Types of CCTV Camera Lens

One of the main differences between security cameras are the lenses that they use. The two options are fixed and varifocal lenses.

Fixed Lens

Fixed lens gives a specific field of view that has been pre-configured and cannot be changed. This provides for a simple set-up and is best used for homes and small businesses.

Varifocal Lens

Varifocal lens comes with an adjustable lens allowing you to adjust until you get your perfect field of view, and this field of view will not change until adjusted. For example Varifocal can have an angle range of 2.8mm to 12mm.
