

Amazon Packaging Support and Supplier Network (APASS)

To support vendors and sellers in certifying their products under Amazon's Frustration-Free Packaging Programs, this document provides a list of companies and labs that can help test, design, and supply packaging in line with meeting Amazon's Packaging Certifications. All companies on this list have received guidance from Amazon and many have already worked with manufacturers to design, supply, and test Amazon Certified Packaging. The essential services these companies and labs provide are: Packaging **Testing**, Packaging **Supply**, and Packaging **Design**.

The APASS Network list is provided to you for your convenience only and no endorsements are implied. You are not obligated to use their services to have your product's packaging certified. If you elect to use their services, you will be contracting directly with that third party, who will be providing services to you at your direction. The list below is meant to help you quickly identify a lab or company that meets your needs. See the directory for company and lab contact information.

Please review the Amazon Packaging Guidelines for more information on Amazon's Frustration-Free Packaging Programs and the 3 Tiers of Certification: Tier 1 (Frustration Free Packaging), Tier 2 (Ships-In-Own-Container) and Tier 3 (Pre-Free Packaging).

Packaging Testing Labs

ISTA certified package testing labs can **test and certify** your products as Tier 1: FFP, Tier 2: SIOC or Tier 3: PFP without additional testing or documentation from Amazon. Simply contact these labs, arrange payment, and send the samples into the lab. If your product(s) pass the targeted certification, the lab will provide you an Amazon standard lab report to upload with Amazon for quick certification.

To achieve certification your products will be evaluated to: (1) meet all requirements for the corresponding standards listed in the Packaging Certification Guidelines; and (2) pass an International Safe Transit Association (ISTA) 6 Amazon SIOC test (Tier 1 or 2) or ISTA 6 Amazon Overbox (Tier 3) test with the appropriate ISTA certified equipment. All labs listed as a Packaging Testing Lab have the appropriate equipment and can test your products packaging against the standards and the appropriate ISTA 6 test.

Additional information on the process plus required submission forms can be found at www.aboutamazon.com/sustainability/packaging/testing -and- www.aboutamazon.com/sustainability/packaging/certification

APASS testing lab certifications have many advantages. For example, certifying externally provides you with reports and documentation that you can use with other retailers. You can certify using a global set of labs avoiding costly shipping and the hassle of shipping internationally. Finally, an APASS testing lab may be able to provide you with results in a timely fashion to support decision making in the packaging development process.

APASS TESTING LIST CURRENT AS OF 3.03.2021

Packaging Suppliers and Designers

Certain companies and labs can provide services beyond testing. Companies or labs that are identified as a Packaging Supplier or Packaging Designer have specialized experience designing and supplying Amazon packaging solutions. Such services may include a simple pre-made corrugated solution for a single product or holistic advice on packaging designs for an entire line, brand, or portfolio of products attempting to achieve packaging certification. Beyond just reaching certification, using these services may result in significant cost savings, waste reduction, or improved customer experience for items fulfilled by Amazon. Please read more about the specialties of each company to ensure you choose the right company to meet your unique packaging needs.

Companies marked as a packaging supplier can provide solutions that may meet your packaging needs and help you achieve Amazon Packaging Certification. While there is little restriction on the type of packaging materials required to meet Tier 2: SIOC and Tier 3: PFP certification, please review the curbside recyclable requirement for Tier 1: FFP when sourcing materials. Further, please research each company's ability to provide primary and secondary packaging solutions in line with your needs.

APASS TESTING LIST CURRENT AS OF 3.03.2021

Directory

Below is a directory of APASS members. The written descriptions are short quotes about the abilities of the members written by the members themselves. The quotes do not represent opinions or endorsements by Amazon.

5 Star packaging is one of the largest distributors of custom corrugated, chipboard, and flexible packaging in Southern California. We produce custom packaging that complies with all three of Amazon's packaging tiers (i.e. FFP, SOIC, PFP), and offer competitive pricing on both recyclable and compostable packaging materials. Our additional fulfillment, warehousing, and design services allow us to be a one-stop shop for companies looking to successfully launch products into any marketplace, from Ecommerce to brick and mortar retail. We have also partnered with 3rd party packaging testing labs to ensure that our packaging designs comply with the rigorous ISTA, ISO, and ASTM standards. Packaging that conforms to these standards is essential for all vendors/sellers who plan on conducting business via Amazon. Please feel free to contact us anytime, and let us help guide you through this process. Also, feel free to review our website, and see what our current customers are saying about us on Google. Thank you for your time and consideration.

CASCADES Founded in 1964, Cascades offers sustainable, innovative and value-added packaging, hygiene and recovery solutions. The company employs 11,000 women and men across a network of over 90 facilities in North America and Europe. The products manufactured are made of 82% recycled fibers overall. Each business unit holds an FSC® certification¹, proving that Cascades takes sustainable development to heart.

Cascades' expert team of over 60 structural designers and packaging engineers provides full structural design and prototyping expertise. Our services are tailored to meet and exceed the e-commerce packaging and supply chain requirements of our customers.

Cascades R&D Center has implemented an internal quality system based on ISTA, TAPPI and ASTM directives that allows us to offer constant service quality. We are able to conduct baseline testing on boxes and components (liners and mediums), as well as competitive analysis, root cause analysis and qualification testing of individual packages or pallets. We provide ISTA 6-Amazon.com testing to help customers' meet Amazon's packaging requirements (Frustration Free Packaging (FFP), Ships in Own Container (SIOC), Over Box (OB) and Amazon Prep-Free Packaging (PFP). With half a century of experience in recycling and continuous efforts in research and development as driving forces, Cascades continues to deliver the innovative products that customers have come to rely on.

Deles group (Global Designer & Supplier) Since the 1950s, we have converted the needs of industry into packaging services and systems. We have become a large group, aware of the strategic importance of our role and our responsibility.

Starting from the product's characteristics and the customer's needs, our packaging engineers design, prototype and develop customized packaging solutions in terms of environmental impact, costs and protection.

Our in-house Lab is focused on research and development activities. Deles Lab is certified by ISTA and equipped with the latest-generation instrument and can supply samples and production pre-series items very quickly.

We created the ONE-SOURCE MODEL, which means we can meet all product care needs throughout the product's life cycle in a single supply, thanks to our experience and knowledge in packaging design, production, end-of-line automation, logistic service.

We are present in Europe and in US market, thanks to a partnership with an American company.

Fraunhofer Institute for Material Flow and Logistics IML-The Laboratory for Packaging Testing /Research and Development at the Fraunhofer Institute for Material Flow and Logistics in Dortmund was founded in 1986 and has been an independent testing institution ever since. A qualified team provides neutral and competent test result evaluation and documentation for customers from the food and consumer goods sectors, the automotive industry as well as for packaging-/ systems manufacturers based on the knowledge and experience of more than 1,500 projects. The focus is on testing secondary and transport packaging, unit loads, load carriers and pallets as well as insulating-packaging-systems. The topic of load securing in the truck cargo hold or container is included if appropriate.

In the Laboratory static, dynamic and climatic stresses can be applied to a wide variety of packaging systems on the basis of standardised test methods. Qualified knowledge of the relevant standards of the associations DIN, EN, ISO, ASTM and ISTA (ISTA Project 6-AMAZON.com, FFP, SIOC, PFP and OB) are the basis of every scientifically accompanied testing task. Modern hydraulically driven vertical vibration testing systems are used to simulate vibrations during transports by truck, railroad wagon or freight aircraft. A total of four climatic chambers enable pre-climate-conditioning of test samples as well as measurements to determine the performance of insulating-packaging-systems. By using the horizontal test system HITS stress on trucks and railroad trains during braking and cornering can be simulated realistically and precisely. A 200 kN four-column test system is used to determine the compressive / stacking strength of packaging, unit loads and complex packaging systems. Drop hooks, precision drop table and vertical shock tester complete the testing equipment.

IPS-technology: (EU Testing, Designer, Cleaning, &Supplier) – IPS-Technology provides end to end design, testing, cleaning and supply solutions in a very wide packaging sector (E-commerce, semiconductor, automotive, aerospace, high tech, medical etc.).

IPS provides ISTA testing and can certify packaging as PFP, SIOC, or FFP. Beyond just testing and certification, IPS-Technology can provide advice in packaging design & damage solutions, technical guidance and feedback on packaging best practices. IPS also test product life. We know the requirements with which products and packaging materials have to comply and all the legal standards and obligations.

As a spin-off of Philips, IPS Technology has gained many years of experience in designing, manufacturing, testing and cleaning (special) packaging and tooling.

Lansmont - For nearly 50 years, Lansmont has been providing Field-to-Lab® measurement and testing solutions to the world's leading companies, government laboratories and educational institutions. Our technologies are used to prevent damage in the supply chain, improve deliverable product quality and maintain regulatory compliance.

Lansmont offers complete ISTA 6 Series Amazon SIOC and Over-Box test equipment solutions. Our subject matter experts can help with ISTA laboratory certification, as well assisting with equipment and testing applications training. We offer global technical support, including on-site preventative maintenance and repair. Lansmont also operates an in-house ANAB Accredited ISO/IEC 17025:2005 and ANSI/NCSL Z540-1-1994 laboratory, where we deliver professional calibration services.

Lansmont's Field-to-Lab® methodology means – measure the hazards present in the distribution environment, then use those measurements to drive laboratory simulation of that environment. Lansmont's SAVER™ shock and vibration data recorders are the industry standard that provide the ability to characterize any number of channels in the supply chain. Our internal experts can assist with supply chain audits and their respective summary reports.

Topa Institute (EU, Testing, Consulting, Packaging Designer and Supplier) Topa Institute, founded in 1983, is a test laboratory with a modern approach to simulating transport and transshipment. The various tests show the possible product fragility or weaknesses of the packaging. The interpretation of the test results, combined with the up-to-date knowledge of the specialists of Topa Institute, exclude damage to your product during transport and storage.

On top of that, Topa Institute is also a key player in packaging development for all kind of products. Solutions are provided for fragile or bulky products as well as for temperature sensitive pharmaceutical products. Our specialists do not only limit themselves to the packaging. The whole logistic process is being researched.

UFP Packaging, LLC – LX Center

Your customers expect products to arrive in good condition and you want to minimize the cost to package your products – it's a balancing act. You also want to minimize shipment preparation fees and over-boxing expenses. The LX Packaging Lab specializes in driving cost out of packaging designs and validating performance in the modern distribution environment. We are an ISTA certified lab staffed by Packaging Engineers & Technicians, specifically trained on Amazon packaging standards. We design and validate everything from corrugated shipping solutions to large industrial scale crates and skids. From light duty to heavy duty, we've got you covered. Outstanding customer service, an efficient design process and the highest technical standards are our hallmarks. We design, prototype & test your shipping solutions to perform. Our affiliates can provide the needed shipping solutions and materials to meet your product protection needs.

Unicorr Packaging Group - Unicorr is among the largest converters of custom corrugated products and protective packaging in the Northeast. We work with our North America alliances to provide additional geographic coverage as needed. As a third generation family-owned and operated business since 1946, we manufacture and distribute a wide range of corrugated containers, displays and retail packaging, and protective packaging at six manufacturing facilities and multiple satellite warehouses. Our experienced structural and graphics design team will create your ideal packaging solution from prototypes through testing in our ISTA certified testing lab, and our skilled production team will take over from there. We truly care about our customer's success and partner together to develop and execute the best possible e-commerce solution for each product or combination of products.

Demand the most from your packaging. After all, your package is a reflection of the quality of your product and your brand. When you choose Unicorr, you'll have a team of talented innovators, production experts and extensive state-of-the-art equipment on your side.

UPS Package Design & Test Lab- There's a science to making sure shipments arrive safely and intact--it begins with the packaging and package engineering. At the UPS Package Design and Test Lab our certified engineers use leading-edge technologies to simulate real-world package transport scenarios.

Movement along your supply chain can take a toll on your shipments, and your packaging must be able to hold up under various conditions. UPS's test lab is a place where packages go through compression, impact, vibration, and shock tests. The data from these tests help our engineers identify the most appropriate packaging for your product to help prevent damages and minimize reshipments.

WestRock– WestRock is an industry leading producer of containerboard and corrugated packaging providing containers structurally designed and performance matched to converting equipment and distribution channel requirements. Our innovative solutions for e-commerce delivers value beyond the box. The WestRock testing lab provides design, prototyping and testing of corrugated containers and related components (adhesives, coating and inks) for products sold for direct delivery to consumers. We conduct baseline testing, competitive analysis, root cause analysis and supply chain performance / qualification testing of individual packages up to double stacked pallet loads. Package Performance Testing simulates the hazards a packaged product, including SIOC (ships in own container) packaging is subjected to during storage and distribution. This testing includes ISTA Certified, ASTM, NMFC Item 180 and 181 testing, in addition to customized testing protocol development.
