CUSTOMER LIST

Dear Customer,

Over the last 12-months the construction material sector has been challenged as never before. Whilst this is affecting most raw materials, it is having a particularly acute effect on plastics.

The reasons include disruption to manufacturing plants due to extreme weather and COVID shutdowns. This has affected the UK, EU, USA and other global markets. Prices for raw material components of PVC are increasing, in some cases by 10% in a month. Force Majeure has been announced by raw material suppliers as supply has become restricted.

The current situation also affects manufacturing using recycled plastics, which is under pressure for similar reasons, resulting in a shortage of processing capacity.

Add to this the global demand is unbalanced, with Asia recovering from COVID ahead of Europe and recent events such as the Suez Canal being blocked, delaying some imports by days or weeks. Shipping containers had already increased in cost exponentially during the COVID period.

The cumulative result is a lack of supply and increasing costs due to raw material shortage.

As a merchant manufacturer, JDP is ideally placed to minimise the cost increases to our customers. Along with our suppliers, we have absorbed several price increases in recent weeks and months. However, to ensure we can maintain the supply that our customers need, we must continue to source raw materials and products at higher prices in line with the market. This includes our own DYKA brand products.

We are in an unprecedented situation, therefore any products that are ordered but not delivered by the 14th day after the price increase, will have the new prices applied to them. e.g. products ordered in June must be delivered by July 14th for June prices to apply.

Yours Faithfully

Martin Joyce
Head of Commercial
