exclusive planters for professionals 2012/2013

livinggreen
design

livinggreen Intro

At Livinggreen Design we take pride in taking a different approach. Instead of outsourcing our production to the far east with the inherent supply problems that result, we decided to concentrate on producing all our products ourselves, here in the UK. In this catalogue EVERY planter featured is handmade to order by our own highly experienced and skilled labour force, giving us control over every stage of the production process and allowing us to offer reliable lead times, full quality control and a simply huge range of finishing options.

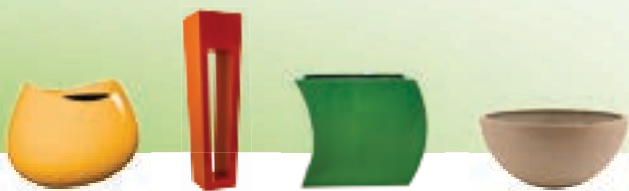

Our range is all designed in house or in collaboration with professional designers who see the endless possibilities our methods and material provide. Rather than focus on one aspect of the market we have products at every price range and style from classical to cutting edge modern design. All Livinggreen planters are suitable for both interior and exterior use being both waterproof and frostproof, while our finishes are UV resistant and durable. In this catalogue we are introducing both silver and gold leaf as well our new Dapple and Vintage paint finishes

A material for the modern world, we work only with our own formulation of fibreglass (GRP) which we describe as Advanced Composite, in reference to the additions and alterations we make to the raw material in order to achieve the strength, quality and finishing that is the hallmark of our work. Very similar to the composites now used to manufacture race cars, airliners and wind turbines, AC is lightweight, super strong and capable of being formed into almost any shape – the perfect material for planter manufacture. See separate sections for more details, along with our excellent environmental credentials.

A large part of our business is the creation of bespoke planters to our clients' specification. We work with top European architects, landscape architects and garden & interior designers to achieve their vision on projects of every size. Some of these are illustrated in the bespoke section of this catalogue. We have full product design capability including CAD drawings & 3D modelling and regularly advise on the specification of planters suitable for use on roof gardens and with green roofs.

You can find this catalogue and our full range on our websites where it is now possible to order online and sign up for our newsletters which will keep you fully up to date with our new products as they are launched. If based outside the UK, you can order through one of our professional Agents who provide excellent service and now cover the whole of Europe and the Middle East. For regular customers we also provide a free customised web brochure and other marketing tools. Please telephone our fully trained Product Advisors for further details or if you want to discuss a potential bespoke project. And please don't hesitate to contact us direct – we love to talk planters!

Tony and Karen Sawyer
Directors, Livinggreen Design Ltd

livinggreen Intro

Chez Livinggreen Design nous sommes fiers de prendre une approche différente. Au lieu de sous-traiter notre production à l'Extrême-Orient avec les problèmes d'approvisionnement qui en découlent, nous avons décidé de se concentrer sur la production de tous nos produits nous-mêmes, ici au Royaume-Uni. Dans ce catalogue CHAQUE bac est fait main sur commande par notre équipe de techniciens hautement qualifié et expérimenté, nous contrôlons chaque étape du processus de fabrication, ce qui nous permet d'offrir des délais fiables, de contrôler la qualité et de proposer une gamme complète, avec des possibilités et des options de finition tout simplement énorme.

Toutes nos références sont conçues en interne ou en collaboration avec des designers professionnels qui voient les possibilités infinies de nos méthodes et les matériaux. Plutôt que de se concentrer sur un seul aspect du marché, nous avons des produits à tous les niveaux de prix et de style, du classique au design modern. Tous les pots Livinggreen conviennent à la fois pour un usage à l'intérieur et à l'extérieur, étant à la fois imperméable et résistant au gel, tandis que nos finitions sont résistantes aux UV et durables. Dans ce catalogue nous présentons des nouveautés en finitions : de feuille d'argent et feuille d'or, ainsi que nos nouvelles finitions peintures - Moucheté et Vintage.

Un matériau pour le monde moderne, nous travaillons uniquement avec notre propre formulation de fibre de verre (GRP) que nous décrivons comme Advanced Composite, en référence aux ajouts et modifications que nous apportons à la matière première afin de parvenir à la force, la qualité et la finition qui est la marque de notre travail. Très semblable aux composites désormais utilisées pour fabriquer des voitures de course, les avions et les turbines éoliennes, AC est léger, super robuste et capable d'être moulé en presque n'importe quelle forme - le matériau idéal pour la fabrication de bac. Voir les autres chapitres pour plus de détails, ainsi que nos excellentes qualités environnementales.

Une grande partie de notre activité est la création de bacs sur mesure selon les spécifications de nos clients. Nous travaillons avec les plus grands architectes européens, des architectes paysagistes et concepteurs de jardins et d'aménagement intérieur pour réaliser leur vision sur des projets de toutes tailles. Certains d'entre eux sont illustrés dans la section sur mesure de ce catalogue. Nous avons la capacité de maîtriser depuis la conception des produits jusqu'à la livraison, y compris des dessins CAO et des modélisations 3D. Nous donnons régulièrement des conseils techniques sur la spécification des bacs pour les toit terrasses et les toitures plantées.

Vous pouvez trouver ce catalogue et notre gamme complète sur nos sites Web où il est maintenant possible de commander en ligne et vous inscrire à nos newsletters qui vous garderont complètement à jour avec nos nouveaux produits quand ils sont lancés. Si vous êtes en dehors du Royaume-Uni, vous pouvez contacter un de nos agents professionnels qui offrent un excellent service et couvrent désormais l'ensemble de l'Europe et le Moyen Orient. Pour nos clients habituels nous fournissons également une brochure web gratuite personnalisée et d'autres outils de marketing. Merci de téléphoner nos conseillers parfaitement formés, pour plus de détails ou si vous voulez discuter d'un projet potentiel sur mesure. N'hésitez pas à nous contacter directement, nous aimons parler pots!

Tony and Karen Sawyer
Directors, Livinggreen Design Ltd

livinggreen design

Our planters represent the best in UK design and manufacture. Although reflecting influences from Europe, Asia and the Americas we are proud to be innovators, developing ideas and themes and bringing them to life at our factories throughout Britain. Each planter is genuinely handcrafted and with literally hundreds of colours and finishes possible, our customers get bespoke products, made individually for their unique requirements.

In a world of mass produced identikit plastics, it's reassuring to know that through the use of our unique Advanced Composite (AC) formulation, we can manufacture striking designs of outstanding quality without compromise to availability or price. Indeed many of our Spirit ranges are less expensive than injection moulded equivalents and all are better value. The secret? Simply taking fibreglass as a base and adding modern materials and manufacturing techniques to create AC planters that are the perfect solution to every situation. Just look at these advantages:

- **All planters are suitable for both interior and exterior use**
- **Outstanding environmental credentials (see page 6)**
- **Ultra lightweight but as strong as steel**
- **Fully frostproof and UV stable**
- **Completely watertight but can be easily drilled for exterior use**
- **Every RAL and BS colour available in textured, polished and matt finishes**
- **Unique range of special 'Natural' finishes – metal, stone, terracotta, rust and ceramic finishes that look, feel and weather just like the real thing**
- **Can be specified as Class 0/Class 1 fire retardant**
- **Design your own! – AC is ideal for bespoke project work with any size or shaped planter possible (see page 222)**
- **Tree planters designs available off the shelf up to 2m square**

All our products are made by hand to the highest standards. We operate a rigid quality control policy to ensure that proper standards are maintained. Small variances can occur such as weight, the level of lustre in the finish and the flatness of the surface. Slight differences can happen when for example, the same model of planter is produced from two separate moulds, or the paint and texturing materials used, comes from a different batch. Such differences are rare and very small and are only the result of the hand made manufacturing process. Our technicians are highly trained and aim to produce a product with tolerances that are within the guidelines set out by our designers.

With water conservation ever more important we have spent the past 28 years developing and refining our own solution for planters, beds and fine turf, which has been independently tested and verified by Reading University's Horticultural Technology Unit. The result, "Tanker Irrigation" can cut water usage by a minimum of 35% and much more outdoors, while prolonging the period required between watering by 100%. Easy to fit and use Tanker is a natural choice for any new planting and is specified in the catalogue for each of our planters.

livinggreen design

Nos contenants constituent ce qui se fait de mieux en matière de conception et de fabrication entièrement britannique. Ils sont inspirés par de nombreuses influences tant européennes, asiatiques et américaines. Chaque contenant est véritablement fait à la main et peut être décliné en une multitude de couleurs et finitions possibles. Nos clients obtiennent ainsi un produit fait sur mesure parfaitement adapté à leurs projets.

Dans un monde dominé par l'usage des matières plastiques nous nous démarquons avec notre formule de AC – les composites avancés. Elle nous permet de concevoir des produits remarquables, de qualité exceptionnelle sans concession en termes de prix et de disponibilité. Nos contenants AC offre ainsi des solutions d'usages multiples et présentent de nombreux avantages:

- **Tous les bacs conviennent pour l'usage à l'intérieur à l'extérieur**
- **Ils présentent des qualités environnementales exceptionnelles (voir la page 7)**
- **Ils sont ultralégers mais plus robustes que l'acier**
- **Entièrement résistant au gel, aux UV et aux intempéries**
- **Complètement étanche mais pouvant être percés pour un usage à l'extérieur**
- **Chaque couleur RAL et BS disponibles dans des finitions texturées, polie et matte**
- **La gamme unique de finitions réalistes 'Naturel' – le métal, la pierre, la terre cuite, la rouille, les finitions qui ressemblent à la vraie matière**
- **Peut-être classé en incombustible MO et non-inflammable M1**
- **Concevez le votre! – le AC est idéal pour les projets sur mesure décliné en taille, en forme et en finition (voir la page 222)**
- **Les bacs à arbres de grandes tailles sont disponibles en stock jusqu'à 2 mètres**

Tous nos produits sont fabriqués à la main aux normes les plus exigeantes. Nous exigeons une qualité contrôlée stricte afin de maintenir ces normes.

Néanmoins des petites variations peuvent survenir telles que le poids, le niveau de brillance dans la finition et la planéité de la surface. Ces légères différences peuvent se produire lorsque, par exemple, le même modèle de bac est fabriqué à partir de deux moules séparés, ou la peinture utilisée provient d'un lot différent.

Ces différences sont rares et très petites et ne sont que le résultat du processus de fabrication à la main. Nos techniciens sont hautement formés et visent à produire un produit avec des tolérances qui sont dans les lignes directrices énoncées par nos designers.

Avec la nécessité croissante d'économiser l'eau, nous avons développé depuis 25 ans une solution pour les bacs, jardins et gazon, validée par l'unité horticole de l'université de Reading en Angleterre. La réserve d'eau, 'Tanker', permet d'économiser au moins 35% de l'eau d'arrosage voire plus en extérieur, tout en nécessitant deux fois moins d'arrosage. D'une adaptation et d'un usage facile, la réserve d'eau est un choix naturel pour les nouvelles plantations et nous la prescrivons dans notre catalogue pour chacun de nos pots.

environment and ethics

In choosing Livinggreen Design planters you are making a sound environmental and ethical choice.

In comparison to other planter materials such as plastic, ceramics, metals and wood, AC offers many environmental advantages, not least because many of these products are manufactured in Asia and imported with the resulting larger Carbon Footprint and ethical uncertainty this brings.

Manufacturing

AC planters are based on fibreglass, a composite of plastic resins and glass fibres. Glass is of course made from silica, the most common mineral on Earth. Typically, an AC planter is only 2 - 3mm thick, with the plastic element only one third of this. Compare this to an injection moulded plastic product which needs to be double walled and you realise that AC planters contain at most a tenth of the plastic of these. AC planters are made by hand at room temperature using a chemical process and the only machinery required are hand tools for the finishing process. Compare this to plastics and metals where massive inputs of heat and machinery are required and you quickly see the energy inputs into AC planter production are miserly. Even ceramics require machinery to extract the clay and huge furnaces to power the kilns – so it's no surprise in Asia to find these placed nearby forests as a plentiful source of wood.

Ethical Production

Our AC planters are manufactured in the UK under European Health and Safety Legislation. Our craftsmen are necessarily well paid and subject to regular health checks. All waste is disposed of under environmental legislation. By contrast, most other planters sold in Europe to professional landscapers have been sourced in Vietnam, the Philippines, Malaysia, India and China. Can we be sure equivalent standards are in place?

Carbon Footprint

Made in the UK and ultra lightweight, AC planters travel far fewer miles and require less energy per mile than much heavier clay and metal imports. As detailed above, the energy used in production is also minimal.

Recycling

Firstly, all our AC planters can be returned to us for repair and refinishing to an as new condition. The only reason to ever throw one of these planters away is if the design has become so obsolete it is unusable. Should disposal be the only option then full recycling is now possible thanks to processes developed for the automotive industry. Glass fibres can be reclaimed chemically from the waste and reused in insulation products. Also the product can be ground down and is commercially used both as an element of new road construction and in industrial roofing products.

It's worth pointing out that much of the glass fibre matting used in production of AC planters is itself made from recycled glass!

environnement et éthique

En choisissant les contenants 'Livinggreen Design' vous faites un choix environnemental et éthique. Contrairement à d'autres matériaux pouvant constituer un bac comme le plastique, la céramique, les métaux et le bois, généralement fabriqué en Asie, AC offre des avantages environnementaux: Les produits sont recyclables, durables, réparables, légers et fabriqués au Royaume-Uni, donc ils possèdent une empreinte de carbone réduite par rapport aux produits importés d'Asie.

Fabrication

Des bacs AC sont basés sur l'utilisation d'un composite de fibre de verre, obtenu à partir de la Silice, que l'on trouve abondamment sur terre. L'épaisseur d'un bac AC est généralement de 2 à 3 mm. Les bacs AC sont faits à la main à la température ambiante, les seules machines nécessaires sont des outils à main pour réaliser les finitions.

Production éthique

Nos contenants AC sont fabriqués au Royaume Uni dans le cadre de la législation européenne en termes de santé et de sécurité. Nos artisans sont correctement payés et sont régulièrement contrôlés par des inspections sanitaires. Les pertes et les chutes sont traitées selon la législation environnementale.

Empreinte de pas de carbone

Fabriqués au Royaume-Uni et ultralégers, les bacs AC voyagent moins et consomment moins d'énergie par KM que des pots importés fabriqués avec des matériaux plus lourds en céramique ou en métal.

Recyclage

Tous nos bacs AC peuvent être renvoyés afin d'être réparés, ils retrouvent alors leur aspect neuf. Au cas où la suppression d'un bac serait toutefois nécessaire, il est maintenant possible de le recycler entièrement. La fibre de verre broyée peut entrer dans la composition des structures de voiries, des éléments d'isolation ou de toiture préfabriquées. D'ailleurs, une part importante des plaques de fibres de verre utilisées dans la production des bacs AC est déjà elle-même fabriquée à partir de verre recyclé.

Credits

We would like to thank everyone who helped to make this brochure possible. Without the help of our friends, colleagues and customers it would not be feasible to produce a catalogue in this form, particularly in relation to the onsite photography. We have made every attempt to ensure that everyone who supplied photographs or gave help of any sort is credited below but if we have forgotten someone or made a mistake we apologise and would ask for corrections which will be posted on the website.

Please note that all photographs and designs are the copyright of Livinggreen Design unless detailed otherwise below and may not be reproduced in any form without the permission of the copyright holder. Please contact our sales office for clarification if required.

Planter Designs

All planters in the Livinggreen Design range were designed in house by our own design team of Dorian Hope, Karen Sawyer and Tony Sawyer with help from Francesca Attala except for the following.

spirit

Express yourself with this unbeatable range of top quality but price competitive planters that are designed to complement each other. Each collection features trademark Spirit styling cues – curved corners, the same angle of taper and wide feature lips. Mix and match across the range and free your design Spirit.

New! Kubik and Cylik LITE. Best selling sizes of these popular ranges redefined and redesigned for an even more cost effective solution. Great design for larger scale projects without compromise on colours or quality of finish. The real thing... but LITE!

Exprimez-vous avec cette gamme imbattable de bacs de bonne qualité à des prix compétitifs qui sont conçus pour se compléter. Chaque collection de la marque, Spirit, possède les détails conforme à cette gamme – angles arrondis, même angle pour les bacs évasés et les bords larges.

Nouveau ! Kubik et Cylik LITE. Les tailles les plus vendues redessinées et repensées pour une solution encore plus économique. Conçus pour des projets plus importants, sans compromis sur la qualité, des couleurs ou des finitions. Toujours la qualité de l'original disponible désormais en LITE!

quadik plus hot lip inserts

Introducing a new concept for planting convenience and style. The Quadik Plus Hot Lip inserts make planting up simplicity itself. Assemble the Tanker irrigation, drop in and surround with compost – then plant as normal. The liners can be planted off site and simply dropped into each planter in the building to make a fantastic display that can be installed by a single technician without the need for full high top van transport. Better still, the Hot Lip feature means you can specify a different colour lip from the planter body and choose from flat or curved lips. Personalise each building floor with different colours, match interior decor combinations or reflect company logos – the possibilities are endless as you can specify Hot Lip in any RAL colour or any of our unique finishes. Hot Lip inserts are fantastic too for flowering plant changes – letting you plant up your replacements off site and simply swapping the inserts over on site with no mess and minimum time wasted.

Présentant un nouveau concept pour planter avec efficacité et style. Le 'Quadik Plus - Hotlips' fait de la plantation la simplicité elle-même. Assemblez et placez la réserve d'eau, 'Tanker', dans le bac et ajouter le terreau, terminez la plantation. Les bacs de plantation peuvent être préparés à l'avance et simplement posés dans chaque bac sur place. 'Hot lips' est disponible en toutes les couleurs RAL ou en finition 'Naturel', en version plate ou bombée. Il peut être assorti ou pas avec le bac. Personnalisez chaque étage d'un immeuble en différentes couleurs, créez des bacs avec le logo d'une entreprise ou assortissez avec une décoration intérieure.

classic

curves

Our signature range. Award winning, in house design and protected by European Design Right Registration. A true celebration of Curves, inspired by the Glamour of Marilyn Monroe, Bridget Bardot, Jayne Russell and now by Sophia Loren and Ursula Andress.

Curvy is fantastically flexible, use singularly as planters or sculptural pieces or in a multitude of combinations to make design walls or feature displays. Specify bold colour and add your own holes (see Holey Design). The important thing is... have fun!!

Notre gamme de signature, primée, conception originale et protégée par 'European Design Right'. Une véritable célébration de courbes, inspiré par le glamour de Marilyn Monroe, Brigitte Bardot, Jayne Russell et maintenant par Sophia Loren et Ursula Andress aussi.

La gamme Curvy est parfaitement modulable, utilisez seule comme une pièce sculpturale, sinon dans une multitude de combinaisons pour créer des écrans architecturaux. Précisez une couleur audacieuse et ajouter vos propres vides, voir des trous dans 'Holey design'... amusez-vous!

easter island

Ultra modern design inspired by the Moai statues. Each planter has an optional second planter or shelf which can be used to present brochures (reception areas), as a writing stand, a glass stand (for bars, hotels etc) or for lights, ornaments etc. Each planter also slots into the other for creating walls or special features.

Design modern, inspiré par les statues Moai de l'Île de Pâques. Chaque pot offre la possibilité d'un bac de plantation en plus ou une étagère en option. L'étagère peut être utilisée pour des brochures (accueils), comme une écritoire, un support pour un verre (bars, hôtels) ou pour un élément de décoration comme une lampe. Chaque bac est modulable avec les autres de la gamme, pour créer des cloisons rythmées ou barrières sculpturales.

luna

Conceived around the concept of the perfect sphere, Luna offers this and more with sphere planters, deep and shallow bowls completing this geometric range. Complete spheres feature a small flat point as standard for stability but can be specified as perfectly round. Ask us to convert Luna Full to a water feature or Luna Half to a hanging bowl for even more options. Try our natural finishes to create 'real' galvanised, rusting or stone balls – with none of the weight and at a fraction of the cost – and up to 1.2m diameter.

Conçu autour de la sphère parfaite, Luna propose cela et plus encore avec des formes sphériques, des coupes profondes et moins profondes complètent cette gamme géométrique. Les sphères complètes en standard disposent d'une petite partie plate pour la stabilité, mais elles sont également disponible parfaitement ronde. Demandez-nous de convertir Luna complète en fontaine d'eau ou la demie Luna en coupe suspendue pour encore plus de possibilités. Essayez nos finitions naturelles pour créer un effet 'réel': en rouille, plomb, pierre - avec un poids négligeable et à une fraction du coût du vrai - jusqu'à 1,2 m de diamètre.

luna

luna

Perfect spheres, Sphere planters and two bowl options complete this fabulous range. Luna Half or Full can be specified as hanging baskets.

Sphères parfaites, sphère en pot, en objet, et deux options en coupe complètent cette gamme inspirante. Prescrivez Luna en demie ou entière pour des paniers suspendus.

garden classics

Despite the name, like all the Livingreen Design range, Garden Classics can be used as both garden and interior planters. However, these ranges have a distinct exterior flavour with design influences from throughout the world.

En dépit du nom, comme toutes la collection Living Green Designs, les classiques de jardin peuvent être employés en extérieur et en intérieur.

garden
classics

rose

Inspired by the Medieval rose and based on ancient lead panels, these incredibly detailed planters can also be specified as both watertanks (with optional lid) and self contained fountains (with optional backplate). Add your own initials, dates or names for a personalised planter that will last a lifetime.

Inspiré par la rose médiévale et basé sur des panneaux de plomb anciens, ces bacs incroyablement détaillés peuvent également être spécifiés comme réserves d'eau (avec couvercle en option) et fontaines (avec une plaque en option). Ajouter vos propres initiales, les dates ou les noms pour un bac personnalisé qui durera toute une vie.

watertanks

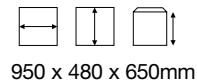

An unrivalled selection of period Watertanks which can also be turned into fountains on request by fitting a special backplate. A fantastic alternative to ugly plastic tanks, these fibreglass models are 100% frostproof and can be ordered with taps and lids as optional extras. All watertanks can also be used as planters.

Une sélection inégalée de réservoirs d'eau d'époque qui peuvent également être transformée en fontaines d'eau sur demande en rajoutant une plaque spéciale. Une excellente alternative aux réservoirs d'eau en plastique, ces modèles en fibre de verre sont 100% résistant au gel et peuvent être commandés avec un robinet ou couvercle en option.

Terraces

While any of the Terraces components can be used singularly, they are designed to be combined together to provide integrated layouts featuring planters, seats and tables of varying size and height. The name 'Terraces' refers to its unique capacity for creating tiers of planting as shown below, but equally it can be used for simple planting and seating arrangements on the same plane. The drawings below illustrate some of the possibilities but Terraces is about using the shapes to create novel solutions to interior space planning and letting your imagination run free.

Alors que chaque composant de 'Terrasses' peut être utilisé singulièrement, ils sont conçus pour être combinés ensemble pour fournir des compositions modulables, des sièges et des tables de tailles et hauteurs variables. Le nom 'Terrasses' fait référence à sa capacité unique pour créer des niveaux de plantations comme indiqué ci-dessous, mais également les éléments peuvent être utilisés pour des plantations simples sur le même niveau. Les croquis ci-dessous illustrent quelques possibilités, mais 'Terrasses' consiste à utiliser les formes pour créer des solutions novatrices en décoration d'intérieur et de laisser exprimer librement votre imagination.

tree planters

the largest off-the-shelf range available

Livinggreen Design offers the largest and most varied selection of off the shelf tree planters available anywhere. We classify a tree planter as at least 90 x 90cm and capable of taking at least a 3m specimen. All are suitable for both interior and exterior use in the most demanding of environments. Such is our skill with tree planter design and fabrication we were chosen to create special planters for the James Bond film, Casino Royale.

Bacs à arbres XXL

Livinggreen Design offre le plus grand stock et le plus divers choix des bacs à arbres. Ces grands bacs à partir de 90 x 90cm peuvent supporter un arbre d'au moins 3m. Tous conviennent pour l'usage à l'intérieur et à l'extérieur. La qualité de ces modèles nous a permis de réaliser des bacs spéciaux pour le film de James Bond, Casino Royale.

replica rocks

create rock features anywhere

Created for the TV and film industry, these AC rocks and standing stones are so realistic as to be indistinguishable from the real thing – except for the weight. Ideal for any location where crane access is an issue – atriums, courtyards, roundabouts etc.

Faux rochers

Créés pour la TV et l'industrie cinématographique, ces rochers en AC sont si réalistes qu'ils ne peuvent être distingués du vrai du faux - excepté le poids. Idéal pour tout endroit où l'accès d'une grue est problématique - les atriums, les cours, les ronds points etc.

bespoke design

any size, any shape
any finish

Livinggreen Design offer a full bespoke design and build service to specifiers. With professional product designers on our team, we can take a sketched idea and using our CAD facility provide you with drawings and 3D models for approval prior to manufacture in Advanced Composites, metals, wood or any combination of these as required. Any size and finish can be supplied, with AC particularly suitable for roof gardens or anywhere where weight is an issue. Lighting can easily be incorporated if required as can logos and memorable dates (see page 236).

Design sur mesure

Taille, forme et finition sur mesure

Livinggreen Design offre un service complet de design sur mesure ainsi que des conseils aux prescripteurs. Avec les designers professionnels dans notre équipe, nous pouvons élaborer un croquis et vous fournir des schémas et des modèles 3D pour approbation avant leur fabrication. Ce service est disponible pour les AC, les métaux et le bois. Toutes les tailles et les finitions peuvent être assurées, avec des bacs en fibre de verre convenant particulièrement pour les toitures jardins et terrasses. L'éclairage peut facilement y être incorporé, de même pour les logos et des dates souvenirs (voir la page 236).

tanker irrigation

The Tanker sub soil irrigation system is the natural choice for cost-effective watering of planters, planting beds and tree pits in both exterior and interior schemes. Incredibly simple to use, all Tanker systems consist of a tank or reservoir positioned under the rootball of the plants and linked to the surface by a flexible or rigid filler pipe. Water is then transported from the tank to the soil as required via a specially designed Geotextile wick which works with any reasonably good soil or compost. Depending upon the size of the area to be irrigated, the tanks can be linked together to form a network, replicating the Earth's natural water table and providing ideal conditions for root growth.

Arrosage par réserve d'eau

La traduction en français de 'Tanker'-réserve d'eau, est téléchargeable en format PDF sur notre site www.livinggreendesign.net

Fitting tanker water cell...

Fitting Tanker Modular network up to 4m long with full automation to restricted depth roof garden for fine turf

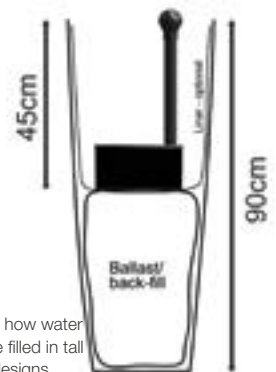

tanker irrigation

There are many proven advantages of using Tanker:

- Less frequent watering:** independent research by the University of Reading has conclusively proved that plants in containers, hanging baskets or planting beds and irrigated using Tanker systems require watering only half as frequently as those planted without. Councils and landscapers have been able to slash maintenance labour budgets by using special Tanker hanging baskets, pillar and railings planters and also by retro fitting Tanker units to existing planters. For private gardens, home owners halve the burden of keeping their planters watered and can go on holiday in the summer with less worry about what they will find on their return.
- Water conservation:** As water is delivered straight to the rootball only as required by the plant, Tanker systems greatly reduce the amount of water required to irrigate any plant display. Even in a sealed system, such as a planter, the documented saving is at least 30% – for exterior beds, hanging baskets and drained planters, the savings will be much greater. With water restrictions a regular feature in many areas, this aspect of the system is becoming increasingly important to our customers.
- Healthier, better looking plants:** Tanker only delivers water to the roots as needed, eliminating the flood/drought cycle experienced by manually watered plants. Soil moisture is optimised and the plant does not experience water stress. The result is a denser, larger rooting system and more compact, healthier growth above

ground. Councils using the system report that the displays produced using bedding plants are the best they have ever experienced with more and larger flowers and growth so vigorous that in some cases it had to be cut back – and all achieved with less than half the watering visits previously required.

- Pays for itself in 3-6 months:** Depending upon the frequency of watering previously required, the labour saving alone will pay for these incredibly cost-effective units within 6 months. When you take into account that plants establish faster and are healthier long-term when watered using the system then other savings are guaranteed in plant replacement costs.

Schematic of how water cell should be filled in tall planter designs

Typical Water Cell installation

Various network options for Modular and Cylinder systems

There are Tanker systems to fit almost every possible situation.

WATER-CELL

- Tanker Water Cell: sealed reservoirs for irrigating individual planters. Available in sizes from 2l - 12l. Suitable for planters up to 90cm diameter.

Water Cell

Code	Litres	 
TWC2	2	220 x 60mm
TWC3	3	220 x 75mm
TWC4	4	220 x 113mm
TWC6	6	343 x 80mm
TWC8	8	343 x 100mm
TWC10	10	343 x 125mm
TWC12	12	343 x 150mm

MODULAR

- Tanker Modular: Available in both Solo (for individual planters) and Network (for larger planters and large beds). Modular units are just 5mm thick and 11cm wide making them ideal for trough planting, window boxes and containers where planting depth is limited. Modular Network is popular for planting beds where very large links can be constructed. Special units up to 4m long can be specified to irrigate lawns, bowling greens, golf greens etc.

Tanker Modular

Code	Litres

TCN8	8	800 x 110mm
TCN9	9	900 x 110mm
TCN12	12	1300 x 110mm
TCN15	15	1500 x 110mm
TCN20	20	2000 x 110mm

- **Tanker Water Level Indicator:** For use in interior landscaping, the indicators are variable straight tubes fitted with a ball float and rod that provide an excellent indication of the depth of water at the base of any planter – perfect for Hydroculture and half-hydroculture growing systems. They are also useful in large sealed tree planters to indicate if there is excess water in the planter. Also available as a filler pipe with a removable lid and no indicator mechanism.

Water Level Indicator

WLI70	32mm	70mm
WLI100	32mm	100mm

TANKER IRRIGATION

Rigid Filler Pipe

Each system can be specified with a number of accessories to fit different requirements.

- **Filler pipes:** A no cost choice of flexible or rigid filler pipe is available on both Water Cell and Modular Tanker systems. The flexible pipe is supplied in lengths up to 50m and can be cut to any size (see page 234). As it can also be bent around corners, it is the perfect choice for larger tree planters, for most exterior applications and for unusual size planters. The flexible pipe can be fitted with a water level indicator which is manually cut to size. Rigid pipes are pre-fitted with a ball float indicator, can be purchased in 5cm incremental lengths and are simply pushed into the tanks for fitting, making this the best and simplest solution for the majority of interior planters. Tanker Cylinder can only be fitted with flexible pipe and cannot be fitted with a water level indicator – however levels can still be read using a Dip Stick (see page 234).

- **Caps:** A choice of caps is available including Freeflow, Standard and Funnel. The Freeflow cap was designed specifically for use by interior landscapers. Open to the air for maximum soil aeration it is tamper proof and attaches securely to either the rigid or flexible pipe. The cap does not open and instead water is poured through a gate of specially shaped fins which are profiled to guide the water freely down the filler pipe without splash back from either bowser or watering can. The cap also features space to add a full colour bespoke advertising message – usually a company logo plus telephone number and web address. Freeflow caps also contain the water level indicator rod which is viewed through the fins and must be used with both rigid and flexible filler pipe where a water level indicator mechanism is fitted. Standard caps are the usual choice for exterior use or where a water level indicator is not required. The cap simply pushes over the end of the filler pipe making a very discrete closure. The Funnel is essentially an open version of the Freeflow cap and is fitted as standard to hanging baskets and pillar planters. A cover cap is available for the funnel making it a suitable alternative to the standard cap.

tanker irrigation

- **Wick:** Tanker Wick are geotextile strips fitted to every Tank and are the heart of the system. As they are manufactured from a special combination of woven plastics, they will never deteriorate when left undisturbed. However where frequent replanting of planters is necessary, for example, hanging baskets and containers planted with bedding plants, it may become necessary to replace the wicks after a number of years. This can easily be carried out for all the Water Cell systems and wicks are supplied for each unit size precut to length. Modular systems, due to their design, are much less likely to require new wicks but if eventually this does become necessary then the units can be returned to us for refurbishment.
- **Dip Sticks:** Tanker Dip sticks are flexible capillary rods that can be put down the filler tube and pulled out to show the exact depth of water in that tank or planter. For use where water level indicators cannot be used and particularly suitable for large tree planters. Custom sizes available.
- **Floats:** Polystyrene floats suitable for use with the flexible filler pipe only. Cut to size. Supplied FOC with new flexible filler pipe installations where requested.
- **Stoppers:** These are used to seal the ends of Network units at the end of a run or to convert a network unit into a Solo tank. Supplied FOC with every new Network installation.
- **Flexible pipe:** Available in up to 50m lengths, this is both the connecting pipe between Network Tanks and also an optional filler tube instead of the rigid pipe system. Appropriate lengths are supplied FOC with new Solo and Network systems where required.

tanker – research proven

“ In summary, planters containing Tanker systems will save you half your costs of watering while providing a more attractive, healthier plant with a much stronger and better developed root system.”

Tanker was invented some 25 years ago and at least two installations from that period survive and are still functioning perfectly today. However, to further prove the effectiveness of the system, and in particular its potential to dramatically cut the costs of watering seasonal exterior displays, Tanker has recently been the subject of intensive research at the world renowned University of Reading Horticultural Technology Unit.

The trials were carried out on typically planted interior office plant displays and also on contractor style hanging baskets, window boxes and exterior planters. In every case identical control units were set up without Tanker being fitted. All the units were watered whenever the soil moisture content fell below a predetermined point as measured by use of a Theta probe. The exterior planters were assessed for 70 days and the interior for 5 months before a destructive analysis was carried out to look at the root systems and the fresh weights of the plant material in each. The results are shown in the panel opposite and conclusively prove that fitting Tankers will both save money on maintenance and improve plant quality.

Above: Interior planter clearly showing superior plant development in Tanker (bottom) fitted planters after 70 days of trials.

Top: Roots systems: left – without Tanker; right– with Tanker
Bottom: Tanker fitted window boxes - Day 56

Proof Positive

A summary of results of trials conducted at the University of Reading summer 2004 on hanging baskets, window boxes, patio planters & interior displays.

- *The use of Tanker systems in all situations tested halved the number of watering visits required to maintain the plants.*
- *The amount of moisture in the soil was always more controlled with Tanker systems present – they were less likely to be either very wet or very dry – promoting better plant development.*
- *The plants in the Tanker watered units looked visually more pleasing than those in the control units having a better, more compact growth pattern.*
- *The root systems of the Tanker grown plants were far better developed than those that were top watered only. In exterior trials, the roots reached the bottom of the planters and formed dense masses while also being thicker and fleshier.*
- *Interior trials using Tanker or top watering alone proved that Tanker watered units required at least 30% less water and still produced a better display.*

planter options

Moulded names, initials and dates

Where our planters feature wide, flat surfaces we are able to add lettering and dates in moulded relief that is integral to the planter in the same finish and will last without deterioration for many, many years, even outdoors. Examples may include the name of a hotel or business, the initials of a couple getting married and the date, the date a company was established etc. Prices are per letter or number and dependent upon the finish required.

Noms, initiales et dates façonnés

Quand nos bacs sont dotés de larges surfaces planes nous sommes en mesure de rajouter du lettrage et des dates en relief, qui font partie intégrante du bac dans la même finition et durera sans se détériorer pendant de nombreuses années, même à l'extérieur. Exemples : le nom d'un hôtel ou société, les initiales d'un couple qui se marie avec la date. Les prix sont sur devis selon la finition par lettre et numéro..

Full colour logos or other designs

On planters that feature a suitable smooth, flat surface we are able to offer a full sign writing service. Logos, designs or any form of writing can be added using either Vinyl or paint stencilling (airbrushing) depending upon the colour combinations required and the eventual location of the planters. Suitable for use on exterior as well as interior planters, we now carry out all this work in our own spray shop making it much more cost effective than sending our planters to a third party sign writer. Prices are by quotation only and dependent upon the size and complexity of the project.

Logos en couleur ou autres dessins

Sur les bacs qui disposent d'une surface lisse et plane, nous sommes en mesure d'offrir un service complet de lettrage. Logos, dessins ou toute autre forme d'écriture peut être ajouté en adhésif vinyle ou au pochoir (aérographe) en fonction des combinaisons de couleurs nécessaires et l'endroit où les bacs seront placés. Convient pour une utilisation à l'extérieur ainsi qu'à l'intérieur, nous effectuons ce travail à l'usine. Les prix sont sur devis selon la taille et la complexité du projet.

Fire Retardant Construction

All our planters can, for additional cost, be manufactured using fire retardant gels and resins to produce an AC product that meets the British Standards Class 0 and Class 1 and the French Standard Class M1. These products are ideal for use in public areas and meet the requirements of government legislation. Each order for FR planters will be accompanied by a certificate stating the type of manufacture of the items ordered and the Standards met. The certificates can be issued in other languages than English on request. Please note that our standard products do not meet these FR standards and it is essential to order the planters as FR if this is what is required.

Fabrication ignifugée

Tous nos bacs peuvent, pour un coût additionnel et sur devis, être fabriqués en utilisant des gels et les résines ignifugées pour produire un produit qui répond aux réglementations : British Standards Classe 0 et Classe 1, et pour la réglementation française M1. Ces produits sont idéaux pour une utilisation dans les espaces publics et répondre aux exigences des normes incendies en vigueur. Chaque commande de bacs non feu sera accompagnée par un certificat indiquant le type de fabrication des articles commandés et les normes respectées. Les certificats peuvent être émis dans d'autres langues que l'anglais sur demande. Notez que nos produits standards ne sont pas conformes aux normes non feu donc il est indispensable de commander les bacs en précisant clairement quand ils devraient être ignifugés.

Bespoke FR Christmas tree surrounds for UK Train Stations

Lighting

Most planters can be specified to include lighting options for both interior and exterior use. These will be low voltage LED units powered by transformers. Both white and coloured or colour changing lights can be fitted and the number and their location is entirely up to you to specify. All electrics are contained within a sealed waterproof compartment within the planter which is reached via an access panel. Where the planter needs to be seen from every side the main access may be underneath but a small door will still be available to facilitate lighting unit replacement. Please contact us to discuss your requirements which we will be pleased to draw up for you.

Éclairage

La plupart des bacs peuvent être adaptés avec une option d'éclairage pour un usage à l'intérieur ou à l'extérieur. L'éclairage est en LED (basse tension) alimenté par un transformateur. Disponible en blanc, couleur ou des couleurs changeantes, le nombre et leur emplacement est sur mesure, entièrement à vous de préciser. Toute la partie électrique est dans un compartiment étanche imperméable à l'eau, avec un panneau d'accès. Lorsque le bac doit être vu de tous les côtés l'accès principal peut se trouver en dessous, mais une petite porte sera toujours disponible pour remplacer l'unité d'éclairage. Notre bureau d'étude étudie chaque projet.

Pallet bases

All our tree planters can be specified with a pallet base for ease of moving once planted. Each base is engineered for the style, size and weight loading of individual units and will incorporate strengthening materials to suit. It is also possible to construct hidden pallet bases but as well as adding to the cost these are often less practical and are not recommended unless the base is to be hardly used.

We recommend textured finishes where pallet bases are fitted as this finish is less likely to be damaged by the lifting and moving process and can be more easily repaired on site. Please note, pallet bases are intended for occasional use only.

Transpalette

Tous nos bacs à arbres peuvent être commandés avec un système de transpalette pour faciliter leurs déplacements une fois plantés. Chaque base est conçue selon le style, taille et le poids de chaque unité, avec un renforcement si nécessaire. Nous recommandons une finition texturée pour un bac au transpalette car elle est moins susceptible d'être endommagée en déplaçant le bac. Les bacs équipés avec un système de transpalette sont destinés à un usage occasionnel seulement.

planter options

Castor bases

All our planters can be specified to include a fully bonded in castor base, with or without brakes as required. Two main types of castor base are available

1. **Interior use base on furniture castors.** These are small, black plastic dual wheel castors with or without brakes and suitable for use typically on commercial carpet or carpet tiles. The base will be recessed and the castors invisible to create the illusion of a planter floating approx 2cm off the floor. Narrow planter bases may require the base not to be recessed to assure stability – you will be informed of this at the time of ordering. These are not suitable for heavy pile carpets or real wood flooring
2. **Exterior use base on heavy duty castors.** Where a unit is to be used outside and regularly moved we fit it with heavy duty castors directly onto the base with no recess. This allows the fitting and easy use of brakes which is not possible with a recessed base. These castor bases are engineered for regular use in a hostile environment.

All our castor bases are built to withstand the planted weight of the unit to which they are fitted and we can vary the design to meet the needs of the situation, for example, non marking castors or rubber castors for wooden floors etc – please just let us know your requirements before ordering. Castors can also be fitted to tree planters on request.

Please note, castor bases should be used with care and may fail if bumped regularly over carpet joining strips, kerbs and other obstructions.

Castor exterior

Broken

Unbroken

Roulettes

Tous nos bacs peuvent être prescrits avec des roulettes, avec ou sans freins (freins sur demande). Deux types de roulettes sont disponibles:

1. Utilisation à l'intérieur avec les roulettes de meubles. Ce sont de petites roulettes doubles noires en plastique avec ou sans freins et appropriées pour une utilisation généralement sur la moquette de bureau ou des dalles de moquette. La base sera remontée et les roulettes sont invisibles pour créer l'illusion d'un bac flottant d'environ 2cm du sol. Elles ne sont pas appropriées pour la moquette épaisse ou des parquets.
2. Utilisation à l'extérieur avec des roulettes pour charges lourdes. Lorsqu'un bac doit être utilisé à l'extérieur et régulièrement déplacé, il est équipé de roulettes pour charges lourdes directement sur la base qui n'est pas remontée. Ceci permet l'utilisation de freins qui n'est pas possible avec une base en retrait. Ces roulettes sont conçues pour une utilisation régulière dans un environnement hostile.

Toutes nos roulettes et leurs bases sont fabriquées pour supporter le poids planté de l'unité sur laquelle ils sont montés. On peut les étudier sur mesure afin de répondre aux besoins spécifiques, par exemple : roulettes qui ne marquent pas le sol ou des roulettes en caoutchouc pour un parquet, sur mesure pour les bacs à arbres etc – nous répondons à toutes vos questions avant de commander.

Merci de noter qu'un bac aux roulettes doit être utilisé avec soin et peut être endommagé s'il est heurté régulièrement contre les bordures ou autres obstacles.

False bases

All our planters but particularly those that are taller, typically over 60cm, can be specified with an integral false base, at any height, to create the perfect sized planting pocket. The base is made from a bonded in sheet of fibreglass sealed with a waterproof coating. Two types of base are available

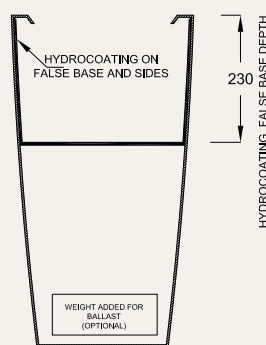

1. False base for soil plants. Typically at 35 – 45cm down from the top of the lip – a standard specification is available for all planters typically false based on request. The waterproof lining covers the base and approx 10cm up the sides. These bases are NOT suitable for use with hydroculture or any other system which requires the base to hold a pool of water. We recommend Tanker Irrigation is used in conjunction with these bases
2. False base for hydroculture or any other water based system. Typically hydro bases will be fitted 23cm down from the lip – false bases can vary by +/- 1 cm in height and therefore this level of tolerance is essential. Hydro bases are fully double coated with our waterproofing plastic layer and are guaranteed waterproof.

It is essential to specify which type of false base is required at the time of ordering

Weights can also be added to the real planter base where stability is an issue but this must be requested at the time of ordering

Faux fonds

Tous nos bacs, mais plus particulièrement ceux qui sont grands, généralement plus de 60cm, peuvent être commandés avec un faux fond à n'importe quelle hauteur, pour créer une poche de plantation parfaite. Le faux fond est fabriqué avec une feuille de fibre de verre scellée avec un revêtement imperméable, étanche à l'eau. Deux types de faux fonds sont disponibles:

1. Faux fonds pour plantes en terre.
En règle générale à 35 - 45cm du bord. La partie imperméable recouvre la base et 5cm environ sur les côtés. Ces faux fonds ne sont pas adaptés pour une utilisation avec l'hydroculture ou tout autre système qui exige de maintenir un fond d'eau. Nous vous recommandons nos réserves d'eau 'Tanker' avec ces faux fonds.
2. Faux fond pour hydroculture. Typiquement situés à 23cm du bord – les faux fonds peuvent varier de +/- 1 cm de hauteur. Les faux fonds Hydro sont entièrement revêtus avec notre couche de matière plastique étanche et ils sont garantis imperméables.

Il est essentiel de spécifier le type de faux fond nécessaire au moment de passer la commande.

Les bacs peuvent être lestés également où la stabilité est un problème, merci de le préciser au moment de passer la commande.

colours + finishes

Most Livinggreen planters are available in all the finishes detailed – but check the product page for a full listing as the design of some units makes certain finishes impractical.

La plupart des contenants de 'Livinggreen' sont disponibles avec toutes les finitions détaillées ci-dessous.

Veillez toutefois vérifier la compatibilité du choix de la finition avec la forme du bac, car certaines sont difficiles à obtenir selon les modèles choisis.

BS4800 and RAL Classic: Over 300 colours available in highly polished gloss, satin, matt or textured matt finishes so you can achieve a perfect match to other furnishings.

BS4800 et RAL Classique: Plus de 300 couleurs disponibles avec plusieurs finitions : polie, satin ou mate texturée. Ainsi nos contenants permettent de trouver l'accord parfait avec l'esprit et l'aménagement du lieu.

Standard Colours: Specially selected colours that are usually held in stock and will meet most requirements. Available in highly polished gloss, satin, matt and textured matt.

Couleurs standard: Certaines couleurs sélectionnées parmi les gammes citées sont habituellement en stock et répondent à la plupart des exigences. Il s'agit des finitions suivantes : polie, satin et mate texturée.

Polished Metallics: The closest finishes to polished metal. Also available in satin sheen.

Métalliques polies: Finitions les plus semblant au métal poli.

Textured Metallics: Matt metal finishes with a rippled effect.

Métalliques texturées: Finitions en effet métal mat texturée.

Polished Pearlescents: Deep, almost 3D colours.

Perle polies: Finition créant un effet de profondeur.

Polished Stardust: Vibrant colour with a hint of silver sparkle. *Other colours on request – check availability before ordering.*

Stardust polies: Couleur scintillante incrustée de petites paillettes argentées. *Plusieurs couleurs sur demande - vérifiez la disponibilité.*

Gold and Silver leaf: True luxury finishes where planters are hand gilded with genuine metal leaf, hand burnished and coated with multiple layers of clear lacquer. *Other leaf finishes available on request.*

Feuilles d'argent et feuille d'or: Les finitions de luxe, les bacs sont travaillés à la main avec des véritables feuilles en métal, ensuite polies à la main et recouvertes de plusieurs couches de vernis clair. *D'autres couleurs de feuilles sont disponibles sur demande.*

Please note we recommend Textured and Natural finishes if planters are to be used outdoors. However all our finishes are suitable for exterior use – please specify this at the time of ordering.

Nous recommandons pour des usages extérieurs d'employer des finitions texturées ou naturelles. Cependant toutes nos finitions conviennent pour l'usage à l'extérieur - spécifiez le lieu d'usage (intérieur ou extérieur) sur la commande.

Natural: Unique finishes that exactly mimic natural materials. *Please note all these finishes have not only the look but also behave like the real material, weathering naturally if outdoors. However, the surfaces will mark clothes if brushed against so use indoors only in low footfall areas. Rust can be matt lacquered to avoid this problem on request.*

Naturel: Finitions uniques qui imitent exactement les vrais matériaux naturels. *De plus elles les ressemblent en aspect et en comportement. Par exemple les finitions rouille et cuivre bleu vieillissent naturellement en usage extérieur. Attention, ces surfaces pourront marquer les vêtements, il est recommandé pour leur usage en intérieur de ne pas les disposer à proximité des endroits passants. La rouille peut être mate laquée à la demande pour éviter cet inconvénient.*

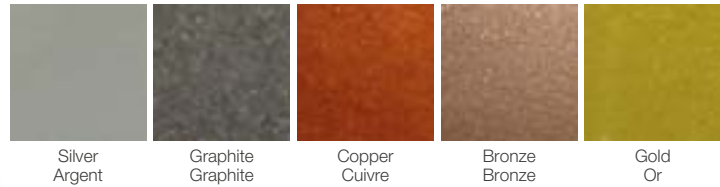

Dapple and Vintage: Unique multicolour finishes adding further opportunities to personalise your planters. Both styles are coated with clear lacquer giving extra shine and a more resilient finish.

Moucheté et Vintage: finitions multicolores uniques rajoutant encore plus de possibilités de personnaliser vos pots. Les deux finitions sont recouvertes de vernis clair donnant un éclat supplémentaire et une finition plus résistante.

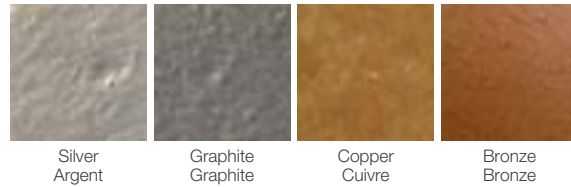

Standard Colours - Couleurs standard

Polished Metallics - Métalliques polies

Textured Metallics - Métalliques texturées

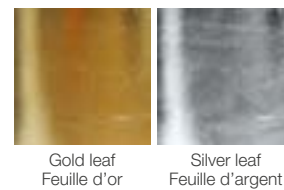

Polished Pearlescents - Perlé polies

Polished Stardust - Stardust polies

Gold and Silver leaf - Feuille d'or et Argent

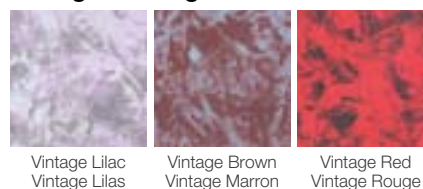

Natural - Naturel

Dapple - Moucheté

Vintage - vintage
