

Flashings Guide

Our team can customise flashings to suit your requirements. You will get the perfect fit by determining the exact size, thickness and degrees you need for your application. They are available in a range of different materials such as Zinalume® steel, Colorbond® steel, Galvanised, stainless steel or even copper.

Minimum flashing fold is 8mm. Safety edge = 2 Bends. Maximum flashing length is 8 LM. Flashings under 1 LM will be charged at a minimum of 1 LM. Standard bend tolerance is $\pm 2\text{mm}$. Please advise if flashing length is critical.
