# TILT & SLIDE DOORS

The tilt & slide door is unique in concept and design. The construction utilises a sash which slides free the frame on a rail system enabling a full perimeter cam locking system to be employed from. This design not only enables double sealing but also incorporates a useful tilt function providing optimum ventilation while maintaining a barrier to children and pets. All these distinct features makes tilt and slide door an ideal alternative to a standard sliding door. EnerStar Tilt & Slide doors are beautifully designed to give your home an aura of elegance.

# LIFT & SLIDE DOORS

EnerStar lift and slide doors are among the most versatile on the market. Unlike traditional sliding doors, our range utilises a lever system. When the opening handle is rotated through 180 degrees the entire door lifts up off its seals and glides along with ease. Operated by the door handle – this allows sliding leaf to drop to the closed position, compressing the weather-seals and closing the door into locking points around the frame, for high security and draught-proofing. There is a secure ventilation position and the door can also be lowered at any point along its track to prevent it from moving whilst open.

# TILT & TURN DOORS

EnerStar Tilt & Turn door construction and characteristics are similar to a EnerStar's Tilt & Turn windows. A Tilt & Turn door is a dual-function door; it swings in for entry and exit, and tilts in from the top for ventilation. Both actions are activated by a simple turn of a lever! A tilt & turn door can be opened in the traditional sense from a hinge on one side of the door or, they can be sealed and tilted at the top for slight air-flow without taking up space inside and exposing the room to the outdoor elements. As with all of our doors, tilt & turn doors are known for their secure and high quality European design that is both visually appealing and structurally unbeatable.

# SLIDING PATIO DOORS

EnerStar sliding patio doors are a great option for opening up your home to the outdoors without losing valuable space inside or outside. We offer a comprehensive range of sliding doors that are not only functional and reliable but also very well suited to Canadian weather conditions and are latest in home designs. These doors are designed for a sleek, modern finish, and provide great solutions for both visual impact and practicality. With EnerStar sliding doors, you can expect year-round performance and genuine value for your money.

# SWING DOORS

Perfect for both classic and contemporary homes, swing doors are a great choice for any desired aesthetic. Vinyl Swing doors provide a luxury feel, without worrying about warping that can sometimes be associated with timber products. These doors are capable of creating Garage opening with their dual opening sashes. They add a beautiful and secure option to your patio.

# BI-FOLD DOORS

The EnerStar vinyl folding doors are the ideal way to link internal and external entertaining areas. The door itself will slide open, whilst its panels fold to the sides and stack against the wall in order to make the most space and accessibility through a single operating door. When all the panels are opened and folded away, the outside comes inside, providing ventilation inside your home, a clear unobstructed view, and the versatility of creating a single large area. Available in member of finishes and configurations, you can tailor the design of your doors to your own tastes.

# CUSTOM FOIL FINISH

EnerStar uses state of art foil wrapping technology for providing solid colours and wood finish to vinyl frames for our customers, who do not want to miss colour revolution and characteristics of maintenance-free plastic. Foiled frames will not change their appearance for the entire life of the window in spite of sun, wind, rain and frost. The film used is permanently bonded to the plastic profiles.

## FEATURES

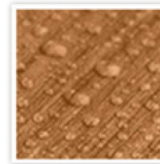

- Very high scratch resistance as compared to paint.
- Designed for extreme climate condition and performs feasible between temperature range from -40 degree to until 140 degree.
- 100's of solid colours and wood finishes to choose from.
- Unlike other decorative coating on PVC-Lamination does not chip or crack.

Foil remains intact up to 140 degrees

Intelligent surfaces with integrated sun protection

Thanks to the fine structure, the film is much easier to clean than conventional surfaces
