Experience in Applications

From the highest value pharmaceutical products to research & laboratory applications, Dry Ice Corp. has been supplying expertise to

High Value Pharmaceutical Products

insure our customer's products are tested, stored and transported to their destination within the temperature profiles required! We have been servicing the leading Pharmaceutical, Research Labs, Diagnostic, University & Research Hospitals, Medical, Bio-Tech, Bio-Science, Federal Research Labs and support industries for over 40 years. Our six branch distribution network covers the Northeastern United States! Our continuing strength is "customized" packaging and professional distribution logistics.

Please contact us to discuss your current or future application that requires Portable, Cost Effective Dry Ice Refrigeration. Experienced "Local" Senior Account personnel available to visit with you and review your application and implement customized "Best Practices-Dry Ice" Program.

Industries

Pharmaceutical, Research Labs, Diagnostic, University & Research Hospitals, Medical, Bio-Tech, Bio-Science, Federal Research Labs & Support Industries

Benefits of Dry Ice—Unlimited Applications!

Dry Ice is said by many to be the most cost effective, environmentally friendly, portable refrigerant known to man. The extreme cold -109°F of this innovative product is being used to maintain sub-zero, frozen and refrigerated temperatures for numerous products. **REDUCED REFRIGERATION EXPENSES!**

Dry Ice goes from the solid state; block, pellet, slab, etc., directly to a gas. It does not go into the liquid stage as it transfers it's cold power to your products. This is a great benefit in that there is no moisture concern for your packaging or product!

Uninterrupted Supply of your "Essential" Dry Ice Requirements!

Dry Ice removes 2x's the heat per pound as water ice. Preventing heat buildup encourages longer shelf life of processed products! The inert carbon dioxide (CO_2) gas is an excellent preservative and inhibits the growth of many forms of bacteria.
