Theme:
Knowing time without knowing the clock

Watch that changes color in stead of telling the clock. The colors change gradually through the day

colors of the day
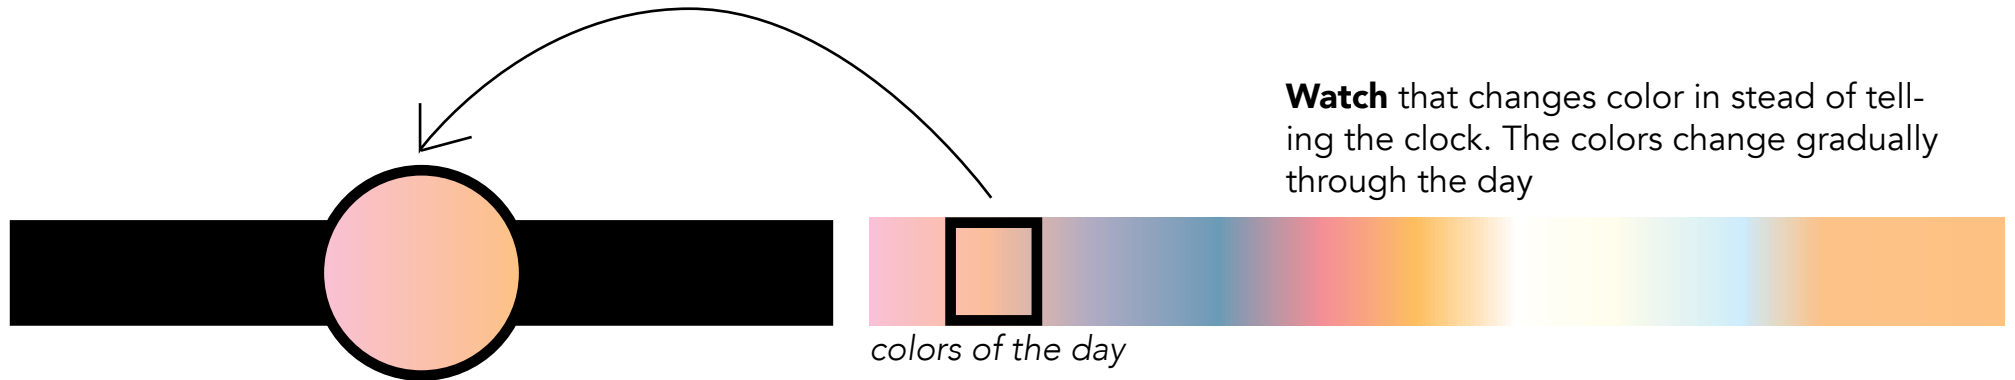

Office watch:
- gives an overview of the whole day
- syncs with google calender
- you know your schedule, but not the exact time
- Lets other people in the office know your scedule

The black rect indicates the time of the day. Here, 5 min to meeting

Theme:
Sound in drawers

Moving sound

only purpose is to convince children that a shy
magical creature is living in the drawers
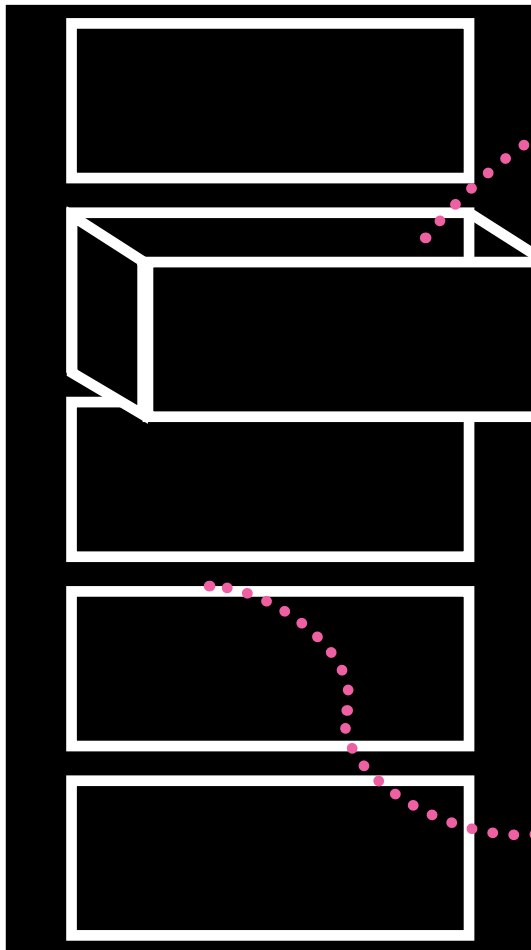

When the drawer where
the "creature" is, is opened
it flies out and into anoth-
er drawer. Only when the
creature is in the drawer
that is opened it will come
out.
The creature is invisible, it
only makes sound when it
flies.
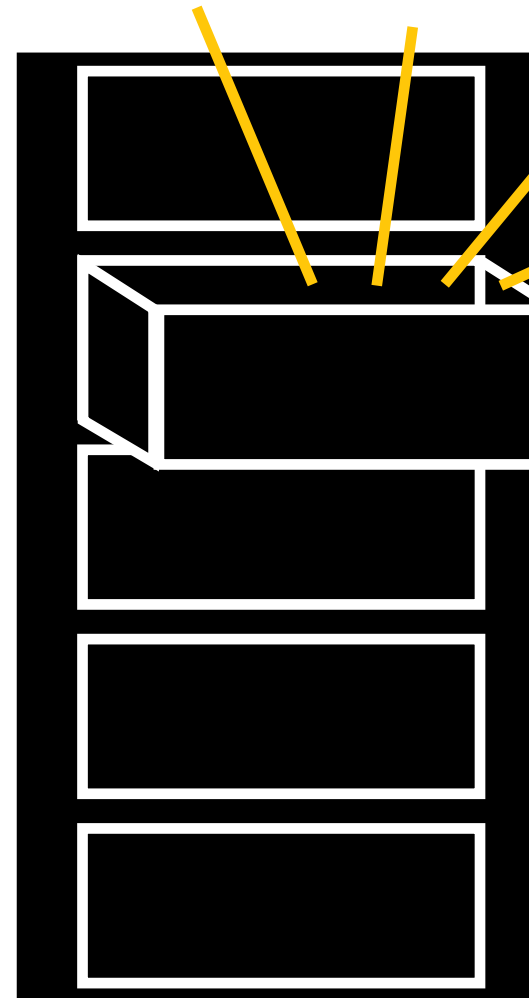

Screaming drawers:
Each drawer has its own
sound.
Will make user play with
the sound, or at least
close them when they are
done (something I never
did which annoyed my
mother a lot)

Theme:
Sound in drawers

Moving sound / inspiration
Parents rearanging childrens dinasaurs ever night to convince the kids that they were actually alive. Parents thought this was needed in this wolrd of ipads and netflix, they don't want their children to lose their sense of imagination and wonder. "In a time where all the answers are a web-search away, we want our kids to experience a little mystery."
