

NOBILI 7 

MADE IN ITALY

Sorgente
Wonder in every drop

UNIQUE REALITY

As the only European company in the sector with a fully integrated production cycle, we lead the category in research and technological innovation. Our production systems span 88,000 square meters, housing 452 work units and producing 2.8 million items annually.

FOUNDRY

The low-pressure robotic Foundry department, a crucial part of the production process alongside the turning unit, brings components to life. Equipped with 20 advanced machining units, it efficiently produces over 780,000 components per year, minimizing material waste and environmental harm.

MECHANICAL MACHINING

Over 28 million components are produced annually from brass bars in 120 environmentally friendly facilities. An electronic system ensures precision, making these components ideal for the world's most prestigious homes and hotels.

POLISHING

Post-Foundry and Machining, components undergo a rigorous cleaning process. They then move to the Polishing department, where 110 automated stations meticulously process over 6 million components annually. A harmonious blend of robotic precision and skilled operator expertise ensures the highest quality standards.

THERMOPLASTIC MOULDINGS

Plastic components, including the non-toxic, food-grade cartridge, are essential to our products. A dedicated department, equipped with 18 presses, produces over 15 million components annually, operating 24 hours a day, seven days a week, with minimal waste.

SURFACE TREATMENTS

The utilization of cutting-edge equipment and advanced technological resources enables the achievement of a glossy, brilliant finish. Rigorous control over the substances employed maximizes sustainability, safeguarding both the environment and the health of operators.

ASSEMBLY

Assembly begins in the heart of the mixing facility, where advanced machinery packs over 10,000 cartridges daily. 23 assembly lines produce over 2.6 million items annually, with 20 laser stations marking products after rigorous quality control.

TOTAL RELIABILITY

The Nobili Widd® full immersion cartridge allows you to achieve first-class eco-sustainability goals, helping you save water and energy every day. Its design specifications and the high level of materials used ensure unrivalled reliability: we are so confident in its quality that it comes with a 20-year guarantee.

- 20 years for Nobili Widd® 35 and Nobili Widd® 28 cartridges (some models)
- 5 years for casting, porosity and chrome-plating defects
- 2 years for surface finishes, spare parts, seals, o-rings and control components related to electronic taps

INTERNATIONAL CERTIFICATIONS

Every Nobili mixer is designed and manufactured in-house, adhering to strict international standards to ensure quality, safety, and environmental responsibility. For detailed information on certifications, visit Nobili 's official website. With over 70 years of Italian excellence, Nobili combines technological innovation with Italian style. Since January 2022, Nobili has achieved net-zero carbon emissions through the use of 100% renewable energy.

Emirates Authority For Standardization & Metrology

THE FACTORY

The Nobili Institute of Technology, situated in Novara province, represents the pinnacle of efficiency in the sector. Its thoughtfully designed layout is optimized to facilitate ongoing growth and consistently deliver the highest quality standards while minimizing environmental impact.

LEAD TIME

Nobili offers a wide range of products and finishes, many of which are available upon request. For non-stock items, the production lead time is 8-12 weeks from the order date, excluding public holidays and summer closures.

SORGENTE

Centro Stile Nobili

Indulge in the luxury of convenience with Nobili's exquisite kitchen mixer taps. Quench your thirst with boiling, chilled, filtered, or sparkling water, all from a single, stylish tap. The intuitive color-coded knobs make selecting your desired water feature a breeze. With its sleek and modern design, Nobili's Sorgente mixers add a touch of sophistication to any kitchen.

The Sorgente 5-in-1 system designed to dispense instantly mixed running water, boiling water at 99 °C and three types of filtered water: room temperature, chilled and chilled sparkling

SORGENTE 5-IN-1

SORGENTE 5-IN-1: YOUR ULTIMATE WATER SOLUTION

Craving instant, perfectly customized water? Sorgente is here to quench your thirst. This innovative 5-in-1 system dispenses instant filtered hot water at 99°C for tea, coffee, and more, room temperature water for refreshing hydration, chilled water for a cool drink, and chilled sparkling water for a touch of fizz. With the Nobli Sorgente app, you have complete control over temperature, carbon dioxide levels, and system status.

ONE TAP, ENDLESS POSSIBILITIES

Say goodbye to waiting for water. The sleek and discreet Sorgente 5-in-1 fits perfectly under your sink and delivers instant chilled water; still or sparkling water; and boiling water for cooking or beverages. No more bulky kettles or unnecessary wait times.

SORGENTE APP: YOUR WATER CONTROL CENTER

The Nobli Sorgente App simplifies the management of your Sorgente system. Connected via Bluetooth, this user-friendly app allows you to customize your water temperature and carbonation level, control the flow of water; and monitor the remaining capacity of your carbon dioxide filter and cylinder. With the Nobli Sorgente App, you have complete control over your water experience.

WONDER IN EVERY DROP

The Sorgente 5-in-1 is a marvel of engineering. Packed into this single device, you'll find a powerful water heater; a high-efficiency chilling system, a versatile CO2 cylinder capable of dispensing up to 60 liters of sparkling. The Gioia filter, which protects the device from corrosion and limescale build-up while also enabling the purification and maintenance of the mineral balance of the water dispensed. With Sorgente, every drop is a delight.

SWIFT AND SIMPLE INSTALLATION

The Sorgente 5-in-1 is easy to install. It requires minimal effort and no specialized expertise, allowing you to get it up and running quickly. Its compact design fits into a space as small as 30 cm wide, and since it does not require ventilation, you can easily integrate it into your existing setup.

PLENTY OF FUNCTIONS...JUST ONE TAP

Sorgente 5-in-1 eradicates disposable bottles from your daily routine: you no longer have to load or shift heavy weights. You can forget about needing storage space for bottles and you'll be able to save time required to stock up on your water supplies. What's more, the built-in water heater inside the device helps you save time on a variety of tasks: cooking a pasta dish in record time, blanching vegetables, sanitising your baby's bottle, or filling a hot water bottle.

**WHITE LED: STAND-BY**

The white LED on the left-hand knob indicates that the mixer is powered on and ready for use. It's in standby mode, patiently waiting for you to select your desired water type. To conserve energy, the mixer automatically switches off after 5 minutes of inactivity.

**BLUE LED: FILTERED WATER**

Turn the knob, and the light will turn blue. This indicates that the mixer is ready to dispense filtered water. A single press delivers room-temperature water, while a double press provides chilled water. Enjoy pure, refreshing water free from impurities and unwanted odors.

**GREEN LED: SPARKLING WATER**

The green light signals that the mixer is ready to dispense chilled, sparkling water. Customize the level of carbonation to your preference using the Nobili Sorgente App.

**RED LED: BOILING WATER**

The red light illuminates when the mixer is in boiling water mode. Press and hold the knob to dispense, and release to stop. For hands-free dispensing (up to 60 seconds or 2.2 liters), activate the Pot Filler function with a double press.

THE SORGENTE BOILER

The Sorgente Boiler delivers instant boiling water at 99°C, perfect for a variety of kitchen tasks. Save time on cooking, tea, coffee, and more with this efficient appliance. The high-performance water heater works in conjunction with the Gioia filter to improve water quality, maintain mineral balance, and reduce heavy metals. Experience the convenience and quality of Sorgente Boiler.

THE PERFECT COMBINATION

The Gioia filter goes beyond protecting your water heater from corrosion and limescale. It enhances the taste of your water through its five-stage filtration process. This process effectively reduces heavy metals, eliminates harmful substances like certain microplastics, maintains the proper mineral balance, and ensures a neutral pH.

The pressurized 316L stainless steel water heater is a force to be reckoned with. Equipped with a safety valve and boasting a capacity of approximately 4 liters, it heats and maintains water at a consistent temperature of 103°C. This allows the mixer to dispense water at the ideal temperature of 99°C, ensuring you always have instant hot water at your fingertips.

INSTANT BOILING WATER

Tired of waiting for boiling water? Sorgente Boiler is your kitchen's secret weapon. From perfectly cooked pasta to a steaming cup of tea or coffee and sanitized baby bottles, Sorgente Boiler makes everyday tasks a breeze. Experience the convenience and efficiency of instant hot water at your command.

ADVANCED EFFICIENCY

The boiling water dispensing indicated by the red LED ring lighting up begins and remains active as long as you press the knob, stopping when it is released to avoid accidental contact with high-temperature water. The mixer features the "Pot filler" function, activated by a conscious gesture such as pressing the knob twice, which allows continuous hands-free boiling water dispensing up to 60 seconds or 2.2 liters.

NOBILIA

A close-up photograph of a white Nobilia kitchen appliance, likely a refrigerator or freezer. The image shows a portion of the white, curved top surface and a stainless steel handle. The handle is partially open, revealing a dark interior with two blue horizontal lines. The Nobilia logo is printed in black on the white surface above the handle. The background is a plain, light color.

The constant search for optimal solutions in terms of function and aesthetics means that our products are made with different materials and finishes: using and caring for them correctly is therefore essential to preserve their quality over time and ensure a long life cycle for all components.

CHROME-PLATED SURFACES

The most common galvanic finish is chrome-plating; it guarantees bright and shiny surfaces, which are also highly resistant over time. It is recommended that the tap be constantly rinsed and dried to avoid aesthetically unpleasant limescale deposits. If limescale is found on the surface of the product, it can be dissolved using diluted vinegar (maximum concentration 10% at 20 °C) and then rinsed with plenty of clean water.

CLEANING PAINTED SURFACES

Compared to chrome-plating, painted surfaces are more delicate and generally more susceptible to scratches and knocks, which is why they must be treated with greater care. It is recommended that the tap be constantly rinsed and dried to avoid aesthetically unpleasant limescale deposits. If limescale is found on the surface of the product, it can be dissolved using diluted vinegar (maximum concentration 10% at 20 °C) and then rinsed with plenty of clean water.

CLEANING PVD SURFACES

The PVD treatment provides a surface of the highest quality in terms of both aesthetics and resistance to abrasion and scratches. PVD is the acronym of Physical Vapour Deposition, a process that takes place in a pressurised chamber by means of metal vapour deposition, resulting in a variety of colour shades with very high physical and mechanical resistance. These PVD surfaces can be cleaned simply with a cloth dampened with neutral pH detergent. If limescale is found on the surface of the product, it can be dissolved using diluted vinegar (maximum concentration 10% at 20 °C) and then rinsed with plenty of clean water.

CARE AND MAINTENANCE OF THE AERATOR

Especially in geographical areas where the water is particularly "hard", solid substances or residues in the water can settle inside the aerator, altering its flow and causing the tap to malfunction. For this reason, constant and thorough cleaning of the aerator is recommended to ensure maximum effectiveness over time.

CORRECT PROCEDURE TO FOLLOW

- Use only neutral pH detergents and avoid spraying them directly onto the product surface
- Using a soft cloth, make gentle circular movements to clean, polish and finally dry the surface of the product

AVOID

- Sanitising products such as bleach, ethylene oxides, chlorides and non-ionic surfactants
- Detergents based on chloric, hydrofluoric, phosphoric and muriatic acids
- Scouring pads and wire brushes, abrasive or powder detergents
