

ORTHOMED
The Surgical Instrument Specialists

OrthoMed, Inc.

Orthomed is a ISO 13485/2016 certified company and has been providing Healthcare Professionals quality products since 1970. We recently celebrated our 50th anniversary and want to recognize the employees, sales partners, distributors, and most of all the thousands of customers who have trusted us to provide the best quality products and service over the last 50 plus years.

We continue to provide the best service and quality instruments at the most competitive prices. Customer service is our top priority which is why our Mission statement says, "customer service above all else." We pride ourselves on being the Surgical Instrument Specialists and being a complete source for all your instrument needs. We cross-reference most instrument companies' part numbers and can often source the hard-to-find or discontinued items. We are happy to do the research if you can provide a crossreference number or pictures.

The instruments featured in this catalog are primarily made in Germany with the highest quality German stainless steel and crafted to rigorous and exacting standards. We demand from our instrument makers: precision, reliability, consistency of pattern, and uniform service.

Guarantee

OrthoMed, Inc. instruments are guaranteed for life against manufacturing defects of material or workmanship. This guarantee is void if instruments are not maintained or repaired properly, or if they are not used for their intended surgical purpose. Tungsten carbide inserts on scissors, needle holders, and wire cutters are guaranteed for three years. Replacement parts, such as springs, are guaranteed for one year.

Customization

We also provide customization and modification services. These may be as simple as serration of blades, etching, color coding for instrument identification or complex instrument manufacturing in small quantities.

Ordering

Orders may be placed by contacting our customer service department at 503-234-9691 or toll free 800-547-5571. Orders can also be faxed to 503-234-8629 or emailed to custserv@orthomedinc.com. OrthoMed, Inc. also has authorized sales representatives and distributors.

Please call customer service for the sales representative or distributor serving your area.

Return Policy

OrthoMed, Inc. requires a return goods authorization on all returns. Most returns will be authorized unless they are over 30 days from date of invoice, have been used, processed or sterilized, or are special or custom orders. A restocking fee may be charged for items with missing packaging or labeling. To receive authorization for the return of unused merchandise contact your OrthoMed, Inc. sales representative or call customer service at 800-547-5571.

OrthoMed, Inc.: The Surgical Instrument Specialists

We are proud to introduce this catalog with more than 4,000 products featuring one of the most comprehensive instrument lines in the industry. At OrthoMed, Inc. we have a passion for surgical instruments and truly want to be known as the Surgical Instrument Specialists. At OrthoMed, Inc. we will continue to provide the innovative instruments that surgeons demand for the ever evolving new surgical techniques. Please note new instruments for MIS (minimally invasive surgery) that are in Section X in this catalog are now available through OrthoMed, Inc. We also have a large number of spinal instruments for this growing specialty.

In addition to our premium Operating Room instruments featured in this catalog we provide middle and economy grade instruments for Central Supply, the emergency room, and the floors. These instruments also must pass strident manufacturing processes certified in conjunction with FDA and CE standards. Many instruments used in these areas may not need to be premium grade when a lower cost instrument will suffice. Our goal at OrthoMed, Inc. is to provide all your surgical instrument needs and continue to build on the trust and confidence that we have earned over the last 50+ years.

Instrument Longevity Through Proper Care

Your purchase of OrthoMed, Inc. instruments represents a considerable investment. By following these guidelines you will protect your investment and ensure many years of productive and satisfactory performance.

Maintaining the Surface

OrthoMed, Inc. stainless steel surgical instruments are made of corrosion resistant, high-grade specialty steels that are especially selected to meet the varying requirements of cutting, clamping, retracting and chiseling.

A special characteristic of these steels is that they form passive layers on the instrument's surface, which protect against corrosion. These layers act as an invisible patina and with repeated use and exposure to air, the instruments become increasingly corrosion resistant.

While every effort is made during the manufacturing process to ensure that instruments are corrosion resistant, the real key to longevity is proper maintenance. In that regard, you must do your part by caring for your instruments. In a sense, the "stainless steel" is a misnomer, one which should not be taken literally. When not properly treated, steel can rust or stain, reducing the life of the instrument or rendering it useless. The following sections outline proper instrument care.

New Instruments

Newly purchased instruments must be cleaned, lubricated and autoclaved immediately before use.

Correct Use

Obvious as it sounds, it bears repeating: Instruments are designed for a particular purpose and should be used only for that purpose. Even the strongest instrument can be damaged when used inappropriately, i.e., when a rongeur is used to cut wire.

Water and Stainless Steel

Ordinary tap water contains minerals that can cause discoloration and staining. Therefore, we recommend the use of distilled water for cleaning, disinfecting, sterilizing and rinsing instruments. To avoid staining, use a cleaning solution with pH near neutral (7).

Manual Cleaning and Soaking

When handling instruments, be very careful not to damage their fine tips and mechanisms. If instruments have been exposed to blood, tissue, saline or other foreign matter, you must rinse them in warm (not hot) water before these substances are allowed to dry. After rinsing, immerse them in a cleaning and disinfecting solution.

Because many compounds including certain chemicals, are highly corrosive to stainless steel, rinse and dry instruments immediately, in case they have come in contact with any potentially harmful substances.

If no ultrasonic cleaner is available, clean the instrument very carefully. Pay particular attention when cleaning boxlocks, serrations, hinges and other hard-to-reach areas. What's more, use nylon (not steel) brushes, such as OM 39- 0684, and warm (not hot) cleaning solutions. Follow the manufacturer's instructions for the preparation of the cleaning solutions. Remember to change these solutions daily.

Ultrasonic Cleaning

Ultrasonic cleaning is the most effective way to clean your instruments. To maximize its effectiveness, your instruments should be cleaned of all visible debris before they are put into an ultrasonic cleaner. Please note that chrome-plated instruments may rust if they are not dried and lubricated immediately after sterilization. In addition, we recommend the following:

- Do not mix dissimilar metals, i.e., chrome and stainless, in the same cycle.
- Open all instruments so ratchets and boxlocks are accessible.
- Avoid piling instruments on top of each other when loading.
- Remove and rinse off instruments immediately after the cycle is finished.
- Dry instruments immediately after rinsing and allow them to air-dry thoroughly.
- Lubricate all moving parts.

Instrument Checkup

The best time to review the condition of your instruments is after they have been cleaned and lubricated and have cooled off. Consider the following:

Function:

Scissors must cut cleanly and close properly. Needle holders and clamps must engage properly and meet correctly at the tips.

Surface:

Carefully inspect surfaces for any sign of staining, cracking or other irregularities. Common sources of staining are:

Inadequate cleaning

- Mixing dissimilar metals
- Impurities in the water
- Unsuitable or improper preparation and usage of cleaning and disinfecting or maintenance agents
- Non-compliance with operating procedures of cleaning and sterilizing equipment

Aluminum Trays

To avoid development of “aluminum salt” on your Al-trays, use only distilled water in your autoclave. Already developed “aluminum salt” is very difficult to remove which might cause damage to the anodized Al-surface. Any instrument or tray should be cleaned of debris with a non-acid detergent (neutral pH) prior to autoclaving.

Lubrication and Autoclaving

All instruments must be properly cleaned before autoclaving. Their moving parts, such as boxlocks and hinges, should be well lubricated. Be careful to use surgical lubricants and not industrial oils. Always sterilize instruments in the open, unlocked position. We recommend that instruments be wrapped in cloth and then placed in the container, or that a cloth be put on the bottom of the pan to absorb moisture. The cloth should be pH(7) neutral and have no residue of detergents. Finally, avoid sudden cooling of your instruments.

Cold Sterilizing or Disinfecting

Prolonged immersion in disinfecting or sterilizing solution can damage your surgical instruments. We recommend that you do not soak your instruments for longer than 20 minutes. To render the instruments sterile and ready for use, use an autoclave cycle.

Caution:

- Instruments with tungsten carbide inserts, such as wire cutters, needle holders, and TC scissors, should never be immersed in sterilizing solutions containing Benzyl Ammonium Chloride (BAC). BAC will soften and dissolve the tungsten carbide.
- Never use bleach as it will cause severe pitting.

Storage

Once your instruments are thoroughly dry, store them in a clean, dry environment. Never put them in areas where chemicals may emit corrosive vapors or where temperature and moisture variations could cause condensation on the instrument.

OrthoMed, Inc. Instrument Care Checklist

1. Rinse and soak soiled instruments immediately after use. Thoroughly clean before autoclaving.
2. Autoclave and sterilize instruments in an open position.
3. Do not stack or entangle instruments.
4. Follow recommendations made by equipment and solutions manufacturers.
5. Keep instruments properly lubricated.
6. Inspect instruments regularly.
7. If you experience a problem, at any stage of the instrument care process, please consult your OrthoMed representative.

SUPER-CUT SCISSORS

Super-Cut Scissors represent a truly remarkable advance in scissors technology. Using the finest surgical steel, the latest heat treating methods and master craftsmanship, the upper blade of the scissors is ground to a razor-sharp edge. This process creates scissors with an unprecedented smooth and effective cutting action.

Benefits of Super-Cut Scissors:

- Cut through soft and fibrous tissue without effort.
- Superb control permits precision in dissection.
- Less hand fatigue for the surgeon and less trauma for the patient.
- Retain sharpness longer than ordinary scissors.
- Ring handles are black-coated for easy identification.
- Fully autoclavable.
- Backed by OrthoMed's lifetime guarantee.
- Not recommended for fiberglass or plaster splints.

Surgeons who use our Super-Cut Scissors are convinced of their superior performance and won't do without them on their surgical trays.

OrthoMed developed these remarkably sharp scissors in response to the demands of doctors, nurses, and other O.R. personnel.

Hospital tests show that these scissors cut multiple layers of stockinette bandages, drapes, and moleskin with ease.

- Very little strength is required for cutting, putting less strain on thumb and forearm.
- Perfect cutting control because you don't have to force them to cut.
- Scissors cut faster, saving critical time in the O.R.
- Retain their sharpness longer than ordinary scissors.
- Not recommended for cutting plaster.

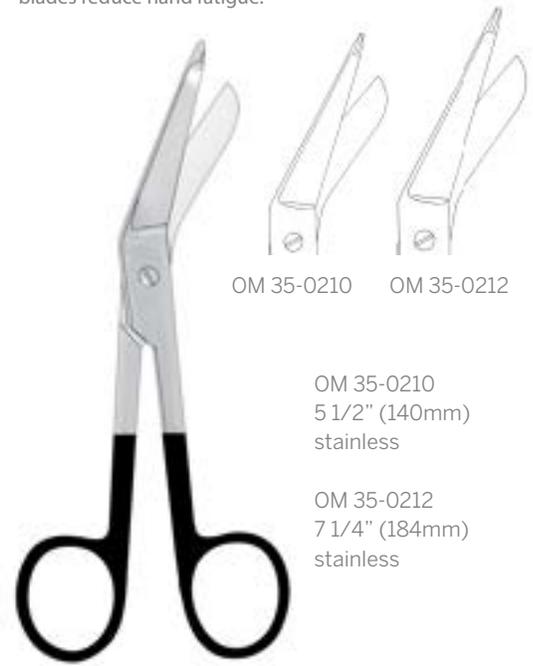

The delicate offset shanks and the sharp Super-Cut edge provide better leverage. The fine knob slides easily under finger and toe bandages.

Note: Our carbide needle holders have TC inserts firmly bonded to the inside of both jaws. We guarantee them for three years. The surface profiles of the inserts have been precision milled to provide the surgeon with a firm, non-slip grip on the needle. Because the carbide is harder than the steel needles, carbide needle holders last much longer than ordinary ones. The finger rings are gold plated for easy identification.

ORTHO+MED
The Surgical Instrument Specialists

SUPER-CUT BANDAGE SCISSORS

OrthoMed developed these remarkably sharp scissors in response to the demands of doctors, nurses, and other O.R. personnel.

Hospital tests show that these scissors cut multiple layers of stockinette, bandages, drapes, and moleskin with ease.

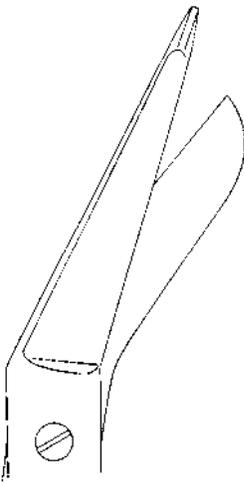

- Very little hand strength is required for cutting, putting less strain on thumb and forearm.
- Perfect cutting control because you don't have to force them to cut.
- Scissors cut faster, saving critical time in the O.R.
- Retain their sharpness longer than ordinary scissors.
- Not recommended for cutting plaster.

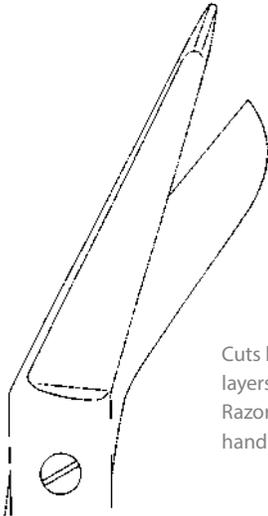

All the benefits of our Super-Cut Lister scissors plus an oversized finger ring, which helps relieve pressure on the third metacarpal.

HIP RETRACTORS

Note: These instruments are used to improve the exposure of the femoral canal prior to reaming or rasping for femoral prosthesis. Designed to elevate the proximal femur while retracting tissue during total or hemi-arthroplasty. The design provides excellent access to the intermedullary canal. The serrations at the tip grip and elevate the proximal femur.

SHOULDER RETRACTORS

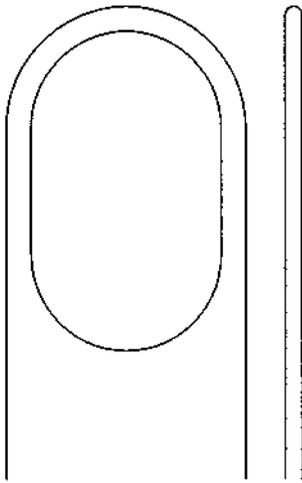

Modification to the original Fukuda design incorporates an additional forward bend at the distal 15mm. This allows the retractor to sit firmly on the posterior neck of the glenoid and reduces the chance of glenoid rim fractures. A series of shallow atraumatic grooves around the rim of the fenestration improves traction.

SUBACROMIUM RETRACTOR

The Goldstein retractor is placed along the glenoid rim during open Bankart Procedures to allow excellent exposure. The advantage this has over existing retractors is that the convex teeth sit easily into the glenoid rim while the strong end of the shaft allows the instrument to stay out of the surgeons view.

OM 86-0015

GOLDSTEIN GLENOID NECK RETRACTOR

The retractor's teeth are specifically designed to retract the subscapularis and capsule medially during a Bankart procedure. The wide midsection retracts the soft tissue during anterior glenoid work. The curved handle allows the assistant to use minimal pressure to achieve exposure.

OM 86-0030
11" (279mm) long X 25mm tip

ANTERIOR GLENOID NECK RETRACTOR

Used during osteotomy of the humeral head and approaches to the glenoid. It is designed to allow one finger retraction and contours to allow teeth to fit behind the glenoid, retracting tissue for easy access to the glenoid.

OM 86-0025
10" (254mm) long X 30mm

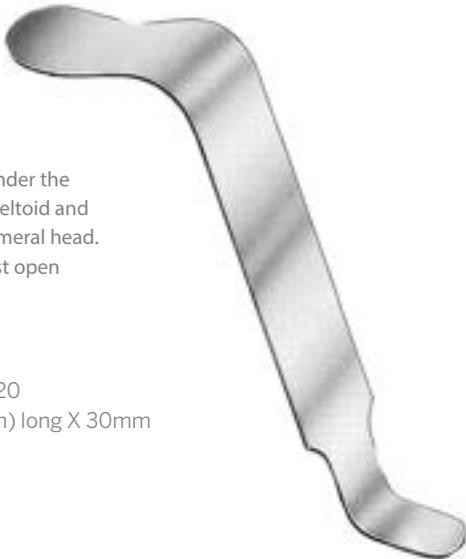

POSTERIOR GLENOID NECK RETRACTOR

Fits easily under the acromion, deltoid and over the humeral head. Used in most open procedures.

OM 86-0020

DELTOID RETRACTOR

This retractor is placed between the glenoid and the humeral head to obtain excellent exposure. The two prongs wrap around the posterior rim to help distribute the applied force to the glenoid neck.

RETRACTORS

Right angled Hohmann's are useful in both knee and hip arthroplasty for retracting tissue at the margins of the joint. It is placed over the margins of the joint to achieve maximum exposure.

The "C" retractor is designed to retract the femur anteriorly during total hip arthroplasty. Placement is made over the pelvic brim for best exposure.

Note:

- These cutters are especially useful for arthrodesis of small and large joints by plug cutter graft technique.
- The plug cutters are designed to be used in pairs.
- The smaller diameter instrument will cut the plug opening and the larger one will harvest a bone graft that will fit into the opening.
- The plug can then be tapped into place using the Bone Impactor (OM 69-0980).

SWING APART KERRISON RONGEUR TFP
 8" 40 degree forward

CATCH THE NEW WAVE IN EASY CLEANING.

In most spinal punches, tissue and debris can collect and remain trapped between the main body and slider. This build-up can impede the smooth function of the instrument and prevent proper sterilization as a result of not being completely cleaned prior to sterilization.

The Clean Wave Kerrison Punch has a slider with a wavelike shaped design which allows cleaning brushes easy access through the recesses and openings between the slider and main body for cleaning prior to sterilization.

- Wavelike shape also helps to reduce friction between the slider and main body, providing a smooth function.
- Forward angled foot plate provides precise and controlled cutting action.
- Features a thin foot plate design.
- Bone ejector is incorporated into the design of 2mm-5mm bite sizes.
- Made from German stainless steel.
- Satin finish helps to reduce glare.

WIRE, PIN DRIVERS AND BENDERS

No Manual Device Has Ever Achieved This Function

For years, surgeons have sought a simple pin driver that could actually be fully controlled with one hand. The new Vickers Easidriver™ leaves the other hand free to manipulate tissue, leaving the patient in better hands.

Ideal Back Up Unit For Office and Hospital

What do you use when your power equipment fails during surgery? Now you have the handy Vickers Easidriver™. Without loss of precious time, it is ready for use. In cases where power equipment is not indicated or available, the Vickers can become your primary driver, allowing for feel and control that power units don't offer.

Dr. Vickers, who developed the patented instrument, is a specialist in hand surgery and the Chairman of the Instrumentation and Equipment Committee of the International Federation of Societies for Surgery of the Hand.

Now you can drive, bend and pull K-WIRE for a fraction of the cost of power equipment.

Note:

- Single handed operation
- Chuckless
- Depthscale
- Wire bending facility
- No maintenance
- No Set-Up
- Autoclavable
- For wire from .028" to .062"

GRATLOCH™ WIRE BENDER

Bend .062" K-Wire single-handedly
without sacrificing stability.

Note:

The Gratloch Wire Bender can stabilize and bend a Kirschner wire simultaneously. K-Wires can be bent close to the bone singlehandedly without sacrificing fracture or osteotomy stability.

To bend wire:

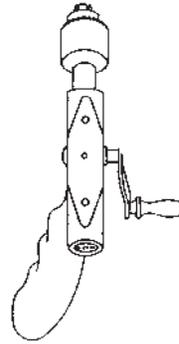

1. After the insertion of K-Wire in the bone, cut the wire, leaving a piece of 1/2" to 3/4" in length.
2. Insert the K-Wire into angled slot of Gratloch™ Bender as close to the bone as possible.
3. Press handles to bend wire (.062" wire will bend 90°, smaller diameters will bend slightly less than 90°)
4. Additional features of the Gratloch™ Wire Bender include two angled cannulations at the proximal end of each handle for flush bending wire (.045" and .062").

ABOUT ORTHOMED WIRE AND PIN CUTTERS

In the past, surgeons have often had to rely on hardware store quality cutters made with inferior metals that can contaminate and ruin stainless steel instrumentation. Now OrthoMed can meet all of your wire and pin cutting requirements with our complete line of stainless steel cutting instruments.

Made From Stainless Steel – All of our wire cutters are engineered to meet the demanding needs of cutting rods, pins, cables and wires in the Operating Room. Jaws are made from the toughest specially-tempered tool steel or have tungsten carbide inserts.

More Cutting Power – Cutters designed with double action give you more cutting power and help absorb the shock of wire cutting. For the surgeon there is better control and less fatigue.

Most Extensive Selection – We offer more jaw and handle styles than any other instrument company.

Note on Carbide Instruments – Instruments with carbide inserts can be replaced, however, welded carbide jaws cannot be replaced.

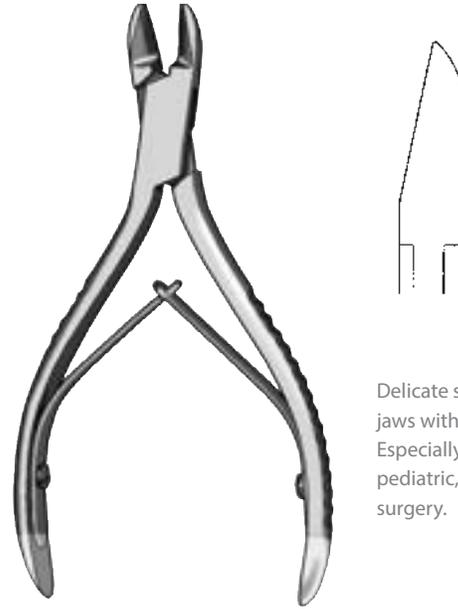

To Achieve the Best Results When Cutting Wires and Pins, Follow these Simple Steps:

- Choose the appropriate cutter for the wire diameter you want to cut.
- Do not exceed the maximum capacity marked on each cutter.
- Cut wire in the middle of the jaw—not on the tip or in the corner.
- Keep the jaw at right angles to the piece being cut. Do not twist or turn cutter.

Caution: Be sure to protect patient and O.R. personnel from flying particles (especially the eyes). The harder the metal, the farther the pieces can fly.

IMPORTANT NOTE ON MAXIMUM CAPACITIES

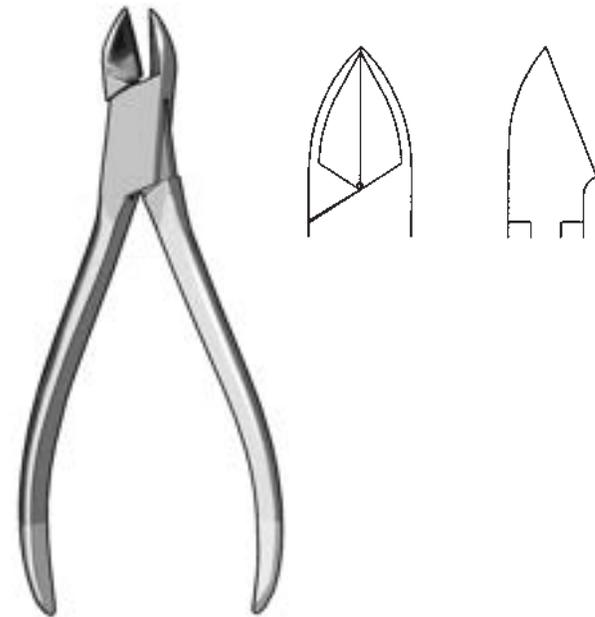

Modern rods and pins vary greatly in hardness and tensile strength. All maximum capacities noted are based on tests using standard strength implant material. Cutting material which exceeds our standard strength ratings, such as certain high strength spinal rods, may damage or shorten the life of cutting edges and voids the instrument warranty. If you're not sure whether our cutter can handle your material, give us a call at (800) 547-5571.

This improved version of our Front and Side Cutter cuts flush to the bone like no other wire cutter. This is a big advantage in buried wire procedures.

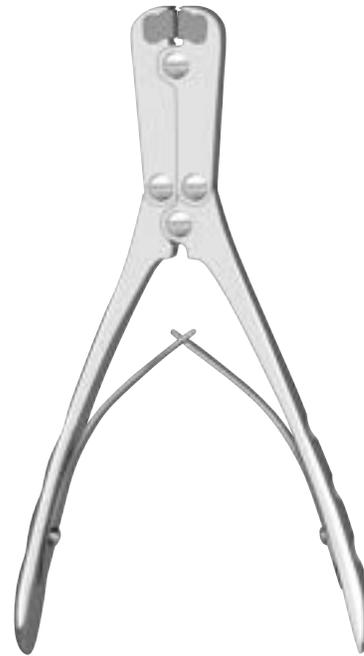

Note: The OrthoMed Wire Cutter with Safety Inserts can help prevent the potentially dangerous occurrence of flying K-Wire pieces in the O.R. This instrument is designed to hold the cut piece of wire in its silicone inserts. After cutting, the remnant wire can be safely disposed of, thus preventing cut pieces from falling into the wound site or flying into the air. The silicone inserts are autoclavable and long lasting. As inserts are not glued into the jaws, replacement is fast and easy. Simply insert the new ones by pressing them into place. Inserts do not fall out or move under normal circumstances.

Powerful double-action jaw enables surgeons to cut 1/4" rods with one hand.

Shearing action cuts cleanly – no raised burrs or sharp jagged edges.

Unique cutting process can help prevent the potentially dangerous occurrence of flying rod pieces in the O.R.

Ergonomically designed patented Ortho-Grip™ silicone handle provides a comfortable, slip-proof grip.

Base and handle are perfectly balanced to ensure stability and prevent lifting.

Simple efficient design has no folding levers, loose parts, or bearings that can break down.

Cuts rods from:

Important:

This large cutter is not designed to be used inside the patient's body.

Durable tungsten carbide jaw cuts hard cable smoothly and easily.

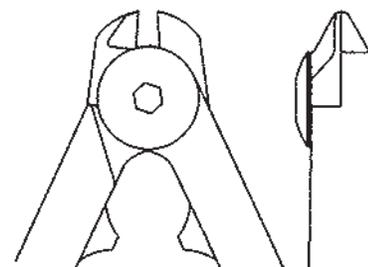

Strong joint design is long-lasting and allows precise cutting.

Handle stop for defined jaw travel.

Jaw angle captures the cable, then cuts through all strands at once, eliminating frayed ends.

Cuts through cable with one cut-reducing risk of small cable particles falling into operating site.

Tested. After 1000 cuts using cobalt chrome cable, the cutter performed as well as it did the first cut.

Small jaw design allows surgeon to get close to bone, even in tight spaces.

Positive handle bars provide comfortable non-slip grip and precise control.

Long lasting extra heavy springs provide solid return.

ABOUT ORTHOMED PLIERS

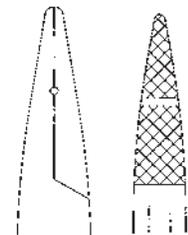

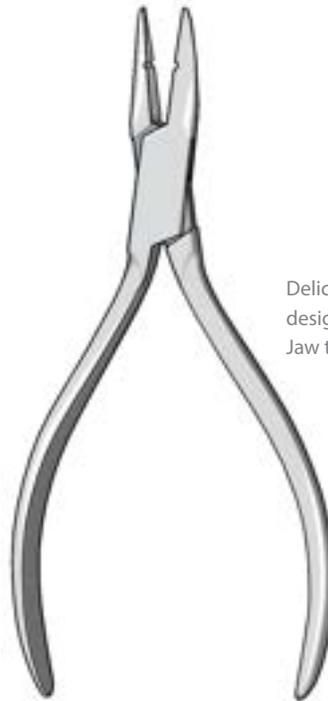

We manufacture a wide range of stainless steel pliers. Whether you are bending delicate 0.2mm cerclage wire or removing a 3.2mm Steinmann Pin, we make a pair of pliers to handle the job.

QUALITY ASSURANCE

Every OrthoMed instrument is made for us to exact specifications. Much of our time is spent assuring the quality of the products we sell. The OrthoMed name does not go on any instrument that fails to pass our tough Quality Assurance Standards. We know our reputation depends on providing a quality product that will perform consistently for years.

VALUE

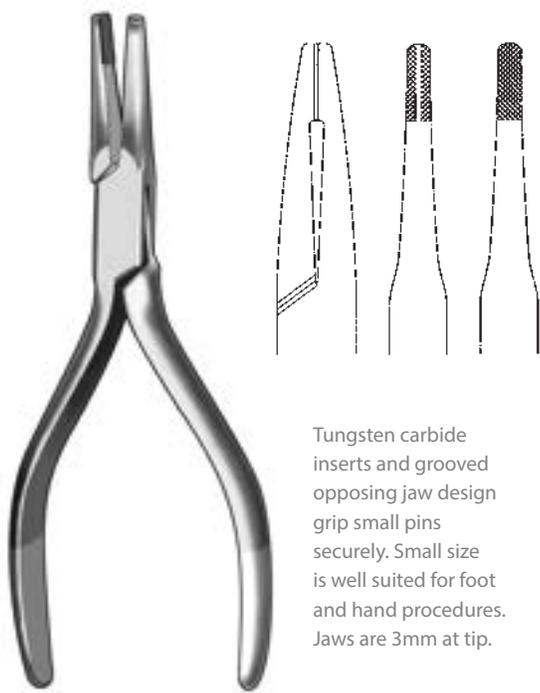

They are built to last! Our instruments are made from the finest German stainless steel. Unlike inferior "hardware store" quality, our pliers won't chip or contaminate fine surgical instruments.

NEEDLE NOSE LOCKING PLIERS WITH A NEW REINFORCED, MORE DURABLE JAW.

- New 12" model has an impressive powerful jaw. The body is made from 2.5mm stainless steel. This plier will hold up better in the O.R. than any other needle nose plier – we guarantee it!
- Both pliers have a more durable reinforced jaw hinge and housing which helps keep the ends in alignment, especially when plier is twisted.
- Other features; one tapered "V" grooved jaw which locks securely onto pins; adjustment screw; and one handed, quick release self-locking lever.
- OrthoMed pliers are made from 300 and 400 series surgical grade stainless steel. Unlike "hardware store" quality, they will not chip or contaminate other instrumentation.

LOCKING PLIERS WITH SLAPHAMMERS

A POWERFUL COMBINATION OF LOCKED GRIPPING STRENGTH AND CONTROLLED HAMMER ACTION.

- These stainless steel heavy duty locking pliers with slaphammers enable surgeons to more easily extract prostheses intramedullary nails and hip fracture plates.
- The large pliers offer maximum versatility- slaphammers can be attached in three places; on the end or either side. Small and medium pliers have end attachments only.
- If additional force is required, a mallet may be used on the hammer plate.

Follow these easy steps to twist and tighten cerclage wire:

1. Position wire around bone. Bend the ends of the wire slightly upwards.
2. Feed both twisted wire ends through the tongue and groove jaw and push out and up through the jaw fenestration.
3. Engage the ratchet. This will lock the wire into place. Turn the entire instrument, tightening the wire around the bone.

LOUTE WIRE TIGHTENER

OM 46-0619
8 1/2" (216mm)
maximum capacity: 1.5mm
17 gauge cerclage wire

How to Use the Loute Wire Tightener

1. Loosen both knobs by turning counterclockwise until center pin disappears from view.
2. Pass wire around bone and feed both ends into center hole at the tip.
3. Use Wire Pulling Forceps (OM 46-0637) to pull ends through and hold wire taut while pushing the instrument close to the bone.
4. Turn lower (distal) knob clockwise to lock wire in place. Then turn upper (proximal) knob clockwise to pull in remaining slack from wire.
5. Balance instrument in one hand and rotate it with the other hand until resistance is felt. Then hold tightener shaft tight and turn lower (distal) knob clockwise until wire is cut.

Note: Hold instrument straight (do not tilt) while tightening

How to use the Corwin wire twister:

1. Wrap wire around bone and position ends next to each other.
2. Grasp both ends of wire with jaws.
3. Engage the ratchet to enforce solid clamping.
4. Stabilize wiring site.
5. Pull back on center ring repeatedly until wire has reached desired tension.
6. Disengage ratchet.

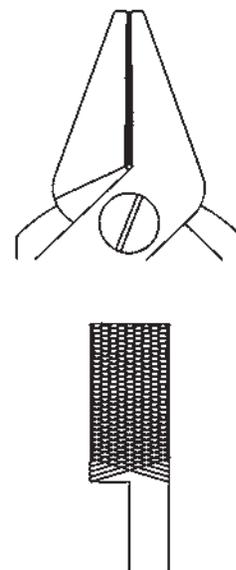

Saves time by semi-automatically twisting soft wire.

CORWIN WIRE TWISTER

OM 46-0582

This time-saving instrument twists wire quickly and smoothly.

The OrthoMed Jet Wire Twister is designed to provide fast, smooth and even twisting of soft wire, saving time in the O.R. Now available for the first time in stainless steel. Suitable for the entire range of cerclage wire.

How to use the OrthoMed Jet Wire Twister:

1. Wrap wire around bone and position ends next to each other.
2. Grasp both ends of wire with jaw.
3. Engage the ratchet to enforce solid clamping.
4. Stabilize wiring site.
5. Pull back on t-handle repeatedly until wire has reached desired tension.
6. Disengage ratchet.

Note: Jaws can be customized. Please contact us for details.

STERILIZATION CASE

Note: The OrthoMed Drill Bit Sterilization Case holds 5" drill bits for sterilization and storage.

- Drill bit sizes and OrthoMed part numbers are clearly noted on the inside of case for quick identification and reordering.
- Lid opens and raises the internal tray containing drill bits up for easy access.
- Lid folds back and acts as a support to hold the case in an upright position – taking up less room in the O.R.
- When closing lid, the internal tray is lowered and contents are held in place, preventing shifting.
- Top of case locks when closed helping to prevent accidental opening.
- Case has a one piece design – eliminates the possibility of losing or switching case parts.
- Anodized aluminum case is light-weight and built to withstand abuse.
- Fully autoclavable to 270°F.

Designed to provide easy access and identification.

Case in open upright position.

Case in closed position.

STERILIZATION TRAYS

These trays are rugged enough to last for many years, yet gentle on delicate instruments. They cool down in 60 seconds after flash sterilization. Lightweight tool Sterilize and transport tools safely and easily. Convenient see-through lid allows you to inventory contents. FDA-approved soft mats come with each tray to prevent shifting of instruments. Mats retain their flexibility even after repeated sterilization at high temperatures. All trays withstand harsh rigors of steam autoclave, dry heat, or flash up to 320°F, 160°C, Eto, gas plasma, gamma radiation, hydrogen peroxide, cold sterilants, disinfectants, or germicides.

Specially designed for aspirator tips and saliva ejectors. More effective than the conventional pipe cleaner, the white bristles are stiff enough to clean blood and debris away from inside walls in one or two sweeps. The stainless steel wire prevents rusting on sinks and countertops after use. Made 12" (305mm) long, this brush will extend the full length of aspirator tips and is flexible enough to round 45 and 90 degree curvatures.

Instrument Management Made Easy

If you've ever reached for a specific instrument while performing a procedure, only to find it missing from your tray, you know why we created the Nail Set. It includes every instrument you need for nail procedures.

Designed For Flexible Use

The Nail Set was developed, tested, and approved by The Podiatry Institute®. The idea was to make it very flexible, for many different potential nail and digit related conditions. With the addition of another instrument or two, it also works well for arthroplasties, the removal of small extoses, or as a laceration tray.

Efficient and Portable

The optional sterilization/storage container, available in two sizes, allows you to sterilize and store the whole set together. By always sterilizing the complete set, you avoid cross contamination between the used and unused instruments. The removable lid can also be used as a tray.

For Office or Hospital Use

If you need to update a worn or incomplete instrument set, are planning to equip new offices, or are simply tired of finding needed instruments missing from the tray laid out for you, the Nail Set is the perfect solution. Identify your instrument sets with custom engraved, personalized aluminum tags on the container.

FLUSH WIRE CUTTER

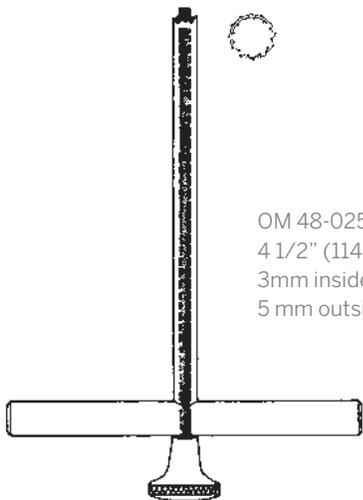

Our Flush Cutter cuts K-Wire flush to the bone like no other wire cutter. Double action for ease, comfort and power with tungsten carbide jaws for long life and sharpness.

Note:

To achieve the best results when cutting wire, follow these simple steps.

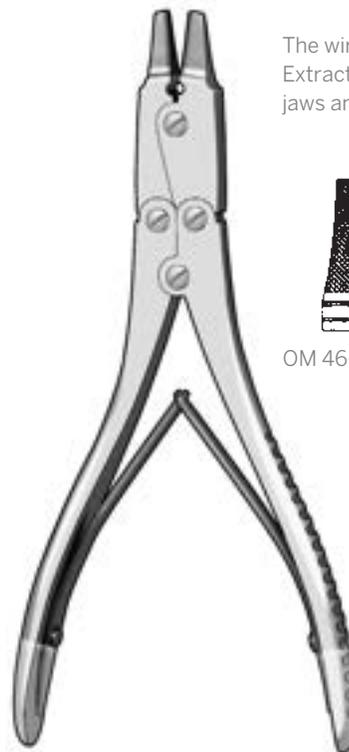

- Choose the appropriate cutter for the wire diameter you want to cut.
- Cut wire in the middle of the jaw not on the edge or in the corner.
- Make a first cut leaving a piece about 1/4" long. Now you can position the cutter for its second and flattest cut.
- When cutting, do not twist and turn the cutter. Just press the handles together.

When removing K-Wire, use the P.I. Plug Cutter to extract a tiny cylinder of bone around the tip of the wire.
