

Plastic card with laser engraved number as the loyalty card

Overview

The laser engraved number is carved into the plastic card surface by the automatic laser engraving equipment. Different from thermal printing, inkjet printing or embossing, the laser engraved number cannot be erased, does not fade and does not fall off. Therefore it's much durable and hard to counterfeit. Usually the UID code of IC chip on smart card is made by laser engraved number. It can be applied into [laser etched credit card](#).
