

Supplementary figure S1. IL-1 β release after 6h stimulation of CD14+ monocytes, MCSF-Macrophages, GM-CSF/IFN γ -Macrophages by crystals at 250, 500 and 1000 ng/ml in presence of LPS (lipopolysaccharide) and parallel cell death rate. sHA= synthetic hydroxyapatite, CAL = human calcification CT= control group without crystal; LPS= lipopolysaccharide. n=3. * p \leq 0,05

Supplementary figure S2. Western Blot raw images of sHA (positive control) and three patients. Cleaved IL-1 β was studied in cellular lysates (CL) and in supernatants (SN). iNF- κ B= NF- κ B inhibitor; iCasp1= caspase-1 inhibitor; inh= inhibitor; sHA= synthetic hydroxyapatite; CAL= human calcification; CT = control condition without crystals.

Supplementary table 1. Primers used for quantitative Polymerase Chain Reaction.
