

# An Abundance of Online Transportation Training

**ONLINE TRAINING**

No time to get your crews out for in-class training right now? No worries, here are some free, online offerings to check out and we think just about everyone will find something of interest. Maybe too much; you may become a training junkie!

The National Highway Institute has made 180 online courses available, now at no cost. They have topics dealing with materials, bridges, asphalt, concrete, paving, maintenance,

pavement preservation, etc. You can browse the NHI online courses at their [website](#). Browse the courses by choosing the web-based training (WBT) option. Get excited about a few courses. Then, use this flyer for instructions on how to link up with NHI and get started.

You have heard us talk before about the American Association of State Highway and Transportation Officials' (AASHTO) Transportation Curriculum Coordination Council (TC3) web-based training before. If you haven't browsed them yet, now's the time. They have online offerings in the area of construction, materials, maintenance, traffic and safety, pavement preservation, and employee development. Pick a couple that sound good and, again, use the flyer for instructions to get started.

There's more. Do you need to understand more about crack sealing, slurry seals, and other pavement preservation topics? Our friend at the Resource Center, Jason Dietz, let us know that the Federal Highway Administration and the Pavement Preservation and Recycling Alliance put together a whole series of upcoming, free webinars, with a new topic each month through the end of the year – pavement milling, slurry system site selection, crack treatments, tack, fog seals, chip seals, etc.. Flip through their webinar [calendars](#) to see the new topic on the third Thursdays of the month, click on them, and register. Oh, yeah, they're free, too.

That should take care of your online needs through the rest of the year, but contact us if you have any problems accessing these and let us know how these performed for you.

## Transportation Training Available GET STARTED TODAY!

As new and innovative ways to manage highway construction programs enter the transportation landscape, so does the need to keep your transportation staff's knowledge up to date. The staff training necessary to prepare for the future, however, can be difficult for local and tribal transportation agencies to afford. Luckily, there are no-cost trainings available in need-to-know transportation topics, many of which can be done anywhere, any time. Learn more about the options to find the ideal fit for your agency's needs.

**National Highway Institute (NHI)**  
Recommended for engineers and construction workers

- 180+ online courses available
- NO-COST access
- NHI training for local and tribal transportation staff is sponsored by the Federal Highway Administration's Center for Local Aid Support.

**NHI TOPICS**

- Introduction to Safety Inspection of Truss and Bridge (Chip Seal Seal)
- Introduction to Bridge Inspection, Inspection and Quality Introduction to a Transportation Asset Management Plan (Use in Project Reporting)

**RELATED CONTACTS ARE LISTED**

## FHWA/PPRA Webinar Program

Each webinar is tentatively scheduled for the third Thursday of each month at 2pm EST. More information will be posted on [Roadresource.org](http://Roadresource.org).

Month	Topic	Association
February <small>***This webinar is scheduled for the 3rd Thursday in February only.</small>	Emulsions 101	AEMA
March	Milling Best Practices	ARRA
April	Intro to Slurry Systems and Site Selection	ISSA
May	Crack Treatments Overview, Project Selection and Design	ISSA
June	HIR & CIR	ARRA
July	Tack and Fog Seal	AEMA
August	Chip Seal Introduction, Site Selection, Design and Materials	ISSA
September	FDR and Soil Stabilization	ARRA
October	Engineered Emulsions	AEMA
November	Slurry/Micro Mix Design and Material Testing	ISSA
December	Bringing it all Together with Alternative Cross Sections	ARRA
