

# Total Garden Blend

**A NEW and exciting soil-less raised garden blend that gives you amazing results after just 6 weeks!**

Most retail garden mixes in poly bags are amendments to the existing garden. What makes the **Total Garden Blend** different?

- **It is a soil-less blend.** Soil produces weeds and also compacts during the summer, resulting in more watering needed but less water getting to the root system. Professional greenhouse growers do not use soil when growing vegetables.
- Requires **no tilling**.
- **Almost no weeding** is necessary.
- Requires less watering – the blend consists of mostly peat. Peat retains water until the roots need it.
- Requires less maintenance.
- No need to amend the soil each year – just add more fertilizer.
- **Slow-release fertilizer** is already in the blend for faster growth.
- The pH is near 6.0, a value that professional vegetable-growing greenhouses prefer. The correct pH is extremely critical to growth.
- No mixing required – **just pour and plant.** It's that simple.
- **Amazing results!**

Professional greenhouse growers know that plants and vegetables need air space, water, food (fertilizer) and the right pH. The **Total Garden Blend** provides all of these important components.

The blend consists of mostly peat, composted pine bark, organic yard compost, perlite, lime, and fertilizer.

The **Total Garden Blend** makes gardening more fun and enjoyable, with amazing results.

65 ea 1 1/2 cu ft poly bags / pallet
