

Agradecimientos	v
Abstract	vii
Resumen	ix
Resum	xi
Contents	xiii
List of Figures	xvii
List of Tables	xxvii
List of Acronyms	xxix
Chapter 1. Introduction and Thesis objectives	1
1.1. Introduction	1
1.2. Thesis objectives	4
1.3. Original contributions of the Thesis	5
Chapter 2. State of the art	7
2.1. Challenges of Microwave Photonics	7
2.2. Microwave Photonics signal processing	9
2.3. Space-Division Multiplexing fiber technologies	12
2.3.1. Increasing the fiber capacity: exploiting the space dimension	12
2.3.2. Multicore fibers	14
2.3.3. Few-mode fibers	16
Chapter 3. Propagation in space division multiplexing fibers	19
3.1. Introduction	19
3.2. Universal characteristic equation for arbitrary optical fibers	20
3.2.1. Introduction	20
3.2.2. Characteristic equation for multi-layer index profile	22
3.2.3. Derivation of the main propagation characteristics	28
3.2.4. Validation of the model	29
3.2.4.1. Trench-assisted step-index profile	30
3.2.4.2. Ring-core refractive index profile	32
3.2.4.3. Four-cladding refractive index profile	33
3.2.4.4. Triangular refractive index profile	35
3.2.4.5. Graded index refractive index profile	37

3.2.5. Discussion of the model applicability domain	39
3.3. Crosstalk	40
3.3.1. Intermodal crosstalk in few-mode fibers	42
3.3.2. Intercore crosstalk in multicore fibers	43
3.4. Conclusions	46
Chapter 4. True time delay lines: Proposal	49
4.1. Introduction	49
4.2. Implementation using heterogeneous multicore fibers	52
4.2.1. Concept	52
4.2.2. Design	54
4.2.2.1. Design optimization in terms of higher-order dispersion	59
4.2.2.2. Design optimization in terms of intercore crosstalk	62
4.2.3. Performance	62
4.2.3.1. True time delay operation	63
4.2.3.2. Crosstalk	64
4.2.3.3. Application to Microwave Photonics distributed signal processing	65
4.2.3.4. Discussion	67
4.3. Implementation using few-mode fibers	68
4.3.1. Concept	68
4.3.2. Mode conversion using long period gratings	70
4.3.3. Design of a tunable true time delay line on a 7-mode fiber	72
4.3.4. Performance	75
4.4. Degradation sources	77
4.4.1. Crosstalk	77
4.4.2. Influence of fiber curvatures and twisting on the group delay	78
4.4.2.1. Theoretical modeling	78
4.4.2.2. Experimental evaluation	82
4.4.2.3. Impact on microwave signal processing applications	85
4.4.2.4. Final remark	87
4.4.3. Influence of fabrication tolerances	87
4.4.4. Other possible degradation sources	89

4.5. Conclusions	90
Chapter 5. True time delay lines: Design, fabrication and characterization	93
5.1. Introduction	93
5.2. Multicore fibers	94
5.2.1. Introduction	94
5.2.2. YOFC Fiber	94
5.2.2.1. Design	94
5.2.2.2. Fabrication	97
5.2.2.3. Characterization	99
5.2.3. CREOL Fiber	102
5.2.3.1. Stage 1	103
5.2.3.2. Stage 2	106
5.2.3.3. Final stage	107
5.2.4. Comparison between both multicore fibers	111
5.3. Few-mode fibers	112
5.3.1. Introduction	112
5.3.2. True time delay line design	112
5.3.3. Long period grating inscription	114
5.3.4. Implementation and characterization	116
5.4. Conclusions	117
Chapter 6. Application to distributed radiofrequency signal processing	119
6.1. Introduction	119
6.2. Multicore fiber approaches	120
6.2.1. MWP signal filtering on a heterogeneous multicore fiber link	120
6.2.2. Optical beamforming on a heterogeneous multicore fiber link	122
6.2.3. Optoelectronic oscillation over multicore fibers	125
6.2.3.1. Multi-cavity OEO model	125
6.2.3.2. Multi-cavity OEO architectures	127
6.2.3.2.1. Based on homogeneous multicore fibers	127
a) Double unbalanced cavity	127
b) Vernier	129

6.2.3.2.2. Based on heterogeneous multicore fibers	131
6.2.3.3. Experimental demonstration	134
6.3. Few-mode fiber approaches	138
6.4. Conclusions	140
Chapter 7. Summary, conclusions and future lines	143
7.1. Summary and conclusions	143
7.2. Future lines	146
Annex I. Commercial fibers and multiplexing devices data	149
A.I.1. Prysmian few-mode fiber and Cailabs mode multiplexers	149
A.I.2. Fibercore multicore fiber	150
Annex II. Material databases	151
Author's Publication List	155
References	159
