

DOLPHIN SOLUTIONS
—
WASHROOM PRODUCTS
2022

WHY DOLPHIN?

Let's start with the obvious reason for making us your go-to supplier of all things washroom-related: the exceptional quality and immense breadth of our product range.

We've got it all. From dispensers to hot air dryers, taps and bins to baby change units, every item we sell is intelligently designed, not just to look good but to be truly fit-for-purpose.

And then there's our proven expertise. We've been working with architects, contractors and developers to create beautiful high performance commercial washrooms for nearly 20 years; and we couldn't be more proud of what we have achieved together.

Some local project reference like Museum of the Future, MBR Library, Abu Dhabi Airport, Qasr-Al Hosn. looking great, and performing brilliantly – in an incredible range of prestigious settings.

But we're probably even prouder of the lasting relationships we've built. Many of our clients come back to Dolphin time and again, for every new project. Which we think says a lot about what we're like to work with, and how much we put into getting every job exactly right.

Our clients know they can depend on us to turn their vision into reality; to deliver on time, every time; and to provide prompt and highly responsive aftersales support, whenever they need it.

Beautiful, intelligent, agile, empathetic . . . a better washroom, and a better experience, are definitely a Dolphin Thing.

INFORM SMART SYSTEM

InForm SMART System is the step-change technology platform for commercial washrooms, allowing you to meet sustainability targets, achieve cost savings, improve user wellness and drive user behaviour. The technology is seamlessly integrated into both new and existing Dolphin products, providing data-led SMART intelligence that enhances sustainability, reduces costs and improves facilities maintenance for increased user wellbeing.

- › Inform SMART System provides real-time data on water and consumables usage, enabling you to identify key areas where savings can be made.
- › Touch-free usage is now of greater importance than ever, reducing the risk of transmission of germs and viruses which, in turn reduces staff illness and absence. Retain top talent.
- › Demonstrate your sustainability credentials with specific, measurable data showing water and energy savings.
- › The system is seamlessly integrated into new Dolphin products for a beautifully clean finish, helping you achieve your goals, whilst benefitting both your people, your bottom line and the planet.

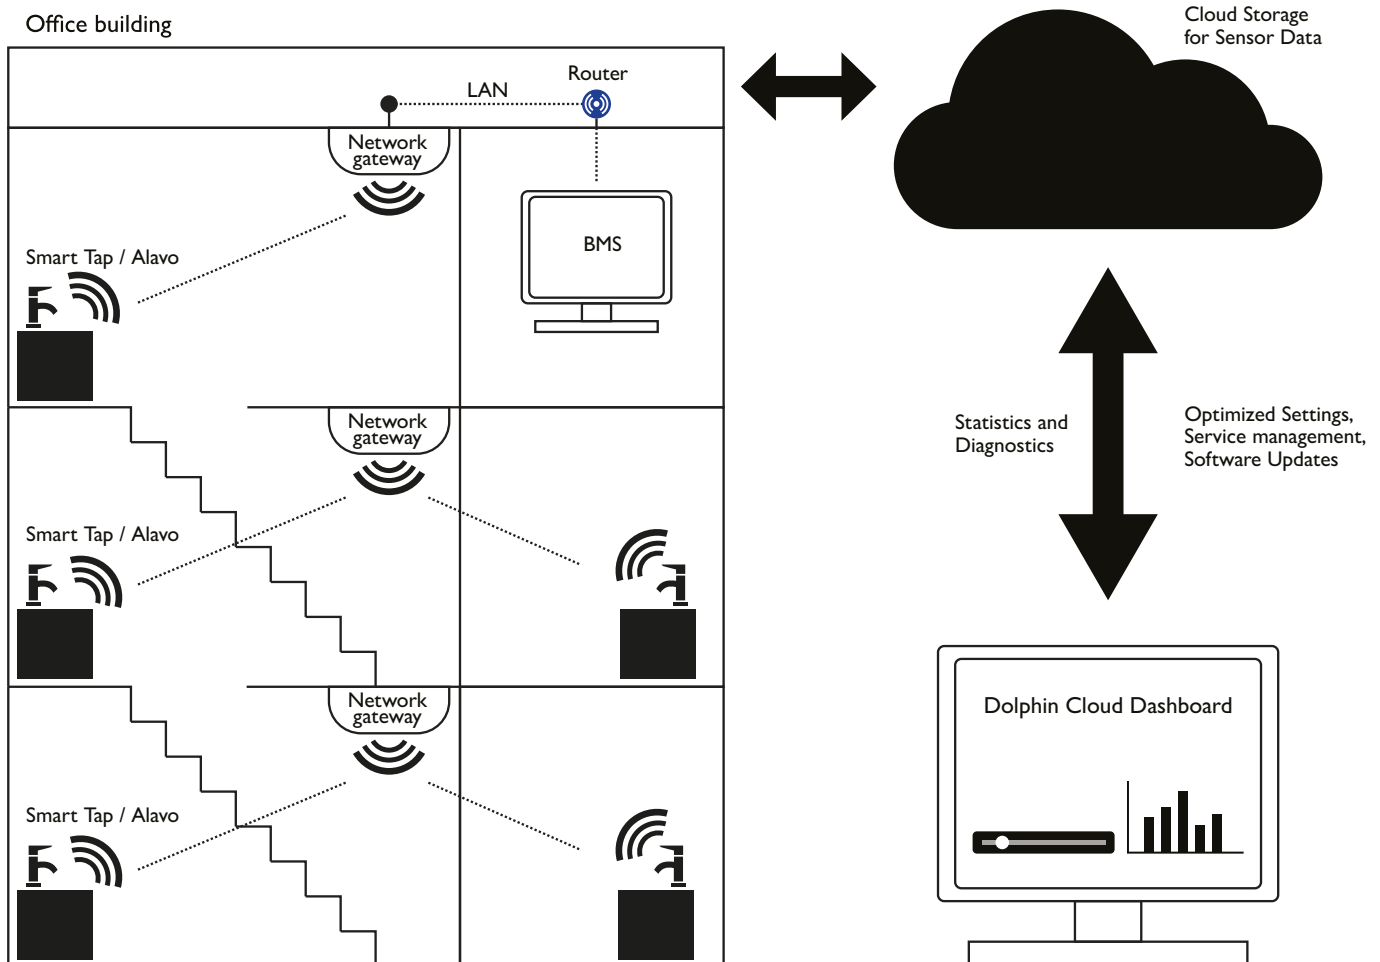

HOW IT WORKS

Dolphin Inform System Architecture:		
Device	Description	Interfaces
Sensor	Sensor products for sanitary or water management applications e.g. taps, WCs, urinals	> Bluetooth 4 LE p2p
Gateway	Network gateway as an interface from sensor products (Bluetooth) to the local network (MQTT)	> Bluetooth > Ethernet / MQTT
Dolphin Cloud	Cloud solutions, storing data from sensor products and providing dashboards with statistic, analytics etc.	> MQTT (to sensors/gateways) > http or https (to clients)

WHAT IT DOES

The Dolphin cloud provide access for your customers to the data oftheir installations with the following key aspects:

- > Statistics: provide access to the historical statistic data of an installation (usages, water consumption for a building / floor/room / fitting, including distribution over time).
- > Diagnosis: provides access to all diagnostic data, finds defects.
- > Settings: provides access to sensor settings, change settings of fittings. The basic functionality of the Dolphin cloud is in line with the Dolphin App for the sensors, adding drill down and data aggregation on different level with grouping of sensors.

ALAVO AND TROUGHS

Alavo is a modular, touch-free, behind-mirror handwash system keeping taps, soap dispensers and hand dryers concealed behind a back-lit mirror above the wash basin. By saving space, minimising water and reducing queues, this wash wall system benefits everyone in the process from design to purchase, contract and installation, facility management and the user.

By saving on space the landlord/ developer can increase the lettable floor area. Architects can shake off design restriction and be endlessly creative with this hugely customisable system. Contractors can enjoy a modular system built offsite. Facilities teams can enjoy an easy to service unit with easy to access consumables. And the washroom user? – They get to enjoy an inspirational, beautiful design in the washroom making for safe, pleasant and comfortable use.

While troughs are available as a solo item to suit whatever washroom you have envisioned, they work particularly well with the Alavo system, creating an entire 'washwall'.

WHAT IS ALAVO?

A customisable, controllable, touch-free, modular behind-mirror handwash system that is quick to install, easy to maintain, secure, stylish and can be complemented with a variety of lighting systems.

CUSTOM

Tailor design from hundreds of options

CONTROL

Adjust lighting, sensors and modes

TOUCH FREE

Infrared sensor for hygienic operation

MODULAR

Pre-built modules manufactured off-site

CONCEALED

Appliances contained behind glass mirrors

INSTALL

Rapid installation time of pre-built modules

MAINTAIN

Access to services and consumables

SECURE

Lockable control panel and mirrors

STYLE

Modern and elegant premium experience

WATER SAVING

Reduces flow rates and automatic shut off

LIGHTING

Integrate adaptable lighting systems

SEALED CARTRIDGE SOAP

Reduces contamination and maintenance

ALAVO ADDITIONAL FEATURES

LIGHTING

- › Durable, energy efficient LED strip lighting which is ecologically friendly and operates in extremely hot or cold temperatures.
- › LED lighting delivers excellent light dispersal at low voltage and can be adjusted to a colour of your choice.

STYLE OPTIONS

- › The system is available for communal washrooms where there are several basin positions in a run, and is also available as a 'supaloo' version with a single tap position.
- › A maximum of 8 tap positions can be connected into the single electrical and water connection.

CONSUMABLES

- › Paper towels easily refilled through top loading dispenser (available from any cleaning sundries supplier)
- › Paper towel dispenser can be interchangeable with the hand dryer
- › Soap cartridge system allows for easy exchange and minimises need for maintenance

INTEGRATION

- › The system is designed to work with tap spacings of 600mm, 750mm and 900mm.
- › Hinged mirror flaps on the modular system are 1000mm high to ensure safe and ease of use by maintenance and cleaning teams, and for Supaloo system are normally 800mm high to enable access in restricted spaces.
- › The modularity of the system enables a streamlined production space, however there are several ways to make it work with your space - please send your enquiry to info@dolphinsolutions.co.uk

ELECTRICAL CONTROLS

- › Control panel with RCD breakers requiring one incoming electrical feed.
- › All transformers, circuit boards, and LED controls are contained in one location. All site connections are made with a 'plug and play' connection system.

INSTALLATION

- › The system comprises factory assembled modules complete with all fittings; allowing installation with just a few simple steps:
- › Fit metal angle strips to the wall
- › Hang first cabinet on the supporting angles and fix to wall
- › Hang and fix all successive cabinets
- › Fit mirror flaps
- › Connect electrics and water

MAINTENANCE

- › Maintenance of the system is very minimal, and includes annual regulating of the TMV3 blending valves.
- › A service contract is available from Dolphin for the system.

VANITY WASH TROUGHS

ECLIPSE VANITY TROUGH

- › With fixed slot and stainless steel removable waste retainers under the trough
- › Designer angled slope trough with water run-off through continuous slots to hidden wastes
- › Square front fascia to hide the trap and waste pipe

LUCID VANITY TROUGH

- › Individual wastes
- › Seamless top and integrated basins to enhance cleaning
- › Front fascia to hide the trap and waste pipe

SVELTE VANITY TROUGH

- › Exposed waste outlets
- › Minimalist square box design
- › Square front fascia – depth can be varied

UNICO VANITY TROUGH

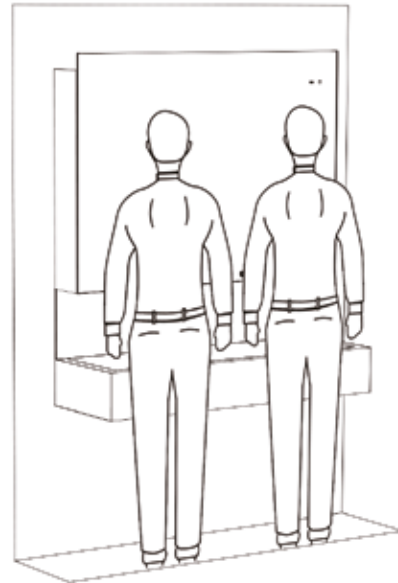

- › Cover corner details and moulded waste chutes
- › Seamless top and moulded inclined watershed zone
- › Individual hidden waste outlets

ZONE VANITY TROUGH

- › Downstand can vary in depth to hide waste pipes if desired
- › Basins can be hidden waste or proprietary bowls
- › Individual wastes front fascia

- > 8 integrated infrared sensor foam soap outlets
- > 7 integrated infrared low energy 1000 watt hand dryers

BEHIND MIRROR SOLUTIONS

Placing your taps, soap dispensers, dryers or paper towels concealed behind a mirror addresses a number of issues. It eliminates water mess causing slip and trip hazards, as well as queuing for hand drying. Replenishment and maintenance are simplified but most importantly, behind mirror facilities provide a sleek and stylish washroom with clean lines and no clutter.

TAPS

There are many different types of applications where taps are needed and the way they are used varies with each. For example, taps designed for use in low-volume residential areas (e.g. in your bathroom!) are very different to those needed in high-volume, publicly-accessible areas (e.g. the toilets at a motorway services). Some environments may require especially vandal-resistant washroom accessories, others may need to be able to be used by people with limited dexterity. If hygiene is the main requirement, then minimising touch points and taking measures to counter bacteria such as legionella is key.

Taps are certified under the Water Regulation Advisory Scheme (WRAS) which prove the taps' credentials in safety, energy efficiency and technology. Meeting WRAS requirements means that the various water regulations throughout the UK are satisfied. Power supply should also be considered – manual taps do not need a power source, and infrared taps will need powering either by battery or a transformer from the mains.

SOAP DISPENSERS

In this section you will find soap dispensers that cater for a wide range of sectors such as commercial, retail, leisure environments and so many more. We can offer manual and sensor operated, exposed or hidden dispensers and a wide range of different colour finishes on various soap dispensers in our range.

We have designs specifically for high-volume, heavy traffic areas, ones that are sleek and contemporary for quieter environments and some designs based on budget.

Our dispensers are not limited by one soap type, most of our soap dispensers are designed to alternate between foam, liquid or anti-bacterial; so we are sure you'll find a product that is suited to your client's/ project requirements.

PAPER TOWEL DISPENSERS

Drying hands is an essential part of the usage of the activity area in the washroom. With research suggesting that just 37% of men and 61% women wash their hands, drying hands need to be as simple and intuitive as possible. Paper towels can be an excellent addition in the washroom as a drying solution as they are classy, quiet and hygienic.

By using paper towels, the spread of germs in a washroom is less likely, and hands are generally dryer once dried with a paper towel. Paper towels are not limited by their position in the washroom, which is why in this section you will be able to find wall mounted, recessed, behind-mirror, under counter, counter and free standing paper towel dispenser designs.

We offer different finishes and customisable options on some of our paper towel dispensers, with automatic dispensers and lockable ones. We also offer Doc M compliant paper towel dispensers, so we are sure there will be a paper towel dispenser in this section to suit the needs of your washroom or project.

We have a range of paper towel dispensers which fit behind hinged or fixed mirrors. The advantages of having them above the basin is that it largely eliminates water splashing on the floor.

HAND DRYERS

Every time we dry our hands a resource is used in one way or another, be it energy or paper. Studies have suggested that by using a hand dryer with a productive life span of 10 years, around 24 less trees are cut down than would be were paper towels being used in place of this hand dryer. The emissions associated with using a hand dryer are much lower overall when compared to the emissions from paper production, manufacturing and disposal, and with electrical grids becoming more efficient, implementing a high speed electrical hand dryer is a lot more beneficial to the environment.

With advances in manufacturing and technology there are numerous hand dryers that are environmentally friendly. Dryers that use warm/hot air will use more power than dryers that use cold air but then they will not dry hands as quickly, which then opens up the hygiene issues. All our dryers only operate when there is physical movement close to the sensor.

COMBINATION UNITS

When choosing accessories for the washroom it is important to consider high-quality products that will have a good long life span, easy-to-maintain and emphasise on space as much as possible.

Complete your washroom with one of our stainless steel combination units. Take your pick from surface mounted, recessed, behind mirror or under counter models.

By choosing a recessed combination unit you can enjoy a combination of accessories together, saving on space in the washroom. By having the wash products in one facility along with drying products, you keep water and waste materials in one place, making maintenance and cleanliness in the washroom easier.

Some of our combination units can be finished in materials such as acrylic, glass and solid surface. Essentially you can match the combination unit to the wall, so it all looks built in, achieving a very stylish, creative yet simple look in the washroom.

TOILET TISSUE DISPENSERS

When choosing a toilet tissue dispenser, attention to detail and function is equally as important as the design.

We like to keep it simple. By offering a range of wall mounted, recessed and free standing toilet tissue dispensers, we are certain that you can find something to suit all styles of washroom.

With customizable options such as powder coating, different stainless steel types, various toilet roll options and Doc M compliant products – we are certain we can provide the solution to your requirements.

BINS

Since 2014, plumbers in over 27 EU countries have reported damages worth one billion pounds caused by blockages of items flushed down the toilet which should have been put in a bin.

Where there is a lack of sanitary or waste bin provisions, people tend to flush items down the toilet causing clogs in the sewer which then leads to bursts and floods in the streets. Products such as wet wipes and paper towels are especially damaging to the environment as they often end up seas and rivers. This is not only specific to wet wipes as this issue extends to items such as pads, tampons, nappies, medical waste and other sanitary products.

It is therefore imperative that there is adequate provisions to dispose of waste within the washroom.

ACCESSIBLE / DOC M COMPLIANT PRODUCTS

The proportion of the UK population aged 65 and over reached 18% in mid-2016 according to the Office for National Statistics. Additionally, the Disabled Living Foundation estimates there are over 10 million disabled people in Britain, and two million people with sight problems in the UK. This highlights the requirement for million people with sight problems in the UK. This highlights the requirement for sanitary ware and washroom products which cater for all needs.

The demands of an ageing population have resulted in products for older and less mobile people becoming incorporated into mainstream design. This trend towards 'Inclusive design' is an industry approach to ensuring that all products are designed to included all ages and abilities, with multiple use, primarily without assistance.

Diversity is normal – design all washrooms with this in mind.

BABY CHANGE

A day out with a young child can be stressful, so making the washroom experience as easy and stress free as possible will ensure more families visit the facilities. Due to a lack of adequate parent and child washroom facilities in the UK, many parents are forced to change children on floors or counters in the standard washrooms which is neither pleasant nor hygienic – for the parent, the child, or other washroom users.

Any parent who has been forced by the lack of appropriate baby-change facilities to create a makeshift changing area on the floor of a washroom is likely to ensure their visit ends before they need to repeat that experience. By designing washrooms for families you enable the adults to maintain close supervision of children, which makes for a safer and relaxed environment.
