

# Digestive System Review

## Across

2. Binge eating followed by purging  
 6. Enzyme in mouth begins breakdown of starches  
 10. This type of digestion separates food into its molecular components by chemical means  
 15. Stores bile produced by liver  
 17. Produced in liver; breaks down fat  
 18. Enzyme breaks down proteins  
 20. Eliminates stores and eliminates waste from the body  
 22. Largest salivary glands; below and in front of ears  
 24. Begins chemical digestion and moistens food  
 25. An accessory digestive organ  
 26. As food leaves stomach, it passes through this as it enters small intestine

27. A component of plant walls that provides bulk for the food passing through the digestive system  
 28. Enzyme breaks down carbohydrates

## Down

1. This enzyme breaks down fats and lipids  
 3. kills bacteria from food  
 4. Broken down into simple sugars  
 5. Number of accessory digestive organs  
 7. Salivary glands on floor of mouth  
 8. This type of digestion breaks food into smaller pieces  
 9. Morbid fear of gaining weight; distorted self-image  
 11. Thick liquid in stomach  
 12. Energy Storehouse  
 13. accessory digestive organ that produces enzymes that act on carbs, fats, and proteins  
 14. Gastric juice in stomach that chemically alters food  
 16. Attached to caecum (colon); no know function  
 19. Broken down into amino acids  
 21. Lining of small intestine contain these finger-like projections that increase surface area  
 23. Taste buds
