Mission

National Breast Cancer Foundation's mission is to save lives by increasing awareness of breast cancer through education and by providing mammograms for those in need.

Vision

The vision of NBCF is to be a God-honoring charity serving those who may be affected by breast cancer. We strive to help the helpless and give hope to those without hope.

Values

Our core values are compassion, integrity and wisdom. Compassion for those with whom we interact. Integrity in what we say and how we fulfill our commitments. Wisdom, knowledge and understanding in our approach to addressing challenges and opportunities.

Letter from Founder & CEO

This has been a joyful year for National Breast Cancer Foundation—a year of growth, while expanding our National Mammography Program across the nation, reaching for a cure for breast cancer, and saving lives. Little did we know that one of our own at NBCF would discover she had breast cancer and survive through early detection, all because of our Early Detection Plan.®

NBCF offers Help for Today...Hope for Tomorrow.®

Roots and Wings

It's been said there are two lasting bequests we can give our children: roots and wings. Famed adventurer and aviation pioneer, Amelia Earhart, certainly inherited both. Earhart, the first woman to fly solo across the Atlantic Ocean, sailed above the clouds and regarded

the world from a bird's-eye view. But, it was her roots that kept her grounded and gave her the wings she needed to fly.

*"You haven't seen a tree until you've seen its shadow from the sky."
~Amelia Earhart*

This observation by Earhart allowed her to fully understand the importance of both roots and wings. Though she accomplished great heights, she looked down and recognized that her roots held steady and covered more ground than she had ever realized.

Soaring Above the Clouds

We know that the successes of this past year were made possible because we have stayed true to our mission and values since the founding of NBCF in 1991. Our roots have grown deep, giving us the resilience to withstand the storms of the economy. Charity Navigator, America's premier charity evaluator, ranks NBCF in the top five percent of charities in America with their highest four-star rating for five consecutive years.

NBCF's partners have given us wings to soar higher and reach farther than ever before. Our 27% increase in contributions this year has come from corporations and individuals who share our vision to impact women's lives with breast cancer education and to provide underserved women with life-saving diagnostic care.

Through our National Mammography Program that has now spread to 42 states, we are able to interact with hospitals and assess their needs, as well as obtain positive outcomes to share with our partners.

As a result of our social media initiatives, over one million individuals have joined arm-in-arm with us to raise a standard against breast cancer with education on our website, www.nbcf.org, and our online community of survivors.

Nothing means more to us than saving lives. We invite you to peruse the highlights of the 2009 NBCF Annual Report and consider how you may want to join with us this year to impact our nation as we uproot the deadly disease of breast cancer and give hope to women through early detection.

Janelle Hail

“No kind action ever stops with itself. One kind action leads to another. Good example is followed. A single act of kindness throws out roots in all directions, and the roots spring up and make new trees.”

~Amelia Earhart

Review of Programs

Since its founding in 1991, the National Breast Cancer Foundation, Inc. (NBCF) has endeavored to save lives through early detection and to provide mammograms for those in need. This mission includes increasing awareness through education, providing diagnostic breast care services for those in need, and providing nurturing support services. NBCF has furthered this mission through the generosity of its donors and the success of its programs to save lives.

Today, NBCF's programs stand firmly rooted in the kind actions and steadfast investments of its sponsors, donors and supporters. These roots of kindness allow NBCF to branch out in all directions and help save the lives of women across the country. Despite the global economic challenges of recent years, NBCF continues to uphold renewed growth, unyielding sustainability, and improved resolutions for the future.

Building hope against cancer through early detection, NBCF's innovative programs represent thoughtful, responsive solutions to those facing breast cancer. These programs include: National Mammography Program,[®] Research, Early Detection Plan,[®] MyNBCF Online Community, and Early Detection Awareness.

National Mammography Program

According to the National Cancer Institute (NCI), getting a high-quality mammogram and having a clinical breast exam on a regular basis are the most effective ways to detect breast cancer at an early stage. Most breast cancer experts and physicians recommend women age 40 and older receive annual mammogram screenings to provide early detection of breast cancer.

However, with rising healthcare costs and cutbacks in insurance coverage, many women simply cannot afford the diagnostic services needed to detect the disease early. Uninsured and underserved women are becoming increasingly vulnerable and need life-saving intervention now.

In 2009, NBCF continued its deep heritage of serving women and furthered its mission to save lives through its National Mammography Program. The National Mammography Program (NMP) provides free mammograms and diagnostic breast cancer services to underserved women nationwide through medical facilities within our network. The NMP network includes 73 medical facilities serving 42 states across the country. The NMP provides medical facilities with funding for mammography screenings, network consultation and management, educational resources, and measurable outcome tools to track patient and program success. It is the goal of NBCF to expand its NMP network to reach all 50 states in 2010.

“Change your opinions, keep to your principles; change your leaves, keep intact your roots.”

~Victor Hugo

Research

NBCF works with some of the finest scientists in the nation to help find the cure for breast cancer and improve early detection and prevention methods. This year NBCF supported several initiatives with The University of Texas M. D. Anderson Cancer Center, ranked #1 Best Cancer Hospital by *U.S. News & World Report*. NBCF continued their support of world renowned cancer researcher, Dr. Mien-Chie Hung and his team, in support of developing novel molecular/gene therapy strategies for human cancer. NBCF also initiated program support for research conducted by Melissa Bondy, Ph.D., Professor of Epidemiology and Gary Johanning, Ph.D., Associate Professor of Veterinary Services. These programs include:

Breast Cancer Research Program: Mien-Chie Hung, Ph.D., Professor and Chair of the Department of Molecular and Cellular Oncology, and his staff are working to develop powerful anti-angiogenesis and chemotherapy agents that have been shown to be less toxic than current treatments.

Dr. Hung with Research/Development Team

Molecular Characterization of Early Stage Breast Cancer Patients: Melissa Bondy, Ph.D., Professor of Epidemiology, and her staff are attempting to understand the risk factors that contribute to treatment failure and relapse in women with breast cancer. They are also working to

identify the factors women can change in their daily lives that will help them avoid aggressive tumors and why women with breast cancer relapse 10, 15 and sometimes even 20 years after the original diagnosis.

Finding Biomarkers for Early Breast Cancer Detection: Gary Johanning, Ph.D., Associate Professor of Veterinary Services, and his staff are working to develop a new biomarker for early detection of breast cancer. Dr. Johanning is researching human endogenous retroviruses that only awaken in women with preneoplastic breast disease and breast cancer. Dr. Johanning is also working to develop inexpensive and reliable tests that will detect breast cancer in its earliest stages, much like the PSA test screens for prostate cancer in men.

BUILD HOPE *against cancer with an* EARLY DETECTION PLAN[®]

An Early Detection Plan[®] significantly increases your chances of surviving breast cancer. NBCF has created an interactive tool to help you develop your own Early Detection Plan[®].

Early Detection Plan[®]

In October 2008, National Breast Cancer Awareness Month, NBCF launched the Early Detection Plan[®] (EDP), an interactive tool to help remind women to schedule breast self-exams, clinical breast exams, and mammograms utilizing a flexible reminder system with email notifications, calendars, and text messages.

Breast cancer has become one of the leading health crises for women in the United States. One in eight women will develop the disease in their lifetime. Though breast cancer survival rates are high, they decrease significantly when the disease is detected in the early stages. According to the National Cancer Institute (NCI), when breast cancer is detected early, the five-year survival rate is 98%. That's why there are more than two million breast cancer survivors today in the United States. It takes just seconds to create a plan and utilize NCI's screening recommendations, including:

Risk Profile: Women with a mother, sister, or daughter with breast cancer are considered at higher risk of developing the disease in their lifetime.

Breast Self-Exam (BSE): A self-examination of the breasts to check for lumps or other physical changes. A BSE should be performed monthly for women over the age of 20.

Clinical Breast Exam (CBE): An examination of the breasts to check for lumps or other physical changes by a qualified nurse or doctor. A CBE should be performed every one to three years depending on age and family history.

Mammogram: An X-ray photograph of the breast and the primary tool in diagnosing breast cancer. Women over the age of 40 should schedule annual mammogram screenings. Women below the age of 40 may also need to schedule mammogram screenings if they have a family history of breast cancer.

Since the program was initiated, thousands of women across the U.S. have created an EDP and joined the movement to detect breast cancer early.

NBCF Programs Help Save One Of Their Own

Early Detection Plan™ - Before introducing the EDP in October, NBCF staff tested the new program by creating their own profiles. When NBCF's Controller, Jo Ann Timberlake, set up her profile, she quickly realized she had not scheduled an annual mammogram in over 18 months. Jo Ann immediately called her doctor and scheduled an appointment. Unfortunately, during the mammogram, her doctor noticed a lump.

"I wasn't worried because I have a history of fibroid tissue and no history of breast cancer in my immediate family. I've had this before, and it's never been a problem," says Timberlake.

This time it was. After a follow-up diagnostic mammogram and biopsy, Jo Ann's worst fears were confirmed. She had breast cancer.

MyNBCF Online Community - Jo Ann decided that her recent diagnosis and role as an employee of one of the most recognized breast cancer organizations would not be in vain.

Within a few days, Timberlake went online and

quickly joined the MyNBCF community. In the community groups, she began reading and commenting on the stories and posts of other women diagnosed with breast cancer.

Though her prognosis was good, she was scared. In the community, she immediately found comfort and a sense of relief to learn that so many women across the country were going through the same thing.

Giving hope to women who are alone and afraid is the foremost reason NBCF created the MyNBCF community.

"Fear is one of the most common trends I noticed among the community members," says Timberlake. "The fear of the unknown is gripping when you have just been diagnosed, and sometimes you wait weeks before you find out how you

will be treated for the disease."

Giving hope to women who are alone and afraid is the foremost reason NBCF created the www.mynbcf.org community. Timberlake found that, like her, many women simply want to be reassured.

Months later and post-treatment, Jo Ann is now cancer free.

NBCF Social Media

“Social Networking that matters is helping people achieve their goals. Doing it reliably and repeatedly so that over time people have an interest in helping you achieve your goals.”

~Seth Godin

best-selling author and marketing consultant

With the emergence of social media networks, NBCF has risen as a leader in the non-profit sector by optimizing its community of supporters and followers.

Launched in 2007, NBCF was one of the first charities to create its own online social community, www.mynbcf.org. This ground-breaking community allows users to create a profile and connect with others facing breast cancer.

The Discussions Section, one of the more popular features of the site, allows members to tell their stories of how breast cancer has affected them. Through the fears of treatment and the unknown, the community members act as an online support group and share the joys of survivorship and encouragement of life after breast cancer.

“I don’t know if inspirational is a good enough word to describe this amazing site,” says one of the MyNBCF community members. “What you ladies do for each other is fantastic and provides many women out there with the support that their own family and friends can’t provide for them.”

In 2009, NBCF expanded its reach through social media, including Facebook® and Twitter. NBCF’s Facebook Cause page currently manages over 250,000 supporters and active members.

As NBCF grows, our online initiatives will continue to significantly influence our need and ability to expand the message of early detection.

Financial Reports

Financial Highlights

women and represented nearly 45% of our overall program spending. We dedicated 43% of our program resources to raising awareness of breast cancer issues and educating the importance of early detection. The balance of our program spending was for early detection, research and community support.

NBCF continues to be rooted by the generosity of our supporters, sponsors and benefactors. We realized an increase of contributions and royalties of 26.8% over the previous fiscal year.

While we are not immune to the recent global economic challenges, our conservative approach to financial controls minimized the negative effects of the markets. In spite of investment losses, we realized an increase in overall revenue of 17.7% over the previous fiscal year.

NBCF's program spending is directed toward four focus areas in order to completely fulfill our mission of helping to save lives through early detection and awareness. The National Mammography Program provides screening and diagnostic services to underserved

How Others See Us

Charity Navigator, America's premier charity evaluator, has given NBCF its highest four-star rating for the past five consecutive years, based on its ability to responsibly manage its finances and operations. NBCF has also been included 15 consecutive years in the Combined Federal Campaign, the world's most successful workplace charity campaign, of which only 2,257 charities out of 1.8 million qualify. We continue again this year to dedicate approximately 80% of expenses to support our programs.

*“Planning is bringing the future into the present so
that you can do something about it now.”
~Alan Lakein*

In 2009, NBCF invited its donor base to discover the benefits of giving wisely. NBCF created an interactive, step-by-step online guide to help explore planned giving, research gift options, and connect with experts to establish a gift plan. The improved planned giving site:

- Significantly expanded the NBCF gift options,
- Provided periodically users to compare gift plans based on their needs,
- Updated site content to reflect current changes in tax laws,
- Defined the type of assets donors can give, and
- Provided resources such as personal calculators, glossary of terms, and sample bequest language to insert your own will.

NBCF's investment in an expanded planned giving program supports our commitment to fulfill our life-saving mission for years to come. The development and expansion of giving options allows our diverse donor base the ability to endow our mission beyond the traditional donation methods, while reaping the benefits of financial planning.

Medical Facilities

National Mammography Program Coverage/Hospitals

NMP Grant Recipient, White Memorial Medical Center

The National Mammography Program (NMP) is the heart and soul of NBCF. The NMP provides medical facilities the opportunity to be included in a national program that serves as a resource for patients and a reputable ally in the fight against breast cancer. Qualified medical facilities within the NMP receive grant funding for mammograms to underserved women and provide vital program statistics, impact reports and information to constituents. Funds granted to medical facilities through the NMP are managed, monitored and analyzed by NBCF. Impact reports are made available to sponsors upon request.

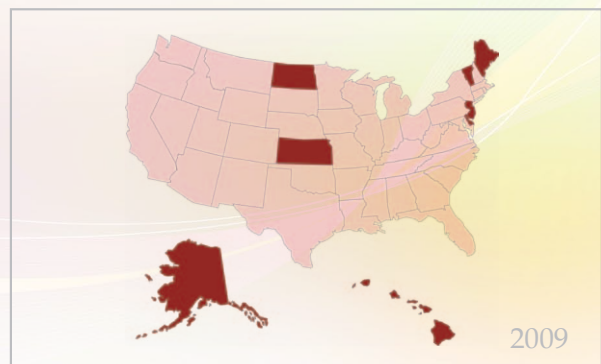

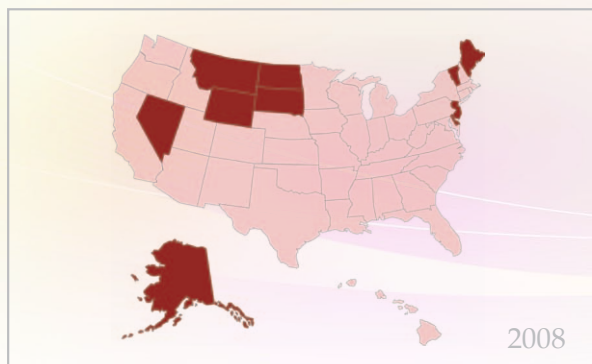

Medical Facility Feedback

Breast Cancer Resource Centers of Texas: “Most of these women have never had a mammogram; they are afraid of the equipment, the process and the results,” says Alice Wilson, Director of Grant Development. “This program demystifies getting a mammogram and gives the women confidence in the process.”

White Memorial Medical Center: “Our partnership with NBCF has allowed us to provide over 8,000 free and low cost mammograms to the women in East Los Angeles,” said Helen Mosley, Director of Cancer Services. “Without the help of NBCF, many of these women would have had to choose between family needs and themselves.”

American-Italian Cancer Foundation: “This year, the funding from NBCF is even more critical in light of the budget cuts to the New York State program,” says Addie Nelson Backlund, Executive Director. “Thanks to a 50% grant increase from NBCF, AICF can continue to provide medical services to many of the uninsured who are no longer covered by the State, especially women age 40 to 49.”

NBCF's First President's Circle Sponsorship CKE Restaurants

CKE Restaurants, parent company to Carl's Jr.[®] and Hardee's,[®] became the first sponsor to join NBCF's President's Circle through their fiscal year 2008-2009 donation of \$1,000,000. This donation was made possible through the support of their successful Pink Star Campaign.

During a three-week, in-store fundraiser that began in April, guests at Carl's Jr.[®] and Hardee's[®] restaurants across the United States donated to the campaign in support of the National Breast Cancer Foundation (NBCF).

For each \$1 donation, restaurant guests received a commemorative pink Happy Star™ to personalize and place on a restaurant lobby display. This leave-behind piece combined the icon for both the Carl's Jr. and Hardee's restaurant chains with the color pink to represent hope and awareness for the plight of those fighting breast cancer. Guests also received coupons to use toward future visits.

"Despite our country's economic situation, Carl's Jr. and Hardee's loyal customers gave generously in support of breast cancer awareness and the National Breast Cancer Foundation," said Andrew F. Puzder, CEO of CKE Restaurants, Inc. (NYSE:CKR). "This is truly a testament to the generosity of our customers, the dedication of our employees and the commitment of our franchisees. We are very proud of all of our restaurants, both company and franchise, whose enthusiasm over the past five years made it possible to reach for and achieve our \$1,000,000 annual fundraising goal."

*"As we express our gratitude, we must never forget that the highest appreciation is not to utter words, but to live by them."
~John F. Kennedy*

Thank You

NBCF will continue to stand rooted in the success of our past, while branching out toward the future with fervent commitment to our mission.

With tremendous gratitude we continually strive to save lives and advocate the message of early detection of breast cancer. May our continued efforts be illuminated by how we fulfill our mission.

NBCF thanks our sponsors and donors for their steadfast trust and support. NBCF also thanks the medical facilities and researchers that tirelessly work to save lives through early detection. Providing Help for Today...Hope for Tomorrow,[®] NBCF will continue to grow life-saving roots that extend to all facing breast cancer.

deepening our roots
