

DENVER BOTANIC GARDENS

HORTICULTURAL OUTREACH PROGRAMS

Design Consultation Services

Denver Botanic Gardens' horticultural outreach programs include design consultation services for municipalities and community projects.

Sustainable landscape design reduces water consumption, promotes pollinators and improves the aesthetic in areas where the community interacts with the landscape.

We can provide designs for your project, work with your landscape architects and contractors or simply consult on recommended plants for the project.

Sustainable design doesn't mean "zeroscape" or plants that are hard to grow and maintain. You can have a lush, textured and colorful landscape that requires very little water and maintenance.

Eriogonum (1)

Sedum (5)

Yucca rostrata (7)

Atriplex (4)

Nassella (9)

Zauschneria (7)

Sporobolus (6)

Limonium (6)
