MVP

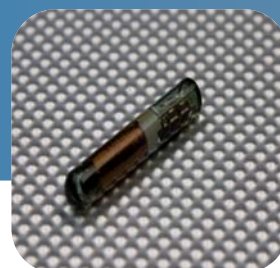

MVP - KEY PROGRAMMING SYSTEM

MVP (Multi Vehicle Programmer) Key Programming System from Advanced Diagnostics is based on the Worlds premier Key Programming System, AD100, but with an extremely small purchase price, and the ability to pay as you go for key programming.

The World Leaders in Transponder Key Programming have again led the way and raised the benchmark with the revolutionary 'Pay As You Go' key programming system. The MVP uses electronic tokens which can be purchased easily and quickly on the internet.

The MVP is supplied with all available software applications and easily updated with new software from the internet, at no cost, ensuring the technician always has the latest developed software.

This system uses electronic tokens to program vehicles. One token is used per programming sequence, and along with never having to purchase software again allows anyone who wants to offer key programming a step in the door ... at a price any security professional can afford.
