OVERVIEW

The FirstNet App Catalog is a library of pre-evaluated and approved mobile apps dedicated to serving and supporting the public safety community.

The promise of dependable mobility

FirstNet empowers first responders and those who support them with reliable access to voice, data, and video in the field. Public safety professionals are connected to this dedicated communications platform via purpose-built devices. These devices include FirstNet Compact Rapid Deployables, trunk-mounted routers, smartphones, tablets, computers, and data terminals as well as wearables, sensors, and IoT devices. With reliable connectivity and the ever-growing array of smarter and smarter devices, an expansive green field of mobile apps is now available to the public safety community.

The **right** mobile apps can help you automate the repeatable, simplify the complex, digitize the daily and inspire practical innovation. The **right** mobile apps can reduce effort and errors while improving situational awareness and community engagement. And the **right** mobile apps can make it possible to connect globally and act locally by sharing actionable information at the right time, in the right ways, with the right people.

It is critical to ensure stability, dependability and ease of use into the mobile tools market. Our FirstNet customers have access to an App Catalog of pre-evaluated applications that are highly secure, meet all technical requirements and are relevant to public safety.

Selecting the right mobile tools just got easier

FirstNet and purpose-built devices connect people, places, and things. Overlaying that fabric of public safety endpoints with FirstNet approved apps makes those connections safe, valuable, and actionable.

FirstNet customers are supplied access to a robust library of curated apps dedicated to serving and supporting public safety professionals. Every app is thoroughly evaluated before it is

Issue Date: 03.08.2023 2 of 47

App descriptions and information contained in any linked materials about the apps are created by the app provider and, as such, AT&T and FirstNet do not assume responsibility for the content.

approved for inclusion. Each solution is vetted and verified as highly secure, reliable, and relevant to public safety.

Although most products found in the iOS and Android commercial app stores will work on FirstNet devices, the FirstNet App Catalog helps public safety agencies know which apps have been independently vetted and proven to satisfy the unique needs of first responders.

- ❖ **No more hunting through thousands of apps to find the right tool** – if it is in your App Catalog, you know it is relevant.
- ❖ **No more wondering if the app will be available when you need it most** – if it is in your dedicated Catalog, you know it is 99.9% available (Verified™) or 99.99% available (Certified™).
- ❖ **No more worrying whether the app will expose your enterprise systems or data** – if it is in your App Catalog, you know security experts are highly confident it conforms to industry best practices in safeguarding your data.

If you, or your agency, are considering a mobile solution that is not included in the App Catalog,

FirstNet can help. Urge the solution provider to submit their application for FirstNet evaluation and approval. And once approved, you can take comfort in knowing their app can also be trusted. Solution providers can visit the [FirstNet Developer Portal](#) to learn how to submit their app for review. FirstNet covers the costs associated with Verified listings.

Planning your digital transformation

We recommend framing your choice of mobile apps based on your agency's implementation goals and current technical capabilities. Be thoughtful and build a solution roadmap that not only supports large-scale, multi-agency events and incidents, but also improves the daily activities of your field personnel. It is difficult to make even the best solutions work if they are not used on a regular basis. It may help to group your app choices by three key agency goals:

1. **GO MOBILE - Enable responder mobility and operational readiness** with tools that enable agency control, device level security, and effective responder communications.
2. **BE AWARE – Enhance mission execution and situational awareness** with tools that help responders digitize their daily work, leverage external sources of information, and share a common operating picture across individuals, disciplines, and jurisdictions.

Issue Date: 03.08.2023 3 of 47

App descriptions and information contained in any linked materials about the apps are created by the app provider and, as such, AT&T and FirstNet do not assume responsibility for the content.

©2023 AT&T Intellectual Property. All rights reserved. FirstNet and the FirstNet logo are registered trademarks and service marks of the First Responder Network Authority. All other marks are the property of their respective owners.

3. **DO DIGITAL – Strengthen operational capacity and community engagement** with tools that use the FirstNet platform to deliver personal, professional, and operational resources to the field and use technology to make community engagement easier and actionable.

Select apps by what they enable

Each agency goal is enabled by three categories of apps.

AGENCY GOAL	APP CATEGORY and SUPPORT
<p>GO MOBILE</p> <p>Mobility Fundamentals</p> <p>Enable responder mobility and operational readiness</p>	<ol style="list-style-type: none"> 1. FirstNet Services – apps that help you use the special capabilities, features and services afforded to FirstNet customers. 2. Endpoint Security – apps that support an effective, highly secure, and sustainable mobile workforce, protecting your mobile fleet and data at rest with: <ul style="list-style-type: none"> • Reliable authentication and access management • Secure and persistent connections to agency systems • Device fleet management via Enterprise Mobility Management (EMM) and Mobile Data Management (MDM) and • Threat detection and mitigation 3. Communication – apps that support direct interaction and collaboration via voice, text, data, file sharing, and video 4. Responder Health and Wellness Apps – apps that focus on responders well-being
<p>BE AWARE</p> <p>Situational Awareness</p> <p>Enhance mission execution, and situational awareness</p>	<ol style="list-style-type: none"> 5. Mission Activities – apps that digitize and automate responder activities to collect, store, access, and share information 6. External Awareness – apps that control and collect information from remote sources, sensors, wearables, and other connected devices 7. Operating Pictures – apps that collect, fuse, analyze, and present information in a manner best suited to the situation, location, and users 8. School Safety Apps – apps that provide communication and connectivity during school crisis

Issue Date: 03.08.2023 4 of 47

DO DIGITAL[Mission Support](#)

Strengthen operational capacity and community engagement

9. [Responder Resources](#) – apps that use the FirstNet platform to put updated information and resources directly into the hands of first responders
10. [Personal and Professional Development](#) – apps that use the FirstNet platform to deliver training and health and wellness resources directly to first responders
11. [Community Engagement](#) – apps that enable and ease actionable information sharing to and from the public

App Evaluation Classifications

FirstNet confers one of two designations to each reviewed and approved app: FirstNet Verified™ or FirstNet Certified™. FirstNet approved apps and their designation can be easily recognized by these FirstNet badges.

Every FirstNet approved app must satisfy the requirements set forth for attainment of the FirstNet Verified designation, while apps that request and pass more scrutiny receive the higher designation of FirstNet Certified. Each app version (Android and iOS) is reviewed and evaluated, so a solution may have a different designation across the two operating system platforms.

App Evaluation Requirements

FirstNet Verified – FirstNet review and evaluation proved the app:

- (1) Is relevant for public safety use
- (2) Garnered a high level of confidence the app is highly secure
- (3) Uses industry best practices for protecting access to, and sharing of, app data
- (4) Demonstrated a performance history of being at least 99.9% available

FirstNet Certified – FirstNet review and evaluation requires fulfillment of the FirstNet Verified criteria (above) with higher availability, increased code scrutiny and added criteria that proves app resiliency and scalability. Specifically, a Certified designation requires confirmation the app:

- (1) Meets or exceeds criteria for FirstNet Verified apps (detailed above)

Issue Date: 03.08.2023 5 of 47

App descriptions and information contained in any linked materials about the apps are created by the app provider and, as such, AT&T and FirstNet do not assume responsibility for the content.

©2023 AT&T Intellectual Property. All rights reserved. FirstNet and the FirstNet logo are registered trademarks and service marks of the First Responder Network Authority. All other marks are the property of their respective owners.

- (2) Garnered a higher level of confidence the app binary and code are highly secure
- (3) Demonstrated a performance history of higher availability 99.99% (versus 99.9%)
- (4) Demonstrated an ability to be resilient in times of failure
- (5) Demonstrated an ability to be scalable in times of peak demand.

Evaluation Criteria	FirstNet Verified	FirstNet Certified
Relevance	✓	✓
Security	✓	✓+
Availability	✓ 99.9%	✓+ 99.99%
Resiliency		✓
Scalable		✓

FirstNet App Features and Qualities

FirstNet approved app providers are given access to APIs (Application Programming Interfaces), SDKs (Software Development Kits) and other development tools. Developers use these appliances to integrate special features and functions into their solutions. In other cases, developers use these tools to enhance the efficacy of their code. Currently the [FirstNet API Catalog](#) includes appliances or tools that help apps:

- Enable the collection and displaying of a “height above terrain” (HAT) value - adding vertical awareness (z-axis) to current “x” and “y” location and mapping coordinates
- Accept credentials and supply two-factor authentication from the FirstNet Single Sign-On app
- Trigger the use of FirstNet capabilities such as device uplift or app priority
- Optimize app use of critical device resources such as batteries and connections
- Leverage specific device features or assets
- Retrieve and share information with popular data stores, systems, or other apps
- Use AT&T mobility features and tools such as texting or IoT data services

The FirstNet App Catalog listing shows when key features are integrated into an app solution showing, for instance, when an app supports authentication via FirstNet Single-Sign-On.

MOBILITY FUNDAMENTALS (GO MOBILE)

First responder use of digital tools in the field is most effective and secure when an agency implements three types of fundamental mobility apps.

1. **FirstNet Service apps** use the FirstNet platform to put network resources and exclusive FirstNet capabilities into the hands of first responders.
2. **Endpoint Security tools** provide agencies with insight and control over their communications platform and ecosystem of agency services, devices, and users.
3. **Communication apps** enable multi-media communications with tools that supply things like push-to-talk, interoperable video, and messaging.

FirstNet Service Apps

FirstNet includes capabilities built exclusively for, and with, first responders. FirstNet service apps invoke or enable access to these exclusive FirstNet features, functions, and services.

App Examples: FirstNet service apps can supply benefits such as:

- 3GPP mission critical technology delivering a high performance and availability push-to-talk solution
- single-sign-on across capable mobile apps
- device priority uplift so users receive elevated priority to FirstNet service
- device diagnostics so users can detect and correct common device issues
- public safety dedicated messaging that supplies reliable, transparent, and reporting of message, file or video delivery/receipt while also circumventing commercial congestion and spam filters
- cybersecurity training so agencies and their responders understand how to protect their data assets and avoid falling prey to cyberhackers
- easy and direct access to dedicated FirstNet customer care.

Most FirstNet service apps require FirstNet service and related credentials.

Endpoint Security Apps

Effectively supporting the use of apps by responders requires the implementation of tools, policy and governance that fulfills four basic mobility needs.

1. User authentication and privilege management
2. Highly secure and persistent connections to agency resources in the field

Issue Date: 03.08.2023 **8 of 47**

App descriptions and information contained in any linked materials about the apps are created by the app provider and, as such, AT&T and FirstNet do not assume responsibility for the content.

©2023 AT&T Intellectual Property. All rights reserved. FirstNet and the FirstNet logo are registered trademarks and service marks of the First Responder Network Authority. All other marks are the property of their respective owners.

3. Agency control of device configurations for quick and scalable enterprise management
4. Reliable detection, mitigation, and resolution of Internet threats.

Many endpoint security apps enable some level of Enterprise Mobility Management (EMM) or Mobile Data Management (MDM) capabilities. EMM and MDM apps or features provide agency administrators with device control, monitoring, and configuration. EMM and MDM features help an agency enforce policies; detect and resolve security threats; and track individual device use.

App Examples: Endpoint security apps address many critical public safety use cases. Some examples include:

- A first responder device is lost or stolen, and an agency administrator needs to quickly “lock-down” a device to avoid unauthorized access or “wipe” and clear the device of any user data.
- A large-scale incident or event requires provisioning a significant number of new devices and users with operationally critical configurations, tools, and applications
- A new data collection, retention or sharing policy has been mandated that requires changing every device to support with new access, configuration, reporting or enforcement policies.

ENDPOINT SECURITY APPS (updated 10.04.21)

Communication Apps

With reliable wireless broadband, first responders can use advanced smartphone and LTE features to exchange information in new and valuable ways.

App Examples: FirstNet breaks through the limits of voice-only communications and current radio network reach with apps that:

- Extend the reach of radio users with LTE interoperability and cross-platform groups.
- Augment the capabilities of radio with the richness of multi-media data and video exchanges.
- Enhance the distribution of information through apps that ease the review, archiving, tracking, and broadcasting of messages.
- Integrate video streaming with advance group integrations

SITUATIONAL AWARENESS (BE AWARE)

Agencies with FirstNet can enhance their mission execution with tools that digitize, direct, and automate the daily activities of responders. These agencies can also enhance their awareness of the environment using apps that control and collect data from the growing array sensors, wearables, and IoT devices across our connected cars, smart homes, automated buildings, and smart cities. Ideally, data from this multitude of sources, can be fused, analyzed, and presented to responders in ways most appropriate and actionable for their role, location, and situation. Situational awareness involves apps that carry out three core objectives.

- (1) Enable and digitize mission activities
- (2) Control and glean insights from external devices.
- (3) Support the collection, fusing, analyzing, and presenting of information

Successful implementation of tools that enable situational awareness is best accomplished when an agency uses mission apps to guide and record their daily activities. Regular use of mission apps provides valuable data and trends – already digitally available and ready for use. Using apps to support daily calls-for-services makes it far more likely that responders can successfully use digital tools to support larger incidents or events.

Core Mission Apps

Implementing apps that support calls-for-service and frequent responder activities can enhance effectiveness and efficiency. By automating administrative duties and simplifying complex tasks, apps can help first responders be fully available while on-scene with less “paperwork” to complete after their shift has ended.

Implementing the regular use of apps to carry out normal day-to-day activities is critical to helping responders successfully use digital tools during large-scale events and incidents.

App Examples: Mission apps are often focused on helping specific disciplines or types of activities. For example, apps can help:

- Law enforcement personnel collect, create store, distribute, and easily find and retrieve field reports or information about calls for service.
- Fire and rescue personnel receive immediate information about the fire scene or situation well before they arrive on-scene
- School administrators and safety personnel execute emergency plans and coordinate across entities in ways that keep students safer during an emergency and help reunite parents and children after an emergency event.

Issue Date: 03.08.2023 16 of 47

App descriptions and information contained in any linked materials about the apps are created by the app provider and, as such, AT&T and FirstNet do not assume responsibility for the content.

©2023 AT&T Intellectual Property. All rights reserved. FirstNet and the FirstNet logo are registered trademarks and service marks of the First Responder Network Authority. All other marks are the property of their respective owners.

Consider apps that support customization or agency configuration so new data collection or storage sources can be added without significant effort or so workflows can be changed as needed.

MISSION APPS (updated 10.04.21)					
MOBILE APP NAME (Link to FirstNet.com)	PROVIDER (Linked to Provider)	SUMMARY DESCRIPTION OF MOBILE APP	Android	iOS	KEY SUPPORT

External Awareness Apps

The availability and use of sensors and other IoT devices across our evolving smart cities, buildings, homes, vehicles, and wearables grows by the day. Mobile apps can help first responders see the state of these remote sources to gain a better awareness of their environment; beyond what they can easily see, hear, feel, smell, or know. Moreover, responders can interact with remote devices for more informed decision-making and faster response.

App Examples: Given the speed in which new innovations and IoT devices are being introduced, the number and reach of external awareness apps will likely grow. Today's App Catalog includes app interfaces with:

- sensors that monitor the occupancy and location of school buses
- key resources such as hospitals, shelters, and critical equipment to ascertain the status and availability of needed resources
- devices that track and monitor key information (such as the location, speed, direction, use and weight) about vehicles and equipment across an agency fleet
- critical details about hazardous materials contained in railcars

Operating Picture Apps

Agencies can use apps to collect and fuse data made available by a vast array of systems, sensors, IoT devices and open-source data for informed assessment of a situation. Such apps can make fact-based predictions about how an incident is likely to progress or guide actions based on operational polices. Even more importantly, these apps can present information based on the situation and user. Role-based and instantly intuitive “pictures” are especially important to first responders who should only receive easily consumable and at once actionable information.

App Examples: Common operating platforms include apps that display information from a multitude of sources onto a user-configurable dashboard and or map. Some apps support the triggering of workflows based on data values or user entries and activities.

MISSION SUPPORT (DO DIGITAL)

FirstNet agencies can advance operational capacity by implementing tools that digitize, direct, and automate a responder’s day-to-day activities. Apps can help responders collect, retrieve, and share critical information. The FirstNet platform can also help agencies disseminate information and deliver training directly to responders in the field.

- (4) Enable smart and effective community engagement with apps that collect information from the public or push out information targeted individuals based on criteria such as location or registration profile data.

Responder Resource Apps

The FirstNet platform enables direct (and auditable) sharing of information and resources across your entire staff. With a smart devices and reliable mobile connectivity, sharing information, updates, and new policies no longer requires waiting for rollcall or a responder’s return to their duty station.

App Examples:

Several apps built by the Department of Homeland Security supply mobile, offline access to national and state Field Operations Guides. One tool helps agencies track location and maintenance of AED defibrillator equipment and another provides for document filing and sharing.

Personal and Professional Development Apps

FirstNet offers a platform well suited for the remote delivery of training and other educational materials. First responders no longer need to wait for rollcall to watch an educational video or wait for in-person training to learn something need. This category of apps also includes tools that help first responders, and their family access resources for their health and wellness.

App Examples:

- The growing supply of health and wellness apps should not be overlooked. First responders and their families often risk or sacrifice their well-being to help others --- these apps are focused on helping them. Lighthouse Health & Wellness will even provide for agency branding and customization.
- FirstNet provides resources that help responders avoid falling prey to cyberhackers. Included are videos that can be used during community outreach events that help students understand how to protect their personal information. Another app helps agencies construct and run live virtual training exercises.

Community Engagement apps

Smart mobile apps can help law enforcement appropriately interact with the public. Apps can disseminate information to targeted individuals based on their current location or some other demographic such as home or work address, certifications, special needs, etc... Apps can also present directly relevant and actionable information to first responders on-scene and eliminate or de-emphasize information that is not immediately needed.

App Examples: Some examples of apps that enable community engagement includes apps that:
