FOX NEWS POLL

ARIZONA

All results are for release 6:00 PM/ET Thursday, September 26, 2024.

Methodology

Conducted September 20-24, 2024 under the joint direction of Beacon Research (D) and Shaw & Company Research (R), this Fox News Poll includes interviews with a sample of 1,021 Arizona registered voters randomly selected from a statewide voter file. Respondents spoke with live interviewers on landlines (147) and cellphones (616) or completed the survey online by following a link received via text message (258).

Interviews were conducted by bilingual interviewers. Respondents were given the option of completing the interview in English or Spanish.

Telephone numbers were randomly selected from a statewide voter file of registered Arizona voters using a probability proportionate to size method, which means phone numbers are proportionally representative to the number of voters in all regions across the state. Telephone fieldwork conducted by Braun Research, Inc. of Princeton, NJ.

Results based on the full sample have a margin of sampling error of ±3 percentage points. A subsample of 764 has been defined as likely voters (LV), with a margin of error of ±3.5 percentage points. Sampling error associated with subgroup results is higher. In addition to sampling error, question wording and order can influence results.

When necessary, weights are generally applied to age, race, education, and area variables to ensure the demographics of survey respondents are representative of the registered voter population. Sources for developing weight targets include the American Community Survey, Fox News Voter Analysis, and voter file data.

Results are of registered voters, unless otherwise noted.

Likely voters are based on a probabilistic statistical model that relies on past vote history, interest in the current election, age, education, race, ethnicity, church attendance, and marital status.

Surveys before January 2024 were telephone only. Web-based survey question wording may differ slightly from telephone wording for improved clarity.

An asterisk (*) is used for percentages of less than one-half percent. A dash (-) represents a value of zero.

Some percentages may not add to 100% due to rounding. In the same way, percentages in "total" columns may be one point more or less than the sum of their parts due to rounding.

1. How interested are you in the 2024 presidential election? Are you:

	Extremely	Very	Somewhat	Not at all	(Don't know)
