

CPD Training for Early Years Practitioners

CPD playwork training sessions specifically designed for early years practitioners

We are award winning training providers who specialise in supporting play in schools and early years settings. These courses aim to provide practical solutions to enhance freely chosen play opportunities for young children within the EYFS framework. We can also write bespoke training to suit your individual needs.

What does it include?

These professional 2½ hour training courses will support practitioners to develop child initiated play opportunities to enable young children to play and learn across the EYFS curriculum. We charge £300 + travel + VAT for each training session. Our in-house training courses costs £30 per person, per course + VAT.

Creating Playful & Enabling Environments

This fun and hands on course uses loose parts to develop fascination traps which extend learning through play.

Using Scrap Outside

This is a hands-on session exploring the latest scrap from your local Scrapstore showing how it can enhance outdoor play.

An Introduction to Schemas & Loose Parts

This interactive course explores how young children's play behaviours can be recognised and understood as schematic play. It offers practical ideas to support children with their schematic preferences using loose parts, as well as strategies for reframing and extending play to support schemas.

Play Theory

We often hear 'learning through play' but what does that actually mean? Explore the theory of loose parts, the play cycle and the practitioner's role in creating a playful environment in both physical and emotional terms.

Fantastic course, well delivered by knowledgeable staff. Lots of food for thought and some good ideas.
