... have an idea???

Email, fax, courier, snail mail or call us! Let us take a look and we can respond quickly with an experienced team that knows the POP industry. Intek Plastics can provide Idea's that will bring your project to market faster and with the most cost effective solution. Push your cart through any retail store and Intek's parts are everywhere. From apples to appliances, batteries to bubbly, cosmetics to cameras and beyond, we support the display companies that create these environments.

Who we are

Intek is a plastic extrusion company established in 1961 with over 22 years experience serving the POP industry. In addition, we also serve OEM's in: building and construction, refrigeration, recreation, telecommunications, lighting and transportation. This broad range of experience gives us the unique ability to provide design assistance for parts within the context and goals of your project. Simply put, we can become an extension of your design team.

Capabilities

- Custom Profiles

H-Channels

H Channels

H Channels are used as a joining strip to attach other extrusions or sign inserts to create custom signage. H channels can be used to separate, connect or mate two parts together. H Channels can also be used in conjunction with J channels to mount signs. Intek can create the right combination of H and J Channels to meet your specific needs.

J Channels

J Channels present a “finished” edge in combination with other extruded elements to create custom POP signage. J Channels have many uses including holding displays, used as edging, and creating custom sized channels for repeat use. They can also be used in conjunction with H-Channels to create multiple signs.

L-Channels

L Channels

L Channels can be mounted to shelves to keep parts and product from falling off store shelves. They can also be used to protect corners or for other protection purposes. These can be designed to meet your specific needs including pre-assembled with adhesive tape for easy attachment or with holes drilled for easy mounting.

U-Channels

U Channels

U Channels are used for quick and easy fabrication of custom signage, edge protectors, and are often combined with other extruded elements for POP signage. They can be used to attach display signs to shelves or walls, as a protective border around signs, or to mate mirrored parts. These can be designed to meet your specific needs including pre-assembled with a foam tape for easy attachment.

Specialty Channels

Specialty channels are your design or ours. These channels are designed for custom applications most time using co-extrusion or tri-extrusion dies. These channels are usually used where the application calls out for using various materials that need to be held by one profile. Remember, your design or ours, we will extrude a profile that is perfect for your application.

Ticket Channels / Data Strips

Without a doubt one of the most important profiles in our line. The profile that the customer looks at first before they make that important decision of which product to purchase. These profiles shown here represent a fraction of the ticket channels and data strips we manufacture, however these seem to be the most popular sizes. We make data strips and ticket channels from 3/8" to 6" high, so please call us for an RFQ for your special needs.

Slatwall

19

Slatwall

Plastic slatwall has been used in retail application for many years. They are virtually indestructible and incredibly lightweight. They're designed to accept all standard pegboard and slatwall hardware. Slatwall components can create freestanding applications, floor fixtures, tradeshow booths & others. You can join several together and they are easy to install and virtually maintenance free. We also have stock dies for wood and MDF panel inserts.
