

The Pragmatic Product Professional

Laura Van Doore

Head of Product Design, Fathom

 @lauravandoore

The Pragmatic Programmer

from journeyman
to master

Andrew Hunt
David Thomas

Foreword by Ward Cunningham

How could a book about programming
written 2 decades ago be applicable to
modern product development?

Building Products in 2019

Pragmatic

Adjective

Solving problems in a sensible way that suits the conditions that really exist now, rather than obeying fixed ideas, theories or rules.

Otherwise we end up with
products like this:

What makes a
pragmatic product person?

Trait #1

BIG PICTURE THINKER

They think beyond the immediate problem and place it in a larger context

Trait #2

DEEPLY REALISTIC

They work with the chess pieces that are on the board, rather than the resources they wish they had

Trait #3

INQUISITIVE

They constantly re-evaluate and question current methods, approach & practices

Trait #4

SKILLED CRAFTSPERSON

They deeply care about their craft, and actively invest in new skill development

Trait #5

SCIENTIFIC MINDSET

They make informed decisions and intelligent compromises

Pragmatic Product Mindset Traits

Big picture thinker

Realistic

Inquisitive

Skilled Craftsman

Test & Learn Mindset

Cultivating a Pragmatic Product Mindset

1

Speak more than one language

In 1999

Learn as many programming
languages as possible

“

The limits of languages influence
how you think about a problem

The Pragmatic Programmer

@lauravandoore

In 2019

Building product is a team sport

With many roles and players

Learning the languages of your
teammates is a super power

SPEAK MORE THAN ONE LANGUAGE

- Customers
- Engineering
- **Product Management**
- Design & UX
- Business

Shared language and skill overlap
breaks down barriers

A blurred, close-up portrait of a man with a mustache, looking directly at the camera. The image is overlaid with a semi-transparent purple and blue gradient. A black circle containing the number '2' is positioned above the main text.

2

Be a catalyst

Catalyst

Noun

A chemical substance that can be added to a reaction to increase the reaction rate without getting consumed in the process

Be a catalyst

Imagine this scenario:

- You have a really clear picture on how to make positive change
- You've got a great grasp on the resources you'll need, and how to bring it all together.
- It's a slam dunk

Be a catalyst

- But when asking for permission to get started, you're met with delays and blank stares
- People form committees
- Budgets need approvals
- Everyone starts to guard their resources

STORY TIME

Stone Soup

BE A CATALYST

People find it easier to join an
ongoing success

BE A CATALYST

Showing a glimpse of the future
helps folks to rally

BE A CATALYST

Sometimes people aren't aware of
the value they can contribute

(They don't know what they can bring to the pot)

Be a catalyst by helping the people around you see an exciting possible future, with a clear path for how they can contribute

A stylized illustration of a person with a white head and neck, wearing a blue long-sleeved shirt. They are holding an open book with a white cover and a yellow spine. The book has red and pink geometric shapes on its pages. Above the person's head is a black circle containing the white number '3'. The background is a solid brown color.

3

Invest in your
knowledge portfolio

“

Your knowledge & experience are your most important professional assets. Unfortunately, they're expiring assets.

The Pragmatic Programmer

INVEST IN YOUR KNOWLEDGE PORTFOLIO

Diversify

The more areas you have knowledge in, the more valuable & adaptable you are.

INVEST IN YOUR KNOWLEDGE PORTFOLIO

Manage risk

Tech skills exist along a spectrum from risky, potentially high-reward to low-risk, low-reward skills.

INVEST IN YOUR KNOWLEDGE PORTFOLIO

Buy low, sell high

Learning emerging technologies or methods might be risky, but it pays off for early adopters who can end up dominating that area.

Manage your knowledge investments in a similar way to how you would manage a financial portfolio

4

Push for progress over perfection

PUSH FOR PROGRESS OVER PERFECTION

You can't design perfect software

There's no single correct answer when building new features & products. 'Perfect' is dependant on the eye of the beholder.

@lauravandoore

PUSH FOR PROGRESS OVER PERFECTION

Plan to adapt and iterate. Permanently.

Customers needs are always evolving, usually needing more and more sophisticated functionality. Product is never done.

@lauravandoore

1

Speak more than one language

2

Be a catalyst

3

Invest in your knowledge portfolio

4

Push for progress over perfection

Pragmatic Product Mantras

4 bite-sized knowledge nuggets

Don't live with broken windows

A photograph of a red station wagon parked in front of a brick building. The building has a large green door and a dark doorway. A person is standing near the doorway. The ground is covered in snow. The text "Don't live with broken windows" is overlaid on the top half of the image.

Fix bad designs, wrong decisions, and poor code when you see them.

Horses, not zebras

A person wearing a zebra costume is standing in a backyard. The costume is white with black stripes and has a zebra head with a mane. The person is standing on a green lawn in front of a house with a covered patio. There are trees and a fence in the background.

Look for expected cause first, rather than searching out something more exotic

“

No one from Brazil has purchased our product, people must not be interested.

Later, user research showed their checkout form validation didn't allow Brazilian postcodes to pass

Carve stones, but think cathedrals

Focus on where the big picture meets the detailed implementation.

When in doubt ask the duck

Rubber duck debugging is popular with devs, but is handy for other teams too

Thanks

 @lauravandoore
