

You Have 8,000 Trees

Let's learn about them!

300,000,000,000+

Across Canada, you'll find more than 300 Billion trees that include around 140 different species.

Who manages your trees?

7,160 of your trees are managed by your province or territory, 136 are under federal government management, 168 belong to indigenous communities, and the last 536 are looked after by private landowners.

What's the plan?

With so many trees, it's difficult to plan for all of them. Roughly 5000 of your trees are subject to one or more management plans, while 3,000 of them are unmanaged.

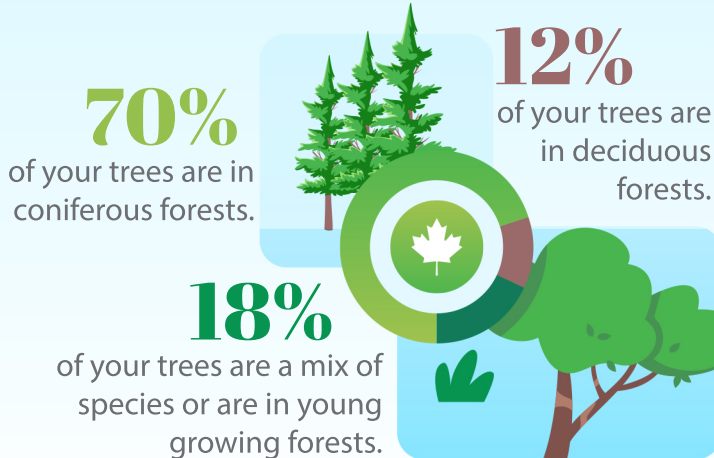

Certified Sustainable

Of your 5000 managed trees, roughly 3,500 of them are third-party certified.

Did you know?

Canada is home to more than **one third of all certified forests in the world!**

Conservation Matters!

Conservation, ecosystem preservation, and biodiversity are crucial to overall forest health. Of your 8000 trees, around 750 of them are subject to specific conservation measures, mostly for ecosystem or wilderness preservation.

How old are your trees?

600 of your trees are in young forests stands, between 1 and 40 years old. Around 2000 trees are in forests stands between 41 and 80 years old. Half of your trees, or roughly 4100 of them, are in stands aged 81-160 years, and the last 1300 are older than 161 years.

Sustainable and Renewable

How many of your trees are harvested each year?
100? 500? 1000?

In reality, **fewer than 16** of your trees are going to be sustainably harvested this year!

Regenerating our Harvest

Of your 16 harvested trees, 10 will be replanted, and 6 will regrow naturally.

Here in Canada, we have stringent federal and provincial laws ensuring that **every single tree harvested on public lands is regenerated!**

Debunking Deforestation

1 of your trees will be permanently removed this year, mostly to allow for urban, industrial, or agriculture expansion. Canada has one of the lowest rates of deforestation in the world!

Economic Opportunities

Collectively, our trees help to directly employ more than **200,000 Canadians** and support **thousands of businesses big and small**, all while supporting hundreds of communities in every corner of the country. In 2021, the products sustainably made from your trees generated around \$45 billion in exports!

Our working forest grows enough wood for a family home every 33 seconds!

Your trees are under threat!

Insects & Disease

Nearly 400 of your trees are currently affected by insects, often defoliating, and killing them, making them ideal fuel for wildfire.

Wildfire Risks

In 2023, more than 400 of your trees have burned, which is **more than will be harvested in the next 20 years.**

Climate-Smart Products

Many of your harvested trees are made into lumber, and other long-life products, which will store the carbon it used to grow for the entire life of the product.

Towards Net-Zero

Since 1990, the forest industry has **reduced emissions by nearly 70%**. By utilizing many waste products like bark and sawdust to heat and power mills, the forest product industry continues to support Canada's transition to a low-carbon economy.
