

TIPS ON UNDERSTANDING YOUR RESULT REPORT

...patients; to be determined by the healthcare professional

Green Complex

This microbe follows the biofilm layer. It is a kind of pathogen that can take advantage of your condition and appear or disappear during your recovery.

Green

Orange/Yellow Complex

These microbes act as a bridge and they need oxygen to survive. They pave the way for the red complex when they are around.

Orange/
Yellow

Red Complex

Red complex are harmful microbes that reside in the gum tissues and resist scaling and root planing. Extra treatment and medication may completely eliminate them.

Red

Pink Complex

Only a quarter of all reports or less show pink complex. This microbe can survive with or without oxygen and it invades the tissues and does not respond to scaling and root planing. Intense treatment is essential.

Pink
