Re: DPH Pamphlet for CII and CIII narcotic dispensing

*“Pursuant to Chapter 244 of the Acts of 2012: “The department of public health shall produce and distribute either in written or electronic form to pharmacies, not including institutional pharmacies, pamphlets for consumers relative to narcotic drugs that includes educational information about: (i) pain management; (ii) misuse and abuse by adults and children; (iii) risk of dependency and addiction; (iv) proper storage and disposal; (v) addiction support and treatment resources; and (vi) the telephone helpline operated by the bureau of substance abuse services established in section 18 of chapter 17. **A pharmacist shall distribute the pamphlet when dispensing a narcotic in Schedule II or III.**”*

Below please find the above referenced pamphlet “*Opioid Prescription Drug Fact Sheet*” that has been developed by the department. Please note that this pamphlet is required to be distributed with each dispensing of a Schedule II and III narcotic medication.

Registrants should begin to distribute the pamphlet to patients when dispensing Schedule II and III narcotic medications on or before Friday, October 23, 2015.

Treating Pain and Avoiding Narcotic Misuse

Suffering from pain?

Your treatment should start with an examination from your health care provider, and a discussion about your pain history, current conditions, and the medications you take. This allows your provider to create a plan that is specific to you, and lowers the risk of side effects or complications of medication, including misuse. You are getting this information because your plan includes a prescription for narcotics. The drugs prescribed are based on factors including the type, location, origin, and severity of your pain. While narcotics may be safe in certain doses, close medical supervision is required for long-term treatment.

Overdose Risk and How to Stay Safe

Misuse of prescription painkillers can slow breathing to the point of death. Naloxone (also known as Narcan®) blocks the effect of opioids and restores normal breathing and consciousness. It can easily be administered by being sprayed into the nose or given as an injection.

If you plan to keep opioids in your home you should talk to your doctor or pharmacist about the benefits of keeping Naloxone in your home. Naloxone is available at your local pharmacy through a standing take-home order, which means you can obtain it today without a prescription.

Misuse and Abuse of Prescription Drugs

Prescription drug abuse is an epidemic in the United States. Drug overdoses now cause more deaths than motor vehicle accidents.

The misuse or abuse of opioids can have serious consequences including, lack of energy, inability to concentrate, physical weakness, nausea and vomiting, and suppression of breathing. What's more, your body may become used to a certain dose, potentially leading to addiction.

How to Safely Use, Store, and Dispose of Narcotic Medications

USE: *Take only as directed by your health care provider.* Do not share your medication with anyone, even if their symptoms are the same. Sharing your opioid prescription with another person is illegal and could endanger their health

STORE: *Store opioids securely,* such as in a locked medicine cabinet or a lock box. Medications should be kept dry and stored at room temperature.

DISPOSE: *Unused prescriptions are best disposed of in prescription drug drop boxes,* located in many communities. More information is available at mass.gov/drugdropbox. If you can't get to a drop box, federal guidelines suggest taking unused prescription drugs out of their original containers, mixing them with coffee grounds or kitty litter and throwing them away in a sealed container. Never flush prescription drugs down the toilet unless the label or information sheet says to do so.

Misuse and Abuse of Prescription Drugs among Youth

The *National Survey on Drug Use and Health* found that young people aged 12 or older who used painkillers (that were not prescribed for them) got them most often from a friend or relative. Show your children how to be safe and responsible by your own actions. Know what you are taking and only take it as prescribed. Talk to your children about how dangerous prescription drugs can be, and be clear that they should not use anyone else's medications. If they have to take medicine during the school day, coordinate this with the school nurse or principal. Don't give them medicine to take on their own.

How to Seek Help for Addiction to Prescription Drugs

For Youth and Young Adults (up to age 24):

Youth Central Intake & Care Coordination (YCICC):

Toll Free: (866) 705-2807 or (617) 661-3991

TTY: (617) 661-9051
