

GR-150XL-3

15 Ton Capacity (13.6 Metric Tons)

SPEC. SHEET NO. TAC-GR-150-3-0-0102-03312019

HYDRAULIC ROUGH TERRAIN CRANE

DIMENSIONS

Note: In this external views, a few equipment are included.
() Reference dimensions in mm.

GENERAL DIMENSIONS

	Feet	Meter
Turning radius (315/80R22.5 Tires)		
4 wheel steer	14' 5-1/4"	4.4
2 wheel steer	24' 11-1/8"	7.6
Tail swing of counterweight	4' 11"	1.5

	Feet	Meter
Overall length	approx. 24' 9-5/8"	7.56
Overall width	approx. 6' 6-3/4"	2.00
Overall height	approx. 9' 6-7/16"	2.90

CRANE SPECIFICATIONS

BOOM

6 section full power partially synchronized telescoping boom of rectangular box construction with 3 sheaves at boom head. The synchronization system consists of 2 telescope cylinders, extension cables and retraction cables. Hydraulic cylinder fitted with holding valve. An easily removable wire rope guard, rope dead end provided on the left side of boom head. Boom telescope sections are supported by wear pads both vertically and horizontally.

Fully retracted length.....	18.0' (5.5 m)
Fully extended length.....	78.7' (24.0 m)
Extension speed.....	60.6' (18.5 m) in 56 s
Root diameter.....	10-1/2" (0.266 m)

BOOM ELEVATION

By a double acting hydraulic cylinder with holding valve. Combination controls for hand or foot operation. Automatic speed reduction and slow stop function.

Boom angle.....	-9°– 82°
Boom raising speed.....	-9° to 82° in 29 s

JIB

2 stage extension type, offset angle (5°-60°) by tilt cylinder. Single sheave at jib head. Box type top section telescopes from box type base section which stows under base boom section.

Length.....	11.8' (3.6 m), 18' (5.5 m)
Offset.....	5°-60°
Root diameter.....	10-1/2" (0.266 m)

ANTI-TWO-BLOCK DEVICE

Pendant type over-winding cut out device with audio-visual (FAILURE icon/BUZZER) warning system.

SLEWING

Hydraulic axial piston motor driven through planetary slewing speed reducer. Continuous 360° full circle slewing on ball bearing.

Equipped with manually locked/released slewing brake. A 360° positive slewing lock for pick and carry and travel modes. Slewing speed..... 2.6 min⁻¹ {rpm}

WINCH

Variable speed type with grooved drum driven by hydraulic axial piston motor through speed reducer. Power load lowering and raising.

Equipped with automatic brake (neutral brake) and counterbalance valve. Equipped with drum rotation indicator.

DRUM

Root diameter x wide.....	12-1/4" (0.308 m) x 12-5/16" (0.312 m)
Wire rope diameter x length.....	9/16" (14.0 mm) x 443' (135 m)
Drum capacity.....	573-8' (174.9 m), 7 layers
Maximum permissible line pull.....	7,500 lbs (3,400 kg)
Maximum line speed.....	407 F.P.M (124 m/min) at the 4th layer

WIRE ROPE

Filler or warrington seal wire (spin-resistant), extra improved plow steel, preformed, independent wire rope core, right regular lay. 9/16" (14.0 mm) IWRC 6 x WS (31) class

HOOK BLOCKS

15.0 ton (13.6 metric ton)
2 sheaves with swivel hook and safety latch
3.5 ton (3.2 metric ton)
Weighted hook with swivel and safety latch

HYDRAULIC SYSTEM PUMPS

2 variable piston pumps for crane functions. Tandem gear pump for steering, slewing and optional equipment. Powered by carrier engine. Pump disconnect for crane is engaged/disengaged by rotary switch from operator's cab.

CONTROL VALVES

Electrically controlled Multiple valves actuated by pilot pressure with integral pressure relief valves.

RESERVOIR

44.6 gallon (169 lit.) capacity. External sight level gauge.

FILTRATION

BETA10=10 return filter, full flow with bypass protection, located inside of hydraulic reservoir. Accessible for easy replacement.

OIL COOLER - Air cooled fan type.

CAB AND CONTROLS

Both crane and drive operations can be performed from one cab mounted on rotating superstructure.

Right side, 1 man type, steel construction with sliding door access and safety glass windows opening at side. Door window is powered control. Windshield glass window and roof glass window are shatter-resistant. Wiper and washer (front windshield and roof window). Tinted safety glass and sun visor. Tilt-telescoping steering wheel. Adjustable control lever stand for slewing, boom elevating, boom telescoping and winch. Control lever stand can change neutral positions and tilt for easy access to cab. Foot operated controls: boom elevating, boom telescoping, service brake and engine throttle. 3 way adjustable operator's suspension seat with high back, headrest and armrest. Engine throttle knob. Hot water cab heater and air conditioning.

Dash-mounted Instruments panel, Multi Function Display, Starter switch (engine start/stop), Drive mode selector switch, Parking brake switch, Steering mode selector switch, Power window switch, PTO switch (pump engaged/disengaged), Air conditioning control panel.

Instruments panel -

Speedometer, Tachometer, Odo/trip/hour meter. Torque converter oil temperature gauge, Water temperature gauge, Air pressure gauge, Fuel gauge.

Multi Function Display -

DEF level gauge, DPF level gauge, Fuel consumption monitor.

CRANE SPECIFICATIONS

TADANO electronic Load Moment Indicator system (AML-E) including:

- Control lever lockout function with audible and visual pre-warning
- Number of parts of line
- Boom position indicator
- Outrigger state indicator
- Slewing angle
- Boom angle / boom length / jib offset angle / jib length / load radius / rated lifting capacities / actual loads read out
- Potential lifting height
- Ratio of actual load moment to rated load moment indication
- Permissible load
- Automatic Speed Reduction and Slow Stop function on boom elevation and slewing
- Working condition register switch
- Load radius / boom angle / tip height / slewing range preset function
- External warning lamp

- Tare function
- Main hydraulic oil pressure
- Fuel consumption monitor
- Drum rotation indicator (audible and visible type)
- On rubber indicator
- Flood lamp switch
- Hydraulic oil temperature

TADANO AML-E monitors outrigger extended length and automatically programs the corresponding "RATED LIFTING CAPACITIES" table

Operator's left hand console includes transmission gear selector and sight level bubble, and outrigger control panel, power supply socket, telescoping lever control selector.

NOTE: Each crane motion speed is based on unladen conditions.

CARRIER SPECIFICATIONS

TYPE

Rear engine, right-hand drive, driving axle 2-way selected type by manual switch, 4x2 front drive, 4x4 front and rear drive.

FRAME

High tensile steel, all welded mono-box construction.

ENGINE

Model	HINO JO5EVA-TDFC [Tier4]
Type	Direct injection diesel
No. of cylinders	4
Combustion	4 cycle, turbo charged and intercooled
Bore x Stroke, in. (mm)	4.409 x 5.118 (112 x 130)
Displacement, cu. in. (liters)	312.6 (5.123)
Start assisting device	24 volt glow plug type
Air cleaner	Dry type, replaceable element
Oil filter	Combined use of all-flow and partial flow paper filters (Spin-on type)
Fuel filter	All-flow paper filter (Element-replacement type)
Fuel tank, gal. (liters)	50 (189), right side of carrier
Cooling	Liquid pressurized, recirculating by-pass
Radiator	Fin and tube core, thermostat controlled
Fan, in. (mm)	Inhalation type, 10-blade, 20.5 (520) dia.
Starting	24 volt
Charging	24 volt system, negative ground
Battery	2-80 amp. Hour
Compressor, air, CFM (l/min)	13.6 (385) at 2,500 min ⁻¹
Output, Max. HP (kW)	without fan NET 172 (129) at 2,500 min ⁻¹
Torque, Max. ft-lb (kgm)	395 (55) at 1,600 min ⁻¹
Capacity, gal. (liters)	
Cooling water	2.5 (9.5)
Lubrication	2.8 (10.7)
Fuel	50 (189)
DEF	5 (19)

TRANSMISSION

Electronically controlled full automatic transmission. Torque converter driving full power shift with driving axle selector. 6 forward and 2 reverse speeds, constant mesh.

- 2 speeds - high range - 2-wheel drive; 4-wheel drive
- 3 speeds - low range - 4-wheel drive

TRAVEL SPEED - 25 mph (41 km/h)

GRADE ABILITY (tan θ) - 51% (at stall), 36%

* Machine should be operated within the limit of engine crankcase design.

AXLE

Front: Full floating type, steering and driving axle with planetary reduction.

Rear: Full floating type, steering and driving axle with planetary reduction.

STEERING

Hydraulic power steering controlled by steering wheel. 4 steering modes available: 2 wheel front, 2 wheel rear, 4 wheel coordinated and 4 wheel crab.

SUSPENSION

Front: Semi-elliptic leaf springs with hydraulic lockout device. Rear: Semi-elliptic leaf springs with hydraulic lockout device.

BRAKE SYSTEMS

Service: Air over hydraulic disc brakes on all 4 wheels. Parking/Emergency: Spring applied-air released brake acting on input shaft of front axle. Auxiliary: Electro-pneumatic operated exhaust brake.

TIRES - 315/80R22.5 (OR) Air pressure: 850 kPa

OUTRIGGERS

4 hydraulic, beam and jack outriggers. Vertical jack cylinders equipped with integral holding valve. Each outrigger beam and jack is controlled independently from cab. Beams extend to 15'5" (4.7 m) center-line and retract to within 5'4-1/2" (1.64 m) overall width with floats. Outrigger jack floats are attached thus eliminating the need of manually attaching and detaching them. Controls and sight bubble located in superstructure cab. 4 outrigger extension lengths are provided with corresponding "RATED LIFTING CAPACITIES" for crane duty in confined areas.

Min. Extension	5'4-1/2" (1.64 m) center to center
Mid. Extension	8'2-3/8" (2.5 m) center to center
Mid. Extension	11'5-3/4" (3.5 m) center to center
Mid. Extension	14'1-1/4" (4.3 m) center to center
Max. Extension	15'5" (4.7 m) center to center
Float size (Diameter)	1'1-3/4" (0.35 m)

STANDARD EQUIPMENT

- Telematics (machine data logging and monitoring system) with HELLO-NET via internet
- Eco mode system
- Positive control
- Emergency steering system
- Transmission neutral position engine start
- Overshift prevention
- Parking brake travel warning
- Tilt-telescope steering wheel
- LED head lamp
- Fenders
- Air dryer
- Water separator with filter (high filtration)
- Air cleaner dust indicator
- Full instrumentation package
- Towing hooks-Front and rear
- External warning lamp
- Tire inflation kit
- Tool storage compartment
- Rear view camera
- Left-front camera
- Multi function display

HOISTING PERFORMANCE

LINE SPEEDS AND PULLS

Layer	12-1/4" (0.308 m) drum					
	Line speeds ¹				Line pulls Available ²	
	Low		High		Low	
	F.P.M	m/min	F.P.M	m/min	Lbs.	kg
1st	197	60	331	101	13,400	6,080
2nd	210	64	354	108	12,400	5,640
3rd	226	69	381	116	11,600	5,260

5th	256	78	433	132	10,200	4,640
6th	272	83	459	140	9,600	4,380
7th ³	289	88	509	155	8,650	3,920

- Maximum permissible line pull wire strength.
9,700 lbs (4,400 kg) with 6x31 class rope.

- ¹ Line speed based only on hook block, not loaded.
- ² Developed by machinery with each layer of wire rope, but not based on rope strength or other limitations in machinery or equipment.
- ³ Seventh layer of wire rope are not recommended for hoisting operations.

DRUM WIRE ROPE CAPACITIES

WARNING AND OPERATING INSTRUCTIONS FOR ON RUBBER LIFTING CAPACITIES

1. Rated lifting capacities on rubber are in pounds and do not exceed 75% of tipping loads as determined by SAE J765-Crane Stability Test Code.
2. Rated lifting capacities shown in the chart are based on the condition that crane is set on firm level surfaces with suspension lock applied. They are based on actual load radius increased by tire deformation and boom deflection.
3. Rated lifting capacities are based on proper tire inflation, capacity and condition. Damaged tires are hazardous to safe operation of crane.
4. Tires shall be inflated to correct air pressure.

Tires	Air Pressure
315/80R22.5	123 psi (850 kPa)

5. Over front operation shall be performed within 2 degrees in front of chassis.

6. On rubber lifting with "jib" is not permitted. Maximum permissible boom length is 42.3' (12.9 m).

7. When making lift on rubber stationary, set parking brake.
8. For creep operation, boom must be centered over-front of machine, swing lock engaged, and load restrained from swinging. Travel slowly and keep the lifted load as close to the ground as possible, and especially avoid any abrupt steering, accelerating or braking.
9. Do not operate the crane while carrying the load.
10. Creep is motion for crane not to travel more than 200' (60 m) in any 30 minutes period and to travel at the speed of less than 1 mph (1.6 km/h).
11. For creep operation, set drive select switch to "4-WHEEL (LO)" and set gear shift switch to "1".
12. The mass of the hook (282 lbs for 15 t capacity, 109 lbs for 3.5 t capacity), slings and all similarly used load handling devices must be considered as part of the load and must be deducted from the lifting capacities.

WARNING AND OPERATING INSTRUCTIONS FOR LIFTING CAPACITIES

GENERAL

1. RATED LIFTING CAPACITIES apply only to the machine as originally manufactured and normally equipped by TADANO LTD. Modifications to the machine or use of optional equipment other than that specified can result in a reduction of capacity.
2. Hydraulic cranes can be hazardous if improperly operated or maintained. Operation and maintenance of this machine must be in compliance with information in the **Operation and Maintenance Manual** supplied with the crane. If this manual is missing, order a replacement through the distributor.
3. The operator and other personnel associated with this machine shall fully acquaint themselves with the latest American National Standards Institute (ANSI) safety standards for cranes.

SET UP

1. Rated lifting capacities on the chart are the maximum allowable crane capacities and are based on the machine standing level on firm supporting surface under ideal job conditions. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger floats or tires to spread the loads to a larger bearing surface.
2. For outrigger operation, outriggers shall be properly extended with tires free of supporting surface before operating crane.

OPERATION

1. Rated lifting capacities have been tested to and meet minimum requirements of SAE J1063-Cantilevered Boom Crane Structures Method of Test.
2. Rated lifting capacities do not exceed 85% of the tipping load on outriggers fully extended as determined by SAE J765-Crane Stability Test Code.
Rated lifting capacities for partially extended outriggers are determined from the formula, Rated Lifting Capacities=(Tipping Load - 0.1 x Tip Reaction)/1.25.
3. Rated lifting capacities are based on actual load radius increased by boom deflection.
4. The weight of handling device such as hook blocks (282 lbs for 15 t capacity, 109 lbs for 3.5 t capacity), slings, etc., must be considered as part of the load and must be deducted from the lifting capacities.
5. Rated lifting capacities are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, inflation of tires, operating speeds, side loads, etc. Side pull on the boom or jib is extremely dangerous. Such action can damage the boom, jib or slewing mechanism, and lead to overturning of the crane.
6. Rated lifting capacities do not account for wind on lifted load or boom. We recommend against working under the conditions that the load is out of control due to a strong wind. During boom lift, consider that the rated lifting capacity is reduced by 50% when the wind speed is 20 mph (9 m/s) to 27 mph (12 m/s), reduced by 70 % when the wind speed is 27 mph (12 m/s) to 31 mph (14 m/s). If the wind speed is 31 mph (14 m/s) or over, stop operation. During jib lift, stop operation if the wind speed is 20 mph (9 m/s) or over.
7. Rated lifting capacities at load radius shall not be exceeded. Do not tip the crane to determine allowable loads.
8. Do not operate at boom lengths, radii, or boom angles, where no capacities are shown. Crane may overturn without any load on the hook.
9. When boom length is between values listed, refer to the rated lifting capacities of the next longer and next shorter booms for the same radius. The lesser of the two rated lifting capacities shall be used.
10. When making lifts at a load radius not shown, use the next longer radius to determine allowable capacity.
11. Load per line should not exceed 7,500 lbs (3,400 kg).
12. Check the actual number of parts of line with Load Moment Indicator (AML-E) before operation. Maximum lifting capacity is restricted by the number of parts of line of Load Moment Indicator (AML-E). Limited capacity is as determined from the formula,
Single line pull 7,500 lbs (3,400 kg) x number of parts of line.
13. The boom angle before loading should be greater to account for deflection. For rated lifting capacities, the loaded boom angle and the load radius is for reference only.

14. The 18.0' (5.5 m) boom length capacities are based on boom fully retracted. If not fully retracted [less than 30.2' (9.2 m) boom length], use the rated lifting capacities for the 30.2' (9.2 m) boom length.
15. Extension or retraction of the boom with loads may be attempted within the limits of the RATED LIFTING CAPACITIES. The ability to telescope loads is limited by hydraulic pressure, boom angle, boom length, crane maintenance, etc.
16. When the jib is removed, turn the jib state select switch to "DISMOUNTED"
17. When erecting and stowing jib, be sure to retain it by hand or by other means to prevent its free movement.
18. Use "ANTI-TWO-BLOCK DEVICE" disable switch when erecting and stowing jib and when stowing hook block. While the switch is pushed, the hoist does not stop, even when overwind condition occurs.
19. For boom length 78.7' (24.0 m) or less and 66.6' (20.3 m) or longer with jib, rated lifting capacities are determined by loaded boom angle only in the column headed "78.7' (24.0 m) boom + jib". For boom length 66.6' (20.3 m) or less with jib, rated lifting capacities are determined by loaded boom angle only in the column headed "66.6' (20.3 m) boom + jib". For angles not shown, use the next lower loaded boom angle to determine allowable capacity.
20. The lifting capacity for over side area differs depending on outrigger extension width. Work with capacity corresponding to the extension width. The lifting capacities for over front and over rear areas are for "outriggers fully extended". However, the areas (angle a) differ depending on the outrigger extension width.

Outriggers extended width	14'-1-1/4" (4.3 m) (middle)	11'-5-3/4" (3.5 m) (middle)	8'-2-3/8" (2.5 m) (middle)	5'-4-1/2" (1.64 m) (minimum)
Angle a°	45	35	25	15

21. Be very careful not to come in contact with the mirror, engine cover, etc, with following warning messages. When operating crane in the following case.
 - When lowering the boom angles less than 12°.
 - When slewing with the boom angles less than 12°.

DEFINITIONS

1. Load Radius: Horizontal distance from a projection of the axis of rotation to supporting surface before loading to the center of the vertical hoist line or tackle with load applied.
2. Loaded Boom Angle: The angle between the boom base section and the horizontal, after lifting the rated lifting capacity at the load radius.
3. Working Area: Area measured in a circular arc about the centerline of rotation.
4. Freely Suspended Load: Load hanging free with no direct external force applied except by the hoist line.
5. Side Load: Horizontal side force applied to the lifted load either on the ground or in the air.

WARNING AND OPERATING INSTRUCTIONS FOR USING THE LOAD MOMENT INDICATOR (AML-E)

1. Set AML select keys in accordance with the actually operating crane conditions and don't fail to make sure, before crane operation, that the displays on front panel are correct.
2. When operating crane on-outriggers:
 - Before outrigger operation, turn the boom toward the front. (Locking and releasing cannot be performed in other state.)
 - Press the suspension lock switch until the suspension lock indicator lamp flashes to lights, and lower the body to the full. (Outrigger operation and crane operation cannot be performed without suspension lock.)
 - Set the PTO switch to "ON".
 - Touch the operation status registration button in the button display section.
 - Touch the outrigger setting button and the outrigger status registration screen appears on the MFD. Make sure that the display matches the actual outrigger status, and touch the set button to register. After the registration is completed, the display returns to the crane operation status.
 - Touch the lift state select button to register the lift state to be used (jib/boom).
The lift status registration screen appears on the MFD. Touch a button for the boom status to be used. Touch the set button to register the setting. After the registration is completed, the display returns to the crane operation status.
 - When erecting and stowing jib, select the status of jib set, and the jib set status symbol lights up.
3. When operating crane on rubber:
 - Before on rubber operation, turn the boom toward the front. (Locking and releasing cannot be performed in other state.)
 - Press the suspension lock switch until the suspension lock indicator lamp flashes to lights, and lower the body to the full. (Crane operation cannot be performed without suspension lock.)
 - Set the PTO switch to "ON".
 - Touch the operation status registration button in the button display section.
 - Touch the outrigger setting button and the outrigger status registration screen appears on the MFD. Select the on rubber operation, and make sure that the on rubber status indicator symbol lights up. Touch the set button to register. After the registration is completed, the display returns to the crane operation status.
- Touch the lift state select button to register the lift state to be used (boom). The lift status registration screen appears on the MFD. Touch a button for the boom status to be used.
- Touch the set button to register the setting. After the registration is completed, the display returns to the crane operation status. However, pay attention to the following.
 - (1) For stationary operation.
 - The front capacities are attainable only when the front position symbol lights up. When the boom is more than 2 degrees from centered over-front of chassis, 360° capacities are in effect.
 - When the load is lifted in the front position and then slewed to the side area, make sure the value of the Load Moment Indicator (AML) is below the 360° lifting capacity.
 - (2) For creep operation.
 - The creep capacities are attainable only when the front position symbol lights up. If boom is not in the over-front of chassis, never lift load.
4. This machine is equipped with an automatic slewing stop device. (For the details, see Operation and Maintenance Manual.) But, operate very carefully because the automatic slewing stop does not work in the following cases.
 - During on rubber operation.
 - When the PTO switch is set to "OVERRIDE" and the "OVERRIDE" key switch outside the cab is set to "ON".
5. During crane operation, make sure that the displays on front panel are in accordance with actual operating conditions.
6. The displayed values of Load Moment Indicator (AML-E) are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, inflation of tire, operating speed, side loads, etc. For safe operation, it is recommended when extending and lowering boom or slewing, lifting loads shall be appropriately reduced.
7. Load Moment Indicator (AML-E) is intended as an aid to the operator. Under no condition should it be relied upon to replace use of capacity charts and operating instruction. Sole reliance upon Load Moment Indicator (AML-E) aids in place of good operating practice can cause an accident. The operator must exercise caution to assure safety.
