**Jack Moore**  
Sales Assistant

## Get your advice from a team of experts

Our service starts the moment the conversation with you starts and we listen very carefully to your requirements and concerns. We can then apply our experience and expertise to offer the right solution from our extensive range of products and accessories.

We provide high quality solutions to the most complex of problems including building in tight spaces, specific insulation needs, ground fixings and access. Site visits are complimentary and without obligation.

## An unrivalled level of service

The Few's team are the experts in our industry, and they control the delivery of each project from start to finish.

Throughout each project our team has a laser focus on the last 10% of delivery – exactly where the difference is made.

## Award winning

Winning the “Best Temporary Structure Provider” award in 2022 and the Sustainability Award in 2023 were a result of continual investment in product, team and processes. Few's offer the best and most sustainable customer experience available.

## The Industry's Sustainable Leader

Few's started the journey to sustainability over 10 years ago with the introduction of Biomass heating, and has continued to invest in infrastructure and processes to ensure we lead our sector in this crucial area.

“A single point of contact will make sure that every detail is given the attention it deserves.”

## Seamless Project Management

Fews have a team of project managers ready to take you through every stage of the process. From the initial enquiry through to handover, a single point of contact will make sure that every detail is given the attention it deserves.

Our project managers are all experienced experts in the field and form a dedicated and committed team focussed on ensuring that every project reaches a satisfactory conclusion. On each project we are on hand to deliver fast solutions to every problem and provide a professional and prompt handover.

## Turnkey Solutions to take the stress away

In many cases, your team will want to arrive on location to find everything ready to go and Fews' project managers are experts in detailed planning; making sure all the right questions are asked to ensure a very smooth handover.

Specialist services for site scanning, ground works are available, and we can assist with planning permission through dedicated partners.

Our team of experienced project managers, site managers, foremen and installation crews are focussed on making sure everything is ready to go from day one.

Over the years, Fews has built up a strong network of trusted suppliers, and are able to tap into a deep well of experience to solve any unexpected on-site problems.

Beyond the structure, we can include specialist flooring, lighting, heating, air conditioning and power distribution if required.

## We work in the most demanding of environments; health and safety is the rock on which our operation is built.

From the precision of Aston Martin Formula One Team to the stringent requirements of HS2, our operations and health and safety teams work closely together to provide a seamless and safe working environment for everyone.

We deliver using our own fleet of vehicles and use our well-trained rigging teams to build every structure.

Our list of accreditations demonstrates the level of commitment we devote to staff, client and public welfare around our structures and build sites.

From our overall policies to method statements for different structure types, risk assessments for hazardous activities and documented inspection systems of our equipment, you can be sure that our tried and tested systems can be relied upon.

# CORPORATE EVENTS

**A blank canvas  
for your brand**

**“People forget what you  
said and forget what you  
did, but people never forget  
how you made them feel.”**

Exceptional finish and detailed attention to corporate branding.

Our corporate marquees have stylish curved roofs, solid glass wall panels and deck level floors.

There are no limits to the interior fit out, only your imagination.

*Aston Martin Aramco Cognizant  
Formula One™ Team

# If you're going to throw a party, make an impression

**Staggering attention to detail and finishing touches are the perfect solution.**

We realise how important it is to impress your guests, deliver your brand message and leave a lasting impression, so cutting corners isn't an option.

Our industry leading range of products, technical know-how and experience ensure your design brief and expectations are surpassed.

*Hollywood Themed Party*

# Structures as great as your ambitions

## A complex build.

---

Some marquee builds are trickier than others, and the Few's team are very experienced in overcoming any number of obstacles. The Igloo structure in the Old College Quad was a complex build in an enclosed space.

The first issue was a network of underground tunnels beneath the quad meaning we had to be very careful in ensuring there was limited weight burden on vulnerable areas.

The second issue was the very tight space we had to work in, with the 20metre x 50metre Igloo marquee with its 14metre internal height being constructed entirely within the Quad and positioned very carefully to avoid placing weight above the underground tunnels.

The third was one of very restricted access. The entire Igloo structure, cherry pickers, trucks and other build equipment had to go through a narrow 3.5 metre-wide arched entrance at one end of the Quad, also with very limited parking on the roadside beyond.

It is a testimony to our project planning, site management and careful rigging crews that the structure was positioned perfectly with no damage to the buildings or ground.

## We can even get the Bard of Avon to join our events

**“If music be the food of love, play on, give me excess of it”**

When a venue was required for Shakespeare's 500th birthday we got the part.

Saturday, April 23rd 2022 saw the celebrations of William Shakespeare's 458th birthday across Stratford upon Avon.

Central to the birthday luncheon was The Pragnell Shakespeare Birthday Award which was presented to Adrian Lester, the latest in a long line of theatre greats.

The main structure was a 20metre x 65metre Premium Fews Marquee on a 3metre leg. In addition, there was a 10metre x 15metre marquee containing the reception area, cloak room and kitchens.

The walls were a mix of ABS panels, glass windows and glass double doors. We fitted a level ring beam cassette floor throughout with access ramps. Bespoke white flat tack-off linings were fitted to the walls and white flat opaque leg boxes to all window bays.

# FESTIVALS

# Create that warm festival feeling with a truly impressive structure

Few are festival specialists and can offer a broad range of products, from large temporary structures for central entertainment areas (which can accommodate 1000s of guests), down to a high volume of smaller catering, VIP or service marquees. All of our festival marquees can be fully dressed and equipped with anything from full AV installations to bespoke tack-off linings.

Our incredible Igloo structure is something to behold. Reaching 14m high and 30m wide, it is capable of supporting huge loads, making it a perfect structure for ambitious AV productions.

Whatever your requirements, we can offer the perfect solution combined with the first class service we've become known for.

**We can cover anything or anyone**

**Every show has it's own unique characteristics.**

Weather conditions, heating, air-conditioning, lighting, size of floor plan - everything goes into the mix.

We'll provide the perfect solution, every time.

# CONFERENCE

# Sometimes you need to put everyone in the picture

## Scale and flexibility

Both are synonymous with the conferencing industry.

Where venues can't provide sufficient space, there is no other better product than a marquee structure.

Few have structures that can comfortably accommodate 1,000's in fully heated or air conditioned comfort.

## A unique space just for you

---

Our thermally efficient, hard sided corporate conference marquees offer space to accommodate 1000s of delegates, and visitors can easily be sub-divided into theatre-style auditoriums, shell scheme exhibitions and networking zones.

# EXHIBITIONS

# If you're going to do it in public, do it properly

## Spacial perfection

Creating the perfect space for a public exhibition can be very demanding.

Is it big enough? In the right location? What about transport networks? Are there enough entrances? Can it be sub-divided?

All these questions can be easily answered with a marquee structure.

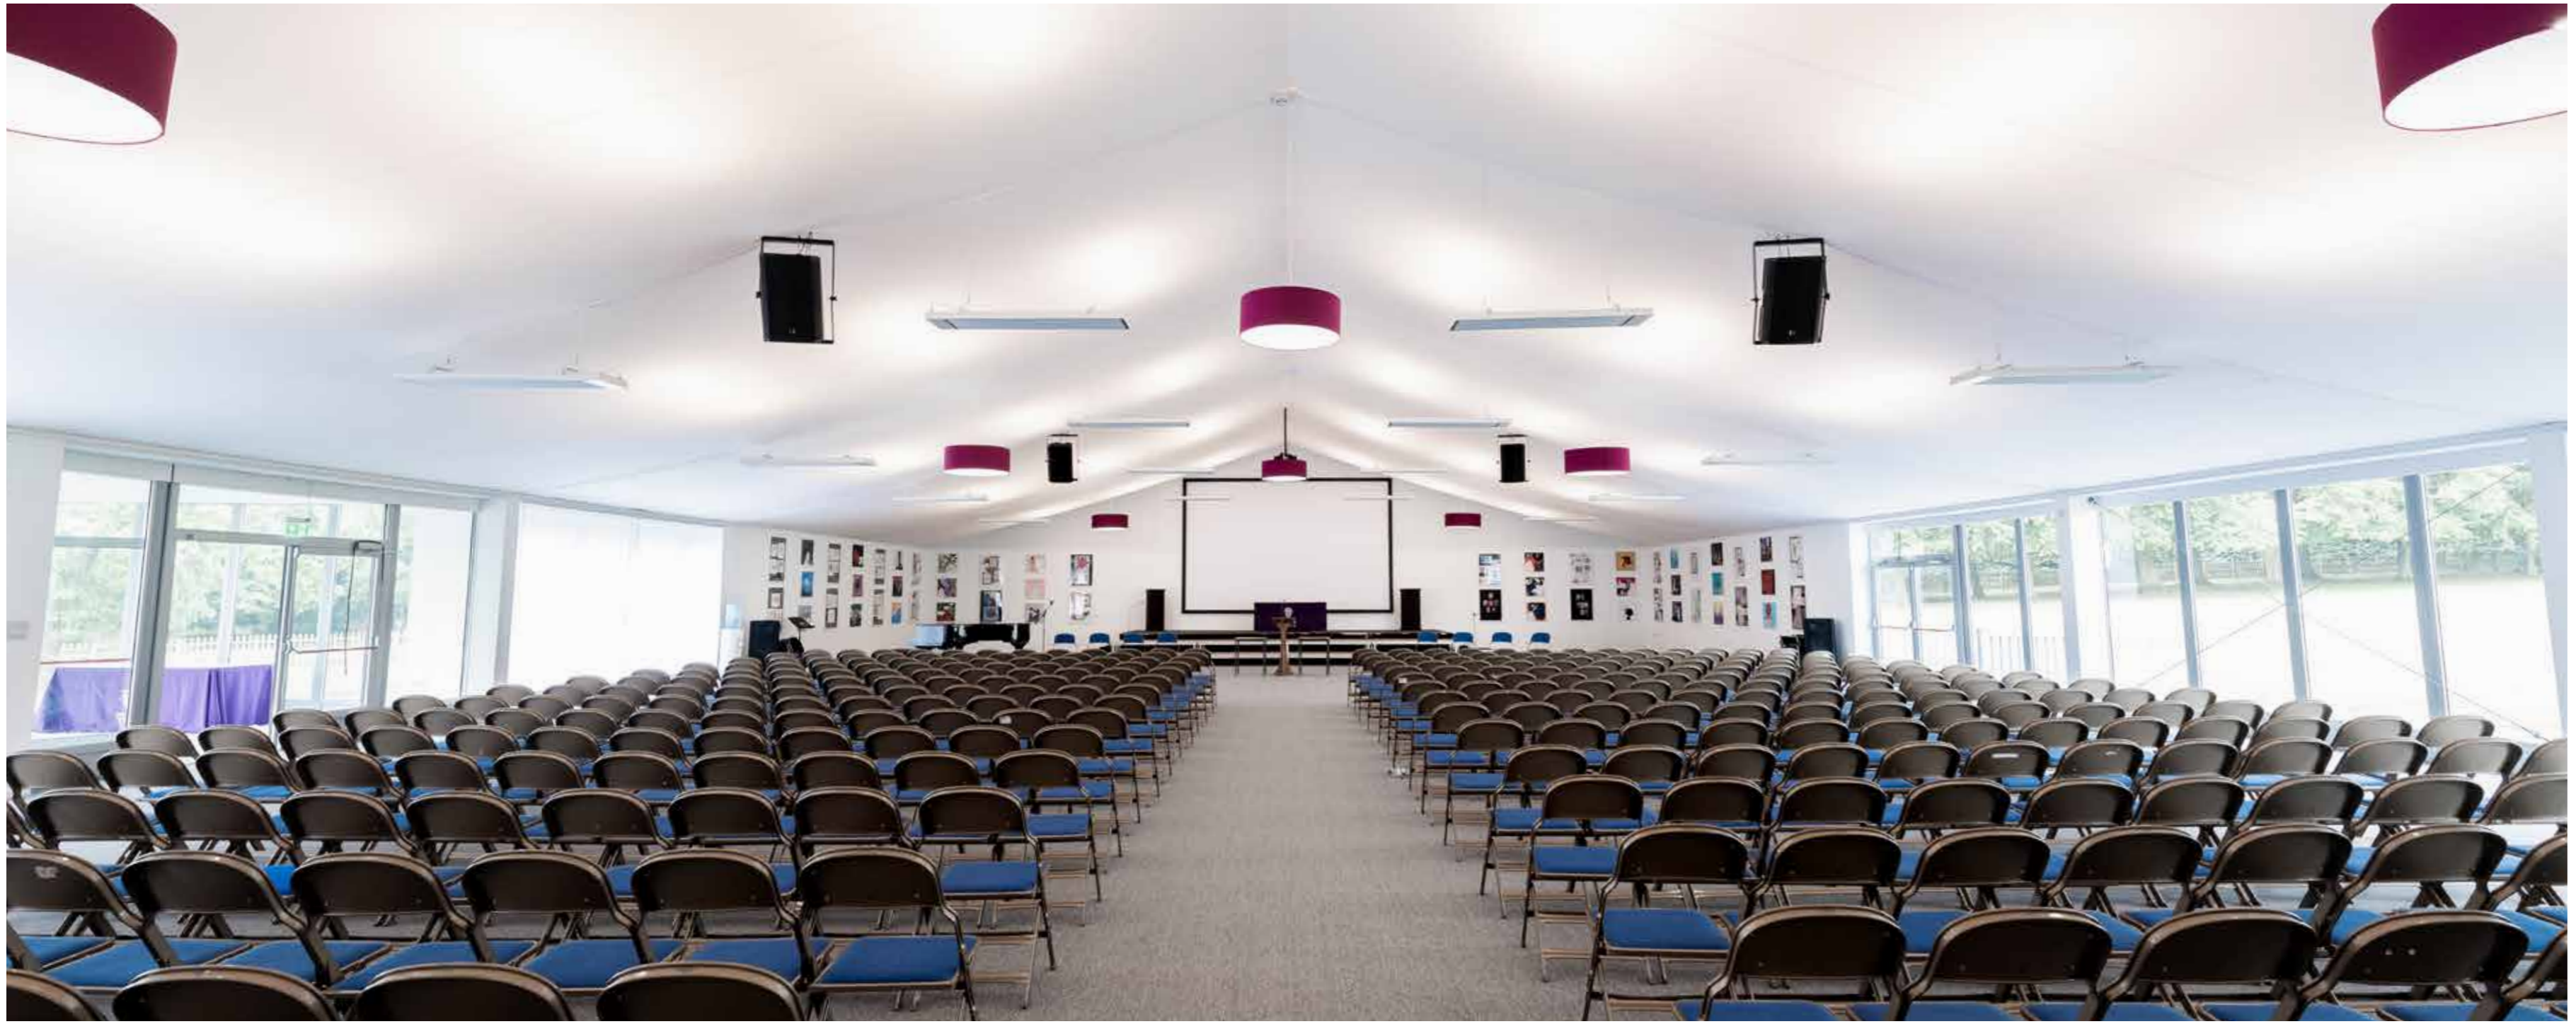

# EDUCATION

# Space saving solutions that are best in class

## Sometimes you just need more space.

A classroom, a lecture theatre, a gymnasium, or even a giant space for a graduation ceremony.

We provide turnkey solutions, including heating, lighting, flooring, glass windows, lockable doors, and perfect interiors.

Few deliver it all, ready to use.

University of Birmingham – Reception Marquee

AUTOMOTIVE

## Leading the field in premium automotive event structures

### Prestige marquees for prestige marques.

Premium automotive marques require structures that are an extension to their brand qualities and values. We therefore take pride in proposing and delivering solutions that are simply clean, bright and in an 'as-new' condition. With flooring systems that can take the weight of the heaviest of vehicles and interior fit-outs that resemble the smartest of showrooms, the Premium range of event structures provides the perfect answer.

# SPORTING

# When it comes to sport structures, we're in a league of our own

## Game on.

Our range of temporary sport structures are specially designed to house major events and sporting celebrations. Our solutions range from simple wet weather provision to stunning luxury structures for press conferences, testimonials, VIP hospitality, exhibitions, green rooms and gala dinners.

Our incredible, exclusive Igloo structure can be used for Ice Rinks, Tennis Tournaments, Indoor Football, Basketball and many other sports and has the capacity to accommodate seating and hospitality areas.

# Ice in our veins

Few are specialists in marquees for ice rink hire. If you're looking for eye catching and practical structures for your ice rink, we have ideal solutions for you. Our Igloo structure offers the versatility and striking aesthetics to ensure your event stands out in the mind of the public, as well as providing the necessary cover to protect and making sure the skaters are comfortable.

We use high quality flooring systems to ensure stability and provide a perfectly level environment on which to construct the rink. For bars, restaurants, storage and changing areas, and reception, we can provide high quality premium clear span structures with full temperature control and bespoke decor.

Ice Rink at Birmingham Centenary Square

## Redefining event structures

Exclusive to Few's Marquees in the UK, and featuring cutting edge structural technology and excellent acoustics, the Igloo and Wave structures allow event designers to create amazing spaces with unparalleled levels of height and light at their disposal. It also serves a market specifically where height, width and suspended weight are critical. Suitable for large productions, the aluminium structure can be designed in modular widths with PVC coverings available in crystal clear, white opaque, and black out finishes.

# Megastructures

by Irmarfer

## Huge Suspended Loading

The Igloo and Wave have a huge load bearing capacity and can comfortably support sound and lighting rigs for the largest of productions, and it is possible to suspend product displays, artwork and even vehicles.

igloo

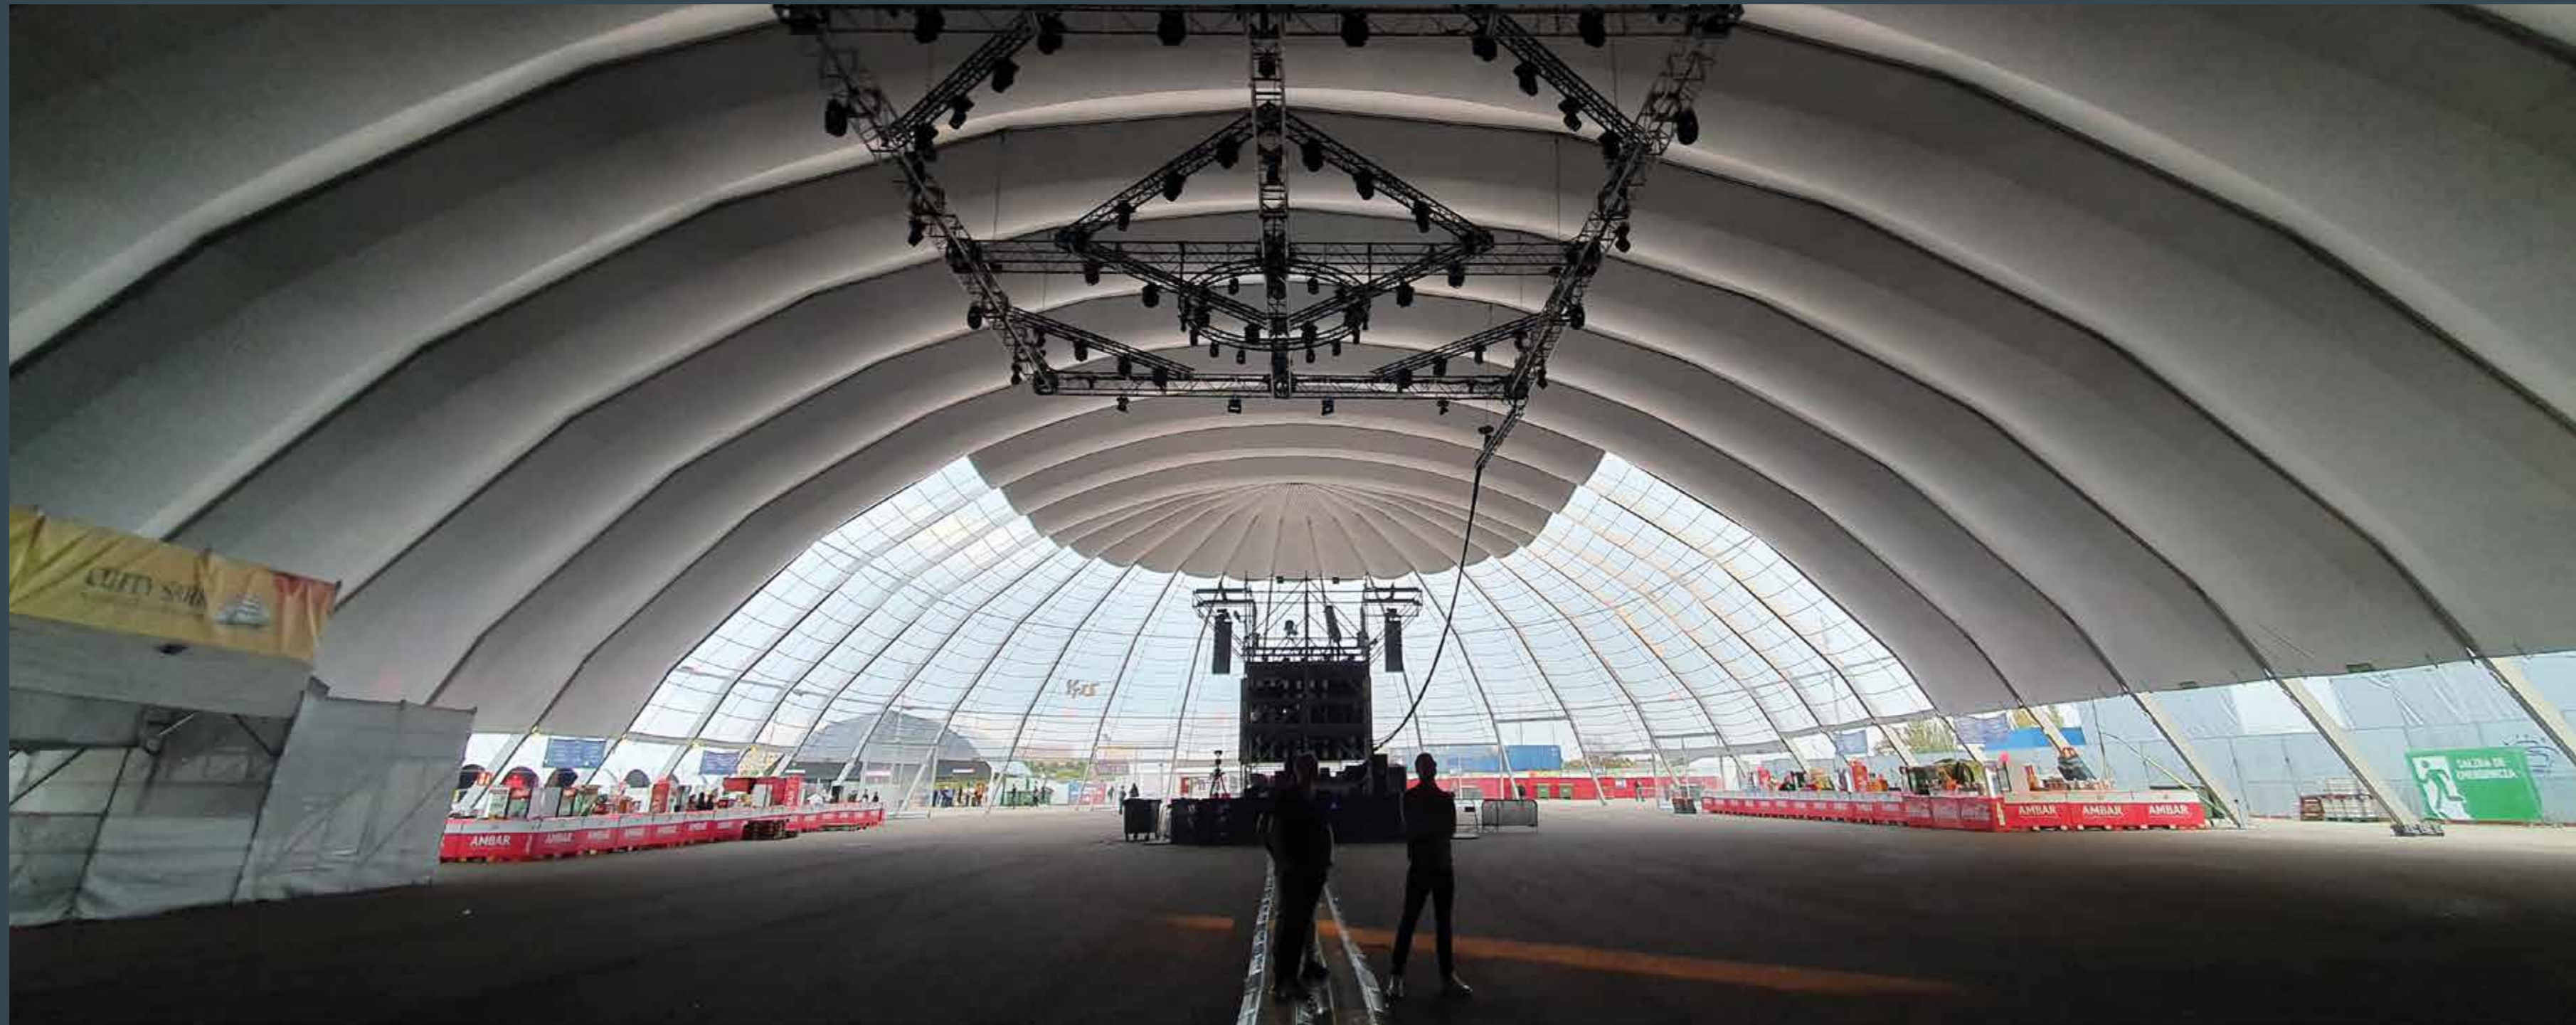

# Expect different with Igloo

## Size and Versatility

- 30 metres widths as standard
- 10, 20 & 40 metres available
- Unlimited length in 5m increments
- White Opaque, Clear and Two Tone
- Black out PVC available

**Unique Internal Height  
up to 16 metres.**

# Make an impact with Wave

## Size and Versatility

- 55 and 70 metre widths available
- Unlimited length in 5m increments
- White Opaque, Clear and Two Tone  
Black out PVC available

**Unique Internal Height  
up to 22 metres.**

75 Metre Clear Span Wave Structure

# Premium marquee structures

## Cutting-edge Marquee Technology

Our prestigious Premium Marquee Structures represent the latest generation of marquee technology and are ideal for clients looking to create large-scale events of the highest possible quality, through the utilisation of aluminium clear span technology. Available in a variety of widths, heights and wall finishes, there are branding opportunities to make a real impact.

The structures benefit from enhanced thermal properties, significantly reducing the impact of wind and ensuring a quieter, warmer environment for guests.

At Fews we continually invest in equipment and methods to improve our service offering.

## Case Study / Aston Martin Cognizant Formula One Hospitality Marquee

### The Requirement

The Silverstone Grand Prix is one of the iconic races in the Formula One calendar, and the Aston Martin brand was returning to the circuit after a gap of 60 years, last appearing in 1960.

To celebrate the return, the Aston Martin Cognizant Formula One Team hosted VIP guests at their factory across the road from the Silverstone circuit.

F1 Team hospitality sets a very high bar, therefore the quality of structures, finish and branding needed to meet exacting standards.

### Bespoke Entrance Walkway & Car Plinths

- Installed a bespoke entrance walkway was built from the access road to the main hospitality marquee using new timber decking.
- Custom decking steps were installed to all three elevations allowing unimpeded access.

### Branded Gable

- 25m wide, one-piece graphic was produced to be stretched taut across the main entrance gable.

### Main Hospitality Marquee

- 25m x 40m Clear-span Premium Marquee with the central section including a clear PVC roofs to give natural light inside.
- Sitting on a cassette floor system covered by a grey carpet and oak brown vinyl flooring.
- Installed two elevated car plinths with black vinyl to showcase the recently launched DBX and DBS.

## Case Study / RMS for Girls – Temporary Classroom

### The Background

RMS is one of the oldest girls' schools in the country. Founded by Chevalier Ruspini in 1788, the school's original purpose was to educate the daughters of Freemasons who were unable to support their families through death, illness or disability. Today, the school accommodates pupils aged 2-18 with some day and some full weekly and flexi boarding.

### The Requirement

In late 2021, RMS discovered structural problems with their existing assembly hall, and needed an alternative building for two years to enable necessary repairs to be carried out to the existing facility. RMS approached Few's to provide a turnkey solution that needed to be fully functioning by April 2022.

### The Few's Solution

- Installed a 20m x 40m structure for the main building and a 5m x 5m structure for the entrance vestibule.
- Installed a level integrated cassette floor system to provide a sound structural base.
- Insulated wall panels and an inflated thermo PVC roofs were specified to help reduce the energy costs of mechanical heating and cooling.
- The spaces were fitted out with bespoke MDF wall panelling with skirting and dado rail.
- Demountable and washable roof lining was installed with lights behind to provide a diffused spread of light.

- Installed a complete lighting and electrical package with built-in sockets, emergency lights, mains distribution board as well as overhead radiant cassette heaters on a digital thermostat control.
- Dedicated on-site Project Manager planned and oversaw the complete installation and included the provision of temporary welfare, aluminium access trackway, site fencing and temporary power.

## Case Study / University of Warwick Graduation Ceremony

### The Requirement

Through early July 2022, The University of Warwick held its Graduation Ceremonies for the classes of '20 and '21.

The postponed celebrations for the Summer 2020, Winter 2021 graduates, and Summer 2021 cohort took place between Tuesday 5 – Friday 15 July 2022

A very large marquee was required to accommodate the number of students – Covid 19 had caused the delay of the previous year's ceremony.

### The Few's Solution / Igloo

- We provided a 30m wide x 90m long Igloo marquee structure with a 30m x 15m round end. To create the right atmosphere, clear PVC was fitted to the round end for the reception area making it a bright welcoming space.
- Above the audience we fitted white PVC to reduce the internal temperatures and maximise the effect of the lighting, with black PVC above the stage area.
- Around the structure we fitted Igloo double doors with emergency exits from the main and backstage areas.

- Due to the uneven nature of the site, we fitted an elevated long grid floor system. The drop from corner to corner was 1.6 metres presenting a technical challenge for a structure of this size.
- Throughout the period of the ceremonies the UK experienced fairly high temperatures so six high-power heat pump chillers were installed around the Igloo with white diffusers inside.

## Case Study / An Experiential Structure

### The Requirement

When the FIFA World Cup was held in Brazil, a country known for its high temperatures and challenging humidity. As part of a promotional experiential event, we built the 'Lucozade Sport Conditions Zone' – a bespoke, state-of-the-art immersive experience in Canary Wharf.

The idea was to offer up and coming footballers a chance to play their game in the same conditions as those being experienced by the England Team. The average conditions of England's opening World Cup game in Manaus, Brazil were temperatures of 32°C and 76% humidity.

### The Few's Solution

- 20m x 35m structure was used for the Condition Zone 5-a-Side pitch and reception.
- Adjoining 15m x 35m structure provided space for the "Conditions" lab, changing rooms, and back of house area. The Conditions Zone provided a unique experience for players and visitors alike.
- Zone itself as well as the additional facilities required to accommodate players, press, and of course the Conditions Lab, where players performance levels would be analysed.

# Sustainable cleaning of 50,000 sq metres of PVC per year

*The Sustainable Green Cleaning Machine*

## A sustainable approach

Fews sustainable story is one of continued investment and process refinement towards our goal of NET ZERO. At every step we have sought to ensure that our carbon footprint is as low as possible, focussing clearly where the maximum gains can be made.

From investment in Biomass and Solar energy, to sourcing our own fuel in the form of woodchip, purchasing the latest efficient vehicles, and developing a highly efficient PVC cleaning machine, Few's journey has been one of total commitment to the future of our planet.

**2012** 250K investment in Biomass heating

Fews invested in an efficient, comprehensive biomass system to utilise a near carbon-neutral energy source. We use locally sourced wood that cannot be used for other purposes.

**This system provided energy for:**

- Full heating system and hot water for office and warehouses
- Power for PVC Cleaning Process
- Cleaning, drying, and preparing linings
- Keeping stock dry through the winter

**2015** 300K investment in Solar Panels

In 2015 we further extended our commitment to the environment by introducing solar power with an investment of over £300k.

- Panels fitted to the roof of the office and warehouse buildings
- Generating on average 2400kw/hr per week providing all the businesses electricity
- Surplus returned to the grid

Fews are currently developing a system where solar panels can be installed on longer-term hire structures to produce efficient energy.

**2016** £1.2M INVESTMENT

**Further investment in Biomass Boilers**

Through further investment our Biomass boilers were upgraded to stay in line with expansion of the Fews businesses.

In addition, we installed a drying floor to enhance our fuel-sourcing process.

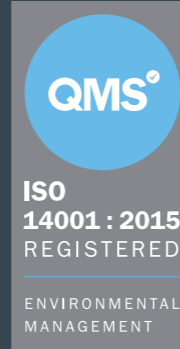

**2018**

**£420K INVESTMENT**

**Achieved ISO 14001 Accreditation**

ISO14001 accreditation was a natural progression for the business, providing a management framework to measure and improve our environmental impact through:

- Process management
- Aligning with our clients and suppliers
- Focussing on our sustainability targets

**Founded wood-chipping business to provide sustainable fuel for biomass**

This was a considerable investment to make our businesses as sustainable as possible including:

- New tractors & trailers
- Chipping machines
- Storage areas
- Recruiting an in-house team to source local wood (ave 6 mile radius) that cannot be used for other purposes

# Our Sustainable Journey

**2020**

**All lighting switched to LED**

**Converted to 100% Renewable Energy Supply**

Our energy supplier, EDF, helped us to switch to a 100% renewable deal which further reduced our overall carbon footprints.

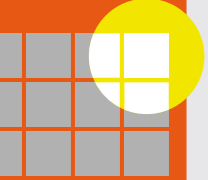

**Became Worcestershire NET ZERO leader**

- New efficient PVC cleaning machine developed in conjunction with manufacturer powered by biomass
- 4 new Eco Trailers
- 4 New Moffett trucks
- Began carbon reporting

- Working towards NET ZERO accreditation
- 2 Euro 6 tractor units with efficient Turbo Compound engines
- Use of HVO for Moffetts and generators
- Investment in battery technology to store solar generated power.
- Vehicle fleet renewal new 4x4's and vans

**2023 PLANS**

**2022**

# Reducing our carbon footprint

## A continued investment in biomass

Investment of over £1 million in an efficient, comprehensive biomass system to fuel our warehouse and offices, including the supply of heating and hot water

- Biomass is an especially attractive fuel source because huge amounts of it are generated inadvertently through industrial and agricultural production
- Harnessing this waste material and extracting more energy from it improves all-around efficiency and reduces the ecological impact mankind has on the environment
- Fews only use wood that cannot be used for other purposes like clippings, prunings, and other arboricultural arisings

## Woodchip from sustainable sources

Fews utilises its own wood-chipping service to produces biomass woodchip from sustainable sources through brash removal and site clearance.

- Our in-house collection team are the “wombles” of the industry –making sure we use and recycle wood that would otherwise be discarded
- We collect from within an average six mile radius of our offices
- Once prepared on our drying floor it is used as fuel for the biomass boilers. This helps to make our operation as sustainable and efficient as possible
