

TEXAS PARKS AND WILDLIFE

BIRDS

OF

DAVIS MOUNTAINS STATE PARK AND VICINITY

A FIELD CHECKLIST

2016

INTRODUCTION

Lying within the northern portion of the vast Chihuahuan biotic province, Jeff Davis County is located in the heart of the Trans-Pecos region of far west Texas. The county comprises 2,258 square miles and varies in elevation from approximately 3,800 feet to 8,378 feet above sea level. About 3,000 residents inhabit Jeff Davis County which is predominately ranching country and includes only two towns – Valentine and Fort Davis, the county seat. The most prominent geographical feature, the Davis Mountains, are characterized by rugged mesas, jagged escarpments, and sharp peaks in the highlands that are interspersed with gentle, rolling hills. Formed by a burst of intrusive and extrusive volcanic activity approximately 35 million years ago during the Miocene, the Davis Mountains today represent the largest and highest mountain range entirely within the state of Texas; over 600 square miles of the range are at elevations over 5,000 feet. The highest paved road in Texas terminates on top of Mount Locke at the McDonald Observatory at an elevation of 6,791 feet.

Jeff Davis County supports a diversity of habitat types due in large measure to the variance in elevation. Grasslands composed of mixed-grass or short-grass communities occur in the basin flats surrounding the mountains as well as on plateaus and rolling hills and are best developed up to 5,200 ft elevation. Blue grama (*Bouteloua gracilis*) and sideoats grama (*B. curtipendula*) are dominant although many other species occur, including bluestems (*Bothriochloa* spp.), three-awns (*Aristida* spp.), tobosa (*Hilaria mutica*), and muhlys (*Muhlenbergia* spp.). Chihuahuan desert scrub, typical of the lowland desert, has invaded certain grassland areas where lack of fire, soil erosion and periodic droughts have allowed the encroachment of desert plants. Creosotebush (*Larrea tridentata*), honey mesquite (*Prosopis glandulosa*), catclaw mimosa (*Mimosa aculeatacarpa* var. *biuncifera*), and other shrubs are common in these areas. Grassland habitats and their associated birdlife are best observed from US 90, TX 17, TX 118, TX 166, and RR 505 generally south and west of Fort Davis.

Elements of pinyon-juniper-oak woodlands are found generally between 4,400 – 5,500 feet elevation where gray oak (*Quercus grisea*), Emory oak (*Q. emoryi*), and rose-fruited juniper (*Juniperus coahuilensis*) are dominant. At elevations above 5,500 feet, Mexican pinyon pine (*Pinus cembroides*) is found, alligator juniper (*J. deppeana*) begins to replace the other junipers, and silverleaf oak (*Q. hypoleucoides*) appears as a co-dominant. Chisos red oak (*Q. gravesii*), chinkapin oak (*Q. muhlenbergii*), bigtooth maple (*Acer grandidentatum*) and Texas madrone (*Arbutus xalapensis*) occur in moist canyons and on protected slopes. At still higher elevations, generally above 6,000 feet, a montane woodland of pines and scattered oaks is found, skirted by an understory of grasses. Dominant trees in this woodland are ponderosa pine (*P. ponderosa*), southwestern white pine (*P. strobiformis*), and Gambel's oak (*Q. gambelii*). Occasional stands of quaking aspen (*Populus tremuloides*) are also present. The scenic loop drive through the Davis Mountains (TX 17, TX 118, and TX 166) traverses portions of both the pinyon-juniper-oak and pine-oak communities.

Streams, marshes (ciénegas), and earthen stock tanks dot the landscape and provide a variety of aquatic and wetland habitats, offering much-needed water, shelter, and food resources for wildlife. Riparian vegetation occurring in these areas includes Rio Grande cottonwood (*P. deltoides* ssp. *wislizenii*), Goodding willow (*Salix gooddingii*), yewleaf willow (*Salix taxifolia*), little walnut (*Juglans microcarpa*), netleaf hackberry (*Celtis reticulata*), desert willow (*Chilopsis linearis*), velvet ash (*Fraxinus velutina*), seepwillow baccharis (*Baccharis salicifolia*), and cattails (*Typha* sp.). Well developed cottonwood/ash/willow gallery woodlands occur in some locations along permanent watercourses, such as portions of Limpia and Musquiz creeks, although in other settings riparian vegetation forms low, dense thickets.

Davis Mountains State Park is situated in the transition zone between extensive grassland communities that encircle the Davis Mountains and the lower extension of the oak-juniper-pinyon woodlands, which

dominate intermediate elevations of the mountains (altitudes in the park range from 4,900 to 5,675 feet). Emory oak woodlands occur along Keesy Creek and its canyon, while junipers and oaks occur intermixed with numerous shrubs, grasses, forbes, and succulents such as yucca and agave on slopes and at higher elevations in the park. Cottonwood and willow are common components of the riparian vegetation bordering Limpia Creek. The avifauna of the park is composed of species characteristic of grasslands, woodlands and riparian areas. Most of the birds found within the park and its immediate surroundings commonly occur in similar mountainous terrain throughout the American Southwest and northern Mexico. Occasionally, birds of the pine and oak forests, more characteristic of the highest portions of the Davis Mountains, visit the park, especially during severe winters, and irruptive species of the Rocky Mountain montane guild invade in some years.

Some of the higher and more significant elevations and habitats of the mountain range are included in the Davis Mountains Preserve, owned by The Nature Conservancy. It is here that the majority of montane (pine-oak) habitats are located. Numerous exclusive species can be found in these upper elevation habitats, especially during the breeding season. Exclusive nesting species include Flammulated Owl, Band-tailed Pigeon, Mexican Whip-poor-will, Magnificent Hummingbird, Gray, Dusky, and Cordilleran Flycatchers, Violet-green Swallow, Plumbeous, Hutton's, and Warbling Vireos, House Wren, Hermit Thrush, Orange-crowned, Virginia's, Yellow-rumped (Audubon's), and Grace's Warblers, Painted Redstart, Western Tanager, Green-tailed Towhee, Red Crossbill, and Pine Siskin. Overall, an amazing 108 species are known or suspected to nest in the Davis Mountains at elevations above 5,500 feet. Other species essentially restricted to this zone during the periods indicated on the checklist include Northern Saw-whet Owl, Williamson's Sapsucker, Steller's Jay, Mountain Chickadee, Pygmy Nuthatch, and Hutton's Vireo.

This checklist includes all species known to occur within Jeff Davis County. Those recorded within Davis Mountains State Park and immedi-

ate vicinity, including Fort Davis and Fort Davis National Historic Site, are denoted by **boldface**. The habitat(s) in which each species is most likely to be encountered is also denoted; exclusive breeding habitats are indicated by **boldface**. Checklist nomenclature and organization follow the A.O.U. *Checklist of North American Birds* (7th Edition, 1998 as currently supplemented). This checklist was compiled by Kelly B. Bryan of Fort Davis, the late Pansy Espy of Fort Davis, and Jody and Clay Miller of Valentine, and is based in part on previous editions which were the result of many years of field observation by these and other observers, particularly the late Frances Williams of Midland.

Please help protect natural avian communities by refraining from using playback tapes of bird songs. Frequent use of these tapes alters normal avian activity patterns, disrupts essential territorial behavior, and may lead to nest failure. Also remember that most land in the Davis Mountains is privately owned. At the present time, general public access is not permitted to any of the Nature Conservancy's holdings in the Davis Mountains. DO NOT TRESPASS.

LEGEND

Seasonal Occurrence

- SP – Spring (March, April, May)
- S – Summer (June, July)
- EF – Early Fall (August, September)
- LF – Late Fall (October, November)
- W – Winter (December, January, February)

Abundance Designations

- A – Abundant, always present and observed, expect large numbers in proper habitat and season
- C – Common, always encountered in proper habitat and season, numbers may vary from low to high
- U – Uncommon, usually present in proper habitat and season but may be overlooked, never common or abundant
- O – Occasional, not always present but usually encountered at least once during season indicated, may occur in a narrow time frame within a season or in a very specialized habitat, numbers may vary
- R – Rare, seldom recorded, not expected each season as designated, may not be recorded each year
- X – Accidental, may be observed only once in ten years or more, not expected
- I – Irruptive/Irregular, invasion species which may be absent some seasons/years, abundant others

Habitats

- WA – All open water-related habitats including ponds and streams/streams
- SM – Shorelines and marsh-type habitats including all wetlands (ciénegas) and mudflats
- UR – Urban/domesticated habitats including towns, subdivisions, farms and ranch complexes
- GR – Grassland habitats including all open/mixed desert, basin and/or mountain grasslands
- RI – Riparian habitats including shrub-tree thickets, oak woodlands and cottonwood galleries

- DS – Desert habitats including desert scrub, open desert country and dry desert canyons
- PJ – Pinyon/juniper habitats including juniper woodlands and the more mesic pinyon/juniper/oak habitats
- PO – Pine/oak woodlands generally found above 5,500 feet elevation also called montane woodlands

CITATION

Bryan, Kelly, Pansy Espy and Jody Miller. November 2015. Birds of Jeff Davis County, Texas, including Davis Mountains State Park: a seasonal checklist. Natural Resource Program, Texas Parks and Wildlife.

In 1983, the Texas Legislature created the Special Nongame and Endangered Species Conservation Fund. This fund may be used for nongame wildlife and endangered species research and conservation, habitat acquisition and development and dissemination of information pertaining to nongame management. Money for this fund is obtained through private donations and sale of nongame wildlife art prints and stamps. This fund now gives Texans a unique opportunity to help support this state's valuable and sensitive nongame resources. Your individual contributions and purchases of nongame art prints and stamps will help determine the level of nongame conservation activities in Texas. For more information call toll-free (1-800-792-1112) or contact: **Nongame and Endangered Species Program, Texas Parks and Wildlife Department, 4200 Smith School Road, Austin, Texas 78744.**

TPWD receives funds from the USFWS. TPWD prohibits discrimination on the basis of race, color, religion, national origin, disability, age, and gender, pursuant to state and federal law. To request an accommodation or obtain information in an alternative format, please contact TPWD on a Text Telephone (TTY) at (512) 389-8915 or by Relay Texas at 7-1-1 or (800) 735-2989 or by email at accessibility@tpwd.texas.gov. If you believe you have been discriminated against by TPWD, please contact TPWD, 4200 Smith School Road, Austin, TX 78744, or the U.S. Fish and Wildlife Service, Office for Diversity and Workforce Management, 5275 Leesburg Pike, Falls Church, VA 22041.
