

PRACTICALITY BROWN

TREES FACT SHEET: SCREENING

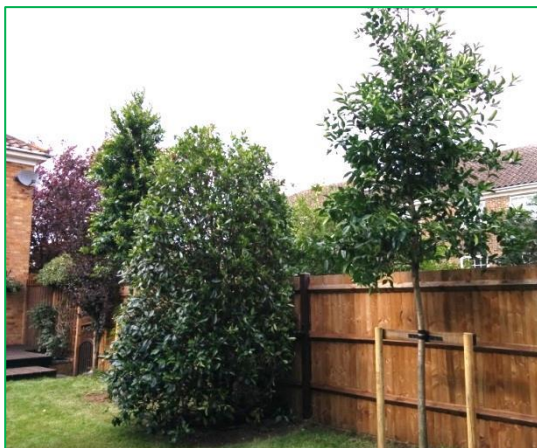

We can supply a range of quality trees for decorative or screening, which are particularly useful to create privacy in your garden.

Screening Trees

These trees may have a clear stem to reach up to fence panel height of around 1.8-2m with a full bushy canopy above. This type of screening is particularly useful if you are overlooked by neighbouring properties but would like to retain lower-level exposure i.e. of an attractive wall or bedding plants.

We can also supply feathered trees that have full growth from the ground upwards and offer the same screening ability.

Generally, evergreens are preferred for this purpose as they remain a permanent feature throughout the year. Screening trees seasons can be planted densely to achieve maximum effect from the offset; however, planting a selection of trees, if space allows, can provide rich contrast and seasonal interest.

Example of species and prices

Species	Girth	Height	Price
Holly (Ilex Nellie R. Stevens)	16-18cm	350-400cm	£951
