# THIRD QUARTER OVERVIEW

## Economy recovering; deficit forecast holds steady

The impact of the oil price shock on Alberta's economy appears to be subsiding, and key economic indicators are showing signs of stabilization or are in the early stages of recovery:

- Indicators of business activity, including drilling activity, manufacturing shipments and exports, have picked up in recent months.
- Despite elevated unemployment, the labour market is showing signs of stability with employment up 18,000 from the July bottom.

After declining 3.5% in 2015 and 2.8% in 2016, real GDP is forecast to grow 2.4% in 2017 (Figure 1).

The modest recovery in 2017 will be led by higher oil and manufacturing exports, public sector infrastructure investments and Ft. McMurray reconstruction. Federal approval of the Line 3 and Trans Mountain pipelines has improved business confidence on market access, with industry now looking to see progress on pipeline construction.

The forecast for the West Texas Intermediate (WTI) oil price has increased to US\$48 per barrel (/bbl), up slightly from the \$45/bbl forecast in the *2016-17 Second Quarter Fiscal Update and Economic Statement*.

Notwithstanding an improved economic outlook moving forward, the 2014 collapse in global oil prices continues to have a profound impact on Alberta's finances and on Albertans. While the economy has added jobs since the depths of the recession in July 2016, average weekly earnings remain below pre-recession levels, and corporate profits remain weak.

Despite the impact of the Wood Buffalo wildfire, increased demands on social programs, and an accounting treatment related to electricity generation transition payments, the deficit remains in line with the forecast contained in the *2016-17 Second Quarter Fiscal Update and Economic Statement*, at \$10.8 billion.

Overall, strong fundamentals will contribute to economic growth over the longer term. Alberta has the lowest overall tax burden among the provinces, high levels of private sector investment and labour force participation, a young, skilled, and educated workforce, and the most economic output and income per person among provinces (Figure 2).

# 2016-17 THIRD QUARTER FISCAL UPDATE

## Fiscal Plan Highlights

A **deficit** of \$10.8 billion is forecast for 2016-17, \$444 million higher than estimated in *Budget 2016*, but in line with the first and second quarter forecasts. The \$700 million revenue risk adjustment included in budget is being removed.

**Total revenue** is now forecast to be \$42.9 billion, up \$1.5 billion from the budget estimate, with higher resource revenue, investment income and federal transfers partly offset by lower tax revenue.

**Total expense** of \$53.7 billion is forecast, an increase of \$2.6 billion

from budget, due largely to several extraordinary items:

- Operating expense has increased \$1.8 billion. A net \$1,055 million is due to accounting for payments to be made annually for the next fourteen years related to agreements made in 2016-17 for electricity generating facilities to phase-out coal use, by reporting this in 2016-17 expense (see page 15 for further details), partially offset by other Climate Leadership Plan expense being lower than budgeted. Another net \$774 million of the increase is mainly for income support and other

social programs, school enrolment growth, and Health programs.

- Disaster expense has also increased \$1.1 billion due to wildfires and agriculture support. The non-cash reduction in unfunded pension obligations has increased, reducing expense by \$0.3 billion.

**The Capital Plan** in 2016-17 is forecast at \$7.3 billion, a decrease of \$1.2 billion from budget, due primarily to re-profiling of projects to future years, as a result of slower-than-anticipated project progress, the Wood Buffalo wildfire, adverse weather and other factors.

## FISCAL PLAN SUMMARY

(millions of dollars)

### Income Statement

	Fiscal Year			Change from Budget
	2015-16 Actual	2016-17 Budget <sup>a</sup>	2016-17 Forecast	
<b>Revenue</b>				
Income tax revenue	15,552	15,730	14,803	(927)
Other tax revenue	5,168	6,037	5,743	(294)
Non-renewable resource revenue	2,789	1,364	2,430	1,066

### Capital Plan

Capital grants	1,911	2,288	2,221	(67)
Capital investment	4,647	6,188	5,095	(1,093)
Climate Leadership Plan (capital grants)	-	5	-	(5)
Climate Leadership Plan (capital investment)	-	-	4	4
<b>Total Capital Plan</b>	<b>6,558</b>	<b>8,481</b>	<b>7,320</b>	<b>(1,161)</b>

<sup>a</sup> Budget revenue has been increased by \$59 million due to an accounting policy change made in the 2015-16 *Government of Alberta Annual Report*: donations to SUCH sector entities for endowments are now reported as revenue on the income statement instead of as adjustments to net assets on the balance sheet.

# Revenue and Expense Highlights

**Total Revenue** is forecast to be \$42.9 billion, \$1.5 billion higher than estimated in *Budget 2016*.

- Resource revenue has increased \$1,066 million, to \$2.4 billion, mainly from a higher oil price forecast, lower light-heavy differential, lower natural gas producer costs and higher well productivity, partly offset by a higher US-Canadian dollar exchange rate and lower natural gas prices.
- The West Texas Intermediate oil price forecast has increased from budget by US\$6 to \$48 per barrel. Fiscal year-to-date (February 17), prices have averaged US\$47.50. The light-heavy differential forecast has declined by US\$1 to \$14.21. The natural gas Alberta Reference Price forecast has decreased 25 cents, to Cdn\$2.15 per gigajoule, and the exchange rate forecast has increased by 2.5 cents, to 76 US¢/Cdn\$.
- Personal income tax revenue has increased \$54 million from budget, to \$11.5 billion, due to a positive \$510 million prior-years' adjustment (higher 2015 assessment data means 2014-15 and 2015-16 revenue was under-reported), partly offset by a net \$456 million decrease from lower household income growth.
- Corporate income tax revenue is forecast at \$3.3 billion, a decrease of \$981 million from *Budget 2016*, due mainly to lower-than-expected 2015-16 revenue (the base used to forecast), the weak economy and the Wood Buffalo wildfire.
- Federal transfers are estimated at \$7.9 billion, \$664 million higher than budget. The increase comprises \$509 million in Wood Buffalo wildfire assistance (an \$82 million increase from second quarter, due to added assistance to Wood Buffalo), \$77 million in higher agriculture

insurance premiums, \$40 million for public transit, water/wastewater and social housing infrastructure, and a net \$38 million in other increases, mainly for social housing and employment programs.

- Investment income is now forecast at \$2.9 billion, \$771 million higher than the *Budget 2016* estimate, due mainly to stronger-than-expected Canadian and global equity markets.
- Total revenue from other sources is forecast at \$14.9 billion, \$72 million lower than budget. An increase of \$237 million in Other revenue, mainly from higher Climate Change and Emissions Management Fund compliance payments, and recoveries of drug and other health care costs from third parties, is offset by a net \$309 million reduction, primarily from decreased tax revenue due to lower-than-expected fuel and tobacco consumption.

**Total Expense** is forecast to be \$53.7 billion, \$2.6 billion higher than estimated in *Budget 2016*.

- Operating expense is forecast at \$46.2 billion, \$1.8 billion higher than *Budget 2016*, due to the accounting for coal phase-out agreements and a net \$774 million increase in other operating expense.
- Climate Leadership Plan (CLP) expense has increased due to accounting for agreements made in 2016-17 for electricity generating facilities to phase-out coal use by reporting \$1,132 million in 2016-17 expense, partly offset by decreases of \$77 million in other CLP expense.
- Main operating expense increases include: \$284 million in Health; \$179 million mainly for income support, child intervention and people with disabilities programs; \$104 million mainly for school enrolment growth; \$72 million primarily for agriculture income support and insurance, and small brewer grants; \$53 million for volume and staffing pressures in Justice and Solicitor General. An additional \$81 million of increases are more than offset by net decreases of \$249 million from in-year savings, lapses, reductions in dedicated revenue and transfers to capital spending across other ministries. The \$250 million budgeted in-year savings has been removed.
- Disaster assistance of \$1.4 billion is forecast, \$1.1 billion higher than budget, including \$739 million for the Wood Buffalo wildfire (up \$96 million from second quarter), \$252 million for wildfire-fighting costs (down \$117 million from second quarter) and \$328 million in other assistance primarily for agriculture indemnities. These are partly offset by a net \$11 million reduction in 2013 Alberta flood assistance and removal of the \$200 million unallocated disaster assistance included in the budget.
- The overall fiscal impact of the Wood Buffalo wildfire is now estimated at \$530 million: \$739 million in Disaster Recovery Program expense, a \$300 million reduction to revenue, primarily corporate income tax, partially offset by \$509 million in federal assistance.
- Capital grants of \$2.2 billion are \$72 million lower, due mainly to re-profiling \$170 million in carbon capture and storage grants, partly offset by higher federal funding and transfers from capital investment.
- Other expense of \$3.9 billion is down \$218 million from budget. Increased inventory consumption and debt servicing costs are offset by lower amortization and a greater reduction in the valuation of unfunded pension liabilities.

# Assets and Liabilities

**Financial Assets** of \$64.7 billion are forecast for March 31, 2017, an increase of \$0.6 billion from 2016.

- Heritage Fund, endowment and other fund assets are increasing by \$0.4 billion, from inflation-proofing and net income retention.
- Assets of the Agriculture Financial Services Corporation (AFSC) and Alberta Capital Finance Authority (ACFA) are increasing by \$1 billion due to net income retention and increased lending activity, mainly of ACFA, funded by borrowing (liabilities increase equally).
- Other financial assets are increasing by \$1.9 billion.
- The Contingency Account balance is decreasing \$1.6 billion, leaving a year-end balance of \$2 billion. The Account has been drawn down to fund annual deficits, after a variety of cash adjustments are applied, including differences between reported accrued revenue and

expense and actual cash receipts and outlays, net income retention by various funds, entities and business enterprises, and cash borrowing.

- \$1 billion is being withdrawn from the Capital Plan financing account to fund capital spending; \$0.8 billion remains available for future years.

**Liabilities** are forecast at \$74.2 billion on March 31, 2017, a \$14.1 billion net increase from March 31, 2016.

- Liabilities for capital projects are increasing \$4.7 billion, reflecting \$4.7 billion in direct borrowing, \$0.1 billion in alternative financing, less \$0.1 billion in principal repayments on completed private-public partnership projects (P3s).
- Direct borrowing for the Fiscal Plan is increasing \$7.6 billion from March 31, 2016. This is \$2.2 billion higher than budget, comprising \$227 million for 2016-17 needs and \$2 billion being undertaken to take advantage of current market

opportunities and for early year 2017-18 cash management.

- AFSC and ACFA liabilities are increasing \$0.8 billion, offset by increased loans receivable.
- Other liabilities are up \$1.2 billion.
- The government obligations for pension plan liabilities are decreasing by \$0.3 billion.

**Capital and other non-financial assets** are forecast at a net \$47.3 billion on March 31, 2017, a \$2.6 billion net increase from March 31, 2016. This reflects: the addition of \$5.1 billion in capital assets less \$2.3 billion in amortization and disposals; addition of \$0.9 billion in inventory assets (e.g. land held for resale, vaccines, gravel) less \$0.9 billion in consumption of inventory; and a \$0.1 billion increase in deferred capital contributions.

**Net Assets** of \$37.7 billion are forecast for March 31, 2017, a \$10.8 billion decrease from March 31, 2016, reflecting the deficit for 2016-17.

## BALANCE SHEET SUMMARY

<sup>a</sup> Since December 31 2016, additional debt has been issued for Alberta Capital Finance Authority (Cdn\$1,131 million) and for the Alberta Petroleum Marketing Commission (Cdn\$100 million). Another \$52 million was borrowed in January to on-lend to the Balancing Pool.

<sup>b</sup> Gross borrowing requirements for provincial corporations. Include amounts of maturing debt being re-financed.

# Capital Plan Highlights

2016-17 Capital Plan spending is forecast to be \$7.3 billion, a decrease of \$1.2 billion from *Budget 2016*, but over \$1 billion higher than the average of the previous five years' capital plans.

Increases of \$92 million in SUCH-sector projects, primarily at post-secondary institutions, \$101 million in projects carried forward from 2015-16, mainly for 2013 Alberta flood recovery, and a net \$44 million in projects funded by increased revenue, are more than offset by a net \$1.2 billion in

project re-profiling, due mainly to project progress, the Wood Buffalo wildfire, adverse weather and other factors, a net \$107 million transferred to operating expense, primarily related to school board maintenance, and a net \$126 million in decreases and cost savings on projects such as the Southwest Calgary Ring Road (SWCRR).

Direct borrowing of \$4.7 billion is forecast, a decrease of \$349 million from budget, due mainly to additional

borrowing in 2015-16, and the lower spending forecast for 2016-17.

Cash received for capital purposes has decreased \$92 million, and alternative financing is \$46 million lower, due mainly to re-profiled and reduced federal and private sector partner funding for the SWCRR. Lower Alberta Social Housing Corporation spending has reduced agency retained contributions by \$49 million.

# ECONOMIC OUTLOOK

## Return to growth in 2017

The impact of the oil price shock on the Alberta economy appears to be subsiding. Many economic indicators are showing signs of stabilization or in the early stages of recovery, including employment, drilling and manufacturing. The economy is expected to expand in 2017, driven by oil and manufacturing exports, public sector infrastructure spending and reconstruction in Fort McMurray. The recovery in 2017, however, will be modest due to the lingering effects of low oil prices on investment and consumer spending. Real GDP is forecast to grow 2.4% in 2017 (Figure 1) compared with 1.9% at *Budget 2016*. This follows a contraction of 2.8% in 2016, which was deeper than expected at *Budget 2016* due primarily to wildfire-related disruptions and lower exports.

Even as the economic recovery begins to take shape, business and household incomes, in addition to government revenue, will remain well below pre-recession levels. Nominal GDP, a broad measure of income, is forecast to improve by 5.5% this year but remain 12% below the 2014 peak.

### Alberta Business Sector

#### Production cuts lift oil price

Oil prices improved in the fourth quarter of 2016 and maintained some momentum in early 2017. Prices were supported by an agreement between OPEC and major non-OPEC producers to cut oil production by almost 2 million barrels per day over the first half of 2017. This lifted oil prices above US\$50/bbl. As a result, the oil price forecast for 2016-17 has been revised to US\$48/bbl, up US\$6/bbl from *Budget 2016*. However, elevated inventories and increasing drilling and crude oil production in the US are expected to limit price gains in 2017.

#### Exports surge on production

Alberta's real exports are expected to increase significantly in 2017, led by growing oil production and manufacturing. After recovering from the wildfires, Alberta's non-conventional production reached the highest level on record in late 2016. Bitumen production is forecast to increase further in 2017 as several projects come on-line. In addition, the improvement in activity in the province has boosted manufacturing, which posted broad-based increases

in major categories at the end of 2016 (Figure 2). Petrochemical and petroleum product production is set to expand further in 2017. After declining by 2.0% in 2016, real exports are expected to grow by 4.4% in 2017.

#### Drilling lifts energy investment

Rig activity is picking up in the province. Although drilling remains well below the 5-year average, it started recovering in mid-2016 as oil prices improved. In January 2017, the number of rigs drilling reached the highest level since early 2015.

Figure 1. Alberta economic indicators

Sources: Statistics Canada and Alberta Treasury Board and Finance, e-estimate, f-forecast

Figure 2. Alberta business output indicators

Source: Statistics Canada

# ECONOMIC OUTLOOK

The improvement in activity is expected to carry through 2017 and increase conventional investment by over 20%. In the oil sands, the completion of several large projects in 2017 and cost cutting, which has reduced capital required to sustain existing operations, are expected to pull down investment by almost 7%.

### Muted construction outlook

Outside the energy sector, investment continues to be hampered by declining private sector construction spending. Many construction projects underway prior to the oil price drop are winding down. Commercial and industrial spending declined through 2016, dragging down non-residential building construction by almost 8% from 2015. Permit data suggest this weakness will carry into 2017 and outweigh increases in government and institutional spending. On the residential side, housing starts weakened in 2016, falling 34% from 2015. Although wildfire reconstruction activity will lend some support, elevated inventories of multiple unit dwellings and high vacancy rates are expected to keep starts restrained in 2017.

### Corporate profits remain weak

Improving oil prices and increased activity will boost corporate profits

this year. However, profits were lower-than-expected in 2016 due to weaker economic activity and losses associated with the Wood Buffalo wildfire. The steep decline in profits during the recession means that net operating surplus is forecast to remain well below 2014 levels.

### Alberta Household Sector

#### Population growth continues

Alberta's population continues to grow, but at a slower rate. After solid growth of 1.8% in 2016, Alberta's population is forecast to expand by 1.3% in 2017. Strong immigration and natural increase are supporting growth and keeping it above the national average. However, net interprovincial outflows have accelerated in recent quarters and will weigh on growth in 2017.

#### Labour market adjusting

Signs of improvement have begun to emerge in Alberta's labour market. Employment has increased by almost 18,000 since the low in July 2016 (Figure 3). Employment is expected to post further gains in 2017, growing by 0.9%. The growth will be supported by an improvement in activity in the province and rebuilding efforts in Fort McMurray. The unemployment rate is forecast to come down from current

levels to average 8% for the year, but remain elevated as people continue to join the labour force.

### Partial recovery in earnings

Household earnings are expected to improve slightly this year following declines in the past two years. Average weekly earnings (AWE) in the goods sector showed signs of improvement in late 2016, up almost 4% from the low. Service sector earnings remain weak but appear to be stabilizing. AWE are forecast to grow 0.7% this year, down from 1% at *Budget 2016*. The modest gain in earnings will support growth in personal income of 1.8%, following an estimated decline of 3.5% in 2016.

### Consumers spending to edge higher

A modest improvement in household incomes and increase in population are expected to support consumer spending. Real spending is forecast to grow by 0.7% in 2017, mainly due to increases on durables, which were hit particularly hard during the recession. Inflation is expected to be a modest 1.9%.

### Risks to the Outlook

- Lower oil prices remain the main risk to Alberta's recovery. Geopolitical uncertainties, including U.S. trade policy under the new administration and elections in Europe, could dampen global growth and oil demand. Lower compliance by OPEC members and higher-than-expected US production could also lower oil prices.
- Slower population growth due to higher-than-expected out-migration would weigh on consumer spending and housing.
- On the upside, higher oil prices and an acceleration in the construction of approved pipelines could boost business confidence and strengthen Alberta's recovery.

## REPORTING METHODOLOGY AND LEGISLATIVE COMPLIANCE

### Method of Consolidation

The *2016-17 Third Quarter Fiscal Update and Economic Statement* reports on the same scope, using the same method of consolidation, as presented in *Budget 2016*. This is also the same scope and consolidation approach used in the Consolidated Financial Statements in the Government of Alberta Annual Report.

The results of all government departments, funds and agencies, except those designated as government business enterprises, are consolidated on a line-by-line basis. Revenue and expense transactions between consolidated entities have been eliminated.

The accounts of provincial agencies designated as government business enterprises are included on the modified equity basis, computed in accordance with International Financial Reporting Standards applicable to those entities.

### Basis of Financial Reporting

The consolidated fiscal summary reports revenue (including gains from disposal of tangible capital assets), expense (including amortization, inventory consumption, loss on disposal and write-down of tangible capital assets), and surplus / (deficit).

Revenue and expense are recorded using the accrual basis of accounting. Cash received for goods or services which have not been provided by period end is recorded as unearned revenue.

Transfers received for capital purposes, and donated capital assets, are recorded as “deferred capital contributions” when the cash or asset is received, and recognized in revenue over the related asset’s useful life (in effect matching the asset’s amortization expense).

Expense includes the province’s cash payments towards the unfunded pension liabilities, and the non-cash change in unfunded pension liabilities.

Debt servicing costs include interest payable, and amortization of issue costs and discounts / premiums on debt issues.

### Compliance with Legislation

The *Fiscal Planning and Transparency Act* (FPTA) requires a public report on the accuracy of the Fiscal Plan on or before February 28. The FPTA gives the President of Treasury Board and Minister of Finance discretion over the form of the report.

The *2016-17 Third Quarter Fiscal Update and Economic Statement* includes comparisons between the *Budget 2016* estimates and third quarter forecasts for revenue and expense (including details and categories of each); the surplus / (deficit); the Contingency Account balance and cash adjustments; a summary balance sheet; the Capital Plan; and financing (borrowing) requirements. An updated Alberta economic outlook, with associated assumptions, is also provided.

Under the FPTA, operating expense increases, excluding those for dedicated revenue-operating expense, collective

bargaining or other remuneration settlements, First Nations settlements, or increases funded by reserves of school boards, post-secondary institutions or Alberta Health Services, are limited to 1% of budgeted operating expense.

In 2016-17, the government entered into agreements to pay annual amounts of \$97 million for fourteen years (\$1,358 million in total, over 2017-18 to 2030-31) for electricity generation facilities to transition away from use of coal. The facility owners have to meet certain criteria annually to be eligible for the payments (e.g., residency in Alberta, investing certain amounts annually in the electricity sector, phasing-out coal use fully by 2030).

There were two approaches considered to account for this. The first method was to simply report the \$97 million in annual payments in expense in each of the next fourteen years. The second was to report the net present value of the payments in 2016-17, the year the agreements were signed. The second method was supported by the Auditor General.

The decision to adopt the second method results in reporting an expense of \$1,132 million in 2016-17, and adding an equivalent liability to the government balance sheet. As there is no exclusion in the FPTA for this extraordinary expense, the \$1,132 million increase in operating expense results in a lack of compliance with the FPTA. Without this accounting requirement, the forecast would have been in compliance with the FPTA.

Alberta
