Do you think Virginia should put more or less emphasis than it does now on the following energy resources?

Wind Power

Solar Power

Coal

Natural gas

Nuclear Power

"Virginia should pursue an all-of-the-above energy strategy, which means lowering our heavy dependence on fossil fuels over time and allowing an increase in electricity generation from emerging technologies like renewable energy as well as more energy efficiency, and I support taking action to accelerate the development and use of clean energy in Virginia."

Critical Crosstabs:

The Virginia Clean Economy Act called the "VCEA" passed last year requires utilities to transition to 100% clean energy by 2050, cut emissions from polluting power plants, and retire those plants over time. It also requires the utilities to offer more energy efficiency programs, to help customers reduce their energy bills. After hearing this do you support or oppose the VCEA?

Critical Crosstabs:

By Gender
