

I've been a teacher for 25 years. Anytime it would rain, I was left to find my own way through puddles which seldom worked out well. When I saw that our school custodian was putting out a solid walkway that was raised above the water and was made of a non-slip material, I asked him what it was. The Puddlejumper was a life saver. Students were no longer walking in my room with drenched socks and shoes.

Thanks Puddle Jumpers!

Wow! These puddle jumpers have been a blessing to our school sites, not only are they light weight but they are so easy to install. Our school staff has reached out to us to thank us on behalf of the students and their parents for providing a safe way to get around puddles on school grounds. We not only use them for puddles but also to accommodate our handicap students!

Thank you Puddle Jumpers!!!

Jorge Robles-Mora

Maintenance Manger

Puddles at MHS

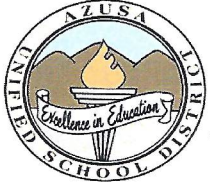

Accommodation of our handicap students

As a long time educator and former school superintendent, I highly recommend the Puddlejumper. In 2017 the district I was running went through tremendous rainstorms that caused damage to district property and surrounding business in a remote, rural part of California in the high desert. I knew about the Puddlejumper from my previous district where I also purchased several for each school site. I immediately ordered several to address the flooding that occurred at the main office as well as all of other campuses. This provided safe paths of travel for students and staff. If we say student safety is our first priority, then this is sure proof way to demonstrate that as an educational leader.

Hello everyone I wanted to take a minute to share my thoughts on the puddle jumpers and what the product has been able to provide for us here throughout our district each time the schedule rains come upon us. As a manager safety protocol must always be in place to minimize potential risk for slips and falls of student's staff and the public during the rainy season, we are always striving continually to reinforce our safety and communicate the importance of creating a culture of safety and prevention within our schools. Especially during the heavy rains if you are looking for a way to reduce the risk while maintaining a high standard of safety for your workplace you should truly consider the puddle jumpers they have provided a safe and clear passage for students staff and visitors to travel through during the rains where rain water accumulates causing potential hazards, Simply by placing down puddle jumpers you establish a regular basis practice for your walkway sidewalks entrances and corridors and for all those moving in and about your campuses thus minimizing the occurrence of slip and fall accidents I highly recommend the puddle jumpers it has definitely helped me promote the safety and well-being of students employees in the public during the rainy season here on our campuses

Thank you, Robert Zamora
