's West Side in 540/1145 following his father's (no. 5) death. Then when the *Kādī 'l-Kudāt* Abū 'l-Kāsim 'Alī b. al-Ḥusayn al-Zaynabī died in 543/1149, he was appointed *Kādī 'l-Kudāt* in his place, at the age of

thirty, by the caliph al-Muḥtafī. He was confirmed in his appointment under the caliph al-Mustandjīd, who then dismissed him. The caliph al-Mustadīf reappointed him, and, the appointment being confirmed later by the caliph al-Nāsir, Abū 'l-Ḥasan continued to serve until he died. When he was dismissed by al-Mustandjīd, he kept to his home, where he pursued his study of the religious sciences, considering himself as still the *Kādī 'l-Kudāt*, and all the *kādīs* as his authorised representatives, "because a *kādī*, unless guilty of moral depravity, may not be dismissed" (*li-anna 'l-kādiya idhā lam yaẓhar fiṣkuh, lam yaḍjuz 'azluh, Ḍjawāhir*, i, 351, 11. 9-10) (Ibn Kathīr, *al-Bidāya wa 'l-nihāya fi 'l-tārīkh*, xii, 329; *Ḍjawāhir*, i, 350-2; Ibn Taghribirdī, *al-Nuḍjūm al-zāhira*, vi, 104).

13. Abū 'l-Faṭḥ Muḥammad b. 'Alī (d. 575/1180); was accepted as *shāhid*-notary by his father (no. 12) on Monday, 12 Radjab 575/Thursday 13 December 1179, who made him his assistant magistrate in the city of Baghdād; he died at the age of 29, less than three months after his appointment (*Ḍjawāhir*, ii, 91).

14. Abū 'l-Faḍl Muḥammad b. al-Ḥasan (d. 592/1196); was accepted as *shāhid*-notary by his uncle (no. 12) on 12 *Shawwāl* 575/Tuesday 11 March 1180, three months after his cousin (no. 13), and was entrusted with the controllership of the caliphal burial grounds in the East Side quarter of al-Ruṣāfa. He died young (*Ḍjawāhir*, ii, 40).

15. Abū 'l-Kāsim 'Abd Allāh b. al-Ḥusayn (died Sunday 30 *Dhu 'l-Ka'da* 615/17 February 1219); was appointed *kādī* in 586/1190, and dismissed in 594/1198; was reappointed as *Kādī 'l-Kudāt* in 603/1207, and dismissed once again in 611/1214; was highly esteemed for his knowledge of the law according to the various schools of juridical thought, as well as for belles-lettres (Abū Shāma, *Tarāḍīm riḍāl al-kamayn al-sādīs wa 'l-sābi'*, 110-11; Ibn Kathīr, *al-Bidāya wa 'l-nihāya fi 'l-tārīkh*, xiii, 82;

*Djāwāhir*, i, 273-4; Ibn Taghrībirdī, *al-Nuḍjūm al-zāhira*, vi, 223).

16. Abū 'Abd Allāh Muḥammad b. al-Ḥusayn died Wednesday 16 Sha'bān 615/7 November 1218, three and-a-half months before his brother (no. 15); was accepted as *shāhid*-notary by his brother (no. 15) on 20 Shawwāl 603/20 May 1207, who appointed him as his representative magistrate in Baghdād, a post he kept until his brother's dismissal on 12 Raġġab 611/17 November 1214 which entailed his own dismissal; he died four years later without reappointment (*Djāwāhir*, ii, 48).

17. Abū Dja'far Yaḥyā b. Dja'far (d. 630/1232-3); he is known to have learned *hadīth* from his father (no. 8) and to have taught the subject, according to al-Mundhīrī (Abū Muḥammad 'Abd al-'Azīm b. 'Abd al-Ḳawī, d. 656/1258), who received authorisation (*iqḍā'a*) by correspondence from Abū Dja'far, on more than one occasion, to teach on his authority, one in particular arriving from Aleppo in Shawwāl 620/October-November 1223). (*Djāwāhir*, ii, 211).

The author of the *Djāwāhir* gives the orthography of the ethnic name al-Dāmaghānī and says that it is the name of *Kādī 'l-Kudāt* Abū 'Abd Allāh al-Dāmaghānī (no. 1) and of a group of his descendants (see *ibid.*, ii, 306). The author cites a nephew (the son of a sister) of Dāmaghānī (of no. 1), 'Ubayd Allāh b. Muḥammad b. Talha b. al-Ḥusayn, Abū Muḥammad al-Dāmaghānī (d. 502/1108), who was accepted by the uncle as a *shāhid*-notary (*Djāwāhir*, i, 340-1).

Another Dāmaghānī (fl. 494/1102), 'Abd Allāh b. al-Ḥusayn b. 'Abd Allāh, was also accepted as *shāhid*-notary by Abū 'Abd Allāh (no. 1), but his identification as a member of the family is not certain (*Djāwāhir*, i, 274).

There are other persons noted with this name, but with no apparent relationship to this family.

(G. MAKDISI)

AL-DĀMAGHĀNĪ, ABŪ 'L-ḤASAN 'ALĪ B. MUḤAMMAD B. 'ALĪ B. MUḤAMMAD B. AL-ḤASAN B. 'ABD AL-MĀLIK B. HAMMŪYA, SON OF ABŪ 'ABD ALLĀH MUḤAMMAD AL-DĀMAGHĀNĪ [q.v.]. He was born in 449/1057, studied law, and was accepted as *shāhid*-notary by his father in 466/1073-4, and was appointed by him *kādī* of the East Side quarter of Bāb al-Ṭāk in Baghdād and of a part of the countryside, a jurisdiction which was that of his maternal grand-father Abū 'l-Ḥasan Aḥmad al-Simnānī, who had just died in 466/1074 (see *Djāwāhir*, ii, 95-6). In the year of these two appointments, Abū 'l-Ḥasan al-Dāmaghānī was only 16 years of age; such appointments at that age were unheard of.

He held the post of *kādī* first under the two caliphs al-Ḳā'im and al-Muḳtadī, until his father died in 478/1085, and was succeeded by the Shāfi'ī juriconsult Abū Bakr al-Shāmī. Upon the latter's death in 488/1095, Abū 'l-Ḥasan was appointed as *Kādī 'l-Kudāt* and held the post under the caliphs al-Mustazhir and al-Mustarshid until his death in

513/1119. He held also the post of substitute-*wazīr* under these two caliphs, sharing the post with others.

There are some anecdotes regarding Abū 'l-Ḥasan al-Dāmaghānī which shed light on how he was regarded by some of his contemporaries among the juriconsults. In one of these, he is said to have refused to accept the testimony of a person who came to him at the behest of the caliph al-Mustazhir. When the latter asked for an explanation, he replied that on the Day of the Last Judgment God would hold him responsible for his actions, not the caliph who appointed him. Another anecdote concerns the Shāfi'ī juriconsult Abū Bakr al-Shāshī (d. 504/1110) who came to Dāmaghānī to pay him a visit. The *Kādī 'l-Kudāt* did not show him respect by rising for him, so Shāshī turned on his heels and left. That was in the 480s. It was not until after the year 500/1106-7 that they came together again on the occasion of a ceremony for mourning over a fellow juriconsult's death. Shāshī arrived first and took his seat. When the *Kādī 'l-Kudāt* entered, everyone rose except Shāshī, who did not budge. Dāmaghānī wrote to the caliph Mustazhir complaining that Shāshī did not respect the representative of the religious law. The caliph wrote back: "What do you expect me to say to him? He is your senior in age, a more excellent [juriconsult], and more pious. Had you risen for him, he would have done the same for you". Shāshī also wrote to the caliph complaining of Dāmaghānī's disdainful treatment of men of religious science, and included the following two verses: "A partitioning screen, conceit, and excessive vainglory / and painstaking reaching for the heights / If all this had come as a result of ability / it would be easy to accept, but it comes as a result of coming from behind (meaning that he succeeded his father, riding on his coat tails)". The caliph finally brought the two juriconsults together and they made up their quarrel. But the anecdote ends on a note which shows that Shāshī had not quite forgiven the magistrate. Dāmaghānī sat with Shāshī, presumably in the presence of other learned men, and began to give a list of the questions of law that his father, Dāmaghānī the Elder [q.v.], had discussed in sessions of disputation, together with the names of his fellow disputants in each case. When Dāmaghānī had mentioned several of these questions, Shāshī made the following remark, laden with subtle sarcasm: "How excellently you have memorised the titles of these disputed questions!"—meaning that Shāshī was good for superficial memorisation, but not good enough for even memorising the disputations themselves, let alone understanding them.

Ibn 'Aqīl [q.v.], who had a great respect for Dāmaghānī the Elder as one of his teachers of disputation, had no respect at all for the son Abū 'l-Ḥasan, to whom he addressed two letters which appear to be open ones written, not in the second, but in the third person (see the French tr. of both letters in Makdisi, *Ibn 'Aqīl*, 467-71). In these, Ibn 'Aqīl compares father and son, laying stress on the inferior qualities of the son. He held against the son the fact that, at one of his sessions as chief magistrate, he cried at the top of his voice that there were no longer any juriconsults of the rank of *muḍtahid* [q.v.]. Ibn 'Aqīl considered this a thoughtless attack against the doctrine of consensus or *iqḍmā'* [q.v.], a doctrine which God had instituted above that of prophecy, since the Prophet of Islam was the seal of the prophets, not to be followed by other prophets. God thus instituted the doctrine of the consensus of His community in the place of the succession of

prophets. He also held against Abu 'l-Ḥasan his neglect of the learned men of Baghdād in favour of those from Khurāsān. He accused him of doing so for the purpose of gaining a broader reputation, presumably because these men would spread his name far and wide on their travels back and forth to their home provinces.

Ibn al-Djawzī (d. 597/1200), who gives a lengthy biography of Abu 'l-Ḥasan and is our source for Ibn 'Aqīl's two letters, nevertheless speaks well of him, stating that he was a religious man, with a sense of honour, with generosity and integrity, and that he was knowledgeable in the field of *shurūṭ*, i.e. the writing of formal documents. Among his teachers, the Ḥanbalī *Kādi* Abū Ya'fā b. al-Farrā' (d. 458/1066), Abū Bakr al-Khaṭīb (d. 463/1071), al-Ṣarifīnī (d. 469/1076), and Ibn al-Nakūr (d. 470/1078) are cited as those who taught him *ḥadīth*, and is said to have related traditions in turn. He studied law under his father and his brother [see under DĀMAGHĀNĪ, ABŪ 'ABD ALLĀH, Nos. 1 and 3].

Abu 'l-Ḥasan died in 513/1119 after having served for close on 30 years as magistrate and chief magistrate. He was buried at his home in the quarter of Nahr al-Qallā'in on the West Side of Baghdād where his father was buried, and the remains of his father were transferred to the shrine of Abū Ḥanīfa on the East Side. (G. MAKDISI)

**DAMASCENING** [see MA'DĪN].

**DANDĀNKĀN**, DANDĀNAKĀN, a small town in the sand desert between Marw and Sarakhs in mediaeval Khurāsān and 10 *farsakhs* or 40 miles from the former city. The site of the settlement is now in the Turkmenistan SSR, see V.A. Zhukovsky, *Razvalini Starogo Merau*, St. Petersburg 1894, 38. The geographers of the 4th/10th century mention that it was well-fortified and was surrounded by a wall 500 paces in circumference, the baths and a *ribāt* or caravanserai lying outside this wall (Ibn Hawkal<sup>2</sup>, 436-7, 456, tr. Kramers-Wiet, 422, 440; *Hudūd al-'ālam*, tr. Minorsky, 105). When Yākūt saw it in the early 7th/13th century, it was ruinous and abandoned, with only the *ribāt*, the minaret and the walls outstanding, apparently because of the encroaching sands, though he quotes a work of Sam'ānī's, the *Kitāb al-Taḥbīr*, that its ruin dated from a sacking by the Ghuzz in Shawwāl 553/November 1158 (*Buldān*, ed. Beirut, ii, 477). Both Yākūt and Sam'ānī (*Ansāb*, ed. Hyderabad, v, 381-3) list many scholars who stemmed from Dandānkān.

The place's main claim to historical fame arises from the fact that, outside Dandānkān's walls in the parched and largely waterless desert, there took place one of the decisive battles of eastern Islamic history. In Ramaḍān 431/May 1040 a force of highly-mobile Türkmens under the Saldjūk leaders Toghri'l and Çağrı Beg defeated a more heavily-armed but largely demoralised Ghaznavid army under Sulṭān Mas'ūd b. Maḥmūd, and this victory gave the Saldjūks control of the former Ghaznavid province of Khurāsān (see B.N. Zakhoder, *Dendānekan*, in *Bulleten*, xviii (1954), 581-7, and Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, index).

**DĀR AL-ḤADĪTH**.

### I. Architecture.

The first *dār al-ḥadīth* [q.v.] founded by Nūr al-Dīn in Damascus served as a prototype for similar

establishments set up in Syria, 'Irāk, Egypt and Palestine during the Zangid, Ayyūbid and Mamlūk periods. Unfortunately, this particular building is now virtually a ruin. The façade is completely disfigured by little shops built on the site of the rooms situated to the north of the courtyard. Of the building as a whole, some traces still exist: the walls of a prayer room with some vestiges of the *mīhrāb* decoration; the façade of this prayer room, made up of three bays; the courtyard on to which it opened; and the basin in its centre. These few remains have nevertheless allowed Jean Sauvaget to reconstruct the plan of the building (*Le Dār al-ḥadīth de Nour al-dīn*, in *Les monuments ayyoubides de Damas*, i, Paris 1938, 15-25). This plan fitted into a small, almost square rectangle (16.30 × 17.20 m. overall). It comprised a room with a *mīhrāb* ranging all along the south wall, which opened on to a central, square courtyard through a large, high central bay flanked by two other bays of more modest dimensions. Each of these bays was made up of a rectangular opening surmounted by a lintel and a curved, pointed arch. The central arch was supported on two rectangular pillars, whilst the lateral ones were supported on the piers of the doorway. Two rectangular and symmetrical rooms, one of them communicating with the prayer room, opened on to the lateral façades of the courtyard, and each communicated with a little vaulted room making up the east and west angles of the northern façade of the buildings as a whole. The central part of this last was made up of a passage way which led both to the central courtyard and also to two further small, vaulted rooms which themselves led to the courtyard. In the centre of the courtyard was a basin for ablutions.

The arrangement here, simple and functional, allows one to identify exactly the role of each of the various rooms: the prayer room at the end, teaching rooms at the sides, and possibly, the janitor's lodgings in the rooms along the façade.

Sauvaget has emphasised the relationship between the plan above and those of the oldest *madrasas* in Damascus, the difference being essentially in a reduction of the dimensions and the replacement of the *iwāns*—specific features of *madrasas*—by lateral rooms. Even so, the distinction between the two types of building was not always clearly made. To cite only one example, the *Ḍiyā'iyya*, founded in Damascus by *Ḍiyā'* al-Dīn al-Makḍīsī before 643/1245, is given as a *dār al-ḥadīth* by Ibn Ṭūlūn (*al-Kalā'id al-ghawhariyya fī ta'rīkh al-madāris*, Damascus, 1949, 76) and as a *madrasa* by al-Nu'aymī (*al-Dāris fī ta'rīkh al-madāris*, Damascus 1948, i, 80).

The opening of the first *dār al-ḥadīth*, was followed by the founding of numerous similar institutions based on Nūr al-Dīn's building; unfortunately, these have almost all disappeared. Of the 16 establishments listed by al-Nu'aymī, Damascus has now only the remnants of Nūr al-Dīn's *dār al-ḥadīth*; the fine doorway with stalactites of that of Tingiz, built in 739/1338 and whose interior has been completely rebuilt (cf. Sauvaget, *Les monuments historiques de Damas*, Beirut 1932, 69, no. 44); and a few remnants of walls incorporated in shops or houses. As a result, we are forced to go back to the written sources in order to get information about the architecture of the *dār al-ḥadīths*; but these are very laconic on this particular aspect, and the passages on these institutions concern themselves almost wholly with the lives of the teachers there. Alone of them Ibn Ṭūlūn devotes a few lines to the buildings themselves, and from him we learn that certain of them were mere

## II. Historical development [see ii, 125-6].

Fig. 1. Plan of Nūr al-Dīn's *dār al-ḥadīth*, after J. Sauvaget.

Fig. 2. Elevation of Nūr al-Dīn's *dār al-ḥadīth*, after J. Sauvaget.

rooms within the house of the *shaykh* who was giving out instruction. Thus the *Shakhshakiyya*, founded in Damascus by Ibn *Shakhshaka* in 656/1258, was only the modest dwelling of this master (cf. al-Nu'aymi, *Dāris*, i, 81). The *Ḍiyā'iyya* (see above) had a plan resembling that of the *Nūriyya*, but the rooms meant for students were spread over two floors (Ibn Ṭūlūn, *Kalā'id*, 83). The *Kalānisiyya*, founded in ca. 729/1328 by the vizier Ibn al-*Qalānisi* (not to be confused with the historian of the same name), had a very extensive hall, provided with three large windows looking on to the *Nahr Yazīd*, several doors giving access to it, a paved courtyard and a minaret (Ibn Ṭūlūn, *op. cit.*, 86). The *Nizāmiyya*, founded towards the middle of the 9th/15th century by the *khādī 'l-kudāt* *Nizām al-Dīn 'Umar*, showed a structure even more close to that of the *madrasas*. Three *iwāns* opened on to a court in whose centre was an ablutions cistern. The southern *iwān* had a *mihrāb*, and the eastern side was provided with a *riwāk* reserved for women (*ibid.*, 88).

Sometimes the *dār al-hadīth* had a *ribāt* or *khānkhāh* [q.v.] annexed to it, or else the founder's own tomb or *turba* might be adjacent to it. This was the case with the *Nāsiiriyya*, founded by al-Malik al-Nāṣir Yūsuf on the southern slopes of Mount *Kāsiyūn* [q.v.] some time before 659/1261. This imposing architectural complex, built on the banks of the *Nahr Yazīd* and decked out with yellow and white stones, was topped by a minaret and also included a mill. According to Ibn Ṭūlūn, *op. cit.*, 94, it was one of the finest houses in Damascus; but by his time, it had been entirely destroyed and even its site had vanished.

In Aleppo, there are still some remains of the *dār al-hadīth* founded by Ibn *Shaddād* Yūsuf (the biographer of *Salāh al-Dīn*) in 618/1221, as attested by the text of a foundation inscription carved on a stone block inserted in a modern wall of the reconstructed building. According to the summary plan deduced by Herzfeld, there remains a rectangular room 16.50 × 6 m. overall, with a *mihrāb* and three openings. In the north-eastern corner, an entrance contiguous to the room's north wall and at the beginning of another wall perpendicular to the latter gives on to what was possibly the *dār al-hadīth*'s courtyard (Herzfeld, *Matériaux pour un Corpus Inscriptionum Arabicarum. Inscriptions et monuments d'Alep*, ii, pl. CXXXVIIa).

The *Kāmiiliyya* of Cairo, founded there by al-Malik al-Kāmil *Nāṣir al-Dīn* in 622/1225 on the model of the *Nūriyya*, is chronologically the second of the *dār al-hadīths* (cf. al-Makrīzī, *Khīṭaṭ*, ed. *Būlāk*, ii, 375). Some remains of this building still exist, in particular, an *iwān*, whose pointed-arched vault is faced in fired brick and is supported on the walls and on stone piers (photograph by J.C. Garcin, in *Annales Islamologiques*, vii [1967], pl. XII).

These various examples suffice to show how the architecture of the *dār al-hadīth* remained dependent on that of the *madrasa*, when indeed it was not included in it. (S. ORY)

## II. History [see Vol. II, 125-6].

**DĀR ŠĪNĪ**, or **DĀRŠĪNĪ** (Persian *dār čīnī* "Chinese wood") is the Chinese cinnamon (*Cinnamomum cassia*), next to the Ceylonese cinnamon (*Cinn. zeylanicum*) the most valuable spice from plants of the cinnamon species, of the family of the Lauraceae, perhaps the oldest spice altogether. The rind of the branch of the cinnamon-tree was used in China as medicine, aromatic substance and spice already in the 3rd millennium B.C., and reached the Near East and the

Mediterranean countries in the 2nd millennium. It cannot be established with certainty with what original plant *dāršīnī* is to be associated, since in the pharmacognostic texts *Cinn. cassia* is also rendered by *salīkhā*, which allegedly is not identical with *dāršīnī*. The Greeks (Dioscorides) called the class κιν(ν)άμουρον, and the rind of the Chinese *κασσία*; the Arabs speak accordingly of *kināmāmūn* (and variants) and *kāsiyā* (*kassiyā*); in Spanish-Arabic texts it even appears in the Romance form *djinnamū* (*cinamomo*), cf. M. Asin Palacios, *Glosario de voces romances*, Madrid Granada 1943, no. 196. Since Ceylonese cinnamon was exported rather late from the island, hardly before the 14th century A.D., *dāršīnī*, according to its name, can only indicate Chinese cinnamon during the whole previous period.

The older Arab botanists (Abū Hanīfa al-Dīnawarī, *The book of plants*, ed. B. Lewin, Wiesbaden 1974, no. 814) did not know what to do with the term *šīnī* and associated it with an unidentified drug *šīnīn* mentioned by al-A'shā (*Dirwān*, ed. Geyer, 201). Ishāk b. Sulaymān al-Isrā'īlī (d. ca. 320/932) was perhaps the first to perceive that cinnamon came indeed from China, see al-Ghāfīkī [q.v. below], *al-Aḍviya al-mufrada*, Ms. Rabat, Bibl. Gén. k 155 i, fol. 130a, 11. Like the numerous other Asiatic spices, cinnamon was imported mainly by the sea route, the most important transit-port being 'Adan (W. Heyd, *Histoire du commerce du Levant au Moyen Âge*, Leipzig 1885-6, index s.v. Cannelle).

The Arabs knew a whole range of kinds of *dāršīnī* which cannot be determined more closely: the "real Chinese cinnamon" (*dāršīnī al-Šīn*), an inferior kind (*dār šūš*), the "real cinnamon rind" (*al-kirfa 'alā 'l-hakīka*), the "clove-rind" (*kirfat al-kurunful*), the "pungent cinnamon" (*al-hādd al-madhāk*), etc. As spice for food, there served not only the tubular rind of the cinnamon-tree, but also its leaves, blossoms and unripe berries. The pleasant scent is caused by the volatile oil extracted from the rind. Taken as a medicine, cinnamon reduces and softens thick substances, strengthens the stomach, liver and spleen and counteracts their sluggishness, quickens the activity of the heart, invigorates the eyesight and is effective against poisonous bites and stings of scorpions. Spread on excrement and urine, it does away with their nasty smell.

(A. DIETRICH)

**DARAK** (A.), *ḍamān al-darak*, in Islamic law the guarantee against a fault in ownership. As the most important of the various guarantees aimed at protecting the new legal status brought about by the conclusion of a contract of sale, the *ḍamān al-darak* ensures that the seller will make good should the buyer's title be contested by a third party. It is possible, for instance, that prior to the conclusion of the contract and without the knowledge of the two contracting parties, a third party had inherited all or part of the property sold, it had been given in *wakf*, a neighbour had exercised his right of pre-emption, or a creditor had claimed the property in settlement of a debt against the seller. Thus the *darak* rises from a rightful claim of ownership (*istihkāk*) before the contract has come into being, while a claim established after this (because a defect is discovered, or the object sold perishes before delivery, for instance) is not covered by the *darak* guarantee. Further, the seller is liable to the buyer only and not to another person to whom the property may have been transferred.

There is a difference of opinion on how the seller discharges his obligation; return of the price was the norm, but arguments are made for the return of the property itself, or its equivalent, if it is fungible, or its value together with the value of such improvements as had been made by the buyer at the time the claim was raised. The *ḍamān al-darak* is usually confined to contracts for the sale of immovable property, but in the formularies for written contracts we see that the guarantee could be given for movables of value as well, such as slaves, walls (considered movable because they could be dismantled for their materials), and palm trees (sold separately from the land and perhaps uprooted). It is not included in contracts in which the property is delivered at a later date, but rather, a separate witnessed document containing the guarantee is drawn up after delivery takes place. Nor is the guarantee given in conveyances in which the alienor receives no consideration, as in a deed of gift. The importance of this guarantee and the variety of formulas employed to express it reflect the concern of Islamic law for the protection of ownership and bona fide acquisition.

*Bibliography*: The term *darak* is defined in Lane, iii, 874; Dozy, *Suppl.*, i, 436-7; J. Schacht, *An introduction to Islamic law*, London 1964, 139; al-Sarakhsī, *K. al-Mabsūt fi'l-furū'*, Cairo 1324-31/1906-13, xxx, 173-4, 180, 183, 187-8; Discussion of various aspects of the legal status and the formulae is to be found in the *shurūṭ* works, e.g., J.A. Wakīn, *The function of documents in Islamic law: the chapters on sale from Ṭahāwī's "Kitāb al-Shurūṭ al-Kabīr"*, New York 1972, index, s.v.; al-Sayrafi, *al-Mukātabāt al-bad'ā'a fīmā yuktab min umūr*

*al-Sharī'a*, in al-Nuwayrī, *Nihāyat al-arab fī funūn al-adab*, ix, 12; Marghīnānī, *al-Fatāwā al-Zahīriyya*, MS British Museum, Rieu Suppl. 4305, fol. 19a; *al-Fatāwā al-Ālamgīriyya*, Calcutta 1251, vi, 424-6. Since this guarantee is a prominent feature of the contract, examples of its use in practice are found frequently in the extant deeds of sale. For examples, see A. Grohmann, ed., *Arabic papyri in the Egyptian Library*, i, 146, 162, 169, 175, 182, 187 and *passim*; J. Sourdel-Thomine and D. Sourdel, *Trois actes de vent damascains du début du IV/X siècle*, in *JESHO*, viii (1965), 173; W. Hoenerbach, *Spanisch-islamische Urkunden aus der Zeit der Nasriden und Moriscos*, Berkeley 1965, 41-2, 272; for earlier Near Eastern parallels, see R. Yaron, *On defection clauses of some oriental deeds of sale and lease, from Mesopotamia*, in *Bibliotheca Orientalis*, xv, 15-22. See also ḌAMĀN.

(J.A. WAKIN)

**DARB ZUBAYDA**, the pilgrim highway running from al-ʿIrāq to the Holy Cities of the Ḥijāz, named after Zubayda bint Dja'far [q.v.], the wife of Ḥārūn al-Rashīd.

The main section of the Darb Zubayda, from Kūfa to Mecca, is something over 1,400 km. in length. The branch to Medina leaves the main road at Ma'dīn al-Nakira, which is also the point at which the road from Baṣra joins it. From Ma'dīn al-Nakira to Mecca the distance is about 500 km., and from the same point to Medina it is about 250 km. Between Ma'dīn al-Nakira and Mecca, the section of the road lying between Ma'dīn Banī Sulaym and al-Mislah has an alternative route which runs: Ma'dīn Banī Sulaym-Ṣufayna-Ḥādha-al-Mislah. This latter route lies across the Ḥarrat Raḥaṭ, and was used for the sake of its superior water resources. For the most part, the preparation of the track of the road consisted in clearing the ground of boulders, rocks, etc., but at least one stretch (near Baṭn al-Agharr) was paved, at the expense of Khālīṣa, the lady-in-waiting of the mother of al-Rashīd (al-Ḥarbī, *K. al-Manāsik*, Riyād 1389/1969, 305).

Fayd, the midway station of the road, was the seat of the *amīr al-ḥaḍḍjī* and the road superintendent (*ʿamīl al-ṭarīk* or *wālī al-ṭarīk*) [see further, FAYD, below] and was provided with fortifications (*ḥuṣūn*) and markets. The main route of the Darb Zubayda had 54 recognised stations (*manāzil*). Stopping places for the evening meal were known as *mulā'ashshā*.

There is no archaeological evidence for the use of the Darb Zubayda route before the Umayyad period, but it must have been in use at least from the time of the foundation of Kūfa in the reign of 'Umar I.

Al-Ḥarbī (*al-Manāsik*, 309) states that 'Uṭmān had wells dug at Fayd, and Ṭabarī mentions that among the places at which 'Alī stopped on his way from Medina to Kūfa in 36/656 were al-Rabādha, Fayd and al-Tha'labiyya. Similarly, Ḥuṣayn b. 'Alī stopped at *inter alia* al-Ḥādḡir, Zarūd, Zubāla and al-Aḳaba. These are all major stations of the Darb Zubayda.

The 'Irāq-Mecca road was a leading concern of the 'Abbāsīd caliphs, to the extent that as a well-maintained, reliable highway it may be regarded as an 'Abbāsīd foundation. Al-Saffāḥ set up milestones and established fire-beacons (*manār*) along the whole route from Kūfa to Mecca (Ṭabarī, iii, 81; Ibn al-Athīr, Cairo edn., iv, 344), and he also constructed forts (*kuṣūr*) along the northern section from al-Kādisiyya to Zubāla. Al-Manṣūr provided the road with hostels, and under this caliph the first road superintendent was appointed. The names of at

least 21 of these superintendents have been preserved. Al-Mahdī enlarged the forts, constructed water tanks, sunk wells and renewed the milestones. It was during his reign that Yaḥyā b. Mūsā, the most outstanding of the road superintendents, was appointed (161/777). His incumbency lasted ten years, during which time the pilgrim road was noted for its convenience, comfort and safety (Ibn Kathīr, *al-Bidāya wa 'l-nihāya*, Beirut and Riyāḍ 1966, x, 133).

Al-Raḥīd constructed cisterns, sunk wells and built forts along the road, but he was outshone in these works by his wife Zubayda, whose contribution is mentioned in laudatory terms by many mediaeval writers. Al-Ḥarbī refers to at least eleven places which were provided with water facilities and rest-houses or fortifications at her instigation, and states that a cistern of a circular type (*birka mudawwara*) was known as a "Zubaydiyya" (*al-Manāsik*, 288). Much of Zubayda's work was devoted to the smaller stations at intermediate points between the larger stopping places, which suggests that her objective was to minister to the needs of poorer pilgrims who had to make their long journey on foot. For the upkeep of the water installations in Mecca she left endowments with a yield of 30,000 *ḍīnārs* per annum, and it is probable that she provided funds for the upkeep of the road itself in the same way. It may be noted that the mediaeval writers record the names of many wealthy individuals, both men and women, who made the upkeep of the road the object of their benefactions.

Among the later caliphs, al-Wāthiq, al-Mutawakkil and al-Muqtadir were particularly active in maintaining and improving the road. Evidence of the contribution of al-Muqtadir is provided by a Kūfic inscription on stone, dated 304/917-17, which refers to improvements being carried out under the supervision of 'Alī b. 'Isā [*q.v.*].

From the 3rd/8th century, the security of the road was increasingly disturbed by tribal raids, beginning with that of the Banū Sulaym in 230/844. In 294/906 occurred the first of many attacks on pilgrim traffic by the Ḳarṁaṭīs [*q.v.*], and these were to continue for over thirty years. The last pilgrim caravan organised under an 'Abbāsīd caliph was that of 641/1243, when al-Musta'ṣim's mother performed the pilgrimage, taking with her 120,000 camels (al-Nahrawālī, *K. al-Flām bi-ā'lām bayt Allāh al-Ḥarām*, ed. Wüstenfeld, in *Die Chroniken der Stadt Mekka*, iii, Leipzig 1857, 178).

After the fall of Baghdād in 656/1258, pilgrim traffic was often diverted through Damascus, but the Darb Zubayda continued to be used intermittently in later centuries, the frequency of traffic depending largely upon the presence or otherwise of a stable administration in Baghdād. The use of the road in the 19th century is attested by European travellers such as Lady Anne Blunt, Huber and Musil.

The coming of motor transport in the 20th century had led to the final abandonment of the Darb Zubayda, although its cleared track is still everywhere visible, as are many of the waymarks (*a'lām*), which usually consist of cairns of stones of over 2 m. in height. Two undamaged milestones from the 'Abbāsīd period have survived, and are now preserved in the Riyāḍ Museum of Antiquities. One of these uses the system of the post-stage (*barīd* [*q.v.*]), the other that of miles. Most of the water facilities of the road can still be identified, even though many of these are sanded up; they include square, rectangular and circular tanks, some of which are connected with settling tanks and flood diversion walls. Many of the

wells are still in use by local tribesmen. The foundations of rest-houses and forts may still be seen at many points along the road, and in several cases (e.g. Ḳaṣr Zubāla, Ḥiṣn Fayd and al-'Aḳīḳ) more substantial ruins testify to the high level of workmanship bestowed on the public facilities of the road.

**DARĪBA** (1)—(6): See Vol. II, 142-58.

(7)—Indonesia. The classical Malay chronicles are not very eloquent about matters of taxes and tolls, and the collections of *undang-undang*, or laws, are more concerned with court rituals than with legal or fiscal questions. More materials are available for the tax regulations under the Dutch administration. Thus F. de Haan's eminent work on *Priangan. De Preanger Regentschappen onder het Nederlandsch Bestuur tot 1811*, 4 vols., Batavia-The Hague 1911 ff., contains a lot of valuable information. But with regard to the Islamic kingdoms and sultanates in the archipelago which flourished in the 16th and 17th centuries, similar detailed studies, although probably less voluminous, are still a desideratum. In this article, the official orthography for Malay and Indonesian is used, except in quotations and the more generally known term of *shahbandar* (not: *syahbandar*).

The rise of the Islamic kingdoms and sultanates developed in two different settings: there are (a) the maritime centres, starting with Pasai (1202) and Malakka (1403), later being continued by Aceh (early 16th century), Demak (1478-1546), Banten (1525), Ternate (end of 15th century), Tidore (idem), Makassar (1605), Banjarmasin (begin of 16th century) and Pontianak (1771) which based their economics mainly on sea trade, whereas (b) Mataram (1582) retained an outspoken agrarian character, although, in the course of time, it gained suzerainty over a number of important seaports in Java and some oversea provinces on other islands.

(a) For the maritime sultanates, the backbone of their welfare was the harbour, and its administration had to be handled with special care. The most important functionary in the harbour administration was the *shahbandar*, or harbour master. He was usually appointed by the local ruler or sultan and chosen from among the foreign traders who had settled in the port. No salary was given to him. In big harbours, more than one *shahbandar* were sometimes active. Thus Malakka is reported to have had four of them at the same time during the period of its florescence before the Portuguese conquest (1511). The same holds true for Banda Aceh Darussalam during the reign of Iskandar Muda (1607-36). In such a case, each *shahbandar* was responsible for certain

national groups, including the one from which he originated himself. In Malakka, one *shahbandar* had to take care of the Gujarati traders, another one looked after the other "western" traders from India, Persia, Arabia, Pegu (Burma) and North Sumatra, a third one dealt with those originating "east" of Malakka like Palembang, Java, the Moluccas or the Philippine islands, and the fourth one was responsible for the Chinese.

The *shahbandar* had to supervise the merchandise, take care of its transport and storage, inspect the markets and guarantee the security of the ships and the well-being of their crew, passengers, and tradesmen. When a ship entered the harbour, he had at once to inspect it and estimate the value of the goods. Based on his estimation, tolls were fixed and those objects chosen which had to be presented as gifts to the sultan or ruler and other high officials. The owner of the chosen gift, however, had to give his consent. Otherwise, according to the *Navigation and commercial law of Amanna Gappa* (Codex 130, chapter xxxv, see below), this gift would have a personal character and the captain had to pay for it. The collected tolls had to be handed over by the *shahbandar* to the *tumenggung* who headed the civil administration of the whole city, including the harbour.

The import tax which was demanded in Malakka was not the same for all traders. Those originating "from above the wind", i.e. the West, had to pay 6% of the value of their merchandise. Only food supplies from Siam, Pegu (Burma), the western coast of the Malay peninsula and northern Sumatra were exempted.

Besides this import tax, 1 to 2% of the value had to be presented to the ruler, the *bendahara* (treasurer), and the *tumenggung*. After the *shahbandar* had reached agreement with the captain and the traders, he was to bring his gifts to their destinates. Tomé Pires observed that the Gujarati traders in particular, who were sailing with considerably sized vessels, used another procedure to pay their taxes. They asked a delegation of ten traders to re-estimate the whole merchandise loaded on their boat, take 6% of its total value and present it directly to the *tumenggung*. Thus all duties were paid at once, including the different kinds of gifts for the ruler and his officials. On the other side, the *shahbandar* responsible for the Chinese, Siamese and the people from Liu Kiu, on his turn, sometimes freed his clients from all kinds of taxes, but then he expected an appropriate "gift", choosing himself those goods he thought to be suitable.

If a trader wanted to settle at Malakka, he had to pay 3% as taxes, and in addition to this another 6% as royal taxes. For Malays, however, this latter sum was reduced to 3% only (Tjandrasasmita, 74 ff.).

Other regulations were valid for tradesmen originating from lands "below the wind", i.e. in the East. Formerly, they seem to have been free from any kind of taxes. It was just expected that their gifts to the ruler and high officials should be appropriate and this could mean at least as high as the official taxes and tolls for the traders from the West. Later on, they also had to pay 5% for their goods, except again for food supplies.

In Banda Aceh, the *shahbandars* together with their secretaries (*keureukön*, Malay: *karkun*) and other personnel were responsible to the *Balai Furdah*. This was a special office for levying the harbour dues, linked to the *Bayt al-Mäl* (Z. Ahmad, 92), which was headed by the Sri Maharaja Lela and the *penghulu kawal*, or supervisor of the guard. These officials,

too, were not real employees of the sultan, but it was expected that they should gain their living from the gifts the merchants had to deliver.

In relation to sea trade, the following kinds of tolls and taxes (*adat wasé*) were known in Aceh: the *hadia langgar*: a gift for the permission to cast the anchor; the *adat lhök*, for those ships anchoring in the harbour; the *adat memohon kunci*, to "ask for the key", i.e. to get permission for disembarkment after the other taxes have been paid; the *adat mengawal*, a donation for those Acehnese who guarded the ship during its stay in the harbour; the *adat hakk al-kalam*, a kind of registration fee; the *wasé kuala*, demanded by the *shahbandar* for disembarking or loading certain goods, for preserving the water supply for departing ships, and help for those stranded; the *adat cap*, to be paid with goods or in money to get the seal or permission of the sultan for sailing; the *adat kain*, a roll of textiles to be presented by the Indian and European merchants when getting the *adat cap*; the *adat kain yang ke dalam*, i.e. textiles destined for the court; etc. (Tjandrasasmita, 77 ff.; Hoessin, 116 f.).

From the time of Iskandar Muda, every merchant had to pay an additional tax, the *usur* (A. *‘usūr*), for the sultan. Differences between the taxes to be paid by Muslim and Christian merchants are mentioned but not explained.

Of equally high importance for the income of the ruler and his functionaries was the market. Here, the *hariya* was in charge of securing the payment of a number of duties claimed by the *adat*, the *adat hariya*, a rent to be paid by merchants who kept their goods in a storehouse which had to be prepared by the *hariya*; the *adat kamsen*, to be taken from merchants as an insurance against robbery; the *adat tandi*, a fee for the clerk weighing the goods in the market; and the *adat peukan*, demanded from people going to the market.

All these taxes and tolls mentioned above had to be transferred either by the *shahbandar* or the *hariya* to the *ulëë balang*, or district chief, who at the same time served as the local military commander. He distributed part of this money to some of his civil servants, whilst another part had to be presented annually to the court. Like the *shahbandar*, *hariya*, or other senior officials, the *ulëë balangs* did not receive a salary.

For the people living in the villages, some other kinds of taxes were known. Those farmers who received irrigation waters for their rice fields had to pay the *adat blang*, or *adat buët umong*. Rent rates to be paid by tenants ranged from 50% to 20% of the yields and depended on the situation of the land. If someone had a cause to be settled, he had first to pay the *adat peutoë* which permitted him to bring his cause to the court (*hak ganceng*). The judge (*kali*, *kādī*) and other elders sitting in the court session were entitled to receive the *adat tuha*.

Besides paying their taxes either in kind or money, the villagers had also to give their services voluntarily to the *ulëë balang* or the *keujhik*, or village chief, e.g. in preparing their rice fields. This had to be done in *gotong royong* (cooperation) by the villagers, without receiving any compensation but being provided with food.

Taxes which were not under the competence of the *ulëë balang* were those levied on forest products (*adat glé*) and the *adat peutuha* for bringing the pepper to the market; trade with pepper was a major concern of the sultan himself.

Complementary to these duties, which were more

or less based on customary law (*adat*), the obligations imposed by the *shari'a* according to the *Shāfi'i madhhab* had also to be fulfilled. Special attention was given to the handing-over of *zakāt*. If someone was reluctant, he had to be admonished either by the *keujhik* or the *teungku meunasah* who was specifically in charge of supervising those aspects of village life related to the *shari'a*.

In the port of Banten, West-Java, which was, besides Jambi, one of the main trading places for pepper, taxes were usually fixed incidentally, varying from ship to ship. Chinese traders usually had to pay 5% of the value of their goods, but the Dutch ships in particular often were faced with discriminatory high fees, which *inter alia*, stimulated them to strengthen their own new port of Batavia (1619). Besides the import taxes, a fee for anchoring had to be paid. Two-thirds of the whole sum were to be delivered to the sultan, the rest was for the *shahbandar*. Export taxes for local products, including pepper, were lower than those for products of foreign origin.

Since the rise of the first Muslim kingdom in Java with its centre in Demak (1478/1546), the seaport of Japara became the dominant trading centre of the island. It was able to maintain this position under the rule of the first rulers of Mataram, who were usually not too much interested in sea trade, concentrating their main interests in the agrarian interior of Java. Under Sultan Agung (1613-46) and the *susuhunan* Amengku Rat I (1646-77), Japara was for some time the capital of Mataram's East-coast province, headed by the *wedana bupati*, with the title *lumenggung*. The city itself, as well as the other ports, was governed by the *kyai lurah*. It is not clear whether it was to him or to the *wedana bupati* that the *shahbandar* and another official met by a Dutch visitor in 1631, the *petiat-tanda* "who supervised all fiscal offices and dominated all the river mouths", were responsible. At all events, it was in the end the main task of the *wedana bupati* to collect all custom duties from the ports, all taxes from his coastal province and those overseas tributaries (*daerah upeti*) which were directly under the supervision of one of the *bupatis* in his province, e.g. Palembang which was under Demak, Sukadana under Semarang, or Jambi which was directly under Japara. Part of the collected deliveries, especially those from the export trade of rice, which was the monopoly of the *susuhunan* himself and until 1657 was allowed to be traded only in Japara, had to be transferred to the court.

In the later years of Amengku Rat's I reign, and especially after the introduction of his policy of centralisation, the higher provincial functionaries were displaced, and the ports directly ruled by the *shahbandars* as *quasi-governors*. They were now directly responsible to the court, i.e. to the *wedana gedong* as the royal treasurer and storekeeper and had to spend much of their time there, which made it easier to control them. Simultaneously, Amengku Rat I introduced a new form of taxation, i.e. money taxation, in exchange for the formerly-used system of taxation which was based on natural and craft products. To increase the income of the court, he also farmed out the provincial revenues out to the officials and then demanded a specific annual sum to be delivered. In the course of time, the whole foreign trade, not only the export of rice, became a state monopoly (Schrieke, i, 184 f.).

Since the days of the Hindu empire of Majapahit, the tolls to be paid in the central and east Javanese

ports on the north coast had been very low, and were sometimes completely unknown, as in Gresik before 1612. Only Tuban formed an exception, and this was severely criticised by the Chinese. Moreover, certain nationalities could be exempted from fees, like the Dutch in Japara under Sultan Agung, or the Chinese, the latter certainly profiting from the fact that a number of *shahbandars* in the north Javanese port were of Chinese descent. But again, gifts were expected to be forwarded by them.

Another commercial centre attractive for merchants from the East as well as from the West was Makassar (Ujung Pandang), which since pre-Islamic days was known too for its free and open attitudes towards trade and its small demands of tolls. Although not directly dealing with questions of taxes and tolls, the *Navigation and commercial law of Amanna Gappa*, a Buginese codex compiled around 1676 and edited by Ph.O.L. Tobing in 1962 (1977), gives interesting hints about the financial obligations and rewards of the community living together for some time on the same ship. During the journey, the traders are not considered as passengers, but are divided into three or four classes of crew members with special tasks and duties given to each of them. Those categorised as "regular crew" may leave the vessel only after having bailed the water from the vessel and paid a fee for "descending" from the ship. The "casual crew" members, however, are free to leave the vessel wherever they want, without paying anything. For each class, the volume of merchandise as well as the part of the hold in which to put their goods are fixed. The freight rate is determined by the distance between the home port and the port of destination, for which detailed data are given.

The sum collected with the freight rates determines the income of the owner of the ship and its senior crew, i.e. the captain, the coxswain, and the *junbata* who has to take soundings and cast the anchor: if neither the captain nor the other two are friends of the owner of the ship, than the proceeds have to be divided into two equal parts, one for the owner and one for the other three. If one of them is a friend of the owner, than two-thirds are for the owner.

A number of regulations deals with the sharing of profit or loss between the dealer and the owner of the goods. According to the principle of *bagi laba*, profit or loss have to be divided equally between both of them, if, in case of a loss, this is not due to negligence on part of the dealer. Otherwise, he has to compensate for it. Another principle states that the family of the dealer, if the goods get damaged because of his negligence, cannot be claimed to participate in compensating for the loss (ch. vii). The principle of *bagi laba* knows, however, some modifications. When the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, he may claim a certain sum from his partner's family, but not more than half of the original capital. After that, he loses any right on the goods, even if his partner eventually reappears and has been successful. If the dealer in fact has died and suffered a loss by his own fault, then his family has to compensate in full (ch. xii).

Debts, too, demand special regulations. If a debtor has sold his properties but cannot yet repay his debts, he has for some time to serve as a slave with his creditor until his debts are extinguished. After that, no claim may be made, even if the debtor becomes a wealthy man (ch. xiv).

If a passenger-tradesman dies on the way and his

heirs cannot be found, his goods have to be turned over to the captain who may trade with them and enjoy the profits. Returning to the domicile of the deceased, however, his property must be handed over to his family, either in money or in kind (ch. xvi).

All these regulations are very similar to those relating to land tenure in the village (*desa*), and as a matter of fact, during its voyage the vessel is considered as a microcosmos in the same way as is the *desa* ashore, representing the cosmic order which has to be preserved through harmonious relationships among its inhabitants. The "owner" of this microcosmos stays outside of it, but he is represented by his deputy and his deputy's helpers. This deputy does not receive a salary, but has to live, like his helpers, from what he collects as rent, or taxes.

(b) Mataram, as the most powerful Islamic kingdom in Indonesia, did not base its economics on sea trade but on the products of its agrarian interior in Java. It continued the main spiritual and administrative traditions of the last Hindu empire of Majapahit which was destroyed by Demak in 1478. The student of its taxation system has to note with regret, however, that the late B. Schrieke did not live to implement his plan of writing a history of Javanese taxation (Schrieke, i, 26). The data collected and evaluated in such a study would not only have been helpful in obtaining a clearer picture about the fiscal and economic development of the Javanese kingdoms, and especially of Mataram, but might also have provided a well-documented basis for studies on the religious-cultural currents in Javanese society which continually gave rise to millenarian movements among the peasantry, caused by the deteriorating economic situation which again was mainly the result of the burden of taxes levied on the farmers.

Basically, the structure of the village (*desa*) and the kingdom were not much different. The village chief, and similarly the ruler in the greater context, were considered as the representatives of the deity and thus entitled to consider the land of the *desa*, or the main lands of the kingdom, as their own property, which they then rented out to the people. In some village societies, this conviction was modified: not the village chief himself, but the village community, owned the land, and the council of the elders had to decide who of the villagers might farm a certain piece of land. Thus in Kediri, East Java, all the land was named *haqullah*, whereas in Banten and Krawang, West Java, only uncultivated land was considered as *haqullah*, whereas cultivated land became *haquladam* (Kartohadikoesoemo, 238). If someone died or moved to another *desa* without leaving an heir behind, his land fell back under the authority of the *desa*. In some places, land was redistributed after a certain time cycle. Someone who wanted to sell "his" land had to notify the village government and pay the *uang paseksèn*.

The communal understanding of land ownership is evident in the Law Codex of Majapahit, which was, on the whole, still used in Mataram. Para. 259 states that anyone who had asked for permission to farm a rice field but afterwards leaves it uncultivated, has to restore by other means the value of the rice he might have yielded. In para. 261, anyone who leaves an already cultivated rice field on its own, with the result that the crop get spoiled or is eaten by animals, is categorised as a thief, and that could mean capital punishment (Slametmuljana, 37, 165).

The relationship between the village and the central authority was maintained mainly via the

taxes and labour obligations. As the land was never in fact considered as being the property of the farmer, he had to pay the *upeti*, which means tribute. This tax might rise to 50% of the harvest, but it could always be changed, according to the general situation. Besides this, a capitation tax, housing taxes, dues for different kinds of offences against the laws, etc. were known. Special taxes had to be delivered at occasions like child birth, wedding ceremonies and services for a deceased person. These could sometimes, if they coincided with warfare or other disasters, bring the villagers to the edge of ruin (cf. the report by C. van Maseyck, quoted by Schrieke, ii, 147). The special war tax which Sultan Agung raised mainly among the foreigners during his military operations in East Java (Surabaya) in 1625, is recorded as follows: all married Chinese had to pay 22½ reals, unmarried Chinese 18 reals, married Javanese in the coastal regions who had been his subjects for many years 4½ reals, unmarried and young men 4½ reals, all recently-acquired slaves from Madura and Surabaya ¼ real. This tax was repeated in the following year (Schrieke, ii, 148 f.). At times it was compulsory to purchase some kinds of spices, rattan, and cotton, and above all rice, the trade with which was, as already mentioned, a state monopoly under Amengku Rat. I. A major occasion to deliver the collected taxes at the court was the *'Īd al-Fiṭr*.

Labour obligations due to the ruler included the building of the *kraton* (palace), important streets or other state projects, and, in times of war, help the army mainly as carriers. The village chief and other district potentates, too, were entitled to summon the villagers for forced labour. Thus the principle of *gotong royong*, or cooperativeness, became more and more abused. Eventually, a *desa* could also be exempted from taxes but instead it was charged with the maintenance of a sanctuary.

Another source of income for the district rulers were the toll gates on streets and rivers which, especially since the middle of the 18th century when their number increased enormously, did great damage to inland trade, and therefore time and again contributed to the rise of social unrest.

*Upeti*, or tribute, had also to be delivered by a vassal or a dependency as a sign of loyalty, or by an ally as reward for any kind of help received before. It could be delivered in kind or money and could also comprise beautiful girls, rare animals or plants. Another way of fulfilling the duties towards the ruler was to send man-power. The annual tribute imposed, e.g., on Palembang in 1668, was one rix-dollar *per capita* (Dagregister 1668-9, quoted by Schrieke, ii, 227).

(O. SCHUMANN)

**DARYĀ KHĀN NOHĀNĪ**, local governor in Bihār under the Dihlī sultans. His original name is not known, Masnad-i 'Ālī Daryā Khān being his honorific title. He was the third son of Masnad-i 'Ālī Mubārak Khān Nohānī, Sultan Bahlūl's *mukta'* or governor of the province of Karā and Manikpūr. Daryā Khān Nohānī attached himself to Prince Nizām Khān (later Sultan Sikandar Shāh) during the reign of Sultan Bahlūl Lōdī. The first important event of his life was the battle of Ambāla, fought between Prince Nizām Khān and Tatār Khān Yūsuf Khayl, the rebel *mukta'* of the Panjāb in 890/1485. In 895/1490 he again fought on the side of Sultan Sikandar Shāh against his own father, who had joined the camp of the rival prince, Bārbak Shāh, and in 901/1496, Sikandar Lōdī appointed him as *mukta'* of Bihār in reward for his services.

In Bihār, Daryā Khān found that the Afghāns' capture of the eastern territories was easier than retaining control over them, for the rule of the overthrown Shārkī dynasty [q.v.] had struck deep roots, and the Muslim 'ulamā', the Hindu *zamīndārs* and the common people had been deeply attached to the Shārkī house for generations. But he gradually succeeded in consolidating Afghān rule there, taking measures to win over local support. He extended generous patronage to the scholars and made generous landgrants to the Sūfīs and *Sayyids*; and the old educational institutions were maintained, while tombs and mosques were repaired. Thus the town of Bihār grew into a metropolitan centre under his governorship.

During the reign of Sultan Ibrāhīm Lōdī, certain political events caused an estrangement between him and the sultan, although he had fought against his own son-in-law, Islām Khān Sarwānī, the rebel in Karā in 925/1519. In 930/1524, Nāsir Khān Nohānī, the elder brother of Daryā Khān, rebelled against the sultan in the Ghāzīpur *sakar*, and his flight to Bihār turned the sultan against Daryā Khān. In an attempt to save himself, Daryā Khān himself rebelled against the sultan and strengthened the defences of Bihār fort; but soon afterwards he died, leaving his son, Bahār Khān, as his successor. His son and grandson ruled over Bihār till the year 936/1530, when Shēr Khān Sūr supplanted the Nohānī rule by his own.

**DASHT-I KĪPĀK**, the Kīpčak Steppe, was the Islamic name of the territory called Comania by Christian writers: the great plains of what is now Southern Russia and Western Kazakhstan. Both names were given while this region was still dominated by the Kīpčak or Comans (the *Dasht-i Kīpčak* is mentioned in the *Dīwān* of Nāsir-i Khusrāw, who died between 465/1072 and 470/1077): they were retained when it passed under the control of the Golden Horde [see BATU'IDS], who subjected and absorbed the Kīpčak whilst adopting their speech in place of their native Mongolian. John de Plano Carpini and William of Rubruck travelled through the *Dasht-i Kīpčak* during the reign of Batu [q.v.]. Carpini, who traversed it from end to end, supplied for the first time the modern names of the great rivers he crossed: the Don and the Volga. Rubruck, who entered the steppe via the Crimea, described it as a "vast wilderness" extending in places over thirty days in breadth, in which there was "neither forest, nor hill, nor stone, but only the finest pasturage". Ibn Baṭṭūta's visit to the region occurred during the reign of Özbeḡ (712-42/1313-41). Like Rubruck he approached it from the south, through the Crimea; from Saray he proceeded in a westerly direction until he reached Byzantine territory. What little we know about social conditions in the *Dasht-i Kīpčak* is derived almost entirely from Rubruck and Ibn Baṭṭūta.

**DATES** [see TAMR].

**DAVID** [see DĀWŪD].

**DAWĀT**, ink holder, a synonym for *mihbara*, "inkwell". The term is also used for *mīklama*, a place for keeping the *kalam* or pen, and more generally for *kalamdān*, penbox.

Islamic treatises describe the various ways of preparing ink and give different accounts of inkwells, *mihbara* or *dawāt*, that were used in their time. The *dawāt* is, according to al-Kālkashandī, "the mother of all writing tools", and "a scribe without an inkpot resembles a man who enters a fight without a weapon". Following traditional religious relationships between the art of writing, meaning the transcribing of the "Word of God", the Qur'an and the tools used for writing, various Islamic writers prohibit the use of inkwells made of precious metals, and call for the omission of human and animal forms in their decoration. However, the 4th/10th century poet al-Kushādīm already accused the learned men of his time of being proud of their gold-and-silver-decorated inkpots. The religious prohibition of depicting human and animal forms was also disregarded.

The use of glass pots and the preference for the round shape, as suggested by al-Kālkashandī, are documented by some 3rd/9th to 4th/10th century inkpots that have been preserved (Baer, *Inkwell*, n. 4; *The arts of Islam*, Hayward Gallery, 1976,

nos. 117-8, with octagonal outer form). A fragmentary cylindrical cast-bronze vessel found at Nīshāpūr suggests that this type of inkwell was used in Eastern Iran as early as the Sāmānid period.

In the course of the 6th/12th century, particularly during its second half, cylindrical bronze inkwells were produced in different Iranian workshops. They were of comparatively small size, and each was originally covered with a separate lid with a domed centre. Lid and body were generally provided with small loops or handles for fastening the pot to the hand of the scribe, and they were decorated with traced and inlaid silver and copper ornaments. Several signed inkwells from the mid-6th/12th to the early 7th/13th centuries, including some of Khurāsānian workmanship, have been preserved. On two of them the decoration includes a human figure, presumably the owner of the inkwell, proudly presenting a cylindrical object of the same type as the vessel itself (Toronto, Royal Ontario Museum, ex-Kofler collection, and London, Victoria and Albert Museum). The covers of the Iranian inkwells are surmounted by a lobed dome that rests on a flat cylindrical collar. In the Syrian specimen, a hemispherical dome rests directly on the horizontal rim, and is surmounted by a pear-shaped finial terminating in a round knob. Both traditions blend in an early 7th/13th century inkpot in the Metropolitan Museum of Art (Baer, *Inkwell*). Three West-Iranian, early Ṣafawid inkpots signed by Mīrak Ḥusayn Yazdī point to the continuation of this type in the 10th/16th century. Apart from cylindrical caskets with small glass receptacles for ink and other writing implements, penboxes with a separate compartment for the *qalam* were used since early times. The earliest known so far is a bronze *qalamdān* dated 542/1148 in the Hermitage which has the shape of a parallelepiped. It is closed and has two openings on opposite ends, one for the ink and the other for the *qalam*. More common is the open, originally East-Iranian, wedge-shaped type made in two parts, in which the inner, compartmented box could be entirely removed. These penboxes were probably placed in a belt, and were commonly used in the Ottoman empire.

Rectangular open boxes with a hinged or separate cover are apparently based on wooden models. The earliest known metal penboxes from the middle of the 6th/12th century are round-ended, and these continued to be popular after the Mongol conquest; but in Mamlūk and Ottoman times, the rectangular penbox was more common. It was imitated by the Chinese in blue and white porcelain for export to the Near East and by Iznik potters working in the early 10th/16th century. A good example of its kind, decorated with a pseudo-Kūfic inscription and floral scrolls in pale blue on white, is kept in the Godman collection in England.

*Dawāt* and *qalamdān* are depicted in miniatures as early as the late 6th/12th century (*K. al-Diryāk*, Bīshr Farēs, *Le livre de la thériaque*, Cairo 1953, Pls. VII-IX). A round-ended penbox is shown in the *Djāmī' al-tawārīkh* copy in the University Library on Edinburgh (*Survey*, Pl. 827 A), while a small inkpot attached to a penbox of the easily portable type is painted by Behzād in a mosque scene of the *Bustān* of Sa'dī in Cairo, dated 893/1488 (*Prop. Kunstgeschichte*, no. 333).

*Bibliography*: General information based on literary sources can be found in A. Grohmann, *Arabische Paläographie*, i, Vienna 1967, 117-27. There is no comprehensive study of the *dawāt* in

visual art. For a short survey, see E. Kühnel, *Islamische Schriftkunst*, Berlin-Leipzig 1942, 80-4. One type of inkwell has been studied by E. Baer, *An Islamic inkwell in the Metropolitan Museum of Art*, in R. Ettinghausen (ed.), *Islamic art in the Metropolitan Museum of Art*, New York 1972, 199-211. The writer is preparing a comprehensive study of the *dawāt* in Islamic art and civilisation. Representations of the different types are included in general books on Islamic and Persian art and in exhibition catalogues: A.U. Pope (ed.), *A survey of Persian art*, London-New York, 1939-64; J. Sourdell-Thomine and B. Spuler (eds.), *Die Kunst des Islam*, Propyläen Kunstgeschichte, Bd. 4, Berlin 1973; *The arts of Islam*, Hayward Gallery, 8 April - 4 July 1976, The Arts Council of Great Britain, 1976; A.S. Melikian-Chirvani, *Le bronze iranien*, Musée des Arts Décoratifs, Paris 1973. Signed metal inkwells and penboxes are listed in L.A. Mayer, *Islamic metal-workers and their works*, Geneva 1959 (incomplete). (E. BAER)

**DĀWIYYA** and **ISBITĀRIYYA**, the Arabic name for the Knights Templars and the Knights Hospitallers respectively. With the partial and very late exception of the Teutonic Knights (see below), the other military orders established in Syria during the Crusades went unnoticed (or at least unnamed) by Arabic writers. Since it is impossible to give here even a summary history of these extraordinary organisations, which in any case belong more to European than to Islamic civilisation, we shall restrict our consideration to two questions: (1) when and by what channels did the terms *dāwiyya* and *isbitāriyya* enter the Arabic language; and (2) how fully did Muslim historians understand and attempt to describe the orders?

*Isbitāriyya* and its common variant *isbitār* are simply arabised forms of Latin *hospitālis*, "lodging-place for wayfarers", perhaps influenced by *hospitārius*, "hospitaller" in a literal sense. (For the Latin terms, see J. Riley-Smith, *Knights of St. John*, 277 n. 5 *et passim*.) Two other variants, *istibār* and *istibāriyya*, which seem especially characteristic of later writers beginning with Ibn Wāṣil [*q.v.*], plainly represent the assimilation of a foreign word to the Arabic *maṣdar* pattern *ifti'āl*. Though the etymology is clear, we do not however know precisely when the Muslims of Syria first became aware of the Hospitallers as a distinct group in the Frankish army. The first recorded mention of them is in Ibn al-Kalānīsī (*Dhāyḥ ta'rikh Dimashk*, ed. Amedroz, 339), who simply lists them without further explanation as members of a Frankish force overwhelmed near Bāniyās in 552/1157. We must therefore assume that by this date the term *isbitāriyya* was in common use among Syrian Muslims. It had doubtless become current only recently, since the Hospitallers did not play a major military role before 530/1136, when they were assigned the stronghold of Bayt Džibrīn (Bethgibelin) by King Fulk, while the real foundations of their power were laid only in 539/1144 with the cession to them of Ḥiṣn al-Akrād [*q.v.*] (Crac des Chevaliers) by Count Raymond II of Tripoli.

In the passage just mentioned, Ibn al-Kalānīsī also names the Templars as members of the defeated Frankish detachment; as with the Hospitallers, this is the oldest Arabic reference to the Templars, and again the term used for them, *Dāwiyya*, is left unexplained. Hence we must assume that by 552/1157 the Templars also were commonly perceived

as a familiar and distinct element within the Frankish army. Indeed, Usāma b. Munkidh, writing some three decades after the event, records a visit to the Aḡṣā Mosque in Jerusalem in the years 532/8-1138-44; it was then partially occupied by the Templars, whom he calls "my friends" (*ashdikāʿī*). (*K. al-ʿIṭbār*, ed. Hitti, Princeton 1930, 134-5). At the time of Usāma's visit, the Templars had been formally recognised as an order of the Church for only ten years or so (at the Council of Troyes, 1128), and their origins went back only to 1119. As in the case of the Hospitallers, therefore, the Muslims of Syria were not slow to become aware of this new element in Frankish society.

On the other hand, the use of the word *Dāwiyya* for the Templars raises real problems. For many reasons, one cannot accept Hitti's suggestion that *dāwiyya* is a "corruption of a Syriac word for 'poor', the original name of the order in Latin being *Pauperes Commilitones Christi*" (*History of the Arabs*<sup>3</sup>, 644 n. 3). Rather, it seems best to derive the word from Latin *dēvōtus*, Old French *devot*, "one who has vowed himself to God's service". Phonetically, this etymology seems to fit both *dāwiyya* and its variant *daywiyya* reasonably well. Moreover, though it is true that the Templars did not ordinarily call themselves *dēvōtī*, this term accurately characterises their status and outlook, and may well have been the way in which they were described to the Muslims by local informants. (Cf. the descriptions of them by William of Tyre, *RHC, hist. occ.*, i, 520; *Chronique de Michel le Sirey*, ed. and tr. J.B. Chabot, Paris 1899-1914, iii, 201-3, 207-8).

As to the understanding of the orders displayed by the Muslim writers of the 6th/12th and 7th/13th centuries, we should not expect any full or accurate descriptions, for this would have required an insight into the corporate nature of Frankish society such as the Muslims did not possess (cf. CRUSADES and IFRANDJ). The Franks are often perceived and characterised as individuals in the Arabic texts, but they are very rarely seen as members of a socio-economic class, nationality, or corporate entity; the observations of Usāma b. Munkidh, Ibn Djubayr, and Ibn Wāṣil (*Mufarridj*, iv, 248-51) represent the furthest limit of Muslim knowledge and concern in this period. Nevertheless, it remains curious that the Templars and Hospitallers were perceived early on as a group apart from other Frankish warriors and yet their precise nature was never investigated.

Throughout the Saldjūk and Zangid periods notices on the orders are extremely rare in the Arabic texts; it is only in the time of Ṣalāh al-Dīn, especially in the years of the reconquest and the Third Crusade (583-8/1187-92), that they become fairly common. This new prominence is certainly due in part to the orders' greatly increased military and political importance during and after the 1170s, but it is equally owed to the writings of ʿImād al-Dīn al-Kātib al-ʿIṣfahānī, which were the chief source for Ṣalāh al-Dīn's reign even for his own contemporaries (e.g. Ibn Abī Ṭayyī, Ibn al-Aṭhīr). ʿImād al-Dīn's *al-Faṭḥ al-ḡusī* shows him to be rather well-informed on the orders and suggests some progress in the Muslims' understanding of them; he knows which castles belong to which, he can give an accurate description of their buildings in Acre and Jerusalem, he seems to have some sense of their internal organisation (though he never discusses it explicitly). He respects the military qualities of both orders, but reserves his fiercest invective for the Templars. One of the ugliest pas-

sages in Arabic literature, unique in its gloating and brutality, is surely that which he devotes to Ṣalāh al-Dīn's massacre of Templar and Hospitaller prisoners after Hītūn. Ibn al-Aṭhīr uses ʿImād al-Dīn's information to make a point of his own—the orders' boldness and fanaticism make them a standing threat to the Muslims, and sound public policy requires their extermination. Indeed, he sharply criticises Ṣalāh al-Dīn on those occasions when he decides to release Templar and Hospitaller prisoners instead of summarily executing them. (Ibn al-Aṭhīr [Beirut reprint, 1966], xi, 531, 538, 558; xii, 22-3).

For the Ayyūbid period after Ṣalāh al-Dīn (589-658/1193-1260), there are only scattered reports on the orders, but the language used suggests a rising level of knowledge and sophistication. In a long report on al-Manṣūr Muhammad of Hamāt's campaign against the Hospitallers in 599/1203 (*Mufarridj*, iii, 141-50), Ibn Wāṣil refers to them for the first time as *bayt al-isṭibār* (*domus hospitalis*), an expression which is henceforth common for both orders and which seems to imply some sense of their corporate nature. Likewise, for the first time they are called *al-ikhwa* (*fratres*), a term suggesting a similar conclusion. Finally, all officers of the orders had previous been named simply *mukaddam*, whatever their real rank; now, however, Ibn Wāṣil distinguishes two subordinate officers, *mukaddam al-turkubliyya* (Turcopolier) and *kūmiṣ min al-bahriyya* (perhaps Commander of the Ship; cf. Riley-Smith, *op. cit.*, 329-30). Though Muslim writers never display a systematic knowledge of the orders' internal structure, this passage at least signals increased contact and familiarity. On a different level, there is a remarkable passage in Ibn al-Aṭhīr (xii, 465-6, *anno* 623) which suggests some comprehension of the special tie which bound the Templars and Hospitallers to the Papacy, and which also demonstrates that Muslim authors had access to Christian informants for their information about such things.

The Mamlūk chronicles *per se* seem to add little that is new to the Ayyūbid texts, but they do reproduce a number of treaties between the Mamlūk sultan and various European rulers which reveal a sound assessment of the place of the orders in the Mediterranean balance of power, and whose precise terminology suggests a fairly accurate knowledge of their internal organisation. Thus in a treaty of 686/1287 between al-Manṣūr Ḳalāwūn and the King of Aragon, the orders are identified as potential enemies of Egypt and Aragon equal to the Papacy, to the Genoese and Venetians, and to the Byzantines (Amari, *Biblioteca arabo-sicula*, Leipzig 1857, 345). Again, when Ḳalāwūn dictated the terms of a truce with Acre in 682/1283, he recognised that the royal *bailli* could no longer command the obedience of all the Franks there, and so the chiefs of the orders were included among the signatories to the treaty. Especially striking is the precise and accurate titulature assigned to these men (*ḥadrat al-mukaddam al-ḡalilī ifrayr* [Templars]; *al-mukaddam ifrayr* [Hospitallers]; *al-marṣḥān al-adḡall ifrayr . . . nāʿib mukaddam* [Teutonic Knights]). It is in this document that the Teutonic Knights appear to be identified for the first time as a separate entity, under the name *bayt al-isṭibār al-amm* (the last word doubtless being an error for *al-almān*) (Maḡrīzī, *Sulūk*, i, 985-6, 995). Whatever knowledge of the orders may be ascribed to the historians and chancery of the early Mamlūk period, however, it would develop no further. For with the fall of Acre (690/

1291), the dissolution of the Templars (1307-14), and the transfer of Hospitaller headquarters to Rhodes (1306-10), Syro-Egyptian Muslims no longer had any real reason to take note of the orders. Henceforth, only the Hospitallers of Rhodes were to play any part in Islamic history, sc. that of the Ottomans.

**Bibliography:** The literature and published documentation on the orders is of course overwhelming, but the bulk of it refers to their European branches rather than to Syria. (This is especially true of the Templars, whose central archives were destroyed when the order was abolished in the years 1307-14.) The best general history of the orders remains H. Prutz, *Die geistlichen Ritterorden*, Berlin 1908; For the Hospitallers in Syria, we have an excellent recent study by J. Riley-Smith, *The Knights of St. John in Jerusalem and Cyprus, c. 1050-1310*, London 1967. For the Hospitallers in Rhodes (1306-1523), the most recent overviews are the chapters by A. Luttrell and E. Rossi in K.M. Setton, ed., *A history of the Crusades*, Madison, Wisc. 1975, iii, 278-339. Due to the lack of archival materials, there is no serious modern work which focuses on the Templars in Syria; however, A.J. Forey, *The Templars in the Corona de Aragón*, London 1973, is a detailed study of their role in Spain during the *reconquista*. The political and diplomatic role of the orders in the East is of course presented in the standard works on the Crusades. Archival materials can be approached through two major collections: *Cartulaire général de l'ordre des Hospitaliers de St-Jean de Jérusalem* (1100-1310), ed. J. Delaville le Roulx, Paris 1894-1906; and *Cartulaire général de l'ordre du Temple*, 1119?-1150, ed. Marquis d'Albon, Paris 1913. An extremely rich source for the Hospital's Rhodian period is the *Catalogue of the records of the Order of St. John of Jerusalem in the Royal Malta Library*, ed. J. Mizzi, V. Borg, A.Z. Gabarretta, Malta 1964. As suggested in the text, the Arabic sources all but ignore the orders during the Saldjūk and Zangid periods. For the Ayyūbid period, the most interesting references are in 'Imād al-Dīn al-Kātib al-Isfahānī, *al-Fath al-kusūfī fī 'l-fath al-Kudsī*, ed. Landberg, Leiden 1888; tr. H. Massé, Paris 1972; Ibn al-Athīr, *Kāmil*; Ibn Wāsil, *Mufarriǧ al-kurūb*, ed. al-Shayyāl et al., Cairo 1953. In the early Mamlūk period, valuable information is yielded by Ibn 'Abd al-Zāhir, *al-Rawd al-zāhir* (on Baybars), ed. A.A. Khawaiter (SOAS thesis, 1960); idem, *Tashrif al-ayyām* (on Kalāwūn), ed. M. Kāmil, Cairo 1961; al-'Aynī, *'Ikd al-djūmān*, fragments publ. in *RHC, Hist. or.*, ii; Baybars al-Manṣūrī, *ẓubdat al-fikra*, unpubl. (see Brockelmann, II, 44, S II, 43). In general, Ibn al-Furāt, *T. al-duwal wa'l-mulūk*, vii-viii, ed. Zurayk and 'Izz al-Dīn, Beirut 1936-8, gives the most reliable extracts of unpublished 7th/13th century materials. Maḳrīzī, *Sulūk*, i, ed. M.M. Ziyāda, Cairo 1934, though late and of little use in itself, is important because of the editor's careful indexes and cross-references. Among Eastern Christian sources, Kinnamos (Greek), Matthew of Edessa (Armenian), Bar Hebraeus and (of highest importance) Michael the Syrian (Syriac) may be mentioned.

(R. STEPHEN HUMPHREYS)

**DAWLAT KHĀN LODĪ**, 27th ruler of the Dihlī sultanate, was the son of Mahmūd Khān Lodī and a cousin of Mallū Iqbāl Khān. Native Persian chroniclers say nothing about the early

history of this Afghān nobleman of Dihlī who emerged as a dominant figure during the early years of the 9th/15th century when Tughlūkid authority was on the verge of dissolution. He served Sulṭān Nāṣir al-Dīn Mahmūd II, the last ruler of the dynasty, both as private secretary with the title *'Azīz al-Mamālik* ("Great one of the State") and as military governor of the Dō'āb. On the death of the Sulṭān in 815/1412, the *amīr* offered the throne of Dihlī to Dawlat Khān Lodī, who thus assumed power, but without the honours of royalty, as incorrectly mentioned by Firīšta, ii, 292; for the Tughlūkid monarchy after Firūz Shāh's death in 790/1388 had become a moribund institution, as evidenced by Badā'unī in his *Muntakhab al-tawārīkh*, i, 266, where he speaks of Sulṭān Mahmūd's writ as extending only from Dihlī to Palam, a suburb of the capital.

The first act of Dawlat Khān Lodī on becoming ruler was to move out of the capital towards Katahr, where he received the allegiance of Narsingh Ray and other Hindu landlords. But he had to retreat from Kalpi in the face of fierce onslaughts by Ibrāhīm Shāh, the Sharḳī ruler of Djanpūr [see SHARKIDS]. Dawlat Khān's downfall came at the hands of his arch-rival Khidr Khān of Multān, who taking advantage of the prevailing disorder in and around Dihlī, attacked the capital in 816/1414. Dawlat Khān took refuge in the fortress of Siri, which was invested by Khidr Khān for four months. At last, he capitulated, and was sent prisoner to Hiṣār-Firūzshāh, where he soon died. The Dihlī Sultanate henceforth enjoyed a fresh lease of life for a little more than a century, with Khidr Khān becoming the first ruler of the Sayyid dynasty.

(ABDUS SUBHAN)

**DAWR** (A. pl. *ādwar*), "revolution, period"; the periodic movement of the stars, often coupled with *kawr* (pl. *akwār*), "great period" (see *Risāla* no. 35 of the *Rasā'il Ikhwān al-Safā'*, [q.v.]: *Fī'l-ādwar wa'l-akwār*). In the doctrines of the extreme Shī'ī sects, the period of manifestation or concealment of God or the secret wisdom.

The Ismā'īliyya [q.v.]; According to the earliest Ismā'īlī doctrine, history is composed of seven *adwār* of seven "speaking" (*nāṭīk*) prophets, each of whom reveals a new religious law (*sharī'a*): Adam Noah, Abraham, Moses, Jesus, Muḥammad and the Mahdī or Kā'im. Each *nāṭīk* has his trustee (*waṣī*) who reveals the inner (*bāṭin*) meaning of the respective *sharī'a*. The seventh *nāṭīk*, the Kā'im, will abrogate Muḥammad's *sharī'a* and restore the pure *tawhīd* [q.v.] of the times before Adam's fall. The period between each two *nāṭīks* is called "the little period" (*al-dawr al-saghīr*). The whole cycle from Adam to the Kā'im (*al-dawr al-kabīr*) is also called "period of the concealment" (*dawr al-satr*), because the gnosis (*'ilm*) is concealed by the outward (*zāhir*) law and is only known by the initiates. During the period of concealment, the seven planets rule the world. Before the *dawr al-satr*, there was a period of manifestation or revelation (*dawr al-kashf*) during which the twelve angels of the Zodiac kept the unadulterated pure *tawhīd*; at the end of time, the Kā'im will bring forth a new *dawr al-kashf*. In the literature of the Tayyibiyya [q.v.], an eternal alternation of *satr* and *kashf* is supposed.

The Druzes [see DURŪZ]: In the Druze canon,

the periods of reincarnation of the Divine Creator are called *adwār*. The 13th treatise counts 70 *adwār*, each of 70 × 70 × 1000 years.

The Nuṣayrīs [q.v.]: Like the Ismā'īlīs, the Nuṣayrīs assume a cycle of seven *adwār*, in which the Divine "Sense" (*ma'nā*) incarnated himself in Abel, Seth, Joseph, Joshua, Aṣaf (the vizier of Solomon), Simon Peter and 'Alī, while his "Name" (*ism*), i.e. his prophet, was incarnated in Adam, Noah, Jacob, Moses, Solomon, Jesus and Muḥammad.

The conception of the seven periods of revelation seems to derive from old Jewish-Christian traditions like those preserved in the Pseudo-Clementine Homilies; it is a well-known topic in the speculations of certain Gnostics and Manichaeans (see T. Andrae, *Die Person Muhammads in Lehre und Glauben seiner Gemeinde*, Stockholm 1918, 322 ff.; H.H. Schaefer, *Die islamische Lehre von vollkommenen Menschen*, in *ZDMG*, lxxix (1925), 213 ff.).

Dussaud, *Histoire et religion des Nuṣairīs*, Paris 1900, 42 f.; H. Corbin, *Le temps cyclique dans le mazdéisme et dans l'ismaélisme*, in *Eranos Jahrbuch*, xx (1952), 149 ff.).

(H. HALM)

**DAYN** (A.), like *obligatio* in Latin, means literally "debt", but also expresses the idea of "claim". This predominance of the passive aspect makes it necessary to specify the sense of the relationship; hence when one says *lahu dayn*, this means that an obligation is due to someone, i.e. he is a creditor, whereas with *'alayhi dayn*, this means someone has an obligation to fulfill, i.e. he is a debtor. Claim and indebtedness are thus two aspects of the obligation, according to whether the active or the passive side is in mind, and this is why it seems more exact to speak of "obligation" for *dayn*.

The obligation (*dayn*) which is a personal right is opposed to that in an object (*ḥakk fi 'l-'ayn*). The idea of *dayn* rests on that of *ḥimma*, a word which has a very wide sphere of applicability: it is the capacity of being subject to the law, in fact the basis of an obligation. Hence patrimony and *ḥimma* come together in practice. It is thus easily understandable why the *dayn* is classified by Muslim authors among goods or chattels (see al-Māwardī, *Adab al-kāfī*); in effect, it is an incorporeal possession belonging to the creditor and existing in the patrimony or personal estate of the debtor, so that this possession makes necessary an "action" on the debtor's part (see Abū Ḥanīfa's definition of the *dayn*: that it is an action required (*muṭālabā*)). But this connecting obligation, this link, is often thrust into the background, and authors confuse the right and the thing which is the object of the right (cf. the analogy of the distinction of *Schuld* and *Haftung* in German for the obligation, and *dayn* and *muṭālabā* in Arabic). The obligation (*dayn*) must be distinguished from its object (*'ayn*) or personal action (*ḥimma*). The obligation which has as its object a non-fungible, determinate thing (*dayn fi 'l-'ayn*) is different from the obligation which has as its object a personal action (*dayn fi ḥimma*). In regard to obligations which have a determinate thing (*'ayn*) as object, the expression *ḥimma* is not used; if the debtor refuses to hand it over, his personal patrimony is not responsible for it.

The sources of obligation (*dayn*). Obligation or *dayn* can arise out of a contract (loan, sale,

surety, transaction or marriage), or out of a tort requiring reparation.

The elements of obligation (*shurūṭ al-dayn*). Obligation necessarily presupposes (a) at least two persons, i.e. a person who is required to perform a certain act, the debtor (*madīn, maṭlūb*), and a second person to whom the fulfilment of this performance is due, the claimant (*rabb al-dayn, ṭālib*). The word *gharīm* indicates the two of them (Latin *reus*). But there can be several principals involved, claimant or debtors, as when there is joint responsibility for the obligation. (b) An object, i.e. the performance which is obligatory and which the other party is legally entitled to exact; a multiplicity of objects is possible (the case of alternative obligation). (c) A cause; Muslim authors often understand by this the origin of the obligation.

The effects of the obligation. This last can be completed or not completed. Where it is completed, see below, there results the extinguishing of the obligation. If it is not completed, the claimant has a right to recover damages because of loss suffered through the non-completion of the obligation. A formal notice is not necessary: *Dies interpellat pro homine*. From the very fact of non-performance, the debtor is presumed to be at fault, and must prove either force-majeure or act of God (*amr al-sullān, darūra, 'udhr* or *āfa samāwiyya*).

Modalities of the obligation sc. settlement and stipulations. In principle, only monetary claims can be affected by a settlement. This last is always presumed in the interest of the debtor. The stipulations can be suspensive or resolutive, but there is a reluctance to validate conditional obligations.

Extinguishing of the obligation. The usual method here is through payment, but there are other ways, e.g. dation in payment (*istibdāl*), extinction of the debt through one debtor or creditor succeeding to the estate of another, substitution of a new obligation, compensation, etc.

Modern legal phraseology translates *dayn* by "claim", and to this are added several epithets: an assigned or assignable claim, a certain one, an unsecured, simple one, a commercial one, a contested one, a dubious one, one which is due, a guaranteed one, etc. (see the translations of these terms in the *Dictionnaire des termes juridiques et commerciaux, Français-Arabe*, by Mamdouh Hakki, s.v. "créance").

**DEHKHUDĀ**, 'ALĪ AKBAR (1297-1375/1879-1955), poet, satirist and lexicographer of modern Iran. During the constitutional revolution (1905-9), he acquired a reputation as poet and satirist. But later, with the rise of Riḍā Shāh Pahlavī [q.v.], he gave up all political activities, devoting himself to literature and philology. Besides the satirical pieces, the so-called *Carand u parand*, in which his very sarcastic humour secured vast popularity for the journal *Šūr-i Isrāfīl*, his literary

output includes a Persian translation of Montesquieu's *Esprit des Lois* (unpublished), a review of Nāṣir-i Khusraw's *Dīwān* (ed. S.N. Takawī and M. Mintūwī, Tehran 1307/1928), a four-volume collection of Persian proverbs and aphorisms, called *Amṭhāl u ḥikam* (*Madjma' al-amṭhāl*, as cited in E.E. Bertels's *Očerki*, is not the correct title of the published volumes), and the extensive lexicon, *Lughat-nāma*, which has had to be published mainly as a posthumous work and is still in progress. While Dehkudā is generally considered a pioneer in modern, simple prose-writing, his poetical work—except for a few pieces published in popular periodicals—seems rather of a turgid and pedantic character, though often well-spiced with humour.

**Bibliography:** The *Lughat-nāma-yi Dehkudā*, of which 203 fascicules in about 22,796 pages, in folio, of 3 columns each, have so far (March 1976) been published), contains an introductory volume (fascicule 40) in which more details on the author's life and work are given, (cf. also *Dīwān-i Dehkudā*, ed. M. Mu'in, Tehran 1334/1955; Dehkudā, *Amṭhāl u ḥikam*, 4 vols., Tehran 1308-10/1929-30; Y. Pagliaro, *Storia della letteratura persiana*, Milan 1960, indices; J. Rypka et alii, *History of Iranian literature*, Dordrecht 1968, index; Gh. Yousofi, in *ZDMG* (1975), 117-32.

(A.H. ZARRINKOOB)

#### DEMESNE [see DAY'A].

**DEMIRDĀSHIYYA**, a branch of the *Kh*al-watiyya [*q.v.*] *Šūfī* order named after Muḥammad Demirdāsh al-Muḥammadi, an Azeri Turk as is suggested by his name. According to 'Abd al-Wahhāb al-Ša'rānī, *al-Ṭabaḳāt al-kubrā*, Cairo 1954, ii, 147 ff. (cf. Maḥmūd Rabī' and Ḥasan Kāsim (eds.), Abu 'l-Ḥasan Nūr al-Dīn al-Sakhāwī, *Tuḥfat al-albāb wa-bughyat al-tullāb fi 'l-ḫiṭāṭ wa 'l-mazārāt wa 'l-tarāḍīm wa 'l-baḳā' al-mubārakāt*, Cairo 1937, 15 f.), he had belonged to the community of mystics which had gathered around 'Umar al-Rūshānī (d. 892/1486), a protégé of the Aḳ Ḳoṣyūnlu [*q.v.*] ruler Uzun Ḥasan and a *ḫalīfa* [*q.v.*] of the second *ḫalīfa* [*q.v.*] of the order Yahyā al-Širwānī (d. 869/1464).

The biographies written in the late 19th and early 20th century by Yūsuf b. Ismā'īl al-Nabahānī, *Djami' karāmāt al-awliyā*, Cairo 1329, ii, 9 f., and Muḥammad Zāhid al-Kawṭharī, *Nabrās al-muḥtadī fi idjūlā' anbā' al-'Arif bi-Allāh Demirdāsh al-Muḥammadi*, Cairo 1364/1944-5, state that Muḥammad Demirdāsh had originally been a *manlūk* of the Sultan al-Ashraf Sayf al-Dīn Ḳāyit Bāy [*q.v.*] and the *murīd* [*q.v.*] of Aḥmad b. 'Uḳba al-Ḥadramī (d. 895/1489-90) before he joined the disciples of al-Rūshānī in Tabriz, from where he is said to have returned to Egypt towards the end of Ḳāyit Bāy's reign. This version is in accordance with the contents of the official biographies published on behalf of the *ṭarīka* [*q.v.*] at the beginning of the 20th century (appended to Muḥammad Demirdāsh al-Muḥammadi, *Risāla fi ma'rīfat al-ḫaḳā'ik wa 'l-ma'ānī min ḳawlihi* ["*Wa laḳad āṭaynāka sab'ann min al-mathānī*"], Cairo n.d., 27-34 and 55-63), which are mainly based upon unpublished sections of 'Abd al-Ra'ūf al-Munāwī's *al-Kawākib al-durriyya fi tarāḍīm al-sāda al-šūfiyya*.

Muḥammad Demirdāsh was an adherent of Ibn al-'Arabī's metaphysics, and he must have been influenced by the teachings of the *Shādhiliyya* order in which he had been initiated by his first spiritual master Aḥmad b. 'Uḳba (cf. Demirdāsh, *Risāla fi Ma'rīfat al-ḫaḳā'ik*, 32 f., 62), as appears in his treatises *al-Kawl al-farīd fi ma'rīfat al-tawḥīd*, Cairo n.d., and in *Risāla fi Ma'rīfat al-ḫaḳā'ik*, mentioned earlier in the article. The liturgy of the order refers in no way to any special kind of mystical theology, as was noted by E. Bannerth, in *WZKM*, lxii (1969), 20, who described the *ṭarīka's ḥaḍra* [*q.v.*]—*maḥyā* in the terminology of the order—and the ceremonial surrounding the yearly occasion of retreat (*ḫalwa*) for a period of three days at the end of *Šha'bān*, as it was practiced in the 1960s (see bibliography). It is not unlikely, however, that the liturgy may have mirrored the influence of Ibn al-'Arabī's thinking upon Muḥammad Demirdāsh at an earlier stage, since we have no evidence of a fixed ritual until about a century after his death in 929/1524, when his great-grandson and *ḫalīfa* Muhammad al-Ṣaghīr composed a treatise in *radjāb* metre, entitled *Tuḥfat al-tullāb al-rā'imīn ḥadrat al-wahhāb wa-uṣūl al-ṭarīk*, Cairo n.d., which codified the ritual and has been the principal manual of the order ever since.

Among others, this manual gives the rules for the so-called *ḥūwiyya*, the most characteristic part of the ritual in which the head of the order, a number of *nuḳabā'* (sing. *naḳīb* [*q.v.*]) and some members form a circle turning anti-clockwise (or occasionally two circles, one moving clockwise and the other circle moving anti-clockwise), while calling "*hū*, *hū*". This part of Demirdāshī ritual has been subject to outside criticism in the past (cf. 'Abd al-Ḳādir b. Muḥyī al-Dīn al-Arbilī, *Hudjūjat al-dhāḳirīn wa-radd al-munkarīn*, Alexandria 1299/1881-2, 43 ff., and 'Abd al-Ghanī al-Nābulusī, *Kutāb al-Ḥaḳīka wa 'l-madjāz fi rihlat al-Ša'm wa-Miṣr wa 'l-Hudjāz*, ms. Berlin 6146, fols. 242a ff.).

From the days of Muḥammad Demirdāsh al-Muḥammadi until the present, ceremonial gatherings have been confined to the only existing *zāwiya* [*q.v.*] of the order, situated in the present-day 'Abbāsiyya quarter of Cairo. The original establishment and the surrounding land had been donated to Muḥammad Demirdāsh by Sultan Ḳāyit Bāy (cf. *Risāla fi Ma'rīfat al-ḫaḳā'ik*, 59). It was visited by Ewliyā Celebi (cf. *Seyḫat-nāme*, Istanbul 1971, xiv, 206) as well as by 'Abd al-Ghanī al-Nābulusī (cf. *Kutāb al-Ḥaḳīka*, fol. 224) towards the end of the 17th century, which suggests that the establishment must have been of some importance at that time. The *zāwiya* complex with its *ḫalwa* cells has been described by 'Alī Mubārak, *Ḳhiṭat*, iv, 112 f., as it was in the 1860s and by E. Bannerth a century later.

The order experienced a severe setback at the end of the 18th century when it was plundered by French troops (cf. 'Abd al-Raḥmān al-Djabartī, *'Adjā'ib al-āṭhār*, Cairo 1297/1879-80, iii, 95), and continued to rank among the less prominent *ṭarīkas* in Cairo until the 1880s, when it experienced a revival under the leadership of 'Abd al-Raḥmān Muṣṭafā al-Demirdāsh Bāshā, the founder of the Cairene hospital named after him. After his death in 1929, a dispute about the succession intervened, in which the then *muftī* of Egypt 'Abd al-Madjīd Salīm intervened (cf. Maḥmūd Abū Rayya, *al-Sayyid al-Bada'wī*, Cairo n.d. 182). This dispute ended in the formal investiture of 'Abd al-Raḥīm's six-year old grandson,

equally named 'Abd al-Rahīm, and the appointment of the principal *naḳīb*, Amīn al-Ṣayyād, as his *wakīl* or regent, specifically charged with the task of managing the *ṭarīqa*'s affairs. The latter's son Ḥusayn was head of the order in the 1970s.

Active membership of the order has never spread outside Cairo. This has been the direct consequence of the requirements set upon the potential *murīd*. Anyone desiring membership had to attend the weekly *ḥaḍras* of the order held near the shrine of its founder for a period of at least two years. During this period he had to be under the surveillance of one of the order's *nuḳabā'*, who were always residents of Cairo. The latter had to judge the personality of the candidate, and could propose him for initiation to the head of the order (cf. Zakī Muḥammad Mudjāhid, *al-A'lām al-sharḳiyya*, iii, 110).

Traditionally there were never more than twelve *nuḳabā'* at one time. New *nuḳabā'* were elected by the head of the order in consultation with the *nuḳabā'* already in office (cf. Muḥammad Sulaymān al-Buṣḥārī, *Tuḥfat al-albāb wa-ḥidāyat al-tullāb fīmā yaḍribu 'alayhim min al-ādāb*, Cairo 1322/1904-5, 81 f.).

The mosque and shrine of Demirdāsh are the scene of an important weekly *ziyāra*-day (cf. F. De Jong, *Cairene Ziyāra-days. A contribution to the study of saint veneration in Islam*, in *WI*, xvii (1976), 34 ff.), and of *maulid* celebrations in the second half of Ṣha'bān (cf. J.W. McPherson, *The Moulids of Egypt* Cairo 1940, 257 f. and E. Bannerth, in *WZKM*, lxii (1969), 129).

*Bibliography:* For further detail and additional references, see E. Bannerth, *La Khalwatiyya en Égypte. Quelques aspects de la vie d'une confrérie*, in *MIDÉO*, viii (1964-6), 3-7; idem, *Über den Stifter und Sonderbrauch der Demirdāshyya Sufis in Kairo*, in *WZKM*, lxii (1969), 116-32 (which contains a German translation of the section about *khalwa* in the *ṭarīqa*'s manual *Tuḥfat al-tullāb*); idem, *Islamische Wallfahrtsstätten Kairos*, Cairo 1967, 74 f., and M. Gilsehan, *Saint and Sufi in modern Egypt. An essay in the sociology of religion*, Oxford 1973, *passim*; The section on al-Demirdāshyya in B.G. Martin, *A short history of the Khalwati order of dervishes*, in N.R. Keddie (ed.), *Scholars, saints and sufis. Muslim religious institutions since 1500*, Berkeley-London 1972, 290-5, is largely based upon Bannerth's work.

The treatises by Muḥammad Demirdāsh al-Muḥammadī and by Muḥammad Demirdāsh al-Ṣaghīr mentioned in the article have been published, together with another treatise by the *ṭarīqa*'s founder, *Kitāb al-Daradja al-ulyā fī ma'ārid al-awliyā'*, by Muḥammad Nūr Ṣāliḥ al-Sirdjānī under the title *al-Maḍmū'a al-Demirdāshyya*, Cairo 1348/1929-30; This collection contains also a section with biographical data on a number of *shaykhs* of the order and a biography of 'Abd al-Rahīm Muṣṭafā al-Demirdāsh Bāshā compiled by Muṣṭafā Adham Bek Munīr, 52 ff.

For other biographies of 'Abd al-Rahīm, see Zakī Muḥammad Mudjāhid, *al-A'lām al-sharḳiyya*, Cairo 1955, iii, 109 ff., which gives also additional information about the order's religious practice, and Muḥammad Sulaymān Badawī, *Nabdhā yasīra min ḥayāt ustādhīnā al-fāḍil ... 'Abd al-Rahīm Muṣṭafā al-Demirdāsh Bāshā*, Cairo n.d. Other publications of the order, containing historical data, liturgical texts and rules, are *al-Nafahāt al-kudsiyya fī awrād al-ṭarīqa al-Demirdāshyya*,

Cairo n.d.; Muḥammad Labīb al-Ḥalabī and Ḥusayn Muḥammad al-Ḥalabī (eds.), *al-Fuyūdāt al-nūrāniyya fī malyā al-ṭarīqa al-Demirdāshyya*, Cairo n.d.; and Muḥammad Nūr Ṣāliḥ al-Sirdjānī, *Risālat al-Silsila al-dhahabiyya fī tarāḍim riḍāl al-sāda al-khalwatiyya al-Demirdāshyya*, Cairo 1319/1901-2.

On the position of al-Demirdāshyya in 19th century Egypt, see F. De Jong, *Turuq and turuq-linked institutions in 19th century Egypt* Leiden, 1978, *passim*; Additional data on the history of the order may be found in F. De Jong, *Two anonymous manuscripts relative to the Sūfī orders in Egypt*, in *Bibliotheca Orientalis*, xxxii (1975), 186-90; Enver Behnan Şapolyo, *Mezhepler ve tarikatlar tarihî*, Istanbul 1964, 193, is full of conflicting detail. (F. DE JONG)

**DEMOGRAPHY.** Demographers who study Islamic nations are concerned with population numbers and population change in those nations. Their works have, with a few exceptions, been recently written. This is due to the nature of the study. Though many of the basic principles of demography have been known for centuries demography as a field of study is relatively new. It is also dependent on statistical sources—records of population from censuses, surveys, and registration lists—that did not exist in many Muslim countries until very recent times. Because of this late development, many demographic topics have been little studied and for some Muslim countries no adequate demography has been written.

There are few demographic studies of Muslim population as such, and demographers have most often not been concerned with religion. Thus in the indexes of books of the demography of Islamic countries the words "Islam" or "religion" either do not appear or only a few references are cited. In addition, some countries with significant Muslim populations have become officially indifferent or even hostile to religion. The communist countries of Eastern Europe and Asia do not list any association by religion in their censuses. This makes historical or comparative analysis of Muslim population extremely difficult. Those in the "Muslim" category in the 1897 Russian Imperial census, for example, cannot be traced in the 1926 Soviet census, which only lists ethnic and linguistic groups, not religions.

For countries such as Saudi Arabia, Turkey, or Iran, of course, Total Population and Muslim Population are, in effect, the same. For other countries, however, especially those in South Asia and Africa, differential studies of the Muslim population would be valuable, though they are seldom done. Religion is usually not a consideration. This is especially true of the modern demographic sample surveys, which produce high-quality information on fertility, mortality, and marriages, but which often do not even ask the informants' religion.

For these reasons, much of the demographic material discussed below is not data or analyses of Muslim population, but of the population of Muslim countries. The distinction is real and important.

In historical documents and colonial records, terms such as "census", "survey", and "population estimate" are often used in a confusing manner. It is thus valuable to define exactly what is meant by the words used to describe basic demographic statistics. The following are definitions of the four sources of demographic data as they are usually defined and as the terms are used here:

**Estimates.** Estimates are not actual counts of the population. They range from wild guesses on

the populations of entire nations to well-reasoned analyses based on incomplete or slightly inaccurate census returns.

**Registration.** In Muslim lands, registration data have always been kept by governments. Ideally, a population register records a person by age and sex and lists his date of birth and death and, perhaps, events such as marriage and conscription. More usually, births, deaths, and other events are registered separately, total numbers of births, deaths, etc. are published, and no attempt is made to keep a record of each individual. The former is usually called a Population Register, the latter a Register of Vital Events.

**Sample surveys.** Surveys ask demographic questions of a scientifically selected sample of the population, often 5% to 10%. The surveys take various forms, but are usually intended to find information on demographic variables, particularly fertility, in a detailed manner not possible in a census. Surveys are normally used to supplement information gained through a census. In countries such as those in the Sahel in Africa, though, in which taking censuses long proved impossible, "sample censuses" were taken instead.

**Censuses.** The census is the basic source of quality demographic data. To be a census, an enumeration must be intended to be an actual count of the members of the population of an area. It must be held in a short period of time. Every census should ask age, sex, and residence of all inhabitants, and questions on marital status, occupation, religion, and others are usually included also. Collections of registration data are not censuses.

Though the census and registration practices of each Muslim country have differed, some phenomena have been universal. In a Muslim nation's early census or registration records, females are undercounted. Children are also undercounted, and a person seldom knows his exact age, so age-specific data is incorrect. As education, economy, and experience with national statistics grows, these problems lessen.

With few exceptions, completeness and reliability of a nation's population statistics improve as time advances. Few Muslim nations have accurate historical statistics. For this reason, in Muslim nations historical demography depends on modern demography. Only by examining modern and accurate demographic data can an historical demographer gain the basic knowledge of fertility and mortality that he needs to evaluate historical records.

What follows are descriptions of the demography of nations with a Muslim majority or a large Muslim minority. They are arranged by geographic region and nation and two sorts of works are considered—government statistics and analytical/descriptive studies. Censuses are listed by year in which they were taken, not by issuing agency or publication year, for reasons of space. The articles and books cited deal with population and demography as a whole, not with specific subjects such as migration or fertility. Those interested in studies of specific demographic topics will find ample resources in the bibliographies of the works discussed below.

### I. MEDIAEVAL ISLAM

There is no reliable demography of Medieval Islam. Materials from which demographic calculations could be made, such as tax registers and military payrolls [see *DIWĀN*] were kept by mediaeval Islamic governments, but have not survived.

Like the mediaeval Europeans, Muslims were

little interested in population numbers for their own sake. Furthermore, the Muslim world felt no need to keep religious statistics, and so it possesses no analogies to the baptismal and marriage records of Western Europe. Though the great geographers and travellers of mediaeval Islam often mentioned the "great size" of cities, the "large number" of people in an area, or gave fanciful estimates of the size of armies, they did not often offer even rough estimates of population numbers. This was reasonable, because there was no way geographers, travellers or others could have known population numbers. No one had counted the population and, as has been proven by the multitudes of erroneous "estimates" of population made in all areas of the world, the only way accurately to know the size of a population is to count it. The enumerations needed for population analysis were not made in the Islamic world, or at least have not been found, prior to the second great period of Islamic expansion, the Turkish empires. In the empires, the keeping of population statistics was the province of the state. Beginning in the late 14th century, the Ottoman government began to keep accurate counts of households in the Empire for taxation purposes. Similar counts were taken by the emperor Akbar in Mughal India, and may have been taken in Şafawid Iran.

**Non-statistical sources.** While demography is essentially a statistical study, non-statistical sources can be used to illuminate areas of population history for which statistics are unavailable. The most obvious area in which this is true is migration. Large-scale migration of Arabs, Mongols, and Turks in Islamic times were recorded by geographers and historians. The populations of cities can be at least roughly estimated through archaeological evidence and through measurements of contemporaries such as Ibn Baṭṭūṭa, who simply measured the size of city walls to gain a picture of the city's size and (by analogy) its comparative population. (Much evidence of this sort is available in Le Strange, *Lands*.) There are numerous quasi-statistical sources for specific demographic events. An example of this type of material is al-Makrīzī on the plagues and famines of Egypt, whose material is analysed by Michael Dols (*The Black Death in the Middle East*, Princeton 1977); for a translation of al-Makrīzī's work, see G. Wiet, in *JESHO*, v/1 (1962). Such sources give estimates of numbers dying, being born, or leaving a city or an area. It should be stressed that such sources can be used to gain an impression of the scope of demographic events, no more. Their population numbers are usually suspect. Much information may be available from analyses of geographers' accounts of the amenities of towns—baths, mosques, etc.—but this research remains to be done. As to accuracy, the Muslim commentators, who often knew well the areas of which they spoke, are much to be preferred to European sources.

One source of mediaeval Islamic demography is the system of records of Islamic law. The codes of the schools and fragmentary surviving judicial decisions can at least give an impression of what was religiously-accepted in marriage and divorce and in matters that affect fertility, such as lactation, polygamy, and contraception. Basim Musallam has made good use of this type of material in his work on contraception (*Sex and society in Islam. The sanction and medieval techniques of birth control* (diss., Harvard University 1973). Unfortunately, legal codes and court decisions do not necessarily reflect actual practice of the majority of Muslim society, and for

this reason legal matters have limited usefulness as demographic sources.

The fact that demographic evidence on mediaeval Islam is almost non-existent has not meant that estimates have not been made. Josiah Cox Russell has been in the forefront of those using materials such as estimates of city sizes and poll tax revenues to arrive at population totals. (See *Late ancient and medieval population*, Philadelphia 1958; *Late medieval Balkan and Asia Minor population*, in *JESHO*, iii/3 [1960], 265-74; *The population of medieval Egypt*, in *Journal of the American Research Center in Egypt*, v [1966], 69-82; and others.) Russell's work is often based, however, on unverifiable secondary sources, vague estimates of army sizes and taxation by historians who lived centuries after the fact, the calm acceptance of population figures drawn without examination from sources such as *La Grande Encyclopédie* and *Encyclopaedia Britannica*, and incredible logical jumps that conveniently provide estimates when not even poor data is available. Russell does show that estimates are possible from fragmentary evidence, but this evidence must be much more carefully analysed than he and those who have followed him have done.

The use of non-demographic evidence to find population totals seems to work better for urban than rural areas. A good example of this type of analysis, though for a later period than mediaeval Islam, is André Raymond's *Signes urbains et étude de la population des grandes villes arabes à l'époque ottomane*, in *BEO*, xxvii (1974), 183-93. Ch. Pellat has made a demographic study out of unusual material in *Peut-on connaître le taux de natalité au temps du Prophète*, in *JESHO*, xiv/2 (1971) 107-35, which shows that an exceptional amount of information can be drawn from limited data. Also, his *Quelques chiffres sur la vie moyenne d'une catégorie de Musulmans*, in *Mélanges d'Islamologie*, Leiden 1974, 233-46, is a pioneering study in the use of biographical references for extracting demographic information.

(Many works on mediaeval Islamic history have uncritically used population estimates as part of their descriptions. For examples of this, see two studies by Eliyahu Ashtor, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1960, esp. 237, 238, 272, and 273, and *A social and economic history of the Near East in the Middle Ages*, Berkeley-Los Angeles-London 1976, esp. 290 and 291, see also his *Un mouvement migratoire au haut Moyen Âge: migrations de l'Irak vers les pays méditerranéens*, in *Annales E.S.C.* (1972/1), 185-214.)

## II. OTTOMAN EMPIRE

The 16th and 17th century Ottoman population registers (*defters*) were among the first European state records that can be used as population sources. Since the records were not kept primarily as data on population, however, they must undergo considerable manipulation before they can yield total population estimates, and they do not provide information on other demographic variables, such as fertility and mortality.

The study of Ottoman *defters* was effectively begun by Ömer Lütfi Barkan, who analysed the registers for total population, city size, and economic change (see especially, *Essai sur les données statistiques des registres de recensement dans l'empire ottoman aux xv<sup>e</sup> et xvi<sup>e</sup> siècles*, in *JESHO*, i/1 (1957), 9-36). Many other scholars have used the *defters* found in the Ottoman archives and local collections in former Ottoman possessions, and the registers have

yielded population data on the empire as a whole, on provinces and on cities. Only a few of these studies can be listed here:

General studies. Barkan, *Osmanlı imparatorluğunda büyük nüfus ve arazi tahrirleri ve hakana mahsus istatistik defterleri*, in *İstanbul Üniversitesi İktisat Fakültesi Mecmuası*, ii (1940), 20-59, 214-57; idem, *Tarihi demografi araştırmaları ve Osmanlı tarihi*, in *Türkiyat Mecmuası*, x (1951), 1-27; idem, *Research on the Ottoman fiscal surveys*, in *Studies in the economic history of the Middle East*, ed. M.A. Cook, London 1970.

Regional studies. Cook, *Population pressure in rural Anatolia, 1450-1600*, London 1972; W.-D. Hütteroth and Kamal Abdulfattah, *Historical geography of Palestine, Transjordan and southern Syria in the late 16th century*, Erlangen 1977; A. Cohen and B. Lewis, *Population and revenue in the towns of Palestine in the sixteenth century*, Princeton 1978; B. McGowan, *Defter-i Mufassal-i Liva-i Sirem: an Ottoman revenue survey dating from the reign of Selim II*, diss., Columbia University 1967; Halil Inalcik, *EF<sup>2</sup> art. ARNAWUTLUK*; Leila Erder and Suraiya Faroghi, *Population rise and fall in Anatolia*, in *Middle Eastern Studies*, xv/3 (1979), 322-45.

Urban studies. H. Lowry, *The Ottoman tahrir defters as a source for urban demographic history: the case study of Trabzon (ca. 1486-1583)*, diss., UCLA 1977; Inalcik, *EF<sup>2</sup> art. ISTANBUL*. R. Jennings, *Urban population in Anatolia in the sixteenth century, a study of Kayseri, Karaman, Amasya, Trabzon, and Erzurum*, in *IJMES*, vii/1 (1976), 21-57.

The *defters* themselves are described and discussed in *DEFTER-I KHĀKĀNĪ*. Facsimiles and translations of *defters* are given by Cohen and Lewis, Cook, and Inalcik, *Hicri 835 tarihli suret-i defter-i sancak-i Amavud*, Ankara 1954.

Ottoman *defters* were primarily kept as financial and military records and it would be a mistake to consider them to be highly reliable demographic sources. Certain groups were not counted (Barkan, *Essai*, 20-1), certain ones undercounted (C. Issawi, *Comment on Professor Barkan's estimate of the population of the Ottoman Empire in 1520-30*, in *JESHO*, i/3 [October 1958], 329-33). The registers were usually household counts, and comparisons between household numbers in two time periods may be confused because of changing household sizes. Nevertheless, the Ottoman *defters* are an incomparable source for the historical demography of the Middle East, especially when they are used as part of a detailed investigation of local, as opposed to empire-wide, population, society and economy.

After ca. 1700 the *defter* records cease, this being probably a sign of diminished central authority in the Empire.

In the reign of Sultan Mahmūd II, the Ottoman empire once again began to collect population statistics. Unlike the 16th and 17th century *defters*, the new registration was the base of a system of military conscription. Each male in the empire was to be recorded in population registers (*tahrir-i nüfus*), at first by general age group ("youth" and "adult" or "youth", "adult", and "aged"-categories corresponding to one's availability for military service). By the 1840s, though, the registers were being kept, at least in some areas, in much greater detail; each male was recorded by age, household, and his relationship to the head of the household. The *tahrirs* were periodically updated through "events" (*vaḳū'āt*) registers in which were recorded births, deaths, conscriptions, and migration. During the reign of 'Abd al-Hamid II,

registrations of females were kept, as well as those of males, but female registration was only successful in northern and western Anatolia and in the European sections of the empire (see Enver Ziya Kural, *Osmanlı imparatorluğunda ilk nüfus sayımı*, Ankara 1940; Fazıla İkbāl, *1831 tarihinde Osmanlı imparatorluğunda idarî taksimat ve nüfus*, in *Bellefen*, xv, no. 60, 617-28; and J. McCarthy, *Age, family and migration in nineteenth-century Black Sea provinces of the Ottoman Empire*, in *IJMES*, x [1979], 309-23).

The totals collected from the Ottoman registration system in provinces were published at intervals in the provincial yearbooks (*sāl-nāmes*), listing population by province, sub-province, and district, and often by religious group and sex. At various times the central government updated the data across the empire and published the data in what have been erroneously been called "censuses". Three of the "censuses" have been translated and reproduced (Kural; Kemal Karpat, *Ottoman population records and the census of 1881/82-1893*, in *IJMES*, ix [1978], 237-74; McCarthy, *International historical statistics: the late Ottoman empire*, Boston 1981). It should be noted that the Ottoman population totals by province uniformly underestimate the number of women and children in the province, and thus totals must be augmented by from 10% to 30%, depending on the province.

The uses of Ottoman figures for the study of the historical population of the Middle East are obvious. Simply stated, no one but the Ottoman government counted the population and no one but the Ottoman government even remotely knew what the population was. Data on total population from *sāl-nāmes* and "censuses" is increasingly being used in population studies. It is, however, the archival records of population that hold the greatest promise. When these records are available and utilised, accurate studies on fertility, mortality, and population change in the Ottoman Empire will be possible.

The 19th century Ottoman registration system has been described by Karpat (*Ottoman population*) and S. J. Shaw (*The Ottoman census system and population, 1831-1914*, in *IJMES*, ix/3 [1978], 325-37). For examples of the uses of *sāl-nāme* and "census" population records, see Vedat Eldem, *Osmanlı imparatorluğunun iktisadî şartları hakkında bir tetkik*, Ankara 1970; Leila Erder, *From trade to manufacture in Bursa*, diss., Princeton University 1976; and McCarthy, *The Muslim population of Anatolia, 1878-1927*, diss., UCLA, 1978.

Contemporary European sources on Middle Eastern population in Ottoman times will only be mentioned briefly here. Those that were accurate were drawn from Ottoman data, and thus are only valuable if they provide population statistics of areas for which the original Ottoman data is unavailable. The most valuable of the European sources are the books of Cuinet (*La Turquie d'Asie*, 4 vols., Paris 1890-4; *Syrie, Liban, et Palestine*, Paris 1896). Cuinet collected, amended, and published Ottoman population statistics, as well as data on the social and economic life of Ottoman Asia. No other European source can in any way compare with Cuinet. (Those interested in European sources should consult N. Michoff, *La population de la Turquie et de la Bulgarie au XVIII<sup>e</sup> et XIX<sup>e</sup> siècles, recherches bibliographico-statistiques*, 4 vols., Sofia 1919-35, and the various volumes of *Die Bevölkerung der Erde*, a supplement of *Petermanns Mitteilungen*, Gotha, especially vol. xi, 1901, 3-23.)

Nineteenth and early 20th century Ottoman geo-

graphers were not greatly superior to the Europeans. Though they often used data from Ottoman government records, the geographers had little appreciation of the proper use of population statistics. The one exception is the *Kāmūs al-d'lām* of Shams al-Dīn Sāmī Frasheri (6 vols., Istanbul 1889-99), which is demographically superior to the others.

### III. MIDDLE EAST

Demography is dependent on government statistics, which are produced by individual political units. Perhaps for that reason, there have been few works on Middle Eastern demography that cross national boundaries in their analysis and even fewer that treat the Middle East, or even the Arab world, as a unit. Volumes on Middle Eastern demography (such as J.I. Clarke and W.B. Fisher, *Populations of the Middle East and North Africa* New York 1972) are usually collections of chapters or articles that study each country individually. This is unfortunate, since many phenomena such as nomadism, polygamy, folk beliefs on contraception, and fertility levels would be best studied for the Middle East in general, as well as for individual areas. (Two examples of the broader approach illustrate its benefits: *Muslim attitudes toward family planning*, ed. Olivia Schieffelin, New York 1967; Oladele Olawayi Arowolo, *Correlates of fertility in Muslim populations*, dissertation, University of Pennsylvania 1973.)

Some studies of the population of the Arab World have been made, though these are usually divided internally by national boundaries. Of them, studies by G. Baer, *Population and society in the Arab East*, Westport, Conn. 1964, and M.A. el-Badry, *Trends in the components of population growth in the Arab countries of the Middle East*, in *Demography*, ii (1965), 140-86, are valuable, but now out of date. A more recent article by Youssef Courbage and Philippe Fargues is an introduction to the demography of the Arab states, *La population des pays arabes d'Orient*, in *Population*, xxx, no. 6 (Nov.-Dec. 1975), 1111-41. K.C. Zachariah has compared the accuracy and availability of data from the Arab states, *The demographic measures of Arab countries. A comparative analysis*, in Cairo Demographic Centre, *Demographic measures and population growth in Arab countries*, Cairo 1970, 279-326. (See also the international analysis of demographic problems in Part I of *Demographic aspects of socio-economic development in some Arab and African countries*, ed. S.A. Huzayyin and T.E. Smith, Cairo 1974, and G. Sabagh, *The demography of the Middle East*, in *MESA Bulletin*, iv/2 [15 May 1970], 1-19.)

Population studies for Middle Eastern nations are published in the international sources listed below and, for 1968 and 1973, in the *Population bulletin* of the United Nations Economic Commission for Western Asia, nos. 10 and 11 (January to July 1976, Beirut 13-26).

Greater Syria. Issawi has collected European statements on the population of Greater Syria in the 19th century (*The economic history of the Middle East, 1800-1914*, Chicago 1966, 209-10), the best of which were based on Ottoman figures. For the period prior to 1918, the best sources on Syrian population are the state records of Ottoman Syria. Of these, the printed population records of Ottoman Greater Syria have been analysed by J. McCarthy (*Population of the Ottoman Fertile Crescent*, in *Proc. of the Congress on the Economic History of the Middle East, 1800-1914*, Haifa 1980). After 1918, Greater Syria was divided into Syria, Lebanon, and Palestine, and

the statistical histories of the three new nations diverged.

In Syria, the French mandatory powers made a population count in 1922, which they updated and published in 1926. This count cannot be called a census, since much of it was based not on actual enumeration, but on population totals given by village leaders. Its totals are too low, as were those of the first census of independent Syria in 1947, which did not count nomads. Modern censuses were taken in 1960 and 1970. (The Syrian government printed, in addition to the results of the census of 1970 itself, volumes of analysis of the census results by K.E. Vaidyanathan.) For an analysis of modern Syrian population and demographic variables, see Mouna Liliane Samman, *La population de la Syrie, étude géo-démographique*, Paris 1978; Samman makes extensive use of Izzat Nouss, *La population de la Syrie, étude démographique*, Paris 1951.

The population of Lebanon in the 19th century has been analysed by Youssef Courbage and Ph. Fargues, *La situation démographique au Liban*, Beirut 1974, ii, ch. I. European estimates are detailed in D. Chevallier, *La société du Mont-Liban à l'époque de la révolution industrielle en Europe*, Paris 1971. Both studies are marred by their lack of consideration of Ottoman statistics, except insofar as those statistics appeared in French works such as Cuinet's *Syrie, Liban, et Palestine*. The bulk of the Courbage and Fargues' work is, however, a good study of modern Lebanese population. The French mandatory administration attempted to enumerate the population of Lebanon in 1921, 1932 and 1941. Even the best of these counts, that of 1932, was deficient and undercounted the Muslim population. For political reasons, no modern census has been taken, and only limited evidence exists on demographic variables such as fertility and mortality (see D. Yaukey, *Fertility differences in a modernizing country*, Princeton 1961). What data exist come from demographic surveys, which are described in *Available demographic data in the Lebanese Republic*, in *Population Bulletin* of the United Nations Economic Commission for Western Asia, nos. 10-11 (Jan.-July 1976), 240-3. J. Chamie, *Religion and population dynamics in Lebanon*, Ann Arbor, Mich. 1977, has described the unusual religious-demographic situation in Lebanon.

In Palestine, the British took an incomplete census in 1922 and a more complete count in 1931. They also recorded migration, an important phenomenon in Palestine, but probably missed much Muslim population movement, especially that of Bedouin. Since the 1948 War and the division of Palestine, Israel has taken censuses in 1961 and 1972, begun a registration system in 1948 (often listed as "the Census of 1948"), and held numerous sample surveys of the population. Jordan has taken censuses in 1952, 1961, 1971, and 1979 and a fertility survey in 1976. The results of the 1952 Jordanian census are very deficient, and those that came from the 1948 Israeli registration count somewhat deficient.

Estimates and census data for Palestine have been presented in great detail by R. Bachi, *The population of Israel*, Jerusalem 1976. Bachi's volume, which is an extremely valuable source, must be used with care for the period 1880-1922. For that period, he avoids using actual Ottoman population statistics and substitutes British and other estimates without justification. Certain other events with large demographic implications, such as the 1948 and 1967 Wars, are also incompletely and, as regards demography,

inaccurately covered. The book is very good, however, on the analysis of Israeli statistics. See also, D. Friedlander and C. Goldscheider, *The population of Israel*, New York 1979, and various analytical volumes published by the Israeli government as part of its census publications.

A. Thavarajah, *Mid-decade demographic parameters of Jordan and population growth*, in *Demographic measures*, 55-75, has adjusted reports on population found in Jordanian censuses and registration records. He provides a good brief introduction to the problems of Jordanian data collection from 1952 to 1965. A much more detailed analysis comes in the Jordanian government's *Analysis of the population statistics of Jordan*, Amman 1966, which describes in detail the country's vital registration system, as well as its censuses, and the accuracy of both.

ʿIrāk. M.S. Hasan wrote the first study of the population of ʿIrāk in the 19th century, *Growth and structure of Iraq's population, 1867-1947*, in *Bulletin of the Oxford University Institute of Statistics*, xx (1958), 339-52. Hasan, however, accepted as accurate and reliable three types of data—Ottoman statistics as presented by Cuinet, European estimates, and the ʿIrākī census of 1947—and none of these can be considered accurate without extensive revision. Three Ottoman provinces made up the area of present-day ʿIrāk—Mawṣil, Baghdād, and Baṣra. Only in Baghdād were Ottoman population statistics fairly accurate, and even in Baghdād there was a significant undercount of women and children, an undercount reflected in Cuinet. European sources had no idea what the population was. Even the 1947 ʿIrākī census was an undercount. As a result, Hasan's figures must be rejected. The best source of total population numbers for Ottoman ʿIrāk is the series of estimates published by the Ottoman government in the *sāl-nāmes* of the ʿIrākī provinces (McCarthy, *Population of the Ottoman Fertile Crescent*).

The ʿIrākī government took censuses in 1927, 1934 and 1947. While the completeness of the censuses improved over time, each one produced an undercount. This was in part due to the use of census records as conscription records. K.C. Zachariah has found numerous errors in the early censuses, *Use of census data for estimating demographic measures of Iraq*, in *Demographic measures*, 27-54. The censuses taken in 1957, 1975, and 1977 are more reliable. See also Faḍīl al-Anṣārī, *Sukkān al-ʿIrāk*, Damascus 1970.

Arabian Peninsula. The best sources on the population of early 20th century Arabia are three geographic works: Shams al-Dīn Sāmī Fraṣherī, *op. cit.*; ʿAlī Djewād, *Memālik-i ʿOṭhmāniyyeniū djuḡhrāfiyā lughātī*, Istanbul 1895; and J.G. Lorimer, *Gazeteer of the Persian Gulf*, Calcutta 1908-1915. The first two offer estimates based on the reports of Ottoman government officials, the third offers the estimates of British consular and intelligence officers, travellers, and merchants. None of the three is useful for anything but rough approximations of population numbers.

In 1947, Nello Lambardi published what he stated were population figures taken from Yemeni government records, *Divisioni amministrative del Yemen con notizie economiche e demografiche*, in *OM*, xxvii/7-9 (July-Sept. 1947), 143-62. The statistics appear to have been part of a tax register of men and animals. Women and children were surely undercounted, but no figures by age and sex were kept, so the extent of the undercount cannot be determined. The Yemeni data are the only data for South Arabia before the

1970s. The British did keep a register of births and deaths in Aden, but the undercount, especially of mortality, was great.

In most parts of the Arabian Peninsula, no accurate census was taken before the 1970s. Only Kuwait and Bahrain were statistically advanced at an earlier date. The Gulf States have held censuses in the following years: Kuwait—1957, 1961, 1965, 1970, 1975; Bahrain—1941, 1950, 1959, 1965, 1971; Qatar—1970; United Arab Emirates—1968, 1975. Oman expects to take a census in 1981. South Yemen took a census in 1973, followed by North Yemen in 1975. Saudi Arabia discarded as under-enumerations the results of a census taken in 1962-3 and has never published the results of its 1974 census (though figures from the census were printed in Abdel Rahman al-Madani and Muhamed al-Fayez, *The demographic situation in the Kingdom of Saudi Arabia*, in *Population Bulletin*, 185-89). See also Zachariah, *Trends and components of population growth in Kuwait*, in *Demographic measures*, 81-114; Fisher, *Southern Arabia*, in Clarke and Fisher, *op. cit.*, 274-90; A.G. Hill, *The demography of the Kuwaiti population of Kuwait*, in *Demography*, xii/3 (Aug. 1975), 537-48, and *The demography of the population of Kuwait*, in *Population Bulletin*, xiii (July 1977), 42-55; Population Division of the United Nations Economic Commission for Western Asia, *An overview of the population situation in Bahrain*, in *Population Bulletin*, xiv (June 1978), 57-69.

Turkey. Rather than continue the Ottoman registration system, the Turkish Republic decided to draw its population enumerations from a system of censuses which followed the Western model. In this it emulated the Balkan countries, each of which had taken a census when it became independent from the Ottoman Empire.

Turkey held its first complete census in 1927 and has held quinquennial censuses since 1935. (For a description of the Turkish censuses, see *A critical review of demographic data obtained by Turkish population censuses*, in *Turkish demography: Proceedings of a Conference*, ed. C. Shorter and Bozkurt Güvenc, Ankara 1969.) The 1927 census is deficient, especially for the eastern provinces of Turkey, but provides useful information and can be adjusted (McCarthy, *Muslim population*, 185-223). From 1935 the Turkish censuses are, along with the Egyptian censuses, the best source of demographic information in the Middle East. Turkey has also held a series of sample demographic surveys, of which the most valuable is the Turkish Demographic Survey. See Nusret Fişek, *Demographic surveys in Turkey*, in *Turkish demography*, 1-18, and the volumes of the Turkish Demographic Survey, Ankara 1965-. The modern Turkish registration system has only produced published statistics for births, deaths, and marriages in the central cities of provinces and these are incomplete due to under-registration and migration.

The best short introduction to Turkish demography is an article by Shorter, *Information on fertility, mortality, and population growth in Turkey*, in *Turkish demography*, 19-42, and in *Population index*, xxxiv/1. More detailed coverage is in Figen Karadayı *et alii*, *The population of Turkey*, Ankara 1974. Turkey's demographers have produced a large and detailed literature in Turkish, French, German and English on Turkish demography. This work is listed and sometimes annotated in the fine bibliographies edited by Behire Balkan, *Türkiye nüfus bibliyografyası*, Ankara 1967, con-

tinuing. See also Necdet Tunçdilek and Erol Tümertekin, *Türkiye nüfusu*, Istanbul 1959; Yakut Bulutoğlu, *La structure par âge et la mortalité de la population de la Turquie*, Paris 1970; and İlhan Tekeli, *Evolution of spatial organization in the Ottoman Empire and Turkish Republic*, in *From Medina to Metropolis*, ed. L. Carl Brown, Princeton 1973, 244-73.

Iran and Afghānistān. There are no reliable demographic statistics extant for Iran until well into the 20th century. In fact, the only contemporary statements on Persian population before World War I that have been published are European estimates, mainly dating from *ca.* 1900. The Şafawī and Kādījār registers have not been found, or at least not analysed and published. However, G.G. Gilbar has studied critically European estimates of the population of Kādījār Iran and the effects of epidemics and wars on the population and has made projections of population size, in his *Demographic developments in late Qajar Persia, 1870-1906*, in *Asian and African Studies*, xi (Haifa 1976), 125-56. See the comments and reports on Iranian population by Issawi in his *Economic history of Iran, 1800-1914*, 26-35, and in his *Population and resources in the Ottoman Empire and Iran*, in *Studies in eighteenth-century Islamic history*, ed. T. Naff and R. Owen, London 1977, and J. Bharier, *A note on the population of Iran*, in *Population Studies*, xxii, 274-5.

The Iranian government made unsuccessful attempts at population registration from 1928 onwards, and carried out an urban "head count" between 1939 and 1941 in 25 cities (B.D. Clark, *Iran: changing population patterns*, in Clarke and Fisher, 68-96). Censuses were held in 1956 and 1966, but the censuses, while providing the first fairly reasonable population data on many parts of Iran, included significant undercounting of women and of certain geographic areas and minority groups, especially nomadic Kurds and Turks.

Bharier has projected the population of Iran from 1900 to 1970 in his *Economic development of Iran, 1900-1970*, Oxford 1971, 24-8, which incorporates material from his *A note* and other articles by Bharier. Djamchid Momeni, *The population of Iran, a dynamic analysis*, Tehran 1975, 25-30, gives a slightly different set of estimates for the same period. Of the two, Bharier's analysis and estimates are superior. His estimates of total population size, rural and urban populations, and migration give a broad idea of population change in Iran from 1900. Given the paucity of the data, no more can be expected.

The following can serve as an introduction to the modern population and demography of Iran: *The population of Iran, a selection of readings*, ed. Djamshid A. Momeni, Honolulu 1977; Djamshid Behnam and Mehdi Amani, *La population de l'Iran*, Paris 1974; and various publications of the Institute for Social Studies and Research in Tehran.

Afghānistān's geographical features and the nomadic nature of many of its people have made even the rough estimation of population in Afghānistān a great task. Population sample surveys of Afghānistān were taken in Afghānistān in 1960 and 1968-9, the latter providing detailed information on demographic variables.

These surveys have been described by L. Dupree, *Population review 1970: Afghanistan*, in *American Universities Field Staff Reports*, South Asia Series, xv/1 (Dec. 1970), and Hamidullah Amin and Gordon B. Schilz, *A geography of Afghanistan*, Omaha,

Nebraska 1976, 153-64. Amin and Schilz print useful results of the surveys, but they too readily accept survey and registration data in questionable areas, such as records of female population and completeness of registration, and thus their work must be used with care.

Afghānistān conducted a more complete sample survey of sedentary population in 1971-3 (*National Demographic and family guidance survey of the settled population of Afghanistan*, 4 vols. 1975). The survey provided the first accurate data on the majority of the population. It was followed by a census in 1979, the results of which are not available. Government registration of males was begun in Afghānistān in 1952, but has produced no useful statistics and is surely incomplete. The best analysis of the Afghān population appears in the analytical volumes (1, 2, and 4) of the 1971-3 National Demographic and Family Guidance Survey. See also two articles by Dupree, *Population dynamics in Afghanistan*, in *Field Staff Reports*, South Asia Series, xiv/7 (April 1970), and *Settlement and migration patterns in Afghanistan: a tentative statement*, in *Modern Asian Studies*, ix/3 (July 1975), 397-413. J.-Ch. Blanc, *L'Afghanistan et ses populations*, Brussels 1977; J. Trussel and Eleanor Brown, *A close look at the demography of Afghanistan*, in *Demography*, xi/1 (Febr. 1979), 137-51. For Russian articles on Afghānistān, see T. I. Kukhtina, *Bibliografiya Afganistana*, Moscow 1965.

#### IV. NORTH AFRICA

The populations of North Africa, like those of the Middle East, are usually studied individually, nation by nation. Only a few works have drawn together statistics from various nations into a picture of North African population as a whole. See, for example, Mahmoud Seklani, *Croissance démographique comparée des pays du Maghreb, 1950-1960*, in *Revue Tunisienne des Sciences Sociales*, vi/17-18 (June 1969), 29-51, and J. Vallon, *Les populations de l'Afrique au Nord du Sahara: Maroc, Algérie, Tunisie, Libye, Égypte*, in *Populations*, xxv/6 (Nov.-Dec. 1970), 1212-35. Amor Benyoussef, *Population du Maghreb et communauté économique à quatre*, Paris 1967, uses population as a basis for analysis of social and economic similarities of the Maghrib countries.

Unlike the Middle East, there are few good sources of historical population statistics for the Maghrib. Those that do exist do not go farther back than the 19th century, though one can hope for the future discovery and use of Ottoman registers for earlier periods.

Morocco. The political and statistical situation of colonial Morocco was so fragmented that no reasonably accurate statistics for the entire country exist before 1960. Prior to Morocco's independence and unification in 1956, the Spanish colonial power only attempted one census, in 1950, while the French in their zone took counts in 1921, 1926, 1936, 1947, and 1951-2. All except the French 1947 "census" were undercounts. In 1947 the government counted ration cards to establish population numbers, and war-time illegalities seem to have caused an actual overcount, see G.H. Blake, *Morocco: urbanization and concentration of population*, in Clarke and Fisher, 404-5. The Moroccan censuses of 1960 and 1971 gave more reasonable totals, and the undercount of women and children seen in other censuses of Muslim countries was slight in Morocco in 1971. Two sample surveys of Moroccan population have been held, in 1961-3 and 1971-3.

*La population rurale du Maroc* by D. Noin (2 vols.,

Paris 1970) gives full analyses of all demographic phenomena, including historical estimates of the population and an excellent bibliography. The work is essential to an understanding of Moroccan demography and demographic history. K. Krotki and R. Beaujot have analysed the accuracy of Moroccan population statistics and arrived at revised figures in *La population marocaine: reconstitution de l'évolution de 1950 à 1971*, in *Population*, xxx/2 (March-April 1975), 335-67. *La population du Maroc* (by the Institut National du Statistique et d'Économie Appliquée of Morocco, Rabat n.d.) is a reasonable summary of basic demographic measures on Morocco, but is disappointing in its lack of detailed analysis or bibliography.

Algeria. Algeria has one of the longest series of censuses of any developing country. The French began enumerating settled Algerian population and nomads (by "tent", not by person) in the entire country in 1856. Before 1886, a certain amount of estimation was used for remote areas, and it was only in 1886 that the French attempted actually to count the entire population. Even then, however, distrust of the colonial government and the difficulties of counting nomads and certain other parts of the population produced a serious under-enumeration; see G. Negadi, *Les sources de la démographie en Algérie*, in *La population de l'Algérie*, Algiers 1974 (?), 1-3. From 1886 to 1911 and from 1921 to 1936 the French held quinquennial censuses of Algeria. After the Second World War, censuses were taken by the French, then by the Algerian government in 1948, 1954, 1960, 1966, and 1977.

Despite their long series, the Algerian censuses only gradually improved in completeness and produced significant undercounts in all censuses prior to 1966. Added to the ubiquitous problems of under-enumeration of women and children, census-takers in Algeria experienced special problems with nomads and with migration to Europe. (For a detailed description of the first reasonably-accurate Algerian census and the problems mentioned above, see Abdelaziz Bouisri, *Technique, méthode, et résultats du recensement de la population Algérienne*, in *Revue Tunisienne*, vi/17-18 (June 1969), 95-125.)

Algeria's vital registration system was begun by the French, but under-registration was extremely high, perhaps 30 %. Since independence this figure has improved to 10-15 % of vital events unregistered; see M.L. Fares, *Population growth and socio-economic development in Algeria*, in *Demographic aspects*, 398-9). The country took a major National Demographic Survey in 1969-71 which has provided the best estimates of fertility and trends available.

In addition to the articles mentioned above, the following can be consulted as basic descriptions of Algerian population and demography: A.M. Bahri *Population et politique en Algérie*, in *Revue Tunisienne*, vi/17-18, 65-88; Zachariah, *Basic demographic measures of Algeria*, in *Demographic measures*, 1-25; A. Bouisri and F. de Lamaze, *La population d'Algérie d'après le recensement de 1966*, in *Population*, xxvi, numéro spécial (March 1971), 25-46; G. Negadi et alii, *Situation démographique de l'Algérie*, and the other articles and the bibliography in *La population de l'Algérie*, in *Population*, xxviii/6 (Nov.-Dec. 1973), 1079-1107.

Tunisia. Both the Ottoman government and the Tunisian Beylik kept registers of population, mainly as taxation records. J. Ganiage has examined these registers and deduced from them the population of Tunisia ca. 1860; see *La population de la Tunisie*

vers 1860. *Essai d'évaluation d'après les registres fiscaux*, in *Études Maghrébines*, Paris 1964, 165-98, and in *Population*, xxi/5 (Sept.-Oct. 1966), 857-62). As is usually the case, the local records are far superior as sources of demographic information than any estimates by travellers or consuls. (For a brief summary of early estimates, see Mahmoud Seklani, *La population de la Tunisie*, Tunis 1974, 13-22.)

The French government of Tunisia and later the Republic held censuses in 1921, 1926, 1931, every ten years from 1936 to 1966, and in 1975. (Censuses of the European population of Tunisia were held earlier than 1921.) The first census seems to have undercounted the population due to the enumerators' dependence on tax registers (Clarke, *Tunisia: population patterns, pressures, and policies*, in Clarke and Fisher, 350; Seklani, *op. cit.*, 18-19), so it is perhaps not proper to call it an actual census. The latter censuses have shown the usual undercount of women and younger children. Various surveys have provided a more detailed demographic picture than seen in the censuses, especially the Tunisian Demographic Survey of 1968 (J. Vallin and G. Paulet, *Quelques aspects de l'enquête nationale démographique tunisienne*, in *Revue Tunisienne*, vi/17-18, 227-48).

Though death registration in Tunisia is very incomplete, since 1958 births seem to have been better recorded; see S. Zaghoul, *Demographic parameters of Tunisia*, in *Demographic measures*, 231, 233.

Tunisia has a well-developed statistical system. M. Picouet describes the system and gives an overview of available data in *Les sources de la démographie tunisienne à l'époque contemporaine*, Tunis 1972. The population itself is described, from the 19th century to 1990, in Seklani's *La population de la Tunisie*. See also: Hachemi Chtioui, *La croissance de la population et des ressources en Tunisie pendant la période coloniale*, in *Revue Tunisienne*, vi/17-18, 53-64; A. Marcoux, *La croissance de la population de la Tunisie*, in *Population*, xxvi, numéro spécial (March 1971), 105-24; and the various publications of the Centre d'Études et de Recherches Économiques et Sociales of the University of Tunis and of the Tunisian Institut National de la Statistique.

Libya. The first population statistics for Libya were the Ottoman registration (males only) records for the Provinces of Benghazi and Tripoli. The Italians took censuses in 1931 and 1935 which under-enumerated the nomadic population, but counted the city regions with greater accuracy, see Pan Chia-Lin, *The population of Libya*, in *Population Studies*, iii/1, 100-25. Independent Libya has held three censuses: 1954, 1964, and 1973. Statistics have improved with time, and an undercount in 1954 had greatly improved by 1973, though the 1973 census was still probably incomplete in coverage of nomads.

Compared to the other North African countries, very little has been written on the demography of Libya. R.G. Hartley, *Libya: economic developments and demographic responses*, in Clarke and Fischer, 315-47, describes population and economy, but provides very little analysis of Libyan demographic data. The best descriptions of the Libyan demography are the short *Demographic parameters of Libya*, by S. Zaghoul, in *Demographic measures*, 115-36, and a monograph by the Libyan census department, *Population growth, fertility, and mortality based on the 1973 Populations Census*, Addis Abbaba (UNECA) 1979.

Egypt. Egyptian population before 1800 has been estimated on the basis of taxes paid, land cultivation, and contemporary statements on city sizes, none of

which have resulted in anything but very rough approximations. On these estimates, see W. Cleland, *The population problem in Egypt*, Lancaster, Penn. 1936, 3-6. The first attempt at scientifically counting the Egyptian population was made by members of the French Expedition in 1800. It was followed by an enumeration, based on tax registers, made by Muḥammad 'Alī in 1821. Both of these early attempts resulted in considerable undercounts. The first relatively accurate population count in Egyptian history was taken by Muḥammad 'Alī in 1846, this time drawn from household registers similar to those mentioned above for the Ottoman Empire in the same period. A census along modern lines was taken in 1882, but its figures were once again too low. See J. McCarthy, *Nineteenth century Egyptian population*, in *Middle Eastern Studies*, xii/3 (Oct. 1976), 1-40, which includes correction factors for the 1882 figures.

The British took decennial censuses from 1897 to 1947. Except for a large undercount in the 1917 wartime census, the British censuses are good population records. The amount of undercounting diminished as the census series went on. Attempts to take a census of the new Egyptian Republic were frustrated in 1957 by war conditions, though preliminary results were reported. The Egyptian government carried out successful censuses in 1960 and 1976, and a sample census in 1966. Registration of births and deaths has been done since the middle of the 19th century and, though it has never been complete, the registration of vital events in the 20th century has been accurate enough to provide a general picture of fertility and mortality patterns. By the standards of the developing world, Egypt has an excellent series of demographic statistics.

An article by A.B. Mountjoy, *Egypt: population and resources*, in Clarke and Fisher, 291-314, is a readable and non-technical summary of the Egyptian population after 1966. For more analytic treatments, see M.S. Khodary, *Use of census age distributions for estimating basic demographic parameters of the U.A.R.*, in *Demographic measures*, 249-78, and V.G. Valaoras, *Population analysis of Egypt (1935-1970)*, Cairo Demographic Centre, *Occasional Paper* no. 1, Cairo 1972. Atef M. Khalifa, *The population of the Arab Republic of Egypt*, Cairo 1973, is the best comprehensive description of the population. See also Issawi, *Population and wealth in Egypt*, in *Demographic analysis: selected readings*, ed. J. Spengler and O.D. Duncan, Glencoe, Ill. 1957; Egypt, Central Agency for Public Mobilisation and Statistics, *The increase of population in the United Arab Republic and its impact on development*, Cairo 1969, esp. 1-30; Janet L. Abu-Lughod, *Cairo*, Princeton 1971; Egypt, *Djihāz tanzīm al-Usra wa 'l-sukkān*, *al-Atlas al-sukkāni li-Djumhūriyyat Miṣr al-'Arabiyya*, Cairo 1977.

The general works on Middle Eastern population cited above usually include the demography of Egypt among their studies. Many monographs on the populations of the Middle East and Egypt are published by the Cairo Demographic Centre.

#### V. SUB-SAHARAN AFRICA

Islam is dominant across North-Central Africa from Mauritania to Somalia, and there are significant Muslim minorities in both East and West Africa. Demographic knowledge of this area only begins with the period of colonial domination. Though a few traveller's accounts of the populations of small areas exist for an earlier period, there are no accurate

figures for the total populations of large areas until well into the 20th century.

The type of demographic statistics available for sub-Saharan African countries depends on whether the colonial ruler of a nation was England or France. England was generally more able to take census statistics of its sub-Saharan possessions than was France. Only at the very end of colonial rule, though, were the English censuses remotely successful counts of population. Before that time, numerous censuses were taken of the non-native populations, or of the populations of cities, or of selected areas, but the first actual censuses of entire countries were only taken after World War II.

Before the War the British did produce a wealth of estimates of African population. These range from simple estimates based on observation to complex approximations made by comparing the characteristics of areas that had been enumerated with those that had not and estimating that similar areas had similar population numbers. Both estimates and censuses made in British Africa are considered in detail and thoroughly analysed by R.R. Kuczynski, *Demographic survey of the British Colonial Empire*, 2 vols., Oxford 1948. Kuczynski collected censuses, estimates, and other data and drew from them accurate estimates of total population, fertility, mortality, and migration. While more recent studies have questioned certain sections of his analyses, Kuczynski's work still stands as a monument to careful scholarship.

The first reliable population data from East Africa censuses come from the British East African censuses of 1948. These were followed by censuses taken in Kenya in 1962, 1969, and 1979, in Tanzania in 1957-8, 1967, and 1978, and in Uganda in 1959 and 1969. Sample surveys have not been as important in East Africa as in West Africa and the Sahel and population registration has not proved effective.

For an introduction to the demography of East Africa, see Simeon Ominde, *The population of Kenya-Uganda-Tanzania*, Nairobi 1975. Melte Monsted and Parveen Walji, *A demographic analysis of East Africa*, Uppsala 1978, go more deeply into analysis and interpretation of demographic phenomena. An article by J.G.C. Bleeker, *Demography, in East Africa: its people and resources*, ed. W.T.W. Morgan, Nairobi, London and New York 1972, 41-58, and the ch. on population in R.M.A. van Zwabenberg and Anne King, *An economic history of Kenya and Uganda*, Nairobi 1975, 3-22, are both brief summaries of the known population history of the area. To date, the most complete and detailed analyses of any country in East Africa are in *The demography of Tanzania*, ed. Rushdi A. Henin, Dar es Salaam n.d., whose articles analyse the results of the demographic survey of Tanzania. On pre-1970 censuses and registration of births and deaths in the area, see the brief description and bibliography by D.A. Lury, *Population data of East Africa*, in *The population of Tropical Africa*, ed. J.C. Caldwell and Chukuka Okonjo, New York 1966, 44-70.

In West Africa, no complete census was ever taken in Nigeria, Ghana, or Sierra Leone while they were under British colonial rule, though in-exact counts were taken in Ghana in 1948. Ghana has held decennial censuses since 1960 and Sierra Leone censuses in 1963 and 1974. In Nigeria, following upon a series of population estimates and partial censuses beginning in 1866, the British took a census in 1952-3 that was relatively reliable. Since then, each Nigerian census has proved to be more

unreliable than the last. See R.K. Udo, *Population and politics in Nigeria*, in Caldwell and Okonjo, 97-105. Nigeria has held censuses in 1952-3, 1962, 1963, and 1973.

Unlike Nigeria, the censuses of Ghana and Sierra Leone have proved to be reliable. Sierra Leone censuses have exhibited only a slight, ca. 5%, undercount and the Ghana censuses are of a similar level of reliability. See T.E. Dow Jr. and E. Benjamin, *Demographic trends and implications*, and S.K. Gaisie, *Population growth and its components*, in *Population growth and socioeconomic change in West Africa*, ed. Caldwell, New York 1975, 427-54, and 346-66.

S.K. Gaisie and K.T. de Graft-Johnson, *The population of Ghana*, Legon, Ghana 1976, have summarised the demography of modern Ghana, but they mention little on historical population. For historical data, see Marion Johnson, *Census, map, and guessestimate: the past population of the Accra Region*, in *African historical demography*, Edinburgh 1977. See also T.E. Hilton, *Ghana population atlas*, London 1960; *Symposium on population and socioeconomic development in Ghana*, ed. N.O. Addo, et alii, Legon 1968; *Interdisciplinary approaches to population studies*, Proceedings of the West African Seminar on Population Studies, Legon 1972; and the three articles by Gaisie in *Population growth*.

Any studies of Sierra Leone should begin with G.M.K. Kpedekpo and G. John, *A bibliography on population and development planning in Sierra Leone*, Freetown 1979. The best short description of the Sierra Leone population are J.I. Clarke, *Population growth in Sierra Leone*, in Caldwell and Okonjo, 270-7, and M.F. Harvey, *The nature of movement of the population*, in *Population growth*, 455-72.

P.O. Olunsaya has briefly summarised historical and modern data on Nigeria in his *Population growth and its components: the nature and direction of the population*, in *Population change*, 254-74. It is symptomatic of the deficiencies of the Nigerian census system that the only general book on Nigerian population is mainly a study of sample surveys (F.L. Mott and Olanrewaju J. Fapohunda, *The population of Nigeria*, Lagos 1975). I.I. Ekanem, *The 1963 Nigerian census: a critical appraisal*, Benin City 1972, has a good, brief introduction (30-45) to the statistical history of Nigeria. See also H.O. Emezi, *Nigerian population and urbanization, 1911-1974, a bibliography*, Occasional Paper no. 10 of the UCLA African Studies Center, 1975.

The Sudan has held three demographic sample surveys—1955-6, 1964-6 and 1967-8—and one census, in 1973. (The 1955-6 survey is often erroneously called a census.) Registration of births and deaths is extremely deficient. Despite increasing accuracy over time, all statements on Sudan's population have been undercounts, especially undercounts of nomads. Because of flaws in census and survey materials, much of what is known of Sudan's population comes from demographic analyses of defective data. For such analyses, see especially P. Demeny, *The demography of the Sudan*, in W. Brass, et alii, *The demography of Tropical Africa*, Princeton 1968, 466-514, and Zachariah, *Use of population and housing survey data of the Sudan for estimating its current demographic measures*, in *Demographic measures*, 169-93. The most complete picture of the Sudanese population is given in *The population of Sudan*, Khartoum 1958, but the book too often relies on defective data from the 1955-6 survey and even this data is out-of-date. The articles listed above and K.S. Seetharam and A. Farah, *Population trends*

and economic development in Sudan, in *Demographic aspects*, 149-69, give a more accurate picture of the population.

That the French in Africa were not as active as the British in taking censuses was largely a function of the type of colonial territory which they held. The countries of the Sahel—Chad, Niger, Mali, and Mauritania—are ones in which holding an accurate census historically proved to be near impossible. Complete counts of population were hindered by the problems of counting nomads, lack of trained census takers, and the prohibitively high costs of censuses in what were extremely poor nations. Chad has never had a census, and the other three countries only held their first censuses in 1976-7, with uncertain results. Instead of censuses, demographers of the Sahel have relied on "sample censuses" of 5 to 10 % of the population. These have yielded the only fairly reliable data on fertility and mortality of the area. See S.P. Reyna, *Chad*, and Issaka Pankoussa, *et alii*, *Niger*, in *Population growth*. A similar, though more statistically reliable, set of sample surveys and post-1975 censuses has been held in other areas of formerly French Africa. Pre-independence "censuses" of French Equatorial Africa were actually either estimates or what are called administrative censuses. The latter are counts drawn from tax registers, administrative records, or attempts to assemble the population at market towns to be counted and have proved to be uniformly incorrect.

L. Verrière has described Senegal in 1965 (*La population du Sénégal*, Dakar 1965), basing his work on the 1960-1 sample survey, which was highly deficient. See also P. Metge, *Le peuplement du Sénégal*, Dakar 1966. The article by B. Lacombe, B. Lawry, and J. Vaugelade, *Senegal*, in *Population growth*, 701-19, is a better description of the population. A. Podlewski has described the population of Cameroon in *Population growth*, 543-64, but little else has been written on the country's population. See also J.-M. Cohen *et alii*, *Afrique Noire, Madagascar, Comores—Démographie comparée*, Paris 1967; *Demographic transition and cultural continuity in the Sahel*, ed. D.I. Pool and S.P. Coulhaly, Ithaca, N.Y. 1977.

Historical demography of Africa is necessarily hindered by the lack of sources. Unfortunately, the Muslim areas of Africa are often those with the worst potential for historical population statistics, since no "parish registers" or missionary records of conversions exist for African Muslims. Nevertheless, the application of sophisticated techniques of demographic and historical analysis is producing data on African Muslim populations of the past, particularly in the 19th century. An example of scholarly effort on African population, *African historical population*, Proceedings of a Seminar at the University of Edinburgh 1977, includes studies on the Sudan, the Ivory Coast, and French Equatorial Africa, all areas of significant Muslim population, and analyses of population statistics of East and West Africa. G. Ayoub Balamoan, *Migration policies in the Anglo-Egyptian Sudan, 1884-1956*, Cambridge, Mass. 1977, has demonstrated that limited African data can be used to establish sound historical knowledge on migration, demographic change, Muslim topics such as the Pilgrimage, and even political events. Many of the works mentioned above on modern African demography have sections on historical demography as well. The volumes by Kuczynski are particularly important for identifying historical statistics and their sources.

Most of the new nations of Africa have taken censuses since independence. F. Gendreau has published a list of censuses, and sample surveys, taken in all the countries of Africa between 1946 and 1975, see *La démographie des pays d'Afrique, revue et synthèse*, in *Population*, xxxii/4-5 (July-Oct. 1977), 930-1 (Some of the censuses listed by Gendreau were not complete or accurate enough to be listed as censuses by the United Nations.) More recent censuses are listed in the United Nations Demographic yearbook (described below).

There are not many general works on the demography of sub-Saharan Africa. *The demography of Tropical Africa*, ed. Brass *et alii*, Princeton 1968, is a pioneer work, not only in African demography, but in the study of the populations of developing nations. E. van de Walle's *Characteristics of African demographic data* in the volume (12-87) is an excellent summary of the types of errors found in African censuses and surveys. Gendreau lists the populations of cities and countries in his article *La démographie*, and considers the accuracy of various types of data-gathering techniques—censuses, administrative censuses, and surveys. For a geographic approach to African population, see W.A. Hance, *Population, migration, and urbanization in Africa*, New York 1970. The best source on West Africa is *Population growth and socioeconomic change in West Africa*, the articles of which consider first the demographic variables for the region as a whole, then for specific nations. Nigeria, Sierra Leone, and Ghana are particularly well represented.

For a brief introduction to sub-Saharan African population, see the chapter by J.C. Caldwell in *General history of Africa*, ed. A.H. Boahene, Paris 1975, or Chantal and Yves Blayo, *The size and structure of African populations*, in *Population in African development*, ed. P. Cantrelle, Liège n.d. (The other articles in the Cantrelle volume, papers from a 1971 conference, are detailed studies of specific problems in African demography.) The United Nations Economic Commission for Africa (Addis Ababa) publishes continuing series on African demography, especially the *Demographic handbook for Africa* and the African Population Studies Series. The bibliography by the United States Library of Congress, *Islam in Sub-Saharan Africa* (Washington 1978) mentions few articles specifically on population, but a number of articles cited as ethnographic have demographic uses. See also: *Essays on African population*, ed. K.M. Barbour and R.M. Prothero, London 1961, which should be used only as a source of references on early data, since the articles accept inferior, usually colonial, data in their analyses; *Population growth and economic development in Africa*, ed. S.H. Ominde and C.N. Ejiogu, London, Nairobi, Ibadan 1972; D. Morrison *et alii*, *Black Africa, a comparative handbook*, New York and London 1972.

## VI. CAUCASUS AND CENTRAL ASIA

There are no accurate statistics of the number of Central Asian Muslims in what is today the U.S.S.R. until the 19th century. Barthold, *Turkestan*, ch. 1, mentions a few Chinese and Arab statements on the populations of cities and numbers in armies, but these are no more than improbable guesses, e.g. the city of Samarkand having 500,000 citizens. In the late 19th century, travellers such as Curzon (*Russia in Central Asia*, London 1889) and Schuyler (*Turkistan*, New York 1877) occasionally reported city sizes, taken from Russian records, fairly accu-

rately, though not figures on total population. See A. Zeki Velidi Toğan, *Bügünkü Türklü ve yakın tarihi*, Istanbul 1942-7, 27-8.

The first census of Central Asia was taken in 1897 by the Russian government. The vassal states of Khīwa and Bukhārā were not included in this census, since they were nominally not included in the Russian Empire, and the populations of the two states are accordingly only known from contemporary estimates. See Timur Kocaoglu, *The existence of a Bukharan nationality in the recent past*, in *The nationality question in Soviet Central Asia*, ed. E. Allworth, New York 1973, 151-8. Estimates of the population of Bukhārā and Khīwa have been discussed and analysed by F. Lorimer in *The population of the Soviet Union: history and prospects*, Geneva 1946, 129, and more completely by L. Kroder, *Peoples of Central Asia*, Bloomington, Ind. 1963, 172-3. Like all censuses of traditional areas, the 1897 census figures are incomplete, especially for Muslim women and young children. Nevertheless, its data are excellent when compared to the type of poor estimates that must serve for previous periods.

The first complete census of Russian (Soviet) Central Asian Muslims was taken in 1926, followed by censuses in 1939, 1959, 1970, and 1979. Official estimates of the Central Asian population were also made by the imperial government in 1911 and the Soviet government in 1956 (Kroder, 178, 190).

Since the Soviet state is atheistic, it does not recognise religious distinctions and the category "Muslim" does not appear on the Soviet censuses. A student of Muslim population in the Soviet Union must consider instead the population of multitudinous "ethnic groups" whose antecedents were Muslims. Comparison of Imperial statistics on Muslims with Soviet statistics on "ethnic groups" is very difficult, as is analysis of Soviet Muslim population. Most demographic analyses of Central Asia or the Caucasus are done by region or republic, i.e., multi-ethnic or multi-religious subdivisions, or by ethnic or linguistic groups, not religion.

I.M. Matley's *The population and the land*, in *Central Asia: a century of Russian rule*, ed. Allworth, New York and London 1967, is a good general article on Imperial and Soviet Central Asian population, as is ch. 7, *Demography*, of Krader's *Peoples of Central Asia*. General volumes such as *The nationality question in Soviet Central Asia*, and R.A. Lewis et alii, *Nationality and population change in Russia and the USSR*, New York 1976, contain large sections on Muslim populations and helpful bibliographies. The best analyses of demographic variables in Central Asia and the Caucasus are in A.J. Coale et alii, *Human fertility in Russia since the nineteenth century*, Princeton 1979, ch. 3. Though not a demographic text, A. Bennigsen and Ch. Lemerrier-Quellejey, *Islam in the Soviet Union*, New York 1967, should be consulted for material on the Muslim family and bibliography. Demographic information, usually on total population, is scattered throughout the articles on the Turkish peoples of Central Asia and the Caucasus in *Türk dünyası el kitabı*, Ankara 1976. Articles on population and modern demography appear in the journal *Vestnik Statistiki* (Moscow).

For sources of demographic information and bibliography, see U.S.S.R., Akademiyā Nauk, Geograficeskoe Obshchestvo Soyuzā SSR, *Geografiya neseliniya v SSSR, osnovnie problemi*, Moscow 1964, chs. 2-4; G.J. Demko, *Demographic research on Russia and the Soviet Union: a bibliographic review and evaluation*, in *Demographic developments in*

*Eastern Europe*, ed. L.A. Kosinski, New York 1977, 94-119. Barbara Anderson has compiled an excellent detailed list of Russian and Soviet statistical publications, *Data sources in Russian and Soviet demography*, in *Demographic developments*, 23-63.

#### VII. INDIAN SUBCONTINENT

The Indian subcontinent, comprising the modern states of Bangladesh, India and Pakistan, has a long and detailed statistical history. The Mughals instituted a population, land, and tax registration system, and much demographic information from the Mughal period, and perhaps earlier, exists in local archives in the subcontinent (Ajit Das Gupta, *Study of the historical demography of India*, in D.V. Glass and R. Revelle, *Population and social change*, London 1972, 425). Little use has been made, however, of anything but population estimates as they appear in histories and chronicles, which sometimes themselves drew on contemporary government records. The first to make use of these population estimates was W.H. Moreland, *India at the death of Akbar*, London 1920, who based his population estimates on the relation of total population to reports of the area of cultivated land and to reports of the sizes of armies. His figures for total population have been improved on and generally supported by J.M. Datta, *Re-examination of Moreland's estimate of the population of India at the death of Akbar*, in *Indian Population Bulletin*, i/1 (Delhi April 1960), whose historical and demographic methodology was far superior to that of Moreland. K. Davis, *The population of India and Pakistan*, New York 1951, 24, raised Moreland's figures, as did Das Gupta, 425-30.

Estimates of mediaeval Indian Muslim population have been carefully catalogued by K.S. Lal, *Growth of Muslim population in medieval India, A.D. 1000-1800*, Delhi 1973. He has demonstrated that painstaking analysis of all types of sources—geographers' accounts, government records, histories, and censuses and registration records from small areas—can provide useful demographic statistics. Despite the completeness of Lal's work, his conclusions remain rough estimates only, many on the level of informed guesses.

British residents of the East India Company, and later the Empire, made numerous population reports in the 19th century. At first they resorted to devices such as counting houses, ploughs or villages and multiplying by set number, but later censuses of certain areas such as Bombay and Madras were taken, and these formed the basis of British population estimates for wider areas (Das Gupta, 419-35). Lal (224-52) has listed a number of early 19th century British censuses and estimates, but the most complete listing is in E. Thornton, *Gazeteer of the territories under the Government of the East India Company and of the Native States*, 4 vols., London 1854.

The first complete British census of the Indian subcontinent was taken in 1881, following an incomplete census in 1871. Figures in the 1881 census were too low, but have been adjusted by P.C. Mahalonobis and D. Bhattacharya, *Growth of the Population of India and Pakistan, 1801-1961*, in *Artha Vijnāna*, xviii/1 (March 1976), 1-10, and by K. Davis, ch. 4. Up to 1931, British censuses of the subcontinent gradually improved, until by the 1931 and 1941 censuses they were among the best in the colonial world.

On early Indian subcontinent population, see

also Zachariah, *An historical study of internal migration in the Indian sub-continent*, New York 1964; Government of India, *Report on the population estimates of India, 1820-1930*, Delhi 1975; T.G. Kessinger, *Historical demography of India*, in *Peasant Studies*, v/3 (July 1976), 2-8.

After independence, the Indian and Pakistani governments continued the censuses. India kept to the British decennial census plan and held censuses in 1951, 1961, 1971, and is planning a 1981 census. Pakistan took censuses in 1951, 1961, and 1972; Bangladesh in 1974. Of the three countries, India's census totals seem to be the closest to correct. Pakistan's census probably undercounts by 7-8 %. D. Natarajan, *Indian census through a hundred years*, New Delhi n.d., gives a detailed view of the Indian censuses. All three countries have held sample surveys which have been especially valuable in evaluating fertility. See, for example, Bangladesh, Census Commission, *Report on the 1974 Bangladesh retrospective survey of fertility and mortality*, Dacca 1977, and World Fertility Survey, *Pakistan fertility survey*, First report, Karachi? 1976.

India's size and economic situation, as well as its long series of available statistics, makes it the developing country most studied by demographers. Hundreds of articles are written each year on facets of Indian demography, and it is impossible to consider this vast literature here. Kingsley Davis's volume, mentioned above, is a good introduction to the demography of India up to independence. The Indian Registrar General's Office has published a general introduction to Indian population, *The population of India*, Delhi 1974, and a *Bibliography of census publication of India*, Delhi 1972. For a more complete review of the Indian statistical tradition, population, and demography, see Asok Mitra, *India's population: aspects of quality and control*, 2 vols., New Delhi 1978. See also R.H. Cassen, *India: population, economy, and society*, New York 1978.

Information on modern censuses and surveys of Pakistan and its demography is well summarised in Mohammad Afzal, *The population of Pakistan*, Islamabad 1974. L. Bean has written a short introduction to the subject in *The population of Pakistan, an evaluation of recent statistical data*, in *MEJ*, xxviii/2 (1974), 177-84. Though the area of Pakistan has been included in studies on the historical demography of India, studies of purely Pakistani historical demography have been done as well: A.S.M. Mohiuddin, *The population of Pakistan: past and present*, diss., Duke University 1962, and Pakistan Institute of Development Economics, *District Boundary changes and population growth for Pakistan, 1881-1961*, Dacca n.d. Earlier studies of Pakistani demography all include Bangladesh as East Pakistan.

See also *Studies in the demography of Pakistan*, ed. W.C. Robinson, Karachi 1965; A.D. Bhatti, *A bibliography of Pakistan demography*, Karachi 1965; Sultan S. Hashmi, *Main features of the demographic condition in Pakistan*, Karachi 1963; T.P. Schultz and Julie da Vanzo, *Analysis of demographic change in East Pakistan*, United States Agency for International Development Report by the Rand Corporation, Santa Monica, Cal. 1970; K.J. Krotki and Khalida Parveen, *Population size and growth in Pakistan based on early reports of the 1972 census*, in *The Pakistan Development Review*, xv/3 (Autumn 1976), 290-318.

#### VIII. SOUTHEAST ASIA

Indonesia. In the late 18th and early 19th cen-

tries, European colonial agents estimated the population of Java, basing their figures on records of the Dutch East India Company. These estimates, the first of their kind, were gross underestimates. The first attempts at accurate enumeration of the population were made by the British during their brief rule in Indonesia (1811-16), when population registers were made. The Dutch seem to have maintained these registers fitfully until 1880. At that time they enforced more complete registration, to be used as conscription records for compulsory labor. Probably because all who could do so naturally avoided such a registration, these registers also produced a large undercount of population. Widjojo Nitisastro has analysed early material on the population of Indonesia in his *Population trends in Indonesia*, Ithaca and London 1970, and has concluded that the Dutch figures on total population are generally useless. Their main use should be as part of complete analyses of small demographic areas. Bram Peper has concurred in Widjojo Nitisastro's analysis and has used alternative demographic methods to calculate the population of 19th century Java; see his *Population growth in Java in the 19th century*, in *Population Studies*, xxiv/1 (March 1970), 71-84.

The Dutch colonial government took a census in 1920 in Java, but included few other areas of Indonesia and undercounted Java. Another colonial census was held in 1930, with wider coverage and better results. Independent Indonesia has taken censuses in 1961 and 1971. Some areas were estimated rather than enumerated in 1961 and the 1971 census is superior. A number of sample surveys have also been taken in the 1960s and 1970s.

Widjojo's volume is the most complete description of the Indonesian population (to 1970), but it must depend on the 1961 census. *The population of Indonesia* by the Demographic Section of the University of Indonesia (Lembago Demografi) is more complete for the later period. G. McNeill and Si Gde Made Mamus, *The demographic situation in Indonesia*, Papers of the East-West Institute, no. 28, Honolulu 1973, accurately summarise the available demographic information on the country.

See also J.M. van der Kroef, *The Arabs in Indonesia*, in *MEJ*, vii/3 (Summer 1953), 300-23 (Van der Kroef too readily accepts Dutch colonial estimates of population as accurate); J.N. Bhatta, *A social science bibliography of Indonesia*, Djakarta 1965; N. Iskandar, *Some monographic studies on the population of Indonesia*, Djakarta 1970; and Masri Singarimbun, *The population of Indonesia: a bibliography*, Yogyakarta 1974.

Singapore-Malaysia. The British began to take population counts in the areas of Singapore-Malaysia in 1824, and made 14 enumerations between 1824 and 1860, none of which can be called reliable. Modern censuses were taken in Singapore in 1871 and 1881 and in both Singapore and the Malayan territories decennially from 1891 to 1931. As British colonial power expanded over new areas of Malaysia, the new areas were brought into the census; see Saw Swee-Hock, *The development of Population statistics in Singapore*, in *Singapore Statistical Bulletin*, 1/2 (Dec. 1972), 87-93. After World War Two, the British took censuses in 1947 and 1957. The independent federation of Malaysia held a census in 1970, as did Singapore, which had seceded from the federation in 1965. Though registration of deaths and births in Malaysia has only been reasonably complete since ca. 1970, the census results since 1921 have been reliable. On registration data, see J.A.

Palmore, *et alii*, *The demographic situation in Malaysia, in Population and development in Southeast Asia*, ed. J.F. Kanter and L. McCaffrey, New York 1975, 64-6. Sample surveys have been taken in the 1960s and 1970s.

Saw Swee-Hock has briefly described changes in population sizes in Singapore in *Population trends in Singapore, 1819-1967*, in *Journal of Southeast Asian History*, x/1 (March 1969), 36-49, and given a more complete description of Singapore's demography in *Singapore, population in transition*, Philadelphia 1970. Saw's analysis of population by "race" offers an accurate picture of Muslim demography, i.e. the demography of the Muslim peoples of Singapore. Dorothy Z. Fernandez *et alii*, *The population of Malaysia*, is a good introduction to demographic statistics on Malaysia, though it contains little analysis of the population. Those interested in historical population should consult C.A. Vlieland, *A report on the 1931 census and certain problems of vital statistics*, London 1932, esp. chs. 3, 13.

See also T.E. Smith, *Population growth in Malaya: an analysis of recent trends*, London 1952; L.W. Jones, *The population of Borneo*, London 1966. Many monographs and articles on modern Southeast Asian population are published by the United Nations Economic and Social Commission for Asia and the Pacific.

#### IX. GENERAL

The populations of Muslim lands have been included as part of the estimates in works on world historical population. The more detailed volumes, such as A.M. Carr-Saunders' *World population: past growth and present trends*, Oxford 1936, or M. Reinhard's *Histoire générale de la population mondiale* (with A. Armengaud and J. Dupaquier, 3rd ed., Paris 1968), contain fairly extensive statements on the populations of Muslim lands. It must be remembered that these estimates have mainly collected and reproduced scholarship that has been done on the various geographic areas of the world by others, so that researchers might be better served by consulting the more primary works, which contain more detailed analyses. The authors of studies of world population history are forced to provide estimates for regions and times for which population numbers are actually unknown. As has been seen above, Muslim lands are often among those whose historical populations are unknown, so estimates of the populations of those lands in world population books must be used with caution. In addition to Carr-Saunders and Reinhard, see the summary article by J.D. Durand, *Historical estimates of world population: an evaluation*, University of Pennsylvania Population Studies Center, Philadelphia 1974, and United Nations, Department of Economic and Social Affairs, *The determinants and consequences of population trends*, 1, New York 1973, ch. 2 (vol. ii is a bibliography on world population).

General bibliographies. Many articles on the demography of the Islamic World do not appear in the standard bibliographies on Islam, such as *Index islamicus*, since the bibliographies do not usually include technical demographic journals within their purview. The best source of information on works on any facet of demography is *Population index* (Princeton, quarterly), one of the most thorough and valuable bibliographies in the social sciences. In addition to hundreds of journals, the *Index* examines all relevant bibliographies from other disciplines for materials on demo-

graphy. See also *Bibliographie internationale de la démographie historique* (Paris); *Review of population reviews* (Paris); and *International population census bibliography*, 6 vols. and suppl., Austin, Texas 1965-8, new vols. in preparation.)

General statistics. The best source of recent demographic statistics on a country is usually the published census, sometimes updated by intercensal estimates in the nation's statistical yearbook. The United Nations *Demographic yearbook* (New York, annual) summarises statistics on population, fertility, mortality, and other demographic topics for all nations. Each year's edition of the *Demographic yearbook* also features detailed statistics on special topics such as marriage or international migration. See also the United Nations *Population and vital statistics report*, published quarterly (New York), which contains topical information.

From 1969 to 1978, the Population Council of the United States published short descriptions and statistics on the demography of various nations in its *Country profiles* (New York 1969-78). The United States Bureau of the Census publishes brief descriptions of selected nation's demography in the series *Country demographic profiles*.

(J. MCCARTHY)

**DEVIL** [see 𐤏𐤏𐤏, 𐤌𐤏𐤏].

**DHĀBĪĪĤĀ** means both the sacrifices of a victim and the victim itself. In addition to the religious sacrifices studied in the art. 𐤃𐤏𐤏𐤏𐤏, there exist a host of others, meant for special occasions (*dbiĥa* in Maghribī Arabic; Berber *tamaghrust*; etc.), which have been treated at length in the art. DAM above. On the blood sacrifices practised before the advent of Islam, see in particular 'ATĪRA and NADĤR, and also J. Chelhod, *Le sacrifice chez les Arabes*, Paris 1955, and the bibliography cited there.

(ED.)

**DHĀT AL-ŠAWĀRĪ**, DHŪ 'L-ŠAWĀRĪ, GHAZWAT AL-ŠAWĀRĪ, "the Battle of the Masts", the names given in the Arabic sources to a naval battle between the Arabs and Byzantines in the latter part of 'Uthmān's caliphate. The locale of the engagement is not wholly certain, but was probably off the coast of Lycia in southern Anatolia near the place Phoenix (modern Turkish Finike, *chef-lieu* of the *kaza* of that name in the *vilayet* of Antalya).

As governor of Syria, Mu'āwiya [q.v.] seems to have inaugurated a policy of building up Arab naval power in order to counter Byzantine control of the Eastern Mediterranean, and in 28/648-9 Cyprus had been attacked [see 𐤏𐤏𐤏𐤏]. The Muslim fleet at Dhāt al-Šawārī comprised ships from the Syrian coastal ports and from Alexandria, and was under the command of either the governor of Egypt 'Abd Allāh b. Abī Sarĥ [see 'ABD ALLĀH B. SA'D] or of a certain Abu 'L-A'war; the Byzantine fleet was commanded by the Emperor Constans II Pogonatus in person. The exact date of this is unsure, but was either 31/651-2 or 34/654-5 (both dates in al-Ṭabarī, i, 2865, but 34/655 in al-Balādhurī, *Ansāb*, v, 50); nor are the details of the battle clear, whilst those which we do possess have been given many semi-legendary touches. However, the Muslim forces gained a decisive victory, and Constans had to flee

to Sicily, where he was assassinated in 668. That the Arabs failed immediately to follow up this triumph, and did not attack Constantinople itself until Mu'āwīya's reign (in 52-8/672-8), was probably the consequence of mounting *fitna* within the caliphate, culminating in 'Uthmān's murder in 35/656 although they were able to sack Rhodes in 33/653-4, just after Dhāt al-Šawārī, if we adopt the earlier chronology for the battle.

Ahrweiler, *Byzance et la mer: la marine de guerre, la politique et les institutions maritimes de Byzance aux VII<sup>e</sup>-XV<sup>e</sup> siècles*, Paris 1966, 17 ff.

(C. E. BOSWORTH)

**DHIKRĪS**, ZIKRĪS, a Muslim sect of southern Balūčistān, especially strong amongst the Balūč of Makrān [q.v.], but also with some representation amongst the Brahūis of further north. The sect's name derives from the fact that its adherents exalted the liturgical recitations of formulae including the name and titles of God, sc. *dhikr* [q.v.], above the formal Muslim worship, the *ṣalāt* or *namāz*.

The Dhikrīs were believed by Hughes-Buller to stem from the North Indian heterodox movement of the Mahdawiyya, the followers of Sayyid Muḥammad Mahdī of Djawnpūr (847-910/1443-1505), who claimed to be an *imām* with a revelation superseding that of Muḥammad the Prophet [see AL-DJAWNPŪRĪ and *EI* art. MAHDĀWĪS]. Adherents of the Mahdawiyya would have brought their doctrines to the remote region of Makrān via Farāh in eastern Afghānistān, where Muḥammad Mahdī Djawnpūrī was buried. The rise of the Dhikrīs in Makrān is apparently contemporaneous with that of the local line of Bolēday Balūč *maliks* in Makrān (early 17th century); both they and their successors after ca. 1740, the Gičkīs, were strong adherents of the Dhikrīs, and their heterodoxy brought down upon them several attacks by the orthodox Sunnī Khān of Kalāt, Mīr Naṣīr Khān (d. 1795) [see KILĀT and G.P. Tate, *History of the Ahmadzai Khans of Kalāt*].

Because, as with other unorthodox sects in Islam, its opponents spread slanderous reports about the immorality of the Dhikrī sect (incestuous practices, community of goods, etc.), the Dhikrī adherents were often driven to practice dissimulation in religion or *takīyya* [q.v.], and it is accordingly not easy to obtain a clear picture of their doctrines and practices. It seems that these were consolidated in the early 18th century by Mullā Gičkī and that they included the idea of *ta'wīl* of the Qur'ān by the Mahdī, whose interpretation had replaced Muḥammad of Mecca's

literal one; the non-necessity of observing the Ramaḍān fast; and the superiority of *dhikr* over *ṣalāt*. These formulae of *dhikr* are to be recited six times daily in special huts called *zīkrānas* which are not orientated towards the *kībla*. Instead of pilgrimage to Arabia, the Dhikrīs established a Ka'ba or shrine of their own at the Koh-i Murād near Turbat, in the district of Kēč in central Makrān, with a sacred well of its own, the *cāh-i zamzam*. British observers noted that the *mullās* of the Dhikrī communities had considerable influence.

Hughes-Buller's information relates to the first decades of this century, when he noted that the sect seemed to be on the decline, and it is difficult to ascertain the present status of the sect, if indeed it survives at all in Balūčistān now; the 1961 Pakistan population census reports mention the existence of Dhikrīs in Makrān and Las Bēla [q.v.], but they may be repeating information stemming from British Indian times.

**AL-DĪKDĀN**, a fortress situated on that part of the eastern shore of the Persian Gulf called the Sīf 'Umāra, not far from the island of Kays [q.v.], and famous in the 4th/10th century. It was known under three designations, Kal'at al-Dīkdān, Ḥiṣn Dīkbāya and Ḥiṣn Ibn 'Umāra, as well as the Persian one Diz-i Pisar-i 'Umāra (*Hudūd al-'ālam*, tr. 126). It stood guard over a village of fishermen and a port which could shelter some 20 ships, and according to Ibn Hawkal (tr. Kramers and Wiet, 268-9), following Iṣṭakhrī (140), no-one could get up to it unaided, since one had to be hoisted up by means of cables and a kind of crane or hoist. He adds that it was, for the Banū 'Umāra, an observation post from which they could watch the movement of ships on the sea: "when a vessel approaches, they bring it to a halt and demand a percentage of its cargo". The name of this fortress (= "tripod", "trivet", see Ibn Khurra-dāqbih, *Glossary*, 211), which al-Mas'ūdī considered as one of the wonders of the world (*Murūdj*, ii, 69 = § 501), is to be explained by the configuration of the land on which it was perched.

The geographers connect it with al-Djulandā b. Kan'an (Ibn Hawkal) or K.r.k.r (*Hudūd*, tr. 143; cf. Abu 'l-Kāsim al-Azdī, *Hikāya*, 138 l. 3; but it is probable that these two names are a deformation of al-Mustakīr, see Ibn al-Kalbī-Caskel, *Tab.* 216 and ii, 264). The Banū 'Umāra claimed to be descendants of al-Djulandā and stated that their ancestors had established themselves in the district in the time of Moses. Now al-Djulandā and his family are known to have been kings in Yemen (Muḥammad b. Ḥabīb, *Muḥabbar*, 265, 266; Ibn Ḥadjār, *Iṣāba*, No. 1295; M. Hamidullah, *Le Prophète de l'Islam*, index; etc.); on this basis, they levied dues on all merchandise and probably indulged too in piracy, since the Qur'ānic verse (XVII, 78/79) "... a king who was behind them, taking every ship by force" was applied to them. In reality, the Banu 'Umara were probably a family of the Azd [q.v.] of 'Umān who had settled in Fārs at an unknown date and who con-

trolled the Sif 'Umāra during a period difficult to define precisely. Yākūt (ii, 711) certainly states that the Āl al-Djulandā (the name of several lords of Fārs) were still powerful in his own time, but he only cites (ii, 966), after al-Mas'ūdī (*loc. cit.*), 'Abd Allāh b. 'Umāra who died in 309/921-2 after having reigned over the island of Zīrbādī for 25 years; his brother (?) Dja'far b. Ḥamza who reigned six months; and his son Baṭṭāl b. 'Abd Allāh who succeeded his uncle (?), who had been assassinated by his *ghilmān*. At all events, the fortress was in ruins at the time of al-Kalkashandī (*Subh*, iii, 242).

*Bibliography:* In addition to the sources mentioned above, see Marquart, *Ērānsahr*, 45; Schwarz, *Iran*, 77; Le Strange, 256-7; Barthold and Minorsky, *Hudūd al-'ālam*, 39-40, 377, 396.

(CH. PELLAT)

AL-DILĀ', an ancient place in the Middle Atlas region of Morocco which owed its existence to the foundation in the last quarter of the 10th/16th century of a *zāwiya* [*q.v.*], a "cultural" centre meant for teaching the Islamic sciences and Arab letters, and at the same time spreading the doctrine of the Shādhiliyya [*q.v.*] order, more precisely the branch known as the Djazūliyya [see AL-DJAZŪLĪ, ABŪ 'ABD ALLĀH MUḤAMMAD], and also sheltering the needy and travellers. In 1048/1638, the *zāwiya dilā'iyya* or *bakriyya* (from the founder's name, Shaykh Abū Bakr Ibn Muḥammad) was moved a dozen kilometres and gave birth to a new complex, enjoying a certain importance, in a spot now occupied by the *zāwiya* of the Ayt Iṣṣāḥ, 35 km. southwest of Kḥnīfira and 64 km. northeast of Kaṣbat Tādā. Impelled by the founder's drive, who belonged to a family possessing vast estates and rich revenues, the *zāwiya* developed considerably, especially after 1012/1603, for during the troubled period which followed the death of the Sa'did sultan al-Manṣūr [*q.v.*], it provided a safe haven for students coming from the traditional urban centres and, thanks to its library and to the members of the Dilā'iyyūn family, aided by scholars from outside seeking refuge and staying at al-Dilā', intellectual resources which were quite appreciable. The subjects taught there comprised, in addition to Ṣūfism, the Kur'ānic readings, *ḥadīth*, *fikh*, logic, grammar, *adab* and a little astronomy for determining the hours of prayer.

Abū Bakr (d. 1021/1612) seems to have limited himself to dispensing his teaching to students of the *zāwiya*, but his descendants have left behind a fairly important work which has been partly reviewed by M. Ḥadjdji (*al-Zāwiya al-dilā'iyya*, 251-3). His successor Maḥammad b. Abī Bakr (d. 1046/1636) was in particular the author of a *Fahrasa* (of which one ms. exists in a private library) and of a collection of *ḥadīths*, *Arba'ūn ḥadīth* (ms. Rabat 1295 Dj.). At his death the direction of the *zāwiya* passed to his son Maḥammad al-Ḥādjī (d. 1082/1671), who very soon transferred the centre to its new site and brought it to its full development. Scholars and literary figures like al-Makkarī and Ibn al-Kādir [*q.v.*] had already stayed at al-Dilā', but the new *zāwiya* attracted quite a numerous group of scholars, among whom the most remarkable was certainly al-Yūsī [*q.v.*].

Maḥammad al-Ḥādjī took part in the renaissance of Arabic culture in Morocco which was owed to the *zāwiya dilā'iyya*, although he did not participate very actively in this intellectual movement. Already in his father's lifetime he had undertaken minor expeditions which had been crowned with success, and he now turned resolutely towards military action, taking

advantage of the decadence of the Sa'dids [*q.v.*]. Operations began in 1048/1638, and the head of the *zāwiya* combatted, in this same year and on the banks of the wādī al-'Abīd, a Sa'did army sent from Marrakesh. Two years later, after various adventures, he had managed to establish his authority over the northwestern quarter of Morocco and, on 1056/1646, he reached as far as Tāfilāit. In 1061/1651 he proclaimed himself sultan of Morocco and established diplomatic relations with various European powers. However, countermovements soon followed in various towns, and after some successes over other claimants to power and over the Spanish, he was finally beaten in 1079/1668 by the 'Alawī sultan Mawlāy al-Raṣhīd [*q.v.*]. He was forced to submit to the latter, who merely exiled him with his family to Tlemcen, but allowed his troops to plunder the riches of the *zāwiya dilā'iyya* and then had the complex—whose site has only recently been identified—razed to the ground.

The Dilā'iyyūn later established themselves at Fās, where they soon came to form a kind of religious and intellectual aristocracy whose prestige was only surpassed by that of the Fāsiyyūn [see AL-FĀSĪ in Suppl.]. Only a grandson of Maḥammad al-Ḥādjī, Aḥmad b. 'Abd Allāh (d. 1091/1680) tried in 1088/1677 to rebel against Mawlāy Ismā'īl [*q.v.*] in the region of al-Dilā', but he was defeated in the next year on the banks of the wādī al-'Abīd. Some of Abū Bakr's descendants still live today in various towns of Morocco, in particular, at Fās, Casablanca and Rabat (see Ḥadjdji, *op. cit.*, 255-6, and E. Lévi-Provençal, *Chorfa*, 299, with genealogical tables).

After Maḥammad b. Abī Bakr (see above), his son Aḥmad al-Ḥārīthī (d. 1051/1641) composed a grammatical commentary which seems to have been lost, but it was another of his sons, Muḥammad, called al-Murābiṭ from his ascetic way of life, who was apparently the first to enjoy a wide audience beyond the confines of Morocco; he was indeed the author of various works which were in some demand in their time, amongst which have been preserved *al-Ma'ridj al-muntakāt ilā ma'ānī al-warakāt* (*fikh*; Ms. Rabat 276 K), *Natā'idj al-taḥṣīl fī ṣarḥ al-Taḥṣīl* (of Ibn Mālik; grammatical commentary in 4 vols. known as far as Egypt), *Fath al-Latīf 'alā 'l-baṣṭ wa 'l-tarīf fī 'ilm al-tarīf* (grammar; lith. Fās 1316), and other works (see G. Vajda, in *Hespéris*, xlviii [1956], 215-16). This grammarian survived the destruction of al-Dilā' and died in Fās in 1089/1678. Two other members of the family became especially well-known in Fās. The first, Abū 'Abd Allāh Muḥammad al-Masnāwī b. Aḥmad b. Muḥammad al-Masnāwī b. Abī Bakr b. Muḥammad b. Maḥammad b. Abī Bakr (1072-1136/1661-1724), was a preacher and *imām* at the Abū 'Ināniyya *madrasa*, *muftī* and *shaykh al-ḡamā'a* (i.e. dean of the professors). He has left behind several works, notably a genealogical treatise on the descendants of 'Abd al-Kādir al-Djilānī [*q.v.*], the *Natā'idj al-taḥṣīl fī ba'd ahl al-ṣarāf al-walīk* (lith. Fās 1309/1891; ed. Tunis 1296/1879; partial Eng. tr. T.H. Weir, *The first part of the Natijatu 'l-taḥqiq*, Edinburgh 1903); his output comprises, in addition to treatises on genealogy, law and mysticism, a poem of 40 verses written just before his death in order to seek God's pardon and recited at Fās at burials, and finally *al-Makāma al-fikriyya fī maḥāsīn al-zāwiya al-bakriyya* (see Lévi-Provençal, *Chorfa*, 301-2; M. Lakhdar, *Vie littéraire*, 152-8 and bibl.). The other Dilā'i worthy of note is Abū 'Abd Allāh Muḥammad al-Ḥādjī b. Muḥammad b. Abd al-Raḥmān b. Abī Bakr, who died accidentally

between Mecca and Medina after having made the Pilgrimage (1141/1729). Several of his works have been preserved: poems glorifying the Prophet; *Zahr al-hadā'ik* (ms. Rabat 306 K) and *al-Zahr al-nadī fi 'l-khulūk al-muḥammadi* (ms. Rabat 157 D), an *urđūza* on the Chorfa *Durrat al-tūđiān* (mss. Rabat 498, 522, 1180, 1244 K; lith. Fās), etc. (see Lakhdar, 166-8).

**Bibliography:** The basic Arabic sources are still unpublished: *Yāziđhī, Hadā'ik al-azhār al-nadiyya fi 'l-tarīf bi-ahl al-zāwiya al-dilā'iyya al-bakriyya* (*urđūza*; ms. Rabat 261 D). *Tāzī, Nuzhat al-akhyār al-marđiyyīn fi manāḳib al-'ulamā' al-dilā'iyyīn al-bakriyyīn* (ms. Rabat 1264 K). *Ḥawwāt, al-Budūr al-dāwiya fi 'l-tarīf bi'l-sādāt ahl al-zāwiya al-dilā'iyya* (ms. Rabat 261 D). These sources, the Moroccan historians in general and the documents of various origin which are concerned with the political, diplomatic and military events, during the period of Maḥammad al-Ḥādġġ, have been utilised by M. Ḥādġġġ for his excellent monograph, *al-Zāwiya al-dilā'iyya wa-dawruhā al-dīnī wa 'l-ilmī wa 'l-siyāsī* (Rabat 1384/1964), to which one should in the first place direct the enquirer, who will find there both biographies of the main members of the Dilā'iyyūn and also a detailed bibliography. In his thesis on *L'activité intellectuelle au Maroc à l'époque sa'dide* (Rabat 1976-7, 2 vols.), this same author has devoted a section to the *zāwiya* (551-7), and the index, s.v. *Dilā'*, *Dilā'ī* and *Dilā'idēs*, enables one to track down various items of scattered information.; For the period after the destruction of the *zāwiya* at al-Dilā', see É. Lévi-Provençal, *Les historiens des Chorfa*, Paris 1922, 298-303; and M. Lakhdar, *La vie littéraire au Maroc sous la dynastie 'alawide*, Rabat 1971, index s.v. *Dilā'ī*.

(CH. PELLAT)

**DINET, ALPHONSE, Étienne** (1861-1929), French painter of oriental subjects and writer who assumed the name NACIR ED DINE (Nāṣir al-Dīn) when he became a convert to Islam.

He was born in Paris on 28 March 1861, and studied under several well-known painters (Galland, Bouguereau, Robert-Fleury). After a first trip to Algeria (1884), he won a scholarship which allowed him to return there in 1885, and from then onwards he led a nomadic life there for several months of each year, until he settled at Bou Saada (Bū Sa'āda) in 1907. It was in this region of the southern part of Constantine province that he met in 1889 an educated Algerian, Sliman ben Ibrahim (d. 1953), who having rescued him, at the risk of his own life, during a local disturbance, became an inseparable friend and constant collaborator of his, even in Paris. Contact with Muslims gradually detached Dinēt from the Christian faith, which he renounced in 1913 and discreetly embraced Islam; he renewed publicly his profession of faith in the New Mosque of Algiers in 1927.

His artistic output, considerable in quantity and of high quality, comprises mainly Algerian and Arab scenes and landscapes, which very quickly brought him wide celebrity, even beyond the ranks of the Société des Orientalistes founded in 1887 by Léonce Benedite, which he immediately joined. Before the end of the 19th century, several of his tableaux were on display at various museums: *Les terrasses de Laghouat* (Luxembourg Museum), *Vue de M'sila* (Pau Museum), *Charmeurs de serpents* (Sydney Museum), etc. After having illustrated the 1898 edition of Devic's *Les aventures d'Antar*, he enhanced

with his own compositions texts gathered together or edited by Sliman ben Ibrahim and translated by his own hands, in particular, *Rabia el-Kouloub* [*Rabī' al-kulūb*] ou le printemps des cœurs (three Saharan legends, Paris 1902); *Tableaux de la vie arabe* (Paris 1904, 1928), which contain fine reproductions of 24 oil paintings (including his own portrait and that of Sliman) accompanied by a presentation and commentary by the latter translated into French; *Mirages, scènes de la vie arabe*, Paris 1960; *El Fiafi oua el-kifār* [*al-Fayāfi wa 'l-kifār*] ou le désert (Paris 1911); and *Khadra, danseuse Ouled Nail* (Paris 1909, 1926). His most famous work, again written in collaboration with Sliman and published simultaneously in two parallel versions, French and English, at Paris in 1918, remains nevertheless *La Vie de Mohammed, Prophète d'Allah*. The Algerian painter Mohammed Racim (Rāsim) also contributed to illustrating this luxury work, which has never been re-published in its entirety (a recent reimpression only has some colour prints and one of Racim's aquarelles; a standard edition unillustrated, has appeared in Paris 1927, 1937, 1947, 1961, 1975 and 1977).

Two years after his official conversion, Dinēt and Sliman ben Ibrahim made together the Pilgrimage to the holy places of Islam. Although he claimed to have taken "no notes, no drawing, no photographs" during his stay in Arabia, there appeared magnificent plates showing scenes of the Pilgrimage as illustrations for the *nihla* which appeared in French from "El Hadj Nacir ed-Dine E. Dinēt et El Hadj Sliman ben Ibrahim Baāmer" and with the double title *al-Ḥādġġ ilā Bayt Allāh al-Ḥarām* (in Arabic script) and *Le Pèlerinage à la Maison Sacrée d'Allah*, together with the date 1347. In fact, this narrative, written on the return from the pilgrimage of 1347 and completed on 6 (*sic*; read 25) Rabī' II 1348/30 September 1929, came off the press in Paris at the beginning of 1930 (2nd edn. 1962), just a few weeks after its principal author's death (24 December 1929). His funeral took place on 28 December at the Great Mosque in Paris (in whose foundation he had himself been concerned) in the presence of leading personalities and of the representatives of several Muslim governments. His corpse was taken to Bou Saada and buried in the tomb which he had made there, and which tourists are still today invited to visit (see Guides Bleus, *Algérie*, s.v. Bou Saada); the house there he lived has been made into a Dinēt Museum by Sliman ben Ibrahim.

This highly-talented painter of oriental topics deserves a notice in the *Encyclopaedia of Islam* not only because he died a Muslim, but also because he can be considered as a fervent apologist for the faith which he had assumed. Several of his written works caused a certain stir in the Islamic world, especially in Egypt, thanks to his friend Rāshġġid Rustum, who in 1929 published at Cairo *Aṣḥī'a khāṣṣa min nūr al-Islām*, the translation of a lecture by Dinēt called *Rayons de lumière exclusivement islamiques* (2nd edn. Paris 1966). Tawfiġ Ahmad was to translate, in the *Madjallat Dġam'iyyat al-Shubbān al-Muslimīn*, the latter part of his *Pèlerinage*, and 'Umar Fākhūrī was to issue at Damascus, in *Ārā' ḡharbiyya fi masā'il ṣharġiyya*, a version of his *L'Orient vu de l'Occident* (Paris n.d.) under the title *al-Sharġ kamā yarāhu al-Ġharb*. This last is a very detailed critique of the studies of Lammens, Nöldeke, De Goeje, Sprenger, Snouck Hurgronje, Grimme, Margoliouth, etc., which was subsequently to be extensively used by the Azharī *shaykh* 'Abd

al-Halīm Maḥmūd in the substantial introduction prefaced to his translation of *La Vie de Mohammed, Prophète d'Allah*, made, in conjunction with his son Muḥammad, from the original edition as *Muḥammad Rasūl Allāh* (Cairo 1956). It is rather surprising that Dinēt's *Sīra* which, as we have seen, had a lively success among French-reading circles, did not draw the attention of the Egyptians during the 1930s, at a time when Haykal was in part inspired, in his *Hayāt Muḥammad*, by *La Vie de Mahomet* of E. Dermenghem published at Paris in 1929; possibly, like this last author (p. IV), they regarded it as too traditionalist. It is a fact that Dinēt and Ṣliman ben Ibrahīm affirmed that they had based themselves exclusively on the works of Ibn Hishām, Ibn Sa'd, etc. and on the *Sīra ḥalabiyya*, and they remark that "the study of innovations" introduced by "modern orientalists" into the Prophet's biography have led them "to assert that, at times, they were inspired by an Islamophobia hard to reconcile with science and little worthy of our age".

It can easily be seen that the detailed criticism which makes up essentially *L'Orient vu de l'Occident* gave 'Abd al-Halīm Maḥmūd valuable arguments against the "orientalists" and in favour of a *sīra* of traditional character which must have been pleasing to its readers, since a second edition of his translation appeared in 1958. The translator analyses Nāṣir al-Dīn's apologetical methods and, basing himself on the latter's writings, demonstrates the superiority of Islam over Christianity. As opposed to the works of the Arabists whose researches tend only to set forth the reality of Islam, without any polemical intentions, Dinēt's principal Islamological works seem to have as their aim less a scientific study of his new religion than a glorification of it and an encouragement to the whole world to follow his example. His viewpoint is very clearly summed up in a paragraph of his *Pèlerinage*, where he affirms that Islam responds "to all the aspirations of different kinds of believers. Having a supreme simplicity with Mu'tazilism, wildly mystical with Sufism, it brings a sense of direction and a consolation to the European or Asian scholar, without stepping on the absolute freedom of his thought, as much as to a Sudanese negro whom it snatches away from the superstitious worship of fetishes. It exalts the soul of the practically-minded English merchant, for whom "time is money", as much as that of the deist philosopher, and that of the contemplative of the East as much as that of the Westerner carried away by art and poetry. It will even seduce the modern medical man by the logic of its repeated ablutions and the rhythm of its bowings and prostrations equally salutary to the care of the body as to the health of the mind. The freethinker himself, who is not inevitably an atheist, will be able to consider the Islamic revelation as a sublime manifestation of that mysterious force called 'inspiration' and will admit it without difficulty, since it contains no mysterious element inadmissible by reason".

*Dinet* (Ar. and Fr. texts, numerous ills.) was published in Algiers in 1977. (CH. PELLAT)

**DIRĀR** B. 'AMR, ABŪ 'AMR AL-ĠHATAFĀNĪ AL-KŪFĪ (ca. 110-200/ca. 728-815), important Mu'tazilī theologian, disciple of Wāṣil b. 'Atā' (d. 131/749). In contrast to many other early Mu'tazilīs, he was of pure Arab extraction; he belonged to the 'Abd Allāh b. Ḡhatafān in Kūfa. He founded his prestige, however, through his teaching in Baṣra where Wāṣil had lived. By profession he is said to have been a *kādī*. After 170/786 we find him in Baghdād in the circle of the Barmakids, where he took part, together with Hishām b. al-Ḥakam, the Ibādī scholar 'Abd Allāh b. Yazīd, the Zaydī Sulaymān b. Djarīr, and others, including non-Muslim theologians, in the famous debates arranged by Yaḥyā b. Khālid al-Barmakī, the *wazīr* of Hārūn al-Rashīd. This position exposed him to certain suspicions: the *kādī* Sa'īd b. 'Abd al-Raḥmān al-Djumaḥī (d. 174/790 or 176/792) outlawed him because of *zandaka*. But, in the presence of Barmakī protection, this seems to have been a mere verbal menace. In reality, Dirār had attacked the *zanādika* and the *mulhidūn* in several books; he seems to have lent intellectual support to the governmental measurements against the Manichaeans since the time of al-Mahdī (158-69/775-85). He not only applied the methods of dialectical theology (*kalām*); he also analysed them and tried to propagate them among the masses, through a *risāla ilā 'l-amma* (cf. Malaṭī, *Tanbīh*, ed. Dederling 31, ll. 10 ff.), which may have been identical with his *K. Adāb al-mutakallimīn* or his *K. ilā man balagha min al-muslimīn*. He was an extremely prolific writer: 57 titles of books are listed in the *Fihrist*, more than those of any other Mu'tazilī.

This is all the more astonishing as neither Ka'bī in his *Makālāt al-Islāmiyyīn* nor the *kādī* 'Abd al-Djabbār in his *Faḍl al-'itizāl* (nor, consequently, Ibn al-Murtaḍā in his *Ṭabaḳāt al-Mu'tazila*) allow him a biography; they did not consider him a Mu'tazilī. Nor did al-Khayyāt, when Ibn al-Rāwandī identified the Mu'tazila with Dirār's ideas. But Ibn al-Rāwandī is in line not only with non-Mu'tazilī writers like al-Nawbakhtī or al-Bazdawī and al-Dhahabī, but also with Mu'tazilī authors like Ibn al-Nadīm and al-Nāshī' al-akbar, who count Dirār among those numerous Mu'tazilīs who did not exactly correspond to the canonical school dogma established in the *uṣūl al-khamsa*. These five principles were apparently first formulated by Abu 'l-Hudhayl, and it is with Abu 'l-Hudhayl and Bishr b. al-Mu'tamir that opposition against Dirār emerged. Their verdict determined the later school tradition, but it did not succeed in suppressing Dirār's writings. Those who avowed their indebtedness to his ideas are therefore mostly found outside the Mu'tazila: Ḥaṣṣ al-Fard in Egypt and other Ḥanafīs in Baṣra and elsewhere. A Dirāriyya group is attested in Armenia by Nashwān al-Ḥimyarī (*al-Hūr al-'in*, 212, l. 3). His influence in theology as well as in jurisprudence (*uṣūl al-fikh*) can be ascertained during at least two generations, although the opposition, Mu'tazilī as well as non-Mu'tazilī, frequently preferred, in such cases, to talk about "Djahmīs" instead of Dirārīs.

This was an old reproach: Bishr b. al-Mu'tamir had claimed, in his *Urduza* written in prison under Hārūn al-Rashīd, that Dirār and his school had succumbed to the influence of Djahm b. Ṣafwān. What was true in this was that Dirār had reacted against Djahm's rigid determinism: he had conceded

that God creates (*khalaqa*) everything including man's actions, but he also insisted that man, in order to be responsible for his actions, simultaneously does them himself, either immediately or through "generation" (*tawlid*). In order to describe man's share in them, he used the Qur'anic term *kasaba* or *iktasaba* which does not yet mean "acquisition" here, but rather the mere performance of the act (cf. M. Schwarz in *Islamic philosophy and the classical tradition, essays presented to R. Walzer*, Oxford 1972 367 f.); he stressed man's freedom of choice (*ikhṭiyār*) by assuming a capacity (*istiṭā'a*) already *before* the act. The concept is clearly synergistic; Dirār openly talked about two "agents", God and man. This is where Abu 'l-Hudhayl and Bishr b. al-Mu'tamir saw a sin against the spirit of the school; they eliminated the idea that God "creates" anything in human actions. Dirār could, however, argue convincingly with an example like the Qur'an: when somebody recites the Qur'an, not only his recitation, *kur'an*, is heard, but also the Qur'an as created by God. The equivocalness of the word (*kur'an* and Qur'an) added to the suggestiveness of the theory.

Outside the sphere of man, Dirār supported God's omnipotence by an elaborate metaphysical system based on the exclusively accidental structure of the creation. Each body consists of a network of indispensable accidents, i.e. qualities without which it would not exist, but which may be realised in a spectrum of varieties best described by their extremes: temperature ("hot or cold"), extension ("long or short"), weight ("light or heavy"), consistence ("humid or dry"), nature of its surface ("rough or soft"), colour, taste, odour, etc. In their agglomeration (*al-lif* or *idjīmā'*), they form its nucleus; there is nothing like a "substance". But they do not have a separate existence either; isolated, they are a mere abstraction. Other accidents which are not indispensable like movement, pain (in human beings) etc. may occur, but they do not form "part" of the body. They do not possess any endurance (*baḳā'*) and are therefore created anew in every moment (cf. Ash'ari, *Makālat al-Islāmiyyin*, 305, ll. 11 f. and 359, ult. ff.). A body for long does not lose its individuality, as less than half of its basic qualities have been replaced by their contrary. Change of any kind may be explained through this process; here Dirār and his adherents seem to have absorbed certain Aristotelian ideas, especially the concept of ἀλλοίωσις (*istihāla*, cf. *Isl.*, xliii (1967), 254 ff.). The entire model is, of course, not Aristotelian; Dirār criticised Aristotle for his doctrine of substances and accidents in a separate treatise (cf. *Fihrist*, ed. Fück, in *Shafī comm. volume*, 69, title no. 14). The system does not allow for any self-determining and independent nature of things (*tabī'a*); this is why it was rejected offhand by Dirār's contemporary Mu'ammār and later on by an-Nazzām, who joined a tradition which was more coloured by Stoic ideas [see KUMŪN]. The consequences were especially visible in the definition of man: he is a conglomerate of "colour, taste, odour, capacity, etc.", but there is no independent and immortal soul.

Using two surprisingly elaborate philosophical terms which were never applied again by the Mu'tazila, Dirār differentiated in everything which exists between its *anniyya* "existence" and its *māhiyya* "quiddity". Opposition arose when he transferred this distinction to God: we know God's *anniyya*, but we ignore the plenitude of His *māhiyya*. For we can infer the aspects of his essence only through rational

conclusion; but we know from ourselves that an outsider is never able to explore the hidden sides of our nature to the same extent that we are aware of them ourselves. This is why we must be satisfied with negative theology: "God is omniscient" merely means that He is not ignorant. Full knowledge will be attained only in the Hereafter; then God's essence will be recognised, not through the *ru'ya bi 'l-abṣār* as many non-Mu'tazilī theologians believed, but through a sixth sense created for this purpose by God. This theory seems to have been prepared by Abū Hanīfa and was taken over by a number of Hanafīs during the following two generations. Later Mu'tazilīs may have seen in it too strong a limitation of revelatory evidence and of the intellectual potential of *kalām*; the theory still depended on Dījāh's concept of the total transcendence of God.

They may have felt more familiar with Dirār's idea to differentiate between two aspects of God's will: "God's will" may be identical with what happens, but also with what He only wants to happen, in His commandments. The latter alternative leaves room for man's *iktisāb*; sin, the crucial problem of Dirār's theory of the two "creators", seems to have been explained by him through *khidhlān*, "abandonment (by God)" (ἐγκατάλειψις). On the other hand, God would always be able to make all unbelievers believe, by His grace (*lutf*; cf. Ibn Hazm, *Fīṣal*, iii, 165, ll. 7 ff. and iv, 192, ll. 9 ff.). This may have been a mere theoretical assumption. The idea was given up by most later Mu'tazilīs in favour of the concept of *al-aṣlah*, but Dirār was still followed in it by Bishr b. al-Mu'tamir.

Dījāhī spirit may also survive in Dirār's denial of the punishment in the tomb; already Shāḥḥām, Abu 'l-Hudhayl's youngest disciple, could pretend that no Mu'tazilī ever shared this radicalism (cf. Ibn al-Murtaḍā, *Ṭabaḳāt al-Mu'tazila*, 72, ll. 3 f.; also *Kādī 'Abd al-Djabbār, Fadd al-'iṭizāl*, ed. Fu'ād Sayyid, 201, ll. 17 ff.). Dirār's doctrine, however, that Paradise and Hell do not yet exist, but will be created during the Last Judgment, and that Adam therefore lived in a terrestrial garden, was accepted by many later Mu'tazilīs like Hishām al-Fuwaīṭ, 'Abbād b. Sulaymān, Abū Hāshim, etc. It looks like an inversion of Dījāh's thesis that Paradise and Hell are finite *a parte post*; but its immediate intention may have been to avoid certain pre-destinarian arguments which inferred from the actual existence of Hell the predetermined necessity of Evil (cf. *Mélanges d'Islamologie, Volume dédié à A. Abel*, Leiden 1974, 108 ff., with reference to a longer passage of Dirārī theology preserved in Ibn Hishām's *K. al-Tidjān*). Dirār's thesis created difficulties not only in Qur'anic exegesis, but also with respect to several well-known *aḥādīth*, for instance about the nocturnal ascension (*mi'rāḍī*) of the Prophet or about the martyrs entering Paradise immediately after their death.

This latter point, however, did not bother him very much: he did not accept isolated traditions (*akhbār āḥād*) as a proof in theological questions (*ahkām al-dīn*), and in his time most *aḥādīth* still had this character of *āḥād*. The only epistemological criterion which, besides the Qur'an, he found safe enough to base upon it religious truth after the death of the Prophet, was consensus (*idjīmā'*); in this he was followed by al-Aṣamm (*q.v.*), who took over the Mu'tazilī circle in Baṣra after him. Dirār's attack against *hadīth* had been formulated in his *K. al-Tahrīsh wa'l-ighrā'*; he had pointed to the

fact that all sects used to rely on different and mutually contradicting *aḥādīth*. It is possible, though unprovable, that the beginning of Ibn ʿKutayba's *Ta'wīl muḥtaliḥ al-ḥadīth* reflects ʿDirār's argumentation (cf. *Der Orient in der Forschung. Festschrift O. Spies*, Wiesbaden 1967, 184 f.).

Belief was, according to ʿDirār, closely linked to intellectual understanding; it begins therefore only with mental maturity (*kaṃāl al-'aql*). Simple people who do not rationalise their convictions may always live in unrecognised unbelief (cf. *Ash'arī, Makālāt*, 282, ll. 2 ff.). But true belief from a Nabataean counts higher than from an Arab, because the Arabs were distinguished by the fact that the Prophet was elected from among them, whereas the Nabataeans always have to transgress the barrier of contempt for not having produced any prophet. If a Nabataean therefore ever entered into competition with a ʿKurashī concerning the caliphate, preference should be given to the Nabataean as the more appropriate (*afdal*) candidate. This would have the additional advantage that a Nabataean does not have a powerful clientèle and could therefore more easily be deposed if necessary. The ʿKuraysh thus do not possess the monopoly of the caliphate, according to ʿDirār; long before him the superiority of neo-Muslims had been defended by similar arguments (cf. A. Noth in *Isl.*, xlvii (1971), 178 f.). Nevertheless, ʿDirār did not doubt that the first four caliphs were *afdal* in the moment of their election. Judgment becomes difficult only with the Battle of the Camel. In this case, renowned Companions with equally good reputation stood against each other. The result was that both factions for ever lost their trustworthiness, even if met separately. ʿDirār compared this situation with two believing Muslims entering a house and one of them being heard from outside pronouncing a formula of blatant unbelief, but both of them being found dead afterwards; there would be no criterion then to find out the unbeliever among them, and both of them would have to be treated as such. In the context of the simile, the death of the two opponents stood for the impossibility of getting reliable historical information about the events of the First Civil War. This neutralistic attitude had been prepared by Wāṣil b. 'Aṭā' and was continued, with slight variations and a different comparison, by Abu 'l-Hudhayl (cf. al-Nāshī' al-akbar, *Uṣūl al-niḥal*, § 90 and introduction, 46). The *Shi'a* understood it as a critique of 'Alī; in later times, they transmitted reports about discussions in which ʿDirār had been defeated concerning the problem of *imāma* by Hishām b. al-Hakam or 'Alī b. Mitham (cf. al-Sharīf al-Murtaḍā, *al-Fuṣūl al-muḥtāra*, 29, ll. 4 ff., 39, ll. -6 ff.).

ʿDirār rejected 'Abd Allāh b. Mas'ūd's and Ubayy b. Ka'b's recension of the ʿKur'ān on the ground that their *ḥarf* was not revealed (cf. Nöldeke-Schwally, *Geschichte des Qurans*, iii, 107).

**DISSOLUTION** [see *FASKH*].

**DITCH** [see *KHANDAK*].

**DIVINE DECREE** [see *AL-KADĀ' WA-'L-KADAR*].

**DĪWĀN-BEGI**, the title of high officials in the Central Asian *khānates* in the 16th-19th centuries.

The title appears first, apparently, in the Tīmūrīd period, when its bearer, a Turkic *amīr* of one of the tribes of the Čaghatāys, was in charge of military affairs and of the affairs of the Turkic subjects, and stood at the head of *dīwān-i imārat* (or *dīwān-i a'lā*) (see H.R. Roemer, *Staatsreiben der Timuridenzeit*, Wiesbaden 1952, 169-71). The title had the same meaning in the state of the Aḳ Ḳoynulu [q.v.] (see J.E. Woods, *The Aqqunlu*, Minneapolis-Chicago 1976, 11). In the Ṣafawī state in Iran, the *dīwān-begi* was one of the seven *arkān-i dawlat* (members of the *maḍlis-i a'lā*) and was the high justiciar, who tried, jointly with the *ṣadr al-sudūr*, the major crimes, as well as civil cases, controlled all *Shari'a* courts and was a court of appeal for the whole kingdom (see *Tadhkirat al-mulūk*, ed. V. Minorsky, text, 20b-22b, tr. 50-1, comm. 119-20). There is very little information about the *dīwān-begi* in the Ṣhaybānīd [q.v.] state in the 16th century, besides the fact that this title did exist; in the 'Abd Allāh-nāma by Ḥāfiẓ Tanīsh [q.v. below] it appears very rarely and without definition of its functions.

More detailed information comes only from the time of the Aṣṭarkhānīds [see *ḌĀNDĪS*]. The *Baḥr al-asrār* by Maḥmūd b. Walī (second quarter of the 17th century) mentions the *dīwān-begi* in a description of the ceremonial at the court of the Aṣṭarkhānīds in Balkh as being among the officials who were sitting on the left side of the *khān*, near the tripod (? *si pāya*; see V.V. Bartol'd, *Sochineniya*, ii/2, 391, 396; cf. M.A. Abduraimov, *Očerki agrarnikhi otshoseniy v Bukharskom khantse v XVI—pervoy polovine XIX veka*, i, Tashkent 1966, 73, where a reference is made to an account of a Russian ambassador to Bukhārā in the 17th century, who mentions that the throne of the *khān* of Bukhārā was raised above the level of the floor of the reception room by six steps; probably, the throne of the ruler of Balkh was raised above the level of the floor by three steps, and the expression *ba-ḳurb-i si pāya* can mean "near the three steps [leading to the throne]". This interpretation, however, remains dubious. Cf. also Quatremère, in *Notices et extraits*, xiv/1, 496, where *si pāya* is explained as "une charpente"). In the administrative manual *Maḍma' al-arkām* compiled in Bukhārā in 1212/1798, the *dīwān-begi-yi kalān* is described as an official second in the rank after the *atalik* [q.v. above]; he was entrusted with the state finance, mainly with the collection of *kharaḳj* [q.v.], as well as with the supervision of the irrigation in the region of Ḳara-ḳul (see facsimile in *Pis'mennyye-*

*pamyatniki Vostoka* 1968, Moscow 1970, 55; Russian tr. by A.A. Semenov, in *Sovetskoye vostokovedeniye*, v [1948], 147). Russian ambassadors in Bukhārā in 1669 also describe the *dīwān-begi* as the second high-ranking official after the *atalik* and mention that he received the credentials from the ambassadors and passed them to the *khān* (see *Nakaz Borisu i Semenu Pazukhinim . . .*, St. Petersburg 1894, 49, 55, 76). The *Ashtarkhānid* chronicles confirm that one of the duties of the *dīwān-begi* was the reception of ambassadors (see *Ta'rikh-i Mukīm-Khānī* by Muḥammad Yūsf Munshī, Russian tr. by A.A. Semenov, Tāshkent 1956, 89). In the 19th and early 20th centuries, under the Mangīt [q.v.] dynasty in Bukhārā, the *dīwān-begi* had similar functions, though he was now the second figure after the *kosh-begi* [q.v.], and not the *atalik*. He was called also *kosh-begi-yi pāyān* ("the lower *kosh-begi*"), because his residence was at the foot of the *ark* (the citadel) of Bukhārā, and *zakātī-yi kalān* ("head of the collectors of *zakāt*" [q.v.]). He was the deputy of "the great *kosh-begi*" (*kull-i kosh-begi*), and in the absence or during an illness of the *amīr* he governed the country together with the *kosh-begi*. Both under the *Ashtarkhānids* and the Mangīts, besides this *dīwān-begi* residing in Bukhārā, there were also *dīwān-begis* of main provincial rulers, such as those of Balkh, Čārdjūy, Hişār, with similar functions. Under the Mangīts, the honorary rank of *dīwān-begi* (the third from the top in the hierarchy of Bukhārā) was given also to various officials not necessarily connected with financial affairs, such as governors of some towns. In Karatigin [q.v.], both under the independent *shāhs* and under the domination of Bukhārā, *dīwān-begi* was the first deputy of the ruler, and he was in charge of state finance as well as of the ruler's estate (see N.A. Kislyakov, *Očerki po istorii Karategina*, Stalinabad-Leningrad 1941, 183). In the semi-independent principality of Ura-Tubā [q.v.] in the 19th century, *dīwān-begis* were low officials—local tax-collectors, subordinate to the *sarkār*, who was in charge of the collection of *khārādj* and of irrigation in the principality (see A. Mukhtarov, *Očerki istorii Ura-Tyubinskogo vladeniya v XIX v.*, Dushanbe 1964, 53). The title *dīwān-begi* could be given also to super-visors of finance in large private estates, such as those of the *Djūybārī shaykhs* in the 16th century (cf. P.P. Ivanov, *Khovaystuo džuybarskiki sheykhov*, Moscow-Leningrad 1954, 60).

In the *Khānate* of *Khīwa*, the post of *dīwān-begi* was probably established only in the early 19th century. In any case, neither the local historian Mu'nīs [q.v.] in his *Firdaus al-ikbāl* nor other sources mention this title earlier, and it is not included in the list of 34 dignitaries (*amaldār*) established by Abu 'l-Ghāzī *Khān* [q.v.] (cf. *Firdaus al-ikbāl*, MS of the Leningrad Branch of the Institute of Oriental Studies, C-571, f. 65b). This title is mentioned by Mu'nīs for the first time in his account of the events of 1222/1808, when two *dīwān-begis* appear simultaneously (*ibid.*, f. 272a). Also later, there were at least two *dīwān-begis* in *Khīwa*. They are mentioned among the high officials of the state along with the *kosh-begi* and the *mehter* [q.v.]; they were usually of mean origin, often Persian slaves. N. Murav'yev (1821) mentions *dīwān-begis* as unimportant officials subordinate to the *kosh-begi* and the *mehter* (see N. Murav'yev, *Puteshestviye v Turkmeniyu i Khīvu*, Moscow 1822, ii, 63); none of other Russian descriptions of the *khānate* compiled in the first half of the 19th century mentions them at all. In the reign of Allāh-Kulī *Khān* (1240-58/

1825-42), the chief *dīwān-begi* was entrusted with the collection of *zakāt* and customs (see N. Zalesov, in *Vovenniy sbornik*, xxii [1861], No. 11, 65), and it remained his main duty till the end of the 19th century. Besides him, there was a *dīwān-begi* in charge of *khān's* estates and a *dīwān-begi* of the governor of Hazārasp (a senior relative of *khān* or his heir). In the reign of Sayyid Muḥammad Raḥīm *Khān* II (1281-1328/1864-1910), the chief *dīwān-begi* Muḥammad Murād ("Mat-Murad" of Russian sources) became the most influential person among the *Khīwan* dignitaries and was considered as a first minister by Western observers (cf. e.g. H. Moser, *A travers l'Asie centrale*, Paris 1885, 238).

In the *Khānate* of *Khokand* [q.v.], the title *dīwān-begi* is also attested, though no explanation is available about the duties of its bearer. It seems, however, that it was more a rank than an administrative post, and its position was the same as that of *dīwān-begi* in the hierarchy of Bukhārā (between the ranks of *parwānači* [q.v.] and *atalik*). Radjab Dīwān-begi, executed in 1236/1820, is said to have had the highest title in the *khānate*, *wazīr al-wuzarā'* (see V.P. Nalivkin, *Histoire du khanat de Khokand*, Paris 1889, 140-1), which indicates, apparently, that he was considered the head of the civil administration; but before that he is mentioned as a governor (*hākīm*) of Tāshkent (*ibid.*, 125, 135).

**DJABAL SAYS**, the name of a volcanic mountain in Syria situated ca. 105 km. southeast of Damascus. Around its west and south sides runs a small valley opening to the southeast into a large volcanic crater. In years with normal rainfall, this crater is filled with water for about eight months. A reservoir near its centre makes *Djabal Says* one of the few secure waterplaces in the region, where sometimes more than a hundred nomad families camp in autumn. At the mouth of the valley on the south-east-slope of *Djabal Says* and opposite to it, on the fringe of another slope, remains of numerous buildings are preserved. The site was first visited in 1862 by M. de Vogüé and excavated from 1962 to 1964 by K. Brisch. The ruins consist of a considerable number of houses, a mosque, a church, a *hammām*, some storehouses for provisions, *khāns* and/or barracks, and a palace.

The *palace* is situated on the south side of the valley. It consists of a rectangular enclosure, ca. 67 m. × 67 m., from which eight towers (four at the corners, one in the middle of each side) project. Entrance is given through a door in the central tower of the north-side. Behind the door one enters a tunnel-vaulted vestibule at the back of which is a doorway, opening into a great entrance hall which leads to a courtyard, ca. 31 m. × 31 m. This courtyard is surrounded by ranges of rooms (54 excluding the small rooms in the hollow towers and the entrance hall) most of which are organised into eight groups (*buyūl*) of five or six rooms. In addition to this, there are three pairs of rooms and four isolated rooms, two of which served probably as staircases. An arcade ran around the paved courtyard in front of the rooms. In the centre of the courtyard is a cistern. The lower parts of the walls consist of basalt blocks on the inner and outer faces with fillings of lumps of basalt and mortar rising up at

some places to a height of ca. 2 m. The upper parts of the walls were built of mud bricks. An exception is the entrance tower, the upper parts of which are also of basalt. Most of the basalt sections and some of the brick sections of the walls are preserved. No traces of ceilings were found. De Vogüé, who visited *Djabal Says* more than a hundred years ago, saw brick vaultings. The building had originally two floors and is stylistically linked with two other palaces, *Minya* (see *KHIRBAT AL-MINYA*) and *Kharrāna* [q.v.].

The *ḥammām*, ca. 150 m. east of the palace, measures ca. 16 m. × 17 m. It consists of a large east-room, ca. 10 m. × 4.5 m., with a semicircular exedra in the north. Its south side opens into two rooms, ca. 3.5 m. deep. The east room can be entered by a door from the east. At its west side, it is connected with four smaller rooms, three of which served as the apodyterium, tepidarium and caldarium of the bath. The lower parts of the walls resemble those of the palace. The upper sections are built of burnt brick. All rooms with the exception of the west room seem to have been covered by vaultings or domes of burnt brick. The west room was probably not covered at all. The building resembles closely *Ḥammām al-Šarāḥ* [q.v.] in Jordan.

The *mosque*, ca. 70 m. west of the palace, is a square building measuring ca. 9.5 m. × 9.5 m. The preserved lower sections of its walls are built of basalt. It can be entered by two doors from the north and the east. The interior of the building is divided into two equal parts by two arches running east-west and resting on a pier in the centre and on wall piers. Here, as in the palace, the upper parts of the walls seem to have been built of mud bricks. If this was the case, they could only have carried a wooden roof.

*Other buildings.* Probably the most interesting feature of *Djabal Says* is that, in addition to the above-mentioned buildings, a considerable number of more modest structures is preserved. At the south-side of the valley in an area stretching from the *ḥammām* (the easternmost structure), ca. 300 m. to the west, the traces of more than 15 other buildings can be seen. The majority of them are of almost square shape and consist of ranges of rooms around three or four sides of a central courtyard. They are of poorer architectural quality than the palace, the *ḥammām* and the mosque. Some of these buildings were doubtlessly built at the same time as the palace and served as storehouses and barracks or *khāns*, whereas some are obviously later. The latter seem to be contemporary with a few smaller buildings whose plans resemble those of simple farmhouses (one range of rooms with a courtyard in front of it). Opposite the valley, at the southeastern foot of *Djabal Says*, in an area stretching ca. 400 m. from southwest to northeast and ca. 100 m. from southeast to northwest, some thirty other buildings are to be found. Almost all of them have courtyards with rooms at one, two, three or four sides. The most conspicuous structures among them are: a building with towers at its corners looking like a palace in miniature, a structure next to it, which Brisch thinks was a mosque, and a one-naved church resembling the large room of the *ḥammām*.

Literary sources (al-Bakrī and Yāḳūt) tell us that the caliph al-Walīd (86-96/705-15) had a residence at *Usays*, a waterplace east of Damascus, which is doubtlessly identical with our site. This conclusion is supported by inscriptions found on the spot. One

of them bears the name *Usays*, in some others the names of sons of al-Walīd are mentioned. Hence the palace, the *ḥammām*, the mosque (which Brisch thinks to be later than the palace) and some of the buildings next to the palace, can be attributed to al-Walīd. Some other buildings are definitely later than the palace, because building material from the palace was used in their construction. It is hard to determine whether there were only two periods of building activity or more. Around the south side of the church a group of very small houses with rather irregular plans is clustered. These differ from the plans of most of the buildings at *Djabal Says* and might represent a third period of building activity, earlier or later than the two already isolated. A pre-Islamic date is suggested by the church (but we also find a church in the Umayyad settlement of 'Anḍjar [see 'AYN AL-DJARR in Lebanon), by an inscription found at *Djabal Says* with the name of the Ghassānid ruler Hārīth b. *Djabala*, dated 528, and by a Roman coin.

**DJABALA B. AL-HĀRĪTH**, Ghassānid chieftain [see GHASSĀN] of the pre-Islamic period, who made his début in Ghassānid - Byzantine relations ca. 500 A.D., when he mounted an offensive against Palestina Tertia but was beaten by Romanus, the *dux* of that province. Shortly afterwards in 502, Byzantium concluded a treaty with the Ghassānids and recognised them as its new allies (*foederati*). Throughout the remaining part of the reign of the emperor Anastasius (491-518), the sources are silent on *Djabala*, who was probably not yet the Ghassānid king but was acting as the general of his father, al-Hārīth b. *Tha'labā*.

In the reign of the emperor Justin (518-27), *Djabala* came into prominence, now as the king of the Ghassānid federates, whom he ruled from al-Djābiya [q.v.], his seat in the *Djawlān*. By that time, the Ghassānids had been won over to Monophysite Christianity and had become its staunch supporters. However, the return of Byzantium to the Chalcedonian position and Justin's expulsion of the Monophysite bishops alienated the Ghassānids and their king, who consequently would not take part in the defence of the oriental provinces against the Persians and their Lakhmid allies, and could not come to the succour of their coreligionists in South Arabia during the reign of Yūsuf Dhū Nuwās [q.v.]. But in all probability, it was he who enabled al-Aws and al-Khazradj of Medina to achieve an ascendancy over the Jewish tribes there, Abū *Djubayla* of the Arabic sources being none other than *Djabala* himself or one of his relatives.

With the accession of the emperor Justinian (527-65), there was a reconciliation with the Monophysites; the Ghassānids under *Djabala* returned to service to fight the wars of Byzantium against the Persians and the Lakhmids, but *Djabala* was not destined to live much longer. His more illustrious son, al-Hārīth b. *Djabala*, is attested as king already in 529, and the presumption is that *Djabala* died at the battle of Thannuris in Mesopotamia in 528, commanding the Ghassānid contingent in the

Byzantine army against the Persians; the Syriac authors remember him under the nickname of Aṭṭar.

In the list of Ghassānid buildings, three are attributed to Djabala, sc. al-Ḳanāṭir, Adhruḥ, and al-Ḳaṣṭal.

(I. A. SHAHID)

**DJĀBIR B. 'ABD ALLĀH B. 'AMR B. ḤARĀM B. KA'B B. ḠHANM B. SALIMA, ABŪ 'ABD ALLĀH** (OR Abu 'Abd al-Raḥmān, or Abū Muḥammad) AL-SALAMĪ AL-ḲHAZRADJĪ AL-ANṢĀRĪ, Companion of the Prophet. His father, 'Abd Allāh, was one of the seventy men of Aws and Ḳhazradj who gave the Prophet the oath of allegiance at the 'Aḳaba Meeting [see AL-'AḲABA] and committed themselves to defend him. His father is also recorded in the list of the twelve *mukabā'*, the chosen group from among the seventy; Djābir himself had attended the Meeting as a very young boy, and is therefore counted in the list of "the Seventy" and in the honourable list of those who embraced Islam together with their fathers. His father prevented him from taking part in the two encounters at Badr and Uḥud, leaving him at home to look after his seven (or nine) sisters. A report according to which he attended the battle of Badr and drew water for the warriors is denied authenticity by al-Wāḳidī and marked by him as an 'Irāḳī tradition. On the Day of Uḥud, Djābir lost his father, his mother's brother 'Amr b. al-Djamūḥ and his cousin Ḳhallād. Djābir's father distinguished himself in the fight and was the first Muslim warrior killed in this battle. The Prophet did not object to Djābir mourning for him, and gave him permission to uncover his face. 'Abd Allāh was buried according to the Prophet's ruling as a martyr on the spot where he fell, clad in his garment, with his wounds still bleeding. The Prophet personally suggested that he should act as father to Djābir and put 'A'isha in his mother's place. On the day following the battle of Uḥud, Djābir asked, and was granted permission to join the force dispatched by the Prophet to Hamrā' al-Asad. After that, Djābir accompanied the Prophet on 18 or so expeditions.

The Prophet showed great concern for Djābir and his family and often came to his dwelling. Djābir's family, who were familiar with his tastes, used to prepare for the Prophet his favourite kind of meal. On one such visit the Prophet blessed the family of Djābir and their abode, on another he cured Djābir of fever by sprinkling on him water which he had used for ablution. The Prophet gave his approval for Djābir to marry a woman who was not a virgin, and who would take care of his sisters. By his blessing, he helped Djābir to pay a debt which his father owed to the Jew Abū Ṣhaḫma, and he invoked God's forgiveness for him when he bought his camel (*laylat al-ba'ī*).

After the death of the Prophet, 'Umar appointed Djābir chief (*'arif*) of his clan. During the military

operations of the conquest of Damascus he was sent as a member of an auxiliary force dispatched to Ḳhālīd b. al-Walīd. On another occasion he was dispatched by 'Umar with a small group to al-Ḳūfa. When the rebellious Egyptian troops advanced to Medina in order to besiege the house of 'Uḥmān, Djābir was among the group sent by the caliph to negotiate with them and appease them. He is said to have fought on the side of 'Alī at Ṣiffīn (37/657) and then to have returned to Medina. During the expedition of Busr b. Artāt (40/660), Djābir was compelled to swear allegiance to Mu'āwiya; this he did in precautionary dissimulation (*takiyya* [q.v.]), after having consulted Umm Salama, the wife of the Prophet. This is a new trait of character, indicating Ṣhī'ī sympathies, and is one of the earliest cases of *takiyya* mentioned in the texts. As an indication of Djābir's attachment to Medina and to the relics of the Prophet, one may adduce the report that he and Abū Hurayra prevailed upon Mu'āwiya to leave the *minbar* of the Prophet in Medina and not to transfer it to Syria. He is said to have visited the court of 'Abd al-Malik and to have asked him for some grants for the people of Medina. When the force sent by Yazīd b. Mu'āwiya against Medina (63/683) entered the city, Djābir openly voiced his objection, circulating an utterance of the Prophet about the punishment which would befall people who afflicted the city. He was saved from death by Marwān when a man, enraged by his words, attacked him intending to kill him. After the victory of al-Ḥadjdjadj over Ibn al-Zubayr (73/692), al-Ḥadjdjadj ordered the hands of some of the opponents of the Umayyad rule to be stamped in the same way as was done to the *dhimmis* and Djābir was among those opponents. Djābir's sharp criticism and unkind words with regard to the rulers, especially al-Ḥadjdjadj, provoked the latter's caustic remark that Djābir displayed the same pride as the Jews (by which, of course, the Anṣār were meant).

Djābir died at 78/697 at the age of 94 (other reports, however, give varying dates). He is said to have been the last survivor of the group of 70 Anṣār who attended the 'Aḳaba Meeting, thus fulfilling a prediction of the Prophet. The prayer over his grave was performed by the governor of Medina, Abān b. 'Uḥmān, or according to another tradition, by al-Ḥadjdjadj b. Yūsuf when he came to Medina after his victory over 'Abd Allāh b. al-Zubayr.

Djābir is noted as a most prolific narrator of traditions from the Prophet. The number of those going back to him is estimated at 1,540; al-Bukhārī and Muslim recorded 210 *hadīths* transmitted by him in their compilations, and the subject-range of his transmission is extremely wide. Of special interest are Djābir's reports about events which he witnessed and details furnished by him about expeditions in which he took part. Djābir was highly respected by the scholars of *hadīth* and is counted in the lists of reliable transmitters and the *aṣḫāb al-fuyū*. He used to recite his traditions in the mosque of Medina; his sessions of *hadīth*-transmission were attended by a wide circle of students, who would discuss the traditions of their master after leaving the mosque. A composition known as *ṣaḥīfat Djābir* contained a great number of traditions recorded by him. Scholars of *hadīth* were eager to circulate traditions on his authority, without always observing the necessary rules of *hadīth* transmission. Even a distinguished pious scholar like al-Ḥasan al-Baṣrī was suspected of reporting some traditions on the direct authority of Djābir, although he never was

his disciple. The impressive list of those who transmitted his traditions includes the names of three of his sons: 'Abd al-Rahmān, 'Aḳīl and Muḥammad. His descendants are said to have settled in North Africa, in a place called al-Anṣāriyya.

In Shī'ī tradition, Dĵābir was granted an exceptionally high rank. The *ḥadīths* recorded in Shī'ī sources on his authority touch upon the fundamental tenets of Shī'ī belief: the mission of 'Alī, his qualities, his authority over the believers, the graces granted him by God, the divine virtues of his descendants and the duties of allegiance and obedience incumbent upon the believers. It was the *imām* al-Bāḳir who asked Dĵābir about the Tablet which God sent down to Fāṭima and which Dĵābir got permission to copy. In this Tablet God named the *imāms* and established their order of succession. It is noteworthy that, according to some versions, the *imām* compared the copy of Dĵābir with the Tablet in his possession and stated that the copy is a reliable and accurate one. In another story, Dĵābir confirms the accuracy of the unusual report about the *ḥidra* as told him by the *imām*. Dĵābir is credited with the *ḥadīth* about the appointment of 'Alī as *waṣī*, which forms the base of the Shī'ī interpretation of Sūra LIII, 1-4. It was he who reported the utterance of the Prophet that 'Alī is the *ṣirāt mustakīm*, the right path to be followed. The *imām* al-Bāḳir stressed that Dĵābir was privileged to possess knowledge of the correct interpretation of Sūra XXVIII, 85, which, according to him, refers to the *radī'a*, the re-appearance of the Prophet and 'Alī. Among further Shī'ī traditions reported on Dĵābir's authority is the one which states that there are two weighty things left by the Prophet for the Muslim community: the Qur'ān and his Family (*al-'iṭra*). Another tradition has it that the angel Dĵibrīl bade the Prophet proclaim the vocation of 'Alī and his descendants, the *imāms*, and tell the Muslim community about 'Alī's distinguished position on the Day of Resurrection and in Paradise. The Sunnī version of Dĵābir's report that the first thing created by God was the Light of Muḥammad had its Shī'ī counterpart, traced back to Dĵābir, which said that this Light was split into two parts: the Light of Muḥammad and the Light of 'Alī, and that it was later transferred to the succeeding *imāms*. It is on the authority of Dĵābir that the significant tradition which states that the last persons to be with the Prophet when he died were 'Alī and Fāṭima is reported. Some of his traditions relate the miracles of 'Alī. 'Alī ascended to Heaven in order to put down the rebellion of the wicked *ḡinn*, who denied his authority and a luminous angel prayed in his place in the mosque. Another miracle happened when 'Alī walked with Dĵābir on the bank of the Euphrates: a very high wave covered 'Alī; when he reappeared completely dry after a short time, he explained that it had been the Angel of the Water who greeted and embraced him.

Dĵābir is distinguished in the Shī'ī tradition by a significant mission entrusted to him by the Prophet: he was ordered to meet the *imām* al-Bāḳir and to convey to him the greetings of the Prophet, which he did. This created a peculiar relationship between the elderly bearer of the good tidings and the young recipient, the *imām* al-Bāḳir. According to tradition, the two used to meet, and some of the traditions transmitted by al-Bāḳir are told on the authority of Dĵābir and traced back to the Prophet. It is evident that the idea that the *imām* might have derived his knowledge from a human being is opposed to the

principles of the Shī'a. It had thus to be justified that it was merely done in order to put an end to the accusations of the Medinans, who blamed al-Bāḳir for transmitting *ḥadīths* on the authority of the Prophet, whom he had never seen. As the traditions reported by Dĵābir and those independently reported by the *imām* and revealed to him by God were in fact identical, the insertion of Dĵābir's name between the name of the *imām* and that of the Prophet was quite a formal act, with no significance. A few traditions are indeed reported with names of some Companions inserted between the *imām* and the Prophet. In one of the traditions it is explained that this insertion may make the *ḥadīth* more acceptable to people, although it is obvious that the *imāms* knew more than that Companion whose name was inserted between the *imām* and the Prophet.

The close relationship of Dĵābir with the family of 'Alī is also exposed in the story relating that Fāṭima bint 'Alī asked Dĵābir to intervene and to persuade Zayn al-'Ābidīn to cease his excessive devotional practices which might be harming for his health. It was a sign of respect and faith that, when Ḥusayn asked his enemies on the battle-field of Karbalā' to save his life, quoting the utterance of the Prophet that he and his brother were the lords of the youths of Paradise (*ṣayyidā shabāb ahl al-'ajanna*), he referred to Dĵābir who would vouch for the truth of the utterance. Dĵābir is said to have been present at the grave of Ḥusayn shortly after he was killed and to have met there the family of Ḥusayn who were sent back by Yazīd b. Mu'āwiya. Another Shī'ī tradition reports about his visit to the grave of Ḥusayn and his moving speech over the grave.

Dĵābir had intimate relations with the family of 'Alī and especially with the two *imāms* Zayn al-'Ābidīn and al-Bāḳir. There are some Shī'ī attempts to link him with Dĵāfar al-Ṣādiq and to fix the date of his death at the beginning of the 2nd century A.H.

Finally, the high position of Dĵābir in Shī'ī tradition is expressed by the fact that he was placed in the list of the four persons who clung to the true faith and in the list of the nine persons to whom 'Alī promised that they would be in Paradise.

**DJĀBIR AL-DJU'FĪ**, ABŪ 'ABD ALLĀH or ABŪ MUḤAMMAD B. YAZĪD B. AL-ḤĀRITH, Kufan Shī'ī traditionist of Arab descent. His chief teacher seems to have been al-Sha'bī [q.v.] (d. 100/718-19). Among other well-known traditionists, from whom he related, were 'Ikrima, 'Aṭā' b. Abī Rabāḥ and Ṭāwūs. Initially, he held the moderate Shī'ī views widespread among the Kufan traditionists. Later he joined the more radical Shī'ī circles looking to Muḥammad al-Bākir (d. ca. 117/735) and his son Dja'far al-Ṣādiq for religious guidance. According to some Sunnī heresiologists, he became the leader of the extremist Shī'ī followers of al-Mughīra b. Sa'īd after the latter was killed by Khālīd al-Ḳasrī, governor of Kūfa, in 119/737. Imāmī sources, on the other hand, report a statement of Dja'far al-Ṣādiq commending him for having said the truth about the imāms while condemning al-Mughīra for lying about them. This makes it appear unlikely that Djābir actually belonged to the Mughīriyya, who recognised the Ḥasanid Muḥammad b. 'Abd Allāh as their imām, but does point to some relationship between him and al-Mughīra. According to another Imāmī report, Djābir first aroused the suspicions of Yūsuf b. 'Umar, governor of Kūfa (120-6/738-44), and then incited the people of Kūfa against his successor, Maṣṣūr b. Djumhūr (126/744). According to most sources, he died in 128/745-6. Other death dates given for him are 127/744-5 and 132/749-50.

Sunnī *hadīth* criticism was divided concerning his trustworthiness. His transmission was evidently accepted at first as reliable and highly accurate but later, as his Shī'ī attitude became more radical, he was shunned. Thus Sufyān al-Thawrī and Shu'ba related on his authority and noted his reliability, though critical judgments are also reported from them. Abū Ḥanīfa is said to have condemned him as a notorious liar who claimed to have a *hadīth* for every legal question. Among the authors of the canonical collections of *hadīth*, Abū Dāwūd, al-Tirmidhī, and Ibn Mādjā quoted a few traditions in which he appears in the chain of transmitters. Al-Bukhārī and Muslim excluded him, the latter quoting negative reports about him in the introduction to his *Ṣaḥīḥ* (Cairo [1963?], i, 15). The standard accusations against him were that he believed in the *raḍ'ā* [q.v.] and that he claimed secret knowledge of many thousands of *hadīths* which

he would not divulge. The Imāmī attitude to him was also ambiguous. While he was considered a loyal supporter of the imāms al-Bākir and al-Sādiq, he was described as "mixed-up" (*mukhḥaliṭ*) by scholars opposed to extremist tendencies. Several Imāmī traditionists who related from him, 'Amr b. Ṣhimr, Mufaḍḍal b. Ṣāliḥ, Munakḥḥal b. Djamīl and Yūsuf b. Ya'kūb, were accused of extremism and considered weak transmitters. The *ghulāt*, on the other hand, recognised him as the most intimate disciple of Muḥammad al-Bākir, who was fully initiated into the mysteries of the gnostic knowledge and superhuman nature of the imām, and they ascribed miraculous qualities and powers to him. It is uncertain to what extent reports later circulating under his name among the *ghulāt* go back to Djabīr, whatever his relations with the contemporary Shī'ī extremists. An early Imāmī source states that 'Abd Allāh b. al-Hārith, leader of the extremist followers of 'Abd Allāh b. Mu'āwiya [q.v.], after the latter's death in 131/748-9, spread extremist doctrines about metempsychosis, pre-existence of the human souls as shadows (*azilla*) and cyclical history (*daur* [q.v. in Suppl.]), ascribing them to Djabīr b. 'Abd Allāh al-Anṣārī and Djabīr al-Dju'fī "who were innocent of them" (see al-Nawbakḥī, *Firaḳ al-shī'a*, ed. H. Ritter, Istanbul 1931, 31).

The Imāmī scholar al-Nadjāshī (d. 450/1058) mentions the following books of Djabīr as still available to him: *K. al-Taḥṣīr*, *K. al-Nawādir*, *K. al-Fadā'il*, *K. al-Djamal*, *K. Ṣiffīn*, *K. al-Nahrawān*, *K. Maktal Amir al-Mu'minīn*, and *K. Maktal al-Ḥusayn*. Djabīr occasionally appears in al-Ṭabarī's Kur'ān commentary and his *Tārīkh* as a transmitter of Kur'ān exegesis and in the latter work also as a transmitter of reports on the caliphate of 'Alī and the death of al-Ḥusayn (see Ṭabarī, index s.v. Djabīr al-Rāwī). It is unlikely, however, that al-Ṭabarī was quoting directly from any works of Djabīr. Extensive quotations of his reports concerning the battle of Ṣiffīn and the caliphate of 'Alī are contained in the *K. Wak'at Ṣiffīn* of Naṣr b. Muzaḥim. Naṣr's authority for them was, however, 'Amr b. Ṣhimr, who is accused by the *Shaykh al-Tūsī* of having made additions to Djabīr's books.

(W. MADELUNG)

**DJABR** (A.), compulsion in marriage exercised upon one or other of the prospective partners,

under conditions which vary according to the judicial schools. The right of *djabr* is foreseen neither by the Kur'ān nor by the *Sunna*, and a *ḥadīth* (al-Bukhārī, *Niḳāh*, bāb 42) actually declares that neither the father nor any other person may give in marriage without her consent a virgin or a woman who has already been under the authority of a husband; the Prophet himself consulted his daughter Fāṭima before giving her in marriage to 'Alī, but it seems that the majority of early Muslim jurists preferred to follow an ancient Arab custom. Later traditions confirm their point of view, and all the schools made *djabr* a point of doctrine, without always employing this term, which does not appear with this particular sense in the classical dictionaries.

In general, this right belongs to the master when applied to slaves of both sexes, on condition that they suffer no damage (see 'ABD), or to the father, grandfather or testamentary guardian (*waṣī*) in other cases; in principle, the *walī* [see WILĀYA] is only considered to exercise this right by the Ḥanafīs, and by the Mālikīs in the case of an orphan girl who does not have a *waṣī*. Except when subject to impediment [see ḤADIR], boys normally acquired the right to consent to their marriage after puberty [see BĀLIGH], so that they escaped from *djabr* at an early age, in the legal sense at least. So it is upon girls that the arrangements relative to matrimonial compulsion have the most relevant effect in classical Muslim law.

According to the Ḥanafīs, even the *walī* may arrange a marriage in the name of children of either sex who are below the age of puberty, and in the case of the girl in particular, this applies whether she is a virgin or not. On attaining puberty boys and girls enjoy a right of choice (*khīyār*) if they have been married by their *walī muḍḍib*, who according to this school may be chosen from among a wide range of agnatic relatives; if it is the father or the grandfather who has exercised the right of *djabr*, however, no annulment is possible. A slave woman given in marriage by her master against her will may also annul her marriage if she is enfranchised.

According to the Shāfi'īs, the *walī* may not give a virgin girl in marriage without her consent, at least tacit; only the father or the grandfather in fact exercises the right of *djabr*, but in this school, it is the notion of virginity which is crucial, the loss of virginity, whether legal, accidental or illegal, conferring upon the interested party the right to consent to her marriage (or re-marriage) even if she is still below the age of puberty.

For the Ḥanbalīs, the conditions for the exercise of the right of *djabr* approximate to those of the Mālikīs, who show themselves the most rigorous in combining the notions of impuberty and of virginity. In fact the father has the right to give his daughter in marriage without her consent, not only if she is subject to impediment, as in the other schools, but also, with certain restrictions, if she is a virgin, whether past the age of puberty (she may even be an old maid) or below it; he exercises the right of *djabr* equally over a pre-pubescent girl deflowered after a legal marriage, and over a post-pubescent girl deflowered accidentally or illegally. There is no right of choice, but the father is obliged to respect the principle according to which the partners must be well-suited [see KAFA'Ā]. So in order to escape the paternal *djabr*, the daughter must be past the age of puberty and legally deflowered (*ṭhayyib*) or, if she has preserved her

virginity after the age of puberty, she must be emancipated in respect of property, or married for a year or less and divorced, or a widow whose marriage has not been consummated. The *walī* other than the father is never *mudhbir*, that is to say that he only has the right to give a girl in marriage when she is past puberty, but her consent, more or less tacit, is then required; having become *ḥayyib*, she must give an explicit consent through the intermediary of her *walī*.

Among the Imāmī *Shrīʿīs*, the right of *djābr* belongs to the father, and, with certain reservations, to the grandfather. In early times, it was applied to the virgin daughter whatever her age, but ultimately it was decided that the post-pubescent virgin is no longer subject to it.

Such is the theory. In practice, the governments of the majority Muslim states, whether independent or under foreign protectorate, have long ago attempted to curb the right of *djābr* by fixing the age of marriage at twelve and above for girls and by forbidding the *kādīs* to conduct unduly premature weddings; but it has not always been possible to exercise a very strict control. In the states which have modern legal systems, this right has been totally abolished or restrained by the necessity of the mutual consent of the parties, even if the mediation of the *walī* is still required (if the latter refuses, it is possible to have recourse to the judge). There remain, however, vestiges of it in the most modern legal codes, such as that of Morocco which provides (art. 12) that the judge has the right to use compulsion in a case where it is feared that a girl will misbehave if allowed to remain a spinster.

**DJABRIDS**, a dynasty based in al-Aḥsāʾ [q.v.] in eastern Arabia in the 9th-10th/15th-16th centuries. The Banū *Djābr* descended from ʿAmir b. Rabʿa b. ʿUḳayl.

The founder of the dynasty was Sayf b. Zāmil b. *Djābr*, who supplanted the *Djarwānids* of ʿUḳayl [see AL-ḲATĪF]. Sayf's brother and successor *Adjwād* was born in the desert in the region of al-Aḥsāʾ and al-Ḳatīf in Ramaḍān 821/October 1418. *Adjwād* in his fifties was strong enough to become involved in

the politics of Hormuz on the other side of the Gulf. He told the Medinan historian al-Samhūdī how he had visited the tomb of Kulayb, the hero of the saga of the war of al-Basūs, in Ḥimā *Ḍariyya* [q.v.], a tomb revered by a Bedouin cult. *Adjwād* extended his authority westwards into *Nadjd* and towards ʿUmān in the east, where he gathered tribute. He won fame as a captain who had suffered many wounds in battle. At the same time he was distinguished for his piety; he diligently collected books of the Mālikī law school to which he adhered, a school with many followers in eastern Arabia. Some of the Mālikī judges whom he appointed were converts from the *Shrīʿa*. He made frequent pilgrimages, the last being in 912/1507, when he was said to have led a throng of 30,000. His generosity was such that the Bedouins of eastern Arabia still remember him as a sort of latter-day Ḥātim al-Ṭāʿī. The traces of a fort near the village of al-Munayzila in al-Aḥsāʾ are known as *Ḳaṣr Adjwād b. Zāmil*.

With the arrival of the Portuguese in the Persian Gulf in 913/1507, Albuquerque learned of the power of the *Djābrids*. *Adjwād* had just died, leaving three sons, the eldest of whom was Mukrin. The famous pilgrimage in 926/1520 by Muḳrin, whom the Egyptians visiting Mecca regarded as "the lord of the Bedouins of the East", is described in AL-ḲATĪF.

Back from al-Ḥidjāz, Muḳrin in *Shaʿbān* 927/July 1521 encountered a Portuguese force that had descended on the island of al-Bahrayn. Having married a daughter of the Amīr of Mecca, Muḳrin had brought with him Turkish craftsmen and sailors to build and man a fleet to oppose the Christian enemy and had strengthened his army with 400 Persian archers and 20 Ottoman sharpshooters. The battle took place on land. After a heroic resistance, Muḳrin fell gravely wounded and died three days later.

In 928/1521 Ḥusayn b. Saʿīd, the *Djābrid* field commander in ʿUmān, joined the Portuguese in expelling the Persian garrison from *Ṣuḥār* on the coast of the Gulf of ʿUmān, and the Portuguese recognised Ḥusayn as the new governor there, describing him as master of the whole stretch of territory southwards to *Zafār* on the Arabian Sea.

As the 10th/16th century wore on, the *Djābrids* grew weaker in the face of an Ottoman advance from the north and incursions by the *Sharīf* of Mecca from the west. Rāshid b. Muḡhāmīs of the Muntafiḳ, an Ottoman subject, dealt the *Djābrids* a crippling blow in 931/1524-5. An inscription in *Masjdīd al-Dibs* in al-Hufūf, the capital of al-Aḥsāʾ, bears the name of the first Ottoman governor, Meḥmed *Farrūḳh Paṣḥa*, and the date 963/1556.

In 986/1578-9 the *Shārif* Ḥasan b. Abī Numayy, while besieging *Mīʿkāl* in the oasis of al-Riyāḍ, captured a number of the leading figures there, among whom there may have been members of Banū *Djābr*. Three years later the same *Shārif* took towns and forts in al-*Ḳhardj* and al-Yamāma. On the way home, the *Shārif* was attacked by Bedouins of Banū *Ḳhālīd*, whom he routed. This incident lends credence to the likelihood of a direct connection between the *Djābrids* and this tribe, particularly its section named the *Djūbūr*.

(G. RENTZ)

**DJĀDJARM**, a town in the western part of mediaeval Khurāsān in Persia, now a town and also a *bakhsh* or sub-district in the *shahrasān* or district of Buḍjnuṛd in the Khurāsān *ustān*. It lies at the western end of the elongated plain which stretches almost from Biṣṭām in the west almost to Nīshāpūr in the east, which is drained by the largely saline Kāl-i Shūr stream, and which is now traversed by the Tehran-Nīshāpūr-Mashhad railway.

The mediaeval geographers, up to and including Ḥamd Allāh Mustawfī (see Le Strange, *The lands of the Eastern Caliphate*, 392-3, 430), advert to the fertility of the region of Djādjarm, which they describe as a well-fortified town, with cereals and fruit, and with water from springs which was conveyed to the field by *kanāts*. The *Hudūd al-'ālam* (372/982), tr. Minorsky, 102, describes it as "the emporium of Gurgān, Kūmis and Nīshāpūr". It lay on an important caravan route which ran westward from Nīshāpūr through Djuwayn, along the plain and then by the Dīnār-Sārī defile through mountains down to the Caspian lowlands; it was this route which Mas'ūd of Ghazna's army took in 426/1035 when that ruler marched against the Ziyārid prince of Gurgān and Ṭabaristān Manūčīhr b. Kābūs, see Bayhaḳī, *Ta'rikh-i Mas'ūdi*, ed. Ḡhanī and Fayyād, 448-9. In the Mongol and Il-Khānid periods this route was particularly well-traversed, and the Spanish envoy Clavijo gives a detailed account of his journey via Djādjarm, see *Embassy to Tamerlane 1403-1406*, tr. Le Strange, London 1928, 176.

In Ṣafawid and Qādjār times. Djādjarm clearly declined, and the earlier fertility largely disappeared; the region doubtless suffered until the later 19th century from the insecurity engendered by Türkmen incursions into northern Khurāsān. C.E. Yate in the 1890s estimated that Djādjarm had 500 houses; B. Spooner in 1961 estimated that the town had 800 households or ca. 5,500 persons. It seems, therefore, that the town has received a modest amount of prosperity in recent decades; the main cash crop of the district today is cotton.

**Bibliography:** In addition to the references given in the text, see B. Spooner, *Arghiyān. The area of Jājarm in western Khurāsān, in Iran, Jnal. of the British Inst. of Persian Studies*, iii (1965), 97-107, and J. Aubin, *Réseau pastoral et réseau caravanier, les grand'routes du Khurāsān à l'époque mongole, in Le monde iranien et l'Islam*, i, Geneva-Paris 1971, 105-30 (corrects certain errors of Le Strange and Spooner, especially the wrongful identification of the mediaeval district of Arghiyān with Djādjarm). For the 'ulamā' of Djādjarm, see Sam'ānī, *Ansāb*, ed. Hyderabad, iii, 160-1, and Yāḳūt, *Buldān*, ed. Beirut, ii, 92. (C.E. BOSWORTH)

**DJĀDJARMĪ**, a *nisba* referring to Djādjarm [*q.v.* above] in western Khurāsān, the name of two Persian poets, father and son, who flourished in the Mongol period.

1. The elder, Badr al-Dīn b. 'Umar, made his career under the patronage of the Djuwaynīs [*q.v.*], a clan originating from the same area, which came to political power under the early Il-Khāns. He was in particular connected with the governor of Iṣfahān, Bahā' al-Dīn Muḥammad Djuwaynī (d. 678/1279). The contemporary poet Madjīd-i Ḥamgar, who also belonged to the circle of this patron, is said to have been his teacher. Badr al-Dīn used as his pen-name either Badr or Badr-i Djādjarmī. He wrote elegies on the death of Bahā' al-Dīn, of Shams al-Dīn Šāhib-Dīwān and on the death of the mystic Sa'd al-Dīn Hammū'ī, another close relation of the Djuwaynīs. His own death occurred in Djumādā II 686/August 1287. Fragments of his poetry have been preserved in the anthology compiled by his son, but he also retained the attention of the *tadhkira*-writers (cf. e.g. Dawlatshāh, 219 ff.; see further Ṣafā, *Ta'rikh*, 558). Although the pretentious title *malik al-shu'arā'* has become attached to his name, his works represent the average of the poetry of his age. Notable are two poems of a didactic nature: a short *mathnawī* in the metre *khafif* on palmoscopy (*ikhṭilāḍī* [*q.v.*]), and a *kaṣīda* dealing with prognostics (*ikhṭiyārāt* [*q.v.*]) based on the position of the moon in the various *burūḍī* (cf. *Mu'nis*, ii, 861-75 and 1218-21).

2. Muḥammad b. Badr, the son, is only known through his extensive anthology of poetry entitled *Mu'nis al-ahrār fi dakā'ik al-ash'ār*, which was completed in Ramaḍān 741/February-March 1341. It is distinguished from the works of the *tadhkira* type by the lack of any biographical data concerning the poets whose works are represented in the collection, as well as by its method of arrangement. The collection contains poems of about 200 different poets from various periods, but the emphasis is on the 7th-8th/13th-14th centuries. The anthologist frequently quotes his father, and has inserted some specimens of his own work as well. Apart from that, the Iṣfahānī poet Kamāl al-Dīn Ismā'īl [*q.v.*], one of the early masters of the so-called "Irākī style", appears to be a distinct favourite. The poems have been arranged into thirty chapters according to their subject-matter, genre or poetical form. Most of them are unabridged. This anthology constitutes a valuable source for the study of mediaeval Persian literature in many respects. It has preserved much material from the Il-Khānid period, but also from earlier periods, that otherwise would have been lost. Chapter xxvii, on *rubā'iyāt*, contains a special section devoted to 'Umar Khayyām, with a group of thirteen quatrains (added as an appendix to the edition of the *Robā'iyāt-e Ḥakīm 'Omar Khayyām* by Fr. Rosen, Berlin 1925). The nature of its arrangement provides a number of starting-points for the investigation of poetical genres.

The *Mu'nis al-ahrār* has already been used as a source by Ridā Kulī Khān Hidāyat (cf. *Madjma' al-fuṣahā'*, lith. Tehran 1295, i, *muḥaddama*). But it became widely known only through the discovery of an autograph, dated Ramaḍān 741/February-March 1341, which formerly belonged to the Kevorkian Collection. This manuscript at first attracted the attention of art historians on account of a series of pictures illustrating, firstly, a poem entitled *ash'ār-i muṣawwar*, especially composed for illustration by *ustād* Muḥammad al-Rāwandī, and, secondly, the *ikhṭiyārāt-i kamar* by Badr al-Dīn. The miniatures have been attributed to the Īndjū school of painting at Shiraz. The manuscript has been described in detail in the catalogue of the *Exhibition of the Kevorkian Collection ... exhibited at the Galleries of Charles*

of London . . . New York, March-April 1914, no. 264. After the auction of the collection in 1927, the six folios containing these paintings were dispersed to several public and private collections (cf. K. Hilter, *Zentralblatt für Bibliothekswesen*, liv (1937), no. 48, and H. Buchtal, O. Kurz and R. Ettinghausen, *Arts Islamica*, vii (1940), 155, no. 48; see also Basil Gray, *La peinture persane*, Geneva 1961, 60 ff., but the interpretation of the pictures there is to be corrected). The literary contents of the manuscript were examined by M. Kaẓwīnī (*Bīst makāla*, ed. by 'Abbās Ikbāl, Tehran 1313/1934', 138-55; ed. Tehran 1332/1953', ii, 184-206; in English in *BSOS*, v (1928-30), 97-108). Several other copies, all, however, of a much later date, have since come to light (cf. e.g. A.J. Arberry, in *JRAS* (1939), 380-1; M.-T. Dānīshpazhūh, *Madjalla-yi dānīshkada-i adabiyāt-i Tihān* viii (1339/1960), 504 ff.; Ṭabībī in the introduction to the second volume of his edition). The text has been edited by Mir Sālīh Ṭabībī (2 vols., Tehran 1337-50/1958-71), who has supplied most of the lacunae in the autograph from the later manuscripts as well as from other sources.

Saḫā, *Ta'rikh-i adabiyāt dar Īrān*, iii/1, Tehran 1353/1974', 558-67; Sotheby's Spring Islamic Catalogue, Monday 23rd April 1979, 84, no. 144.

(J.T.P. DE BRUIJN)

**DJĀ'FAR B. ABĪ YAḤYĀ, SHAMS AL-DĪN ABU 'L-FAḌL B. AḤMAD B. 'ABD AL-SALĀM B. IŠHĀK B. MUḤAMMAD AL-BUHLŪLĪ AL-ABNĀWĪ**, Zaydī, scholar and *kādi*. His ancestors, including his father, were Ismā'īlī *kādīs* of Ṣan'ā' under the Ṣulayḥīds and Ḥātīmīds. His brother Yaḥyā (d. 562/1167) served the Ismā'īlī Zuray'īds of 'Adan as a panegyrist and judge. Djā'far converted to Zaydism at an unknown date and at first adhered to the doctrine of the Muṭarrīfiyya [q.v.]. After the arrival of the Khurāsānīan Zaydī scholar Zayd b. al-Ḥasan al-Bayḥakī in Ṣa'da in 541/1146, Djā'far studied with him. Al-Bayḥakī represented the doctrine of the Caspian Zaydiyya and, with the support of the Zaydī *Imām* al-Mutawakkil Aḥmad b. Sulaymān (d. 566/1170), who also studied with him, vigorously fought the Muṭarrīfī heresy. In 545/1151, when al-Mutawakkil temporarily succeeded in wresting Ṣan'ā' from Ḥātīm b. Aḥmad, he appointed Djā'far *kādi* of the town. *Kādi* Djā'far accompanied al-Bayḥakī, when he left the Yaman, in order to pursue further studies with him and, after al-Bayḥakī's unexpected death in al-Tihāma, continued his journey alone. He is known to have studied and received authorisation for the transmission of books in Mecca, in Kūfa, where he was present in Dhū 'l-Ḥiǧǧa 550/February 1156, and in Rayy, where he received an *idjāza* on 1 Djumādā I 552/13 June 1157. His chief teacher in Rayy was the Zaydī scholar Abu 'l-'Abbās Aḥmad al-Kannī, from whom he later transmitted numerous works in the Yaman. In 554/1159 he returned to the Yaman and renewed his service to the *Imām* al-Mutawakkil. In this year he stirred up Sunnī antagonism in Ibb by propagating Mu'tazilī theology. He settled in Ṣan'ā' near Ṣan'ā' and taught in his *madrasa*, attracting numerous students as well as the strong opposition of the Muṭarrīfiyya, who built their own *madrasa* next to the mosque of the town. In Waḫash, the centre of Muṭarrīfī learning, he debated with the prominent Muṭarrīfī scholars Muslim al-Laḥǧǧī and Yaḥyā b. al-Ḥusayn al-Yaḥīrī.

In Djumādā I 556/May 1161 he preached at the funeral of the son of the *Imām*, who continued to support him in his struggle against the Muṭarrīfiyya. He died in 573/1177-8 and was buried in Ṣan'ā'.

*Kādi* Djā'far played the most conspicuous role in the introduction of the religious literature of the Caspian Zaydī community to the Yaman. Through his transmission of this literature as well as through his own works, said to number more than thirty, in all fields of religious learning, he became the founder of a school which recognised the Caspian Zaydī *Imāms* as being equally authoritative teachers with the Yamanī *Imāms*, and he espoused the Baṣran Mu'tazilī doctrine in theology and legal methodology already adopted by most Zaydīs outside the Yaman, thus restoring ideological unity within the Zaydiyya. His school became predominant in the Yamanī community under the *Imām* al-Manšūr 'Abd Allāh b. Ḥamza (d. 614/1217), who supported its views in his own many writings and waged a war of extermination against the Muṭarrīfiyya.

**DJĀ'FAR B. MANŠŪR AL-YAMAN**, Ismā'īlī author and partisan of the Fātimīds [q.v.]. He was the son of the first Ismā'īlī missionary in Yaman, al-Ḥasan b. Farāḥ b. Hawṣḥab b. Zādān al-Kūfī, known as Manšūr al-Yaman [q.v.]. When in the year 286/899 the chief of the Ismā'īlī propaganda, 'Ubayd Allāh, claimed the imāmate, Manšūr al-Yaman acknowledged him; the letter by which 'Ubayd Allāh tried to prove his 'Alid descent has been preserved in Djā'far's *al-Farā'id wa-ḥudūd al-dīn* (see H.F. Hamdānī, *On the genealogy of Fatimid caliphs*, Cairo 1958). When after the death of Manšūr al-Yaman (302/914-15) his sons were excluded from the leadership of the community in Yaman, they fell away from allegiance to the Fātimīds, except Djā'far (see Mālik al-Yamānī, *Kaṣṣf asrār al-Bāṭiniyya*, ed. al-Kawṭharī, 217). He came to the Maghrib during the reign of the second Fātimid caliph al-Kā'im (322-34/934-46); and under al-Manšūr (334-41/946-53) he fought against the Khāridǧī rebel Abū Yazīd [q.v.]. The merits of his father secured him the financial support of the caliph al-Mu'izz (341-65/953-75), when he was forced to pledge his house in al-Manšūriyya (Ṣabra) to a creditor (see *Sīrat al-Ustādḥ Djaḡdhar*, ed. M. Kāmil Ḥusayn and M.'A. Ša'īra 126 f.). The date of his death is not known; possibly he composed his *Ta'wīl al-zakāt* only in the last year of al-Mu'izz (see W. Madelung, *Imamat*, 96). The date 280/990 for his *Asrār al-nuṭakā'* has certainly no solid basis (see Madelung, *loc. cit.*); there is therefore no reason to take him for a grandson of Manšūr al-Yaman, and all sources agree that he was his son.

Djā'far's works (see W. Ivanow, *Ismaili literature*, Tehran 1963, 21 f.; P. Kraus, in *REI*, vi (1932), 486 f.; F. Sezgin, *GAS*, i, 578 f.) mostly treat of the allegorical exegesis (*ta'wīl*) of the Qur'ān and of the ritual duties (e.g. *al-Ridā' fi 'l-bāṭin*; *Ta'wīl*

*al-hurūf al-mu'djama; Ta'wīl al-farā'id; Ta'wīl al-zakāt; Ta'wīl sūrat al-Nisā'*). His *Asrār al-nutak'* is a collection of legends of the prophets from Adam to Muḥammad. The gist of the "Book of the intervals and conjunctions" (*K. al-Fatarāt wa 'l-kirānāt*) ascribed to him, which P. Kraus (*loc. cit.*) incorrectly assigns to the later Tayyibiyya [*q.v.*] literature, consists of prophecies which expect as the Mahdī [*q.v.*] "the Fourth, the Seventh of the second heptad" (sc. of the three hidden *Imāms* and the four Fātimid caliphs), i.e. al-Mu'izz. The *Kitāb al-Kashf* ascribed to Dja'far contains six older treatises from early Fātimid times which have been clearly put together in the time of al-Ḳā'im (see Madelung, *op. cit.*, 52 ff.).

**DJAGHATAY** [see ČAGHATAY].

**DJALĀL AL-DĪN MANGUBIRTĪ** [see DJALĀL AL-DĪN KHĪ'ARAZM SHĀH].

**DJALĀLĀBĀD**, a town of eastern Afghānistān, situated in lat. 34° 26' N. and long. 70° 27' E. at an altitude of 620 m./1,950 ft. It lies in the valley of the Kābul River some 79 miles from Peshāwar to the east and 101 miles from Kābul city to the west, and is on the right bank of the river. As well as being roughly midway along the historic route connecting Kābul with the beginning of the plains of northern India, Djalābād is also strategically situated to command routes into Kāfiristān [*q.v.*] (modern Nūristān) and today, routes run northwards from it up to the Kānur and Alingār River valleys.

The area around Djalābād is that of the ancient Nangrahar (contemporary pronunciation, Nungrihar or Ningrahar; the name has now been revived, in the latter version, as the name of a modern Afghān province, see below), which was a flourishing region culturally and religiously, forming part of the Gandhara of the Sakas and then Kushans. Buddhism was strong there, and the early 7th century Chinese Buddhist pilgrim Hsüan-Tsang records it as Na-ka-lo-ho = \*Nagarahāra; cf. G.H. Macgregor, in *JASB*, xiii (1844), 867-80; T. Watters, *On Yuan Chwang's travels in India, 629-645 A.D.*, London 1904, 182-90, and *Hudūd al-'ālam*, tr. Minorsky, comm. 252-3. The Buddhist antiquities of the region have been exploited and looted since the 19th century; serious archaeological investigation dates from the work of the Délégation Archéologique Française en Afghanistan 1923-8 at Hadda a few miles south of Djalābād, mainly at Tepe Kalan stupa (J. Barthoux, *Les fouilles de Hadda*, Méms. DAFA, iv, Paris 1933, and vi, Paris 1930), and this has recently been continued by Sh. Mustamandī (*Nowelles fouilles à Hadda (1966-1967) par l'Institut Afghane d'Archéologie, in Arts Asiatiques*, xix (1969), 15-36, cf. L. Dupree, *Afghanistan*, Princeton 1973, 306). This region of Nangrahar has also at times been included in the eastern part of that of Lamghān or Lamghānāt [*q.v.*].

The comparatively low-lying and sheltered valley here of the Kābul River gives Djalābād what Dupree has-called a "Mediterranean, dry-summer, sub-tropical climate" (this is in fact more accurate than Humlum's term "monsoon climate"). Rain falls mainly in the three winter months, and the mild

climate has meant that Djalābād has for long been a winter residence place for many Kābulis and a winter haven for tribesmen of the climatically harsh slopes of the Safid Kūh to the south of the river valley and of the Kāfiristān fringes. At present, Djalābād is the centre of a rich area for the growing of sugar cane by irrigation, rice, fruits, etc., and a Ningrahar irrigation project, built around a dam in the Darunta gorge, has recently been undertaken. Ethnically, the Djalābād region comprises some Tādjīk villagers but mainly Puštūns of the Ghilzay, Shinwari, Khugiyani, Mohmand and Safī tribes.

The actual town of Djalābād only appears in Islamic history during the Mughal period, and Akbar is said to have founded it in ca. 978/1570. Nādir Shāh Afshār campaigned in the district, and defeated the Puštūn tribes at nearby Gandamak. It is during the 19th century that the town really comes into prominence. The American traveller Charles Masson was there in ca. 1826-7, and states that he discerned the ruinous mud walls of two earlier towns on the site, the contemporary town being the smallest of the three. The then governor of Djalābād was Nawāb Muḥammad Zamān Khān b. As'ad Khān, a nephew of Dōst Muḥammad [see DŪST MUHAMMAD], and the revenue of the whole province of Djalābād, including that from the Tādjīk villages and from Laghmān, amounted to three lakhs (i.e. 300,000) of rupees (*Narrative of various journeys in Balochistan, Afghanistan and the Panjab*, London 1842 (repr. Karachi 1974), i, 174-80; Sir Thomas Holdich, *The gates of India*, London 1910, 352 ff.).

Shortly after Masson's visit, Djalābād was seized and sacked by Dōst Muḥammad in his expansion from Kābul (1834). It then played a crucial role in the First Afghan War (1839-42). It was occupied by Major-General Sir Robert Sale's brigade of the British forces ("the illustrious garrison") from November 1841 till April 1842 against the attacking Afghān army of Muḥammad Akbar Khān, and fortified by the British troops, despite a severe earthquake there in February 1842 which damaged the defences. It was Djalābād that the remnants of Major-General William Elphinstone's ill-fated army straggled back from Kābul in January 1842, the town being only relieved three months later by Major-General George Pollock (see J.A. Norris, *The First Afghan War 1838-1842*, Cambridge 1967, 371 ff.). During the Second Afghan War (1879-80), Djalābād was again occupied by British troops, who built a defence post, Fort Sale, one mile to the east of the town. It had now become a favoured winter residence of the *amirs* of Kābul, and in 1892 'Abd al-Rahmān Khān [*q.v.*] built a palace and garden near the western gate of the walled town. When in 1919 the *amir* Ḥabīb Allāh [*q.v.*] was assassinated in the Laghmān district, his brother Naṣr Allāh was briefly proclaimed king at Djalābād, but abdicated in favour of his nephew Amān Allāh b. Ḥabīb Allāh. During the Third Afghan War, which followed these events almost immediately, Djalābād was bombed from the air by the British (cf. L.W. Adamec, *Afghanistan 1900-1923, a diplomatic history*, Berkeley and Los Angeles 1967, 107-8, 117, 122). It was amongst the Shinwaris and other Puštūn tribes of the Djalābād region that the *amir* Amān Allāh [*q.v.*, in Suppl.] endeavoured in 1928 to exert his centralised authority and to end the extortion of protection money (*badraka*) from caravans travelling to Peshāwar, provoking a rising of the Shinwaris in which, amongst other things, the rebels sacked the British consulate in Djalābād; this rising, and the poor performance

of the royal Afghān army against it, were contributory causes of Amān Allāh's downfall and abdication in 1929 (cf. L.B. Poullada, *Reform and rebellion in Afghanistan, 1919-1929, King Amanullah's failure to modernize a tribal society*, Ithaca and London 1973, 162 ff.).

The modern town has since 1964 been the provincial capital of Ningrahar; its population was estimated by J. Humlum at 20,000-30,000, swollen during the winter by the influx of Kābulis and others (*La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 140). It has by now lost the protective wall and the bazaars of the old city, and the modern town has expanded towards the west. Djalālābād also possesses a military airport, originally built with US aid for civil purposes.

*Bibliography* (in addition to sources given in the article): *Imperial gazetteer of India*, Oxford 1908, xiv, 11-13; *Area handbook for Afghanistan*, Washington D.C. 1973, index; and the general histories of Afghānistān (Fraser-Tyler, Masson and Romodin, Klumburg, etc.), especially for the events of the 19th century.

The name Djalālābād occurs elsewhere in the Central Asian and Indo-Afghān worlds. For the Djalālābād in the modern Kirghiz SSR, see the article s.v. in *EP*. For the Djalālābād in Sistān (= Dōshak), see Holdich, *op. cit.*, 335, 497. For the Djalālābād in the Shāhājāhānpūr District of Uttar Pradesh in India, situated on the Ganges and in lat. 27° 43' N. and long. 79° 40' E., said to have been founded by the Tughlukid Djalāl al-Dīn Fīrūz Shāh, and the Djalālābād in the Muzaḥfārnagar District of Uttar Pradesh, in lat. 29° 37' N. and long. 77° 27' E., said to have been founded by one Djalāl Khān under Awrangzīb, see *Imperial gazetteer of India*, xiv, 13-14.

(C.E. BOSWORTH)

**DJALĀLĪ**, a term in Ottoman Turkish used to describe companies of brigands, led usually by idle or dissident Ottoman army officers, widely-spread throughout Anatolia from about 999/1590 but diminishing by 1030/1620. The term probably derives from an earlier (925/1519) political and religious rebellion in Amasya by a Shaykh Djalāl. Official Ottoman use appears in a petition (*ard*) as early as 997/1588 (Divanı Kalemi 997-8-C), where the term identifies unchecked rebels (*ashkīyā*) engaging in brigandage. Analysis of the three-decade period of *Djalālī* revolts indicates that these leaders had in common certain objectives which arose through deteriorating social and political conditions in Anatolia.

First, constant warfare for decades on the Ottoman boundaries expended men and treasure, leaving large areas of the Anatolian heartland without proper protection from local outlaws. By the later 10th/16th century, the Ottomans found themselves unable to move militarily beyond the lines generally established by Sulṭān Sulaymān Kānūnī, both in Hungary and in Persia. Hostilities continued with the Habsburgs from 1002/1593 until the Treaty of Zsitvatorok (11 November 1606); war in the east with the Ṣafawid Shāh 'Abbās [*q.v.*] continued from 1012/1603 until the Treaty of Amasya in 1021/1612.

Second, deterioration in the economic stability of the Empire brought about serious imbalances. Monetary inflation, due largely to Mexican silver from Europe, caused a rapid increase in prices which affected daily-wage soldiers who, when pay was in arrears, increasingly either refused to fight or revolted. When the central government found itself without funds to disperse, it devised new sources

of cash: sale of offices to wealthy purchasers, demands for increased tribute from subject nations, the sale of lands formerly administered by cavalrymen (*tīmārs* [*q.v.*]), debasement of the coinage, and the increase of peasant taxes. Food shortages, even widespread famine, occurred due to limited agricultural technology, a decade of drought (985-1577 to 993/1585), increase in population, heavy demands by Ottoman armies in both Europe and Persia, scorched-earth policies by the Ottoman and Persian armies in eastern Anatolia, and illegal sale of grain to European markets.

Third, as in other areas of the Mediterranean, Ottoman lands experienced unrest and banditry among classes normally quiescent. Peasants (*re'āyā*) on cavalry lands sold as *ilūzām* [*q.v.*] found their new absentee landlords interested more in profits than traditional patronage. Legally tied to their lands, peasants felt the oppression of the new landowners, whose excesses could not be bridled, and that of the tax collectors, many of whom could hardly be differentiated from brigands. With technological changes in warfare, increased numbers of Muslim *re'āyā* enlisted as daily-wage musketeers (*sekbān*), returning to Anatolia after their campaigns jobless but expert in the military arts. Another normally tranquil group were students training in *madrasas* [*q.v.*] for positions in the Ottoman bureaucracy. Frustrated especially because their number far exceeded available positions, they wandered in groups across rural Anatolia, some preaching religious revival, and most of them participating in anti-social violence against small villages and lonely travelers (Akdağ, *Celālī isyanları*, 85-100).

Fourth, misguided leadership within the Ottoman government kindled the great *Djalālī* rebellions. After the astonishing Ottoman victory over the Habsburgs at Hāc Owasi (Mező-Keresztes [*q.v.*]) in Hungary on 23 October 1596, the newly-appointed grand vizier Čighāla-zāde Sinān Paṣha [*q.v.*] declared forfeit the property and the lives of all who deserted (*firārī*) from the battle. The *Firārīs*, whose several thousands included many high-ranking officers, fled to Anatolia where they joined the forces of the *Djalālī* leader Karāyazıdī 'Abd al-Halīm and fought successfully against Ottoman armies for several years. The unsuccessful actions of important Ottoman generals, including Naṣūh Paṣha against the *Djalālī* Tawīl Khālī at Bolvadin (1014/1605), and Farhād Paṣha's [*q.v.*] anti-*Djalālī* campaign of 1015/1606, demonstrated the need for greater military organization and discipline in recognition of the seriousness of the rebellions.

Where Ottoman leadership often failed because of personal incompetence, bureaucratic sluggishness, and court intrigue, local *Djalālī* chiefs proved themselves master strategists and attractive leaders, with objectives in many ways unique in Ottoman history. Unlike most rebels, they did not attempt to establish a bureaucratic state and a taxation system, to coin money, or to have their names read in the Friday mosque prayer (*khutba*). The *Djalālī* leaders primarily desired a place for themselves in the established Ottoman order, usually accepting a pardon from the weak government, leading to the offer of positions as *sandīak begis* or *beglerbegis*. At such a time, their rank and file became salaried and, as *'askerīs* [*q.v.*], non-taxed. When they failed to obtain governmental recognition, both leaders and led lived on plunder, pillaging villages or outlying city districts, demanding enormous ransoms of the urban dwellers and incurring the hatred of the coun-

tryside. *Djalālī* bands ruled wide areas of Anatolia, communicated with one another, and occasionally acted in unity. Though commonly branded as proponents of the Persian *Shāh* 'Abbās and of *Shī'a* Islam, sectarian fervour played little part in their activities. Neither the Persian monarch nor any other foreign power gave them official recognition.

A different kind of rebellion occurred contemporaneously in northern Syria and is often erroneously considered to be a *Djalālī* revolt, possibly because of a short-lived alliance with some *Djalālī* leaders (*Shidyāk*, *Akhbār al-ayān*, 133). *Djānbūladoghli* 'Alī Pasha based his revolt on the power of his well-known Kurdish family and Turkoman retainers, as well as on regional loyalties in Aleppo and Damascus. Official recognition came in the form of an alliance with the Grand Duke of Tuscany (Fondo Archivisto Modiceo, No. 4275 is the Italian copy of the treaty) and a vague understanding with the *Şafawid* *Shāh* (Wāsiṭī, *Talkhīṣāt*, f. 11b).

The dangerous international implications of *Djānbūladoghli*'s revolt were not missed by the newly-appointed (1015/1606) grand vizier, the nonagenarian *Kuyudju Murād Pasha*. On the occasion of peace in Hungary, he immediately marched toward Aleppo, established military discipline, used a variety of loyal non-Anatolian as well as *deuṣhīme* [q.v.] forces, whom he paid promptly, and smashed the Syrian rebel *Djānbūladoghli* at Oruç Owasi near Lake 'Amīk (1016/1607). Six months later he turned against the great *Djalālīs*, took advantage of their fickle individualism, pardoned some, executed most, and routed the army of *Kalenderoghli* Meḥmed at Gökşün Yaylası, though the rebel leader fled to Persia. A year later *Murād Pasha* executed the last great *Djalālī* leader, *Muslu Çawuşh*.

In the years following *Kuyudju Murād Pasha*'s death (1020/1611), though *Djalālī* faded from official use in the *Mühimme defterleri*, the term remained in Ottoman historical writing to identify certain Anatolian rebels. *Ewliyā Çelebi* in the mid-11th/mid-17th century mentions the "*Djalālī* Pashas" (*Seyāhat-nāme*, viii, 104), and *Na'imā* (*Ta'rikh*, v, 155) describes the activities of a 12th/18th-century rebel as *Djalālīlik* ("like a *Djalālī*"). Today, the memory of the *Djalālīs* remains only in the folk songs of the Anatolian hero *Köröghlu* [q.v.].

**Bibliography:** Official documents found in the *Baş Vekalet Arşivi*, Istanbul, contain *Mühimme defteri*, lxx-lxxx, zeyl 7 and 8, and *Kâmil Kepeci Tasnifi* lxxi, covering the years 1000-22/1591-1617, but with a hiatus between 1005-11/1596-1603; *Ali Emiri Tasnifi*, nos. 455-9, 465, 616; *Fekete Tasnifi*, *Bab-i Asafî*, *Divan-i Kalemi* nos. 997-1014; *Ibn ül-Emin Tasnifi* nos. 29, 200-2, 504, 506, 586, 686, 688; Eye-witness accounts include *Wāsiṭī*, *Talkhīṣāt dār 'ahd-i Sultān Ahmad Khān*, *Esad Efendi Kütüphanesi*, *Süleyman Kütüphanesi*, no. 2236 ff. 5a-30a.; *Topdjular Kātibi* 'Abd al-Kādir, *Tawārikh-i āl-i 'Othmān*, Vienna Staatsbibliothek, no. 1053, ff. 216b-262b, *passim*; T. de Gontaut Biron, *Ambassade en Turquie de Jean de Gontaut Biron, Baron de Salignac, 1605 à 1610 (Correspondance diplomatique et documents inédit)*, in *Archives Historiques de la Gascogne*, fasc. 19, Paris 1889; M. (W.J. GRISWOLD)

**DJAMĀL AL-DĪN İŞFAHĀNĪ**, MUHAMMAD B. 'ABD AL-RAZZĀK, Persian poet of the later *Saldjūk* period, and father of a better-known poet *Kamāl al-Dīn İsmā'il* [q.v.]. A goldsmith and miniature painter in his early years, he left his workshop, as his son tells us, to study, acquiring extensive theological knowledge, traces of which are to be found as characteristics in his 'Irākī-styled poetry. Continuous eye troubles, a speech impediment, a large family of at least four sons, and a short tour through *Ādharbāyḍjān* and *Māzandarān*, very likely in search of more generous patrons, constitute all the details we know from his personal life. Besides local grandees of the *Āl-i Şā'id* and *Āl-i Khudjand*, to whom he dedicated flattering *kaṣīdas*, his other patrons included some *Saldjūk* princes of 'Irāk and a number of local rulers of *Ādharbāyḍjān* and *Māzandarān*. Among contemporary poets, he paid equivocal lip-service to *Khākānī* [q.v.], held friendly correspondence with *Zahīr-i Fāryābī*, and wrote mordant satires against *Mudjīr-i Baylakānī*. He also paid homage to

Anwarī and Rashīd-i Waṭwāt [q.v.], who seem to have ignored him rather disdainfully. Djamāl al-Dīn's ascetic ideas—including the idea of renunciation—are best presented in the *kaṣīdas* which he wrote in the fashion of Sanā'ī, though these are far inferior to Sanā'ī's ones. His *Diwān*—comprising *kaṣīdas*, quatrains, and *ghazals*—contains no less than 10,000 verses and displays the lucid and flowing 'Irākī style. Djamāl al-Dīn is said to have died either in 588/1192 or in 600/1203, the former being more likely.

(A.H. ZARRINKOOB)

**DJAMĀL KARSHĪ**, sobriquet of ABU 'L-FADL DJAMĀL AL-DĪN MUḤAMMAD B. 'UMAR B. KHĀLID, scholar and administrator in Turkeṣtān during the Mongol era. He was born at Almalīgh around 628/1230-1, his father a *ḥāfiẓ* of Balāṣāghūn and his mother originating from Merw. He enjoyed the patronage of the local Turkish dynasty founded at Almalīgh [q.v.] by Būzār (or Uzār), and obtained a position in the chancellery there. In 662/1264, however, he was obliged to leave Almalīgh, and for the remainder of his life resided at Kāshghar, though travelling widely in western Turkeṣtān.

In 681/1282 he composed a Persian commentary (*surāh*) on the great lexicon *al-Şiḥāh* of Dījawharī [q.v.], subsequently adding to it a historical and biographical supplement. Djamāl Karshī's *Mulḥakāt al-Surāh* is in fact the only historical source we possess emanating from the Central Asian state founded by Kaydu [q.v.]. Extracts of the work, which includes particularly valuable sections on the Karakhānids [see ILEK-KHĀNS] and the Mongol rulers of Turkeṣtān [see ČAĠHATAY KHĀNATE], surveys of various Central Asian cities, and biographies of local divines, were edited by Barthold in *Turkestan*, Russ. ed., i, 128-52. The *Mulḥakāt* was completed soon after the accession of Kaydu's son Čapar [q.v.] in 702/1303, the latest date mentioned.

The date of Djamāl Karshī's death is unknown. The surname is due to his connection with the rulers of Almalīgh (*karshī* = "palace"), and is not a *nişba* from *Karagaysh* as was formerly supposed.

Barthold, in *Žapiski Vostočnogo Otdeleniya Imperatorskogo Russkogo Arkheologičeskogo Obščestva*, xi (1897-8), 283-7; idem, *Turkestan*,<sup>2</sup> 51-2; Brockelmann, I, 296, S I, 528; H. F. Hofman, *Turkish literature*, iii/1, 3, Utrecht 1969, 84-9, with full MS references. (P. JACKSON)

AL-DJĀMĪ'A AL-'ARABIYYA, the Arab League. Established at the end of the Second World War, this reflects the desire to renew the original unity, a desire which has continued to be active in Muslim communities following the decline and subsequent collapse of the Arab-Islamic empire.

It was during the final years of the 19th century and before the First World War that Arab nationalists became aware of their national homogeneity, based on a common language and destiny, and on a similar way of life and culture (*kawmiyya* [q.v.]).

Egypt, reverting to the cause of Arabism between the two World Wars, in order to put an obstacle in

the way of Hāshimite designs (a plan for a Greater Syria conceived at 'Ammān, or for a Fertile Crescent, put forward by Baghdād) took the initiative of assembling in Alexandria representatives of the Arab States regarded as being independent. This meeting, marked by the signing of a protocol (7 October 1944), laid the foundations of a unity which was ratified the following year in Cairo, where on 22 March 1945 the Pact of the Arab League was signed by Saudi Arabia, Egypt, Iraq, Lebanon, Syria, Trans-jordan and Yemen.

Subsequently, the League has been joined by the following countries: Libya (1953), Sudan (1956), Tunisia and Morocco (1958), Kuwait (1961), Algeria (1962), South Yemen (1967), the United Arab Emirates, Kaṭar, Baḥrayn and 'Umān (1971), Mauritania and Somalia (1974) and Djibouti (1977). Furthermore, the Palestine Liberation Organisation has been admitted, first in the capacity of an observer (1965), then as a full member (1976).

The text adopted by the founders after long discussion, is remarkable for its flexibility and its simplicity. It specifies that the object of the League is "the forging of links between the member States and the coordination of their policies" with the aim of fostering collaboration in respect of each one of them.

The components of the Organisation are currently the following:

— The Council of the League, the supreme body, which can meet at the level of Heads of State, Prime Ministers or Foreign Ministers. Summit meetings composed of Heads of State since 1964 have been:

1. Cairo (13-17 January 1964).
2. Alexandria (5-11 November 1964).
3. Casablanca (13-18 January 1965).
4. Khartoum (29 August-2 September 1967).
5. Rabat (21-23 December 1969).
6. Algiers (24-29 November 1973).
7. Rabat (26-29 October 1974).
8. Cairo (25-26 October 1976).

The council decides questions of administration by a simple majority, but in all important cases, decisions are only binding if they have been taken unanimously. Conversely, they are binding only on the States that have voted for them (art. 7).

— Five other councils, at ministerial level (common defence, economics, information, health, youth) were instituted in 1950.

— Ten permanent committees are charged with studying various questions entrusted to them and submitting in various cases projects for resolution or recommendations.

— An administrative tribunal and a committee of financial control are directly responsible to the Council of the League.

— Seventeen specialised agencies have been instituted by particular agreements to investigate common technical problems.

— The permanent Secretariat-General, which is directed by a Secretary-General elected by a two-thirds majority, himself assisted by a number of additional secretaries, comprises several departments and controls specialised bureaux, institutes and social centres. Three Egyptians have successively held the office of Secretary General of the Arab League:

- 'Abd al-Raḥmān 'Azzām Paşa (March 1945-October 1952),
- 'Abd al-Khālīk Ḥassūna (October 1952-May 1972).
- Maḥmūd Riyād (since 1 June 1972).

The Secretariat-General maintains permanent delegations to the United Nations in New York and

Geneva, as well as Information Offices in the principal foreign capitals (Washington, New York, Ottawa, Paris, London, Bonn, Geneva, Brussels, Rome, Madrid, Buenos-Aires, Brasilia, Tokyo, New Delhi, Dakar, Lagos, Nairobi and Addis Ababa).

Since the creation of the Organisation various plans for reform have been proposed by different states: Syria (1951), Iraq (1954), Morocco (1959, 1963), Algeria, Iraq and Syria (1964). These projects have never come to fruition. Since June 1967 this subject has only been tackled by experts.

Conflicts between member States have not been lacking, leading to almost constant disputes between two or more of the partners. These have been motivated by various factors: frontier disputes, local subversion, differences over the choice of foreign policy, differences of approach concerning the manner of conducting the war or of obtaining peace in the Israeli-Arab conflict, abortive attempts at union, ideological rivalries, personal antagonisms and a permanent struggle for supremacy. Generally, the States concerned have avoided referring their quarrels to the Council of the League. They have preferred to solve their differences by seeking the arbitration either of bilateral diplomacy or of other, larger organisations, such as the U.N.O. or, since its inception in 1963, the O.A.U. In a number of cases, certain members have failed to attend meetings. Sometimes the tactics adopted by Egypt, by the very fact that the latter is host to the League, paralyse its activity. But to this day no decisive schism has interfered with its workings.

The League, which has supplied a considerable quantity of aid to liberation movements and has assisted the emancipation of Arab nations, serves in fact as a forum where mutual aggressions and rivalries may be diminished, and where, after the confrontation, a measure of co-existence develops.

In the economic sphere, it has given birth in 1948 to a bureau for the boycott of Israel, in 1950 to the Union of Chambers of Arab Commerce, Industry and Agriculture and in 1957 to the Council of Arab Economic Unity. It has played a not inconsiderable role in the matter of oil, organising congresses and providing facilities for meeting and observation attended by experts from all parts of the world, sessions which have themselves led to the establishment of groups of producing States such as O.P.E.C. (Organisation of Petroleum Exporting Countries) in 1960 and O.P.E.A.C. (Organisation of Petroleum Exporting Arab Countries) in 1968.

It is in the name of the League that attempts have been made since 1964 to organise an Arab Common Market, which has never got beyond the stage of a free-trade zone limited to Egypt, Iraq, Syria and Jordan.

More recently there have been founded the A.F.E.S.D. (Arab Fund for Economic and Social Development) (1973), the Union of Arab Banks (1975), the Arab Institute for the Guarantee of Investments (1975) and the Arab Bank for Economic Development in Africa (1975). Since 1973 the League has played a major role in the Arab-European dialogue and in Arab-African co-operation.

Handicapped by the weight of mentalities whose evolution remains very slow, paralysed by the political rivalry of member States, affected by the turbulence of an unstable international world, the League nevertheless plays a role that often goes unnoticed as a centre for contacts, exchanges and studies where Arabs may meet, learn to understand one another, overcome their difference and arrive at common solutions [See also the Addenda and Corrigenda].

*Bibliography:* Studies on the League are numerous but often partial. As the basis for a bibliography, one may consult A.M. Goma, *The foundations of the League of Arab States. Wartime diplomacy and inter-Arab politics, 1941 to 1945*, London-New York 1977; R.W. McDonald, *The League of Arab States, a study in the dynamics of regional organization*, New Jersey 1965; A. el-Telawi, *Le Secrétariat-général de la Ligue des États Arabes*, Paris II thesis (goes up to 1971). The activities of the League may be followed in specialist journals like *Cahiers de l'Orient contemporain*, Paris 1945-69; *Orient*, Paris 1957-69; and *Maghreb-Machrek*, Paris, since 1964. An overall view is given in the *Fiches du monde arabe*, Beirut. A recent publication by the League in Cairo is the monthly bulletin in Arabic, *Djāmi'at al-duwal al-<sup>5</sup>arabiyya*, from January 1978.

(R. SANTUCCI)

**DJAMMĀL** (A.) camel-driver or cameleer, also an owner of and hirer of camels (hence synonymous here with *mukārī*) and a dealer in camels; Persian equivalent, *ushurbān*.

During the pre-Islamic and post-Islamic periods camel caravans travelled enormous distances between the main centres of population and trade. Our sources indicate that relatively high wages were earned by the *djammālūn* during the 'Abbāsīd period. The *djammāl*, it also seems, came under the jurisdiction of *hisba* [q.v.] officials in Islamic towns. The conduct of the camel-men came under some criticism from writers like *Djāhīz* and Ibn al-Djawzī. Ibn Sa'd cites a tradition that 'Umar b. al-Khaṭṭāb chastised a *djammāl* for overburdening a camel. However, the great expansion of international trade between regions during the 'Abbāsīd period gave the camel-men a significant role to play in Arab society, and they were one of the most important groups of transport-workers. It was during this epoch of greatness of Islamic civilisation that we find some *djammālūn* among the transmitters of the Prophetic traditions (*aḥādīth*). *Ibshīhī* [q.v.] tells a tale that the caliph al-Mu'tamid awarded a pious *djammāl* a monthly allowance of 30 *ḍinārs*, besides a royal gift of 500 *ḍinārs* in cash. In contrast to their mediaeval glory, the modern camel-men's trade is regarded as demeaning and low (*danī*?), and on some of the pilgrim roads to Mecca, one could hear a lot of critical comments about the conduct of the *djammālūn* until very recent times.

(M.A.J. BEG)

**DJAMMŪ**, a region of northern India, lying between lat. 32° and 33° N. and long. 74° and 76° E. and extending east of the Čenāb. It is bounded on the south by the Sialkōt district of the Panḍjāb and on the north by Kašmīr, of which it now constitutes a province, covering an area of 12,375 sq. miles. Its capital, the town of the same name, is situated on the right bank of the Tavi.

The original name of this ancient principality, which lay in the valleys of the Tavi and the Čenāb, was Durgara, from which is derived the ethnic term *Dogrā* for its mountaineer inhabitants. Even the name Durgara, however, figures for the first time only

in copper-plate grants of the early 10th century, and *Djammū* appears to be referred to in Kalhana's *Rājataranginī* as Babbapūra (Babor). During the reign of the great *Kashmīr* king Kalaśa (1063-89), *Djammū* was tributary to *Kashmīr*, and his subordination continued into the 12th century, when the decline of their powerful neighbour enabled the *rājās* to assert their independence.

At this time, Čakradeva, ruler of *Djammū*, played a part in the struggle between the last *Ghaznawid* sultan in the *Pandjāb*, *Khusraw* Malik b. *Khusraw* *Shāh* (555-82/1160-86) and the rising power of the *Ghūrīds* [q.v.]. Čakradeva allied with the *Ghūrīd* Mu'izz al-Dīn Muhammad against *Khusraw* Malik and his *Khokar* allies, who had been harrying *Djammū* and refusing allegiance to its ruler, their suzerain (see C.E. Bosworth, *The later Ghaznavids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977, 129-30).

The *vamsāvalī* of the *rājās* of *Djammū* supplies a long list of rulers, often with very few details of their reigns, and the chronology can only occasionally be fixed by reference to external sources. Tīmūr, in the course of his invasion of this region in 801/1398-9, forcibly converted the *rājā* of *Djammū* to Islam, and this is probably the *Bhīm-dēv* (d. 1423) whom we find on the throne over the next few decades; but his successors reverted to Hinduism. This did not preclude co-operation with *Hasan* *Shāh* of *Kashmīr* in resisting the invasion of Tatar *Khān* Lūdi, governor of the *Pandjāb*, around 1480, while during the troubled reign of *Muhammad* *Shāh* (1484-7), *Parasramdēv* of *Djammū* intervened in *Kashmīr*'s internal politics, putting to death a great number of *sayyids*.

In the 16th century *Djammū* was divided into two states, *Djammū* and *Bahū* (Bao), separated by the *Tavī*. Both principalities, which were reunited in the next century, followed the other hill states in accepting the suzerainty of the *Mughal* emperor *Akbar*, and remained subject to his successors until the 18th century. With the transfer of power in the *Pandjāb* after 1165/1752 to the *Afghāns*, whose authority was weaker, the hill chiefs were able to recover a certain independence. Under *Randjit-dēv* (d. ca. 1780), who reduced *Kishtwār* to subjection, *Djammū* extended as far as the *Ravī* in the east and in the west even beyond the *Čenāb*. *Randjit-dēv* himself, however, was obliged to pay tribute to the *Sikhs*, and after his death the disputes among his sons enabled him to consolidate their hold upon the region. In 1819 the *Sikh* ruler *Randjit* Singh conquered *Kashmīr*, and for his services during the campaign *Dulāb* Singh, a descendant of *Randjit-dēv*'s brother, was in the following year made *Rājā* of *Djammū*. He embarked on an energetic programme of conquest, reducing *Ladākh* (1834) and *Balistān* (1841). With the death of *Randjit* Singh in 1839, the *Sikh* empire fell into decline, and *Gulāb* Singh stood aloof from the first war with the *British* (1845-6), acting subsequently as mediator. By the treaty of *Amritsar* of 16 March 1846 he received from the *British*, for the sum of 75 *lakhs*, *Kashmīr* and all the mountainous territory between the *Indus* and the *Ravī*. For the later history of *Djammū*, see *KASHMĪR*.

(P. JACKSON)

**DJĀMŪS** (Ar., fem. *djāmūsa*, pl. *djāvāmīs*) designates the Indian buffalo or water buffalo (*Bubalus bubalis*), with, in other regions, the species *ami*, *fulvus* and *kerabau*; it is the βούς ἄγριος or βούβαλος mentioned by Aristotle as found in the wild state in *Arachosia*, the present-day *Balūčistān* (see *Hist. Anim.*, ii, 1 (4) and French translation by J. Tricot, Paris 1957, i, 115-6). The African buffalo (*Synceus caffer*), which is unsuitable for domestication and which the Sudanese call *djāmūs al-khalā'* "Buffalo of the wilderness", is quite unknown to the Arab writers. The term *djāmūs* (in Berber *talhamust*, pl. *tilhamusin*) is an arabisation from the Islamic period of the Persian composite noun *gāv-i mīsh* "bull-sheep" (which al-Djāhiz transcribes as *kāwīnāsh/kāwīmīsh* in *Hayawān*, i, 152, ii, 182, v, 459, vii, 243), given to this domesticated bovine whose facial profile is reminiscent of that of the ram, with the short and upturned muzzle, the narrow and slightly arched forehead and the long, flat, ringed horns, set very far apart and curving horizontally towards the rear; the long tail has earned the beast, in some localities, the dialectical name of *dhunbūb* (from *dhanab* "tail").

The domestication of the Indian buffalo took place relatively recently in the historical era, since we note that Aristotle speaks of it as a wild species which corresponded to the bull as the wild boar corresponds to the pig. As for Europe, the historian Paul Warnefrid, according to Paul the Deacon, states that it was in 596, during the reign of the Lombard king *Agilulf*, that the first buffaloes appeared in Italy, in the Pontine marshes; they had already been introduced some time previously into Eastern Europe, notably in the lower Danube valley, whence they rapidly spread towards the North. In the time of *Albert the Great*, who describes them perfectly, they were to be found not only in Hungary where they had remained, but in all the Slavonic regions and in the neighbouring Germanic provinces. As for the Arabs, they did not really discover the animal until after the 1st/7th century, with the Islamic expansion into Persia and *Afghānistān*. As soon as the Muslim conquest reached India, the new rulers were quick to exploit the buffalo, a creature in which they discovered special qualities not possessed by the bull, qualities which contributed to a great extent to the cultivation of vast tracts of low-lying and marshy ground that were hitherto unexploitable. The semi-aquatic nature of the Indian buffalo, whose natural habitat is marshland, added to a powerful physical constitution and a strong herd instinct, made it the ideal instrument for clearing these impenetrable areas of the ferocious animals, lions especially, which infested them. In fact, as al-Djāhiz so rightly says (*Hayawān*, vii, 119-120), the buffalo, the elephant [see *FIL*] and the rhinoceros [see *KARKADAN*] are the three "great herbivores" (*ru'asā' al-bahū'im*), daring to confront and overpowering the "carnivorous lords" (*sādāt al-sibā'*). In groups, buffaloes become formidable, posing to the danger that threatens them the moving rampart of their massed horns, forming a protective ring around the females, the calves, and even their human masters (see al-Damīri, *Hayāt*, i, 183). Moreover, the buffalo is an extremely distrustful creature with a vigilance that cannot be cheated, to such an extent that the ancients claimed that it never slept on account of a worm lodged in its brain (see al-Kazwīnī, *Aḡḡā'ib* . . . , in the margin of al-Damīri, *op. cit.*, ii, 203). The intrepid resistance posed

by the buffalo to the lion, defined by the admiring al-Djāhiz as "stout-heartedness" (*shadīā'at al-kaḥb*, *Hayawān*, vii, 142) very soon came to the attention of the herdsmen, then to that of the Muslim rulers who, taking advantage of this fighting instinct, reinforced it by sheathing the horns of the animals in copper or iron, thus improving their armament before sending them out against the great beast (see al-Nuwayrī, *Nihāyat al-arab*, x, 124).

The earliest introduction of buffaloes into the Near East is attributed to the powerful governor of Syria Mu'āwiya b. Abī Sufyān [*q.v.*] who used his political skill to transfer *en masse* the Zuṭṭ [*q.v.*], and their large herds of buffalo, from the eastern frontiers of the Tigris, to which point they had already penetrated, into the region of the 'Awāšim [*q.v.*] and of the 'Amk [*q.v.*] of Antioch which was infested by lions. These Zuṭṭ or Djāt [*q.v.*] (pl. Djitān, see *Hayawān*, v, 407, n. 2), semi-nomadic Indo-Aryans from Sind, a people highly rebellious in the face of any constraint, were at that time essentially breeders of buffaloes, and their steady progress westward was to be an important factor in the proliferation of these Indian bovines around the Mediterranean basin. The northern frontier region of Syria received a second influx of buffaloes, 4,000 according to Ibn al-Faḳīh (see *Abrégé du Livre des pays*, French tr. H. Massé, Damascus 1973, 137), under the caliphate of al-Walīd I and for the same reason, sc. danger and instability caused by lions. Then the caliph Yazīd II repeated the operation for the benefit of Cilicia and the lower Orontes (see AL-ʿAṣfī). Finally, it was again from these same regions that the 'Abbāsīd caliph al-Mu'tašim was obliged, in 222/837, to deport the entire Zuṭṭ nation, which was settled along with its buffaloes in the vast Mesopotamian lowland region of al-Baṭīḥa [*q.v.*]; this draconian measure came as a result of the raids and acts of brigandage indulged in by these turbulent and perpetually rebellious Indo-Aryans, a large number of whom had been transplanted thither by the energetic Umayyad governor al-Ḥaḍḍjādī b. Yūsuf al-Thaḳāfī, who transported them by sea from Daybul [*q.v.*], after their capture in 94/712 by the general Muḥammad b. al-Ḳāsim al-Thaḳāfī. They were to give their name to the Nahr al-Zuṭṭ, one of the marshes situated between Wāsiṭ and Bašra (see Yāḳūt, *Mu'djam*, iv, 840, and *Hayawān*, v, 399); these are the same people who, seven centuries later, arrived in western Europe and were nicknamed, according to the various countries, "Tsiganes", "Bohemians", "Egyptians/Gypsies/Gitanos", "Romanies", etc. After this deportation, buffaloes did not however disappear from Lower Mesopotamia since, following the Zuṭṭ, Arab tribes, including the Bāhila [*q.v.*] and the Banu l-'Anbar [see TAMĪM], continued to breed them; this species of bovine prospered exceedingly and, in the 4th/10th century, al-Mas'ūdī could write (*Murūdj*, ii, § 870): "As for buffaloes, in the Syrian border region, they draw chariots of the greatest size; like the bulls . . . [of al-Rayy/Rages] . . . they bear in their nostrils a ring of iron or of copper. The same custom is observed in the province of Antioch . . . large numbers of buffalo are also found in 'Irāk, and especially in the *tufūf* of Kūfa and of Bašra, in the *Baṭā'ih* and the neighbouring regions." In our own times, some Shī'ī Arab tribes, including the Āl Bū Muḥammad and the Ma'dān, still make their livelihood through the rearing of the buffalo to the south of al-'Imāra (Amara) on the approaches to the Hawr al-Ḥammār, and the butter which they produce supplies the market of Baghdād.

In Egypt, the domesticated buffalo (in dialect *gāmūs*, *gāmūsa*) guaranteed the prosperity of agriculture in the Nile valley from the Delta to Aswān. Its introduction into the ancient kingdom of the Pharaohs was owed to the Muslims, and seems to have been contemporary with that experienced by Syria and the 'Awāšim; the major Arab historians make no mention of the question, but it may be supposed that the first creatures arrived there carrying or drawing equipment in the rearward of military contingents coming to take up garrison duties. Whatever the case may be, the fellah whose livelihood was bound up with the periodic flooding and subsiding of the great river found in the buffalo the ideal partner for the efficient agricultural exploitation of the muddy soil left by the receding of the water; there, as in the rice swamps of the Far East, the buffalo manoeuvres easily and its docility makes it the best draught-animal for this kind of terrain. Furthermore, it is able to defend itself against the irritations of mosquitoes by wallowing in the mud of the tributaries in the manner of the pachyderms, and it spends the hottest hours of the day agreeably, submerged up to the nostrils in the tidal waters; its presence along the banks of the Nile proved decisive in the elimination of the crocodiles which infested them (see al-Ḳazwīnī, *op. cit.*, ii, 203). The number of buffaloes in Egypt grew so quickly and so extensively that in the 7th/13th century, al-Maḳrīzī tells us (*Ḳhūṭat*, i, ch. xxxix) certain sultans, in their constant quest for increased revenue, imposed an excessive annual tax of three to five *dīnārs* per head, which at that time represented half of the value of the animal; this crushing burden on the fellah was fortunately abolished in the following century. It was in the course of the 8th/14th century that the intrepid Moroccan traveller Ibn Baṭṭūṭa became acquainted with and appreciated, first at Damietta and then in the Indies, the excellent milk of the buffalo (*Rihla*, Cairo 1928, i, 17, ii, 12). In Ceylon (*ibid.*, ii, 136) he consumed buffalo steaks, then, putting into port at Kaylūkarī (ii, 158) while on his way to China, he was offered, among other presents, two female buffaloes by the local princess.

To the many advantages offered by the buffalo to the peasantry dependent on the great rivers of Islam, an additional asset that should be mentioned was the use by craftsmen of its hide, which was particularly resistant and ideal for the manufacture of shields (see *Hayawān*, vii, 86). It was much in demand by the savage Bedjā herdsmen [*q.v.*] for their nomadic journeys between the Upper Nile and the Red Sea (see *Ḳhūṭat*, ii, ch. xxxii); from terms such as "buffleterie" (French), "buff-belts" (English) we know of the high value placed upon this leather for the equipment of European soldiers up until the last century. In mediæval oriental medicine, fumigations making use of this leather were recommended for the elimination of house-bugs, while the salted fat of the animal was held to be an ointment effective in the prevention of scabies and leprosy.

In the Maghrib, the buffalo (in dialect: *zāmūs*) is hardly known except in one small herd of about fifty animals living wild on the banks of the Tunisian lake of Ischkeul. The origin of this herd is obscure; the general opinion is that these buffaloes were imported from Italy at the beginning of the 13th/19th century, during the reign of Aḥmad Bey [*q.v.*]. But the studies of L. Joleaud and L. Lavauden (see *La chasse et la faune cynégétique en Tunisie*, Tunis 1920, 14) tend to show that these animals are

the last remnants, having reverted to the wild, of the buffaloes once the property of the Carthaginians; such a thesis seems extremely hazardous, in spite of everything. In Algeria, finally, where the buffalo is not present, the term *djāmūs* (or *zāmūsh*) designates women's bracelets carved from the horns of the animal. In reference to this term, it is to be noted that some authors have given the title *djāmūs al-bahr* "river buffalo" to the hippopotamus (see FARAS AL-MĀ').

AL-DJANBĪHĪ, MUḤAMMAD B. 'ABD AL-NĀBĪ (other forms are *Djīnbayhī* and *Djūnbayhī*), Egyptian author of a variety of tracts of which the majority have as a central theme the denunciation of what is seen as the various manifestations of decay of Islamic civilisation in Egypt.

He was born in 1842 in the village of *Djīnbāwāy* (*Djīnbawāy*, *Djīmbaway*) in the *markaz* of *Itāy al-Bārūd* in al-Buḥayra province. After a period of study at al-Azhar, he held the office of *khatīb* in al-Muṭahhar mosque in Cairo. He resigned from this office at an early age and returned to his village (cf. *Ptilaf al-ma'ānī wa 'l-mabānī fī takhmīs kaṣīdat Abī Fīrās al-Ḥamdānī*, Cairo n.d., 16), where he devoted himself to what he saw as his mission: to struggle for the victory of Truth, i.e. of Islam as conceived by him, and to exhort the Islamic world to this end (cf. *Tasliyat al-ṣadāra wa 'stinhād al-wizāra*, Cairo n.d., 13). These exhortations were set forth in a number of books and pamphlets permeated with a strong mystical strain, and supported by quotations from authors belonging to the *Shādhīliyya* order [*q.v.*] into which al-Djanbīhī himself had been initiated. They were directed against Christian missionary activity (cf. *Taṣḥīḥ al-tarḡīḥ bayn Muḥammad wa 'l-Masīḥ*, Cairo 1321/1903-4; *Muthabbīt al-ʿaql wa 'l-dīn fī 'l-radd 'alā suḥabā' al-mubashshirīn*, Cairo n.d.; and *Masmūm al-asīma wa 'l-shūhām fī 'l-radd 'alā man shauwushū al-afkār bi-dā'wā tanwīr al-afḥām*, Cairo n.d.), against journalism (cf. *Kuṣhf al-izār 'an mushawwahāt al-awzār*, Cairo 1902, *passim*; *al-Sirāḡ al-wahhāḡ fī 'l-dalāla 'alā aṣṣraf minhāḡ*, Cairo n.d. 73 f.; *Asḡak al-naṣā'ih al-nahī 'an al-mūbīkāt wa 'l-kabā'ih*, Cairo n.d., 159), against the foundation and character of the Egyptian University (*Balāyābūz al-'aṣriyya tanṣhuruhā al-Djāmī'a al-Miṣriyya*, Cairo n.d.), and against Western science and scholarship (cf. *Risālat al-Ḥabīb wa-dalālat al-ṭabīb*, Cairo n.d., 68, 99; *al-Razāyā al-'aṣriyya liṣubbān al-umma al-Miṣriyya*, n.p., n.d. (approx. 1923), 32). In addition, he denounced the 'ulamā' for not being able to counter the decay enveloping Islamic civilisation (cf. *Asḡak al-naṣā'ih*, 13; *Ḥāfiẓat al-ādāb wa-mawḡizat al-albāb*, Cairo 1316/1898-9, 30), and condemned demands for independence as un-Islamic and political demonstrations as *bida'* to which in the past only the *Khawāriḡ* [see *KHĀRIḊĪS*] had delivered themselves (cf. *al-Razāyā al-'aṣriyya*, 52 f.). At the same time, he criticised Lord Cromer (cf. *al-'Amal al-mabrūr fī radd'at ahl al-ḡhurūr*, Cairo n.d., 136; *Risālat al-Ḥabīb*, 29), whom he saw as not just aiming at maintaining political domination, but as directed in the final resort at establishing religious domination (cf. *Asḡak al-naṣā'ih*, 147); wrote against the calls for *islāḡ* of those belonging

to the reformist movement—which he saw as not being different from al-Wahhābiyya [*q.v.*; cf. *al-Razāyā al-'aṣriyya*, 60 ff., 147]—and attacked and denounced its inspirers *Djamāl al-Dīn al-Afḡhānī* and *Muḥammad 'Abduh* (cf. *Zahḡahat al-zā'ighīn 'an munāwasha al-mutawassilīn*, preceding *Irshād al-Shaykh Mahmūd Khaṭṭāb*, mentioned below, 18, 63; *Asḡak al-naṣā'ih*, 120 ff.; *al-Razāyā al-'aṣriyya*, 46 ff.), as well as its representatives such as *Kāsim Amīn* and *Muḥammad Farīd Wadḡī* (cf. *Irshād al-umam ilā yanbū' al-hikam*, Cairo 1338/1919-20, 90; *al-'Amal al-mabrūr*, 49 f.; *Asḡak al-naṣā'ih*, 110 f.). The most provocative of his publications (which are still awaiting a proper evaluation) is a book entitled *Irshād al-Shaykh Mahmūd Khaṭṭāb ilā ṭarīk al-ināba wa 'l-matāb*, Cairo 1336/1817-8. It contains a lengthy and profound attack upon *Mahmūd Khaṭṭāb al-Subkī* [*q.v.*], the founder of the *Djam'iyya al-Shar'iyya li-Ta'āwun al-'Āmilīn bi'l-Kitāb wa 'l-Sunna al-Muḥammadiyya*, commonly known as al-Subkiyyūn. It must be considered as one of the more significant treatises written against al-Subkī's conception of Islam (cf. F. De Jong, *Turuq and turuq-opposition in 20th century Egypt*, in F. Rundgren (ed.), *Proceedings of the VIth Congress of Arabic and Islamic Studies*, Stockholm-Leiden 1975, 87 f.). *Muḥammad al-Djanbīhī* died in 1927.

**Bibliography:** A biography by *Badawī Tāhā 'Allām* is prefaced to *Muḥammad al-Djanbīhī, Hamm baṭnī 'abalanī*, Cairo 1954 (2nd ed.). See also the biographical notes by 'Abd al-Karīm Salmān in the postscript to the edition of *Ptilaf al-ma'ānī* mentioned in the article. This booklet is the only one of al-Djanbīhī's publications mentioned by Brockelmann, S I, 440. To the works referred to in the article and the ones listed by Sarkīs, 714 f. must be added *Karam al-rubūbiyya wa-sharaf al-'ubūdiyya*, Cairo 1927; and *Nashr al-asrār al-baṣariyya min ṭawāyā al-akhḡāk al-muḥammadiyya*, Cairo 1319/1901-2.

(F. DE JONG)

**DJAND**, a mediaeval town on the lower reaches of the *Sir Daryā* in Central Asia, towards its debouchure into the Aral Sea, in what is now the Kazakhstan SSR; its fame was such that the Aral Sea was often called "the Sea of *Djand*".

*Djand* is first mentioned by certain Muslim geographers of the mid-4th/10th century, in particular, by *Ibn Ḥawḡal*, and following him, by the anonymous author of the *Hudūd al-'ālam* (wrote 372/982). *Ibn Ḥawḡal* mentions three settlements on the lower *Sir Daryā* amongst the *Oghuz* Turks of that region: *Djand*; the "New Settlement", (al-*Karya al-hadīṭha*, appearing in the Persian sources as *Dih-i Naw*, and in later Turkish contexts as *Yengikent* [*Kāshghari*, tr. Atalay, iii, 149-50: *Yenkend*] or *Shahr-kent* (e.g. in the *K. al-Tawassul ila 'l-tarassul*, *Nasawī's Strat Sultān Djālāl al-Dīn* and on certain coins); and *Khuwāra*. Of these, al-*Karya al-hadīṭha* was the largest, being provisioned with corn from Transoxania when there was peace between the Turks and Muslims, and lying on the left bank of the river at 10 stages from *Kh'arazm* across the *Kizil Kum* [*q.v.*], at two stages from the Aral Sea shore, and 20 stages from *Fārāb* or *Pārāb*, the later mediaeval town of *Otrār* [see *FĀRĀB*]. This town was the winter residence of the ruler of the *Oghuz*, the *Yabghu*. The ruins of al-*Karya al-hadīṭha* probably lie at the modern *Djānkent-kal'a*, near the old *Khiwan* fort of *Djān-kal'a* and 22 km./14 miles downstream from *Kazalinsk*. *Djand* lay further upstream, on the right bank of the river, not far from the modern *Qyzyl-Orda* (the

Perovsk of Tsarist Russian times); the Russian archaeologist P. Lerch and the American traveller E. Schuyler identified its site with an old Kirghiz cemetery and the ruins at Khorkhut, a station on the Orenburg-Tashkent postroad (now the track also of the railway), but this identification is not entirely certain (see Schuyler, *Notes of a journey in Russian Turkistan, Khokand, Turkistan, Bukhara, and Kuldja*, London 1876, i, 62-3; E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, ii, 95-6). The site of *Khuwāra* is totally unknown, and it disappears from mention after the end of the 4th/10th century.

The three settlements were important as entrepôts for trade with the Inner Asian steppes, and Gardīzī (mid-5th/11th century) mentions the route which ran from Fārāb to Yengi-kent and thence to the lands of the Kimāk [q.v.] on the banks of the Irtysh (*Ṣayn al-akhbār*, ed. Ḥabībī, 258). All three settlements had a population of Muslim traders in the 4th/10th century. Barthold assumed that these Muslims had themselves founded the settlements as trading-posts, independent of any policy on the part of the Sāmānids to extend their power into the pagan Turkish steppes (cf. his *Histoire des Turcs d'Asie Centrale*, 49, and *Four studies on the history of Central Asia*. iii. *A history of the Turkmen people*, 92). Recently, however, the results of investigations by Soviet archaeologists in the lower Sīr Daryā area have suggested that these places had a pre-Islamic history; S.P. Tolstov has spoken of these in his *Goroda Guzov*, in *SE*, iii (1947), 55-102, as "Hunno-Turkish" settlements, resettled and refortified in the 4th/10th century, whence the name "New Settlement". As well as these three places on the lower Sīr Daryā, there is mention in the sources of other Turkish towns on the middle course of the river, such as Ṣawrān and Sighnāk (the latter on the site of the present-day ruins of Sunaq-qurghan), and Idrīsī, possibly utilising information of over two centuries before from *Djāyhānī*, names over ten settlements of the Oghuz on the Sīr Daryā; other sources mention that the Oghuz already in the 4th/10th century included both nomads and sedentaries (see Tolstov, *Auf den Spuren der althoresmischen Kultur*, Berlin 1953, 263-4; O. Pritsak, *Der Untergang des Reiches des Oğuzischen Yabghu*, in *Fuad Köprülü armağanı*, Istanbul 1953, 399-401; Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, 211-13).

At all events, *Djand* was an important centre of the Oghuz towards the end of this century, and it plays a rôle in the semi-legendary accounts of Saldjūk origins, those called in *Mirkh* and the *Malik-nāma*. The eponymous founder of the family, Saldjūk b. Duḳāk, is said to have come to *Djand* with his followers, to have become a Muslim and to have relieved the Muslim population of the town of the tribute levied on them by the still-pagan Oghuz Yabghu; finally, he was buried there. From these events dated the hostility between the two branches of the Oghuz, that of Saldjūk and that of the Yabghu (Ibn al-Athīr, *Mirkh* and, etc., utilised in Barthold, *Turkestan down to the Mongol invasion*<sup>2</sup>, 178, 257, Cl. Cahen, *Le Malik-Nameh et l'histoire des origines seldjukides*, in *Oriens*, ii (1949), 43-4, and Bosworth, *op. cit.*, 219-21). The conversion of the Yabghu nevertheless followed ca. 390/1000, and he assumed the Islamic name of 'Alī; Gardīzī records this conversion under the year 393/1003 and states that 'Alī contracted a marriage alliance with the last Sāmānid Ismā'il al-Muntaṣir [q.v.] (*Ṣayn al-akhbār*, ed. Nāzīm, 64, ed. Ḥabībī, 176; Pritsak, *op. cit.*, 405-6).

*Djand* now became for some 50 years the centre of an Oghuz principality which played an important part in the diplomatic and military policies of the great powers of the region, sc. of the Ghaznavids, who after 408/1017 controlled *Kh*ārazm, and the *Qarā-Khānids* or *Ilek-Khāns* [q.v.] of Transoxania. As for Yengi-kent, the original seat of the Yabghu, we can only assume that it must have passed into the hands of the *Kīpčak* [q.v.], who were at this time expanding their power within the steppes and who came to control much of the middle Sīr Daryā as far up as the *Isfīdjāb-Shāsh* region, which accordingly long remained a pagan area. The Ghaznavid historian Bayhākī in his *Tārīkh-i Mas'ūdi*, and a later source like Abu 'l-Ghāzī's *Shādījara-yi Tarākīma*, mention the ruler in *Djand* *Shāh* Malik b. 'Alī, sc. the son and successor of the Yabghu, and the local historian of Bayhāk, Ibn Fundūq, gives him the full name of Abu 'l-Fawāris *Shāh* Malik b. 'Alī al-Barānī (concerning this *nisba*, see Z.V. Togan, *Umumi türk tarihine giriş*, i, Istanbul 1946, 181), with the honorifics of *Ḥuṣām al-Dawla* and *Nizām al-Milla*. The hostility between the two branches of the Oghuz, the line of the Yabghu in *Djand* and the Saldjüks in Transoxania and the northern fringes of *Khurāsān*, made *Shāh* Malik the natural ally of Mas'ūd of Ghazna against his rebellious governors in *Kh*ārazm and against the *Qarā-Khānids*, and in 429/1038 the sultan appointed *Shāh* Malik as his governor in *Kh*ārazm; but when, in *Shā'bān* 432/April 1041, the latter was triumphant and occupied *Kh*ārazm, Mas'ūd had already been deposed and was dead (see Barthold, *Turkestan*, 297-303; Cahen, *Le Malik-Nameh*, 49-55; Bosworth, *The Ghaznavids*, 238-9, 241).

The fortunes of the Saldjüks were, however, in the ascendant after their victory at *Dandānkān* in 431/1040. By 435/1043-4 they had secured *Kh*ārazm, and *Shāh* Malik was forced to flee from *Djand*, which also passed under Saldjūk control. Yet the subsequent pre-occupations of the Saldjüks in Persia and the west apparently allowed *Djand* to slip from their hands, doubtless into those of the local *Kīpčak*. In 457/1065 Alp Arslan had to lead an expedition to *Djand* and *Ṣawrān*; the ruler of *Djand* submitted, and was confirmed there as governor on behalf of the Saldjüks (Barthold, *op. cit.*, 298, 302; Pritsak, *Der Untergang des Reiches des Oğuzischen Yabghu*, 408).

Under the *Kh*ārazm-Shāhs [q.v.], *Djand* and the middle Sīr Daryā reaches, together with the *Manghishlak* peninsula [q.v.] to the east of the Caspian Sea, were regarded as important frontiers (*thughūr*) against the pagan *Kīpčak*. Atsiz led a campaign from *Djand* into the steppes early in his reign, probably ca. 527/1133. Because of Atsiz's humiliation at the hands of his suzerain, the Saldjūk sultan Sandjar, who in the winter of 542/1147 had invaded *Kh*ārazm, *Djand* was lost to the *Shāhs*, and passed to Kamāl al-Dīn b. Arslan *Khān* Maḥmūd, the grandson of Sandjar's *Qarā-Khānid* nephew Arslan *Khān* Muḥammad, ruler of *Samarḳand*. According to *Djuwaynī*, Atsiz and his army appeared at *Djand* in the spring of 547/1152, on pretext of organising an expedition against the *Kīpčak*, and Kamāl al-Dīn was seized and deposed. The *Shāh's* eldest son II Arslan was now appointed governor of *Djand*, an indication of the importance attached to it, and the allotting of this governorship to a *Kh*ārazmian prince became henceforth frequent; *Tekish* was governor at his father II Arslan's death, and under *Tekish*, the prince *Malik Shāh* was governor. Various expeditions from *Djand* against the *Kīpčak* are recorded in the later 6th/12th and early 7th/13th centuries, e.g. in

the winter of 577/1181-2 by Malik *Shāh* b. *Tekish*, in the winter of 591/1194-5 by *Tekish* himself against *Sighnāk* and *Kayir* *Buku Khān*, chief of the Oran tribe of the *Kipčak*, and in the autumn of 606/1209 by the *Shāh* 'Alā' al-Dīn *Muhammad* (Barthold, *Turkestan*, 324, 328-9, 337, 340, 361-3). It was during the course of an expedition northwards from *Djand* into the *Kipčak* steppes that *Kh*"*ārazmian* troops first clashed accidentally with *Čingiz Khān*'s Mongols, according to *Nasawī*, in 612/1215-16, although the exact chronology is uncertain here (see Barthold, *op. cit.*, 369-71).

In the strategy of their invasions, the Mongols regarded *Djand* as an important point. The *Kh*"*ārazm-Shāh*'s governor in *Djand* and *Shahr-kent* or *Yengikent* was *Kutlugh Khān*, who had 10,000 cavalrymen in the latter town. The Mongol commander *Čin-Temür* was at first repulsed from *Djand*, but returned in the spring of 617/1220. *Djand* surrendered peacefully, but was sacked, and the official of the Mongols 'Alī *Kh*"*ādja* from *Kizhduwān* near *Bukhārā* was appointed governor, retaining this office, according to *Djuwaynī*, till his death. *Yengi-kent* (the Iankint of John of Plano Carpini) was likewise taken, apparently without resistance, as was the town of *Barčligh-kent* or *Barč-kent* (Carpini's *Barchin*) at a so-far unidentified spot on the *Sir Daryā* between *Djand* and *Sighnāk*. *Čingiz*'s eldest son *Djoči* then used *Djand* as a base for the attack on *Gurgāndj* in *Kh*"*ārazm* in the next year (*Djuwaynī-Boyle*, i, 83, 86-90; Barthold, *Turkestan*, 415-16; *Bretschneider*, *op. cit.*, i, 277-8). It was around this time that *Yākūt* wrote about *Djand*, mentioning that its population was of the *Hanafi madhhab* and that one of its famous men was the poet and stylist, resident in *Kh*"*ārazm*, the *Kādī* *Ya'kūb* b. *Shīrīn* al-*Djandī*, pupil of *Zamakhshārī* and contemporary of *Sam'ānī* (cf. *Sam'ānī*, *Ansāb*, ed. Hyderabad, iii, 350); *Yākūt* noted that the town was now in the hands of the *Tatars*, and nothing was known of the fate of its inhabitants (*Buddān*, ed. Beirut, ii, 168-9).

In fact, *Djand* continued to enjoy a modest prosperity under the Mongol Great *Khāns* and then under the *Čaghatayids*, and it appears on an early 14th century Chinese map as *Jan-di*. An 8th/14th century *Čaghatay* source attributes the construction of mosques, *madrasas*, etc. in *Djand*, *Barč-kent*, *Otrār* and *Šawrān* to the *Özbeğ Khān* *Ergen*, son of *Sasī Buqa*; but *Djand* and *Barč-kent* apparently ceased to exist as towns towards the end of that century (see Barthold, *Four studies*. ii. *Ulugh Beg*, 101).

*Bibliography*: Given in the article.

(C.E. BOSWORTH)

**DJANDJĪRA**, the *Marāthā* corruption of the Arabic word *djazīra* "island", is the name of a former native state in the heart of the *Konkan* on the west coast of India. It actually owes its name to the fortified island of *Djandjīra* (lat. 17° 45' N. and long. 73° 05' E.), lying at the entrance of the *Rajapuri* creek, half a mile from the mainland on the west and 48 km. south of *Bombay*. The impregnable fort, which has an excellent command over the *Arabian Sea*, rose to prominence under the *Nizām Shāhī* [*q.v.*] rulers of *Ahmadnagar* towards the end of the 9th/15th century when a *Habshī* or *Abyssinian* adventurer named *Sidī Yākūt*, in the service of *Ahmad Nizām Shāh* (892-915/1487-1509), was made commander of the fortress island, which was also consequently called *Habsān*. The ruler of the island used to be a *Sunnī* Muslim known as *Sidī*, but later on he came to be known also as *Wazīr*

and *Nawāb*. The *Sidīs* of *Djandjīra* were a prosperous community of skilled seamen, noted for their tenacity and fighting spirit, expressed in the warfare and activities of a long and chequered career extending over four-and-a-half centuries.

By the middle of the 11th/17th century, the *Sidīs* of *Djandjīra* were firmly established as an effective, though small, naval power on the west coast maintaining on behalf of the *Sultān* of *Bidjapūr* a powerful fleet for protecting the maritime trade and for providing transport for *Muslim* pilgrims bound for *Mecca*. Later on, the *Sidīs* transferred their fleet to the service of the *Mughals*, who were more willing than the *Sultāns* of *Bidjapūr* to offer them protection against the mounting menace of the *Marāthās*. Hence in 1080/1670 *Awrangzīb* made the *Sidī* Admiral of the *Mughal* navy and gave him an annual grant of four lakhs of rupees (400,000) for the maintenance of the fleet.

The most remarkable aspect of *Djandjīra*'s history was its invincibility in the face of determined onslaughts by the *Marāthās* under three generations of their chieftains, i.e., *Sāhādājī*, *Sīvādājī* and *Sambhādājī*—father, son and grandson—to whom conquest of the tiny *Djandjīra* was a matter of prestige. The concerted attempts of the *Peshwa* and the *Angres* in the early 18th century failed to diminish *Djandjīra*'s power of resistance. It survived all native challenges and continued to hold its own even as the country passed under the *British* paramourcy, which adopted a policy of non-interference in the *Sidī*'s administration. Moreover, the *Djandjīra* ruling power obtained possession of the port of *Djāfarābād* on the south coast of *Kathiawar*. This singular independent status of the state continued till 1287/1870 when, following a breakdown in law and order there, the *Sidī* had to conclude a treaty with the *British* government, resulting in the introduction of a *Resident British Officer*.

The erstwhile state of *Djandjīra*, which consisted of three municipalities—*Murud*, *Shriwardhan* and *Djāfarābād*—merged with the state of *India* when the sub-continent attained independence in 1947. At present, *Djandjīra* proper is included in the *Murud* municipality of the *Kolaba* district of *Maharashtra* state.

*Bibliography*: D.R. Banaji, *Bombay and the Sidīs*, London 1932; 'Alī *Muhammad Khān*, *Mir'at-i-Ahmadī*, Baroda 1927-30; *Maharashtra State Gazetteer (Kolaba District)*, Bombay 1964.

(ABDUS SUBHAN)

**AL-DJARĀDATĀN<sup>1</sup>** "the two locusts", the name given to two slave singing girls who, according to legend, lived in the time of the people of 'Ad [*q.v.*] and belonged to a certain *Mu'āwiya* b. *Bakr* al-*Imlākī* (see al-*Tabarī*, i, 235-6 and al-*Mas'ūdī*, *Murūdjī*, index). When the delegates of the people of 'Ad came to make the pilgrimage to *Mecca* in order to obtain rain, the two girls so charmed them that *Mu'āwiya* had to make up some verses to recall them to the object of their mission; but they forgot in the end to make the *tawāf*, and it was this failure of duty which led to the destruction of the people of 'Ad. The names of these two legendary slave girls vary considerably in the sources. According to al-*Tabarī* (*Tafsīr*, Cairo 1315, ii, 250-1), one was called *Warda* and the other *Djarāda*; according to *Ibn Badrūn* (65), they were called *Ka'ādi* and *Thamādi* (or *Nafādi* and *Ta'ādi*), but the sole point of interest in these indications is the form *C'a C'ādi*, characteristic of a certain number of feminine names. It is possible that just one of them was called *Djarāda*,

since al-Djafādī (*Shūfā*<sup>2</sup>, 85) says that this name was later applied to all singing girls [see KAYNA], and that the dual was formed according to a well-known principle (cf. al-Baṣratān<sup>1</sup>, etc.).

*Bibliography:* Djāhīz, *Tarīb*<sup>1</sup>, § 151; Ṭabarī, i, 234-6; Mas'ūdī, *Muwāḍi*, index; Ibn 'Abd Rabbihī, *ʿIkd*, vii, 28; Kisā'ī, *Kiṣas*, 107; Maydānī, i, 138-9 (three proverbs arising out of the girls); *Aghānī*, index; Ma'arrī, *Ghufṛān*, index; Nāṣir al-Dīn al-Asad, *al-Kiṣān wa 'l-ghinā' fi 'l-ʿaṣr al-djāhili*<sup>2</sup>, Cairo 1968, 73-5.

Also, 'Abd Allāh b. Djud'ān [*q.v.*] is said to have possessed two singing girls known as al-Djarādātān<sup>1</sup>, called Zabya and al-Ribāb. Ibn Djud'ān allegedly gave them to Umayya b. Abi 'l-Ṣalt [*q.v.*] as a reward for the poet's addressing eulogies to him.

*Bibliography:* Djāhīz, *Tarīb*<sup>1</sup>, index; Caussin de Perceval, *Essai*, i, 351; Nāṣir al-Dīn al-Asad, *op. cit.*, 84-5 and index. See also KAYNA.

### vii.—INDIA AND PAKISTAN

This article defines the Muslim press as those newspapers both owned and edited by Muslims. The definition does not include either newspapers in languages normally associated with Islam, for instance Persian and Urdu, with which Muslims have had nothing to do, or newspapers edited by Muslims but owned by men of other faiths.

The Muslim press originated in the government and private newsletters of the Mughal period. There was the *wakā'ī*, a confidential letter by which the emperor was informed of developments in his dominions, and the *akhbār*, a semi-public gazette by which information was transmitted to the court. Amongst other groupings in Indian society, based on common political or commercial interests, private newsletters circulated. They were handwritten and several copies of each were produced. Large numbers were noted leaving Dihlī in the 1830s and they were influential in Oudh (Awadh) up to 1857.

Muslim newspapers in modern form began to emerge in the 1830s. Among the first were the *Samachar-Sabharajandra*, a weekly in Bengali and Persian published by Shāykh 'Alim Allāh from Calcutta between 1831-5, and the *Sayyād al-akhbār* published in Urdu from Dihlī in 1837 by Syed Mohammad Khan (Sayyid Muḥammad Khān), the elder brother of Syed Ahmed Khan (Sayyid Ahmad Khān [*q.v.*]). The introduction of Urdu lithography in 1837 gave a boost to the development of the press in north India, and by the 1840s several Muslim newspapers were being published.

In the second half of the 19th century, the Muslim press grew steadily. It flourished primarily in north India, though it had outposts in the Madras and Bombay Presidencies. Its major centres were Lahore, Dihlī, Lucknow and Calcutta, and its major languages Urdu and Bengali. Very few specifically Muslim newspapers were published in English, though the *Punjab Observer* is worthy of note. Most leading newspapers were weeklies, and only the *Paisa Akhbār* founded in Lahore in 1888 sustained daily publication over a long period. Among the most influential newspapers, though not those with the largest circulation, were the two edited by Syed Ahmed Khan from 'Aligarh, the *Tahdīb al-Akhḫāk* and the *Aligarh Institute Gazette*. The former educated its readers primarily in the religious and social aims of the 'Aligarh movement, and the latter instructed them in its educational and political aims. The range of subjects

which these publications covered indicated a general trend; newspapers were becoming less concerned with literary exercises and sectarian religious polemic, and more with local, national and international affairs.

During the 19th century, the Muslim press, like the Indian press generally, grew in response to the increasing activity of government and the citizen's increasing awareness of the world beyond his locality. Nevertheless, nothing contributed more to the foundation of new Muslim publications, and to major increases in the circulation of newspapers already in existence, than upheavals in the world of Islam. Indian Muslims had powerful pan-Islamic sympathies. This point is made graphically by the striking expansion of the Muslim press which coincided with the last years of the Ottoman empire, in fact from the Italian invasion of Tripoli in 1911 to the abolition of the caliphate in 1924. Newspapers were founded: in 1911 Muḥammad 'Alī's *Comrade*, in 1912 Abu 'l-Kalām Āzād's *al-Hilāl*, Ḥamid al-Anṣārī's *Madīna* and 'Abd al-Bārī's *Hamdam*, in 1913 Muḥammad 'Alī's *Hamdard*. These new publications and established ones sold on a hitherto unknown scale; the weekly *al-Hilāl* achieved a circulation of 25,000, while Zafar 'Alī Khān converted his *Zamīndār* from a weekly selling 2,000 copies into a daily selling 30,000. There was a dramatic improvement in the quality of production; both *al-Hilāl* and *Hamdard* were printed rather than lithographed. There was a similar improvement in journalism; *al-Hilāl* was written in new and forceful Urdu, while *Comrade* was the equal of any contemporary Anglo-Indian weekly. These newspapers greatly stimulated and even created political agitations, and government acknowledged their influence by gagging them. They also brought their editors, men such as 'Abu 'l-Kalām Āzād and Muḥammad 'Alī, to the forefront of Muslim politics.

During the 1920s and 1930s the Muslim press, though never as strong or as vociferous as the Congress or Hindu press, continued to grow. Some of the great newspapers of the pan-Islamic era died, for instance *al-Hilāl* and *Comrade*, but others such as *Zamīndār* and *Madīna* continued. Fresh newspapers were founded; in 1922 *Muslim Outlook*, the first English-language Muslim daily of importance, and in 1927 *Inkīlāb*, the leading Urdu daily of the 1930s. Both were published in Lahore.

It was not until the 1940s that the Muslim press began to compete on equal terms with that of the Congress. Muslim newspapers played a major role, a role which still has adequately to be evaluated, in winning support for the All-India Muslim League's campaign for Pakistan. As in the pan-Islamic era, it showed that it was most effective when religious and political issues were combined. Among the leading League newspapers were *Anḏām* in Urdu and *Dawn* in English from Dihlī, *Nauwā'-i Waqt* in Urdu from Lahore, *Hamdam* in Urdu from Lucknow, and *Āzād* in Bengali and *Star of India* in English from Calcutta. Not all Muslim newspapers supported the League, for instance *al-Djām'iyyat*, the voice of *Djām'iyyat al-'ulamā'*, and *Madīna* were distinctly pro-Congress, but by the 1940s pro-League newspapers both in numbers and in circulation far outstripped their Congress Muslim rivals.

The partition of the subcontinent in 1947 in large part destroyed the Muslim press as it had existed. In India, despite the country's vast Muslim population, a specifically Muslim press has been unimportant; among the leading Muslim newspapers are *Radiance* and *al-Djām'iyyat*. Pakistan, on the other hand,

has developed a press of considerable dimensions both in English and in the various regional languages. In West Pakistan the leading newspapers in English are *Dawn* and *Pakistan Times* and in Urdu *Nauwā'ī Wakt* and *Mashriq*; in East Pakistan up to 1971 the leading English newspaper was *Morning News* and the leading Bengali newspaper *Āzād*. By the late 1960s the Pakistan press was producing 800,000 newspaper copies daily, of which more than three-quarters were in languages other than English. This vigorous newspaper industry existed in spite of heavy restrictions upon press freedom imposed by government and in spite of growing competition from commercial radio and television.

*Bibliography:* There is no work devoted specifically to this subject. The newsletter is dealt with by J.N. Sarkar in S.P. Sen, ed., *The Indian press*, Calcutta 1967; A.S. Khurshid examines the growth of the Pakistan press in his contributions to A.S. Khurshid, ed., *Press in Muslim world*, Lahore 1954, and J.A. Lent, ed., *The Asian newspapers' reluctant revolution*, Iowa 1971. Aspects of the provincial Muslim press are treated in N. Gerald Barrier and Paul Wallace, *The Punjab press 1800-1905*, Ann Arbor 1970, and M.N. Islam, *Bengali Muslim public opinion as reflected in the Bengali press 1901-1930*, Dacca 1973. For the Indian press generally, see J. Natarajan, *History of Indian journalism*, Part ii of the *Report of the Indian Press Commission*, Delhi 1955; and M. Chalapathi Rau, *The press*, Delhi 1974.

#### viii.—EAST AFRICA

The history of the press and its development and use among East Muslims is very brief. The Muslim intelligentsia, however, have received and read newspapers and journals from other parts of the Muslim world, particularly from Egypt, from the closing years of the 19th century until the present.

It was such connections that helped develop the first interest in establishing local media. The first Muslim to do so was *Shaykh* al-Amīn b. 'Alī b. Nāfi' al-Mazrū'ī [see KENYA, MUSLIMS IN], a Muslim scholar of Mombasa who was familiar with the works and publications of al-Afghāni, Muḥammad 'Abduh and Rashīd Ridā. Newspapers and journals like *al-Manār* were regularly read by *Shaykh* al-Amīn and a coterie of Muslim scholars on the East African coast. Concerned about the low status of Muslims and Islam in this region, *Shaykh* al-Amīn decided to use the press to raise the level of Muslim religious, cultural and political consciousness, very much along the lines of the Middle Eastern reformers.

First he founded a modest-sized paper called simply *al-Sahīfa*. Shortly afterwards, in 1932, he established a more substantial paper, appropriately called *al-Islāh*. The paper was financed by the founder, with contributions from well-wishers, and was published in two parts, a Swahili one and an Arabic one, the former being often a virtual translation of the latter. Thus a wider readership was achieved through the use of Swahili, the *lingua franca* of Eastern Africa. It discussed issues relevant to the political, economic and religious situation of the East African coast and regularly included news from the rest of the Muslim world, with which the editor of the paper often called for greater solidarity.

In 1932, *Shaykh* al-Amīn was appointed *Kāfi* of Mombasa. His new duties compelled him to hand over the running of *al-Islāh* to another Muslim scholar, *Shaykh* 'Abd Allāh al-Ḥas. There developed a notice-

able difference in approach and style in the paper, which was not now as popular and effective, so that the paper declined and its publication ended soon afterwards. *Shaykh* al-Amīn had continued to write and published booklets on Islam after his appointment as *Kāfi*, and, in 1937, as Chief *Kāfi* or *Shaykh al-Islām* of Kenya. One such booklet was a reproduction of selected articles from *al-Islāh* which was published under the title of *Uwongozi* (Swahili "Guidance").

Even so, it was left to the Ahmadiyya sect [q.v., and see KENYA, MUSLIMS IN] to expand the publishing of newspapers. Their arrival in the 1930s had earned them the immediate hostility of the orthodox Muslim communities, and *Shaykh* al-Amīn himself carried out a campaign to discredit them in East Africa. Nevertheless, in Tanzania they founded two newspapers, one in Swahili, *Mapenzi Ya Mungu* ("The Love of God") and one in English, *East African Times*. Both papers reflected the characteristic militant defence of Islam, lengthy exposition of its teachings and their relevance to modern society, and regular theological challenges to Christians and Christianity. It is certain that these two papers have contributed to the relative success of the Ahmadi sect in Tanzania.

It was in Tanzania also that a Muslim monthly journal, *The Light*, was founded in the 1960s by the Ithna 'Ashari community, modestly printed and completely financed by members of the community.

A general comment to be made about these publications, including the other journal irregularly produced by the Ismā'īlī community, *Africa Ismaili*, is that each one of them has a limited distribution. The two journals hardly go beyond the communities concerned. The two Ahmadi newspapers are regarded as heretical propaganda, and thus not appreciated by other Muslims as representing authentic religious views or the ideal way of reflecting the image of Islam in East Africa. An acceptable, popular Muslim press has yet to emerge.

(A.I. SALIM)

#### ix.—SOUTH AFRICA

The implantation of Islam in the extreme south of the African continent took place in three stages. The first Muslims arrived there in 1667, Malayan slaves whom the Dutch had imported as manual labour to improve their new colony of the Cape. Their slave status prevented these Malays from practising their Islamic religion and from possessing land, and they only obtained a place of worship in 1797. They were unable also freely to move about and were compelled to stay in the Cape, so that Islam was unable to expand beyond this limit.

However, the importation after 1860 of a second wave of manual labourers was necessitated by the growing development of new crops in the territories of the white settlers (Boers) at the time of the "great Trek" or migratory movement of 1834-9. Hence from 1860 until the beginning of the 20th century, the owners of sugar cane plantations, a crop which was very prosperous in Natal, brought in Indian farm workers, some of whom were Muslims. Islam was thus implanted at two points in what became after 1910 the Union of South Africa, one in the south and one in the west. The economic crisis which began in 1929 threw a considerable number of Indian farm workers out of a job and compelled them to seek another living. Some of them settled in Durban, the capital of Natal, whilst the remainder spread throughout the land towards the Cape, Johannesburg, Pretoria, Port Elisabeth

and other South African towns. Thus the third and last phase of the implantation of Islam in South Africa was completed.

The opening of the 1960s was an important period for the Muslim community there, and it marks the beginning of its organisation and its expansion. This process was inaugurated by certain Indian Muslim leaders, who aimed at stimulating the feelings of the diverse ethnic elements of the Muslim community into a consciousness that they were above all Muslims and that, in the light of this, they should work for the progress of the Muslim community. In effect, the Malay and Indian Muslims had previously thought of themselves as belonging rather to their own ethnic community, and their activities, above all those of the very active Indians, had taken place within the framework of their original communities.

This movement brought about the creation after 1960 of several Muslim organisations, such as the association of South African Muslim women or even the association of South African Muslim butchers. It was also during this period of intense activity that the Muslim press came into being, thanks to its launching by a Muslim of Indian origin, M. Sayyed, in the shape of a fortnightly called *Muslim News*. Its first number appeared at the beginning of January 1961, and had 12 pages, eight in English and four in Urdu, and was edited and printed at Athlone, a district on the eastern edge of Cape Town where many Muslims live. In 1971 the four Urdu pages disappeared, and since that date, *Muslim News* has contained only eight pages in English. It styles itself the only South African Muslim newspaper; however, there exist two bulletins, the *Ramadan Annual* and the *Muslim Digest*, published both by one press group, the Makki one.

*Muslim News* was meant essentially to inform South African Muslims about religious and cultural activities of the community, and likewise to give exhortation on the practices of the Islamic faith. Without departing from these original aims, it evolved in 1973 in another direction by assuming a distinct political aspect. Condemnation of *apartheid* and of white domination was expressed in the course of articles which became more and more specific and violent in tone, a condemnation which arose from a lively denunciation of the very difficult living conditions of the non-white population of South Africa. After the publication of articles criticising government policy on these topics, the direction and editorship of *Muslim News* were in December 1975 and again in March 1976 brought before the courts in the Cape; but the journal has nevertheless continued to appear.

A perusal of *Muslim News* allows one to appreciate the efforts made by the Muslim community of South Africa to improve their precarious conditions of living. Great improvements have actually been achieved in various fields, such as health and education. An orphanage has been built, health services have been set up in districts where they were lacking, and finally, numerous mosques and *madrasas* have been constructed and a programme of Islamic studies organised. All this has come to fruition from contributions and from the gifts of a few very rich Muslims.

Finally, *Muslim News* at times highlights in its columns the lack of unity within the Muslim community of South Africa, one mainly due to dissensions between the three great national Muslim associations, the Muslim Judicial Council, the Muslim Assembly and the Ashura (< *shūrā*). These are essentially quarrels between personalities trying to assert

their own pre-eminence. They have no effect at all on the South African Muslim community's sense of solidarity, and are in fact tending now to disappear; this can only strengthen the community's determination, for despite its numerical smallness (200,000 members out of a total population of 22 millions) it is certainly one of the most vigorous Muslim communities of the southern hemisphere.

(P. GOROKHOFF)

x.—THE KUMUK [see KUMUK].

**DJĀWARS** (< Persian *gāwars*) is millet, *Panicum miliaceum* L. (Gramineae), one of the oldest cultivated plants. While in Europe it is now almost only used as fodder, millet plays a prominent role as cereal and victuals in many areas of Asia and Africa. Although the ancient Spartans ate millet, Dioscorides considers millet as the least nutritious of all cereals (*De materia medica*, ed. Wellmann, i, 1907, 173 f. = lib. ii, 97). This is adopted by the Arab translator (*La "Materia medica" de Dioscorides*, ii, ed. Dubler and Terés, Tetuan 1952, 179), who renders the Greek κένυρος with *kankharūs* (and variants). But already Ibn Māssa, a contemporary of Hunayn, says that millet, cooked in milk, or broth mixed with millet flour and fat, is an excellent food (see Ibn al-Baytār, *Djāmi'*, Būlak 1291, i, 156, 15-16). On the nomenclature, the following can be remarked: occasionally, *kankharūs* is understood as both *djāwars* and *dhura*, and the first of these is equated with the Mozarabic *banīshuh*; cf. Anonymous (Ibn al-Rūmiyya?) *Nuruosmaniye* 3589, fol. 89b, 21; on *banīshuh* (Romance *panizo*), see M. Asin Palacios, *Glosario de voces romances*, Madrid-Granada 1943, no. 406. Others consider *djāwars* as a kind of *dukhn* (also *alūmus* < ἄλυσμος), by which may be meant the small sorghum (*Pennisetum spicatum*), widespread in the Sudan and also called Moorish millet, while *dhura*, also called *djāwars hindī* "Indian millet", indicates the great sorghum (*Sorghum vulgare*). In his book on plants, Abu Ḥanifa equates *dukhn* with *djāwars* and considers it as a kind of *dhura* (*The book of plants*, ed. B. Lewin, Uppsala-Wiesbaden 1953, no. 405). In the course of time, *dhura* has become the leading expression for millet. Brūnī knows already the Turkish term *dārī* for this (*Saydala*, ed. Ḥakīm Muḥ. Sa'īd, Karachi 1973, Arab. 130, Engl. 106), and names the Indian synonyms.

As a foodstuff, *djāwars* has the inconvenience of causing constipation, of being hard to digest and of promoting urine, but the constipation effect can be removed by adding fat or purgatives, and also by diluted wine or by baths. On the other hand, when applied in a warm compress, it proves to be a good remedy against gripes and cramps. It has an astringent effect and is therefore suitable to be used as nourishment for those suffering from dropsy, whose stomachs should be contracted and whose bodies should be "desiccated".

(A. DIETRICH)

AL-DJĀWBARĪ, 'ABD AL-RAḤĪM (not 'ABD AL-RAḤMĀN) B. 'UMAR B. ABĪ BAKR DJĀMĀL AL-DĪN AL-DIMASHQĪ, dervish and alchemist from Damascus who travelled and wrote in the first half of the 7th/13th century. He spent some time in Egypt (before 613/1216, and in 620/1223, 623/1226 and 624/1227) and in Northern Syria (Āmid, Anṭākiya, Harrān, Konya, al-Ruhā) and travelled through the Biḡā' and the Hidjāz (Djidda, al-Madīna). He claims to have been also in Cyprus, Baḥrayn and India.

Al-Djāwbarī wrote between 629/1232 and 646/1248-9 upon the request of the Arṭuqid al-Malik al-Mas'ūd (in 629/1232 ruler of Āmid and Ḥiṣn Kayfā) his book *al-Mukhtār fī kashf al-asvār* ("The selection in the unveiling of Secrets"). This is a concise encyclopedia of tricks, practices and devices used by fraudulent Sūfīs, false alchemists, beggars, impostors, drug-sellers, jugglers, quacks etc. i.e. the mediaeval Islamic underworld, known as the Banū Sāsān [see SĀSĀN, BANŪ]. The book is modelled after the *Kashf al-dakk wa-īdāh al-shakk* of Ibn Shuhayd [q.v.], which is lost. Al-Djāwbarī lived himself by some of these practices, and the *Mukhtār* is a colourful mine of first-hand information for the social and cultural history of the Islamic Middle Ages. Al-Djāwbarī's entertaining personality also caught the interest of some of the political rulers of his time; he proudly relates that he blackmailed a fraudulent alchemist from the Maghrib out of 'Izz al-Dīn Aybak al-Mu'azzamī's (died 646/1248-49) court by threatening to divulge the secret of his competitor's method to make gold. The book combines realism and psychological insight, a certain knowledge of mechanics medicine and botany with a familiarity with alchemistic and hermetic writings and an enlightened, if naive, scepticism towards many things miraculous.

The *Mukhtār* falls outside the scope of traditional mediaeval Islamic literature and scholarship and is written in careless "Middle-Arabic", full of jargon and dialectal expressions. It has been printed several times (Damascus 1302/1885; Istanbul n.d., Cairo 1316/1898 and several times n.d.). All printings are incomplete, expurgated and unreliable. The author of this article is preparing an edition, based on the available manuscripts. Two further books of al-Djāwbarī, a treatise on geomancy and *al-Širāt al-mustakīm fī 'ilm al-rūḥāniyya wa 'l-tandīm*, a work on the occult sciences and astrology, are lost. The *Kutāb al-Šihr al-halāl fī 'l-af'āb al-simāwiyya wa-bā'd jawā'id šnā'iyya mudjarraba*, printed after some of the Cairo editions, has been erroneously ascribed to al-Djāwbarī, and is in reality a translated extract of a 19th century French treatise on "magic naturelle".

*Bibliography*: All information concerning al-Djāwbarī has to be gathered from his *Mukhtār*. Al-Djāwbarī's importance has already been noted by M. Steinschneider, *Gauberi's "entdeckte Geheimnisse, eine Quelle für orientalische Sittenschilderung,*

in *ZDMG*, xix (1865), 562-77; idem, *Polemische und apologetische Literatur in arabischer Sprache, zwischen Muslimen, Christen und Juden*, Anhang II: *Gauberi's "entdeckte Geheimnisse"*, in *Abhandlungen für d. Kunde des Morgenlandes*, vi/3, Leipzig 1877; and M.J. de Goeje, *Gauberi's "entdeckte Geheimnisse"*, in *ZDMG*, xx, (1866), 484-510; A considerable part of the *Mukhtār* has been translated by E. Wiedemann, who stressed, perhaps overmuch, al-Djāwbarī's importance for Islamic natural sciences, cf. the list of translated passages in S. Wild, *Jugglers and fraudulent Sufis*, in *Proceedings of the Vth Congress of Arabic and Islamic Studies. Visby 13-16 August, Stockholm 17-19 August 1972* = *Kungl. Vitterhets Historie och Antikvitets Akademiens Handlingar, Filologisk-filosofiska serien 15*, Uppsala 1975, 58-63; Cf. further C.E. Bosworth, *The mediaeval Islamic underworld. The Banū Sāsān in Arabic society and literature*. Part One. *The Banū Sāsān in Arabic life and lore*, Leiden 1976, 14-15, 24, 106-18, and M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam (Handbuch der Orientalistik, 1. Abteilung, Ergänzungsband VI, 2. Abschnitt)*, 254, 367. (S. WILD)

#### DJĀWHAR

(i) Substance. [see Vol. II].

(ii) Jewel, jewelry

Whether or not *djāwhar* had the meaning "jewel" from the beginning of this word's usage in the Arabic language is uncertain, but this meaning is well-attested from early in the Islamic era. For example, both *djāwhar* and the plural *djāwāhir* are used in the Paris manuscript of the *Kutāb al-Aḥjār li-Aristātālīs* (publ. with tr. and comm. in 1912 by J. Ruska as *Das Steinbuch des Aristoteles*—see p. 92 for the above-mentioned terms), a work which Ruska dated to some time before the middle of the 3rd/9th century. The Arabic lexicographers from at least as early as the 4th/10th century give "jewel" as a meaning for *djāwhar* (e.g. in the *Tahdhīb al-luḡa* of al-Azhārī [q.v.]). This usage continues throughout the centuries to the present day, traceable both in historical literature and in, for example, the 12th/18th century dictionary *Taḏj al-arūs* (for a more complete listing of the definitions by the Arabic lexicographers, see Lane's *Lexicon*, s.v. *dj-h-r*).

The word *djāwhar* makes no appearance in the *Qur'ān*, even though there are specific references to both jewelry (gold bracelets, XVIII, 31 and XLIII, 53; silver bracelets, LXXXVI, 21; bracelets of gold and pearls, XXII, 23 and XXXV, 33) and precious stones (*yākūt*, ruby, LV, 58; *marjān*, small pearls or coral, LV, 22 and LV, 58; and *lu'lu'*, pearls, XXII, 23, XXXV, 33 and LV, 22). In four of the five passages mentioning the wearing of bracelets the verb *yuhallawna* is used. From its root, which means "to adorn", another common word for jewelry in general (*ḥaly*) is derived (see Lane, s.v. *h-l-y*). However, *djāwhar* was clearly the most important single term for jewelry or jewels in the Arabic language during its reign as the *lingua franca* of the Islamic world.

Let us now turn from the consideration of words used for jewels to an attempt to form a picture of the objects themselves. That is, what kinds of jewels did the peoples of the regions under consideration make, collect, wear or otherwise use in the various historical periods in which they lived? This art-historical question, an extensive, as opposed to intensive, definition of the word *djāwhar*, shall

constitute our main concern in what follows. This will mark the first attempt ever made at a survey of Islamic jewelry, and thus must be regarded as provisional in certain respects.

### 1. Early Islamic jewelry (1st-4th/7th-10th centuries)

Any history of Islamic jewelry ought to begin with examples from the earliest centuries of Islām. However, to the best of our knowledge, there are very few extant pieces datable to before the first half of the 5th/11th century in either the eastern or western parts of the Muslim world. Consequently, in attempting to reconstruct a picture of the jewelry in vogue during the first three hundred and seventy-five years of the Islamic period we are forced to turn to pictorial or sculptural representations in addition to literary descriptions.

The available representations show that the jewelry and other body-adorning and costume elements worn during the period were very strongly influenced by the Roman, Byzantine and Sāsānid ornaments found current in the countries conquered by the Muslims. A few examples should suffice to illustrate this point.

The ball-shaped earrings depicted on the sculpture from Khirbat al-Mafjar (R. W. Hamilton, *Khirbat al-Mafjar*, Oxford 1959, Pl. XXII, 4) and the teardrop shaped examples in the paintings at Sāmarrā' (E. Herzfeld, *Die Ausgrabungen von Samarra*, Berlin 1927, Pl. LXXI, top) compare very closely with those found on Sāsānid rock reliefs and coins (S. Fukai and K. Horiuchi, *Taq-i-Bustan*, Tokyo 1972, ii, Pl. IX and A.U. Pope, *A survey of Persian art*, London and New York 1938, iv, Pl. 251 F, H, J, K, N, O). Sāsānid prototypes (Fukai and Horiuchi, *op. cit.*, i, Pl. XX) can also be found for some of the head ornaments depicted in a manuscript of al-Šūfi of 399/1009 (E. Wellesz, *An early al-Šūfi manuscript in the Bodleian Library in Oxford*, in *Ars Orientalis*, iii, Fig. 10) and for the belt fittings in a wall painting from Nishāpūr datable to before 1000 A.D. (Fukai and Horiuchi, *op. cit.*, i, Pl. LXIV, and W. Hauser and C.K. Wilkinson, *The Museum's excavations at Nishapur*, in *Metropolitan Museum of Art Bulletin* [April 1943], Fig. 45).

Western influence, on the other hand, can readily be seen in some of the jewelry depicted in the wall paintings at Ḳuṣayr 'Amra. The heart-shaped pendants worn by one of the female figures (M. Almagro, L. Caballero, J. Zozaya and A. Almagro, *Qusayr 'Amra*, Madrid 1975, Pl. XXVII, top) bear very close comparison to Roman pieces (*Allen Memorial Art Museum Bulletin*, xviii/2-3, Oberlin, Ohio—hereinafter abbreviated *Allen*—Fig. 68), as does the shorter necklace of oval elements worn by the same figure (L. Pollak, *Klassisch-Antike Gold-schmiedearbeiten*, Leipzig 1903, Pl. XVI, No. 396). A scalloped and jewelled necklace worn by one of the male figures as well as one consisting of a series of pendant elements adorning a female figure (Almagro *et alii*, *op. cit.*, Pls. XI and IX) have close Byzantine parallels (A. Greifenhagen, *Schmuckarbeiten in Edelmetall*, i, Berlin 1970, Pl. 49, and Metropolitan Museum of Art No. 17.190.1667).

The vogue for breast ornaments held in place by crossed straps, seen so often on the figures in Ḳuṣayr 'Amra, (Almagro *et alii*, Pl. XVII, top) probably entered the Islamic repertoire from the West also (for a Greek example, see H. Hoffman and P. Davidson, *Greek gold*, 1965, Fig. D), although the earliest example known to these authors is from 2nd century

B.C. India, the country which also seems to be the ultimate source for the waist ornaments seen in the paintings in our late 1st/early 8th century Jordanian bath (S. Swarup, *The arts and crafts of India and Pakistan*, Bombay 1957, Pl. 88, left and 104 left).

Thus during the earliest centuries of the Muslim era, the jewelry traditions of the Roman, Byzantine and Sāsānid realms seem to have been important as models for Islamic jewelry. Having seen how close the Islamic representations often are to their apparent models, one is tempted to speculate that, to some extent, the scarcity of early Islamic jewelry may be due to our ignorance, and that many of the pieces now classified as Roman, Byzantine and Sāsānid are in fact Islamic in date. Another major factor accounting for the "disappearance" of jewels, especially when it comes to the larger and more valuable stones and pearls, was their re-use in new stringings or settings in accord with the taste of the times. From the remarkable series of large stones, especially diamonds and spinel "rubies", which were inscribed with the names of Persian and Mughal rulers, we know that such stones had considerable histories (discussed in greater detail below); for example, the inscriptions in the name of Nādir Shāh in two large spinels and a teardrop-shaped emerald show concretely how in these cases stones from one treasure were re-used by a subsequent owner (in one case as an armband, and in the other, on a string of prayer beads—see V. Ball, *A description of two large spinel rubies, with Persian characters engraved upon them*, in *Proceedings of the Royal Irish Academy*, iii/3, 380-400 and Pl. X; V.B. Meen and A.D. Tushingham, *Crown jewels of Iran*, Toronto 1968, 46, 64-5 and 67).

We know from a number of literary accounts concerning the period at present under discussion not only that early Islamic rulers collected precious stones, but that they also used them in ways similar to those which we can verify from much later periods.

In one of the most informative and detail-laden works among those with which we deal with notable treasures, the *Kitāb al-Dhakhā'ir wa 'l-tuhaf* of al-Ḳādī al-Rashīd b. al-Zubayr (ed. M. Hamidullah, Kuwait 1959), we have in § 18 the following: "al-'Alā'ī recounted in the *Kitāb al-Aḡwāb* that Šabāh, the secretary, said that 'Umar b. Yūsuf (i.e. Yūsuf b. 'Umar) al-Thakafī sent to Hishām b. 'Abd al-Malik a red ruby which was bigger than his palm and a pearl of the greatest possible size. The messenger came in to him. He could not see the face of Hishām because of the height of his throne and the number of cushions. He took the stone and the pearl from him and said: Has he written down their weight? Then he said: Where are the likes of these two to be found?" What is particularly interesting about the above account is that it is such large stones and pearls which were considered appropriate for the ruler and that he was fully aware that the real way of recording such items was by weight. Hishām's questions become even more meaningful when we know that, according to al-Bīrūnī [*q.v.*], al-Rashīd, who also received many comparable gifts, was a great admirer of valuable stones and that he sent the jeweller Šabāh, the grandfather of al-Kindī [*q.v.*], to Ceylon to buy stones (see Mohammad Jahia al-Haschmi, *Die Quellen des Steinbuches des Bīrūnī*, Bonn 1935, 14). Not so incidentally, these gifts (sc. the ruby and the pearl) were appropriate to kings not only because of their size but also because they were among the most valued gems in the Islamic world from earliest to latest times, although one often suspects that the huge red rubies, *yākūt*,

cited are either red tourmalines or spinels, even though there were those competent to differentiate. For an example of methods used for such differentiation, we may point to al-Bīrūnī who recorded the specific weights of stones in relation to sapphire, which he gave the arbitrary value of 100. Thus the pearl "is 65 and a third and a quarter" (see F. Krenkow, *The chapter on pearls in the book on precious Stones by al-Berūnī*. Part II, in *IC*, xvi/1 [1942], 26-7).

Specific literary accounts and numerous recorded gifts and purchases as well as pictorial evidence exist which establish the prevailing hierarchy of value in stones. According to al-Bīrūnī in his *Kūtab al-Djamāhīr fi 'l-ḡawāhīr* (as cited by E. Wiedemann, *Über den Wert von Edelsteinen bei den Muslimen*, in *Isl.*, ii [1911], 348), there are three outstanding precious gems, the ruby (*yākūt*), the emerald (*zumurrud*) and the pearl. Wiedemann (*op. cit.*, 348 n. 1) also informs us that in f. 5a of the *Steinbuch des Aristoteles* it says that the pearl, the *yākūt* and the *zabardīad* (topaz) and their kind are preferred by people over other precious stones. For a concrete example, we may cite another passage from the *K. al-Dhakhā'ir* (§ 33) which recounts gifts given to al-Mutawakkil by a favourite slave girl consisting of twenty tamed gazelles, with twenty Chinese saddles with small saddle-bags containing musk and ambergris and other perfumes, "And each gazelle had a female slave attendant with a golden belt, having in her hand a golden rod, at whose tip was a jewel, a ruby or an emerald or some other from the jewels of high value."

It is hardly possible to estimate real prices; thus that given for the famous *Djabal* (see al-Mas'ūdī, ed. Pellat, index) varies considerably according to the sources. Wiedemann states, in *op. cit.*, 346, and following al-Dimashqī, that it must have weighed  $14\frac{1}{2}$  *mūhkāls* (according to Kahle's conversion figures, in *Die Schätze der Fatimiden*, in *ZDMG*, N.F. xxxiv [1935], 336, this would amount to about 64 gr. or 320 carats) for 80,000 *dīnārs*. Furthermore, according to the same source, al-Rashīd is said to have paid 90,000 *dīnārs* for a pearl named *al-Yatīma*, "the Orphan". The weight is not given, although weights for pearls of this name are mentioned in several other accounts of the early Islamic period. In the light of the comments of al-Bīrūnī as cited by Krenkow (*art. cit.*, Part I, 407) and of the passage, also from al-Bīrūnī, cited below, it would seem that this name, along with *Farīda*, "Unique", was given to any large pearl, perhaps especially to those pear- or teardrop-shaped, for which no match could be found.

Further accounts of the early Islamic period indicating the value placed on certain stones are the following, all taken from the above-cited *K. al-Dhakhā'ir*:

(i) In the time of the caliph Hishām b. 'Abd al-Malik, the "king of India" sent as a present to *Djunayd* b. 'Abd al-Rahmān, the then governor of Sind, a jewel-studded camel mounted on a silver, wheeled under-carriage, and its udders were full of pearls and its throat was full of rubies, both of which could be made to pour forth. *Djunayd* sent this on to Hishām, who appreciated it highly. "It amazed Hishām and everyone who was in his company, and it remained in the Umayyad treasury until it passed to the 'Abbāsids" (§ 15).

(ii) There is an account (§ 27) of a gift sent to al-Rashīd, by "one of the kings of India", of "an emerald rod longer than a cubit. At its head was the image of a bird of red rubies, and it was invaluable." We are told that this bauble passed down through the 'Ab-

bāsīd family, serving for at least part of the time as a plaything for royal children, to al-Mu'taṣim, who ordered a search for the (at that point) missing ruby-encrusted bird (valued, we are told, at 100,000 *dīnārs* by one 'Abd Allāh b. Muḥammad) which had become separated from it but which was found, under threats of punishment, by the treasurers.

(iii) We read (§ 29) that al-Ma'mūn corresponded and exchanged gifts with a king of India, and that the Indian king's letter to al-Ma'mūn mentioned the gifts he was sending: "And the gifts were a cup of red ruby, the opening of which was one span wide by one finger thick, full of pearls, each of which weighed a *mūhkāl*. They totalled 100 pearls..."

For the actual use of precious stones in jewelry, there is considerable evidence that in this early Islamic period, as in the previous Roman and Byzantine periods as well as in much later periods such as the Mughal one in India, many of the larger precious stones were bored and strung on cords, chains, wires or whatever was appropriate. Remarkably graphic literary confirmation of this is afforded by al-Bīrūnī's treatment of the emerald, as cited by Wiedemann (*op. cit.*, 351), when he says that emerald jewels or beads (*kharaṣa*) are called reeds or tubes (*kaṣaba*) because of their long form and because one bores through them. This has a remarkable ring of veracity because of what we know of the longish crystalline formation of the emerald, as well as the great number of presumably Byzantine necklaces which incorporate just such bored sections of emerald crystals. This practice of boring and stringing precious stones as beads was not confined to emeralds. The following passage from the *K. al-Dhakhā'ir* (§ 37) does not furnish certain proof of this, but gives an indication of its likelihood. We are told that when al-Mutawakkil was returning from Damascus, in 244/858, he was met by his mother's servant, with gifts from "al-Sayyida" Kabīṭha, the mother of al-Mu'tazz. Their amount was 400,000 *dīnārs*. This enormous treasure included "a string of beads of jewels of an unknown value." From the same work (§ 14), we hear again of "beads of great jewels" in a casket of jewels which had been brought by the Fāṭimid caliph al-Mu'izz when he came to Cairo from his previous capital in Tunisia.

Occasionally we are fortunate enough to find passages which describe or unconsciously indicate not only the precise kind of gem involved, but also the arrangement or manner of stringing of these jewels. Once more from the *K. al-Dhakhā'ir* (§ 22) we learn that "Mu'nisa, the slave girl of al-Ma'mūn bil-lāh, gave to Mutayyam, the slave girl of 'Alī b. Hishām ... with the knowledge of al-Ma'mūn, a necklace whose central pearl was like an egg of a sparrow, and black beads whose value was 10,000 *dīnārs* (at this value the only imaginable black beads are black pearls of fine quality—we know that, according to al-Bīrūnī, on the authority of al-Ḥasan and al-Ḥusayn of Rayy, court jewellers to Maḥmūd of Ghazna, Maḥmūd's treasury included black pearls—see Haschmi, *op. cit.*, 15), and four stones of red rubies and four stones of emeralds on its right and left, between them the precious beads of gold. The continuing necklace had dates (*balāh*—here surely meant to indicate the shape of the beads) anointed with perfume (*ghāliya*). Mutayyam found the dates anointed with perfume (*ghāliya*) elegant and delightful; her joy could not be increased by the remaining jewels." Although we cannot be absolutely certain of the arrangement here, the general picture is quite clear; that called up in the imagination by this and

the passage to follow is amazingly like that which one gets from the accounts of the likes of Tavernier (see *Travels in India*, tr. V. Ball, London 1889, ii, 150) as well as what one actually sees being worn by Mughal rulers in their miniature paintings (see below in section on Mughal India). Another very graphic passage from the early Islamic period is found in al-Bīrūnī's chapter on pearls (Krenkow, *op. cit.*, II, 25), in a section discussing the egg-shaped pearl: "The pearl called al-Yatīma weighed three *mithkāls* and it was called al-Yatīma (orphan) because its shell had gone before a sister [pearl] could be born [in it]. Likewise, a similar one was called Farīd (unique) when its equal could not be found and it was necessary to make it the centre of a necklace which is called *qilāda*." Elsewhere in the same work (Krenkow, *op. cit.*, Part II, 33), al-Bīrūnī is arguing against "coral" and for "small pearls" as being the correct understanding of the term *marjān*, and we get an idea of his sense of what is proper as regards the combination of stones with pearls. He quotes a passage from Abū Nuwās and then comments: "Crowned with pearls and marjān like a rose betwixt red anemones." So he thinks that the white pearl is adorned in the necklace between two reds, meaning the ruby and the coral. Such a necklace would be uncommon and of bad taste. On the contrary, the small pearls are put between every large pearl and two encompassing rubies filling the place between them, holding them apart; then on account of their polish, the redness of the ruby glistens and can be compared with the redness of gold."

Other such accounts about the combination of rubies, emeralds and pearls of various sizes could be given, but perhaps those cited above are sufficient to indicate something of the nature of a type of jewelry that seems to have had currency throughout the centuries in most of the Islamic world and of which we have nothing but the literary accounts and pictorial representations, together with some of the stones (in such repositories as the Iranian crown jewels and the Topkapı in Istanbul). What we do have left to us in something of its original form, although of less intrinsic value, is of greater historical importance, for it provides us with a better picture of the changes in artistic taste from period to period.

As regards those few objects datable to the early Islamic period, they fit very well into the pattern established for those adornments found in the paintings and reliefs discussed at the outset, i.e. they exhibit a dependence on Roman, Byzantine and/or Sāsānid models. However, these objects also show a development away from the older objects in terms of decorative motifs or principal designs, an Islamisation of their pre-Islamic models. Perhaps the most striking example of this is an amulet case excavated at Nīshāpūr which can be dated before 1000 A.D., on the basis of its epigraphic decoration (Fig. 1). Sāsānid as well as Byzantine prototypes exist for the general shape (M. Negro Ponti, *Jewelry and small objects from Tell Mahuz (North Mesopotamia)*, in *Mesopotamia*, v-vi [1970-1], Fig. 85, No. 36, and W. and E. Rudolph, *Ancient jewelry from the collection of Burton Y. Berry*, Bloomington, Indiana 1973, Fig. 153), but its elaborate yet beautiful integration of form and decoration are peculiarly Islamic, as is its nielloed Kūfic inscription.

Also datable to the same period on epigraphic grounds are two belt fittings excavated at Nīshāpūr, one of which is shown in Fig. 2. Unlike the smooth-edged and undecorated fittings on the depiction of

the horseman in the Nīshāpūr wall painting discussed earlier, these two sculpted and decorated objects may have been part of a set like that in Fig. 3. The latter should be dated to the 3rd/9th century on the basis of its close comparison with the fittings depicted in a painting from Sāmarrā' (E. Herzfeld, *op. cit.*, Pl. LXV, right).

Some of the finger rings from Nīshāpūr also seem to be datable to this period. The silver as well as the gold ring pictured in Fig. 4a and b both show a dependence on Roman models (E.H. Marshall, *Catalogue of the finger rings, Greek, Etruscan and Roman, in the Departments of Antiquities, British Museum London 1907*, Pl. XV, 526, Pl. XIII, 469), and as will be discussed later, the silver ring can be seen as a precursor of a type of Saldjūk Persian ring.

## 2. Early mediaeval jewelry (5th-7th/11th-13th centuries)

Once we move into the early mediaeval period, not only do we have many more extant jewelry examples than we did for the early Islamic period, but we are also able to establish firmer dates for them. The reasons for the survival of these relatively large groups of objects, as well as the explanations of the lines of development which brought the art to this brilliant flowering during the early mediaeval period, continue to elude us. The jump from the few early objects just discussed to the objects we are about to present is often a very large one indeed.

Pivotal pieces for the study of early mediaeval jewelry in greater Iran are a pair of bracelets, which are illustrated in Fig. 5a-b. Each of the four hemispheres flanking the clasp of each bracelet bears a flat disk of thin gold at its back, which was decorated by pouncing it over a coin, in this case a coin bearing the name of the 'Abbāsīd caliph al-Kādir billāh (381-422/991-1031). The late Dr. George Miles was of the opinion that the style of the coins used was that of those minted in 390/1000, 397/1007 and 419/1028, during the rule of Maḥmūd of Ghazna, and that they were probably struck in the mint of Nīshāpūr. As the gold discs were most probably embossed over relatively new coins, a dating to the first half of the 5th/11th century seems quite secure.

There are a large number of extant bracelets in both gold and silver which are analogous to these, although none are as fine or as elaborate. The main characteristics of this group of bracelets are the four hemispheres flanking the clasp, the tapering of the shank toward the clasp and the twisted effect of the former; or alternatively, a non-tapered shank is subdivided into ball-shaped sections.

Pre-Islamic jewelry has again served as a model for these bracelets, which show a continued conservatism and traditionalism in the medium. Examples of coins and imitation coins on jewelry are quite numerous in the Byzantine period; and the twisted effect of the shank must ultimately derive from Greek bracelets with similar shanks (Metropolitan Museum of Art, No. 45.11.10—see Hoffman and Davidson, *op. cit.*, Fig. 61b). Those with shanks subdivided into ball-shaped sections must have had as their ultimate models Roman rings and bracelets as well (Allen, Fig. 107).

The hollow gold and silver rings from Nīshāpūr with stone settings which we saw earlier seem to have given rise to the type of ring seen in Fig. 6. Its epigraphic and vegetal decoration in niello place it very neatly in the early mediaeval period, more particularly in the 6th/12th or 7th/13th centuries; and furthermore, the type of setting with its heavy

claws is very typical for Persian jewelry of this period. The bracelet illustrated in Fig. 7a-b, whose mate is in the Boston Museum of Fine Arts, shares many of the features seen in the last object discussed. Four of its elements take the form of truncated pyramids (as does the bezel of the ring), and bear the heavy claws to hold the now-missing stones. It also prominently features epigraphic decoration in niello.

The granulated treatment of the border on the obverse of the pendant in Fig. 8a-b, the settings with heavy claws and the niello-like decoration, relate this object to the bracelet just discussed. A feature we have not met with before, however, is that found on the reverse—a double twisted wire decoration laid on the gold sheet. This method of decorating a plain gold surface was very popular in Iran during the period in question and can be seen on a pair of earrings, one of which is shown in Fig. 9, which bear close comparison with a pair found in Russian excavations (in the region between the Sea of Azov and Moscow) whose finds can be dated between the 1170s and 1240 (G.F. Korzukhina, *Russkie kladi IX-XIII vv*, Moscow 1954, pl. LX). The open-work beads decorating the upper part of these earrings were also an important feature of Iranian jewelry at this time. Another pair of earrings, seen in Fig. 10, are composed of three such beads. There are many variations of such three-bead earrings from 6th/12th and 7th/13th century Iran, and a large number of similar ones were found in the Russian excavations already mentioned (for example, Korzukhina, *op. cit.*, pls. XLV, XLVIII, XXXI, XXXIII, etc.).

Fig. 11a-b illustrates a type of ring which seems not to have been in vogue in the Islamic world before the second half of the 6th/12th century. However, once introduced, it enjoyed great popularity and variety. The most essential features of this ring type are a cast shank, often with anthropomorphic terminals, and polygonal bezels. The prototypes, again, are to be found in Greek as well as Roman rings (Marshall, *op. cit.*, fig. 61, and pl. XVI, 552). The ring chosen to illustrate the type is a particularly fine example, with four of the six corners of the bezel decorated with human heads, the crown itself consisting of a repeating geometric pattern executed in openwork filigree and the shank bearing harpies and terminating in double-bodied harpies. Although not as elaborate as our example, many rings of this type were found in the Russian excavations mentioned above whose finds can be dated between the 1170s and 1240 (Korzukhina, pls. XXXVII, 3, XXXVIII, 3, XLV, 4, etc.). The style of the animals as well as the technique employed on the belt fittings in Fig. 12 relate this object very closely to the above ring.

Because the geometrical design and its mode of execution on the two hair ornaments in Fig. 13 are identical to that on the ring in Fig. 11a-b, these objects must be dated to the same time, if not to the same workshop. Between the bronze core and the gold exterior of these ornaments there was a textile which was probably brightly coloured, and this must have heightened the impact of these striking pieces. Hair ornaments had a long pre-Islamic history, and tubular ones are still current in the Middle East today.

The earrings featuring polyhedral beads in Fig. 14 must also be similarly dated, since two hair ornaments with closely related beads were found in the Russian excavations mentioned above (Korzukhina, pl. LIX). Their sophisticated and ingenious transformation of the spherical bead into a pentagonal

dodecahedron is quite in keeping with the extraordinary amount of sophistication at the time in the usage of geometric solids as the forms of beads, weights, etc., especially notable in the finds from the Metropolitan Museum's excavations at Nishāpūr.

A cache of jewelry and 82 gold coins found in Tunisia about 50 years ago allows us to establish relatively firm dates for certain types of jewelry executed in the Fāṭimid realms (G. Marçais and L. Poinssot, *Objets kairouanais, notes et documents*, xi/2, Tunis 1952, 467-93, and Marilyn Jenkins, *Fāṭimid jewelry, its subtypes and influences*, in *Kunst des Orients*, in press); and this in turn allows us to date certain closely related objects from the Fertile Crescent.

Marçais and Poinssot have shown that the jewelry in this cache was made before the end of the year 436/1045, and Jenkins has demonstrated that it was very likely produced in Egypt. She has also delineated a number of characteristic features of this jewelry, thus permitting a considerable broadening of the group. On the basis of these works, it seems likely that the gold objects about to be discussed, as well as many others closely related to them, were all produced in a relatively short period of time before 436/1045.

Each sub-type enumerated below will be introduced by one or more Fāṭimid objects datable by means of the Tunisian cache. These groupings grew out of Marc Rosenberg's theory of "the battle of granulation and filigree", in which he suggests an historical progression proceeding from those pieces on which granulation, consisting of grains of more than one size—most often set on paired wires—was the dominant decorative device, to those on which grains are also placed on paired wires but on which the granulation and filigree could be said to be on an equal footing. The third sub-type incorporates only a small amount of granulation; and the final phase shows the complete displacement of granulation by filigree (see Rosenberg, *Geschichte der Goldschmiedekunst auf technischer Grundlage, Granulation*, iii, Frankfurt 1918, 96-104). The closely similarity among the objects comprising the various sub-groups makes it highly likely that the "battle" was a quick one, at least in the case of Fāṭimid Egypt.

Examples of the finest and most decoratively complex type of Fāṭimid gold work are the openwork biconical and spherical beads in Fig. 15 exhibiting filigree work and granulation with grains of more than one size. Another example of this particular phase of Fāṭimid jewelry is a gold bracelet with a tapered tubular shank and heart-shaped terminals in the Archaeological Museum, Istanbul (G. Breiting *et alii*, *Das Buch vom Gold*, Lucerne and Frankfurt 1975, 239, No. 6). The area where the shank meets the terminals bears three large grains, or more properly, shot. This bracelet bears close comparison with one in the Damascus Museum, also with heart-shaped terminals but with a twisted-wire shank (*Catalogue du Musée National de Damas*, Damascus 1969, Fig. 119, right). The latter may in turn be compared with several excavated in Russia in finds datable to the 5th/11th and turn of the 6th/12th centuries (Korzukhina, *op. cit.*, pl. XIV). All this confirms that this group of bracelets with tubular or twisted-wire shanks and heart-shaped terminals, whether made in Egypt or somewhere in the Fertile Crescent (as is probably the case with the bracelet in the Damascus Museum), were contemporary with the beads illustrated in Fig. 15 (which are datable by means of the Tunisian cache) and consequently must date before 436/1045.

Another bracelet which must be placed in this finest and decoratively most complex phase is that seen in Fig. 16a-b, which has a mate in the Damascus Museum. The twisted effect of its tapered shank and the four hemispheres flanking its clasp, as well as the treatment of the area where the shank meets the clasp, relate it very closely to the Persian bracelet illustrated in Fig. 5a-b, which is probably datable to the early 5th/11th century. However, the type of bosses on the clasp, the style of wirework on the back of the clasp and the treatment of the shank relate the Freer bracelet more closely to contemporary objects made in Egypt. We therefore attribute this bracelet to a workshop in the Fertile Crescent, most probably in Syria, where both Egyptian and Persian influences would very likely be found.

Also contemporary and made either in Egypt or the Fertile Crescent are a group of six bracelets with twisted-wire shanks whose clasps bear granules in two triangular arrangements, flanked on two sides by groups of three contiguous shot, on either side of a set stone (*Catalogue du Musée National de Damas*, Fig. 119, second from right; *Collection Hélène Stathalos*, iv, *Bijoux et petits objets*, Pl. XI, and p. 73, Figs. 11 and 12; and the European art market). The manner of usage of the grains on the clasps of these bracelets is closely related to that on the "blimp-shaped" beads on the necklace in Fig. 15.

The next Fātimid sub-type is illustrated in Fig. 17a-b. Unlike the beads discussed above, this pendant bears grains of only one size, and the filigree and granulation can be said to be equally important.

Those objects exhibiting filigree with only a very sparse use of granulation, such as the bracelet in Fig. 18 with repoussé shank, are examples of the next sub-type. Bracelets with repoussé shanks bearing geometric designs, sometimes filled with human figures, were a later development of such bracelets (Metropolitan Museum of Art No. 58.37, and A. de Ridder, *Collection de Clercq catalogue*, vii/1, pl. XII, No. 1279).

Another example of this phase is the pair of earrings in Fig. 19. However, the use of undecorated hollow hemispheres as well as the tapering of the edges to a point take them out of the Egyptian milieu and, as was the case with the bracelet in Fig. 16a-b and several other objects mentioned above, perhaps a provenance in the Fertile Crescent should be suggested for them (cf. Zakiyya 'Umar al-'Alī, *Islamic jewelry acquired by the Iraq Museum* [in Arabic], in *Sumer*, xxx, Pl. 8; Paris, Grand Palais, *L'Islam dans les collections nationales*, Paris 1977, No. 363; and Metropolitan Museum of Art, No. 95.16.2-3). Closer to its Egyptian prototypes than the above, but incorporating Persian elements as well, is another earring which also must have been made in the Fertile Crescent (Hayward Gallery, *The arts of Islam*, London 1976, No. 239).

As we have said, the final phase in Fātimid jewelry is represented by those objects with no granulation at all, their decoration being executed solely in filigree or in filigree combined with a technique other than granulation, such as cloisoné enamelling. Two examples can be seen in Figs. 20 and 21. The latter may be compared with the biconical bead in Fig. 15 (see also L.A. Mayer Memorial Institute for Islamic Art, Jerusalem, No. J75, the wirework of which is closely related to that on the back of the clasp of the bracelet in Fig. 16a-b), but here three biconical beads are combined to form a necklace spacer, a type of combination also seen in the material

from Ur (C.L. Wooley, *Ur excavations*, ii. *The Royal Cemetery*, Oxford 1934, pl. 146a), as well as from Cyprus of the first half of the first millennium B.C. (Metropolitan Museum of Art, No. 74.51.3297). Another type of tripartite spacer can be seen on the necklace in Fig. 15.

In the medium of silver, the earring shown in Fig. 22 has a shape and the box-like construction which we have seen often in the jewelry from the Fertile Crescent. These features, in addition to the style of its nielloed vegetal and epigraphic decoration, place it in the early part of the period under discussion.

Towards the end of what we have called the early mediaeval period, one of the Islamic lands west of Iran (probably Syria) produced the silver and gilt bronze belt illustrated in Fig. 23, other elements of which are in the Benaki Museum, Athens. According to Mr. Benaki's records (see Berta Segall, *Museum Benaki, Katalog der Goldschmiede-Arbeiten*, Athens 1938 No. 323, and p. 190) the inscription on the buckle is in the name of al-Malik al-Šālih 'Imād al-Dīn Ismā'īl, who was twice the Ayyūbid ruler of Damascus and who was killed in battle at Cairo in 648/1250 (mistakenly said in Segall to have taken place in 1266). Although there was a Mamlūk sultan of the same name who ruled in the 8th/14th century (743-6/1342-5), the titular formulae which one can read on the buckle do seem closer to those of the Ayyūbid ruler than of the Mamlūk one.

### 3. Late mediaeval jewelry (8th-11th/14-17th centuries)

For reasons still largely unclear to us, when attempting to deal with the jewelry art of the late mediaeval period, we are faced with a situation similar to that in the early Islamic period. That is, there are very few extant pieces from any part of the Muslim world datable to this period, and therefore we are again forced to turn to pictorial representations in addition to literary descriptions for our main picture of the jewelry of this important four-hundred-year period.

It is probable that the representations of jewelry in Persian miniatures do not give us a full and adequate picture of the jewelry in vogue at the time, even for the upper classes. This is partly due to the very limitations of the Persian miniature art itself in terms of what it could show; and one gets the feeling that convention played some part in what jewelry the painter chose to decorate his figures, just as painters' conventions had a part in the architectural forms and decoration represented in these miniatures. However, it does seem on the other hand that the representations do reflect in a general way the types and, as will be seen, the changing styles of jewelry worn. With Mughal miniatures, the representations are more detailed, and give a feeling of being less fanciful, more indicative of a specific time, place and object.

The necklace in Fig. 24a-b is one of two extant pieces of 8th/14th century gold jewelry known to the present authors (the other is a head ornament in the Staatliche Museen, Berlin-Dahlem, No. 565, which is very closely related to the gilded silver head ornament found in a 14th century tomb at Novorossiisk, for which see R. Zahn, *Sammlungen der Galerie Bachtitz*, ii Berlin 1921, pl. 123). The shapes used in the wire and stone work on the obverse of the necklace's two principal elements, as well as the contours of these elements themselves, relate it closely to the crown of Anšūbirwān in a page from

the Demotte *Shāh-nāma* (Metropolitan Museum of Art No. 52.20.2, see I. Stchoukine, *La peinture iranienne sous les derniers Abbassides et les Il-Khans*, Bruges 1936, ms. no. XV, no. 24), and the style of the chased design as well as the motifs on the reverse of these elements clearly point to the same period. In addition, the overall Chinese feeling is in line with what we might expect at this time.

To come back to the miniature mentioned above, we might point out that both of the principal figures wear simple gold hoop earrings and that this fashion can be seen in other representations of the period. For example, in a miniature probably painted in 'Irāk in ca. 771-81/1370-80 (R. Ettinghausen, *Arab painting*, New York 1962, 178) we see very similar earrings worn by the Archangel Isrāfīl.

We may take this occasion to say that the wearing of earrings by men is a custom with a very long history in the Near East, being well-attested in for example, Assyrian, Achaemenian and Sāsānid reliefs. We have already referred in section 1 above to a man wearing earrings in a wall painting from Sāmarrā', and we have literary evidence that earrings were worn by pre-Islamic Arabs: al-Bīrūnī in his chapter on pearls (Krenkow, *op. cit.*, I, 407) quotes an extract from al-Aswad b. Ya'fur [q.v.] which contains the phrase "... runs a man with two pearls [in the lobes of his ears] . . .". This custom continued in the Islamic world, although not universally, until the beginning of the modern period, as attested by, for example, paintings of the Mongol, Tīmūrid, Šafawid and Mughal schools.

A belt of gilded silver consisting of 62 elements was found in the 14th century tomb at Novorossiisk mentioned above (R. Zahn, *op. cit.*, pls. 121, 122). The overall style of the belt, as well as the decoration on the triangular and rectangular pieces, relate it to two earlier belts illustrated in Figs. 12 and 23.

Turning to the more western part of the Muslim world, several gold bracelets can be quite securely placed in 8th/14th century Mamlūk Egypt or Syria. Continuing the bracelet tradition in this part of the world as discussed above, these have hollow shanks—plain or giving a twisted effect—but they now terminate in animal heads. The clasp is round and tabular, and the one in the Benaki Museum, Athens, is decorated with an Arabic inscription (B. Segall, *op. cit.*, No. 319, and Cairo, *Islamic art in Egypt 969-1517*, April 1969, No. 20).

At the turn of the 8th/14th and 9th/15th century in Iran we not only see the continued use of the type of belt already discussed (M.S. Ipsiroğlu, *Painting and culture of the Mongols*, New York n.d., fig. 47) but we also begin to see the use of a new belt type consisting of a large gold roundel or roundels on a cloth or leather strap, a type which appears soon to have superseded the older style and which was to remain in vogue in Iran for centuries to come (Metropolitan Museum of Art, No. 57.51.20, *MMA Bulletin*, N.S., xvi [1957], 56, and No. 33.113, *MMA Bulletin*, xxix [April 1934], 59-60, fig. 2).

One of these latter miniatures (57.51.20) also shows a new fashion in the decoration of the female visage: strings of beads framing the face, being secured by the headcloth at the top of the head and passing under the chin. As we shall see, this type of ornament was still in vogue in Iran in the Kādjar period. This popular Tīmūrid fashion is also in evidence in two other miniatures, one from ca. 829/1426 and the other from between 1470 and 1480, which also show us examples of Tīmūrid earrings. These appear to be either plain gold hoops, hoops

with a single pendant tear-drop pearl (seen earlier in paintings from Sāmarrā') or gold hoops with four pendant paired pearls (Metropolitan Museum of Art, No. 13.228.13, fol. 17b; see New York, Asia House Gallery, *Muslim miniature paintings from the XII to XIX century*, 1962, 58, no. 41, and No. 57.51.24; *MMA Bulletin*, N.S., xvi [April 1957], 232).

As regards the fashion in bracelets during the Tīmūrid period, a miniature from a *Haft paykar* manuscript shows bathing women wearing simple strings of beads at their wrists (Metropolitan Museum of Art, No. 13.228.13, fol. 47a, *MMA Bulletin*, N.S., xxv [May 1967], 325, fig. 16). One of a pair of cast silver bracelets with dragon-headed terminals and bearing on the top an Arabic inscription can be seen in Fig. 25. At least two other examples of this type are extant, and it may represent a simpler and later version of the Mamlūk bracelets discussed above with animal heads flanking their clasps.

The cast gold and jade seal ring illustrated in Fig. 26 may have developed out of the type of ring illustrated in Fig. 11a-b, as they have several important features in common: the technique of casting, followed by a significant amount of chasing; shanks which have anthropomorphic terminals and which are decorated with designs on two levels; and a lozenge adorning the centre of the shank (for the universal importance and use of the seal ring throughout Islamic history, see *KHĀTAM* and *MUHR*).

The necklace seen on the woman in the detail of a miniature from a manuscript dated 853/1450-1 in Fig. 27 points both backward and forward in time. The central element is related to one of those on the necklace in Fig. 24a-b, whereas the overall composition is identical to what we shall see is the most popular type of Šafawid necklace represented in miniatures, although the rosettes here are two-dimensional elements instead of spherical beads as in the case of the Šafawid necklace.

Našrid Spain is better represented by extant jewelry than other areas during this period. The necklace illustrated in Fig. 28 consists of five pendant elements and five beads. The pendant elements show an indebtedness to Fātimid jewelry in their box-like construction, the use of gold loops on their circumference for stringing pearls or semi-precious stones, and their combination of gold and cloisonné enamel as well as of filigree and granulation. However, they are not as laboriously executed as the best Fātimid pieces, and the work has been further decreased by simply pouncing a gold sheet over the decorated front side of the pendant to produce the decoration on the back, a peculiarity of Našrid jewelry.

As indicated earlier, the vogue for beads framing the face continued in the Šafawid period but, in addition, two other types of head ornament—whose sources of inspiration were probably earlier crowns—were very popular during this period. Examples are to be seen in Figs. 29 and 30, both of which appear to be of gold set with stones.

The necklace shown in Fig. 27 was the immediate precursor of that worn by the woman in Fig. 30. The elements and their arrangement are identical, except that the flat rosettes set with a single stone in the 853/1450-51 miniature have, seventy-five years later, become what appear to be granulated spheres set with multiple stones. The central element has also changed from an apparently carved or painted piece to a gold pendant set with stones. Another type of necklace which we see represented in Šafawid paintings, worn as a choker or close to the throat, consisted of a central triangular, sometimes bejewel-

led, gold element flanked by two smaller gold elements on a string of pearls; and we see Iranian women in paintings of this period wearing a series of strings of beads, plain or bearing a single pendant (Metropolitan Museum of Art No. 52.20.6, unpublished, and a wall painting from the Čihil Sutūn (1057/1647) in Işfahān, unpublished). These paintings also show a continued vogue for bracelets consisting of simple strings of beads.

Also at the Čihil Sutūn, we encounter on the statues at the edge of the pool an early example of the bejewelled tripartite armband which was to have such popularity in the Kādĵār period (Fig. 31).

The new belt type, which was first observed in Persian miniatures dating to around 1400 A.D., was further elaborated upon in the Šafawid period. The elements are jewelled and the number represented on a given belt is increased (Fig. 32). Two complete Šafawid belts and a buckle are extant (Pope, *Survey of Persian art*, vi, pl. 1394a-c).

The types of earrings current in Šafawid Iran show, for the most part, a continued conservatism at least as far as the representations are concerned. We find gold hoop earrings and gold hoops with a single shot at the bottom or at the bottom and two sides. There are also variations on the type of earring consisting of a gold hoop with a pendant pearl which in one case consists of three pendant stones, blue, white and red (Fig. 33). In addition to these, we also see more complex pendant earring varieties couposed of gold, pearls, rubies or garnets and emeralds or in some cases composed of the aforementioned stones, but depicted in the miniatures in a way that is not detailed enough to permit a description.

Some of the ring types represented in the miniatures of this period include: archer's rings, usually indicated in black; seal rings and others represented with white and green stones (we may mention the one depicted with a white stone—in Metropolitan Museum of Art No. 1970.301.7, unpublished—which very much resembles in style that illustrated in Fig. 26); plain gold rings with rectangular bezels; and gold thumb rings.

Another Šafawid fashion seen depicted is the wearing of bandoliers, an example of which can be seen in Fig. 33. This one incorporates gold beads, amulets, a rosette and a gold pendant. Others of the period bear jewelled elements (Metropolitan Museum of Art No. 12.224.4, miniature unpublished).

Recognisable representations of jewelry in Ottoman miniatures are almost non-existent. A rare instance shows Meĥammed II wearing a white archer's ring and a ring set with a blue stone (N. Atasoy and F. Çaĝman, *Turkish miniature painting*, Istanbul 1974, pl. 1). A hint of the kinds of treasures on hand in Tavernier's time (in addition to arms, utensils and the like enriched with diamonds, rubies, emeralds and other precious stones), can be had from the following:

"But what is most precious in that Chamber and transcends all the rest, is a strong Coffe'r all of Ironwork, which contains another, of about a foot and a half square, wherein there is a vast Treasure. When this Coffe'r is open'd you see a kind of Gold-Smiths Jewel Box, wherein are ranked all sorts of Jewels of highest value, as *Diamonds, Rubies, Emeralds*, a huge number of excellent Topazes, and four of those Gems, call'd *Cats-eyes*, which are so beautiful, that they are not to be valu'd. Having satisfy'd your curiosity with the former, you come next to certain little Drawers full of several Jewels, great Roses of Diamonds, Pendants, other Roses

of Rubies and Emeralds, Strings and Chains of Pearls and Bracelets. There stands aside by itself a Cabinet, where are the Sorgouges, or the things wherein are fasten'd the Heron-tops, which the Grand Seigneur wears in this Turbant. They are as it were little handles, made in the fashion of Tulips, cover'd over with the most precious Stones of the Seraglio, and 'tis into this that the Heron-top enters, that rich Plume of Feathers . . . Of these Handles, some are higher and more precious than others: and my Oversear of the Treasury assur'd me, that, of all sorts of them, great and small, there are above a hundred and fifty. The lesser ones serve only for the Campagne, and the great ones, which are the richest, are reserv'd for the Poms and Magnificences of the Court, and when the Grand Seigneur marches in Ceremony to *Constantinople*. If he has a desire to satisfie his sight with the lustre of his precious Jewels, he Orders the Coffe'r to be brought into his own Chamber; but if he calls for some particular Piece of the Treasury, he gives order to the *Chasnadarbachi*, to fetch it, and that Chief Officer of the Treasury cannot enter it, without abundance of mysterious precautions" (*The six voyages of John Baptista Tavernier . . .* (and) . . . *The description of the Seraglio*, made English by J.P., London 1678, ch. viii, "A relation of the Grand Seigneur's Seraglio", 46-8). Aside from the familiar strings of pearls, it is of interest to note that the treasury contained at this time a number of rose-cut diamonds, rubies and emeralds.

One such rose-cut diamond adorns the top of an hexagonal box, at present in the Hazine, the body of which is formed from a huge hollowed-out emerald crystal. According to an inscription on a mounting for one of its suspension hooks, this box was made by order of Sultan Aĥmed I in 1025/1616. The settings employed in this piece are extremely similar to those used in contemporary western Europe, while other objects in the Topkapı Hazine bear close comparison with Persian and Indian objects as regards techniques employed. For example, a dagger with a solid emerald handle which purportedly was presented to Meĥammed IV by his mother Turkĥān Sultān during the consecration of the Yeņi Dĵāmi' in 1073/1663 exhibits not only enamelling very similar to that which we associate with Kādĵār Iran, but also the type of thickly encrusted surface which gives the impression of the stones having been pushed through the thin gold sheet from the back. A further closer study of the jewel treasures in the Topkapı would no doubt prove instructive regarding the nature if not the origins of the Ottoman style in jewelry.

Although few major pieces of Mughal jewelry from before the late 18th century remain extant, we are for a number of reasons in a better position to formulate an idea of the jewelry art of the earlier centuries of the Mughal period than we were in attempting to arrive at some picture of the jewelry of, for example, Timūrid and Šafawid Iran or of Ottoman Turkey. First of all, there is a large body of extant material dating from the late 18th to the 20th centuries, which, given the amazing tenacity of forms and traditions in Indian jewelry, gives us a rich context in which to consider the bits of evidence for the jewelry of the earlier centuries of the Mughal period. Secondly, for those curious about the jewels of this period, the miniatures produced under the Mughals are almost invariably much more detailed and therefore contain much more information for those who study the objects depicted. And thirdly,

we have a wealth of precise verbal accounts of the jewels, thrones, etc., of the Mughal court, especially those of the sharp and knowledgeable J.B. Tavernier.

One real disadvantage for the would-be student of Mughal jewelry is the lack of available information about the jewelry of India during a very long period prior to the one with which we are here concerned. It may have been noticed that this article has not include any discussion of jewelry made under the Dīhlī Sultanate. Pieces must exist, perhaps unrecognised or unpublished, in Indian museums or private collections; but we do not know definitely about such jewelry and have no real notion from any source as to its nature. Despite the absence of extant pieces from some extensive periods of time, it seems safe to say, on the basis of observation of recent and contemporary work and of study of such pictorial records as the highly detailed sculptures, that India has the longest unbroken jewelry tradition of any nation on earth, as well as the greatest variety of jewelry forms, functions and techniques. For the period from the beginning of British domination to the present, there are many studies of particular regional and/or technical types and styles, and we will make no attempt to survey or summarise this material here. We shall content ourselves rather with a presentation of some of the notable features of the adornment associated with the period of the glory of the Mughal Empire, and their continuation into the later period, namely the 18th and 19th centuries.

Aside from whatever may have been the tradition at the time of the Mughal conquest in the 10th/16th century, we may safely assume that a considerable amount of Tīmūrīd tradition passed southward with the royal family, its treasures and entourage, and that Tīmūrīd tradition in turn represented an amalgamation of other Islamic, and to some extent Central Asian and Chinese traditions.

Our best evidence for the jewelry styles of the periods of the emperors Akbar until Awrangzīb (963-1119/1556-1707) are the miniatures painted under their patronage. A striking confirmation of the veracity of these paintings is afforded by a statement of Tavernier concerning what he saw during the reign of Awrangzīb (*Travels in India*, ii, 150), that there is "no person of any quality that does not wear a Pearl between two color'd stones in his Ear." Although the following paintings are somewhat earlier (e.g. Metropolitan Museum of Art No. 30.95.174, no. 11, "Akbar giving audience . . .," ca. 1590-1600, unpublished; and Metropolitan Museum of Art No. 55.121.10.29, portraits of three nobles, all of whom have this type of earrings, and a huntsman, from the Shāh Dīhān Album, period of Dīhāngīr, 1014-36/1605-27, unpublished), they invariably show earrings with a precious stone (ruby or emerald) between two pearls, confirming the style of earring described by Tavernier. The discrepancy of detail may be due to a change in the arrangement by Awrangzīb's time, or may result from a confusion on Tavernier's part, as he had just been describing a pearl in the emperor's collection, the largest perfectly round one he had ever seen and one for which the emperor was unable to find a mate. If he could have paired it, Tavernier says, he would have made of them earrings, each with a pair of rubies or emeralds on each side, "according to the custom of the Country" (*loc. cit.*). This preference for the combination of pearls, rubies and emeralds coincides with what was said above in section 1, and one sees the combination everywhere in Mughal

(as indeed, in Tīmūrīd, Šafawīd and Kādījār) paintings. The only other colour commonly seen is blue (sapphire), but this latter occurs much less often than the other three.

Of course, we know that from ancient times India was the land of precious stones, and that even stones which did not originate in India itself, such as the rubies of Burma, often found their way to other countries by way of India. Furthermore, India herself was a major market for stones from early times, even for those stones which had to come from considerable distance, such as the emerald (coming from Egypt). India and her immediate neighbours such as Ceylon, "Indo-China" and the mountains of Badakhshān produced an amazingly large variety consisting of most of the precious stones known up to this day. The *Ratnaparīkṣa*, or "Appreciation of gems", a compilation of Indian tradition about gemstones, their varieties, qualities, sources, etc., which was apparently compiled as a technical guide before the 6th century A.D. (L. Finot, *Les lapidaires indiens*, Paris 1896), exhibits a surprising degree of knowledge and a surprisingly systematic approach in dealing with a wide variety of stones. In it, we find the canonisation of the "nine gems": the ruby, the diamond, the cat's-eye (chrysoberyl), the "hyacinth" (zircon?), the topaz, the sapphire, the pearl, the coral and the emerald (Finot, *op. cit.*, 171). Despite this great variety, there is already expressed in this compilation a strong hierarchy of preferences, with the diamond considered first among gems. The order of treatment of our other major stones is: pearl, ruby, sapphire, and emerald.

Thus it is not at all surprising that we see Mughal rulers and noblemen represented as wearing earrings, turban ornaments, bracelets and necklaces of a variety of lengths and arrangements consisting almost solely of large pearls, rubies, sapphires and emeralds. For example, in Fig. 34 we see a painting from the Shāh Dīhān Album which depicts Dīhān with his son Shudjā'. Aside from the jewelry worn by the pair, which consists of pearls, emeralds and rubies, the painting is of additional interest as it shows Dīhān with a ruby between the fingers of his right hand and other rubies and emeralds in a dish held in his left hand. We are making no assumptions in interpreting the red stones as rubies, the green as emeralds, etc., as the following passage from Tavernier (*loc. cit.*) shows. He describes and offers a line drawing of a large pearl belonging to Awrangzīb: "Numb. 4. Is a great perfect pearl, as well for its Water as for its form, which is like an Olive. It is in the midst of a Chain of Emeralds and Rubies, which the Great Mogul wears; which being put on, the Pearl dangles at the lower part of his Breast."

Perhaps something should be said here about the diamond, in light of its mention in connection with the *Ratnaparīkṣa* as well as Tavernier's ample testimony not only to the presence of diamonds in the Ottoman Treasury (see above), but the great amount of mining, cutting and use of diamonds in India in his time (*op. cit.*, ii, *passim*).

As is well known, India was the great source of diamonds up until their discovery in Brazil and South Africa, and as the *Ratnaparīkṣa* and other early Indian texts indicate, the Indians were using the diamond as a jewel well before Muḥammad's time. Indeed, even as early an author as Pliny (Book xxxvii, 15) seems to speak of the diamond under the term *adamas* and he calls it the most valued of human possessions, having been for long only known to kings.

But he also seems to confuse it with other stones; and his assertion that it cannot be broken even by hammer blows on an anvil has the status of mere legend. He does speak of its use to engrave other stones and such usage probably has a more ancient history than we shall ever be able to establish.

According to Finot (*op. cit.*, p. xxx), certain of the early Indian texts with which he deals indicate that it is undesirable to cut diamonds and that the ideal form is the perfect octahedral crystal (*op. cit.*, p. xxvii). What is most important to notice here, however, is that the practice of cutting the diamond was known to them. Even as late as Tavernier's time (see ii, 56, of Ball's translation), such an expert on gems as he could say of cleaving diamonds (to avoid wastage by simply grinding away material) that the Indians "are much more accomplished than we are."

Al-Bīrūnī, cited by Wiedemann (*op. cit.*, 352), seems to offer contradictory information regarding the use of the diamond in the early Islamic period. He says on the one hand, that the people of Khurāsān and 'Irāk only use the diamond for drilling (and cutting) and poisoning, and on the other, that a "drachme" of diamond in one piece costs one thousand *dīnārs*, whereas if in small pieces the price is one hundred *dīnārs*. This price quotation seems to clearly indicate a gemstone usage, not an abrasive one, where only small pieces are used anyway. In any case, according to al-Bīrūnī in another place in his stone book (as cited in Haschmi, *op. cit.*, 28-9), the diamond is mentioned by poets of the Qājāhīlyya and the Umayyad period (Imru' al-Qays and Abu 'l-Nadīm respectively). Again from al-Bīrūnī (Haschmi, *op. cit.*, 13), in citing a treatise by Naṣr b. Ya'kūb al-Dīnawarī comes much more solid and detailed information, according to which the Buwayhid Mu'izz al-Dawla Aḥmad b. Buwayh (ruler in 'Irāk 334-56/945-67) gave his brother Rukn al-Dawla a ringstone of diamond which weighed three *mīḥkāls*. Furthermore, he says (*loc. cit.*) that Maṣūb b. Nuḥ al-Sāmānī (either Maṣūb I 350-65/961-76 or Maṣūb II 387-9/997-9) had several ringstones, of which one was a diamond, and that "one never saw a larger diamond".

Thus it seems fairly certain that the diamond was known as a gemstone throughout the Islamic Middle Ages. How these diamonds were cut and set we do not know. Even the Mughal miniatures show nothing which to our knowledge can be identified as a diamond. The earliest inscription on a diamond of which we are aware is one in the name of Niẓām Shāh with the date 1000/1591-2, now in the Iranian crown jewels (Meen and Tushingham, *op. cit.*, 46, unpictured "rose-cut" diamond, 22.93 ct.).

To return to our discussion of the forms of Mughal jewels, another ubiquitous item in Mughal paintings is finger rings which come in some variety, although their details are generally not possible to ascertain, except for the colour (and by deduction, the type) of the gemstones. One well-known type of ring that is identifiable is the archer's ring (discussed above under Ṣafawid Iran), which we know from many extant examples, usually of jade and often inlaid with gold and precious stones. Another form of jewel usually associated with men is the *subha* or string of prayer beads. These beads were of course made of every variety of material from wood and bone to stones of all sorts. The passage cited above (in section 1) about the inscribed stones in the Iranian crown jewels shows that Nādir Shāh had a *subha* with emeralds, and there are in fact representations in Mughal miniatures of precious stone *subha*. For

example, a painting of Akbar done in the period of Dījahāngīr (1014-36/1605-27), a detail from which is seen in Fig. 35, shows Akbar fingering a string of prayer beads consisting of large rubies, sapphires and pearls. Although the number of beads is not correct for Muslim prayer beads (being neither 33 nor 99), this must be attributed to a mistake, casual or otherwise, on the part of the artist.

Certain fashions already noted in 9th/15th to 13th/19th century Iran are also to be seen in the Mughal miniatures. Among these are the bandolier, which passes over one shoulder and down under the opposite arm, on which is strung various jewelled charms, including amulet cases of a form similar to that from Nīshāpūr (Fig. 1) and those in Iranian miniatures (see Fig. 33) and of which numerous Mughal examples from the 18th and 19th centuries exist (e.g. Metropolitan Museum of Art No. 15.95.137 and 138, unpublished).

In another miniature in which we can observe such bandoliers (Fig. 36), we see a profusion of clearly-depicted jewelry. Most of the ladies shown have chokers fitting high on the neck which consist of a central jewel (a large ruby or emerald set in a square or rectangular gold "box") held by three rows of pearls which complete the circuit of the neck. Another type of choker seen is one consisting of a series of closely-placed rectangular gold and stone jewels forming a continuous band bordered on top and bottom by a single row of pearls. Most persons also have intermediate-length pendants, apparently held by silk cords, which also consist of large central stones (rubies or emeralds) set in a simple rectangular or elliptical gold box, with pendant pearls. In addition, one sees the strings of large and small stone beads and pearls which are universally represented and described. We see here also a lady wearing the type of jewelled tripartite armband discussed above as seen on a statue from the Čihil Sutūn (extant Mughal examples from the 18th and 19th centuries include Metropolitan Museum of Art No. 15.95.40, 41 and 41.100.118, both unpublished). Other types of arm decorations seen in this rich miniature include: apparently solid gold armbands which fit at the elbow; a wide tapered close-fitting bracelet set with pearls, sapphires and rubies; another bracelet very similar to a choker described above, with a large ruby set in gold and held by two rows of pearls; and an upper-arm band which is similar to another of the chokers, with a series of stones set in rectangular gold settings and bordered with rows of pearls. Finally, we may mention some of the types of ear and nose rings seen. There are several examples of the type of earring with the stone between two pearls discussed above, but there they have also a pendant teardrop-shaped pearl. The same type of ring, but without the pendant pearl, occurs as a nose ring. The other major type of earring is a large, disc-like one of gold set with stones large and small and sometimes with a pendant pearl. Some of these (particularly that on the lady in the centre) bear a rather close resemblance to the star-like element on the head-ornament (Fig. 37a). The position also was similar since this element rested at the side of the head at the ear.

The detail of this piece (Fig. 37b) shows that granulation was an art which continued at a high technical and artistic level in India. This technique has existed in India from at least the 1st-2nd centuries A.D., as the jewelry excavated at Sirkap, Taxila, now in the Central Asian Antiquities Museum, Dihlī, shows (see *The art of India and Pakistan*,

catalogue of an exhibition held at the Royal Academy of Arts, London 1947-8, ed. Sir Leigh Ashton, New York [1948?], figs. 180 and 186).

The way in which the elements in the necklace from Taxila (Ashton, *op. cit.*, fig. 180) fit together almost in the manner of a jigsaw puzzle has striking parallels in any number of 18th and 19th century Indian necklaces, (one example of which is shown in Fig. 38). In these and a myriad of other ways, the jewelry art of India displays an astounding tenacity for the preservation of traditions.

Another striking demonstration of this traditionalism is to be found in the pair of bracelets in Fig. 39. Bracelets of this type are well-known and exhibit an ingenious type of pivoting clasp closed with a threaded pin. The universally-used type of clasp pin in Islamic jewelry outside India and in one or two isolated examples of the 8th/14th century, is one which is held in place by friction. But a pair of bracelets found at Pusztá Bakod in Hungary (now in the National Museum, Budapest, see Franz M. Feldhaus, *Die Technik der Antike und des Mittelalters*, Potsdam 1931, 221-2 and Figs. 252 and 254; and M. Rosenberg, *op. cit.*, i, 123 and Figs. 141-3) and dating from the period of the tribal migrations (perhaps 5th-7th centuries A.D.), displays not only terminals of snout-to-snout beasts in a manner very reminiscent of our Indian ones, but they, like the Indian ones, are closed by a counter-clockwise threaded screw. This type of screw closure is found on a variety of types of Indian jewelry, and almost invariably the threads are made not by cutting but, like those on the much earlier bracelets just mentioned, by soldering on to the pin and into the hole which receives it coils of wire with regular spaces between (Feldhaus, *op. cit.*, 221-2, traces the screw closure in jewelry back to at least the 5th century A.D., as it is found in a fibula from the grave of Childerich, d. 481). It should be noted that all of the above mentioned jewelry found in Europe which exhibits the screw closure is of the type with hammered-in garnets, a type which was widespread in Europe and Asia between about the 4th and (depending on the region) the 10th or 11th centuries. The screw pin may have come to India with some of these migrating peoples.

Our pair of bracelets exhibits two other features for which Mughal and post-Mughal India is justly celebrated. The white jade shanks are inlaid with gold forming graceful floral patterns, the leaves and flowers of which are formed by stones set into the gold. Although sporadically practised in Turkey and Iran, possibly under Mughal influence, this art in those areas did not rival that in India either in level of technique and artistry or in longevity.

The gold terminals of these bracelets are covered with brilliant enamels which demonstrate a masterful control of the medium. Jaipur is best known for this type of enamelling, which is perhaps best described as "encrusted", in which three-dimensional forms are covered. Additionally, details are sometimes cut into the metal under transparent enamels to contribute to the liveliness of the effect. The literature on the subject of Indian arts and crafts from the 18th to the present century contains much information on Indian enamelling, and we will not dwell upon it, beyond saying that the art here reached one of its greatest consummations. These enamels, of course, like other precious techniques from time immemorial, adorned and jewelled a whole array of objects which were not jewelry in the modern sense such as arms, thrones, utensils and the like, and as such they constitute a branch of jewelry.

As we suggested at the outset, the subject of Indian jewelry is an enormous and complex one, especially because of the wealth of evidence in the sculptures and paintings and the variety of recent and contemporary forms. And this situation, combined with the great dearth of known pre-18th century pieces, leaves one in a great state of puzzlement about where all the older pieces went. We can of course explain this to some extent by remembering that even within families it was customary to reset stones in the latest style, especially after passage from one owner to another, and in the process to melt down the precious metals for re-use. To cite a particularly notorious case of radical and wholesale change of ownership, that of the Mughal royal treasures, we know that most of what was on hand when Nādir Shāh took Dīhli was immediately transformed into ingots for ease of transport (Meen and Tushingham, *op. cit.*, 11); and of course the stones and pearls were hauled away, either to be remounted or simply deposited in the Iranian treasury. Such "radical and wholesale changes of ownership" have of course been taking place throughout Islamic (and other) history, and we can well imagine that many of the stones that were in the Mughal treasury at the time of Nādir Shāh's visit had in turn formed part of the treasuries of various earlier houses. The Mughal treasury may for instance have included stones that had once belonged to some 'Abbāsīd or Fāṭimīd caliph. Such would be impossible to prove in the absence of inscriptions on the stones; but there are tantalising bits of information to be found. For example, when one compares the weight reported (23 *mithkāls*, which by Kahle's precise formula of one *mithkāl* = 4.414 gr.—and not 4.5 gr., to which he rounds it off—gives 101.5 gr. or 507.5 carats) for a large balas ruby which was part of the enormous loot dispersed from the Fāṭimīd treasury during the chaotic period in al-Mustansīr's reign (see Kahle, *op. cit.*, 336, 356) with that of the largest known balas ruby in the world, now in the Iranian crown jewels (reported as 500 ct. by Meen and Tushingham, *op. cit.*, 46, 47, 67), one is struck by the agreement in weight. Of course it may be a coincidence, but the embers of hypothesis are fanned when we know that Nāṣir al-Dīn Shāh told Dr. Feuvrier, his physician in the 1890s, that "the hole . . . was pierced to take a cord by which it hung around the neck of the Golden Calf" and that "this ruby came from a king of Abyssinia, and had been brought back from India by Nādir Shāh" (Meen and Tushingham, *op. cit.*, 67).

Despite the various reasons for and the mechanisms of the transformation and transfer of jewels from one period and region to another, one is still left in a quandary. In the case at hand, where are all the pieces of the period which were not in the Mughal royal treasury? Surely some were kept as family heirlooms or got buried, to be found later?

We must believe that future excavations, in conjunction with heightened awareness on the part of researchers in museums and on historical texts, will continue to provide information on this as well as other periods where we are faced with these hard-to-explain lacunae.

#### 4. The final phase of the tradition (18th and 19th centuries)

The conservatism in style which has been noted as a major characteristic of the three broad periods covered so far continues in the final phase of the Islamic jewelry tradition which is to be treated here.

In Kādjār Iran, bandoliers were still fashionable

for men and women (S.J. Falk, *Qajar paintings*, London 1972, pls. 2, 26, 46, 47), although instead of the metal amulets and pendants sometimes set with stones seen on the Şafawid examples, the Kādjar ones seem to have consisted solely of pearls or of elements composed of pearls and/or precious stones. The style of the belts in Iran during this period remained essentially the same.

Strings of beads were still worn on the wrists (Falk, pls. 26 and 43), in addition to bracelets composed of precious stones set into square bezels hinged one to the other, as well as plain gold bangles (Falk, pls. 17, 23, 25).

One of the latter paintings referred to above (that in pl. 17) also shows a continuation of the vogue for a string of pearls framing the face. In the Kādjar period, however, the pearls only appear to have extended from ear and the strings are longer so as to serve as necklaces (Falk, pls. 19, 20). There was also an elaboration of jewelled head ornaments, especially for women, in the Kādjar period. These were worn either pendant from their head cloths or in combinations serving as simple or elaborate head-dresses (Falk, pls. 5-7, 18-21). An example of one of these pendant elements can be seen in Fig. 40a-b. The small and large elements are hinged together and a ring is attached to the top of the former. The two projecting ornaments are removable, for decorating the top of a feather (Falk, pls. 5, 20). A similar object, in this case used to decorate the foreheads of Jewish and Muslim brides in the region of Bukhārā, can be seen in Fig. 41a-b. Influence from the Indian sub-continent is very obvious on this subject, as on much Kādjar jewelry, particularly in the manner of setting the stones.

A very popular type of earring in Iran during the 18th and 19th centuries consisted of a series of hemispheres or cones, hung one below the other, with pendant elements (Falk, fig. 1). These were executed in enamel, sheet metal or in filigree, with either pendant pearls or balls, repoussé- or wire-decorated metal sheets of a combination of both (see Fig. 42). A prototype for this kind of earring is to be found in 1st or 2nd century India (The Royal Academy of Arts, London, *The art of India and Pakistan*, pl. 22, No. 185). Another popular earring type can be seen in Fig. 43. This variety consists of a semi-circular lower part often decorated with dragon-headed terminals and spherical or knob-like protrusions around its circumference (Falk, figs. 3, 4). Again, these were executed alternatively in enamel, sheet metal and filigree.

A very fine example of the ubiquitous Kādjar armband, referred to earlier in connection with the Şafawid example, can be seen in Fig. 44a-b, here executed in gold, enamel and precious stones.

Aside from a continued vogue for strings of beads at the neck (Falk, pls. 14, 38), pendants or roundels set with precious stones on strings of pearls or beads were a popular necklace type during the Kādjar period (Falk, fig. 7, pls. 17-19). The last painting also shows a necklace bearing a central element very similar in shape to that seen in Fig. 27.

To the best of our knowledge, aside from the new pieces in the Topkapı Hazine (most of which are either turban ornaments or belt buckles of well-known types), very little Ottoman jewelry of any significance made and used in Turkey itself has survived from the period in question. However, we can learn a considerable amount about fine Ottoman jewelry of this period from that made in the more distant regions of the Ottoman empire and even from Morocco.

When one compares pieces which can be attributed to Istanbul (*Collection Hélène Stathatos. ii. Les objets byzantins et post byzantins*, Limoges 1957, pl. XI, nos. 79, 80, 82 and pl. XIII, nos. 107-9) with the gold jewelry from Morocco of the same period, one feels quite justified in stating that the provincial craftsmen were drawing at least some of their inspiration from the Turkish capital. The similarity is so great, in fact, that one can safely use such Moroccan pieces to fill in the large gaps in the Istanbul jewelry.

The style of the gold work on the Moroccan head ornaments in Fig. 45 is very close to that on the diadem and the oval pendant in the Stathatos collection. That iconography was also shared can be seen on the necklace in Fig. 46. The double-headed bird, whose body is set with stones and from whose tail extend pendants of pearls and precious stones, is very close to a pendant in the Stathatos collection. The two enamelled cylindrical beads on this necklace, however, are descendants of those seen on the Naşrid necklace in Fig. 28.

The necklace in Fig. 47a-b combines precious stones on the obverse with enamelling on the reverse, which is another feature of the Istanbul jewelry.

The largest body of Muslim North African material, however, has a series of styles all its own assuming a myriad of forms and drawing its inspiration from a variety of periods and areas. There is a rather detailed literature on the subject which can be studied by those with a particular interest (see *Bibl.* below). A study of the literature on this jewelry, which extends into the 20th century, as well as the later Indian jewelry, provides insights into the ways various earlier pieces and types were worn, and gives an idea of their overall effect. The same can be said for ethnographic studies, which often provide the best documentation of recent and contemporary jewelry from the various regions whose earlier jewelry productions have been discussed above.

(M. KEENE and M. JENKINS)

**DJAWHARĪ, TAŤĀWĪ**, modernist Egyptian theologian. He was born in 1278/1862 in the village of Kafr 'Awaḍ Allāh Hidjāzī in the Nile Delta to the south-east of al-Zakāzīk. He studied at al-Azhar [q.v.] and at Dār al-'Ulūm [q.v.] from 1889 until 1893 when he graduated. After his graduation, he worked as a school-teacher at various primary and secondary schools until his retirement in 1922, except for the period between 1908 and 1914 when he taught at Dār al-'Ulūm (ethics, *tafsīr*, *ḥadīth* and grammar) and at the Egyptian University (Islamic philosophy).

He is the author of an impressive oeuvre of nearly thirty published books—some of which were translated into a number of other Oriental languages—and numerous articles on a variety of subjects published in different periodicals throughout the Islamic world. The majority of his writings constitute an effort to show how the teachings of Islam, and in particular, the contents of the Qur'ān, were in accordance with human nature, and with method, theory and findings of Western modern (19th and early 20th century) science, with which he had familiarised himself mainly through popular accounts in English.

His principal work is his Qur'ān commentary, *al-Djāwāhīr fī tafsīr al-Kur'ān al-karīm*, Cairo 1923-35, in 26 volumes, which was analysed extensively by J. Jomier, *Le Cheikh Taṭṭāwī Jawharī (1862-1940) et son Commentaire du Coran*, in *MIDEO*, v (1958), 115-74. The scope and nature of Taṭṭāwī's writings and the extensive learning displayed by him, drew the attention of European orientalists like D. Santillana, M. Hartmann and Carra de Vaux, who gave mostly eulogising analytical accounts of some items (cf. Carra de Vaux, *Les penseurs de l'Islam*, Paris 1926, v, 275-284; M. Hartmann, *Schaich Taṭṭāwī Dschauharī. Ein moderner ägyptischer Theolog und Naturfreund*, in *Beiträge zur Kenntnis des Orients*, xiii (1916), 54-82; D. Santillana, *Kitāb ayna 'l-insān* (review), in *RSO*, iv (1911), 762-3).

Throughout his life, Taṭṭāwī Djawharī showed a theoretical as well as practical interest in spiritism, as appears from passages in many of his writings and in particular from his books *Kitāb al-Arwāḥ*,

Cairo 1910, 1920, 1931, *Barāʾat al-ʿAbbāsiyya Ukht al-Rashīd*, Cairo 1936, which is a defence of al-ʿAbbāsa's innocence of adultery, in defiance of the contentions presented by Djirdjī Zaydān in his similarly-named novel, written upon instruction from the spirit of Harūn al-Rashīd, and *Ahlām fi ʿl-siyāsa wa-kayfa yataḥakkak al-salām al-ʿamm*, Cairo 1935, in which he presents in a series of revelations an all-enfolding view of the fundamental order, in accordance with which human existence should ideally be. Tantāwī Djawharī was an active member of the spiritistic association of Aḥmad Fahmī Abu ʿl-Khayr (d. 1960) known as *Djamʿiyyat al-Ahrām al-Rūḥiyya*. Because of this profound commitment to spiritism, his writings were criticised and shunned by Azhar circles (cf. ʿAbd al-Laṭīf Muḥammad al-Dimyāṭī, *al-Wisāʾa al-rūḥiyya*, Cairo 1368/1949, 57-9), but no formal action aimed at the prohibition of any of his books has ever been taken. Outside Egypt, however, his works were forbidden for some time at the end of the 1920s by the Dutch censor in the Netherlands Indies (cf. *Mirʾat al-shark*, *Madjalla adabiyya akhlākīyya idjtimāʿiyya* (Djokjakarta), iv-v (Oct.-Nov. 1928), 63-5), while his unconventional Kurʿān commentary was banned in Saudi Arabia (cf. Muḥammad Ḥusayn al-Dḥahabī, *al-Tafsīr wa ʿl-mufasssīrūn*, 3 vols., Cairo 1961-2, iii, 174).

He was the official Egyptian candidate for the Nobel Prize (cf. *al-Risāla* (Cairo), vii (1939), 188, 326) when he died in January 1940.

*Bibliography:* In addition to the references given in the text, see the literature mentioned in the article by Jomier. The latter article contains a biography of Tantāwī pieced together from the biographical material scattered throughout the *tafsīr* and supplemented by oral information obtained by Jomier from members of Tantāwī's family in the early 1950s. See for additional biographical material, F. de Jong, *The works of Tantāwī Jawharī (1862-1940). Some bibliographical and biographical notes*, in *Bibliotheca Orientalis* xxxiv/5-6 (1977). This article also gives details about Tantāwī's books not mentioned by Brockelmann, *GA*, S III, 329 ff. and in the article by Jomier. In addition, see Ilyās Zakhūrā, *Mirʾat al-ʿasr fi taʾrīkh wa-nusūm akābir riḍāl Mīsr*, Cairo 1897, ii, 225-8; C. C. Adams, *Islam and modernism in Egypt. A study of the modern reform movement inaugurated by Muḥammad ʿAbduh*, London 1933, 245-7 (based upon M. Hartmann's article mentioned in the text); ʿAlī al-Djanbalāṭī, *Fī dhikrā Tantāwī Djawharī*, Cairo 1962, and Raʾūf ʿUbayd, *al-Insān rūḥ lā ḡasad*, Cairo n.d., 299 ff.

**DJĀWĪDHĀN KHIRAD** (P.) "eternal wisdom", the title of a kind of Iranian *Fürstenspiegel* whose earliest known mention, occurs in a work by al-Djāhīz, now lost, containing the memorable sayings of wise men and poets (see al-Khafādjī, *Tīrāz*, 108), the *Istīlāl al-fahm*. Judging by an extract which has been preserved, this author recounts, on the authority of al-Wākīdī, the conditions in which the *Djāwīdhān khīrad*, the spiritual testament written "just after the Flood" by the mythical king Hūshang [q.v.] for his sons and successors, was allegedly rediscovered. When al-Ma'mūn was proclaimed caliph in Khurāsān, the king of Kābulistān sent to him a *shaykh* called Dhūbān bearing a letter in which the ruler stated that he was sending him the most magnificent present in the world in the person of this wise man

who, adds al-Djāhīz, used the *sadjīʿ* of the diviners (!) and gave apposite replies to questions put to him. When al-Ma'mūn arrived in Baghdād, Dhūbān pointed out to him the hiding-place at Ctesiphon/al-Madā'in of a casket of black glass containing a piece of brocade in which were preserved one hundred leaves. Dhūbān informed the caliph's secretary, al-Ḥasan b. Sahl [q.v.], that it was the *Djāwīdhān khīrad* translated from the language of Hūshang into Persian (= Pahlavi) by Gandjvar b. Isfandiār, vizier of the king of Īrānshahr. Al-Ḥasan b. Sahl had each leaf read out and explained, one after the other, by a certain al-Khīdr/al-Khaḍīr b. ʿAlī, then put the text into Arabic. However, since the leaves as given to him were in a state of disorder, he had to pass by a great part of them. The tradition adds that al-Ma'mūn, when he heard about this translation, could not prevent himself from expressing his admiration.

Such is the legend concerning the discovery of the *Djāwīdhān khīrad*, the fate of whose Pahlavi original is unknown. Neither is anything known about what happened to al-Ḥasan b. Sahl's Arabic text, which must have been in circulation for a certain period before being itself translated into Persian. R. Henning (in *ZDMG*, cvi [1956], 73-7) thinks that it could possibly have been preserved in the *Yatimat al-sultān* attributed to Ibn al-Mukaffāʿ (ed. Kurd ʿAlī, in *Rasāʾil al-bulaghāʾ*), Cairo 1365/1946, 145-72) which displays several points in common with the *Djāwīdhān khīrad* of the historian-philosopher Miskawayh [q.v.].

The latter avers that, after having been struck, when a youth, by the enthusiastic judgment on the *Djāwīdhān khīrad* by al-Djāhīz, he felt compelled to bring it to light again, and that his untiring researches at last enabled him to find a copy with a *mōbedhān mōbedh* of Fārs. Even conceding that this information has a base in reality, it is regrettable that Miskawayh gives no indication as to what language it was written in. It might be supposed *a priori* that it was a copy of the Pahlavi original, but such a hypothesis seems hardly plausible if one gives attention to the complete harmony, in Arabic, between the wording of an important number of sentences of the *Yatimat al-sultān* and this author's own *Djāwīdhān khīrad*, for in this latter case, Miskawayh certainly did not retranslate a Pahlavi text, even though he was capable of this, as his usage of other Iranian texts inaccessible in Arabic demonstrates.

The interest of this anthology of Miskawayh (ed. ʿA. Badawī, Cairo 1952, under the title *al-Hikma al-khālida*) consists essentially in the author's clearly-manifested intention of inculcating that "among all the nations, intelligences concur in following the same way, and neither differ according to the countries involved nor change with the elapsing of time", after having pinpointed many resemblances between the wisdom of the ancient Iranians, illustrated by the document which he claims to have rediscovered and the Pahlavi texts which he has utilised, and that of the Indians, Arabs and Greeks. In order to achieve his aim, he conveys to the reader "a rambling succession of moral reflections or philosophical discourses borrowed from various sources" to which the libraries of Ibn al-ʿAmīd and ʿAḍud al-Dawla [q.v.] had enabled him to find easy access (on these sources, see M. Arkoun, *Contribution à l'humanisme arabe au IV<sup>e</sup>/X<sup>e</sup> siècle: Miskawayh philosophe et historien*, Paris 1970, 146-58; from a more general point of view,

Arkoun has devoted an extended study to Miskawayh's work, *Introduction à la lecture du Kitāb "Jāwīdān khīrad"*, as a preface to the Persian version of Shushtarī, in *Wisdom of Persia*, xvi, Tehran 1976, 1-24). Miskawayh's extensive readings provided him with a rich documentation on the wisdom of the Persians (5-88), the Indians (89-100), the ancient Arabs (101-208), the Greeks (282-4) and the "modern Muslims" (285-342). Especially worthy of note is the Table of Cebes (229-62), and this Arabic adaptation has since a long time back attracted the attention of orientologists (Span. tr. P. Lozano y Casela, *Parafraſis arabe de la Tabla de Cebes*, Madrid 1793; ed. and tr. Suavi, *Le Tableau de Cèbès ou l'Image de la vie humaine*, Paris 1873; R. Basset, *Le Tableau de Cèbès*, Paris 1898; and see Arkoun, *Contribution à l'humanisme arabe*, 158-60).

(CH. PELLAT)

**DJAWZ** is the nut in general, and in particular the class of the walnut (*Juglans regia* L.), rich in varieties. Term and object are of Persian origin (*gawz*), as correctly recognised by the early Arab botanists (Abū Hanīfa al-Dīnawarī, *The book of plants*, ed. B. Lewin, Uppsala-Wiesbaden 1953, 86, l. 14). They also relate that the walnut-tree is widespread in the Arab peninsula, especially in the Yemen, and that its wood is appreciated because of its firmness; shields made from wood of the walnut-tree are mentioned also in poetry because of their hardness: *ṣahīfatu tursin ḡawzuhā lam yuthakkabi* (*op. cit.*, 16, l. 2 and 86, l. 17; *Dhayl Dīwān Ibn Mukbil*, ed. 'Izzat Ḥasan, Damascus 1381/1962, no. 4). In Islamic times, Iran remained an important area for the cultivation of the walnut-tree. Geographers occasionally describe the differences in climate in view of the trees that are found: walnut-trees grow in cold regions, date-palms in hot regions, according to Muḡaddasī, 459, 463. For the cultivation areas in particular, see P. Schwarz, *Iran im Mittelalter nach den arabischen Geographen*, new impr. Hildesheim 1969, 29, 38, 72, 98, 159, 272, 421, 882, and B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 402, 406. In Andalusia the walnut was also called by the Romance term *nuez* = *nuwāḡī* in Anonymous, *Nuruosmaniye* 3589, fol. 88a, l. 24, *nūḡī* in M. Asīn Palacios, *Glosario de voces romances*, Madrid-Granada 1943, no. 383.

Since the walnut had allegedly been imported by the Persian kings, the Greeks called it *κάρυα βασίλικά* (plur.), *kāryā bāsīlikā* (and variants) in the Arabic translation of Stephanos. It was considered hard to digest and noxious to the stomach; when taken on an empty stomach, it causes nausea, expels tape-worms and, when taken with figs and rue, it is effective against deadly poisons. In the course of the centuries, the Arab physicians and pharmacists acquired considerable new knowledge about the healing power of the nut; the fresh fruit, crushed and mixed with honey, is a proved collyrium against the dimness of the eyesight; shell and leaves are astringent and therefore effective against the trickling of urine. By applying a mixture of walnuts and onions, the poison introduced by the bite of a

rabid dog can be extracted. Blonde hair can be dyed black by a mixture of pulverised iron and the fresh nut shells, crushed while still green. Other preparations are effective against psoriasis; by washing the mouth with decoctions, soft gums are strengthened. The juice of the leaf removes suppurations of the ear, the ashes of the shell staunch internal and external bleedings, and the fruit pulp of old, grilled nuts is effective against boils on the head. Walnut oil acts as a solvent and alleviates pain. Certain noxious secondary effects of the walnut, such as headaches and yellow gall, can be avoided by taking oxymel or by sucking sour pomegranates, etc. It was generally believed that sleeping under a nut-tree had a slimming effect.

In a more general sense, *ḡawz* is synonymous with *thamar* and indicates the fruits of a whole range of plants of oriental origin. The latin *nux* may have taken this meaning from Arabic pharmacology in the same way as *granum* took the meaning of *habb*; one might compare the combinations of these terms in Dozy, *Suppl.*, i, 233 and 239-41 respectively. Here may be enumerated, after Ibn al-Bayṭār, *Djāmi*, i, 175-8, tr. Leclerc, nos. 526-38, only the fruits most frequently combined with *ḡawz*: 1. *ḡawz bawwā* or *ḡawz al-ṭīb*, the nutmeg, *Nux moschata*.—2. *ḡawz māḡhīl*, the thorn-apple, *Datura stramonium* L.—3. *ḡawz al-ḡay'*, the nux vomica.—4. *ḡawz al-ruḡa'*, another kind of nux vomica, *Alcaea immanensis* Forsk.—5. *ḡawz al-ḡhums*, an Indian nut which is not further definable.—6. *ḡawz 'abhar*, undefined.—7. *ḡawz al-ḡaṭā*, a kind of succulent herb, *Sedum cepaea*.—8. *ḡawz al-zanḡī* (perhaps to be read *al-riḡ* because it is said that the fruit is effective against *al-ḡawlandī al-riḡī*, the windy colic), probably *Sterculia acuminata*.—9. *ḡawz al-anḡār*, probably synonymous with *ḡawz al-ḡaṭā*, above no. 7.—10. *ḡawz al-ḡhark*, the Abyssinian nut, *Unona aethiopica* (?).—11. *ḡawz al-ḡawḡhal*, an Indian nut, *Gardenia dumetorum* (?).—12. *ḡawz armāniyūs*, the Abyssinian nut, = 10 (?).—13. *ḡawz ḡundum*, fruit of the *Garcinia mangostana*. For further material, see Dozy, i, 233; M. Meyerhof's commentary on Maimonides, *Sharh asma' al-ḡukḡār*, no. 82; F. A. Flückiger, *Pharmakognosie des Pflanzenreiches*<sup>3</sup>, Berlin 1891, Index s.v. Nux.

(A. DIETRICH)

AL-DJAWZĀ' [see MINTAQAT AL-BURŪD].

AL-DJAYHĀNĪ, surname of viziers of the Sāmānids [q.v.], of whom one at least wrote a famous *Kūtāb al-Masālik wa 'l-mamālik* which has never been found in spite of the hopes raised by S. Janicsek (*al-Djayhani's lost Kitab al-masalik valmamalik: is it to be found at Mashhad?* in *BSOS*, v/1 (1926), 14-25; see also V. Minorsky, *A false Jayhānī*, in *BSOAS*, xiii (1949), 89-96). The identity of the author of this work poses a problem difficult to solve.

Ibn Faḍlān (*Risāla*, ed. A.Z.V. Togan, *Ibn Faḍlān Reisebericht*, Leipzig 1939, text § 4, tr. 6, tr. M. Canard, in *AIEO Alger*, xvi (1958), 54) relates that a Djayhānī, who bore the title *al-shaykh al-'amid*, obtained for him an audience with the young Sāmānid Naṣr b. Aḥmad (301-31/913-43 [q.v.]) and arranged for his lodging at the time of his journey to Bukhārā in 309/922; he refers only to the *nisba* of this individual and makes no mention of any literary activity whatsoever. In 336/947, when revising the *Murūdj*, al-Mas'ūdī as yet had no knowledge of the *Kūtāb al-Masālik*, but he mentions it in the *Tanbih* (ed. Šāwī, 65) some years later (before 346/957), and summarises its contents: a description of the world, marvels, cities, capitals, seas, rivers, peoples and the places that they inhabit, without reference to the relevant itineraries (cf. Yāqūt, *Buldān*, i, 7), and without passing judgment; for him, the name of the author is Abū 'Abd Allāh Muḥammad b. Aḥmad.

Ibn al-Nadīm, in 377/987-8, four times mentions a Djayhānī (*Fihrist*, Cairo ed. 198<sup>2</sup>, 219, 473). In the first passage, Abū 'Abd Allāh b. Muḥammad b. Naṣr, vizier of an unspecified ruler (*šāhib*) of Kḥurāsān, is the author of the *K. al-Masālik*, of a *K. al-Rasā'il* written wholly on behalf of a secretary of state, and of two other works, the titles of which are unclear; without doubt the titles that should be expected (cf. Dodge's translation, i, 302) are: *K. al-'Uḥūd li 'l-khulafā' wa 'l-umarā'* (which was apparently a formula) and *K. al-Ziyādāt fi K. al-Nāshī' fi 'l-Makālāt* (which might have been a supplement to the *Makālāt* of al-Nāshī' al-Akbar, a text of which has been published and annotated by J. van Ess in *Frihe mu'tazili-tische Häresiographie*, Beirut 1971). Immediately after, Ibn al-Nadīm devotes to al-Balkhī (d. 322/934 [q.v.]) quite a long article in which he describes the circumstances under which the latter lost the protection of the vizier of Naṣr b. Aḥmad, Abū 'Alī al-Djayhānī, who was a dualist (but Abū 'Alī was no longer vizier at the time of the death of al-Balkhī; see below); D.M. Dunlop, (*EF*<sup>2</sup> art. AL-BALKHĪ) makes this Djayhānī "the son of the geographer". Subsequently (219) Ibn al-Nadīm accuses Ibn al-Faḳīh [q.v.] of having plagiarised al-Djayhānī's book; apparently it is the *K. al-Masālik* which is in question, but this source is not mentioned in the *K. al-Buldān*, which is extant, and it is impossible to assess the degree of truth in an assertion of this kind. Finally, in the fourth passage (473), it is Muḥammad b. Aḥmad al-Djayhānī who appears among those ostensible Muslims who were secretly *zindīks* [q.v.]; it is not impossible that this Djayhānī is the same as the one previously described as a dualist and also the same as the one whom al-Tawḥīdī (d. 414/1023) quotes (*Imtā'*, i, 78-90) in order to refute the opinions violently hostile to the Arabs which this writer had expressed "in his book".

So far, we possess only a date (309/922), two *kunyas*, Abū Allāh and Abū 'Alī, and two names, Muḥammad b. Aḥmad and Aḥmad b. Muḥammad.

With the same *kunya* and the same name as those in the *Tanbih* of al-Mas'ūdī, Yāqūt (*Udabā'*, xvii, 156-9) introduces the Djayhānī who exercised to some extent the functions of regent at the court of the Sāmānid Naṣr b. Aḥmad from the time of his accession in 301/913; it is evidently of this vizier that Ibn Faḍlān speaks (see above). Yāqūt, who was well acquainted with the *K. al-Masālik* (*Buldān*, i, 7 and 394, with reference to Soghdia), does not mention its title and confines himself to indicating the *kunya* of the author, Abū 'Abd Allāh; it is in any case remarkable that, in his article on Djayhān (ii, 181), he mentions only one Djayhānī, Abū 'Abd Allāh Muḥammad b. Aḥmad, vizier of the Sāmānids at Bukhārā and the author of works, in regard to which he refers the reader to his *K. al-Akhbār*. It is nevertheless under the name of Abū 'Abd Allāh Aḥmad b. Muḥammad b. Naṣr that, copying Ibn al-Nadīm, he places, in his *Mu'djam al-udabā'* (iv, 190-2), the biographical article regarding the Djayhānī who wrote the *K. al-Masālik*; he borrows from a *K. Farid al-tarikh* on the history of Kḥurāsān some verses composed against this vizier, of whom he says that after having served under Maṣṣūr b. Nūh (350-65/961-76 [q.v.]), he was dismissed by Nūh b. Maṣṣūr (366-87/977-97 [q.v.]) in 367/978. For the first time, we have two dates: 301 and 367. Al-Šafādī (*Wāfi*, ii, 80-1, no. 389, and viii, 53-4, no. 3463) copies, under the same headings (in other words, respectively, Aḥmad and Muḥammad) the two articles of Yāqūt which he nevertheless considers suspect; the correct reading seems to him to be Aḥmad b. Muḥammad. Hādjdjī Khalīfa (no. 1664) opts for Abū 'Abd Allāh Aḥmad b. Muḥammad, but Kaḥḥāla, while following this last biographer (*Mu'djam al-mu'allifin*, ii, 165) and attributing to Aḥmad, who was still alive in 367/978, the *K. al-Masālik*, the *K. al-Rasā'il* and the *K. al-'Uḥūd*, has no scruples about a contradiction and makes Abū 'Abd Allāh Muḥammad b. Aḥmad (ix, 25) the author of the *Rasā'il* and the *Masālik*, following the *K. Hadiyyat al-'arīfn* of Ismā'il Pasha al-Baghdādī.

It is not unusual for the commonness of names such as Muḥammad and Aḥmad to lead writers and their copyists astray, but here, we have the clear impression that the Sāmānids employed three viziers bearing the *nisba* of al-Djayhānī: the first (I), who served in the entourage of Naṣr b. Aḥmad at his accession, must have been called ABŪ 'ABD ALLĀH MUḤAMMAD B. AḤMAD B. NAṢR; he was replaced, no doubt in about 310/922, by Bal'amī [q.v.], Abū 'l-Faḍl Muḥammad b. 'Ubayd Allāh, whose successor was ABŪ 'ALĪ MUḤAMMAD B. MUḤAMMAD AL-DJAYHĀNĪ (II); this last was vizier from 326 to his death in 330/937-42 (Ibn al-Athīr, viii, 283), that is, at the end of the reign of Naṣr b. Aḥmad, and there is no reason to suppose that he was not the son of (I); no doubt it was his own son, ABŪ 'ABD ALLĀH AḤMAD B. MUḤAMMAD B. NAṢR (III) who was deprived of his office, according to Yāqūt, in 367/978, and replaced by al-'Utbi.

Among these three individuals, who clearly seem to belong to the same family, one should attempt to ascertain which is the author of the *K. al-Masālik* (the other three works mentioned are too little known to be taken into consideration). V. Minorsky (preface to the *Hudūd al-'ālam*, xvii), V.V. Barthold (*ibid.*, 16, 23) and A. Miquel (*La géographie humaine du monde musulman*<sup>2</sup>, Paris-The Hague 1973, xiii-xxiv) opt, with D.M. Dunlop and Sarton (*History of science*, i, 635-6), for no. I, which seems however unlikely, since it is probable that his book would

have been known to al-Mas'ūdī—who is in fact the only one to refer to the name of Muḥammad b. Aḥmad—before the revision of the *Murūqī* (332/943). The association of no. II with al-Balkhī would incline us to attribute the *K. al-Masālik* to him, but his *kunya* of Abū 'Alī rules out such an identification, since the author of this work is always Abū 'Abd Allāh.

In these circumstances, it is legitimate to suggest, as a hypothesis, that the *K. al-Masālik* is a family work, perhaps begun by Muḥammad b. Aḥmad (I), continued by his son Muḥammad b. Muḥammad (II) and completed by his grandson Aḥmad b. Muḥammad (III) in the years immediately following 330/941-2. Examples of this kind are not rare in Arabic literature (see AL-BARKĪ in Suppl., IBN SA'ĪD AL-MAGHRIBĪ, etc.) and it is probably the plurality of authors which gives rise to confusions which the other exploitable sources do not enable us to solve, although they supply some information regarding the work in question.

Ibn Ḥawqal (writing in ca. 375/985) declares (*Sūrat al-arḍ*<sup>2</sup>, text 329, tr. Kramers-Wiet, 322) that he took with him in the course of his travels, which certainly began in 331/943 but stretched over a long period, the books of Ibn Khurradādhbih, of al-Djayhānī and of Qudāma, but he regrets possessing the first two which have monopolised too much of his attention, and he does not seem to rate them very highly, although he does not hesitate to exploit al-Djayhānī (453/438) insofar as regards Khurāsān, visited by him in the third quarter of the 4th century. Al-Muḥaddasī (375/985), who also utilises him on a number of occasions, is more explicit; in his *Aḥsan al-takāsim* (3-4; tr. Miquel, Damascus 1963, §§ 10-11), he describes Abū 'Abd Allāh al-Djayhānī (without further qualification) as a philosopher, astronomer and astrologer and adds that he gathered together people "who were acquainted with foreign countries in order to inquire from them concerning the different states, their resources, their access routes, the height at which the stars revolve there, and the position occupied there by the shadow... For him this was a means of conquering these countries, of getting to know their resources and of perfecting his knowledge of the stars and of the celestial sphere". While acknowledging his merits, al-Muḥaddasī seems subsequently to reproach al-Djayhānī for having developed at length the physical geography of the countries described, thus neglecting some important facts. Finally, Gardīzī, who was writing between 440 and 443/1049-52, confirms al-Muḥaddasī's suggestion by declaring (*Zayn al-akhbār*, ed. Nāzīm, Berlin-London 1928, 28-9) that al-Djayhānī was in contact with correspondents residing in areas stretching from Byzantium to China, obtaining written information and making selective use of the material.

The *K. al-Masālik* perhaps consisted of seven volumes (cf. note on ms. C. of al-Muḥaddasī, tr. Miquel, *op. laud.*, 14), but the information supplied by this note is confusing and should be treated with all the more caution seeing that it is hardly likely that Ibn Ḥawqal would have encumbered himself with such a voluminous work (unless, of course, it was an abridged version that he carried about with him). It must in fact have supplemented the *K. al-Masālik* of Ibn Khurradādhbih, with which moreover it appears sometimes to be confused. On account of this, some authors attribute to this work a particular political stamp, but the information consists above all of purely geographical data, unpublished

and difficult to obtain otherwise, which must have been of interest to other writers, and we cannot but be astonished as the disappearance of a work so widely exploited. The debt of the author of the *Hudūd al-'ālam*, of Gardīzī and others to al-Djayhānī has been the object of scholarly speculation on the part of Minorsky and of Barthold (see prefaces to the *Hudūd*, xvii-xviii and 23-6), but it is clear that too many uncertainties remain for absolutely firm conclusions to be reached.

(CH. PELLAT)

AL-DJAZARĪ, BADĪ' AL-ZAMĀN ABU 'L-'IZZ ISMĀ'ĪL B. AL-RAZZĀZ, engineer who worked in al-Djazīra during the latter part of the 6th/12th century. His reputation rests upon his book, *Kitāb fī mā'rifa al-hiyal al-handasiyya* (ed. and tr. D.R. Hill, *The book of knowledge of ingenious mechanical devices*, Dordrecht 1974), which he composed in 602/1206 on the orders of his master Naṣīr al-Dīn Maḥmūd, a prince of the Artuqid dynasty [q.v.] of Diyār Bakr. All that we know of his life is what he tells us in the introduction to his book, namely that at the time of writing he had been in the service of the ruling family for twenty-five years. The book is divided into six categories (*naw'*), the first four of which each contains ten chapters (*shakl*), but the last two only five each. The categories are as follows: (1) water-clocks and candle-clocks; (2) vessels and pitchers for use in carousals; (3) vessels and basins for hand-washing and phlebotomy; (4) fountains and musical automata; (5) water-lifting machines; and (6) miscellaneous. There are many illustrations, both of general arrangements and detailed drawings, and these are of considerable assistance in understanding the text, which contains many technical expressions that have since fallen into disuse. Some thirteen manuscript copies, made between the 7th/13th and the 12th/18th centuries, are extant to bear witness to the widespread appreciation of the book in the Islamic world (listed in Hill, 3-6; to which must be added Topkapı Saray mss. H 414 and A 3350). There are, however, no references to al-Djazarī in the standard Arabic biographical works of the Middle Ages, and there is no known translation into a European language before the 20th century.

Only one of the complete machines, a twin-cylinder pump driven by a paddle-wheel, can be said to have direct relevance to the development of mechanical technology. Many of the devices, however, embody techniques and mechanisms that are of great significance, since a number of them entered the general vocabulary of European engineering at various times from the 7th/13th century onwards. Some of these ideas may have been received directly from al-Djazarī's work, but evidence is lacking. Indeed, it seems probable that a large part of the Islamic mechanical tradition—especially water-clocks and their associated mechanisms and automata—had been transmitted to Europe before al-Djazarī's book was composed [see *HYVAL*, in Suppl.]. Even leaving aside the question of direct transmission, we still have a document of the greatest historical importance. First, it confirms the existence of a tradition of mechanical engineering in the Eastern Mediterranean and the Middle East from Hellenistic times up to the 7th/13th century. Al-Djazarī was well aware that he was continuing this tradition and was scrupulous in acknowledging the

work of his predecessors, including Apollonius of Byzantium (?), the Pseudo-Archimedes, the Banū Mūsā (3rd/9th century), Hibat Allāh b. al-Ḥusayn (d. 534/1139-40), and a certain Yūnus al-Asṭurlābī. Other writings and constructions, whose originators were unknown to al-Djazarī, are also mentioned. Secondly, his use of and improvement upon the earlier works, together with his meticulous descriptions of the construction and operation of each device, enables us to make an accurate assessment of the level of achievement reached by the Arabs in mechanical technology by the close of the 6th/12th century.

**Bibliography:** Eight valuable articles on al-Djazarī's work were published in the early years of this century by E. Wiedemann and F. Hauser, listed in *Der Islam*, xi (1921), 214; see also Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim 1970, ii, index, 846; The miniature paintings from two of the manuscripts are discussed in A.K. Coomaraswamy, *The treatise of al-Jazarī on automata*, Boston 1924; See also Brockelmann, S I, 902. For the other writers mentioned, see *ḤIYAL*, in Suppl.

(D.R. HILL)

AL-DJAZARĪ, SHAMS AL-MILLA WA 'L-DĪN ABŪ L-NADĀ MA'ADD B. NAṢR ALLĀH, 'Irāqī composer of *makāmāt*; a native of Djazirat al-'Umar, he died in 701/1301. His *al-Makāmāt al-Ḍayniyya*, which were written in 672/1273 for the author's son Zayn al-Dīn Abu'l-Faḥ Naṣr Allāh, are a good example of the imitations of the *Makāmāt* of al-Ḥarīrī. The external form of the work follows that of al-Ḥarīrī precisely: there are 50 *makāmāt*, most of which are named after towns. The various episodes are linked together by a common hero, Abū Naṣr al-Miṣrī, and a common narrator, called al-Kāsim b. Djiryal al-Dimashkī. The narratives of al-Djazarī's *makāmāt* are overwhelmed with the ingenious puns, elaborate rhymes and other forms of wordplay for which they provide the vehicle. The lavish use of rare words to provide long series of phrases ending in the same rhyme makes an immediate understanding of the *makāmāt* difficult. They copy the form of their famous model to the point of exaggeration, but do not have the inspired wit of its contents.

Brockelmann records six surviving MSS of *al-Makāmāt al-Ḍayniyya* (II, 205, S II, 199). In addition there are 13 selections from al-Djazarī's work in the Leeds Ar. MS 169, whose principal contents are the *Makāmāt al-Ḥarīrī*. The selections from al-Djazarī are from the following *makāmāt*: *al-Kudsiyya*, *al-'Aniyya*, *al-Djimiyya al-Shirāziyya*, *al-Iskandariyya al-Khayfā'*, *al-Dimashkiyya*, *al-Dabā'*, *al-Djamāliyya al-Djūniyya*.

**Bibliography:** Ḥadjidjī Khalīfa, ii, col. 1785; Brockelmann, *loc. cit.*; for some specimens of Djazarī's rhymed prose and verse, together with English translations, and a full list of the 50 titles of his *makāmāt*, see R.Y. Ebied and M.J.L. Young, *Shams al-Dīn al-Jazarī and his Al-Maqāmāt al-Ḍayniyyah*, in *The Annual of Leeds University Oriental Society*, vii (1975), 54-60.

(R.Y. EBIED and M.J.L. YOUNG)

**DJAZZĀR** (A.), "slaughterer", of camels, sheep, goats and other animals. These formed a distinct group of workers in mediaeval Arab society, quite apart from the *kaṣṣāb* and *lahḥām*, the two terms used for the butcher. In modern times, however, the *djazzār* is synonymous with the latter terms. Djāḥīz and other writers use the words *djazzārūn* and *kaṣṣābūn* alongside each other to

show them as separate groups; there were *dār al-djazzārīn* in Medina and Mecca during the 1st century A. H.; while there were many *sūkh al-djazzārīn* as well as *sūkh al-kaṣṣābīn* in Baghdad and other Islamic cities throughout the Middle Ages. The word *djazzār* seldom appears as a *nisba* with Arabic names, though *kaṣṣāb* is often used as an occupational surname among the Arabs.

The *djazzār* was required to be an adult (*bāligh*) and a sane (*'ākil*) Muslim who would utter the name of God at the time of each slaughter. The *muhtasib* saw to it that the *djazzār* slaughtered animals free from illness or defects. The non-Muslim (*dhimmi*) butchers practised their trade side-by-side with their Arab colleagues in the Middle East and North Africa. Friday was the weekday when most slaughtering of animals took place, according to Djāḥīz.

Unlike craftsmen of low prestige like tanners and cuppers, the slaughterers and butchers were not socially ostracised in Arab society. The Prophet forbade one of his relatives to employ a *khādam* [q.v.] in the trades of a slaughter (*djazzār*), or butcher (*kaṣṣāb*), cupper (*ḥaḍḍām*) or goldsmith (*ṣā'igh*), (al-Kattānī, *al-Tarātib*, ii, 106). The *djazzār* was usually a free person (*hur*). The slaughterers were disliked by Arabs for the uncleanness (*nadīṣa*) of their work. Ibn al-'Imād cites a case of an unscrupulous *djazzār* who utilised a dead animal for selling its meat, and the case was perhaps not untypical. Some Arab *udabā'* discussed the professions of the nobility (*sinā'at al-ashraf*) and cited the names of many Kuraysh [q.v.] like al-Zubayr b. al-'Awwām, 'Amr b. al-'Āṣ, 'Amir b. Kurayz, and Khālid b. Asīd, among *djazzārūn* in their early careers. The *djazzārūn*, according to Djāḥīz, could never be rich, and their economic condition remained unchanged in Arab society over a long period. During the Buwayhid period, the slaughterers, butchers and other tradesmen had to pay additional imposts (*maks*), although they were usually exempt from taxation. The daily earnings of a *djazzār* in Egypt during the reign of al-Ḥākim bi-Amr Allāh (386-411/996-1020) was one *ḍinār*, which was an exceptionally high income for a worker.

The slaughterers and butchers are portrayed in Arabic history books as groups of persons with violent tempers. The butchers were expelled from the Round City of Baghdad by Abū Dja'far al-Manṣūr for their tendency towards violence. Ṭabarī records that the *djazzārūn* rioted in Mecca in 262/875-6, producing 17 casualties and jeopardising the pilgrimage of many people. For this and other reasons, a minor Arab poet echoed the sentiments of the public by saying that he did not wish to live in a locality where a slaughterer would be his neighbour. Al-Lubūdī, a jurist of the Mamlūk period, came to the conclusion that the occupation of the *djazzār* was undesirable (*makrūh*), because it bred hard-heartedness among men. Despite these criticisms, however, one gets the impression that the slaughterers were not generally despised in Islamic society.

(M.A.J. BEG)

AL-DJAZZĀR PASHA, AḤMAD, the dominant political figure in southern Syria (the *eyālets* of Sidon and Damascus) during the last quarter of the 18th century and the early years of the 19th. A Bosnian by origin (some sources assert that he was of Christian parenthood), he was born ca. 1722; the story of his early life is confused with legend. He apparently began his career at the age of sixteen as a soldier of fortune in Istanbul, where he entered the service of the Grand Vizier Ḥakīm-Oghlū ʿAlī Pasha. In 1756, when his master was sent to attend to the affairs of Egypt for two years, he accompanied him there and stayed behind to attach himself to the local Mamlūk military system. His Mamlūk patron, ʿAbd Allāh Bey, was administering the Buḥayra district in the Delta region as *kāshif* when he was murdered by the local Bedouins in the course of a rising. The *shaykh al-balaḍ* ʿAlī Bey (1760-73) appointed Djazzār to succeed his master as *kāshif* of the district, raising him to the rank of Bey. It is alleged that Djazzār came to be so-called (*djazzār* = "butcher") as a result of the ferocity with which he proceeded to subdue the Bedouins of the Delta; it is possible, however, that Djazzār was his original surname, or that it was a *nom de guerre* which he adopted at the start of his career to promote his image as a competent professional soldier.

Djazzār remained attached to ʿAlī Bey in Egypt for several years. By 1768, however, he had become dangerously compromised in Mamlūk political intrigues. Fleeing Cairo, he returned for a short while to Istanbul; it was probably then that he first became officially attached to the Ottoman state as an agent. He then proceeded to settle in Syria, where he set out to establish for himself a large *mamlūk* household and a private army of Bosnian, Albanian, North African and other mercenaries which became the basis of his personal power.

Between 1768-74 the Porte was involved in a war with Russia; in the course of the hostilities, a Russian naval squadron appeared in the eastern Mediterranean, and Russian agents were sent to Acre (ʿAkkā) to encourage the powerful chieftain of Galilee, Ḍāhīr al-Umar, to join ʿAlī Bey of Egypt in a revolt against the Porte (Ḍāhīr had successfully usurped power in the southern parts of the *eyālet* of Sidon, with Ottoman acquiescence, since the 1730). It was after Ḍāhīr rose in revolt that Djazzār was sent in 1772 by the governor of Damascus to defend Beirut, which had shortly before been bombarded and pillaged by Ḍāhīr's Russian allies. Since 1749, Beirut had been controlled by the *Shihāb amīrs* of Mount Lebanon; technically, however, it was part of the

*eyālet* of Sidon (as was, indeed, the whole of the *Shihāb* domain). The ruling Lebanese *amīr*, Yūsuf *Shihāb* (1770-88), was opposed to Ḍāhīr, and happy at first to see Djazzār established in Beirut. However, when Djazzār refused to honour the *Shihāb* claim of suzerainty over Beirut, Yūsuf *Shihāb* turned to his old adversary Ḍāhīr for help, and the latter summoned the services of the Russian squadron against Djazzār. Beirut was bombarded for a second time in 1773 and besieged by land and sea for four months before its garrison was starved into surrender. Djazzār fled the town and was given refuge for a time by Ḍāhīr in Acre. Betraying his host at the first opportunity, he fled to Damascus, smuggling out with him a convoy of Ḍāhīr's munitions. Delighted by his persistent loyalty, the Porte raised him to the rank of Pasha and appointed him *beylerbeyi* of Rumelia, then *mutesarrif* of the *sandjaq* of Karā Ḥiṣār in Anatolia in 1775. Later in that same year, when Ḍāhīr al-Umar was finally defeated and killed by his own men, Djazzār was appointed *beylerbeyi* of the *eyālet* of Sidon, and established the seat of his government in Acre. In the following year, he was confirmed in the government of the *eyālet* with the rank of *wazīr*, and continued in the office and rank until his death in 1804.

In Acre, Djazzār used his *mamlūk* household and his private army to set up a régime of remarkable stability; his policy of ruthless repression, and the cruelty with which he meted out punishments, made him the object of general fear. On one occasion, in 1790, a group of his officers and *mamlūks*, supported and possibly prompted by his political enemies in Istanbul and by the French traders in Acre, staged a rebellion against him which was almost successful, but the rebellion was crushed by a surprise action and never repeated. Despite the constant intrigues against him in Istanbul, Djazzār's mandate in the *eyālet* of Sidon was annually renewed, without interruption, for twenty-nine years—a record without precedent in the history of Ottoman provincial administration. On four different occasions (in 1785, 1790, 1799 and 1803), the *eyālet* of Damascus was also entrusted to his care. At a time when the general decline of the Ottoman state was encouraging rebellion and the usurpation of power in the provinces, an efficient and loyal governor in Syria, which was an area particularly prone to insubordination, was badly needed, and Djazzār was just the man for the job. In the coastal *eyālet* of Sidon, which was already overshadowing the inland *eyālet* of Damascus in importance because of the increasing European (and particularly French) maritime trade with the Levant, Djazzār suppressed the unruly *Mitwālīs* (Twelve *Shīʿīs*) and other tribes of the hill country of Galilee and northern Palestine, and established his administration firmly in the area. While he was not able to destroy the *Shihāb* emirate in Mount Lebanon, he did manage to exploit the Maronite-Druze confessional jealousies and the political factionalism prevailing there to reduce the *Shihāb amīrs*, who had once fought successful wars against the governors of Damascus, into docile and subservient fiscal agents. In Acre, Sidon and Beirut, he was careful to keep the lucrative commercial activity going, but at the same time took strict measures of control to derive the maximum profit from it for himself. He established a personal monopoly over the cotton and grain trade in his territory, and also made heavy impositions on the silk trade; as a result, he amassed a huge fortune, which contributed to the perpetuation of his power. His payments of the required tribute to the Ottoman

treasury, though at times unpunctual, were always correct. In 1799, when General Bonaparte advanced northwards from Egypt to occupy Syria, Djazzār, assisted by the British, successfully repelled his attack on Acre and forced him to retreat; he thereby set the seal on the failure of Bonaparte's eastern venture, and paved the way for the final expulsion of the French from Egypt two years later.

Despite the great power which he came to wield in southern Syria, Djazzār administered the *eyālet* of Sidon in strict loyalty to the Porte, and not in the manner of the *mutaghalliba*—the tribal chieftains and military adventurers who seized the opportunity of Ottoman decline to establish autonomous principalities in the provinces. In Syria, the *mutaghalliba* (like Dāhir in Galilee, and the Shihābs in Mount Lebanon) normally sought to promote their power by catering politically to the fierce particularism of the local tribes and sects, of whom the Maronites and Druzes of Mount Lebanon and the Mitwālī and other tribesmen of Galilee and northern Palestine were prime examples. They also tended to identify themselves with the interests of the new and predominantly Christian merchant class which thrived on the import-export trade with Europe. In Mount Lebanon and Beirut, the close association of the Shihāb *amīrs* with the Maronite silk merchants was reflected by the conversion of an increasing number of the *amīrs* from Sunnī Islam to Christianity; in Acre, Dāhir had favoured the Christians generally, and surrounded himself with Christian agents and advisers. Like Dāhir, Djazzār by necessity employed competent Christians (of the Sakrūdī, Iddī, Kālūsh and Mārūn families) as secretaries, treasurers and stewards; he was careful, however, not to pamper the Christians as a community, and most Christians who served him ended up in prison, in the torture chamber, or on the gallows, with their fortunes confiscated and their families reduced to destitution. Likewise, Djazzār cared little for the support of the tribesmen and peasants of the mountain hinterland, whom he knew to be venal and fickle, and ultimately undependable. Instead, he appears to have sought popularity among the Sunnī Muslim populace of the towns by appealing to their instinctive sentiments. At a time when the Ottoman state, as the universal Muslim state, was suffering repeated defeats and humiliations at the hands of Christian powers, the high-handed manner in which Djazzār dealt with the local Christian bourgeoisie, and with the French and other European traders in Acre and Sidon, could only have met with strong approval among the urban Muslims, particularly those of the lower classes. The Pasha's repressive policy towards the crypto-Maronite Shihābs and the heterodox Druzes and Mitwālīs must certainly have had the same effect. As governor of Beirut in 1772-3, Djazzār had armed the Sunnī Muslims of the town to help in its defence against the Russians. As ruler of the *eyālet* of Sidon, his unwavering championship of the Ottoman cause, which was the cause of Islam, probably secured for him some popularity among the lower Muslim classes of the coastal towns. Whatever the extent of this popularity was, it has remained unrecorded, because the available accounts of his régime were not written by his supporters but by the Christians, the foreigners and the Muslim notables who, as communities and sometimes possibly as individuals, had suffered at his hands and were unanimous in branding him as a bloodthirsty tyrant.

On the whole, the Djazzār régime represents the last reassertion of the Ottoman imperial prerogative

in the traditional manner against the particularist tendencies in Syria, before the radical social and political changes of the 19th century. His determined efforts to break the stubborn local autonomies foreshadowed the policy of centralisation of the *Tanzīmāt* period.

**DJEBEDJĪ** (T. "armourer"), the name given to a member of the corps of "Armourers of the Sublime Porte" (*Djebedjīyān-i dergāh-i 'ālī*), a *Kapı Kulu* [q.v.] Corps closely associated with the Janissaries [q.v.]. Their function was to manufacture and repair all arms, ammunition and other equipment belonging to the Janissaries and, on campaign, to transport this equipment to the front, distribute it to the Janissaries and to collect it at the end of the campaign, keeping a record of losses and repairing damaged items.

The Corps was presumably founded shortly after the Janissaries and, until the late 10th/16th century, its recruits came from the *pendj-yek*, the principle by which the state took one in five of prisoners of war and the *dawshirme* [q.v.]. However, the system broke down when the *djebedjīs*, like the Janissaries, received permission to marry and recruit their own children and native Muslim to the Corps.

Like the other *Kapı Kulu* Corps, the *djebedjīs* were divided into thirty-eight divisions (*orta*), the first of which was divided into 59 sections (*bölük*). Each *orta* represented a different craft in the repair or manufacture of guns, gunpowder and other war materials. The chief officer of the Corps was the *djebedjī bashī*, under whom came the *bash ketkhudā*, who usually succeeded him if his post fell vacant, and four other *ketkhudās*. Another officer was the *djebekhāne bash çavuşu*. A *bölük bashī* commanded each *orta*, and under him was the *oda bashī*, and the chief craftsmen, called *usta*. The central barracks of the Corps was in Istanbul, but its members served in turn in the frontier fortresses of the Ottoman Empire. A group of *djebedjīs* would always accompany a Janissary garrison. Their total strength varied according to the size of the Janissary Corps; there were about 500 *djebedjīs* in the mid-10th/16th century and their numbers fluctuated between about 2,500 and 5,000 in the 12th/18th century.

The Corps was abolished, together with the Janissaries, in 1241/1826.

**DJEZZAR** [see DJAZZĀR].

AL-DJILDAKĪ, 'IZZ AL-DĪN AYDAMIR B. 'ALĪ B. AYDAMIR, Egyptian alchemist, who died in 743/1342 or later. He was the last outstanding Muslim adept of his art, of encyclopaedic, though rather uncrucial, learning. Almost nothing is known of his life; he himself, however, tells that he spent more than 17 years on extensive travels, which lead him to 'Irāk, Asia Minor, the Maghrib, Yemen, Hidjāz, Syria, and Egypt, where he ultimately settled. Al-Djildakī represents the mystical and allegorical trend in Muslim alchemy, but there is evidence that he had real experience in practical operations and chemical substances. His interests extend also to the *khawāṣṣ*, i.e. the magic properties of things, and to pharmacology, medicine and astrology, especially the attribution of metals and other substances to the seven planets. He often reflects on the parallels between natural and alchemical processes, and he attacks Ibn Sīnā who denied the possibility of artificial transmutation (see *Avicennae De congelatione et conglutinatione lapidum*, ed. E.J. Holmyard and D.C. Mandeville, Paris 1927, 6-7). His very numerous works, which still exist in many manuscripts, are valuable for the history of alchemy through his philologically-accurate quotations from his predecessors. He is familiar with Djābir b. Ḥayyān's theory of balances as well as with his biography (see P. Kraus, *Jābir ibn Ḥayyān, in Méms. de l'Inst. d'Égypte*, xlv (1943), xlv (1942), indexes). Among other Greek, Indian and Persian authorities he refers to Hermes [see HIRMIŠ], Cleopatra (see M. Ullmann, in *WZKM*, lxiii-lxiv (1972), 161-73), the caliph 'Alī and Khālid b. Yazīd [q.v.], and he also composed lengthy commentaries on writings of Apollonius (see BALINŪS), Ibn Umayl [q.v.], Ibn Arfā' Ra's, and al-Sīmāwī.

**DJISR MANBIDJ** [see KAL'AT NADJM].

**DJIRGA** (Pashto; cf. H.G. Raverty, *A dictionary of the Pukhto, Pushto, or language of the Afghāns*, London 1867, 330b), an informal tribal assembly of the Pathāns in what are now Afghānistān and Pakistan, with competence to intervene and to adjudicate in practically all aspects of private and public life among the Pathāns.

In the course of his abortive mission to Shāh Shu-djā' and the Durrānī court of Kabūl in 1809 [see AFGHĀNISTĀN, v. History (3) (A)], Mountstuart Elphinstone described the *djirga* system as alive and vital, with assemblies at various levels, from the village at the bottom up through the clan or *khāl* to the tribe or *ulus* at the top, with a *djirga* of subordinate chiefs around the tribal *khān*; but he

observed that it was a model frequently modified or disrupted rather than a neat hierarchy of institutions. He noted too that the *djirga* was the principal means of administering criminal justice, where an offended party had not already avenged his wrongs in blood, and of determining amounts of compensation due to a victim; and he adjudged it a useful and tolerably impartial institution (*An account of the kingdom of Caubul*<sup>3</sup>, London 1839, i, 215-26). At the very apex of the system, the Amir of Afghānistān might summon a "great (*loya*) *djirga*" of leading chiefs for consultation at critical junctures.

The political division of the Pathāns in the course of the 19th century into those to the east of what became the Durand Line and in British India and those to the west in the independent kingdom of Afghānistān eliminated the *loya djirga* as an effective expression of feelings of the whole Pathān nation, although the institution was eventually incorporated into the political structure of modern Afghānistān as a representation of all ethnic and social groups with the state, and not merely of the Pathāns; for the *djirga* in Afghānistān of the last two centuries, see MADJLIS. 2. Afghānistān.

On the British side of the Frontier, the *djirga* has continued as an instrument of democratic tribal expression; it was, for instance, tribal *djirgas* which in November 1947 signified the adhesion of the North-West Frontier Province to the nascent Pakistan, and in February 1980 a *djirga* of Pathān and Balūč chiefs and notables met at Sibī in northern Balūčistān to affirm opposition to further Soviet Russian encroachment after the latter power's occupation of Afghānistān towards the end of 1979. As far back as the second half of the 19th century, a modified and less authentic type of *djirga* had been made part of the Frontier Crimes Regulations, originally promulgated in 1872. Under this arrangement, cases involving tribal honour, blood feuds and women could be withdrawn from the magistrates' courts and arbitrated upon by a *djirga*, which was however in this case a group of tribal elders appointed by the magistrate and acceptable to both parties. Here the *djirga* was an ancillary of British Indian law, though after ca. 1880 in the recently-pacified parts of northern Balūčistān and the newly-administered tribal areas of the North-West Frontier Province, the *djirga* was adopted as a substitute for the formal legal system, thus in effect enshrining Pathān custom.

**DJUDHĀM** (A.), leprosy or Hansen's disease.

I. *Terminology*. A number of Arabic terms that may refer to leprosy were created on the basis of the symptomatology of the disease. Aside from the distinctive symptoms of advanced lepromatous leprosy, various terms were adopted that were descriptive of leprous lesions, but they were not restricted exclusively to leprosy. No clinical cases of leprosy are reported in the mediaeval medical literature that might clarify the terminology. There can be little doubt, however, that *djudhām* referred to leprosy, particularly of the lepromatous type. The term was used in pre-Islamic Arabia; it was derived from the Arabic root of the word, meaning "to mutilate" or "to cut off," and is descriptive of serious disfigurement that occurs in cases of lepro-

matous leprosy. Thus, *aḍdhām* (pl. *ḍadhāmā*) may mean "mutilated" from having an arm or foot cut off, or "leper" and "leprous" (al-Murtaḍā, *Ḡhurar al-fawā'id*, Cairo 1954, i, 5). Conversely, the use of this root would strongly suggest that the lepromatic form of the disease existed in pre-Islamic Arabia. Considerable confusion exists concerning terms other than *ḍudhām*; the difficulty is certainly due to the numerous forms that leprosy may take, particularly in its early stages and its mimicry of other skin diseases. The term *baraṣ* was definitely used to name leprosy, but it could be applied to other skin disorders. This term was also used in pre-Islamic Arabia. It was derived from the Arabic root that may mean "to be white or shiny." Emphasis on the whiteness of the skin in the Arabic medical accounts of *baraṣ* and *bahaḳ* may have referred to the hypo-pigmentation occurring in the early stages of dimorphous leprosy or the macules and infiltrated lesions of tubercloid leprosy. Depending on the context, white and black *baraṣ*, white and black *bahaḳ*, *waḍah*, and *kawābī* were often used to name leprous symptoms. In addition, the following terms could apply to leprosy, but they were rarely used—some are clearly euphemistic: *abka'*, *aḳṣhar*, *arḳat*, *asla'* (*sul'*), *barash*, *bayād* (*baydā'*), *dā' al-asad*, *dā' al-ku'tāl*, *muraḳka'*, *sū'* (*aswā'*).

II. *Medical history.* There is no persuasive evidence that true leprosy occurred in ancient Egypt, Mesopotamia, or Persia before the time of Alexander the Great. It must have existed much earlier in India, the Far East, and probably central Africa. *Sora'at*, the so-called leprosy of Leviticus, does not correspond to any modern diagnosis of the disease; it was a non-specific condition and essentially a non-medical notion. The *lepra* (Gr. *leprós*, "scaly") mentioned in some of the Hippocratic writings was also a skin ailment that cannot be identified and was probably not related to leprosy. It was not before 300 B.C. that true leprosy entered the sphere of medical science. At that time, physicians of Alexandria became acquainted with its lepromatic form and named it *elephantiasis* because of the thickening and corrugation of the skin. The tubercloid type, however, was not yet clearly distinguished from other, non-specific skin eruptions. Galen [see ḤĀLĪNŪS], in the 2nd century A.D., inadequately described what he called *elephantiasis graecorum* and *lepra* (*Ad glauconem*). The earliest and best description of leprosy was given by a contemporary of Galen, Aretaeus of Cappadocia (*Extant works*, ed. and tr. F. Adams, London 1856, 123-9/366-73, 236-40/494-7); Aretaeus' pathology and treatment of the disease were important because they strongly influenced later Greek physicians whose works were translated into Arabic. With the single exception of Aretaeus, however, the pathogenesis of leprosy was explained in late Roman medicine by the theory of humours. Leprosy was due primarily to a predominance of black bile, the melancholic humour, in the body. The disease was considered by the Greek doctors to be both contagious and hereditary. The victims were believed to be unclean and specifically marked by strong venereal desires. There was an increasing recognition of the polymorphous character of leprosy, particularly of the milder tubercloid type. The disease in advanced stages was considered incurable. All the ancient authors failed to mention the loss of sensation, which is a conspicuous symptom of the disease. The treatment of the diseased consisted of bloodletting, cauterisation, purgation, baths, fomentations, diets, and invariably

the theriac of vipers. Together with the classical descriptions of leprosy, the various treatments entered into Arabic medical science.

The earliest indisputable proof of leprosy in the Middle East has been found by Möller-Christensen in two skeletons from Egypt (Aswān) that date from about A.D. 500. Therefore, there can be little doubt that genuine leprosy existed from the early Islamic period and that Muslim doctors had sufficient opportunity to observe it. Practically every Arabic writer on medicine discussed leprosy. The earliest account seems to have been the *K. fi 'l-ḍudhām* by Yūhannā b. Māsawayh [*q.v.*]. The work is apparently lost, but it was frequently quoted by later Arabic authors; an anonymous treatise does exist that contains the opinions of Ibn Māsawayh as well as those of al-Rāzī and Ibn Sīnā (A.Z. Iskandar, *Catalogue of Arabic manuscripts*, London 1967, 70 f., 126). The first full account of leprosy in Arabic medicine is to be found in al-Ṭabarī's *Firdausu 'l-Hikmat* (ed. Siddiqi, Berlin 1928, 318-25); the pathology and therapeutics of the disease are largely consistent with the earlier Greek medical texts. Arabic writers who discussed leprosy include the following: al-Kindī (*Fihrist*, tr. Dodge, New York 1970, ii, 621; *Medical formulae*, tr. Levy, Madison 1966, 60, 158, 233 et *passim*), Yūhannā b. Sarābiyūn, Ṭābit b. Ḳurra (*K. al-Dhakhira*, ed. Sobhy, Cairo 1928, 7, 29, 138-41; M. Ullmann, *Die Medizin im Islam*, Leiden 1970, 124), al-Rāzī (*K. al-Hawāi*, Hyderabad 1970, iv, 59 f., 65, 73, 93, xxiii/2, 1-33, 47-72, 88-120), Ibn Abi 'l-Ash'ath (Ullmann, *Die Medizin*, 139), 'Alī b. al-'Abbās al-Maḍjūsi (*Kāmil*, Cairo 1877, i, 310 f., ii, 194-6), Abū Maṣūr Kumrī, Abū 'l-Kāsim al-Zahrāwī, Ibn Sīnā (*Kānūn fi 'l-ṭibb*, Būlak 1877, iii, 140-6, 281-7), al-Djurdjāni, Ibn Abi 'l-'Alā' Zuhr (Albucasis, *On surgery and instruments*, ed. and tr. Spink and Lewis, Berkeley and Los Angeles 1973, 142-9), Ibn al-Ḳuff (*K. al-'Umda*, Hyderabad 1356/1937, i 155 f., ii, 48-51), Ibn Mas'ūd al-Shīrāzī, al-Azraqī (*Tashīl al-manāfi'*, Cairo 1304/1887, 275 f., 291-4), Nafīs b. 'Iwaḍ and Ḡhiyāth b. Muḥammad.

The medical textbook of al-Maḍjūsi [*q.v.*] is quite important because it was one of the first Arabic works to be translated into Latin (*Liber pantegni*). Its translation by Constantinus Africanus [*q.v.*] was decisive for the Western terminology of leprosy. The translator could not use the word *elephantiasis* in translating al-Maḍjūsi's account of leprosy because in Arabic the term (*dā' al-fil*) was already used for the present-day disease of that name. In this situation, Constantinus seized upon Biblical usage, where the Latin translation of Hebrew and Greek was *lepra*; he therefore translated *ḍudhām* as *lepra* rather than *mutilatio*, which would have been more precise and would have avoided the stigma attached to *lepra*. As it was, the use of *lepra* for leprosy in general caused confusion with the Hippocratic use of the word and extended the application of the name with its evil connotations to a wider range of skin disorders. Al-Zahrāwī's work was also translated into Latin and became well-known in Europe. In his discussion of leprosy, al-Zahrāwī made a significant contribution to medicine by describing, for the first time apparently, the neurological symptoms of the disease. It is difficult to believe that local anaesthesia had not been observed among lepers much earlier. In the Middle East, the loss of sensation caused by leprosy was noticed by Ibn al-Ḳuff; the source of his observation is unclear. (The leprosy of Baldwin IV [d. 1206], king of the

Latin Kingdom of Jerusalem, is described by William, bishop of Tyre; the narrative contains the only incontrovertible clinical evidence of the anaesthetic symptoms of leprosy in the Middle East [*A history of deeds*, tr. Babcock and Krey, New York 1934, ii, 296, 460]. The description of insensitivity by al-Zahrāwī was repeated in the Western medical literature, at least from the 12th century. It served as a means of distinguishing lepers and excluding them from society. As opposed to the Galenic tradition of the other works, al-Azraqī's work may be regarded as a good example of "Prophetic medicine" (*al-ṭibb al-nabawī*). Al-Azraqī's quasi-medical discussion of leprosy may well reflect popular beliefs and practices that persisted throughout the mediaeval period alongside those of professional medicine. Moreover, it was a common practice during the mediaeval period to attribute to stones the ability to ward off disease; for leprosy, topaz (*zabardjad*) was reputed to have this property (M. Ullmann, *Neues zum Steinbuch des Xenokrates*, in *Medizinhistorisches Journal*, vii [1973], 71).

In sum, the Arabic medical writers borrowed heavily from Hellenistic sources, but their works were not entirely imitative. The description of leprosy in the Arabic medical textbooks followed the encyclopaedic form of ancient manuals; the descriptions of leprosy were brief, non-clinical, and largely theoretical. The Muslim understanding of the disease was most clearly indebted to the earlier sources in its adoption of the humoral theory to explain the illness. Care and treatment were also consistent with Hellenistic practices; however, Arabic medicine introduced a greater variety of simple and compound medications. Furthermore, the Arabic doctors adopted the view that leprosy was contagious and hereditary. Yet they did not view the disease as fiercely contagious, and their writings lack any element of moral censorship of the diseased. Moreover, the medical texts did not recommend flight from the leper or his isolation from the community. The influence of this non-condemnatory attitude toward the disease and its victims in Muslim society is impossible to gauge, but it would be reasonable to assume that through the activity of Muslim doctors it weighed against the selective discrimination and segregation of lepers. Generally, the Arabic writers paid greater attention to leprosy than the Hellenistic doctors. In the classification and description of the disease Muslim doctors made significant advances. The earlier writers distinguished, for the most part, between *elephantiasis* and leprosy. The Arabic writers tended to regard *elephantiasis-djudhām* as one form of leprosy. Concerning the symptomatology of leprosy, the Arabic doctors refined the description of the skin lesions and called attention to the neurological signs. Despite its own inherent difficulties, the Arabic terminology was more appropriate and detailed than that of the classical authors. It is probable that Arabic terminology influenced Byzantine nomenclature. Finally, Arabic medical understanding of leprosy was important because it was conveyed to the West and formed the basis for European knowledge of the disease until the 17th century.

III. *Social history.* The Arabs in pre-Islamic Arabia were afflicted by leprosy, along with a large number of other communicable diseases. Leprosy is attested by the famous Arabic poets of the period. The first important figure in the history of the Arabs before Islam who probably suffered from some form of leprosy was *Djadhīma al-Abrash* [q.v.]

or al-Waḍḍāh, the king of al-Hīra, who played a dominant role in the politics of Syria and 'Irāk in the second quarter of the 3rd century A.D. Two famous pre-Islamic poets may also have been stricken by the illness. The first, 'Abīd b. al-Abrāš, on the basis of his name, may have been leprosy. Leprosy would account for his wife's aversion from him, which is mentioned in his poetry (C. Lyall, *The Dīwān*, Leiden-London 1913, 6, 33-6, 38 f.). The second and more famous was al-Hārith b. Hilliza al-Yashkurī [q.v.], who wrote the seventh of the *Mu'allakāt*.

The Qur'ān mentions in two places the healing of the lepers (*al-abras*) by Jesus (III, 48 and V, 110). More important for their influence on Muslim society are the *ahādīth* that were attributed to the Prophet concerning leprosy. The best-known of these traditions is the statement that a Muslim should flee from the leper as he would flee from the lion. Similarly, another familiar tradition asserts that a healthy person should not associate with lepers for a prolonged period and should keep a spear's distance from them (Wensinck, *Handbook*; al-Bukhārī, *al-Sahīh*, Būlāq ed., viii, 443; Ibn Kūṭayba, *Uyūn al-akhbār*, Cairo 1925-30, iv, 69; *LA*, xiv, 354 f.). The two pious traditions are prescriptions for social behaviour and appear to deal with both moral and medical difficulties posed by the leper. The traditions may have strengthened the desire of Muslims to avoid those individuals who were conspicuously afflicted by the disease because it was morally as well as physically offensive. Leprosy was believed by some to be a punishment by God for immorality. Consequently, leprosy was often invoked as a curse on a Muslim for his immoral behaviour. Medically, both traditions seem to express an implicit belief in contagion. The idea of contagion is also found in other traditions that are unrelated to leprosy and in the medical and non-medical literature. Nevertheless, the belief in contagion was denied by the Prophet in a number of other traditions which state that disease comes directly from God. The tradition advising flight from the leper is, in fact, preceded by a complete denial of contagion in the collection of al-Bukhārī. Thus the issue of contagion is quite contradictory; it was the subject from an early time of religio-legal discussion that attempted to harmonise these traditions. The contradiction was not resolved; it would appear that many witnessed contagion and found justification for it in the traditions, while the more religiously inclined may have adhered to the principle of non-contagion. The latter were partially justified in the case of leprosy because it is only moderately contagious and some individuals are not predisposed to it at all. There were also traditions that recommended supplication to God for relief from leprosy, for the matter should not be left entirely to fate.

The legal status of the leper was directly related to the pious traditions. Leprosy is not discussed in the Arabic legal texts as a separate subject, but it is treated as a disability within such broad areas as marriage, divorce, inheritance, guardianship, and interdiction of one's legal capacity [see *ḤAḌIR*]. Because leprosy was considered a mortal illness, the leper was limited in his legal rights and obligations—along with the minor, the bankrupt, the insane, and the slave. The leper's status seems to have been particularly close to that of the insane in legal matters, especially in regard to marriage and divorce: a marriage could be dissolved by either person

because of the disease. In Mālikī law, a man in an advanced state of leprosy should be prevented from cohabiting with his slave wives and still more so with his free wives, which is consistent with a belief in the hereditary nature of the malady. Also, Mālikī law allowed an automatic guarantee of three days, at the expense of the seller of slaves, against any "faults" in a slave; the guarantee was extended to one year in case of leprosy. In addition, the development of leprosy in a slave might be a cause for his manumission.

In general, the differing religio-legal traditions served as the bases for various interpretations of the disease. These traditions account for the wide spectrum of behaviour by and toward the leper, ranging from his total freedom of action to segregation in lep-rosaria. The range of popular responses to the leper is reflected in early Arabic literature that deals with leprosy and other skin irregularities. Al-Djāhīz and Ibn Kūṭayba [q.v.] collected poetry and narrative accounts on this subject. Al-Djāhīz's compilation of material is to be found in his *al-Burṣān wa 'l-urḍān* (Cairo 1972, 8-110), which is concerned with a large number of physical infirmities and personal characteristics. The author's objective is to show that physical infirmities and peculiarities do not hinder an individual from being a fully active member of the community or bar him from important offices. Al-Djāhīz maintained that such ailments are not social stigmas but are what may be called signs of divine blessing or favour. The afflicted were spiritually compensated by God and special merit should be attached to their lives. Thus he countered the contrary opinion that the infirm should be disparaged or satirised for their afflictions. Most of the poets quoted by Ibn Kūṭayba also appear to say that skin disorders should not be the cause of scorn and revilement but should prompt the sufferer to repentance (*Uyūn al-akhbār*, iv, 63-7). Ibn Kūṭayba and al-Djāhīz cite numerous references to leprosy in Arabic poetry, as in the fierce poetic duels of Djarīr and al-Farazdak, and mention those poets who were themselves leprosy, such as Ayman b. Kḥuraym [q.v.]. There are other historical reports of probable instances of the disease in early Islamic history, such as that of Ibn Muḥriz [q.v.].

The most important political figure in early Islam who was probably afflicted by leprosy was 'Abd al-'Azīz b. Marwān [q.v.]. It is reported that he suffered from "lion-sickness" i.e. *djudhām*. He was given many medications for the ailment, but they were ineffective. Therefore, his physicians advised him to move to Ḥulwān [q.v.] because of the sulphurous springs there, and he built his residence there (Abū Šāliḥ, *The churches and monasteries of Egypt*, ed. and tr. B. Evetts in *Anecdota Oxoniensia*, vii, Oxford 1895, 154). Shortly after the time of 'Abd al-'Azīz, we have the brief but significant statement of al-Ṭabarī that the caliph al-Walīd I was in Syria, probably Damascus, in 88/707 and conferred a number of benefits upon the people. Al-Ṭabarī says "He awarded the lepers [*al-mudjodhdhamīn*] and said: 'Do not beg from the people.' And he awarded every invalid a servant and every blind man a leader" (*Ta'rikh*, vi, Cairo 1964, 496). As with the invalids and the blind, the caliph apparently made provisions for the lepers in some manner. The passage is ambiguous, but it seems that he had the lepers separated from the rest of the population (E. Browne, *Arabian medicine*, repr. Cambridge 1962, 16 f.). This act of al-Walīd is traditionally considered by Arabic historians to be the institution of the first hospital

in Islam (cf. S. Hamarneh, *Development of hospitals in Islam*, in *Journal of the History of Medicine and Allied Sciences*, xvii [1962], 367). The first hospital is alleged by al-Makrīzī to have been built by al-Walīd in the year 88/707, and the caliph "provided for doctors and others in the *māristān*, and he ordered the restraint of the lepers [*al-djadhdhāmā*] lest they go out, and stipends for them, and provisions for the blind." (*al-Khitāt*, repr. Cairo 1970, ii, 405; see also BĪMĀRISTĀN and A. 'Issā, *Histoire des Bimaristans*, Cairo 1928, 95). One may well imagine that the caliph created a hospice—*dār al-mardā*, later called a *māristān* or *bīmāristān* in the 'Abbāsīd period—for the afflicted of the city, comparable to Byzantine practice (see D. Constantelos, *Byzantine philanthropy and social welfare*, New Brunswick, N.J. 1968, 78 *et passim*). The later hospitals of the 'Abbāsīd period treated leprosy and other chronic ailments in special quarters (S. Hamarneh, *Medical education and practice in mediaeval Islam*, in *The history of medical education*, ed. C. O'Malley, Berkeley and Los Angeles 1970, 41).

Leprosy certainly existed in the Middle East during the mediaeval period, but there is no way of determining its extent. Individual cases of leprosy are occasionally mentioned in the historical literature, such as that of Abu 'l-Barakāt al-Baghḍādī [q.v.], who died of leprosy about 560/1164. We know as well that leprosy afflicted the Jews because there is considerable material about lepers in the Geniza, especially in letters from Tiberias, where they sought healing in the hot springs and the air of the place (J. Mann, *The Jews in Egypt and in Palestine*, Oxford 1920-2, i, 166 f., ii, 192-5). According to Ibn al-Ukhuwwa (*Mā'ālim al-kurba*, ed. R. Levy, 1938, ch. xlii), the *muḥtasib* or market inspector [see ḤISBA] must not allow people suffering from leprosy to visit the baths. Also from Egypt, a *wākf* of the Mamlūk sultan Barsbāy [q.v.] states that those afflicted especially with leprosy (*djudhdhām aw baras*) should not be employed (A. Darrag, ed., *L'acte de waqf de Barsbay*, Cairo, 1963, 56). The specific discrimination against lepers in these two instances appears to show that the theological proscription of contagion had very little practical effect (see M. Ullmann, *Islamic medicine*, Edinburgh 1978, ch. vi). Furthermore, lepers commonly begged in the streets of the cities, despite the pious endowments on their behalf and laws against mendicancy. While many must have been genuinely leprosy, it was not unusual during the mediaeval period for men and women to feign the disease by intentional disfigurement in order to receive public charity (C.E. Bosworth, *The mediaeval Islamic underworld*, i, Leiden 1976, 24, 84, 100). Deception of the opposite kind was also common in the slave market, where a buyer had to be on his guard against the concealment of leprosy sores on the bodies of slaves. During the later Middle Ages, the reappearance of plague must have destroyed large numbers of lepers because of their exceptional vulnerability to diseases other than leprosy. The Black Death in the mid-8th/14th century and the serious recurrences of plague thereafter may account for the particular depopulation of lepers among a generally-diminished population.

In the Islamic West, leprosarīa were established and special quarters were designated for lepers. The quarters seem generally to have been located outside the walls of many Muslim cities, often in conjunction with leper cemeteries (Leo Africanus, *Description de l'Afrique*, ed. and tr. A. Épaulard, Paris 1956, i, 60 f., 229, ii, 399; E. Lévi-Provençal,

*Histoire de l'Espagne musulmane*, i, 188, iii 335, 382, 434). The first Muslim hospital appears to have been built in al-Ḳayrawān, and near it was situated a separate building called the *dār al-djudhāmā*, where lepers received medical treatment (Hamarnah, *Development of hospitals*, 375). Further west, the Almohad sultan Ya'ḳūb al-Manṣūr founded hospitals for lepers (see BĪMĀRISTĀN and R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 72, 110). Sulphur springs were considered to be particularly beneficial for lepers in North Africa as they were in the Middle East (E. Westermarck, *Ritual and belief in Morocco*, London 1926, ii, 44, 484 ff., 497 ff.; Legey, *Essai de folklore marocain*, Paris 1926, 158; C. Grey, ed. and tr., *Travels of Venetians in Persia*, London 1873, 144; Leo Africanus, *op. cit.*).

In Anatolia, the Ottomans built hospitals in the later Middle Ages, similar to the Byzantine *xenodochia*. A leper house was built at Edirne in the time of Murād II (d. 855/1451) and functioned for almost two centuries. Before this foundation, the Turks had constructed others in Sivas, Kastamonu, and Kayseri. In 936/1530 Sulaymān II built a leprosarium in Scutari, which survived until modern times. An important leper house was founded as a *wakf* by Sultan Selīm I in 920/1514 near Istanbul, which operated until 1920; it is described by A. Süheyl Ünver in his article, *About the history of the leproseries in Turkey*, in *Neuburger Festschrift* (1948), 447-50.

The traditional ways of dealing with lepers in Muslim society lasted well into the 19th century. Lepers and leproseries were particularly noticed by Western travellers, and their accounts add to our knowledge about the plight of the diseased (Ulrich J. *Seetzen's Reisen*, Berlin 1854-9, i, 120 f., 277 f.; Klingmüller, *op. cit.*, 49; D.L. Zambaco, *Voyages chez les lépreux*, Paris 1891; *Aus einem Briefe des Herrn Consul Wetzstein an Prof. Fleischer*, in *ZDMG*, xxiii (1869), 309-13). There is no reliable observation of true leprosy by Western travellers in the Middle East during the mediaeval or early modern periods. The only exception is the report of leprosy in Egypt by Prosper Alpini in his *Medicina Aegyptorum* [1719], 56). Europeans' concern about the disease was often heightened by their belief in its highly contagious nature (M. Clerget, *Le Caire*, ii, Cairo 1934, 16; *Description de l'Égypte*, i, Paris 1809, 492-8, ii/2, Paris 1822, 697; Clot-Bey, *Aperçu général sur l'Égypte*, ii, Paris 1840, 356 f.). Leprosy was also probably common in the countryside, but most of our documentation comes from the urban centres. Leprosy as well as syphilis and elephantiasis frequently occurred in Egyptian villages in the 19th century and were poorly treated (J. Walker, *Folk medicine in modern Egypt*, London 1934, 23). Today leprosy remains a health problem in the Middle East and North Africa.

**DJUHAYNA** [see ḲUDĀ'A].

**DJULFĀ** (in Armenian, July), a town on the River Araxes, on the northern border of Ādharbāyḍjan, once in Armenia and now in the U.S.S.R. Also, in 1014/1605, Shāh 'Abbās I founded a suburb of Iṣfahān bearing the same name, to accommodate the Armenians transferred by him from the original town.

I. Djulfā in Ādharbāyḍjan is situated in lat. 38° 58' N, long. 45° 39' E, and is built on the northern bank of the Araxes besides an old bridge (Sharaf al-Dīn 'Alī Yazdī, *The history of Timur-Bec*, London 1723, 265-6); it lies in the ancient canton of Golt'n, mentioned in Armenian literature as early as the *History of Moses of Khoren* (J.A. Saint-Martin, *Mémoires historiques et géographiques sur l'Arménie*, Paris 1818, i, 1267, 133, 237, ii, 365, 423). Lying on the edge of a volcanic belt extending south-east into Iran, the surrounding land is rocky and barren, although suitable for the cultivation of the vine—

Moses of Khoren refers to Goh'n as *ginevōt* ("wine rich"). On the main route northwards from Tabrīz to Nakhidjēvan and Tiflis, in the 10th/16th century Djulfā became the centre of a flourishing community of Armenian merchants, trading as far afield as Europe, India and Central Asia, and with a special interest in the traffic of silk. According to Cartwright, at the end of the century the population was 10,000, with 2,000 houses (John Cartwright, *The Preachers Travels . . .*, London 1611, 35-6).

After his successful campaigns against the Ottoman Turks, Shāh 'Abbās I resolved to depopulate eastern Armenia and to create an empty tract between himself and his enemy. To this end, he transferred the major part of the population to Persia, estimated at some 60,000 families, including numbers of Georgians and Jews besides Armenians. The exodus is described by the Armenian chronicler Arak'el of Tabrīz, who refers to it as the great *siḡgin* ("exile, expulsion") (Arak'el of Tabrīz, *Ūvre d'histoires*, St. Petersburg 1874, tr. M. Brosset); it was considered disastrous in the eyes of the Armenians, who composed many bitter folk-songs lamenting their eviction from a prosperous area. Shāh 'Abbās I captured Djulfā in 1013/1604, and recognising the useful role that the merchants might play in his own economy, transferred them to Iṣfahān; he gave them three days to gather their possessions, and then destroyed the town and bridge. Although Djulfā was ruined, a few Armenians made their way back later in the 11th/17th century. Remains of churches and the ancient cemetery still survive. The extension of the Russian railway system to Tabrīz through Djulfā, and its establishment before the first World War as a stage on the Indo-European telegraph line, led to an increase in its importance; it now serves as a frontier post between Iran and the U.S.S.R.

II. New Djulfā (in Armenian, Nor Ĵulay) is situated in lat. 32° 40' N, long. 51° 41' E, and forms a suburb of Iṣfahān built on the south bank of the Zāyanda-rūd river, linked to the Čahār Bāgh in Iṣfahān by the Allāhwardī Khān bridge. It was created in 1014/1605 by Shāh 'Abbās I, to house the Armenians transferred from old Djulfā on the Araxes. Other Armenian emigrants were settled in Iṣfahān itself, but subsequently moved to New Djulfā in 1065-6/1654-5, where the mixed geographical origin of the population was reflected in the names of the different quarters, such as *Hirvanli* (Erevan), *Nakshivanli* (Nakhidjēvan) (Chardin, ii, 97). The population of New Djulfā has been estimated at 15,000-20,000 to start with, rising to 30,000 by 1630. Some 50,000 more Armenians were settled in 24 villages in the countryside around Iṣfahān. The spiritual head of the community was a Bishop, owing allegiance to the Catholicos at Etchmiadzin, and responsible for Armenians throughout Persia, as well as those in Basra and Baghdād (Gregorian, *op. cit.*, 667).

Shāh 'Abbās I helped the newcomers to establish themselves in New Djulfā, even assigning Persian masons and engineers to assist them. His support of the Djulfā merchants in international trade was of immense consequence, both of the Persian economy and their own good fortune. The strength of their position was assured in 1027/1618, when the Armenian merchants secured the monopoly of the silk trade abroad, wresting the privilege from the British. A measure of the significance of this monopoly is the estimated volume of the silk crop in Persia, more than 4 million pounds in the early 11th/17th century rising to 6 million pounds by the 1670s

(C. Issawi, *The economic history of Iran: 1800-1914*, Chicago 1971, 12). A further advantage was gained in Russia in 1078/1667, when Czar Aleksei Mikhailovich granted the Armenians special privileges, including the right to travel north from Astrakhan and deal directly with European buyers. The main advantage to Shāh 'Abbās I was the skill of the merchants in foreign trade, coupled with their reputation for honesty and diligence. With New Djulfā at the centre, an international trade network was established, with Armenian merchants settled as far afield as Tonkin, Siam, Java, the Philippines, India, the Near East, Holland, France, England, Germany, Italy, Poland, Sweden and Spain. Spices, cotton goods and porcelain were brought from the Far East and India; silk was exported from Persia to Europe; in return, a large variety of European goods was imported into Persia, including cloth, glass, clocks and watches, metal-work and oil paintings. As one traveller observed, "All the commodities of the East were made known to the West, and those of the West serve as new ornaments for the East . . . in the midst of Persia is now (*ca.* 1112/1700) seen everything that is curious throughout all the countries where the merchants have extended their correspondence" (J.P. de Tournefort, *Relation d'un voyage du Levant*, Paris 1717, iii, 232-3).

Shāh 'Abbās I accorded the Armenians something close to equal status with his Muslim subjects; New Djulfā was organised as a separate entity within the city, under the jurisdiction of its own *kalāntar* [*q.v.*], responsible for the collection of taxes, and a *kadkhudā* for the maintenance of civic order [see Iṣfahān, Vol. IV, p. 103]. Foreign embassies and missions were generally housed in New Djulfā; as the Armenians were skilled linguists and often acted as interpreters and intermediaries, this gave them a double advantage in the conduct of exchanges between the foreigners and the Persian court. Foreign missionaries, such as the Jesuits, Dominicans and Carmelites, were also established in New Djulfā; so were foreign craftsmen, like jewellers, gunsmiths and watchmakers, who often took Armenian wives. Shāh 'Abbās I took a personal interest in the affairs of the Armenian community, visiting them in New Djulfā and even attending religious festivals, such as Christmas and Easter. In 1029/1619, he took part in a special ceremony on the banks of the Zāyandarūd, afterwards dining and spending the night with his Armenian hosts (P. della Valle, *Voyages*, iii, 100-13).

The increasing wealth of the Armenian community was reflected in the erection of numerous churches and private houses erected in New Djulfā in the first half of the 11th/17th century. The churches, of which thirteen still survive, combine Armenian plans with Persian construction, brick replacing the Armenian traditional use of dressed stone; two of the churches have onion-shaped domes with double shells. The decoration is an eclectic mixture of Armenian, European and Persian elements. The interiors of the two largest churches, Surb Amenaperkitch (All Saviour's Cathedral) and Meydani Betghahem (Bethlehem Church), contain carved gilt stucco, *cuerta seca* tile panels, and wall-paintings in European style; the paintings are probably the work of Western artists and Armenian assistants. New Djulfā was also a centre for copying and illuminating manuscripts; a number of these are among the collection of almost 700 Armenian manuscripts in the Museum adjacent to the Cathedral, which also contains other items of historical

interest. A few private houses still survive of the Šafawid period, either built round a central courtyard, or in the middle of a walled garden, with separate quarters for men and women. Several are decorated with wall-paintings in European manner, as well as in more conventional Persian style. When Sir Thomas Herbert visited the house of the *kalāntar* Kh<sup>h</sup>ādja Nazar in 1038/1628, the impropriety of the wall-paintings earned his disapproval.

The Armenians were responsible for introducing a number of Western innovations, the most significant of which was the printing-press using cast metal type; the first Armenian work printed in New Džulfā was the Book of Psalms (*Sagħmos*), which appeared in 1638.

Shāh ‘Abbās I’s friendly policy towards the Armenian minority continued under his successors, Shāh Šafī and Shāh ‘Abbās II, but by the second half of the 11th/17th century, during the reign of Shāh Sulaymān, relations between the Persians and the Armenians became strained. In the 12th/18th century under Nādir Shāh, the Armenians suffered excessive taxation and other penalties, and many Armenians emigrated, particularly to India. At present the Armenian community is reduced to less than 500 families. A large Armenian cemetery, with several thousand carved gravestones, including those of a number of Europeans, lies to the south of the town.
