

XTRAC Laser Information

XTRAC is the only FDA-cleared, clinically proven excimer laser that gets skin clear of psoriasis—and it works fast, with many patients seeing substantial improvement and long-lasting reductions. Because XTRAC delivers a highly targeted, therapeutic beam of UVB light only to areas of the skin affected by psoriasis, healthy skin surrounding the lesions stays intact.

HOW DOES IT WORK?

Using a carefully focused beam of laser light distributed through a refined liquid light guide delivery system, the XTRAC system is designed to clear unsightly psoriatic skin plaques quickly and effectively. Because it concentrates light on active lesions, XTRAC allows your health care technician to deliver the high therapeutic doses necessary for rapid clearing without risk to healthy skin. XTRAC Lasers produce a highly effective, safe, and painless therapy by delivering a targeted, super-narrow UVB band to affected areas, resulting in effective and rapid improvement without the worry of harmful side effects of invasive, systemic agents.

WHO SHOULD CONSIDER THE XTRAC THERAPY?

Almost all patients with plaque psoriasis are candidates for the XTRAC Therapy. If you have mild, moderate or severe psoriasis, you should consider the XTRAC Therapy.

ON WHICH AREAS OF THE BODY CAN BE TREATED?

The XTRAC Therapy can be used on any plaque psoriasis regardless of location on the body. The XTRAC Therapy is excellent for hard to treat areas such as the scalp, knees or elbows. Most patients will begin to notice improvement in their psoriasis within 3 or 4 treatments. Significant improvement is often seen in 6 to 10 treatments, with clearance in 10 to 20 treatments. Individual results will vary.

HOW LONG DOES THE TREATMENT TAKE?

Treatments are relatively quick. The exact time depends on how many psoriasis areas are being treated with the XTRAC. Typically, patients can be in and out of the treatment room in ten to fifteen minutes.

HOW OFTEN IS THE TREATMENT GIVEN?

The XTRAC Therapy is performed two to three times per week in your physician's office. Your physician will discuss with you the best treatment program that fits your need.

IS THE XTRAC TREATMENT SAFER THAN OTHER TREATMENTS?

The XTRAC Therapy is extremely safe compared to other prescription treatments. The XTRAC Therapy does not expose your healthy skin to treatment. Also, there is no thinning of the skin as is common with topical medications. There is also none of the dangerous health risks such as cancer, tuberculosis, even death, as associated with biologics and systemics.
