

A Day In The Life – Accenture Technology Analyst

Video Transcript

Wilmaris Rivera Soto
Technology Development Program

Hola hola, my name is Wilmaris Rivera Soto. I am based out of the Boston office, and I am part of Accenture's Technology Development Program. Super happy to be here and show you guys how it is a day in the life as a tech analyst.

What do you do at Accenture?

I basically design applications based on client needs and discovery, and work very closely with developers and with testers to ensure that the applications are looking right and functioning as designed.

Can you tell us a bit about your current project?

Now I want to talk to you guys about what I'm currently working on which is designing an application for a university that will enable its students to have control of their personal brand. And based on this data, they're going to have a further online personalized experience because they'll be getting targeted content and personalized recommendations.

What are some day-to-day examples of your work?

I just got off a call with my amazing team, and we had a really great brainstorming session about a feature that we want to implement in the near future. But yeah, it makes me think about how much I love being part of this team that is focused on innovation, focused on keeping students engaged with the university and their peers.

What else are you involved in at Accenture?

I am originally from Puerto Rico, and I am actually the location lead of the Hispanic American group within Accenture in Boston.

Why do you love working at Accenture?

Accenture allows you to navigate through different roles within Technology early on, for you to get an understanding of what you actually like and would like your career path to be like in the future.

Thank you so much for following me along today. I was so happy to show you guys a little sneak peek of what you can actually do as part of Accenture's Technology Development Program. See you next time!
