**Mankind! Long before your birth,  
Alluring was the beauty of Mother Earth.  
She bore living things of all kinds...plants and insects, animals and birds.  
All, an exotic reflection of her biodiversity,  
A diversity you have chosen to destroy!  
Why...Mankind...Why?**

.....

**Mankind! When will you repent of your evil ways?  
When will you stop biting the hands that have fed you?  
When will you love mother earth like she loves you...?  
And stop writing her dirge with your actions?  
Mother earth looks upon you with her painful eyes  
Sobbing and asking you why...**

**Why...Mankind....Why? (Christopher Ndubuisi)**

Earth, a five letter word in which all the thing we can see in the world and beyond came. Life came out of it, lived in it, breaded in it and did everything for living. From the beginning of the first life, nature has been caring for it like a mother. The Earth provides us with all we need to exist and asks for nothing in return. You can find living organisms from the poles to the equator, from the bottom of the sea to several miles in the air, from freezing waters to dry valleys to undersea thermal vents to groundwater thousands of feet below the Earth's surface. She has given everything to make our life harmonious.

We have taken whatever we can from her. Has she ever said no when we ask for something? In turn to the things she has given to us, what have we done to her?

She gave us air to breathe, we polluted it.

She gave us water to drink, we again polluted it.

She gave us land to live, we bombed it.

She gave us forests to balance life, we destroyed it.

She gave us ozone to protect us, we damaged it.

She gives us everything she can to her children to live in harmony, we showed her anger, hatred, greed and we have made her so ill.

We have damaged her too much. We have to stop further damage. It's every human being's responsibility to fix this. Remember, every once in a time, when we forget to fix things, she herself has taken steps to fix the damage done to her. But at what cost - lives of her children? Yes, it's true.

Since 1600 more than 700 species of plants and animal has gone extinct. Some 13 million hectares of the world's forests are still lost each year, including 6 million hectares of primary forests. Thirteen of the world's hottest years on record have all occurred in the past 15 years and Arctic ice levels were this year the thinnest they have ever been, scientists have warned. Temperatures reached record levels in several regions during 2010, the World Meteorological Organization (WMO) says, confirming the year is likely to be among the warmest three on record.

Its forty years of celebrating Earth Day, 40 years of educating people about saving Mother Earth. Yet, she is still in a peril greater than ever. But we should not be fainthearted for there is still hope — and it is all in our hands.

Every little thing we do, we are contributing to the welfare of the world. So it is just right that we make ourselves conscious of what we can do to help the environment with the crisis that it is experiencing. Humans on Earth can soften the response of “nature” to Mankind and Earth itself by a continuous act of LOVE. ”Sending Love Daily to Mother Earth.” A Collective Blessing of Love from all Humans on Earth will save the Millions of life's, animals, and nature itself. ## Goal of the page • » save our green « •

- 🌱 To make people concern about environmental issues.
- 🌱 Making them understand why save nature is important right now.
- 🌱 Make them know about how to lead an eco-friendly life.
- 🌱 Introducing with amazing natural stuffs
- 🌱 Telling how to make their surroundings green.
- 🌱 Highlighting various attempts taken by different countries or nations to save environment.
- 🌱 Pointing various problems
- 🌱 Presenting news related to environment.
- 🌱 Sharing members view everyday.
- 🌱 Make people know more about the earth.

# Interesting Plants

## BASKET TREE (IMAGE CREDIT: FLICKR)

As a hobby, bean farmer Axel Erlandson shaped trees – he pruned, bent, and grafted trees into fantastic shapes and called them "Circus Trees." For example, to make this "Basket Tree" arborsculpture, Erlandson planted six sycamore trees in a circle and then grafted them together to form the diamond patterns.

## THE TWO-LEGGED TREE SHAPED BY AXEL ERLANDSON

## LADDER TREE (IMAGE CREDIT: ARBORSMITH)

IN IFATY, SOUTHWESTERN MADAGASCAR, OTHER BAOBABS TAKE THE FORM OF BOTTLES, SKULLS, AND EVEN TEAPOTS. (IMAGE CREDIT: DANIEL MONTESINO [FLICKR])

DEER TREE :)

CACTUS:-

TEAPOT BAOBAB (IMAGE CREDIT: GILLES CROISSANT)

## REDWOOD TREE

Redwood trees are ancient giants, the tallest living beings on the Earth, reaching heights of up to 360 feet (100+ meters). Redwoods are also known for their longevity, typically 500 – 1000 years, but sometimes more than 2000 years

## GIANT SEQUOIA: GENERAL SHERMAN

Giant Sequoias (*Sequoiadendron giganteum*), which only grow in Sierra Nevada, California, are the world's biggest trees (in terms of volume). The biggest is General Sherman [wiki] in the Sequoia National Park – one behemoth of a tree at 275 feet (83.8 m), over 52,500 cubic feet of volume (1,486 m<sup>3</sup>), and over 6000 tons in weight. General Sherman is approximately 2,200 years old – and each year, the tree adds enough wood to make a regular 60-foot tall tree. It's no wonder that naturalist John Muir said "The Big Tree is Nature's forest masterpiece, and so far as I know, the greatest of living things."

Axel Erlandson underneath one of his arborsculpture (Image credit: Wilma Erlandson, Cabinet Magazine). He was very secretive and refused to reveal his methods on how to grow the Circus Trees (he even carried out his grafting behind screens to protect against spies!) and carried the secrets to his grave. The trees were later bought by millionaire Michael Bonfante, who transplanted them to his amusement park Bonfante Gardens in Gilroy in 1985.

# World of Organisms

## Fennec Fox:-

The Fennec Fox (*Vulpes zerda*) is a small nocturnal fox found in the Sahara of North Africa. The fennec fox is the smallest of all the world's foxes, weighing only 2.2 pounds (1 kilogram). But it sure has enormous ears, measuring 6 inches (15 centimeters), which it appears to have borrowed from a much bigger relative.

## Colored parrot fish

The beautifully colored parrot fish is known to change its shape, color, and even gender during its lifetime. Every night, certain species of parrot fish envelope themselves in a transparent cocoon made of mucous secreted from an organ on their head. Scientists think the cocoon masks their scent, making them harder for nocturnal predators, like moray eels, to find.

## Slow Loris

The Slow Loris is one of the cutest, sweet, and shy mammals on earth. With its narrow set, bulbous eyes, they are the kind of animal that people dream of taking home and cuddling it like a teddy bear. However, besides being one of the cutest mammals, it is also the most poisonous and venomous. The Slow Loris produces a toxin on the inside of its elbows through a gland, which if eaten, would give you quite an extreme case of stomach pain. They smear this excretion on their young, to help keep them from being eaten in the wild. They are also considered venomous because if provoked, they can suck this same poison from their elbows into their mouths, injecting it into an enemy via a bite. If the presumed predator shows an allergic reaction to the toxin, they could be dead within hours if not properly treated. Found in South and Southeast Asia, they range from Northeast India in the west to the Philippines in the east, and from the Yunnan province in China in the north to the island of Java in the south.

## Finger monkey

The finger monkey is the tiniest living primate in the world. It's so small that it can hold onto your finger. This cute little primate hugs and grips onto your finger so tight that you are bound to wish to take it home. Finger monkeys are as a matter of fact pygmy marmosets. They are also known as pocket monkey and tiny lion. It is native to the rain forests of Brazil, Peru, Bolivia, Ecuador and Colombia.

## Green tree frog

Two green tree frogs meet face-to-face atop a leaf in Louisiana's Atchafalaya River Delta. Green may be the most common color found in nature—it's everywhere from leaves, grass, and moss to snakes, butterflies, and even the northern lights. Green represents life, vitality, nature, and, of course, environmentalism.

## Horned lizard and the thorny devil

This picture will show you the difference between the horned lizard (left) and the thorny devil(right).

## Non-venomous snake

Most species of boas are colorful like the *Corallus caninus*, a non-venomous snake found in the rainforests of South America. Adults grow to about 6 feet or 1.8 m in length. They have highly developed front teeth that are likely proportionately larger than those of any other non-venomous snake.

## Shark

Shark is carnivorous fish which lives in deep sea water (6600 ft under sea level). There are 440 different species of the shark. Shark is the oldest living animal/fish because it is older than dinosaurs. Millions of sharks are killed by humans every year for different purposes but there is no danger as far as their extinction is concerned. Sharks generally lives in salt water and only some species of shark lives in fresh water.

## Africa's western black rhino

IUCN has declared that Africa's western black rhino is extinct and a quarter of all mammals are at a risk of extinction. The organization stated that 2 other subspecies of rhino such as northern black rhino and java rhino were close to extinction. They are possibly extinct in wild. Human are directly responsible for the extinction. Poachers killed them one by one to collect their horn.....the news was declared on Thursday after the death of the last surviving one.

## Shrimp

Remember the shrimp 4m the movie "finding memo". Well here it is. It's a cleaner shrimp, also known as pistol shrimp. This deep sea creature is abnormally addicted 2 cleaning. It cleans whatever it finds, even your hand, feet, food dishes, everything...it is

normally found in every sea...its upper body is magentas with white border and lower body is cream colored. Its eyes are dark black. Many people use them for cleaning stuff. They are also kept in fish aquarium for cleaning...small shrimp but keep the sea clean.

## Wonders Around the World

### ■ *5 colored river of Cambodia :*

Caño Cristales is a river located in the Serrania de la Macarena Mountains. The area where the river is found is so remote that you can only get there by horse, donkey, or on foot. Caño Cristales is filled with waterfalls, rapids, wells and hollows, with water so clear you can see all the way to the bottom. During most of the year the river seems like any other, with the water coursing over green algae rocks. Then during the period of time between the wet season and the dry season – which happens between September–

November – the river transforms, becoming a river of color. The algae in the water produce a riot of color; red, blue, green, black and yellow line the river. This river has no fish because of the complexity of the channels. Caño Cristales has been called “The River of Five Colors”, “The Liquid Rainbow” and “The River That Ran Away From Paradise” and it’s honestly easy to see why.

### *Fly Geyser Reno (Nevada)*

Fly Geyser Reno (Nevada) was accidentally created in 1916 while drilling a well for water, though they didn’t start forming until 1960. The spot picked had an unknown geothermal area. The heated water eventually found a weak spot in the well and pushed itself to the surface. The minerals started building up to create a mini volcano of about 5 ft. tall, with layers of terraces. The terraces have different colors from the minerals in the water and the geothermal water has found more weak spots to create two more geysers nearby. The water spouts continuously and fills holes and hollows in the terraces, to give the area a surreal look. Water where there isn’t much water to begin with has attracted swans, ducks, and other animals to the area. Fish also swim through the ponds, introduced by an unknown human dropping the eggs in the water.

## *Aurora*

See the beautiful light; it's an aurora...aurora means 1st light of morning sun. But it's not a light from the mighty sun. An aurora is a natural light display in the sky particularly seen in high latitude regions like arctic and Antarctic regions. It's caused by the collision of energetic charged particles with atoms in the high altitude atmosphere.

## *Vale Da Lua*

Vale Da Lua is a stone basin that has been carved out by the San Miguel River. The name translates to valley of the moon and was given that name because the erosion of the rocks by the river has left them smooth, and in shades of gray similar to the look of the moon. The valley has some of the oldest rock formations in the world, with an estimated age of 1.8 billion years old. The river has created caves, grottoes, waterfalls and bizarre rock formations, to form a labyrinth in the narrow canyon walls. Seen from space, the area is the most luminous on earth. Quartz and the smoothness of the rocks cause the glow. The surrounding forest is abundant with wildlife and lays claim to many varieties of orchids. The river has made the area a work in progress, as it continues to erode and change the landscape.

# Heal Earth :: Heal Yourself

Globally, we waste 30–40% of all food produced, or one of every three calories.

**Please:**

\*Check the ingredients in your fridge and cupboards, then write a shopping list for just the extras you need.

\*Check that the seals on your fridge are good and check the fridge temperature too.

\*When you buy new food from the store, bring all the older items in your cupboards and fridge to the front.

\*Serve small amounts of food with the understanding that everybody can come back for more once they've cleared their plate. This is especially helpful for children.

\*Some food waste is unavoidable, so why not set up a compost bin for fruit and vegetable peelings?

Let's set a zero waste challenge.....

#### EFFECTS OF OIL SPILLS:-

1. Temporary ecological damage.
2. High concentrations of toxic components released from the oil, will affect the some marine resources in a localized area.
3. Dead and dying crabs, lobsters and shells will be washed.
4. Nature will recover after even the worst oil spills; it may take up to 20 or 30 years or longer in particularly sensitive area.

Do you know China is the world's largest market for tiger products? Although trade in tiger parts is illegal in China, in 2007, the Chinese government created an exception for registered and labeled tiger and leopard skins of "legal origin. The Environmental Investigation Agency (EIA), is sounding the alarm over the Chinese government's apparent relaxation of prohibitions against the sale of tiger skins.

This Diwali, Chemical and engineering department of Jadavpur University making pollution free candle. Which not only help the Eco-system, it also gives you a good smell. Normally we use a white or colorful candle, which gives you a huge amount of CO<sub>2</sub> and makes your air polluted. In this candle they are using vegetables colors, which gives you good smells and they are not using so much of oil. So this brings this candle pure and clean. But the candles prices are little bit higher than normal candle, which find you easily in the market.

So this Diwali bring home pollution free candle and make the most of it.

Canada becomes the 1st country to announce it would withdraw from the Kyoto protocol on climate change which was initially adopted in Kyoto, Japan, in 1997, is aimed at fighting global warming. Canada would be subject to penalties equivalent to C\$14 billion (\$13.6 billion) under the terms of the treaty for not cutting emissions by the required amount by 2012. All the countries signed this protocol but the USA has not yet ratified it.

# DO YOU CARE FOR NATURE?

**By Naturelover Sambit.....**

Now-a-days everybody seems to be aware of environment and our impact on it. People talk about global warming, sea level rise, polar ice cap melting, acid rain and lots of other stuff. Environmental science is included in every school and college syllabus, people are using star rated products like energy efficient lighting and other home appliances, celebrities are claiming that they r GOING GREEN ( not to mention few of them posing naked for P.E.T.A ) . Looks like everybody trying to do whatever they can, and I have to

admit some people are doing... But my question is, is it helping our environment as much we thought it would??

Let me share an experience with you...

Few weeks ago, a seminar on REASONS BEHIND GLOBAL WARMING was held in our college. Students from some other college also joined. They made some presentation; there was a group discussion also. But they were all same, dull, boring (you know what I mean if you have attended any such seminar). Everything they were saying were just a copy of some book or other or our favorite Wikipedia. The thing is, these guys were all toppers and they did what they can do best, they memorized few lines, equations and graph last night and told on Dias whatever they could remember. I asked one of them about his perspective about global cooling. As expected he knew very little about it.

And this is the main reason behind our present environmental crisis. We are running in a vast field with our eyes closed, we have no idea where we are going. There are some people who are really think about environment, care for it. I appreciate it but there are some other who has no idea what to do to protect our environment. Most of the students don't like studying it. My classmates laugh at me because I like this subject but not so well in so called DEPARTMENTAL SUBJECTS. I don't think bookish knowledge is going to help us fight global warming or any other environmental problems.

Nature took thousands of years to create a perfectly working ecosystem. It is not possible for us to understand it through some book. And if we don't understand how nature works we won't be able to fix what is broken. We have to understand all the aspects before we try to change any part of it. Because any mistakes can have devastating result. Just for an example to prevent deforestation government started planting eucalyptus trees without knowing its effect. These trees have no bi-product that local people can use, these trees support very few wildlife, and makes land more aired because of their fast-growing nature.

We have heard about lots of theories about environmental development and prevention model like ISO-14000, E.M.S. model etc. but before employing any of these models anywhere we have to understand that nature is not a math's question paper where you apply a formula , solve an equation and obtain the result. When in danger, nature is like a little baby, crying and helpless. Like a caring mother we have to understand what she needs .not just some big project or lots of money is going to help her. She needs all our love to heal.

Being eco-friendly does not mean giving lecture on sustainable development or getting full marks in environmental sciences exam or walking on the road wearing GO GREEN tee-shirt. Eco-friendly means implementing green ideas in your life like closing the water tap after use, switching off the light when you leave your room, using air-conditioner only when necessary, asking for a paper bag instead of plastic at grocery store and reducing your carbon footprint as much as possible.

If you care about nature, nature would care about you. So please get out of your room, NATURE is waiting for you outside, see her, touch her, feel her and love her. I am doing my part for nature, ARE YOU? BECAUSE THE WORLD IS IN YOUR HANDS .....

**Abrace un arbol  
(Hug a tree)**

*By shalini Roy...*

It is spring! And I'm elated like any other mother would be, to see her children bathing in sunbeam, playing and dwindling in the breeze. I still remember the day when I gave birth to my two beloved children, Seasam and Sambal. Back then I was just five, playing 'Pitto' with pebbles near the plantation plot that my mother had risen with all her blood, sweat and tears! I came across some unusual pebbles! They weren't like the rest. They were much smaller and I presented it to my mother. She asked me to bury them in the backyard. And so I did. Fascinatingly a few days later i saw two of my kids eke out their precarious existence from the soil and now they are full grown trees, strangely enough both taller than their mother. I have raised them as mine, as if they once belonged to my womb! I fed them, nourished them, watered them and now my children nourish me and possibly everyone around them! The feeling is euphoric.... I'm one proud mother today! Trees are pre-requisite to our existence. How long can you live without clothes? For life?

With-out food? Few days? Without water? few hours? Without air?...few seconds? Or maybe not even that! People are chased away from their urban abodes to lofty mountains and seas! Some spend almost a lifetime in search of peace! But friends, take my advice. Plant a small tree at any corner of your home. Nourish it. Care for it. Let it have a space in your heart, give it a warm hug every morning, whenever you're gloomy sit beside it and cry your heart out. Trust me, the peace that you would derive from it would be worth all the effort you put into raising it. The feeling of giving life to something and sustaining it is unsurpassable! Man isn't apart from nature. He has evolved out of nature. Its nature's mercy AND grace that man still survives on earth. And trees are the most elemental part of it. A future without trees is a call to the doom. It's not just unimaginable but scary too! But mankind today is so engrossed in "progress" and its leap towards 25th century dreams that it has almost completely overlooked the urgency of existence of green cover. In fact, one of my favorite cartoons, The Jetsons , was an animated science fiction sitcom which portrayed life in the 25th century as conceived by the producers back in 1963. There were robots, electronic contraptions, and flying cars. If you come to think about it, other than the flying cars, some of their futuristic ideas have become a reality. However, in remembering this series, I noticed something recently which made me pause and think. There was hardly any vegetation in that "future." There were hardly any trees. No greenery. Is that how life will become in the 25th century? Then I would suggest that people worthlessly fancy living this way in 25th century because a future without trees is too hostile for survival. As globalization makes the world become smaller, it becomes increasingly easy to see how the lives of people (and plants and animals and ecosystems) everywhere are closely synced up with one another. So toys made in China can affect the quality of life in Europe, pesticides used in Argentina can affect the health of people in the U.S., and greenhouse gas emissions from Australia can affect a diminishing rainforest in Brazil. The truth is that EVERY SINGLE THING we do every day has an impact on the planet-- good or bad. The good news is that as an individual you have the power to control most of your choices and, therefore, the impact you create: from where you live to what you buy, eat, and use to light your home, to how you shop or vote, you can have

global impact. It's important for every individual to have consciousness for nature and motive to go green. Bottom line: It benefits everyone on the planet to help keep our wild spaces alive and growing. Embracing a greener lifestyle isn't just about helping to preserve equatorial rain forests, it can also mean improving your health, padding your bank account, and, ultimately, improving your overall quality of life. All that and you can save furry animals, too? **GO HUG A TREE! EMBRACE A GREENER LIFESTYLE AND STAY HEALTHY. SAVE THE EARTH FOR "YOUR" CHILDREN TO BREATHE IN SAFELY!**

Save earth! Before you, evaporate along-with it!  
**Save earth! Before you, evaporate along-with it!**

*By Abhishek Kumar*

What is Global Warming? Since the beginning of time there have been documented variations in climate and temperature. A well known climate variability that Californians experience, El Nino, occurs every three to six years and results in warmer ocean temperature, increased ocean upwelling, and drier winters. While this phenomenon appears to be threatening to our environment, it is simply just a natural climate cycle. However there is a hazardous threat to our Earth that has been occurring for the past hundred years. The phenomenon known as global warming refers to the average increase

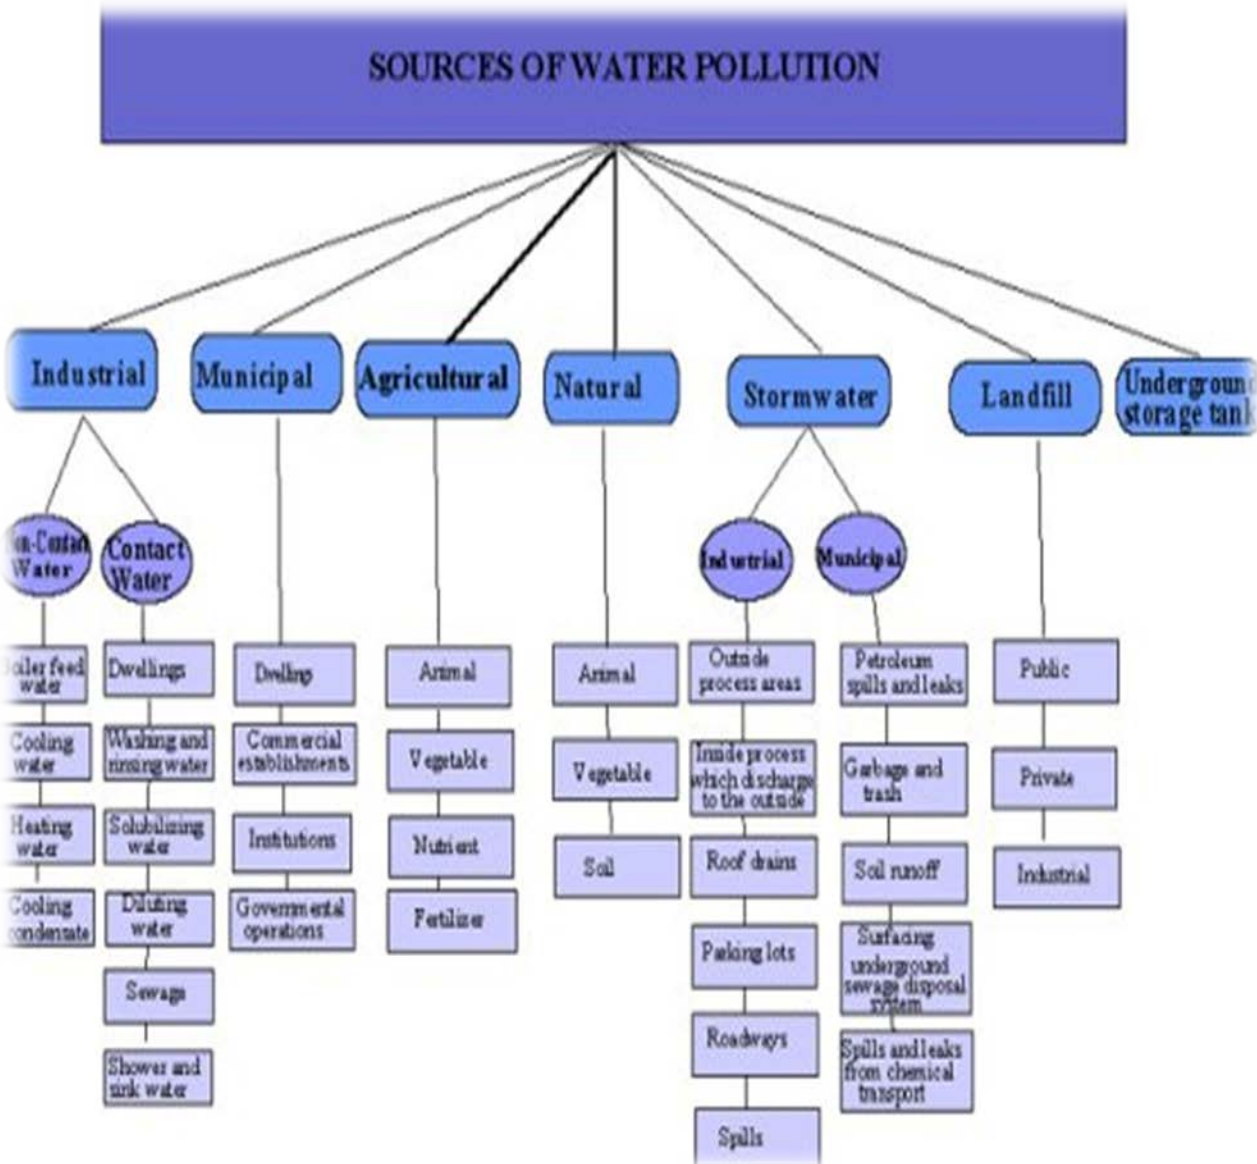

in the Earth's overall temperature. Such an increase in temperature can result in drastic climate changes that in turn can lead to a rise in sea level, changes in rainfall, and detrimental impacts on plant and wildlife. In order to truly understand the phenomenon that is global warming one must analyze and understand the greenhouse effect, greenhouse gases, and climate change. The Earth's atmosphere plays a key role in the global warming process. Global warming will lead to an increase in global temperature, rise in sea level, change in rainfall, and many other climate occurrences. With the continued emission of greenhouse gases, like carbon dioxide, methane, and nitrous oxide the threat of global warming becomes more prevalent. The atmosphere cannot bear the continued increase in pollutants and eventually the earth's human, plant, and wildlife will suffer. Global warming is in fact a real threat and action must be taken to protect the environment. When the earth radiates such energy back to space, atmospheric gases trap departing energy. Atmospheric gases like water vapor, carbon dioxide, and other gases simulate the glass panels of a greenhouse. Therefore these chemicals are known as the greenhouse gases. The greenhouse effect is responsible for the insulation on the earth thus making human, wildlife, and plant life possible. While the natural process of the greenhouse effect is necessary, problems occur when the atmospheric concentration of greenhouse gases increases.

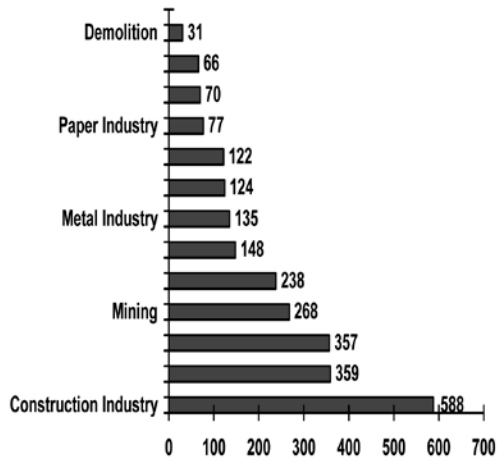

# Save water, Save lives

*By Albert Plabonestein*

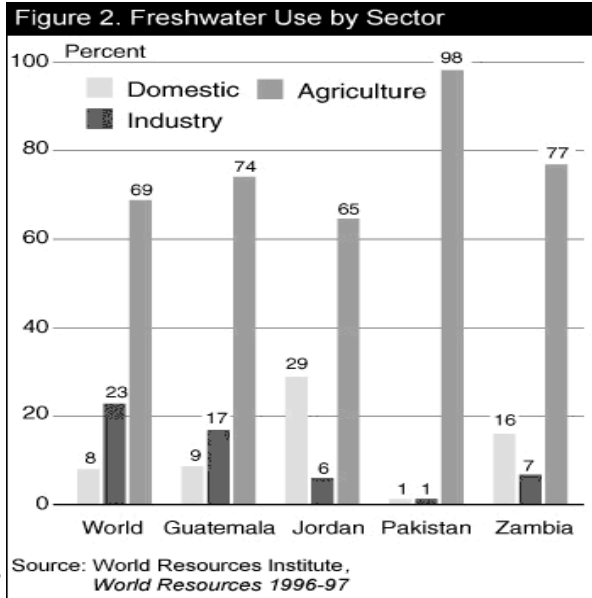

Water is one of the major environmental elements that affect our life. All the living things use water and save their lives. But things change when the water become contaminated. Any chemical particles, living or non living substances or waste products pollute water.

## *ETIOLOGY OF WATER POLLUTION:*

Source: Water pollution incidents in England and Wales 1997. The Environment Agency 1997

Source: World Resources Institute, World Resources 1996-97

*AND LAST OF ALL.....*

*So....please..... Save water...Save lives.....!!!*

## *\*GOD, MAN AND SCIENCE\**

[By Pravin Pandey](#)

The proponents of intelligent design came up with condemnatory remarks about Darwin's theory of evolution and the insufficiency of Neo- Darwinism as a scientific doctrine. According to them, it failed to give a satisfactory explanation for the origin of such complex structure as see organs. Take an example of eye. How can isolated components such as retina, lens, cornea etc, all randomly formed by undirected mutations, be assembled to form a complex whole called eye merely by a gradual process enforced by natural selection It is said that several random events results in the formation of many structures that assemble in various permutations and combinations. Some of these permutations may be functionally more successful than others. It takes millions of years for a wide array of random events to result in a race chance of successful combination of functionally efficient structures. When this happens nature forcefully favors their survival and perpetuation. The so called doctrine of intelligent design belief that life is a

continuum that all life forms evolve from pre-existing ones. Intelligent design believes in the 'de novo' creation of life. This is another way of stating the theory of special creation where GOD was believed to be the creator. In this, case god is replaced by some designer with intelligent intentions. The questions arise who create the designer. Do the believers of intelligent design theory have a explanation for the existence of vestigial organs and homologous structures. Why did the designer not create life on all planets and stars?

Take a chemist who in his experiments combines various ingredients in a test tube and provides a spectrum of physical conditions to set the reaction in motion. It is ultimately left to the reactants to combine and behave differently under different conditions and forms the various products. Quite similarly, the designer must have created all the essentials ingredients, that is, varied forms of matter and energy, and left them to react indefinitely. Matter and energy are thus continuous state of flux. Change is the only constant thing in the universe and this is the paradoxical truth whose complexities are yet to be unraveled.

Way back in time, before the advent of the telescope and the microscope, mankind's belief in the existence of distant galaxies or microbial life would have had no proof but may have been mere stretches of imagination. Science believes in proof and not in imagination. At the same time, lack of proof is not a proof in itself of non-existence of something. Someday in the distant future, there may be inventions that will be able to see the existence of the Supreme Being we called GOD. Mankind may then be able to communicate with this intelligent designer and find an answer to the tickling question-

How did matter and energy come to exist in the first place?

GOD may have rested after creating life but mankind shall not rest and continue the quest till an answer is found.....

# CALL OF NATURE

By Dibya Jyoti

Dear FRIENDS, I would like to say something on our duty in environmental pollution. Just realize the problem and its consequences over our planet. Some are often say that there is no need to do anything on pollution. Nature balance it itself. It is true. But to balance if nature eradicates us then what we will we do? We are not making... ourselves adjust with the circumstances rather want to change them. We use ac and appliances but not keep pace with the nature.

I AM NOT SAYING TO DO RALLY, SATYA GRAHA OR ROAD SIDE PROTEST.  
JUST DO THE FOLLOWING THINGS....

♥ NEVER USE POLYTHENE OE PLASTIC.AT LEAST TRY TO AVOID THEM.  
ALWAYS USE CARRY BAGS.

♥ GIVE SOME GRAINS TO BIRDS AND ANIMALS

- ♥ YOU CAN PUT WATER POTS ON UR ROOF WHICH HELPS THE BIRDS TO GET WATER IN SCROCHING SUMMER.
- ♥ NEVER HONK (APPLY HORNS IN AUTOMOBILE) LOUDLY.THEY IRRITATE THE HUMANS AS WELL AS OTHER CREATURES.
- ♥ SAVE FUEL, ELECTRICITY, and WATER.
- ♥ ALWAYS TRY NOT DIRT THE DRESS MATERIALS.BECOZ DETERGENT AND SOAPS USED FOR LUNDRY PURPOSE ARE ALSO DANGEROUS.
- ♥ AVOID LEATHER MATERIAL LIKE WALLETS, BELTS, and SHOES ETC.
- ♥ AVOID ANIMAL PRODUCTS LIKE SOME KINDS OF FACE CREAMS WHICH ARE MADE FROM ANIMAL FATS.
- ♥ BE ECOLOGICAL..TRY TO USE BEST OF THE RAIN WATER...AND SUNLIGHT.
- ♥ TRY TO BECOME VEGETERIAN.
- ♥ TRY TO AVOID OF MAKING E-WASTES.RECYCLE THEM ...
- ♥ PALNT A TREE ON UR BIRTH DAY.IF NOT POSSIBLE JUST WATERD THE TREE IN SUMMER.

PLZ ADD THE ABOVE THINGS IN UR LIFESTYLE. REST WILL BE DONE BY SOCIAL WORKERS AND GOVTS. AND UNO.

AT LEAST DO THE ABOVE FOR THE SAKE OF ANIMALS AND TREES...

HOPE YOU GET MY MESSAGE.....

# Member's messages

 *"Your deepest roots are in nature, no matter who you are, where you live, or what kind of life you lead. You remain irrevocably linked with the rest of creation, So nature is the base of our life and it's our responsibility to save it*

*SAVE FORESTS*

*SAVE ANIMALS*

*SAVE ENVIRONMENT*

*SAVE NATURE*

*SAVE UR FUTURE*

*SAVE WORLD*

*SAVE YOURSELF" ..... Abhishek Kumar*

 *Nature is like a book....a small child can harm it .... a teenager may harm it but regret too...but what about a man , who is enough grown 2 understand , why don't he rejuvenate it...!!..... Sankriv Kumar*

 *"Nature is man's teacher.*

*She unfolds her treasure to his search,*

*unseals his eye, illumes his mind,*

*and purifies his heart;*

*an influence breathes from all the sights and sounds*

*of her existence.*

*SAVE NATURE*

*SAVE WORLD*

*SAVE YOURSELF " .....Abhishek Kumar*

 *“ Reading about nature is fine, but if a person walks in the woods and listens carefully, he can learn more than what is in books, for they speak with the voice of God. ”:):)..... Jassi Aujla*

 *“We do not see nature with our eyes, but with our understandings and our hearts.. ” ..... Jassi Aujla in request of Manas Padhy*

 *“'Growth' and 'progress' are among the key words in our national vocabulary. But modern man now carries Strontium 90 in his bones ... DDT in his fat, asbestos in his lungs. A little more of this 'progress' and 'growth,' and this man will be dead.” ..... Punk Jesus*

 *“As you sit on the hillside,  
or lie prone under the trees of the forest,  
or sprawl wet-legged by a mountain stream,  
the great door, that does not look like a door, opens.” ..... By Sambit Manna in  
request of Punk Jesus*

 *“Let us permit nature to have her way: she understands her business better than we do.” .....Jassi Aujla in request of Achi Protikkhay'*

 *“ Those who dwell among the beauties and mysteries of the earth are never alone or weary of life. ” ..... Jassi Aujla*

 *“Your deepest roots are in nature. No matter who you are, where you live, or what kind of life you lead, you remain irrevocably linked with the rest of creation. So Nature is the base of our life and it's our responsibility to save it.*

 *SAVE FORESTS!!!*

*SAVE ANIMALS!!!*

*SAVE ENVIRONMENT!!!*

*SAVE NATURE!!!*

*SAVE UR FUTURE!!!*

*SAVE WORLD!!!*

*SAVE YOURSELF!!!” ..... Abhishek Kumar in request of Manas Padhy*

 *"I love to think of nature as  
an unlimited broadcasting  
station, through which God  
speaks to us every hour, if  
we will only tune in.” " ..... Abhishek Kumar*

 *"If the sight of blue skies fill you with joy  
If a blade of grass springing up in the fields has power to move you  
If the simple things of nature have a massage that you understand..  
Rejoice, for your soul is alive  
....its our sincere duty to make our planet GREEN, GREEN, and GREEN" .....  
Meghbalika Moushumi Sharmin Toma*

 *When you take a flower in your hand and really look at it,  
Its your world for the moment.  
I want to give that world to someone else.  
Most people in the city rush around so,  
They have no time to look at a flower.  
I want them to see it whether they want to or not....  
When you plant tree, never plant only one, plant three....  
--One for SHADE*

*--One for FRUIT and*

*--One for BEAUTY..... Meghbalika Moushumi Sharmin Toma*

*A flower blooming at your feet,the night sky blossoming with stars,and everything  
in between-is nature just too awesome for words!!!!GO GREEN!!!!.....Rohan  
Suresh*

 *I think that I shall never see*

*A poem as lovely as a tree.*

*A tree whose hungry mouth is prest*

*Against the earth's sweet flowing breast;*

*A tree that looks at God all day,*

*And lifts her leafy arms to pray;*

*A tree that may in Summer wear*

*A nest of robins in her hair;*

*Upon whose bosom snow has lain;*

*Who intimately lives with rain.*

*Poems are made by fools like me,*

*But only God can make a tree.....Nature Lover Sambit*

 *I don't know what i may appear to the world*

*but to myself, I seem to have been only like a girl playing on the seashore,and  
diverting myself in now and then.*

*finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of  
truth law all undiscovered before me*

*Let up permit nature to have her own way, she understands her business better than  
us..... Meghbalika Moushumi Sharmin Toma*

*The best remedy for*

*those who are afraid,*

*lonely or unhappy is*

*to go outside,*

*somewhere where they*

*can be quiet, alone with the heavens,*

*nature and God.*

*Because only then does*

*one feel that all is as it*

*should be and*

*that God wishes to*

*see people happy,*

*amidst the simple beauty of nature. I*

*firmly believe that*

*nature brings solace*

*in all troubles.*

**SAVE NATURE**

**SAVE YOURSELF**

*..... Abhishek Kumar*

 *Did i wake up to the whisper of the morning rain?*

*Or was it the colors of the sunbeam,*

*As i opened my eyes*

*I saw you fluttering those wings by my arms*

*Beside the blooming flowers in the summer warm*

*So green*

*So calm!*

 *Oh! What a world!*

*Lemme embrace it tight in my arms*

*Breathe in the breeze*

*defying bonds*

*Beauty...this nature*

*Gift to me*

*from my heaven's czar*

*healing my eternal scars! ..... Shalini Roy*

 *I arise today, through the strength of heaven; Light of sun, Radiance of moon, Splendor of fire. Speed of lightning, Swiftness of wind, Depth of sea, Stability of earth, Firmness of rock...Man is not himself only...He is all that he sees; all that flows to him from a thousand sources...He is the land, the lift of its mountain lines, the reach of its valleys. We inter-breathe with the rain forests, we drink from the oceans. They are part of our own body. You didn't come into this world. You came out of it, like a wave from the ocean. You are not a stranger here. Your deepest roots are in nature. No matter whom you are, where you live, or what kind of life you lead, you remain irrevocably linked with the rest of creation. For the 99 percent of the time we've been on Earth, we were hunter and gatherers, our lives*

*dependent on knowing the fine, small details of our world. Deep inside, we still have a longing to be reconnected with the nature that shaped our imagination, our language, our song and dance, our sense of the divine..... Shalini Roy*

 *Animals for medical experimentation and product testing is controversial subject leading to heated debate. Suffering involved in animal experimentation is painfully obvious. Like us all animals, share the capacity to recognize fear and suffer pain. There are serious scientific and health issues involved as well. You can use your power as an informed consumer to help end the use of animals in product testing. Buying products with the LEAPING BUNNY LOGO guarantees cruelty-free products and you can feel good about using it..... Shalini Roy*

 *never harm the dreaming world,  
the world of green, the world of leaves,  
but let its million palms unfold  
the adoration of the trees.....Naturelover Sambit*

 *"I cannot believe that the inscrutable universe turns on an axis of suffering; surely the strange beauty of the world must somewhere rest on pure joy!  
Good nature will always supply the absence of beauty; but beauty cannot supply the absence of good nature.".....Ochena Balok*

 *Aerials...  
You are born to fly!  
Soaring up the sky,  
Like I want to Cherish every dream!  
Who can forbid your way?  
There's no one to pull you down!*

*Coz you're an aerial...born free...born to fly!!*

*..... Shalini Roy*

 *From the very first day*

*when my leaves unfold*

*I stood here in the forest*

*tall, straight and bold*

*don't cut me fool*

*i am a tree*

*i am here*

*so that you can live free..... Naturelover Sambit*

 *The world's a roller coaster;*

*and I'm not strapped in...*

*Maybe I should hold it with care*

*I dig my toes into the sand*

*The Ocean looks like a thousand diamonds*

*shrew across a blue blanket!*

*I lean against the wind*

*pretend that I m weightless,*

*And in this moment I'm happy!*

*I lay my head onto the sand*

*the sky resembles a backlit canopy*

*with holes punched in it*

*I'm counting UFOs!*

*I signal them with my lighter,*

*And in this moment I'm happy..... Shalini Roy*

 *"God is the great mysterious  
motivator of what we call  
nature, and it has often been  
said by philosophers, that  
nature is the will of God. And  
I prefer to say that nature is the only body of God that we  
shall ever see."*

*... "One of the first conditions of  
happiness is that the link  
between Man and Nature shall  
not be broken."*

*SAVE NATURE*

*SECURE UR FUTURE..... Abhishek Kumar*

 *I like to take the time out*

*To listen to the trees, much in the same way that i listen to sea shell, holding my  
ear against the rough bark of the trunk.*

*Hearing the inner singing of the sap, it's a lovely sound, the beating of the heart of  
the tree..... Naturelover Sambit*

# Happy Moments

**Abhishek Kumar** Thanks Green-Green Admin :)

.....

Today i have learnt many things and hope that will learn in future too. . .

# Future Plan

## Problem we are facing...

- 🌱 The most important problem we face is to find out the quiz. And sometimes controversial information is given on various sites, so it seems sort of difficult to manage it.
- 🌱 As there are three administrators, and all are from different places, so sometimes two makes posts on the same time.
- 🌱 Sometimes posts can't be given on time because of slow internet connection.
- 🌱 Sometimes we see personal attack or attack to some special race. We have to be rude to handle this kind of behavior.

## Future plan...

- 🌱 Present more wonderful places around the world.
- 🌱 Arrange a competition with member's photography.
- 🌱 Make an album of the people who have contribution to environment.
- 🌱 Give brief information about medicinal plants and fruits.
- 🌱 Give ideas to make outdoor as well as indoor green.
- 🌱 Make a bond among members to interact and share views and take various attempts in their locality like tree plantation, raise awareness and so on.
- 🌱 Provide more green living tips.
- 🌱 Start a tree plantation program and invite the photograph of the plants planted on the same day by the members and arrange the entire plants picture on a common album.

# Conclusion

*Thanks all of you for being with us. Thank you so much for ignoring our faults and encouraging us to go ahead. Without your help we could never run our page and publish this magazine. From your guys we know many things in each and every moment. Now we are really rich because we have you. Thank you for the endless loves that still surrounds us.*

*We expect you always on our side, for your protection and support, for sharing our dreams. Your irreplaceable heartiness, love and understanding are the sources of our strength.*

*We hear People around us are talking about environmental issues. We all know what to do and what not to. These ideas sound great, but they have to be implemented. Let's do our best to save our mother earth.....lets change our life style.....let's say.....*

↳» ἴ'μ ηστ αη εηνησημεηταξιστ. ἴ'μ αη εαητη ωαηηισα. :)

Regards,
