<b>Table of contents</b>	<b>15</b>
<b>I Introduction and basic concepts</b>	<b>1</b>
<b>1 Introduction</b>	<b>3</b>
1.1 Objectives . . . . .	6
1.2 Thesis outline . . . . .	7
<b>2 Design and synthesis of optical lattice filters</b>	<b>9</b>
2.1 Introduction . . . . .	9
2.2 Optical lattice filters and the Z-transform . . . . .	10
2.3 Optical lattice architectures . . . . .	13
2.4 Ring-assisted Mach-Zehnder interferometer filters . . . . .	15
2.4.1 Description and basic properties . . . . .	15
2.4.2 Synthesis algorithm . . . . .	16
2.4.3 Practical considerations . . . . .	19
2.5 Conclusions . . . . .	22
<b>II Optical couplers and reflectors based on multimode interference mechanisms</b>	<b>23</b>
<b>3 2x2 Multimode interference couplers with variable power splitting ratios</b>	<b>25</b>
3.1 Introduction . . . . .	25
3.2 Basic MMI theory . . . . .	26
3.3 Tapered 2x2 MMIs . . . . .	30
3.4 Design procedure . . . . .	32
3.5 Tapered 2x2 MMIs in SOI . . . . .	34
3.5.1 Design . . . . .	34

3.5.2	Experimental results . . . . .	35
3.6	Tolerance analysis case study: A 4x4 MMI-based 90° optical hybrid in InP . . . . .	40
3.6.1	Introduction . . . . .	40
3.6.2	Simulation procedure . . . . .	41
3.6.3	Results . . . . .	44
3.7	Conclusions . . . . .	46
<b>4</b>	<b>Multimode interference reflectors based on aluminium mirrors in thick SOI</b>	<b>49</b>
4.1	Introduction . . . . .	49
4.2	Operation principle . . . . .	50
4.3	2-port MIRs with arbitrary reflectivity . . . . .	52
4.4	Aluminium mirror modelling . . . . .	54
4.5	Device design . . . . .	57
4.6	Measurement procedure and experimental results . . . . .	59
4.7	Conclusions . . . . .	64
<b>III</b>	<b>Microwave photonic applications of integrated optical filters</b>	<b>67</b>
<b>5</b>	<b>Instantaneous frequency measurement</b>	<b>69</b>
5.1	Introduction . . . . .	69
5.2	A photonic-based IFM receiver integrated in InP . . . . .	71
5.2.1	Operation principle . . . . .	71
5.2.2	Fabrication . . . . .	74
5.2.3	Experimental procedure . . . . .	74
5.2.4	Results and discussion . . . . .	75
5.3	Exploring the practical limits of photonic IFM receivers . . . . .	78
5.3.1	Introduction . . . . .	78
5.3.2	IFM Theory . . . . .	79
5.3.3	Simulation results and discussion . . . . .	88
5.4	Conclusions . . . . .	94
<b>6</b>	<b>Frequency discrimination for microwave photonic links</b>	<b>97</b>
6.1	Introduction . . . . .	97
6.2	Theoretical background . . . . .	98
6.3	Design and layout . . . . .	103
6.4	Experimental characterization and discussion . . . . .	105
6.4.1	Optical filters . . . . .	105
6.4.2	Linearity and dynamic range . . . . .	107
6.5	Conclusions . . . . .	111

<b>7 Coherent microwave photonic filters</b>	<b>115</b>
7.1 Introduction . . . . .	115
7.2 Theoretical background . . . . .	117
7.3 Design and layout . . . . .	119
7.3.1 Tunable lasers . . . . .	120
7.3.2 RAMZI filter . . . . .	121
7.3.3 Dual-drive MZM . . . . .	122
7.4 Experimental results . . . . .	122
7.4.1 Fabrication and packaging . . . . .	122
7.4.2 Experimental setup . . . . .	124
7.4.3 Tunable lasers . . . . .	125
7.4.4 Photodiodes . . . . .	127
7.4.5 Thermo-optic heaters . . . . .	128
7.4.6 RAMZI filter and polarization rotation issues . . . . .	129
7.4.7 Dual-drive MZM . . . . .	134
7.4.8 Coherent MWP filtering . . . . .	136
7.5 Conclusions and future work . . . . .	141
<b>8 Conclusions and future work</b>	<b>143</b>
8.1 Future work . . . . .	145
<b>Appendix A 2D simulation of 3D devices: the effective index method</b>	<b>147</b>
<b>Appendix B List of publications</b>	<b>151</b>
B.1 Journal papers . . . . .	151
B.2 Conference papers . . . . .	152
B.3 Others . . . . .	153
<b>Bibliography</b>	<b>154</b>
