This specification establishes the requirements for labeling of materials and products (including packaging), wherein a biodegradable plastic film or coating is attached (either through lamination or extrusion directly onto the paper) to compostable substrates and the entire product or package is designed to be composted in municipal and industrial aerobic composting facilities. This specification, however, does not describe the contents of the product or their performance with regards to compostability or biodegradability. In order to compost satisfactorily, the product must demonstrate each of the three characteristics as follows: (1) proper disintegration during composting; (2) adequate level of inherent biodegradation; and (3) no adverse impacts on the ability of composts to support plant growth. **ASTM-D6868, ASTM-D6400**

Capable of being broken down (decomposed) rapidly by the action of microorganisms. Biodegradable substances include food scraps, cotton, wool, wood, human and animal waste, manufactured products based on natural materials (such as paper, and vegetable-oil based soaps). See also degradable and photodegradable. **BIODEGRADABLE**

The Biodegradable Products Institute (**BPI**) is a not-for-profit association of key individuals and groups from government, industry and academia. Through their innovative compostable label program, they educate manufacturers, legislators and consumers about the importance of scientifically based standards for compostable materials which biodegrade in large composting facilities. They also promote the use and recovery of compostable materials through municipal composting and we provide information and resources such as how to find a composter.

A product that is “compostable” is one that can be placed into a composition of decaying biodegradable materials, and eventually turns into a nutrient-rich material. It is almost synonymous with “biodegradable”, except it is limited to solid materials and does not refer to liquids. **COMPOSTABLE**

The Design for the Environment (**DfE**) Program at the U.S. Environmental Protection Agency developed the Alternatives Assessment Criteria for Hazard Evaluation as a transparent tool for evaluating and differentiating among chemicals based on their human health and environmental hazards. The Criteria are applied in all of **DfE** Alternatives Assessments and can be used by other organizations.

**EcoLogo**™ UL Environment's **ECOLOGO** Certification is based on multi-attribute, lifecycle based standards. All products certified to an **ECOLOGO** standard must meet or exceed each of the listed criteria before receiving the mark. **ECOLOGO** Certification is classified as an ISO (International Organization for Standardization) Type 1 ecolabel and has been successfully assessed by the Global Ecolabeling Network, further demonstrating its credibility.

The Safer Choice **EPA** label (formerly DfE) offers a readily identifiable way to know that a product is as safe as possible for people and the environment. When you see the Safer Choice label on a product it means that the Safer Choice scientific review team has screened each ingredient for potential human health and environmental effects and that—based on the best available experimental data and EPA predictive models—the product contains only those ingredients that pose the least concern among chemicals in their class. For example, if a Safer Choice product contains a surfactant, then that surfactant will not be toxic to humans and will biodegrade readily to non-polluting degradation products. Many surfactants in conventional products biodegrade slowly or biodegrade to more toxic and persistent chemicals, which threaten aquatic life.

**FSC** certification ensures that products come from responsibly managed forests that provide environmental, social and economic benefits. The FSC Principles and Criteria provide a foundation for all forest management standards globally, including the FSC US National Standard (v1.0) that guides forest management certification in the U.S.

**Green Seal** provides science-based environmental certification standards that are credible, transparent and essential to helping manufacturers, purchasers and consumers make responsible choices that positively impact business behavior and improve quality of life. Thousands of products and services in hundreds of categories have been certified to meet Green Seal standards. Green Seal provides public education and guidance for creating a more sustainable world.

**LEED**, or Leadership in Energy and Environmental Design, is changing the way we think about how buildings and communities are planned, constructed, maintained and operated. Leaders around the world have made LEED the most widely used third-party verification for green buildings, with around 1.85 million square feet being certified daily. LEED works for all buildings—from homes to corporate headquarters—at all phases of development. Projects pursuing LEED certification earn points across several areas that address sustainability issues. Based on the number of points achieved, a project then receives one of four LEED rating levels: Certified, Silver, Gold and Platinum. LEED-certified buildings are resource efficient. They use less water and energy and reduce greenhouse gas emissions. As an added bonus, they save money. Learn more about why LEED continues to be the leading benchmark in green building.

Manufacturers, regulators and consumers look to **NSF** International for the development of public health standards and certification programs that help protect the world's food, water, consumer products and environment. Our mission is to protect and improve global human health. As an independent, accredited organization, we develop standards, and test and certify products and systems. We provide auditing, education and risk management solutions for public health and the environment. Founded in 1944 as the National Sanitation Foundation, we changed our name to **NSF** International in 1990 as we expanded our services beyond sanitation and into global markets. The letters in our organization's name do not represent any specific words today.

Sustainable products are those products that provide environmental, social and **economic benefits while protecting public health and environment over their whole life cycle, from** the extraction of raw materials until the final disposal. **SUSTAINABLE**

Buying recycled sends a message to industry that recycled products are in demand and helps close the waste circle, helping to ensure that recyclable materials will continue to be recycled and not be wasted. When recyclable materials become the raw materials of industry, they reduce the need for mineral and petroleum extraction and timber harvesting. Less water and energy are typically required to make products from existing (recovered) materials than from virgin materials. When you buy recycled products, you save vital natural resources and help stimulate economic growth through environmentally preferable technologies. **RECYCLED MATERIAL**

**SFI** Inc. is an independent, nonprofit organization dedicated to promoting sustainable forest management. We work with conservation groups, local communities, resource professionals, landowners, and countless other organizations and individuals who share our passion for responsible forest management. Our Board of Directors represents environmental, social and economic interests equally, and we address local needs through a unique grassroots network of **SFI** Implementation Committees. Our forest certification standard is based on principles that promote sustainable forest management, including measures to protect water quality, biodiversity, wildlife habitat, species at risk, and Forests with Exceptional Conservation Value. The standard is used widely across North America, and has strong acceptance in the global marketplace so we can deliver a steady supply of wood and paper products from legal and responsible sources. This is especially important at a time when there is growing demand for green building and responsible paper purchasing, and less than 10 percent of the world's forests are certified

Managed by the U.S. Department of Agriculture (**USDA**), the goal of the **BioPreferred** program is to increase the purchase and use of biobased products. The **BioPreferred** program was created by the 2002 Farm Bill and reauthorized and expanded as part of the Agricultural Act of 2014 (the 2014 Farm Bill). The program's purpose is to spur economic development, create new jobs and provide new markets for farm commodities. The increased development, purchase, and use of biobased products reduces our nation's reliance on petroleum, increases the use of renewable agricultural resources, and contributes to reducing adverse environmental and health impacts.
