We are a leading creator of conferences and summits who aim to bring together great minds with avid learners amongst the thought-inspiring atmosphere of leading venues.

Chilli IQ has many years of collective experience in the area of creating and developing innovative conferences and summits for the changing business environment. This is not though what differentiates us from the crowd, what makes us unique is our modus operandi. We value quality and strive to ensure that every aspect of our events reflects this – from the choice of speakers, the venue and the genuine attention to detail.

Our main objective is to lead the field in the area of knowledge delivery and as this is a fluid process we are constantly seeking new avenues and evolving to make sure we never just settle. We ensure that all who partake in the Chilli IQ conference experience – whether it be as a delegate, a speaker, a sponsor or an endorsing association – maximise their investment and attain a higher level of understanding and awareness of the chosen business theme.

2030: The future of technology & the legal industry

AI & Beyond ::
the latest on
where we are
and where we
are heading
with artificial
intelligence

The rapid growth and widespread adoption of Artificial Intelligence have been truly remarkable. This technology is now quickly integrating into organisational systems, with an increasing number of law firms incorporating it into their daily operations.

- What does this mean for the future of legal services, the legal sector, and the workforce?
- What steps are necessary for successful integration, and what topics like ethics, accuracy, re-skilling, and other concerns still require in-depth discussion?

Some experts propose perceiving these technological disruptions as opportunities for evolution rather than causes for concern.

"The Future of Technology and the Legal Industry" serves as a sequel to last year's highly successful inaugural event, and it is a vital gathering for legal professionals.

This innovative event will bring together leading experts to explore this rapidly evolving field that is changing faster than we can keep pace with. Taking place in both Sydney and Melbourne, the event will offer a central hub for sharing knowledge and fostering networking opportunities.

SESSION THREE

LEGAL FUTURES: WHERE SHOULD ARTIFICIAL INTELLIGENCE TAKE US?

It is never wise to predict the future – evolving capabilities of artificial intelligence systems in prediction and content generation are impressive and sometimes surprising. The original goal of artificial intelligence research was to create machines that simulated human learning and intelligence. In the outputs of generative AI, we can indeed find simulated human reasoning and text that could have been written by a human. Lawyers, alongside many others, have been impressed with AI systems' ability to answer questions, pass exams, and produce documents that mirror, in at least some ways, the performance of human law students and lawyers.

In light of this, it is tempting to reduce recruitment and start contemplating a world of avatar judges delivering automated justice based on documents authored through the use of large language models fine-tuned on the wealth of legal documents held in large law firms and the corpus of statutes and case law. Before rushing towards such a future, we should pause to consider both what might be gained (and the skills we will need to achieve that) as well as what would be lost. In doing this, we need to step back and understand how different kinds of artificial intelligence system work – what they do well and where they can fail. Then, projecting into the future, we can ask about the affordances and limitations of hypothetical developments in artificial intelligence.

THREE KEY TRENDS IMPACTING LEGAL TECH AND CYBER SECURITY IN 2024

Across the legal sphere generative AI and emerging technologies are continuing to transform organisations and deliver new automation solutions and client servicing insights. Organisations must also adopt a wide perspective, due to a range of emerging external challenges such as increased growing regulator and clients concerns regarding data security, governance and risk management.

This presentation will examine this landscape and focus on the following three key trends which have emerged in 2024:

- 1.Changes in the cyber threat landscape;
- 2.Risk management trends for the deployment and management of Generative AI Systems;
- 3.Key insurance and contractual processes impacting cyber and technology risk management.
