

NEW YORK

# Modernizing the geo-data stack

CARTO

Hudson River

Weehawken

**Matthew Forrest**

Field CTO

**CART** ●

Hoboken

# Overview

# Our agenda

## The modern data stack |

What the modern data stack means in the wider world of data

## Modernizing two ways |

How to modernize locally and within the cloud (and when to move to the cloud)

## The modern geo-data stack |

What does the modern data stack look like for geospatial?

## In the cloud |

When and why to use the cloud

## Where we see the future |

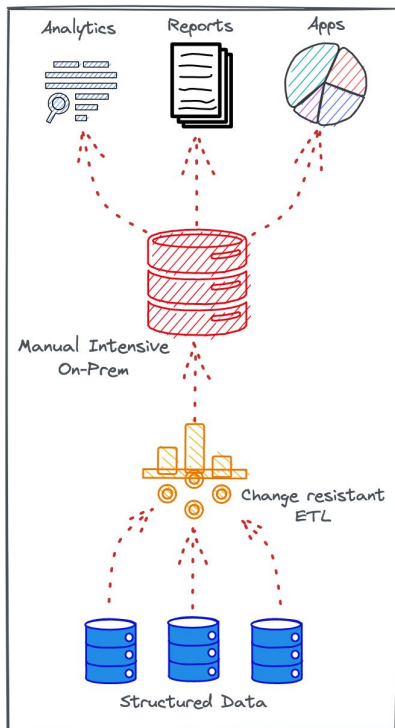

Why we believe SQL, data warehouses, and cloud can be a part of the future

# Understanding the modern data stack

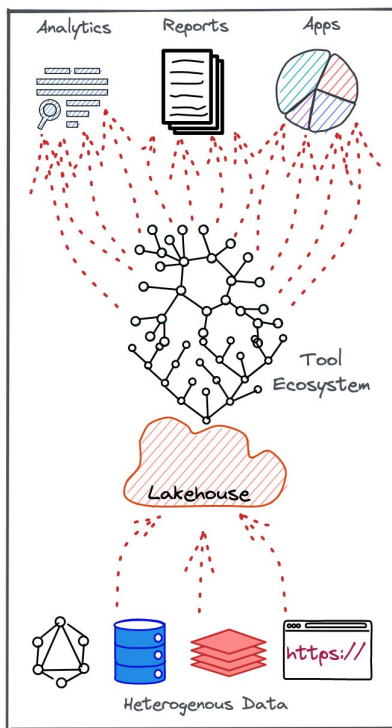

# Why?

- Growth in the OLAP database
- Distributed computing and regular releases
- SQL as the *lingua franca*
- Ecosystem tools to support

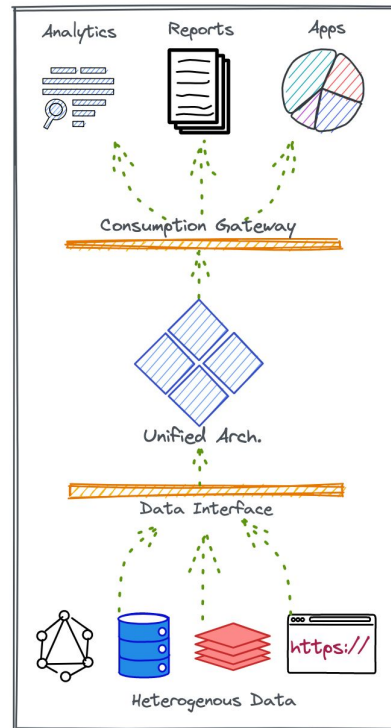

### Traditional Data Stack

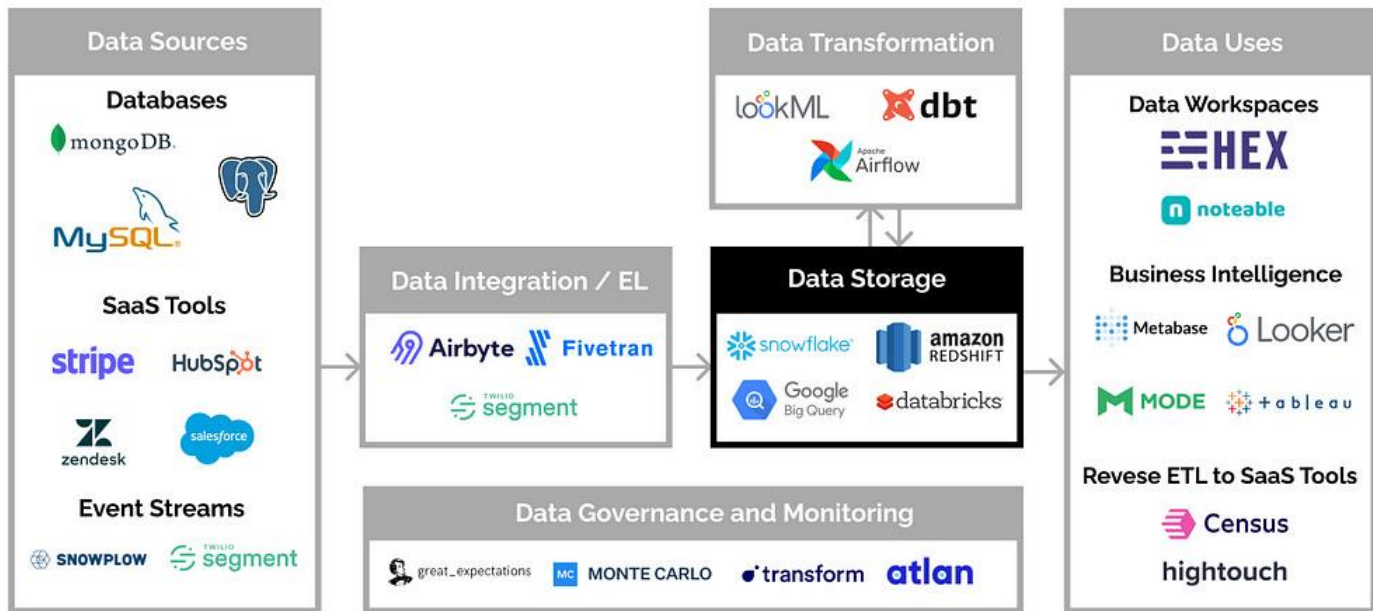

### Modern Data Stack

### Data-First Stack

# Modern Data Stack

@tanayj

# The modern geo-data stack

# Modernizing in many ways

# Processing storms data from NOAA

# Index of /pub/data/swdi/stormevents/csvfiles

# Three different paths

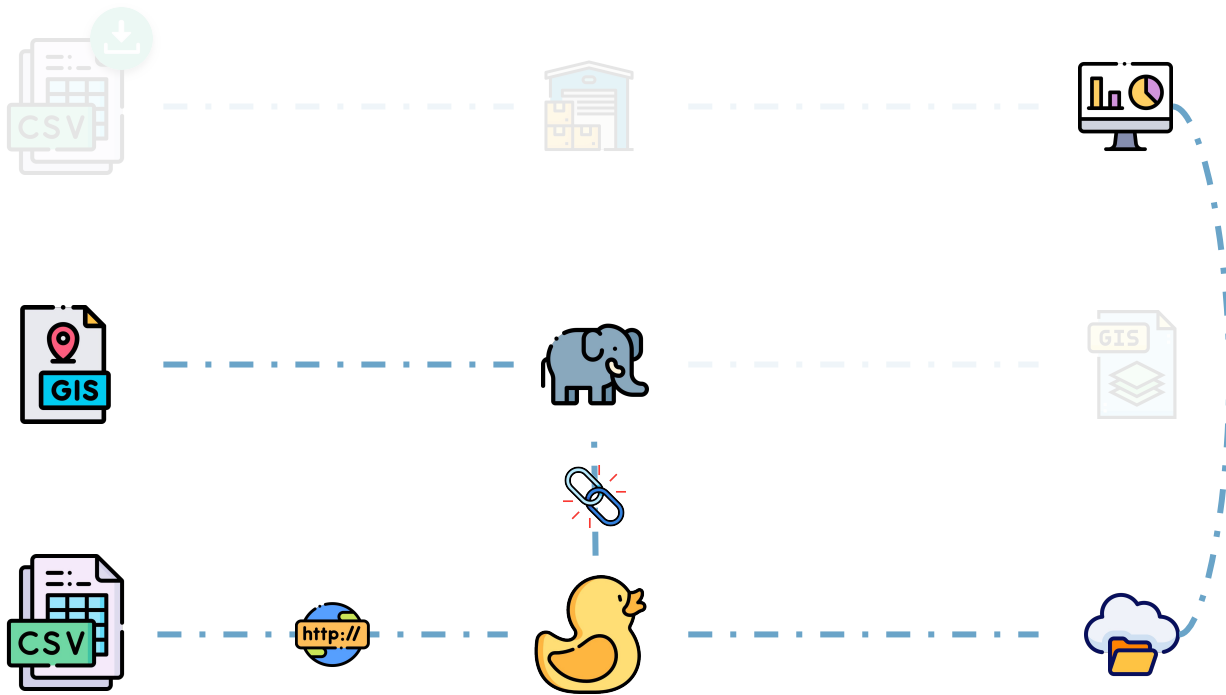

# Three different paths

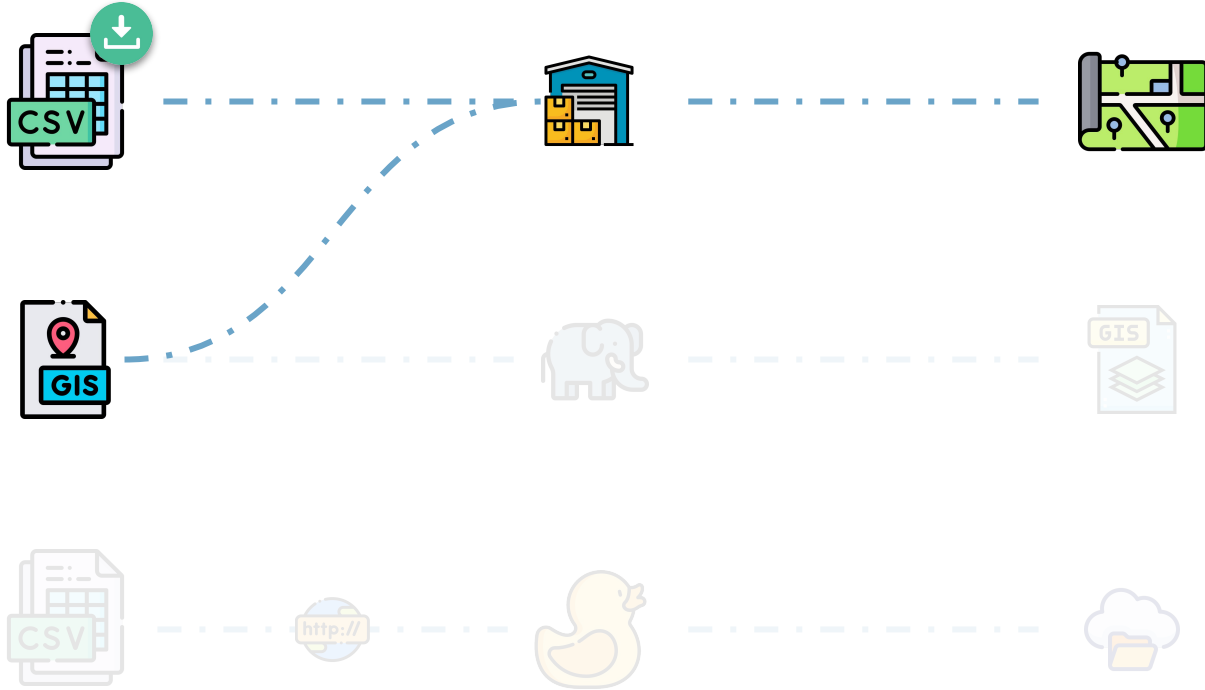

# Three different paths

# Three different paths

# Three different paths

**Looks the same, but there are many ways to use the modern geo-data stack**

# The modern geo-data stack

# The modern geo-data stack

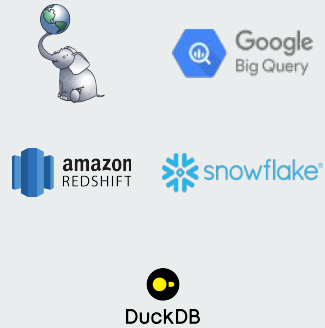

## Data Sources

## Ingestion

## Storage

## Analytics

## Data Science

## Reverse ETL

## Transformation

## Applications

# When and why to use the cloud

Dialing...

**The cloud does a lot more than  
just getting your work online**

# Three use cases for the cloud

Your analysis needs to be repeated or available regularly

You need to run your analysis with large scale data

The geospatial need isn't just a one off

# FUTURE RADAR

▶ SAT 7 AM

Understanding exposure at any point in time

# Where CARTO is focusing

## Geoparquet & Raster

Improving data at the source, making raster ingestion easy

## Workflows

Orchestrating ingestion, transformations, and analytics

## Storage

Improving connections to the cloud data warehouses

## Analytics

Builder makes analytical reporting dead simple

## Data Science

Embedding pure spatial data science into the Analytics Toolbox

## Applications

Integrating with Deck GL, tiling at scale like never before

You can import a local file from your computer, or a file from a URL.

Choose method

File

E.g.: file.geojson, file.csv, shapefile.zip

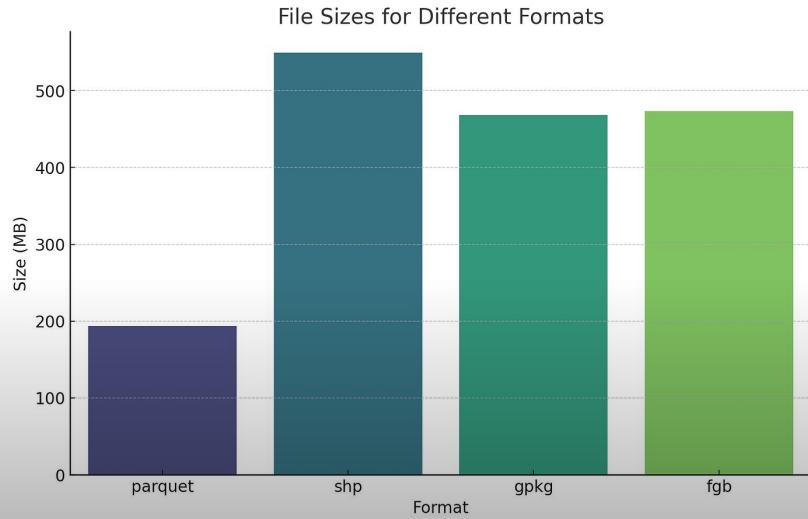

Browse

Shapefiles, GeoPackage, CSV, KML, KMZ, TAB, GeoJSON and (Geo)Parquet files are supported

Cancel

Continue

**Support native upload of  
Geoparquet at larger file sizes**

**Improved size and performance  
across the board**

CALL

```
`carto-un.carto.RASTER_ST_GETVALUE`(  
  "my-bigquery-project.my-bigquery-dataset.UKv1p1",  
  ST_GEOGFROMTEXT('POLYGON ((-3.100891 51.436889, -3.100891 51.538221, -3.308258 51.538221,  
  NULL,  
  "my-bigquery-project.my-bigquery-dataset.UKv1p1_cardiff"  
)
```
