

Sensory Perception

Across

3. A condition that occurs when an individual receives too many stimuli or cannot selectively filter meaningful stimuli. Fill in the blank. (Sensory _____).
9. A sense of spatial orientation and balance. Fill in the blank. (_____ sensation).
10. Sense of hearing.
11. Relating to seeing or sight.
12. Opacity of the lens of the eye that causes clouded, blurred, or dim vision. Can be removed with surgery that replaces the lens with an artificial lens.
13. The impairment of near vision and accommodation as the lens of the eye gradually becomes thicker and loses flexibility as a person ages.

14. Benign tumor near cranial nerve 8.

16. Age-related hearing loss.

17. Hearing ringing in the ears.

Down

1. Gradual loss of peripheral vision caused by elevated intraocular pressure that leads to progressive damage to the optic nerve.
2. Loss of central vision with symptoms such as blurred central vision, distorted vision that causes difficulty driving and reading, and the requirement for brighter lights and magnification for close-up visual activities.
4. Sensory receptors that respond to specific stimuli such as pain, pressure, temperature, and vibration; includes vestibular sensation and proprioception.

5. A complication of diabetes mellitus due to damaged blood vessels in the retina. If found early, treatments, such as laser treatment that can help shrink blood vessels, injections that can reduce swelling, or surgery, can prevent permanent vision loss. Fill in the blank. (Diabetic _____).

6. The interpretation of sensation during the sensory process.

7. Any type of difficulty that an individual has with one of their five senses or sensory function. Fill in the blank. (Sensory _____)

8. Relating to the sense of smell.

15. Sense of taste.
